## **1.0 INTRODUCTION**

---

### **1.1 *Caneel Bay Resort Location and Description***

The subject property consists of approximately 150 acres and is located on the west side of St. John, United State Virgin Islands (USVI) within the Virgin Islands National Park. Caneel Bay is owned by Virgin Islands National Park (VIIS) on St. John, USVI and operated through a retained use estate by Caneel Bay Internal Acquisitions. The property currently operates as a resort with approximately 100 buildings and structures, used for lodging, food services, recreation, landscape and maintenance, security and utility. The property primarily consists natural vegetation and fauna. The resorts facilities are bordered by beaches to the north and west and to the south and east by undeveloped land. **Figures 1 and 2** illustrate the project location and general property layout.

### **1.2 *Purpose and Objective***

This Removal Site Evaluation (RSE) report for Caneel Bay Resort (Site) was conducted by 3E Consultants (3E) for the National Park Service (NPS) in general accordance with the requirements detailed in 40 Code of Federal Regulations (CFR) 300.410 and pursuant purchase order P16PX02147 dated July 12, 2016.

The purpose for this project was to evaluate conditions at the Caneel Bay Resort to assess the potential threat posed by the release or threatened release of hazardous substances to public health, welfare, and the environment, determine the need for additional Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) action, and evaluate whether a removal action is appropriate.

## 2.0 SCOPE OF WORK

---

### 2.1 Document Review

To aid in the understanding of the Site background and history, 3E reviewed the following documents:

- Caneel Bay Legislation-2010.pdf
- 1983 Lead Agreement-CBIA to VIIS.pdf
- VIIS RUE Briefing Statement 4.22.16-Bill Stevens. Docx
- HR714 Virgin Islands-Caneel Bay Lease.doc
- Caneel Bay and Turtle Resort PW Violation Report.pdf
- Water and Wastewater issues at Caneel Bay.docx
- Caneel Bay Wastewater Report.pdf
- VIIS Caneel Bay Report Level 1 ESA report 9.4.12.doc
- LEVEL 2 ESA Report 3.4.14.pdf

As identified through review of the above referenced documents and specifically the Level I Environmental Site Assessment (ESA) and a Level II ESA, the Caneel Bay property has seven sites with identified and confirmed contamination from operations at the resort. The areas of contamination are listed as:

- Site 1 Engineering and Maintenance Area
- Site 2 Engineering Area Former UST
- Site 3 Grounds and Landscaping Chemicals Storage Sheds
- Site 4 Grounds and Landscaping Equipment Maintenance Building
- Site 5 Emergency Generator Building
- Site 6 Waste Water Treatment Plant
- Site 7 Debris Landfill.

Six of the sites have confirmed soil contamination with Site 2 being the only site confirmed with groundwater contamination. The chemicals of concern impacting soil at the above sites consist of pesticides, semi volatile organic compounds (SVOCs), silver, arsenic, barium, cadmium, PCBs, selenium, and mercury. These soil impacts exceed the US Environmental Protection Agency (EPA) Regional Screening Levels (RSLs) for soil screening protection of groundwater (SSL). Soil concentrations also exceed leachability criteria at these Sites; therefore, resulting in a potential for shallow groundwater environmental impacts. Groundwater contaminants of concern consists of benzene, ethylbenzene, naphthalene, and 1- and 2-methylnaphthalene. These groundwater concentrations exceed their respective RSLs for tap water.

## **2.2 Environmental Database and Aerial Review**

3E updated the electronic database report for the complete St. John Island. An electronic data search of federal, state and local government environmental records was conducted by Environmental Data Resources, Inc. (EDR). The result of the search is a “Zip” report listing all sites located in the same zip code as the subject property, rather than a map of the sites. St. John is covered by the same zip code (00830). The specific databases searched and sites found are listed in the EDR ZIP/PLUS™ Report, which is included as **Appendix A**.

All sites listed in the Zip Report were reviewed to verify the locations with respect to the subject property. As previously reported, listed sites are in Cruz Bay and are within 0.5 miles of the subject property. However, all the listed sites, are separated hydrologically or topographically from the subject site. The subject site is listed on the EDR report. The Caneel Bay Hotel site listing indicates that the facility is currently not a Resource Conservation and Recovery Act (RCRA) hazardous waste generator, and has no violations listed. In 1992 the facility was a RCRA large quantity hazardous waste generator with no violations noted. The Caneel Bay Hotel site is listed as a Facility Index Site (FINDS) which lists the RCRA generator status and a surface water pollutant discharge permit (NPDES). No site-specific details were observed. No additional information was listed since the previous EDR in the Level 1 Report in 2012.

As part of 3E’s review, historical aerial photographs from GeoSearch were obtained for the following years dated 1954, 1983, 1999, 2004, 2006, 2007 and 2011. The 1954 aerial photograph indicates that the resort was partially constructed and was present on the subject property. The adjacent properties were undeveloped woods, beaches, water bodies and a road (Highway 20). The 1983 to 2011 photographs indicate that the land use of the subject site and adjoining properties are similar to the current land use. Copies of the aerial photographs are included in **Appendix B**.

## **2.3 Onsite Review**

The purpose of the onsite review was to verify the information found in the supplied historical documents and compare the current facility operations to those specifically described in the Level 1 and Level 2 Reports. The onsite review was completed on September 8<sup>th</sup>, 2016 to verify the areas defined in the Level 2 Report and to identify additional onsite sources as they relate to the visual observation and determine if additional environmental impacts associated with the operation and maintenance of the resort have occurred since the date of the last report (2014). 3E personnel was escorted by Mr. Brad Dow, Director of Engineering with Caneel Bay Resort during the visit. Site Photographs are provided in **Appendix C**.

### **2.3.1 SITE 1 ENGINEERING AND MAINTENANCE AREA**

The Level 1 Report completed in 2012 discussed the numerous open containers of oil and oil filters, batteries, and generally bad housekeeping practices. These have since been corrected as the oil waste area has been completely revamped. Otherwise, the engineering and maintenance area appeared as it did in

the 2014 Level 2 Report. A floor drain and sink drain were observed northeast of the carpentry shop that was not mentioned in the previous reports. Based on visual review and coordination with the onsite escort it was not able to be determined where the outfall of the drain was located; therefore, we were unable to determine if any environmental impacts may have occurred from historical uses in this area.

Stressed vegetation observed in the 2014 Level 2 Report was observed during our site visit around buildings and AST pads in the engineering and maintenance area. Mr. Dow stated that the stressed vegetation was from their weed control application. A weed control plan including what types of pesticide/herbicides being applied and by whom was requested from Mr. Dow; however, this information was not made available for review to confirm if proper application techniques and volumes are being used.

From the 2014 Level 2 Report, three sediment samples exceeded RSL screening criteria for SVOCs and/or organochlorine pesticides that were collected from the concrete paved drainage north of the engineering maintenance area. The concrete paved drainage ditch that runs west to east across the site discharges to the beach on the west shore of Caneel Bay beneath the dock. According to Mr. Dow, stormwater runoff from offsite also flows through the ditch. Due to the unknown nature of the offsite impacts to the drainage ditch it was unable to be determined if the exceedances observed in the 2014 report were due to onsite or offsite sources. See attached **Figure 3**.

### *2.3.2 SITE 2 ENGINEERING AREA FORMER UST*

From the 2014 Level 2 Report, the former UST located south of the engineering warehouse concrete patch appears similar to what was observed in 2014. The monitoring well located on the southwest corner of the concrete patch area was also observed. The concrete patch appeared to be intact. No closure documents or information was available for review to confirm the removal procedures or if samples were collected as part of the removal operations. See attached **Figure 4**.

### *2.3.3 SITE 3 GROUNDS AND LANDSCAPING CHEMICAL STORAGE SHEDS*

The 2012 Level 1 Report mentioned ripped bags of herbicides and pesticides spilled onto unpaved floors. These items were not observed and appeared to be better organized. However, a new pole barn that was not present in either 2012 or 2014 report was observed east of the Chemical Storage Sheds. Visible petroleum staining was observed on a pervious surface from a nearby lawn mower. See attached **Figure 5**.

### *2.3.4 SITE 4 GROUNDS AND LANDSCAPING EQUIPMENT MAINTENANCE BUILDING*

The 2012 Level 1 Report mentioned an open-sided equipment maintenance building with numerous pieces of oily equipment, oil stained tables, oil-stained concrete floors, open containers of used motor oil, and numerous cans of gasoline and oil, and an oily odor was present in the area. The maintenance building appeared similar except no oily odor or open containers of used motor oil, gasoline or oil were observed. See attached **Figure 6**.

### *2.3.5 SITE 5 EMERGENCY GENERATOR BUILDING*

This building is west of engineering and houses two large diesel-powered emergency electric generators. The 2012 Level 1 Report stated that a strong oily odor was present in the building; the concrete floor beneath the generators was oil stained; and that several large lead-acid batteries were present on the floor of the building. This was not the case during 3E's site survey; these items appear to have been remedied.

However, the report did not mention the gasoline/diesel pump located on a pervious surface beside an asphalt paved road. 3E noted petroleum soil staining around the fuel pump on the pervious surface. Additionally, the asphalt paved road is sloped downgradient of the fuel pump towards another pervious area. Soil and groundwater samples were not collected to determine if there are environmental impacts associated with these fueling operations. See attached **Figure 7**.

### *2.3.6 SITE 6 WASTEWATER TREATMENT PLANT*

The Level 2 Report completed in 2014 showed numerous chemical storage containers of varying size within the building and slight staining on the concrete floor. The building no longer stores these materials inside and the concrete floor had been sealed and repainted. Additionally, a Level 2 Report soil sample location outside at the northwest corner of the building has been concrete paved over.

3E observed multiple unmarked and unlabeled 55-gallon drums approximately 300 feet east of the wastewater treatment plant pump building in a laydown yard within a wooded area. The number of drums is not known because they were covered in shade cloth and partially buried with fill. The drums that were visible were rusted and in poor condition containing various amounts of unknown liquid. Waste characterization of the drum contents was not conducted to determine if the drum contents are hazardous or non-hazardous. Soil and groundwater samples were also not collected to determine if environmental impacts may have occurred. See attached **Figure 8**.

### *2.3.7 SITE 7 DEBRIS LANDFILL*

The debris landfill area appears to have less vegetation debris than what was observed in the 2014 photographs. Mr. Dow stated that they plan to employ a wood chipper in the future to reduce the overall bulk. 3E observed the following while onsite:

- The previously noted depression contained rubber, glass and other non-organic materials layered throughout the depression.
- Observed excavation and stockpiling activities in proximity to the southern side of the debris landfill. Mr. Dow stated they may use some of the onsite fill in other areas at the resort.
- Un-sampled fill material was being used onsite outside of the landfill area. Without proper analytical analysis of this material, there is a potential to be spreading impacted media to un-impacted areas of the property.

- Per conversation with onsite personnel, the vertical and horizontal extent of the landfill and its contents are not known therefore the actual environmental impacts are unable to be determined.

See attached **Figure 9**.

## 3.0 REGULATORY REVIEW

---

This report documents the results of the RSE as required Section 300.410. The RSE was conducted to assess the threat posed to public health, welfare and the environment by the release and threat of future releases of hazardous substances on and from the Site, and to evaluate the need for removal action pursuant to 40 CFR 300.415CLA.

### 3.1 *Source and Nature of the Release of Contaminants*

#### 3.1.1 *SITE 1 ENGINEERING AND MAINTENANCE AREA*

**Source 1** - Operations within and around the maintenance buildings in pervious areas may be a potential source. The known soil contaminants are SVOCs, TPH DRO, arsenic and mercury. All these contaminants except TPH DRO exceed the US EPA RSLs for SSL.

**Source 2** - Sediment from deposits in the concrete paved drainage ditch pervious down slope. The known soil contaminants exceeded RSLs for SSL screening criteria for SVOCs and/or organochlorine pesticides, arsenic, barium and mercury.

The exposed pervious soil at these locations may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

#### 3.1.2 *SITE 2 ENGINEERING AREA FORMER UST*

**Source** - The operations of the former UST. The known groundwater contaminants exceeding RSL tap water are benzene, ethylbenzene, naphthalene, and 1- and 2-methylnaphthalene.

The groundwater and potential for petroleum impacted soil at this location pose a potential threat to the environment and ecological aspects of the surrounding habitat.

#### 3.1.3 *SITE 3 GROUNDS AND LANDSCAPING CHEMICAL STORAGE SHEDS*

**Source 1** - Operations within and around the landscaping chemical storage sheds may be a potential source. The known soil contaminants are organophosphorus and organochlorine pesticides, arsenic barium, selenium and mercury. All these contaminants have documented exceedances of RSLs for SSL.

**Source 2** - Petroleum stained area on pervious soil beneath the newly constructed pole barn. The stained area had a definitive petroleum like odor.

The exposed pervious soil at these locations may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

#### ***3.1.4 SITE 4 GROUNDS AND LANDSCAPING EQUIPMENT MAINTENANCE BUILDING***

**Source** - Operations within and around the landscaping equipment maintenance building may be a potential source. The known soil contaminants exceeded RSL SSL screening criteria for SVOCs, arsenic, barium, selenium and mercury.

The exposed pervious soil at this location may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

#### ***3.1.5 SITE 5 EMERGENCY GENERATOR BUILDING***

**Source 1** - Operations within and around the Emergency Generator Building may be a potential source. The known soil contaminants exceeded RSL SSL screening criteria for SVOCs, arsenic, barium, cadmium, selenium and mercury.

**Source 2** - The gasoline/diesel pump located on pervious soil may be a potential source. 3E observed existing petroleum odor stained area around fuel pump on pervious soil.

The exposed pervious soil at these locations may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

#### ***3.1.6 SITE 6 WASTEWATER TREATMENT PLANT***

**Source 1** - Operations within and around the wastewater treatment plant pump building may be a potential source. The known soil contaminants exceeded RSL SSL screening criteria for SVOCs, silver, arsenic, barium, selenium and mercury.

**Source 2**-The potential source of contamination exists around the unlabeled 55-gallon drums located 300 feet east of the waste water treatment plant pump building. 3E observed the rusted 55-gallon drums were in poor shape and contained liquid.

The exposed pervious soil at these locations may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

### *3.1.7 SITE 7 DEBRIS LANDFILL*

**Source** - Operations of the debris landfill may be a potential source. The known soil contaminants exceeded RSL SSL screening criteria for the pesticide dieldrin, polychlorinated biphenyls (PCBs), SVOCs, arsenic, barium, selenium and mercury.

The exposed pervious soil at this site may pose a potential threat to the public through direct exposure and given that the soil concentrations exceed leachability criteria may pose a potential threat to the environment and ecological aspects of the surrounding habitat.

## 4.0 LIMITATIONS

---

### 4.1 *Specific Limitations*

The following provides specific project limitations that should be considered upon review of the data, conclusions, and recommendations provided herein:

- Documents provided by the NPS contained information that is accurate and reliable.
- Partially buried drums were observed at Site 6. Excavation or other types of intrusive explorations to identify the amount of fully buried unmarked 55-gallon drums or their contents was beyond the scope of this project.
- Appendices from the Level 1 Report were missing including; site location maps, database report, historical aerial maps and survey maps.
- 3E could not visually assess the complete site due to heavily vegetated areas.
- No other visual survey was completed at any of the resort rooms. The conclusions and recommendations provided herein are based on analytical data collected by others. 3E cannot verify compliance with state and federal sample collection procedures and cannot guarantee the validity of the data provided by others.
- Opinions regarding regulatory applicability are based on 3E's knowledge of the regulations, experience with similar projects, and standard industry practices. Consultation with legal or regulatory officials was not included within the scope of this project.

## **5.0 CONCLUSIONS AND RECOMMENDATIONS**

---

On the basis of the evaluation conducted and the factors outlined in 40 CFR 300.410, 3E has determined that the release of hazardous substances at the Site pose a potential threat to public health, welfare, and the environment and that a non-time-critical removal action should be initiated to fully assess the impacts and abate/contain the release of hazardous substances off-Site at the following locations:

- Site 1 Engineering and Maintenance Area
- Site 2 Engineering Area Former UST
- Site 3 Grounds and Landscaping Chemical Storage Sheds
- Site 4 Grounds and Landscaping Equipment Maintenance Building
- Site 5 Emergency Generator Building
- Site 6 Wastewater Treatment Plant
- Site 7 Debris Landfill

A removal action comprised of delineation of soil and groundwater contamination in these areas at the Site is necessary to address potential migration of contaminated soil and groundwater off-Site; abate the potential threat to public safety; and ensure the long-term success and protectiveness of the Site.

## Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

## Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

## COMMUNITY WATER SYSTEM

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### Federal NPL site list

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

**Federal Delisted NPL site list**

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Federal CERCLIS list**

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

**Federal CERCLIS NFRAP site list**

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

**Federal RCRA non-CORRACTS TSD facilities list**

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## Other Ascertainable Records

## RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. ## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## **OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
