The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Thank you

Tad Moore

**Correspondence:** I am absolutely against any proposal that would not allow my dog to run free. Who are the people who would require all dogs to be on leashes at all times? They are the Utopians who believe they know better how others should live their lives and that all institutions that have existed with virtually little or no problem, should be eliminated or amended so that these Utopians can feel empowered. The people I know who have dogs and walk them in the parks which allow them to do so unleashed, do so responsibly and by that I mean that they pick up after their dogs and reel them in when conflicts occur. If they know their dog is territorial, they keep the dog on the leash. It's simple common sense. This common sense may be violated by an extremely small minority of dog owners. That these events, of which i have not seen one, are elevated to crisis status by again, a very small handful of idiots, is idiotic in and of itself and symptomatic of the pussification of America and especially the Bay Area (San Francisco).

I oppose any regulation that would prohibit my dog to run freely and responsibly.

**Correspondence:** My family has been taking our dogs to Fort Funston for more than 20 years. We live in San Mateo, but it has become increasingly difficult to find an open, legal, place for them to run, play, and exercise... so we make the 20-30 minute drive up to the Coast. This trek has become a favorite of ours, and is the most exciting thing in our dogs' lives. Every few weeks we load them into our Jeep and head up Hwy 280... it isn't long before they sense our destination and, boy, do those tails start wagging!

Now, we are hearing that the GGNRA, in it's infinite wisdom, plans to restrict the off-leash area at various locations, including Fort Funston... to some tiny little plot of enclosed land. We already have enclosed, postage stamp-sized lots in San Mateo for our dogs... they are a JOKE! Dogs need lots of open room to exercise & have some fun. Now, we can't even take them down to the beach & throw a ball or stick into the waves for them to retrieve ?!! Ridiculous and completely unfair. Who do you folks actually think you are, anyway? I thought we defeated the Nazis decades ago! Where is our "Government by the people, and FOR the people" ?!

How about you put this to a vote (this IS America, isn't it?) instead of imposing your authority on the public? Does ANYTHING that we (the dog-loving public) say even matter at this point? Surely does not feel like it.

There is NO reason we can't have parks/beaches that DO allow dogs off-leash, in addition to these restricted locations that you dog-haters are so passionate about. That way, you folks can go to your dog-free parks and talk about the "native plants" and the rest of us can enjoy the great outdoors with our best friends.

Are you still even reading this at this point? I probably lost you at "Nazis", huh? Well, just in case this IS being taken into any kind of consideration, please put my family down for a huge "Hell, NO" on the GGNRA's plan. It is just wrong.

Thank you.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Park Planning,				

My name is Maya De La Rosa-Cohen and I live with my family and two dogs in the Noe Valley neighborhood of San Francisco. I have been recently deeply disturbed by your proposed plans to cut 90% of the land where I normally walk with my dogs at least three times a week. Considering that there are very few alternatives left in the city where I can walk freely with my dogs who are under voice control off-leash, this proposed plan will greatly negatively affect our day to day lives. I strongly disagree with the positions of the executive boards of these groups, and would like to make it clear that these local boards do not speak for their members nor do they speak for me. My dogs and I spend at least three days a week walking at Fort Funston, Crissy Field and Fort Mason- an activity that is good for our mutual health and happiness. The restriction of these and other areas that have long been established as off-leash pet areas would be an abominable change for many dog owners living in San Francisco. The Preferred Alternative is too restrictive and there is no justification in the SEIS for these major changes. Moreover I support the formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. Putting up fences in areas like Crissy Field, Fort Mason and Fort Funston would make the off-leash areas feel like pens and visitors using them will feel unwelcome. Fences secure enough to keep small dogs in will hinder movement of wildlife. But if fences are not secure enough to keep small dogs in, why have them? One of the great advantages of SF living and SF beauty is the open and welcoming nature of our parks. The plan to restrict these areas with fences and other material boundaries would be a grievous mistake that would inevitably damage our city's beauty and welcoming energy- not to mention how it would negatively alter the lives of SF dogs and their beloved owners.

Lastly, I would like to formally oppose the Monitoring-Based Management Strategy that replaced the DEIS Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported. The SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative. The SEIS lists many, many comments

from people opposed to dog walking and very few from people who support dog walking. The SEIS copies, without change, entire sentences and text from the DEIS about studies of dog impacts, especially on wildlife and birds, even though DEIS comment showed that this text was inaccurate, misleading, and misrepresented what the studies actually said. Yet the SEIS copied it word for word. Comments supporting dog walking were not used to argue that there should be more off-leash restrictions, while comments opposing dog walking were used to argue for more restrictions. SEIS still lists impacts that might, can, or could happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

My dogs and the dogs of my friends are all under voice control. They present no evident threat to the indigenous wildlife of the areas we walk in. The off-leash areas at Fort Funston, Crissy Field and Fort Mason provide an incredible community for dog lovers, owners and walkers to enjoy this city's natural beauty freely. The harsh restrictions outlined in your plan are unfair and unwarranted. Please reconsider as I know this issue is greatly important to me, my family, my dogs, and my friends who, although they may not own dogs, truly enjoy the freedom allowed them and their fellow citizens to walk with their dogs off-leash on park grounds.

Sincerely,

Maya De La Rosa-Cohen

<b>Correspondence:</b>	In different plans I noticed that there are areas where it is suggested "no dogs are allowed". These areas then get a designation of no impact(by dogs) since no dogs are allowed. While logical, in fact, "no impact" is not an accurate designation because dog owners consciously decide not to obey the rules and will take dogs where there is no enforcement at the time.				

That some dog owners purposely do not obey the rules is also stated in a few places in the SEIS. It is not an opinion, it is a fact. Therefore to be more truthful, I suggest you take into consideration that even in areas where no dogs are allowed, there will be impacts from dog walking. Some dog walkers prefer to get away from other people and dogs and will seek out "no dogs allowed" areas to do so. I once had a friend tell me she purposely walked her dog on a "no dog" trail because her dog didn't get along with other dogs.

Assuming "no impacts" from dogs in areas where no dogs are allowed is dependent upon enforcement until such time as people decide they need to obey the rules.

Having lived next door to a 35 acre offleash dog park for nearly 20 years and following the progression of offleash dog recreation in CA, I suggest modifying any statement as to "no impacts" in areas where "no dogs" are allowed by adding it will take "consistent enforcement" for that to be a truer statement of fact.

**Correspondence:** The GGNRA Draft Dog Management Plan / SEIS is an incredibly biased document that is focused on creating increased limits to dog owners/dogs without any consideration or sense of fairness regarding the reality of the current situation. If the GGNRA is approximately 117 square miles and 99% of it is currently off limits to dogs, then currently 115 square miles are unavailable to dogs, leaving only approximately 2 square miles for dog access. Shouldn't the conversation and the dog management plan be oriented to finding MORE opportunity for recreation for people with dogs? The bone-headed bias that resulted in this draft plan going public should be an embarrassment to the GGNRA. Where's the leadership? Next thing you know, you'll be suggesting paving over undeveloped ridge lines for parking lots above Muir Woods...wait, you already did that! It appears that there's a tremendous amount of confusion over the mission of the Golden Gate National RECREATION Area, an area that was rightfully protected from development so as to be enjoyed by all.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to as many dog friendly places in the GGRA, like Muir Beach or the Miwok Trail, as possible and would like to continue to have the current access to them.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

---

**Correspondence:** With the issue of dog management in the GGNRA under discussion, I would like to see stricter rules for dogs developed and enforced.

Reasoned, responsible dog owners would not expect to take their domestic pets to a natural open space and allow them to interfere with other park visitors and wild life as the dogs run off leash. The demonstrative dog owners who argue for their 'right' to run dogs off leash should not be allowed to dictate policy.

Please rule in favor of the park.

Thank you.

Bill Jones

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear NPS,				

I'm writing to urge you to support and promote dog-friendly policies in the Golden Gate National Recreation Area.

I live beside the GGNRA and am grateful to spend time hiking and cycling on the Miwok, Coastal, Green Gulch, Dias Ridge, and other trails almost daily. Often, I walk my dog along the Miwok trail, meeting up with friends and neighbors doing the same. Walking our dogs in the GGNRA has been the basis of many friendships and has fostered a true sense of community in our neighborhood, whose steep, windy, narrow roads and lack of sidewalks is not safe for dog walking.

My 12-year-old daughter and I constantly marvel at the good fortune we have to live near such a beautiful, hilly place, that allows us to get some real heart-pumping exercise and appreciate nature while we walk our dog. The GGNRA currently allows many kids and families a chance to get out in nature and exercise with their pets-an awesome way to ensure that children grow up with an appreciation for animals and nature and a healthy appetite for physical activity.

In the nearly 1,000 visits I've made to the GGNRA over the past three years, including frequent weekend visits to Muir Beach, I've never encountered any bad dog behavior. Instead, I see dog owners yielding to cyclists, other hikers, and beach goers; picking up after their pets; forbidding their dogs from going off trail; and generally acting responsibly. I've found the dog owners who frequent the GGNRA to demonstrate an amazing model of responsible citizenry and consideration for others.

So, I was surprised and disappointed to discover that you are considering further limiting the areas where dogs are allowed in the GGNRA.

The GGNRA was designated as a recreation area for exactly this kind of use-for the residents of the Bay Area to have the opportunity to get exercise in fresh air and nature. Please don't take this opportunity away from those of us who value it so deeply.

I understand that you have not undertaken the peer-reviewed, site-specific studies required by law before drastically altering public use laws. How, then, can you make a proper decision about trail usage in the GGNRA?

One thing is certain: the consequence of sending southern Marin dog owners into their cars to walk their dogs someplace further afield would be more traffic, more fuel emissions, and less exercise for local residents. None of that is in keeping with the National Park Service's mission.

I urge you to maintain dog-friendly status throughout as much of the GGNRA as is possible, certainly including the Miwok Trail, the Coastal Trail, the Wolf Ridge Loop, the Rhubarb Trail, the Rodeo Beach Loop, Muir Beach, Homestead/Four Corners, and everywhere else dogs are currently allowed.

To honor the needs of local residents, I urge you to return to the 1979 Pet Policy, which allows for appropriate use by pet owners of OUR recreational land.

Thank you for listening. Please think carefully about the impact these decisions have on local communities, on the health of our families, and on the lifelong habits our children are forming. We treasure the opportunity to exercise in nature, with our whole families- -dogs included!

Sincerely,  
Kaitlin Quistgard

**Correspondence:** The current off leash areas in the GGNRA are very important to the thousands of dog owners in the bay area. Please do not place any additional restrictions on both off leash and on leash dog walking. There are over 100,000 dogs in San Francisco and they need a place to exercise. San Francisco has given a significant amount of its beaches and natural lands to GGNRA jurisdiction and current San Francisco parks are not able to handle the influx of dogs that would happen if dog walking was limited in the GGNRA. On behalf of me and the thousands of other dog owners who walk their dogs in the GGNRA please do not restrict dog walking.

**Correspondence:** I am writing because I oppose Alternative F and because I support Alternative A.

I have lived on Spring Drive, just a few blocks from the Miwok Trailhead on Marin Drive, for almost three years, and my wife, my dog and I are in the GGNRA almost ever day, hiking, running or riding our bikes out to Muir Beach. In the hundreds of times we have done one of these activities, we have NEVER witnessed an unfavorable interaction between dogs or humans. On the contrary, dog walkers are routinely courteous and friendly. Nor have we observed any sanitation issues as a result of dogs.

My understanding is that the GGNRA is a recreation area that was established for this very set of activities. And as an avid user, I can attest that it is hugely successful today at fulfilling that mission: recreation. And dogs need recreation just as we do. There is already so little open space available to dog lovers; 3 trail corridors in the headlands and Muir Beach. What benefits can further restrictions possibly yield? Indeed, Alternative F will only limit the recreation possibilities for many people, as well as their dogs.

Choose Alternative A.

Thank you.

**Correspondence:** Marin county is an outstanding place to live, because of its open space, that is enjoyed not only by the residents but by untold numbers of visitors. The GGNRA represents much of this open space, such that the proposed ban on off leash dogs would have a profound effect on the happiness of not only the affected dog residents but thousands of their owner-families.

I support the No Action Alternative in the SEIS for Muir Beach, Homestead, Oakwood Valley and the Marin headlands.

I use these areas almost every day and find the vast majority of dog owners I encounter are responsible stewards of these much appreciated areas.

Please keep the 1979 Pet Policy in place.

The GGNRA is a major reason that San Francisco is such a great place to live. I have financially supported the GGNRA and feel the provision of approved off leash areas for dog owners represents significant value in the community.

**Correspondence:** Dear Sir or Madam:

My name is Wendy Umphrey and I live in Mill Valley. I have walked my dog on Crissy Field, Ocean Beach, and on approved Marin trails, for the past 5 years.

I strongly oppose the preferred alternative for Crissy Field, Ocean Beach and Marin county trails like the Oakwood Valley trail because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science and not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, dogs are a part of our lives here in the Bay Area. Most pet owners want to be responsible pet owners. We want to exercise our dogs freely in the allowed open spaces, because tired dogs are good dogs. Having a yard or fenced dog park to exercise in is not sufficient for any but the smallest of breeds. Further curtailing the amount of open space available for dog exercise will affect the dogs and dog owners in a negative way, and whether it will improve the lives of non-dog people is questionable at best. Please keep the rules as they are. We already are seriously constrained as to where we can exercise our animals. Thank you.

Sincerely,

Wendy Umphrey

**Correspondence:** Please do not change the current off leash policies. We take our dog out off leash whenever we can. She enjoys the freedom of running around meeting other dogs as do I. I love that she

---

can run around and explore. I know that it makes her so very happy.

We visit Pulgas Ridge in San Carlos very often and would actually prefer more off leash access on the hiking trails. About once a month, we will go to either Fort Funston or Baker Beach.

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

<b>Correspondence:</b>	The proposed changes to the dog walking areas are a total disaster. The idea that all the dogs that use Ocean Beach are to be restricted to an off leash area under the Cliff House that's approximately the size of a baseball diamond is so blatantly unworkable that it's simply ludicrous. The dogs and their owners would be packed like sardines in a ridiculously tiny space. It will absolutely ruin Ocean Beach as a destination for dog owners. Owners and their dogs should have access to - at bare minimum - the section of the beach from the Cliff house to Fulton Street, which is half a mile long, and will leave the remaining three miles of beach dog free. I hardly think that letting dogs have access to one-seventh of the total beach is asking too much. Dog owners are numerous in San Francisco. We have a right to enjoy the beach, with our dogs, without being cramped and corralled into a virtual shoebox.

**Correspondence:** We chose to live here and pay property taxes in this very expensive county mainly due to access to open space. We have owned dogs all our lives. For 20 years we were in SF and for the last 8, here in Marin County. We are extremely distressed to see our rights to open space in the GGNRA being further limited. As it is, we cannot walk with our dog on Mt Tam. The GGNRA was historically set aside as a RECREATION AREA...it's even in your name. It is NOT a museum of flora and fauna. I feel the rights of dog owners to enjoy at least the minuscule 1% or so of designated trails is being further chipped away at by a vocal few.

As a woman who frequently hikes alone during the week, many times, the only other people I see on the trails are other folks walking their dogs. When you take that user group out of the mix, it feels LESS SAFE. This was the case when many former off leash sites in SF became leash only. Suddenly, no one was there. The regular folk disappeared who'd been daily walkers.

We live in a urban area and the GGNRA land was set aside expressly to SERVE THE PEOPLE and create a balance with nature. To discriminate against one user group flies in the face of everything the GGNRA was historically set up to do. Please do not erode our freedoms further. Let the SF Bay Area be an example of tolerance and freedom and respect for all life, man and dog alike.

**Correspondence:**

Hello -

I support Alternative A and strongly oppose Alternative F.

I do not own a dog, but I live near Eastwood Park, off of Tennessee Valley Road.

I have always enjoyed seeing dogs on these trails and have never seen a dog or dog-owner misbehave. It's one of the reasons I enjoy walking this trail, because the dogs make me smile. And I see how families and elderly benefit from being able to take their dogs on a nearby trail to walk without having to get into a car and face tremendous traffic - which has gotten increasing worse with the increased visitation to Muir Woods.

I do think that professional dog walkers should have some limits on the number they can have off-leash at any time and should have responsibilities for helping keep our trails clean. I believe if they received GGNRA permits for a fee, that fee could help offset providing additional trash cans/garbage bags to make cleaning up poop easy.

Thank you for your consideration,  
Robin

**Correspondence:** I would submit that dogs should be kept on leash in the GGNRA. At Crissy Field, the area where I spend the most time as a runner and bird-watcher, off-leash dogs are harassing and killing the endangered plovers. There are numerous other places where people can allow their dogs to run wild (Golden Gate Park? Dolores Park? Alta Vista Park? The Presidio?) without needing to jeopardize an endangered species. Aside from that, it is annoying and dangerous whenever an unleashed dog sprints on to the busy bike/walking path nearly causing collisions with cyclists, pedestrians, strollers, etc.

Dogs certainly need to be on leash in other National Parks. Why is GGNRA regarded differently just because it is located within city limits? Would dogs be able to run around terrorizing and maiming wildlife in Yosemite Valley? Of course not. So why are the standards set differently for San Francisco?

Sincerely:

---

A concerned San Franciscan and nature enthusiast

**Correspondence:** I visit Fort Funston with my dog Cora every day. She is a great dog and is really only happy and fully exercised when she gets to run around and explore nature and socialize with other dogs. I strongly oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** Having been a GGNRA user for decades, I believe it is critical to allow continued off leash access by dog users, unchanged from current conditions. Option A is the clear choice. The other proposed regulations are a response to vocal minorities that agitate for change due to personal bias or infrequent and uncommon incidents. In reality, given the enormous number of dog walkers that allow their dogs to exercise and play off leash, any such incidents are truly rare. Dogs and their people are overwhelming valuable, considerate, and responsible users of the GGNRA who should not be unnecessarily regulated. Enforcement should be reserved for the true bad apples who are unlikely to change their behavior regardless of regulations. The resources already expended for this process, and the resources that would potentially be required under the other options, can and should be allocated to more important issues. Allowing people to self regulate first, with enforcement a distant second, is always in society's best interests and is the higher calling of freedom. People who want to avoid dogs have ample alternative locations to visit within the GGNRA. Just like changing the station to avoid unwanted programming, people have a choice. Neither is censorship or the heavy hand of authority the best

---

solution. Educate, maintain, serve, improve, supply, and communicate with your users to engender the behaviors you desire and you can accomplish more than you can with the proposed options.

For the record, I own a home, a business, I vote, I pay taxes, and yes, I have a dog. I am a responsible, contributing member of society who understand the issues and the consequences of what I am asking.

**Correspondence:** I pay a lot of my income to live in marin , I have dogs and horses and I live in marin because I enjoy open space . I have lived hear my whole life , and have always had dogs as do all my friends , we all enjoy the parks and open spaces . I also work with dogs and all my clients , even the elderly enjoy the trails and open spaces with thier dogs . They spend a lot of money on thier pets as do most people in marin , we are not a county who dumps a dog in the back yard and forgets about them! They are part of the family , thankfully . You will lose a lot of support if you enact unfriendly dog policy in the park. The funny thing is most of the people I know that use the park have dogs ! We are the ones who use it every weekend or even more , we are not tourist or fare weather users . We are responsible , we pick up poop , and train our dogs . We have a lot invested in our pets health and well being . The park is part of our life . I think it sad a for the higher ups to treat us like insignigent users and to pit "kid people " against " dog people " , many have both . I can not tell you how many dirty diapers I have seen ( and picked up ) on the trails after a holiday weekend .... How many beer cans , how many cigarettes how much garbage .... So for the parks to act like thier biggest issue is dogs ! Please.

Sadly the park is not pristine and it never will be as long as people use it, so to act like dogs being removed will somehow return it to it's natural state is just ridiculas . Also to act like more people will use the parks if dogs are gone is also ridiculous . People will either use it or not , it's not about whether or not dogs are allowed. I know Sierra club people and Audubon peopel, I support both, I believe there are times when we need to post no off leash dogs during nesting of some birds .... But to make it permanent is a mistake .

Marin is about 90% oen space , thanks to real environmentalist , not burrecrats . It's not okay to act like dogs are that big of a problem , it is a waste of time . Do something better with your time and resources . I see dogs and family's every where , they are a huge part of our lives now . In fact the pet industry was one of the only industries to grow during the recession and continues to grow , you are missing an opportunity to be more progressive and inclusive of all park users .

Mr. Frank Dean, Superintendent  
National Park Service ' Golden Gate National Recreation Area  
Building 201, Fort Mason  
San Francisco, CA 94123

Dear Mr. Dean,

I am writing to offer my reaction to the GGNRA Dog Management/Environmental Impact Statement Plan. As I review the Preferred Alternatives, I am concerned over the effect the implementation of the Alternatives may have on the San Mateo County residents and visitors. As the San Mateo County Supervisor representing the Supervisorial District adjacent to Fort Funston, I respectfully ask that GGNRA considers continuing to allow off-leash play areas. Citizens in my District have used Fort Funston to recreate their dogs responsibly for years.

Throughout the process conducted to produce the Plan, I heard residents of San Mateo County ask not to have trail access and off-leash play areas for dog walkers reduced. As I reviewed the Alternatives, I am concerned by how many of these areas are being prohibited or restricted for dog walkers. In addition, I have concerns over the potential impact this can have on San Mateo County's coastal communities. By reducing the amount of trails people can access with their dogs and citing people for violations, GGNRA will be discouraging people from engaging in outdoor activities and enjoying their national park lands. GGNRA states that they have selected the Alternatives because it grants multiple user groups the opportunity to enjoy the property, allow for habitat restoration. and is justifiable and enforceable by NPS Rangers. I am sympathetic to the need to reduce conflict between dog owners and those who may be afraid of dogs, the preservation of habitat, and reducing potential liability of the GGNRA. For decades, dog walkers, non-dog walkers, mountain bikers and horseback riders have all enjoyed the trails and park areas that are now managed by GGNRA. Multiple user groups have been enjoying these areas together in the past and should be able to continue to do so. I believe the strong desire by dog walkers and the community to continue the traditional use of these areas for recreation of their pets will make it difficult for GGNRA and the NPS Rangers to effectively enforce the Alternatives.

I ask that you reconsider your Alternatives and not place such heavy restrictions on trails, and especially the Fort Funston area currently used by dog walkers.

Sincerely,

Supervisor Adrienne J. Tissier

District 5

County of San Mateo

Dog Management Plan  
Supplemental Environmental Impact Statement  
Support: NO ACTION ALTERNATIVE  
January 13, 2014  
Dear Mr. Dean,

I walk my dog, off-leash, on the Oakwood Valley Trail in the GGNRA, several times a week. I was surprised and disappointed to learn that a discussion was underway to reduce the amount of free running area for dogs. I would have hoped to be writing in support of expanded access, but see that elements opposed to dog interests have already framed the conversation negatively.

The GGNRA is an astonishing resource for our community. When I lived in San Francisco, I was a runner, without a dog, who used many if not most of the Area's trails. It was always a pleasure to encounter the many other types of travelers, whether they were on horse, mountain bike, or foot. I also would come to ride the wonderfully beautiful and challenging single-track trails that beckoned from across the Bay. Now I take my dog for the only off-leash walking we can do to the Oakwood trail. Over the decades my opportunities to experience the GGNRA have been systematically reduced, undoubtedly as the result of initiatives like this one, by a vocal minority. As managers of the Area, I would encourage you to find ways to expand access for all, as opposed to reducing it.

At the very least I'm certain you recognize that as use groups are pushed from the Area, your fundraising is impacted. In my case, GGNRA was a favored charity. That is no longer the case as I cannot peruse my preferred activities as I could in the past. I expect that your mandate is not to maximize financial support, but I do think that lost revenue should be an indicator of whether or not you are meriting the needs of your audience.

Perhaps the issue is the result of a misunderstanding of the function and environmental quality of the Area. This is a large urban park close to a major city, and surrounded by suburbs. It provides local flora and fauna historic and protected borders. But, most importantly, it is a recreation area for humans wishing to engage nature. Not all people do that the same way, and helping us accommodate the needs of each other could be your highest priority. In this country we have a wide variety of outdoor areas, some that exclude humans to protect the natural order, such as the Farallon Islands. There are other areas like Golden Gate Park that are almost entirely devoted to human use, despite the large sample of flora and fauna that exist there.

While it is possible that free roaming dogs in the GGNRA may scare some wild life, I suspect there is plenty of remote area that can act as a refuge, should it actually be proved that the dogs are a problem. Mostly, however, this park's use is between the Farallons and Golden Gate Park. It is for all humans and is an essential resource for those of us who have dogs. Since a good dog is a happily exercised dog, please keep and expand the area we can use to experience nature with our pets, thereby providing a benefit, in well behaved canine companions even outside of the GGNRA.

Please give me a reason to support the Area again. Many thanks for your consideration.

Chip Smith  
167 Ethel Ave

GGNRA Ft. Mason

Re Dogs @ Rodeo Beach Ft Kronkite

As a longtime user, perhaps twenty years, who walks my dog @ Kronkite beach I would hope that we are able to continue to do so. People are generally conscientious, but I for one clean up others poops when I find them. When I walk I pick up plastic, foam and mylar, oh and treated lumber scraps. mainly its bottle caps, straws and shotgun wads. In the past, a loop of the beach netted a shopping bag full, now 2, 3 times a week I'll fill a pocket. We are getting better. We really need places to let our dogs run. Most of the coast is reserved for shorebirds. I've lived on, in a salt march in Larkspur for 35 years.

Thank you

Herbert B. Launer

Bill Bechtell

President, Montara Dog Group

P.O. Box 370493

Montara, CA 94037

Mr. Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Bldg 201

San Francisco, CA 94 123-0022

Attn: SEIS

Dear Superintendent Dean,

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan/Supplemental Environmental Impact Statement (Draft DMP/SEIS).

I apologize if you find some of my comments similar to comments on the previous Draft DMP/EIS. The web-based "Comment Response Report" was entirely too cumbersome to be practical. In any event, it appears that most comments were not taken seriously, because the GGNRA's preferred alternative for Rancho Corral de Tierra (Rancho) in the current Draft DMP/SEIS still does not allow sufficient opportunity for recreational dog walking.

My name is Bill Bechtell and I am president of the Montara Dog Group. The group consists of approximately 400 people, mostly residents of the San Mateo County midcoastside, who regularly walk their dogs in the open space known as Rancho. The midcoastside includes the small unincorporated communities of Montara, Moss Beach and El Granada. It is bounded on the west by the Pacific Ocean, and on the east by Rancho. The area has long had the reputation of being a dog-friendly area, largely because of the numerous trails available in Rancho for dog walking. I, myself, have lived in Montara for 37 years, and regularly walk my dogs on the numerous Rancho trails. The midcoastside is also a tight-knit

---

community willing to fight hard to preserve the cultural and environmental values that attracted us to this area in the first place.

For many years the open space known as Rancho was privately held by various development corporations. They tried to build condos and golf courses, and to subdivide the property into "ranchettes." We fought back all of these attempts. Then Caltrans dusted off some 1960s-era freeway plans, and tried to put a freeway (the Devil's Slide Bypass) through the heart of Rancho. Again we mobilized to fight this freeway, and eventually convinced Caltrans that a tunnel behind Devil's Slide was a much better solution, again sparing Rancho.

Then in 2001, the Peninsula Open Space Trust (POST) purchased Rancho to save it from development. We dog walkers have had a very good working relationship with POST over the years. They have no staff rangers, so we have been POST's eyes and ears on Rancho, reporting off-road vehicle activity and illegal dumping. We have also installed and maintained dog waste disposal cans throughout the dog walking area for the past 6 years at our own expense, and all done by volunteers from our group.

If the GGNRA's preferred alternative for Rancho (Alternative B, No dog walking allowed except on-leash on a few trails near Montara and El Granada) is put into effect, it will be very sad and ironic that those of us who have fought so hard to protect the land will now be forced off of the land. (See Attachment 1).

The GGNRA is referred to as a "park" throughout the SEIS. The GGNRA is not a National Park. It is a National Recreation Area. If Congress had wanted GGNRA to be a national park, that is what they would have authorized. Also on the first page of the Executive Summary, the SEIS states: "The purpose of the GGNRA is to offer national park experiences (emphasis mine) to a large and diverse urban population while preserving and interpreting natural, historic, scenic and recreational values." If I want "national park experiences" (whatever that is) I will go to a real national park, such as Yosemite, Yellowstone or the Grand Canyon. I understand that the GGNRA's mission requires balancing the various values, but this SEIS does not give nearly enough weight to recreational values (such as dog walking), the main reason for the GGNRA's existence.

The Montara Dog Group's "preferred alternative" for Rancho is Alternative A, the "No Action" alternative, with the addition of two off-leash dog walking areas, one near Montara and the other near El Granada (See Attachment 2). Dogs would be allowed on-leash throughout the remainder of Rancho as indicated in Alternative A in the SEIS (See Attachment 3).

There is a fundamental error in the status quo assumed for GGNRA's No Action alternative in the SEIS. As acknowledged on page 60 of the SEIS, there has been a long history of off-leash dog walking at Rancho, although not officially sanctioned. As such, off-leash dog walking should be the status quo or baseline for GGNRA's No Action alternative, not on-leash dog walking. As you know, Montara Dog Group and Crissy Field Dog Group have previously corresponded with you extensively on this issue, so instead of rehashing the contents of those letters, I have attached them to my SEIS comments, for the record. (Attachments 4 through 9)

The tone of the SEIS tends to pit dog walkers versus environmentalists, and that is not necessarily the case. Although a dog walker, I also consider myself an environmentalist. I have been a Sierra Club member for over 50 years (former trip leader), and a member of Sequoia Audubon Society (former board member) for about 30 years. With proper education, signage and enforcement, there is no reason for dog walking to cause environmental damage, either to wildlife or plants. Mr. Ken White, president of the Peninsula Humane Society & SPCA, considered the effect of off-leash dogs on Rancho near Montara, and came to these conclusions:

"Our professional wildlife rehabilitation staff completed a review/analysis of the site and the proposal, and we believe that there is no observable reason related to the protection of native wildlife which would justify denying access to off-leash dogs in the area."

Please reconsider your plan to ban dogs and off-leash dog play from the small areas of Rancho Corral de Tierra which informally allowed this use for years with no negative impact."

Ken White's full letter is attached at the end of my comments (Attachment 10). Mr. White's conclusions directly contradict the speculative wildlife impacts at Rancho suggested by GGNRA on page

697 of the SEIS. The fact is that the SEIS fails to identify any scientific studies, site specific to Rancho, that document adverse impacts from dog walking on wildlife or on flora at Rancho. Montara Dog Group certainly realizes and accepts the need to restrict dogs (and people) from certain sensitive habitat areas, and will cooperate fully to help protect those areas when they are identified by scientific studies. Another flaw in the SEIS and GGNRA's preferred alternative is the total lack of off-leash dog walking opportunities in San Mateo County. Page 43 of the SEIS refers to "Management objectives in the draft 2011 General Management Plan that are relevant to dog management include the following: The park has significantly expanded in size and includes many new lands in San Mateo County. This planning process takes a comprehensive parkwide approach that will help ensure that the management of the natural and cultural resources and visitor experiences are consistent throughout all park areas." (Emphasis mine.) Obviously the SEIS does not meet this objective because Mann County and San Francisco County both have off-leash dog walking areas, while GGNRA's preferred alternatives for San Mateo County have none. Off-leash dog walking areas should be provided by GGNRA in San Mateo County as well as the other two counties.

In conclusion, GGNRA's draft Dog Management Plan/SEIS is extremely biased against people who recreate with their dogs, with insufficient documentation to support that bias. It appears that the GGNRA's goal is to restrict people with dogs to the maximum extent possible, in spite of Congress' mandate in the enabling legislation to preserve and encourage recreation, including dog walking. I hope that the final plan will take our comments to heart, and provide more areas for dog walking, both on-leash and off-leash, within Rancho and the rest of the GGNRA.

Yours truly,

Bill Bechtell

President, Montara Dog Group

Member, Sierra Club

Member, Audubon Society

RE: Draft Dog Management Plan/Supplemental Environmental Impact Statement

Dear Superintendent Dean;

I am writing to comment in response to the Draft Dog Management Plan/Supplemental Environmental Impact Statement (DMP/SEIS). This important document will affect the entire Bay Area for years to come and it is important that the GGNRA planners listen to those of us who have been using these lands, some of us for decades. First I would like to say that I find none of the alternatives acceptable, as none allow off leash dogs, but I prefer Alternative A. I am an equestrian who has been active with the local land managers to keep horses on area trails and in the future plans for land use. (Board Member, Bay Area Barns and Trails; President, Coastside Horse Council; Committee Member, SMC Confined Animal Technical Advisory Committee; Member, SMC Resource Conservation District Advisory Board; Past President, ETRAC) I am a member of several riding clubs and a member of the Montara Dog Group. I am a resident of Montara and have been riding with or walking with my dog in the area now known as Rancho Corral de Tierra (Rancho) for almost 20 years. I grew up in San Francisco and rode horses for years on the beach and in Golden Gate Park (with my dogs). I have been using the area now known as GGNRA since the early 1950's. I find your new plan restrictive and not supportive of an open space for urban recreation.

My first objection is your statement of the purpose of the GGNRA as "providing a national park experience to the public." GGNRA is a National Recreational Area not a National Park. As such its purpose is to provide open space for public recreation and enjoyment. The lands that comprise GGNRA have been used for farming and/or have been under some form of human management for centuries and are not the pristine areas that make up a National Park such as Yosemite or Bryce or Yellowstone. The GGNRA lands are perfect for urban recreation; they are easily accessed and are not part of a sensitive ecosystem, although there are some endangered species found in the areas. As an ecologist (PhD, UC Davis) I think of sensitive ecosystems as those that are threatened by human expansion into an area or areas that have not been subjected to human use. The lands under the purview of GGNRA are beautiful and wonderful but not threatened. The animals and plants that make up the ecosystem have had centuries to come to terms with the human users of the land. Even the endangered species have managed to find areas where they are surviving quite well by the numbers that are seen here. GGNRA is a unique urban recreation area and as such should be treated with special respect but please do not try to turn it into a National Park. Congress set up the National Recreational Areas to be something different from a National Park. A recreation area is a place to be outside and enjoy, it is not an area that needs protection or preservation.

As the newest area of GGNRA, Rancho is a perfect example of the type of land that makes up the whole of GGNRA; it was a ranch from the time of the Spanish colonies until it was bought by developers who tried to subdivide the land. The community was able to fight the attempts to develop the area and leave the land as open space. However, it seems we can't fight the

government; now that the land is owned by GGNRA the rules are changing without taking the community input into account. The results of many meetings and comments have apparently been ignored if the current document reflects the results. Before GGNRA acquired the land we locals used it with no restraints and were good to it. We cleaned up after our dogs, we left a small footprint on the land, used only a few trails and didn't disturb the creeks. When POST bought the land in 2001 the use as is continued and we continued our care of the area. In fact, during that time the Montara Dog Group went to the trouble to voluntarily put in dog waste disposal sites and to police the area.

As part of our care we respect the wildlife and do not disturb the native flora and fauna. As locals we live with the local wildlife, we keep the deer out of our gardens but let them into our pastures, we enjoy the native predators and hope they don't eat too many of our domestic animals. We (including our dogs) and the native animals find a way to live together. The dogs in Montara, Moss Beach and El Granada have been off leash in the area for decades and there is no evidence of a decline in the number of native animals that can be accredited to the dogs. Perhaps a decline due to the rapid growth of the area but that is human intervention not dogs. I have photos on a home trail cam of some of the local predators; fox, coyote, raccoon etc. I have not been lucky enough to get the mountain lion but know it has been close. The wood rats make nests in our backyard and there are birds of all kinds in the yard. Does leave their fawns at the edge of our property while they browse in our fields. Our loose farm dogs have not kept any away.

The DMP/SEIS states that off leash dogs are a threat to the native animals. From my observations of the native fauna I can find no evidence that supports the contention that they need protection from off leash dogs. This is supported by Mr. Ken White, President of the Peninsula Humane Society and his professional staff, who also find no reason to ban off leash dogs. As an ecologist I have been interested for years in the interactions of native fauna and the encroachment of humans. I find these rural interfaces most interesting by the adaptations of the native animals to the new environment. We have a large coyote population in Montara (much more of a threat to other species than the occasional off leash dog) but they are rarely seen and seldom heard. Most dogs are not inclined to hunt; domesticated dogs historically do not do well when left on their own in the wild. They rely on the food provided by their owners and are not apt to try to find another source. If the threat to wildlife is real, there is no scientific evidence in the DMP/SEIS that off leash dogs are a threat. Without scientific evidence there is no reason for the ban and it should be removed.

The DMP/SEIS states the locals are most likely to be the users of Rancho, which is the case in Marin where the majority of users of GGNRA are locals. With the long history of responsible use of the land it surprises me that GGNRA is asking for a total ban of off leash areas. Do you think that the locals are going to suddenly turn into hooligans? Dog owners have dogs to be friends and companions, the dogs are helpers in many ways; dogs give their owners a lot of satisfaction and are shown to lower blood pressure and help keep us healthy. Of course one of the ways they do that is providing a playmate and a reason to be outside walking. Watch any dog food commercial and see what we do with our dogs, we throw things for them to find and bring back, we give them obstacles to jump over, etc. These are all activities that are done off leash. It is a form of punishment to keep us from playing with our companions. We do not send them into the brush to chase rabbits, we play with them.

The impact of not having anywhere on the Coastside to walk dogs off leash is huge. It means to legally have a dog off leash we will have to go in our cars for miles to get to the few areas on the Peninsula that allow off leash dog walking or into San Francisco where off leash dogs will still be allowed. The environmental impact of that is far greater than the perceived impact of a few dogs on the Rancho land. Given that there is no scientific evidence that off leash dogs damage the land, I for one do not understand the tone of the DMP/SEIS. It is so anti-dog that I wonder if any of the people who drafted it have ever been on a walk with a dog.

I worry that as the Park Service becomes more restrictive that this will affect the equestrians in more ways than the case that we can no longer ride with our dogs. There is something special about being out in the open with your horse and dog that cannot be matched by other experiences. I miss my dog when out with my horse and the dog does not understand why she has to stay home. I also miss the security of having the dog with me. Over the years I have had a couple of encounters while riding my horse when having the dog with me was what saved me from a bad experience.

In conclusion I am asking you to stop calling GGNRA a National Park and to keep it an Urban Recreation Area. Along with this allow us to recreate with our dogs. The residents of Montara, Moss Beach and El Granada need a place to walk our dogs beyond our back yards. For this I ask that you do not finalize the plan with the preferred option but go back and re-examine the case for off leash areas in Rancho.

Sincerely,

Lyndall Erb, PhD

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Carolyn Hendrickson and I live in San Francisco. I walk my dogs at Fort Funston, Ocean Beach, Crissy Field and Golden Gate Park, as well as the on leash trails in the Marin Headlands. I am a member of the Sierra Club.

I strongly oppose the preferred alternative for Fort Funston and Ocean Beach because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, I agree that in order to have shared community space for everyone to enjoy and to be environmentally responsible, dogs should be restricted from some sites and leash laws should be enforced in sensitive areas. However, there should be adequate space that is easily accessible to dog owners. My

family and I use the open space for off leash walks, runs and games that help us get exercise, stay healthy, and minimize our time on the road. As is, we can ride our bikes to many of these locations (with a dog carriage in tow behind my bike for our three-legged dog). We have two rescue dogs from San Francisco and Oakland Animal Care and Control. Vigorous exercise and off leash play has been an important part in their recovery from a traumatic start and some of the anxiety issues they developed while mistreated by previous owners and time living in city shelters. My family feels strongly that it is important to put our energy into helping local animals recover and integrate into our dense urban community. A big part of this is making sure they are good and tired and well-exercised.

Sincerely,

Carolyn Hendrickson

**Correspondence:** I am writing to countest the recent restrictions proposed for dog walking in the GGNRA. I have walked my dogs regularly at Crissy Field, off-leash, for 30 years. It is one of the great pleasures of living in San Francisco and is a local treasure. Our community has used this space for decades to no harm. The restrictions posed by the National Park Service are detrimental to local residents and their pets.

My dog also goes regularly to Ft Funston Park for off-leash walks. That park is well known as a place for dogs. It is my understanding that this park will largely become off limits for off leash dogs. Where are these dogs going to go for exercise? I think the NPS is being short sighted in closing any of these spaces. It will result in over-crowding in other areas causing problems that never existed before. Please leave San Francisco parks the way they've been for residents. Your national organization needs to take into account the needs of local residents who have been using these spaces, without problems, for years.

<b>Correspondence:</b>	NPS,				

I am a resident and active supporter of the Golden Gates Parks Conservancy, Sierra Club, Natural Resources Defense Council, and other environmental groups. Protecting the environment is a priority for me.

At the same time, I recognize that I live in an urban area. I own 1 dog and visit Fort Funston every week day. My comments primarily concern Fort Funston.

The research done to prepare this plan was obviously extensive. I would like to submit the following

comments:

- The report includes a section about monitoring-based management strategy. That strategy includes monitoring the number of dogs and dog walkers, among other items. Has any monitoring of the number of dogs (in general, not only for commercial dog walkers) been done as part of the research for the plan? If only 25 dogs use Fort Funston on a day, it's not a problem to relocate those dogs to other city parks. But what happens when hundreds of dogs are relocated? Or thousands? The potential for aggressive incidents increases dramatically if a large number of dogs are relocated to a smaller area.

And I would bet that people are more likely to change the location where they take their dog (if the final plan requires it) than they are to change the time of day. Many of us work and have a set window for going to Fort Funston. So, if the plan restricts off-leash areas in the GGNRA, not only will a lot more dogs be transferred to city parks, but they likely won't be dispersed throughout the hours of the day in an even manner.

The two paragraphs above apply also if significant areas of Fort Funston are changed to be on-leash only. Those that remain off-leash will result in more dogs in a smaller space.

One of the advantages of having off-leash areas at Fort Funston is that the size of the park allows more space for these dogs to interact. Obviously, that doesn't mean there are no aggressive incidents at Fort Funston, but they're less likely to occur in a space that large than in a much smaller city park.

- Dogs have always been important to people. For city-dwellers, they are a link to nature that is invaluable. Proper care of dogs requires adequate exercise, which provides an outlet for energy that might otherwise be misdirected. On-leash areas do not provide the same outlet as off-leash areas. For some dogs, this is not as much of an issue. For others, it makes all the difference between a well-behaved dog and one that turns to mischief or worse. Because of the density of the human population, one might argue that it's even more important for dogs who live in an urban area to have the proper outlet for their energy.

As an example, my dog (26 lbs) was rescued from a shelter. He had previously been a stray and so is very fearful. We have taken several obedience classes and used private training, but his fear is deeply ingrained. He won't walk farther than 1/2 block in either direction from our house, which certainly doesn't give him the proper amount of exercise. However, he feels safe at Fort Funston and at beaches, so we take him off-leash there so he can get the proper exercise. If we don't take him, he is definitely more difficult to manage. These off-leash areas make a huge difference - - walking him on-leash at these places is not nearly as effective.

- I do support closing certain areas for protection of species or habitat with fencing or similar borders. However, that support does not negate the concerns expressed above.

I urge you to keep the maximum amount of space off-leash at Fort Funston.

Thank you for your consideration.

Gina Luzzi

**Correspondence:** To whom it may concern,

Please, PLEASE do not further restrict the few areas we have to take our dogs off leash in areas where they can really stretch their legs and RUN. As an owner of a hound (and there are hundreds of thousands like me), my dog needs to really stretch her legs at a full run, or she would literally go crazy. Small dog parks in the city here and there are not a good fit for many, perhaps even most dogs.

The GGNRA was established to give outdoor recreational opportunities to people in a densely populated urban area like mine. It requires a different management approach than wilderness areas like Yosemite or Yellowstone.

I support the GGNRA "No Action Alternative" in the the SEIS for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

To force people into their cars in search of the scant places where dogs can run is hard on people, hard on the environment in terms of driving longer distances, and all-around bad for Marin County.

Thank you for considering this letter!

Rachel Paluska

**Correspondence:** NONE of the alternatives for Ocean Beach allow dogs off leash west of Lincoln to Sloat.

Leashing dogs here is completely untenable. This is the most urban stretch of beach north of LA. Human concerns trump the birds on this one. The Snowy Plover can find another place to roost, it's really just that simple. We can't turn back the clock. It's too late. The humans have already arrived on this little stretch of beach.

These regulations will create countless negative interactions between dogs and their owners and the legal enforcement of it will be an unwarranted expenditure of time and effort that should be spent elsewhere where real safety concerns exist.

Nor will the birds really even be impacted. There are plenty of other secluded beaches on the pacific coast for these birds.

CEQA does provide for over-ruling environmental concerns if they are recognized. This is one of those cases. Enforcing this leash only rule will NOT result in any environmental improvement, but it will do a lot of damage to the many human beings who live here.

I have lived at Muir Beach for just under 35 years and have owned 2 dogs in that time. There are already so many beaches and trails where dogs are not allowed; I don't understand the necessity to limit dogs to off-leash at our little Muir Beach. To think that a local Muir Beacher cannot run their dog on the beach is punitive. Many others from Southern Marin and beyond bring their dogs here as it's the closest beach where dogs can exercise. It's part of the culture of the area. The NPS wants to make our parklands into some sort of museum; forgetting that the recreational areas of Marin are our backyards and why we chose to live here. Don't people and dogs count too?

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. Dog Management Plan  
Supplemental Environmental Impact Statement  
Support: NO ACTION ALTERNATIVE

Dear Mr. Dean:

I walk my dog, off-leash, on the Oakwood Valley Trail in the GGNRA, three times a week on average. The Oakwood trail is about the only trail I ever have my dog off leash. I was so happy to find such a beautiful, safe, well-maintained and convenient trail. I am disappointed to learn that a discussion is underway to reduce the amount of free running area for dogs. I would have hoped to be writing in support of expanded access, but see that elements opposed to dog interests have already framed the conversation negatively.

The GGNRA is an astonishing resource for our community. Dog owners are a large part of this community and it is very frustrating to find that there are very few places in the GGNRA to go with a dog, even on a leash. I am a responsible dog owner and diligent about cleaning up and controlling my dog! I hope the bad behavior of others will not impact the people like me who feel that it is a great privilege to have this resource. Please don't change the accessibility for the Oakwood trail!

Over the decades my opportunities to experience the GGNRA have been systematically reduced, undoubtedly as the result of initiatives like this one, by a vocal minority. As managers of the Area, I would encourage you to find ways to expand access as opposed to reducing it for the sectors of the public who actively and regularly visit.

At the very least I'm certain you recognize that as use groups are pushed from the Area, your fundraising is impacted. In my case, GGNRA was a favored charity. That is no longer the case as I cannot peruse my preferred activities as I could in the past.

I also expect that your mandate is not to maximize financial support, but I do think that lost revenue should be an indicator of whether or not you are meriting the needs of your audience.

Perhaps the issue is the result of a misunderstanding of the function and environmental quality of the Area. This is a large urban park close to a major city, and surrounded by suburbs. It provides local flora and fauna historic and protected borders. But, most importantly, it is a recreation area for humans wishing to engage nature. Not all people do that the same way, and helping us accommodate the needs of each other might be your highest priority. In this country we have a wide variety of outdoor areas, some that exclude humans to protect the natural order as much as we can, such as the Farallon Islands. There are other areas like Golden Gate Park that are almost entirely devoted to human use, despite the large sample of flora and fauna that exist there as well. Thank you for your time, Lisa Terry

<b>Correspondence:</b>	I am FOR banning dogs on the beach in San Francisco. I cannot tell you how many times I have seen dog owners just walk away from their dog's feces - - like they're too good to pick it up. I am also tired of being nipped at by aggressive dogs, "bumped" by dogs chasing balls and frisbees, growled at by dogs who are overly protective. I love dogs, but clearly it's the people who own them that need to be retrained. Banning dogs on the beach may be a great lesson for dog owners. It's not a right, but a privilege, to use National Park property. Sure would be nice to enjoy a leisurely stroll on the beach again.

<b>Correspondence:</b>	I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet				

---

Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A /supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.				

(In fact I support INCREASING the number of dog-friend areas, but that doesn't seem to have been considered at all!)

I regularly take my dog to Mt Tam, Rodeo Beach, Muir Beach, Coastal Trail, Wolfback Ridge, and other trails in the GGNRA.

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%.

But most important the GGNRA is NOT a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space, including biking, and hiking with children and dogs.

The vocal minority of dog haters should not be allowed to hurt the vast majority of dog owners who are considerate, friendly and loving.

Thanks in advance,

- - Frank Leahy

**Correspondence:** This is just ridiculous... not only is what's being proposed wrong... it's also insanely damaging to the local community and businesses.

1) EVERYONE who has a dog and bought a house out there did so b/c it's one of the only places you can still walk your dog off lease. If this goes through it could have a damaging impact on our property values and resale potential.

2) This part of the beach has virtually ZERO wildlife that needs to be protected from dogs... saying that some bird "might" be scared by dogs is just a lie. The dogs have been there for 50 years... if they didn't hurt them before then it's not going to start now.

3) There are COUNTLESS small businesses that support dog owners... walkers... groomers... boarders... and they ALL will lose business if this gets passes

4) With the federal budget problems AND high unemployment, why why why WASTE money enforcing a outdated and USELESS law??? Are the park officials really that silly to think they can change 50 years of habits with blank threats? Just because you walk a dog off lease doesn't mean you're subject to stop & seizure... what that means is I HAVE EVERY RIGHT TO WITHHOLD NAME & ADDRESS if I get confronted by a ranger... so how do you plan to enforce it? It's silly and a great example of POLITICIANS WASTING AMERICA'S MONEY...

You DO realize that there are many better ways to help American OTHER THAN encroching on our rights? I for one am NEVER supporting a national parks service again and will never vote for funding or help for an organization that ignores logic so it can feel more powerful... do what you want, but everyone will remember how useless you are and everyone will remember how much time and \$\$\$ you wasted because you HATE dogs.

Good luck ever getting elected with this on your record... if dogs are a mans best friend... apparently the national park service is mans worst friend.

Haver fun being miserable and pointless in life... I'm getting back to WORK and will continue to walk my dog on that beach OFF leash whenever the hell I choose.

- From everyone in America other than the 4 people sitting in a room reading this

**Correspondence:** I live by Mori Point for almost 40 years. This area is the housing area that connected to the park. I always have dog and I love to walk my dog to Mori Point everytime I can together bringing my friends or relative to look at the ocean and climb the mountain when they came to visit. I love to let my dog go off leash because I know that my dog(s) is very friendly and does not bother anybody that ride bicycle or jogging. I have a chance to meet lots of friendly people that do not mind my dog or any other dogs that go off leash. Most of the time the dog's owner know whether their dogs are good enough to go on without leashes. They have freedom in their own way without bothering any one. Please, I will appreciate very much if you will consider have Mori Point for OFF-LEASH dogs. Thank you very much for letting me have a voice in it too.

**Correspondence:** I am appalled at the thought that you will forbid dogs on 99% o all trails! The Bay Area's constituents are vastly dog owners and lovers! Do you NOT know who is being served by those parks?? Dogs owners. We need space to exercise them as part of OUR exercise routine. The vast majority of dog owners are responsible and clean up after their dogs. As a concern for the natural habitat, you may insist that the dogs remain on the trails and NOT get off to protect the habitat and you may even install a system of citizens monitoring others to respect those rules, through a volunteering system.

On the other end, cyclists are a complete nuisance and are not respecting pedestrians zooming at all speed and not slowing down.

Just remember that Northern California has millions of residents with dogs and that you will be negatively affecting taxpayers.

We will not forget if we are ignored.

**Correspondence:** Hi, I literally live across the street from GGNRA and implore you to BAN DOGS from our trails. There is so much dog poop across the street, on Oakwood trail, on Miwok, almost anywhere we can walk to from our front door ... it's disgusting. I have two small children and I can't let them play in the woods across the street because it's so polluted and when we use the trails it's become a sick game to point out the piles of dog poop. Furthermore, even on the trails that are supposed to be "on leash only" we still encounter rough and rowdy off leash dogs that don't hesitate to jump on a small child and owners who become indignant when we say things like, "can you call your off your dog, he's afraid of dogs." It's become so unpleasant we've all but stopped using the trails, which is deeply frustrating since

part of the reason we bought our house was it's close proximity to all the great GGNRA hiking. Please, please, please, put people first and ban the dogs and their irresponsible owners from our trails. Thanks

**Correspondence:** I strongly agree with those that oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to several of the sites you control.

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. I can't see any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** To Whom it May Concern:

My name is Mari Yao. I am a life-long San Francisco resident, currently residing in Diamond Heights. As the owner of one dog, we do not frequent the dog park at Walter Haas playground as we do not like the fenced in area and each time we've taken our dog inside, she just sits on the bench, even though it is close by. We abide by the leash laws when we walk to Christopher Park., but we most frequently visit Fort Funston and McLaren Park on a weekly basis and get so much joy from watching our dog get to run to her heart's content.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

Additionally, I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

Finally, I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I am a registered voter and appreciate your consideration.

Thank you,  
Mari Yao

**Correspondence:** Please stop creating new rules for ocean beach every year, this is a city, not a national park. The three main reasons.

1) There is no proof the dogs effect the snowy plover at all, and their decreasing numbers is more likely due to the second largest city in California being 5 feet away. Most environmental studies say the plover mates in Salt lake, Utah, anyway - another piece of science ignored.

2) The GGNRA is incapable of enforcing the leach laws, which leads to the violation of these laws, and stricter regulations. A ranger at the GGNRA meeting told me the dog ban was started because people were not obeying the leash guildlines - well if there were trained rangers there, people might. Also, the tasing of a dog walker in San Mateo by a GGNRA ranger shows the lack of training and inability to handle the issue.

3) It is foolish to ban dogs when you don't enforce the leach laws. I aways walk my dogs on a leash because of the rules, but many don't. This isn't good for the dogs because leached dogs don't like being approached by other free running dogs. Your lack of enforcement of the rules is only causing problems, not fixing anything.

**Correspondence Type:** Web Form  
**Correspondence:** I am a homeowner and resident of the outer richmond in San Francisco. We frequently walk our dog at Lands End trail, Sutro Park, Ocean Beach, Baker Beach, the Presidio, Marin County beaches and recreation areas and Crissy Field. We benefit from the ability to walk with our dog off-leash in the GGNRA because it gives her the exercise she needs and gets us out for longer, more playful and more interesting walks.

I am opposed to the Preferred Alternative. The boundaries and access for off-leash access are too restrictive and there is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences make off-leash areas feel like pens and visitors using them feel unwelcome. Further, these pens actually promote the running and unchecked intermingling of ill-behaved dogs with people and well-behaved/voice-controlled dogs. The only place my dog has ever been attacked by another dog was in these fenced off areas.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Punishing all people for the acts of a few is an unfair and unjust approach that is completely counter to American values of justice and due process.

The new dog management plan did not suitably address comments to the earlier version of the plan from people who support dog walking. The GGNRA appears to have dismissed nearly all of them and should address comments on issues such as negative impacts on the community and human health from off-leash restrictions.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), instead the plan cites anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan does not allow off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as the recently acquired Rancho Corral di Tierra.

**Correspondence:** i have been a resident of the outer sunset district for 40 years. i walk daily in golden gate park and along the front way at ocean beach.

i believe all dogs should be required to be on leashes. unfortunately there are many dogs with owners who haven't trained them or are so busy doing their own thing that they let their dogs run freely to the detriment not only of wild life but also to those of us who just want a pleasant walk by our beautiful ocean without having to contend with out of control dogs and their neglectful owners.

i was bitten on the leg while i was walking my dog - who was leashed - by a dog who was not on a leash and decided to attack out of the blue. the owner could not control her dog and as i tried to get her dog away from mine i was bitten. the owner stood and screamed and felt somehow that that was her contribution to controlling her out of control dog. certainly this situation could have been if not alleviated, at least less problematic had her dog been leashed.

**Correspondence:** The changes made in the 2013 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011 which ran 3:1 AGAINST the plan.

I support the NO Action Alternative in the SEIS for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

The SEIS contains no peer-reviewed, site specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

Please RETAIN the longstanding 1979 pet policy.

The GGNRA was established to give outdoor Recreational opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite.

The SEIS preferred alternatives force people in to their cars in search of places to walk with their dogs. THIS IS BAD FOR THE ENVIRONMENT AND BAD FOR MARIN COUNTY!

**Correspondence:** NONE of the alternatives for Ocean Beach allow dogs off leash west of Lincoln to Sloat.

Leashing dogs here is completely untenable. This is the most urban stretch of beach north of LA. Human concerns trump the birds on this one. The Snowy Plover can find another place to roost, it's really just that simple. We can't turn back the clock. It's too late. The humans have already arrived on this little stretch of beach.

These regulations will create countless negative interactions between dogs and their owners and the legal enforcement of it will be an unwarranted expenditure of time and effort that should be spent elsewhere where real safety concerns exist.

Nor will the birds really even be impacted. There are plenty of other secluded beaches on the Pacific coast for these birds.

CEQA does provide for over-ruling environmental concerns if they are recognized. This is one of those cases. Enforcing this leash only rule will NOT result in any environmental improvement, but it will do a lot of damage to the many human beings who live here by creating arguments and resulting in negative citizen/law enforcement interactions and needless fines.

**Correspondence:** I have lived in the Bay Area for almost 14 years. While I was a frequent user of GGNRA parks, a few months back I got an ~1 year old Labrador dog from the SF SPCA. So in just this short time I have been using the parks even more - - exploring and enjoying them while getting my dog out for exercise. I make multiple visits a week to our local parks including Chrissy Field, Ft Funston, Lands End, Ocean Beach, and the Presidio. This general pattern of knowing people with dogs tend to more active and enjoy the outdoors should be aligned, and to me it is, with the GGNRA purpose of offering a "national park experience to a large and diverse urban population". So I have been confused and dismayed by the efforts to significantly restrict parks with dog-friendly and off-leash areas.

The systems in general seem to be working and where they are not (if this is even the case by-and-large?) shouldn't the most effective use of resources be spent on the existing guidelines? More directly, what specific issue(s) or problem(s) are driving the need for this anyway? It seems as if the changes proposed are based on limited to no study with significant assumptions and "can", "may", "might" type conclusions

---

driving this. Assumptions and a lack of clear harm or impact is not a reason to drive through changes that will negatively impact such a significant base of the users of GGNRA parks.

Specifically:

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

GGNRA is one of the treasures of living here. Being able to enjoy them responsibly with your dog is a significant part of this for many of us - - the very urban population that the parks are designated to support. Thank you,

Darin Boyd

**Correspondence:** I am old, tired, broke; and am on my 4th dog since this battle began nearly 2 decades ago. Fourth dog will surely cross over the Rainbow Bridge before this entire BS is settled. I'm tired of writing letters, attending meetings, and submitting comments, but I will continue until I'm dead or until the GGRNA honors their promise to the citizens of San Francisco.

Couldn't help but copy and use this comment as it is EXACTLY how I feel. Only we are on our 5th and 6th dog and have used Fort Funston without issue for over 20yrs. I have personally NEVER witnessed a dog/human interaction that even remotely was threatening. The area is without landscape or weather that is condusive for almost any activity but dog walking. Leave Fort Funston as it is.

**Correspondence:** I am a San Mateo county resident with a yellow lab. There are few places where I can take him to run and be a dog. Watching him run with his ears flapping and his tongue hanging out brings me great delight. We have very fun afternoons walking and playing with the other dogs at Fort Funston or at Crissy Field. Taking him out keeps me healthy and active.

Please make off-leash areas a priority. Dogs need places to run and humans need places to exercise with their dogs. There are not enough places as it stands. Let's not close the few areas we have.

**Correspondence:** Please reconsider the off leash ban. I am not a dog owner but I have had no issues with off leash dogs in the city and many of my friends have benefited from being able to take their furry companions to large public spaces so they may stretch their legs. Its hard to be a city dog and the freedom to go off leash in large areas is necessary for their happiness. Thanks.

**Correspondence:** Please do not restrict dog walking or off leash areas, these areas are so important to our dogs and our community, espically at crissy field. Dogs need a place to run free, this makes people happier and dogs more relaxed and well behaved when they are walking on the city streets or interacting with humans. it is so important for dogs to get a lot of exercise, and this will become extremely difficult, especially for disabled people or people who can not walk, for their dogs to get enough exercise. Please consider the dogs and the disabled dog owners. Thank you.

**Correspondence:** I believe we can submit multiple comments. If not, then disregard this one and use my previous. However, if we can, I would like to make the point that GGNRA should not be allowed to make the argument if the number of comments decrease on this second SEIS, this indicates any less dissatisfaction.

---

You must consider several other reasons why the number of comments may decrease, e.g.,:

\* The 2nd draft (SEIS) clearly ignored the comments from the 1st, so many are disenchanted with the process and believe it is a waste of time.

\* In general, it is hard enough to get people to find time to make a comment. To ask them to make multiple is exponentially more difficult.

\* Some now want to boycott this process by refusing to participate.

**Correspondence:** I am NOT in favor of restricting dog walking in any of the park areas in any way. In my opinion there are NOT ENOUGH places to walk dogs, and not enough areas where they can be off leash. It sounds by all the information I have read that the studies that have been done in the past have been skewed. If you look at the number of incidents with dogs (ei dog bites) it is unbelievably few as compared to crimes (violent and otherwise) by adults in these parks. Every way you look at it, adults are more dangerous to each other than dogs every have been or will be. Please do not restrict dog walking in any of our parks more than they already are.

**Correspondence:** I would love to see the anger directed toward the irresponsible dog walkers who ruin it for everyone. I am in favor of dogs being allowed in the GGNRA, with leash rules strictly enforced, even on Mill Valley residents who are above most rules since it is their backyard.

Allow dogs in Tennessee Valley, on leash. Please cite those walking dogs off leash. Even MV residents.

Require those walking dogs to be in possession of a plastic bag, or bag of feces. No bag, get a citation. Oh, you left it at the bottom of the trail to get later? Sorry! Here is you ticket, Yoga Pants. I see many bags of feces at trailheads that sit for days. If only I could identify the entitled person who left it....

Just like the CHP puts out sobriety checkpoints, I would love to see rangers do regular, unannounced citations of off leash dog walkers. Let the word get around that one will get cited for breaking the rules, even if you have a full Lulu Lemon outfit.

I love dogs, and am a life long owner of dogs. But I don't support the right of anyone to allow their dog on sensitive trail areas, off leash, endangering hikers and bikers, jumping on children, terrifying wildlife, etc. I dont care if your dog is friendly, loves kids, doesn't bite, etc., if he is off leash, the potetial for random mayhem, fecal deposits and increased animosity and strain among fellow users of our precious resources is too high.

**Correspondence:** As a dog owner and dog walker, I feel like it's really important to continue to allow dogs to be off leash at Fort Funston and other parks and beaches in and around San Francisco, CA. Off leashing dogs allows them to play fetch and run to get exercise and as long as the dogs are well behaved, this privilege should not be taken away. Banning off leash will force overcrowding in small fenced dog parks which is not safe and when I walk off leash at the beach I arc around other packs to prevent incidents which isn't possible at fenced dog parks. Banning off leash would negatively affect dog owners and the dog walking industry.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach and the surrounding trails.

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the1979 pet policy. That policy still works today and should be retained.

Dogs are part of the character of this national treasure, and the outdoor life style of Marin and the Bay Area in general.

**Correspondence:** The GGNRA regulations say that: Visitors to the park are responsible for knowing and abiding by those rules. This webpage is intended to help people learn about the rules that protect them and their park. Further information is available in publications such as the park's newspaper and from park rangers at headquarters and at the visitor centers throughout the park. On this issue alone, without even considering the environmental degradation of 100's of dogs running in every direction leaving feces and especially repulsive dog feces bags everywhere, this rule is rarely abided by dog owners and I've never seen it enforced. This has lead me to experience deep fear, discomfort, and embarrassing moments when I should be in a hoped for peaceful, commune with nature. Instead dogs have chased me, attacked me, growled at me, bared their fangs at me - not just large canines but small nasty ones as well. I owned and lived on a working sheep and horse ranch for 10 years. I had between 4-6 dogs at any given moment. They were trained to round up sheep. I have many years of experience as a dog owner. I know when voice command works because I used it and my dogs listened or my flock was doomed. There is a complete lack of voice command at the Fort Funston to Ocean Beach area. There are dog fights on a daily basis. Dogs trespass beyond the fence barriers and the owners do not care nor do they control their charges.

I go to walk as early as possible to avoid the hordes but this is no longer the GGNRA format of beautiful natural wilderness, wildlife, flora. This is a dog toilet filled with careless, dog owners and many dangerous dogs.

Please contact me if you need further clarification. I am available to speak on behalf of returning the GGNRA back to its goal of providing city folk with a beautiful natural habitat for ALL to enjoy - not a feces-filled destroyed, empty, wasteland.

**Correspondence:** I have read the Draft Dog Management plan in its entirety. As a homeowner and full-time resident near one of the trail heads under consideration, I firmly encourage the National Park Service to adopt Alternative A - No Action. As a frequent user of the trail system, I have yet to see any negative impacts or conflicts resulting from dog walkers. Many of my friends and neighbors utilize the trails on a daily basis to walk their pets. This is a core part of our community, and encourages the usage and therefore vested interest for the continued stewardship and protection of our park system. Inhibiting park access for local families, lowers our quality of life, and reduces the public interest in the continued funding of the park system itself. I do not have a dog in my household, but certainly do recognize the valuable experience dog access creates for many other park visitors.

We need to be more inclusive to promote usage of our park resources so each generation has a vested interest in maintaining and protecting these lands. If children will not even be allowed to walk their pets in GGNRA, why should they really care about protecting it.

**Correspondence:** Dear Superintendent Dean,

My name is Caitlin Burkhart and I live in Oakland. I walk my dog in off leash areas in Bay Area parks every day.

I strongly oppose the preferred alternative for the Bay Area off leash areas because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

Sincerely,

Caitlin Burkhart

**Correspondence:** Hello,

Please please keep Fort Funston open to off-leash dogs. I've taken my white golden retriever Grady there many times...it's his favorite place in San Francisco. He loves the beach; I believe all dogs do!

Our dog-walking service Active Dog Adventure Club takes pack walks at Fort Funston on a regular basis along with many others. The area is very well used and taken care of by all.

In all the times I've been to Fort Funston I've found all the dogs to be well behaved and well cared for. The dog owners have always been respectful of others and the environment, being careful to pick up after their dogs.

I urge you to preserve this jewel for the many dogs and dog owners in the San Francisco bay area.

Thank you,  
Cynthia Cadua

**Correspondence:** Once a week I walk along Ocean Beach in San Francisco. I do a bit of coastal cleanup while strolling along (it is a surprisingly clean beach). I have determined that people who drink Corona beer are the least responsible, and that the laundry is not the only place where socks are lost. / Now for the issue. It is a pleasure to see people exercising their dogs. For the most part owners are responsible for cleaning up after them. However, when you come to writing up the final plan, would you please stress that cleaning up is only part of the process. The plastic bag of dog poop needs to be disposed of responsibly, preferably in a biodegradable bag, not left to be swept out to sea on the next high tide (or cleaned up by the likes of me and the others who are out there picking up refuse), or arranged as though it was an offering to the gods (believe me, I've seen this).

I've met one family with very young children who picnic first, then everyone fans out and picks up trash. The small boy digging in the sand was excited about the prospect of doing so.

People have chased me down to donate trash. Even surfers have retrieved refuse I couldn't reach without getting wet.

Good luck coming up with a plan which works for everyone.

Incidentally, I learned about this document from the "sandwich" boards along Ocean Beach.

<b>Correspondence:</b>	To whom it may concern;				

I do not see the need to confine the dogs whose owners are comfortable allowing them off leash. People can usually tell if their dogs are suitable for the leash free environment. I think you can trust the majority of pet owners to be responsible about their animal. The ability for dogs to run around w each other freely is a great thing for pet and owner alike. I do not currently keep any animals, but when I did I was a frequent visitor of dog parks and I believe that was the happiest I ever saw my dogs. Certain breeds are just meant to rove about, and the breeds/individuals that tend to be less social are equally less likely to be put in that situation by their owners. Dog owners are, in my experience, sensitive and compassionate individuals, who should be trusted to be responsible with their pets. Please continue to allow the owners and pets alike to roam without the ugly confines of a chain link fence.

Thank you  
Harry Crimm

<b>Outside Organization:</b>	Unaffiliated Individual				
<b>Affiliation:</b>					
<b>Received:</b>	Jan,25,2014 14:03:38				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear National Park Service,				

My wife, dog, and I moved from Washington, DC to the Cow Hollow neighborhood of San Francisco last year. One of the main attractions to moving to this area of San Francisco was Crissy Field. We take our bulldog Stella every day to Crissy Field so she can play. Living in a condo, she does not have a chance to run around and get exercise other than the daily trip to Crissy Field. These trips also plays an important role in socializing her to other dogs (i.e., making her a friendly, well-adjusted dog) and has allowed us the chance to meet many of our new neighbors.

We were dismayed to learn that you are considering banning dogs from playing off-leash. I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the Golden Gate Recreation Area. Instead, I support Alternative A, the No Action Alternative.

Dogs are already off-limits in over 99% of the Golden Gate Recreation Area. Having studied the issue and travelled around the city, I cannot see any compelling reason to eliminate or further restrict the remaining 1%.

My understanding is that you haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. Moreover, you have not conducted any surveys on the actual demand for use by the population. I am sure if you conducted a scientific survey of the citizens who have access to the GGRA you would find: 1) a significant portion of them desire areas where their dogs can play off-leash; 2) the majority of citizens do not oppose dogs having off-leash access to 1% of the GGRA; and 3) those limited few who might have a specific objection would be willing to live with a mutually acceptable compromise position. I recommend you carry out such a survey before taking this drastic action.

A strong part of the fabric of this community is its dog-friendly locations and general love of animals. It is odd that you would consider such a draconian approach to an undefined problem that would so substantially impact this community.

It is especially shocking because your plan provides no alternative to providing city residents with one of their key demands: open spaces for them and their pets in a crowded urban environment. I could understand your approach is a large wilderness area, but this is an urban environment and without this park access, there is no reasonable alternative for us and those like us.

I also worry about the unintended economic and environmental impacts of these decisions. There are thousands of dog owners who use the GGRA every day. If they are no longer able to use this space, they may move to locations that do, which will negatively affect both real estate prices and local business. This is especially true given the fact that many pet owners are high income and highly mobile individuals or couples. Even if they don't move, they will likely drive to locations where their dogs can freely play, increasing both congestion and air pollution.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Furthermore, I understand your 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 AGAINST the plan.

Accordingly, I strongly urge you to preserve the fabric of our community, choose Alternative A (the No Action Alternative), and allow our pets to have a tiny sliver where they can play freely.

Thank you,  
Matthew Oresman

**Correspondence:** To Whom it may Concern,

Dear Mayor Lee,

My name is Kelly Cytron and I live in San Francisco. I have walked my dogs on Ft. Funston, Chrissy Field & Baker Beach for the past 16 of years.

I strongly oppose the alternatives because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. I want real research, not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

This will impact our dogs because they will be restricted to walking them on the city sidewalks which is not pleasant and we will have to drive long distances if we want to let them walk off-leash.

Thank you for taking the time to read this.

Regards,  
Kelly Cytron

<b>Correspondence:</b>	I live in Pacifica and frequently visit Fort Funston to exercise my dog. There are no parks allowing off leash dog walking in San Mateo county.				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	I have a 3 year old Lab mix who is very active. We walk in many parts of the GGNRA on a regular basis, including Crissy Field, Fort Funston, Rodeo Beach and other spots. I prefer to have my dog off-leash, so that she gets enough exercise - - running, playing with other dogs, chasing a ball, etc (due to two knee surgeries, my days of running are over).				

---

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I am very disappointed that the new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

<b>Correspondence:</b>	My wife and I support dogs with lease in public parks. We do not own a dog and do not plan to own one. We have no problem with dogs, we love small pets. However, in public places, unleashed dogs should be avoided. On Pacifica beach a dog attacked my wife, threw her on ground and climbed on top of her while she was shouting keep the dog away. The owner of the dog lady just stood there and saying.. "oh, he is just playing with you, he is very gentle and very friendly"				

It may be true, however, we are not available to play with other peoples dog and pet them. Dogs and dog owners need to respect non-dog owners privacy.

Therefore, we will support all plans :

1. Requiring dogs on lease at all times when in public places.
2. Creating open space (enclosed) specially for dogs where dogs can be on leash.

Note: In south city, behind Safeway, there is a great dog paly area. We believe more of such places should be created with public funding.

<b>Correspondence:</b>	The changes to the current Dog Management Plan concern me, as a National Park going dog lover. I understand the environmental impacts, to the habitat as well as to endangered wildlife.				

---

I also support the educational pieces to this plan. I think it is important to have information specific to dog walking in the parks; and the consequences related to non-compliance.

What troubles me, and many dog walker, would be the loss of off-leash and dog access at some of the suggested sites. Dog walkers need to take their animals out daily. We need to socialize them with people and other dogs. It is a loss to society when we have anti-social companions, due to environmental restrictions.

It would be a shame to loose National Parks donations from such a large base of people, after their access has been denied.

Thank you,  
Cate

<b>Correspondence:</b>	To Whom It May Concern,				

---

I write to support Alternative A, specifically regarding Fort Funston, but also for every site. The "need" for action is a fiction.

The urge to add additional regulation is a knee jerk reaction and will be a costly and dangerous mistake. It cannot be the role or policy of the park service to do anything but maximize the quality of experience for all who wish to take part in the park system. I fully support setting expectations of visitors to all parks clearly. However I do not support the needless creation of laws or the make-work enforcement of those laws. The fewer the regulations, the greater the promotion of community and culture, and the better

---

trained all park personnel are in how to educate \*not\* regulate their customers, the better.

For example, instead of ruining one of the best experiences for dog lovers in the \*country\* by imposing fines, employing police, and aggravating people during what should be a relaxing and enjoyable experience. A simple sign at the entrance of Fort Funston that says "This park is for people who love dogs. If you don't love dogs, you will not enjoy this park." The idea you would try to create a space where every type of person is happy is an infantile and inane goal. People want to congregate in communities with shared expectations. Fort Funston is for dogs to run free.

I will also note that in your environmental impact statement you make no mention to the quality of life for dogs. It is an unfortunate necessity that dogs be leashed sometimes for their safety. But no dog wants to be leashed, nor is it their natural state. You seem to take the side of a tiny minority of squeaky wheel humans who want to ignore the rich cultural traditions of an area and use it as \*they\* see fit, and of course to protect the voiceless animals native to the area (which I support) but completely ignore the massive population of non-human, non-protected animals that benefit the most from the status quo.

To a dog, a walk on a leash is \*nothing\* like a walk off leash. The immense, categorical difference between the two experiences would be obvious if you simply substituted "dog" with "child." Do you, for one moment, believe that you could institute a rule where leashes for children were required? Do you think that any beach community in the world would stand for that? No. And it is only your lack of empathy (most likely to do a lack of belief in the intellectual and/or emotional capacity of canines) which lets you even consider the idea.

While the inception and perpetuation of this process disgust me deeply, I will at least take some solace (when the farcical and inevitable conclusion arises) that I did not remain silent.

<b>Correspondence:</b>	My dog and I love walking, hiking and playing off leash. It allows him the freedom to really sniff, run, play and frolic in a way that he can't when indoors or in my small yard or on leash in on leash areas. It provides him with much needed exercise which, in turn, makes him a well behaved dog. My dog, and many dogs, are better able to socialize with humans and each other off leash. They are less protective than they are when on leash and my dog is just happier that way. He is very good at listening to my instructions. Many dogs are better behaved off leash and these areas are a precious resource for dogs in the Bay Area. There are already so many restrictions on where dogs can play off leash, please let's keep these areas for off leash fun.

**Correspondence:** Often I meet my son Danny and walk with him and my dog at Crissy Field along the beach. We meet many other folks with their dogs and children and it is always so sweet to experience the way we all get along, grown ups, animals and children. You rarely see a dog on leash nor does there appear to be a logical need for it. People pick up after their dogs and sometimes after the occasional overlooked doggie deposit. This walk serves so many purposes for myself and others, it is good for my mental and physical health and the socialization for all of us has a positive affect that I'm sure ripples out into what has become an increasingly negative world. I'm sure there are some folks who would like to not have any animals on the beach, why not reserve a section of the beach for them and a section for those of us who want to continue to walk our dogs off leash.

Thank you for allowing this space and extended time to comment.

Adrienne Ames

**Correspondence:** Off leash areas currently represent 1% o the total available land so it's unclear why this would need to be reduced. Even if you don't like dogs, or don't have a dog, you can still use the other 99% o the land and not be bothered by any wayward canines. Dogs need to be able to go off-leash and run free sometimes - and its cruel to spend your whole life sitting, laying, or running on a leash. Have you ever seen the pure joy an animal has when it runs free? I am 100% oposed to this plan.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I am not a dog-owner and do not expect to be one in the foreseeable future. I visit San Francisco's parks frequently as a hiker and lover of nature and wildlife.

Yet I oppose the plan to restrict dogs and support the No Action alternative. Here's why:

1) People walking dogs are among the most ubiquitous users of the parks, particularly during the off-peak

---

hours. Frequently, I visit a park to find only dog-people and maybe joggers. Joggers race by, often with ear-buds, internally focused. Dogs and their people walk slowly and pay attention. By doing this, they make the parks safer for everyone - especially lone older hikers like me.

2) San Francisco has a large number of dogs, and the number can only be expected to grow as people focus on the health and emotional benefits of pet ownership. All these dogs need to be exercised, twice a day. All dogs need off-leash time. Dogs that don't get off-leash play do not get properly socialized, any more than children would who are never allowed out from behind their desks. We need city dogs to be better socialized, not less so. Obviously, dogs do need to be under control. Existing leash laws should be sufficient to achieve this, together with a stronger dog-owner education campaign.

3) If areas where dogs can be allowed are restricted, it makes those areas less safe for others, while overcrowding the remaining parks. Restrictions in the GGNRA will inevitably push the dog population into the city parks in larger numbers. This seems counterproductive on every level.

4) There's no evidence that dogs do any damage to wildlife or the environment. While a few anecdotal tales are produced about dogs attacking birds or animals, this is a vanishingly small number compared to the ordinary threats these birds and animals face from natural predators, from habitat loss due to "Native Plant Restoration" or from normal urban risks - glass windows, moving cars, windmills.

5) GGNRA, and by extension, the Parks, lose the support of the public if they lose sight of the needs of the public. The users of the parks are its potential allies - the people who vote to support, who fund-raise, who come to the defense of the National Park system when it's threatened. Making policies that turn them off is bad not just for those with dogs, but for all of us who care about the environment and want others to care about it too. Many people feel their comments earlier were not considered in preparing this SEIS.

The biggest threat is definitely not dogs or dog owners; it's that people will drift away from our parks, and then wonder why such a huge piece of valuable real estate is sitting there doing nothing much. As someone who cares about saving our parks for generations to come, this in itself is one of the most negative aspects of the plan.

<b>Correspondence:</b>	Hello Golden Gate Park Recreation Area Committee,						

I'm writing because I've noticed the off-leash advocates all over facebook asking people to send you comments and I'd like to do so, but in favor of keeping dogs on-leash.

Of course people should be able to play catch with their dogs, but not everywhere. I don't appreciate dogs running at me out of nowhere (like, on trails), I don't like them running over my beach blanket, or eating my picnic.

My last bad experience was this summer having a dog urinate on my umbrella at Crissy Field and the owner didn't even notice. We just have so many people as it is that use these popular places that adding

dogs and people's inattention to the mix causes a real pain.

I'm not sure my annoyance is a reason to vote in favor of leash laws, but certainly if there's some environmental harm there is.

I think that dog-lovers and dogs should have their own large areas, but keep them on short leashes in the popular people places.

Thanks for your time and good luck with all the comments.

Please also hold my information from public review.

**Correspondence:** Hello. Even though we live in the East Bay, we still frequent the GGNRA parks. My dog's favorite place in the whole world is Fort Funston. That place couldn't be more perfect for dogs, especially down on the beach, as the cliffs make perfect natural fences. There are plenty of places out there that do not allow dogs off leash and very few that do. Dogs, just like humans need to run, jump, spin around, and play. Movement is life. Without these activities, life quality and expectancy are drastically reduced. As a student at Life Chiropractic College West, I truly understand the magnitude of this. As a pet parent, we can only do so much on leash for them. My dog is way faster and way more agile than me, so playing with him off leash is the only opportunity he has to be very active. Please don't take away Charlie Doodle's favorite place to run and play.

**Correspondence:** To whom it may concern;  
My name is Len Carella and I live in San Francisco. I walk my dog on Ocean Beach, Baker Beach, Fort Funston and Crissy Field for the past three of years.

I strongly oppose the preferred alternative for these places because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

County and on new lands that the GGNRA acquires in the future.

And finally, I oppose these new rules because they would cause great hardship to me and my dog. I would have to drive long distances to take my dog to a place where he could get the kind of off leash exercise he needs on a daily basis. Dogs that do not get enough exercise are problematic but when they are properly exercised they are a benefit to the larger community. Please do not make dogs and their human companions suffer because of your unfair and unnecessary new rules.

Sincerely,  
Len Carella

<b>Correspondence:</b>	My husband and I have a dog and as such we plan accordingly. We almost always vacation in places where we can take our dog with us. Several times a year we have mini vacations (weekend stays) in San Francisco largely due to the abundance of off leash areas in which we are able to relax with our dog. If the off leash areas are removed from San Francisco we will be less likely to go to San Francisco and spend our money there. If off leash areas are removed we will be more likely to take our tourist business to other cities like Carmel by the sea.				

In the Bay Area the majority of the outdoor recreation areas are there for people with out dogs to enjoy. Despite the fact that so many of us have dogs and would like the option of bringing our dogs with us. We hear all the time how important it is to socialize dogs so the do not become dangerous threats. If the places that we socialize disapear how will anyone be able to do the right thing? Won't that increase the number reports of injury caused by dogs when they are in public.

Please don't remove the off leash dog areas from S.F. Parks & Recreation.

**Correspondence:** We need more off-leash dog parks and beaches, not less! Many dog owners live in apartments or condos with no yard and dogs deserve their intrinsic right to run free! Would you want to live your life on a leash at all times? Some dog owners are irresponsible, but do not punish all dogs for human error.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please reconsider punishing dogs for bad human behavior.

Thank you!

<b>Correspondence:</b>	Frank Dean, General Superintendent Golden Gate National Recreation Area, Fort Mason, Bldg 201, San Francisco, CA 94123-0022 Attn: SEIS				

I am concerned about the changes suggested in the GGNRA 2013 SEIS which drastically reduce the off-leash areas available to domestic dogs. There are very few places in the undeveloped areas of the county, GGNRA or otherwise, where dogs can legally explore off-leash. Surely in a county of this size and with so much undeveloped area there must be SOME places where a dog can, well, just be a dog. Yes, we have our dog parks but saying that dogs can get all the exercise they need there is like saying that we humans can get all the exercise we need at the county's numerous gyms and that all we need to see of wild animals can be seen in a zoo. Technically true, but it is just not the same as an outdoor ramble which provides exercise for the spirit as well as the body.

I understand that we humans must live in harmony with are non-human neighbors, but can't there be some balance here? We make accommodation for cows, horses, and other 'domesticated' animals, as well as for species completely out of numerical whack due to human intervention - deer, turkeys, raccoons, skunks, big cats, feral cats, etc. The Golden Gate National Recreation Area was established to give outdoor RECREATIONAL (not wildlife preservation) opportunities to people in a densely populated urban area.

It requires a different management approach than wilderness areas like Yellowstone or Yosemite. Surely the Recreation Area which accommodates human impact from ranches and restaurants can accommodate reasonable off-leash areas for Man's Best Friend as well.

**Correspondence:** Of the proposals, I feel strongly that the dogs should be required to be on-leash throughout the park system. From my experience, dog owners do not pay attention to the granularity of specific regions being off leash vs on leash. If they see dogs off leash in a certain area, they'll feel like the entire park is off leash. Another important item will be actually enforcing the on-leash requirement. It seems every time I'm at Crissy Field, I see a dog off leash and out of owner's control terrorizing the birds in the lagoon. Unfortunately for the small percentage of responsible dog owners, the majority of dog owners cannot control their dogs, and do not think about on vs. off leash areas; if they see another dog off leash they assume their dog can also be off leash. I've also noticed an explosion in the number of dogs in the city, so we need to lock this down.

**Correspondence:** To Whom it may concern. For those who love and understand animals, they are beautiful social beings. We as dog owners use these public places to let them enjoy socializing as much as we humans do. Now granted there are people who are afraid to venture out into the public and choose not to interact socially, but that is their choice. Unfortunately dogs do not. Like young children, dogs need a lot of supervision and attention to nurture a healthy mental and emotional being. Of course a dog can survive strictly living within the compound of ones home, but a child could also be locked in a closet and physically survive. As for their mental state of mind.... Children whom have been isolated have difficulties getting reintroduced into society due to the lack of development. We can get into the debate on why man domesticated the dog, but ultimately remember that it is an "animal" and has more natural animal instincts and has the need to run and have moments to be free. It's no different then seeing a rehabilitated animal being re-released back into the wild. The mental state changes and you can see their need to escape captivity. They (dogs) are animalsâ€ we owe it to themâ€ It's not like they have a choice.

---

It is our responsibility as humans to take care of what we can control. That is why this decision is so important.

Thank you for your time,  
Aki Yoshikawa

**Correspondence:** Dear Superintendent Dean,

My name is Sue Minsuk and I live in San Francisco. I walk my dogs on Crissy Field for the past 16 years. I belong to Dog Connect SF Bay Area & Dog Pro Network

I strongly oppose the preferred alternative for (name the area or areas) because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, As my own dogs age they prefer a smaller city park experience and if the GGNRA areas become even more restricted our city parks will become over run.

**Correspondence:** Hello,

I live close to the Presidio and enjoy off-leash walking with my dog, Wendy, on Baker Beach, in the Presidio, and along Crissy Field. My dog walker takes her to Fort Funston every day during the work week to get needed exercise and stimulation.

The Preferred Alternative is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the

GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

Finally, the plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

I urge you to reject the current plan and to adopt the original 1979 Pet Policy which was affirmed as legal and the current law of the land by Federal Judge William Alsup in 2005.

Thank you,

Melanie Loftus

<b>Correspondence:</b>	Mayor Lee,				

As a 15 year resident and conscientious dog owner I object to the GGNRA's plans to restrict access to public recreation areas to dog walking. The GGNRA's charter is to protect and maintain the city's urban recreation areas for use by all its inhabitants. Pet policy was explicitly addressed in 1979, and I ask that they honor that commitment. Their plan would leave only 7 remaining RAs that allow. Most San Franciscans do not live within walking distance to these remaining few, and if we did those parks would potentially be overburdened with dogs (if indeed that were possible, which the proposed GGNRA restrictions would seem to suggest)

These parks are important to the health San Francisco's dogs. Being that we dog owners take every opportunity to walk with our dogs, these restrictions would effectively ban us human residents as well from these parks.

I would propose an alternative of higher fines and penalties for abuses of these important places. If

maintenance cost is cited as the largest issue then perhaps a small license fee to be able to walk dogs in the parks. For instance, a \$5 per year additional fee for stamp on a dog license. Even the simple requirement that the dog be licensed to enter the RAs at all would likely result in an increased rate of dog licensing, funds from which could help maintain them.

I ask that you evaluate the lack of substance supporting the dog restrictions and lack of studies concerning the impact to the rest of SF neighborhoods when evaluating your support of these GGNRA policy changes.

Sincerely,  
Tim Dietz  
19 Woodward St  
San Francisco, CA 94103

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Elizabeth Hudson and I live in San Francisco. I have been walking my dogs on Crissy Field, Fort Funston, Baker Beach and Ocean Beach for the past 16 of years.

I strongly oppose the preferred alternative for these areas because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, the proposed new regulations will force me to use my car and drive long distances to walk my dog (who is solidly under voice-control) off leash, and will cut down on the time I spend with my family enjoying this outdoor space. The interests of responsible dog owners who clean up after themselves and their dog, and who respect the environment around them should be considered along with the scientific concerns.

Sincerely,  
Elizabeth Hudson

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood Trail.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Dogs are a part of our families and fortunately are a reason many people enjoy the outdoors and exercise regularly.

<b>Correspondence:</b>	First of all, the fact that the dog plan is over 1500 pages in length abusrd. It is angering that our tax dollars are misappropriated in this folly.				

These are urban parks and in urban areas a large percentage of the people utilizing them are dog owners.

I walk my dog almost everyday at Mori Point, she is on leash and I pick up her poop. I pick up trash off the beach every day I walk on the beach. I have even removed tires from the surfline. I utilize the Mori point beach with my children almost very weekend. Yesterday we built a large castle on the beach all with found driftwood, stones, feathers, and shells. Our dog stayed with us and played for 2-3 hours. The

thought that my access to Mori point will be limited by a a crew of governmental bureaucrats is beyond infuriating.

The GGNRA is utilized by many people. Restrictions on the number of dogs people are walking are entirely reasonable. Restrictions on responsible dog owner such as myself is completely inappropriate.

These restrictions and the dog plan should be thrown out in its entirety. The organization or individuals that wasted our tax dollars in compiling it should be fired.

Sincerely,  
Rob West, DVM

<b>Correspondence:</b>	My name is Lyle Sweeney and I live in San Francisco. I walk my dog on Crissy Field and Fort Funston for the past 5 years.				

I strongly oppose the preferred alternative for GGNRA because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

If owners are not following rules, then set up self funding patrols that incur steep fines that will self fund on-going patrols. If a single patrol can fine 1-3 people per day at \$500 per incident, that would be more than self funding.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, as a resident of San Francisco without a yard, I will lose the few options I have left to go out and enjoy recreation with my dog. These restrictive measures are helping rich people who can afford large houses with large yards.

**Correspondence:** Dear Superintendent Dean,

My name is Andrea Flynn and I live in Mill Valley. I walk my dog on the Miwok, Oakwood, Fort Funston, and many other beautiful trails for the past 12 years. It is one of the big reasons I love living here.

I strongly oppose the preferred alternative for Marin Headlands and Muir Beach because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science, not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, parks and recreation struggles daily with the high demands on the community fields. As parents of children in multiple sports, we see that this is a real land management issue, and redirecting the families and pets out of the hills, these fields come under greater strain.

Sincerely,

Andrea Flynn

**Correspondence:** Just saw on [www.dogtrekker.com](http://www.dogtrekker.com) that dog access will be severely limited soon in SF's Golden Gate parks. We have avoided travelling in California in the past due to what we felt were too stringent dog restrictions. We recently found the [www.dogtrekker.com](http://www.dogtrekker.com) web site and have started to change our minds...there appear to be lots of great hikes and places to visit WITH a dog...particularly in the East Bay Area. We always travel south for a 1 or 2 month camping trip in Oct. - Nov and head to set up base camp in areas that are dog friendly....if you changes your dog rules in the golden gates area we won't be visiting. Please keep your parks dog friendly!

**Correspondence:** My partner and I adopted our dog, Dunkin, almost three years ago. We moved to San Francisco from Boston not too long ago and immediately fell in love with how "dog friendly" SF is compared to Boston. Dunkin has a lot of energy, loves playing and running on the beach and trails. We frequent many of the parks that could be affected by this project. Well behaved and trained dogs should have the right to run freely. You can't play frisbee on a leash! I oppose the Preferred Alternative because it is too restrictive. I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please keep San Francisco a dog friendly and dog welcoming city. So many pups and owners enjoy the beauty and nature here. It would be a shame to change that.

**Correspondence:** I agree with the proposal to keep dogs ON LEASH in more areas of GGNRA. National parklands are for preserving wildlife and open space. The lands should not be geared for the use of a specific interest group like dog owners. My friends have seen dogs in GGNRA chasing endangered snowy plover. Most dog owners do not have sufficient voice control over dogs, and when hiking, I do not want a strange dog running up to me. Above all, if you permit rampant dog off leash areas in GGNRA, the dog owners will then ask that even more sensitive areas such as Yellowstone, Yosemite and other great national parks to be opened up, to the detriment of wildlife. Please maintain on leash rules for all national parks and recreation areas.

**Correspondence:** Please consider continuing to allow dogs on Muir Beach. It is an excellent experience for people and their dogs. The ability to exercise, to socialize and to enjoy the ocean is good for dogs and their owners. There are very few places that allow dogs off leash, which is unfortunate because they can exercise better that way. In nearly 30 years of going to Muir Beach with my family and my dog(s) I have never seen a problem. Most people bring only well socialized and friendly dogs to this area. I truly appreciate the opportunity to enjoy this beach with my dog and other people. Thank you.

**Correspondence:** As a Bay Area dog owner, it's important for us to have a place to take our dogs for recreation. It makes for a happier dog and provides an inclusive community where all recreation needs are accounted for and provided. By SEVERELY limiting the areas for recreation for dogs and their owners, you are essentially saying that this is an area that dogs are not welcomed. Isn't SF an area where everyone is welcomed and we provide recreation for everyone? I understand why some parks are off limits and why certain areas are not conducive to allowing dogs, but the new plan takes away such a LARGE amount of area- where are dogs now allowed to run free? Please reconsider this proposal as it has such a massive impact on such a large population.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, Fort Funston and Ocean Beach.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** My name is Friday Apaliski and my dog's name is Sunny Louise. Sunny is 5 years old and she grew up in San Francisco. She has graduated from three levels of obedience class and continues with training on her daily walks. Every week day she goes for an off leash walk to Fort Funston, where she follows the rules and is under voice command at all times. Every weekend my husband and I take her to Crissy Field where we let her run on the beach in the off leash area. She never goes into the fenced off protection zones. This activity is not only good for Sunny, but it's good for my husband and me too. Sunny comes home happy and calm, and we are able to enjoy our beautiful. If Sunny weren't able to join us on our walks we would go on them.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. €

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Rather, they should work on enforcement, than try to make even more restrictions that even people who want to comply won't be able to comply with.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A /supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of

needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Thank you very much for your time. I hope you'll take this matter as seriously as I do.

**Correspondence:** My name is Megan Price and I live in the (outer) Sunset in San Francisco. My husband and I frequently take our dog, a rescue named Tesla, to Fort Funston. Fort Funston is such a great park, for dogs and humans. We love to spend weekend mornings walking, enjoying the gorgeous views, and watching Tesla open up and run at top speed (something impossible to achieve on our leash walks). She loves these trips, and has the opportunity to get much more fresh air, exercise, and socializing with other dogs than she has an opportunity to experience on our much more efficient on-leash walks in the morning before work.

I want to formally object to the restrictions proposed in the 'preferred alternative' plan. These restrictions would essentially remove all off-leash opportunities, something of great benefit to both dogs and their humans. Dogs with the opportunity to run and socialize are much happier and better behaved. I understand that off-leash areas are hard on the local ecosystem, so I can certainly understand if the city needs to limit access to some areas. But no alternative off-leash areas have been proposed. If the suggested restrictions are put into place, alternative open spaces must be created and provided.

Additionally, many points are raised in the SEIS about the discomfort of some non-dog-owning visitors to areas frequented by dogs. Certainly, it is the responsibility of all dog owners to train their pets and to ensure that they are under control and well-behaved when out in public. Enforcement of these social norms should be expected. However, residents who are simply uncomfortable around dogs do not have special claim to access areas frequented by dogs. Just as I cannot take my dog to many public areas (state parks, beaches, etc.) these individuals could choose to frequent one of these many alternative public spaces where dogs are not allowed. I do not find these points in the SEIS to provide any compelling evidence of the need for the restrictions proposed in the 'preferred alternative plan.'

I whole heartedly support formalization of the 1979 Pet Policy instead of the restrictions proposed in the 'preferred alternative plan.'

As a dog owner who frequents many areas in the GGNRA (most often Fort Funston), I hope that all of the comments submitted during this period are taken into consideration and that we are able to find a true alternative that meets the needs of the city, the local ecosystem, and all residents, including their furry friends.

**Correspondence:** The Human Society of Marin estimates that there are about 90,000 dogs living in Marin. I'm told there are more dogs than are children in Marin. For many people, their dogs ARE their kids. Even if a person doesn't go quite that far, their dog is still a treasured member of their family. Dogs and kids both need outdoor, exercise time. It's healthy for their mental and physical well-being. Why does the GGNRA want to take even MORE space away from where dogs can exercise off-leash? Would the same be true if we were talking about children? The people of Marin have so many dogs - - dogs are a part of life here. I find it unimaginable that the people who live here want LESS places to go to enjoy time hiking, biking, camping, romping, swimming, picnicking, playing frisbee and ball or .....all the activities we enjoy with our dogs. And off-leash play is essential to that mix. Imagine putting your child on a leash in order to let him climb a jungle gym or go down a slide. How do you play ball with a dog on a leash? If this is truly a democratic society than let the people vote and then stick with that decision. If the people of Marin actually vote to accept less space for off-leash play for their dogs than I'll eat my words and move

---

to a more dog-friendly location. But I think the GGNRA will be eating dog biscuits instead. Take it to the people!

**Correspondence:** We love and use Fort Funston on a weekly basis. It would be a travesty to loose this public park as an off-leash area.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** To whom it may concern,

I was very dismayed to hear about the proposed plan to remove off-leash capabilities from the GGNRA. While there are a number of form letters out there to copy, I'd rather not waste your time rehashing the studies and evidence supporting a pro-dog position; rather, I just want to relate my experience. I have been to many parts of the GGNRA with my dog many times, probably at least a hundred trips over the past few years; dogs off-leash are very common, and it lets them explore the wilderness and be free. I have during this time never seen a single owner fail to clean up after their dog, nor have I seen any incident where a dog accosted a person or wildlife (the wildlife areas are already segregated and I see nobody being disrespectful with their dog).

I simply don't see what harm the dogs are causing to anyone, and they are immensely happy to run around and enjoy nature and interact with each other. My two most common trips are to Crissy Field and the Marin Headlands, and it's always wonderful to watch my dog scamper around the trails.

I urge you to reconsider this plan and keep GGNRA the wonderful place for both dogs and humans to play as it is today.

Dogs are the lowest on the totem pole. Dogs are unwanted! However 50% o SF households have dogs. You cannot deny them. You worry about people who do not have dogs, you worry about tourists, you worry about wildlife, you worry about that all other recreational activities have space enough. But the GGRP does not worry about dogs,

if the needs of the dogs are not met and seen, they will become very unhappy. Dogs need space to run, dogs need the free run, not being leashed and restricted, or being in a backyard only. Dogs need the free run and the fun.

Dogs on leashes are more aggressive, dogs who do not have adequate socialization and free run are unhappy, Unhappy animals are aggressive.

Fort Funston, is great. I love FF and my dog as well. If off leash areas are restricted as you plan, it will be overcrowded in the areas where we can actually keep them off leash. You set up problems, dog aggressions will increase.

We need more off leash areas in the city and in parks around, more opportunities for peaceful dogs/dog owners to enjoy nature. We have the right! you want to take if from us. I disagree.

That is how it is important to have open dog area's for running and exersize.  
It's health of our beloved pets we are talking about! Please be kind to all.

**Correspondence:** Dear Superintendent Dean,

My name is Jeremy Hughes and I live in San Francisco. I regularly walk my dog in golden gate park, chrissy field, fort funston and ocean beach for the past 9 years. My dog is a golden retriever and has never harmed a thing except for possibly a tennis ball. On leash would prevent my dog from doing what is innate in him... retrieving and swimming& not easy to do while on leash, no?

I strongly oppose the preferred alternative for all areas of GGNRA because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, this is going to impact me and my work schedule and well being because I will be having to get into my car and drive long distances to walk my dog or not going out on walks with your family because you can't take your four-legged friend etc., feeling like my dog doesn't have anywhere to run free, etc.

Sincerely,

---

**Correspondence:** I have been a resident of SF for 21 years and always appreciated the city for its diversity and love for not only humans but as well as animals. I do not support the banning of off-leash here in SF. My dogs and I will be affected by this. My neighborhood is crowded and I do not have a back yard or a front yard for my dog to run around freely and play. The street I live on is busy with traffic sp I never let my Happy run around in the neighborhood. I take her to Fort Funston and Ocean beach because it is open and big enough for her to run freely with other dogs. Please do not ban off-leash dogs because I feel like she would always be on the leash aside from home where her space is too small. Thank you

**Correspondence:** GGNRA,

The areas you are trying to restrict are RECREATIONAL areas, not national parks. By restricting the use of these lands, you are forcing dog owners to flock to smaller urban parks, which will cause overcrowding and congestion in the neighborhoods these parks are in. We live in the outer sunset and during the federal furlough when Fort Funston was closed, we saw Pine Lake Park inside Stern Grove get jam-packed with dogs & people - - just awful.

By restricting these parks, you are also limiting the amount of exercise pet owners get when they take their dogs for a walk. For example, the loop my husband and I walk at Fort Funston every day is just under two miles of various topography. In addition to it being a great workout, we love coming here WITH OUR OFF LEASH DOG, to take in the scenery (it never gets old).

Please leave these recreational areas as they are today - - off leash to dogs.

Thank you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Eric Plumb and I live in San Francisco. I take my dog Chewie to Golden Gate Park, Ocean Beach, Crissy Field, Fort Funston, and various other local parks all the time. I would love to be able to continue doing so.

I strongly oppose the preferred alternative for (name the area or areas) because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

On a personal note, Chewie and I both thoroughly enjoy long romps on the gorgeous beaches and trails in the Bay Area. We are obedient of and respectful of off- vs. on-leash areas and of wildlife. While I understand the need to protect other species, I would need to see convincing studies such as those mentioned above before I became convinced that a proposal such as this was in the best interests of the community as a whole. Thanks for your time.

Sincerely,  
Eric Plumb

I regularly take my dog to muir beach

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Why should dogs be excluded or leashed in open space areas? Where can one exercise a dog that is NOT a dog park? Dog owners deserve to spend quality time exercising their dogs (and themselves) and not have to be fenced into a bare-dirt lot. More and more public areas are becoming dog-friendly; such as the Town Center, Corte Madera Mall, San Anselmo Avenue (and other town areas). As long as a dog owner or walker has a leash to contain their dog(s) if necessary, bags to clean up after them, and the dog is controlled whether on a leash or not, they should be welcomed.

**Correspondence:** The federal land belongs to the people of the United States. Dog walking is a vital part of the Marin/San Francisco communities. It is good for the dog and good for the dog owners. We dog owners need designated areas in which to bring our dogs for fresh air and exercise. The plan to restrict these areas is unacceptable. There are plenty of other protected areas that dogs are not allowed. We need our share of dog friendly areas on NPS land (which again is paid for with taxpayer dollars).

**Correspondence:** There are very few beaches left near San Francisco that allow dogs to run free. Taking away the public's right to allow well behaved dogs to experience the beauty of California Beaches without being inhibited by leases is part of the joy of the experience. National Park Service should encourage complete families (including dogs) in their invitation to visit. Restricting dog access to these beaches may mean a reduction on visits by the public.

**Correspondence:** I am opposed to the entire GGNRA Dog Management Policy because I disagree with its premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. By their own admission, the GGNRA had no data or studies to support these claims and they are relying upon these claims to initiate a process whereby access for people with dogs will be severely limited or completely banned. Even now, with this SEIS, the GGNRA admits they have no site-specific peer reviewed studies (required by Federal law) to substantiate their claims that dogs are a problem for wildlife, water quality or vegetation in the GGNRA. Instead, they rely upon anecdotal evidence and baseless assumptions to claim dogs have the potential to damage this Recreation Area.

Additionally, in the SEIS the GGNRA asserts they have the right to redefine the term "recreation" as utilized in its enabling legislation and in the promises made to the voters of San Francisco back in 1972 by the GGNRA/NPS/DOI and the GGNRA's first Superintendent, the Honorable William J. Whalen, in order to secure various properties then owned by the City and County of San Francisco. These promises, most importantly, stated that this National Recreation Area would retain historical recreational access (including off-leash recreation) should the citizens vote to include SF park properties in the GGNRA.

The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. All properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time.

If the GGNRA does not want to manage these properties as a Recreation Area, then they should transfer the Recreation Area to another entity better able to manage it, e.g. the Forest Service or Bureau of Land Management. Alternatively, for sites heavily utilized by dogs and their guardians, such as Ocean Beach and Fort Funston, these properties should be reverted back to San Francisco.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** Dear Superintendent Dean,

My name is Wally and I live in Fremont. I walk my dog on fort funston for the past 3 of years.

I strongly oppose the preferred alternative for fort funston because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

And finally, (please state in your own words how the restrictions will impact your life- examples may be having to get into your car and drive long distances to walk your dog or not going out on walks with your family because you can't take your four-legged friend etc.)

Sincerely,

---

**Correspondence:** Ocean Beach is a wonderful resource for many types of people, and home to a number of species, including the snowy plover. I understand that there are many competing needs to be accommodated. However, NPS' preferred alternative seems completely unwarranted and unfair. Banning leashed dogs from Ocean Beach between Sloat and Stairway 21 will deprive hundreds of dog owners and their dogs of daily exercise and enjoyment. I am on the beach almost every day (I live across from it), with my dog. I see dozens of regular dog walkers & runners, surfers, walkers, dog-less runners and fishermen; less frequently, I see families with children, homeless people, sunbathers, partiers, etc. On gloomy days, which are frequent, however, the beach is deserted but for people with dogs and surfers. My observations are obviously anecdotal, and I do not have data to back them up. But based on my experience, the preferred NPS alternative will have a disproportionate impact on dogs and their owners, and a minimal impact on those people who only occasionally use the beach. Are there dog owners who fail to prevent their dogs from chasing birds or jumping on others? Yes, I've seen them. But the vast majority of people who walk their dogs on Ocean Beach respect the seasonal leash laws or have their dogs under tight voice control. If NPS wants to protect the snowy plover, it can enforce the existing leash laws and hand out hefty tickets to deter further infractions. Banning dogs entirely just seems unfair to all the people whose dogs are well-behaved. The days Ocean Beach is most trashed is after a sunny day has drawn crowds who do not value and respect the beach. I, and other dog owners, love and respect the beach. We try to take care of it, not just by cleaning up after our own dogs, but by cleaning up after others and carrying trash off the sand and dunes.

**Correspondence:** I would like to thank the National Park Service for the thorough and thoughtful manner in which they've addressed this sensitive and contentious topic, as well as thanking them for their work to maintain some of the most beautiful places in this country despite decades of underfunding.

I walk in GGNRA lands several times each week. I support the use and enjoyment of these places by all, but I do not believe any one group has a "right" to their preferred use. People that fish for crabs at Crissy Field are subject to regulation. People who want to mountainbike can only do so on certain trails. I have no right to pick wildflowers when I walk at Mori Point. And people with dogs do not have a "right" to walk those dogs off-leash.

I support restricting off-leash dog-walking and regulating commercial dog-walking; I also support a strong and well-funded monitoring and education program. I see dogs walked off-leash in the GGNRA part of Mori Point each week. These dogs race off the trail and scatter the birds and rabbits in the area. When I mention to owners that the dogs should be leashed, even those that comply release their dogs when I go on my way. The GGNRA has invested time and money in improving access and preservation at Mori Point. Dog owners do not have the "right" to undo that work.

Likewise, I ask that there be increased monitoring and education around proper handling of dog waste. I see and smell piles of dog waste in every park I walk in, every single time. At Crissy Field, the waste barrels are sometimes overflowing with bags of waste, and a pleasant walk along the waterfront is spoiled by the pervasive smell. Fort Funston reeks of dog urine on a warm day. I also believe that, even if compliance with good dog-waste handling procedures were improved, dog waste will still have a large

and negative impact on the public's experience in the parks. There are almost no grassy parks in San Francisco where I can play frisbee or tag with my kids, or have a picnic, without needing to be on guard for dog waste.

I would support permit requirements for all dog walkers at the parks, with the fees to be used to fund monitoring and education programs. I would also support user permits for non- -dog-walkers, as well. These parks are beautiful, and we should all be willing to spend money to keep them that way.

Unregulated, unmonitored and heavy use of GGNRA lands by dogs diminishes the parks: the plant and animal populations are impacted, and the accumulated dog waste is unpleasant and unhealthy. Regulation and monitoring would improve the parks.

<b>Correspondence:</b>	To Whom it may Concern,				

My name is Billy Campbell. My wife Patty, two sons, Jeremy and Liam and well trained dog, Shasta spend EVERY weekend at the parks and beaches that allow us to take Shasta. Shasta is a very well trained Golden Retriever/Shepherd mix dog that has a passion for Frisbee, tennis balls and the ability to run off leash. I live in the Bay Area specifically for it's mostly dog friendly environments. If these restrictive laws were to pass, not only would it affect Shasta's quality of life but it would also affect my family's quality of life. We LOVE the parks and beaches throughout the bay area. I will do everything I can to ensure that my family and dog have the best life as possible. I would even consider moving to a more family oriented place. To me, this is not a pet thing but a family thing.

There is no doubt that there are a few people in this dog owner crowd that spoil the freedoms we have by taking advantage and even abusing the system.

I would propose that all dog owners go through a training or evaluation. I too have run into dog owners that have blatant disregard for leash laws and picking up after their own dog. Some of the dogs I know for sure would never pass behavioral acceptance. This could possibly eliminate a good portion of the problematic people and dogs. I would gladly pay a one time fee of \$20 to \$50 per dog for and license to be in the parks unleash. Not only is my dog trained for voice commands, Shasta also knows sign language and whistle commands. I'm not expecting everyone's dog to be like this but there should be something in place for this.

Thanks for not passing these restrictive laws.

Billy Campbell

**Correspondence:**

Areas where our dogs have been welcome to walk or play off-leash for decades could be severely cut or banned outright under the revised GGNRA dog plan. The new rules would affect off-leash as well as on-leash access at Crissy Field, Fort Funston, Muir Beach, Rancho Corral de Tierra on the slopes of Montara, and many other parklands.

The San Francisco City Council recently unanimously passed a resolution objecting to the GGNRA plan, which prompted the head of the Sierra Club to say that SF is pandering to a small group of dog extremists.

However, I believe that as responsible citizens, we must be realistic and fore-thinking about how to accommodate more than 100,000 local dogs in a city with limited space.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

I am not suggesting unlimited dog walking access, and we advocate responsible dog ownership in all GGNRA lands. But there is no credible reason to deny fair and reasonable access for both on- and off-leash dog walking that has taken place on GGNRA land for more than 50 years.

I frequently visit family members that live in San Rafael and we typically enjoy, with our children and dogs, the few remaining hiking trails open to leashed dogs in Marin.

I am very upset to learn that the GGNRA wants to, once again, eliminate or even further reduce the enjoyment of its park area by people with dogs. This is terrible stewardship of public lands that are supposed to be fully enjoyed by the public.

We have visited the Muir Beach area many times and it is very beautiful. The expanded parking area is greatly appreciated and was very needed. Now to eliminate the use of the area by a segment of the public...makes no sense and would seem to be an enormous waste of tax dollars.

We keep our dogs on leash and have never witnessed any problem caused by any dog or their owner on GGNRA recreational property.

I very much hope this mean-spirited proposal will be withdrawn or rejected.

**Correspondence:** The demographics of our country are shifting rapidly. The population is aging and there are a significant number of individuals living alone. This last has been a marked, important change. Many people (like me) depend on their dogs for their day to day companionship and exercise. There is ever-growing science that shows that these animals have a strong, positive influence on the health and well being of this population, and therefore of society as a whole.

It is urgently important that our parks recognize the import role that our dogs play in our lives and not

---

continually seek to make it more difficult to own dogs in our metropolitan areas. Dogs need to be off leash for their health and socialization. No amount of walking replaces a good run. Not to mention the joy these animals bring to all involved in these activities.

I am 72 years old and take my dog to an off-leash location every day, rain or shine. I can't imagine my life without this activity.

**Correspondence:** Further limiting the areas in which dogs are allowed is absolutely absurd. Pet ownership is certainly a responsibility, and one that people should not take lightly. As a pet owner living in the Bay area I am constantly aware of the diminishing number of places I am allowed to take my dog so that he may enjoy a bit of freedom. A vast majority of living spaces in the Bay area do not provide enough space to allow a dog ample room for regular exercise, this is why most dog owners turn to parks and recreational areas to allow their dog the ample space. Further limiting these spaces will only result in a negative outcome for dog owners, their pets, and even those who do not own dogs.

**Correspondence:** Although I am not a dog owner myself, I often help walk and hike my boyfriend's dog throughout the Bay Area where it is allowed. There are already so many trails and parks that are off limits to dogs off-leash or even completely. Given about half of San Francisco residents own dogs, dog

---

owners should be allowed spaces in which to exercise them.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** I have read the SEIS and the proposed changes to the dog management document. I have also read the thousands of suggestions from the public, so I consider myself well informed on the topic.

The proposed changes you outline in your dog management plan seem to ignore the concerns and suggestions of a large number of public commentators.

I do not see the comments of dog owners adequately reflected in your proposed use plans. In fact it seems the plans have been proposed with a very one-sided view in mind, that is, to restrict or eliminate the access to lands by a significant segment of the population, namely those residents and tax payers with dogs.

Because your plans do not include balanced options for the public to vote on, including options that increase access to the area by all segments of the community, I do not believe the issue has been adequately evaluated. I do not support any change to the current use rule, mandated and set out at the time of the grant of lands in 1979.

**Correspondence:** The recently proposed further limitations for dog walking and required dog leashing are far too strict. Over 99 percent of the GGRNA is already severely limited for dogs and their owners. Not only do dogs need areas where they can run and play freely, the owners too required areas where they can walk their animals without being leashed themselves.

I understand that a minority of owners are irresponsible and do not properly manage their pets, however, the response to that is not to punish the great majority of responsible dog people. The proper response to to take appropriate action against the few who allow their dogs to terrorize other beings or the land. We do not penalize all drivers because some drive drunk, or punish all parents Because some have dangerous children. This should also be the case with regard to dogs and their people.

Also, with respect to protecting the land of the GGRNA , require dogs to stay on the paths and educate walkers about the importance of not allowing their animals to chase the wildlife. These are more measured and appropriate ways to care for the wildlife and habitat of the area.

Some people believe that the answer to the dog leash issue is to send dogs to dog parks. For many of us, and our dogs, such parks are neither pleasant nor worthwhile. Dogs, and their people, need to walk and run freely, not be penned up in a confined area with lots of other dogs, some of which are not that friendly. Also, as the MHS will tell you, some of the biggest problems with dogs these days are attacks that occur at the dog parks.

Please do not take over zealous actions with respect to the majority of dogs and their humans within the GGRNA boundaries. It would be a great loss and hardship to us all. Thank you. victoriagold

Superintendent, Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123  
Attn: SEIS

Dear Madam or Sir:

Hello and Greetings! My name is Richard Lynch, I live in San Francisco in the densely non park no green area of SOMA (South Of Market). Regularly, I visit parts of the GGNRA, specifically, at least once a week I visit Crissy Field all the way to water's edge with my dog for OFF LEASH as well as Fort FunDog for OFF LEASH at least once-a-month and all the way to water's edge. Additionally, I frequent Pacifica, CA coastal access areas after dog acupuncture with holistic vet in Pacifica at least 3-6 times a year

including all the way to water's edge at the beach and on the walking trails. I have travelled up and down the coast as far south as San Diego and as far north as Mendocino with my pet companion (so far with trips South occurring at least once-a-year for last seven-plus years) via the slow route gearing my travel and lodging plans specifically around travel with my pet companion and I notice how vital it is to maintain open off leash in the Bay Area as the opposite as witnessed by me and mine causes nastiness in dogs and people outside the San Francisco Bay Area.

My dog adopted in 2006 at age 2 is a special needs animal now of the three-legged variety since January 2009 due to systemic cocci AKA Valley Fever and doing excellently with a lot of energy benefiting from regular exercise and continued socialization with people and other dogs. For me I get a closer connection to the area which is increasingly becoming hard to get closer to as I live in the ever-densely-growing, very unplanned, non green area of SOMA with its skyrocketing pricing and fast-killing vehicles (for example, in 2013 alone, 21 cyclists and 4 pedestrians were killed dead due to poor planning by the area). Nearby city parks are non existent. Although I do walk to distant parks in distant areas of the city with my companion dog and I enjoy them often as well (at least 1-2 times per week); however, these excursions are not sufficient to our off-leash needs. Daily I tweet for green parks and dogspaces to be added in SOMA and daily the local powers that be ignore my and others' efforts. I belong to and support SFDOG, WALK SF, SFBike, as well as am an original member of BAY AREA BIKE SHARE PROGRAM prior to its opening and recent inauguration, among others. I disagree with the positions of the executive boards of the Sierra Club (whom I have supported with cash), and I would like to point out that these local boards do not speak for their members/supporters and they do not speak for me at all. I also volunteered as a trained dog-walker for SF ACC tenants and did serve weekly prior to my own dog's onset of special needs arising 2008-2009.

1) I strongly oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. I strongly support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. The SEIS Preferred Alternative proposes to install fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fences secure enough to keep small dogs in will hinder movement of wildlife. If fences are not secure enough to keep small dogs in, why have them?

3) I strongly oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

4) SEIS still lists impacts that "might", "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

5) SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1).

However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space" (Enabling legislation, first paragraph). The SEIS notes, in a negative way, that "In many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities." (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - "The objective of [the creation of the GGNRA] is to ... expand to the maximum extent possible the outdoor recreational opportunities available to the region." (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972).

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent,				

My name is Evan Mizrachy and I am a San Francisco resident and dog owner (Kayo is my precocious 4 year old mutt who was rescued by a wonderful organization). I can be found several times a week walking Kayo at Chrissy Field or Fort Funston (and occasionally at Fort Mason, Rodeo Beach and Muir Beach). Being a responsible dog owner, I have always kept my dog under voice control in any area where off leash, I clean up after him and keep him from passing fenced off areas. My time walking Kayo off leash is a critical part of my lifestyle, and I don't doubt Kayo's as well. As any dog owner will tell you, dogs need more vigorous exercise than they can get while on leash.

Beyond being a dog owner, I am an avid environmentalist so I understand the need for habitat protection - that said I do not believe those two things need to be in conflict. This DEIS and Plan doesnt seem to recognize that environmental values include both recreation and nature. The document doesnt acknowledge that people care about both and that people with dogs are often also good stewards of our environment. Further, today the vast majority of GGNRA land is already off-limits to dogs (>99%),cutting that back further would be a great disservice to the city's dog owners. It also needs to be pointed out that the discussion is around park land that is clearly in an urban area - as such the needs of the city's citizens need to be looked after as well. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dogs needs. Without access to the small amount of land in the GGNRA currently available, I worry that many dogs and dog owners will not have sufficient opportunity to engage in recreation. It is thus critical to me that places like Fort Funston and Chrissy field remain open for off-leash dog walking access.

As such, I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science

or long-term monitoring of site specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dog-walking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I also oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular areas simply because it deems that not enough people are complying with the leash restrictions.

When Congress created the GGNRA in 1972 - it did so in part to "expand to the maximum extent possible the outdoor recreational opportunities available to the region. A great many citizens in the area look to engage in recreation with their dogs as companions and not recognizing so does a disservice to these citizens.

We all know that families with children have left San Francisco in droves due to a dearth of affordable quality schooling. I would hate to see my dog owner friends (myself included) be forced to follow due to the lack of available dog-friendly dog walking options.

This is a really important issue to me and I sincerely hope that my voice, and the voice of the great many other city dog owners, will be heard in this matter.

Respectfully,

Evan Mizrachy

<b>Correspondence:</b>	These are comments for the proposed dog management plan for GGNRA.				

We are opposed to this plan. We visited Muir beach for the first time with our dog 2 days ago. What a great spot for people, for families, for dogs. Eliminating space for dogs to run free on the beach or for folks to walk their dogs is wrong.

Changes made to the 2013 SEIS do not address the comments filed in 2011 and the comments ran 31 against the plan.

We support the No Action Alternative for Muir beach, Homestead, Oakwood Valley and the Marin Headlands.

The SEIS contains no peer reviewed site specific studies.

Retain the 1979 longstanding pet policy.

Where will people in urban areas have to go with their dogs?

**Correspondence:** Dear Committee Members,  
Thank you for taking the time to solicit input from the citizens of our potentially impacted communities. It is a testament to the thoroughness of the committee and its recognition of the gravity of this debate. I would like to start by requesting the committees acknowledgement that our dog owner community is currently already drastically discriminated against in its access to our Bay Area parks. In Marin County, families with dogs are permitted access to merely 1% o our parks land! This alongside the fact the recent surveys show nearly 40% o all Californians are dog owners.

As frequent users of parks, dog owners are often the most committed volunteers to park maintenance and fund raising. In addition, our parks are funded equally by all tax payers, dog owner or not. This discrimination alone should give any fair analysis pause before considering further reduction of dog friendly public space.

Lastly, I would like to address the economic sense of further restricting parks from dog friendly space. Any tightening of dog restrictions would naturally require additional resources for policing and enforcing said policies. With our park systems already under intense financial pressures (park closers, etc.), could our park dollars not be better spent reopening and maintaining our parks system instead of degrading the experience of some the parks systems biggest advocates and supporters?

In closing, I ask you to please reconsider any changes to our current dog friendly park space. It is unfairly over-limited as it is and to add to this discrimination makes little sense in regards to neither economic factors nor general equality.

Sincerely yours,

Katrina Kehl

**Correspondence:** Please do not pass this bill. My dog and I enjoy the to-be affected areas on a daily basis. I feel it is the people who use the GGNRA frequently are the people who help take care of it the most. I surf on a daily basis and I notice the beach is filled with happy dog owners who are also helping to take care of the beach by not only picking up their own trash and dog mess, but other trash and broken glass because it can hurt our dogs. Dogs are a major part of SF culture and the GGNRA should reflect

---

that.

Thanks for your time and thanks in advance for not passing this.

**Correspondence:** To Whom It May Concern,

I live in San Francisco, and I walk my dog on at Chrissy Field and have for the past 4 years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I strongly oppose the preferred alternative for Chrissy Field because it is too restrictive. I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

And finally, these restrictions will negatively impact my life and the life of my family, including my canine companion. I am a teacher who lives in the city and utilize the GGRNA to exercise and socialize. Limiting access to this facility for canines will limit my ability to keep my dog active and in good health.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to many beaches and trails that are threatened with closure to me.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Less than 1% of trails and beaches in the GGRNA are dog-friendly. That means anybody who wants a dog-free experience has 99% of the 80,000 acres to play in.

There hasnt been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. They should have to prove it before they legislate it.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog-walking since the original pet policy in 1979. The GGNRA is not a wilderness national park like Yellowstone and shouldnt be managed as if it were.

If the dog management plan is adopted, Marins estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

In 2011, the GGNRA tried to implement a similar plan. It was opposed in the public comments by a margin of 3 to 1. These are public lands and the GGNRA need to listen to the public.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear GGNRA,				

I moved to Pacifica about 10 years ago specifically to enjoy the large open spaces with my dog. I soon found out that most of those spaces, on County or State Park land, are already off limits to my dog. But we still had plenty of GGNRA land to hike on together. That would be the "R" in GGNRA. The highlight of my week is to use a little time off on the weekend to go hiking with my dog. Please don't take that away.

I have friends with dogs in the East Bay. Over there they have a regional park system, not a national one. Their regional park system is larger and much older than GGNRA. It's the East Bay Regional Park System, and it allows dogs off leash on ALL trails and open space. What is so different about the East Bay? Is it the fact that it's managed by "regional" and not "national" authorities that makes the difference? Then maybe you national authorities could leave, and return control to the regional people who seem to be doing a far superior job

in the East Bay at least.

If you choose to stay, then why don't you have a look at what they are doing over in the East Bay. Try to become a part of the regional community. Stop fighting us. I for one am tired of this. It's been over 2 years of threats to ruin our dog walking lives. Please stop.

**Correspondence:** Dear Superintendent Dean,

My name is Frances Hochschild and I'm also writing on behalf of my 83 year old mother, Christie Hochschild. We live in San Francisco and for the last 50 years mom has been walking her dogs in the area. Our favorite places to walk are the Presidio and Crissy Field. I also have a 10 year old daughter and believe that a good park works well for both kids and dog owners.

I strongly oppose the preferred alternative currently under discussion - - they are much much much too restrictive. My mother walks with a cane and one of her few remaining pleasures in life is walking her dogs off leash. In addition, there hasnt been a single peer-reviewed, site-specific study as required by law.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. I know my parents have been supporting dog walking and this definition for years (although my dad sadly passed away 7 years ago). These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, please consider that her daily walk at crissy field and the presidio with her dogs is one of my mother's few remaining pleasures in life - it both gives her exercise as well as provides her with a community of like minded peers of all ages. It would be very sad if this were no longer part of her life

Sincerely,

Frances Hochschild

**Correspondence:** Hello

I very much oppose the changes that are being outlined in the current plan to limit off-leash areas for dogs, specifically at Fort Funston. There is no better place for off-leash dog walking in the city. The Dog walking community is friendly, and frankly more friendly than the general population at-large (dog/non

---

dog owners put together). I say this because recreation areas have a primary role-for recreation. There are many, many places one can go if they really don't like dogs and only one great place in the area, Ft. Funston. If we take this area away, it will impact the lives of dog owners and dogs in the surrounding area. My dog loves to be at Funston, she does not wander off paths, she is kind to other dogs and I get to meet people in the city and socialize while enjoying the beauty around me. Please do not limit that for me, my family, my dog or my fellow residents. I hate the idea of a fenced-off area for my dog. Dogs need a big place to roam free. Since when does GGNRA provide dog runs? If I wanted one of those, I'd put one in my backyard. Many of us do not have large yards in the city, or some folks, none at all. This does not mean they should not own a dog-it means they walk them in places like Ft. Funston. Where will they go if our space there is limited? To another park where there are dangerous needs/rubbish in the grass for dogs to eat or step on?

I have been around Funston for years. I just don't see dogs ruining the greenery like some suggest as an ecological concern. I don't know who the people who dislike dogs are, but I ask them to go to all the places where dogs are not. Dogs can already only be free in a few places. Most owners are very responsible and I think that more dog issues could arise if dogs are so severely restricted.

I love Ft. Funston. I go there to de-stress. Please don't take that away from me. If my dog cannot relax freely there, frankly, I won't be able to either and any support for GGNRA that I would provide in the future would end.

Thank you for your consideration. I am a regular citizen.

<b>Correspondence:</b>	I have lived two blocks from ocean beach for eight years and have walked my dog on the beach everyday for six of those years. There are many responsible dog owners who clean up after their pets, keep them from harassing the plovers and make sure their animal is under voice command at all times. As a responsible, respectful dog owner and a daily visitor to the beach I feel that dogs are one of the least detrimental elements to the native environment of ocean beach. I see more damage in the form of trash and human feces in the sand dunes on a daily basis than ever from people's pets Please save and even extend the off leash policy at our beach and if you are concerned with preserving and nurturing the environment think about addressing the problems caused by number of homeless on the beach.

Our family applauds your efforts to implement a balanced and comprehensive dog management plan in the GGNRA and we support the NPS's preferred alternative. We have seen and experienced too many situations where careless owners allowed their off-leash dogs to knock over children, attack wildlife, invade protected areas and leave feces on public paths. This has been particularly pronounced when professional dogwalkers have been unable to provide sufficient attention to all of the animals under their care. We support the new measures to allow all visitors to enjoy and experience the GGNRA and preserve the environment for future generations.

**Correspondence:** I am a San Francisco resident. For over a decade I have been an avid outdoor recreationalist and environmentalist - I hike, swim, surf, bird watch, and I walk my dog at Fort Funston. I understand that the GGNRA needs to manage and make policies about recreation in its jurisdiction. However, the proposed Dog Management Plan, in my reading of it, is overly restrictive, based on incomplete analysis, and a drastic over reaction to a non specified problem. In addition, I worry that, if enacted, it will create a series of so called "dispersion" problems such as traffic and over crowding at the few remaining places where people are legally allowed to exercise their dogs. In my experience, most of the people who exercise their dogs at Fort Funston are regular visitors who feel a sense of guardianship and gratitude about the space. We appreciate its beauty and feel a sense of obligation towards it. Every day I pick up about 2 pounds of plastic from the beach - bottles, balloons, food packaging, clothes left by tourists.....and I pick up dog feces. Fort Funston is an urban zoopolis, populated by a diversity of flora and fauna and it bears the trace of its proximity to SF, a large and polluted city. It's not a pristine wilderness. Rather, it is a multi use urban park. Please don't legislate the fiction that it is anything else. To do so will deprive a large number of people and animals a sense of belonging to it, a sense of guardianship towards it, and a chance to experience its specialness. A specialness that is, in large part, created by its many users

---

and its status as a multi use recreational site. Thank you for your consideration  
Irene Gustafson

<b>Correspondence:</b>	Dear Golden Gate National Recreation Area				

Please continue to allow unleashed dogs on Muir Beach.

I have taken my dog there about once a week for years and have never seen a problem between the dogs and people or wildlife. My dog has a great time with long runs and playing in the water.

Local dog parks are no substitute for Muir Beach. At dog parks my dog just follows me around. I do not know why, but I suspect that she is a Hurricane Katrina rescue may be a factor.

Arthur Davidson  
Mill Valley

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.				

I am a Marin native and have lived in Marin for over 50 years. One reason why I love Marin is because on the weekends, my family and I take our dogs out on hikes or to the beach.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. I don't agree with amount of limitations that there are already on dogs in the GGRA and there isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of OUR public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents (especially dog owners) rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

People and horse back riders that do not want to interact with dogs (as per some reasoning that I've read in support of your plan) can use the other 99% o the GGRA.

**Correspondence:** I am a frequent walker with my 2 dogs, sometimes 3 at Ocean Beach and Fort Funston. Right now, Ocean Beach in my area only allows off leash from May-July. I abide by that policy and will take the dogs off leash to Ft Funston. At Fort Funston, I walk with my nephew, his 2 children and friends and our dogs. It is a highlight of our week when we make the trek around the loop from the parking lot, down near the beach, around the Skyline Blvd side and on up back to the parking lot. The kids stop and hang around the trees in some parts that are not blocked off. They play at the fort where the old sandbags are sometimes torn down and work to build it back up. It is a wonderful couple of hours spent with kids and dogs and family. There are many wonderful people walking around with their dogs off leash. Rarely have I witnessed any incidents of any out of control dogs or people. It is a gem of an area for people who own dogs to enjoy fresh air and a short or lengthy walk. Nowhere else in the area can you have this opportunity to allow your dogs to run and run and enjoy life with their owners/caretakers. I recall hearing that one of reasons for restricting dogs was the wear and tear they cause. Well, if you frequent Fort Funston, you know that it is not the dogs or people - it is Mother Nature blowing wind and sand to cause erosion and change. Please don't punish dogs and dog owners for what nature does to the environment. I think you will find more trash and debris where people frequent than where dogs and dog people are found. Please keep off leash available for the people who are in need of places to go where there are no restrictions for exercise of their pets and family. There are many alternatives for those who don't like dogs. Thank you.

**Correspondence:** The GGNRA needs to be FAR more accommodating to the most pet-friendly community in the country. San Francisco residents have more than 120,000 dogs; limiting them to less than 1% o the public space supported and maintained with their tax dollars is ludicrous. The GGNRA is NOT PAYING ATTENTION TO THE CITIZENS with their promotion of this draconian, anti-dog bill. And it is insulting us with a "revised" plan, 2 years after the original plan, which is almost identical to the first plan, not taking the public response to the first plan into consideration in any meaningful way. San Franciscans care deeply about our environment, which is why it is one of the most pristine and beautifully preserved and protected areas in the country. It is ridiculous to maintain a position of "protecting" the environment from San Francisco's dog-loving AND nature-loving citizens.

**Correspondence:** Our family, which includes two small dogs, frequently visits MUIR BEACH, where other visitors include people with dogs as well as those without. In all our years enjoying this special place we have had no problem with other dogs and owners nor they with us. Everyone gets along beautifully, sharing the enjoyment of a place we all treasure. There already are areas where dogs are not allowed, like the south half of Stinson Beach to name one, for individuals who prefer this experience. It is vital that families, which often include dogs, continue to have access to our local open spaces and park lands, and not just to a tiny few areas which may be at a distance and become overcrowded as a result of your restrictions. Individuals who visit nature are healthier, both physically and emotionally, so discouraging people from public lands would directly impair the general health of society. Your mandate established in 1916 to bring people into nature must be upheld and maintained, not set aside or parsed. Responsibly managed dogs are the norm, not the exception, so making these drastic changes regardless of that is unwise and unnecessary.

**Correspondence:** Please do not harass the dog owners and their pets. They pay taxes and are entitled to use the parks like everyone else. I see no reason to clamp down on their use of these park lands so severely- have there been a bunch of dog attacks or has something drastic occurred? If you restrict usage as proposed, then the local dog parks will become inundated. Where else will dog owners be able to go to let their critters romp about? I'm not a dog owner, but I support responsible tax-paying dog owners. Live and let live.

**Correspondence:** I have been a dog owner in San Francisco for the past 10 years.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** I have had my canine companion of one type or another since I was a small child..I watched in Half Moon Bay how they concreted the beautiful sand dunes into parking lots and bathrooms

and put up over 187 signs..the road was flattened allowing and drawing Masses of people to this beautiful part f the coast at Venice beach where i had surfed and picnicked with my parents..The crowds came as they had set up the area to draw in.They left their trash,they walked on the bluffs and left their scents everywhere. But they paid..The ravens came following the trash the people leave..The ravens bothered the Plovers..Then the dogs got the blame for it. Then the rangers trucks left tracks and went up and down the beaches spewing exhaust and noise stating that they had to comply with multi use functions..Of course,once again,this didnt include the loves of our lives...our companions,our dogs..the happiest and most selfless creature on earth..And the people with dogs...,love the environment,the waves,the sand,the smell of the wind..The bird experts admit now it isnt the dogs that are causing the problems but its in their cheapest interests to blame them. At Ocean Beach,where the dogs are most off leash,the Plovers flourish.. Dogs and humans and children need to be offleash to be healthy and to be mentally in balance. Please so not let these people speak for a small number of humans who have a large amount of money..

**Correspondence:** Please do not restrict the dog-loving, dog-walking population of the Bay Area to a few narrow, short trails on which our dogs have to be leashed.

More and more it is being recognized how important pets, specifically dogs, are to one's mental well-being. Being able to allow these creatures to run and walk off-leash to get their exercise (and allow their owners to exercise) has benefits more far-reaching than colored trails on a big map.

The Bay Area's dog owners have to have alternatives when walking their pets. If you regulate all off-leash areas to a few select 'mini trails' we could see over crowding of those trails and more intense debate from the 'non-dogloving folks'.

Let us have our access to the Bay Area's vast resources. Most of the single-track trails are already off limit. In many areas, one cannot even hike a loop, because the trail ends for the dog. Walking with my dog in the open space is safer than walking by myself. It brings us both joy.

We have a very peaceful existence right now with our rangers - why create tension? If you need to ask dogwalkers to register and put a cap on the number of dogs one can take - fine. Cap it at 5 dogs. That allows the walker to make some money. Don't punish all of us because of complaints from a few people. There are SOOOOOOO many trails hikers can select that are off limits to dogs and walkers now. Show them where they are and leave our trails ALONE!!!

To curtail the ability of owners to take dogs out for walks could result in many pets left in the back yard with little exercise - a cruelty to animals and an injustice to a well-meaning owner.

PLEASE allow for voice-control, off-leash trails where they currently exist and quit limiting our access to the outdoors.

I donate to the GGNRA currently, because I am able to take advantage of its beauty. If you ban me from my source of enjoyment, I will look to other places to donate. I heard about this from a local blog and the postings at the foot of my trails.

<b>Correspondence:</b>	Hi,				

I am completely against ending the no leash dog areas in SF. Dogs bring great pleasure and protection to our lives. They should have the right to be able to have some freedom. I have seen no reason in the 12 years I have had a dog to limited their access. I understand that there should be dog free places for children but limiting the dogs to a small amount of off leash areas has it problems for such a large city. However, I do think we should increase the fine when someone doesn't pick up after their dogs.

**Correspondence:** My name is Emily Ceisel and I'm a dog owner, walker and sitter in San Francisco. I strongly oppose the proposed restrictions on off leash dog walking. Dogs are a part of the San Francisco fabric, and families, the elderly and young singles alike all enjoy the benefits of outdoor exercising with their dogs in areas where the dogs can truly romp and play. Responsible dog owners don't let their dogs dig or hunt wildlife. I walk every day and have not seen severe destruction caused by dogs.

I frequent areas such as Crissy Fields, Glen Canyon Park, the Presidio and Golden Gate Park. If the GGNRA restrictions take effect, I can foresee overcrowding in nearby city parks, causing new issues with dogs due to the overcrowding. I am a member of local groups that seem to support the new restrictions, but do not feel they speak for me on this.

San Francisco won't be the same if these restrictions take place.

**Correspondence:** Dear Committee,

I've been a long time (20 years) of San Francisco, homeowner for 10 years and dog owner for 9. In addition to being a dog lover, I got my dog to help me enjoy the city in live in, because i found i was no longer enjoying the high cost of living here and enjoying what the Bay ARea has to offer. In addition, my health would benefit from walks and being in nature. And that's what my walks with my dog at Fort Funston and Chrissy Field do for me. They've allowed me to stay in this city, to make it more livable, and to make my life have a much higher quality. I'm not overstating the case nor being melodramatic when i say that if your plan goes forth as planned, if i can no longer walk my dog off leash in the areas you propose closing to dogs, I will undoubtedly leave San Francisco because what keeps me here right now, would be gone. I'm a responsible dog owner. Most of us are. and we care about these areas tremendously. the same way there are irresponsible people who damage the coast line with trash, unruly children, lack of care, there are of course some people who do the same with their dogs. you'll always have those people. But most of us are not. Being in an urban environment like this, packing the huge number of dogs that live in this city into its streets limiting off leash running/exercise areas the way you propose, is a recipe for disaster. you'll have under-exercised dogs in tight enviornments, and i can assure you the beautiful areas of this city that make things worth it, will not get the use they're getting now. The quality of life for all in this city will decrease - i have no doubt of that.

Please consider that these off leash areas are the only places where San Franciscans can enjoy nature, get exercise and exercise their dogs that are free and that add a different perspective to an increasingly unaffordable inhuman city.

**Correspondence:** Hello,

There is nothing so disconcerting as having an unleashed do run over your picnic and the owner laugh it off with a cute smile and a "so sorry" , it doesn't bring back the moment of enjoyment nor the adrenalin spike you feel when rushed by a wayward dog. I believe the GGNR was created for the "enjoyment of people" not the enjoyment of dogs.

PLEASE KEEP UNLEASHED DOGS OFF OF MUIR BEACH.

Thank you  
Greg Maloney

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To Whom it May Concern:				

I am writing regarding the proposed changes made in the 2013 SEIS with respect to dogs and their access to GGNRA.

According to the U.S. Census data from 2000 and 2005, there are more dogs than children in San Francisco (and that's just one city in a very large Bay Area community). I grew up in Mill Valley with a dog in my home, raised my own after graduating college (who happily makes up a family of three with my fianc  and I) , and know countless others in Marin and San Francisco who share their homes and their lives with these wonderful, loving animals. I could go on at length about how important these pets are to our lives, our children and families, our happiness, and even (many studies will tell you) our health, but I think it may fall on deaf ears considering the proposed changes; I cannot imagine a person who has spent a blissful day at Muir Beach frolicking in the waves with his overjoyed canine, or hiking through the shaded paths of Oakwood Valley as his panting puppy follows behind ever making such restrictive changes. There are already such limited spaces that we can enjoy time with our dogs, limiting it further seems downright cruel.

One might argue that these changes do not impinge on one's right to own a dog; the happiness that such a companion brings to one's life will remain unchanged. But this argument ignores the fact, as stated above, that dogs are very much a part of the fabric of family life here in Marin, and disallowing owners the ability to include beloved pets in the normal recreational activities of the family: hiking, going to the beach, sightseeing on our beautiful coastline, etc. will hurt not only the dog, but the family as well. Walk through downtown Mill Valley, or through any of the picturesque towns of Marin, and you will see a trend: people with dogs, dog water bowls in front of businesses, businesses handing out dog treats and waste bags, and even providing tie up areas for pets to relax while their owners shop. We bring our dogs everywhere, to shop, on errands, and on vacations; to limit our recreational abilities with our pets would remove a core part of our lives that we spend with our pets.

But removing many of the core places Marin and Bay Area residents spend with their dogs will not only hurt families (especially families made up primarily of one or many dogs and one owner), but also the dogs themselves. Dogs need spaces to exercise, and spaces to exercise with their owners provide a wonderful opportunity to keep both happy and healthy. Dogs also, and this is indisputable, love to be with their owners (one look at the face of a forlorn dog left at home while his family piles into the car to head to the beach would certainly convince you of that); take away the spaces we can enjoy with our dogs and you stand to have many unhappy, depressed puppies whining at home. Alternatively, the SEIS preferred alternatives force people into their cars, in search of places to walk with their dogs; this is bad for the environment and bad for Marin County.

If the above does not convince you, the 2013 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011, and further, comments in 2011 ran 3:1 AGAINST the plan. As a member of the community for the entire 27 years of my life (and will continue to be as I raise my own family), I support the "No Action Alternative" in the SEIS for each area: Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

Moreover, the SEIS contains no peer-reviewed, site-specific studies OR vital monitoring as required by law in order to initiate such a dramatic change to the public's use of their public lands. The GGNRA should thus retain the longstanding 1979 Pet Policy. The space is, after all, called the Golden Gate National RECREATION area, its longstanding purpose and use is in the title itself, to provide RECREATIONAL opportunities to people in a densely populated urban area. Recreation, for many of the Bay Area's residents, includes their dog(s). Considering this fact, the GGNRA also requires a different management approach than wilderness areas like Yellowstone or Yosemite.

Again, I repeat that there are more dogs than children in San Francisco. Our dogs are central to our lives. Please do not take these beloved spaces away from us and our dogs, it will disrupt the very core of our lives here in Marin and negatively affect us for generations to come.

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Micah Hamady and I live in San Francisco. I have been walking my dog at Fort Funston, Crissy Field, and Ocean Beach (among other areas affected by your plan) for the past 9 years.

I strongly oppose the preferred alternative for these areas because they are too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely

---

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, walking my dog in these areas is a great form of exercise for us both, and my furry friend absolutely LOVES swimming and running around these areas after being cooped up in the house all day.

Please don't take that away from him.

Sincerely,  
Micah Hamady

<b>Correspondence:</b>	I am a 78 year old retired physician living in Tamalpais Valley, CA. I have been using the GGNRA almost daily to exercise myself and my dog. It is most important for both our continued well being.				

The proposed plan is far too restrictive. I have in my practice suggested that people acquire dogs to assure that they would participate in outdoor healthful activities.

The propose plan unnecessarily limits several of the areas that I use, particularly Oakwood Valley and the Miwok trail.

It will cause far more harm than good. I have heard no voices from my neighbors in favor of the restrictions you propose.

Please reconsider the restrictions for the health of many citizens besides myself. I urge you to maintain off leash areas as most dogs can be controlled without a leash.

Stuart R. Schwartz MD

Subject: Proposed Dog Management Plan

---

Although there have been some modification to the extreme restrictions of the 2011 plan, I have several objections to the proposed NPS Dog Management Plan for GGNRA issued in September 2013. As I live in Pacifica, my specific comments focus on that area, as well as the coastal area a bit south.

I know this memo is lengthy, but I sincerely hope the GGNRA and the NPS will read it (!) and consider my arguments. I attended an NPS public meeting in Paifica about 2 years ago, I submitted comments then, and Ive read the new proposal. This is a serious quality of life issue that I have been engaged in. Dog Management Policy is a central issue to making GGNRA properties fulfill their intended mission. My main plea is: Please do not let a small number of problems interfere with the enjoyment and use of trails by dog walkers.

First a few general points:

" GGNRA includes the word recreation but not wilderness. These lands are located in a densely populated urban region with a population that highly values its quality of life and access to outdoor activities. This is NOT a National Park in the same sense as Yosemite, Yellowstone, and Zion! This land is typical of what used to exist in coastal northern California. The GGNRA is land with trails intended to be USED, not land to be set aside and protected from the public.

---

" The vast majority of the land area is not conveniently accessible to people because of the nature of the Coastal Scrub vegetation, and the abundance of poison oak! If people (and dogs) are limited to trails, they represent a relatively minor impact on the ecosystem as they will travel on only a small fraction of the total land area. The endangered species (i.e. checkered butterfly) live primarily in places where humans and dogs do not and will not be going.

" I do not know the number of dogs in the greater San Francisco Bay Area, but I would guess it is upwards of a million. Walking ones dog is a great form of exercise, especially for an aging human population. We dont jog and mountain bike forever! The demands of the dog for exercise, inspires the dogs caretaker to exercise too. This is of uncontested benefit to both the dog and human. Prohibiting leashed dogs on most of GGNRA trails just doesnt make sense, either from an ecological or health perspective.

" San Mateo County Parks prohibit dogs. California State Parks prohibit dogs on trails, allowing them only in campground/picnic area and on fire roads. San Mateo County has a lot of open space, but too many of the trails are off limits to dogs. Places a dog can be legally off-leash are nearly non-existent. If we are going to get our human population moving more, we need more not fewer open places to walk dogs, including some off leash areas larger than city lot.

" I recognize some people are frightened of dogs, others just dont like them. Some dog owners are irresponsible and let their dogs approach people uninvited. Others allow their dogs to foul the footway, without picking up the poop! However, I suggest that the vast majority of dogs and their owners are law abiding, respectful do not represent a threat to others on the trail. Why must all dog walkers be punished because of a small fraction of irresponsible people? Instances of dogs attacking people are VERY rare, even if dogs are not leashed. Unprovoked attacks on people by leashed dogs are probably nearly non-existent.

" I also want to say something about leash specifications. We have an adjustable leash for our dog that works VERY well. We make it short when we are passing strange dogs and people, and let it out long when we are away from others. It is unacceptable and narrow-minded to limit leashes to a single (short) length. A responsible dog walker can do perfectly well around both unfriendly humans and dogs with an adjustable leash.

" Dogs provide a sense of security to their companions. I like to run or walk alone with my dog. Many of the GGNRA trails (i.e. Sweeney Ridge) are in areas far away from neighborhoods and where normally there are few people. The presence of a dog with walkers is a deterrent to those who might wish to do harm.

" Lastly, I want to comment about enforcement of leash requirements. It is true that many dog walkers will choose to let their dogs off leash to be under voice control, even in areas where leashes are required. It is also true that there are not enough NPS staff to patrol trails at all times. I suggest a program where citizens are allowed to report to the NPS dogs/owners who are not obeying the spirit (if not the letter) of policies included in the final management plan. People who are upset by a dogs behavior could take a photo of the dog/owner or get the dogs license number in order to make a report to GGNRA staff. Most people routinely walk their dogs in the same areas, so rangers on patrol could be on the lookout for dogs that had been reported. A suitably substantial fine would encourage better compliance. The nature of this offence is such that only periodic enforcement may be adequate.

Specific Comments about GGNRA land in Pacifica and nearby:

1. The proposed areas for leashed dogs on Mori Point are not acceptable and represent more than a 50%

reduction from the current situation. I see no reason to limit dog access on nearly all the trails. It would be especially sad if dogs were banned from the western end of the Point which is such a great place to see the sunset. Please let my dog and me continue to get a workout on Bootleggers steps!

2. The proposal for Milagra Ridge trails to allow leashed dogs is acceptable

3. The proposal for trails allowing leashed dogs in the Cattle Hill/Sweeney Ridge area is egregiously unacceptable. I strongly object to having to drive to San Bruno in order to hike to the Discovery Site with my dog. Portola came from the western side to first see the Bay and we should be able to make that same trek with our leashed dogs. I did not find any convincing evidence that leashed dogs on any of the trails in the Sweeney Ridge area would present a problem. Leashed dogs should be allowed on all these trails, including the Notch Trail. If horses are allowed, why not leashed dogs?. Most of the trails in the Sweeney Ridge area offer panoramic views and are more like roads than narrow trails. Dogs should not be excluded just on the off chance that someone will be on the trail who is afraid of dogs. This is not Chrissy Field or Ocean Beach. These trails are not crowded and the countryside is wide open.

4. My same point is relevant to the Rancho Corral de Tierra as well. Unless there is a compelling reason to forbid dogs, leashed dogs should be allowed on all trails.

5. I have participated in the planting/restoration efforts at the Pedro Point Headlands. If leashed dogs are kept on the trails, there is no reason dogs should not be allowed on all the trails in this area as well. It is essential to have at least a single loop out to the bluff so dog walkers can experience one of the most magnificent views ever!

6. The Summary of the Management Report states clearly that the impact of leashed dogs to the endangered red legged frogs, garter snakes and butterflies would be negligible and would be minor to other wildlife. If the ecology is not threatened, such a restrictive policy is totally unjustified. It is hard for me to comprehend. Are a small number of people who are afraid of dogs really so powerful in setting policy?

7. My last point has to do with the definition of leashed. When hiking or running, it is MUCH easier on both the dog and human to use a retractable leash of about 12. We have hiked/run hundreds of miles with our dog and we know. He does not wander off the trail to any extent that the habitat would be damaged any more than if he were on a 6 leash, and he is perfectly under control when meeting other people or dogs on the trail because we just pull up on the length of the leash. Am I really going to be ticketed on these trails using my retractable leash, when my dog NEVER strays more than a foot to either side of the trail/road? You have to be kidding!! It seems to me that this regulation was made by someone with little real experience. Just because it is the rule in campgrounds, dont make it the rule on trails.

**Correspondence:** Hello, I am a born and raised San Francisco and dog owner, currently in Alaska and would like to one day return to San Francisco. However, it is very disheartening that the Golden Gate National Recreation Area is going to decrease off leash dog-friendly areas. The problems at hand are already illegal and you should enforce the laws that are currently in place instead of creating more rules.

---

1. No Littering - dog poop is litter so fine people who don't clean up after themselves.
2. Its illegal to tamper with foliage and wildlife in a national park - If a person's dog is running through sensitive areas of a park, fine the individual.
3. No Animal Cruelty - It is the responsibility of the owner to tame aggressive dogs and not allow them to hurt others. If they do, clearly they are being cruel to the animal and should be charged as such.

Most of these parks will still allow horseback riding which is far more detrimental than off leash dogs. Finally, if the GGNRA cannot enforce laws already in place, how will they enforce new laws?

Thank you.

<b>Correspondence:</b>	My name is Cecilia and I live in San Francisco. My dog and I as well as my friend's and their dogs frequent Crissy Field, Ocean Beach, Fort Funston and Lands End multiple times a year. I take my dog off leash at Crissy Field's East Beach between 3 and 4 times a week. I will outline my opposition to this below:				

â€¢I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

â€¢I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

â€¢I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

---

**Correspondence:** I have followed this debate for a number of years and can do no better in brief than to say that I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

In my own words, my wife and I have visited Fort Funston regularly for about five years with our little Norwich terrier, Emma. (In fact I proposed to Linda, my wife, on one of our early excursions to this beautiful site after watching Emma tear up and down the sand dunes in complete ecstatic puppy joy.)

In all those visits I have never seen any dogs behaving aggressively to other dogs or people. Any suce must be very rare. The very great majority of dog owners at Fort Funston realize what a wonderful place it is for their dogs to enjoy the great outdoors and to become socialized with other dogs and other people. They respect the site and opportunity accordingly. Almost everyone picks up after their dogs, in my experience, and some of us who come across scat from others go ahead and pick that up too!

There is no other place so close to teh western part of San Francisco that can afford the benefits to dogs and dog owners as Fort Funston. To restrict or prohibit its access in the name of a general policy suited for places more distant from a major city environment would deprive many good citizens of San Francisco of this uniquely positioned recreational opportunity.

Please, a little common sense here!

<b>Correspondence:</b>	My Labrador and I use Fort Funston on a regular basis. I have not encountered any difficulty with dog walkers or other dog owners. This is the only off leash area close by to Burlingame. In my opinion, there are many places that park users can go to avoid dogs, but only a few that are available for those of us who love dogs. I oppose and do not understand the need to limit our area.

**Correspondence:** Dear NPS ~

We could not be more adamantly opposed to the further limitations GGNRA is considering with regard to dogs in the National \*\*\*RECREATION AREA.\*\*\*

We regularly take our dogs to Muir Beach and the Marin Headlands, and have for years. We cannot imagine the Park Service prohibiting our use of these areas with our dogs.

The Marin County portions of the GGNRA which are currently dog-friendly and which have been for decades, have been and should continue to be governed, monitored and regulated differently from more remote wild land areas. In those properties under NPS' control and direction, off-leash dogs may pose a significant threat or have a significant impact on the plants and animals around them. In Marin County, different rules - a different philosophy - should apply; off-leash dogs are extremely unlikely to pose a substantive threat to the plants or animals which are already adapted both to a) the presence of dogs in the environment, and b) the relatively harsh conditions which exist specifically because the surrounding environment is a harsh one.

Further, to delete from the already-short list of dog-friendly \*\*\*RECREATION AREAs\*\*\* in the area, will force more and more of us to DRIVE ever-longer distances to find the last remaining parks where we can walk and play and exercise with our canine companions. By maintaining the GGNRA, isn't the objective to keep people OUT of their cars to pursue these activities?

Furrrrther, it's my understanding that site-specific, peer-reviewed studies are at least called for, if not required by law, for changes of this nature to be made. Is that really true? If so, please send me copies of the studies conducted in this matter, relative to Muir Beach, Homestead, the Headlands and the other areas which you are now considering making off-limits to us dog folks. I've not been able to find even a trace of a study on any of the properties under consideration.

And lastly - wasn't this issue already considered by NPS in 2011? I've been reading that the public comments received by NPS numbered 3-to-1 \*\*\*AGAINST\*\*\* further restrictions on dogs in the Marin County portions of the GGNRA. Is that true, too? If so, what is NPS management thinking? I know - the objective is to solve problems. But where will all the dogs go, if not into the National Park lands we love soooooo much (and which is supported by our tax dollars)? Riiiiiight - dog parks! Put the problems out of the GGNRA and into the local, municipality-owned parks sprinkled around the County. NO! We pay for the GGNRA, too! We want to keep the GGNRA open for ourselves and our canine friends and companions! Packing us all into the tiny municipal dog parks that are available will only create BIGGER problems!

Don't take away our access to the GGNRA!!!

We're paying attention - and we vote.

David E. Gurley  
Corte Madera

**Correspondence:** My name is James, and my dog Woody is a well-behaved hound-shepherd mix that gets along with everyone and everything. Woody walks off-leash in the GGNRA several times per week. We regularly visit Ocean Beach, Fort Funston, and Lands End. On special occasions we walk from Muir Beach to Rodeo beach and back along the Pacific Coast Trail. Off-leash in the GGNRA, Woody and I both derive the benefits of exercising, socializing, and getting in touch with nature. It is one of the most crucial pieces of the San Francisco lifestyle that I love so much. It balances out the high cost of living and other downsides of the urban environment. Please don't ruin that.

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Optional Points to Make (choose as many or as few as you want):

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says

the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Renee Ballinger and I live in Burlingame. I enjoy walking my 4 yr old Pointer/lab mix regularly at Ft. Funston, Pulgas Ridge, Sweeny Ridge, and Redondo Beach. I belong to the Sierra Club.

I strongly oppose the preferred alternative for Ft.Funston and all the other closures because it is too restrictive and there is no factual basis for not allowing responsible dogs and dog walkers to use this recreational space.

I feel that it is difficult already to find open space, and to reduce this by 90% is unacceptable. Dogs need to run for their health and well being.

This new plan does not incorporate feedback and has only minor changes from the publicly opposed 2011 plan.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

This proposed management plan will take a toll on the whole family and limit our regular family weekend hike/beach days if we are not able to take our dog with us on these outings.

Sincerely,

Renee Ballinger

**Correspondence:** There is not reason at all to let dogs run wild at GGNRA. There are too many instances when the dogs disturb wildlife. Give the dogs an area to run, but it can be much smaller than it is now. Things change and you now know how much the damage the dogs are doing to birds. The dogs owners just don't want or care to know.

Just because the dog owners are loud and there are many of them, does not make them right. Stand up for the birds!

Thank you, Jo Ann Herr

**Correspondence:** Tell yeah what, guys, I'll buy into parts of this proposal if you also submit a proposal to deal with the homeless situation in SF, including the vagrants that have vicious dogs as companions.

This is ridiculous. We are seeing an overreach by the government here, and whoever drafted up these ludicrous proposals has clearly never had the joy of a pet in their life. I'm all for enforcement of owners who are jerks and don't pick up after their dogs, but restricting mine and my pet's shared enjoyment of park areas makes no sense. One of our greatest joys is to walk and explore uninhibited in Fort Funston. It brings pleasure to both of us to roam freely and interact with the other dog owners in the park. How dare you try to take that away from me and my family.

California mismanagement once again at its finest.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** Dear Superintendent Dean,

My name is Elizabeth Wiens and I live in San Francisco. I have been visiting GGNRA lands, specifically Golden Gate Park, Ocean Beach and Fort Funston for the past 3 years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for Ocean Beach and Fort Funston because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, with these restrictions I will be forced to use my car to access off leash areas and dog recreation, may look to other cities to meet my and my pet's needs and will in general not go on as many walks with my family as my 4 legged friends options will be restricted.

Sincerely,

Elizabeth Wiens

**Correspondence:** Hello,

My name is John Hyde, and I live in San Leandro. Every weekend I travel to Muir Beach, Fort Funston, or Crissy Field to walk my dog. These are some of the only dog friendly places to visit in the Bay Area. If not allowed to visit these areas with my dog, I will not visit them at all. Although I am a member of the Sierra Club, and have been for over a decade, I disagree with their stance on restrictions of dogs in these areas.

It has come to my attention that there are going to be sweeping changes in the dog leash policy in the GGNRA, which I oppose. I understand that the existing policy was created in 1979, and I support that it be continued in future GGNRA land acquisitions.

I oppose "fenced in" areas to walk dogs, in these areas as well. I believe that these parks should remain "open", and now these areas will be like fenced in dog parks.

Please don't restrict dog access in the GGNRA.

Regards,

John Hyde

**Correspondence:** The joy of having a dog is to be allowed to have it under voice command but off leash in some areas. People who dislike dogs can have certain areas to themselves but they cannot have ALL the parkland. We do not live in a city, on the contrary, we live in Marin where it is acceptable to

have a dog and enjoy the outdoors without having a park ranger track you down and give you a ticket.

Having lived here for 22 years and having a dog for a good part of that time I can tell you how mad I am about a further clamping down and reduction of the reasonable places to walk a dog.

If you do this all dogs will be in one spot and I can tell you it will get to be dangerous.

If you remove an area for dogs you should be required to add an area!!! It is our parkland.

I am mad as hell about this!  
Heather Selick

<b>Correspondence:</b>	I support Alternative F: NPS Preferred Alternative.				

I live and work in the Presidio of San Francisco and I regularly use GGNRA areas such as Baker Beach, Crissy Field, Ft. Mason, Ocean Beach, Lands End, and the Marin Headlands. Over the many years that I have lived in San Francisco, the number of dogs, and in particular the number of off-leash dogs, has grown. I am not a dog owner, and my primary reason for visiting the above mentioned sites is for hiking, biking, and bird watching.

I believe that the GGNRA, and the Presidio, are unique in that they represent National Park lands within a major urban area. Dogs are part of that community, and these areas represent logical places for dog walking. But the number of off-leash dogs has become unsustainable, and commercial dog walkers are abusing their free access to these areas. The limit of six dogs/person is especially important, as is enforcement of leash laws in sensitive wildlife areas. I believe that voice control of off-leash dogs is rarely happening.

In principal, I support Alternative D: Most Protective of Resources and Visitor Safety. However, I believe that some of the recommendations in this alternative will be very difficult to enforce, creating a law enforcement nightmare. That is why I support the preferred alternative.

Thank you

**Correspondence:** As the mother of an infant son, an animal lover, guardian of two dogs, and wildlife rehabilitator, I am asking that you reconsider the ban of off-leash dogs in Golden Gate National Recreation Area. I frequently take my dogs and son to Chrissy Field and Rodeo Beach. My dogs are both large and require lots of exercise - - running, not walking - - in order to be healthy and well. It is impossible for me to get them that exercise without letting them run off-leash. I understand the need to protect wildlife and, especially as a wildlife rehabilitator, I understand the need to reduce threats to wildlife. But very few dogs pose threats to wildlife. Let's get real here - the biggest threat to wildlife is humans. Let's focus on how to reduce our impact but not punish those of us who choose to visit and use the parks responsibly with our dogs. Thank you.

**Correspondence:** I oppose the Preferred Alternative because it is unnecessarily restrictive. The status quo allows dog access on less than 1% o GGNRA lands and is a reasonable solution to allowing those with dogs access to these public lands while still allowing those who don't wish to interact to have dog free space. It also provides for sensitive habitats. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

There is no justification in the plan for such restrictive changes or for creating fenced-in off-leash areas or a Monitoring Based Management Strategy that would allow the GGNRA to arbitrarily change leash status without public comment or opinion.

The dog community is an important one in our communities and off-leash access is critical in an urban area such as ours. Restricting access will cause overcrowding in our cities' parks and take away outdoor recreation access for thousands of dog owning households in our area. There is no justification for taking away this access in a recreation area, especially one that was specifically delineated as such upon its creation. Access to 1% of GGNRA land is a reasonable compromise to allow thousands of Bay Area residents the benefits of health and well-being that access to these lands allows. Please keep the 1978 Off-Leash Pet Policy and direct your valuable and limited resources towards something that will actually benefit the parks and the people who support and enjoy them.

**Correspondence:** You know, California is a very expensive place to live and raise a family because of property costs and the many forms of state and local taxes. We live on my wife's teacher salary and what we have in savings, while I care for an elderly parent and the one child who still lives at home, which is why rarely travel beyond this area. That we must stay close to home isn't such a hardship because ours is a beautiful place. The weather is conducive to being outdoors in our fantastic local, state, and federal park lands. Since two little "rescue" dogs from the Marin Humane Society joined our household a few years ago we began regularly making the short trek over the hill from our house in Homestead Valley to our closest beach where dogs are welcome off leash, MUIR BEACH. These forays, while simple and modest, have become essential to our well-being. Should you decide that we can no longer take our little dogs with us on these restorative outings, that they and we can no longer enjoy their off-leash, voice-controlled romps, you will be depriving us of something that helps us manage our limited funds and family constraints.

Furthermore, we have never, in 25 years of going to Muir Beach(or any other area beach) when our kids were young and now just with our dogs, had anything but positive experiences with other dogs and the people with them, or the people there without dogs. There is no dog problem at Muir Beach. There is nothing to remedy. We and other dog owners abide by the "sensitive habitat" signs. We care about our beach and we take care of it!!! We never see dog feces, and we do see people cleaning up after their dogs, something we do without fail, also(however, it is our practice to "walk" the dogs in our neighborhood before going to the beach).

When dogs are off-leash they lose that territorial watchfulness and are not focused on being protective of their owners. On trails, yes, dogs should be leashed for their own safety because of fast and furious bikers

---

and the close proximity in which people and other dogs may be passing each other. On certain trails I think that dogs should not be allowed. But beaches are different from trails. Forcing people with dogs off most area beaches or mandating that dogs be leashed where currently they are not required to be so, is a serious over-reach of government and a nonsensical, damaging one. Discouraging park attendance through increased restrictions to access, eventually, will mean fewer people will develop deep connections with nature. A decrease in nature literacy will mean fewer stakeholders and THIS will bring real harm to our environment long term. -Mark

**Correspondence:** Dear Superintendent Dean,

My name is Lindsay Dellas and I live in San Francisco. I walk my dog on Ocean Beach, Baker Beach, Crissy Field and Ft. Funston for the past 30 years. yes, I'm a native San Franciscan and have always had dogs, fabulous ones adopted from our local shelters. I have volunteered at Pets Unlimited, the SF SPCA, Rec & Park specific to Lafayette Park and Golden Gate Park and at the Marine Mammal Center.

I strongly oppose the preferred alternative for all those beaches because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

If you could see the joy it brings my sweet 15 year old dog, Chloe, when we get to go to crissy field. She has bad arthritis and walking stairs is impossible for her, but at the beach, she is able to walk from the car (which I lift her in and out of) straight to the water. There she is able to get some relief from her pain and enjoy getting out and socializing with other dogs and people. I simply can not deny her this joy at her late stage in life because of a poorly written and unscientific law that singles out and targets one group of people. Please think of our four legged friends.

Sincerely,  
Lindsay Dellas

**Correspondence:** Hi There,

I love the plans for alternatives to the Fort Funston Dog Zoning. Anything is better than the current system for our campers! (( It seems like current system is plan A?)

Options we like in this order are:  
D, C then F

Each of these seem great and really fair to the dog-walkers too. The dogs and dog walkers have ACRES and MILES of parkland north of the main parking lot, both in uplands and on the beach, so it would be wonderful to have some space that are free of doggies and their poops on the south side of the park, in the uplands and on the beach. ((I CANNOT EMPHASIZE HOW MUCH THE POOP, and random dog poop baggies filled up are just left EVERYWHEREEEEE!!!!))))

Our program works around the current dog walkers as much as we can. More and more we use the area from the skyline blvd. road native plant area restored zone, as it is peaceful, lots of wildlife, and a calm and useful area to learn and enjoy. This is not much space, and for the sake of timing will hike students to the Batteries, but steer clear of the east side of these as there are many many dogs.

As soon as we enter the westbound or northbound section of our footprint, offleash dogs are everywhere, often barking, running up to kids and pooping everywhere, I mean everywhere. There is a heavily used unloading zone on the north side of our building that is really used as a big poop pit. It is very sad to see the park disrespected and full of dog poop and trash. Even more than that, it is sad to see the off-leash walkers and up to 20 dogs in tow trampling through the restored native plant regions that we use to teach, even more frustrating is dog walkers interrupting our programming of kids in the middle of a game, or exploring the sand/beach for the first time in their life, and the walkers asking us to 'move our kids' out of the way b/c "this is an off-leash dog park" and "can't we go somewhere else".

Lots of dogs and owners are friendly, but it would be nice to be a truly 'mixed use' park not just an off-leash dog and poop park! :)

Thanks for listening:)  
-Lisa

**Correspondence:** My name is Phil Clevenger and I live in San Francisco. We've walked our three rescued dogs in McLaren park for the past 3 or 4 years, though we also venture to Chrissy Field, Glen Park, and other places for variety.

---

I strongly oppose the preferred alternative because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Phil Clevenger, Pam Clevenger

and our dogs:

Lucy, Kali, and Veda

**Correspondence:** I oppose changes in the GGNRA to further restrict dog access or mandatory leash laws in designated areas. Therefore I support Plan A.

Dog ownership in the United States is approximately 37% of the population according to the American Veterinary Association.

The GGNRA is a large part of Marin County with very limited access for dog owners already, further restrictions will force dog owners to even more limited open space preserves and thereby increasing the number of incidents in those areas. This high density of dogs in small designated areas can already be felt, causing increase incident rates and environmental impact.

The public park and open space system is created to enjoy our natural resources. Although I have funded parks with contributions in the past, my inability to access them when I want to go out with my dog is shifting my resources to fund alternative projects.

We enjoy our natural resources with out dog companions who get us out into the parks. I shifting my focus to the Eastbay with a more liberal view on the issue.

**Correspondence:** Muir Beach has been a favorite spot for myself, my family, my friends, acquaintances, and many people in the Bay Area as well as the furry, four legged creatures that make up our families.

Most of us have animals, dogs that are our pets, that we consider family. Most of these dogs are well trained, and follow voice control, and most pet owners are responsible, and clean up after their pets.

To create a rule that dogs should be on leash at a beach is like saying children should sit down in their seats at recess. Dogs need to run and play. This creates healthy non-neurotic dogs that are easy to be around. Leashing dogs makes them aggressive and territorial.

Of course there are some owners who should leash a temperamental dog and don't, and there are some owners who do not clean up after their pets. Please do not enforce rules and regulations because of a few irresponsible pet owners. I personally have one dog - a border collie who is completely under voice

---

control and will lie down when I give him the signal from 50 yards away. My other dog is different and she is on the leash because she is unpredictable and untrusting of strangers since she an abandoned dog, that was rescued.

The law should read that if the dog is not under voice control, or is aggressive, then that dog should be leashed, but let's not create a new breed of hostile dogs, in an already too litigious society. Let's not have an adverse impact on family life, preventing a child from throwing a ball for his dog and allowing the child the pleasure of watching his dog catch it in the waves and bring it back to him.

Please think of all these things, and avoid initiating a leash law at Muir Beach.

Thank you

Sincerely,

Charlene Frischer

**Correspondence:** Dear Superintendent Dean,

My name is Stacey Dirzuweit and I live in San Francisco. I walk my dog at Golden Gate Park, Fort Funston, Ocean Beach, Crissy Field, and Point Isabel Park for the past 14 of years. I belong to SaveOffLease.com and Hayes Valley Dog Buddies.

I strongly oppose the preferred alternative for the Golden Gate National Recreational Areas because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Francisco and San Mateo Counties, and on new lands that the GGNRA acquires in the future.

Please don't force families like mine to have to drive long distances to find dog friendly outdoor areas.

Sincerely,  
Stacey Dirzuweit

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. I do support Alternative A, the No Action Alternative.

The GGNRA was established to provide recreational opportunities to local residents. Unlike a National Park, the GGNRA original charter was to offer open space to a densely populated area. Considering that 50% of that population has dogs, it seems highly illogical to restrict that portion of the population from enjoying this open space. The fact that 99% of the GGNRA is already off-limits to dog owners is a shame. To reduce this further seems completely unreasonable.

For dog owners, the enjoyment of walking their dogs in the GGNRA, as well as offering them off leash access, is essential to the dog owners well being and health. I personally do not have a dog. However, my mother does and her taking her dog for walks in open spaces provides my mother an essential form of

exercize that benefits her as well her dog. I believe this was the intent of the original charter as detailed in the 1979 pet policy. The National Park Service should not impose any further restrictions on this essential use of our puplic lands.

Best Regards,

Kathy Johnston

<b>Correspondence:</b>	I support limiting dog use and requiring dog owners to follow the stricter rules.				

My two picnics with my kids this summer at Chrissy Field were run through by dogs.

In addition my toddler's face has been licked by an off leash dog at the park. Thankfully, he wasn't bitten.

I have lived in other cities and consider the lax dog rules in San Francisco to be unsafe and unfair. I feel unsafe around other people's off leash dogs and don't think my family should be forced to interact with other people's dogs when I go to a public park.

Often people have their dogs off leash when signs say it is forbidden. I find this disregard to the rules as hard to explain to my kids. In Seattle, where we moved from, police gave tickets to violators of leash laws in parks. As a result, such violations became the exceptions, not the norm.

In no other public space, have I seen dogs allowed such freedom because their respective owners deem them safe to do so. Dogs are unpredictable around other dogs and around kids and people they don't know- -a park contains all theses elements.

A new dog policy that enforces leash laws and clearly marks off leash areas would make the park safer for everyone.

Thank you for working on this!

<b>Correspondence:</b>	We live in SF and have a new puppy/dog. What I've realized is that she HAS to have off-leash activity at least once a day - to run, play with other dogs,, etc. - or she digs, chews household items, decks, etc. Young dogs need room to run. Period. On leash is fine on trails, but there must be areas, open areas, protected areas, where dogs can run. I don't believe that can not be done without protecting the environment. Put up fences where you don't want the dogs to go. Tell us how many feet from the dunes you want us to keep the dogs. Dogs are not like cats. They need space to run and play. In that way,				

---

they are very much like children. Please keep spaces in the city: by the Cliff House, at Crissy Field, on Baker Beach, for example, with off-leash areas. They do not need to be huge, just there. I will have to let my dog off least part of each day. The dirt covered, bland dog parks near us are unacceptable for us. Dog parks like the Upper Douglass park are a godsend, but when will it open...??? Dogs are not going to go away. Please help us all work together to live together.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Miwok, Coastal trails and Rodeo Beach.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. I haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

I am a responsible dog owner and have trained my dog to be under voice control and be socialized with people with or without dogs. I pick up after my dog and am considerate of my fellow citizens who do not have a dog. Please don't limit our off-leash access to the trails and the beach.

Rozanne Cazian

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear GGNRA,				

Please do not pass this unfair ban on local beaches and parks - - as a dog owner and manager of a local pet shop, I know first hand that the happiness and lives of dogs and owners alike will be severely impacted if you take away local parks and beaches from being popular dog-friendly locales. Dogs do not harm the environment, the parks, the beaches - - sure sometimes there is poop but in the grand scheme of everything, we all poop, so don't hold it against the dogs that they have to do it in the outside world.

Many of our customers go to Funston and Crissy Fields every day, and most of those dogs REQUIRE a lot of daily exercise that is unrealistic for a modern dog owner to compete with - - we simply can't keep up with them, jogging isn't always an option, and hiring a dog walker instead of participating in bonding playtime at a local beach or park is just an obnoxious idea.

Please reconsider this motion to ban allowing our precious animals/children (which is what they are to us!!!) from having a healthy, active lifestyle! We all share this city, please don't exclude us from enjoying nature with our pets and family.

Christina Valence  
Store Manager of K9 Scrub Club Noe Valley

**Correspondence:** I am a dog lover who enjoys encountering dogs on the street when I walk in my neighborhood. And having had a free roaming dog as a child in a small town, I understand the need for dogs to have a place to run free. However, the GGNRA is not a huge place and is home to wild species for whom the presence of dogs is a threat. There are millions of pet dogs in the country who are cared for by their keepers, but no one is feeding the wild creatures or taking them to the vet. These animals must be protected and keeping dogs out of their environment will help do that. There are many places in this city that are dog friendly, we need not sacrifice the open spaces of the GGNRA to their needs while ignoring the real threat to wildlife.

**Correspondence:** I am absolutely heart broken that we may lose our ability to walk on the trails that dogs will now be banned from. One of the biggest joys in the world is hiking with my pup. I am not the only one. There are already so little trails that we can go on, now only Rodeo? Mountain bikers are a bigger issue than dogs. Honestly, I have been hiking the Marin trails for over 20 years and have never seen dog doing anything on a trail other than smiling and having fun. Isn't that the point? Please reconsider.

**Correspondence:** Dear Superintendent Dean,

My name is Madeleine Pao and I live in San Jose. I walk my dog on Fort Funston for the past 2 of years. I belong to Fort Funston dog group.

I strongly oppose the preferred alternative for San Francisco, Bay Area because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Madeleine Pao

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hi,				

My name is Sharon Salisbury and I have lived in Mill Valley for over 30 years. During those years I have always owned dogs and one of the pleasure of living here was that there were a few places we could wander off-leash, with our furry pals by our side. It is such a joy for me and the dogs to watch them splash through mud puddles, run after sticks in the creek, or just run across a meadow. As our dogs have gotten older, we now make use of the dog park, which is very crowded and where often dogs fights occur. And even there, if a dog goes in the water after a duck(what dog wouldn't) we get fined. I am a member of Audubon, volunteer at WildCare and IBRC and do not condone dogs chasing birds, but i didn't chose the location of the park either.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

"I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. And is this just not another dog park?

"I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

And what happened to all of the comments that were made back in 2011 as they seem to have disappeared or not even been considered. I went to each and every meeting and wrote letters, as did many of my friends and I can tell you the overwhelming response was from people who supported dogs off leash in certain GGNRA areas. There is a reason the GGNRA has a R in the acronym, as well you know, it stands for recreation. It is not a pristine wilderness area. It was created and meant to be used by all groups of people, including people with their off-leash dogs. As it stands now, we only have access to !% oall the beautiful park land in CA. Bikers, birders, hikers all go off trail and there are many more of them but they

keep being allowed on more land, while we are losing some of our most wonderful walkie places. I am a birder and can also attest to birders going off-path en masse to peer into nests and pishing to lure birds into the open. The new plan does not cite any specific examples of damage, nor is there any scientific evidence for keeping dogs on-leash.

I oppose the current plan for many reasons: dogs kept on-leash are almost always more aggressive, dog fights are occurring more frequently in dog parks due to overcrowding (there was a near-fatal attack at the MV dog park last week.) as well as a place for being a vector for parasites, dog owners pay taxes too and then there is just the pure joy it brings us and our dogs to feel freedom if only for an hour. After 30 years of hiking and walking dogs off-leash, I have never, ever seen a dog fight nor any dog bringing any animal down. On the contrary, I think the coyotes are winning in Mill Valley and I wish them no harm for that. Their home first.

Mary Oliver, the Pulitzer Prize winning poet speaks for me and Badger and Emmy when she says:  
"You may not agree, you may not care, but  
if you are holding this book you should know  
that of all the sights I love in this world-  
and there are plenty-very near the top of the list is this one: dogs without leashes."

Sincerely,  
Sharon Salisbury

<b>Correspondence:</b>	I oppose the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan. The plan proposes to either eliminate or severely limit dog-walking access in 21 locations in Marin, San Francisco and San Mateo counties - including traditional off-leash areas like Crissy Field, Fort Funston, Marin Headlands, Mori Point, Muir Beach, Ocean Beach, and Rodeo Beach.				

The GGNRA is located in a major urban area with minimal open space, so these restrictions will have a dramatic impact. I believe an acceptable dog management plan must take into consideration the impacts of the proposed plan on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, and must respect the recreational values that are part of the GGNRA's original mission (to provide for the maintenance of needed recreational open space), which this plan FAILS to do.

Please listen to the residents of San Francisco- WE OPPOSE THIS PLAN.

Sincerely,  
Catherine Foreman

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take our dogs to Muir beach.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I am very upset at the proposed changes to ban dogs off-leash at certain beaches as well as being banned from on-leash trails.

The changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 AGAINST the plan.

I support the "No Action Alternative" in the SEIS for each area: Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

I would like the GGNRA to retain the longstanding 1979 Pet Policy.

The GOLDEN GATE NATIONAL RECREATION AREA was established to give outdoor

---

RECREATIONAL opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite.

The SEIS preferred alternatives force people in to their cars, in search of places to walk their dogs. This is bad for the environment and bad for Marin County.

Please ensure that we keep our beaches open to all types of people with or without dogs.

<b>Correspondence:</b>					

Nearly every day for the past 18 years, we've walked our dog off-leash in Oakwood Valley, which is about 100 yards from our house. We've never had to get in our car to go there.

Over the years, we've spoken with many of the thousands of people we've seen there and we have yet to meet anyone who seemed bothered by our dog.

We oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to Oakwood Valley and other parts of the GGRNA. We support Alternative A, the No Action Alternative.

We don't understand what all the fuss is about. Is this just so some bureaucrat can get a merit badge? This same issue came up three years ago and it was soundly defeated. What has changed since then? There has been no environmental degradation at Oakwood Valley during that time or during the nearly two decades we have taken our dog there.

Dogs are already off-limits in 99% of the GGNRA. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The GGNRA was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yosemite. Marin residents rely upon this open space as a place for recreation within walking distance. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in your 1979 pet policy. That policy still works today and should be retained.

Sincerely,

Tom and Amy Davey

**Correspondence:** I love Point Reyes National Seashore. Its 71,000 acres of mixed-use territory that is saved from development is fabulous. I love the Golden Gate National Recreation Area. To have a further 80,000 acres designated for recreation is beyond wonderful.

I also love our dogs. They are well-behaved, healthy, friendly, devoted members of our family. We are responsible dog owners who walk them leashed and clean up after them every single time.

Perhaps not all dog owners are as responsible as we are, but they can be educated to change their habits. I remember when California roads and highways were decorated with ribbons of litter for their entire length. Cans, papers, cups - hundreds of thousands of them. The anti-litter campaign took many years to change the habits of Californians, but it worked, and it worked well.

Simply banning dogs from National lands is not the right solution. An outright ban on dogs prevents a huge percentage of the population from enjoying the parks except from the confines of their car. The only place I can walk legally with my dog in Point Reyes is along Highway 1 - a narrow highway with 55mph traffic passing my left shoulder just inches away. At every trailhead or side road along the highway there is a sign that bans dogs from leaving the highway. This makes no sense to me.

I remember in 1995 the Mount Vision fire burned 12,000 acres and 45 homes in Point Reyes National Seashore. Damage was in the tens of millions of dollars. The fire was caused by 4 boys who acted irresponsibly.

Using the same logic it would make even more sense to ban children. Think of the savings in graffiti clean-up alone.

And no dog has caused a wildfire - ever.

<b>Correspondence:</b>	I care about Fort Funston and the Marin Headlands the most. I want there to remain a trail system and a beach for dog owners to let their dogs off leash, but understand that there is a need to protect habitat and to make a place where people without dogs can feel safe and comfortable.				

I am a dog owner and a citizen of San Francisco. I value having a place for my dog to run off leash because in San Francisco I cannot afford a yard to myself where I can exercise my dog. I like the following options:

At Ft. Funston:

Option A (no cation) is the best.

Option E is second best.

Option F is third best.

All of the other options are no good because they take the best off-leash dog walking in the city away.

In the Marin headlands only option A (no action) leaves a place where I can walk my dog off leash.

I have no strong opinions about any other location.

Thank you for you time and work.

Please do make sure that there is still wild beach and a robust trail system so I can exercise my dog off leash.

**Correspondence:** GGNRA's Dog Management Plan would have negative impact on EVERYONE; dog owners and the general public.

Off leash areas are a fundamental necessity of any city with population of dogs. It is a fact that their are more dogs than children in San Francisco county. So, why are they proposing to substantially decrease the amount of off leash areas, when their is already not enough.

If GGNRA's Dog Management Plan is passed, the remaining off leash areas would become hazardously overcrowded.

Their would be a huge increase in the number of under exercised and under socialized dogs, which only spells disaster and poses huge danger to EVERYONE. Under exercised and under socialized dogs are more likely to be out of control and the likelihood of them biting someone would be greatly increased.

**Correspondence:** I have lived in San Francisco for ten years. I have enjoyed the immense beauty of Fort Funston and Ocean Beach with my dog for the past two years. Exercising her off leash, while respecting the beauty of these natural places, has made me a healthier and happier citizen, which I believe fulfills the purpose of setting aside such recreation areas in the first place.

I strongly oppose the preferred alternative for Fort Funston because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though

much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Fort Funston is like no other place. It is the best part about living in San Francisco. It makes our city unique, because we can live an urban life and vacation every day in wild nature with our dogs. Please reconsider your position.

**Correspondence:** I have a very energetic, well-behaved dog who loves to run, play, and be social. I live in the city of SF with no backyards and very few places that allow her to run free, sniff, and explore. In recent studies, it has been noted that San Francisco has more dogs than children. There are eight playgrounds within walking distance of my house but no where for me and my dog to fetch or play. So we go to both Bernal and Ft. Funston multiple times per week.

My mild mannered Aussie shephard has lived in SF her whole life. She is friendly, quite, and brings smiles to the faces of the people she sees. In order to keep her this way, she needs a public place where she is allowed to hangout with her friends and burn off energy. All the walks in the world could not compensate for seeing a big empty park and not being able to play after being alone inside most days. Dogs like humans needs interaction and to have a little fun.

As her responsible parent, I have trainer my dog to behave, not bark, and stay within park limits. We spend 10 hours on average per week at public parks that allow dogs. And in my experience, the dogs she

plays with are equally as respectful.

City dogs need a place to play. Don't take that from us. By taking away Funston and requiring leashes at more city parks, you would turn my dog into a cooped up, moody, bored member of society rather than the happy, positive participant that she is.

If anything, dog families need more not less space to congregate, share stories, and enjoy the outdoors. Good conversation and a little sunshine makes everyone in this city just a little bit happier.

**Correspondence:** Please oh please don't do it. Don't close our trail. Every day after school me and my dad walk my dog Lou on the Oak Creek Trail. It is my favorite part of the day and I know it is my dog's favorite part too. I just got my dog a month ago and I can't believe this might happen. We meet so many nice people and their dogs, and really the only people we see on this trail are people with dogs. It's a small short trail but it's a big part of our day. Please don't close this trail to me and my dog and dad. We would miss it so much. And our new friends.

From, Gus Mehrkam 6 years old, Tam Valley student.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Rodeo Beach and other trails around Marin County and this proposed dog management plan is the wrong way to go. It will create more problems than it intends to fix ... traffic, overcrowding, and overuse. The dogs aren't going anywhere, just their space to roam!

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Glacier or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park. My family and I travel to National Parks every summer, we don't bring our dog and realize the difference between a wilderness area and a recreation area.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

---

Thank you for your attention to this matter.

**Correspondence:** As a San Francisco resident with kids, I strongly support restricting dog access to the parks. Off-leash dogs can be dangerous - my wife has been bitten here in the city - and they make beaches and other park areas less usable for humans. I think dogs are wonderful, and this city has some fine dedicated dog parks. But people come first. Our parks need to be people-friendly first and foremost, and off-leash dogs degrade the quality for everyone else. Thank you for your time!

**Correspondence:** My name is Nate Bolt and I live in SF. I've walked my dog at Fort Funston and Chrissy Field for 10 years, and my dad took us to those same areas with our family dog growing up in SF. I went to Lowell High and now manage research for Facebook so am deeply invested in the culture of the bay area and our ability to escape the hectic pace of life in any urban area. Our access to nature makes SF incredibly special - please don't radically alter it by over-regulating off-leash dog access.

I strongly oppose the preferred alternative for Fort Funston and Chrissy Field because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. I'm a member of Esomar for research standards, and any of our thousands of members would find your methods and justification severely lacking. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas.

And finally, some of my fondest family memories are letting our dog play at the beach off-leash under voice control, and in my entire 36 years of going to Fort Funston and Chrissy field, I've never seen a single problem with any off-leash dog, ever. Yet you're trying to take away one of the richest experiences of nature for pet-owners in SF and other areas. I'm pleading with you to reconsider. This is far too severe.

Sincerely,  
Nate Bolt

**Correspondence:** The GGNR proposed changes to off-leash rules severely impact my husband and our dog. As is the case for many dog owners in San Francisco, our dog is "our child." We chose to live in the Marina for the amazing access to Crissy Field and the Presidio. Our dog loves nothing more than a run on the beach. And I love nothing more than doing that with her! In these outings, we see friends and make new ones.

We considered moving to Marin County 10 years ago. But because of this unique city where we could work, live, and enjoy access with our dog to outdoor spaces with other people and dogs, we chose to stay in San Francisco, specifically the Marina.

We are very much against this change, and ask that you consider the severe impact to the quality of life to individuals like us who have chosen to stay in San Francisco.

Sincerely,  
Jodi & Bob Morris (& dog Sydney)

**Correspondence:** Dear Superintendent Dean,

My name is Jayne Verdon and I live in San Rafael. I have been visiting GGNRA lands, specifically (name the areas in which you walk with your dog) for the past 20 of years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for (name the trail or beach, for example Muir Beach, or Fort Funston) because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, (please state in your own words how the restrictions will impact your life- examples may be having to get into your car and drive long distances to walk your dog or not going out on walks with your family because you can't take your four-legged friend etc.)

Sincerely,

Jayne Verdon

**Correspondence:** I am very disappointed that the NPS is proposing to prohibit dogs on leash on the trails surrounding my home. I have been walking my dogs on leash since the early 70's. I am particularly disappointed that it is proposed to prohibit dogs on leash south of Muir Beach on the Coastal Trail . I also note that the NPS is purportedly prohibiting dogs on leash on the Owl Trail and the old Banducci road connecting Highway 1 to the Coastal Trail going up to Pan Toll. There is additional signage prohibiting dogs on other trails connecting to the Coastal Trail. To my knowledge there has never been any advance notice of this unilateral prohibition and as far as I'm concerned is without justification.

I have been able to hike with my dogs on leash on the coastal Trail for years and years. We don't impact any water on our hikes, there are very other people and dogs on the trail at any one time. In all my years of hiking on these trails I can't recall ever seeing any Park Service people out on foot on the trails either south of Muir Beach or North on the Owl Trail or the old Banducci Farm Rd. I've only seen them in NPS vehicles driving on the fire roads and creating large ruts when muddy. Certainly that is far more destructive of the environment than a few isolated people with dogs on leash. If you folks hardly ever walk these trails I don't see how you can justify prohibiting people like me from hiking with my dogs on leash. You can't possibly know what the conditions are or even if they affect the environment at all. What's the point of having this recreational area if citizens like me who live in the area can't use it with our dogs on leash? One of the unique things about where I live is that I can go out my front door with my dogs on leash and hike out either north or south in a beautiful countryside without getting in my car. Now your proposals threaten this unique and valuable place that I live in. I am very disappointed in the NPS and feel intimidated and hostile to you folks for taking this activity away from me. Alex Johnston

**Correspondence:** My name is Michele Batista and I live in Pacifica next door to Milagra ridge and Sweeny ridge. I often visit Milagra ridge with my dog Flash. He is well behaved and I don't feel that I should be punished from enjoying the parks with my dog as I am a responsible pet owner. I often volunteer at Milagra with the GGNR and also on my own on a weekly basis I pick up the feces from other dog owners that are not being responsible. I know that the feces is a problem to the environment, but instead of being so incessant about having dogs on lease we should focus on issuing fines to those that are not picking up their dogs waste, which is the real problem at the parks. Being a Geologist (I know some information about environmental issues) there is no reason that the dogs should not be allowed. I understand that dogs trample the vegetation, however, if were talking about the amount of area the dogs trample versus the entire area of the parks their destruction of vegetation is almost negligible. Our government has already ruined the natural vegetation by planting the non-native ice plant and the Pampas grasses thinking it would prevent erosion. The dogs remaining on the trails only leave paw prints if the owners are picking up and not allowing their pets to walk on areas that are being rehabilitated. Maybe we should try fencing in the rehabilitated areas to keep people out of them instead of keeping dogs contained. Despite fencing in dogs you still have a human problem of trampling vegetation. I feel that you should consider leaving all parks open to all toe enjoy. It is getting overly restrictive and not healthy for humans nor their best friends. And we should not all have to be punished for those that do not follow the rules.

**Correspondence:** Dear Superintendent Dean,

My name is Jason Stephens and I currently live in San Francisco and have lived in the Bay Area for 15 years. I am one of the many San Franciscans who own a mostly well-behaved dog that I walk on a daily basis in the city. On weekends I often try to take Kora to an off-leash area so she can get more exercise and enjoy a short stint of relative freedom. I've never personally had any problems between my dog, anyone else's dog, or other dog or non-dog-owning people. Although I know problems do occur, my observation is that they are very uncommon and it would be a huge shame to greatly curtail off-leash areas based on anecdotes. Part of living in a dense city environment is having to occasionally put up with people and situations (and yes, dogs) that you might prefer not to.

I did not write the comments below but I have read them and agree with them:

I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describes how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

Sincerely,

Jason Stephens

<b>Correspondence:</b>	Please keep an offleash area at Fort Funston. Parkl is in your name. Parks are areas for recreation.				

Off lease areas like Funston provide true recreation areas for dogs and their humans. Recreation for dogs truly means off leash. They need to run, and I know that I for one cannot run as fast as my dog can.

Granted, the National Park Service probably has a focus on both humans and the environment, rahter than dogs. However, I would argue that these off leash areas serve humans as much as their pets. Outdoor exercised pets are happier pets, espically in a crowded city like San Francisco. This is important.

I would also guess that off-leash areas in the NPS are a tiny percentage of overall park service lands.

Service is in your name. Please keep the off-leash areas as a service to all of us who live here.

Susan Cunningham

<b>Correspondence:</b>	My name is Kathryn Weeks. I am writing to express my very strong opposition to the proposed off-leash restrictions in the GGNRA, particularly Fort Funston, a dog mecca. If you live in the Bay Area and own a dog, you go to Fort Funston. On the beach, there is an eyesore of a drainage pipe surrounded by concrete walls. Over the years, the walls have been covered by murals, graffiti, and even frescos in relief - all of which depict dogs.				

---

Our dogs go to Fort Funston about 3 times a week. There is no way we could live in our one bedroom apartment, with 2 people and 2 dogs, if it wasn't for the off-leash privileges in Fort Funston. The vigorous exercise our dogs get is vital to their ability to live in cramped quarters, their ability to relax, and for their humans' peace of mind.

Please do not restrict off-leash privileges in GGNRA. This is not a proposal supported by the public or the citizens of this city. The residents of San Francisco have more dogs than children. We need these off-leash areas to give our dogs the exercise and socialization that they need and deserve. We pay the ridiculous cost of living in the Bay Area to have access to special places, like Fort Funston, and we cannot afford to lose it. Please do not restrict off-leash privileges in the GGNRA. It will have a significant impact on these animals' well-being. It will also hurt the many dog-walking businesses that rely on off-leash areas, like Fort Funston, which provide a safe environment for dogs to roam free and exercise.

**Correspondence:** Dear Madame or Sir:

My name is Kathryn Weeks and I am a proud resident of San Francisco. I am writing to express my very strong opposition to the proposed off-leash restrictions in the Golden Gate National Recreation Area, particularly in Fort Funston, a dog mecca.

One of my dogs is one year old and as hyper as they come. Her favorite place in the world is Fort Funston.

If you live in the Bay Area and own a dog, you go to Fort Funston. On the beach, there is an eyesore of a drainage pipe surrounded by concrete walls. Over the years, the walls have been covered by murals, graffiti, and even frescos - all of dogs, which signifies how much of an institution Fort Funston has become for dog owners. Our dogs go to Fort Funston about 3 times a week. There is no way we could live in our one bedroom apartment, with 2 people and 2 dogs, if it wasn't for the off-leash privileges in Fort Funston. The vigorous exercise our dogs get is vital to their ability to live in cramped quarters, their ability to relax, and for their humans' peace of mind.

Last year, our beloved Boxer dog died. We scattered her ashes on the beach at Fort Funston - her favorite place on earth. It was The off-leash laws have great significance to San Franciscans, even sentimental value for some of us, and have a very positive impact on our lives.

Please do not restrict off-leash privileges in GGNRA. This is not a proposal supported by the public or the citizens of this city. The residents of San Francisco have more dogs than children. We need these off-leash areas to give our dogs the exercise and socialization that they need and deserve. We pay the ridiculous costs of living in SF to have access to special places like Fort Funston, and we cannot afford to lose the off-leash privileges that make them so unique. It will have a significant impact on our animals' well-being. It will also hurt the many dog-walking businesses that rely on off-leash areas, like Fort Funston, as they provide a safe, natural environment for dogs to roam and play. This, in turn, improves the quality of life for SF residents. Please do not restrict off-leash privileges in the GGNRA.

**Correspondence:** I was born and raised in San Francisco. I have been a veterinarian at the SF/SPCA since 1994. In the Bay Area, many people regard their pets as their family members. Just providing food and shelter for our pets is not enough to ensure good health. Environmental enrichment, training, socialization and daily exercise are essential for our pets to be fit and healthy. Dogs need regular off leash exercise that often can not be provided in our homes, ours small backyards if any, or by simply leash walking in the neighborhood or at local parks. That is why it is so important for us to have close access to off leash dog parks and regional open space. My clients, friends, and my family regularly take our dogs to Ocean Beach, Fort Funston, the Presidio, the Marin Headlands, Fort Mason, and Sweeney Ridge. Restricting available off leash areas in the GGNRA means that many of us will be unable to adequately provide the exercise our dogs and families need and more people with dogs in the Bay Area crowding the limited local off leash dog parks.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash

---

access in San Mateo County and on new lands that the GGNRA acquires in the future.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral de la Tierra.

Thank you for considering my comments.

<b>Correspondence:</b>	To Whom It May Concern:				

Off-leash spaces in the San Francisco Bay Area are extremely important to dogs and dog owners. They increase the happiness and well being of both. When dogs cannot get significant exercise, as they do with fetch (off leash), they are much harder to manage at home and in general. A well exercised dog is a wonderful dog for the whole community.

Please do not limit off-leash dog areas.

Thank you,

Laura

**Correspondence:** Please reserve an area for dog walking in all the different parks. As a woman, I always feel safer walking and hiking these areas with my dog. I think professional dog walkers should have a dog limit per each excursion to keep proper control of their dogs. I also favor restricting some areas to preserve wildlife habitat. Erosion causes these areas to shift and barriers are not always clear. I would also favor a rule limiting off leash dogs to two per person. We think parks can be enjoyed by everyone including dogs as long as owners respect that certain areas are off limits and common sense rules enforced to maintain the natural beauty and enjoyment for all visitors.

**Correspondence:** I am absolutely in favor of tighter leash laws (but they need to be enforced) in addition to removing dog access all together. Dog waste has altogether become a problem everywhere. Streets, trails, beaches, you name it. Not to mention, where leashes are required, many owners do not adhere to the applicable laws. "Under voice control", unfortunately what dog owners deem as adequate voice control is open to interpretation, so much so its laughable and the only alternative is to ban them all together. Overall, my experience of public spaces is never enhanced by others dogs, rather, there is an indifference, or a negative impact. Super negative when I see their excrement left behind. I think dogs have hit critical mass and there needs to be tighter control.

<b>Correspondence:</b>	I wholeheartedly support the "No Action Alternative." As a 27 year Marin County resident, I strongly urge the GGNRA to retain the longstanding 1979 Pet Policy. Dogs under responsible owner supervision should continue to be allowed off-leash, given the popularity of dogs in Marin. We have taken our dogs to Muir Beach, Oakwood Valley Fire Road and Homestead for over 20 years. We've never experienced any problems and have always been responsible, considerate owners. Attention must be given to number of dog owners in the county. Leaving only Rodeo Beach for dogs to be off-leash is unfair and could also create other problems such as over-crowding. Yes, irresponsible dog owners should be subjected to citations by park rangers and held accountable. The beaches and trails currently open to dogs should stay that way so that people AND dogs can reasonably coexist.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Miwok Trail; Wold Ridge Loop; Tennessee Valley Trails, including Rhubarb and Oakland Valley; and Muir Beach. ONE OF THE MAIN REASONS MY HUSBAND AND I DECIDED TO SPEND A PREMIUM TO LIVE IN MARIN WAS THE DOG FRIENDLY, OFF-LEASH TRAILS!

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	The dog restrictions proposed in the Draft Dog Management Plan for the GGNRA are far too exclusive of dogs where they have long traditionally been allowed. I believe restrictions are necessary in sensitive areas where wildlife can be disrupted by dog and human activity, but this plan excludes dog activity where it causes no environmental disruption or damage. Indeed, far more destructive human activity is permitted in many areas. As a frequent enjoyer of the GGNRA, I am happy to encounter off-leash dogs and I feel they are a great enhancement to the enjoyment of all. Responsible owners should not be punished for the behavior of irresponsible dog owners, or dog walkers with more than two dogs. Rules are needed, not exclusions, and the dog-owner community is exceptional in its enforcement of responsible behavior among itself.				

---

The freedom and respect for dogs are an integral part of San Francisco, and this attitude is one of my main reasons for living here. The current proposal lacks balance and needlessly assumes typical prejudices against dogs and their owners. I urge a fairer balance, keeping traditional practices- -which have worked well for decades- -while limiting restrictions to areas that suffer from both human and dog activity. Responsible dog owners are, in my experience, the most responsive to environmental preservation of the frequent users of the GGNRA.

I urge you to please re-examine and revise this proposal to strike the proper balance respecting tradition and character of this fantastic resource and national treasure, which we have enjoyed for so long and so harmoniously.

Sincerely,  
Stephen Waxman  
San Francisco

**Correspondence:** In sum, the tighter the restrictions on dog walkers, private or commercial, the better.

In particular, commercial dog walkers should be heavily restricted - they have 10 dogs at times and let them off-leash at times. Sometimes there is more than one commercial dog walker at same location. When requested to control animals, they are rude and claim they are not subject to regulations. It is dangerous to walkers nearby - particularly in Presidio and near Mountain Lake.

In Crissy Field, at times there are just too many dogs - they fight with each other and it is dangerous to walkers nearby.

**Correspondence:** My comments are specifically related to the Stinson Beach area that is currently a "leash free" area for dogs.

My understanding is that this "leash free" area will not be available to non Stinson Beach residents if the current proposals are enacted.

I strongly urge you NOT to make this change.

I have been to Stinson Beach numerous times, both with a dog and without a dog. I have experienced no problems with any dogs during my visits. My dog has caused no problems. I have observed that the overwhelming majority of dogs are well behaved and responsive to their owners. I have also observed that the overwhelming majority of dog owners pick up after their dogs. (Unfortunately, horse owners are not required to do that; but that's another story.)

There are limited areas within Marin County that are available for leash free dogs. So called dog parks only provide a limited amount of space and room for exercise and only provide limited stimulation both for the dog and the dog owner. Stinson Beach is a wonderful area for both humans and canines. There is no reason that they cannot enjoy them together.

Please do not deprive us of joint access to this area

Thank you.

John

**Correspondence:** To Whom It May Concern:

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I own two dogs and live near the GGNRA and Muir Beach in Mill Valley, CA.

I take my dogs with me on hikes and runs in those two places on a regular basis: one or two times per week.

I don't understand why you would limit the presence of dogs in these designated dog approved trails and beaches. There are so many trails where dogs are not allowed, why eliminate the few where they are allowed?

Why not allow the users of the park some say in how the park is used? After all, the public owns the park and we are the public.

This isn't a wilderness area like Yosemite why treat it like it is?

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your consideration.

Peter Abel

**Correspondence:** I am a resident of San Francisco and a dog owner. My dog and I both love to exercise outdoors in nature and in our parks and already feel we are too restricted as to where we can do this. It would be terrible not to be able to take her to walk in Fort Funston or Crissy Field, two parks we visit many times a week. It is incredibly important to both my health and the health of my dog to be able to exercise in our beautiful outdoor parks.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

Thanks very much,

Page Bertelsen

**Correspondence:** Fort Funston is one of the last places where Humans and Dogs can enjoy nature as it was designed: to be open and free. While it may SEEM as though you are helping conserve the park by restricting dogs, in reality you are ruining that park's experience. In California there are hundreds of miles of beach and woodland area where dogs need to be leashed - this need not be one of them.

**Correspondence:** To whom it may concern:

I respectfully request you review your proposal to limit dog use within the Golden Gate Recreational Area. Dogs are an essential part of our lives in America and limiting their movement in our parks and open space limits our human lifestyles as well.

Last year I started a lifestyle change. I had gotten a puppy earlier in the year and had to wait until it was safe for him to be on the streets. As soon as he was able, I started walking him. I walked and walked and walked him and you know happened? I lost 60 lbs! YEP! I went from Obese to 'Normal' and most of that change happened because I WALKED MY DOG!!

My dog and I went to the Marin Headlands last year together to celebrate my birthday as no one was around to share the day with me. We had a GREAT time! As a single female, I don't feel its safe to be on isolated trails alone (and its NOT!), but when I'm with Bubba, I'm all good! It was a birthday to remember! Why would you want to prevent me from being on these trails with my protective Bubba?!

According to the American Humane Society, 37 to 46% ohouseholds in the United States OWN DOGS, thats 87 million domestic dogs in the United States!! THATS A LOT OF DOGS. Honestly, its the people who own dogs that are using the TRAILS! If you own a dog, you absolutely MUST walk them and if your a dedicated dog owner, you actually plan your weekends around taking your dog to an awesome outdoor area- like the Golden Gate Recreation Area.

Dogs are a part of our families. Dogs motivate us to get outside, to visit our parks, to smell the fresh air! PLEASE PLEASE PLEASE, I beg of YOU, please stop descriminating against our furry family members. WE need trails!

If you don't have a dog, PLEASE take 2 minutes to watch this video:

<http://www.godtube.com/watch/?v=WWDPLWNX>

I thank you in advance for your time in reading this email and for your consideration of my request.  
LOVE my NATIONAL PARKS!!

**Correspondence:** Please continue to allow dogs to roam off-leash in as many public parks and beaches as possible! Instead of banning ALL dogs, lets put the burden on the owners who fail to either clean up after their dog or allow them to go in places they shouldn't (dunes, for example). Put a VERY hefty fine on dog owners who disobey these things. But please do not make ALL dogs go on leashes. Running free brings them SO much happiness.

**Correspondence:** Hi, I want to write to let you know that I do not like the idea of eliminating the limited number of outdoor areas for dogs or dogs off leash. For the first time EVER me and my family were able to enjoy an outing with our family dog this past weekend. Our experience at Muir Beach was phenomenal and worth the drive. I was amazed at how pristine the beach was with dogs, no waste, no dog fights, just dogs frolicking with each other and their owners.

What struck me was the relaxed atmosphere of the beach and its visitors that day and I think that this vibe could be attributed to the dogs being there. They broke down barriers and lead to strangers interacting with each other, chatting and enjoying a lovely afternoon. These interactions would not have happened if not for the dogs, who brought all together.

It has been shown that dogs encourage people to exercise and improve quality of life. So why would you take that away? It makes no sense.

Lastly the reason we chose to visit the beach over the woods was because of the dog friendly policy. Please don't take this resource away from the public.

**Correspondence:** I am writing to express dismay not only about the proposed dog plan about the odd ways in which the information is presented and the autocratic ways in which the National Park Service has acted. I have now stopped my annual donations to the National Park Service because of this issue.

On October 21, 2013, the National Park Service simply did not attend a hearing because they didn't want to hear the perspectives of those that do not agree with them. According to SF Gate, "Howard Levitt,

the park's spokesman. "It made no sense; we saw no productive purpose to be served."

On the website under the Dog Management Plan, you have provided a list of Current Places Where Dogs Can Go Under Voice Control. However to find out what the elements of the dog management plan are, one must go to a complex set of documents. If you can make the current list of available dog friendly sites available in a clear list, why can't you make the new restricted list as available? I can only think that it is in keeping with Mr. Levitt's approach to not engage stakeholders with views that differ from the Park Service.

I am greatly frustrated by the National Park Service's efforts to impose Yosemite-like rules on a Recreation Area. I will continue to be politically and financially active in opposition to these efforts, but I find it terribly unfortunate, when the Park Service is not devoting its resources and time to improving its parks, to outreach services to youth, to fundraising, but instead to reducing the joy and recreation of dog owners and families in the Bay Area.

**Correspondence:** ALL ANIMALS INCLUDING HUMANS DESERVE AND NEED FREEDOM OF MOVEMENT. HUMANS ARE ABLE TO WALK AND EXERCISE FREELY AND ANIMALS NEED TO BE ABLE TO DO THIS AS WELL FOR THEIR HEALTH AND WELL-BEING. IF AN ANIMAL CANNOT MOVE FREELY FROM TIME TO TIME, THEY ARE NOT LIVING A FULL LIFE JUST AS WE WOULD NOT LIVE A GOOD LIFE IF WE WERE TETHERED. DOGS DESERVE HAPPINESS JUST AS WE DO AND MOST DOGS LIKE TO RUN FREE JUST AS OTHER ANIMALS DO. YOU WILL HAVE MORE DOG-BITING ON YOUR HANDS IF YOU REMOVE THEIR RIGHTS . EVEN A ZOO ALLOWS ANIMALS SOME FREEDOM OF MOVEMENT. OTHERWISE, YOU HAVE A FRUSTRATED ANIMAL. I HAVE WALKED MY DOG OFF LEASH ON OCEAN BEACH FOR A LONG TIME AND HAVE NEVER EXPERIENCED ANY TROUBLE THERE WHATSOEVER. INSTEAD, DOGS BRING PLAY AND COOPERATION AND THEIR NEEDS IN LIFE ARE NO LESS THAN YOURS. A DOG ALWAYS ON A LEASH HAS PENT UP ENERGY THAT COULD ESCALATE INTO A TROUBLED DOG THAT WOULD CAUSE TROUBLE. JUST AS HUMANS WOULD. LET THE WORLD PLAY AND REALIZE THAT MANY DOGS ARE PART OF WILDLIFE. WOULD YOU LET US WALK A MOUNTAIN LION OFF LEASH ? YOU WANT TO PRESERVE WILDLIFE? THEN, DO. WHY NOT DO SOMETHING MORE PRODUCTIVE FOR THE PARKS RATHER THAN DREAM UP MORE RESTRICTIONS. WE ARE NOT ROBOTS. NEITHER ARE DOGS. AND HOPEFULLY, NEITHER ARE YOU.

**Correspondence:** Please let my dogs run off leach on the beaches in California. I have two ATT dogs that are on leaches in the City. They go to rest homes thru the SPCA program but after their visits with the rest home clients they need to relax with a good run on the beaches of San Francisco. They work great with the clients and know that after a good work day they they will be able to run and play like dogs.

Please do not take these areas away from them. Dog parks are OK but they are overrun by dog walkers and they are dusty.

**Correspondence:** Dear Superintendent Dean,

My name is Jake Davis and I live in San Francisco. I walk my dog on Ft Funston, Baker and Crissy Beaches for the past 7 years. I belong to the Dolphin Club.

I strongly oppose the preferred alternative for the above mentioned beaches because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Finally, I don't want to have to drive long distances to let my dog run.

Sincerely,

---

**Correspondence:** Most of my experience in the GGNRA is at Ocean Beach and Crissy Field. I hope to see the preferred alternatives put in place at both sites.

I enjoy dogs but I have witnessed many people and their children getting harassed by enthusiastic off-leash dogs, and even aggressive dogs. I have also witnessed them go after birds (including snowy plovers at Ocean Beach.

Whichever alternative is chosen, please be sure to enforce the laws. It seems as though there is no enforcement at Ocean Beach.

**Correspondence:** The proposed revisions to dogs in park lands are too restrictive. It's important to retain our precious beaches and parks. It's also important to maintain the quality of life that provides a sense of community and positive health benefits for many who otherwise would not take part in the outdoors.

Dogs are an essential ingredient of a healthy life style. Please continue to educate the public about how to be responsible , while at the same time allowing the same open space use of space by owners and dogs as is currently in place . Please do fine those who don't comply to current regulations or who are not responsible pet owners, but please don't implement the new plan as proposed.

**Correspondence:** Dear National Park Service,

I have been a resident of San Francisco for the past 20 years and currently live in the Glen Park neighborhood with my partner and our two dogs...Poppi the 6 year old Beagle, and Ramsey the 10 month old Greater Swiss Mountain Dog. Both dogs are well socialized and good-natured in part because we believe that daily exercise and socialization with other dogs and people are key to the health and safety of our canine companions. Prior to our current dogs, I lived in the Duboce Triangle neighborhood and had a Rott/Lab mix for 13 years who I walked off-leash in Duboce Park every day.

Since moving to Glen Park, we frequent neighborhood parks (Glen Canyon and McLaren Park) as well as Fort Funston and Crissy Field. The proposed restrictions in GGNRA's Draft Dog Management Plan are severe, unwarranted, and oppressive to all responsible and law abiding dog owners and their pets. If implemented, these restrictions will severely compromise our ability to provide the necessary care to our pets. Any dog behaviorist will tell you that well socialized dogs are also critical for the safety of other people and animals as positive socialization mitigates fear based reactions. This is a health and safety issue for everyone.

We take great pride and joy in watching our dogs run and play. Spending time at Crissy Field and Fort Funston with them and interacting with other dogs and their people is a pleasure, and reminds me how fortunate we are to live in such a beautiful place! It also gets us out and about and keeps us healthy.

Nothing is more satisfying then taking a nap with our dogs after a romp on the beach....a tired dog is a happy dog! Please do not impose these restrictions that limit our ability to enjoy the recreational areas that we should be entitled to like any other city resident. Don't take equal access RECREATION out of these recreational areas.

Thank you for your thoughtful consideration.

Sincerely,

Wade Crosson

**Correspondence:** i am a 92 year old woman and i would like to say that what you are proposing is preposterous !  
why are you trying to police people to such an extent ? your rules sound so silly . maybe you don't have dogs or understand their needs. too bad. we do understand our dogs needs and they need to run. our dog is very gentle and would never cause trouble. these are not your parks. they are the parks of the people.  
why punish those who act responsibly? those who are afraid of dogs which seems to include you are probably afraid of a lot of things and dog haters should get some counseling. we are taxpayers and we have rights. you really shouldn't have the right to take away the rights we have enjoyed for a very long time. in all my experiences , i really think this makes no sense whatsoever but seems cruel to me and to my friends who like to enjoy the great outdoors. please have some respect for our rights to make our own decisions because the more rules you make, the more troubles you make. and the more unhappy people become. a dog that doesn't receive proper exercise can become a mean dog and you'll see more problems down the road. when you hear a dog barking non stop at home or being rough in the world is most likely that way because they don't get proper exercise and dogs physically need to run.

<b>Correspondence:</b>	Hello,				

My name is Thibault Cartier, my dog and I have been living in San Francisco for 2 years now

We enjoy taking walks and playing off leash with other dogs at Ocean Beach, Fort Funston and crissy field.

Walking my dog in these area is just so amazing! My dog is the reason I go out and we would miss going to these area so much.

Where should we go if you ban these area? In the street where the dogs can walk on pieces of glass, eat chicken bones left over by people who don't know where the trashes are?

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Best Regards,  
Thibault Cartier

**Affiliation:****Received:** Jan,31,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Please hide my identifiable personal information.

The argument that all interests must be accommodated in all parks is ludicrous and an impossible goal. Just as one wouldn't expect to be able to play baseball on a tennis court or bicycle on beach sand, non dog lovers can't expect to have all the beaches to themselves. What is more realistic is to have special parks that include special purposes. There are plenty of parks and beaches that ban dogs altogether. Only a few are available for off leash activity. The needs of the many should not be restricted by the desires of the few.

The best way to accommodate different interests is to take into account the percentage of potential users. According to the latest census, there are more dogs in the City than children. While these groups are not mutually exclusive (many households have both children and dog) as the numbers of dogs increase, accommodations for them should increase, not decrease.

Muir Beach is a good example of a park that is ideally suited to remain designated for off-leash activity. It is out of the way and the majority of users are dog friendly. Impact to the environment near the water's edge is negligible.

To answer some of the objections posed:

1. Dogs are vicious and attack people.

A greater risk exists on the city streets than in parks. People don't take aggressive dogs to the beach, evidenced by the relatively few reported incidents of dog bites (only 9 bites in 17 million visits to the parks last year, according to Parks Services' own report).

2. Dogs trample the flora and chase the fauna.

Mostly, dogs run along the waterline leaving the rest of the beach alone. There is no flora growing at the water's edge on a sandy beach. Sensitive areas on the way to the beach are protected by enforceable dog leash laws. Similarly, the water's edge is not a sensitive wildlife habitat. The footprint of dogs is far smaller than the footprint of humans. There have been few documented incidents of dog damage to the environment.(e.g. I have never seen a dog with a Snowy Plover in its mouth).

3. Dogs leave messes.

Responsible dog owners pick up their dogs feces. That's the enforceable law. What I've experienced on the beaches, on the other hand, is the litter left behind by people, not dogs. If litter were the criterion used to restrict beach use, we would ban people from the beaches. Enforce liter laws.

4. Dog pathogens pose a health danger to humans.

Contrary to a statement in the Golden Gate National Parks Plan draft (p.34), dog parvovirus is species specific and NOT transmissible to humans, as human parvovirus is not transmissible to dogs, according to the CDC (<http://www.cdc.gov/parvovirusB19/>). Furthermore, E.coli is omnipresent and part of the natural bacterial fauna found in the intestines of all mammals. The strain that is hazardous to humans comes from contaminated beef, not dogs. There is NO evidence of E.coli from dogs causing any problem in humans.

5. Dog pathogen pose a health danger to wildlife.

Vaccination against rabies is mandatory as is licensing. Responsible pet owners routinely vaccinate their pets against parvovirus, distemper, influenza and other diseases. If transmission to wildlife ever becomes a real, other than a perceived, threat, then area specific requirements for specific vaccinations could be enforced.

Question: What is the waterside boundary at National Parks' beaches? Mean high-high tideline is the usual property line designator. If that is the case with National Parks, then the land between the low tideline and the mean high-high mark is outside the jurisdiction of the Park Services and would be governed, instead, by any applicable Maritime or National Marine Sanctuary laws.

**Correspondence:** To whom it may concern,

I just learned of the planned restrictions to off leash dog walking in SF and surrounding areas. As a owner of two dogs in San Francisco, I am 100% aainst such a move. My two dogs are extremely well adjusted, healthy and happy dogs that live in the middle of the an urban environment. I live across the street from Dolores Park, which affords a nice outlet for dog socialization and exercise. However, on the weekends it's impractical to take them there for exercise because of the crowds.

When looking at alternatives, few good ones exist. The handful of alternatives close in the neighborhood are extremely limiting in terms of actual freedom to have the dogs enjoy safe, free, exhausting (essential for happy active dogs breeds and their temperament) play. Closing access to places outside of the very enclosed dog parks in the area or Dolores Park when there are few people, which is very limited, would limit the access to free play and dog/owner bonding on hikes.

I have no idea what issue would be resolved by doing this. I am near certain of the impact though; less active dogs, with pent up energy in a city with so many dogs = a lot more acting out, overcrowding of the few dog areas in the city and therefor more dog issues between dogs and with people. Restricting off leash areas just because will not be without ramifications; why do it???? Please, please, please, please stop this campaign and leave off lease dog access as is or with even more options.

Sincerely, Alan Brisbon

**Correspondence:** I urge you to keep off-leash dog walking as a part of the Fort Funston area. Dog truly is man's best friend, and our four-legged companions bring such joy to our lives. Those of you who have the power to make these decisions and also own dogs understand that I'm sure. The Fort Funston area is a key place and one of only a few I know of where dogs can be dogs - off leash. They can run on the beach, interact with other dogs, and feel free for a time. It is truly a sight to see your dog as happy as a dog can be, and currently they can be that at Fort Funston. This also keeps their owners fit and healthy, happy and calm.

With what dogs face these days, so many being euthanized that don't have the luxury of homes and owners that care, let's not take one more thing away from them. They are our friends our companions and depend on us. We have the power to keep them happy while also protecting the environment around them.

Thank you,  
Nathan Hanley

<b>Correspondence:</b>	Officials at GGNRA,				

Please reconsider the initiative to restrict dogs so that they must be on a leash in designated park areas. Previous to living in Oakland, I lived in San Francisco from 1998-2008. I have enjoyed the beautiful parks in the city as do most dogs. Now that I live in Oakland and have my own dog, it brings me great joy to be able to share the open space at Ocean Beach with my dog. This is an area where there are no ticks and plenty of other friendly dogs for her to socialize with. Also, many people without dogs enjoy the spontaneous energy that is create when dogs are allowed to play in a respectful manner. Not once have I seen a mishap created by a dog, nor have I noticed the dogs seriously destroying the habitat. In fact, over the years having surfed at Ocean Beach, I have see the coastline and dunes drastically change as result of storms or high surf.

It is with great concern and disappointment to know that my small dog must be on a leash along the coastline.

Kind regards,  
Stephen

**Correspondence:** PEPC-

I'm in favor of Alternative A to allow me and my pets to continue to walk off leash through the GGNRA, as well as having some public beach access areas to play. This pet policy adapted in 1979 allows humans and their pets to access a just a small percent of the beauty in this area. As an animal owner and nature lover it would be a huge loss to me and many people in the area to have out rights taken away altogether given the large space in question and leaving a smaller percentage to dog owners to occupy. I sincerely hope there is some percentage of space left for us to enjoy too.

Warmly,

Laura Miller

**Correspondence:** Please enforce leash laws in the GGNRA! Please protect GGNRA visitors, wildlife and the environment by implementing Alternative D. Our second choice is Alternative B.

While activist dog walkers may have the loudest voice, they are a minority and there are many more visitors who don't own dogs, are dog owners and dog walkers, who do not agree with their views. Protect us from the unreasonable requests of activist dog owners.

As frequent visitors to GGNRA sites, we are alarmed by the number of dog owners who let their uncontrolled dogs run off-leash. Many of them are not under voice control. Those of us who have been attacked and bitten by dogs and/or feel very uncomfortable around unleashed dogs are labeled as unreasonable when we ask that owners to leash their uncontrollable dogs. Dog owners should recognize, in the words of veterinarian, Ben Hart\*, an animal-behavior specialist at UC Davis that "There's no such thing as an absolutely, completely safe dog." Given this from an expert, it is clear that public safety should be a real concern. This is not to detract from the negative effect that dogs have on wildlife and the environment. Our SF neighborhood suffers from a high dog population where dog incidents and dog waste have polarized the residents. We have had to rescue innocent visitors from our neighbor's "friendly" dog. Only a subsequent visit and citation from the SF Animal Control convinced them that they needed to obey city leash law.

This conflict reminds us of those days when smokers freely polluted the air in public spaces, negatively affecting the environment and health of all around them. Not until the no-smoking law restricted their behavior, did the quality of air improve for all of us.

Please see this SF Chronicle article: It would be interesting to note the change in statistics since that date.

**Correspondence:** I fully support the new dog management plan. Priority needs to be given to the protection of the park, its natural features and wildlife, which - esp. in an urban area - - is already subject to massive stress. The damage done by dogs, and esp off-leash dogs - - is very obvious at Fort Funston, which looks like a devastated area. I no longer want to walk there. It is depressing to look at.

Keep GGNRA as a park for everybody to enjoy - - that means also, protect what is there from being exploited and destroyed by the vocal few. Think of the countless hours of volunteer work people have put into the park maintaining and restoring it. All of that can be easily ruined by careless and thoughtless use, such as proposed by the dog owner lobby.

**Correspondence:** This plan should be rejected because it reduces available dog-walking areas and eliminates it altogether in others [such as Ocean Beach between Sloat Blvd. and Lincoln Way]. It is a fundamentally flawed plan that unnaturally transposes to this unique urban park setting the goals and practices of non-urban parks.

Our dogs are our family. They emotionally nourish, sustain and "give back" to us daily in a way other animals [including wild birds] don't and can't. They deserve and need free-exercise areas in a densely populated city like San Francisco. San Francisco is not Yosemite or the Grand Canyon, for crying out loud. GGNRA bureaucrats obviously are unable or unwilling to acknowledge and protect that pivotal difference.

Bicyclists and uncontrolled young children are a far worse safety risk in the GGNRA than dogs - particularly at Crissy Field. Bicyclists and unsupervised children routinely run uncomfortably close to pedestrians, cause collisions and ignore basic courtesy. If the GGNRA wants to increase safety at Crissy Field, it should: (1) either ban bicycles or begin strict ticketing of bicyclists who ride too fast and too close to pedestrians.

Bird-watchers have plenty of non-urban parks and open space in the San Francisco Bay Area to go to. There is no need or reason to grossly reduce dog walking areas in San Francisco; to the contrary, they should be INCREASED!

Moreover, the Audubon Society grossly distorts this discussion by claiming [as their representative did on January 30 in San Francisco at Stern Grove] that dogs are to blame for the reduction in numbers of certain birds. No empirical data supports that false claim - the Audubon representative couldn't cite any when asked to do so on January 30. Feral cats, coyotes and other natural predators ignored by this plan are more of a risk to birds than dogs. And they all have been such a risk since time immemorial and before there ever was a national park system. It is the bird watchers, not dog owners, who are trying to alter the natural order.

Dog-walking areas in the GGNRA should be increased, not reduced as this draft plan would have it. Too much staff time and too many taxpayer dollars have been squandered already on this draft plan, which succeeds only in bolstering San Francisco's growing reputation as a bureaucrat's paradise. Enough is enough. The draft plan should be rejected.

**Correspondence:** Dogs, by their nature, will sniff, chase, and dig. They are curious and unpredictable. They greatly harm birds, rodents, insects and other wildlife, either directly or by disturbing their habitat or food sources. Domestic dogs should not be allowed to destroy what little is left.

The GGNRA is not a synthetic urban dog park. It is part of our National Park System, and a protected area for endangered and threatened species. People have a right to use it, but not abuse it.

Please consider this: the folks that have dogs also typically have extra money to care for them- -their food and vet care; and often their toys, grooming, and walking service. Folks that have dogs also usually own a house or condo, as the majority of apartments or rental units do not permit dogs. Therefore, these dog guardians already have a disproportionate amount of power in the city. They do not represent the majority of San Franciscans, and they certainly don't represent the wildlife, which has no voice, no "owners" to speak for them.

So I must speak for the wildlife. I am asking you to please not give in to the loudest fraction of San Franciscans who feel entitled to force their choices on nature and the rest of the city. I love dogs; they have been a part of my home and my life. But dogs need their own fenced-off space to be dogs, and their guardians must be responsible and follow the law- -with consequences if they don't. There must be justice for nature. Please protect those who have no political power, even while the most privileged are shouting for more.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Crissy field.

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-

specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	Hi:				

I strongly agree with the idea of this plan. However, from what I can see, there is no mention of Stern Grove Park anywhere. I live in the area, and I cannot take my kid to Stern Grove, because, despite the fact that this park has its own dog play area, the off-leash dogs are everywhere - kids playground included. This is not safe.

My concern is that after the other city parks become more restricted towards the off-leash dogs, there would be even more off-leash dogs in Stern Grove, which would basically turn it into one huge dog park, neighborhood children be damned. So my suggestion is to try to make off-leash/on-leash restrictions and clear markings a citywide project, to save other parks, and especially Stern Grove, from becoming exclusively dogs playgrounds.

Thanks.

Best regards,  
Maria Belilovskaya

**Correspondence:** I was raised with a family dog and have had my own dogs as an adult. They were always a very positive addition to my life and I wouldn't have had that any differently than I did. Dogs are not, or shouldn't be considered, wild animals. We have them and raise them to be members of our family. Raised in a suburb we always had a rear yard that provided for our dogs' exercise. We never took them to parks and let them off leash.

Dogs should NOT be allowed on city streets or in urban parks off leash. Dog owners seem to be oblivious to us who do not currently co-habitate with Rover. The owners feel they have the right to have their tamed animals utilize public and private spaces with the same sensitivity as we would ask of another human being. This is not possible. Even the best trained animal, when not controlled by a leash, will gather with

their kin to form packs that lose their training to follow the dominant animal in that pack. This well recognized in rural areas where dogs off leash in areas of animal grazing can be legally shot by the rancher or farmer whose animals will be threatened by the off the leash dogs.

Why should we as urban citizens, who love our parks just as much or more than the dog owners, have to put up with marauding packs of animals, dodging both them and their ubiquitous feces and fearing to lie in grass that has been fouled by preceding droves of dogs?

Sure, dogs and owners love to have them run and enjoy what we the people have made available. But why should such a small percentage of citizens, dog owners, control such a large percentage of what is there for us all?

I might add that I'm tired and disgusted by having to replace so many of my front yard plants, many, many, due to the irresponsibility of so many animal owners!!!! Ron and Pamela Harrison

<b>Correspondence:</b>	I am appalled at the new dog management plan. this limits the freedom i have with my companion, seeing as i take him to the east beach near crissy field almost daily and many others are there to greet us, it is an iconic land mark for some, and those who come to visit are pleasantly surprised at the immense fun everyone is having. we are not causing any harm and it has become rooted in our way of life. please dont tear that away from us				

---

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** I am pleased to see this new expansion to keep dogs out of the park. I go to Crissy Field frequently with my child. We have been jumped on by off-leash dogs, a dog once peed on our beach bad, and there is always dog poop on the ground.

Dog owners always apologize and say "my dog is friendly." They seem to not care that not everyone likes dogs and many of us do not want to pet their dogs not be tackled by them. They don't care that children might be afraid of a dog bounding up to them and knocking them off their feet.

Dogs should not be given complete freedom, they are dogs, not people. Keep them on leashes, keep them off people, pick up their poop. Dog owners are not respectful of others rights.

<b>Correspondence:</b>	As a neighbor and volunteer at the Presidio, I frequently encounter dog walkers with dogs off leash. Many times the dogs are running in areas that are clearly marked as sensitive habitat.
------------------------	---

---

Professional dog walkers often have as many as 9-10 dogs. The worst offenders are those that do not keep them on leash. But even on leash, no one can effectively manage that many dogs.

Although I am a dog lover, I still believe that there must be strict rules to manage dogs in the Presidio. No dog should be off leash in sensitive areas.

Professional dog watchers should be limited to a maximum of 4 dogs and only permitted in certain, non sensitive areas. Professional dog walkers should also be charged fees for their use of the park and required to have permits as other vendors in the Park are required.

<b>Correspondence:</b>	I regularly visit Ocean Beach and Fort Funston with my dog.				

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred

alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** It is understood that the heavy use of these parks needs to be taken into consideration, but dogs should not be held accountable or punished. Good dogs and good owners seem to constantly be punished for the bad dog owners. I own and have owned dogs throughout my life. Being able to take them out and spend the day with them in the San Francisco parks and other nearby state parks is what makes living in the Bay Area so wonderful. Once a month bulldog owners, including myself meet at Chrissy field - at East beach in particular, and let our dogs romp around together for a few hours. Like small children, this teaches our dogs how to behave around others and "other social norms." I have seen people who are afraid of dogs learn that dogs are not so scary by watching our dogs. My dog is just as scared of people as people are of him. Removing off leash areas like this or restricting them will prevent many people from learning how to manage their dogs, and from their dogs to learn from each other. At the same time, why don't they just remove playgrounds?

In our family, our dogs have traveled all over California with us. They have gone camping, hiking, day trips, car trips, weddings, everywhere. It is understood that perhaps sometimes, areas may be closed or trails should be allowed to "rest," while wildlife regrows, etc. But to remove or limit off leash areas completely seems a bit much. Dog owners should understand their dog's needs. If their dog cannot be controlled, their dog should be left at home or put on a leash. This is much like if a child cannot be controlled - it is up to the parent to do the discipline.

**Correspondence:** As a lifelong resident of San Francisco and vocal advocate and financial supporter for restoration of Crissy Field, surfer and frequent user of the GGNRA, I must loudly and vehemently disagree with any plan to require dogs to be leashed. There are, of course, fragile ecosystems that require a no dog policy at specific times - to protect breeding grounds and endangered species. Most of the GGNRA is not, and certainly Crissy Field is a family and dog friendly area in which dogs have been allowed to play Frisbee, fetch, chase kites and run free for ever. There does not seem to be any valid reason to change this policy. Thank you.

**Correspondence Type:** Web Form

**Correspondence:** My name is Nancy Faville. I am a hobby breeder and Rhodesian Ridgeback enthusiast. All but a few of our 100 puppies live in the San Francisco Bay Area. Together, we are a family of dog owners who email often and meet at least twice a year to maintain a support network, share dog-related recreational information, rehome dogs as needed, share health information and donate to a fund to provide financial assistance for Ridgebacks with medical needs. Members of our Ridgeback family organize and participate in Ridgeback "meet-ups" at Crissy Field, Fort Funston, and Muir Beach. These off leash meet-ups encourage the dog socialization which is necessary in high density urban areas.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. The right action to take is to formalize the 1979 Pet Policy for dog management. I support expanding off leash access in San Mateo and newly acquired land by GGNRA.

Park land preservation is important, but so is the enjoyment of that park land.

**Correspondence:** According to the SF Examiner, the "stakeholders" include a dog group, a bird organization and a park conservation association. Sounds more like "interest" groups to me. How about someone from the general public or a family, or children's organization? Are we getting to the point that we are battling between those who want playgrounds and those who want dog parks?  
Jackie Speier is wrong about not having two sets of rules for two jurisdictions. By her logic, the entire GGNRA could be open, or closed, to dogs.

**Correspondence:** We support wholeheartedly the Park Service dog management plan. Most areas of the park is now a dog park unwelcoming to us a dog owner. The unmanaged conditions sicken us so we do not go to heavily dog-impacted areas. Even areas off limited to dogs have dogs on and off leash. This is entirely unacceptable and the result of systemic corruption known also as endemic corruption, which is corruption primarily due to the weaknesses of an organization or process - in this case the unwillingness of Park Service staff to uphold the current law and to protect the interest of living plants and animals that living in the parks and other responsible park users.

"The worst form of corruption is acceptance of corruption."

**Correspondence:** I am submitting my comments as a concerned long-term resident of San Francisco. My primary concern is that the Snowy Plover Protection Area at Ocean Beach has become an off-leash dog play area during the restricted seasons, with no enforcement of park policies for the Protected Area. This has resulted in increased harassment of the Snowy Plover populations in the Protected Area.

I would like to recommend strict enforcement of dogs on leash requirements in the Snowy Plover Protection Area at Ocean Beach, regardless of what Alternative Dog Management Plan is adopted. I am a regular visitor to Ocean Beach and particularly the Snowy Plover Protection Area and I have yet to see any enforcement actions in all the years I have been visiting the area. Dog owners rarely have their dogs on leashes in the Protected Area and I have witnessed increasing numbers of dogs harassing the Snowy Plovers and other birds. In some instances, I have also witnessed dog owners encourage their dogs to chase birds in the Protection Area as a play thing for enjoyment. Dog owners usually become confrontational when made aware of the Protected Area's on-leash and no-harassment policies, and they usually do not seem to be aware of the Park's policies in the Protected Area or do not seem to be concerned, especially given the lack of enforcement. I also think allowing off-leash dogs during a short window between May through July increases confusion in the general public with regards to dog handling policies in the Protected Area, and promotes the lack of concern and compliance during the protected seasons when dogs are required to be on-leash.

It is important to note that the number of off-leash dogs in the Snowy Plover Protection Area increase during the dawn and dusk periods, which coincides with the feeding times of the Snowy Plovers, significantly increasing harassment impacts on the Plovers. I have also noticed a shift in the feeding time patterns of the Snowy Plovers in the Protected Area, where they now come out to feed later in the twilight hours when there is less harassment as there are less people and dogs around then. This however reduces their feeding time window and their ability to find food, which likely impacts their overall wellbeing and population numbers.

I have also witnessed Park Law Enforcement personnel drive their vehicles in the Snowy Plover Protection Area and in most occasions at night, particularly in the zones where the Snowy Plovers nest/rest. This seems to be in complete violation of the Parks policies in the Protected Area and have direct negative impacts to the Snowy Plover nesting populations. Would like to recommend the Parks Service take action to restrict vehicle use in the Protected Area, particularly during the restricted seasons.

Would like to note that I am a dog lover and have a dog in the family. Like other responsible dog owners, we are respectful of the Protected Area's on-leash policies and the need to find balance in protecting natural habitats and wildlife, and in particular the threatened Snowy Plovers. I and others are supportive of strengthening protections afforded to natural resources, wildlife and habitats within Park boundaries and believe that should be prioritized. I think it would be helpful for the Park Service to expand its public awareness and education efforts to inform dog owners of the on-leash and no harassment policies in the Protected Area at Ocean Beach and other similar designated protective areas on Park lands. Critically, this needs to be followed up with strict enforcement for it to have meaningful impact.

Thank you

**Correspondence:** We are not dog owners, but we really enjoy watching the dogs, off lease, play and swim at Crissy Field sandy beach areas.  
The owners, especially the dog walkers, are so responsible and friendly.....just great . Hope for no one, no document, no restrictions to this pleasure.

But on the dirt walkway, which runs parallel to the beach, we think dogs should be on leash and there should be NO BIKING allowed (only walkers).....there. Allowing bikers to intermingle so close to walkers is an accident waiting to happen.

**Correspondence:** My name is Mark Rubnitz. I have been & am a resident of San Francisco for over 20 years. I currently have 2 small dogs & had 2 medium sized dogs before these. SF has always been an extremely dog-friendly and dog-proud city. It is estimated that there are significantly more dogs living in SF than children. It is absurd to me that the off-leash dog areas even need to be defended. Dogs, like people, are social animals even & especially in domestic urban circumstances, and they require, NEED adequate play/exercise, energy & interaction outlets with their owners & other dogs. This is NOT something new! Humans have had close personal domestic relationships with dogs for thousands of years. Dogs are animals and need to be able to express their energies & instincts as such and this cannot be achieved by denying them & their guardians reasonable access to areas where the limitations & restrictions of leashes & leashed activity are not required. All one has to do is compare dogs walking on leash anywhere to dogs running & playing off leash at the beach or in a park to see & understand the difference. SF is a growing city & its population of dogs is growing as well. To take away so much already established & relied upon off-leash exercise areas would be a huge mistake as well as set the stage for financially & time consuming civic battles.

**Correspondence:** Hello.  
I take my young dog, Baxter, a Border Collie mix, out to the GGNRA about four days each week. We often visit Fort Funston, Ocean Beach, and Crissy Field in the Presidio. Our visits are a mix of on- and off-leash walks, runs and play times. While the sights and sounds of these beautiful outdoor recreational areas are enjoyable, it is most often the times when Baxter is wandering, running and playing off-leash that makes the experience truly satisfying and restorative for us both.

---

Having reviewed and considered the draft dog management plan/supplemental environmental impact statement, my additional comments are as follows:

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

In closing, I monitor Baxter's activities both on- and off-leash and am opposed to further off-leash restrictions in our use and experience of the GGNRA.

Sincerely,

Michael Harrington

**Correspondence:** I am very much in favor of restricting access of off leash dogs where preservation of wildlife, i.e. snowy plover, is indicated. I am also in favor of restricting access at Crissy Field and Ocean Beach. From direct observations, my experiences at these locations has ranged from annoyance to intimidation. Having had dogs run up to me and my child while the dog is unleashed is anything but pleasant. Our outdoor experience is negated further by the ubiquitous comment, "don't worry, she's friendly." Additionally when I do see dogs leashed and unleashed on grassy areas of the park, that area becomes off limits to me because of the animals crapping on the grass. It has been my experience that I always pick one of those spots, the result being is that my family avoids playing on the grass rather than risking an encounter with dog "skid marks." There has not been a time when I have not witnessed off leash dogs either rummaging through personal items, urinating or becoming uninvited guess with my experience at the GGNRA.

I do understand and enjoy seeing dogs unleashed and enjoying the out of doors but only in site restricted areas. I respectfully request that off leash dog regulations remain restricted in order to preserve wildlife and everybodys experience.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to many of the trails in Marin and I'm highly respectful of others and the natural surroundings.

Dogs are already off-limits on over 99% o the Golden Gate Recreation Area. There isnt any compelling

reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thanks

Chris Neal  
Dog Owner - Marin Resident

<b>Correspondence:</b>	Dear GGNRA,				

As a long-time SF resident and former dog-owner, I believe it is imperative that off-leash dogs should be restricted and enforced. I think the most recent draft to GGNRA areas regarding areas for off-leash dogs

was more than generous given what a truly small percentage of dog owners there are actually in these represented areas. The survey research done by GGNRA shows this clearly. The damage, danger and nuisance that even one off-leash dog presents to people, wildlife and children, is enough reason to carve out designated areas for their activity. Just today, I returned to Crissy Beach East with my two young children (2 and 4 years old) and was again, bombarded by at least 4 off-leash dogs whose owners had no voice control over their behavior; these dogs' behavior included urinating on my children's toys, digging through our backpacks and picnic basket for food and growling and threatening myself and my children when I attempted to shoo them away. And these same self-righteous dog owners threatened to call animal protective services on me for trying to protect my property and my children from their dogs. I told them that if they did not have control over their dogs, they need to be leashed. They only finally left with their dogs when I said that I would be happy to call the authorities for them regarding their dogs' behavior. It is extremely frustrating to experience this each and everytime we go to Crissy Beach East with our children. These incidences happen several times per visit, and is exacerbated on weekends and sunny days - where even a greater proportion of off-leash dogs are out. Sadly, it takes just one thoughtless dog-owner to take away the privileges of other dog-owners (who do have voice command control over their animals). We should preserve the beauty of GGNRA as much as possible - in its natural habitat and for the wildlife - so that generations thereafter can appreciate it. I take my children to enjoy the beauty of the landscape and oceans - so that they can grow up to be conscientious of their carbon footprint on this planet. I am saddened by how even a handful of dog-owners can ruin this for so many people, because they feel their dog has not only a right to trample over children, picnics and wildlife, but that somehow our need to restrict and regulate this is unfair. If they even lived in other countries - they would see how highly privileged their dogs already are. In France, dogs are prohibited from beaches completely. Please help preserve as much of our wildlife as possible for generations to come - not just the generation of "me and now".

<b>Correspondence:</b>	Our precious dogs need space to play and walk! With so many places for non-dog owners to be, with the high percentages of dog owners in the Bay Area, and lastly with kids in school m-f there must be some solution other than to ban the dogs or significantly reduce the dogs from these fine places. Our dog walkers are well trained on doggie manners and know how to keep dog well behaved within the rules. I as a dog owner want the enjoyment of walking my dog in these areas as it is also pleasurable to me, a dedicated tax player.				

I could not attend on Thursday but I want to support the cause!

<b>Correspondence:</b>	I have been going to Fort Funston with my dogs for over 20 years and support the off leash law there. It has always been clean with people picking up their dog excrement and very safe.				

---

The dog owners are very social and friendly. We all can communicate with each other about how good Fort Funston is for families with their children and dogs. This place must be preserved as a off leash dog park so that we can all enjoy the nice people with their dogs. Make this site a SF city park that is the greatest for walking, seeing the view, enjoying the history and meeting nice dog people.

Ronald Smialowicz

**Correspondence:** I am strongly opposed to the the "dog management" Alternative F plan. Very little of the parks are available for dogs as it is. We frequently walk our dogs on the trails of Mill Valley and I have never encountered a dog which was destructive or out of control. Closing off trails to dogs essentially means that the people can't enjoy them either. I don't believe you have presented any solid evidence that dogs are threatening the parks or the trails.

**Correspondence Type:** Web Form  
**Correspondence:** To Whom it May Concern,  
I strongly oppose the Preferred Alternative to the GGNRA plan because it is too restrictive. I have enjoyed use of GGNRA land for multiple uses since I moved to the Bay Area more than 15 years ago. I cycle, hike, have children and have dogs. I benefit greatly from open space area and could not enjoy it nearly as much if the proposed changes take place.  
There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.  
I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. I was upset in 2011 by the threats of tickets and tickets that were issued to people enjoying places like Crissy Field with their pets in areas that have historically been off leash areas. There is no explanation why the numerous comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. Parks are already overcrowded and do not provide the same type of experience as open space areas like Crissy Field

---

and Muir Beach. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. This is not the case.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. I find that most owners are very responsible and that the impact dogs have is less than the impact some hikers, mountain bikers and horseback riders have on the same areas. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral de Tierra. As someone who works in San Francisco and lives in Marin this issue is very important to me. My dogs go with me to work and are in open space every day. Living with large dogs in an urban area necessitates having space to exercise them. Please help to make our voices and opinions heard.

Best Regards,

Betsy Joyce

(Elizabeth Drobish Joyce)

**Correspondence:** While I don't live in San Francisco at this time I am a member of the Golden Gate National Recreational Area & feel I would like to comment on this issue.

I strongly believe dogs and any other domestic animal should be kept out of the area. There are many wild creatures who live in this area and they need their space. While dogs may not be eating or chasing these animals, their very presence affects their lives. I live in a very remote part of Mendocino County. I have no domestic animals because they would eat my blue belly lizards, & scare my deer and possibly kill my birds. Domestic animals should be kept away from the homes of the wild animals.

**Correspondence:** I am writing in support of the draft GGNRA dog management plan. I believe it strikes a reasonable balance between dog walkers and other competing values and benefits. As you consider possible revisions I urge you to continue to protect wildlife and the visitor experience from the impacts of dog use on trails and beaches. On the Sweeny Ridge trail from Fassler Road please do not open up the trail to dog use beyond the cattle hill spur trail. My experience at Mori points is that about 40% of all dogs are off-leash even in dogs-on-leash areas. When evaluating dog impacts, given the lack of enforcement, it should be assumed that allowing on-leash use will lead to significant off-leash use also, especially in more remote areas.

Thank you

**Correspondence:** Dear Superintendent Dean,

My name is Brandy Wince and I live in San Francisco. I walk my dog on at Ft Funston and Chrissy field.

I strongly oppose the preferred alternative for Ft Funston and Chrissy field because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, the restrictions will negatively impact mine and my dogs life.

Sincerely,

Brandy Wince

**Correspondence:** Hello!

I am writing to voice my opinion to oppose the GGNRA's revised dog plan. I fear that by placing restrictions on what have traditionally been dog-friendly spaces, smaller spaces such as city parks will now have to accommodate an influx of dogs and may lead to more conflict between dog owners and non-dog owners. As San Francisco is a city with a robust dog population, it seems unwise to greatly reduce the amount of available recreation space, especially as it construes such a small amount of the overall GGNRA land holdings. As Bay Area residents become increasingly absorbed by computers and technology, it is extremely heart-warming to see entire families going for a walk together at Fort Funston. The family dog is the catalyst for these group walks, and, if restricted from these open spaces near urban centers, people are going to be even less likely to disengage from technology and enjoy the out-of-doors. Dog owners have traditionally been very staunch supporters of open spaces and the GGNRA and it would be a shame to alienate this group.

I am grateful to have such wonderful open spaces so close to my home in the City and applaud all that you do to maintain these amazing retreats. Please don't make it harder for city folk to get fresh air and exercise with their dog!

Thank you for your time.

**Correspondence:** For some context, my family owns a dog, a lovely little Jack Russell. My family is also are strong supporters of Golden Gate National Recreation Area. I don't claim to speak for all dog owners, but I can say that not all dog owners feel the same about this plan. I feel that GGNRA's has balanced the "need" for off-leash dog walking well by including the Crissy Airfield and the northernmost half mile of Ocean Beach (to name two spots we take our dog for off-leash activity.

The park's main mission- -the protection of natural and cultural resources- -is well served by the current plan, and I support the plan.

Thank you for the long years you have spent listening to the broader public, including dog owners like myself and other people who respect your mission.

**Correspondence:** As a longtime bay area resident, hiker, and 14 year GGNRA volunteer, I fully support strong regulation of dogs in the GGNRA. Your Dog Management Plan is fair and appropriate. The park is many things to many people, and if we are to ensure that no one group displaces the rest of park visitors, then dogs need to be considered second to the natural resources, wildlife, and visitors who are not comfortable with dogs. I support the par service's efforts to regulate recreational dog walking, and to adopt a Dog management plan that adheres to all established NPS management policies and practices.

Further, I do NOT believe that commercial dog walking should be allowed at the GGNRA. Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public. Also, I have personal experience with seeing commercial dog walkers lack full control over their dogs and dog waste, etc.

Thank you for your diligence in taking good care of our parks.

---

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I am not a dog owner at present, but I often walk with friends and their dogs. It is so wonderful to watch how joyous they are, enjoying nature with us.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your attention to this important matter.

Abbey Levine

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Mat Gilbert and I live in San Francisco. I have been visiting GGNRA lands for 10 years, especially Fort Funston and others in the immediate San Francisco area.

I strongly oppose the "preferred alternative" for it is far too restrictive. San Francisco sets a very strong example for the rest of the nation with our achievements in terms of humane animal welfare. Animal Shelters from around the country have commended our city and county for having the highest adoption to dog birth ratio in the country where elsewhere dog overpopulation is a problem. The citizens of the city depend on open space to exercise along with their pets.

In addition to the detriment to our lifestyles, there are a number of reasons that this dog management plan is a problem. For example, there have been no peer review or site-specific studies, as required by law.

Matthew Gilbert

**Correspondence:** I urge the GGNRA to restrict off leach dogs to designated fenced in areas only. I look forward to someday being able to sit in the grass again and I'm sure our shore birds would like to nest on our beaches again. There are simply too many dogs in the city now and our parks and open spaces have become predominantly dog exercising zones. The balance we need will require greater restrictions on dogs and their owners than we currently have. The status quo seems to be off leash dogs everywhere. It horrifies me to see dog owners knowingly let their dogs harass wildlife, especially young, and vulnerable birds. It is very stressful for them and probably ends up in premature death. Our wildlife needs to be protected!

**Correspondence:** I oppose the newly proposed Preferred Alternative use for the GGNRA because it is too restrictive for off leash dogs. As a professional dog behaviorist and trainer who's lived and worked in San Francisco for over 15 years, I know from experience how important these areas are for our dogs' and people's health and well being. Dogs need to be able to run and play in large spaces and even trained in these spaces. Without proper exercise and training, almost all dogs will exhibit behavior issues. These behavior problems can be as minor as destruction of household items and mild separation anxiety to dangerous aggression towards other dogs and humans.

I also fear how crowded our dog parks will become. Our local parks are too small for proper exercise and, with more dogs pushed into them, may also cause further aggression due to crowded conditions. It will also undoubtedly lead to more spread of contagious diseases, such as giardia and parvo, which are already all too prevalent in San Francisco.

Please allow our dogs and their people the ability to roam freely and safely and obtain the healthy exercise they require.

Thank you,

**Correspondence:** Dear Superintendent Dean,

My name is (first and last) and I live in San Francisco. I walk my dog on Chrissy Field, Marina Green, Baker Beach, and Presidio for the past 5 years.

These new proposed laws are too restrictive in a city that is known for being dog friendly and progressive. There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, this will impact not only my dogs quality of life but mine as well. With less places to walk my dog, I will have to drive farther which impacts emissions. More fuel burned, more cars on the roads

---

per dog owner. Consider the number of people with dogs, how many added cars that is to the streets because we have to drive daily to give our dogs exercise. Consider how dogs bring smiles to most people faces. You are stealing that from them. Consider the impact it will have on the few areas that you are allowing dogs. How will those areas be effected when all of the dogs in the city have to migrate there. For a progressive city, this is taking us back in time to segregation! San Francisco should be an example to other cities across the country. Instead, capitalism is ruling and taking over the soul of our city. Shame on you for your part in this! Please keep the rules as they are so we can walk to our destinations, keep smiles on strangers faces, keep fuel emissions down, keep dogs spread across the city thus lowering the environmental impact.

Sincerely,  
Amanda Whichard

**Correspondence:** I believe the restrictions outlined in the plan are prudent, striking a balance between the needs of nature, the needs of people without dogs and the needs of people with dogs. My experience in various parks in San Francisco and beyond is that dog owners show a willful disregard for regulations, ignoring both use restrictions and leash requirements. As a result, I think clear, unequivocal regulations on where dogs can and cannot be, and where dogs must be leashed, combined with FIRM enforcement, is best for all who use the GGNRA.

<b>Correspondence:</b>	I believe many people misunderstand the situation with off-leash dogs in the Golden Gate National Recreation Area. Just because dog owners are well organized and are loud doesn't mean they have a right to trample the rights of non dog-owners to enjoy these areas and in particular to enjoy the wildlife values of these places.				

---

I fully support the National Park Service policy on off-leash dogs. The big problem continues to be lax enforcement of existing regulations. I cannot tell you how many times I have been trying to photograph rare and/or sensitive birds or animals and have had inconsiderate dog owners allow their dogs to terrorize the birds and animals right in front of me. And when I point out that the area is posted that dogs must be on leash they just laugh.

Please do not let the loud, organized protests from the dog owners association drown out the disorganized but heartfelt opinions of those of us who find that we no longer want to visit our public parks because they are no longer suitable for wildlife study or quiet contemplation.

Any multiple-use plan must take into account the values all of us, not just dog owners. I hope you will consider my comments before pushing a pro off-leash dog position any further.

Thanks for listening.

<b>Correspondence:</b>	This plan by the GGNRA is the worst idea I've seen in a long time. Judging by the lack of response to an overwhelming amount of resistance to this plan, you at GGNRA are likely to ignore all reason and will proceed with this hateful plan, no matter what the general public says. If you are trying to stir up civil disobedience and a general revulsion for the GGNRA, you are succeeding. Dog owners have a long memory, and we don't forgive or forget.				

Before you do something that you and your future victims will regret, try for once to do the right thing.

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Samantha Tattan and I live in San Francisco. I have been visiting GGNRA lands, specifically Panhandle, Alamo Square, the dog run by 7th Ave and Ocean Beach for the past four of years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternatives because it is too restrictive. There is no justification in the SEIS for

major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, (please state in your own words how the restrictions will impact your life- examples may be having to get into your car and drive long distances to walk your dog or not going out on walks with your family because you can't take your four-legged friend etc.)

Sincerely,  
Samantha Tattan

**Correspondence:** Places where people can enjoy their dogs off-leash attract like-minded individuals with dogs, particularly if they're refreshing to the soul and body. So, envision a place where there are lots of people, children, dogs, strollers, most in motion, active, even noisy. Any wildlife that could be harmed isn't likely to be revealing itself, wouldn't you think? I used to take my dog to Fort Cronkite beach on New Year's Day. It was always busy with people. The last time I did this, a ranger literally chased me and scolded me with a wagging finger ... I didn't know they'd made a new rule about "no dogs except on leashes". Who tortures a dog by leashing it on the beach?? I looked around; there were a couple hundred people and kids, walking, sitting, running, playing, boogie-boarding. I thought about what was being protected by leashing dogs, and to this day I fail utterly to see it. I would otherwise describe myself as generally pro-conservation. Oh, and if this is about dog poop, let's all get a grip. Just about every critter defecates. Somehow the planet continues to revolve. Most humans learn not to step in it, and if by chance they do, most manage to cope. I passionately agree that dog owners ought to and truly must pick up after their dogs. Let's make sure there are bags available at all times, because even well-intended and experienced owners once in a while fail to have a bag with them. Or maybe they've used their bag for their own dog, and now they need one to pick up after some bozo who didn't. Let's have a public information campaign to make it a big social no-no not to pick up after your dog. Like texting during the movie or lighting up in restaurant. We can change people's behavior if we really want to.

**Correspondence Type:** Web Form  
**Correspondence:** I strongly support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. There is no place for dogs in our parks, except guide dogs. I can no longer use the GGNRA or even the city parks, due to my countless frightening episodes with out of control dogs and their often rude walkers. Commercial dog walkers usually cannot control the dogs, nor do they even try, even though these people present themselves as professional. Dogs are destructive to the very things that so many of us come to the national parks to experience: wildlife and the peace that only nature can provide; a respite from city life.

I want the National Park Service to adopt a robust Dog Management Plan; one that conforms to all established NPS management policies and practices, protects park resources; one that provides the opportunity of a quality National Park experience for all visitors, not just those with dogs.

Commercial dog walking does not belong in National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain. Commercial dog walking doesn't provide any service or benefit to any park users, destroys park resources

---

and is in total contradiction to NPS values. It only serves private enterprise at the expense of the American public.

**Correspondence:** As a dog owner living in San Francisco, I have felt so lucky to have the open space at Fort Funston, part of the GGNRA, to visit with my dog. Fort Funston is a unique space to go with your dog in that you can walk along the beach and ocean or hike along the hillside cliffs. I can see the joy and excitement in my dog, and all other dogs we meet along our way, from being able to run, play and frolic in this amazing space. It would be a true loss to change Fort Funston.

**Correspondence:** I've lived on the peninsula for almost 60 years. Having open areas to hike and hiking with dogs has always been a part of the local culture. San Mateo County has beautiful open spaces that should be enjoyed by everyone.

Dog owners are a responsible lot - picking up after and taking care of the surroundings. Dogs really can't get enough exercise at the end of a leash - it's a physiological fact. Dog owners also add to the safety of the region - especially for women who walk alone. Dog owners are a cordial bunch - we know each other and these walks and talks are vital part of our daily routine.

It's rare to meet other hikers who oppose dogs - quite often the response is welcoming. I can only imagine that superintendent Frank Dean and the others who back this plan do not hike these trails and have formed their opinions about the needs of our parks and open spaces from the comfort of an armchair.

Please! This trend is counter to that of other areas. The East Bay makes walking dogs a joy. Let's move our thinking forward and not backwards. If the real concerns are dog droppings then let's impose steeper fines. If the objection is damage to nature - let's study it and find a solution.

Thank you Jackie Spier for listening to your constituents, for hearing the voice of reason, and for thinking forward to what it means to recreate in the lovely county of San Mateo

<b>Correspondence:</b>	Hello,				

Let me first say I appreciate the opportunity for the public to submit a comment on the GGNRA's proposal. I am a San Francisco resident and Bay Area native with a very high energy young dog. One of the things we love most about San Francisco is how dog friendly our neighborhood is; we have off leash dog parks in walking distance from our apartment which we frequent daily. While having the opportunity to play outdoors with my dog daily is a great way for both of us to get some fresh air and exercise, it can't compare to the stress relief of letting my pup run free and socialize with other dogs at Fort Funston or spending the day with her hiking in the Marin Headlands as we escape the hustle and bustle of city life and enjoy the natural beauty of California. While I realize there exist some irresponsible dog owners (there are irresponsible people, some of whom happen to own dogs) I have to say San Franciscan's have some of the happiest and best behaved dogs - just check out a dog park in the suburbs of San Jose and you can easily see how much better socialized and well-adjusted city dogs are in comparison. What makes the difference is giving pups some freedom to explore and meet other dogs on neutral turf rather than holing them up in their own back yard and closing them off from interaction with other dogs and humans.

From what I understand, the GGNRA's purpose is (or should be) to maintain urban recreational areas for Bay Area residents, and while, as an avid outdoorsperson, I am certainly concerned for the preservation of my natural surroundings, I am not at all convinced that my dog could cause a more detrimental environmental impact than humans. Now, if we are talking about improving the park-going experience of those without dogs, there are certainly better ways to go about the issue than effectively blocking access

to and decreasing the possibility for enjoyment of local recreational areas for the enormous population of dog owners in the area. As this is a huge population, I sincerely hope the comments from those in support of dog walking will be taken into account in this phase of the process as I know they were largely ignored in the second iteration of this plan. I urge you to consider more reasonable and realistic solutions that target the real issues at hand such as stricter regulations on pet waste cleanup and the number of dogs that one person can realistically have under voice control. Blocking access to beloved local recreation areas will put a damper on San Francisco and the Bay Area's beautiful, unique and open-minded persona, as well as overcrowding our local parks and restricting (in the most claustrophobic sense) so many of us who value the natural beauty of our home and want to share it with our best friends. Thank you for your time. I am looking forward to further conversation on this issue as we collectively inspect and solve the problems facing us.

Sincerely,

Nicole Turnipseed

<b>Correspondence:</b>	Please do not close or reduce dog play areas in the city! We really need designated areas at the local parks and beaches for the dogs and their owners. Dogs, big and small, need ways to let their energy out and they also need regular exercise and socialization to have a healthy balance of lifestyles. And there are also many dog owners, especially the elderly and physically challenged people in the city, who don't have cars or easy access to go to parks outside of the city. Please take serious consideration of keeping the dog parks available.

<b>Correspondence:</b>	I have lived on the Coast, in El Granada and Montara for the past 5 years. I also happen to be a former military working dog handler and retired police/search and rescue dog handler. I currently own a retired Bloodhound along with a non-working and very energetic mutt. I walk both every day, or face the consequences of frustrated dogs for failing to do so. The bloodhound remains on a leash during walks because they are runaways by their nature...the mutt, however, NEEDS to be off-leash to run. She comes from Alaskan sled dog stock and HER nature is to run. But she has also been thoughtfully trained and is very sweet natured, staying within voice control while out and about. We don't allow her to chase wildlife or jump on other people enjoying the trails. NO DOG OWNERS SHOULD ALLOW THAT BEHAVIOR. And if reported doing so or caught doing so, they should be issued citations. Should we ban driving cars because some car owners are negligent in their operation and maintenance of their cars? NO, we issue them a citation when caught acting in an unlawful or negligent manner. Dogs need to socialize. Dogs need to release energy. Failure to have the ability to do so results in behavior issues. Walking on a 6 foot leash doesn't always work to take care of exercise. Dog parks aren't always the answer either. So I can't enjoy my neighborhood parks and natural settings because of negligent dog				

---

owners who would attract attention of law enforcement wherever they are, on or off leash? How about signs at the trails with a number to call and report bad behavior? How about rangers doing spot checks for bad behavior? Rather than poop on the hundreds of responsible park users and their dogs, how about rangers and deputies investigate and respond to calls and reports on a case by case basis of bad behavior rather than spend their time scouting for random violations of leash law that weren't reported by a complainant? I'd rather rangers spend their time down at the naked beach on-viewing the public sex acts and masturbating pervs 20 feet away from picnicing families rather than hide behind bushes looking for a well-behaved but off-leash dog...

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, Miwok Trail, Oakwood Valley, Wolf Ridge, and Coastal Trails.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

---

**Correspondence:** The report and proposed actions are clearly based on the concerns of a small and vocal minority (and remote bureaucrats) against the interests of a much-larger and more economically varied population (relatively speaking given the location). While this may be fine, or at least acceptable for more remote parks, it makes no sense for an urban park. Rule changes that affect the daily lives of numerous people should not be made without evidence of actual and genuine public support. While the land may be managed remotely it nonetheless is public land and the managers of such land should see some responsibility to manage it in the interests of the actual living-breathing public.

As I'm sure others have noted there are a number of problems with the report. It lists completely arbitrary levels of damage associated with the various alternatives. Some of these are silly in addition to arbitrary - the effects of the policies on a dog owner who no longer can use his favorite or nearby-trail are clearly of a much higher order than the walker who is annoyed by having dogs on the trail. None of the observed environmental degradation is actually linked to dogs. Saying that damage has occurred in dog areas is clearly not the same as dogs have caused damage.

The specific things that I wanted to comment on, however, are:

1) There's no proposal for truly expanded dog use. If one is concerned about the effects of dogs on trails - then it should at least be considered that providing more acceptable trails would spread out the use and mitigate more severe effects on the currently acceptable areas. A rotation could also be considered. Limiting dogs on a small trail corridor (or a handful of trails of any mileage as proposed) will naturally increase the number of dogs on those trails and magnify the real or imagined damage.

2) The report seems to conflate off-leash areas with leashed-walking on trails. Personally I would be fine with limiting off-leash areas to beaches/fields while allowing dogs on more trails (and certainly the existing ones). Leashed dogs generally stay on trails - probably as well as most unleashed children (like the authors of the report I don't feel compelled to defend this point - but i'd say the risk is only mild to moderate). This is especially true on trails that are/were fire roads which make up a fair portion of the trails in the park.

3) Limiting dogs on trails does not magically protect the environment from risk or change the inherent nature of the area. Much of the park abuts recreational lands or is former military land. It's not pristine. It's also close to multiple really big cities that provide a lot of users that do a lot of damage to trails. Reducing dog use will not keep it safe from human-caused erosion, litter, air/water/noise pollution. The notion that dog use is the thing that imperils this land for future generations is absurd. Aren't there horse trails (in general - why doesn't the NPS get around to keeping horses away - as a backpacker I hate horses)?

4) The notion that increasing regulations won't lead to increased enforcement costs is obviously flawed. Restrictions are meaningless if not enforced and that takes ranger hours and money. I imagine it would take a lot of money to keep a resident of muir beach from taking their dog onto the beach or the coastal trail.

5) There are very few on-leash hiking trails as is. very, very few.

6) It's just plain contrary to the nature of the land. These are public lands near a lot of people. They should be left as much as possible for the public to enjoy as they see fit. Areas of particular value (muir woods) can be exempted - but prohibiting a very common public activity from accessible public lands is essentially confiscating a great public resource. There's clearly no compelling reason to do this, especially without a greater effort to determine actual damage.

**Correspondence:** I am a lover of nature and the environment and of dogs, but I think dogs should be controlled, kept on leash when near any wildlife, and have a place to gather. They do NOT need access everywhere! They simply need exercise and they don't care if it's pristine, a gorgeous beach or an of land. Having had a dog for 15 years, I believe dog-owners who don't want any restraints on their dogs are simply selfish. they want to come to the beautiful places, but they don't want to exercise any dog-discipline to preserve those places.

**Correspondence:** Leashed nature walking and off-leash play provide essential exercise for dogs, which is particularly important with the rise of canine obesity. Restricting access will keep responsible owners away, but irresponsible ones (the ones who are currently causing problems) will continue to do as they please, because that's what irresponsible people do.

Please do not pass the new restrictions without further study and evidence that the restrictions would actually solve the perceived problems.

**Correspondence:** There are very few areas in the city and surrounding bay area where dogs can run freely with their families. The loss of this space results in anxious dogs that aren't well exercised and therefore bark and cause complaints with neighbors.

It's healthier for all involved if dogs and their families have a lot of outdoor space to run and play. Especially places like Fort Funston which is well kept and specific to dogs. Families without dogs have endless options for outdoor area, but unfortunately those with dogs do not.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions

So many dogs are EUTHANIZED annually for BEHAVIORAL DISORDERS. dogs need to run & have energy burned off to be good dogs not ripping up the furniture at home. I HAVE A 3 YEAR OLD LABRADOR THAT NEEDS OFF LEASH EXERCISE.

PLEASE DON'T CONDEMN DOGS TO DEATH BY LEASHING THEM UP!

**Correspondence:** I've been following the reports of the GGNRA and hope that my input will be of some use. The point I'd like to make is that the off-leash land options should be widespread enough in the bay area that everyone, including people with and without dogs, can enjoy the coastline.

Over the last 18 years since moving to the bay area, I've enjoyed Stinson Beach, Baker Beach, Crissy Field, Muir Beach, and Rodeo Beach with my dog. In the last year, I've made a point of getting Muir or Rodeo twice a month. Being from the land-locked midwest, the beauty of the bay hits me every time I see it; I've come to believe that it's essential for everyone, including the dogs, in our densely populated cities to get away from the traffic, noise, congestion, and air pollution. Access to the bay is vital for our mental and physical health.

Some of the best off-leash training work I've done with my dog has been at the beaches, where there are canine distractions, no fences, and new stimuli (sand, sea smells, birds) that compete with her attention. The training successes translate into a dog who is confident, calm, and able to listen to commands in spite of distractions around the busy streets of Richmond, Berkeley, and El Cerrito where we walk. The benefit is not only for me and my dog, but for everyone who she comes into contact with.

Admittedly, we spend more time at Pt. Isabel, which is a 15-20 minute walk from where we live (or 5 min. drive). I would hate to think of all of the dogs in SF squeezing into fewer places (just Rodeo for an off-leash option) instead of being able to spread out into the parks and beaches we currently enjoy for off-

leash options. Up and down the coast, there are so many beaches and parks that only allow leashed dogs (or don't allow them at all) that I can't imagine further restrictions helping anyone.

**Correspondence:** I'm a former dog owner and still a dog lover. But I support the GGNRA dog management plan as drafted. There can and should be a balance between use of GGNRA for wildlife and people who enjoy wildlife and the associated calm, quiet environment on the one hand, and dog owners and dog exercisers on the other. Prohibiting dogs for certain areas, as currently proposed by GGRNA, strikes me as the appropriate way to achieve this balance. Thanks you.

**Correspondence:** Bottom line: there are only a few places within the GGNRA where dogs are permitted. The rest of the park is effectively off limits. Yes people complain but they are probably in the minority. Should dog owners be encouraged to be more responsible vis-a-vis their pets, certainly. But, greatly restricting their access and/or concentrating their use to an ever shrinking area will only concentrate the problems. A policy similar to what the Marin municipal water district allows- which is that dogs are permitted everywhere in the MMWD, but they are required to be on leash. That policy has appeared to work pretty well for the decades that it has been in force. If anything - increasing the areas

---

where dogs are permitted on or off leash will probably alleviate some of the congestion and overuse issues that are generating problems.

**Correspondence:** I am a resident of San Francisco and a dog owner. We live across the street from Golden Gate Park and the Panhandle. We regularly enjoy recreation in these parks with the dog. As a lover of all animals i support the GGNRA proposal of controlling dog access in the parks. With the decline of bird populations (for a multitude of reasons) and to support their prosperity (they serve as Agents of Dispersal, Biological Controls, Bio Indicators, etc.) i think the GGNRA's attempt to conserve their natural habitat by limiting the dog free-for-all that exists in this City, is a noble attempt to protect wildlife. i am a proponent of creating more designated, fenced in areas for dogs to play and run free. i just don't believe that dogs off leash does not disturb birds livelihood. It's a unique situation to have such amazing parks in an urban environment and it is up to us to protect the creatures that serve as their essence. I failed to mention the birds' beauty and song but if you've ever been in the parks at Dawn you would know...

**Correspondence:** Please keep the parks dog friendly as they've become an essential space where my dog, Thor, & I enjoy the outdoors and physical activity every weekend. Closing the parks to dog owners would negatively impact many of us at a tremendous level. I give annually for the privilege and would rarely use the parks if unable to do so w/ my gentle canine companion.

I completely understand if the need is to impose leash further requirements for all spaces in question since I know a number of people have approached me thanking me for respecting their space as well. Despite my dog being very gentle to all, I know his size can intimidate people and always have him on a leash to ensure all feel comfortable that he's close to me at all times.

**Correspondence:** There seems to be little scientific data that demonstrably proves that off-leash dogs, when under the responsible control of their owners, do significant harm to floral, fauna or other environmental considerations in the types of areas addressed by the EIS (I.e., not high sensitivity areas). It seems like policy is being formulated based upon speculation, not facts.

The focus of the management plan should be to responsibly ensure the broadest access to and usage of these areas, including for responsible dog owners who want to maximize the exercise that they and their dogs get when using these areas. Please don't penalize us for the poor behavior of a small number of dog owners and their dogs or for possible bias that non-dog owners might bring to this deliberation.

Thank you,  
Bill Pace

**Correspondence:** Hello, I strongly support protecting wildlife by limiting dogs (especially off-leash dogs) in the GGNRA. I have had to greatly limit where I go hiking and bird-watching. Time and time again, even in on-leash only areas, I have seen dogs chasing wildlife while the owners ignored this behavior or, in some cases, encouraged it.

Wild animals have so few refuges, their habitat has been reduced - these few places need to be protected for these animals. Please, do the right thing, and protect our wild places.

Thank you so much.

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Ann Gregory and I have lived in San Francisco for 55 years.

I strongly oppose the preferred alternative for GGNRA because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes. I have never seen a dog fight or a dog causing harm to the wildlife in the 8 years I have been walking my dog at Crissy Field and Baker Beach.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you.

<b>Correspondence:</b>	I am an animal lover, animals of all varieties. However, when it comes to the enjoyment of our National Park spaces, I will advocate for the wild life and not the domestic varieties. Keep our wild places for wildlife, and keep dogs away from the wildlife. It may be possible for a few				

---

small spaces to be available for leashed animals, but not on trails where people may wish for a quiet walk in the park, unbothered by dogs, even if they are leashed. Some areas may have families with young children who are not used to dogs, or picnic areas where people want a quiet moment. If people want to take a long walk with their dog, or take it for a run, there are other places to do that. Our National Parks belong to all of us, not just dog owners, and too often dogs take over the environment they are in because of their enthusiasm and high energy. I'd prefer NOT to have them in the public spaces in our national parks.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, Rodeo Beach and the Marin Headlands.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear Superintendent Dean,

My name is Ruben Garcia and I live in San Francisco. I have been walking my dog at Fort Funston, Ocean Beach and Crissy Field for the past 10 years.

I strongly oppose the preferred alternative because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption. I expect that if your proposed changes are implemented at Fort Funston, we will see Stern Grove flooded with dogs.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Ruben Garcia

**Correspondence:** I appreciate the hard work dedicated to studying the issue of dogs in our parks. In all cases, I oppose allowing dogs off-leash. A recent visit to Crissy Field (December 2013), for example, was made much less pleasant by the sheer number of dogs darting about, some fighting with each other, others coming up to me and my family, which made us quite uncomfortable. In fact, I am much, much less likely to visit Crissy Field again due to the sheer number of dogs off leash.

---

It is quite unnerving to be on a hike or a simple stroll and have a strange dog- -off leash- -rushing at you.

My family and I had gone to Crissy Field specifically to look at birds. Allowing dogs off leash is incompatible with a nature experience, such as bird watching. I often walk along the bluffs in Half Moon Bay, and many times have seen off-leash dogs chase blue herons, egrets and other birds along the bluffs. Our bird populations, native plants, etc. are under severe strain, and allowing dogs to roam freely in these sensitive habitat areas is, to me, completely incompatible with nature preservation/restoration.

On lands designated as national parks, I very much want to see the 'no dogs allowed' policy enforced. I'd also like to see a 'no dogs allowed' policy in all ecologically sensitive areas covered by this report.

**Correspondence:** I strongly support the provisions in the NPS Draft Dog Management Plan/Supplemental Environmental Impact Statement that restrict dog walking to designated areas, periodic closures to allow for re-growth of vegetation, in county licenses, limitations per walker, restriction of off trail walking, and strong monitoring to see that the policy is actually effective. In that spirit I offer the following comments.

In the past my family and I have greatly enjoyed visiting the Presidio of San Francisco as well as other areas in the Golden Gate National Recreation Area. But recently we have chosen to visit much less often as our experience when we do, has been greatly affected by the number of dogs we have encountered.

The number of dog walkers with large numbers of dogs seems to have greatly increased in recent years. We realize that in an urban park, accommodation of people with a variety of recreational interests is important, but it seems that currently the interests of walkers, hikers, and runners has been sacrificed for the convenience of dog owners. The levels of noise, effects on crowding of paths, and obvious effects on vegetation, severely impacts the experience in the Presidio which is presumably meant to have some of the characteristics of a natural area.

In addition to problems encountering the large numbers of dogs brought to the Presidio by dog walkers, an even more disturbing problem is the huge number of off leash dogs encountered in all parts of the Presidio. While we realize that a majority of dog owners are responsible, given the population in San Francisco even a small percentage of irresponsible owners can severely impact the experience of walking in the Presidio. I was actually bitten while walking around Mountain Lake Park (it didn't break the skin so I chose not to do anything about it). Being accosted by dogs approaching from off trail areas, the stench of urine and feces, bags with feces deposited on the ground, and frightening my grandchildren so they no longer want to visit the Presidio, are just a few of the additional problems we've experienced.

So as stated previously I strongly support the provisions that restrict dog walking to designated areas, periodic closures to allow for re-growth of vegetation, in county licenses, limitations per walker, restriction of off trail walking, and strong monitoring to see that the policy is actually effective.

**Correspondence Type:** Web Form  
**Correspondence:** Hello,

My name is Anne Schnobrich. I live in the Cow Hollow neighborhood, and frequent Chrissy Field, Fort Funston, Rodeo Beach, and many other wonderful off-leash areas in the Bay Area. We go to at least one of these places daily, and our Rhodesian Ridgeback loves to run and play with other dogs in these friendly, beautiful park areas. Because we live in the city, off-leash areas are critical to the happiness & health (emotional & physical) of both my dog and all the dogs in the area.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most

people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

Again, we chose to live in San Francisco in part because it was extremely dog-friendly. We pay exceptionally high rent & taxes to live in the city, and the rationale for living here is in part due to the off-leash accessibility. Limiting the off-leash areas would result in unhappy dogs. It is critical to the health of our canine population to leave these areas intact.

Thank you,  
Anne Schnobrich

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Brian Kenney and I live in San Francisco. I have been visiting GGNRA lands, specifically Fort Funston, for the past three years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for all of the affected areas in San Francisco because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, one of my favorite things about living in San Francisco is that I can enjoy beautiful parks with my dog, without a leash. He is well mannered and respectful. Losing the right to go play fetch at the beach would be terrible for us both. Even the idea that we would be in a fenced off area is unsettling. It brings me a sense of peace to be able to walk a long stretch of beach with my dog at my side. He is the closest thing I will ever have to a child and his freedom means everything to me.

Sincerely,  
Brian Kenney

**Correspondence:** I'm clearly against stricter rules for dog owners in the NP!

While I absolutely support the NP (I'm a member and regularly volunteer there) and nature protection I still think it should mainly be a park for the people who live here. It's in an urban area and people should be able to enjoy it. As many people here own dogs (many rescue dogs from all over California, by the way, who should have the same importance as any bird in the NP) I think they should definitely be allowed to take them with them. Also dogs need space to run off-leash.

I definitely see a problem with irresponsible dog-owners who don't have their dogs under control or don't clean up after them. For them there should be fines. But you can't punish all others for a few black sheep!

Please leave the rules as they are!

Best regards,  
Marion

**Correspondence:** RE: Draft Dog Management Plan/ Supplemental Environmental Impact Statement

To whom it may concern:

I'm writing to express my support for the proposed Draft Dog Management Plan that outlines new rules for on- and off-leash dog-walking in the Golden Gate National Recreation Area. I realize that the plan is contentious, and I'm disappointed that so many, on both sides of the debate, have vilified those they disagree with. The fact is, thoughtful long-term management demands a balance of consideration for human recreational use (and that of their domesticated animals/pets) as well as wildlife population success and habitat/ecosystem integrity. I am a dog lover (and soon to be dog owner) myself, but I fully support the restrictions. The National Park Service is not responsible to create open space for dogs to run, and it is incumbent on those of us who live in or near the GGNRA to accept this fact.

Sincerely,  
Christopher Reiger

**Correspondence:** I am a preservationist and I generally support plans for preservation or restoration of community land (e.g. national park land) and the ecosystems and natural plant/animal life in that land. However, I strongly oppose the Alternatives in the DEIS (especially the Preferred Alternative) that would restrict off-leash dog access in local national recreation areas that are important to me and my community. I am not a dog owner, but it doesn't take a dog owner to see that the relationship between humans and dogs is important for human happiness and that it is akin to the human family ties in many if not most households in the Bay Area. Human/dog families need public places to be outside, be in the community, and be free to run and play (like human children need to be free to run and play). The GGNRA park spaces that currently allow dogs (such as Ocean Beach, Muir Beach, Crissy field, etc) already represent only a small percentage of Bay Area park land, and dog-owning families consider these places invaluable to their quality of life.

The benefit to the Bay Area's natural plant/animal life by restricting dogs to leashes in these spaces seems very suspect to me considering the fact that these spaces represent a small percentage of the natural land of the Bay area, and that they are spaces already altered by the humans and human infrastructure that surround them. The detriment that these Alternatives would have on my friends' and neighbors' recreation opportunities and happiness, on the other hand, seems severe.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I have had dogs for many years and frequently walk in the GGNRA. I'm also a photographer and a birder. One of my dogs is quite prey-driven and would chase wildlife if given a chance. There are places where it is safe for her and for wildlife if she runs off leash; there are places where it is not. Dogs that are not as prey-driven as my dog are also a disturbance even if they do not actively chase wildlife. A bird is not able to distinguish between a dog that will chase it and a dog that will not, and is under stress in either case.

I've watched dogs chase shorebirds from their safe wintering areas along our shorelines. Yes, the birds return when the chase is over but that doesn't mean it hasn't been stressful or dangerous to them. It takes energy that is better used for foraging for food or keeping warm or resting, when forced to fly away from a dog. The GGNRA is a wintering area to many birds that nest in other areas. If their wintering area is not safe because of off-leash dogs, they will not survive to return to their nesting areas.

Living in an urban area is a challenge for active dogs but there are many places where it is appropriate for dogs to exercise and to enjoy a run or walk.

It is possible to set aside restricted areas where dogs are allowed on-leash, restricted areas where people and dogs are not permitted at all, and areas where dogs can run free. Let's give it a little more thought and do what's right for wildlife.

**Correspondence:** Hello,

I am very concerned about this new plan. I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach. Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. We haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. It's my understanding this is required by law to initiate such a dramatic change to the public's use of our public lands.

I believe compromise is a good thing, and people should be able to enjoy portions of the recreation area dog-free. But they already have 99% dog-free! The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Please don't take away the tiny area dog owners still have to enjoy.

**Correspondence:** The GGNRA is a National Park and belongs to the citizens of the U.S.A., not just the people of San Francisco. I realize many people in SF have dogs, but a National Park with sensitive resources should not be used as a dog park. I'd like to come visit and not have to worry about being harassed by a dog, stepping in dog feces, or seeing dogs chase birds. Even if it wasn't a National Park I would like to come visit and not have to go through all that.

Please institute the preferred alternatives and please enforce them. I believe the current laws at Ocean Beach are sufficient, but it seems to me like it is never enforced and all the dog owners know this. If the preferred alternative allows for better enforcement, then please go forward with that plan.

**Correspondence:** I think that I was a bit too hasty in my first response - while there are many aspects of the plan and the government/special interest group combination that created it that are troubling - I'd like to focus more directly on the trail system for the Marin headlands.

Looking at the current map, it is clear that areas where dogs are allowed are limited - the crown jewel of these being the coastal trail section from rodeo to muir beach. While it seems that most of the attention with regards to the plan has focused on the off-leash areas - it's also true that the plan strips on-leash walking areas here in addition to converting off-leash areas to on-leash areas. The plan states a preference for on-leash areas, and I have no problem with the conversion of off-leash areas to on-leash. The justification for banning dogs from the trails altogether seems rather weak however.

As far as I can tell the reasons given are the butterfly habitat, the "integrity" of the interior section of the park (which oddly enough contains the coastal trail) and creating a mix of user experiences.

As for the first two points - while I'm sure dogs may have a negative impact on the area I also imagine that if the habitat were particularly vulnerable that people, horses, and bikes wouldn't be allowed on it. Likewise, the "integrity" mentioned is not some sort of wilderness area - but one crisscrossed by roads, people, horses, and bikes and a campsite.

As for the mix of user experiences - this is one of the few particularly scenic areas where on-leash walking is permitted. It is not at Pt. Reyes or Muir Woods/Mt. Tamalpais - or on the trails in the Stinson beach area. While there are numerous open space areas where it is - they aren't coastal or as generally unique as the section of coastal trail. In light of this it seems that a better mix is kept by allowing dogs on the existing trails - those wanting a dog free experience can take any of the other trails in the area or go to any of those other general areas.

It is also unclear why a dog-free experience is something that should be weighed so heavily in an area where many trails allow horses and bikes. Perhaps the changes would be understandable in light of a general plan to reduce human impact in the area - but this does not seem to be the case.

Lastly with regards to this area, the alternative E map shows a significant reduction in dog-available land vs. the status quo. The document states that maps labeled E are supposed to provide for the maximum of dog access. In this case the maximum access would be access to all trails - and not a substantially reduced area.

It is hard to believe that the park service considered all interests if the supposedly dog-friendly plan was itself a strict limitation. What's the point of having a rule making process if the decision was already made?

Clearly there was no real intent to preserve dog access to the area - or reasonably consider it - but I do think that dog access to a small percentage of trails in the area - including one very nice stretch of coastal trail is a valuable resource. I would hope that regardless of what is decided with regard to the off leash areas that this issue will be considered on its own - especially in light of the numerous dog-free trails in the area.

**Correspondence:** We are so disappointed to hear that the National Park Service is considering eliminating access for dogs to Muir Beach and the Pacific Coastal Trail. We are diligent dog owners who clean up after our pet, and have worked hard to train her to follow voice command. Our dog is 11 years old, and to be honest we do not hike without her because this is what she lives for. We commonly support Marin county businesses when we come. For example, today we went to Pelican Inn and up the coast to Marin Sun Farms for expensive meals. We will have little reason to frequent Marin County if there are no beautiful trails we can enjoy with our dog. Consider all the tourism dollars that will be lost by dog owners like us. Consider that people that don't like sharing trails with dogs already have many, many trails to choose from where dogs are not allowed. Please do not take away what little is still available for dog owners!

**Correspondence:** Dear Superintendent Dean,

My name is mike and I have lived in San Mateo for 40 years. I walk my dog on just about every affected location and can't image what it would have been like without these off leash locations for the last 40 years.

I strongly oppose the preferred alternative process because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I shutter to think of the loss of this benefit to the Bay Area . It is one of the few things I have to look forward to anymore.

Sincerely,

Mike

---

**Correspondence:** Dear Superintendent

I live in San mateo and I have been visiting GGNRA lands, specifically Fort Funston for the past 18 years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for Fort Funston because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

I can't even begin to explain the loss of quality of life if this flawed tragedy goes forward.

Sincerely  
Jeanine

<b>Correspondence:</b>	Dear National Park Service,				

I do not support the reduction in off leash area for dogs in San Francisco, and I also not support further restrictions on leashed areas either. Owning a dog is important to me, and has brought a great joy to my family over the last 9 years. I live in San Francisco and our regular weekend outings include walks on Crissy Field, Lands End and Fort Funston with our dog. I would not enjoy the outdoors to the extent that I do if I did not own a dog- as the dog walking brings to me out these special places. And also reminds me that I need to support our parks, both national and local.

The GGNRA would severely reduce the on and off leash walking areas for dogs and their owners, and is not needed. The 1979 plan for GGRNA has been working well and was created for a city where recreational use includes many different kinds of activities, including dog walking. What studies have been done to understand the impact to Golden Gate Park and other small parks when this walking area is reduced?

The reduction is dog walking areas- both on and off leash would impact the way I enjoy the parks greatly. I do support any changes and do not see the need to do so.

Best regards,  
Nancy Valente

**Correspondence:** I disagree with the Golden Gate National Recreation Area's Dog Management Plan.  
- The changes made in the 2013 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 against the plan.

- I support the No Action Alternative in the SEIS for each area: Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

- The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

- The GGNRA should retain the longstanding 1979 pet policy.

- The Golden Gate National Recreation Area was established to give outdoor recreational opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone and Yosemite.

- The SEIS preferred alternatives force people into their cars in search of places to walk their dogs freely. More time in car = bad for the environment, and bad for Marin County.

<b>Correspondence:</b>	Hi,				

---

With the dwindling areas where dogs can play off lease in the Bay Area, it makes no sense to change the GGRA pet policy just to satisfy a few extremists. The vast majority of dog owners are responsible, caring for their canine friends as if they are members of the family. Within any group, there will be a few bad actors but that doesn't require group collective punishment of the vast majority who do follow the rules. The GGRA is an urban park system with a working pet policy that has worked well and there is no need to change it.

Regards,  
John

**Correspondence:** San Francisco has the best dog parks in the world, period. Yet this ban is trying to change that and for no particular reason other than they can. Over 50% o San Francisco households have a dog and there are more dogs in SF than kids. This ban would affect not a small minority of San Francisco citizens, but a solid majority! If this ban goes forward, where are the dogs supposed to go? The parks are already crowded as it is, imagine how much more crowded they'll become when they have less places to go. Not only that, but exactly who is going to pay to police all these parks once the ban goes into effect? I doubt you'll find anyone who wishes their tax dollars would be spent on something so frivolous. Keep the best dog parks in the world as they are and make the citizens, and the dogs, of SF happy!

**Correspondence:** Please continue to allow fence-free off leash play for dogs in the GGNRA. If control is the issue, please consider instituting a dog permit that dogs can wear on their collars signifying they and their owners have passed a training and awareness course. Colorado has this policy and I believe it works well.

Taking my dog to any of the GGNRA areas where he's allowed to run off leash is one of the greatest pleasures of our shared life. We would no longer visit these areas if he could not run off leash, and this would definitely lead to a reduced awareness and economic benefit for all of the surround businesses and the concessions within the park.

**Correspondence:** For Dog Mgt. Plan:

I'm a dog-lover. I feel that dog-lovers need to be conscious of the responsibilities of being a dog owner. Dogs are domesticated animals and will be with us as long as there are humans. I fear that this is not true for flora and fauna of the world as that we must protect them as much as we humanly can. The flora and fauna are very vulnerable to what we do or not do. They are not able to protect themselves (with a few exceptions like poison oak). For dog owners who are sensitive to the fragility of the world for themselves and those who follow them will find that there are plenty of places to take their pets. If they consider themselves dog-lovers and therefore animal-lovers, they can get to the correct places by car, feet, bike, etc. This is not true for our usual flora and fauna. We must protect the habitat that is needed for those

fragile and endangered entities.

There also must be our own human needs met. There are people who are afraid of dogs and those people have to right to know that they can go to places where there will be no dogs or at least know that the dogs will be on leash and in COMMAND and CONTROL of their owners. Many a person who is fearful of dogs have become so due to the lack of control or lack of a leash. It would be wonderful if parents could be assured that there places that they can take their child/ren to a dog-free place where the child could run freely. I find it disgusting that some dog owners go into tot play area with their dog.

Whatever policy is implemented, I believe that there such be a strictly no dog allowed for fragile endangered species habitat, dogs on leash which is strictly enforced with heavy fines for habitat that can carry the load of dogs and human use (this is probably the point of this study) and a few dog parks where the dogs are allowed to run without leash but under voice command. There is not place, unfortunately, for unruly, untrained dogs in a public land. That is my feeling. Thank you.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Cedric Brehaut and I live in San Francisco. I often walk my dog Ocean Beach, Fort Funston and Crissy Field.

I strongly oppose the preferred alternatives for these areas because they are too restrictive. They also do not adequately analyze the impact on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported. The increasingly large population of dogs in San Francisco and surrounding areas justifies an extension rather than a reduction of off-leash areas.

And finally, this proposal creates the potential for many unplanned consequences for dogs, their owners, and for the entire local community. Dogs need exercise, and if they get less of it due to new complexity for their owners in accessing off-leash areas, I believe incidents of aggressive canine behavior will increase. Dogs need to walk and run, and if they are not given this opportunity, the pent-up energy is expressed in much less desirable ways.

Thanks for your consideration.

Cedric Brehaut

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.				

---

I regularly take my dog to Rodeo Beach and the Alta Trail.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear GGNRA,

I have been a Bay Area resident my whole life. I grew up in kentfield and i now live in San Francisco. As a child, we had cats, no dogs. We went o the beach (Stinson) an others and I had a wonderful childhood meeting many amazing dogs!

Now, I have a wonderful vizsla, piper. She is an amazing, show-winning dog. She is a 1-year old, well trained, excellent mannered, full of energy pup!

Every day she goes to at least one (sometimes 2) of the GGNRA places for an off-leash run. On fact yesterday we were at Chrissy Field. Almost everyone there (except the runners/bikers going through) was with a dog! Most of whom at some point ran off-leash (very happily).

As you evaluate shutting down many of your beaches to dogs off-leash I ask you to please reconsider. Please allow us to remain a city that loves our dogs. Please allow our dogs to love our city and let them continue to be allowed off-leash.

Dogs are better behaved off-leash than on and their log-term behavior is better as well.

Please contact me if you would like further information.

I am hopefull that your decision will be to allow our city to maintain its free spirit and allow dogs to be free to run also.

Thank you very much,

Kristin

**Correspondence:** Today is Sun, Feb 2, 2014 and it's raining. We took our dogs to Ft Funston to play and exercise. Everyone at Ft Funston when we were there were people with dogs. It's rare that people who don't have dogs think - 'oh it's raining, let's go for a walk. Dog owners go out in all kinds or weather because dogs appreciate being out no matter what the weather. Dog people use Ft Funston the area the most - rain or shine. So by limiting the off leash areas you are penalizing the the major consumers of the park - - and isn't that what the park is for - - to use? I don't understand the logic of penalizing your 'best customers'. If this were a commercial business that logic would surely put the company out of business.

Also there is no area in the city where there is as much real estate for off leash area. So now the much smaller proposed off leash areas will become way more crowded and there will be a greater chance of dog fights and injuries, and a greater chance of catching illnesses for the dogs as they are exposed to more dogs/germs in a smaller, more crowded space.

Please don't limit off leash at Fort Funston!

**Correspondence:** Please let us have the last 1% o the GGNRA for our animals.

I OPPOSE The GGNRA proposed dog management plan. Marin is a beautiful county with a wide variety of outdoor trails etc. for people of all ages to enjoy. we are very lucky to have the GGNRA,which was created for us due to the dense population area that we live in.

We bring our well controlled dog to Muir Beach and Wolf Ridge.

\*The bay area is full of responsible dog owners and lovers. Off leash areas are vital for the health of our dogs. We all live in tight quarters and these beautiful animals need an opportunity to run free, under the supervision of their owners. AGAIN the GGNRA was originally developed for these kind of activities!!!

\*These areas are not National Parks and should not be treated the same way. We all need a place to go recreate with our animals.

\* there are no studies that have proved these animals are causing undue stress on these open spaces.

My taxes support these areas the same way as those opposed to off-leash areas taxes are spent. 99% o the areas are off limits, and those opposed get their way 99% o the time. Let us have measly 1%

Thank you

**Correspondence:** I am writing to oppose the plan for restricting the size of off leash areas in the GGNRA including Crissy Field, Ft. Funston, Baker Beach and other areas. Off leash dog walking and dog play is a normal and non-disruptive recreational activity enjoyed not only by dog owners but also by their friends and many other visitors who do not own dogs but appreciate having them around and seeing them play. Allowing off leash activities does not meaningfully affect other users of a semi-natural recreation area. GGNRA is not a crowded and developed park where off leash dogs could interfere with stuctured game fields or playgrounds. I support that some areas of GGNRA should be on leash only where pets could affect the park experience for others, including some portion of the Crissy field beach set aside primarily for people and children; however, the proposed plan goes far beyond any reasonable balance and should be changed. Thank you.

**Correspondence:**

For Mori Point, I strongly favor Alternative A. But more specifically I'd very strong prefer access still allowed on Mori Bluff Trail. Mori Bluff trail is strongly favored by dog walkers because it allows a loop to be made into / out of adjacent City of Pacifica land where dog-walking is allowed. Removing dogs from the Bluff trail means no access to this popular loop.

I walk this loop several times a week and in my own informal surveys I would say the majority of users on the Mori Bluff Trail are dog owners. The area has a very long history of human use, a few dog paws are surely not going to be noticed. All the dogs I meet here are very well behaved.

Please give us access to the Bluff Trail! Without this I doubt I will be visiting Mori Point in the future. Getting to Old Mori trail means driving - - surely you don't want me driving my dogs in a car at this time when we are all so concerned about CO2 emissions? Walking is so environmentally friendly!

**Correspondence:** I applaud the National Park Service for extensive study and work in preparing the SEIS, and for proposing alternatives that exhibit a willingness to listen to public comment and to compromise on the "no off-leash dogs in national parks" stance.

Overall I support Alternative E. It is generally a sensible compromise that provides the most off-leash access, and prohibits dogs in the fewest areas. However, Alternative E needs modification to provide additional off-leash access for residents close to large areas in Land's End and Marin and San Mateo counties. Further, Alternative A is best at Baker Beach and Fort Funston. These off-leash dog areas are enjoyed by highly responsible dog owners and currently serve a clear need for extensive off-leash dog areas. Taking away this access would disserve the public.

Dog advocates treasure nature and open space. Motivated and action-oriented, they can become one of the strongest NPS volunteer groups. But a "no off-leash dogs, or no dogs at all" position alienates them. The NPS needs to stop thinking that exclusion and enforcement are the way to protect parklands. Instead, NPS should support dogs in national parks and engage and educate the dog owner community to become volunteer monitors and managers of the parks to protect nature and other visitors alike. Such collaboration

will prove long-term to be the least costly and conflictive approach.

The plan states that without some action, GGNRA resources and values "might not be available for enjoyment by future generations." Yet some plan alternatives prevent enjoyment of these areas right now. Current and future generations require an approach that recognizes the rights of citizens who love dogs and the natural world to reap the benefits, recreation, and sheer joy of off-leash exercise in the national parks.

Alternative E, with modification to allow more off-leash access at Fort Funston, Baker Beach, and Marin and San Mateo counties, acknowledges the vital relationship between people and dogs. It positions and enables the NPS to collaborate with dog owners on long-term educational and outreach programs that support the parks, protect natural habitat, and improve the experience for all visitors.

Thank you for your continued interest in public comment.

<b>Correspondence:</b>	As a responsible pet owner, and lover of beaches, it is important to me and other responsible pet owners, that Muir Beach remain open to dogs off leash. My experience at Muir Beach has always been a positive one. I have never seen any aggressive behavior of the dogs off leash. Neither have I witnessed any pet owner NOT clean up after their dog. It is important to allow dogs to exercise without the constant tether. I know the argument against mine, is that it is dangerous to allow dogs to roam free. In some areas that may hold more truth than others, but I truly believe that the pet owners who utilize Muir Beach, and most other GGNRA areas are not the irresponsible type. I oppose all the new GGNRA proposals, and I ask that you reconsider your agenda. Thank You.

**Correspondence:** Don't outlaw fetch! There are ways to protect our parks and wild areas AND allow plenty of room for dogs, and their family members, to get adequate exercise outside. We need to find a win-win solution for the city of San Francisco and our 120,000 dogs. Many of these dogs live in apartments and condos and it's critical that they have plenty of off leash space for fetch and frisbee.

**Correspondence:** I would like to oppose the plan. Hiking in dog allowed area, especially off leash area, provides me with my weekly exercise. There are already too little parks on the peninsula that allows dog. Even less parks allow for off leash walking. If parks doesn't allow for dogs, I will have even less choice for exercising. Getting outdoor with my dogs is very important for me and family. Most dogs stays in the trails and have minimal impact to the parks.

**Correspondence:** As a homeowner, resident and HEAVY taxpayer of Marin, I am dismayed at the proposed changes in Alternative F for the trails that I currently enjoy in the Marin Headlands with my dog. In your document I find little to convince me of why my canine citizen should not be allowed to run with me, off leash. For me, this is one of the best things about living in Marin, and if I was unable to enjoy these areas with my dog, and the extremely limited area with which she travels with me through the trail system, I would seriously consider selling my home and leaving the area altogether. I find the proposals to be extremely short-sighted and myopic and lacking in correlation to the many responsible people who use these trails. Do not take away the rights of the many for the irresponsibility of the few. Consider that as populations grow, that there are alternatives that you have not explored such as alternating use days for bikes, leash/off-leash use that have been successful in other areas. Consider those views of the residents and the happiness that these trails provide for us and our dogs, and consider the taxes we pay because these are the reasons we love living in California. Take away the reasons for us to love California and we'll consider taking our taxes to other states.

I stand opposed to the measures outlined in your document. Enacting laws like this will only increase the tensions felt and only increase the number of people you will need to enforce the rules when there are

PLENTY of other alternatives to these ridiculous proposals you've outlined.

Sincerely- -an outspoken taxpayer, homeowner, responsible dog owner, environmentalist and friend to many in my community.

**Correspondence:** On January 30, 2014, The SF Examiner reported that the Police Officers shoot & killed second dog in a week. The dog charged towards the officers & the owner made no move to stop the dog. The dog ran aggressively at the officer who fell & had to kill the vicious animal. The owner was arrested & booked on charges of assault on a police officer & assault with a deadly weapon. Even police officers were threatened by pets & the owners. These kind of attacks have been happening too often & one too many. At least the police officers carry guns to protect themselves. I do not believe ordinary citizens need to carry pistols to ward against unruly dogs & irresponsible dog owners in the National Parks. If the pets are allowed roaming in the Ocean Beach only, why they are running around the side walk along the beach ? They should be banned from the location. Additionally, dogs should not be allowed in the nearby Lands End trails if they already invaded the Ocean Beach. Leashing their dogs is the least they can do for the safety & security & health of the rest of the GGNRA users. Yet they rarely do. That is why banning dogs entirely will be the alternative. I do not wish to see lawsuits against the unrespectful owners & possibly GGNRA either. Please act sensibly. Thank you for your attention.

**Correspondence:** I support the NPS in coming up with a dog management plan and thank you for your efforts. Even though I currently live in Salinas I used to live in San Francisco and visit and volunteer for the park frequently. I still visit from time to time.

I urge you to ensure that the final plan protects resources including wildlife and makes sure it allows for a good experience for all visitors including those without dogs.

I understand that commercial dog walking is under review. This does not seem like an appropriate activity for a National Park. It seems that it would allow a small group of individuals to benefit commercially from the park at a cost to all other users.

I support providing places for people to walk there dogs but dog owners have become a very vocal group and I urge you not to let this sway the park into placing their needs above those of protecting the park or providing for the enjoyment of other visitors.

**Correspondence:** As a dog owner, a lover of nature, and a frequent public park user, I believe that it's crucial to find ways to be responsible if we want to bring our dogs into public parks where the needs of wildlife must also be protected. Observing off-limits areas and abiding by on-leash laws are simply part of being a good neighbor and a good citizen in an increasingly crowded world. Here in Oakland we found ways to protect the sensitive resources at the Serpentine Prairie in Redwood Park where over-use had nearly destroyed the native grasslands. Hikers, equestrians, dog owners, and dog walkers all adapted to fencing off areas that were formerly multi-use. Now the prairie is recovering. Protecting the snowy plover and other sensitive wildlife in GGNRA can and must be a high priority. Those of us with dogs must exercise self-restraint and not assume that we are entitled to take our dogs wherever we want. We can do this by extending the love and affection we feel for our pets to all nature- -it's all part of the same continuum.

**Correspondence:** I am a Marin County resident and property owner and a frequent user of the GGNRA areas including the Marin Headlands, Muir Beach, Rodeo Beach and Stinson Beach. Dogs owners in these areas generally do not respect the posted rules including dog restriction and use of leashes in these areas. In fact, on Rodeo Beach on Christmas Day of 2013, there were many pedestrians including children and families and dogs were clearly not in "voice control" or no attempt was being made to control dogs via voice by the owners. In fact, it is not clear to me what the definition of voice control is. Is

---

there a test or certification for voice control? In general, dogs running wild off-leash enjoying their freedom by default means that others occupying these areas do not have the freedom to enjoy them without the influence of the dogs. Dogs running free become dominant and the amount of bird life present when dogs are present is greatly diminished. The bird life in the beach areas of the GGNRA is prolific and it's unfortunate to see the birds less present when the dogs are running on the beach and in the surf unchecked. Signs at Rodeo Beach and Muir Beach indicating that dogs should be checked due to wildlife are largely ignored by dog owners. On Rodeo Beach at Christmas Day 2013, a man was walking on the bridge to the beach with his baby in his arms and the bridge was covered with pedestrians when a dog owner allowed his golden retriever to run back and forth across the bridge at full speed with no regard for it's impact on the safety of others. Similarly, sitting on the beach with a picnic this summer on Muir Beach, my companion and I were accosted by two dogs running wildly neither on a leash nor in voice control. If dogs are on the beach without a leash, whether or not in "voice control," the beach seems to be effectively ceded to be a dog beach, particularly with no definition of voice control and no enforcement of what rules exist at present. Those who might want to enjoy the beauty and serenity of the open space are consequently prevented from doing so.

**Correspondence Type:** Web Form

**Correspondence:** Dear Sirs,

I am most concerned about the proposed reduction in off-leash freedom, and even complete banning of dogs, from so many areas of the GGNRA. I urge you to consider the repercussions such changes would have. People will continue to have dogs, but without access to so many of these open spaces they will drive more (increase traffic and pollution); or cause new sets of problems to occur by overcrowding of small neighborhood parks.

The GGNRA, by its very NAME, is intended for RECREATION!!! We live in an urban/suburban region, and it is vital that people, and their pets, retain access to the outdoors. We do not live in a wilderness region!!

Please do not change the longstanding pet policy from the 1970s. I believe the proposed changes go against the wishes of the majority of the public, regarding the use of their lands. Please leave beaches and trails open to be enjoyed by dogs with their owners. The proposed plan does not appear to be management for dogs.... I fear it may be more like banishment.

Respectfully yours,

T. Collins

<b>Correspondence:</b>	Dear GGNRA,				

My name is Rodolfo Garcia, and I'm 86 years old. I like to walk at Fort Funston with my son and daughter-in-law and their two dogs, Pancho and Marisa. Because I have some problems walking, I can't get down the steep path to the beach. So we walk together around the trails in the upper area of Fort Funston. But if your preferred alternative goes into effect, the off-leash part of the upper area will be so small that we really won't be able to exercise the dogs there. And I won't be able to get down to the beach with my son and daughter-in-law.

I oppose your preferred alternative because it would prevent me from being able to spend time walking with my family. I'm sure this will also affect other people who are elderly or disabled.

Thank you for your consideration,  
Rodolfo Garcia

**Correspondence:** Please reconsider reducing areas for off leash dog play. I cannot adequately exercise my dog if he must remain on a leash. I worry that the remaining off leash areas will become terribly over crowded that the dogs will become stressed and they won't be a safe place for exercise. I am all for conservation. I just feel we need to find a middle way.

Thanks for your consideration and hard work!

Mara

**Correspondence:** The proposed plan is unacceptable with respect to all changes to the off-leash areas.

All parks in question need to INCREASE the off-leash dog areas due to the overwhelming demand for these spaces.

Any decrease in off-leash areas in Fort Funston or any other park in San Francisco is vigorously opposed by me, and my community.

Thank you,  
Holly

**Correspondence:** I have a dog and I use Crissy Field and Fort Funston as places to exercise my pet. I do not think that further restrictions on off-leash areas are necessary.  
I believe that a significant portion of the complaints with respect to dog feces not being picked up can be attributed to commercial dog walkers. When they have 8 to 10 dogs to care for, it is impossible for them to keep an eye on all of dogs at all times to know when any of the dogs defecated. I believe individual dog owners are being penalized for the actions of commercial dog walkers.

**Correspondence:** Fort Funston is the ideal location for a family to enjoy walking with their dogs off leash. It is one place that a family can enjoy a short hike with the kids and dogs who love running and releasing happy energy. The kids get a great energy release from the lack of backyards that most homes in SF lack.  
I have utilized Fort Funston for the last 10 years. I am part of a military family who had our dogs travel the world and always walked leashed. The first time I took my chow to Stearn Grove, I was afraid to take her leash off for fear of her running away. It was amazing to see her walk ever so gently among the other dogs as if to say "i am among my own".

---

I am at Fort Funston a few times a month to give my dogs a lengthy hike and to think that this beautiful park will be limited to them just upsets me to no end.

Have you ever walked at Fort Funston? It is a beautiful display of many sorts of dogs of many shapes and sizes. I don't think I have ever witnessed more than an occasional dog getting out of hand. I know there are some irresponsible dog owners. Shame on them - but please don't punish the responsible owners who way outnumber the bad ones. Please allow us to keep our dogs off leash at Fort Funston. I know there are those who say the dogs disturb birds and dig holes. I am sorry, but Fort Funston is more deteriorated by Mother Nature than dogs. There is sand swept areas all over. I dare anyone to say the dogs are responsible for any destruction of the landscaping. The wind changes it every season. Please keep it as it is and don't take away a wonderful recreation for all our family members, both children and pets.

<b>Correspondence:</b>	Dear Board Members,				

With such a large state, it is very surprising how little space is allowed for our canine companions to roam and get the exercise and stimulation they need. After moving here from Seattle for a job with a major biopharmaceutical company, I have been so very surprised and disappointed at how my life has been affected by the lack of space that I can share with my dog. I am a tax paying citizen, a great deal of tax due to my commitment to my career, but it seems my new home state doesn't take my investment into this state into consideration when it comes to my life, my passion (walking with my dog) or the needs of my companion, who I consider a replacement for the children that I've never had. I realize not everyone feels this way, however, many people do and that number grows every year. Us folks who are making 6 figures, living a life that includes their dogs, who have very few alternatives in a state that is supposedly wanting us to take part in it's beauty.

It has made me consider leaving the state, my life before I moved here was far better. I love my work in research oncology, but the lack of support from this state in a lifestyle for people with animals, it just doesn't feel like a long term possibility. And now, to read that those few spaces that we do have are being taken away, it's a message that people on the board clearly aren't a balanced representation of the real people that live in this state.

I will never spend another dollar supporting this state or it's parks or other venues if we are not allowed more space for our animals to get the exercise and stimulation their brains need to be happy. Animals are saviors to some people. People with traumatic pasts. People who have suffered trauma are supported by these animals. Every year we learn more about animals and their ability to feel and think and we as humans become more aware of their needs and how they provide us so much love and healing. How can your group turn a blind eye to the needs of the people that love their animals who help them live quality lives without a second thought? The lack of compassion and support to the humans who need these animals is just as wrong as the lack of support to let these animals get the experiences they need to feel whole and happy.

I was so looking forward to living here...this has been the biggest disappointment in my move. Cement and tiny little fenced in areas only force dogs to feel stress. If only your staff wanted to be cognizant of

the facts and create a place for the many people and animals as they do for duck and birds who don't pay taxes or ensure the future of this state.

**Correspondence:** I walk my 2 dog at Fort Funston for the last 10 years on a daily basis. These parks are suppose to be for the people and for our pets to enjoy. If it is wildlife that we are trying to conserve, there must be a better way to barricade certain areas so that pet disturbances are lessened without lessening space. If people are complaining about pets, then certain areas like picnic areas are pet free and areas of open space are for people and pets to run around. If pet waste is an issue, allocating more areas for people to throw pet waste away can solve this problem. The public and all stakeholder who use GGNRA site must communicate and meet to iron out the details. If it is GGNRA who is dictating what lands are used and not used then these federal lands are not for the people, it is for GGNRA.

By limiting the space for pets not only are we are building a community of unhealthy pets but we are also building a community of unhealthy people who rely on these sites to exercise, walk, and enjoy nature. San Francisco is becoming a city where there are more pets than children and we need these sites to cater to the needs of the pet owners and the pets.

**Correspondence:** I would like to add my comments to the discussion regarding the proposed restrictions in allowing dogs off leash at popular locations such as Muir Beach. Many people move to Marin to enjoy the hiking trails and beaches we have available to us. Many of us own dogs. As the number of trails and beaches shrink that allow dogs it also limits where people who want to hike with their dogs can take them. The changes will deeply affect the quality of life for people who enjoy these areas WITH their dogs. I recommend that more areas are opened up for hiking with dogs rather than taking away the few current areas people can hike with their dogs.

**Correspondence:** I am very saddened that this is up for review again. I feel strongly that the current bylaws of the NPS are sustainable and balanced. Moving to Mill Valley was a life style choice as I want my family to grow up with an appreciation for nature and spending time outdoors. I have two dogs that are a big part of our family. As the laws currently exist, our walks are very limited. We cannot go to 90% of the trails around our house. We have been relegated to walk our dogs, and thus do our weekend hikes on the Oakwood Trail or on the Blithedale Ridge. In the summers, we can also add Rodeo, Muir and Stinson Beach to the places we're allowed. Otherwise, we need to drive to other counties to get decent hikes with our dogs. I believe that restricting the trails to dogs even further is a tragedy to the dog and family friendly area we are supposed to be.

More than that, however, i don't understand what legal basis under which you are imposing these new laws? I don't think the studies you have been doing are well controlled or substantive and my concern is that it is just a few very vocal anti-dog people that are leading this charge.

My vote is to leave the law AS IS. We are restricted enough and the dog walkers on the trails here are well behaved and responsible with clean up.

Please let me know if there is ANYTHING else i can do to protect the Park area and protect this beautiful place for my family.

**Correspondence:** Too many dogs. I feel uncomfortable continually being approached by dogs, diminishing the pleasure of my visits to GGNRA sites and feeling like I have to indulge their owners. Dogs should be kept on leashes at all times in public places. The GGNRA exists for people to enjoy. It's not a dog park (or a dog toilet). I am not satisfied by dog owners who promise to clean up their animals' feces. They should be crapping in the park to begin with. Whether picked up or not, they still leave filth behind.

**Correspondence:** The city is cutting more space where dogs can be a dog. There are more dogs in the city compare to children. Children are leaving this where as increase of dogs keep growing.

The people in public service have no common sense. When animal lovers start using economic power against this in public office this is when things will change for animals.

As parents to pets we must hold the city responsible insuring that there pets are giving a city that is pet friendly. The park on Sacramento and Franklin just redid the park and to most of the area where dogs play and gave it to children. there are never as many children in that park as there are dogs.

Now officials want to take space again. As pet owners we need to use our resources and power to stop this official from taking space from our pets.

Jacqueline

**Correspondence:** Dear Superintendent Dean,

My name is Lara McCaskill and I live in San Francisco. I walk and run my 4 year old Golden Retriever, Huck along Crissy Field, Rodeo Beach, throughout dog allowed trails in the Headlands and at Muir Beach. Every weekend, my husband and I take Huck for a run in the GGNRA. In fact, it was on one of these runs that my husband proposed to me at Rodeo Beach, with Huck in tow. I can't imagine this wonderful, healthy tradition of ours being taken away.

I strongly oppose the preferred alternative for dog access within the GGNRA because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, the health and well-being of our community will drastically suffer without proper dog-friendly recreation areas.

Sincerely,  
Lara McCaskill

**Correspondence:** The proposed alternatives to the current policy as modified remain unacceptable. There remains no objective data suggesting that dog use on these trails has damaged the environment or threatened user safety in any meaningful sense. The only rational approach would be to allow temporary restrictions on trails to allow for periodic restoration where a need is identified. This is particularly the case for the Oakwood area which should be left alone entirely.

While I appreciate the need to protect wildlife habitat, these alternatives, particularly as they apply to Oakwood are ill conceived and will restrict what is a low impact use for little or no benefit to wildlife habitat.

**Correspondence:** The Dog Management Plan is way too restrictive and therefore unacceptable.

I walk my 2 small dogs at Fort Funston almost every morning. It's the only off-leash open space area that we feel able to comfortably walk through varied terrain without worrying about motorized vehicles. There's enough open space so we're able to walk peacefully and meet other dogs now & then. If you limit the walking to fenced in on-leash only trails, this will funnel all the dog walkers to the same paths. It would ruin the freedom and whole off leash experience.

Please do not elect or enforce plans B-F.

Thank you.

**Correspondence:** The frequency of dog activity in our native wildlife habitats is putting several species at risk.

Hawks need to eat, Owls need to eat, birds need to nest, plants need certain nutrients to grow. All native plants and animals are important to our ecosystem. They have adapted to live here, and should NOT be forced out or threatened by the behavior of dogs, or lack of enforcement by our park system which they rely on for protection. An owner can only do so much to control a dog's natural instinct to run, chase, hunt, sniff, etc. And they shouldn't have to. This is why it is necessary to have designated, fenced in, areas

so dogs can express those instincts.

It cannot be left up to an over population of domesticated animals to push out the animals and plants that have already been here, adapting, and living.

I speak out for the microfauna to the fishes, for the rodents to the raptors.

This is as much their home as it is ours.

The fact that people do not naturally respect or understand these habitats, rather prioritize their pet's needs exclusively, it is up to law enforcement to create this boundary for preservation.

**Correspondence:** I can see absolutely no reason at all for these measures to be taken. They make no sense. Who is supposed to profit from them? People? And how would they profit?

The land? How have dogs damaged the land? The dogs would suffer. That's very clear. What's more it is extremely unlikely that the people who have made this proposal actually own dogs. It appears they don't care very much about them either. I hope that those responsible will come to their senses and withdraw this proposal.

**Correspondence:** I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. This is a necessary action to ensure visitor safety, protect natural and cultural resources.

In addition, commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain. Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public.

I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for all visitors.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, in particular. What a dog-friendly beach affords us is a place for families with kids and dogs to enjoy time spent in nature together.

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I believe that dogs need to be on leashes for many safety reasons. First, their is human safety, where little children can be overwhelmed by a huge dog streaking by off leash. I also know this is very important for the protection of birds and wildlife. All the human activity is already a stress without adding off leash dogs to the mix. I have had experiences at Crissey field with off leash dogs that have made me uncomfortable and uneasy. There are other ops for dog owners to have off-leash fun and I believe that restrictions (i.e., have dogs on leash) at Crissy field are serve the overall greatest good. thanks for considering my comments.

**Correspondence:** To whom it may concern, going to the beach with my dogs (3 of them) has been a great experience for the whole family - my kid and her friends come along and they run with the dogs - exercise for youths these days is so important - without access to the beach to dog which are leash free would mean that my kid would not be interested in coming with me. Why? you can just walk the dogs on leash around the neighborhood. Also the well being and physical and mental health of the dogs is amazing by having this option. San Francisco and the Bay Area is so dog friendly - it's a blast to live here . We are very pro-environment and we tread lightly on the planet. Limiting access to the dogs at these beautiful parks will mean that everyone will pile up in city run parks. Please remain dog friendly for the enjoyment of everyone - humans and canines alike. Thank you. Veronique Lauriault PhD

**Correspondence:** Hi there,

I have lived in San Francisco for 4 years, and just adopted a dog a few months ago. As a new dog owner in San Francisco, I have been so grateful for what a welcoming, dog-friendly community there is here, and by the abundance of downright wonderful areas there are to visit with my dog. It is a treat not just to have open space to train and walk my dog off-leash, but to be able to do so in such beautiful places, where I can further explore and appreciate the natural beauty of this gorgeous part of the world where we all live together. As an avid hiker, camper, and lover of the outdoors, this situation has been delightful. Because my dog is a young, active, working breed, she needs constant off-leash exercise to be a happy, well-behaved creature. I live in Diamond Heights, and every single day my dog visits dog parks - - frequently Fort Funston, Ocean Beach, Golden Gate Park, Stern Grove, McLaren Park, Glen Canyon, and Land's End.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I STRONGLY oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fenced-in areas completely alter the dog experience, making them feel nervous, anxious, and wanting to resort to a "fight or flight" instinct - - this frequently can cause more dog incidents as dogs feel trapped.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative. Why solicit comments from the community if you simply plan to dismiss them?

Don't let fear-mongering and unsupported anti-dog claims destroy a truly magical part of living in San Francisco: the freedom to enjoy the incredible natural beauty of the Golden Gate, along with our friends, families, and our unleashed furry friends.

**Correspondence:** I would like to comment on the Dog Management Plan.

All-in-all, I think the GGNRA should be open for recreation use by as many different users as possible, including people with dogs. I understand that dog use is a "hot-topic" item, but you should be able to look beyond the comments and see what makes the most sense.

It might be important to make a distinction between weekday and weekend policies. During the week, most of the GGNRA Sites have very few visitors. As such, dog use could and should be unrestricted. But on the weekends, use skyrockets. Perhaps then there could be dog-specific zones or tighter restrictions.

Overall, the GGNRA sites near San Francisco are meant to serve a more urban and local population. People that live here see these sites as extensions of their backyards (lucky us). As such, the policies here should be tailored to this more urban use, versus a policy in a more remote "destination" site such as Yosemite or the Grand Tetons.

Thank you.

<b>Correspondence:</b>	I strongly oppose Alternative F, a severely restrictive plan to limit the number of trails and areas where dogs are allowed. I support Alternative A, no action.				

---

There are already so few trails available for dog owners to have their pets under voice control, and the proposed changes are unacceptable for locals who use these trails everyday. I walk my dog on Oakwood Valley trail regularly and there are many many responsible dog owners who also use this trail. I also use the Miwok trail in Tam Valley.

Dogs are already off limits on 99% o the GGNRA trails and there is no reason to eliminate use of the small amount that remains open to pet owners. GGNRA is meant as a recreation area, not a National Park or wilderness area. It requires a different type of management. Access for all users was part of the original charter and it should remain accessible to responsible pet owners.

**Correspondence:** Hey NATIONAL PARK SERVICE!

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my family and my dog to some of the trails which still allow them...

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Please do not deny off-leash access to our little pooch! We take our little dog to Fort Funston at least twice a month and she looks forward to this outing immensely. There are few places where she can explore freely and untethered, which is very stimulating to a dog. Not only is this enjoyable to her, but it is also incredibly beneficial to her health. She is not a young dog who strictly likes playing with other dogs. Therefore, she does not seem to enjoy going to the little fenced in dog parks where the square footage is usually fairly small and where no stone is left unturned even before we get there. In other words, she seems bored there. I also have a small child who loves going to the beach to "walk" the doggy. Please don't take away this valued family experience from us and all the other dog-loving families in SF.

Thank you for taking the time to read this comment!

**Correspondence:** Hi,

I've always been a supporter of the GGNRA and support the national park service. However, I think the recent current dog proposal that heavily limits the areas that we can use for off-leash walking of dogs is going to fundamentally change these parks for the worse. One of the best parts of living in San Francisco

is access to these great parks, parks that we can share with our best furry legged friends. I highly urge you to reconsider this proposal that will take away from the recreation and enjoyment that many people in the city highly value. If not, I will have to withdraw my sustaining donation to these parks since I will no longer support the goals of the NPS and the GGNRA.

Thanks,  
Tina

**Correspondence:** The proposal is nonsense. No peer reviewed study has been done. My dogs generally go to a private location for walking but it would be a shame to have some of the more dog friendly locations closed, even if we only use them on occasion. Fort Funston is a favorite family activity of ours, as is a dip out in Ocean Beach from time to time.

If you want fewer dogs at these locations then you should consider opening open more locations to dogs rather than fewer. This move will put a greater strain on those too few that remain open.

I hope the proposal will be reconsidered. Thank you.

**Correspondence:** Dear Superintendent Dean,

My name is LaDonna Willems and I live in San Francisco. I have been visiting GGNRA lands, specifically Fort Funston, Ocean Beach, Baker Beach, Crissy Field, Stinson Beach and Rodeo Beach for the past 13 years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet. (And Ocean Beach is just 3 blocks from my home, so I and my dog, my husband and my young daughter are there almost every day.)

I oppose the preferred alternative for Ocean Beach, Fort Funston, Crissy Field, Stinson Beach and Rodeo Beach because it is far, far too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I ADAMANTLY REJECT the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, I reject these off-leash limitations because it will negatively impact my life and the life of my dog Vila. For 8 years I spent countless hours enjoying GGNRA areas with my previous dog LeeLoo. The joy in watching your dog happily romp on the beach and play with other canine pals, unfettered and off-leash, is like no other. LeeLoo passed away in 2010 and we held a small memorial gathering for her in her favorite place... Fort Funston. I want to continue to be able to give my new dog, Vila, the same joy and healthy exercise that LeeLoo enjoyed. I want my daughter to be able to experience "Fort Fun" with her family and her dog. The GGNRA's preferred alternative is a terrible idea. It absolutely breaks my heart as I think of how my family's life will change... having to leave our dog at home when we go to Ocean Beach just blocks from our house, having to get in our car and drive to find some space where she can run free.

Please take the overwhelming public commentary AGAINST this proposal into consideration. Plans A through F in this SEIS are harmful.

Sincerely,  
LaDonna Willems

**Correspondence:** I strongly urge to continue to keep trails open to dogs in the GGNRA area. I have been a Marin resident since 2003 and my family has used and loved the trails throughout the Marin headlands consistently since then. I exercise my dog on the trails in Marin about 4 times a week and dog friendly trails are already very restricted. I think allowing Marin residents to responsibly use the trails with their dogs encourages a love of the outdoors and good health and for women alone, dog provide a feeling of security. Furthermore, I believe the original charter specifically detailed both people and their dogs using the trails.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. And as far as I understand, there has not been any peer reviewed site specific research that support the dramatic restrictions on dogs in GGNRA. This is not a national park or wilderness area and should not be managed as such.

Please keep the trails open to dogs. Thank you for your consideration.

<b>Correspondence:</b>	My family and I drive to Fort Funston every weekend to walk our dogs off leash. There isn't a better place than Funston for off leash dog walking. The kids get to walk around freely with our dogs while enjoying the view of San Francisco and the ocean. We've met GREAT people and dog owners here. The dog owners who bring their dogs to Funston know that their dogs are safe around other dogs and people. If not, they will keep their dogs leashed. Rarely do we see any incidents. If/when incidents do occur, dog owners react appropriately to stop the situation.				

I think it would be a great loss to our family and other families to restrict off leash dog walking at Funston the way you plan to. Yes, we understand that we can still walk with the dogs on leash, but we believe that will lead to a lot of tension between the dogs.

Please don't set any restrictions for off leash dog walking at Fort Funston.

**Correspondence:** I like to hike in the GG National Recreation Area. I have been aggressively approached by large off-leash dogs on several occasions. I object to this. I have been bit by dogs and object to them approaching me. I object to being made afraid by the simple act of taking a hike. It's my strong opinion that dog owners should compromise on this issue. I further believe that failure to comply be penalized with a substantial fine.

I don't think dogs will be concerned one way or the other.

The common refrain of dog owners is, "Oh, MY dog wouldn't hurt you." Well, when the dog is running toward me, how do I know this?

I will add that I have been actually attacked by dogs in Mountain Lake Park in SF (which, I realize, is not part of the GGNRA). The park has a large off-leash area. Dog owners going to this area, and coming from it, leave their dogs off-leash during their transit, and the dogs run amuck through the park. The park has been effectively taken over by off-leash dogs and their owners, as has the large paved road immediately adjacent to (north of) the park. (I don't know who has jurisdiction over this road.)

Because dog owners are well organized, their voices - their comments - may dominate this proceeding. I suggest to you that there's a large group of people out here who aren't so well organized whose opinions should also be registered. I would count small children among this number. I am happy to serve as their voice.

Regards,

Bob Frost

**Correspondence:** I am not a dog owner and I am concerned on how this dog management plan will affect the city parks. Restricting off leash dog walking access in areas where off leash dogs are now (for example: Chrissy, Fort Funston) can lead to an increase of dogs in our local area parks. How does the GGNRA plan to address/take responsibility this issue, even if the parks are not part of the GGNRA? Local parks may not be part of your jurisdiction, but if this management plan is approved and there is a significant increase of dogs in parks, there is a strong correlation between the two. GGNRA should be held responsible and should be prepared with a solution.

**Correspondence:** My name is Brianna and I am writing to oppose the GGNRA's plan to restrict off leash dog walking areas in San Francisco. I understand that this is to try and resolve issues that come from walking dogs off leash but I strongly feel that this is not the solution for the issues. There a lot of dogs in this city and they all deserve the right to have areas close to home where they can be taken to on a daily basis to run and play off leash. A dog cannot get the sufficient amount of exercise they need when they are walked on leash.

Thank you  
Brianna

**Correspondence:** I'm writing to express my extreme opposition to the GGNRA's Dog Management Plan. Please reconsider these draconian restrictions to our community recreation areas. The banning of dogs at all of these wonderful areas will have a much worse impact on the community than any environmental impact your new rules are trying to mitigate. Please, from a true nature lover and environmentally responsible person. I beg you, please reconsider.

Thank you.

**Correspondence:** Chrissy field is heaven for my dog and many many others! it is a place, in this urban environment, to run free, swim , and play with others. it brings my dog peace as well as me! i smile laugh and love watching the dogs all play! this city is a city of dog and pet owners...people who love their pets, respect the environment and other using the beach too!  
To restrict or take away the freedom and happiness it brings dogs and their owners would be awful! i spend a lot of time at the beach at Chrissy and I always feel that everyone picks up after their dogs, watches them diligently, and are sensitive tho others trying to enjoy the beach. i love it! my dog loves it! the community loves it!  
please please reconsider the plan and let us live and love this beautiful place we are blessed with...and let us do it with our wonderful furry companions!  
Thank you!

**Correspondence:** GGNRA,

The changes made in the 2014 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 AGAINST the plan.

I support the "No Action Alternative" in the SIES for each area: Muir Beach, Homestead, Oakwood Valley and Marin Headlands.

The SEIS contains no peer-reviewed, site-specific studies or vital monitor as required by law to initiate such a dramatic change to the public's use of their public lands.

Please retain the longstanding 1979 Pet Policy.

Kindly remember that the GOLDEN GATE NATIONAL RECREATION AREA was established to give outdoor RECREATIONAL opportunities to people in a densely populated urban area. It required a different management approach than wilderness areas like Yellowstone or Yosemite.

The SEIS preferred alternatives force people in to their cars, in search of places to walk with their dogs. This is bad for the environment and bad for Marin County!

Best regards,  
Kristin Sjöholm

**Correspondence:** I was just at Fort Funston yesterday and I observed the following:

- 1) Due to the cold/wet weather, there weren't many people there. The ONLY people there were people walking their dogs, all off leash.
  - 2) There were new posts with wires up to replace the old sand covered ones in the areas that are off limits. It's great that GGNRA are replacing the posts to help restrict access to "protected areas", but it really isn't effective. Many times, you still see people (with AND without dogs) walking through the restricted areas. To be clear, GGNRA should post clear signage at each of the areas where both dogs AND people are not allowed.
  - 3) The new posts and wires do not prevent sand from sliding into the protected areas. If you walk down the paved trail to the very end, you can see numerous spots where the sand has clearly taken over the paved walkway and has covered plants in the "protected areas." This isn't something that the dogs or people have caused. That's mother nature. If the GGNRA is really that concerned about the "protected areas" spend the time and money on effective barriers to protect these areas. There's no point in putting up new posts if they aren't effective. The sand has been overwhelming the path and plants for months now. GGNRA needs to come up with a better idea to protect the plants, which are living areas for other animals.
-

4) Not one single park ranger was seen patrolling the area, again. I have been going to Funston for years. I can honestly say that of all the times I've been there, I have only seen a ranger patrolling ONCE. The ranger was driving his vehicle on the walking path. Not very safe in my eyes where dogs, people and children and running around. It's not effective to draft a plan if there's no enforcement. If you want to stop bad behavior (both dogs and human), there needs to be some sort of enforcement conducted in a safe, effective manner.

Some things for the GGNRA to consider!

<b>Correspondence:</b>	I am writing in strong opposition to imposing more leash restrictions. I previously lived in Southern California, where there are very few places to take a dog off leash. We have a German Pointer that absolutely needs to run hard every day and does not like to fetch.				

It's a huge positive for us now that we live in the Bay Area to have so many wonderful locations to be able to run her. My experience from daily walks and bike rides on nearby open space is that people are very thoughtful regarding their dog walking. If a dog is aggressive, they have it on a leash. But in most cases, the dogs are under voice command and closely monitored.

Any new restrictions on off-leash activity would have a significant negative effect on our experience - I often rave about how thoughtful the dog rules are in general and would be disappointed to see them changed.

<b>Correspondence:</b>	Dear GGNRA Staff.				

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood Valley Trail, Muir Beach, and the North End of Stinson Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. In addition, dogs provide safety on trails from persons whom might be a threat to an unsuspecting individual. There have been assault crimes reported over the years on these trails and our canine friends provide much needed safety where rangers cannot be present.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood Valley Trail and enjoy seeing the many families and dogs out and about. We never have any trouble with our dog or with others and it is one of our favorite aspects of living in Mill Valley. We walk to Oakwood on the weekends - without this trail, our family would need to drive to another location to walk the dog off leash.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. **Correspondence:** The GGNRA's restriction for ALL the dogs and the owners/parents in the San Francisco Bay Area is not going to benefit the City nor its parks and recreational areas for the better. The idea that dogs are driving away the natural habit of animals in the parks is an exaggerated point. If the Environmental groups are super concerned about the parks then they need to be closed to not only dogs but people as well. People/tourists are far worse than the local dogs that go to an off leash dog park, so why not cut tourism then? Oh wait! That would be bad for the economy and the City of San Francisco's revenue. What about the construction that is happening in/near/over the Presidio area? It is driving more of the wild animals to the City center and out of their homes. The Presidio police like to inform local and general public that the dog owners and their faithful companions, are the cause of the birds moving to other areas, coyotes dying and the other furry creatures becoming more of a risk of going extinct. By all means, blame them, but next time you visit the beautiful Presidio National Park take a good look around and see how much construction is going on ALL around the park that is so well preserved for millions of tourists to visit on foot, bike and car. Off leash dogs are not the problem.

Dog owners and their dogs are being accused of neglect and improper training of their dogs that are off leash. If an owner of a dog is not aware of their pet that is acting up, another dog will definitely put the unruly dog in its place as well as the owner of the other dog. If they do not learn quickly, the dog owners that do respect the off leash rules will then call the park rangers/police to site and ticket the disrespectful dog owner.

This new plan is NOT going to solve any problems that are place on the table. They are just going to enhance the current issues already. Put blame where blame is do-ill informed tourists and the development/construction/lack of park rangers.

**Correspondence Type:** Web Form  
**Correspondence:** I am a San Francisco resident. I regularly visit GGNRA areas with my family, and often like to bring our dog. We most frequently visit Baker Beach, Ocean Beach, Muir Woods, and Marin Headlands. I very much enjoy being able to bring our dog with us, and have her off-leash in open areas,

---

because it provides a way for our entire family to relax and enjoy outdoor time. Even when we do not bring our dog, I like seeing other people with their dogs - - it adds to the enjoyment of the setting, and gives us ways to interact with other visitors.

I was disturbed by the GGNRA plans to limit recreational uses of our urban open spaces. There is little actual justification for these plans, and they would strongly undermine a popular, enjoyable, unique setting as it is currently used and valued by residents and visitors.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

<b>Correspondence:</b>	To Whom it May Concern,				

I am a Mill Valley native, a supporter of local community and a dog owner. I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

Most every day, I walk my dog at either the Oakwood Valley Trail or at Muir Beach. At both places, I not only enjoy the beauty of my surroundings, but I do my part as a volunteer, cleaning the beach and trails of any left-over garbage from hikers or picnic-goers. And, of course, I always clean up after my dog. There is a very strong-knit community of dog owners who are not only respectful of our place in the environment, but strive to make it a better place because of our presence. Please preserve access for the majority of locals who love to be out with their dogs and who show positive stewardship of the land.

Many thanks for your time, and I hope we can retain the longstanding 1979 Pet Policy.

Sincerely,  
Amanda Wilkins  
39 Loring Avenue  
Mill Valley, CA 94941

<b>Correspondence:</b>	To Whom It May Concern at GGNRA:				

---

I ask that you please reconsider limiting dog access (both on and off-leash) within San Mateo County. These areas are already crowded with local residents and their canine companions as a result of restrictions placed on dozens of open space areas within the county.

There are millions of people living here that are trying to maintain their own health as well as that of their dogs in these parks, and now you want to further restrict our access based upon non-existing conditions. Dogs and their owners are not negatively impacting the natural resources in these areas, we are realizing the beauty of the parks by our constant use.

Further, if you continue to restrict access to the most active people within this county, you will find that these parks slowly fall from the public eye and when the next 'budget crisis' comes up, no one will be there to champion the cause to keep them open. I saw this happen first hand when Redwood City decided to close Bair Island to pedestrians and their dogs several years ago. Within about 16-months of the closure, a deal was made behind closed doors with a developer, and now the beautiful Bair Island sanctuary has been ruined, another lost treasure on the Peninsula. All of this happened because the public couldn't use the area and it was simply forgotten about...

The citizens of San Mateo County and their dogs deserve the right to access the few limited areas we currently have access to in this county. I ask that you please reconsider any further limitations to your tax paying community and their dogs.

In closing, I would ask that you please consider opening access for dogs and their owners in more parks within the county, rather than focusing your attention on these senseless limitations, as that would truly be representing the general population in this area that happens to pay your salary!

Thank you for your time and consideration.

Erin Sunkel & Otter the dog

<b>Correspondence:</b>	Don't punish the many because of the irresponsibility of the few. Enforce current laws better if you must, but these sweeping changes go way too far. Seeing children over 5 in SF is				

---

already rare enough. You also want dogs to become a novelty? Come on.

Other reasons the proposed legislation is faulty:

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I have been thinking about this a lot. You are restricting who may use these lands. No bikers, no people with dogs and so on. We are the people who support the open space. We donated money to purchase these lands. we show up to clear the non native brush. We give directions to tourists.

We love the open space and we feel safe in the open with our dogs. As you restrict use you will get less and less support with keeping the open space free of development.

**Correspondence:** Fort Funston is a terrific place for dogs and people. In all my time walking, there have been positive experiences with the dogs off leash. It would be a shame to not allow the dogs along the paths that I so enjoy to walk on with my dog.

It is such a beautiful place for me to walk and my dog enjoys the ability to discover nature on her own, especially living in the city.

The dog owners take care of the area and there is no litter or dog waste left - in fact because of them it is one of the cleanest public areas around.

Please keep this area available for off leash dog walking.

<b>Correspondence:</b>	If citizens didn't adopt these furry creatures, our streets would be filled with stray animals and cats and dogs would be put to the death by the masses. These animals become bigger than pets- they are family.				

The goal of the GGNR is noble. They want to protect endangered species and return our land to a more original status. Banning dogs is an easy move. What would be difficult would be studying to find the actually dangers of these endangered species (people, pollution, ect..) and working to minimize those impacts.

If we are going to ban dogs from an urban park, why not ban cars too? I would bet the cars do far more damage in a year that the dogs would do in a lifetime.

If you want real change, then make it. Don't scapegoat poor domesticated dogs who's only crime is that families didn't want them to live a life only on a leash, or worse, being put down.

**Correspondence:** I've been using Crissy Field since the early 80s when it was a military base still. Even back then everyone cleaned up after their dogs the few of us that there were. I've been down there in sunny days which are the few exceptional days when there are lots of people down there and the people in the dogs interact just fine. I'm for keeping it as it is with a off leash area. People who violate voice control and do not pick up after their dogs should get a giant fine however. I have traveled to most places in the world, 500 cities and I can honestly tell you that the Crissy Field off leash area is by far the best one I've ever seen anywhere.

In my 30 years of using Crissy Field I can count on one hand the number of people who have not been responsible dog owners.

From Thomas Roop

Daly City, CA

I want to express my disappointment in this 2014SEIS Dog Management Plan with such a massive land take away for the Recreation of Off Leash Dog walking with the use of voice control.

I want to see and know just where are (The Site Specific Peer Review Studies) that were used to prove our Dogs are harming any Habitat for birds as well as the vegetation in the GGNRA???

I personally think the Original 1979 Pet Policy is all that is needed if you were to just enforce the existing dog mangement rules.

My dog and I go to Fort Funston and Ocean Beach and at Fort Funston daily and we try to go early or late in the day and travel the outter trails that circle Fort Funston and all of these areas we go too, you want to take away. These are areas with a lot of trees to make it easier for myself and our dog on hot days and going through the south end of Battery Davis and coming out the North Battery Davis on the sunset trail to go north to the Horse trail will not be possible in your preferred plan. I do not see anything that you offer to replace this experience and other ways that we travel are banned in your preferred Plan F...

At Ocean Beach I do not see; (The Site Specific Peer Review Studies) that were used to prove our Dogs are harming any Habitat for birds as well as the vegetation in the GGNRA??? The Snowy Plover is not endangered or on a Critical Habitat list that would justify the closing of Ocean Beach from Staircase 21 south two miles to Sloat Blvd. The law requires a Site Specific Peer Review to prove our Dogs are harming any Habitat for birds as well as the vegetation in the GGNRA, where is the proof?

This is very disheartening that you and your colleagues would spend our tax dollars to punish us and our dogs by taking away the land we walk and not even have a good plan along with a fair management style that will enforce your plan. The rules are on the books just enforce them and we can all live and let live.

As a resident of San Mateo County I really feel disenfranchised by the GGNRA and as you acquire land the rules go right to National Park Rules when folks in Montara have had a history of off leash Dog walking for over 20 years, that was not even considered....

Yes for the Original 1979 Pet Policy

Thomas Roop

**Correspondence:** Dear Superintendent Dean,

My name is Sarah Stromska and I live in San Francisco. My fiancé and I bought our first home in August 2013. The house is 2 blocks from Ocean Beach. Soon after our purchase we adopted a dog from the SFSPCA. We love taking him for walks on Ocean Beach - he loves to play with other dogs and chase the waves.

I strongly oppose the preferred alternative for Ocean Beach. It is too restrictive. In a city where dogs outnumber children (25% of households compared to 18%), and where owning - or even renting - a reasonable amount of space is getting harder and harder to come by, places like Ocean Beach are vital to maintain the health of our furry friends and our community.

Health and social benefits aside, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to

prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban community. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Sarah Stromska

**Correspondence:** My name is Samir Garg and I live in San Francisco. One of my favorite aspects of this city is its pet-friendly environment. I thought this before I had a dog, and of course now with a dog - I appreciate it even more.

I strongly oppose the restrictive measures being put forth in some of the key areas I like to take my dog and kids - Fort Funston being the most critical.

Key reasons:

- With the off-leash culture, I feel we were especially diligent in socializing our dog and training him to be incredibly good with people as well as other dogs; this would not have been possible in an on-leash environment

- The city is a tough place to take animals out to let them run, so the few big off-leash parks have been a huge help

I hope that this key feature of San Francisco remains, as it's one that my family and I have enjoyed immensely.

Sincerely,  
Samir Garg

**Correspondence:** My name is Angela Sharp, I live in the SOMA area of San Francisco. I have two labs that I take to Ocean Beach, Baker Beach or Crissy Field on a regular basis, 5-6 days a week. I can not imagine not being able to let my dogs run freely on the beach and to let them swim, as that is part of their DNA.

I live in the heart of the city and look forward to taking my urban dogs to the beauty of the GGNRA. I derive great pleasure in walking my dogs off leash in these areas. They can run and swim and I can experience the beauty of the beach, fresh air and knowing they are free and out of the noisy, crowded city.

This is a dog friendly city. Let's keep it that way!!! One of the great aspects of this city!

These are some points I oppose to:

THE GGNRA , SHOULD NOT BE ALLOWED TO CHANGE LEASH LAWS IN PARTICULAR GGNRA AREAS JUST BECAUSE IT DEEMS THAT NOT ENOUGH PEOPLE ARE COMPLYING TO LEASH RESTRICTIONS.

THE MONITORING-BASED MGMT STRATEGY THAT REPLACED THE COMPLIANCE-BASED MGMT STRATEGY IN THE EARLIER VERSION OF THE PLAN.

THIS PLAN ADMOTS THERE ARE FEW SCIENTIFIC STUDIES THAT SHOW THE IMPACT THAT DOGS HAVE ON VEGETATION AND SOILS. A SUPPLEMENTAL ENVIRONMENT INPACT STATEMENT NEEDS TO BE BASED ON SCIENCE, NOT ANCEDOTE

THE FOUNDING OF THE GGNRA'S PURPOSE IS TO OFFER A "NATIONAL PARK EXPERIENCE TO A LARGE AND DIVERSE URBAN POPULATION", HOWEVER, THE ENABLING LEGISLATION SAYS THE PURPOSE OF THE GGNRA IS TO PROVIDE FOR THE MAINTENANCE OF RECREATIONAL SPACE.

I DO NOT SEE ANY DAMAGE TO ANY AREA IN THE GGNRA FROM WALKING MY DOGS. THIS WOULD BE A TRAGEDY IMPLEMENT THESE PROPOSED LEASH LAWS.

<b>Correspondence:</b>	I would like to commend the park for its thorough review process regarding the regulation of recreational dog walking activities in the Golden Gate National Recreation Area, and express support for the current proposals to clearly delineate where certain related activities will and will not be permitted. The properties of the Golden Gate National Parks are a tremendous public resource that deserve to be made accessible and enjoyable to all residents of the area, while at the same time safeguarding the natural assets - - including native plants and wildlife - - that make these areas so biologically diverse and environmentally significant. There are clearly areas where high-impact activities, such as off-leash dog play and commercial dog-walking, should not be permitted, either because of the sensitivity of the natural resources, or because they interfere with the passive and peaceful enjoyment of those areas by other members of the public. I know it is not possible to satisfy all constituencies all of the time, but I appreciate the careful thought that has gone in to the preparation of the current proposal and look forward to its final adoption in the near future.

**Correspondence:** Dogs need off leash time where they can run and play with their humans and with other dogs. It is extremely cruel to reduce off leash areas. It is such an unkind way to treat these beings that help us and do so much for us. We have almost the whole city to ourselves, how mean is it to remove what little area they have for some freedom. Please look inside your heart and do the right thing by the dogs. San Francisco is an incredible city that is known for its openness and forward thinking ways. This would really be a shameful thing if we were to take these areas away from our Canine companions. Dogs that are allowed at least some free, unrestrained time, are better socialized and well behaved than their unhappy, always restrained counterparts.

Sincerely,

Monica Mendez

<b>Correspondence:</b>	I am HORRIFIED by Alternative F, the "preferred" dog management plan to restrict off-leash and dog-friendly access to the GGNRA. I would prefer the No Action Alternative, but really think you need FAR MORE access for off-leash dogs.				

I'm a life-long environmentalist, but I also know the very natural and healthy role that dogs play in our lives and the natural environment.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There is no true reason to eliminate or further restrict the remaining 1%.

I demand that you conduct peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

Keeping dogs ON leash all the time creates many new problems for our society - - it creates behavior problems in dogs that are very serious and result in many injuries every year to HUMAN BEINGS. Dogs need to run free - - and they have done that for many centuries along the coast as they were the domesticated friends of Native Americans.

To keep them on leash is animal abuse - - does the GGNRA really believe that there is NO coastal areas where dogs and their owners can hike and play off leash? That is insultingly stupid.

The GGNRA needs to provide recreational opportunities for ALL Bay Area residents and their families - including their dogs. Perhaps you've never owned a dog, but leaving a dog behind when going to the seashore is like leaving your small child behind because they are banned from the beach.

As for the birdlife, it is far more threatened by natural predators including rats, rodents and coyotes, than by domesticated dogs under the watchful eyes of their companions.

**Correspondence:** I regularly visit Fort Funston with my dog - this is one of my favorite activities, and I've been so grateful for this space where I can hike, and Morgan (my dog) can be off leash. This allows him to get exercise that I otherwise wouldn't be able to provide.

I oppose the plan because it is too restrictive. I've seen NO justification in the dog management plan for major changes.

I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

Please do not implement this plan and take away the joy of experiencing this beautiful area with our companions.

**Correspondence:** Dear Superintendent Dean,

Not only am I a proud dog owner who frequents the off-leash dog parks in question, I am a psychiatrist with a particular interest in service and comfort support animals. Everyday I see, firsthand, the power of the human-dog relationship, and it is difficult to see how that relationship can truly be fostered when the dog is inhibited from free play. Free, off-leash play in an outdoors environment offers an opportunity to build trust and discipline that would not be as available should this restrictive alternative be implemented. Many of my patients leave their homes for the sole purpose of taking their dogs to one of these amazing off-leash areas and would otherwise stay at home, missing out on much-needed exercise, social interaction, and sun. Running in an open environment is also pertinent to the health of these urban animals, especially larger dogs, who were often bred to perform rigorous physical activity and to freely roam farmlands.

Personally, if Fort Funston and Ocean Beach no longer had large off-leash roaming ares, my dog would suffer from lack of exercise and free play. Additionally, the influx of dogs to inadequately-sized city parks would present a crowding problem. What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

Sincerely,

Chris Stauffer, MD

**Correspondence:** The plan released in September of 2013 for designated areas for off leash dogs is more than aqueduct. I like most people like dogs and I like people but I don't appreciate when some human runs up and jumps on, I also don't like dogs jumping on me while the owner calls out "don't worry he's friendly".

Everyone doesn't want dogs running around sniffing their private parts and jumping on them while their irresponsible owner smiles. The dogs have several areas to run off leash please keep the way it was proposed. If you allow more areas for off leash dogs you will need more law enforcement to control irresponsible dog owners can't the limited resources of the Park Service be put to better use?

Norman Machado

**Correspondence:** My name is Shannon and I live in San Francisco with my husband, two children and Daisy, our golden retriever. I walk Daisy at Chrissy Field at least 3x/week and did the same for years with our last golden, Lucy. I meet friends there, we walk, talk, share joys and sorrows and enjoy our beautiful city...with our dogs. I meet new people too, we share dog stories and life stories. We commiserate, we learn and we laugh. On the weekends, my husband gets up early and takes Daisy to Chrissy Field for a big morning swim and wrestle session with her other dog friends. It is the highlight of his busy week. Before kids and before Daisy, we would take Lucy each and every weekend morning to Fort Funston. It was our chance to get outside, catch-up over a hike on our busy weeks and watch all the goofy dogs and soak in all the joy they bring to our lives. When Lucy passed, I looked back at all the photos we had taken at Fort Funston (or "Fort Fun", as we call it) and realized how some of the best days of my life were spent there with her. My point to all this is the benefits of these off-leash outings are just as beneficial to all the \*people\* - -if not more- -as they are to the dogs!

For this reason, I strongly oppose the preferred alternative for Chrissy Field and Fort Funston (and other areas, but these are the ones I care most about) because it is too restrictive. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported.

I was just remarking the other day how lucky we are in San Francisco to have off-leash beach areas for our dogs, unlike LA or San Diego. Please don't turn our city into Los Angeles!!

**Correspondence:** Dear Superintendent Dean,

My name is Russ Thau and I live in San Francisco. I walk my dog, Jimmy Dean, on Baker Beach, Ocean Beach, and Ft. Funston for the past 8 of years.

I strongly oppose the preferred alternative because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, San Francisco is one of the most dog friendly cities in America and what makes this place so special. We understand all aspects of life and celebrate them. Everyone on these beaches are responsible with their dogs and I don't see any problems. Let us continue to enjoy to exercise our dogs in an open

environment.

Sincerely,  
- Russ

**Correspondence:** Animal companions are an integral part of San Francisco life. They provide not only love, comfort, and loyalty to their owners, but they also teach compassion, responsibility, and unconditional love. As a lover of animals, a dog owner, and a San Francisco resident, it is important to me and to San Franciscans that we treat these animals/pets/companions with respect and love. An important part of that is to provide them with the exercise, stimulation, and freedom that they deserve. Therefore, I believe it is imperative that we do not ban or limit the off leash policy at Fort Funston. There are already not too many areas in San Francisco that allow these beloved members of our families to run freely.

**Correspondence:** I am a fourth generation San Franciscan and a second generation Sunset District resident. I live very close to Ocean Beach and spent many years walking my dogs there, sometimes as much as three times a day. I also frequently visited Fort Funston. I no longer do so because I have a dog who cannot be allowed off leash. If this was not the case, I would still regularly be exercising on GGNRA lands with my off-leash dog.

I am writing to demand that you reinstate the ORIGINAL 1979 Pet Policy per the 2005 Federal Court decision because all closures since then have not been based upon site specific, peer-reviewed studies as the law requires. From all my research into the so-called environmental reasons for banning or severely limiting dogs from these and other GGNRA areas, I see no valid reason for it.

I disagree with the premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. And, as I said, there has not been any peer-reviewed studies to prove this.

Further, the GGNRA is located in an urban area and was designed to be an urban, recreational area and as such was voted on by the people in the City and County of San Francisco. And there have not been any environmental impact studies about what the effects would be of so many dogs and people moving over to San Francisco property.

Finally, it will simply not be enforceable to go forward with the plan to eliminate 75% of the off-leash recreation area in San Francisco. The people who regularly visit the GGNRA will continue to go with their dogs and continue to enjoy exercising them there - - even with the risk that they will be shot with a taser by one of the rangers, as was done a couple of years ago on GGNRA land.

Please drop the preposterous proposed plan and reinstate the original 1979 plan. The NPS is a guest in San Francisco's backyard and not the other way around

Thank you.

**Correspondence:** I am strongly opposed to the limitation of dogs in the Golden Gate National Recreation Area.

The Golden Gate National RECREATION AREA was set up to be a RECREATION AREA for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The GGNRA is not a wilderness national park like Yosemite and Yellowstone and should not be managed as if it were.

Less than 1% o trails and beaches in the GGNRA are dog friendly. That means anybody who wants a dog-free experience has 99% o the 80,000 acres to play in.

There has not been a single peer-reviewed, site-specific study, AS REQUIRED BY LAW that supports such a drastic restriction of dog friendly areas. It must be proven before it is legislated!

I appeal to you to make no policy changes regarding dogs in the GGNRA, and to please retain the longstanding 1979 Pet Policy for the GGNRA.

Thank you,  
Annette Sullivan

**Correspondence:** As a dog owner and avid outdoors person, I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I

---

support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption. The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote. The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space." The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I am strongly in support of a GGNRA plan to closely regulate dogs in the national parks. I do not want to have my visits to GGNRA lands dominated by avoiding dogs, by dog feces, by dogs chasing wild birds and small mammals, etc. I do not want my frisbee to be chased by other people's dogs. I do not want to see public lands taken over by private businesses, basically dog shuttle services, where I then have to turn around and leave because of my distaste for dogs.

---

Dogs are not people and I can't state strongly enough how much I would like the presence of dogs to be minimized in the national parks system. Insofar as they must be tolerated they should be confined to well-demarcated areas, and leash laws should be very strictly enforced in all areas with serious penalties for noncompliance.

thank you.

**Correspondence:** Please retain the longstanding 1979 Pet Policy. The Golden Gate National RECREATION AREA was established to give outdoor RECREATIONAL opportunities to people in a densely populated urban area. It requires a DIFFERENT management approach than wilderness National Park areas like Yosemite or Yellowstone. Less than 1% o trails and beaches in the GGNRA are dog-friendly. That means anybody who wants a dog-free experience has 99% o the 80,000 acres to play in.

The SEIS contains no peer-reviewed site-specific studies or vital monitoring as REQUIRED BY LAW to intitiate such a dramatic change to the public use of their own public lands.

If the dog management plan is adopted, Marins estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

These are public lands and the GGNRA need to listen to the public.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

---

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained

**Correspondence:** I am a resident of San Francisco for 10 year. We have a dog named Cooper (French Bulldog) for 3 years. My dog walker takes Cooper to Fort Funston everyday for off leash walks.My husband and I have takes Cooper to Crissy Field 1-2 times per month.  
Off-Leash dog walking is the greatest thing for all Bay Area residents and dogs because we not only enjoy the beautiful surrounding in its natural setting, but we also learn to be respectful to each other and to all creatures on earth.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.It will totally distort the beauty of natural environment and limit interaction between people, nature and animals.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan proposed here carried no evidence for any negative environmental impact due to off-leach dog walks. We as owners are very responsible on picking up waste and protect the environment. The plan lists impacts that might, can, or could happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on

vegetation and soils, p. 375).

As a scientist and dog lover, I 100% oppose this none scientific-based proposal on banning off-leash dog walking in bay area.

**Correspondence:** Dear Sir or Madam,

My experience with dogs is unfavorable. Each frightening encounter involved a dog owner who said their dog was harmless and then refused to restrain their dog. I have been barked at, chased and bitten by dogs merely by approaching their direction. I find dog owners/walkers to be ignorant that their dogs do not always follow voice commands. I fault dog owners/walkers rather than dogs for arrogance when it comes to protecting other people, wildlife and habitat value.

I believe the underlying problem is that there are too many people and too many pets. Human activities must be strictly limited, because the rights of others are being infringed upon, while the environment suffers silently. Therefore, I urge you to address the following:

â€ I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area.

â€ I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for all visitors.

â€ Commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain.

â€ Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public.

Thank you.

**Correspondence:** Thank you for trying to manage off-leash dogs fairly. I think any conversation about this needs to acknowledge that EVERYWHERE is off-leash. Don't take my word for it - go for a walk in any green space, anywhere.

I am all for having off-leash areas available in as many parks as possible, providing that the remaining areas have on-leash laws enforced. Until then, any discussion about off-leash areas is a waste of time. Perhaps we would make more progress by starting with small, but enforced, on-leash areas for the humans.

By the way, I believe revenues from ticketing would more than cover the cost of enforcement, at least until dog owners learn to change their behavior.

Thank you for your consideration.

**Correspondence:** Dear NPS,

I discovered Fort Funston just a few months ago. My friend took me and my three legged chihuahua, Trike, along with her and her big Australian Shepard. She swore up and down it would put all other dog areas to shame.

And was she ever right! My puppy had the time of his life exploring the dunes and trees, and running around on the beach. He was most definitely doing the doggy equivalent of a big smile the whole time.

Everyone was friendly, the park was clean (and didn't smell of dog, or human, urine like most other parks in San Francisco), and Trike and I both got lots of exercise, clean air, and beautiful views. I jokingly call it "Doggy Disneyland" since it really is the happiest place on Earth for my little pup.

The thought that we could lose this beautiful place (and so many others) so soon after finding it is devastating. I beg of you, please reconsider closing down off-leash and recreation areas that are so dear and valuable to so many Bay Area residents.

-I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

-I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash

---

areas feel like pens and visitors using them will feel unwelcome.

-I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Thank you for your time,  
Morgan Weinert

<b>Correspondence:</b>	Dear GGNRA Superintendent,				

I have been following the discussion of dogs within the GGNRA for years, an issue of concern to me because of the native flora and fauna that I appreciate on visits to GGNRA lands.

Recreational dog walking must be regulated on all GGNRA lands to protect the native nonhuman fauna, the often delicate flora, and human beings.

A dog management plan should comply with all established National Park Service policies and practices.

I feel that no commercial dog walkers should be permitted on GGNRA lands, and if the decision is made to allow them, the number of dogs they supervise should be limited to three.

Warm wishes,  
Sam Gilbert

<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Trista Kang and I live in Outer Sunset, San Francisco. I have walked my dog on Fort Funston, Crissy Field, Golden Gate Park, and other SF parks for the past year.

I strongly oppose the preferred alternative for SF park areas because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No

evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

To dog owners, dogs are a member of the family. I would consider my dogs' happiness as highly as my own when choosing a place to live. It's important to me and my family that we have a place to freely interact with nature, and I would move away from San Francisco if this restriction was truly put into place.

Sincerely,

Trista Kang

<b>Correspondence:</b>	I am not sure why you feel the need to pass this extremely unpopular law. Fort Funston is one of the few places you can go and let your dog run free. Who is going to use the field or the beach when you won't let responsible dog owners use it? Your funding will be cut and then you'll wonder why. Be logical about this. There are so many places our dogs can't go, so why add to that list?

**Correspondence:** I am writing to oppose the ban of having pets/dogs in public parks and beaches. Sf residents are confined by 4 walls and most do not have yards or outdoor space even for ourselves. We including our family furry, feathered, or scaly friends need sunlight and fresh air. I feel this is a free basic need that is a right that can't be taken away. It is what mother nature provides for us all. I also want to say that animals have become a big part of the family like our love ones.  
I will do whatever it takes to stop this ban.

Thank you

**Correspondence:** Dear Superintendent Dean,

My name is Rebeca Golden and I live in Mountain View. I've walked my dog at Fort Funston for the past 4 years.

I strongly oppose the preferred alternative for Fort Funston because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, I am one of the many dog owners in the Bay Area who loves being outdoors but works full-time (sometimes more than full-time) in an office setting. Being able to get away from the concrete and the cars and be out in the open space with my four-legged best friend is essential to LIVING. Even those wealthy enough to be able to have a back yard around here still, for the most part, have no venue to be able to run and play with their dogs; apartment-dwellers like me can only exercise our dogs on concrete (and we do) - the ability to go and be outdoors is priceless. It reconnects us to our citizenship in the human race and our kinship with everything living on Earth.

Sincerely,

Rebeca Golden

**Correspondence:** I oppose the GGNRA Draft Dog Management Plan. I am a responsible pet owner who frequents, among other locations, Fort Funston, Crissy Field, Stinson Beach, Muir Beach, and the Marin Headlands. My dog is well socialized and has never presented an issue in terms of interfering with other occupants of any of the areas frequented. My husband and I love the outdoors and are very respectful of all of the park areas that we are blessed to access. We got a golden retriever as we wanted a dog that loves to hike both land and beach areas. Our dog has been our constant companion for the past 7 years. During this time I have never run into an issue with someone complaining that our dog was on park property and bothering them. On the contrary, I have had many an individual, including park rangers, say that our dog brings a smile to their face because she is such a happy dog. Restricting our dog to only off-leash, limited areas also restricts us to these same areas and limits our ability to enjoy the outdoors. Part of the amazing lifestyle we enjoy is the access to these urban parks with our dog companion. Restricting our dog's access also restricts our access and ability to enjoy the parks. I think this is an unintended consequence and should be considered.

**Correspondence:** I moved from NYC to San Francisco because I adopted from a shelter a young yellow lab and I enjoy hiking with her. I chose San Francisco because of the amazing off leash areas. My dog is very well socialized, I took many obedience classes (currently enrolled in Canine Good Citizen class), my dog is under my voice control at all times, I always carry treats and poop bags.

Being able to take my dog to Crissy Fields, Fort Funston, Marin Headlands, Baker Beach etc. makes me happy. It is a very bonding experience for us and keeps us both healthy.

My dog goes with her dog walker (who is a certified dog trainer as well) three times a week to fort funston. She plays with her doggie friends, runs and I know that my dog walker keeps the pack safe and at a distance from the other dog walkers. Too many dogs on a small territory would cause fights and wouldn't be safe for dogs and the dog walkers/dog parents.

I'm a very responsible dog parent and I know how important hikes are to my dog's mental and physical health. If the GGNRA restrictions take effect we will move again, I don't want to live in a city that has more dogs than children, where people take dog parenting very seriously but can't walk their dog off leash.

If you have to - require people to take off leash classes like this one:

<http://www.sfspca.org/programs-services/dog-training/classes/open-space-etiquette>

or take Canine Good Citizen classes.

I oppose the Preferred Alternative because it is too restrictive and support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash areas in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

**Correspondence:** My name is Megan Synnestvedt, and I live in San Francisco. I have been visiting GGNRA lands, specifically Fort Funston for the past 2 years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

---

I oppose the preferred alternative for Fort Funston, because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, this will have a huge negative impact on my life and the life of my dog. We would have to drive far distances to find appropriate areas to run off leash. And, my dog would have extra energy. Imagine all the dogs in the city with all that extra energy, this seems extremely dangerous to me.

Sincerely,  
Megan Synnestvedt

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to many of the Marin county trails.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local

---

residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** GGNRA has already excluded dog access from more than 75% o the beaches, trails and open spaces. This has presumably helped protect wildlife but has also concentrated the dog activity into the remaining spaces. Further restriction will increase usage yet more making the remaining dog-friendly areas even more burdened and encourage scofflaws to take their dogs further afield.

The policy of further restriction, especially if it is as severe as proposed, could well have catastrophic consequences for bird and wildlife populations in other parts of the park. It is widely acknowledged that the park service is woefully understaffed to patrol the park as it is now. We would all be better served to keep the dogs in already established areas where the park service can monitor the activity than to close those areas and have to monitor a much wider area. The idea is to keep pets away from more wild areas.

As an example of public policy going wildly askew GGNRA only needs to look as far as Wilder Ranch State park and the illegal construction of single-track bicycle trails.

Please keep dog-friendly areas open so we can keep domestic animals further away from wildlife.

**Correspondence:** Please keep the dog rules at GGNRA as they are. I walk my dog with my 4 year old daughter at Ocean Beach at least once per day. It is the highlight of all of our days and the main reason I live in the Outer Sunset. The ability to get out and be outside on the beach, playing with our dog is a fundamental part of teaching my daughter about nature and animals and how to respectfully enjoy a special habitat. While it's arguably true that we could still go to the beach without our dog, the plain fact is that we wouldn't. The GGNRA at Ocean Beach is located in a city. Part of living in a city means embracing all inhabitants, including families. Closing the beach to dogs will severely limit the places my family can play outside. We have chosen to continue to live in San Francisco, despite many of our friends with children leaving, in part because of our relationship with Ocean Beach. Please do not ban dogs.

**Correspondence:** With less than 1% of the trails and beaches in the GGNRA dog friendly, this plan to impose further limitations on an area originally designated and intended as a recreation area that would include dogs is a bad one. The GGNRA is a "Recreation Area," meant for the use of the residents from the surrounding, densely populated San Francisco and Marin Counties. Eliminating dogs from the very few areas of the GGNRA that they are currently allowed would effectively exclude dog owners from using the park.

If the GGNRA had been intended primarily for preservation of land and wildlife, this plan would make sense. But that is not what this park was intended for and not how it should be used. Nonetheless, if the GGNRA is going to limit dogs for the sake of wildlife conservation, it really should provide some compelling evidence that limiting dogs will actually result in better wildlife conservation. So far there is no such evidence.

Dogs need exercise to be healthy behave well. There are not many places available to dog owners currently that provide the open space necessary for exercising them properly. If there is any really compelling evidence that "voice control" areas fair worse environmentally than "on-leash" areas, I wish the authors of this plan would present it.

Having said that, even if there were such evidence, to what lengths must we go for preservation of a future at the expense of the health and well being of those dogs and dog owners currently relying on the GGNRA's dog friendly areas.

<b>Correspondence:</b>	We have a rescue dog that needs to run far and wide, really fast. He is about as interested in running in the local off-leash tiny "dog-park" as a mountain lion would be. There are almost no areas where we can take him that is big enough besides Crissy and Funston (They are great too because he can just run up and down the shore and not make chase of animals as he does when he is inland). As it is, we make the drive regularly to Funston, which is terrible for the environment. If it closes, we will need to drive even more, or take him deep into park lands. Our dog doesn't read and doesn't understand fences, so fencing in an area isn't a good solution. He and lots of other dogs in the area just need some big spaces set aside for them.

<b>Correspondence:</b>	This is a follow-up to my reply at the last comment period. Unfortunately, the latest version is not practical in what may have been an attempt to compromise. For example, requiring dogs at Muir Beach to be on leash is like taking a child into a candy store and telling that child he can't have any.
------------------------	---

The GGNRA locations which currently allow dogs off leash need to remain so. The percentage of space allocated for such activity is already minimal, especially relative to the percentage of the local population

who own dogs and rightfully desire to exercise their animals in the outdoors. While there are a few "bad apple" dog owners who may not follow park rules, there are others - such as teenagers leaving empty beer bottles on the beach - who also violate the rules. Should we banish them?

Let's keep the rules appropriate for the 95% of the population who are considerate and orderly. Closer monitoring and enforcement against those who disobey is very doable and can be paid for with additional usage or license fees if necessary. This is not that complicated.

The park space belongs to dog owners as much as anyone else and they should not be further excluded from usage. The NPS needs to keep current usage fully intact.

**Correspondence:** When I walk my dogs on GGNRA land I can go for hours without seeing a soul. Just empty trails and trees. We don't allow them to chase any wildlife, we carry the poop out. When I do meet people, I have NEVER met anyone objecting to my dogs. They all stop to pet them. It makes me wonder if these people deciding the parameters have ever been to the GGNRA land. All those who scrambled to make this area happen - many were hikers with dogs. I love my peaceful walks on the trails and beaches of Marin, I think banning dogs or off leash areas would severely impact the quality of living here. And it is pointless, unresearched and high-handed. Please do not allow this beautiful place to become off limits to me and my pets.

**Correspondence:** My name is Dominika Knossalla and I live in San Francisco. I walk my dog on Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Stinson Beach for the past 2 years. I belong to National Association of Canine Scent Work.

---

I strongly oppose the preferred alternative for Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Stinson Beach, Marin Headlands because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I can't imagine driving long distances to walk my dog or not going out on walks with my family because I can't take my four-legged friend.

Sincerely,

Dominika Knossalla

<b>Correspondence:</b>	Opposition to fencing dogs in the GGNRA and opposition to monitoring-based management				

Dear Superintendent Dean,

My name is Dominika Knossalla and I live in San Francisco. I've been walking my dog on Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, Stinson Beach for the past 2 years. I belong to National Association of Canine Scent Work. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, Stinson Beach because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

I moved from NYC to San Francisco because I adopted (from a shelter) a young yellow lab and I enjoy hiking with her. I chose San Francisco because of the amazing off leash areas. I can't imagine driving long distances to walk my dog or not going out on walks with my family because I can't take my four-legged friend.

Sincerely,

Dominika Knossalla

<b>Correspondence:</b>	Not enough response to comments submitted in 2011.				

Dear Superintendent Dean,

My name is Dominika Knossalla and I live in San Francisco. I've been walking my dog on Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, Stinson Beach for the past 2 years. I belong to National Association of Canine Scent Work. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I strongly oppose the preferred alternative for Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, Stinson Beach because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

I moved from NYC to San Francisco because I adopted (from a shelter) a young yellow lab and I enjoy hiking with her. I chose San Francisco because of the amazing off leash areas. I can't imagine driving long distances to walk my dog or not going out on walks with my family because I can't take my four-legged friend.

Sincerely,

Dominika Knossalla

**Correspondence:** Sure dogs are "members of the family". But let's face it, \*human\* members of the family do not look like dogs, don't smell like dogs, don't sound like dogs, and DO NOT ACT LIKE THE CANID PREDATORS THAT DOGS INHERENTLY \*ARE\*. As such, dogs have a vastly more stressful impact on the wildlife that naturally resides (or tries to reside) in the areas under consideration. Even human children, who are presumably in training by their adult mentors to act like 'civilized human beings', are not as stressful to wildlife as even the most well-trained Fido. Dogs DO NOT BELONG in these areas.

**Correspondence:** Dear Superintendent Dean,

â€My name is Dominika Knossalla and I live in San Francisco. I've been walking my dog on Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, â€â€Sweeney Ridge, Stinson Beach for the past 2 years. I belong to National Association of Canine Scent Work. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I strongly oppose the preferred alternative for â€Fort Funston, Crissy Fields, Ocean Beach, Baker Beach, Muir Beach, Sweeney Ridge, Stinson Beachâ€ because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

â€I moved from NYC to San Francisco because I adopted (from a shelter) a young yellow lab and I

enjoy hiking with her. I chose San Francisco because of the amazing off leash areas. I can't imagine driving long distances to walk my dog or not going out on walks with my family because I can't take my four-legged friend.â€ My dog is very well socialized, I took many obedience classes (currently enrolled in Canine Good Citizen class), my dog is under my voice control at all times, I always carry treats and poop bags. My dog goes with her dog walker (who is a certified dog trainer as well) three times a week to fort funston. She plays with her doggie friends, runs and I know that my dog walker keeps the pack safe and at a distance from the other dog walkers. Too many dogs on a small territory would cause fights and wouldn't be safe for dogs and the dog walkers/dog parents. I'm a very responsible dog parent and I know how important hikes are to my dog's mental and physical health. If you have to - require people to take off leash classes like this one:<http://www.sfspca.org/programs-services/dog-training/classes/open-space-etiquette> or take Canine Good Citizen classes.

â€

Sincerely,  
Dominika Knossalla

**Correspondence Type:** Web Form  
**Correspondence:** I submitted comments last week, but I would like to add a couple more that I think are relevant.

The challenge for the National Park Service is to find the balance point for multiuse in the GGNRA given all the different kinds of potential use and the need to protect the ecological integrity of the land. In my opinion the revised Dog Management Plan (issued Sept. 2013) does not find the appropriate balance for the portion of the GGNRA in Pacifica, an area with VERY many dog walkers and park land near many neighborhoods and therefore convenient for residents to walk their dogs on GGNRA property. How much should the "critical habitat" argument determine access by leashed dogs? I think the following point is critical. How much more environmental impact is there from a person walking with a leashed dog than from a person walking alone? I would contend for nearly all the trails the incremental difference is negligible, especially on trails where the checkered butterfly is the relevant species of interest (i.e. Sweeney Ridge trails)

In my previous comments (submitted last week) I made the assumption that many dog walkers would refuse to put their dogs on leash when walking on the trails. I want to modify that. If the public is made aware of the ecological importance of keeping their dogs on the trails, I am more optimistic that a "leash-only" policy can be implemented effectively. With appropriate education and signage, law-abiding dog walkers will help implement the "leash only" policy. The same goes for a no-poop-on-the-trail policy. In return for the privilege of having my dog along on the trail with me, I would gladly remove dog waste from along the trail, and chastise those I saw who did not pick up their dog's poop.

I also want to make a point about the detailed differences among trails on the Sweeney Ridge land. The trail east of the Sundance Nursery is VERY steep with crumbling footing. Hiking up from the end of Fassler Avenue is much better, especially with the new trail. Quality of walking makes a difference, so decisions should not be made simply looking at a map. Decision makers need to actually walk the trails and experience the terrain. In this case I see no reason why both these trails should not be open to leashed dogs.

It is vital for the National Park Service to understand in a profound way its mission to protect the land AND maximize accessibility of that land to recreational use by the public, especially in the special case of the GGNRA. These two goals need not be in opposition to one another. Instead of trying to make policies that are consistent for all national park land, those setting policy for the GGNRA need to look at the particular ecology and critical habitat of each site. What precisely are we trying to protect? What species are threatened? What are the needs of those species and how might they be adversely affected by people and dogs or other wildlife? What species are too abundant and should be reduced? Policies need to be based on strong scientific evidence, then implementation of these policies will be much easier and more justified. An educated public will assist the National Park Service in implementing justifiable policy, instead of looking for ways to avoid abiding by the rules.

In closing, I want to emphasize that the GGNRA land within Pacifica is adjacent to areas of high population density. Since the incorporation of the City in 1957, the citizens of Pacifica have fought hard to defend keeping their hillsides as open space. It is because of the vigilance of Pacifica's citizens that these tracts of land exist at all to become part of the GGNRA. Historically, Sweeney Ridge was used for cattle grazing and was later proposed for residential housing. Mori Point and Pedro Headlands were badly torn up and eroded because of use by motorcyclists. Over the years, Pacificans have worked hard to help restore native vegetation in these heavily impacted areas. Pacifica does not have a strong commercial tax

base. It has been proposed that "Our Ecology is our Economy". If Pacifica is known to tourists as a "dog friendly" town, we will be able to attract many more visitors to enjoy our trails and open space, adding to our economic prosperity. The economic consequences of severely limiting dog access to GGNRA trails are potentially profound to our fiscally fragile community.

I hope the opinion of residents and City Council of Pacifica will have some influence on the policies that are set by the National Park Service for Dog Management in the GGNRA. We care deeply about the ecology of our open space, but we also want to be able to use this space for recreation, including exercising ourselves and our dogs.

**Correspondence:** Please do not limit our off leash areas. As a pet owner with a dog walker, and someone who used to bring my dog to work and walk him daily on Crissy Field, it would be devastating to see the areas where humans and dog play together go away. I can say from years of experience of walking my dog with the Crissy Field dog walkers that they are some of the most courteous and considerate people of the land the space. Everyday I watched them pick up after every dog, fill gopher holes, appreciate the beauty surrounding them and be courteous to those also using the land. After all, they are the ones that have to come back day after day so it's important to them to have a clean space and friends in the shared space.

Also, rarely during the day did I see anyone BUT dog walkers on Crissy Field. Would it be a happy medium to make work hours off leash periods and alternate weekend days?

Please do not take away our wonderful, unique off leash parks and really think about if it is the dogs that are the problem. I look at how beautiful and pristine Crissy Field and compare it to the Fort Mason field that is always torn up and littered. Crissy Field is off leash and Fort Mason isn't.

Please reconsider your options!

**Correspondence:** Dear GGNRA,

I am a volunteer on the restoration projects in the Presidio as well as a park user and I also like dogs. I do not want to see dogs banded from all the park lands. However, I think that there should be some clear rules on where dogs are allowed, where they must be leashed, and where they are not allowed at all. These rules must be clearly posted and enforced.

While most dog owners are considerate and have voice control of their dogs, there are others who feel that their dog has the right to do as it pleases, where it pleases and if that includes digging up plants, chasing birds or defecating where others park visitors walk, it is their right because as they say they are "tax payers". I am also a tax payer, but I believe that we all need to have limits so that we can get along with one another and preserve our natural resources for future generations.

Thank you for tackling this contentious task!

**Correspondence:** While I find dogs to be inappropriate in an urban environment, it is their owners that make them so objectionable. They mess my front yard, bark late at night and now, it seems, seriously threaten the natural enviornment.

Nevertheless it is people that are the most disruptive of the environment, without question, and you can't (or aren't) getting rid of them. You might as well let the dogs have some fun by providing adequate play areas. With people tramping through and dumping their trash and butts anyway, there's nothing very natural about these parks now, is there?

**Correspondence:** I visit Fort Funston almost weekly and it is an invaluable spot in San Francisco for my very active dog to get his required exercise. With this outlet, I do not infringe on surrounding areas that do not allow dogs (San Bruno), yet if I was left with no "legal options," I would most likely end up using areas that do not technically allow dogs.  
I am a very responsible dog owner who uses leashes in leashed areas, cleans up after him and is respectful of other people using the same spaces. Allowing viable options is essential for so many dog owners in the city who simply wish to responsibly utilize outdoor space with their pets.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

---

I regularly take my dog to Muir beach where I live 7 minutes away....

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	While I am not able to get to the GGNRA parks as often as my dog or I might enjoy, our parks are a great joy for all - those with kids, with dogs, with friends, who walk and talk and enjoy the incredible scenery. It is my opinion that the new 'Preferred Alternative' is overly restrictive and that the older Pet Policy PLUS off-leash access (from late 70s) in San Mateo and for new GGNRA acquisitions would be preferable.				

Reading through various reports, I see very little included in the impact reports from those who support dog walking in these areas and yet a great deal from those opposed. Many of the impacts cited were 'might's' or 'can's' or 'could's' - I find this lack of evidence along with the lack of site-specific studies to be disturbing.

My dog is leashed until it is apparent that it is safe for me, him and others, and he is thereafter under voice control. The parks are a wonderful place for us to be with other two and four legged friends, where we all get some exercise and fresh air.

I urge you to consider all of us, all aspects of park use.

Thank you,

Beth

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** I am against the entire Dog Management Plan. You are required by law to have Site Specific Peer Review Studies used to prove your assertions that our dogs are harming any wildlife, habitat for wildlife, or vegetation in the GGNRA. Where are they? They need to be made public by law.

I believe everything that can be said has been said, except this one thing. You can never win this. It may seem like it for a while. But the truth is, we will never give up the privilege we've enjoyed for well over 30 years of off-leash hiking on this less than 1% o GGNRA. This is the thing. We have love on our side. And love is a great energizing and motivating force. It will always win against beaurocracy and mean spiritedness. Our generation may pass away before the battle for off leash recreation is won, but another generation will come along to take our place. Wave after wave of dog owners who love their dogs as family members, companions, protectors, will push against this Dog Management Plan until a future generation of GGNRA awakes to the possibility and need of sharing the land they are entrusted to steward. You people would be well advised to rethink your philosophy around off leash recreation. You would save yourselves a lot of time, trouble, and money.

**Correspondence:** I have been a veterinary technician, dog behaviorist, and avid birder ... so I am fond of both dogs and wildlife. It is very unfortunate that there are irresponsible dog owners out there who don't think beyond themselves, at the extreme expense of our natural wildlife. I have witnessed dogs charging the wildlife at Crissy Field, in the Presidio, at the ocean beach. I have also witnessed a responsible owner with their dog on leash who had a free-roaming dog attack their dog. The nearby owner ignored the situation.

Restrictions must absolutely be put in place to preserve our wildlife. They were here first, and they are the ones who are endangered ... not the domestic dog (who is of course a lovely companion, when properly trained ... and cleaned up after!) It would certainly be lovely to be able to take a walk without stepping around or into poop.

**Correspondence:** Dear Superintendent Dean,

My name is Melissa Severini and I live in San Francisco. I have walked my dog on many GGNRA sites for the past 6 years.

I strongly oppose the preferred alternative for all GGNRA sites because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

And finally, I urge you to consider the long-term impacts of dramatically raising the activation energy of hundreds of families and individuals in the city in order to get them to go outside with their dogs. Increased traffic congestion, number of cars in the city, and a less fit, obese population are all obvious long term side effects of this excessive and poorly thought out plan.

Sincerely,

Melissa Severini

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

My name is Kevin Clark and I've lived in San Francisco since 2006. I adopted a dog from a rescue in 2009 and have walked her all over the city. We're regulars at Bernal Heights Park, the Day Street Dog Run, Fort Funston and other parts of the GGNRA.

I strongly oppose the preferred alternative for Fort Funston because it is far too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

And finally, please consider increasing the number of off leash areas in and around the city rather than eliminating them. The dog friendly nature of the area is one of the reasons I'm here and continue to stay. With these sorts of changes, I'll be forced to look for access south or east which means more time in cars and less involvement with the local community.

Sincerely,  
Kevin Clark

**Correspondence:** I have been a San Francisco resident for the last 13 years and a dog owner for the last three. Thanks to having a dog, our family discovered Fort Funston. We enjoy it almost every week-end. Taking the dog for his weekly energetic frolic is a great pretext for the whole family to get some air and exercise. We would not do it if the dog was not allowed to run free up and down the dunes and hills, it's an essential part of the fun.

I am appalled that the National Park Service is considering restricting this area to dogs or requiring them to be on leash. In our regular hikes over the last two/three years, not once have we seen an incident involving a dog. All dog owners are responsible and all dogs are well mannered.

I understand the need for controlling erosion in this area and would be fine with closing off certain areas for short periods of time for reconstruction work. I would even understand a rule that dog owners have to take their dog waste back home so as to lower the burden of dog waste disposal on the park service staff. But take away the dogs' freedom to run and you will see frequency drop dramatically. The only alternative in the area would be Stern Grove that would, as a result, suffer from over crowding. Also, Stern Grove is inaccessible on Sundays over the summer due to the Festival, so dog owners would have no alternative.

Please let us continue to enjoy this little paradise for the whole family.

Thank you.

**Correspondence:** I move here from Belgium 17 years ago. In Belgium we have 20 miles of beaches and seashores where families come spend vacation time. Dogs are aloud in the morning and late afternoon. The hours vary according to month of year. In the summer, dogs can only go on the beach before 9:00 am and after 6:00pm. in the fall, it can change to before 10:00 and after 5:00. Winter may be different.

I would not suggest varying hours in San Fancisco, just one time marked on board in several places.

I heard once on NPR that park and rec thinks that this is not manageable.

I wonder why.

With hours posted, if there is no police, ordinary people will kick people with dogs off the beach.

The same way that smokers are being told off.

It is just a question of habit forming. It may take a few months but people will get it.

I have 3 children and have had dogs my entire life.

For 10 years, I lived on El Camino Del Mar near Baker Beach and enjoyed the beach with my kids and our dog.

Most people are good people who follow the rules. Granted, there are always rule breakers who sadly spoil things for everyone. However, extreme measures hurt families with children.

What is the percentage of families with children that have dogs.

I am sure there are a lot.

There should be a possibility to have some place where dogs would be allowed all day in some places.

In a culture where gaming is prevalent, parents going out with their children and their dogs should be highly valued and encouraged.

It helps building families, keep kids healthy and help fight obesity.

Compromises means inclusion of various needs, not unilateral exclusions.

**Correspondence:** As a homeowner and resident of the area, I live directly across Great Highway from Ocean Beach at Kirkham, I am very much invested in the continued health of the ecosystem, and maintaining appropriate access to the public lands.  
I spend time on the beach daily, and I am very aware of who uses the resource in an appropriate way, and who abuses the privilege. Dog owners are, in my experience, some of the best stewards of these resources. I, and my neighbors with pets, are often the ones who are in the position of leaving the beach better than we found it.  
There are laws in place that would adequately protect the fragile ecosystem if they were appropriately enforced. Before punishing all pet owners with a blanket ban on beach access, work within the structure in place.

**Correspondence:** I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

First of all, thank you for considering my opinion. I recreate with my dog in the off leash areas of the GGNRA often and it's a wonderful part of the Bay Area experience, both for people (including non-pet owners) and pets. A place like Ft. Funston is a local institution for dog owners and those who enjoy dogs alike.

Secondly, and more formally:

1) I oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

3) I oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy as the MBMS is still based largely on compliance with leash restrictions.

Best Regards,  
Matthew Goforth

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Jim Thirtyacre

**Correspondence:** I write in support of the proposed new rules and stricter policies for dogs in the GGNRA. GGNRA is the only national park that allows unleashed dogs, which has a negative impact on wildlife, plant life, and other patrons in the park. I say this as a dog owner and someone who has worked and volunteered in animals shelters for many years. But I am also a birder, and an environmentalist, and I don't believe that the narrow interests of dog owners should be allowed to trump all other considerations. Taking your dog to a public place, especially a national park, should be a privilege and dog owners should be aware of this privilege and the attendant responsibilities. Dog owners DO NOT have the right to go anywhere they want with their dogs, nor should they have the right to have their dogs off-leash in a national park, or to have their dogs at all in particularly sensitive areas. A balance of uses and strong enforcement are called for.

Thank you for the opportunity to comment.

**Correspondence:** If the government passes the law to always have pets on leashes, then pets that people own can't move more freely. My teacher, has a pet dog and two birds. He rides his bike along side with his birds that fly next to him. If the government passes the law, my teacher would have to ride his bike with the birds attached to a leash to the bike and the birds can't fly freely. Also, he has a dog that he walks. If the dog is attached to a leash all the time, his dog won't feel as free.

Sincerely,

---

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, especially Little Beach, the more private portion that locals use. Our dogs are members of this community, behave appropriately and politely, when trained under voice command; visit with other dogs (important to their well being - off leash!)and people and create no danger. They offer us important social, physical and emotional support. When you leash dogs, they become more aggressive and it is OUTRAGEOUS that Marin County would only offer ONE beach to exercise our dogs, and ourselves. Many studies show how important it is to humans to have dog companions and to restrict us with leash laws makes the experience unhealthy and more dangerous.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence Type:** Web Form

**Correspondence:** Dear Superintendent Dean,

My name is Alita Macias and I live in the heart of San Francisco, Nob Hill, where there are limited areas for pets to get a good run. I walk my dog at Lafayette, Huntington Square Park, Crissy Field, Golden Gate Park, Fort Funston and Holly Park for the past 4 of years. I've had the chance to work closely with SF Puppy Prep, Wonderdog Rescue and SF SPCA over the years, which are organizations that have helped to save and create healthy environments for our dogs.

I strongly oppose the preferred alternative for all areas noted in GGNRA Dog Management Plan proposal because it restricts the ability of any San Francisco resident, who vast majority do not have access to a backyard facility in their own homes, to safely and healthily own a dog. If you've ever owned a dog, you know that at minimum they need to be exercised 30 minutes two times a day to avoid separation anxiety, destruction to rental property, weight gain, depression and other health issues. A dog that remains indoors and with no exercise is a dog that an owner will quickly become unable to manage and maintain ownership of. It doesn't take much for a dog owner to throw their hands up in desperation and abandon a pet, should the access to facilities become difficult. With a plan like GGNRA Dog Management Plan there is certain to be an impact on shelters, rescue adoption agencies and dog training/walking facilities as an increasing number of dog owners will abandon their pets. We already face extreme issues with overcrowding in shelters and stray animal control - why then force beloved pet owners to have to give up their pet when it could be otherwise avoided.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

In addition, there has not been a single, peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove that negative environmental impacts are not only occurring now, but that dogs are specifically the root cause of them. We want real science not anecdotes.

If my dog does not have access to open spaces, I'd be forced to give up my pet for adoption as he'd be unable to participate in walking groups with his walker, who would face fines from this new plan. He has very high-level of energy, left at home all day to his own devices would cause noise complaints with neighbors in my building as well as cause damage to the unit, which would force my property manager to evict me from my unit. The only alternative is to drive outside of San Francisco for exercise, which not owning a car and working full-time is a huge strain financially, notwithstanding losing my apartment. I have lived for 7 years without a vehicle and as a citizen of San Francisco my carbon foot print matters quite a bit to me - please do not make me have to buy a car or risk losing my housing, so that I can simply exercise my dog and keep him in a healthy state of mind.

Sincerely,  
Alita Macias

**Correspondence:** Dear Superintendent Dean,

My name is David Klug and I live in San Francisco. I have been visiting GGNRA lands, specifically Chrissy Field and Muir Beach for the past 2 of years. I exercise there with my companion dog off leash and under voice control for both my own health as well as the health of my pet.

I oppose the preferred alternative for Chrissy Field and Muir Beach because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not

adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored.

I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will make people and their dogs feel penned in. In addition, any barriers put up will impede the natural movement of wildlife.

I would ask the GGNRA to conduct the necessary site-specific peer- reviewed studies (as they are required by law) before making any changes to the uses of our recreational land.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on compliance of leash laws and therefore allows the GGNRA to change the status if they deem park users are in non-compliance.

And finally, (please state in your own words how the restrictions will impact your life- examples may be having to get into your car and drive long distances to walk your dog or not going out on walks with your family because you can't take your four-legged friend etc.)

Sincerely,

---

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Yvonne Soria

It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

I walk Funston 3 or 4 times a week. Its one of the treasures in the Bay Area, because of the people that go there. It's not pristine nature, there's still rebar and old fortresses, the waves are often overshadowed by target practice at the nearby gun club, but it's perfect as a point for recreation. We need to keep an open space like this for the huge number of people that have dogs in this area.

I can understand setting restrictions in some of the more dense areas. Chrissy Field is FLOODED with people now non-stop. I think setting hours for those areas makes a lot of sense. But leave Funston alone.

**Correspondence:** Dear Superintendent Dean,

My name is Lauren McGehee and I live in San Francisco. I walk my dog on Fort Funston, Crissy Field,

---

and Ocean Beach for the past 2.5 years.

I strongly oppose the restriction of off lease play areas because it is too restrictive. It also does not adequately analyze the impact of the preferred alternative on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, there are so few places that are off-lease dog friendly within San Francisco. My dog is very high energy and loves to run on open stretches like Fort Funston. Without these special places, he and I will not get the exercise we need and love.

Sincerely,  
Lauren McGehee

<b>Correspondence:</b>	Please do not take away any more leash-free dog areas in the Bay Area. I have an English Mastiff, who is a gentle giant. Because of his size, he doesn't get the same benefits of being taken to a small, enclosed "leash free" area. Without places like Fort Funston, his health will suffer. The people who enjoy the benefits of leash-free areas often leave the place nicer than when they arrived. These leash free parks also provide happiness to non-pet owners, who enjoy the benefits of being around animals. It would be a travesty to see these leash-free zones taken away without quantifiable facts supporting a valid reason why San Francisco is adversely affected by dogs in our parks.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Chris Crofford

**Correspondence:** I would like to make a comment. I live with a dog, a wonderful dog. When I take her to the beach I see how happy she is chasing her ball. I am not just about dogs and respect the limitations posted for the birds. If she even thinks about chasing a bird she gets a "time out".

This is not an intellectually perfect note, it is from the heart. Please please please do not that this joy away from my dog and my family who love the beaches I grew up on away from us.

Please go outside of your box and consider how much this means to us.

Regards,

Christie

**Correspondence:** I find the picture you posted a situation at one specific park for which you are drafting policy that effects all non prohibited areas (few as there are) that are still open in to dogs on leash in my area. The GGNRA was created with the blood and sweat of local West Marin citizens and ranchers for the purpose of creating open spaces and trails that would serve the people living here as well as the people of this nation. If you pass this policy you are restricting use to the local public. There are very few alternatives than the few dog accessible trails that remain here. All parks are State, county, or federal lands granted by the people for the people. It would be ridiculous to cause in accessibility to local citizens who walk with their pets and yet allow biking for people that live outside of the area. I urge you to rethink, and or scrap this anti-dog, anti- local policy. You might instead take note of the wealth of dog prohibited park spaces that are already available to those members of the public that are concerned about dogs. And if there is an ongoing problem in a site specific area reduce your policy to that area. Dogs are part of many families and despite I have not seen any incident of dog attacks or interaction with wildlife in the parks around my neighborhood that would justify decreasing access as recommended in this project. There is far more adverse interaction with the park lands from bus loads of dog less people that defend on our communities every weekend than there is from those few that come out here and hike with their dogs to enjoy our regional parklands be they National or otherwise. Those dog owners should not have to chose between spending time with their dogs and enjoying the outdoors. Perhaps you should research how much dog welcome area has already been lost before you consider further restriction.

Sincerely, Amelia Neffati

**Correspondence:** Dear Superintendent Dean,

My name is Sarah Burke and I live in San Francisco. I have walked my dog on Ocean Beach for the past 12 of years.

I strongly oppose the preferred alternative for Ocean Beach and the other GGNRA parks because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. We want real science not anecdotes.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, nature and natural spaces are to be enjoyed by all. Please impose that dog owners clean up after their pets, and leash their pets when necessary. But to restrict dog owners to enjoy natural local spaces with their dogs...why do this? Our dog is part of our family, and having to drive long distances to enjoy nature because our dog Maya is no longer allowed in local parks around San Francisco will affect not only our family time, but perhaps more importantly, such a restriction is just another example of the ever-changing San Francisco; once a place of soul, peace, love and freedom, now the home to the Google bus and park restrictions.

Sincerely,

Sarah Burke

**Correspondence:** Dear Superintendent Dean,

My name is Laura Cheek and I live in SF. I walk my dog around Chrissy Field, Fort Funston, Bernal Heights, Marin Headlands, ect.

I fear that the restrictions will limit the places my family and I go on hikes, since we highly value having off-leash areas where the dog can roam. Living in SF is restrictive as it is for a dog, so it would be nice to keep our parks open to off leash recreation.

I strongly oppose the preferred alternative for SF parks (Chrissy Field and Fort Funston) because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Dogs are a large part of our lives and they need space to run free. Designated dog parks for off leash use are a benefit to our society as it is a place for a large group of our population to congregate and enjoy the outdoors with our fellow neighbors. Removal of such a place will lead to increased issues with dog walkers on confined sidewalks and increased issues with dog waste on sidewalks.

Sincerely,

Isaac West

Letter #2

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely, Ruby Rieke

**Correspondence:** There are very few places to let a dog run in a city like San Francisco. One of those places is Fort Funston and it truly is a paradise for dogs and our kids. Before owning a dog we never went to Fort Funston, now we go almost every weekend. We've taken a number of people with us and they too have enjoyed Fort Funston, but had never been and would not have gone had we not had a dog.

There is no reason to restrict dogs from being off leash in a place that is almost entirely used by dog owners. The dog owners know they have to have their dogs under voice control and I have never seen a

problem at Fort Funston concerning dogs not on leash. Without these dog owners there would be no need for Fort Funston as it would be highly under utilized.

We pay a lot of taxes, and there are more people that would prefer a no leash required but under voice control policy than there are people who want to use the park without any dogs. So really, there is no reason not to let the dog owners have a place like Fort Funston to use for their dogs.

Sincerely,  
Christopher Aaron Fraser

**Correspondence:** The newly restrictive dog management plan makes no sense. If the problem is that people have not been adhering to the existing plan, the solution is to enforce the existing plan, not to make it even more restrictive. This only punishes the people who HAVE been following the plan, and those who flout them will simply continue doing so.

The whole point of the GGNRA was to provide open lands for human recreation in a dense urban environment. If you severely restrict our ability to bring our dogs with us, that will just mean the public will derive less enjoyment from these valuable public lands.

Please pay attention to the public comments on this issue and revise the plan accordingly. Thank you.

**Correspondence:** I would like to voice my support in favor of rules to compel dog owners to keep their dogs on leash. I understand many dog owners would feel burdened by these rules but I also feel very strongly that negligent dog owners have ruined off leash for responsible dog owners. An incident where an off leash pit bull chased and attacked a Park Police horse serves as a reminder of the horrible consequences of a negligent dog owner. Although this is an extreme example it is an intolerable situation. Dog owners ought to be held accountable as a community and unfortunately there is no way to separate the responsible and irresponsible dog owners and so in order to protect public safety reasonable measures need to be taken to protect the public. It is unfortunate for the responsible owners but it is not an unreasonable burden for owners to keep their dogs on a leash. Thank you.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** To whom it may concern,

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I am a veterinarian in the community and I regularly take my dog to areas of GGNRA that currently allow dogs. As a veterinarian and a dog owner I cherish this opportunity and recognize the benefits both dogs and owners receive from having access to these areas.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Dr. Liz Milauskas

**Correspondence:** I am opposed to the entire GGNRA Dog Management Policy because I disagree with its premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. By their own admission, the GGNRA had no data or studies to support these claims and they are relying upon these claims to initiate a process whereby access for people with dogs will be severely limited or completely banned. Even now, with this SEIS, the GGNRA admits they have no site-specific peer reviewed studies (required by Federal law) to substantiate their claims that dogs are a problem for wildlife, water quality or vegetation in the GGNRA. Instead, they rely upon anecdotal evidence and baseless assumptions to claim dogs have the potential to damage this Recreation Area.

Additionally, in the SEIS the GGNRA asserts they have the right to redefine the term "recreation" as utilized in its enabling legislation and in the promises made to the voters of San Francisco back in 1972 by the GGNRA/NPS/DOI and the GGNRA's first Superintendent, the Honorable William J. Whalen, in order to secure various properties then owned by the City and County of San Francisco. These promises, most importantly, stated that this National Recreation Area would retain historical recreational access (including off-leash recreation) should the citizens vote to include SF park properties in the GGNRA. These promises, along with the conventional definition of the term "recreation", do not comport with GGNRA's current philosophy exemplified by Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA, who in 2007 was quoted as saying "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard." The GGNRA does not have the legal authority to rewrite history or its enabling legislation to their own design.

Once again, buried deep within the SEIS is the GGNRA's poison pill. Only the name has changed; it is now the Monitoring-based Management Strategy. The GGNRA gets to decide whether we are in compliance, and the measures of compliance are subjective. Under this SEIS the GGNRA may decide to

impose short-term or long-term closures of areas. These short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which dog guardians have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston could be their reason to ban dogs entirely from these beaches. This is unacceptable.

The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. All properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time.

If the GGNRA does not want to manage these properties as a Recreation Area, then they should transfer the Recreation Area to another entity better able to manage it, e.g. the Forest Service or Bureau of Land Management. Alternatively, for sites heavily utilized by dogs and their guardians, such as Ocean Beach and Fort Funston, these properties should be reverted back to San Francisco.

**Correspondence:** Taking dogs to recreational areas to play is an important part of many dog owners. It is rare, if ever, to hear people being bothered by an off leash dog sharing park space etc, in fact, people show great affection to dogs in general. The new policy is trying to solve a problem that doesn't exist, and frustrates a large portion of the population it tries to serve. I hope policy makers gather real data and opinion, instead of sticking to a plan that came only from their personal preferences.

**Correspondence:** I strongly oppose the Sept. 2013 Dog Management plan by the GGNRA. Cutting the areas where dogs can be on and off-leash by 90% is absurd. And this plan will have NO off-leash anywhere in San Mateo County!! You are not just cutting the dogs out of enjoying these properties, but children/families as well. Please spend the time to consider the opinions of all opposed to this plan, and come up with a strategy that is family friendly. These are the people who support California and its public lands.

**Correspondence:** Hello

I oppose the GGNRAS's preferred alternative to off leash dog walking, and my family supports the no action alternative.

I spend time at Ft. Funston and around Mt. Tam hiking with my family and my dog. These are beautiful and important days for us as Bay Area residents. I believe its crucial to have these areas open to off leash dog use.

The GGNRA is an urban park, not a wild area. It's crucial recreational space for our city. By severely reducing off leash dog walking, the GGNRA violates the legislation that allows different user groups - including off-leash dog walkers -to recreate.

Please enforce the existing rules to manage dogs, these are adequate for our city and its open areas.

Thank you!

Arin Fishkin

<b>Correspondence:</b>	To whom it may concern:				

I am a 3rd generation Bay Areaan, born in Oakland and residing in San Francisco for the past 24 years. I have been avid parkgoer since my birth in 1972, when my parents would take my brother and I all over the Bay Area to experience the glorious nature around us. I have pictures of my mother rocking me to sleep as an infant in Mother's Meadow in GG park, of my father carrying me on his shoulders in Muir Woods. We've camped everywhere we could, from Angel Island to the Marin County Coast, and hiked up Mt. Tam. We've spent lovely days at Stinson Beach and Bolinas, even though it was too cold or rough to go in the water. My entire life can be viewed through the lens of the amazing park systems you manage. And now, I take walks a few times a week through the Panhandle and GG Park to maintain and improve my health and fitness. So thank you, from the bottom of my heart and the soles of my feet, for the work that you do to preserve and maintain it.

I am not a dog owner, but I love that they are also a part of the park experience. And I don't understand why their access should be further limited within our park system. The dog owners I have observed over the years are some of the most responsible parkgoers I encounter. I can not believe that dogs present any real problems in the very limited off-leash space they now enjoy. Those areas are essential, I believe, for the social well-being of both the dogs and their owners.

Park impacts, I believe, would be far better served by Leave No Trace education and activies. Please reject any more misguided efforts to reduce negative impacts on our beautiful parks by blaming dogs and dog owners. I honestly don't understand how anyone thinks this is a good solution, unless they personally are afraid of or dislike dogs.

Thank you for your consideration.

**Correspondence:** Letter #2 - - Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

<b>Correspondence:</b>	Dear Superintendent Dean,				

I walk regularly with my dog in the GGNRA, so I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for the past 11 years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I find true refuge whenever I go to a GGNRA property. It is my place to unwind and where I go to feel good from the various sights I see. From the many dogs that walk around looking so satisfied from their excursions, grinning ear to ear, to the ever changing landscapes that nature is providing. Going to these grounds never gets old, I would go everyday if I could, I know of some people who do. And this petition isn't just for "dog people", but believe me we are passionate about it, it's for the people who run or walk the trails too. They choose to walk amongst the furry four-legged probably because it makes them happy too or provides some entertainment to take their minds off their work out.

I recall a family came to visit from Sacramento and they were amazed, blown away at what an amazing

dog friendly area Fort Funston was. They wished they had brought their dog , but they got their "doggy fix" anyhow. They explained that there was no such place in existence in Sacramento. I met a lady who lives in San Jose but brings her dog up to the area twice a week for the sole enjoyment of allowing her dog off leash, and ability to play on the beach. That's amazing!

I am a member of the local veterinary community, a responsible member who is advocating for the right to enjoy these places as I have for the past 11 years. Please, and thank you for listening.

Sincerely,  
Genovieve Gomez, RVT

<b>Correspondence:</b>	While I agree that sensitive areas at Crissy Field should be properly fenced and marked to keep dogs away from endangered species, it's important to keep the park dog-friendly.				

I walk there nearly every morning with my neighbor's terrier, a sweet little dog that likes to burn off energy but is quick to return to my side when called. I have not encountered any scary dogs or careless owners. In fact, I find that dog walkers as a group tend to police each other when it comes to courtesy. The people who think it's amusing or otherwise acceptable to harass wildlife or leave messes are not the norm in my experience.

Crissy Field should indeed be for everyone, including non-dog lovers. However, I implore those in power to consider the uniqueness of the park for those of us who love our city and our pets. Crissy Field is home to natural species, but it's also a sanctuary for those who enjoy a natural setting with our own special animals.

From my experience, mornings without dogs at Crissy Field would be a great loss and diminishment of life in San Francisco.

Thank you for your thoughtful consideration.

**Correspondence:** My family lives in San Mateo and we strongly support limiting the negative impacts dogs have on our open spaces. We live near Sargarloaf and experience first hand the feces the noise pollution and the limits dogs are putting on the use of the park for not just people and children but also the native species. I know dogs are cute, but I hope their owners don't bully down some sensible limits. Dogs are great in dog parks, back yards and homes, but in nature and parks where children and other less protected species dwell they are out of control.

**Correspondence:** This plan is way too restrictive. The number of people and dogs this will hurt far outweighs your purported reasons for the changes you want. Currently, there are very few incidences where dogs interfere with humans enjoyment of your parks. Also, dog owners and walkers are for the most part responsible for picking up after their dogs. I know that I'm meticulous about it.

I would really hate to loose Ft. Funston as a dog park. It's our daily dose of comfort and enjoyment and I know of many who don't even have dogs who enjoy watching and interacting with them.

San Francisco is already a place that's very expensive to raise children, so many families leave. Those of us who can't afford children, often adopt dogs as a substitute. Let's keep San Francisco a dog-friendly place.

Thank you.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Lance Farrell - Proud Marina off lease dog park goer for over 6 yrs.

**Correspondence:** I live in Sausalito and use the Alta Trail and Oakwood Valley trails at least once a week. I walk with my dog for exercise and to enjoy the natural setting. O believe this is what a recreation area adjacent to a highly urbanized center is intended to do. In this area I can only endorse Map 4A which is the current situation. If you make this an on leash area it will not serve me and will lessen my enjoyment this open space.

I occasionally take my dog to Stinson, Fort Cronkite and Muir Beach.

After reviewing the maps for Muir Beach I find that 5A and 5E are acceptable. This is historically an off leash area the wildlife in the area is habituated to this reality.

Walking with my dog makes me feel safer and as a senior citizen I am a potential victim of crime.

Walking with my dog gives me needed recreation.

This is a recreation area and I can't understand why you want to restrict our historical use.

Michael Sheats

**Correspondence:** Hello,

I will try and keep it short and simple. I have been biking, hiking and walking all of the Pacifica trails and beaches for the past 8 years. Even before they have urbanized Mori point. I have witnessed dog owners, bike riders and families from the trail to the beach. I have to laugh at these people that have zero tolerance to dogs. Over the years I have witnessed more families or should I say parents that let their kids run wild, tramp, pick and virtually destroy wild life then any of our four legged friends. Yes there are a very few irresponsible dog owners that do not pick up after pets and that is unfortunate. Just as unfortunate when you look at Lindamar beach after a nice day and all the trash that is left behind by slobes. This I believe creates more havoc then any furry friend could do. And about the snowy plover..... the dogs are running on the beach and not up in the dunes. The few that I do see chase the poor little plover, they just fly away. What is next, I will not be able to fly my kite on the beach due to the plover. People, nature will find a way. Remember the spotted owl that could only live in trees. What did they find 5 years later, a spotted owl nesting in a Walmart. Can we bring common sense back to the table please or should we make a leash law for kids or better yet, their parents.

**Correspondence:** Proposed changes will severely affect the off leash fun our dogs can have at spaces like Fort Funston, Crissy Field and Ocean Beach. Why should we go to a dirt dog park when there's an abundance of amazing beaches and trails to roam free? We clean up after our pets, exercise strict caution with them when off leash, and generally love the outings with our dogs. The exercise is fantastic, keeps them happy and healthy, and provides them with enough activity at times when they're with their dog walker so that I can devote more of my time to foster dogs and volunteer work with the Humane Society and local rescues. By the way, any ideas on how fencing is going to help anything should really be looked at more closely. I fail to see the thought process behind it.

Dear Superintendent Dean,

Several times a month, I go all the way from Berkeley to Fort Funston because it is such a special place for me and my dog. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** Please do not reduce the areas where I can walk my dog off leash. I have a large dog that needs to run. I live in San Francisco, and have walked with dogs off leash my whole life; at Baker's Beach, Land's End, Sutro Heights, Ocean Beach, Fort Funston, in the Presidio and at Crissy field and Fort Point. I appreciated the beautiful new paths and improvements that have been done over the years. I respect that areas with fragile new plantings and agree they should be protected from humans and dogs who would destroy them but once they are established they should be hardy enough for the area to be used by the public. Dogs need exercise running. So do children. My dog is a princess and does not trail blaze. My godchildren love to trail blaze. If a dog is not friendly with other dogs, children or adults, those dogs must be required to wear a muzzle and be on a leash. If I have ever been with a dog that is not good off leash, I have controlled that dog with a leash. I think it would be very narrow minded, lowest common denominator thinking to stop the rights of all dogs for a few bad ones. Please clarify the law that dogs should be under control otherwise they should not be off leash.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Fort Funston, Crissy Field & Ocean Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I have been commenting and going to meetings for years and years. That means I have had dogs for years and years (since 1990 in San Francisco). The points I keep coming back to: (1) I don't see problems on the beaches and I have been going for so long and so frequently. It makes me feel like it's about expanding tourism or making money somehow and not about dogs and people and nature. Are there people with dogs writing these regs???(2) Speaking of nature, since when are dogs not a part of it? I am very pro-nature in every sense of the word (I am nature!) but to restrict further the areas where dogs play? Dogs help people cope in a very un-cope-able world. They lower blood pressure and get people outside walking and running. This is good for the universe. To restrict these immeasurable benefits at a time when housing is expensive could mean a San Francisco without dogs - - and more dogs being put to death - - and more isolated individuals. How very sad.

**Correspondence:** As a San Francisco resident, senior citizen, and dog owner I wish to state my opposition to the proposed Dog Management Plan. The GGNRA is supposed to be for everyone, and the area where dogs are currently allowed off leash is a very, very small percentage of the massive GGNRA. The dog walking areas are used by a broad cross section of the community, and by taking away the majority of that small area our rights to enjoy the GGNRA as we have historically been allowed to use it are being taken away.

You could make the dog walking areas places to increase the income of the GGNRA by encouraging the enjoyment of those areas. Just placing coffee and food trucks in those areas would bring in needed income. Figure out ways to make them better not restrict their use.

Joanne McGrail

**Correspondence:** Please consider leaving the off leash areas as is. We so enjoy spending time with our sons, their families and pets in these areas and have NEVER had anything but a pleasurable experience. The people we have met, with or without dogs, are happy and so are pet owners and their dogs.

I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

Thank you for considering my opinion. I recreate with my dogs and my family and friends' dogs in the off leash areas of the GGNRA often and it's a wonderful part of the Bay Area experience, both for people (including non-pet owners) and pets. A place like Ft. Funston is a local institution for dog owners and those who enjoy dogs alike. I cannot imagine not being able to enjoy Ft. Funston as it currently exists.

Secondly, and more formally:

1) I oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

3) I oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based

---

Management Strategy as the MBMS is still based largely on compliance with leash restrictions.

Please, please why would anyone want to change such a wonderful experience for so many?

**Correspondence:** I applaud the new restrictions on dogs in GGNRA areas. I live between Sweeney Ridge and Milagra Ridge in Pacifica and hike there often. I have had dogs run at me and have seen large dogs chase coyote, deer and rabbits. Wildlife cannot be protected without some restrictions on dogs. Unleashed dogs invite conflicts with people and coyotes. I also volunteer in a Wildlife Rehab program and see the effects on birds, skunks, opossums injured because of contact with dogs. I realize that dog owners need a place to walk their pets, but strongly enforcing leash laws and making some sensitive areas no dogs will help wildlife, plants to thrive. I moved to Pacifica for the nature and have been seeing in degraded due to unleashed dogs. I support more dog park areas but not in GGNRA and park areas or areas where neighbors are disturbed by barking.

**Correspondence:** I recently moved from the Sunset district to LAkeside district of SF. I visit Fort Funston and Ocean Beach about 4 times a week with my two small dogs. The benefits for both my dogs and I are amazing. It gives them freedom to explore beautiful outdoor settings while at the same time exercising their obedience to respect the environment and other people and dogs who are enjoying it as well. Without access to such places, we will be limited to our home or small gated areas which aren't enough stimulation for them or myself. Without the stimulation, my dogs easily get bored, which leads to unnecessary barking at all hours and therefore unhappy neighbors. My dogs have been going to Fort Funston and Ocean beach since they were puppies. Our family would be devastated if this access was taken away as it is one of the reasons we choose to remain residents of san francisco.

**Correspondence:** Dear GGNRA,

As part of your Dog Management Plan, I think you have grossly overlooked the importance of these off-leash, manageable dog areas. Every time I visit a park in the San Francisco area, regardless of policy, I find that owners tend to have their dogs off-leash, for better or worse. The danger of people shirking policy is that the bad dog owners win. Those who are okay potentially endangering the safety of children or other animals are the ones who will begin to dominate our parks and those who are looking for a safe and managed space to let their dogs off-leash will have no where to go. This not only endangers the lives of people but also infringes upon the rights of those dog owners who do effectively manage and clean up after their pets. The people who should be impacted by this are not the ones making use of approved spaces but those who do not make use of those spaces. When you eliminate those spaces, the rule-breaker's domain gets larger. Not only should you not shrink the size of space available to dog owners but increase it in order to cut down on the unmanaged dog off-leash population. With effective policy comes the ability to manage those who cannot manage themselves.

Please reconsider the impact to the overall community and to dog owners all over the Bay Area.

Best,

Hannah

**Correspondence:** Regarding the proposed restrictions on off leash dog use of areas in GGNRA where it is currently allowed. These are urban parks and beaches. They are not the most pristine of California's shoreline. Dogs are not native species, nor are humans. How can GGNRA consider leasing space to commercial ventures while at the same time restricting recreational use?

My dog is an officially licensed service animal key to the health and functioning of my family. Why should she be suspect, and suspect of what? I am responsible for her care and cleaning up after her, but she deserves to feel her own energy and exercise with her friends. Is she a greater potential threat to the beach or the bay than a car leaking oil or CSO discharge?

Please defend the off leash areas that exist now, serving a region of 5 million people. This is not a wilderness. Within 100 plus miles in either direction from San Francisco I can count off leash beaches on one hand.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties such as Crissy Field, Fort Funston and Ocean Beach since we moved to the area.

We Moved to SF because its Dog Friendly

One of the main reasons why my husband and I chose to move from London in the UK, to San Francisco was that its known to be one of the dog friendliest places on earth, with lots of stomping ground for our happy bouncy dog. We believe that an exercised and socialised dog equals a happy and good dog - and that is of course something that most dog trainers would agree with too.

The City Parks will get Over Crowded

I'm worried that if the bigger GGNRA parks will close down for off leash dog walking in line with your proposed dog management plan, then the thousands of dogs who get their daily exercise will have to come to the smaller city parks - which are already full of other dogs! I'm talking about parks such as Alamo Square Park, Duboce Park, McLaren Park, Buena Vista Park to mention a few.

I don't need to tell you the dangers of over crowding dog parks, but apart from less enjoyable exercise for canines and humans alike, one worrying long term result could be that if San Francisco's pooches will get less exercise overall then that could result in more stressed, misbehaving dogs who might end up in the city shelters if their owners feel they can't cope.

The Dog Management Plan was not Modified as Promised

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

---

County and on new lands that the GGNRA acquires in the future.

Sincerely,

Linda Liebrand

**Correspondence:** We have been walking our dog on Ocean Beach since the day we got him, he does not get to go out much and being able to walk off leash is the only thing he has to look forward to. He is extremely well behaved and under complete voice control, so there is not the slightest chance that he will disturb any wildlife such as the snowy plovers. I feel that a mob of drunken men playing frisbee on the beach will cause far more disturbance to the endangered bird nesting areas than does a well behaved dog walking calmly with his owner. If the goal of the GGNRA is to prevent dogs from running wild and disturbing the wild-life, then they should make a rule against that behavior, not being off-leash per se.

The constant proliferation of rules against dogs in parks is becoming a real problem. For many of us, walking our dogs is how we relax and cope with the daily stresses of life. When you restrict our ability to do this, it is going to have consequences for the well being of a great many people.

I also note that I have walked on Ocean Beach for years and I have never seen snowy plovers north of Taraval. I suggest that if the real goal is to protect these birds and not just to restrict dogs uniformly, restrictions would be most reasonably put into place in those areas where the birds actually nest.

Respectfully yours,  
Wallace Marshall

**Correspondence:** I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it's too restrictive and will drain resources on an already resource strapped city. Let's put our monitoring services to good use and keep people safe in urban environments that are currently hotspots for drugs and crime like the tenderloin and upper Haight. Dogs off leash should be the least of our problem and it sends a pretty strange message about our priorities if we have someone walking around our policing leash laws when we have so much serious crime rampant in our neighborhoods.

**Correspondence:** To whom it may concern,

As a San Francisco resident for 13 years and responsible dog owner, it is imperative that the off-leash areas in the city remain off-leash. These places are used by people to enjoy meeting other dogs, socializing and creating a educational environment for our pets.

A socialized dog is a well behaved dog. Most dogs who live in a closed habitat can become vicious and anxious, that which I witness in other counties and cities.

For the dog population that San Francisco county has (factually having more dogs than children in population) it is extremely important for this society as a whole to keep the off-leash areas we have now.

Thank you for your consideration

PG

**Correspondence:** I am a proud owner of a dog walking company ( Dog Trotters ) since 1997. I have been walking groups of dogs in the golden gate open space and Marin open space for 17 years, I am also Native American and think it is our freedom to be on the trails while respecting them and keeping them clean. Dogs and animals need to be on the open space to play, run and be out in nature. It would be a crime to Native Americans, dog owners and Dog walkers to put laws on open space and then police them to keep dogs off of them. In the eyes of the Great Spirit please keep the open spaces of Golden Gate open to dog owners and dog walkers and all people. Dog walkers and dog owners live in harmony with others who use open space (bikers, families, children, joggers and all who love nature) Dogs are pack animals and behave themselves very much when they are having fun with their own kind. I wonder who are the ones who are trying to kick dogs off golden gate open space even have dogs and know what Marin dog owners and dog walkers would lose by doing this ? This would be a tragedy ! In the name of our ancestors, please keep Golden Gate open space open to all dogs (off leash) so they can play, run and be dogs. Me and my fellow dog walkers are committed to picking up all our dogs poop and keeping the trails clean and people friendly. Sincerely, I Don David Topliff / Owner of Dog trotters & dog walker with Heart / www.dogtrotters.com

**Correspondence:** GGNRA and the National Parks are prohibiting access by a large population of the U.S., namely dog owners.

The term "Recreation Area" implies that we should be able to bring all of our family members, including pets. It's not a preserve, it's not a reserve, it's not forbidden private property.

As a dog owner, I find it undemocratic, unfair, and unrepresentative to institute draconian rules which enrage the public, discourage funding for parks, and degrade faith in government.

Please reconsider your stance, and allow use of public space by all.

<b>Correspondence:</b>	Dogs are living things like us. Dogs have the right to run around, play, and enjoy their life that is shorter than ours and the only way they can is to keep the dog parks open. Most people do not have enough money to move out to another area where dog parks are still open. Closing down 90% o SF's dog parks will cause dogs to loss something very important to them, their exercise. Dogs need exercise, its very important to them and closing down dog parks, is like taking away what dogs do for a living.

<b>Correspondence:</b>	I would be very disappointed if most of these areas were designated as "on-leash" rather than the current "off-leash" laws. I currently live in Oakland because of the off-leash regional parks and have considered a move on San Francisco only because of the existence of fort funston and crissy field. There are so very many places where dogs are already not welcome in the city. I do not understand why there should be more.

**Correspondence:** Dear Mr. Dean,

I am writing in response to the proposed off leash restrictions in the GGNRA.

I have a sweet 5 year old mutt, Milo, who is the love of my life for my husband and I. Especially since we don't have children our dog is a huge part of our little family and thus family walks are a regular occurrence. There is nothing quite like watching our sweet furry boy run and play off leash. My dog is well behaved, under voice control and I keep him out of replanted/restricted areas. We always try to leave the park cleaner than we found it and regularly pick up trash from careless visitors.

Some of our most favorite places to walk in GGNRA within San Francisco are Crissy Field, Baker Beach and Ocean Beach. We have been visiting one of these places at least once a week over the past four years. In addition, I know that our dog walker is a regular at Fort Funston and I speak for her and myself when I say I cannot even imagine walking there with my dog on leash. We call it Fort FUN for short because that's what it is for our dog when he can be free there.

Outside of the city we LOVE to walk and run in the following parks as well:

Mori Point

Sweeney Ridge

Stinson

Muir Beach

Rodeo Beach

Marin Headlands

Fort Baker

I am very concerned that if the GGNRA further limits dog walking as recreation, what few surrounding parks and trails that do allow off-leash will become overcrowded and overburdened. We need more access, not less.

I have been told there are more dogs in SF than children. What will happen to the few parks that allow off leash walking? I live near Dolores Park and can see first hand what an over used/abused park looks like, and I'm not referring to the dog owners at Dolores. I think that most dog owners/walkers are respectful and do their best to be considerate of the other visitors in the parks. I think we have been enjoying our open spaces concurrently.

The GGNRA is an urban park, not a wilderness area. It's critical recreational open space for a densely populated urban area.

San Francisco is a wonderfully dog friendly city and it is one of the things I love most about my city! All the beautiful open spaces there are for my family, which includes my dog, to walk together, makes SF a truly special place.

Another concern I have is that SEIS lacks scientific data. Instead, it makes assumptions and assertions with absolutely no peer reviewed site-specific studies as required by law. Without these studies and corresponding data, there is no legitimate or legal foundation for these policy changes.

The plan doesn't differentiate between impacts caused by humans or other animals. It just assumes all the negative impacts are caused by dogs.

There is no federally designated critical habitat in the GGNRA. Yet they cite possible impacts on critical habitat as a reason to ban dogs or restrict access to dog owners.

By severely reducing off leash dog walking, the GGNRA is in violation of its enabling legislation that allows different user groups -it specifically mentions off-leash dog walkers -to recreate.

I oppose the GGNRA's preferred alternatives and support the NO ACTION alternative.

Please, PLEASE enforce the existing, and fair, rules to manage dogs.

Thank you for your time,

Wendy Osborne  
Mission District

**Correspondence:** I just moved to the area last year and I love living near the beach. But most of all, I love that my dogs can run freely and meet other friendly dogs in the area. Please keep open areas for dogs to run free! We live in a one bedroom apartment and it's amazing to see their little faces light up when we get to the sand. They have large smiles while enjoying their runs around the beach and the parks. People always comment how cute and friendly they are. They create no problems by being off leash. They bring smiles and happiness to other people around them. This is one of the many things we love about living in the city, it's a dog friendly city.

My hope is you realize the freedom that comes for dogs and their owners to have them off leash.

Thinking positive thoughts that you will honor our request to keep open off leash areas.

Thank you,

Tina

**Correspondence:** I am wariting as a resident of San Francisco asking you to not increase restrinctions on off leash dog walking in the GGNRA and to keep the 1979 guidelines for dog walking. I take my dog to Fort Funston every week because I can walk him off leash there. He is awlays under voice control and does not bother others using the park. It is a rare exception that I see a dog that is distrubring other people there. There SEIS fails to provide enough evidence to justify the need to restrict dog walking. Public comment to the 2011 DEIS was largely opposed to restrictions on dog walking but SEIS fails to acknowledge these comments and the public's will. Fort Funston, Ocean Beach and Crissy Field are all part of the city of San Francisco and it is vital that the needs of San Francisco residents are taken into consideration. When I go to Fort Funston I see hundreds of resposible dog owners out with their dogs. This resource is vital to physical and psychological health and it would not be in the public good to restrict dog walking.

**Correspondence Type:** Web Form

**Correspondence:** I am particularly concerned about the restrictions being proposed on off-leash areas in Pacifica such as Milagra Ridge, Sweeney Ridge, Mori Point and the beaches. I have lived in Pacifica for 32 years and have hiked daily on these hills and beaches. Having hiked with a dog companion all this time, I know from direct experience that very little, if any, damage is done to the environment or species residing within these open space areas. More damage has been created by off-road vehicles of the past, horses and negligent human visitors. The bottom line is that we all inhabit this planet and all have a right to use these wonderful places for our recreation and entertainment. One group does not take precedent over another. But it seems dogs have become the poster children for intolerance and hysteria among a few making it the "tyranny of the minority". Companion animals are an essential part of many people's lives and that goes without further explanation. Quality of life for both humans and their dogs is at stake here.

I read the article about this in the Tribune today and was shocked at the scope of restrictions being considered. If it weren't so serious, it would have been funny especially about Mori Pt. and how the trails are being selected for dog or no dog. Sweeney Ridge is inaccessible for many people because of the steep, slippery terrain and there is little incentive for dogs to venture off the trails, so to restrict dogs to leashes or not at all in that area is unreasonable. I use this as just one example of how too much thinking and planning may ruin the enjoyment of these areas for everyone. There are many dog owners in Pacifica who simply won't utilize these areas without their dogs and some off-leash areas are absolutely necessary for the well-being of the dogs as well as fully enjoyment by their owners.

---

In closing, I would like to suggest that there is no real need to regulate open space to death, that it is there for all of us to enjoy, and that things are really fine as they are right now. The frogs, snakes and butterflies are thriving as they have for many more years than we have been "managing" this their territory, so "if it ain't broke, don't fix it". Just leave things alone, educate people regarding stewardship of the open space and let the dogs have some fun and exercise.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Jessa

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it

---

deems that not enough people are complying with the leash restrictions.

Sincerely,  
Amit Gupta

**Correspondence Type:** Web Form  
**Correspondence:** Areas where our dogs have been welcome to walk or play off-leash for decades would be severely cut or banned outright under the revised GGNRA dog plan.

As responsible citizens, we must be realistic and fore-thinking about how to accommodate more than 250,000 local dogs in a region with limited space.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

There is no credible reason to deny fair and reasonable access for both on- and off-leash dog walking that has taken place on GGNRA land for more than 50 years.

**Correspondence Type:** Web Form  
**Correspondence:** This plan is outrageous and tramples all over the expressed wishes of a hard working LOCAL population who need recreation and access to trails on PUBLIC LAND, including with our companion dogs...The NPS is single-mindedly ignoring the majority of the local population who pay taxes and help fund the NPS and their activities. You are supposed to work for US, not follow the wishes of a FEW.

You seem to be just going through the motions of requesting comments, as opposed to genuinely HEARING the majority of the local residents who need to have access to these trails with their pets.

Further, all comments expressed in 2011 were THREE to ONE AGAINST the GGNR plan. Criticisms and concerns expressed in comments filed in 2011, HAVE NOT BEEN ADEQUATELY ADDRESSED

---

BY NPS.

The longstanding 1979 Pet Policy should be kept.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood trail and Miwok Trail. THIS WILL BE TAKEN AWAY UNDER THIS PLAN...

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There NO REASON GOOD ENOUGH to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

City parks will be overrun by dogs unable to access these trails...there are simply not nearly enough dog parks to offset these losses of trails in the GGNRA.

THIS IS WRONG HEADED. I STRONGLY OPPOSE THIS PLAN.

**Correspondence:** First if all thank you for your work on the trails restoring and preserving the beauty of our natural landscape. I vehemently disagree with the proposed changes to dog and human access on the GGNRA. Please raise the fines for the violators who do not curb their dog rather than punish all of us who use the land recreationally with our pets.

I hike the trails every day. It is very, very rare to see a dog chasing wildlife, I personally think that aspect is way overblown and used to justify certain actions. Raise the fine to \$1000 for people not cleaning up after their dog, or willingly letting their dog chase wildlife.

Please let them exercise on the trail rather than crowding the city streets or not getting exercise at all. Please make no changes, or give the dogs more space and raise the fines. Thank you so much.

Odin Barr

**Correspondence:** I found out about this proposal while visiting El Rodeo beach with my two dogs last month. We make the two-hour trek to this beach specifically because our two big, extremely well-behaved dogs love the space to run and the socialization off-leash offers them an opportunity for further development and training. It is therefore confusing that the GGNRA is proposing to ban off-leash dogs from a number of areas, when the existing areas that dogs are allowed off-leash are so few. Of course, not all dogs are as well-behaved as my two, but is punishing all dogs for a few outliers really the best solution here? Problem dogs act out not just off-leash, but on-leash as well, meaning that creating new government regulations that not only cost money but affect around 40% of Bay Area residents really doesn't get to the heart of your perceived problem. To me, this is a power move by a few government individuals who probably had a bad experience at some point in their lives with dogs. Don't punish the well-behaved dogs

and their faithful owners for this personal vendetta against a few outliers. Thank you for your time, I hope the government can drop this and get back to real issues sometime soon.

<b>Correspondence:</b>	I am fine with dog owners having a couple of areas where they can bring their dogs. Let them keep Oakwood and the north part of Stinson where they're already allowed. I only go to those places when I am with a friend who has a dog. Personally I don't have a dog, because someone in my home has severe animal allergies ... but I do love dogs. However, I have several issues with the way I have observed MANY dog owners in the GGNRA in Marin:				

1. Their practice of leaving a plastic bag full of dog poop on the side of the trails. I believe that if you own a dog, part of your life will be carrying around a plastic bag full of poop. I don't think it's reasonable to leave it on the side of the trail. Time and time again, I have witnessed several friends "forget" to pick up that bag on the way back: "Oh darn, I can't remember where I put that baggie... oh well."

2. I have witnessed many people who claim to have voice control over their dog, not be able to control them. Most of the time, their dogs run off far from view, so really, the dog owners have no idea where their dog actually is. How can you claim you have your dog under voice control when they are too far

away from you to see you or hear your voice?

3. I have witnessed many, many people ignoring the "no dogs" signs on trails in Tennessee Valley. Once I was on a hike with a very vocal proponent of letting dogs be off-leash in the GGNRA and she (a) started to walk on a trail that wouldn't allow dogs, saying "oh, I know you're not supposed to bring dogs here, but I do it anyway"; and (b) at one point lost her dog on our hike and we spent about 15 minutes trying to find him. It is this attitude of "MY dog wouldn't hurt anyone"... "MY dog isn't like other dogs" that is so annoying. Guess what. Even though I like dogs, I don't want your dog charging at me or my child when I'm on a hike, especially on a trail where no dogs are allowed in the first place. It seems like people take advantage of the fact that our national parks don't have the funds to have many rangers... so they bring their dogs on no-dog trails because they know they're unlikely to get caught.

Yes, I realize this is a national recreation area and not a national park, but the dogs should stay on the trails, just like the people, so that they don't disturb the habitat. I watch people's dogs run off the trails all the time. Having them on-leash would fix that issue.

There are two enormous dog parks that I know of in Southern Marin - - one in Mill Valley and another in Tiburon. People can throw balls for their dogs there. It's not like the GGNRA is the only place to recreate with a dog in this area-that argument is just nonsense.

Again, I'm fine with letting the dog owners keep Oakwood. I know that when I go there, I'll encounter many, many dogs. But because the dog owners flagrantly ignore the rules elsewhere, I support banning dogs on other trails.

It's not people like me who are ruining it for the dog owners, it's the irresponsible dog owners who ruined it for them. Unfortunately most of the dog owners I see have a flagrant disregard for the rules.

<b>Correspondence:</b>	I live in San Francisco with my husband, 2 kids and a dog. I walk my dog regularly at Chrissy Field and Fort Funston. These are currently offleash areas and as city parks, have been so for a long time. It is one of my greatest pleasures to walk with my dog off-leash in these areas. My dog is obedient, does not sniff or take other people's food and is gentle with strangers and children, and has good recall. I always clean up after my dog, and regularly pick up other people's trash I see along the way- as do many of us responsible dog owners. On weekdays, the vast majority of people on these beaches are those of us walking our dogs off leash. While part of the national parks, these areas are right smack in our city, and are used as CITY parks by residents. They need to be considered as such. There is little reason, other than the few irresponsible dog owners and the few powerful NIMBY neighbors, to further restrict dogs off-leash opportunities in these areas, and it would be discriminating against the vast majority of beach enjoyers to do so. We respect the limits of the off leash areas, we allow the snowy plovers to reproduce, we pick up trash. We are responsible park users. I appreciate your consideration of my comments. Michelle

**Correspondence:** My comments are specific to the Ocean Beach proposal. Though I suspect my comment will we heard like a candle in a dog lobby tempest, I support Plan C or F or one of the all leash all the time proposals. At minimum, I would like to see a regulated zone at the north and extreme south ends of the beach where dog owners can let their dogs run amok as they are inclined to do.

In the middle of the beach there have always been inconsistencies enforcing the leash laws. If we don't impose clear-cut zones (including possibly all leash, all the time, all places on Ocean Beach) and times where the dogs are supposed to run free, then all this deliberation will be for naught. Let's face it, there won't always be enough funding to enforce the mid-beach zone, but if there are clear rules that everyone understands which keep dogs in the North/South zones for off leash activity, then possibly the mid- beach goers will be able to justly enforce the rules.

Additionally, while the vast majority of dog owners try to clean up after their dogs, many don't "see" when/where their dogs poop, and some owners even forget bags to handle the business. I also see well-intentioned owners pick up the poop then leave the bag to be trashed upon their return walk only to forget the ugly blue plastic bag there for the tide to take away and choke some poor turtle.

Minimizing dog impact at minimum to the North/south zones of the beach (where there can be a culture of accountability) would be best for the plovers and the people who want a clean peaceful place to recreate. Keeping the majority of off leash activity to the North/South ends (or none at all) might also allow for some focused signage and garbage cans to be placed to facilitate proper adherence to the rules.

Thanks for your consideration.

**Correspondence:** Dear Superintendent Dean,

---

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Pam Daghlain

<b>Correspondence:</b>	Dear GGNRA,				

I am a lifetime resident of Southern Marin, 44 years. I have had dogs my entire life and know the responsibility necessary to own and share the land with dogs.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. I haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I am opposed to the GGNRA Compliance-based Management Strategy regarding off leash and on-leash dog walking in the GGNRA. Compliance based management strategy cannot be part of any plan. This strategy will potentially end off-leash access without giving people a chance to comment on the change. It also punishes responsible dog owners for the bad actions of a few irresponsible ones. It must be removed.

I also oppose the Preferred Alternative because it is too restrictive. There is no justification in the DEIS for this major changes. I support formalization of 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Walking my dog at Fort Funston 2-3x a week, Chrissy Field Beach once a week and at Pine Lake Park 2-3x a week is our family's nature time. My kids live, play and go to school in an urban environment. We have a large dog who needs to run play with my kids, and kids who need the outdoor experience our dog gives us. I'm afraid what will happen to Pine Lake if GGNRA land goes all on-leash/no dog. It's a terrible loss for urban citizens to walk freely with their pets in these small areas. I feel a terrible loss of Constitutional rights.

**Correspondence:** Let dogs run free...

It seems that most dog owners keep the dogs on leash, what could possibly be the harm in this? In addition

I feel that there should be several long trails where dogs are allowed off leash as well.

Please do NOT close off the GGNRA to dogs entirely. Choose areas that are more sensitive in terms of the fora and fauna, close a few, but let's find a balance here. Are we humans and our pets not a part of nature?

I propose three zones:

No Dogs  
Dogs on Leash  
Dogs Run Free !!!

Thank you  
Sincerely, Xander Wessells

The Pedro Point Highlands have been negatively affected by decades of motorcycle and other high impact uses. Why are dogs being restricted? Where is the science behind saving habitat which was lost decades ago? For safety the dogs can be restricted from the cliff top. But to not allow dogs at all? It make no sense.

This is just another case of the NPS defaulting the position of disallowing dogs just about everywhere. The revised plan is incredibly restrictive, especially in San Mateo County. It is clear the NPS would prefer no dogs, period. The NPS seems to have forgotten this is National RECREATION Area not a National PARK. The 39% o taxpayers that own dogs should be allowed more than the 1 or 2% o the areas they are being offered in this latest "revised" plan.

Please Revise it again. And Seriously this time.

**Correspondence:** Dear Superintendent Dean,

I am a new dog parent. We decided to adopt our pup, who was abandoned by his previous owners, because even though we live in an apartment in a city, our town has always been a dog friendly place. We have restructured our schedules during the week to give him time and attention but are still restricted by time to our neighborhood sidewalks and local parks. So on the weekend we all look forward to time in one of the several GGNRA areas that will be affected by this new plan. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from giving myself and my dog the recreation time, which includes both physical and mental exercise, we need on a regular basis.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

**Correspondence:** As a long time dog owner and frequent user of the GGNRA, The plan makes sense in terms of developing an effort to have dog owners be more honest and vigilant about their dogs impact on the GGNRA environment. This is clearly a problem of a few causing problems for the overwhelming number of responsible dog owners. Unfortunately, most dogs, including mine if not carefully watched, will run after birds and wildlife (especially on open beaches) with whatever intention (e.g., play, instinct, predator behavior?). This is not acceptable, so restrictions and regulations are clearly necessary. While I do not see a problem with restricting and enforcing dog walking to "...on leash only" in most of the proposed to-be-protected areas, I urge park management to ensure the use and maintenance of proposed areas to be designated as off leash but must be under voice control. I also urge that the park service either keep or create at least 1-2 off leash areas on the San Mateo coast. In addition, please consider significantly increasing the fines and enforcing penalties for violators - the word will get around and people will be more likely to be more compliant with the regulations.

**Correspondence:** The GGNRA, by its own rules, must conduct site-specific, peer-reviewed studies as the foundation for any policy changes intended to protect the resources of the GGNRA. The GGNRA acknowledges the required studies do not exist. This renders the proposed policy changes arbitrary and capricious, and as such they are unlawful and cannot be implemented. The ORIGINAL 1979 Pet Policy should be reinstated per the 2005 Federal Court decision because all closures since then have not been based upon site specific, peer-reviewed studies as the law requires. For lands added after the drafting of the original 1979 Pet Policy, DOI policy requires historical usage be maintained. Any changes would have to be justified by the requisite site-specific, peer-reviewed studies followed by a formal rulemaking process.

The revised plan is far too restrictive. I favor keeping the access the same as it is now (I think you call that alternative A?). But I appreciate there could be an issue with some dogs going off trail and into sensitive areas.

The Answer? Easy! ENFORCE THE LEASH LAWS!

A leashed dog cannot go into sensitive areas. But why restrict them from the trails entirely?

If NPS simply enforces the leash laws with the current level of access, the law-abiding dog owners can continue to enjoy the parks. But sensitive areas are protected. WIN-WIN!

Why is NPS coming up with these incredibly restrict plans to hugely limit access of current law-abiding users? Whereas what they should be doing is enforcing the law on those user not following the rules.

It is a bit like proposing we close down all the roads in California simply because a few people are speeding - - but yet we don't want to solve it by giving out speeding tickets. Crazy!

I am one of many business leaders in San Francisco who oppose this ban on dogs in areas where we have been recreating with our dogs for 20 years.

Increasing numbers of San Francisco offices, including my own, allow dogs at work. Nearly every hotel in San Francisco now allows dogs. With all the tech companies moving into SF, the numbers of downtown dogs will only increase. Why, when the entire SF Bay Area is becoming more dog-friendly, is the GGNRA becoming increasingly intolerant of people recreating with their dogs?

Dogs without proper exercise can become aggressive. SF parks will be overwhelmed with dogs if GGNRA proceeds with these ill-conceived, short-sighted measures.

I attended the GGNRA meeting about this issue in Pacifica about a year ago. It was 100% clear that the issue had already been decided, and the forum for public input was just an empty gesture. I would like to know, where are the compromises that have been made since that time? What was (and is) the impact of the public outcry?

And - who exactly does not want dogs at Fort Fun? Where are the names of these people who oppose recreating with dogs in national RECREATION area? I've never met one person who did not enjoy the

---

dogs at Fort Funston or Crissy beach.

There are plenty - hundreds, if not thousands - of state parks, national parks, and beaches that are off-limits to dogs. These are great places for people to enjoy nature without dogs.

For the 50% ad growing numbers of San Franciscans who DO have dogs, for all the commuters who bring their dogs to work every day, for all the tourists who bring their dogs to our hotels - - we need off-leash recreation area. This is OUR national recreation area.

California is a very big state, with plenty of room for people, dogs, trees, snowy plovers and everything else to co-exist and thrive. Unlike much of CA, the SF Bay Area is very densely populated with people and dogs. It is our responsibility to care for these dogs. They need socialization and exercise in OUR national recreation area.

<b>Correspondence:</b>	I strongly oppose the preferred alternative in the GGNRA's new draft dog management plan. I exercise and socialize my service dog trainee in the GGNRA. This kind of off-leash play and exercise is important to the social development of the dog. It has also been a personal source of mental and physical health.
------------------------	---

The outpouring of objects to previous drafts doesn't seem to have been addressed by the most recent draft. Elected officials have voiced their concerns and I have not seen a response.

I live in a dense and growing urban area, and open recreation areas are harder and harder to find. The 1979 policy set aside areas for dog waking, and the need for these areas has grown since then, not reduced. We need more dog-friendly and off-leash areas in the GGNRA, not fewer.

<b>Correspondence:</b>	Dear Superintendent Dean,
------------------------	---------------------------

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

---

**Correspondence:** Please do not punish me and my dog because of the inconsiderate rule-breaking of a small minority of dog owners. It would be like banning all cars from the road because a few drivers drive drunk. The obvious solution to the problem, which annoys the majority of dog owners as well, is enforcement of the current rules.

And let's not be naive about the power of rule-making to stop the improper conduct of this small majority- they will simply break these new rules and run their dogs off leash regardless. The only way to stop them: enforcement. So seeing as how enforcement is the only way to stop the inconsiderate conduct that we all deplore, let's not punish the majority of dog owners who respect the rights of everyone to enjoy our natural environment. I understand that we live in an era of reduced government resources, so let's get creative instead on enforcement strategies to punish those who break the rules. The current GGNRA proposal will only deter responsible dog owners from enjoying our wonderful trails and beaches; it will do nothing to stop the problem.

Many thanks for your consideration.

**Correspondence:** I write with great concern about the plan to close most of the Golden Gate National Recreation Area to dogs. While I recognize the importance of protecting wildlife areas, San Francisco is a city with, already, too little green space for families and their dogs. The GGNRA takes some of the pressure off of the tiny, overused, crowded squares of green that serve as dog runs in this city. In the few and small dog runs we have besides the GGNRA, dogs are so crowded together as to increase their aggression and limit the amount of exercise they can get. The grass is unusable by children, leading to turf wars between parents and dog-owners (I am both). It's a relief to take our dog to Crissy Field, Fort Funston, and other areas where she can just run.

Please consider not reducing the dog space so drastically. The city needs it.

---

**Correspondence:** As active members of the Mill Valley community and dog owners, we are saddened about the push to take away GGNRA trails and beaches that allow dogs and their owners the opportunity to walk, run and exercise freely. Given the scope of GGNRA land and the inordinate amount of trails available for hikers, mountain bikers, and the like, it is truly incomprehensible to us as to why the GGNRA representatives are trying so hard to take away what few areas we have to enjoy our dogs.

No matter how many studies have been done or arguments made to retract these GGNRA dog areas, their is a fundamental problem. It is the fact that 46% o pedestrians walk these trails with their dogs (Marin County Parks

Visitor Use Census and Survey - Nov 2011) and if you take them away where will they go? Dog owners will be forced to take their dogs on walks and hikes on non-mandated dog trails and beaches which will cause a whole number of additional problems we can avoid if we are allowed to simply maintain what we currently have.

Dogs aid in the health and well being of all their owners, both young and old, providing exercise and companionship. They are the lifeline for many elderly people. Dog owners are not asking for anything more ..... we just want to keep what we have allowing us to utilize trails and beaches designated for dogs lovers, some allowing our dogs to play freely off leash and get the much needed exercise they also need. We ask that you PLEASE grant us and our dogs that opportunity -to keep our much needed trails and beaches. There are SO many options for non-dog owners to take advantage of in our beautiful National Parks in Marin County. REALLY, SO MANY! Why not start a campaign promoting how wonderful these options are to those people that don't want to coincide with dogs? If we follow the rules, we ALL could enjoy the amazing beaches and park trails we are privileged to have in the GGNRA landscape.

Thanks for taking the time to listen-  
Charlie & Diane Barrett

I have lived in San Francisco for 5 years (Pacific Heights and Russian Hill). As someone who walks regularly with my dog in the GGNRA (I go to Fort Funston 5 times a week and Crissy Field at least 4 times a month), I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. Being able to take my dog to these places and enjoy letting her run off-leash is an extremely important part of my life and is a huge part of why I love living in San Francisco.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. I have never had a bad experience in either Fort Funston or Crissy Field - for the most part everyone there is a responsible dog owner with their pet in full voice control. I don't think there is a need to reduce off-leash areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. I hope you will not reduce the off-leash areas in Fort Funston or Crissy Field. They are my favorite places to go in SF and is part of what makes

this such a beautiful city.

Thank you for your consideration,  
Joyce Wang

**Correspondence:** I live in the Upper Haight neighborhood of San Fransisco, CA. My dog and I frequent the Crissy Field area, Rodeo Beach, Muir Beach, Stinson Beach, Marin Headlands, Baker Beach, Ocean Beach, and Fort Funston areas in the GGNRA. Walks and hikes in these areas with my dog off leash provide for a wonderful way to exercise with my dog. We both get home feeling exhilarated from being in the outdoors, exhausted from a good workout, and happy.

My dog is like a child to me and I try to take her with me as much as possible. While, it make sense that places that serve food, small spaces and certain outdoor endangered habitats are not preferable for dogs to be, I would certainly hope that me and my dog would be welcome in open spaces that have historically been dog friendly and have not been severely impacted by presence of off-leash dogs.

I oppose the "Preferred Alternative" because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences, will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitored-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375) so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in area where it has been practiced for decades.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most

people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Crissy Field, and Oakwood Valley.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. There has been no dialogue about less restrictive alternatives. If you ban dogs, and off-leash use, the trails and beaches become useless to the vast majority of the people who enjoy them.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Tony Brass

**Correspondence:** I totally support increased regulations re dogs and especially off-leash dogs in the GGNRA, local parks, and elsewhere. I am so sick and tired of trails that smell like dog crap. Dog walkers should be cited and fined for each and every dog and at least double fines for unleashed dogs when in violation of local ordinances.

The hired dog walkers are the absolute worst. Please fine these people. What other business owner can take advantage of public lands without regard or recompense for the damage they do?

I do not even take my child to many local parks because they are overrun by unleashed dogs. These dogs poop and pee everywhere. She is scared. This is totally unhygienic and unfair to my human child.

If I hear one more dog owner compare their dog to a child, I am going to puke.

---

I have called so many times for enforcement, especially in the GGNRA around Tennessee Valley.

Please increase enforcement. Please fine, fine, and fine. You can easily pay for the increased enforcement.

Sincerely,

Patty Compas

<b>Correspondence:</b>	Dear Superintendent Dean,				

As a dog lover who uses Fort Funston on a regular basis, it makes me very sad to consider the upcoming off-leash ban. I don't know when the last time was that you have been to Fort Funston, but people go there specifically because it is a wonderful place to take your dog for an off leash adventure. People don't seem to go there with any other expectation which is why I don't understand the motivation for this change.

Most other places you take your dog, they must be leashed. I feel Fort Funston is such a great place because he can be free. We were just there last weekend for a few hours of beach fun with the family. We have a big dog who needs to chase a ball in the ocean to get his energy out and I just don't know what we'll be able to do to fill the void if the leash policy is changed.

Please reconsider.

Sincerely,  
Julie Shumate

<b>Correspondence:</b>	Being a dog owner, avid hiker, and working a sedative job, I value my dog walking time on GGNRA lands very much. The constant threat of taking this right away is both annoying and frustrating. I frequently walk my dog on leash in the Sweeney Ridge, Oakwood Valley and off leash at Fort Funston. Sweeney Ridge and Fort Funston are highly altered landscapes in an Urban area. One has to wonder why anyone could rationalize banning leash walking on Sneath Lane trail, which is a cement road leading to an abandoned Nike Missile Site. It is hard to believe that my dog has any impact on the landscape (I always pick-up after him).				

---

Basing rules on assumed non-compliant dog owners should be extended to all activities in the park then. The same rationale should ban all children since they have been known to throw garbage or go off trail. Never once have I encountered any enforcement. A first step perhaps would be actual enforcement before one decided to ban all dogs because it is just all uncontrollable.

I understand that some sensitive landscapes do need protection from off leash dogs, but some of the proposed limits on leash walking are too draconian.

Having these recreation areas open and available for myself and my dog has a major impact in how I relate to the Bay Area. Confining my experience to a few overcrowded parks will have a direct impact on my lifestyle and how I relate to the GGNRA. If there is a constant erosion for access to me and my dog I would have to assume that GGNRA is unable to manage these recreational lands and will work with my local politicians to pull the parks back to local management.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Corey Brew

<b>Correspondence:</b>	I am and have been a very responsible dog owner in San Francisco for 16 years. I take pride in my canine companion, who is a very healthy active Aust. Shepard. She has been going to run				

---

at Ft. Funston, Ocean Beach and Crissy fields, 5-6 days a week for her entire life and loves it! She loves chasing a ball and swimming. She is a high strung little dog, who needs to run, fetch and catch in order to feel "normal". Otherwise, she would be like a marathon runner who was only allowed to run on a track once a month. She is well cared for and picked up after, like most city dog owners who use these off leash areas. I see more dog messes left on city streets, than out on the sandy beaches in this town. Please don't take away what our dogs need most, FREEDOM!

**Correspondence:** Not a single resident plant or animal benefits from the presence of dogs in the GGNRA.

I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and provides a quality National Park experience for ALL visitors.

I would prefer no dogs; but I support the NPS attempt to regulate recreational dog walking as a necessary evil.

The most restrictive plan is best because the presence of dogs anywhere in the GGNRA will necessitate major enforcement efforts to protect natural and cultural resources, as well as provide, visitor safety.

While I reluctantly support the NPS current efforts to regulate recreational dog walking, I adamantly oppose individuals with multiple dogs being allowed within the GGNRA. Voice control is no control. In addition, commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain.

Commercial dog walking will provide no service or benefit to any park users. It is a practice which should be prohibited since it will adversely impact park resources and values.

Enough already. Give us a break from rambunctious dogs. I'm tired of seeking balance where dog owners and others constantly clash over the rules. In future, any ticket given to individuals in violation of the new dog policies should result in a stiff fine collected.

The vast majority of park visitors ask that you just say "NO" to the DOGPAC.

**Correspondence:** As a long time resident of Marin County I very much resent and oppose the ever increasing "rights" (so-called) of dog owners. Our area seems to regard pets as equals to human beings. My taxes are happily paid to improve our parks, clean up the environment and make life better for the next generation. They are not intended to support canines, owned by other people, to have rights in those areas. I have been attacked and bitten by an off-leash dog. When I see one on the trail I cringe to one side. This is an infringement of my rights to walk peacefully in our park areas. The dog lobby is a vocal minority. I hope they are leashed soon.

**Correspondence:** To whom it may concern at the GGNRA,  
I am writing to urge you to do everything you can to stop the Golden Gate National Recreation Area from implementing its new dog management plan. This plan will cut where people can walk off- and on-leash by 90% cmpared with where people can walk with dogs now. It is going to create a huge impact on the Bay Area, which we simply cant afford.  
I had hoped that this new plan would be significantly different from the original GGNRA dog management plan, because thousands of people-the overwhelming majority-submitted substantive comments in opposition to the plan. But the GGNRA did not make significant changes. They ignored what people want, and are moving forward with an extremely unpopular plan no matter what we say. The GGNRA was created in 1972 for the maintenance of needed recreational open space, and to expand to the maximum extent possible the outdoor recreational opportunities available to the region. That's why it's designated as a National Recreation Area, not a National Park. With the new dog management plan, the GGNRA is reneging on its promises to preserve and protect recreational access to the GGNRA. There is no credible reason why people with dogs are not allowed to have adequate and reasonable space to walk their dogs in the vast 80,000 acres that comprise the GGNRA. Please take action to stop the GGNRA from imposing this radical plan on the San Francisco Bay Area.  
Thank you,  
Vivian Hernandez  
A regular dog walker at Fort Funston for over 6 years and the only place I can walk my dog safely off leash at the same time that I can enjoy some fresh ocean air and what mother nature intended for all of us to enjoy.

**Correspondence Type:** Web Form

**Correspondence:** I am a concerned resident of San Francisco who owns 3 dogs and who utilizes parts of the GGNRA (Baker Beach, Crissy Field) to allow my dogs to play exercise, walk, and socialize. The GGNRA lands were earmarked for public use in 1979, given by the city of San Francisco and the lands were to be reserved in perpetuity for recreation or park purposes. The GGNRA plan to limit severely dog walking and off leash activity in 2011 was commented upon with numerous objections to this radical change, so much so that the GGNRA came out with an alternative plan in September 2013.

Unfortunately, the objections raised in the 2011 comments went largely unheeded and the alternative plan is just as objectionable. I am writing to favor a "no action" plan and preserve the ability for dogs and their owners to utilize these lands in the largely responsible mode that they have been doing for years. Firstly, there is no hard evidence that the current situation has had any environmental impact. There has been no study as required by law that demonstrates any impact. Furthermore the impact on other city parks and properties if the change were to be adopted has been totally ignored. The current usage of these lands by dog walkers is only 1% of the GGNRA land and the new restrictions would reduce this to 0.1%. Where will the many dog owners in San Francisco and other affected surrounding municipalities go? This will most assuredly impact in a detrimental way the remaining smaller areas that can be utilized. As an aside, from what I can see from personal observations, there is a far greater impact from humans. Why not restrict humans too from these lands. The numbers of dog related citations is less than 0.1% of all dog related visits according to the GGNRA's own statistics. Human citations outnumber these. It makes no sense to restrict dog usage, because these lands are parks and recreation lands, not wilderness. They benefit the population by being available for use by our citizens. If off leash usage of the GGNRA's land is severely restricted by dogs and their owners as proposed, there will also be a negative impact on dog/dog and dog/human interactions. Namely, when dogs are able to exercise, socialize, and play off leash, there are fewer attacks, fights, and bites. This fact is certainly supported by the comments made by researchers and veterinarians. Is the irresponsible change proposed by the GGNRA going to result in more injuries. Evidence would strongly suggest that, so that this potential deleterious outcome in my opinion has a greater negative impact than the potential environmental impact suggested by the GGNRA and its total lack of evidence. With numerous comments against the proposed change in dog access from the 2011 and the current 2013 comment period, and the support of these comments by numerous dog loving groups, and several governmental leaders, it makes no sense to change anything resulting in less access by dogs and their owners to these areas in the GGNRA. Let this recreation area remain a recreation area as was originally intended by the city of San Francisco and its citizens.

<b>Correspondence:</b>	I support requiring leashes for dogs. Although many are well-behaved, about 10% are out of control - - jumping on people, harrassing other dogs, and definitely not under any voice command. It's unsafe and it creates a tense atmosphere for everyone else. Furthermore, restrictions related to endangered wildlife are habitually ignored. (For example, how many leashes do you see during snowy plover season at Ocean Beach?) The safety and comfort of *people* need to come above that of dogs or their owners; and the safety of protected local species needs to have priority over stir-crazy dogs. Again, I support the use of targeted off-leash areas and the implementation (and enforcement!) of leash requirements.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As a dog owner who regularly walks my dog in the GGNRA, I vehemently oppose the Preferred Alternative described in the GGNRA's new draft dog management plan.

First, it is too restrictive. The new plan calls for major reduction of off-leash areas. Studies have shown that leash can made dogs frustrated as it prohibits them from running freely and socializing with other dogs. Fencing up a designated off-leash area is also problematic because it limits movement of dogs to a small area. GGNRA is really the only open area in the SF Bay Area that can allow large number of dogs to free roam, while those who dislike dogs can have many other parks to choose from. It is ridiculous to close down the only place where off-leash dog walking is possible.

Second, it is unfair. It seems the plan is to punish all dog owners when only a few irresponsible dog owners don't pick up after their dogs. I think there are ways to penalize those bad apples without ruining it for everyone. Maybe have someone to patrol the area and ticket those violators. Also, it is hard for family with a kid and a dog to enjoy the outdoor when there is a designated off-leash area.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Heather Runes

**Correspondence:** I am a strong proponent of striking a balance between protecting sensitive coastal habitat and allowing open space for dogs to be off-leash.

Care should be given to sensitive areas that would be damaged by the presence of free roaming dogs. Space should be provided for off-leash exercise. However and more important, stronger compliance should be a high priority when it comes to off-leash areas for dogs that are not under voice command. Pets that run free, that do not respond to owners voice commands should cited and multiple violation should come with an eventual banishment from open space in GGNRA.

**Correspondence:** Hello,

I live in Scott Weiner's district of SF and I'm emailing because I'm upset about a proposal by the Golden Gate National Recreation Area to severely limit dogs and off-leash dog walking in Ft. Funston, Crissy Field and other parks.

Just about one in every three households in San Francisco has a dog, and this is going to dramatically impact San Franciscans. It is also going to impact city parks, because if this proposal passes hundreds upon hundreds of people and their dogs are going to flood places like Maclaren Park and Golden Gate Park.

Please don't do this. Things are great the way they are.

My best regards,  
Robby Bearman

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir beach and the surrounding trails.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Please rethink your decisions.

---

Sincerely,

Lydia Luhessa Caddell

**Correspondence:** Dear Superintendent Dean,

I absolutely love living in San Francisco. What's so fantastic about this part of the country is the many places to spend time outdoors year round. There's nothing my husband and I love more than spending time outdoors with our dogs. Unfortunately, in the city of San Francisco, most people (like ourselves) do not have yards, so we head to places like GGNRAs to get exercise. We've always felt a sense of community in these parks, meeting others who care just as much about taking care of these amazing areas.

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent people like myself from recreating with our dogs for my own health and my dog's health the way I have on GGNRA properties for many

years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. <b>Correspondence:</b>	Hello,				

I live in the Outer Sunset, just one block from Ocean Beach. I visit Ocean Beach at least once, sometimes twice daily with my dog. My dog walker also takes her to Ft Funston and/or Ocean beach dialy.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** I think that the proposal to limit dogs at Crissy Field and Fort Funston is unnecessary. Right now Crissy Field is a perfect place - the runners and bikers have a path, the dogs can run off leash on the beach and the wildlife and naive plants are protected by a fence. I don't see ant extra dog poop and I don't see why things should be changed.

---

As dog owners we are often treated like unimportant citizens. We pay our taxes and follow the rules, only to have them curtailed even when we follow them.

Many so called off leash areas in San Francisco are next to roads and play grounds. The beaches are the best place for everyone to have dogs.

Ocean Beach is basically off limits, so the other beaches which are much smaller should be available.

We are all Californians, and we all need access. There are more dogs in San Francisco than children.

Please don't change anything.

**Correspondence:** Dogs need to be on leash in public areas, period. I have been attacked when on my bicycle just minding my own business and the owner said, "He was just wanting to play with you". My child has been knocked down by a "he's a good dog, he would never hurt anyone". A large portion of dog owners do not pick after their defecating animals. Wildlife is chased off. I have nothing good to say about off leash dogs that are not under their owners control. If people want their dogs to have a free range to run then they should buy themselves a property up in the hills with a couple acres. I am so tired of having people's dogs harass me and my family. We actually avoid the shoreline in SF because my daughter is terrified of the dogs that are allowed to run wild and are far from under control of their owners. Not cool.

Dogs need to be leashed.

**Correspondence:** I have been walking my dog at Fort Funston for three years... I feel very lucky to be able to do that and cherish those days as does my dog.

If the proposed changes do happen it will be an absolute loss of privilege for those of us that enjoy Funston so much..

To have an enclosed area put in place will be a disaster and waste of time and money. The reason so many people go to Funston each day is to enjoy the walk while their dog is greeting others and running and having fun. This is one of the few places in the city that you can let your dog run free - please don't take this away from usâ€

**Correspondence:** Hello:

My name is Brian Bullard, a forth generation San Franciscan , and owner of Fur Family & Friends, a pet care company in Marin.

I walk on Latte Lane, in Mill Valley, and Donahue in Sausalito CA. I also have a permit with Marin Open Space, so I use their trails as well.

I am very concerned about the dog walking restrictions that are being talked about.

We cant all bring dogs to dog parks or easily conduct business if our land that we pay taxes for, are further off use.

There are hundreds of dog walking companies that use the current open GGNRA lands with good relations. To put us on city streets and private lands would not be a great option for pet care firms.

Many dog walkers are one client away from being homeless and several are over 55 years of age with little hope of landing a new job , only to depend on our Government for medical and food financial help. Bringing California further in debt.

I hope you think of individual dog walkers, and the dogs they represent.

Dogs lives are happier off leash. More dog restrictions may mean more unwanted pets and overcrowded shelters.

Sincerely,

Brian B Bullard

**Correspondence:** I'm sorry this is just ridiculous. I love how it's all the dogs fault for the destruction of the environment and chasing the birds away. I swear when I go to Ocean Beach or Crissy Field I see trash left by humans, children that are running around unsupervised chasing birds and people just walking on plant life where they shouldn't be. It's 1% o the land that should be left alone for dogs to run free and enjoy the freedom of the outdoors. I'm sorry you want to save the environment and your birds you seriously need to look at the human species. We are the most destructive creature on this planet. Also if your going to start going after the dogs for being so destructive and chasing away wildlife why doesn't any of this include the horses that are riding down the hillside or running along the beach at Ft. Funston. I've seen your precious birds using all their valuable energy running away from the horses and even

---

people that are running or walking along the waters edge. Also why isn't the Audubon Society assisting with the injured and sick pigeons that are in the city if they're so concerned about the well being of birds.

**Correspondence:** Regulation of recreational dog walking is an appropriate activity for the NPS within the Golden Gate National Recreation Area. The NPS has established management policies and practices which protect park resources and help to insure that all visitors may enjoy the national park. Adopting a Dog Management Plan is entirely appropriate and I support it. Most dog owners are responsible and keep their pets under control. As in all of life's activities, some do not. I have witnessed unpleasant sights on

---

Crissy Field where dogs not under control have chased birds and other wildlife.

In addition, I am troubled by dog walkers using national park land for commercial gain. All other commercial activities that I am aware of are regulated by NPS, pay usage fees, and adhere to detailed regulations. The nature of commercial dog walking means that this activity creates an additional burden on the already understaffed NPS, with no benefit I perceive to the rest of the public.

I accept that dogs may be permitted in a national park so close to an urban setting, when they are not commonly permitted in other national parks. But that nonconforming activity needs careful regulation. I believe that the NPS Special Rule and the GGNRA Draft Dog Management Plan set the appropriate boundaries for this otherwise nonconforming use.

For reasons of personal privacy and the protection of my personal data, I prefer not to provide personally identifiable information.

**Correspondence:** February 6, 2014:

GGNRA/To Whom It May Conern:

I am writing on behalf of dogs and dog owners: to preserve off-leash space in San Mateo, San Francisco, and Marin counties. I'd like the see the GGNRA continue to permit land use per the 1979 Pet Policy set forth in the guidelines from the United States Department of the Interior.

It's my belief that people, natural erosion, rising sea level, man-made pollution, and urban sprawl are the greater factors at play (in terms of threatening our natural resources). I think the GGNRA should focus its concern with reducing pollution, maintaining trails, restoring native vegetation, providing community education and outreach, and monitoring (and fining) litterbugs who trash our resources. Two years ago, I was hiking with a group above Rodeo Beach: there are former bunkers and Nike missile sites that could be removed and restored. The erosion on some of those trails is staggering. And many of the trails looked in need of grooming.

Now, I'm sure that there are some dogs that are a nuisance to people, and I'm sure there have been complaints. And undoubtedly there are some naughty dog owners out there. But I'm pretty sure that people (i.e., humans) cause more harm than Bay Area residents' animals. I also find it particularly troubling that a family traveling with their pet would run into some serious problems trying to plan day trips around here.

I can't list all the places that I'd like to discuss, but the following are areas that I feel strongly about keeping open to animals under voice command/control. Overall, I think Alternative A (no action) summarizes my position. However, I'll focus on several:

Muir Beach: Alternative A (no action).

I am often in Marin and the closest beach during my visits is Muir Beach. I think it's very unfair to make it leash only or to prohibit dogs. I feel very strongly about this. I understand the creek is a sensitive salmon habitat, but I see kids playing in the creek and in the dunes. I've seen parents chatting while their kids dig in the dunes in the off-limits area (of course the sign was half buried by drifting sand).

Additionally, the creek is often closed at its mouth, unless it's storm season. I could see restricting dog access or increasing signage during sensitive salmon runs, but this shouldn't be a permanent, year-round rule. Most people's dogs just want to run along the waterline by the shore.

What about local residents with dogs? Are they going to have to drive all the way to Stinson beach to have coastal access for their dogs? I want to add that driving my dog to Stinson Beach or Bolinas increases my carbon footprint-and I am not keen on that. I prefer to drive as little as possible. I can't take my dog overland because the hiking trails don't permit dogs. Plus, I think the Coastal Trail and/or fire roads should be open to dog owners so we can visit places like Pirates Cove. I used to go there and picnic

and pick up trash. But now I don't go because I cannot take my dog there.

I can't believe that if a person were hiking the coastal trail that he/she couldn't walk the entire length with their dog companion-because it would be against the law. Why? I've been on trails in Marin that are so overgrown that the path is barely visible through the vegetation. Animals and their owners help keep these trails open and groomed. If anything, the ticks and poison oak are the greatest hazards. Why don't you consider other solutions (e.g., permits for dogs to be on trails)? I don't see the harm that animals have on the trails. For example, Tennessee Valley to Tennessee Cove: if a dog is on leash, it's not going to spook a horse or scare off animals any more than a bunch of kids running around. In the past, I used the area often, but now that it doesn't permit dogs, I have stopped using it. It doesn't sit well with me. I find it troubling that my dog cannot accompany me on this route.

Ocean Beach: Alternative A.

Ocean Beach is the closest beach to my home. I use the north end of the beach daily, and I feel lucky to have it be off leash so that I can exercise my dog. However, it's frustrating that I can't walk or run the length of the beach with my dog off leash. I understand there's a season snowy plover habitat/hatching issue, and I agree with limiting off-leash access during those times of the year. But I don't think there should be year-round closure of the area between Sloat and the Beach Chalet (where the snowy plover sign is located). I've seen the young plovers heading to the ocean. They are sensitive to what's going on around them, but they're not hatching year round. I've witness dogs chasing birds, but it's not usually the case. A bigger issue that I see: kids playing in the dunes and homeless people sleeping in the dunes. Isn't this the sensitive snowy plover habitat? But my biggest peeve at the beach is the trash: I regularly pick up trash from beach visitors and trash that washes up. I think the GGNRA should be more concerned with policing people who litter and who disturb the peace at the beach. Fine them \$300 to \$500, and they'll be sure not to litter again. Last week, I saw a family of five get up and leave all their trash behind. Disgusting.

Baker Beach: Alternative A (or maintain an area where dogs can run off leash); maybe make the south area off-leash. Who complains about dogs on this beach: the nudists? Which is a greater distraction and embarrassment?

China Beach: Why aren't dogs permitted there? I find this ridiculous. I'd like to use the space and grill out, but I can't take my dog down there? It's a tiny beach. What's the deal?

Crissy Field: Alternative A

I'm happy with the bird preserve area, but I hope you don't restrict more areas for dogs. The shoreline is such a great place to exercise ones dog. How about fixing the gopher holes in the former airstrip. And what's up with the giant metal sculptures?

How are they helping to preserve nature? They don't provide habitat for birds.

Fort Miley: Alternative A

Rodeo Beach: Alternative A

Fort Baker: Alternative A

Lands End: Alternative A

Fort Funston: Alternative A

I strongly disagree with any leash laws here. If the GGNRA needs to put up fencing to preserve sensitive habitats, then it should do so. There is a lot of erosion there, but just look at the cliffs along Daly City and Pacifica. There's plenty of coastal erosion going on. Fort Funston is a great place for dogs. Yes, it's a highly impacted area-but because dogs are restricted elsewhere. There's a high concentration of dogs. Might this be because of restrictions in other places (e.g., just south in San Mateo or in the City of San Francisco itself)? If the GGNRA wants to preserve nature, then commit to opening Lake Merced to the ocean-as it was before the Great Highway was built. Get rid of the golf courses, which allow pollution to run off into the lakes. It's disgusting.

Sutro Heights: Alternative A

Sweeney Ridge: Alternative A (allow dogs)

San Mateo: I recently read that San Mateo County no longer has off-leash areas for dogs. Is that true? That seems very unfair and overly restrictive.

Pt. Reyes: I don't like that Limantour Beach is now leash-only. If there were a beached seal, I could see that dogs should be leashed, but if one's dog is under voice command, there shouldn't be a need to restrict them from being able to exercise.

Why is the fire road to Wildcat Lake and Bass Lake off limits to dogs? I can understand keeping dogs on leash (it's a fire road!), but to not allow dogs at all on the fire road really irks me. I know there's a bird sanctuary, but leashed dogs aren't bothering birds anymore than hikers.

Up north, I recently learned that Jack London State Park had changed its dog policy. Boy, I'll bet Jack is rolling in his grave. If you think about it, our great leaders, writers, and thinkers (who sought to help our wilderness areas) had dogs. The Roosevelts were dog lovers. So was John Muir and John Steinbeck. How would they feel about restricting dogs in our great outdoors? They'd think we're nuts.

I think the GGNRA should back away from restrictive dog policies. It seems that the 1979 agreement was a promise from the government to the people. It sets out clear guidelines. But my personal opinion is that America needs fewer rules, not more laws and regulations.

I have to say, I've been to several public information meetings. And one thing I don't like about the GGNRA's presentation is that the diagrams you had at your public meetings did not show before and after representations of the areas you are seeking to change. So it's difficult to imagine the entirety of what is potentially changing. But it's clear that I will be losing public-access areas to recreate. I am very much opposed to anything that prohibits dogs. While I agree that there are some places that may need seasonal leash laws, I strongly feel that most places (if not every place) should be accessible with a leash. I don't know what the problem is with having a dog on a 6-foot lead. In the big picture: How are dogs more disruptive to nature than a line of cars spewing out carbon monoxide and other pollutants? Answer: dogs aren't.

I'd prefer to see the GGNRA be constructive and expand areas for pet owners. For instance, it would be great if an area could be set aside for water skills and water work-an aquatic recreation area for dogs and their owners. Why not close the depressing SF zoo and create an area there? I think the GGNRA could be more constructive: let's remove the invasive species and eucalyptus. Let's plant and restore redwood forests and other native vegetation. Let's clean up the creeks and the streams and the ocean. Let's clean up the trash. Let's groom and maintain hiking trails: for man and for beast.

Believe me, as a taxpayer and voter I am letting my representatives know how I feel about more laws and regulations. I don't like the fact that the 1979 policy is being chipped away at. America has bigger problems on its hands.

Well-behaved dogs should be allowed to accompany their owners in nature.

Sincerely,

WTR, SF and CA taxpayer and proud American citizen

**Correspondence:** Please, we take the responsibility to train our dogs to behave. We pick up after them. They cause no harm. In fact they are a delight to nearly every human that comes in contact with them. We can judge very well who is dog skittish and keep our dog at our side until we know if they are or are not. We pose no harm to anyone, we just bring joy.

Please don't take away places where we can roam. Our health depends on it (mine and my dog's)

**Correspondence:** I am a resident of San Francisco and fully support this plan. Next, is improving awareness and compliance of off leash areas in the Presidio. Recently I walked the mountain lake trail and the road between the old golf lodge and the lake I observed 48 off leash dogs running around, playing, some aggressively. If this is an on leash area it is being totally ignored. This is an issue all over the city. Dog owners seem to think the leash laws dont have to be followed....if as a citizen we say something we are seen as dog haters when we are not. Please approve this, and do the same for the Presidio and the city in general next!

There is not enough coastal area open to dog walking as is, therefore GGNRA should not restrict dog access any more than it already has.

This is not a pristine area. The impact of dog access is insignificant compared past uses by the military.

**Correspondence:** I strongly support limiting dog spaces and off leash dogs in the parks. Wildlife and plants need space and a chance to live and flourish. Please do limit the dogs! I have seen them chasing wildlife and birds constantly ever since I have lived in San Francisco (20 years) and have been shocked by the attitude of the owners towards the natural landscape. I see constant degradation of the landscape and the wild life.

Thank you,  
Caroline Ayres

**Correspondence:** In all areas I remain in favor of access for dogs by leash to the trail head. I am no longer a dog owner, but I favor off leash areas to be maintained as much as possible. Pushing dogs out of GGNRA lands completely is not a solution for the community as a whole as it will overburden county and city parks. Dog owners must be responsible in their duties to other citizens, but this does not mean that they should be categorically banished from the parks. Many dog owners love nature and love hiking,

---

and their dog is the one companion that will do it with them and make them feel safe while out on the trails alone. They deserve to use the parks responsibly.

Two areas that I use frequently I will comment on.

Stinson Beach: Map 2-F Yes/In Favor:

Comment: It shows the alternative for a dog corridor to the north end of the beach - - the corridor should be more generous. This corridor should be provided free of fear or harassment by park officials. It is a long standing solution at Stinson Beach with years of precedent. Dog owners willing comply and move to the north end of the beach. The map should include most of the area directly in front of that parking lot entrance at the north end as the dog corridor.

Oakwood Valley, Alta Trail Map 4-A Yes/In favor:

Comment: This is the best but still unreasonable. The entire area should be voice control since it is all one loop. Having areas where your dog has to be on leash in one spot and then on leash half way in creates artificial areas of conflict and harassment by park officials.

Oakwood Valley and Alta Trail are really two separate areas. I've walked between them - done the 4 mile loop from my house many times and only seen at most one other person between the two areas. The greatest disservice to the OakWood Valley are dog walkers with too many dogs. This trail is often used by older people with older dogs or puppies because of the lack of elevation change and the short distance.

<b>Correspondence:</b>	Please do not block dog owners from 99% o the GGNRA				

Th changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3 to 1 AGAINST the plan

I support the No Action Alternative in the SEIS for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands

SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands

Please keep the longstanding 1979 Pet Policy

The GGNRA was established to give outdoor RECREATIONAL opportunities to people in a densely populated urban area & as such it requires a different management approach than wilderness areas like Yellowstone or Yosemite

<b>Correspondence:</b>	Thank you for the opportunity to comment, and thanks also for the time and energy spent on the various options. I moved to SF in Dec 1983 and have lived here ever since. I initially lived near Sutro Park for two years prior to moving to the Ingleside Terraces, where I've lived for 28 years. I am a registered voter. I cannot speak to the specific needs and challenges of Crissey Field, Fort Miley, Fort Point or Baker Beach. While I have visited each site on occasion, I have not spent enough time at those locations to have anything more than a tourist's appreciation for those sites. I have spent a great deal of time at Ocean Beach. I am a dog owner and thus biased toward greater rather than less freedom for dogs, but I do have concerns about my fellow dog owners in terms of the sometimes lax oversight of feces removal from the beach. I think there is a reasonable expectation among visitors to the beach that dog owners be responsible for their pet's waste removal, and I regret to say that I don't think we've collectively lived up to our end of the deal when it comes to the beach. I would support a requirement that dogs				

---

remain on leash at Ocean Beach, in hopes that greater proximity to their dogs will help all us dog owners do a better job of cleaning up. I also would support on-leash requirements at Sutro Park, where I think visitors have an expectation that they can walk peacefully without worrying (as non-dog owners often do) that they will be accosted by a dog off his leash. On the other hand, I think there is a vastly different expectation of visitors to Fort Funston, and I think dog owners at FF have done a very fine job in terms of waste management. I would not support any changes to the current structure at FF. I have no environmental expertise, so I cannot dispute those who would claim that shorebirds are being unduly disrupted by dogs who chase them. I'm at FF with my 100 pound dog virtually every day that the weather allows, and I have yet to see a dog actually catch one of the birds, although perhaps that does happen and I'm just not aware of it. I have no idea how much dog-chasing of the birds is too much for the good of the birds. Simply put, Fort Funston is heaven on earth for dogs. I also see many young kids with their parents walking around FF, and the expectation of the parents appears to be similar to what mine was when our kids were younger and we went to FF: namely, there will be dogs running around, so we just need to deal with that. And we never had a problem when our kids were small, nor have I seen a problem with dogs and kids. I also have seen a much greater attention to waste management by dog owners at FF than at Ocean Beach. Not sure why that is, but perhaps we have a greater sense of pride of ownership at FF. Thanks again for the opportunity to comment, and please note that I firmly oppose any changes to Fort Funston, but would support on-lease requirements at Ocean Beach and Sutro. I don't have enough experience at the other sites to comment knowledgeably.

<b>Address:</b>	San Francisco, CA 94114 United States of America				
<b>Outside Organization:</b>	Unaffiliated Individual				
<b>Affiliation:</b>					
<b>Received:</b>	Feb,07,2014 00:00:00				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hello,				

I am a nine year resident of San Francisco, and what drew me to the area was how dog rights, dog-owner rights, and recreation were all prioritized and balanced. I have lived in Cole Valley and Noe valley, and visit on a weekly basis Fort Funston, Crissy Field, and Golden Gate Park. I derive much pleasure from walking with my dog off-leash in the GGNRA, along with my husband and newborn. In fact, this is one of the reasons why we are opting to NOT move into the suburbs with our new baby.

Specifically:

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no

explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Thank you for supporting our rights and balancing the need for true recreation.

---

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA and has lived in San Francisco for almost 40 years, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many

years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Michael LaBrie

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. It could have a negative impact on pet health & welfare, as the SPCA has warned.				

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979, which is one of the aspects of the Bay Area that make it such an attractive place for active people and dog owners alike to live. Revoking this access would decrease the value of our property (we live in close proximity to one of the GGNRA areas), and is counter to the spirit of the Bay Area a whole.

---

<b>Correspondence:</b>	One only has to look at pictures taken of Fort Funston or the Presidio before and after significant dog use to see the impact of off leash dogs. There are holes all over, clearly dug by dogs and native brush torn up all over the place. So while I totally understand the passion for dogs people have in the Bay Area, I think it blinds people to the impact of such a large dog population.				

---

My wife and I hike the trails from Mount Tam to Montara and beyond. In almost every case we encounter off leash dogs, chasing wild life, thrashing through sensitive habitat. Often we see 4 or 5 bags of dog poop on the trail. It seems to be a custom for owners to pick it up but forget to retrieve on the way back. That is both unsightly and unconscionable littering pristine trails. It wins no favor on our part.

Sometimes we see off leash dogs and their owners right next to signs that specifically say no dogs, or dogs on leash. If we mention it we invariable get hostility and bullying in return.

A few days ago a friend logged into Facebook asking how to get skunk off her dog and out of her house. There were a lot of sympathetic replies, but the underlying cause was the fact that she lets her dog off the leash all the time. This is just one of the important reasons to obey to leash laws.

What if your off leash dog encounters a rabid raccoon? What if your dog upsets a mountain lion or a den of coyotes or gets bitten by a rattlesnake? or gets poison oak all over his coat? or brings lyme infested ticks that jump to your children?

There are good reasons to obey leash laws, and no good reasons to bully people who expect that they should be followed.

On a hike to Baker beach the other day I saw no less than 10 dogs off leash in the Presidio and all over the Baker Beach area. My wife and I were having a private conversation about it and one of the dog owners butted in and attempted to provoke an argument on the subject. We weren't even talking to her. This is how deep the sense of entitlement is with dog owners. I told the woman that it was not up to us to argue about it here and that the legislature would make decisions.

On the way back from the hike I stopped to chat with a Park Police officer to inquire about the leash laws. I just wanted to know. He seemed shaken and told me that one part of Baker Beach is off leash and the other is no dogs and that the Presidio is always leash only. The young officer then shared with me that there is an unspoken agreement NOT to enforce leash laws because of the bullying of dog owners. He said they gang up and personally attack him, report him, and accuse him of horrible things that tie him up on court on his off time and that he was frankly powerless to enforce the law.

This is unacceptable. No demographic should be allowed to intimidate rangers, peace officers or other hikers, not ever.

Our opinion is that areas should be clearly marked for off leash, on leash and no dogs and enforcement should be stepped up to firmly establish the habit of obeying the law.

Our family loves animals and has had dogs and other pets all our lives. We are not against dogs or dog ownership, rather we are pro responsible dog ownership. What we are against are weaponized dogs, aggressive dog owners and people who let their animals tear up and pollute our parks like they are entitled to do so.

The park services are always short on funding. Enforcing the leash and no dog areas laws would not only send a clear message to dog owners where and where not to exercise dog privileges, but raise revenue for education, signs and other important programs. Those who scoff the law should be ticketed, fined and people bullying the law should be prosecuted to the fullest extent of the law.

**Correspondence:** Dear Superintendent Dean,

I regularly use the GGNRA, and I'd like to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. Doesn't the GGNRA stand for RECREATION AREA? The new restrictions will make it close to impossible to enjoy these parks (especially Fort Funston, where I hike with my adorable mini-goldendoodle, Tika, every weekend). Please know that I do this for my own health as well as Tika's.

.

The concerns/objections that many people expressed over the initial plan seem to have been disregarded, as no substantive changes were incorporated into the "revised" plan. In addition, has there been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas?

Sincerely,  
Theresa Ruppe

**Correspondence:** I renew my strenuous objection to this "dog management" plan. The NPS has been deceptive throughout and continues to be so in this "updated" report that fails take into account account thousands of comments adverse to the plan. The 1979 Off-Lease Dog Plan has served everyone's needs and has been validated by a Federal Judget as having been properly implemented. We do not need more restrictions. When the off-lease conversation began in 2000, we were assured that a brief restriction on the cliffs to the immediate west of the paved path would be temporary; this area was never restored. Then dozens of acres of flats above the cliffs and at the far north end of Ft. Funston were fenced, an act the Federal Judge found had no basis in law or fact. None has been restored.

The NPS claims the needs of the snowy plover trump everything, but in 14 years they have not updated their science, even when proved wrong, such as claiming dog shadows frightened the plovers from nesting when the trajectory of the sun makes this impossible. Further, the cliffs on the north end of the

---

park have totally eroded away. Not because of dogs or people, just because of Mother Nature. The park is changing all the time due to weather. Dogs and their owners shouldn't be penalized for that fact.

I can live with the fences, but there is no basis to further restrict off-leash use of Ft. Funston. I favor more widespread publicity of and enforcement of the 1979 Dog Plan.

**Correspondence:** You should let dogs off leash at parks and beaches because dogs are really happy without their leash. It's like someone holding you by your neck 24/7. It's really uncomfortable. It's not just dogs who need to be free sometimes; some people have birds. Birds need to fly and Excercise or else their wing muscles will be really weak and that won't be good. It's not really a dogs fault if it chases you. You probably provoked it, or maybe it's just playing with you. They won't really attack you unless they're really bad. Even if you did make ban dogs from being off leashed, I'd still let them play freely because that's a really dumb rule.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

My name is Edgar Peters Bowron and I live in Belvedere, California. I have been visiting GGNRA lands, specifically Crissy Field, Oakwood Valley Fire Road and Trail, Muir Beach, and Stinson Beach, for the past thirteen years. I exercise there with my dog off leash and under voice control both for my own health as well as the health of my pet.

I oppose the preferred alternative for these areas because it is too restrictive. There is no justification in the 2013 SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around.

The GGNRA has lost sight of its purpose: it was set up to be a recreation area for a densely populated, urban area, not a national park. The GGNRA was built and designed for dog walking from its inception, to better the quality of life of San Francisco metropolitan residents by making dog walking a well-established priority. In fact, Congressional reports at the time referred to dog walking specifically as one of the uses for the space when the GGNRA was created.

Moreover, in my experience, many of these areas are utilized primarily by dog walkers and not by visitors without dogs. Take Oakwood Valley Fire Road and Trail, for example. I often make note of the people I meet on the trail and irrespective of day of the week or time of day, approximately only two of every ten visitors are accompanied by a dog. When I count the visitors with and without dogs on the actual beach at Crissy Field, as opposed to the bike and walking path, a similar ratio prevails.

After 2-1/2 years in review, the 2013 SEIS was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the DEIS released in 2011, opposing the proposals in that plan by a margin of 3:1.

Moreover, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The SEIS document admits there are few scientific, peer-reviewed studies that show how these areas are affected by the presence of dogs (e.g., on vegetation and soils, p. 375), and instead cites anecdotal observations made by National Park Service staff. However, such anecdotal claims have no validity and cannot be used to set policy. I would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies (as required by law) before making any changes to the uses of our recreational land.

The SEIS does not provide the results of public comment on the DEIS (neither does the "Response to DEIS Comments by the GGNRA" document on the GGNRA website). You say you received over 4,700 comments, but do not specify how many respondents opposed restrictions on dog walking and how many supported them. The SEIS reads: "NPS received many public comments complaining that dog use precluded their enjoyment of areas (p. 100)." But there's no indication of how many negative comments were actually made. Are they from a small minority or are they widespread? An independent analysis of the DEIS comments showed that the vast majority (at least 3: 1) supported dog walking. This is not reflected in the SEIS. Rather, a community forum or roundtable should be set up to evaluate management going forward, including dog walkers and other GGNRA users.

Instead of curtailing off-leash privileges, the GGNRA could institute a dog "green tag" system - which certifies dogs and their owners to use the area. Irresponsible dog owners should have their privileges

suspended, instead of all people losing access to a particular dog walking area.

In conclusion, I oppose the Preferred Alternative because it is too restrictive- -there is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy as well as off-leash access on new lands that the GGNRA acquires in the future. And, I urge the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of dog walking recreation in the GGNRA for generations to come.

Sincerely,

Edgar Peters Bowron

**Correspondence:** Dear Superintendent Dean,

I am a responsible dog owner who lives in San Francisco & loves sharing its recreational areas with my dog. She is a well-behaved creature whose joy in running off-leash and free (where allowed) gives me joy & helps me combat depression.

I am writing to express my sadness about and opposition to the alternatives laid out in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from enjoying recreation time with my dog for my own health as I have on GGNRA properties for many years.

Unfortunately, I understand that the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. I have also learned that there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. It seems to me, as a result of this information, that this plan is ill-considered and should not be adopted as a result.

I'm probably most upset that the GGNRA doesn't seem aligned with its purpose which is to provide a recreation area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-

leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Please consider the mounting opposition to this plan and re-consider implementing the alternatives currently on the table. There has to be a plan that will work better for both sides.

Sincerely,

Anne Moellering  
9 Coleridge Street  
San Francisco, CA 94110

**Correspondence:** San Francisco is a wonderfully diverse community and a common thread that brings many of us together is our love and passion for our dogs and responsibly using the beautiful park to exercise ourselves and our dogs. This plan will drastically restrict our opportunity to come together as a community and create a very congested and challenging problem for dog owners to walk our dogs. Almost every dog owner views their dog as a part of their immediate family and stress the importance of keeping them safe and healthy.

It seems like this ban is punishing the many to curb the behavior of the few. I have utilized these parks daily and have seen VERY few irresponsible owners not controlling or picking up after their dogs. There is no way to enforce every rule for every owner but for every one complaint, there are hundreds of positive and valuable interactions that leave this city as a better place to live.

San Francisco is a progressive city that understands the importance of inclusivity and this ban targets dog owners and forces us to choose between our loving family members and the city we call home. We live in such an urban area, backyards are virtually nonexistent, thus our parks are even more valuable to us than citizens that do not have dogs.

On a completely different but related note, as tax payers, we pay incredibly high taxes to live in this city and use of our public parks are part of what we pay for. If we are severely restricted to use what we are paying for, why are we paying for it?

This ban is targeting dog owners as a public nuisance during a time where there are SO many more and bigger issues at hand. There is a large population of homeless people who live in the parks and also have dogs. Why are these vagabonds who do not pay taxes allowed to continue to live in the park but responsible tax paying citizens of the city are being squeezed and targeted with this ban.

I have faith that this ban will be struck down by responsible city officials and passionate owners who desperately need these locations to keep a quality of life that will allow us to continue to live in the city.

Thank you,

Joe Lijek  
Owner of Truman, the Prince of San Francisco.

**Correspondence:** On June 3, 2013 I was bitten by one of three off leash dogs while walking on a path adjacent to my home in San Rafael. I have used this path several times weekly for 19 years, both with our family dog and in the past few years after our dog died at age 15. After I was bitten on the back of my right leg, I lost my balance and fell. I was taken by ambulance to Kaiser Emergency in San Rafael. It was several weeks before I could resume my daily activities, including driving, pain free. I am of Medicare age.

The dogs in question were running free in a City of San Rafael area known as Jerry Russom Park that merges with Marin County Open Space. The owners were strolling the 3/4 mile path (Old Lucas Valley Road) some distance away while the dogs ran free into the City of San Rafael portion of the path that clearly posts a leash law ordinance.

Please maintain areas in GGNRA that prohibit dogs (Tennessee Valley) and that require dogs to be on leash so that I can have safe places to walk. Even friendly dogs can jump on me and cause me to fall. (I am 100 pounds and 66 years old, five feet tall) Please do not make dogs more important than people. Dog owners may be louder and more vocal than some of the rest of us, but every neighbor who knows my experience has told me of intimidation by off leash dogs and disrespectful dog owners.

**Correspondence:** I want to voice my concern for curtailing dog use of GGNRA areas. There are very few venues left for dogs to enjoy and run off leash. High energy dogs can be walked for miles without really getting the exercise they need. They need space to run and chase, swim and play, Crissy field is a perfect spot as the dogs can swim and swim and fetch balls in the bay. A dog on leash can never do this. I am a regular visitor at Crissy field and Stinson Beach specifically because they are dog friendly outings where they are allowed to run and play with the family. I sincerely hope you are able to work the rules to allow dogs off leash access while keeping the areas open for human visitors and protecting wildlife and habitat. Thank you. Amy

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

I oppose fences to surround or delineate any off-leash area in the GGNRA. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Perhaps more education for dog owners, and fines for dogs not under voice control or for not cleaning up could be implemented. But I see no reason to punish the many responsible dog owners with an overly restrictive plan. The GGNRA should be for all the people, especially the local San Francisco residents, a large percentage of whom own dogs.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

**Correspondence:** In response to the Audubon opinion in the SF Chronicle, 2/7/14, by Michael Lynes  
I am so tired of the Audubon Society blaming the dogs for everything. What about the coyotes, raccoons,  
skunks and

crows that eat the eggs of shorebirds in the nesting areas. Should they have leashes? I am a responsible  
dog walker at Baker Beach. We have crows, sea gulls and some sandpipers and NO snowy plovers so  
why must this beach have off leash restrictions?

We clean up the beach daily and help with safety for folks that recreate. I personally know a dog walker  
who saved a life of someone drowning. Naked men are offensive to families and no one cites them. Since  
there are more dogs than children it is unfair that law abiding dog owners get cited as a group to pick on.  
SF can set off fireworks that spew so much detritus into the ocean and beaches (that I personally have  
cleaned up) and that is an environmental hazard that goes unnoticed. Tankers can spill oil which damages  
the shoreline and wildlife. In addition to Fleet Week, those are far more serious issues, not people  
enjoying exercise on the beach with their dogs. During the two year reg negotiations the Audubon people  
derailed any compromise and wanted to put up fences everywhere which I thought was not a good  
solution. They do not want even humans in their so called bird areas.

**Correspondence:** Dear Superintendent Dean,

I am a responsible dog owner who lives in San Francisco & loves sharing its recreational areas with my  
dog. He is a well-behaved creature whose joy in running off-leash and free (where allowed) gives me joy

---

& helps me combat depression. I grew up on a ranch in Wyoming, and being at places at Fort Funston where he can run free are the only things that keep me sane in the city, thus truly the only things that keep me here in the city.

I am writing to express my sadness about and opposition to the alternatives laid out in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from enjoying recreation time with my dog for my own health as I have on GGNRA properties for many years.

Unfortunately, I understand that the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. I have also learned that there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. It seems to me, as a result of this information, that this plan is ill-considered and should not be adopted as a result.

I'm probably most upset that the GGNRA doesn't seem aligned with its purpose which is to provide a recreation area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. I am not saying every area has to be dog-friendly, but you're thinking of making us leash-up at Fort Funston, are you kidding me? Where else can I go let him run free on the beach?

Please consider the mounting opposition to this plan and re-consider implementing the alternatives currently on the table. There has to be a plan that will work better for both sides.

Sincerely,

Liz Rumsey, 552 Precita Ave., SF, CA 94110

<b>Correspondence:</b>	To Whom It May Concern,				

I would just like to take a moment to express my strongest possible disagreement with the proposals to make GGNRA an on-leash only space.

As the owner of two dogs living in San Francisco, these areas are critical areas I need to keep my dogs exercised. A move as radical as this severely restricts how much free-running exercise my beloved dogs can get. this is bad for me, bad for my dogs, and terrible for city parks, which will become overrun with these areas now off limits. And that's just for me, and owner of two dogs. What are the city's dog walkers going to do? In addition to preventing so many wonderful animals from getting good exercise, you'll also be contributing to people losing their jobs.

I have spent years going to Fort Funston, and know it to be a clean, well taken care of area. If certain sections need to be cordoned off, just do that, please, please don't take this great resource away! Find another way to do what you need to do, but this is simply not the answer.

- Ron Mee

**Affiliation:****Received:** Feb,07,2014 16:05:17**Correspondence Type:** Web Form**Correspondence:** I strongly oppose the the GGNRA's latest dog management plan. I support the 1979 pet policy which was created to ensure recreational off leash dog walking.

The proposed changes to the 1979 pet policy are too restrictive and will drastically limit my ability to exercise at Crissy Field, Fort Funston and Ocean Beach.

The GGNRA should not be aligned with National Parks because it is a RECREATION AREA. The fact that the GGNRA is in a densely populated urban area makes it all the more critical to preserve its recreational uses.

Please expand off leash dog walking in the GGNRA.

They are the 2 sweetest calmest dogs you'll ever meet. It is essential to their physical and mental well being to get the exercise they can only get from off leash play.

There are already very few places left in the city where this is allowed, so I make a 30 minute trip to Crissy Fields 3 times a week so can they can get this essential exercise.

I have lived in the Sunset area of San Francisco, where I own my house, for over 50 years. I dutifully pay my taxes to the state and the city so that public services such as the park system can survive.

If off leash dog walking is banned in Crissy Fields, I, along with thousands of dog owners, would seriously have to consider moving to a place where off leash dog walking is allowed.

**Correspondence:** To whom it may concern

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to oak ridge

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Brandon Hendrickson

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Andreas

**Correspondence:** To Whom it May Concern,

I am very concerned about losing any offleash rights especially at Fort Funston where we have taken our dog many times over the last year. The ability to run with our dog and let her socialize with other dogs in an open and safe environment is especially important in a city like San Francisco where there is not a lot of open space throughout the city. Residents should be able to get to a nearby recreation area without needing to restrict their activities when it is unclear that there is significant environmental impact (based on well-accepted scientific data). Please make sure that there continues to be unabated availability of places where we can take our dog so that she may run and play like the rest of us.

Sincerely,  
MHC

**Correspondence:** My dog is never happier and healthier than when she is running after her ball, running and playing with other dogs, jumping into the ocean, and experiencing the other great moments that she can only experience in the great off-leash play areas of Ft Funston, Chrissy Field, Ocean Beach, Baker beach.

I love living in San Francisco because it's such a great inclusive city, a city where everyone can be who they are and live their life to the fullest. That should of course apply to our canine family members as well. The play areas near my home have slowly converted to 'Posted: no dogs' areas - so now the off-leash areas like Stern Grove, Ft Funston, Ocean Beach, etc. are about the only park areas for dogs to play - with each other and with their owners.

Please don't reduce these off-leash areas that are vital for the health and proper socialization and exercise of my dog and thousands like her. Since half the residents of San Francisco have dogs, they're an important part of the fabric of our great city and I speak for them.

**Correspondence:** For my husband and I,taking our 19 mo. old cockapoo, Maeby, to Fort Funston is a weekly treat. We love that we are only 10 minutes from our house, but it feels like another world: epic cliffs, beautiful vistas and an abundance of wildlife. Maeby gets so excited to run the beach that she shivers the whole way there and practically bursts out of the car upon our arrival. She loves running down the beach, chasing her toy in the waves and rolling around in the sand. She is normally filthy by the time we leave, but it's well worth the joy it brings us all.

When we have family or friends in town we take them to 'Doggy Heaven' and they always understand what we mean once there. The joy you see in the dogs and their owners cannot be found elsewhere in the Bay Area, let alone the country I believe. Visitors are always quick to exclaim that this is the best thing they did their entire trip and it is the most special part of San Francisco.

Limiting the dogs to leashes at Fort Funston would diminish the purpose and draw of this magical place, which is to be free and natural. I have never once seen a dog out of control, a dog owner littering or people disrespecting the natural environment. Rather, I constantly see dog owners cleaning up after others on the beach and bringing the trash up to the receptacles. We owners are the ones who want to keep this place safe for our dogs and clean for the other wildlife.

I urge you to reconsider leashing our pets and consider other methods. Voice control, trail markers and other guidelines would still allow all to enjoy Fort Funston yet keep the natural habitat safe. Consider this: How would you feel if our National Parks were taken away? Our place to disconnect from the world and experience nature. This is what I feel Fort Funston is to our dogs. This is there place to disconnect quit literally from their leashes and run free as nature intended.

Thank you for listening and taking my thoughts into consideration.

Warm Regards,

Anna Mumm

**Correspondence:** Please do not move forward with the proposed limitations to off-leash areas. San Franciscans love our dogs, but it's hard for dogs to get enough exercise in a city. Vast off-leash areas are necessary for many dogs, including mine, to get the exercise they (and their human friends) so desperately need! When my sweet sheltie mix does not get sufficient exercise (and multiple on-leash walks per day are not enough, nor are trips to the tiny fenced in dog runs) she becomes a nervous wreck, and she begins annoyance behaviors such as barking.

I oppose the Preferred Alternative because it is too restrictive and there are no good reasons for these changes. No studies have documented an adverse impact of dogs on the environments in these areas. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fences also destroy the wonderful natural beauty of scenic locations such as Crissy Field.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please listen to the public! These changes will be harmful to the health of dogs, and reduce the joy that us humans take in having healthy and happy canine friends. Please keep San Francisco and surrounding areas a welcoming place of natural beauty that we can ALL enjoy.

**Correspondence:**

Sirs,

Concerning Rancho Corral De Tierra, where I live near Montara. For years and years the community has enjoyed this area as dog-accessible. Very few, if any, problems were reported before NPS took over.

Now NPS is in charge and the community of dog-owners (who are very close to the majority of Montara residents) are all but excluded. Not only that, but NPS is showing an aggressive attitude and the use of potentially lethal force against those dog walkers who dare to use the land in the fashion that they are accustomed to, and have been allowed to, for decades.

These plans are a huge overreach and a draconian burden on all dog-owners, especially those in San Mateo County where so much open land in GGNRA. There is no effort for a fair balance at all; and all the exclusions seem clearly based on politics, not science.

I can only ask that you please please reconsider these plans. Allow more dog walking in GGNRA San Mateo County lands - - most especially in those areas like Rancho Corral De Tierra and Pedro Point Highlands that have been available to dog walkers for generations (and are no small reason why we live here).

I fear what will be in the next plan: Put a fence around it and exclude all humans too, perhaps? No doubt there are elements in the power structure at NPS who would favor that plan too!

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Bruce Cyr

**Correspondence:** In a city like San Francisco, where most of us are dwelling in apartment complexes, condos or homes without yards, these public spaces are critical to the health of our families and the canine population.

Dogs need training, socialization, play and love to live happy, healthy lives. With the growing population of more aggressive dogs, like pit bulls, this is even more critical. If aggressive dogs are not socialized and trained properly, they can turn against humans at the least provocation. And, we know how that usually ends.

The neighborhood based off-leash sites in San Francisco have diminished greatly over the past few years and the Golden Gate National Recreation areas are an important part of a healthy city ecosystem.

Please don't eliminate this key resource for our families and our canine companions.

**Correspondence:** I support the GGNRA's plan to restrict dog access to vulnerable bird and wildlife nesting and foraging areas. The birds and wildlife have no voice; they just become extinct as their home is trampled and destroyed. I'm sick and tired of irresponsible dog owners who allow their dogs to litter the beaches and trails with dog shit. They ruin the area for everyone. I hope you do right by the birds and wildlife; their home territories are shrinking. BTW, I own a dog. I don't let her off leash and don't take her to any off leash areas. The one time I did, the place was disgusting. Every couple of feet, I found dog shit among the shrubbery and along the trail. It was truly gross and I left and have never gone back.

**Correspondence:** My husband and I are 100% fr the BAN OF DOGS on the sites in your proposal. Bottom line, people let them run around and do not have control of the dogs as much as they think they do. We've had aggressive dogs come to us and the owner(s) refuse to admit the dog(s) are aggressive. We have also witnessed dogs attacking wildlife. The wildlife and trails need our support and care. It's not all about them and their dogs, it's the bigger picture of protecting habitat etc. So you know, I help nonprofits like Animals Legal Defense Fund and In Defense of Animals to name a couple, I'm for the rights of animals and their welfare. However, when it comes to dogs and the beach/trails, it's out of control and we must protect the wildlife's habitat. Don't think that the people are the majority that have written in, they are not. While at Muir Beach, the last two time we went, we had to recuse sick sea bird(s) by calling Marin Humane Society (also a client) so they could take them to WildCare. In the meantime, I had to stay near the birds to keep people's dogs away from the birds. So much for having a good time at the beach. As someone that was born in S. Marin, I respect the land and wildlife. I'm for helping the wildlife thrive and survive. People are the problem, they are narcissists with dogs reeking havoc on the trails and beaches. They go on trails not designated for dogs, they ignore the signs and if you ask any Park Ranger, they become belligerent and sometimes violent when asked to leave. Please do the right thing for the beaches and trails, vote to ban them. It's time to do this now as the population continues to grow and so will the amount of dogs, the destruction will only get worse.

Thank you  
The Polas

**Correspondence:** Hello,

I am very against this proposed dog management plan. I am a dog owner and also have been a dog walker for the past 10 years. I walk and hike Crissy Field and Baker Beach several times a day. I love and appreciate the opportunity to use these parks for personal enjoyment and for work. I understand the need for protecting the parks, but these parks are used daily by San Francisco and Bay area residents. I even occasionally meet people that have traveled (from other states) with their dogs to be able to experience our offleash parks. This plan will affect the people that actually use and enjoy the parks on a DAILY bases. Reducing the areas where dogs are allowed are only going to consolidate the dog/people use areas and those areas will become overused and damaged. There are more dogs than children in this city and they need the ability to be off leash. The San Franciscan residents that use these parks on a daily bases, have dogs. San Francisco is able to have so many dogs in such a small area because of the ability of being offleash. Dogs get the exercise and socialization they need, reducing problems in the neighborhoods and at the park.

This plan is far too strict and needs to be changed. Think of the people that actually use and love these parks. Who trusts a person that doesn't like dogs anyways?

**Correspondence:** California wants to welcome everyone. That has driven property values so high that most of us cannot afford a decent size yard, even with a decent salary. Therefore, we must rely on public land to exercise ourselves and our dogs. We all pay into it, and enough of us have dogs to justify our being able to use it.

I have no children, yet pay excessive taxes and fees to support the public schools. Is it to much to ask that I can use the land that I have paid for to spend time with my dog?

**Correspondence:** Limiting the number the number of dogs per walker is important to public safety and, potentially, to protecting the Park against liability. In my extensive experience with dogs (10 years working as both volunteer and staff, particularly at Fort Funston) I find that one aggressive dog can usually be handled by facing it and speaking loudly and authoritatively. However, a large pack (and most dog walkers have 8 or more dogs) may have two or more aggressive dogs, and when that happens they behave like a hunting pack, circling an individual so that only one dog can be faced at a time. Furthermore, a group of dogs will behave far more aggressively than an individual. All of this is in addition to the difficulty of controlling a large group. The current sizes of dogs groups with a single walker make the park experience risky and unpleasant for other users, and frequently for other dog walkers.

**Correspondence:** As a resident of San Francisco, off leash play areas are an integral part of the city and the Bay Area's identity. Owning a dog not only provides exercise and other health benefits for the owners, but also teaches children responsibility and care towards other living things, which in turn helps them respect nature.

My family uses Chrissy Field for off leash areas and we hike in other parks as well in San Mateo County. I oppose the plan to close the land to off leash access, but I do support the 1979 Pet Policy WITH off leash access in San Mateo County and on any new, acquired lands.

I lived for eight years in Chicago, where off leash parks are sparse, and the ones that were there were small, jammed under elevated subway train tracks (the EL), and fenced in. What this led to were too many dogs crammed into a small place, resulting in dog fights and in some cases child injuries.

I am especially concerned about the fact that public comment overwhelmingly runs against the new dog management plan and that this is not being taken into consideration. Our parks belong to us. The whole mission of the park system is to preserve the parks "for the enjoyment, education, and inspiration of this and future generations." As I stated previously, families taking out dogs and dogs being walked by responsible professionals is an appropriate use of park lands that enables them to be enjoyed and future generations to learn about parks, the importance of them, and humans' responsibility in the world.

I greatly hope that this management plan is rethought and off leash areas are kept at the current level.

Sincerely,

Larisa Beckwith  
San Francisco, CA

**Correspondence:** The fort funston site is a well managed, well policed dog park enjoyed by residents of its two surrounding counties. It offers a recreational socializing site for dog owners as well as dogs. Owners are able to converse without worry of their dogs being in danger. The wide open space is singular amongst dog parks in california. We do not wish the site carved up into tunnels of overuse for a potential gain in a particular plant species. With that logic we would raze the mission to re-establish the mission blue butterfly in the non-existent watershed.

Leave the fort alone and let dog owners enjoy their only large, worry free park in northern california!

Why not charge a permit fee to bring dogs? I would happily pay 100 dollars a year to bring my dogs to GGNRA - - but with the currently level of access. With permits, dog numbers will decrease, and it will raise much needed money for enforcement.

The new proposed plan is still far too restrictive.

**Correspondence:** Please leave the Off Leash areas as they are. If you must change them, add MORE space for off leash exercise and play. According to a study reported by the American Psychological Assoc, people with pets are happier, healthier and better adjusted than those without. Pets and people need exercise to get to or maintain a healthy body and mind. What better exercise than going to the beach

to walk and run around. San Francisco is currently constructing a lot of condos and apartments, many of which will allow pets. City parks are already crowded and the GGNRA areas are a great place to go to lessen the crowds. Please DO NOT take away the off leash areas!

**Correspondence:** Dear GGNRA staff,

Thank you for your proposal limiting dog use in the park. The current situation is so unpleasant that we no longer feel safe going there. Our observation is that dog owners do not generally obey posted regulations. When confronted they have offered us excuses (not MY dog) and expletives. Few leash their dogs. The owners' defensiveness is similar to that of the parent of a misbehaving child. No one wants anyone else to discipline their child or point out their neglect of community norms.

When I look at the big picture in this way I conclude that the proposed rules do not go far enough. Abuses will continue under this plan.

Nothing will work but fencing off areas for dogs to play in. I hope your proposal is merely a first step in limiting dogs in our parks.

Lisa Doyen

**Correspondence:** Dear Superintendent Dean,

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

The reasons prompting these new restrictions have not been clearly articulated which leads one to believe it's based on a very small contingent of people who are vehemently opposed to dogs in general. Let us remember the GGNRA was created for recreation, for all residents to enjoy the public lands and should not discriminate against dog owners. Even though I haven't found the reasons for these restrictions I'm assuming it's the fear for public safety but I've certainly ran into more angry people than angry dogs!

Furthermore, if these restrictions are imposed it will certainly lead to overcrowding in the remaining areas allowing the current dog polices, which by no means preferred by anyone.

I don't believe these "cause/effects" have been thoroughly examined and I urge the GGNRA to re-examine all the rsasons to impose these restrictions.

Best Regards.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Sincerely,

Lindy Flemming

**Correspondence:**

Maintaining our heritage of high visitation to places like Fort Funston, Ocean Beach, Muir Beach, Baker Beach, etc. for recreation; outweighs the benefits of converting these areas into new, highly protected habitats for coastal plants and wildlife.

As these areas have long been multi-use, wildlife has become adjusted to human behavior. The more sensitive areas are rarely used. The path of human/dog use is quite predictable. Especially in Fort Funston, which is the best off-leash for dogs available, since there are only two entrances/exits due to the cliffs, it is

the safest place to teach a dog about being under control off leash. This is when you know a dog can really be obedient, when there is no boundary. This benefits the dogs behavior everywhere else, as he is more obedient there also.

As for other GGNRA locations, the NPS needs to provide substantial scientific evidence and measurements, instead of just speculation and exaggeration, before discouraging people from continuing our heritage of walking dogs in these areas. These same DEIS criteria for adverse impact levels would easily exclude all humans from the park without any evidence of real degradations to the environment. This DEIS could just replace "dog" with "human" and the arguments would be virtually the same except "humans" have a greater adverse impact because of the larger visitation counts. Believe it or not, humans are natural born predators, and the GGNRA law enforcement data proves humans have been known to attack each other, go off-trail into closed areas, and disturb wildlife. Plus, humans, like dogs, have been known to make noise, litter, dig in the sand, splatter sand, bump into other people, walk around the batteries, trample hiking trail beds, produce garbage, find and report injured wildlife, pee on the bushes, injure themselves while exercising, etc.

**Correspondence:** I have been a responsible and considerate dog-owner in San Francisco for over 10 years. My dogs & I have enjoyed the many outdoor areas this city provides to dog owners. Over the years I have spend many many hours at Chrissy Field and the East Beach areas, sharing the space harmoniously with other dog-owners. The impact of dogs to these areas is non-existent. So I have to ask - why is GGNRA & NPS trying to enforce such harsh restrictions on a major section of the population of the Bay Area. What is driving these changes? It's not evident from the documents. I strongly object to the changes being proposed. If implemented, they will have great adverse effects on the small areas being permitted for dog use. SF is known for it's open-mindedness and acceptance. This plan is in direct conflict with what The City of San Francisco stands for. People will stop coming to SF and pet-owners will be forced to move elsewhere. The many small businesses that have started to support our pet population will suffer and, most likely many of them will fail - that's not what this country is about. GGNRA & NPS should not implement this plan - there is little or no benefit for the Bay Area.

**Correspondence:** My name is Linda Johnson and I am a tax paying dog owner who frequents fort Funston with my lab mix, Odie. Odie was a shelter dog on death row in the Central Valley who was saved by the SFSPCA then adopted by me. He had clearly been abused when I got him and had no socialization skills with humans or dogs. He would cower and plaster himself to my legs when around other humans or canines. I began taking him for weekly visits to Fort Funston to socialize him and the result was nothing short of miraculous. His first day there he stared at the ocean in awe off leash for a full ten minutes, clearly never having seen such a body of water before. He remained off-leash on every visit, allowing him to gradually explore his surroundings and other dogs at his own pace. At the same time he was learning how to enjoy life, I was in the middle of a failing marriage and spent a lot of time walking the beach and trails of Fort Funston sorting things out and increasing my mental and physical health as I faced this looming stressor. Being able to heal alongside Odie was an amazing gift - and to do it unfettered (off leash) in such a beautiful place gave us both the strength, health, and hope to start over and leave the past behind as we moved into our new future. This recovery was largely the result of times spent off leash at Fort Funston. It was a unique opportunity for me and Odie to bond and appreciate the beauty life has to offer despite past disappointments. Please PLEASE listen to those who oppose your plan. The value of spending time with one's best friend off leash in nature without breaking any laws is crucial to human and canine health and wellness. I am a psychotherapist by trade and can testify to the power of both animal assisted therapy and nature's positive impact on those who suffer. And we all suffer at some point in life. So I ask you for personal reasons and compassion for humans and all living beings to reconsider your position. Odie and his canine friends have left very small footprints on the environment compared to humans, yourselves included. You cannot deny this fact. So please do not fight to restrict access to the tiny amount of open space we currently have to enjoy with our best friends. You will be making a HUGE mistake and hurting many people and their dogs. Following are other points I fully endorse. Thank you for reading this letter.

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No

evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A /supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hello,				

I am a resident of El Granada and my property is adjacent to the Rancho open space. We have owned the property for 18 years, and one of our primary reasons for purchasing it and building our home here was the open space and the ability to enjoy it for recreation with our children and our dogs. We love the fact that many neighbors and visitors also walk their dogs (on and off leash) on the trail that runs just behind our home.

I am very concerned that the Preferred Alternative in the recent Dog Management Plan calls for such limited dog access to this beautiful land. The GGNRA by its name is clearly a National Recreation Area, and the SEIS needs to give more emphasis to its recreational nature. People who live at and visit the coastside need areas to recreate, including with their dogs, and a National Recreation Area should provide this.

For decades, people have been enjoying the land with their dogs, and we have been good stewards of the land. It is a rare and beautiful area. It seems very strange to me that our government would come in and restrict our usage of it in the name of preserving it. We have been using it with our dogs AND preserving it for many years.

My "preferred alternative" for Rancho is Alternative A, the "No Action" alternative, with the addition of two off-leash dog walking areas, one near Montara and the other near El Granada, as referenced in Bill Bechtel's letter. Dogs would be allowed on-leash throughout the remainder of Rancho as indicated in Alternative A in the SEIS.

Please consider the input of all the good people in favor of allowing dogs on the Rancho.

Thank you,  
Kirsten Jaeb

**Correspondence:** I have heard that there are more dogs than children in San Francisco. We happen to have both. It means a lot to us that our weekends can involve fun, leash free field trips to these areas. They are also part of what makes our week possible, as they allow our dog to get enough exercise that we can work and not worry about him.

There are plenty of places around here where the dog cannot go off leash or is not permitted. I would argue that there is enough space to make everyone happy - please leave what off leash dog space still exists alone.

We have never had any issue with our dog or any others in these areas and have been probably hundreds of times. Changing the rules feels like it would be changing part of the San Francisco character that we love. It feels unnecessary. Please don't do it.

**Correspondence:** Dear Superintendent Dean and NPS planning staff:

I walk with my dog regularly - -daily, even- - in the GGNRA, I'm writing to express my opposition to the preferred alternative described in the GGNRA's new draft dog management plan/SEIS. It is incredibly restrictive, far too much, and if codified will prevent me from recreating with my dog (for my own well being, and the health of my dog) in GGNRA.

I'm familiar with the previous iteration of the plan. The new plan was changed in any legitimate fashion to reflect the inordinate number of concerns and objections in response to the prior plan. Additionally, there hasn't been a single peer-reviewed, site-specific study (as I understand it this is required by law) that supports such a restriction of dog-friendly areas.

The GGNRA seems to have lost its foresight: GGNRA is a RECREATION AREA effectively within a densely populated, urban population center. GGNRA is not Wilderness. The pet policy from 1979 needs to be codified such that access for humans and their dogs is maintained, and not restricted.

Sincerely,  
Seth Green  
San Francisco

**Correspondence:** Please leave beaches available for off-leash dog use. Many of us have active but very well behaved dogs and use the beaches happily for recreation. I understand that not all beach-goers appreciate dogs, but so many Marin families have dogs and it is already so restricted where they can be off leash. There should be some designated beaches where off leash is acceptable.

**Correspondence:** I am completely shocked over the proposed ban on allowing dogs to run and play fetch in many areas of San Francisco. San Francisco has long had a reputation for being a dog-friendly city. It seems that more and more action is being taken to curb this freedom and restrict dog-owners. As a populace we are responsible for the lives of our domesticated animals. To deny them the ability to roam and play is inhumane and not necessary. San Franciscans have existed without such a ban for a very long time and there is no reason for one now. Please stop the discrimination.

**Correspondence:** I recently moved to the Bay Area drawn by the incredible resources and natural beauty. I love being outdoors, hiking and picnicking. My experience outdoors includes, whenever and wherever possible, being with my dog. Having my dog as a walking/hiking companion is extremely important to me. The dog provides me encouragement to walk farther and faster than I might if walking alone. We love exploring together, partners in fitness and in health. As a woman walking alone, having a dog by my side increases my sense of safety. Frankly, I think I would not walk even half as often if I did not have my dog with me. Walk with friends, you suggest? I have found that my friends are often not available for a long hike when I am, and many are not willing to walk the same distance or at the same pace...but my dog is always ready and willing to be my companion.

I believe that dogs should be allowed on all of the Recreation area trails. Off leash areas are a treasure. Watching my dog racing and playing with other dogs brings a smile to my face - and to the faces of others lucky enough to be part of the action. Dog lovers and walkers are healthier and happier for a good reason.

I recommend keeping all of the current off leashes sites. In fact, it would be great if these areas were expanded.

When dogs are in areas which require a leash, I believe that they should be well-behaved and under close control. This is important for the safety and comfort of everyone. I have no objections to requiring 6' leashes for walking in areas that have heavy pedestrian traffic. I pride myself in having a dog that is well-mannered and friendly. Many, many non-dog owners stop to chat with my dog and me when we are out on the trails together. Clearly they have no objection to sharing the beauty of the outdoors. In fact, I can't help but wonder who actually does object. I have never heard anyone complain about sharing the outdoors with a well-behaved dog and its owner.

I cannot see any possible reason for excluding dogs from the GGN recreational sites. I STRONGLY object to the suggestions for eliminating off leash areas and restricting on leash trail access. WHY? I don't see how this policy change is helping anyone and it is significantly restricting the enjoyment of thousands and thousands of residents and visitors to the SF Bay area and your recreational sites. I am sorely disappointed that these changes are seriously being considered. To repeat, I object to the proposed changes.

<b>Correspondence:</b>	Dear Superintendent Dean:				

I am a frequent visitor to the GGNRA, and I am writing to express my strong opposition to the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. Additionally, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people (including myself) in response to the first plan. There has not been a single peer-reviewed, site specific study that supports such drastic restrictions in dog-friendly areas.

It is very important to the health of me and my dog to have access to off-leash dog friendly areas. I have been recreating in these areas for the past 12 years, since moving to the Bay area.

I support formalization of the 1979 Pet Policy plus off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I oppose any fences to delineate any off-leash area in the GGNRA.

Thank you for the opportunity to comment.

**Correspondence:** I strongly oppose Alternative F, your plan to restrict off-leash and dog-friendly access to the GGNRA. Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

With the ever increasing number of dogs in the county (ie. residents love their dogs and seek services and trails for them), the more you limit access the more problems and congestion there will be on the miniscule number of remaining trails.

Please realize the detrimental impact this will cause!! It should be expanded as the need is increasing not decreasing!!  
Sheri

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As a conscientious, responsible and mindful canine Advocate and Guardian, who regularly enjoys outings with my dogs in the GGNRA, I am writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan ... which definitively does NOT take dogs into account.

The draft proposal is extensively too restrictive and will prevent me - - as well as a majority of many others - - living in this urban setting from recreating, exercising and experiencing "the outdoors" with my dogs. It disregards a means for myself and others to continue to attend to all of Our collective health in the manner we have responsibly done so on GGNRA properties for many, many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (AS REQUIRED BY LAW) that supports such a drastic restriction of dog-friendly/open-space areas.

Evidently, the GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for densely populated, urban areas. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

A policy that must be formalized in support of off-leash areas in the entirety of the San Francisco, Marin and San Mateo Counties; and, inclusive in this process is that of the/any new lands that the GGNRA acquires in the future.

Sincerely,

Madeleine V. Salada, R.N.  
Health Care Advocate and Facilitator

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to the Oakwood Valley Trail and Rodeo Beach Loop. Off-leash exercise is critical to his health and happiness.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:**  
Dear Superintendent Dean,

For the past 18 years, I have walked my dogs (off leash) nearly EVERY DAY at either the Presidio, Ocean Beach, Fort Funston, Pacifica or Chrissy Field. I walk for my health and my sanity, and it benefits my pets in the same way. In all that time, I witness our human population of San Franciscans and tourists co-existing with off leash dogs in the most natural of ways. As a matter of fact, it is what most people find "charming" about our great city.

Almost every dog owner is conscientious about picking up after our pets, and I can attest that if we see someone not taking care, we demand that they clean up or we do it ourselves. We appreciate the great privilege we have and insure that we take the responsibility that goes along with it.

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Walking my dog, especially off leash is very important to me. It is important for dogs socializing and exercising and also for my own great enjoyment. I have been a hiker for many years and before I had my dog(two years ago) I had access to many, many other trails, which I miss very much. Now I am restricted to a handful of trails. There are many dogs in Marin. People in Sonoma county have literally , no place to walk their dogs off leash and so they travel down here. We in Marin, treasure our natural beauty and hiking trails and access for our 100,000 plus dogs. Also, dogs on leash at a beach is really absurd. That is why, at every beach I've been to people break that rule, because it is impossible or pointless to have a dog

onleash, trying to play with waves other dogs etc. These things are important to us and I see no compelling reason to deny us our enjoyment, because you people want the "regulations" to be the same in all of your areas, so that your staff is less confused(that seems to be your reasoning).

**Correspondence:** Dear Superintendent Dean,

I support the Preferred Alternative because I am tired of chasing away off-leash dogs that approach my family. My son has been attack by off-leash dogs at his school, which does not allow off leash pets of any kind. As a child I was also attacked by an off-leash dog at a park. Large pets and all dogs should be leashed in public areas at all times, excepted for designated off-leash areas. Protect our families, not the dog owners that think they are entitled because they bought a dog and did not have an adequate private yard for their pet.

I support fences to surround or delineate any off-leash area in the GGNRA. Fences will make park visitors and families feel safe and welcome.

The GGNRA should do what is necessary if pet owners are complying with the leash restrictions.

Sincerely,

John Weerts

As a tax payer I believe children and families have a right to enjoy the parks. I'm writing to express my support to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement.

Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been abused by dog walkers who think they have the right to let their dogs run free over the rights of people who would like to use these public areas. I do not like strange dogs of varies sizes running up, jumping on, sniffing me. On one occasion a dog stole a sandwich from my young son, I have seen children playing soccer step in dog poop bc many dog owners are irresponsible. Because of this, please enforce new rules that will make all public areas safe for more than just dog owners and their dogs.. I do not support off-leash areas .

Sincerely,  
Laura Milvy

The argument that the parkland is for people not animals is crazy...it's for people and the majority of people have dogs. Even if it were a smaller segment, accommodating them is clearly the way to go.

What's the argument against? Hard to know the intent, but none of the arguments I've heard hold water. Dogs are clearly not the problem and most (almost ALL) dog owners are not either. So why not wake up and address whatever REAL problems exist and not just outlaw dogs against the wishes of MOST of the people who use the parks. Certainly dogs can't be allowed in every area without infringing on the wishes of the FEW who hate dogs, but that still leaves a LOT of areas they should and can be allowed in.

I firmly oppose all of these new restrictions.

Why would you want so many people to hate GGNRA and it's employees???

**Correspondence:** I think taking off leash area away at ft. Funston goes against the spirit in which these land were given to the NPS

We need this space and take care of it and are mostly responsible dog owners. I do not feel strongly about Chrissy field since it is a multi use area. But ft funston iss not traditionally a tourist area. And I still think it very unfair that a ocean a beach was taken away as well.

Most dog people are strong environmentalists and wildlife and bird lovers but this city has a large population of dog owners who need to get out and walk their dogs.

I am 65 and for me and many older folks getting down to the beach at ft. Funston is a hardship so I need more space up above to walk.

Thnk you for considering my comments.

**Correspondence:** Continued policies regarding Rancho Corral de Tierra makes land use more restrictive than use prior to GGNR acquisition and continues to negatively impact the residences of Montara and surrounding areas, along with their companion animals.

The No Action Alternative needs additional provisions to allow off-leash dog walking in the the areas near Montara and El Granada where the practice has been going on for decades.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash

access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely

---

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Upper and Lower Mori Point:				

1) PLEASE keep on leash dog access on Upper Mori trail to Sweeny Ridge: I have a back issue which prevents me from running and briskly walking up the steep upper Mori trail has a level of difficulty that I need to maintain my health and is one of the only exercises of this intensity that I can do with my back condition. Hiking these trails is so important to me that I purchased my house in Pacifica to live next to Mori point trail. These hikes have maintained my back health and helped reduce my high blood pressure and stress level. This is a wide trail with very few hikers - and those that I do encounter usually also have a dog. In urban areas, an important reason to conserve of open space is to provide residents like me a place to hike/exercise.

2) PLEASE keep on leash dog access on the wide but steep trails near Mori point: While my usual hike with my dog (on leash) is upper Mori trail to Sweeny Ridge, at times when it has been very rainy this trail is too muddy and slippery to use safely, so I then like to hike to Mori Point. This access is very important to my health as I have a back issue which prevents running but briskly hiking up bootlegger stairs and the upper trails of Mori provide me much needed exercise (only speed walking on the flat coastal trail next Mori point does not supply the same level of intensity).

3) Enforce leash laws and do not punish considerate dog walkers: I observe off leash dogs at Mori point frequently and as an 'on leash' dog walker, I find these loose dogs can sometimes be scary and sometimes go off trail which I agree could hurt surrounding wildlife. I have never seen a park ranger in this area enforce the leash laws. It does not seem fair to take access away from these trails for considerate dog walkers that keep their dogs on the trail and on leash and who pickup after them. Why not instead post signs reminding people about leash laws and then enforce them?

4) Dogs make walkers and hikers feel safe providing motivation to exercise: On more than one occasion my dog and I have been approached by coyotes on Mori trail. We have also encountered people camping/sleeping in the bushes. Having my dog with me makes me feel safe and provides additional motivation.

5) Keep access for those who are willing to pay a dog usage fee: A usage fee to take a dog on-leash on the upper Mori and Sweeny ridge trails could help pay for more fencing, signs, additional trash cans and more law enforcement. Having to buy a license to use certain trails could keep the number of dogs down but enable those who really need or love using the trails to have access.

6) I will not hesitate to contact my elected officials, protest, and even take legal action (as I feel this will lower my property value) if on-leash dog access to upper Mori trail is restricted.

Thank you for your attention.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties since September. I recently moved back to the Bay Area from Washington state and was happy this time to bring a furry friend only to find out the Bay Area is becoming much less welcoming to dogs than when I lived here in the 1990s through 2008.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I moved to Tiburon this time to be able to access more of what the GGNRA has to offer. I am a responsible dog owner in addition to the many others I meet but realize there are exceptions... just as there are exceptions to good families enjoying the beach with a few who don't pick up after themselves or leave dirty diapers about, just as there are exceptions to hikers and bikers who stay on trails ensuring the fragile ecosystem is protected vs the few who feel carving out a new trail is more important, just as there are mostly good surfers who heed the speed limit vs the few who rip through the parking area on to their next adventure. Ticket those who don't comply with the rules, don't fence anyone in and destroy this wonderful open area and let all enjoy this special place that inspires us. Educate vs restrict, promote enjoyment and inspiration that connects all to this wonderful planet vs creating a recreation area to be enjoyed by few.

Sincerely,  
Karen Loida

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me, my dog, and friends from enjoying the very trails we have hiked

on for many years and prevent us from enjoying the beautiful beaches

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. It feels as if they are discriminating against those of us who have well-behaved dogs. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely, Caroline Palmer

<b>Correspondence:</b>	Dear Superintendent Dean,				

Please do not make changes that will prevent dogs under voice control from enjoying the GGNRA off-leash. I have been taking our dog to Fort Funston for the last few years regularly, and it provides incomparable health benefits for myself and my pet. Most of the alternatives under consideration that will make changes to the current policy are overly restrictive. Even Alternative F in Fort Funston extends leash areas to trails (but oddly, not to off-trail areas).

If you have properly surveyed the area over time, you will know that dogs are typically well behaved and under good voice control of owners and dog walkers, that owners pick up dog waste, and that dogs love these parks! There are very limited alternatives for urban dwellers to properly exercise their dogs.

I also note in the latest draft of the plan that there are citations to publications that support the general theory that dogs can harm vegetation, yet I did not see an indication that the actual adverse impact of dogs off-leash in these specific parks has been quantified. This is disappointing since it seems to be used as a basis for action throughout much of the document.

I also oppose the use of fences as it will decrease the natural beauty of the parks for all visitors, including those without dogs.

Thank you for considering my input,

Daniel

**Correspondence:** It is my opinion the current status of any and all dog access shall remain unchanged; that is to say any further ordinance, statute, or regulation(s) being considered by the GGNRA (or any other regulatory body) will pose undue hardship to me and the citizenry at large. Open, dog-friendly space is becoming ever more limited in the San Francisco Bay Area; therefore, we the people rely on areas like Fort Funston and Sweeney Ridge (to name a few) to maintain the well-being of our dogs and ourselves. We dog owners are the proprietors and stewards of the land in question. It is my opinion our rights for our dogs to access these lands in a good faith, safe, and respectful manner shall not be further infringed.

Thank you,  
Scott Kent

**Correspondence:** PLEASE, PLEASE .... do not close anymore trails, walks or beaches to the dogs off leash or on leash. There is limited off leash areas in the GGNRA for dogs and there owners. We are a respectful group who pick up after their dogs and enjoy spending time with other people/dogs. There are lots of areas for hikers, horses and bikers.

I hear you are interested in closing more trails. Please DO NOT close more trails. Actually, it would be nice if you can consider opening more trails.

I know it's important to protect the vegetation and I don't think the dogs contribute to this problem as much as the bikers and hikers that go off trails. There are much more people hiking and bikers using GGNRA than people walking with dogs.

Dog owners tend to be more respectful of preserving the land and picking up after their dogs.

**Correspondence:** This is a terrible idea; please take another look at it and see how it affects ordinary citizens with multiple dogs, not just those dog-walkers being targeted. Since when do we prevent anyone from going into our national parks with their animals?!

Dgs are, of course, much more attracted to parks and long walks or runs than my pet cats. But I'm hoping to find a dog soon, and I certainly want to enable him or her to enjoy the great outdoors as much as my husband and I do too. We presently have just two cats, and they're not good candidates for park-walking, for obvious reasons such as not being able to take commands, not staying near us when they wander into the woods, etc.

I am certain this entire course of action is intended to target the "dog-walkers" who take 10 or 15 animals wherever they can, as often as they can. Taking care of peoples' dogs is hard work; if a good run is what helps all the animals stay calmer and more comfortable until their people come home from work is a very good thing. This will affect adversely those people unable to get whatever "licenses" they must obtain or "fees-per-dog" they must pay for park-walking. This in turn will hamper working people's ability to make certain their dogs are safe inside their homes or apartments all day, where they might bark and annoy neighbors or do personal damage to personal premises- -because it may become financially impossible

---

to pay the cost of those walkers' licenses, etc.

If you must track this activity to assign damage, annoyance or financial responsibility to injury or damage to SOMEONE, then ticket dog-walkers who don't pick up after their charges or those who take on or don't properly supervise closely enough their "clients." Please don't close public facilities to ordinary people with their ordinary pets. That will take more patrolling and licensing and oversight than it's worth and just increase layers of bureaucracy: which we hardly need!

THIS IS NOT THE KIND OF PROBLEM THAT REQUIRES SUCH DRASTIC SOLUTIONS; it's like killing a fly with an elephant gun.

Please, let's get real about dogs, humans and the great outdoors.

**Correspondence:** I urge you not to restrict the current dog walking areas in the GGNRA. I am a San Francisco resident and go to Fort Funston every week because I can walk my dog off leash there. Along with me hundreds of other people are benefiting from being able to walk their dogs off leash at Fort Funston. There are over 100,000 dogs in San Francisco and they need exercise. If off leash walking was restricted in Fort Funston and other GGNRA locations it would cause thousands of people to take their dogs to city parks instead. City parks don't have the capacity for this. The GGNRA now occupies all of San Francisco's coastline land. It is vital that the GGNRA take into consideration the needs of the residents of San Francisco and it's parks. The mayor of San Francisco, several of the Board of Supervisor members and Nancy Pelosi all support continuing the 1979 dog walking policy. I urge you to take into consideration all of our needs and desires.

**Correspondence:** Thank you for making a plan that protects wildlife and allows people to enjoy more of the GGNRA without worrying about dogs. In particular, the elderly and frail need a connection to nature, which is so richly and locally provided by GGNRA. However, senior citizens often become fearful of off-leash dogs to the point that they can no longer enjoy spending time in nature, observing the natural flora and fauna.

The proposed dog management plan will help GGNRA manage recreation and natural resources and if anything, more restrictions on dogs and more importantly, enforcement of restrictions, is needed. It will be important to make sure everyone knows what the rules are, where dogs are allowed and where leashes are needed. It's also important not to undermine the plan by failing to communicate with dog owners in the GGNRA, especially when they are oblivious to the rules. Early in the program, dog owners should be warned, but if there is continued disregard for nature and fellow citizens, then fines and other enforcement are warranted.

**Correspondence:** One of the common photos showing a "beautiful life" is of a dog running on a beach. Now, especially for us in California, that picture is becoming more and more of a rarity. I've been upset at the California State Park System for their ridiculous rules against dogs for years. These rules kept our family from visiting and using the state parks for the entire 12 years we had our dog, who recently passed away. It made no sense to us to go for a hike or camp and not include our four-legged family member.

I grew up having dogs, but the rules weren't so strict and anti-dog in those days. Our most recent dog was a beautiful Australian Shepherd who needed to run for her health and well-being. She didn't like dog parks because of the big dogs that would chase her and jump on her...that wasn't her thing. She only wanted to be with us. She never chased wildlife, or barked a lot, or jumped on people, and she never ever, in her 12 years, bit anyone or anything. And, as dog owners, we trained our dog well and always, ALWAYS picked up after her. And yet we found it more and more difficult to find places for our dog to run. Our dog, being a herder by nature, was also much better off-leash than on. Off-leash she would stay right at our heels (didn't have to train her to do that, it was natural for her), but on-leash she either pulled ahead or would try and herd us and end up tripping everyone. But, at least we could take her places with us; leaving her behind was painful for her and us.

When you take away our public open spaces from dogs, you are probably also taking those places away from dog owners, and making a dog's life a lot less healthy. So, why are you considering banning all these areas from dogs? Because they chase wildlife? Some may, but not all. And, so do children. Should we ban children from beaches? And, we all know that teenagers can do some pretty stupid things on occasion. Maybe they should be banned. But, in the end, it is actually the adult or parent who is in charge. Why, instead, don't we ban adults that don't watch their children or dogs? After all, there are only bad dog owners, not bad dogs.

As a dog owner (which I hope to be again someday), and as a responsible parent of two grown boys, I don't think it is fair that all of us with dogs should suffer due to some irresponsible dog owners. I wouldn't mind paying for a special license in order to take my dog to the beach. This license could be revoked if my dog behaved badly or bit someone, and I could get fined if I didn't pick up after my dog...just like littering. The revenue from the license could help pay for enforcement and other necessary dog amenities.

I also realize that, as a national park, you are responsible for protecting the environment and the wildlife.

---

However, the wonderful thing about a beach is how it rejuvenates and cleanses itself constantly. How perfect a place for kids and dogs to run and play! But, there is the issue of the wildlife. Snowy Plovers and other birds like to nest on beaches. But, they don't do it all the time. My in-laws used to live in Huntington Beach, and their beaches would put temporary fences around the nesting areas when they were needed. Why can't you do this? Please don't put up fences for the dogs to stay within...that would be horrible. Small fenced-in dog parks may work for some dogs, but not all; and not for larger dogs, or shy, people-oriented dogs like ours.

I care deeply for the birds and wildlife, and I hate it when owners don't watch their dogs or pick up after them (and I feel the same about parents!). But, dog owners are part of the public that owns these parks. I realize how difficult it is to manage these beautiful beaches for all of its different users, and I don't envy you this job. These beaches where you want to ban dogs are next to urban areas and need to be available for those kinds of uses. A dog NEEDS off-leash time on a beach or large open space, because a dog NEEDS to run. Walking on leash is fine some of the time, and maybe all that is necessary for some breed of dogs, but most need to really run...and they can't do that on a leash. Make dog owners more responsible, and let us try and work together so everyone can use the parks.

**Correspondence Type:** Web Form

**Correspondence:** Dogs have become an integral part of many families, with whom they should have the right to exercise and recreate. There are so many amazing dogs and incredibly responsible dog parents, it would be very sad if they were penalized and could no longer go to the parks they've been frequenting since the original pet policy was set in 1979. Is there truly a reason compelling enough to deny our canine citizens their most basic need?

Please continue to support the important role dogs play in making SO many people's lives better, as well as the critical importance that exercise plays in ensuring dogs remain good citizens. As Cesar Milan says, dogs primary need is "exercise" followed by "discipline & affection." If we continue to limit the places people can enjoy time outdoors in nature with their dogs (which is where dogs should be as much as possible), the harder it will be for people to provide their dogs with the exercise required to keep them from developing behavioral problems. I know I and all my responsible pet owning friends would be glad to follow regulations that keep other animals safe or environments as pristine as possible. We just have to ensure that we don't go so far with this that we and our canine companions suffer.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

Please, support as much off-leash access for our animal companions as possible! Thank you for your consideration & empathy.

**Correspondence:** Areas where our dogs have been welcome to walk or play off-leash for decades could be severely cut or banned outright under the revised GGNRA dog plan. The new rules would affect off-leash as well as on-leash access at Crissy Field, Fort Funston, Muir Beach, Rancho Corral de Tierra on the slopes of Montara, and many other parklands.

The San Francisco City Council recently unanimously passed a resolution objecting to the GGNRA plan, which prompted the head of the Sierra Club to say that SF is pandering to a small group of dog extremists.

However, we believe that as responsible citizens, we must be realistic and fore-thinking about how to accommodate more than 100,000 local dogs in a city with limited space.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely

---

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

We are not suggesting unlimited dog walking access, and we advocate responsible dog ownership in all GGNRA lands. But there is no credible reason to deny fair and reasonable access for both on- and off-leash dog walking that has taken place on GGNRA land for more than 50 years.

<b>Correspondence:</b>	I am writing to express my concern regarding the proposed limiting of park areas for off-leash dogs in the San Francisco Bay Area. This is a region that has always been unusually friendly to dogs and dog owners, and there is no sound reason to curb the freedom- -respectfully and responsibly adhered to- -enjoyed by pooches and their companions who only wish for them to have room to roam among like-minded pets and their owners. Please do not take steps to irreparably change one of the best aspects of living in this area. Please continue to value dogs and their owners. Please believe in our ability to properly look after our pets in public spaces.				

Thank you very much for your consideration.

Steven Jenkins  
San Francisco

**Correspondence:** As a new dog owner in San Francisco, for many months, I have been looking forward with expectant pride to taking our new family member on unleashed romps through the many beautiful recreation areas our city has to offer. I often brag to my friends from the east coast about how dog-friendly our city is, and indeed it is one of my favorite things about the bay area that we can travel with our beloved companions to so many places here.

Since we brought home our dog, my boyfriend and I have come to view to the long walks we go on with him as the highlight of each week. Finding new places to introduce him to has allowed us to become acquainted with parts of San Francisco we had never seen before, including Fort Funston (!), and it has made our experience as residents so much richer. Furthermore, the 45 minute to 1.5 hour off-leash walks we take with him several times a week have also been great for our health, and we have been especially grateful for having an impetus to see the ocean on a regular basis.

While keeping our dog on leash wouldn't prohibit us from continuing these activities, I don't have the words to express the difference between bringing our dog to an enclosed area where he's forced to interact with other dogs versus the ability to explore and play freely together in an open space. There is nothing like the pleasure of seeing him trot ahead sniffing eagerly then come bounding back at my call.

To quote the poet Mary Oliver (who I generally don't care for, except I do think she has some wise things to say about dogs):

"I want to extol not the sweetness nor the placidity of the dog, but the wilderness out of which he cannot step entirely, and from which we benefit. For wilderness is our first home too, and in our wild ride into modernity with all its concerns and problems we need also all the good attachments to that origin that we can keep or restore. Dog is one of the messengers of that rich and still magical first world. The dog would remind us of the pleasures of the body with its graceful physicality, and the acuity and rapture of the senses, and the beauty of [Fort Funston's] forest and ocean and rain and our own breath. There is not a dog that romps and runs but we learn from him.

The other dog- -the one that all its life walks leashed and obedient down the sidewalk- -is what a chair is to a tree. It is a possession only, the ornament of a human life. Such dogs can remind us of nothing large

or noble or mysterious or lost. They cannot make us sweeter or more kind.

Only unleashed dogs can do that. They are a kind of poetry themselves when they are devoted not only to us but to the wet night, to the moon and the rabbit-smell in the grass and their own bodies leaping forward."

Please continue allowing me and my dog to be together in the larger natural world. The GGNRA's decision will have a profound impact on our lives- -and we are only one pair of so many!

**Correspondence:** As a regular user of multiple GGNRA, I am appalled at the restrictive rules being considered for dogs in the recreation area. I take my dog with me for companionship and mutual exercise as we explore the paths in the GGNRA. I do not understand in any way the restrictive rule changes that have been suggested. I have been on the trails at many sites in the GGNRA and have never witnessed any issues with dogs. I have seen nothing to justify the proposed changes. It certainly seems reasonable to have some areas restricted to dogs on leash only. The key to such regulations is enforcement. The current fine for having your dog off leash in a leash only area is sufficiently high to be a deterrent to rule breakers, however, as best I can see, the rule is rarely enforced. If the rule were enforced regularly, rule breaking would cease.

With all state parks and all parks in San Mateo County closed to dogs, again with no justification, inadequate open space is available to those of us who enjoy exercising with our dogs. The suggestion that

allowing dogs on leash in parking lots only as one solution, clearly indicates that those making the rules have no idea of what is appropriate for dogs and dog owners.

<b>Correspondence:</b>	February 8, 2014				

Dear Superintendent Dean,

My name is Miranda Ruenroeng and I currently am a resident of San Mateo. I have been visiting GGNRA lands, specifically Mori Point, Sweeney Ridge, Fort Funston, Ocean Beach, Lands End, Crissy Field, Baker Beach, Muir Beach, Rodeo Beach, and dog-friendly trails in the Marin Headlands (Coastal Trail and the Wolf Ridge Loop) since moving to the Bay Area in 2009. I exercise in these beautiful outdoor recreational spaces with my dog Osby, either on-leash (at Sweeney Ridge and Mori Point) or off-leash and under voice control, for my own health and the health of my pet as well. As a Muir Woods Annual Pass holder and a member of the Marine Mammal Center, I cherish and respect our local natural resources.

I strongly oppose the preferred alternative for Mori Point, Sweeney Ridge, Fort Funston, Ocean Beach, Lands End, Crissy Field, Baker Beach, Muir Beach, Rodeo Beach, and trails in the Marin Headlands because it is too restrictive. There is no justification in the SEIS for major changes in any of the 22 areas affected. I would like it on record that I adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad idea that will unfairly limit access, and severely restrict outdoor exercise options, for responsible Bay Area pet owners and their companion animals. In addition, any barriers put up will impede the natural movement of wildlife. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. I support formalization of the 1979 Pet Policy, PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan simply does not reflect democratic change, as it was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in opposition of the original plan by a margin of 3:1. What the citizens of the Bay Area need is a new plan that describes how these spaces will be managed as RECREATION AREAS, which is what the lands are mandated to be (Golden Gate National RECREATION AREA), as opposed to a National Park, which clearly is inappropriate for lands within a crowded urban setting.

And finally, I would like to express what a drastic, negative impact the planned restrictions would impose on my family and our lives. My dog and I currently exercise together in GGNRA spaces at least three days each week, and we log more exercise mileage on GGNRA lands than anywhere else, including residential areas and other local open spaces. Additionally, on weekends my husband, Stephen, often joins our dog and me on outings to GGNRA lands, where we enjoy valuable family time together outdoors. In fact, we hold these places so dear that we have chosen family photos of us (our dog included) at GGNRA sites for our holiday cards every year since moving to the Bay Area.

As I've already stated, spending as much time as possible outdoors with my dog in the public spaces within the GGNRA has been a part of my weekly routine since we arrived at our first apartment in San

Francisco in 2009. In the past few months, however, access to these open lands has become even more precious, as my dog was diagnosed with advanced cancer in 2013. Walking the trails and running on the beaches of GGNRA spaces has had a materially positive effect on my dog's battle with cancer and my ability to have joy with him and with my spouse during what has been a very difficult time for our family. In short, we treasure the Golden Gate National Recreation Areas and feel that access to these recreational lands, for our entire family, is an integral part of what makes our lives in the Bay Area so fulfilling.

Sincerely,

Miranda and Stephen Ruenroeng

<b>Correspondence:</b>	I am grateful for the attempt to find balance within the parks. The parks have become less of a respite from dense city living, and have become overrun with professional off leash dog walkers. The parks have become trashed by dog filth and dog bags, noisy from yelling dog walkers, and devoid of remaining biodiversity.				

Thank you for helping to find a fair balance. Providing any off leash areas for walkers is more than what most areas in such urban environments offer. City park dog runs and designated off leash areas as a small portion of the various park lands is so reasonable and fair! Thank you for taking on this difficult issue.

<b>Correspondence:</b>	Increased usage over time was anticipated when this National Recreation Area was created. The House Report No 92-1391 made clear that the GGNRA would be confronted with problems in San Francisco that would require careful planning because of the high volume year-round visitation:				

"As a national urban recreation area, this new component of the national park system will be confronted with problems which do not frequently occur at other national park and recreation areas. Great numbers of people can be expected to use the area-particularly those portions located in San Francisco County."  
(pg. 11)

\*\*\*\*\*

. In October, 1977, Rolf Diamont, GGNRA "Environmental Coordinator" prepared a memo proposing a "Draft Dog Policy for San Francisco Unit." His memo enumerated the following guidelines:

1. "No regulation, verbal or written, should be attempted that cannot be reasonably and consistently administered."
2. "Dog regulations should be different for different areas of the park reflecting public needs and attitudes as well as urban geography and our capabilities."

3. "When we discourage or restrict dogs in any area, whenever possible, an alternative site where dogs are allowed should be suggested.

I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

As a big dog owner (I have owned Rottweilers, Malamutes and now Bernese Mtns Dogs) I visit Fort Funston or Crissy Field on a regular basis and almost always with my kids. These are great locations to let my dogs off leash to run, roam and play with other dogs. Over the last 10 plus years, and maybe I'm the exception, my dogs have never been in a fight, my kids have never been bitten, and on a rare occasion someone has missed picking up after their dog. Yes there are a few dog parks in my general neighborhood, but its so nice to get the kids out to the beach to explore, let the dogs run, and just enjoy what these beautiful areas have to offer without having to worry about further restrictions limiting dog access.

Thank you for your consideration.

Sincerely

Lane Welton

**Correspondence:**

Hi. I am Michael Feranchak. I live in San Francisco and I'm calling because I'm upset about a proposal by the Golden Gate National Recreation Area to severely limit dogs and off-leash dog walking in Ft. Funston, Crissy Field and other parks.

Just about one in every three households in San Francisco has a dog, and this is going to dramatically impact San Franciscans. It is also going to impact city parks, because if this proposal passes hundreds upon hundreds of people and their dogs are going to flood places like Maclaren Park and Golden Gate Park.

This issue is being portrayed by the GGNRA as people who have dogs versus environmentalists. I am an environmentalist and a dog owner and I'm certain we can protect the environment AND allow off-leash dogs in the GGNRA. The vast majority of the GGNRA is already closed off to dogs. It's important to remember that the GGNRA is not a pristine wilderness area - it's a recreation area in an urban environment - so it needs to allow for recreation that is balanced with the protection of indigenous species and plants.

Please reconsider for me and my dog.

Thank You,

Michael P Feranchak  
and Max

**Correspondence:** First, I would like to express my gratitude that the Corral de Tierra property has been saved from development. I have lived in Montara for thirty one years and have watched various owners try to build on it. I am extremely pleased that is no longer an option.

In the thirty one years I have lived here I have always have had a dog. I have been walking in the field all those years with my dog. With the help of the Montara Dog Group, I have become a better dog owner.

---

The community that has been built here is very extraordinary. We clean up after our dogs and other dogs. We have respect for each other on the trail. Most of the dogs do much better together when they are off leash. When I see a dog who is on leash or a person walking without a dog I always ask them if they would like me to leash my dogs. This method seems to work well here. We need to have some areas that are open to off leash dogs.

The GGNRA is supposed to be about recreation. For many of us dog walking is our recreation. Watching my dogs run and frolic with other dogs is pure joy to me.

Please leave many open for off leash dog walking. My dogs and I both thank you for your consideration.

**Correspondence:** My husband and I live in Campbell which is not very off leash friendly. Sure there are a few "dog parks" that are a small patch of AstroTurf surrounded by fencing that we can take our dogs to, but they know it's not the real deal. Although we are surrounded by beautiful hills with miles of hiking trails, only a few even allow dogs, none permit our dogs to feel the freedom of being off leash. Because of limited resources in our area, we take our dogs up to the city at least once a month so they can run free and we can reinforce their off leash voice control training. We make a day of it. We meet up with friends and enjoy long walks along Fort Funston or whichever other fun park is close by the friend we are visiting that day. After the dogs have had their fun, my husband and I go out to eat at a local restaurant. Because the city is welcoming to our "fur children" we spend a lot of time up there with friends and we are also stimulating the economy by eating and shopping there. I'm not sure how often we would make it up there if it wasn't a place for our whole family.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Daniel Balderas

**Correspondence:** Dear Superintendent Dean,

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas and on new lands

that the GGNRA acquires in the future.

Sincerely,  
Dee Lawrence

<b>Correspondence:</b>					

Then, this study fails to present hard data backing their recommendations, fails to provide any impact analysis of their recommendations, and fails to adhere to the existing 1979 court rulings. All of their options, including No Change actually reduce off-leash rights from the current conditions. No options were considered for expanding off-leash areas, which arguably could have greater positive effects.

The NPS repeatedly makes the mistake of prioritizing GGNRA lands for conservancy over recreation, and often arguing that all of the other NPS lands do not allow off-leash areas. That misses critical points including in this unique circumstance:

- " these are national recreation areas,
- " national recreation areas are not all managed by NPS, so should not be limited by NPS rules,
- " the City of San Francisco gave lands to GGNRA under the condition that these lands would be used for recreation, and
- " these parks are uniquely within an urban area so should not be treated with same rules as say Yosemite.

With only 1% o GGNRA lands dedicated to off-leash access, further restricting off-leash access can only offer small (if any) gains versus the enormous impact to the 10,000 dog visitors per day, the health of dog owners whose primary exercise is walking their dogs, and the subsequent overcrowding of city dog areas, insufficient dog exercise and socialization which will lead to further overcrowding of abandoned dog shelters.

This GGNRA Dog Plan will have enormous detrimental effect on one of the most unique, forward thinking and treasured cities in the world.

Bay Area resident and voter

Dear Superintendent Dean,  
I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog

management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.  
The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.  
Sincerely,  
Lisa Muller

<b>Correspondence:</b>	Please keep dogs off Baker Beach, especially the southern portion, whether they be off- or on-leash.				

I run at Baker Beach. The sand near the cliffs is strewn with dog poop - it is disgusting. I'd like to have a dog-free place to jog where I don't have to worry about stepping in poop or being molested by someone's misbehaving pet.

I've also seen wildlife molested at Baker Beach, and I suspect it was done by dogs, though I am not sure of that: mussels are removed from the cliffs at the far south end and strewn on the sand, sometimes as far north as the creek.

I support any efforts to restrict dogs from any or all parts of the GGNRA.

<b>Correspondence:</b>	Please keep the GGNRA open to ALL! Individuals, families and their four-legged family members deserve the right to access public land as much as everyone else!				

Reducing access this to proposed exorbitant degree is punishing a quite large sector of the Bay Area population, and limiting access to public land that can only be described as grossly prejudiced.

Before ANY action is taken, the people DEMAND a broad spectrum of surveys to be taken at the actual land which is being proposed to be pet-limited. Each and every person who is taking advantage of the GGNRA over a period of time should be given a say in this process!

Without this equitable due process, the proposal is simply non-ethical.

**Correspondence:** I am so disappointed. One of the many things that make SF such a special city is their "dog friendly" environment. My son lives in SF and when I visit him my heart is warmed by all the dogs being walked, dogs playing off-leash in parks, water bowls outside of businesses, dog-friendly restaurant patios. This past Monday my son invited me (and my dog) to walk along the beach at Crissy field. What a wonderful experience that was! On a Monday morning, we saw several dog walks . . . with 8 to 10 dogs and all their 'doggy gear'. What a wonderful service to residents of SF! I think how a community treats its animals is a reflection on the the heart of that community. Please don't restrict dog park areas in or around SF.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to the Headland and frequently walk alone and having my dog with me provides peace of mind and safety while enjoying the outdoors by myself.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear Superintendent Dean,

As someone who lives in the city of San Francisco and walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

Dog walking is one of the few recreational past times open to all ages, for older dog owners off leash is hugely important to be able to fully exercise our dogs. Last year my mother broke her arm in a fall, off leash enabled her to continue walking Wellington which she would not have been able to do on leash. We have invested time and money training our dog so that he is always under voice control.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

In years of walking my dog in the GGNRA the only times I have had concerns for my safety have been from other people rather than dogs.

Finally as an owner of a market research consultancy I have concerns about the objectivity and quality of the "visitor surveys" that were undertaken 2008 and 2011. Both the sample and the methodology appear to be flawed and therefore subject to bias.

Sincerely,

---

**Correspondence:** I walk my dog on Ocean Beach on a regular basis. My dog does not disturb anyone and she is always under my control. I clean the dog poop. The rules if any, should simply enforce stiff penalties for not cleaning after the pet. But to ban dogs from the beach is patently unfair. I walk on the beach as opposed to fire trails, because there are no ticks on the beach, and because I enjoy this activity with my dog. The dogs need exercise, they need to run around, and it is inhumane not to let the dogs on the beach. This is overreaching by the government.

**Correspondence:** As a dog owner myself, and one frequents the national recreation areas like ocean beach on a regular basis, I want offer the following recommendations: Please allow the dogs on the beach, but enforce strict penalties against people who fail to clean up after the pets or control their pets. Install doggie poop bags at the beach entrances, and put up warning signs for non compliance. While this may not solve the problem completely, it will serve to address the concerns posed by non-dog or even responsible dog owners, regarding this issue. The solution is not to ban an activity, but encourage responsible behavior. This should at least be attempted on a trial basis before an outright ban on dogs is initiated. thank you.

---

**Correspondence:** Hello!

I am writing in support of the Dog Management plan and any further efforts to better control dog recreational activities in the GGNRA.

I used to work as a naturalist and science educator at Fort Funston, one of the most popular dog parks of the GGNRA. There I took under-served youth from low income neighborhoods on nature hikes so they could learn about San Francisco's natural history, geology as well as observe native wildlife.

Many of these students come from neighborhoods where they've experienced trauma in the form of aggression or attacks by dogs. I was appalled at how many rude and harassing comments I received from dog walkers who got angry when I asked them to keep their animals on leash around my student groups. Dogs jumped on my students, knocked them over and ate pieces of their lunch right out of their hands.

Moreover, Fort Funston was littered with dog feces and dog walkers who could not "voice control" the 10-15 dogs they would walk at one time. This is a safety hazard for anyone who is trying to enjoy a park and doesn't want to play with dogs and/or has an allergy or intense fear of them.

I continue to enjoy the GGNRA and still get questioned when I walk through Fort Funston, "where is your dog?" I constantly remind people that this park is for everyone, not just dog walkers.

Please continue to preserve the GGNRA for ALL park visitors, especially those who want to enjoy these parks beauty without being harassed by dogs, their feces and the irresponsible owners who don't know how to control their animals.

Thank you,  
Thea Zajac

<b>Correspondence:</b>	I would like to preface my below comment with something about myself. I have taken college environmental studies, ecology, botany, biology, and written a paper on and done hundred of hours of volunteer work for habitat restoration of the Mission Blue Butterfly here in the Bay Area. My cousin is a retired ranger, his brother VP of California Division of Forestry. I grew up in the outdoors, a Boy Scout (completing my eagle scout requirements) and have great respect for our environment. In addition my grandfather was mayor of Oakland for 10 years and I grew up in a political atmosphere. I believe with my upbringing and education I bring a somewhat unique perspective to the proposal.				

---

I advocate a fair and balanced approach to use of land, both for the environment and recreation, but the current trail regulations and all of the proposals on the table are not reflective of the diverse population in the Bay Area and what is needed. There needs to be a greater balance of spaces for everyone's enjoyment while maintaining adequate space for the surrounding wildlife. It is the Golden Gate National RECREATION Area in an urban setting. It is not a national preserve or park and should follow a different guideline than other areas.

There are no off leash areas in San Mateo County within the GGNRA at all, yet 40% of the population has at least one dog. Every county other than San Mateo has large amounts of off leash areas within the Bay Area. Currently there is a large amount of non-compliance in the area due to this heavy handed approach, this will only get worse with any of the proposals. I know from past experience with the Boy Scouts in maintenance and creation of trails, that when you have overly heavy trail regulation people lose respect for the authority and do not follow any of the rules. However if you allowed space and trails for everyone, people will be much more compliant, people will be happier and the environment will be happier. Right now a dog owner either needs to break the law or drive a considerable distance, which is also poor for the environment. This then concentrates people into one area, typically Fort Funston, which creates over use in that area and increased conflict. So thusly, you have people walking their dogs off leash in the whole of the system currently with little care for the environment and those that don't break the law are concentrated into a small area. This is not how I learned best practices of trail management, nor is it beneficial to the environment or citizens of the community.

Each space should have areas for each demographic. Some area of no dogs at all, some on leash only, and areas of off leash. Keeping people local within their area. The amount of compliance will be high, people will have greater respect for the laws, they will have a more vested interest in the upkeep, and most will also take a more active roll in the environment. It is a win, win.

Look at Pulgas Ridge Open Space Preserve. It contains the only off leash hiking trail system within San Mateo County. Within the space there are no dog areas, on leash areas, and off leash areas. The compliance is high and conflict is low, everyone has a place to go. However it is quite a drive for the coastal communities and is generally only used by people local to that area. We need more local areas like this.

Much of the land in San Mateo County in the GGNRA is abandoned military and filled with old bunkers and concrete, not suitable for any habitat restoration.

I will take Milagra Ridge as an example, as it is out of my back yard. Though this proposal can be applied to any area easily. The upper part of Milagra Ridge has a well done and active restoration. The lupin and thus the Mission Blue Butterfly has made a substantial rebound. However that only applies to the top of the ridge. The lower area (western side below the overlook) is littered with old concrete, bunkers, military debris, and evasive species. The western side of the ridge is also fairly unused other than by dog walkers from the surrounding area.

In the upper area of Milagra Ridge, I suggest keeping on leash only to Milagra Ridge Road and Fire Road on the upper section and the North Spur, everything else no dogs at all. Then the lower, most western side below the overlook and below the cable fence, dogs off leash. This keeps the dogs in an area where there will be little impact and limits traffic in the areas of the restoration.

A win, win for everyone and the environment.

This is the approach that needs to be taken system wide. Not increased laws that will only raise the amount conflict.

None of the proposals are adequate for the community or environment. A balance is what is needed and it does not appear that there is any move toward that direction with the current proposals.

**Correspondence:** Regarding proposed restrictions on dogs at Ocean Beach SF. I am strongly opposed to restricting access for dogs.

I have been a regular user of Ocean Beach for over 24 years. In that time I have observed a dramatic increase in the amount of users, a significant proportion of those are people who bring their dogs. Some of these park users are people who have chosen to live near the beach order to be able to walk with their dogs. There are many cold and foggy days when the only park users are surfers, joggers and dog walkers.

Ocean Beach is urbanized and the idea that banning dogs from most of the beach will somehow return it to a state of wilderness is misplaced. Ocean Beach has already "gone to the dogs" figuratively speaking. More accurately it is the growing population of the Bay Area that has led more people to use the beach. It is urban open space with a long history of development and use. It is not another Yellowstone Park or National Capital.

The only conflicts I have directly observed is dogs and birds. Studies were done and restrictions were put in place. I make a point myself to educate dog owners if I see their dogs disturbing any of the local wildlife. I do not hesitate to speak with them.

Please don't restrict dog access at Ocean Beach any further.

Regards,

Matt

**Correspondence:** Please allow for continued off leash areas at great parks like Chrissy and ft funston. It is one of the things that makes sf so great. It would be a horrible shame to force leash rules in these beautiful places where our dog can have some real freedom to run. Dog areas Re alreDy so limited for off leash. It would make things difficult for my family.

**Correspondence:** Dear Superintendent Dean,

---

As someone who exercises regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Christina Velasco

<b>Correspondence:</b>	Dear Superintendent Dean,				

As a foster family for the Norcal Weimaraner Rescue who walks regularly with our foster dogs in the GGNRA, Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with our fosters for my own health and our foster dogs health the way I have on GGNRA properties for many years. We rely on these spaces to help rehabilitate some of our foster dogs. We walked and swam a severely injured Weimaraner named Hero who had been abandoned by his family after being hit by a car. After the initial wounds healed, we took Hero for regular swims at Fort Funston. Hero made a 100% recovery and was later adopted by a police officer.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Erin Drake

**Correspondence:** To whom it may concern:

Im writing to express my strong opposition of GGNRA's new draft dog management plan.

I regularly take my dog to many of the areas affected by this plan (Stinson beach, Ocean Beach, Fort Funston, Marin Headlands etc). This plan is way too restrictive and will prevent me from enjoying outdoor activities with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

Further, dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979 and should remain accessible for responsible dog owners to enjoy.

Thank you for reading.

Sincerely,

Bo Sharpe  
Sausalito Resident

**Correspondence:** This is my second statement opposing the NPS plan to close down access on the Golden Gate National Recreation Area to off-leash dog recreation.

The NPS/GGNRA new version of its proposed "dog management plan" would be a disaster for Marin County residents.

It would take away hiking trails, fire roads and beaches that have been used by people and their dogs for at least a half a century. The owners of more than an estimated 60,000 dogs would be left with virtually no place to go for off-leash recreation.

One of the main reasons people move to Marin is because it is so friendly to both children and dogs and because of its close proximity to a multitude of trails and beaches. Many of us jog the trails with our dogs or pack up the kids and dog for a day at the beach. Single women feel safer hiking with a canine

---

companion and dogs get the elderly out of the house socializing on trails.

The GGNRA plan would take away an important part of traditionally dog-friendly Marin's soul by putting a choke collar on man's best friend.

The fact is, there is no justifiable reason for these proposed changes. As it stands now, 99 percent of the GGNRA is already off limits to dogs. If the dog management plan goes through, there would not be a single trail in the entire 80,000 acres where dogs and their owners could enjoy an off-leash experience. In Marin, off leash dog walking would be banned on all 38 trails. Only five of those trails would even allow leashed dogs. Funneling all dogs onto just five trails is irresponsible and reckless. The only off-leash area in all of Marin County would be a remote stretch of Rodeo Beach, which is only accessible by car. Dog owners, who normally walk or drive a short distance to their trails, would be forced into cars to drive miles away in order to exercise their pets.

Imagine living in Muir Beach and having to drive 15 miles in order to do something you normally do right outside your back door. How many cars will this put on our already congested roadways and how much more pollution will this cause? Tam Junction simply cannot handle any more unnecessary cars trips.

The GGNRA has spent millions of our tax dollars compiling a 2,400-page report full of anecdotal evidence and skewed scientific reporting telling us what dogs "could" and "might" do, but have failed to include what impacts closing down these areas would have on surrounding neighborhoods. The fact is, if the dog plan gets approved, local parks and trails would be overwhelmed with dog walkers kicked off their favorite trails.

The Marin Humane Society adamantly opposes the plan because they know how important off leash play is for the health and behavior of dogs and their humans.

"As animal shelters across the country work to save animal lives and create homes for thousands of homeless animals, what a shame that now responsible dog guardians will be scrambling to find a proper place to spend off-leash time with their animal companions on our public land," said Captain Cindy Machado, the director of animal services for the Marin Humane Society. "The GGNRA spaces in Marin aren't just places to congregate, they are places to be active by hiking, walking, enjoying the beauty of our natural spaces and spending quality time with our animal companions who share the same enjoyment when they are with us."

Closing down these trails is a betrayal of public trust and the spirit of the GGNRA's enabling legislation. I vehemently oppose the GGNRA proposed preferred plan.

**Correspondence:** What's the problem with dogs being allowed to run on the beaches? I understand that it is mandatory if the dog goes to the bathroom the owner is supposed to pick it up. I do know some don't do that but with all the uproar of cruelty to animals, I would think this is being cruel. It is depriving them of their freedom to run and get their exercise. I see nothing wrong with them being on the beach as long as they are with their owners and watched. I'm sure there are worse things than dogs who roam the beaches. So, I protest against closing these areas for dogs. If they aren't allowed on the beach, maybe you or whoever is protesting this should put up a fence along some of the beach areas for them to run and enjoy. There are worse things to worry about than protesting the dogs on the beach. I pray that the dog lovers win on this one and you protesters find something worth while to work on, like drugs and corruption of our country.

**Correspondence:** Please DO NOT impose tight Dog use restrictions in the GGNRA and public lands.

Pet ownership and dog companions are a tremendous necessity for human and therefor community health in urban environments. This plan undermines the natural and fundamental needs people have for pet companionship. The GGNRA exists for Public Use for PUBLIC BENEFIT. Restricting pets, restricts access for people....and that is bad practice for public lands and forward thinking communities.

I don't even have a dog, and I love the GGNRA, and I am an environmentalist interested in preserving nature and wild life habitat. It is because of my interests in a freener and more sustainable and healthy future for people and planet that I am against this proposed restriction.

PERSONAL EXAMPLE: I grew up riding the GGNRA with a horse, and parents allowed us to ride alone because one of the girls had a dog following us everywhere for safety. The dog would have warned us of danger, scared away predators, or gone for help if something would have happened. This would not be possible if dogs are not allowed to accompany their owners. Because of pets, horses and dogs, I was able to explore and experience and understand the wild open space lands of Marin County all through my formative years. I am now a dedicated environmentalist because of it. If Marin County open space was not available to me, I would be a different person. Instead, I have raised four children who have explored these lands with me their whole lives and now they too treasure and frequent the GGNRA; hiking and surfing.

Allowing people to experience the open space gives back to the future as citizens pass down values and understanding of the importance of Nature to the next generation. Preventing people from learning and understanding nature, will lead to creating entire generations of people who don't know and don't care about it these lands. When people don't know...they don't care! Who then will protect the GGNRA, and other important open spaces - and all that is dear and important for the environment on this planet?

It starts here, please do not restrict people and their companions (dogs) from enjoying and learning about the public park lands, instead you are in a position to keep it open and available so as many people as possible will fall in love with the outdoors, and will care for our parks and open spaces...the health of the community today, and the continuation of the public park lands in the future depend on it.

Sincerely,

Annalisa Roger,  
Resident of Marin County  
Founder, Director DotGreenFoundation.org

**Correspondence:** Please don't add any more restrictions to limit dog access to Federal land. There are already so few places we can take dogs. Before I got a dog I regularly hiked in Point Reyes National Seashore and the Marin Headlands. Now that I have a dog, I am forced to seek alternate locations where I can take my pup. It is becoming more and more difficult to find spaces that allow dogs. I am a responsible dog owner and just a few weeks ago went to the fabulous Muir beach. The non-dogs owners already have the vast majority of open land and trails in the Bay Area to themselves, please don't take away what little we have left. Thank you for your consideration.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** As a resident of Montara and a dog owner, I have visited several properties now managed by the GGNRA - Rancho Corral de Tierra (Rancho) , Mori Point, Fort Funston and Crissy Field. I have observed that there is a real community of dog owners who frequent these parks. Most of the dog owners are very responsible custodians of the park and their dogs are well behaved. The current draft proposal contends that the opposite is the case and that dogs and their owners need to be banned from GGNRA properties. There are precious few places where one can currently walk a dog off lead in San Mateo and San Francisco Counties. The fact that the GGNRA wants to take away several existing dog friendly venues is disturbing. There are already plenty of places for those who do not enjoy the company of canines to visit and enjoy the outdoors without having to deal with dogs. Maintaining dog friendly parks and preserving the environment do not have to be mutually exclusive.

**Correspondence:** I live in Marin and we have been walking our dogs for many years here, without negative incidents of any kind. It had been my experience that the vast majority of dog owners are very responsible.

This plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

**Correspondence:** Dear GGNRA -

Ft Funston and other off-leash dog areas must remain open for recreational use - - including off-leash dogs.

The plan as stated is restrictive, does not support the recreational use of OUR land and puts a tremendous burden on city parks.

Ft Funston is a lovely place BECAUSE of the dogs there, not in spite of them. This cold, foggy, windy place would see few visitors w/out the dog users and many women who run there on weekend mornings do so because of the SAFETY that comes with dog users out and about.

Crissy Field and Baker Beach are more used than other areas by a mix of people and dogs - and this is what makes these areas wonderful! If you must, for the sake of non-dog owners, restrict dogs on these beaches, maybe you can do it at certain, heavy use hours (between 10am and 3pm for example).

I do hope any revisions to the plan are in tune with RECREATION and the people in this wonderful city and not simply the decision of an organization that seems to be out of touch with its original charter.

**Correspondence:** I've been a Montara resident for 17 years. The area now known as Rancho Corral de Tierra has been an important part of our community for as long as I can remember. I've walked my dogs off leash in the area behind Farallone View Elementary School since 1998. I have never witnessed a serious altercation between dogs and humans in the hundreds of walks I've taken. Equestrians, bicyclists, runners, hikers and dog walkers have co-existed peacefully for years. I do not understand the need to change the off-leash policy. I often walk in the mornings and afternoons and rarely see anyone except fellow dog walkers, most of them locals. We are a respectful bunch and leash our dogs when we approach people without dogs. We pick up our dog waste and help maintain the trails. We have been active in supporting first Peninsula Open Space Trust and now GGNRA to preserve open space on the coast. I know that dogs can disrupt the wildlife in the area, but dogs have been part of the area for decades so this is not something new to the area. As a long term supporter of The Nature Conservancy, I know that some land needs to be set aside with minimum impact from humans and there animals. This is not the case in

---

Rancho Corral de Tierra in my opinion. This land borders densely populated areas near San Francisco and the peninsula and it needs to be preserved for all users. Thank you for considering my comments.

**Correspondence:** The mission of the National Park Service is "...to promote and regulate the use of the...national parks...which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." National Park Service Organic Act, 16 U.S.C.1.

To that end, I very much appreciate that you are working to reduce and control the impact of dogs in the GGNRA, our limited and therefore precious natural environments that have been set aside to preserve our national wildlife flora and fauna, so that our generation and future generations will have the opportunity in an ever-increasingly urban, developed environment to experience and appreciate wildlife in its natural setting.

There are many of us, including many responsible dog owners, who are in favor of restricting dogs off leash as well as banning dogs completely from some natural areas within the GGNRA. I liken the irresponsible dog owners to people who think they should have a right to smoke anywhere, anytime, not respecting the rights of those who want a clean, smoke-free environment. When I go to the San Francisco Bay shore and want to observe the shorebirds in their natural habitat, I am dismayed by unleashed dogs who come bounding along, chasing shorebirds and scaring others off. After all, it's their natural habitat, not the dog's. Dogs have owners to feed and protect them. Wildlife needs your protection to thrive.

As a wildlife supporter, I of course would like to see even stricter regulations for dogs than those being proposed, but I strongly urge you not to weaken your proposal.

Thank you for your consideration.

**Correspondence:** As someone who walks regularly with my dog in the GGNRA (specifically Rancho Corral de Tierra in Montara), I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on this property for many, many years.

This property was saved from development by some of the very people who may soon be asked to leave (or worse) if they bring their dog. It's clear their voices are not being considered or heard. Though dog

walkers, horses, hikers and mountain bikers have peacefully coexisted on this land for many years, we now are being threatened with government oversight that doesn't represent the needs of many. In my opinion, GGNRA has lost sight of its purpose in regard to this area (and others within the GGNRA): these lands were set aside to be a RECREATION AREA for ALL to use and enjoy. Though I agree that the dog mgmt policy needs to be formalized in some way, but dogs and responsible dog owners should be allowed to continue this co-existence. I urge you to support off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. Dog owners have rights too.

**Correspondence:** The proposed regulations are too severe. We live in an urban area. These parks are heavily used and enjoyed by people and dogs like. A simple solution for Crissy Field is - no dogs on the beach closest to the parking area. Then dogs off leash in the area after the channel and over the bridge. As for Stinson Beach- it works well as it is -accommodating both-beach area off limits for dogs and clearly marked area for dogs off leash. As for Fort Funston- it should be open for all activities including off leash dogs. It is one of the best treasures of living in the SF Bay Area. Walking my dog off leash on the GGNRA beaches is my favorite past-time. Please consider the rights of dog owners in your decision. If the beaches are closed to dogs it will be very hard to enforce. You will have to hire many law enforcement folks to chase down us dog lovers. Please be rational, fair and mindful of the will of the people.

**Correspondence:** GGNR was setup as a recreation area - - recreation in these areas should NOT be limited it should be inclusive and include off leash areas for dogs - - MOST especially in urban areas where it is difficult to find any open green areas. I am a strong advocate for responsible dog ownership, and would rather see tough sanctions on dog owners who do not cleanup after their pets, or owners/dog walkers that cannot manage the number of dogs in their care - - BUT why penalize the majority of dog owners who are responsible not only to their dogs, but to the environment and recreation areas that we visit.

GGRNA should not be able to restrict access without factual data to backup the restriction of access to

GGRA - - for more than 50 years this area has been made available for on/off leash access; why should this change now? It should not be opinion, it should be supported with data.

**Correspondence:** I regularly take my ONE dog, who needs LOTS of daily OFF LEASH exercise to many GGNRA trails and beaches in Southern Marin. If I could not walk my dog off leash on these trails, I would no longer visit the parks. If you move forward with Alternative F, I WILL ASK FOR AN ANNUAL TAX REFUND FOR LOSS OF REASONABLE USE OF LOCAL GGNRA PARKS (and I imagine many of my friends will do the same).

Local Remington and Mill Valley dog parks have poor access, inadequate parking, and are too close to local schools, which will present a danger to Marin's children if these inadequate dog parks are overrun with dogs at their entrances and exits.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies to support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I do not support any restriction to existing off leash areas with the Golden Gate National Recreation Areas - - I oppose the GGNRA's dog plan.

It makes no sense to further restrict areas that allow off/on leash access for dogs. There is already limited access to parks that allow dogs off/on leash to further restrict would result in overcrowding and more issues in the existing areas that are available.

I support responsible dog ownership - - but why limit areas that have been accessible for off/on leash dog walking since 1979.

PLEASE DO NOT APPROVE GGNRA's DOG PLAN.

**Correspondence:** It is a travesty to wildlife and their shrinking habitat that dogs are allowed to roam at the Golden Gate National Recreation Area. Dogs on leash areas are a farce. A large proportion of dog owners let their canines run free no matter what the rules are. Leash compliance on Ocean Beach is less than 30%! A secure fenced area is where dogs should go to play so that dogs do not have the chance kill, maim, chase, or otherwise harass birds, wildlife and unsuspecting humans. The hard-wired canine instinct is to seek, chase, and kill prey.

There are other users of GGNRA besides dog owners and dogs, many of whom want to enjoy our National Park without the disturbance of somebodys barking dog running down birds. Many people visit GGNRA to picnic, hike, walk, view wildlife, and simply enjoy nature and the beauty of the ocean. GGNRA is the only national park with off-leash zones. Un-leashed dogs and wildlife are not compatible and should be kept physically separated in our national parks.

The following excerpts are quoted directly from the NPS strategic plan: (My comment is in parentheses.)

\*\*\*\*\*  
\*\*\*\*\*

Since our 1916 creation, the National Park Service has preserved many of Americas finest treasures and made them accessible to millions of visitors. (Dogs are not the visitors the NPS is referring to, by any stretch of the rules. - my comment)

Parks show us wonders, both natural and historical, that grace our lives and provide us cherished experiences.

Category I goals - Preserve Park Resources - reflect the NPS 1916 Organic Act to conserve the scenery and the natural and historic objects and the wild life therein.

Category II goals - Provide for the Public Enjoyment and Visitor Experience of Parks - reflect the NPS Organic Act mandate to provide for the enjoyment of the [resources] in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

#### MISSION STATEMENT

The National Park Service preserves unimpaired the natural and cultural resources and values of the national park system for the enjoyment, education, and inspiration of this and future generations. The Park Service cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world.

\*\*\*\*\*  
\*\*\*\*\*

GGNRA has gone too far accommodating dogs and their humans. Please use diligence and common sense to protect our wildlife and peaceful beaches. Please use the NPS goals and mission statement to safeguard our natural resources, not trample and abuse them.

**Correspondence:** San Mateo County will have no off leash sites if this plan goes through. That is tragic for both the dogs under our care and the humans who walk them. The dog owners who walk their pets in off leash areas are responsible, pick up the waste and make sure their dogs are under control and are well socialized before they let their dogs off leash. There are very few episodes of dog aggression on the current off leash areas.

I myself have a Bouvier who is a service dog as well as a pet. He requires a lot of exercise and if there are no off leash sites I would have a difficult time managing the 35-60 minutes of intense exercise per day that he requires. He is actually too big to exercise in the the relatively small dog park in Half Moon Bay. He brings such joy and love to the humans he works with in a clinic that I work at that patients would not be able to benefit from his well exercised and gentle presence were it not for his exercise program. I live on the coast and the off leash areas would all be gone.

Please allow responsible owners the ability to manage their own and their pets exercise needs in a responsible and joyful way.

**Correspondence:** I am writing to express my strong opposition to the GGNRA's draft dog management plan. I am a 10-year resident in San Francisco and have owned a dog the entire time. As a dog owner who not only regularly uses the GGNRA regularly with my dog, I am a dog owner who based my home purchase on the proximity to Ocean Beach for the use with my dog!

It would be a devastating loss to dog owners to not have these areas for off leash enjoyment. For the past 10-years of regular use, I have noticed that often times the majority of people using these areas have dogs. By restricting these areas to dogs, you immediately are crippling the use of these areas for the 50% o homes in SF that have dogs. I know from experience that any time I leave the house to enjoy the outdoors, I have my dog. If my dog isn't allowed to enjoy these areas with me, I won't get to enjoy them either. We will be forced to go to small, cramped dog parks that, if this law passes, will be completely overcrowded. I believe you have to keep in mind the importance of a dog needing space to be a dog. Having a Labrador Retriever, I know that he needs the open space and off leash water area to do what is ingrained in him. If you have a large population of dogs that are not allowed to be a true dog and enjoy this open space, you will have a large population of extremely frustrated dogs that could lead to aggressive behavioral problems.

Please consider the large population of owners that this will effect, and please consider the damage that this may have on the dogs that RELY on these areas to be the dogs they are meant to be.

**Affiliation:****Received:** Feb,09,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dog walking:

I am a 5 year part time resident of San Francisco. I have owned 1-3 dogs for the past 25 years. My greatest joy in life is waking up every morning to take my dogs for a run or walk OFF-LEASH on TRAILS. Dog walking all started in Illinois when I was 10 year old. It has continued daily since then. But this joy is under prosecution. Every year I have to fight for my right to walk my dogs. I have to fight for my right to own dogs. I am asking you not to go through with these restrictions in the GGNRA. Let us continue to take our dogs out on trails; hikes that take over an hour to complete. I want to be able to get away from the traffic, the concrete, people and be out in nature every day. I own dogs so I have to go out every day. I will not go out if I cant walk the dogs. If I am stuck in a fenced in area to play fetch I will not go there. I will only go where I can hike. A small fenced area to play fetch with my dogs is not healthy. There is no data that allowing people on trails is bad for the environment, and if it is bad its because there are too many dogs. That means we need MORE AREA to go and not less.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

This is not a new problem, nor a California problem. In Illinois they went from the whole city being off-leash to only in parks, to nowhere can dogs be off leash and not allowed in parks at all. What good does this do? It allowed the city to spend loads of money mowing grass that no one uses. In the end the only solution was for a club to be formed to buy 100 acres outside of the city for off leash hiking for dogs. If you do not own a car, you cannot go there. It is a miserable situation. In California there is no land to buy. What people have done is to give the Land to GGNRA so that people will always be able to go hiking; **HIKING WITH THEIR DOGS**. New areas added such as Rancho Corral Di Tierra where people have walked for years should be all off leash just as they were before GGNRA got a hold of them. It is a disgrace to the California that any decision is made that limits people from exercising. In an age where we want to fight obesity, why are you putting forth a plan that will encourage it? Be the first to make dog hiking, and dog ownership a thing of pride!

This plan will not allow dog walking on any trails. Dog owners are not going to drive to these parks and play fetch with their dogs in a tiny fenced area and then go for a hike without them. what they will do is find a place to hike with their dogs. The only place they will be able to go in San Francisco county will be McLaren Park. How will 3000/dogs a day impact that tiny 30 acres? We need more areas not less. If an are is over used, then you need a plan to rotate acreage. You need a system like in skin resorts of hard, easy, moderate places, you need to teach people what works and doesn't work for hiking. Keeping dogs off trails is NOT the answer.

The only joy I find in life now is walking trails with my dogs everyday, rain or shine. There were 50 cars at Fort Funston in the middle of the storms this weekend. That totals over 50 people an hour out walking with their dogs on a bad day. On a good day I bet there were 10 fold more. If you go ahead with this plan you will have those people (like me) inside being miserable. You will have more dogs in the pounds as people cant find a place to walk them. You will have more people break laws in order to find some sort of pleasure in this miserable society and economy. Going to these parks with your dog is the only thing many of us can afford. Rents take 50-70% o your income with no relief in sight. Instead of enjoying my time, I have to fight to be allowed to just go walking on trails in the wilderness. I am a single lady. I want

my dogs with me! Please let me stop fighting and make these parks forever Leash Free!

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
April Bednarz

Sherron Bullens  
643 Ferdinand Ave  
El Granada CA 94018

Mr. Frank Dean,  
General Superintendant  
Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco CA 94123-0022

Dear Superintendant Dean,

I am writing to comment on the proposed plan for usage of the Rancho Corral de Tierra area handed over to Golden Gate National Recreation Area (GGNRA) by Peninsula Open Space Trust (POST) in 2011.

I have lived in San Mateo county since 1975 and El Granada since 1999. I bought my home in El Granada (and tolerate a lengthy commute every weekday) specifically and solely for the proximity to areas where I could hike with my dogs. I have enjoyed hiking with dogs in the area behind El Granada regularly since I moved in, continuing in the traditional use of that land that has gone on for decades, and likely since the time of human inhabitation of the area. Like most of my neighbors, I am a responsible dog owner. I pick up and carry out feces. I do not allow my dogs to disturb habitat, chase animals. Dogs have no greater impact on the environment than, for instance, a child would, and certainly less impact than a bicycle would.

Because I love the land behind our town, I have taken it upon myself to help protect and maintain the area. I never hike without a large garbage bag, and I pick up all garbage I see - which, at times, has been a whole lot and necessitated several trips for removal. Several of my dog-walking neighbors do the same thing. There are others who hike with pruners and shovels and work to maintain the patency of the trails. The people of this area greatly value the Rancho land and take care of it voluntarily.

I am an environmentalist. I contribute time and money to many national and international associations dedicated to preserving wildlife and the environment, such as the Cornell Laboratory of Ornithology, Sierra Club, Audubon Society, World Wildlife Fund, National Wildlife Association, Nature Conservancy, and Zero Population Growth. I contributed regularly to POST to specifically aide in the preservation of our little area of Rancho. Hiking with dogs is not antithetical to caring about the environment. Clearly, many very avid and contributory environmentalists are dog owners.

I am dumbfounded that the preferred plan (Alternative B) that GGNRA proposes for Rancho is to completely prevent off-leash dog walking and severely limit access even for leashed dogs. This is so out

of alignment with my experience of the current and historical usage of this land, as well as with my observations of lack of environmental impact of dogs, that I wonder if there is some unknown, malevolent motivation behind the proposal. What could possibly cause the GGNRA, part of our government - which is supposed to be by and for the people - to wish to completely change the way the local people enjoy public land? Why would a governmental body move to reduce the property value of citizens who have lived here for decades? Why would GGNRA risk alienating all the volunteers who have worked for years to keep Rancho clean and safe, providing this rare bit of natural habitat for the native wildlife? Why would GGNRA discriminate against citizens who wish to hike in this beautiful territory with their families, when their family members, in part or in whole, are composed of dogs? This is not responsible government. This is oppression, discrimination, and thoughtlessness. Proceeding with Alternative B will bring you ill will, passive resistance, legal action, and trouble and heartache for years to come.

Mr. Dean, I urge you to consider Alternative A - the usage plan which would continue to allow responsible dog owners to hike with their dogs on leash in all parts of Rancho, and even off-leash in specific areas behind Montara and El Granada. This is exactly how people are currently using this land. This will not cause the loss of goodwill and cooperation of the locals. You will retain your volunteer garbage collectors, trail custodians, and stewards of the environment. You will ensure that the people and dogs of San Mateo County have someplace to go to get fresh air and exercise and contribute to the general health of the populace. You will be maintaining the wonderful aura that permeates this wild territory. As a government employee, you will be accurately representing the local peoples' will - truly governing by and for the people.

Thank you for allowing me to comment on GGNRA proposals for Rancho Corral de Tierra. If you have questions, or would wish to more fully understand my position, I provide my telephone numbers and email address below and invite you to contact me.

Sincerely,

Sherron Bullens

**Correspondence:** They came for the dogs, and I said nothing. They came for the horses and the mountain bikes, and I said nothing. They came for me, and there was no one else on the trails to object! This is what your GGNRA Dog Management Plan amounts to and we know it. A growing number of us see what you are attempting and will resist. We've been discussing this at Tamalpais High School in class.

The mandate of the National Parks, including the special region that is the GGNRA (meant to be an urban refuge, thank you, Congressman Phil Burton), is to provide citizens and visitors access to our natural

---

world that we may profit from increased health and grow in stewardship through a deep connection to the fundamental value of it. Public lands and National Parks are "America's Best Idea" only if they are accessible to and valued in perpetuity by the masses. Disenfranchising people now from public land will produce generations who care less for it, and this serves no entities except perhaps a few short-sighted bureaucrats and their elitist supporters in positions of authority right now.

John Bell, 18 yr old Marin Science student.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I am contacting you with my views to continue to allow trail access to dogs (both on leach and off leach) even though I am not a dog owner. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent residents of San Mateo and San Francisco county from recreating with their dogs as has been the practice for many years. It especially concerns me that the GGNRA is proposing to eliminate land access for people with dogs without any solid science to support that position. It also concerns me that further public support for additional GGNRA lands (vs. local control) will be lessened if GGNRA policies are perceived to be arbitrary, unreasonable and lead to an unjustified loss of green space access for the dog owners in the affected areas.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Dan Bernstein

**Correspondence:** I did not grow up in a family with dogs. In fact, for most of my life in San Jose, I was scared of them. I would be annoyed when there was poop in the park or in lawns on our street and I'd run away if one came towards me. It wasn't until I moved to San Francisco in 2007 that I realized the dogs here were different. They were friendlier, happier- they played more with other dogs and they weren't as ferocious seeming as dogs back home.

My fiancée (who grew up with dogs) explained to me that dogs in our city are different from dogs in suburban areas because of the awesome open areas we have for them to explore and play with each other, which makes them more socialized. From Crissy Field to Fort Funston to Alamo Square, these places not only offer dogs a ton of exercise after being cooped up in an apartment all day, but it is at those places that they learning how to behave & play with other dogs and mind people.

It is important that dogs get enough exercise & expel their energy, so that they are tired in the evenings and don't cause havoc indoors. Back in San Jose, there were zero dog parks & it was rare that these dogs got to play in open areas with each other. Folks either kept their dogs just in their backyards and/or walked them around the neighborhood while tugging back on leashes when other dogs and people were

near, creating more fear & perpetuating any tension which is then picked up by the dogs, making them more uneasy.

In 2009, I finally caved and my fiancée & I got my first dog- a half huskey/half shiba inu puppy named Kuma. I was nervous that I wouldn't know how to take care of him, that I would be an awful mom, and I was so over-protective of him with other dogs. The first time I let him off leash at Alamo Square, I screamed every time a big dog would run towards him. After a while and after many tips from other dog owners, I realized the difference between dogs playing & fighting, and saw for myself how amazing a couple hours playing with other dogs and swimming at Crissy Field would tire out this energetic puppy (enough to where we could go out to dinner and come home without worry that he tore apart our living room).

I am a full believer that these open areas, and the freedom we as dog owners have there to let our dogs run around, are the reason that dogs in our city are so well-behaved. Even now when we go back to San Jose, there is clear difference in behavior of dogs there vs. here (there is only 1 dog park nearest to the level we have available here (Campbell), yet that is still leash only aside from a small gated area).

Please, please, PLEASE do not restrict these areas for us owners and for our beloved dogs. They provide an enormous value in the relief they offer at the end of tough work days and too-short weekends. These places are a vital part of what makes our city thrive and also so enviable to visitors with dogs of their own and limiting them would be doing a great disservice to our city.

PS: I've heard that there are more dogs in the city now than children. This may not be the case in other cities, however we all know that SF has never been one to follow the pack. Given the exodus of families for more affordable housing, I'm seeing this more and more. Please consider the impact this will create in OUR city before going through with this

<b>Correspondence:</b>					

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Jeff

**Correspondence:** I am an owner of a Portuguese Water Dog and have been for 11 years. I am a responsible pet owner in everything from vaccine shots to picking up after my dog. I have several friends with dogs who are also responsible dog owners. In fact the significant majority of dog owners I know are very responsible about their dogs. So I am urging the National Park Service to continue to allow dogs in the parks either on leash or off leash. I feel strongly that there are not enough off leash areas in the greater Bay Area and would like to see more rather than less. Thank you!

**Correspondence:** I have learned of the poorly planned GGNRA "Preferred Alternative" and oppose it completely for several reasons.

I have been a San Francisco voter since I moved here in 1987. I vote in every election, and I vote for every office and for every measure. I pay attention to which politicians support the programs I approve of, and it makes a difference in how I vote.

My partner and I walk our dog very responsibly, using especially Crissy Field, Fort Funston (where my partner served in the Coast Guard), and Ocean Beach.

First, as to the PA plan itself, it restricts dog walking far too much. I see no justification for the changes. We have a perfectly good policy established in 1979 which should now be formalized, and extended to the new GGNRA areas in San Mateo County.

Fences around off-leash areas are unnecessary, unsightly and off-putting. Are dogs and their humans a virus we need to quarantine?

---

The PA would significantly and adversely impact the way we have been using GGNRA areas for both fun and health, for all three of us, for many years.

Second, procedurally, this attempt by the GGNRA to change the leash status is arbitrary, undemocratic, and very poorly researched. Persons from all stakeholder groups should be represented honestly in an open and participatory process.

The GGNRA has clearly failed at being able to do that, as it is my understanding that the new plan did not respond in any significant way to thousands of people's substantive concerns and objections about the first plan. There have not been any peer-reviewed, site-specific studies-which the law requires-to support the sweeping changes proposed.

The GGNRA seems to have forgotten its purpose and mandate. It was established to be a recreational area for a densely populated, urban environment. I'm sure they are not petty bureaucrats making decisions without consulting the constituency the GGNRA was established to serve, but this PA this makes it seem as if they were. Americans and Californians do not conduct public business in this way.

Sincerely,

Steven A. Armstrong, M.A., M.A. Hum., M.Div.

**Correspondence:** I am a senior citizen who does not have a dog but I go to Fort Funston every morning and I can tell you that offleash dogs are not a problem out there. People walking their dogs make the park safer for everyone because they are out 24/7, rain or shine. The dogs do less damage than people and the weather. Less than 1% o GGNRA land is currently offleash friendly and I do not understand your position that drastically reducing that 1% urther is "balanced". I also do not understand your position that areas you control such as Fort Funston should be treated as if they were true wilderness areas like Yellowstone or Yosemite. In case you haven't noticed, a place like Fort Funston abuts a densely populated urban area and is no more a true wilderness area than my backyard. I consider myself an avid environmentalist but also a realist. 1% i not balanced. Your preferred option is not balanced. You should be adding more offleash areas, not doing away with them. That would be at least heading in the direction of being balanced. I ask that you do not restrict offleash recreation. Thank you.

**Correspondence:** Having moved to San Francisco 3 years ago from Colorado we were so excited to find all of the excellent off-leash dog walking options here in the city for our 7 year old samoyed. He is an active dog and is well behaved off-leash, as are most of the dogs we encounter on GGNRA land. We live in the Presidio and regularly use both Crissy Field and Baker Beach for exercise and dog socialization. These are very valuable areas to us as responsible dog owners living in the city of San Francisco. Please do not take away these highly valued off-leash locations - with the large population of dogs living in the city, this would put immense pressure on the few off-leash city parks that would be left to accommodate us.

**Correspondence:** This is an absolute ABUSE OF POWER on the part the those elected officials of the park system, especially, Marin County against people who love dogs and who love to share the beautiful open spaces where they can play and walk with their companions. You are trying to shut down any open space, no matter how big or small, where people can be free with their dogs.

At the end of Center Street, in Novato, CA. there is a fire road and walking trail, hills to climb, it's wonderful for dogs to play off leash. I agree, the person whose dog it is should carry a leash at all times, but NOT to keep the dog on it the whole time.

Within the last couple of months, State Police, Police, Troopers, whomever you want to call them have been "ambushing" dog walkers, and giving them \$200 tickets for having their dog off leash and not on the fire trail.

By "ambushing" them, I mean that the "law enforcement persons" sit in their vehicles watching the walking trails. As soon as they see a dog off the leash, they drive down, walk up and hand the person a \$200 ticket.

A friend of mine, saw the law enforcement people down below them, so they turned around and headed back up the hill. The law enforcement people saw them and drove down the fire trail. Meanwhile, the friend doubled back, and was sitting in their car, starting it, when the law enforcement persons argued with them. THIS IS HARASSMENT AND ABUSE OF POWER.

People are becoming AFRAID of "law enforcement" in the open fields. Law enforcement is there to protect people. What are these "law enforcement" people protecting people out in open fields, on rainy days, early mornings (when many dog walkers walk) or in the early evening, again, when many people come home from work, need to unwind and want to be with their best friends or companions- their dogs. They sit there for a couple hours at a time and especially on holidays. "Law enforcement" costs tax payers very much money....to PROTECT them, not HARASS and INTIMIDATE dog lovers.

I have walked those hills for over four (4) years now, and now I am afraid.

This is happening now in Novato, CA. and probably other places in Marin County.

I do not live over in Marine, but I drive over to be with family and walk our dogs together. I will continue to support the COMMON PEOPLE who have children, dogs and like to enjoy the country and it's freedom, without HARASSMENT. INTIMIDATION, and the ABUSE OF POWER by Mayors, City Council Members, Park Officials and Law Enforcement.

Sincerely, Lynn A Thayer

**Correspondence:** Dear Superintendent Dean,  
I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Karen Dittrich

**Correspondence:** My whole household is disturbed by the proposed changes to dog walking in GGNRA areas specially Fort Funston and Mori Point. As responsible dog owners, we have abided by the rules for over 35 years. We are frustrated and upset that GGNRA is again restricting what is a recreation activity for us and others. My mother is 84 years old. Walking her dogs after her stroke and the death of her husband is what has kept her healthy and fit. She broke into tears hearing that there would be more restriction. She would just like to peacefully walk her dogs.

First,

â€ Fort Funston has had off lease dog access for over 35 years. We have enjoyed going there through our lives. We went there before GGNRA had it. Each time there is an agreement; GGNRA goes on the attack to restrict access even more. As others have opined,

"it has been a colossal waste of time and money, and a hardship for the citizens because not only are we battling for our right to access, we are also paying for both sides of the debate. It was at the conclusion of the latest legal battle wherein Federal Judge William Alsup reinstated the 1979 Pet Policy, over the objections of the GGNR A/NPS/DOI that a statement was made by the Judge that became the impetus for initiation of the planned changes in Dog Management in 2006".

Second:

â€ Mori Point- the proposed restrictions are ridiculous. As a family who lives right next door to Mori point we cannot understand why can no longer walk our leashed dogs in all areas. We control them, and pick up after them. Mori point is a recent acquisition to GGNRA. This was made possible by citizens like my mother, husband and myself who donated to the Land Trust to purchase it. I never thought that we would be so restricted. Should we not have donated? You have to wonder. GGNRA has done wonderful improvements to Mori Point. But does it need to include such sweeping restrictions. We like to climb to the top and watch the sunset and get a good cardio for us and our leashed dogs. Why restrict it. We stay on the path and do not disturb the plants of animals.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

My name is Angela Osborne and my husband Dan and I live in Larkspur, Marin County. We have lived here for 14 years and for the past 6 years, have enjoyed walking our dog in areas around Marin and San Francisco including Rodeo Beach, the Marin Headlands, Stinson Beach, Muir Beach, Ocean Beach, Fort Funston, Baker Beach and Chrissy Field.

We exercise in these areas with our dog off leash and under voice control for both our own health as well as the health of our dog. We are also avid hikers and cyclists. Like many people who come to Marin County, my husband and I moved here to be close to nature and pursue a healthy, outdoor lifestyle. Our dog has played an instrumental part in getting us out into that wonderful Marin environment.

My husband and I are writing to let you know that we strongly OPPOSE Alternative F, the Golden Gate National Recreation Area (GGNRA) preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, we SUPPORT Alternative A, the No Action Alternative.

With its plan, the GGNRA appears to have lost sight of its original purpose. The GGNRA is not a national park. It was established to provide recreational activities to local residents in a densely populated urban area. It is not a wilderness area like Yellowstone or Yosemite and therefore requires a different management strategy than a National Park.

As Marin residents, my husband and I rely upon and enjoy its open space. Dogs are already off-limits on over 99% of the GGNRA. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

Local residents have fought hard for many decades to create and preserve the vast tracts of open space that contribute so much to the views and the outdoor lifestyle cherished by most who live here. Access for all users, including people and their dogs, was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. It needs to be formalized and supported with off-leash areas in all three areas - San Francisco, Marin and San Mateo County - and on new lands that the GGNRA acquires in the future.

The GGNRA's plan would only allow for more restrictions and does not provide for opening up more areas for dog recreation. This is a fundamentally unfair process to set up and lacks justification. It is also extremely worrying, as it does not factor in any growth or change in the urban population. Marin has the most people it has ever had living in its borders and more than twice as many dogs as school children. This reflects the recently released U.S. Pet Ownership & Demographics Sourcebook from American Veterinary Medical Association (AVMA) that reveals that more than 50% of California households own a dog.

The GGNRA plan would seriously restrict dog walking in that less than half (7) of the 22 areas in the three counties would allow off leash dog walking. There is no justification in the SEIS for major changes

---

in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored. A significant number of comments submitted in 2011 were not considered or addressed in the GGNRA's current dog plan. This is very worrying.

There is inadequate factual basis in the current plan for the proposed changes. The GGNRA claims it is responding to what it said were rising complaints from park visitors and park officers, yet it has failed to provide current data to back up that claim. We walk our dog in these areas and have rarely seen any altercations other than minor (and natural) dog-on-dog interactions.

The new plan does not adequately analyze the impact of the preferred alternative on nearby parks. The public and the San Francisco Board of Supervisors requested this analysis in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, albeit much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption. The GGNRA has not adequately studied the dispersion effect of its plan on local communities, neighborhoods and residential areas. These include parking, traffic congestion, driving patterns and increased miles traveled to reach dog-friendly areas.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on 100% compliance of leash laws and therefore allows the GGNRA to change the status if it deems park users are in non-compliance. It reserves the right to restrict further dog walking if there are unspecified "violations" or "impacts" in the future. The plan makes inconsistent assumptions and is arbitrary.

My husband and I would like it on record that we adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad and costly idea that will make all people, with or without dogs, feel penned in. In addition, any barriers put up will impede the natural movement of the very wildlife the GGNRA claims it seeks to protect.

There hasnt been a single peer-reviewed, site-specific study (as required by law) that supports the proposed drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. Dogs and their walkers are not going off trail so how many dogs are in fact leaving these trails and invading critical wildlife habitat? The GGNRA should take a balanced, fact-based approach to its environmental analysis, provide the data and stop speaking hypothetically. We would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies before making any changes to the uses of our recreational land.

After 2-1/2 years in review, the new plan has not been modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

Given 99% of the GGNRA is already off-limits to dogs, it is hugely discriminating to seek a plan that reduces that 1% any further. At a time when restaurants, shops and other local businesses are providing access, water and treats for dogs, the GGNRA's plan to restrict them shows how out of touch it is with both its mission, purpose and a significant segment of the society it was formed to serve.

What the people of the Bay Area need is a new plan that describes how the space will be managed as a recreation area, which is what the lands are mandated to be. A proper forum should be set up to review recreation management and should include dog walkers and other park users such as cyclists, equestrians, hikers, and surfers and sail boarders. This type of committee would be valuable for the GGNRA in order to hear directly from their users and to engender their support in maintaining the GGNRA lands through

volunteer opportunities supporting collective access.

The restrictions in Marin County are extremely far-reaching to the point of leaving practically no areas for off-leash dog recreation and many areas off limits all together. Marin is the hardest hit by the GGNRA preferred alternative as it would eliminate off leash dog walking at Muir Beach, all trails at Homestead Valley, Marin Headlands and Oakwood Valley. There is no factual basis to support this. The only off leash area in Marin would be a remote stretch of Rodeo Beach. The closure of these areas will place a huge burden on other open space lands in Marin, causing overcrowding in what few dog parks remain.

In San Francisco County, the GGNRA's proposed alternative is extremely restrictive for off and on leash dog walking in areas that my husband and I currently enjoy walking with our dog including Ocean Beach, Fort Funston, Land's End, Baker Beach and Chrissy Field. Approximately 75% of dog walking access in San Francisco will be eliminated if the GGNRA preferred alternative is adopted.

With the harsh restrictions in both Marin and San Francisco County, we will be forced to travel further and further to find outdoor recreational areas to enjoy with our dog. In short, the GGNRA preferred plan would severely impede our ability to enjoy the Marin and Bay Area lifestyle that originally brought us to the area. The GGNRA plan does not simply limit dogs. It limits all that is wonderful about the Marin County and Bay Area lifestyle, culture and community.

Sincerely,  
Angela & Daniel Osborne

<b>Correspondence:</b>	To whom it may concern, I just wanted to say that I support the dog management plan for several reasons. I support the goal of restoring the coastal habitat for all creatures, and I find that at several coastal spots the number of dogs- often with professional dog walkers- is so immense that I feel like I am walking through a dog bathroom on my way to the beach. I hope that they still have a spot within SF to go off leash, but I do feel that space should be far more restricted than it is now. I love dogs but I also love nature and the sea- I would like to enjoy the latter, and have it managed for future generations and for its ecosystem.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

On another note, I'm an NYC transplant and the pet policies and other personal freedoms that the Bay area offers are just some of the factors that made me want to move here. Increasing rules and regulation over what's been in place for decades now does nothing but spoil the atmosphere of a great city and make it homogenous. If non compliance of the current rules is a major issue the revenue that could be generated from increased enforcement and ticketing far out weighs an all out ban.

Another alternative.. make pet owners register their dogs to access these areas. Maintain the current laws but ask people to pay an annual registration that include a tag for the dogs collar. We do this in NYC and revenue goes towards the maintenance of pet oriented facilities.

There are better alternatives to a ban. We should be reducing access at all beyond the current laws.

Because we live so close to Rancho Corral de Tierra we have a unique perspective. When we wash our dishes we can see the entire Rancho meadow all the way to Montara mountain. We can see it from our living room. We can see it from our bedroom. We can actually see virtually every owner and dog out our windows all day long. Which brings us to an invitation to any GGNRA ranger or executive who believes this area is now or somehow will be in the future overrun with frothing, wild, insolent canines who will threaten everything from the speeding mountain cyclists to the plopping horses to the rare San Francisco Garter snake. Wait a second, now that you mention it, it does seem like every time our dog Vinny goes for a walk he brings home one of those snakes. Of course we tell him not too, but he just can't help himself. And he always runs way off the trail and tramples sensitive habitat, it makes us sick. And the birds he kills. He's a blood thirsty uncontrollable beast. Forgive us, we digress. Come on over. Have a cup of tea. Watch out our window. Maybe wash a dirty dish or two. Hang out all day. You won't see more than fifteen or twenty docile dogs the whole time you're here, trotting down the trails, minding their own business, jumping for joy. It's a pretty simple picture of human and dog, getting some exercise.

Sincerely,

Arthur Hofmayer

**Correspondence:** Dear Directors:

I have several short comments that I hope you will hear.

First, after 20 years of taking dogs to walk, run, and play at Fort Funston, Rodeo Beach, Chrissy Field, and Muir Beach, I will tell you that we are THE most self-policing/self-monitoring group using any of those open spaces, save for the horse people who also share the space.

Humans, on the other hand, who come for recreation, make a huge amount of trash, which is left not only in the trash bins, but all over the beach. I find bottles, toys, pieces of broken things, along with an array of food packaging. They start fires, let their kids run and scream, chasing birds and climbing all over the cliffs, and after all that, leave garbage on the beach. When the clean-up crews come for clean-up days, they do NOT report dog walking leftovers, but human leftovers- -GALORE!!!

Dog people pick up their poop, do not allow their dogs to chase wildlife, and add only the dog poop bags to the trash bins. When someone misses a poop, another walker invariably lets them know.

Almost all dog people prevent their dogs from chasing or in any way intimidating birds or other animals. Since dog people are gone by sunset, the little animals who live in these areas are then free to come out and live their nocturnal lives. People who come to these areas for human recreation or party purposes, on the other hand, come in at all hours of the night, leaving trash, tents, human feces, etc. I have come across all these things time and time again around the trails at Fort Funston. Never are they dog people. Humans do not police each other- -they are passive and pretty much ignore the trashy habits of each other.

By and large, dog people in the Bay Area are smart, conscientious, and hold high standards for keeping their walking areas clean and free of anything that may ruin the aesthetic or environmental quality of their dog run areas. They are very harsh with any dog people who don't adhere to those standards.

I am an animal advocate, not just a dog advocate. I am one of thousands of Bay Area dog people who strictly disallows my or anyone's dogs to harm any plant or animal out at these wonderful places.

Dogs must have open space to play and run. As long as humans and horses go without leashes, dogs also deserve that same feeling of freedom to sniff and fetch and play with each other.

Please do not make these arbitrary rules against our dogs. Our dogs are our families. They are a big part of the joy of Bay Area outdoor life.

Thank you for your consideration.

**Correspondence:** To Whom It May Concern,  
This is my second letter concerning the proposed plan for the GGNRA by the NPS. My family and I moved to Mill Valley 6 years ago. While searching for a place to call home in the Bay area, it quickly became apparant that Marin County was the place for us. The biggest attraction was definitely the open space of the GGNRA. We live for outdoor recreation, including hiking, biking, running and beach combing. The GGNRA has provided a sanctuary daily for my entire family, including our dog. Every day we look forward to our trek into the wilderness area with our furry friend. It is as crucial for my dog to be able to go and run as it is for myself. I cannot think of a better place to exercise my companion than the open spaces and beach. I feel allowing a dog to run keeps them fit, happy and well balanced.

When I heard that the NPS was revising its plan for these areas I was initially excited. Mistakenly, I thought they were surely going to expand the areas available to dogs, and in fact link a series of trails so one might be able to actually make an entire loop. I can't fathom the reasoning that has gone into the proposed plan, and for whom it has been made. Surely, it isn't for the daily users like myself, who can walk with my K-9 companion from my home to the trails. I see my friends and neighbors daily, also with

their dogs, out enjoying the refuge of the wilderness. In my view, the GGNRA was set aside for just these kind of activities. Closing the beach and trails to dogs is nonsensical, both for the dogs and their owners. I can find no reason that the GGNRA in its entirety, isn't open to people with their pets. I think all of the trails can be shared by all users.

Thank you for your time. If there is a vote on these issues, please vote no for restricting access to owners with their dogs.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and dogs running in closed fenced areas are more likely to get aggressive.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I have been a San Francisco resident for years and have used all the off leash areas with my dogs for the past 25 years. I now live down the peninsula and travel monthly to SF for its dogfriendly parks and beaches. Please don't take this away.

Sincerely,

Helena Eckerberg

**Correspondence:**

This is my second statement opposing the NPS plan to close down access on the Golden Gate National Recreation Area to off-leash dog recreation.

The NPS/GGNRA new version of its proposed "dog management plan" would be a disaster for Marin County residents.

It would take away hiking trails, fire roads and beaches that have been used by people and their dogs for at least a half a century. The owners of more than an estimated 60,000 dogs would be left with virtually no place to go for off-leash recreation.

One of the main reasons people move to Marin is because it is so friendly to both children and dogs and because of its close proximity to a multitude of trails and beaches. Many of us jog the trails with our dogs or pack up the kids and dog for a day at the beach. Because I frequently walk with my dog alone on the GGNRA trails, my dog provides protection for me should there be anyone threatening me and my safety. I would not feel safe walking alone without my dog, and I often do not have the luxury to find an available friend to hike with me when I am available.

The GGNRA plan would take away an important part of traditionally dog-friendly Marin's soul by putting a choke collar on man's best friend.

The fact is, there is no justifiable reason for these proposed changes. As it stands now, 99 percent of the GGNRA is already off limits to dogs. If the dog management plan goes through, there would not be a single trail in the entire 80,000 acres where dogs and their owners could enjoy an off-leash experience. In Marin, off leash dog walking would be banned on all 38 trails. Only five of those trials would even allow leashed dogs. Funneling all dogs onto just five trails is irresponsible and reckless. The only off-leash area in all of Marin County would be a remote stretch of Rodeo Beach, which is only accessible by car. Dog owners, who normally walk or drive a short distance to their trails, would be forced into cars to drive miles away in order to exercise their pets. In particular, I would be forced to get in my car and drive miles away to walk with my dog, whereas now, I do not need to use the car at all. I simply walk from my house to the trails. Certainly, Marin does not need this added congestion and pollution, which this new law would force upon us.

Imagine living in Muir Beach and having to drive 15 miles in order to do something you normally do right outside your back door. How many cars will this put on our already congested roadways and how much more pollution will this cause? Tam Junction simply cannot handle any more unnecessary cars trips.

The GGNRA has spent millions of our tax dollars compiling a 2,400-page report full of anecdotal evidence and skewed scientific reporting telling us what dogs "could" and "might" do, but have failed to include what impacts closing down these areas would have on surrounding neighborhoods. The fact is, if the dog plan gets approved, local parks and trails would be overwhelmed with dog walkers kicked off their favorite trails.

The Marin Humane Society adamantly opposes the plan because they know how important off leash play is for the health and behavior of dogs and their humans.

"As animal shelters across the country work to save animal lives and create homes for thousands of homeless animals, what a shame that now responsible dog guardians will be scrambling to find a proper place to spend off-leash time with their animal companions on our public land," said Captain Cindy Machado, the director of animal services for the Marin Humane Society. "The GGNRA spaces in Marin aren't just places to congregate, they are places to be active by hiking, walking, enjoying the beauty of our natural spaces and spending quality time with our animal companions who share the same enjoyment when they are with us."

Closing down these trails is a betrayal of public trust and the spirit of the GGNRA's enabling legislation. We vehemently oppose the GGNRA proposed preferred plan.

**Correspondence:** The GGNRA, by its own rules, must conduct site-specific, peer-reviewed studies as the foundation for any policy changes intended to protect the resources of the GGNRA. The GGNRA acknowledges the required studies do not exist. This renders the proposed policy changes arbitrary and capricious, and as such they are unlawful and cannot be implemented. The ORIGINAL 1979 Pet Policy should be reinstated per the 2005 Federal Court decision because all closures since then have not been based upon site specific, peer-reviewed studies as the law requires. For lands added after the drafting of the original 1979 Pet Policy, DOI policy requires historical usage be maintained. Any changes would have to be justified by the requisite site-specific, peer-reviewed studies followed by a formal rulemaking process.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Michaela Coan

**Correspondence:** Dear National Park Service -

I am writing to you to ask you to reconsider turning even more of our beautiful beaches into anti-dog areas. My dogs have enjoyed spending time at many of these beaches for the last 10 years. Spending time with them at these beautiful places is a big part reason we moved to this area. There are already plenty beaches in the area that do not allow dogs. I certainly respect this, however the beaches that allow dogs are so few and between already that I would not know where to be able to enjoy this beautiful scenery with my four-legged companions should these beaches go away. As owners of well behaved dogs, where would you suggest we should be taking them instead? Let's please keep this area progressive and welcoming to man's best friend. This is what makes the Bay Area great.

Regards,

Elke O'Neill

**Affiliation:****Received:** Feb,09,2014 23:39:13**Correspondence Type:** Web Form**Correspondence:** I am in favor of restricting dog access in the GGNRA.

As an everyday walker/jogger in beautiful Pacifica for the last 35 years, I have seen a marked increase in the number of dogs on the trails of Mori Point and Rockaway, as well as the beaches of Linda Mar and Sharp Park. That means there are many more off-leash dogs chasing the birds, even in the areas that are considered nesting places for our little snowy plovers. It also means that every time I am out enjoying nature, I expect to be pounced on by an unleashed bounding dog. Big and small- -dogs act as if they can do whatever they want. Even if leashed, the handler seems to assume their dog is harmless. Or I hear the familiar words, "don't worry, he won't bite, he's friendly." That time, when the handler tried to call his dog back, that bull terrier ignored him and jumped on me- -twice! So much for voice control. How on earth am I supposed to act normal (and not scared) when I am absolutely petrified that I will get bitten? Whenever I go for a jog in the GGNRA, I know I will have to stop in my tracks and walk quietly and carefully past every dog so as to avoid him/her growling or chasing me because I am jogging. Why am I and the birds subjected to stressful situations whenever we are in nature? Especially, in an area that is designated protected government space.

And the mess that those dogs leave. Okay, so the mindful handlers always clean up after their pets. So why is there so much poop fouling the beaches and our shoes. Not so much fun for families when they are out enjoying the great outdoors. I see parents/nannies with toddlers on the shore at Crissy Field and some are on constant alert because of the many unleashed dogs cavorting nearby. Cannot even sit on the grass without worrying about some sort of residue left over from Fido.

I hope there will be additional and tighter restrictions on dogs in the GGNRA. The more GGNRA allows dogs access to park lands, more people will go to the breeders and pet stores to buy dogs. After all, now there is a great place to walk them. Right? If access is denied or curbed, there might be fewer new dog owners because people won't want to walk their dogs- -on a leash- -in their neighborhood. Nor will they want to clean up all that poop in their own backyard. Which is how it used to be way before the park lands opened up to people.

Thank you for your consideration.

**Correspondence:** Dear Superintendent Dean,  
I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.  
The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.  
Sincerely, Michelle Quenneville

**Correspondence:** Letter for 2014 SEIS NPS/GGNRA Dog Management Plan Febuary 10, 2014

To the Honorable Judge Lee  
CC to GGNRA Superintendent Frank Dean  
Ft. Mason, San Francisco California

From Thomas Roop  
315 Irvington St.  
Daly City CA 94014

Honorable Judge Lee,

One could say that while you have three dogs that you and your dogs take up to much real estate, while those of us with one dog leave less of a carbon foot print on the eco-system and you would probably have the same negative reaction we get from folks like yourself who have not done your research, just like the NPS/GGNRA only have one Peer Review . This Peer Review showed that dogs are not the Snowy Plovers enemy. There have been no Peer Reviews that are mandated by law before the NPS/GGNRA can allow the public to view their planed change of rules that will have a major ripple efect on local dog parks.

\*\*\*\*\*  
\*\*\*\*\*

Go To (Where is the Peer Review) on Ocean Beach Dog to learn More.  
<http://oceanbeachdog2.home.mindspring.com/id32.html>

\*\*\*\*\*

\*\*\*\*\*

On the San Francisco Coast there was a Pet Policy put together in 1979 that Dog Guardians and other Stake Holders put together on this side of the Bay. We have Off Leash Dog Walking due to the insight of Judge Alsup who declared the 1979 Pet Policy to be the law of the land while the GGNRA was ordered to properly seek the comment of the public. In 2011 after the DEIS DMP was released and the NPS/GGNRA received over 4700 comments against there DEIS DMP, the GGNRA made a few very minor changes and put the nearly identical plan out as the SEIS DMP on Sept. 6, 2013 with out any kind of Site Specific Scientific Peer Review Studies that are required by Law. This is something the NPS/GGNRA has skipped in their zeal to disregard the public input.

\*\*\*\*\*

There are Resolutions against the SEIS DMP by the City and County of San Francisco Board of Supervisors along with Mayor Lee's objection to this DMP plan. Instead of increasing the amount of land for all recreation including that of Dog Walking as Congress warned the GGNRA about increasing urban population growth in their enabling act which created the Golden Gate National Recreation Area in 1972. The NPS/GGNRA has chosen to shrink the area where once again this is being done at the peril of the of Voice Controlled-Off Leash Dog Walking

\*\*\*\*\*

\*\*\*\*\*

This NPS/GGNRA 2011/DEIS & 2014/SEIS Dog Management Plan; has been a waste of Two million tax payer's dollar's to create this DMP and 2.5 million a year to run this plan which was not needed, had they ( The NPS/GGNRA) followed the rules in the Original 1979 Pet Policy!

\*\*\*\*\*

\*\*\*\*\*

Think about what is going on here , the GGNRA has 80,000 acres and only (one percent 1%) s land is dedicated for off leash dog walking with voice control and owner must have a leash for each dog. The current NPS/GGNRA 2014 SEIS will take away 90% o 1% tg Guardians and their four pawed pals have to recreate...

\*\*\*\*\*

\*\*\*\*\*

Our Dog Goldie loves to go to Fort Funston just as we love to take her there. Goldie and I socialize with other Dog Walkers and their Dogs which besides the social benefits, this makes for a mellow, less aggressive dog... More importantly the dogs like Goldie who are rescued instead of being executed because of the large amount of dogs that come out of puppy mills . Of these puppies, as many as 64% oe dogs two and under are surrendered to The Pound. The Pound and Dog Rescue Groups are the last hope of placing these dogs who breathe and smell the same air as us and have their own personality's; they have feelings of Joy/Happiness and sadness which makes them a Family Member.

\*\*\*\*\*

\*\*\*\*\*

I was Born and Raised in San Francisco I have lived in Daly City for 41 years and used to hike with friends in the late 50's around Fort Funston / Battery Davis and take the Sky Tram from the Observation Deck where the Giant Camera is to Point Lobos and hike around that area before Sutro's was a ruin's...Back then when friend's would hike up on San Bruno Mt. one of the guys had a small Collie named Mittsy and she would be with us for hours off leash. Today due to massive development the only land left are these park lands that we all agree on one point and that is no development. The 2014 SEIS DMP was DOA when introduce this past September and must be thrown out and The Original 1979 Pet Policy to be introduced as a section seven rule-making resolution....

Tom & Goldie (14)

**Correspondence:** This supplements my prior comments provided electronically and at public meetings regarding the Draft Dog Management Plan. I am 100% i favor of Alternative A and absolutely against any change to the existing off-leash dog walking included in the 1979 Pet Policy. As I understand it, when our Bay Area cities turned over the vast majority of our parkland to the Federal government to create the Golden Gate National Recreation Area (GGNRA), you promised to maintain recreational use as it existed before the property transfer. This promise was codified in the 1979 Pet Policy. All Alternatives (other than Alternative A) relies on studies that do not pass peer review and ignore the peer-reviewed study that concludes dogs are not hurting wildlife in our parks. Any change to the 1979 Pet Policy is unjustified and improper.

**Correspondence:** I am zealously opposed to the GGNRA's Dog Management Plan in San Francisco. The parks that we take the dogs to will either be closed to dogs off leash, or prohibit dogs completely. 90 percent of the parks we frequent will be affected. This plan is drastic and unrealistic. San Francisco and the Bay area has always been very dog friendly. This plan is not taking into consideration that the people that use these national recreation lands on a daily bases, do so with their dogs. Please do not limit the ability to use these parks as much as anyone else!

**Correspondence:** Ft. Funston is presently being used in its very best capacity right now by serving all of the people of San Francisco and southern cities to walk their dogs off leash. The land is not good for anything else. The pet policy in place is working just fine and was put in place by forward thinking people who understood the burden on our city parks. That pet policy was one of the smartest things San Francisco has done.

Changing it would be short sighted and just plain dumb. Please listen to the people - we've been fighting this change now for many years.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Jeff Chebul

**Correspondence:** Please consider the thousands of people who have rescued pets and need a place for them to go. With so few trails and beaches that allow off-leash now, how could you even consider taking this away? Everybody deserves the right to this beautiful place we live, and 99% of dog owners are respectful about cleaning up after their dogs and keeping them off of sensitive land. Please, please don't do this to those of us who have committed a portion of their life to rescuing dogs!

**Correspondence:** We have seen in Marin that the fewer areas allowed for off-leash dog walking, the more impacted those areas become, the more the complaints, and the cycle increases speed. Dogs bring great joy to a huge portion of the Bay area population, specifically because the kind of people who choose to live here in the first place are those who love the outdoors and animals; half the reason to have a dog is because it pulls you out to nature. We also have children, and appreciate that dogs can disturb people and cause damage.

The answer is not to ban off-leash, but limit it a bit more by section of beach or trail, and in some places perhaps by the time of day (such as not on Sundays from 10-5, when the beach may be most crowded.)

**Correspondence:**

I was living on the coast in San Mateo County for years and years before the NPS came in and bought up Mori Point, Rancho in Montara and Pedro Point Highlands.

For years and years my family and I walked our dogs on and off leash in these and many other areas. All without any incident.

Now the NPS swoops in and BANS ALL OFF-LEASH dog walking in San Mateo County. This is on lands with a very long history of reasonable and accepted public dog use.

Where is the science for this decision? The rationale? The logic? There seems to be plenty of strong-arm politics in the latest proposals, but basically zero consideration of science or the public access.

The one other place in San Mateo County of walk off-leash (Esplanade Beach in Pacifica) is now almost permanently inaccessible due to cliff erosion. Hence the NPS decides now is the right time to ban off leash walking everywhere else too?!

Please take another look at how incredibly oppressive and restrictive the "preferred" plan is for the huge numbers of dog owners in San Mateo County.

I favor alternative A: No action. At least until a **\*\*reasonable\*\*** alternative is proposed by the NPS.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog out on hikes throughout Marin County. She is under voice control and is actually better off leash than on. I have also noticed this with the other dogs we run into. They become more aggressive on leash with each other than if they are off. I also believe it is safer for the walker to have the dog off leash, especially on single track trails.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

I have lived in San Francisco for over 15 years and have used the GGNRA both before and after having a dog. I go to Chrissy Field and Fort Funston twice a week and that is one of my main reason I live in the area. The ability to meet others, enjoy the outdoors and bond with my pet. The RECREATION AREA is meant to citizens of this area, several of which use the area for for dog walking only. If this was taken away, I would seriously consider moving out of the area. I hope this is not taken away.

Sincerely,  
Doug Bentz

**Correspondence:** Dear Superintendent Dean,

In looking at the POLICY ON THE ESTABLISHMENT AND ADMINISTRATION OF (NATIONAL) RECREATION AREAS, the #1 point is to provide investment in outdoor recreation that is more clearly responsive to RECREATION DEMAND than other investments that are based primarily upon considerations of preserving unique natural or historical resources, the need to develop and conserve public lands and forests, or the requirements of major water resource development undertakings.

The recreation demand for local citizens comes from dog owners - over 50% of San Francisco residents have dogs. While you reference point #3 in your study, there is not mention on point #1. Please consider this motivation of the establishment of Recreation Areas in your analysis.

The system of National Recreation Areas should:

- 1) Provide for Federal investment in outdoor recreation that is more clearly responsive to recreation demand than other investments that are based primarily upon considerations of preserving unique natural or historical resources, the need to develop and conserve public lands and forests, or the requirements of major water resource development undertakings;
  - 2) Be areas which have natural endowments that are well above the ordinary in quality and recreation appeal, being of lesser significance than the unique scenic and historic elements of the National Park System, but affording a quality of recreation experience which transcends that normally associated with areas provided by State and local governments;
  - 3) Be consistent with Federal programs relating to national parks, national forests, public lands, fish and wildlife, water resource development, grants for urban open space, recreation programs on private agricultural lands, and programs for financial assistance to States in providing recreation opportunity.
-

Thanks,  
Doug Bentz

**Correspondence:** Dear Superintendent Dean,

I am writing to oppose the Preferred Alternative of the Draft Dog Management Plan as it in no way allows for sufficient space for dog owners in GGNRA lands to walk their dogs, either off leash or on. Scientific studies do not back up the extremely restrictive measures that have been adopted in this alternative. I have been walking with my dog at Fort Funston in San Francisco, Mori Point in San Mateo County, and Oak Valley Trail in Marin County for many years, and am completely dismayed as to why this activity will be so greatly curtailed in the future if this plan is adopted.

I have not been silent on this issue until now. Over the years, I have participated in the planning process for the Dog Management Plan, have testified at many meetings about it, sat on the rule making committee, and written many comments letters. During this entire process I feel my point of view, as well as those of tens of thousands of other dog owners, have been completely ignored by the GGNRA.

Less than one percent of GGNRA lands are currently open for dog walking, and the plan will reduce this pathetically small amount of land open for this activity to the point of absurdity. For instance, the Preferred Alternative allows for no off leash dog walking on GGNRA lands in San Mateo County at all. That is only one example of the complete inadequacy of the plan. There are many more.

The GGNRA totally ignores the fact that dog walking is an extremely popular recreational activity in the highly urbanized Bay Area, one that numerous residents partake in. The closing of more GGNRA lands to dog owners will force them to walk their dogs only in park lands managed by cities and counties, making these areas unacceptably crowded and difficult to manage. This is surely unacceptable for local jurisdictions, many of which were the grantors of the land GGNRA currently manages!

---

I implore you to reject the Preferred Alternative of the Dog Management Plan and go back to the drawing board to develop a more scientifically valid plan, one that considers dog owners legitimate users of GGNRA lands.

Thank you,

Carol Arnold

I regularly take my dog to muir beach and the coastal trail.

---

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

**Correspondence:** Dear Sir/Madam,

I wanted to write to you as I heard about the terrible plan to cut the available areas of national parks by up to 90% for dog owners. As a dog owner and outdoor enthusiast I strongly oppose these plans.

I come from the UK and having moved to California I already feel like the off-leash laws are overly restrictive. What you're planning to do will mean that I will not be able to enjoy the great California countryside. To that point what is the point of even living in California???

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Kind Regards,  
Symon

<b>Correspondence:</b>	Two Whom It May Concern:				

We live within a half mile of Rancho Corral del Tierra (now part of GGNRA) and it is a fabulous resource for members of our community. Personal dog walking on-leash by local residents is a significant part of the foot traffic in the area, along with hikers, bikers and horse riding. The fact that all these users coexist happily, in a location that is just a stones throw from San Francisco, is one of the main aspects of Rancho and the GGNRA that I love. I have never - - not once - - had a bad experience related to dogs in the GGNRA, either when walking or running with my own dogs or when encountering other people with dogs. I have never encountered a loose dog without an owner or seen any negative effect of the policy of allowing dogs on leash in this part of the GGNRA.

On the contrary, I have seen so many wonderful positive effects. People and their dogs getting out into the countryside - - getting exercises, enjoying and appreciating the outdoors, seeing the beautiful mountain vistas, and looking out over the Pacific ocean. Running and walking your dog only on streets is not especially fun, it's not as healthy as the variety of terrain provided in a park like Rancho, and frankly, in an area that is as rural as the Moss Beach / Montara / El Granada area, it's pretty hard to get a real workout without simply running laps on the streets. (And running on PCH is hardly enjoyable and barely safe.) Almost every time we have visitors here the first thing I do is drive them up to Rancho and show them around. It's a fabulous resource of which we are all immensely appreciative and proud.

Part of what makes Rancho such an important part of the Coastsides experience is its low-key regulation. Protection and safety are important, of course, but the fact that people can responsibly take their dogs (or bikes, or horses, or just themselves) out into what is essentially a community resource is a gigantic value. It improves the quality of life and at the same time provides a clear base of citizens who love and appreciate and want to take care of this amazing resource. Eliminating or significantly restricting the access of dogs to Rancho will significantly reduce my interest - - or at least my practical ability - - to use and appreciate the area. I'm sure the same is true for many others. We're a dog-friendly and dog-loving community. If our dogs are suddenly unwelcome in a geographic feature that literally dominates our landscape, we will simply not use it very much. That would be a huge waste and would alienate so many people.

Please don't restrict the freedom of citizens to responsibly take their dogs into Rancho Corral del Tierra!

Sincerely,

Peter A. H. Peterson

**Correspondence:** I am in support of the draft dog plan for the GGNRA. While I have met nice dogs who are under control, While walking, I have been rushed at by unknown dogs, which can be frightening, especially for children. The dog owners, when they show up on the trail, often just laugh.

I think this is a balanced plan that allows responsible dog owners to enjoy the outdoors with their pets, and yet protects wildlife. San Francisco and its environs is unique in being a city that has such access to wild places, and where one can view wildlife, especially the birds of the Pacific flyway. Let's protect the natural beauty and wildlife that we have.

Please support the GGNRA dog plan.

**Correspondence:** I am heartened by the willingness of the NPS to devise regulations on rights of dogs in GGNRA that will allow other species their 'rights' also. I have often witnessed off-leash dogs running vigorously through areas that are vital habitat for wild species. It is wonderful to see dogs in unrestrained motion, as I know from years of living with dogs, but owners who do not restrain their dogs in designated areas, where other species strive to survive, are denying those creatures their livelihood.

I hope that the regulations will be enforced when adopted: there are, alas, some dog owners who do not feel bound by regulations which they perceive as infringement on their dogs' entitlement to full freedom. On beaches where dogs are not leashed, though required, I have been knocked down by racing dogs, had food snatched from my hand, have been peed\* on while sitting and watching waves and birds. I have seen owners urge their racing dogs (Limantour) to chase into four flocks of 800 resting shorebirds and cheer their ability scatter them.

\*On one occasion, I spoke to park personnel shortly afterwards, and was told that dogs are territorial and acted badly sometimes....

**Correspondence:** I have worked as a naturalist/program coordinator at the Environmental Science Center (ESC) at Fort Funston for the past 6 years. Every year we host approximately 50 classes from within the San Francisco Unified School District for our overnight program which includes a 2-3 hour walk around Fort Funston on the 1st day and a hike down to the beach on the 2nd day. On numerous walks

---

with our students we have been literally overrun by dogs. Many dog walkers come to Fort Funston with 10-15 dogs per person and most of the time all of these dogs are off leash and not on voice command. Many times dogs have scared our students literally running up to them or running them over. While its true that some of these times the owners/walkers are aware of the situation and try to call their dogs off, most of the times the dogs just don't listen. More often than not the owner/walker is nowhere in sight and so we are left with screaming and scared students and a dog or dogs that won't leave us alone. I've never been quite sure of the dog rules here at Fort Funston. How many dogs can one person be responsible for ? Clearly we can all agree that most people do not have control of 12 dogs with voice command. If dogs are off leash do they have to be trained well enough to listen to their owners/walkers ?

Another huge issue is that there are dog owners and dog walkers that don't pick up after their dogs. Some don't pick it up and others leave the plastic bags full of dog poop on the trails. My students and I have stepped in dog poop on numerous occasions which could have been prevented.

I work with students at many of the parks in the city and Fort Funston feels more like a dog park than a national recreation area. In fact I can honestly say that I would never just walk around Fort Funston with friends or have a picnic here or bring people from out of town here. I don't think Fort Funston is for people that don't have dogs or don't have a hang glider which is too bad because its such a beautiful place and should be a place for anyone to enjoy.

In the end I think we can make new rules and regulations but if there is no one there to enforce it and no real consequences nothing changes. There should be clear areas where off leash is okay and also areas where dogs must be on leash (no exceptions) so that this park can be used by the many different people that live here with or without dogs. The sensitive areas here should be protected from dogs as well.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like a dog park and those of us who love to hike with our trained dogs off leash do not like dog parks and one cannot hike in a dog park.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Teresa Cleland

**Correspondence:** I support allowing off-leash dog(s) at Muir Beach. I believe that it is appropriate to limit the number of off-lease dogs to perhaps 1- or 2-dogs per adult; while a higher limit of leashed dogs per adult may be considered. I propose that at all times; dogs shall be under voice control by the owner/adult and any dogs not exhibiting control shall be immediately leashed.

I am a frequent user of the GGNRA recreation sites for the past 25-years, mostly those located in Marin County. During the summer months, I visit the GGNRA approximately once every week and during the winter months I visit the GGNRA approximately once every two weeks. About 25% o my visits to the GGNRA are with my dog. My remaining visits to the GGNRA are about 50% fr mountain biking and another 25% fr walking/hiking without dogs or bikes. I have gone horseback riding twice during the last 25-years through the private stables.

I am a new dog owner and my first 22-years of use at GGNRA never included any dog(s). During my 25-years of use of the GGNRA I have never encountered any conflicts with dog(s). My only dog conflict in Marin County opens space areas was a single occurrence on Marin Municipal Water District property.

The GGNRA is surrounded by urban area. Please ensure that off-leash dog activities are maintained at Muir Beach to provide the recreation opportunities consistent with the needs of the neighboring urban population.

Thank you for your consideration.

**Correspondence ID:** 2753    **Project:** 11759    **Document:** 55416

**Address:** San Francisco, CA 94103  
United States of America

**Outside Organization:** San Francisco SPCA Unaffiliated Individual

**Affiliation:** OfficialRep

**Received:** Feb,10,2014 12:42:11

**Correspondence Type:** Web Form

**Correspondence:** On behalf of the San Francisco SPCA, a local animal welfare organization founded in 1868, I am writing to convey our strong opposition to the Golden Gate National Recreation Area Supplemental Dog Management Plan (the "Plan"), which aims to drastically limit dog access in San Francisco, Marin and San Mateo counties. The SF SPCA strongly urges the National Park Service to modify the Plan to allow for greater access to urban recreational opportunities, including off-leash dog walking.

The GGNRA is a popular recreation destination located in a major urban area with minimal open space. For many local dog guardians, especially seniors and others who find it difficult exercise their pets while on-leash, the GGNRA is the only place where they can let their dogs play and release a lot of energy. As the SF SPCA can attest, daily exercise is essential to a dog's proper health and well-being. Exercise affects a dog's behavior, trainability and aggression levels, which are important to properly maintaining public safety in crowded urban environments. Take away off-leash dog areas in the GGNRA, and dog guardians may be unable to meet the physical and mental needs of their pets (also at a detriment to their own healthy, active lifestyles).

Significantly reducing dog access in the GGNRA will adversely impact hundreds of thousands of Bay Area residents and visitors. In San Francisco alone, dogs outnumber children. Yet, the Plan allows only

extremely confined areas permitting dogs in the GGNRA that will soon become severely overcrowded, which will result in serious congestion in nearby neighborhood dog parks. San Francisco's dog parks are already limited, and off-leash areas are particularly scarce. If guardians and their dogs are displaced from the GGNRA and forced to relocate to the city's dog parks, this overcrowding will become increasingly problematic and potentially dangerous. These negative impacts will be felt by individuals both with and without pets, as well as the already overburdened City of San Francisco Parks and Recreation Department.

The SF SPCA strongly urges the National Park Service to adopt a different approach to the current Plan - one that addresses the needs of ALL of the GGNRA's recreational users, including the countless Bay Area residents and visitors who have historically enjoyed access to the GGNRA with their dogs. Several viable alternatives to the current Plan exist, including, for example, a registration system that allows access suspension for irresponsible visitors and their pets. Responsible individuals, however, should be permitted to continue to enjoy outdoor visits to the GGNRA with their dogs while peacefully coexisting with wildlife and the environment, as they have done for decades.

In closing, the SF SPCA is strongly opposed to the current draft of the GGNRA Supplemental Dog Management Plan. The Plan should be significantly revised to meaningfully promote continued recreation for all visitors, including individuals who responsibly enjoy the GGNRA with their dogs.

Sincerely,

Brandy Kuentzel  
Corporate Counsel & Director of Advocacy

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Tim Oben

**Correspondence:**  
Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.  
The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Jill Wiliams

**Correspondence:** Policy Must Address For-Profit Dog-Walkers.

A visit to Crissy Field on a weekday in the late morning reveals that the beach is being used by numerous for-profit dog walkers, who are conducting their private business using public space. On a recent Friday at 11am there were about 80 dogs on the beach under the oversight of about 10 walkers. Most walkers appear to have 6-10 dogs under their supervision, with the result that their dogs are very poorly controlled.

One solution would be to limit dogs-per-walker to two dogs; otherwise the concept of 'voice control' for dogs is clearly only theoretical.

**Correspondence:** New Dog Plan Must Reflect Test Case: Ineffectiveness of Current Dog Policy in Crissy Field Wildlife Protection Area.

The new GGRNA Dog Policy must err on the side of restriction, since current policies are largely ignored by dog walkers in the Crissy Field Wildlife Protection Area. Approximately 50% o the dogs observed walking within the area are not on leash during the restricted date range, despite there being several signs and fencing at either end of the Area.

Since current policy is largely ignored in this test case for restrictions on dog access, future policy in other parts of the GGNRA must err sharply toward restricting dog access. Similar to speed limits, future policy must be highly restrictive in order to achieve even mild restriction.

**Correspondence:** I am very concerned about the GGNRA's proposed limitation and elimination of off-leash dog areas. These areas, such as Fort Funston, portions of Crissy Field and even areas in the North Bay such as Muir Beach form a vital part of San Francisco's urban recreation areas. There are currently more families with dogs than with children residing in San Francisco, and eliminating the GGNRA off-leash areas will seriously over tax the limited city park space available in San Francisco.

Coming from a family with both a dog and kids,I cannot stress enough how important use of the GGNRA off-leash areas is to our family. It is a source of great joy and family bonding to spend time enjoying nature in these beautiful areas while our kids and dog can run freely.

The GGNRA management of these Urban nature areas must be balance to reflect the fact that they form a part of an Urban environment. They are not and cannot by virtue of the their location, be managed as pristine wilderness areas such as the National Parks. That is simply not the reality of their Urban location.

Thank you for your consideration

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Rodeo Beach Loop, Muir Beach and trails around. With additional restrictions and bans, people will have to be in the cars looking for other places to walk their dogs. Do you want to add to the traffic and pollution for the environment? Furthermore, let's not forget the changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011, and comments in 2011 ran 3:1 AGAINST the plan.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** In the 42 years that I have lived in San Francisco, I have not once encountered hostility to my off-leash dog(s) on the local beaches and on the trails on the flanks of Mt. Tamalpais. I have seen the human and canine populations grow without conflict in the areas you administer and we share. It seems to me insane to compress the space open to off-leash exercise. Most dog owners and dog walkers I have encountered over the years have been responsible, unobtrusive, careful to clean up after their charges. I wish you would provide more than vague and/or hearsay evidence that a huge majority of users are unhappy in the presence of dogs and their guardians. Please reconsider your policy planning. It makes no sense.

**Correspondence:** Dear Superintendent Dean,

I live at Ocean Beach in San Francisco, and I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on

GGNRA properties for many years. We are a family of 4, and all of us enjoy using Ocean Beach with our dog, where we all get the opportunity to exercise away from the urban heart of the city.

Most specifically, I think it is absurd to even propose banning on-leash dog walking for any part of Ocean Beach. We who live in the neighborhood are the primary users and caretakers of this beach. I am out there just about 365 days each year, in rain, fog, wind or otherwise, to walk my dog a few blocks, letting her do her business while I am immersed in the Pacific Ocean environment. It is those of us who live at the beach, and use the beach WITH OUR DOGS, who also care for the beach. We pick up trash from people too lazy to clean up their picnics, and even worse trash from drug users and homeless people camping in the dunes. Walking our dogs is not the problem - - it is part of the solution to making this beach great!

It is inconceivable to go against the strong historical precedent of using Ocean Beach as a place to recreate with our dogs, especially on-leash. If this change is implemented, you can expect an enormous public backlash, as this will NOT be acceptable to the thousands of people who responsibly recreate at OB with our canine companions.

I feel similarly about the proposed changes to Fort Funston, where the current rules concerning walking dogs under voice control are working effectively to provide a safe and responsible space for people to exercise with their dogs. My dog exercises at Fort Funston under voice control at least 4 times per week, and I cannot imagine the impact on my family, my children, and our dog if we are not able to continue to do the same. I strongly oppose any proposal to restrict off-leash dog walking at Fort Funston to the equivalent of a 'penned in' area.

Regarding the new proposal, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Jacob Lesnik

**Correspondence:** In my opinion the GGNRA leadership is not sincerely in reaching a mutually satisfactory agreement vis a vis dog owners. I believe that GGNRA has decided what it believes is the best course for dog management which is to further and further exclude dogs from the lands it manages until no dogs are allowed. Period. For that reason I am ready to move on to find a way to legally remove GGNRA from management of all lands in San Francisco and replace it with management more in tune with our community's unique needs and requirements.

Therefore, I am opposed to the entire GGNRA Dog Management Policy because I disagree with its

---

premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. By their own admission, the GGNRA had no data or studies to support these claims and they are relying upon these claims to initiate a process whereby access for people with dogs will be severely limited or completely banned. Even now, with this SEIS, the GGNRA admits they have no site-specific peer reviewed studies (required by Federal law) to substantiate their claims that dogs are a problem for wildlife, water quality or vegetation in the GGNRA. Instead, they rely upon anecdotal evidence and baseless assumptions to claim dogs have the potential to damage this Recreation Area.

Additionally, in the SEIS the GGNRA asserts they have the right to redefine the term "recreation" as utilized in its enabling legislation and in the promises made to the voters of San Francisco back in 1972 by the GGNRA/NPS/DOI and the GGNRA's first Superintendent, the Honorable William J. Whalen, in order to secure various properties then owned by the City and County of San Francisco. These promises, most importantly, stated that this National Recreation Area would retain historical recreational access (including off-leash recreation) should the citizens vote to include SF park properties in the GGNRA. These promises, along with the conventional definition of the term "recreation", do not comport with GGNRA's current philosophy exemplified by Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA, who in 2007 was quoted as saying "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard." The GGNRA does not have the legal authority to rewrite history or its enabling legislation to their own design.

Once again, buried deep within the SEIS is the GGNRA's poison pill. Only the name has changed; it is now the Monitoring-based Management Strategy. The GGNRA gets to decide whether we are in compliance, and the measures of compliance are subjective. Under this SEIS the GGNRA may decide to impose short-term or long-term closures of areas. These short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which dog guardians have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston could be their reason to ban dogs entirely from these beaches. This is unacceptable.

The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. All properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time.

If the GGNRA does not want to manage these properties as a Recreation Area, then they should transfer the Recreation Area to another entity better able to manage it, e.g. the Forest Service or Bureau of Land Management. Alternatively, for sites heavily utilized by dogs and their guardians, such as Ocean Beach and Fort Funston, these properties should be reverted back to San Francisco.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean, As a proud long-time San Francisco resident and someone who walks regularly with my dog at Ocean Beach, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is shortsighted, restrictive, and will prevent me from recreating with my dog for my own health and the health of my community the way I have on GGNRA properties for over ten years. This plan takes away from our community at Ocean Beach because it prevents us from using the beach with family and friends the ways we have for decades. We live at the beach, walk on the beach (with our dogs), care for the beach, and encourage everyone around us to take care of the beach. The new plan was not modified to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. This type of reactionary, non-scientific policy change goes against our shared democratic values and the very fabric of our country's purpose for protecting open spaces. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches				

---

have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Francisco and on new lands that the GGNRA acquires in the future.

Further, I can say that walking my dog at Ocean Beach directly benefits the community, wildlife, and beach itself. I pick up trash and debris every single day at the beach because it is a place that I care deeply about. I play my part as a citizen here and if my ability to walk my dog each day were taken away, I would simply walk somewhere else. As someone who has chosen to live at the beach and take part in this community, this would be a shame-it would create further problems for the beach and the City.

Sincerely

Noah Borrero, Ph.D

<b>Affiliation:</b>					
<b>Received:</b>	Feb,10,2014 00:00:00				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who moved to the Bay Area largely due to the existence of dog-friendly parks and recreation areas, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. I strongly believe that this alternative is much too restrictive.

I regularly walk with my dog in the GGNRA. Like many working San Franciscans, I also have a dog walker who takes my dog out every day to enjoy the various trails and beaches in the GGNRA. When I adopted my dog from the San Francisco SPCA, I made a commitment to provide a better life for him. Crucial to this is being able to give him adequate exercise and play in the areas where I live. This exercise is also important in increasing the health and well being of dog owners themselves.

The GGNRA's actions indicate to me that they have lost sight of their founding purpose - to be a recreation area for a densely populated urban city. Residents and their dogs have been using these properties as such since the original pet policy in 1979. This policy needs to be formalized and supported with off-leash areas, including areas that GGNRA acquires in the future.

There is a troubling lack of data to support GGNRA's preferred alternative described in the new draft dog management plan. In light of the thousands of people who submitted comments and concerns in response to the first plan, it is also troubling that the new plan was not modified in any significant way to reflect these objections. In addition, there has not been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

There is simply no credible reason to deny fair and reasonable access for off-leash dog walking in GGNRA property, an activity that has been an important facet of these lands for thousands of residents over the past 50 years.

I sincerely hope that the GGNRA will act in response to the thousands of people who have expressed substantive concerns about this plan.

Holly

**Correspondence Type:** Web Form

**Correspondence:** Dear GGNRA,

I am a San Francisco, Inner Richmond resident concerned about the new GGNRA dog management plan that would limit access to large parts of the parks by respectful and conscientious dog owners like myself.

My husband and I are 30-somethings who enjoy spending time with our 4 year old rescued dog named Remy. We visit parts of the GGNRA on almost a daily basis. Our family loves going to Chrissy Field, the Marin Headlands, and Sweeney Ridge. We hike in the Presidio several times a week as it is very close to home. We also spend time at Fort Funston - Remy goes there 3 times per week with his dog walker.

We love to walk, run, and play in these parks. Our dog Remy is well behaved and under strict voice control at all times. He loves having the open space to run around in especially since we live in such an urban environment. In addition, his dog walker, who is also a Richmond resident, takes him and his pals to Fort Funston every week for additional exercise and socialization. Without this off-leash access to this park, he would lose opportunities to get his energy out and explore the outdoors while we're away at work.

It is very important to us that the new GGNRA dog management plan keep dog access to the very places that are so special to us. I am writing to you because I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I also oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Finally, I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I also would like to add that I believe there is no evidence to suggest that off-leash dog walking on GGNRA trails has had any substantial negative impacts. We and almost all other dog owners I know are

very conscientious of our impact on the environment. We pick up after our dog and we do not allow him to chase the wildlife, dig holes, or otherwise cause disturbances. The GGNRA was created in 1972 for the maintenance of needed recreational open space, and to expand to the maximum extent possible the outdoor recreational opportunities available to the region. That's why it's designated as a National Recreation Area, not a National Park. With the new dog management plan, the GGNRA is reneging on its promises to preserve and protect recreational access to the GGNRA and the proposed plan infringes on my ability as a pet owner to enjoy the wonderful outdoor spaces that the GGNRA provides.

I believe it is unfair to vastly limit where people like myself recreate with our beloved pets. I urge you to please consider my comments.

Sincerely,

Jennifer Ruch

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to Oakwood valley to Alta trail and also the Miwok trail. I don't see the science provided in the report that says dogs are threatening any species in these areas, other than second hand heresay.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park. In addition, there is plenty of science that says that a dog gets people out to exercise more than if they did not own one, and this should be available locally. By eliminating this local access, we will all be getting into our cars and driving miles to places that allow off-leash access, further clogging the roadways and contributing to pollution.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Cara Lowe

<b>Correspondence:</b>	A better, and better enforced, dog management plan is badly needed in the GGNRA.				

Dogs have not been regulated in the GGNRA at the expense of wildlife, habitat and visitors. I have observed dogs chasing birds at Crissy Field on the beach and on the lawn on several occasions over the last 6-plus years. Leash laws are openly disregarded and poorly enforced. Off leash dog areas should be limited and well defined with appropriate barriers. Visitors to the GGNRA need to be able to enjoy themselves without having to interact with dogs, and they need to feel that they and their children are safe. Also commercial dog walking is not an appropriate active in a National Park.

Better regulations are needed and the proposed Dog Management Plan/SEIS is a step in the right direction.

**Correspondence:** The NPS dog management plan is a crime against the people of the San Francisco Bay Area and all who value the Golden Gate Recreation Area and the freedom to enjoy its beauty.

The Plan consists of numerous baseless and unsubstantiated claims. There are NO EVIDENTIAL DATA to support the restriction and elimination of access to places where people have been enjoying themselves with their dogs for countless years.

The claims regarding bird habitat & nesting (Snowy Plover, Bank Swallow, etc.) are inaccurate and have been repeatedly disputed. They are not based on scientific observation. Similarly, the impact of dogs on plant life has been exaggerated and not substantiated by any standard or scientific means.

Additionally, there is no study of the real environmental impact of these restrictions on the rest of San Francisco, Marin and San Mateo Counties. The NPS has not considered how these restrictions will affect local communities and City parks. Given the already miniscule percentage (less than 1%) of the GGNRA currently available to visitors with dogs, the NPS plan is grossly unjust. It would severely impact the lives of its current users and adversely impact the lives of tens of thousands of Bay Area residents.

The NPS has consistently ignored the very concerns and comments it solicited and inaccurately represents the conditions in these locations. The changes that were suggested have not been implemented and appear to have been dismissed without consideration.

Dog owners/walkers constitute a vast majority of the regular users of these areas. They are overwhelmingly responsible and care deeply for these places. Damage, mishaps and other problems are small when compared to the overall impact of human users in the GGNRA. The lack of facts to support their position implies that the NPS is unfairly targeting a single group (people with dogs) out of pure malice with no regard for public outcry or the opposition to the plan from local governments.

I regularly bring my dog with me to Fort Funston/Ocean Beach and Rodeo Beach. If it were not for my dog, I would not get out and get this exercise nor would my dog. These are the only places in the Bay Area where we can run, play ball, splash in the ocean. The NPS changes will seriously impact the physical and mental health of countless people and their pets as well as the livelihoods of those who make their livings working with dogs outdoors.

With over 120,000 dogs, San Francisco is a Dog City. It is densely populated and open space is limited. This is why we set aside these lands years ago to preserve them forever for RECREATIONAL USE by people in the Bay Area, a fact the NPS chooses to ignore.

<b>Correspondence:</b>	Dear Superintendent Dean, I am a responsible dog owner who lives in San Francisco & loves sharing its recreational areas with my dog. She is a well-behaved creature whose joy in running off-leash and free (where allowed) gives me joy & helps keep her happy and healthy.				

I am writing to express my sadness about and opposition to the alternatives laid out in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from enjoying recreation time with my dog for my own health as I have on GGNRA properties for many years.

Unfortunately, I understand that the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. I have also learned that there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. It seems to me, as a result of this information, that this plan is ill-considered and should not be adopted as a result.

I'm probably most upset that the GGNRA doesn't seem aligned with its purpose which is to provide a

recreation area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Please consider the mounting opposition to this plan and re-consider implementing the alternatives currently on the table. There has to be a plan that will work better for both sides.

Sincerely, Susan Cunningham  
9 Coleridge Street, SF CA 94110 - and her dog Zuma

January 18, 2014

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Building 201, Fort Mason  
San Francisco, CA 94123-0022

Dear Superintendent Dean,

My name is Keith McAllister. I am a retired City College of San Francisco professor, now approaching 70 years of age. For years my primary outdoor recreational activity has been walks with my dog under voice-control, usually at Fort Funston, less often at Ocean Beach. Your preferred Alternative F in the SEIS would simply eliminate that activity from my life. Alternative F precludes long off-leash dog walks at Fort Funston, Ocean Beach, and everywhere else in the GGNRA. There are no other parks within San Francisco which can be substituted. Let me emphasize: I am talking about human recreation, human exercise. Sitting and watching my dog play in a ROLA (or DPA) is not the same thing at all.

I am a life-long environmentalist: a member of Sierra Club and Audubon for 35 years, now a member and significant contributor to Nature Conservancy. So I care about the plants and animals in the GGNRA. I have read the ANPR, the DEIS, and now the SEIS carefully, and remain convinced that the claimed

environmental harm done by dogs is exaggerated, and sometimes fabricated. I will discuss specific examples of GGNRA's misuse of science in the attached comments. Visitors can continue to enjoy recreation in the GGNRA with their dogs, and the environment can continue to thrive, without the elimination of access proposed in Alternative F.

I am sorry that my detailed comments on the DEIS were ignored. I won't repeat them, but they are still valid-inconvenient truth for some GGNRA staff. But I will repeat two themes: 1) The GGNRA places no value on the recreational use of open space by people walking with their dogs, while putting great value on the displeasure felt by people who don't like to see dogs. 2) The GGNRA hides behind a facade of science with many citations in the SEIS document and 30 pages of references. But examination of the references usually finds no science there. My DEIS comments pointed out instances where GGNRA blatantly misrepresented the cited paper; the SEIS usually repeats this non-science.

DEIS comments and the San Francisco Board of Supervisors asked GGNRA to analyze the effects on City parks of draconian reductions to off-leash access in the GGNRA, the SEIS does not do so. GGNRA simply assumes people will continue to use GGNRA sites, accepting on-leash access in place of off-leash access, and accepting small ROLAs in place of room to walk with dogs. That assumption is most unlikely. GGNRA has moved into San Francisco, taken over huge tracts of open space, and now is behaving like a very bad neighbor.

I urge the GGNRA to continue its 1979 pet policy, which worked so well. Alternative A is an approximation to that policy.

Best regards,

Keith McAllister

#### COMMENTS ON SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT FOR GGNRA DRAFT DOG MANAGEMENT PLAN

Keith McAllister

#### VISITOR USE AND EXPERIENCE

GGNRA/SEIS continues to arbitrarily value people who dislike dogs more than people who walk with their dogs. That is arbitrary and capricious prejudice.

The preferred Alternative F greatly reduces the off-leash areas at Fort Funston from Alternative A. Off-leash beach access is reduced from 1.13 miles to 0.66 miles of beach, and the upland off-leash area is reduced from 98.7 acres to 17.6 acres. Yet SEIS says (page 1176) this reduction would have minor adverse impact on people who want off leash, and moderate adverse impact on people who don't want off leash.

There is no logic to that evaluation. People who have been taking long walks at Fort Funston for years, accompanied by off-leash dogs, must give up that activity, entirely. They won't be able to do it at Fort Funston, nor anywhere else in the GGNRA, nor anywhere in San Francisco parks. They must simply give up a central portion of their outdoor recreational life. By any reasonable measure, that's a major adverse impact for them. People who don't want off-leash can still go virtually anywhere in the GGNRA and not encounter an off-leash dog. If there is any adverse impact for them, it is a negligible impact. They have virtually all of the GGNRA at their disposal, and also most of Fort Funston.

An evaluation of the impacts of alternatives on the two groups of people should include a credible estimate of how many people are affected. We know there are tens of thousands who go to Fort Funston for dog walking every year. How many don't go to Fort Funston because of the dogs there? One bit of data that would help here is the number of DEIS commenters that said they don't go to Fort Funston for that reason. GGNRA knows that number but doesn't provide it in the SEIS.

It is only because of the acute prejudice of GGNRA staff against people with dogs that GGNRA could describe the adverse impact of Alternative F on such people as minor. Underneath it all, GGNRA does not consider people with dogs to be legitimate park visitors, while people who don't like dogs are considered legitimate park users.

## GGNRA/SEIS MISUSE OF SCIENCE

The GGNRA's Supplementary Environmental Impact Statement (SEIS) states in several places that it is not a scientific document, and that science will not decide policy. On the other hand, the SEIS emphasizes that NPS staff have done a thorough review of existing credible scientific literature on dogs and recreation. The countless citations to papers would seem to indicate that the GGNRA believes that science does, in fact, support their policy choices. The GGNRA wants to have it both ways: 1) Science supports them, and 2) They are not bound by science. In fact GGNRA will do what it pleases and ignore science except for its cynical presentation of a scientific veneer.

I can't possibly check all GGNRA's citations. But the SEIS cites some sources that I am familiar with, and the SEIS uses those sources inaccurately. (That's the most polite way I have of saying it.) I will list a small sample.

### Dogs and Pathogens

#### 1. SEIS says: Dogs expose visitors to dangerous pathogens.

The SEIS first makes this claim on page 336, where no data or scientific studies are cited to support the claim. There is a long list of possibly, can expose, and many ways. Then a long quote from an anti-dog DEIS commenter discusses dogs run[ning] up and pee[ing] on innocent bystanders.

Later, on page 1231-1232, SEIS says, Currently, adverse impacts on visitor human health and safety from dog-related pathogens exist at all park sites considered in this draft plan/SEIS. Sites such as Fort Funston may have more of a health and safety risk from dog-related pathogens... Again, absolutely no evidence is offered of any adverse impacts on human health from dog-related pathogens at Fort Funston, or anywhere else in the GGNRA. Instead, we get the opinion of another anti-dog commenter on the DEIS: One commenter noted that multiple infections have been reported at local hospitals from bacteria transmitted from dog feces. The commenter then provides a long list of diseases he claims were transmitted by dogs. No citation is offered to any document; there is no way to check the veracity of the statement. That's not evidence of anything.

So in both cases of the claim, GGNRA offers no evidence, only the un-scientific opinions of two unidentified, strongly biased, anti-dog commenters which GGNRA selects from the thousands of DEIS comments.

I suppose we should be thankful that GGNRA has dropped its doubly bogus citation of a non-existent document that it used in the Draft EIS to make this unsupportable claim. Remember NPS 1999, the substudy of the San Francisco Sewage Master Plan? In fact NPS 1999 was something unrelated, and no

such substudy of a sewage master plan existed. Now, without any pretense of evidence, GGNRA continues to make the claim, and relies on two biased anti-dog commenters as substitute for real evidence.

#### Soils and Vegetation

SEIS spends a lot of space making the case that dogs damage soils and vegetation. Nowhere does SEIS attempt to quantify that damage, though they acknowledge that there are many other forces that alter soils and vegetation within the GGNRA. So, even though there is no evidence that the effect of dogs in the GGNRA is significant, SEIS devotes considerable pseudo-scientific effort to prove the effect exists. Discussed as follows:

2. SEIS, page 374, uses Shulzitski and Russell 2004 to say, heavy off-leash dog use increases deterioration of native plant communities.

Shulzitsky said this in his prestudy introduction to the unpublished version of the paper. He offered no evidence because he didn't study dogs or their impact on plant communities. Shulzitski 2004 is simply not a scientific citation about dogs and plant communities. Note that Shulzitski did not make the claim in the version of his paper submitted to a peer reviewed journal (*Ecological Restoration* Vol. 27, No. 4, 2009.) I conclude that he gave GGNRA what GGNRA wanted with this off-hand remark, but declined to make a statement to scientific peers for which he had no evidence.

3. SEIS, page 426, cites Shulzitski again to claim that dogs damage soils and vegetation in the restored areas at Fort Funston: on many occasions, dogs and humans were observed inside this area.

What Shulzitski actually said in the published version of his paper is, though a small number of visitors and their pets continued to use the restricted areas, the measures [post-and-rail fencing] were successful for the most part. Please note the large difference between on many occasions and a small number. As in other cases noted in these comments, GGNRA cites a source to say something different from what the source actually said.

4. SEIS, page 425, continues the bogus claim made in the DEIS that [Recreational] disturbance of the cliffs in most instances would potentially contribute to cliff erosion [at Fort Funston].

In fact, as in the DEIS, GGNRA offers absolutely no evidence that recreationists contribute to cliff erosion at Fort Funston. The cliffs at Fort Funston have eroded greatly over the last fifteen years-because winter storms pound the base of the cliffs. Period. There is no other source of cliff erosion that anyone has measured or reported.

Items 2, 3, and 4 are particularly important in the Impact Analyses of the Alternatives at Fort Funston. In fact, items 3 and 4 are from those impact analyses. GGNRA misuses scientific sounding citations to claim adverse impacts that are supported by no evidence whatsoever.

5. SEIS, page 374 uses Sime 1999 to say dogs could damage vegetation and soils, with resulting influences on vegetation, soils, and wildlife.

In fact, Sime was discussing sensitive alpine habitat, of which there is none in the GGNRA. Using a citation to say something so incontrovertible as, dogs could damage vegetation and soils, simply illustrates GGNRA's desire to look scientific without actually being scientific.

Sime 1999 is Chapter 8, Domestic Dogs in Wildlife Habitats from a larger document: *Effects of Recreation on Rocky Mountain Wildlife: A Review for Montana*. Committee on Effects of Recreation on

Wildlife, Montana Chapter of the Wildlife Society.

Chapter 9 of the larger document is devoted to the effects of recreationists on soils, vegetation, and water. There is even a section in Chapter 9 on trampling of vegetation. But nowhere in Chapter 9 are dogs mentioned. That clearly suggests that the scientists who actually studied soils and vegetation didnt find dogs to be a significant source of impact.

6. SEIS, page 374, uses Sime 1999 to say that dogs could possibly [emphasis not in original] spread and establish new populations of invasive and/or non-native plants.

It should surprise no one by now that Sime offers no evidence such spread by dogs has actually occurred. GGNRA made the dogs spread invasive plants claim in Negotiated Rulemaking and again in the Draft EIS, both times without any evidence. Repeating it a third time doesnt make it true, especially when no evidence is offered this time either.

7. SEIS, page 375, argues that dog waste and dog urine affect soils.

As usual, SEIS offers no scientific citations. It cites NPS 1999, which is Natural Resources Section, Resources Management Plan, Golden Gate National Recreation Area. Prepared by Golden Gate National Recreation Area. December 1999. Thats useless on many counts: 1) Its not a scientific document, 2) Its GGNRA citing itself, 3) Its a citation to a huge document, with no page number, so no one can check the citation.

SEIS presents, in lieu of evidence, only the usual can, could, and very many may. GGNRA made the dog waste harms soils claim long ago, during Negotiated Rulemaking. In the Technical Subcommittee, GGNRA was asked for evidence to support their claim. The request was repeated at subsequent Technical Subcommittee meetings. No evidence was ever produced.

In comment on the DEIS I pointed out the DEIS still offered no evidence, even though the DEIS repeated the claim. Now we are at SEIS. The claim is still made; there is still no evidence. Really, after three strikes, you are out (and should withdraw the claim).

#### Dogs and Wildlife

8. SEIS, page 376, cites Miller et al 2001 and Simes 1999, 8.4 to claim that dogs disturb wildlife more than people alone, and that dogs increase a persons radius of disturbance.

The SEIS misuses Miller et al 2001 just as the DEIS did. Millers statement about radius of disturbance doesnt come from any evidence he gathered. What his evidence showed, and the point of Millers study was, that dogs disturbed the birds less than people with dogs or people alone. Sime offers absolutely no evidence or citations to support her claim.

9. SEIS, page 377, uses Sime 1999 to say, Injuries sustained may result in death or may compromise the animals ability to carry on other necessary life functions resulting in eventual death.

The studies in Rocky Mountain Wildlife which document killed and/or injured animals describe deer that were deliberately run down with trained hunting dogs, and sometimes killed. None were killed or injured by dogs accompanying recreationists. Sime goes way beyond what her colleagues report, (those who actually studied the interactions), offering her evidence-free speculation.

10. SEIS, page 378, uses Sime 1999, 8.10, to say dogs can . . . injure or kill birds.

This citation demonstrates why the numerous citations of Sime 1999 in the DEIS and SEIS are simply

worthless. They are not scientific evidence of any kind. Sime does say on page 8.10 that dogs can kill or injure birds. But, as usual, Sime provides no evidence to support the claim. In fact, Sime discusses eight (8) specific studies of impacts on birds. Some didn't involve dogs at all. The literature cited by Sime shows no case of a bird injured or killed by a dog.

Lets be specific about what Sime says. Here are the studies discussed in Sime 1999, pages 8.10-8.11:

- a) Hansen and Grant (1991) state that pedestrians generated the most negative responses by birds, but Sime jumps into that same sentence with her speculation that presence of dogs may [emphasis added] intensify bird responses to pedestrians.
- b) Burger (1986) studied effects of human activity on shorebirds. People walking accounted for 43% and 50% of disturbances in two bays studied, followed by fishermen, airplanes, and then dogs.
- c) Hoopes (1993) studied human-related disturbances of piping plovers: pedestrians 86%, cars (not just dogs) 7%, vehicles 5%, bikes 2%. Ten observed chick mortalities were caused by cat, herring gull, human handling, and off-road vehicle - none by dogs.
- d) Yalden and Yalden (1990) studied nesting golden plovers. Adult plovers spent 11% of the day responding to people.
- e) Keller (1991) lists dogs as disturbers of eider ducklings (after fishing and people walking, and not ranked against windsurfing and boating) but doesn't quantify the dogs effect. No mortality or injury reported.
- f) Baydack (1986) disturbed lekking sharp-tailed grouse with various treatments. Females were displaced by all disturbances, including parked vehicles and snow fencing. Males were flushed only by humans and leashed dogs. He does not compare humans alone to humans with dogs.
- g) Patterson (1952) found that humans flushed sage grouse on a lek (dogs not involved.)
- h) Ingold et al. found that nesting ptarmigan in Switzerland slowed their heart rate when approached by a hiker (dogs not involved.)

Contrary to Simes and the SEIS citation, in none of the studies were birds injured or killed by dogs.

11. SEIS, page 379, uses Andrusiak 2003 to claim, Dogs disturbing foraging birds may diminish a bird's foraging time and can result in a loss of energy required to migrate, and can significantly affect their survival during migration.

Andrusiak did not say that in Andrusiak 2003. Andrusiak conducted an extensive literature review, looking for effects of dogs on birds. His conclusion was that the statement, Dog disturbance (excluding other sources of disturbance) to overwintering or migrating birds affects their survival and/or reproductive success, is categorized as Unknown/no data. That is to say, Andrusiak found no evidence that dogs affect the survival of birds during migration. It is dishonest of SEIS to pretend that Andrusiak provides scientific support for their claim. (This misuse of Andrusiak was pointed out in comments on the DEIS. GGNRA could have looked at Andrusiak's paper to see they were misusing it. GGNRA either didn't bother to look, or looked and decided to continue with their blatant misrepresentation of Andrusiak's paper.)

12. SEIS, pages 932-933, claims that allowing off-leash dogs to continue at Fort Funston would result in continued long-term minor adverse impacts on the bank swallow.

GGNRA has been claiming for 15 years that the bank swallow colony at Fort Funston needs protection from people with dogs. Some of the bizarre counter-factual evidence offered in the DEIS has now been left out of the SEIS. Small progress toward reality. Still, there is no documented recreational disturbance to the bank swallow colony, only the repeated statements from the same thoroughly biased GGNRA staff. It has not happened that a dog has collapsed a burrow in the colony. An honest evaluation of Alternative A would say that no significant long term impacts on the bank swallow colony are likely. There are no adverse impacts occurring now, so it is not accurate to predict continued long-term adverse impacts.

#### Dog-Wildlife Disease Transmission

13. SEIS, pages 382-3, relying primarily on Sime 1999, argues that dogs in the GGNRA will spread diseases to wildlife in the GGNRA.

As usual, Sime is an unreliable source. Her studies do not show disease transmission from pet dogs to wildlife. Further, although SEIS presents evidence that there is rabies in northern California, especially among bats, there is no evidence that the rabies comes from pet dogs. In fact, dogs are more likely the victims of transmission of rabies or distemper from wild animals. In this case, it is simply a pet owners responsibility to vaccinate pets against these diseases to protect the pets. No GGNRA pet policy is going to affect disease prevalence among wild animals in the Bay Area.

<b>Correspondence:</b>	I grew up in the Bay Area and when I was a kid, we could take our dog to the park or to the beach and play off lease. I have many find memories or throwing tennis balls in the ocean at San Gregorio and other beaches in Half Moon Bay. Today, dogs are prohibited from most beaches - even when they are on leash. It is becoming increasingly difficult to exercise our pets, and why? Because of a few isolated incidents? Please do not take away the few places we have left to allow our dogs to roam free. Most of us are responsible pet owners and we deserve places to exercise our animals without the restriction of a leash. Most of the land around here forbids dogs - isn't that good enough for you? If you have any place in your heart for animals or the people who own and love them, do not take away any more of our space. Thank you

**Affiliation:****Received:** Feb,10,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dear Sir,

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to the Headlands, Rodeo Beach and other areas in and around Mt. Tamalpais.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

And as final note, people have had a longer relationship with dogs than the institution of marriage. There are many positive reasons for this and they shouldn't be ignored or denigrated.

Respectfully,

Maud Trachtenberg

**Correspondence:** I will keep this simple. I am a dog lover. I am also a staunch environmentalist caring deeply about the ecological integrity of our diminishing, threatened, and fragile ecosystems. Normally I cringe at the term "multiple use" as that most often means exploitation.

The GGNRA is an urban park (in the sense of it's proximity to San Francisco and other urban centers) visited by millions of people engaged in many forms of outdoor activities, among those walking and playing with our beloved canine friends and companions. There are precious few places left in this country a dog can run free and frolic. The beach areas are some of the last refuges. I have been using and enjoying the GGNRA since its inception and have always loved watching people and their dogs frolic, as well as played with my own dogs in the past. For so very many of us this is, or has been, the principal activity that draws us to GGNRA. I have very rarely if ever personally witnessed any serious conflicts with dogs and people, or dogs with wildlife. The vast, vast numbers of dog owners are extremely responsible with their dogs who engage in harmless, fun activities.

For dogs (and us, their loving human companions) to lose the right to play at the beaches and other areas of GGNRA would greatly diminish my and many others' experiences and enjoyment. Again, it's why so many of us go there. It is our park!

Please keep the GGNRA free and open to dogs!

Thanks!

**Correspondence:** I walk my kids and dogs off leash everyday. My kids chase the birds more than my dogs but that doesn't mean I should leash my kids. It is great outdoor exercise for our whole family. Dogs need freedom to run around in a safe space and they can not get the same exercise on a leash walk.

Dog owners consider their dogs family and these spaces will go used rain or shine by devout dog owners. It will be an extremely sad day when these privileges are taken away from our innocent loving dogs.

**Affiliation:****Received:** Feb,10,2014 19:21:47**Correspondence Type:** Web Form**Correspondence:** Dear GGNRA:

I am the guardian of two dogs that I adopted from two different rescue organizations. Both of my dogs were rescued from SF Animal Care & Control. I love them both very much, and hope that with my care and attention they will live long, healthy lives.

People always comment on how lucky my dogs are because I saved their lives, but in reality I am the lucky one. Because of them, I am a happier, healthier, and product member of our society.

Before I adopted my dogs, I was a bit of a couch potato. I had just moved back to CA from Boston. I worked long hours (from home) and every day after finishing up work, I would just sit and relax and watch TV. After doing this for awhile, I realized I needed to get out more and get some exercise. At the time I was living in San Francisco on John Muir Drive, near both Fort Funston and Ocean Beach. On the rare occasions when I would go walking, these were two places I liked to visit. There were always people around, and I met and had great conversations with many of them. I especially liked stopping to talk with the dog owners. I realized that most of them habitually got out and about because of their dogs. Quite a few of them told me how their lives had changed for the better because of their dogs. That's when I decided to adopt a dog.

I adopted Redgy, a Jack Russell-Dachshund mix, when he was 5-1/2 months old. He is very energetic, playful and attentive. We spend time at Fort Funston and Ocean Beach 2-3 times a week. It is good for both of us. He is very well behaved and walks well on a leash. But it's great for him to regularly get off leash to run and play with both me and other dogs. A good hour or so of off-leash play allows Redgy to work out all his energy. By the time we get home, he is exhausted and can just sit, relax and nap beside me.

I ended up adopting my other dog, Fenway, because the clock was ticking on him at the ACC. I started off just fostering him until the group that rescued him could find him a permanent home. But he and Redgy got on so well together that I decided to adopt him. Now I go to Fort Funston Ocean Beach (and periodically Crissy Field and Golden Gate Park) 3-4 times a week to work off all their energy and to get my exercise. We probably spend 8-10 hours a week out and about at one of these public areas. As I said, it's good for the dogs, but I know I wouldn't be as happy and healthy or even as mentally sharp as I am today if it wasn't for them.

I now live in a condo complex in Pacifica. I don't have a back yard and there isn't a lot of green space around where the dogs can play off leash. Pacifica does have a dog park, but it is a fenced in space with just gravel, no grass. It's a perfectly fine space for owners who have dogs they can't let off leash elsewhere. But for me, being able to take my dogs to a park or a beach, with more natural surroundings and space to run and play, is much better.

In addition to caring for my own dogs, I do volunteer for the two rescue organizations that my dogs came from. I don't foster anymore, but I do help with taking foster dogs out on walks to give them exercise and some much needed outdoor time and play. It is great to have public parks and spaces where I can take them, since as I said earlier I don't have any such space where I live.

Both for my own dogs and for all the dogs in rescue care - - this is why I am writing to voice my opposition to the GGNRA's new dog management plan. It is too restrictive. The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA.

There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA will not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

Also, the new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking, and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Please do take time to give serious thought and consideration to my and many, many other dog owners' and care givers' input and perspectives. If you do, I know you will understand the vital importance of retaining and not diminishing off-leash access within the GGNRA.

Thank you for your time and attention!

Regards - - Joyce Q.

<b>Correspondence:</b>	Hello,				

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Stinson Beach and the Oakwood Valley Trail. Being a dog owner and having access to the existing dog-friendly areas of GGNRA has made me appreciate our community immensely and has made for a friendlier, very enjoyable community for me, my family, our friends and neighbors. Fostering a safe and friendly community is important.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. **Correspondence:** I am a lifelong resident of San Francisco. I am a wife and mother of 2 children. I am a 2nd grade teacher. And I have 2 dogs and a cat. I feel very fortunate that we have such great outdoor recreational areas in and around the City. As we all know, it is very important for large urban areas to have outdoor areas for their citizens to use. I have noticed that off leash dog walking areas have many people using these outdoor areas. It is wonderful to see people getting outside with their dogs. They are getting much needed exercise, time outside which relieves the stress of the workday, socialization with other people, and quality time spent with their canine companions. It would be so sad if these recreational areas were restricted. There are so many people using these areas, because they have dogs. What would they do if they couldn't take their dogs to exercise and relax and have fun in these areas? They could walk around their neighborhoods, but then the recreation areas would not be used. They could take their dogs to city parks which are small and would be ruined by the increased traffic of all the people and dogs who currently use the GGNRA. The impact of dogs on these parks could be devastating. Why limit who can use GGNRA? It is a recreation area, not a national park that needs to be preserved. We need to have outdoor areas for all to use. Please keep these outdoor areas open for all to use.

**Correspondence:** We have a very active and healthy puppy who is 8 months old. We enjoy taking our dog the off leash to join other dogs in play. Without these options I worry his health as well as ours will be impacted by limiing play in off leash areas to small areas and with the potential for overcrowding. Our idea of a good day in one of our beautiful parks is not being overcrowded having to exercise caution with every step. We are asking that you don't take away our options for off leash dog parks.

Sincerely,  
Gina

<b>Correspondence:</b>	Dear Directors:				

This is to submit the same comments with a couple of copy changes. I do hope you will look to this one as my final edit and note the corrections and proofing.

Thank you! My letter follows:

Dear Directors:

After 20 years of taking dogs to walk, run, and play at Fort Funston, Crissy Field, and Muir Beach, and a few times to Rodeo Beach, I will tell you that we are THE most self-policing/self-monitoring group using any of those open spaces, save for the horse people who also share the space.

Humans, on the other hand, who come for recreation, make a huge amount of trash, which is left not only in the trash bins, but all over the beach. I find bottles, toys, pieces of broken things, along with an array of food packaging. They start fires, let their kids run and scream, chasing birds and climbing all over the cliffs, and after all that, leave garbage on the beach. When the clean-up crews come for clean-up days, their bags are filled with human leftovers, not those from dog people.

Dog people pick up their poop, do not allow their dogs to chase wildlife, and add only the dog poop bags to the trash bins. When someone misses a poop, another walker invariably lets them know.

Almost all dog people prevent their dogs from chasing or in any way intimidating birds or other animals. Since dog people are gone by sunset, the little animals who live in these areas are then free to come out and live their nocturnal lives. People who come to these areas for human recreation or party purposes, on the other hand, come in at all hours of the night, leaving trash, beer cans, tents, human feces, etc. I have come across all these things time and time again around the trails at Fort Funston. Never are they dog people and rarely remains of dog recreation. Humans do not police each other- -they tend to be passive and pretty much ignore the trashy habits of each other.

By and large, dog people in the Bay Area are smart, conscientious, and hold high standards for keeping their walking areas clean and free of anything that may ruin the aesthetic or environmental quality of their dog run areas. They are very harsh with any dog people who don't adhere to those standards.

I am an animal advocate, not just a dog advocate. I am one of thousands of Bay Area dog people who strictly disallows my or anyone's dogs to harm any plant or animal out at these wonderful places.

Dogs must have open space to play and run. As long as humans and horses go without leashes, dogs also deserve that same feeling of freedom to sniff and fetch and play with each other.

Please do not make these arbitrary rules against our dogs. Our dogs are our families. They are a big part of the joy of Bay Area outdoor life.

Thank you for your consideration,

Melissa Flower

**Correspondence:** Don't take away our GGNRA! If there is a problem with how a small number of people are behaving within it, then, please, with the resources you were planning to use in enforcing increased restrictions, ticket them for any infraction that applies. That is leadership. But closing trails and beaches to the rest of us who tread lightly and make sure our dogs do too, is wrong. The path toward permits and further restrictions flies in the face of the GGNRA's mandate to be an accessible urban recreation area. Even the name describes its planned purpose. GGNRA does NOT stand for the Golden Gate Restricted Area, nor the Golden Gate Nature Reserve. It's the Golden Gate National Recreation Area, and should remain so in perpetuity. -Tamsen Bell

**Correspondence:** The proposed 'dog management' plan reads more like a dog elimination plan. It is packed with exaggerated, inaccurate and purpose skewed statistics. The current head of GGNRA is clearly anti-dog and that agenda drives much of this written document.

Fact people in the cities have dogs. They have used these facilities, mostly reasonably and responsibly for generations. Why is there so clearly an agenda to eliminate dogs? You can legislate whatever you want but, like our inane drug policies, all you accomplish is criminalizing normal everyday citizens.

**Correspondence:** As a 30 yr. resident of San Francisco, i am very upset at the latest Dog Management Plan. I have been active in the Off-leash movement here in SF and i have seen no willingness by the NPS or GGNRA to accommodate or even consider the effects this draconian plan will have on our dogs. Dogs and Dog Owners for decades have had the right to walk and run our dogs in these areas and eliminating over 90% oit is inhumane and ill-conceived. These areas are City Parks, not natural wilderness areas, and the needs of City residents needs to be considered and respected before all else. I strongly protest this latest Plan, which in reality, is just a carbon copy of the original. Listen to the people, and act accordingly.

**Correspondence:** Hi,

Plan does not provide adequate facilities for off leash recreation with dogs. The population of people with dogs is growing every year, yet we are cutting back on the space available for off-leash and on-leash recreation with dogs - what part of this makes sense?

As dog owners, we are outside in the parks EVERY DAY! That makes us one of the BIGGEST user groups of parks - including the GGNRA. The areas available now are already too small, and we should be expanding them, not shrinking them.

Dogs have been in the GGNRA - well - basically forever! But wildlife, plants, wild animals flourish in the park, if dogs were causing irreparable damage to the wilderness aspects of the park, would we not have seen effects by now? Instead, we have a glorious, living park alive with shared use as an urban recreational area.

Sincerely,

Claus Schlund

**Correspondence:** 02/09/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it has little do with recreation outside of limiting it, and it doesn't seem to

---

represent the interests of the majority of the people that pay taxes here. Dog parks in SF are rare, too small and too far away, and the plan fails to account for how un-exercised dogs on crowded sidewalks and streets will pose far more harm to people than trained dogs playing in safe rural off-leash areas. Furthermore the SEIS research seems unscientific time and time again. Building fences across Crissy field or the beach areas, as well as adding a 'leash police', seems like a far more disturbing and disruptive use of land and resources. We pay far too much in property taxes for the privilege of living in SF to have the land we're paying for controlled by a seeming single interest in this manner. I urge for a review or return to the 1979 proposals rather than this short-sighted and overly restrictive approach.

Thank you for your time and consideration.

Katy

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Hannah Murray

**Correspondence:** Dear Sir or Madam,

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is far too restrictive and will prevent my family from recreating with our dog for our health, the way we have on GGNRA properties for many years. As Financial District residents, our access to these outdoor recreational areas is absolutely essential for my family, including our school-age son and the family dog.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Karen Scarr

**Correspondence Type:** Web Form  
**Correspondence:** I oppose the proposed changes for the following reasons:

1) Oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. Support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) Oppose fences to surround or delineate any off-leash area in the GGNRA. The SEIS Preferred Alternative proposes to install fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fences secure enough to keep small dogs in will hinder movement of wildlife. If fences are not secure enough to keep small dogs in, why have them?

3) Oppose the Monitoring-Based Management Strategy that replaced the DEIS Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

Optional Points to Make (Choose as many or as few as you want):

1) SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative. The SEIS lists many, many comments from people opposed to dog walking and very few from people who support dog walking. The SEIS copies, without change, entire sentences and text from the DEIS about studies of dog impacts, especially on wildlife and birds, even though DEIS comment showed that this text was inaccurate, misleading, and misrepresented what the studies actually said. Yet the SEIS copied it word for word. Comments supporting dog walking were not used to argue that there should be more off-leash restrictions, while comments opposing dog walking were used to argue for more restrictions.

2) SEIS still lists impacts that might, can, or could happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

3) SEIS says that, during the last six years, NPS staff did extensive literature searches to look for reports of impacts from dogs in other parks. In that same time, they could easily have conducted the site-specific studies that might have shown whether or not impacts are occurring in the GGNRA. Yet they chose not to do them.

4) SEIS admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. However these anecdotal claims have no context - how frequent were they, how serious, etc. - and cannot be used to set policy. An SEIS is supposed to be based on science, not anecdote. The SEIS also says it relies on the best professional judgment of NPS staff to determine impacts from dogs and their importance when there are no scientific studies of impacts in other parks available (e.g., p. 396). NPS staff have demonstrated a long-standing, strong bias against dog walking, and the SEIS should not depend largely on their biased judgment and anecdotes for proof that impacts from dogs are currently occurring.

5) SEIS says there has to be a no-dog area at all sites where off-leash dog walking is allowed. For example, the SEIS says Muir Beach is too small to have both an off-leash and a no-dog area, so therefore there cannot be an off-leash area at Muir Beach (p. 113). There's no similar idea that sites that are no-dog also have to include off-leash areas. This shows the inherent unfairness of the SEIS.

6) SEIS never gives results of public comment on the DEIS (neither does the Response to DEIS Comments by the GGNRA document on the GGNRA website). They say they received over 4,700 comments, but never say how many opposed restrictions on dog walking and how many supported them. The SEIS says: NPS received many public comments complaining that dog use precluded their enjoyment of areas. (p. 100). But there's no indication of how many negative comments were actually made. Are they

from a small minority or are they widespread? An independent analysis of the DEIS comments showed that the vast majority (at least 3:1) supported dog walking. This is not reflected in the SEIS.

7) SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by public comment to the DEIS and by the San Francisco Board of Supervisors in 2011. The SEIS claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. It also claims that because people will still be able to walk their dogs on-leash at some sites, most will continue to walk in the GGNRA. No evidence is given to support either assumption. The SF Supervisors and dog walkers asked for a thorough analysis. What we got was cursory at best.

8) SEIS data still does not support claims that there are major safety problems from dogs that require off-leash restrictions. The total number of dog bites or attacks from 2008 to 2011 (four years) was 95 (p. 21). Even if this number is undercounted and should be tripled or quadrupled, it still represents a miniscule portion of the millions of dog visits each year to GGNRA sites. Even the total number of dog-related incidents (nearly all of which were for having dogs off-leash where they weren't supposed to be) from 2001 to 2011 - 4,932 - represent a tiny fraction of the million dog visits each year (p. 252). The vast majority of incidents (at least 89%) in the GGNRA involve people without dogs, including murder, rape, robbery, drugs, and larceny. People are the safety problem in the GGNRA, not dogs.

9) SEIS still does not consider management tools that could mitigate alleged impacts from dogs in the No-Action Alternative. For example, dog training classes, dog-horse workshops, and poop cleanup days could all mitigate concerns about dog safety and pathogens in feces that are used to argue that the No-Action Alternative will not work and therefore the GGNRA must restrict off-leash access.

10) SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a national park experience to a large and diverse urban population (p. 1). However, the enabling legislation says the purpose of the GGNRA is to provide for the maintenance of needed recreational open space (Enabling legislation, first paragraph). The SEIS notes, in a negative way, that in many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities. (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - The objective of [the creation of the GGNRA] is to & expand to the maximum extent possible the outdoor recreational opportunities available to the region. (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972)

11) SEIS will not allow off-leash dog walking on any trail anywhere in the GGNRA. The only site-specific consensus agreement to come out of Negotiated Rulemaking was to allow off-leash dog walking on a trail in Oakwood Valley in Marin. This was included in the DEIS. However, it was removed from the SEIS (Oakwood Valley is now proposed to be on-leash only) because the GGNRA decided that there would be no off-leash dog walking on any trail. All the money and work that went into Negotiated Rulemaking was wasted.

12) SEIS still will not allow any off-leash dog walking on New Lands acquired by the GGNRA in the future, even if dog walking occurs has traditionally occurred there.

13) SEIS cites several surveys of visitor use and visitor satisfaction, including two done in 2011 in response to DEIS comments, that were so poorly done that their results are essentially meaningless. A 2008 visitor use survey at Ocean Beach and Crissy Field used people who intercepted people at these sites and asked about their park usage. However, the interceptors were observed by several people to actively avoid talking to people walking with dogs, hopelessly skewing their results. A 2011 visitor use survey at Fort Funston and Muir Beach, done specifically in response to DEIS comments, only counted people as

walking dogs if they had a leash in their hand. People walking with a friend and the friend's dog were not counted as a dog walker (because they did not have a dog of their own with them), even though they were only walking there to walk with the friend's dog. A 2011 Visitor Satisfaction Survey was so confusing respondents didn't know if they were being asked about their satisfaction with current conditions at GGNRA sites or with the severe restrictions proposed in the DEIS.

14) SEIS still describes the visitor experience as focused on people who don't want to be around dogs. This criticism was made of the DEIS too and apparently ignored.

**Correspondence:** I am very interested in striking a balance between dog off-leash availability, environmental preservation and safety for all who use GGNRA land. However, because GGNRA land is one of the few places that is available to dog walkers, and that those areas are already very constricted compared to GGNRA land available to all other audiences, I would want to see as much space as possible allowed for walking dogs.

Because I use only Marin County and some San Francisco GGNRA areas, I will confine my comments to these. However, in principle, I strongly support as much off-leash area as possible. It seems to me it reduces the environmental and safety pressures the more alternatives are available to those of us who must have places to walk our dogs off-leash. Because dog owners are expected to have dogs under voice control at all times, a great number of options for off-leash walking reduces the number of dogs in any given area at one time.

As a dog owner who also works and must use a dog walker from time to time, it is also important that dog walkers have places available to walk their dogs, and be able to walk enough dogs to make a living so they can continue to provide this essential service.

So I explicitly support Plan A in the following areas: Stinson Beach; Oakwood / Alta Avenue; Muir Beach; Rodeo Beach; Marin Headlands; all sections of Crissy Field; and all areas of Ocean Beach.

**Correspondence:** I live in southwestern San Francisco, about 5 minutes from Fort Funston. I have two beagles, and have been taking them to Ft. Funston for years. In over 20 years of going there, I have never had a bad experience. I have always found the dog owners there to be very responsible about picking up dog litter, trash, etc. In fact, Ft. Funston is a very non-threatening and comfortable environment (as opposed to some of the city parks where a lone woman does not always feel safe).

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.  
I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying

---

with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral de Tierra.

Please reconsider the proposed ban on off-leash areas such as Fort Funston. Proceeding with this ban will seriously impact the quality of life for ALL San Francisco residents, not just dog owners. Thank you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Francisco and on new lands that the GGNRA acquires in the future.

Sincerely,

Melissa

**Correspondence:** Please keep Ft. Funston and at least some other of the current "doggie beaches" leash free. For the many, many dog owners in San Francisco and the surrounding area, the opportunity to run on the beach and hike in the hills with our canine companions is an important recreational/health-maintenance activity. I live across the bay, but Ft. Funston is a favorite destination for me and my dogs. Since I usually combine our beach visit with lunch, you could say that I'm helping the local economy!

**Correspondence:** Dear Superintendent Dean,

My dog is a rescue dog with a lot of anxiety. And the two best things for a dog with anxiety are exercise and wide open spaces. I cannot take my dog to enclosed dog parks. The space is too small and he is too anxious. Therefore, I am not able to use any fenced-in area designated for dogs in the city or out. If the open trails and beaches in the GGNRA are closed for off-leash dog use I will have nowhere to take my dog that is near the city and safe for us to exercise and socialize off-leash. This would make his quality of life so much poorer and that is just unfair when there is so much land available for multiple use and the vast majority of dog owners are so respectful and responsible when it comes to their environment.

Instead of such severe restrictions, please instead formalize the original pet policy established in 1979.

---

We need these areas of the GGNRA for our dogs. Many of us depend on it!

Sincerely,  
Brandi D

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

If there are areas that need to be closed for habitat or wildlife needs, you will find that dog owners will faithfully follow and support these initiatives. You will also find that dog owners self-police. I would

encourage you to provide education and community outreach if there are activities and behaviors that you would like to see different.

We all live in this beautiful area and urban dwellers, dog owners and dogs are all committed to preserving and enjoying these areas.

Sincerely,

---

**Correspondence:** I am deeply fearful of the loss of fun outings for San Franciscans (and other Bay Area families). I agree that professional dogwalkers have often abused the privilege of using parks and beaches, but I think families and individuals with one or two dogs should be able to run them off-leash in most of these areas.

I think that what some people don't understand is the pure joy of tossing a ball or stick into the waves and watching your dog's response. This is what our family did for all the years while our kids were growing up: when we couldn't agree as a family on a single thing, we all agreed that going to the beach with our dog was just perfect fun. The dog's enthusiasm is infectious!

For me, going to the beach without my dog really wouldn't be worth the effort because the pure joy would be missing.

**Correspondence:** Dear GGNRA:

I have been born and raised in the Marina District of San Francisco and have been walking my dog down on the Chrissy Field beach and on the Southern Marin trails for nearly 50 years. I am angered that the government wants to take our freedom to walk our dogs here in SF and on many trails/ beaches in Marin away from us. The government is here to represent the people and the people of San Francisco and of Marin are telling you we do NOT want you putting more restrictions on OUR recreation areas. There are plenty of places people can hike where dogs are not allowed so please, please leave our beaches and trails alone for us to be able to walk our dogs. The GGNA is an urban playground for ALL to enjoy and not a National Park with all its restrictions.

Sincerely,

Heidi Detjen

**Correspondence:** As an avid dog walker and promoter of dog and human well being, I am writing this to ask you to not limit off leash dog parks, trails, beaches and areas that are currently in question.

Dogs love to be free and off leash. When my family and I visit the San Francisco, Bay Area, we love all the outdoors it has to offer us and our dog-off leash. We take him everywhere with us. The pure pleasure of seeing him happy, being free is such a natural thing to do. I have asked myself as a human how would it feel to live in a world where everywhere I went I had to be on a leash. I realize dogs are domesticated animals, but they still need freedom.

I think creating this law will hinder the locals and visitors and make the San Francisco/Bay Area not as appealing, especially the dog lovers that live there and visit and there are many.

Sincerely-

Ann

<b>Correspondence:</b>					

There are probably no accurate figures on the number of dogs in San Francisco. The usual figures of somewhere around 150,000 are based, I believe, on the number of registered dogs, and since many dogs are not registered, the cited figures are probably substantially lower than the real numbers.

I think everyone would agree that there are an astronomical number of dogs in the City, and growing rapidly by the month. The sheer numbers and future increases necessitate rethinking policies and enforcement.

There is virtually no enforcement of any regulations regarding dogs in the City or in National Park areas, and of course San Francisco has an unusual situation in that so much City land is also National Park land.

For reasons of public safety, health, and the environment there should be very limited off-leash space in the City and San Francisco should comply with national policies in our national parks.

Even though many dog owners may be responsible citizens, the lack of enforcement and overly permissive policies create a situation where the possibly small percentage of scofflaws among them amount to a significant public problem due to the huge and growing population of dogs.

Many people let 2-6 or more dogs run freely, making supervision and waste clean-up impossible and create a public health and safety menace. In general in San Francisco, those who wish to have no interaction with off-leash dogs have almost nowhere to go. including markets, theaters , stores, beaches.

"Voice control" is always a myth that makes any enforcement impossible. One often sees owners shrieking at their dogs to no avail especially in the ubiquitous dog fights that one sees in all parks. Or owners who ineffectually tell their dogs not to destroy the turf by digging but allow much destruction or pursuit of birds.

No citizens should have to experience any chance of dog bites, a statistically significant occurrence, given the enormous canine population.

I was recently in Chicago and was amazed at seeing virtually no off-leash dogs, except in the relatively few fenced-in areas reserved for them. It made for a much cleaner and safer environment.

It has been decades since Harvey Milk's "pooper scooper" law dared to raise big-picture discussion of the impact on quality of life of the dog population of the City. Since then, the exponential explosion of dogs makes such discussion urgent.

In San Francisco there is a strong and well-financed lobby that opposes any regulation of dogs and is opposed to any dog-free or leash areas. This does not necessarily represent all dog owners, especially

those owners whose dogs are often attacked by off-leash dogs. But there is strong fear of the political clout of this lobby among politicians and public officials.

Please stand up for the public safety and health of our City and heed the environmental concerns of the Audubon Society and maintain strictly enforced leash law on our parks and beaches.

**Correspondence:** Please do not take away any more "off leash" trails in Marin County and on Mt Tam trails. If anything add more! Many dogs are more stable and peaceful off leash. Allowing dogs to really run makes them healthier animals. If anything, require dog owners to certify that there dogs are capable of being "off leash". That way, uncontrollable dogs must remain on leash and they won't spoil the "off leash" privileges for the mostly capable "off leash" dogs in Marin county. Please do not require dogs to be leashed more than they currently are.

**Correspondence:** The proposal to ban dogs from Sloat to Lincoln is excessive. I walk my dog on this beach on a daily basis and it would be a huge loss to not be able to continue this practice. I understand the concerns for wildlife and other visitors, but I feel that at the very least, leashed dogs should be allowed on all of the beaches.  
To only allow dogs to be North of Lincoln, (which is in the heavily trafficked fire pit area that also frequently includes broken glass), or South of Sloat is too restrictive. I too, would like to be able to walk the full length of the beach with my dog, and it's not fair to restrict this area in this way.

It would make more sense to allow a smaller area like North of Lincoln to be off leash, and then allow leashed dogs for the rest of the beach.

While there have clearly been some users of the beach who have allowed an animal to roam into protected areas, or failed to pick up feces, these incidents should not reflect on the whole community, who for the most part are responsible dog owners and should be allowed full use of the beach.

Instead of enforcing a complete ban, I feel that more education about the endangered/protected wildlife could be useful. Additional signs on the beach with information about why the area is leash only, etc. Additional installations of poop bag stations and trash cans would also help to keep the entire beach area clean.

Also, the signage about the rules should direct people to different areas, so if they are in a leashed only area, they can easily find an off-leash area.

And if it's absolutely necessary to provide a no dogs allowed area of the beach, then make that the area south of Sloat, or some smaller section of the beach.

**Correspondence:** I firmly support retaining off leash recreational space in the GG National Parks. The California coast line is huge and much of it already prohibits off leash dogs. As a long-time San Francisco resident, I spend every weekend at Fort Funston with my dog off leash and will be greatly impacted by new restrictions.

I have heard concern about wildlife protection in connection with the parks. Every week I see children climbing up the dunes and eroding the sandy cliff face at Ft. Funston. Organized "boot camp" exercise groups climb the dunes and tear up the turf. If off leash dogs are banned in the name of wildlife and environmental damage, then off leash children and fitness groups should also be banned.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Katy Garlinghouse

<b>Correspondence:</b>	Hi -				

My name is Carrie Asby, and I live in San Francisco with my dog, Walter Jones. We visit Crissy Fields weekly to get exercise, fresh air and take in the fabulous view of this wonderful city.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

Please keep walking my dog off leash at the beach or on the trails legal. Out of all the problems in this work, a dog running off leash at the beach or on a hike isn't one of them. Thank you for you time and consideration.

Sincerely,  
Carrie Asby

**Correspondence:** Good afternoon,

I am a fourth generation San Franciscan. For the past three years, we have walked our two dogs at Mori Point. Each and every time we do, I spend my walk picking up the endless amount of trash on Mori beach. I even continued to do so throughout my entire pregnancy, when bending over once much less 100 times risked complete public humiliation. Naturally I would never leave my dogs' litter on the beach either. Not once have I ever seen another soul doing so.

As a responsible, tax paying member of this community, I expect to be able to access a small sliver of our open space with my dogs and child as a family. Just like I have to share the road with bikes and muni stops with Google buses, I ought to legally have access to small portions of beaches with my canines.

Please do not give my family yet another reason to be forced out of San Francisco. There are plenty of ways to achieve all goals respectfully in this matter.

Thank you,  
Jennifer Harrison

**Correspondence:** I am a 93 yr. old woman who resides in San Anselmo. I have a companion dog who is the love of my life. I pay a friend to walk the dog in various parts of Marin County including Tennessee Valley, Muir Beach and Rodeo Beach. I cannot walk the dog or allow him off-leash, so knowing he's getting this kind of active exercise is such a blessing to me. He sleeps better and i sleep better after these outings. It's common sense that dogs need exercise and being off-leash is so very helpful with their development and socialization. Having this ability to get my dog exercise is so important to both of us. Please don't take this away from us.

**Correspondence:** I strongly oppose the GGNRA draft dog management plan, restricting off leash dog walking in San Francisco, Marin, and San Mateo, CA.

I am a resident, rescue dog owner, of San Francisco and use these areas, specifically, Fort Funston, Ocean

---

Beach, and Crissy Field every weekend to spend quality time exercising both myself and my dog. Off leash dog play is crucial to my dog's health and socialization and walking freely in these areas allows me to enjoy them for exactly what they are intended for: recreation.

If this plan is accepted and enforced I will no longer use the the GGNRA for personal enjoyment - Restricting these areas would cause me to find new areas of off leash dog play, all of which will not be able to handle the overflow resulting from these restrictions.

In addition to opposing restricting these areas, I think it is confounded to propose fencing these areas - it will ruin the fluidity and beauty of the landscapes. It is also ridiculous that this management plan has been proposed without conducting appropriate studies substantiating the reasoning.

I support the GGNRA's management of the original 1979 dog management plan. San Francisco intended that these areas allow for off leash dog play and personal recreation, and the GGNRA should be managing these lands and future lands granted to the GGNRA as they were originally intended.

<b>Correspondence:</b>	I am very disappointed in how the GGNRA is planning on handling dog access and off-leash access on land GGNRA has been hired to manage FOR the people of the Bay Area. This is a fighting point for responsible dog owners who realize and understand that having a dog is a right and to have a happy, balance dog requires varied places to walk, run, and play with them not on leash. Our off-leash parks and many leashed trails have been what makes San Francisco one of friendliest dog cities in the country. In one fell swoop you with eliminate that. Please know that I and others like me will fight this.

**Correspondence:** I oppose the Draft Dog Management Plan as I feel it restricts too heavily the amount of locations where dogs are permitted. While I agree that there should be many areas where wildlife is free from potential interference by dogs, I also feel that it is important for dog owners to have a variety of terrain with ready access on which to exercise their dogs. As we have created a culture in which humans and dogs have become a close and immensely mutually beneficial pairing, we have a moral obligation to create environments in which dogs' comfort and health are well met.

**Correspondence:** Dear Superintendent Dean,

I am writing to strongly object to the Preferred Alternative of the Dog Management Plan. The plan is way too restrictive for dog owners who already have difficulty finding places to walk their dogs. The land in GGNRA in San Francisco was given by the City of San Francisco for recreational use. If people aren't able to re-create in the City, then they'll be forced into more rural areas which will have greater impacts on wildlife. The plan violates original agreements that promised off-leash recreation in parts of GGNRA. Those parts are already extremely restrictive and this plan will make them even more so.

I am a senior citizen and I attribute my relative good health to the fact that I walk with my dog at least twice a day every day. It keeps both me and my dog in excellent shape, both physically and mentally. It is a known fact that a well-exercised and socialized dog is a good dog, one that is friendly toward people and other dogs. A dog constantly kept on leash is not a well exercised dog.

The plan does not take into consideration all of the thousands of comments dog owners have submitted in various formats through the years, including myself. It is time for GGNRA to pay attention to all recreational needs of its visitors, including those of dog owners!

Thank you.

Sincerely,

Andrew Moore

<b>Correspondence:</b>	Fort Funston was the very first place my dog Timber and I went after arriving in San Francisco to visit a friend in the fall of 2001. We had been in the car for 8 hours after driving up from LA and we both needed a chance to stretch our legs after the arduous journey. My friend from the city recommended the park for its beauty and more importantly, for its vast off-leash, dog friendly setting. Much to my surprise it was all he told us about and more. We were greeted by friendly people, happy				

---

children and ecstatic dogs and their owners and acres upon acres of open space to be explored by my dog and I. She loved the other dogs, the sand, the bushes and the cliffs after being couped up in the car. I could imagine it is the same for dogs and their owners after having been in their home or office all day. Each time I returned to the city after that initial visit it would make it a point to go to Fort Funston as soon as possible so myself and Timber could roam free and enjoy the best of the bay area. I have since moved to San Francisco, and in the five years I've lived here, I have taken numerous friends, family and acquaintances who visit the bay area to the exact same spot. In the hundreds of times I've been to Fort Funston, Crissie Field, GG Park, Rodeo Beach, Fort Baker, etc. has anyone expressed anything but pure joy and wonder at the fact dogs are welcome and not once have I heard a complaint from someone without a dog or seen a dog or their owner affect the natural balance or cause a problem.

It seems obvious that the best purpose for this piece of land, along with others such as the meadows in Golden Gate Park and the vast lawns and beaches of Crissie Field is for dogs, their owners along with other families and children to be allowed unfettered access to the land and the water, free of any restrictions. Timber and I make the trek to Fort Funston, Crissie Field and the Golden Gate Park every week and cannot imagine where we will go to enjoy such a profound experience if you go forward with your plan to severely restrict the off-leash areas on our National Parks.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I walk my very energetic Wheaten terrier regularly at weekends at both Fort Funston and Crissy fields - RECREATIONAL areas. During the week, our dog walker takes her to fort funston which she adores.

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is very restrictive and will prevent me from exercising with my dog the way I have on GGNRA properties for many years now.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I expect to see Fort Funston, Rodeo beach and many other beautiful recreational beach areas in the bay area start to resemble "ghost parks" if this new dog management plan goes through. San Francisco has always prided itself on being a dog-friendly city, it will be very sad to see that perception fade because of the GGNRA's new proposed plan.

Sincerely,  
Anne-Marie Twomey

**Affiliation:****Received:** Feb,11,2014 15:10:22**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County (maintaining the access we have enjoyed for decades in that area) and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

Dogs who are well-behaved not only enjoy healthier activity when playing off-leash, but they model appropriate behavior for other dogs (and dog owners). In the Golden Gate National RECREATION Area, dog-walking is a legitimate and desirable recreational activity, enjoyed by huge numbers of dogs, dog owners, and dog-lovers alike. In particular, there is insufficient evidence to demonstrate that dogs in Rancho Corral de Tierra are significantly disturbing vegetation or wildlife. The vast majority of the reported "incidents" result from the insufficiently announced/communicated changes in policy from the historical use and access dogs and their owners have enjoyed in the area.

Please preserve off-leash access in San Francisco and San Mateo County, and protect appropriate recreation for healthier dogs. Please do NOT arbitrarily remove this valuable resource that San Francisco is famous for.

Sincerely,

Gever Tulley

Have these impacts been estimated, quantified, evaluated, considered, peer reviewed and publicly disclosed? If

so, where is that analysis?

2) Any reduction to on or off-leash dog areas will only result in the remaining areas getting more crowded. In turn, this will only worsen any conflicts or incidents. For the record, although GGNRA/NPS claims to want to reduce such conflicts, it appears they in fact want to increase the likelihood of such incidents so they can then use these incidents as grounds for yet further reductions until they achieve their backhanded goal of minimizing dog access.

**Correspondence:** The idea that "without action, these resources and values in some areas of the park might not be available for enjoyment by future generations" due to the impact of dogs and the presence of dogs leads to "resource degradation" is decidedly unreasonable when you compare the effect of dogs to many of the other effects of humans in these parks that include (but aren't exclusive to): horses, bicycles, dirt bikes, and humans themselves. People do much more damage and leave much more trash (i.e. resource degradation) in the parks than dogs ever will, so to restrict the use of dog owners in these areas will only make a small difference when compared to the overall problem.

If resource degradation is the true issue, the NPS would do much better to limit overall traffic in these areas (which I know would never happen) to curtail the issue. Dogs aren't the problem and the science will show that dogs aren't the problem - irresponsible people are. Responsible dog owners are probably the best patrons and supporters that the parks have, and if you alienate this group, you are losing out on all of the support from this group that highly values our natural resources.

**Correspondence Type:** Web Form  
**Correspondence:** 02/04/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it lacks proper study or fairness. For example, there is no peer reviewed study, just hearsay about damage dogs may cause.

The NPS does not believe the GGNRA should be treated differently than Yosemite. In fact, GGNRA is a RECREATION Area.

GGNRA is also clearly influenced by money donated by minority special interest groups like GGNPC. com . Notice how this unassociated non-profit even tries to look like it's a government agency.

GGNRA has been trying to remove its responsibility to support recreation for which the lands were originally designated. They continue to defy the 1979 Dog Management plan which has been challenged and upheld as recently as 2005.

They continually chip away at reducing dog areas while there are more dogs than children in SF. Literally 50% o households have a dog.

This is not about dog rights vs. human rights. It is about dog parent (human) rights. As a child and dog parent, I do not have time (nor want) to walk my dog in a dingy tiny dog park, take my dog home, lock her up and go enjoy the lands that everyone else can enjoy on my own.

**Correspondence:** 02/04/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan.

I strongly oppose the preferred a.lter.native for all local parks because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

After 2-1/2 years in review, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted com ments in response to the first plan, opposing the original plan by a margin of 3:1.

What the people of the Bay Area need is a new plan that describe how the space will be managed as a recreation area, which is what the lands are mandated to be, not as a national park, which is not something that is appropriate in a crowded urban area.

**Correspondence:** 02/04/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it doesn't reflect the needs of the public and seriously changes the quality of life for dog owners in the area.

The GGNRA is a beautiful piece of land. For years, it has been shared by lots of different kinds of people for a diversity of uses. We need to protect those uses for \*everyone\*.

One of the most amazing qualities of the GGNRA is that it's largely open and unobstructed by fencing or pens of any kind. Any plan that adds fencing to dog-use areas will blemish this otherwise pristine land.

**Correspondence:** 02/04/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it restricts the ability of any San Francisco resident, who vast majority do not have access to a backyard facility in their own homes, to safely and healthily own a dog. If you've ever owned a dog, you know that at minimum they need to be exercised 30 minutes two times a day to avoid separation anxiety, destruction to rental property, weight gain, depression and other health issues. A dog that remains indoors and with no exercise is a dog that an owner will quickly be com e unable to manage and maintain ownership of. It doesn't take much for a dog owner to throw their hands up in desperation and abandon a pet, should the access to facilities be com e difficult. With a plan like GGNRA Dog Management Plan there is certain to be an impact on shelters, rescue adoption agencies and dog training/walking facilities as an increasing number of dog owners will abandon their pets. We already face extreme issues with overcrowding in shelters and stray animal control - why then force beloved pet owners to have to give up their pet when it could be otherwise avoided.

The GGNRA has lost sight of its purpose

**Correspondence:** 02/04/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

First of all, thank you for considering my opinion. I recreate with my dog in the off leash areas of the GGNRA often and it's a wonderful part of the Bay Area experience, both for people (including non-pet owners) and pets. A place like Ft. Funston is a local institution for dog owners and those who enjoy dogs alike.

Secondly, and more formally:

1) I oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel uncomfortable.

3) I oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy as the MBMS is still based largely on compliance with leash restrictions.

Best Regards,  
Matthew Goforth

**Correspondence Type:** Web Form

**Correspondence:** 02/04/14. I strongly oppose the restriction of off lease play areas because it is too restrictive. It also does not adequately analyze the impact of the preferred a.lter.native on nearby parks. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011.

The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

And finally, there are so few places that are off-lease dog friendly within San Francisco. My dog is very high energy and loves to run on open stretches like Fort Funston. Without these special places, he and I will not get the exercise we need and love.

Sincerely,  
Lauren Bagden

**Correspondence:** 02/05/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

Ft. Funston was a boon when I discovered it in 2006 after moving to the Bay Area from my native Chicago-land. My initial impressions of the area was of an unusual intolerance towards dogs and dog owners. Strict off-leash laws and harsh enforcement left me feeling dejected, and the wholly inadequate off-leash park areas (small, rundown, cramped and poorly equipped) had my dog depressed and uninterested in play. Ft. Funston changed all that, and I'm not speaking in hyperbole as it is a 1 hour drive from home and yet a trip we regularly make. Dogs and dog owners have very few options in the Bay Area for recreating in a meaningful way in nature. Please don't take what little we have away.

**Correspondence:** 02/05/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because my dog uses off-leash trails 3 times a week and would be confined to a very small beach if this goes through. Reducing the area she has to play puts her at greater risk for being attacked by another dog.

My neighbor's dog was recently killed by another dog in a small dog park. I feel this could have been prevented if the dogs had more room to play.

**Correspondence:** 02/05/14. Congress should not adopt the The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan. The Plan is overly restrictive regarding where dogs can be within GGNRA both on leash and off leash. Currently, there are many areas of GGNRA that are already closed to dogs. There is no good reason to expand those areas. There is also no good reason to ban off leash dog play in the already limited areas that it is permitted. In balancing the environmental impact

---

against the enjoyment of dog owners, there appears to be no compelling environmental reason to keep dogs --. on leash or not --. off this federal land. Please do not further limit the areas on which dog owners can enjoy their outdoors with their dogs beside them.

Sincerely,

Laura Vartain

<b>Correspondence:</b>	02/05/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because one of the biggest reasons I love living in this city, is the outdoor life it affords. Almost everyday and certainly every weekend, my family and I go to Fort Funston with our dogs. We hike, enjoy the beautiful views and the company of other people and their animals.				

I was shocked to learn about a proposal by the GGNRA to severely limit dogs and off-leash dog walking in Ft. Funston, Crissy Field and other parks --. especially as it didn't take into account any of the views or opinions of the public: the people who live and work in this city.

Just about 1 in every 3 households in SF has a dog, and this is going to dramatically impact San Franciscans. It is also going to impact city parks, because if this proposal passes hundreds upon hundreds of people and their dogs are going to flood places like Maclaren Park and Golden Gate Park. I've seen what happens when too many dogs are in a confined space, and I'm also worried about the potential serious accidents it will cause should this happen.

I urge you to learn about this issue and help us come to a better resolution.

**Correspondence:** 02/05/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

Officials at GGNRA,

Please reconsider the initiative to restrict dogs so that they must be on a leash in designated park areas. Previous to living in Oakland, I lived in San Francisco from 1998-2008. I have enjoyed the beautiful parks in the city as do most dogs. Now that I live in Oakland and have my own dog, it brings me great joy to be able to share the open space at Ocean Beach with my dog. This is an area where there are no ticks and plenty of other friendly dogs for her to socialize with. Also, many people without dogs enjoy the spontaneous energy that is created when dogs are allowed to play in a respectful manner. Not once have I seen a mishap created by a dog at the beach, nor have I noticed the dogs seriously destroying the habitat. In fact, over the years having surfed at Ocean Beach, I have see the coastline and dunes drastically change as result of storms or high surf.

It is with great concern and disappointment to know that my small dog must be on a leash along the coastline.

Kind regards,  
Stephen Nichols

**Correspondence:** 02/05/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it's too restrictive and will drain resources on an already resource strapped city. Let's put our monitoring services to good use and keep people safe in urban environments that are currently hotspots for drugs and crime like the tenderloin and upper Haight. Dogs off leash should be the least of our problem and it sends a pretty strange message about our priorities if we have someone walking around our parks enforcing leash laws, when people are sleeping in our streets.
