Having to use a leash is bad enough, especially with dogs that have been trained to walk without a leash. Imposing restrictions like the ones being considered (to certain paths or areas) cannot be enforced and should be seen by those of you that have done this before at other parks, as a waste of time, money and effort. We are not here nor support Rancho Corral de Tierra in order to employ more State or County or Government talking heads and bodies.

The taxes I pay here in San Mateo do not call for more restrictions, they actually demand less and require you to stand up for our rights as home owners, property owners, tax payers and law abiding citizens. We did not spend millions of dollars not only for our homes but for the original purchase and protection of this land merely for the State to come in and impose ridiculous rules because of some endangered species. Figure out a way where we can use the park like it was meant to be used by the people that live here and that originally bought into this area because of the Rancho Corral de Tierra "OPEN" area.

If you're looking for ways to improve your newly acquired park (Rancho Corral de Tierra) of which my taxes helped pay for, then perhaps you could start by removing fallen trees laying across paths and placing benches in areas where they can be enjoyed and not crowded onto by the walking path.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Superintendent Dean,

I have walked with my dog in the GGNRA for years. I am writing to express my strong opposition to the preferred alternative described in GGNRA's new draft dog management plan. It is too restrictive and will prevent me from enjoying the the GGNRA properties. I am 64 years old, the hikes/walks that my dog and I share are an important part of my health regimen.

I feel the GGNRA has truly lost sight of its purpose. It was set up to be a RECREATION AREA for a densely populated, urban area. The trails and beaches have been set aside for dog walking since 1979.

More and more parks and trails are setting up policies to exclude dogs. Not only in SF, but in the east bay as well. Thousands of homes in San Francisco, and the bay area, have dogs. Do not exclude them, and thereby us, from these wonderful environments.

**Correspondence:** I think the proposed changes to the GGNRA to limit off leash areas is too restricted. San Francisco stands out proudly as city that is dog friendly and has well behaved dogs. Our wonderful areas are a treasure and so many out of town friends have commented to me on these wonderful areas for dogs to run, feel alive happy and healthy.

As a therapy dog volunteer I have seen what amazing love our dogs give to so mainly people in hospital, care home and to the children reading programs.

For the great love these dogs give to so many people it is only fair that we provide these wonderful off leash ares

**Correspondence:** Dear Superintendent Dean,

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. San Francisco is unique with its commitment to ubiquitous human-canine interactions and is the primary reason why I have chosen San Francisco as my home. The new plan is way too restrictive and will prevent me from recreating with my dogs for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. There are problems with the current system, however, by removing what makes San Francisco unique harms its law-abiding citizens more that in solves any of the raised concerns. In addition, there hasn't been a single peer-reviewed, site-specific study that supports such a drastic restriction of dog-friendly areas.

Respectfully, the GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you for your dedicated efforts to preserve this truly precious resource. It is my sincere hope that a more reasoned and inclusive approach can be reached.

Sincerely,  
Dan Clark

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

---

**Correspondence:**

Dear Superintendent Dean,

I was born and raised and, except for a few years away at college, have lived all of my 55 years in San Francisco, mostly on the Western edges of the City. I have been angered and deeply, deeply saddened to have most of the coastside areas in San Francisco, i.e., Ocean Beach, Fort Funston, Lands End, and Chrissy Field, areas I used to walk in daily, given away to the GGNRA, a group which clearly has no commitment to the communities of people and dogs who use these areas for recreation and exercise, to refresh ourselves and spend time with our friends. Now when I walk my dog in the GGNRA lands, I often find myself crying, literally, to know that I will not have this joy much longer. I also wonder where I will go to exercise my dog off leash, and this is very stressful. Will I have to walk at night so that my dog can at least run and play off leash? I am sad because the friends I have made will inevitably be making new arrangements about how to get their dogs off leash exercise, and the wonderful connections I have made with this community of people will be broken. Maybe you don't know that most dogs don't just exercise themselves. If you put a dog in an enclosed area, they won't actually exercise. The dog will walk around a bit, perhaps tussle with another dog, but most dogs will eventually just lay down. Dogs require their person to exercise with them, i.e., their person to walk so that then the dog will walk. So essentially, to

restrict dogs to leash only access to GGNRA lands is to deny them the freedom they innately need and deserve. And because I will make sure my dog gets what she needs in terms of off leash exercise, my life is going to become more complicated in order to provide her with that. I really see my only option as walking at night where hopefully you will not have the resources to harass me and/or arrest me. Do you see this as sad? I do. One of the great joys of my life is walking my dog with my friends. Remove off leash dog walking in the GGNRA, and this joy is gone. I really see no reason for this. Everyone should be welcome everywhere, including in the GGNRA. Runners, cyclists, skateboarders, people walking, and anyone else should be welcomed in the GGNRA lands. The Bay Area, where a large percentage of the population have dogs, is already one of the most unfriendly places for dogs, and restricting dogs from most of the GGNRA and making it essentially only on leash will seal the deal that the Bay Area is completely unfriendly to dogs.

I beseech you to give the GGNRA lands in San Francisco back to the City of San Francisco, but knowing you won't do that, I beg you to allow off leash dog walking in the GGNRA as it has been all my life. Dogs need a significant area, at least a mile or two, in which to walk, run, and play both for their physical and mental health. And guess what? SO DO I. Things had been working fine for more or less 40 or 50 years. Please allow things to continue as is. Please allow off leash dog walking everywhere in the GGNRA.

I have one more request. I respectfully request a written, personal response from you to this letter that thoughtfully addresses each of my concerns. This is at least the third letter I have written to you on this issue, and I have not had any response except to see your plans remain unchanged regarding off leash dog walking in the GGNRA.

Sincerely,

Julie Kaufman

<b>Correspondence:</b>	Changes made in the 2013 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011; comments in 2011 ran 3:1 AGAINST the plan.				

I support "No Action Alternative" in the SEIS for each area: Muir Beach, Homestead, Oakwood Valley, and the Marin Headlands.

The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

Please retain the longstanding 1979 Pet Policy.

The GGNRA was established to give outdoor recreational opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite.

The SEIS preferred alternatives force people into their cars, in search of places to walk with their dogs. This is bad for the environment and bad for Marin County!

**Correspondence:** We have a very active dog who requires intense exercise at least twice daily. We already feel frustrated by the restrictions on dogs already in place, and the new bans for limiting dog areas proposed would be devastating. San Francisco is a dog city, and we are proud to be part of a place that embraces our four-legged family member. We are also huge nature lovers and love spending time outside in the many spaces which are proposed to be banned to dogs. We want to support protecting the natural beauty around us, but not at the expense of losing even more space for us to bring our dog. If the GGNRA went forward with their proposal to increase the amount of areas banning dogs, the limited areas remaining where dogs would be welcome wouldn't be able to accommodate the large population of dogs in the Bay Area.

**Correspondence:** I am strongly opposed to Alternative F, the preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

With a miniscule percentage of GGNRA space currently designated for any type of dog access, these new restrictions are completely unreasonable.

The GGNRA is at its heart and as its title indicates, a RECREATION area. It is partly an urban park, and is in no way wilderness, nor a wildlife reserve, nor a bird sanctuary, but primarily a place for humans to enjoy the outdoors. Traditionally, this has included people with dogs in limited areas.

Many GGNRA lands in Marin County were once inhabited; with many buildings that included military installations; families and ranches; herds of livestock; pickup trucks and farm vehicles; and LOTS of working as well as pet dogs, roaming thousands of acres. Our dogs accompanied my friends and me as we rode our horses on hundreds of acres of what is now the Marin Headlands. We shared the range with livestock herds and it was our responsibility to train our dogs not to chase cattle and sheep, which we did. It is that very issue of responsibility that advances the greatest challenge to the proposed new restrictions. If a small percentage of dog owners do not train or manage their dogs properly, they should be cited, but that should not translate into banning all other responsible dog owners and their well-behaved dogs from the vast majority of the GGNRA. Following this path of logic means that:

>We should ban children from the vast majority of the GGNRA, because a few children chase wildlife, run excitedly through and damage sensitive habitat, scream at the top of their lungs and throw rocks at birds, or rip branches from trees to use as play swords, or hiking poles.

>We should ban mountain bikers from the vast majority of the GGNRA because some of them erode trails and damage hillsides and wildlife habitat, aggressively confront hikers and horseback riders on single-track trails where they are not allowed, and build illegal and destructive hidden trails for their personal sport.

>There are smokers tossing cigarette butts, litterbugs tossing trash, pot farmers using pesticides and polluting creeks, and parents leaving detritus behind from family beach picnics. Does it thus follow that we ban all humans from the vast majority of the GGNRA?

No, of course not. So why restrict just one category of park user over any other, when all user categories have bad actors among them? Please exercise common sense and reason as you proceed, keeping in mind the original intent of the formation of this magnificent Recreation Area. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** 02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it is exclusive and discriminative towards these animals. A drastic 90% decrease in recreation space available greatly affects the well-being of both animals and owners. If this occurs, the spaces in which dog-owners are left take their animals for exercise and fresh air will be more heavily concentrated, which may have negative consequences such as increasing traffic and waste in those areas, increasing the amount of dog-fights in these highly-concentrated off-leash areas, or conversely, deterring owners from taking their dogs out at all.

**Correspondence:** 02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because a large part of the pleasure of visiting recreation areas is seeing an area where people and animals can intermingle in a relatively unrestricted way. There are already plenty of places in which people who dislike animals can go to find recreation, but the number of places for humans and animals to find positive interaction is becoming our greatest scarcity. Dogs should be free in recreation areas to roam under the supervision of their owners and intermingle with each other.

From an environmental impact standpoint, dogs are FAR less damaging to the environment than people. If there is a particularly sensitive habitat that exists in these recreation areas, they should be closed to public use entirely and redesigned as wildlife preserves. A dog in the company of a responsible owner

will stay on walking paths, refrain from disturbing wildlife, and make the overall park experience more enjoyable for everyone who might potentially enjoy the connection with nature that an outdoor recreation area is supposed to foster. Conversely, humans leave behind garbage (particularly cigarette butts,) trample pants, and, at times, create a tremendous intrusion into the lives of wild animals. The ecological impact of humans is far more detrimental than the impact of dogs. Thus, if an area is too sensitive to intrusion, it should not be open to any foreign intrusion.

Please retain the rules and regulations adopted in 1979. I adamantly support not only the continuance of the current off-leash areas, but an expansion of outdoor areas in which dogs are permitted to accompany responsible owners without physical restriction (i.e. leashes, harnesses, etc.)

**Correspondence:** 02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because I feel as a tax payer, I should have equal access to the open space areas that make living in the San Francisco Bay Area so desirable. I am a third generation native to the San Mateo a County and have a vested interest in preserving our outdoor spaces and keeping them pristine for all to enjoy. Dog owners like myself leave areas better than how we found them. We respect these spaces and cherish them. We are in no way harming species or destroying ecosystems when we respectfully use these recreation areas. In fact, we are the ones who contribute to the local economies when using these spaces. We strengthen the economy with each trip we make to these recreation areas. We and our pets are assets and not liabilities.

**Correspondence:** 02/15/14. I support The Golden Gate National Recreation Area (GGNRA) Draft Dog Management because there is already wide-spread abuse by dog walkers. Many dog-walkers abuse the leash-only rules that are already in place making visits to parks unpleasant for people and dangerous to wildlife. Giving them more access will only increase their self-righteousness. We need further restrictions and more enforcement of current laws.

**Correspondence:**

I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for ALL VISITORS. The situation at Ft. Funston illustrates how largely unregulated dog access can ruin the coastal park experience for families with dog feces underfoot, poop smell in the air and aggressive dogs frightening, even knocking over children.

On one visit to watch hang-gliding, my granddaughter was badly traumatized by the sudden approach of a large unleashed dog. The continuing increase in numbers of unleashed dogs at Chrissy Field will eventually mirror the scene at Ft. Funston. Trying to remind dog walking visitors about the leash requirement on Ocean Beach only results in hostile response. "My Dog" doesn't chase birds... is under "voice control" - sure thing. Seems like every dog is an exceptionally virtuous "My Dog".

Furthermore it seems to me that commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain. Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public. The DAILY visits of troops of 6 or 8 dogs running together as a pack - often unleashed - multiplies the impact on wildlife and recreational visitors alike.

I very strongly support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. I realize the difficulty of instituting firm regulations in the face of fierce opposition by fanatic dog owners and commercial dog walkers, but GGNRA is a National Park tasked with the responsibility for protecting wildlife, enhancing the natural environment and providing thoughtfully managed outdoor recreational opportunities for the citizens.

**Correspondence:** Dear Superintendent Dean,

---

Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

I hope the concerns of responsible pet owners will be considered before any final changes are made, and that any new policies continue to allow for recreation with our dogs.

Sincerely,  
Jordan Hinkes

**Correspondence:** There are so few places already for hiking with dogs in the San Francisco Bay Area. Ocean Beach, Fort Funston, parts of the Marin Headlands, and Krissy Field are wonderful places for furry friends to run around and experience the outdoors. Closing these off would deprive owners and dogs alike of this joy. San Francisco is a crowded city, and residents do not have space on their property, and the parks are too small for dogs to get proper exercise. Teenagers partying do far more damage to our open space than dogs do.

**Correspondence:** 02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...

1) Oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. Support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

2) Oppose fences to surround or delineate any off-leash area in the GGNRA. The SEIS Preferred Alternative proposes to install fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston. Fences will make off-leash areas feel like pens and visitors using them will feel uncomfortable. Fences secure enough to keep small dogs in will hinder movement of wildlife. If fences are not secure enough to keep small dogs in, why have them?

3) Oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily

focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

**Correspondence:** I am writing to express my very strong opposition to some of the proposed dog management alternatives for San Francisco beaches that, if approved, would require dogs to be on leash on certain park walkways and in beach areas where they are currently allowed to be off-leash. We walk our black lab, Fred, almost every day along the water at Ocean Beach between Fulton and the Cliff House, and can't think of a better place for him to run and play in any kind of weather. It's his favorite place on earth and mine too (next to Crissy Field and Fort Funston where we also enjoy playing with him off leash), and we never have any issues. People love to see Fred having fun at the beach, and part of the reason he is such a good and happy dog, is that he gets proper exercise. We walk him on leash in our neighborhood and in the park, but at the beach, he can get even better exercise by running for long stretches, which is so important for large dogs, in order for them to stay healthy as they age. Swimming in the bay at Crissy Field is another safe and healthy way for large dogs to exercise, and it would be a shame to take this away.

The GGNRA was set up to be a recreation area for a densely populated urban area which happens to include a large population dog owners. We should be able to continue to give our dogs the good quality of life they have been fortunate to have in San Francisco, where they don't have to always be confined to a leash or a small fenced-in dog yard/park. Most dog owners as well as many other volunteers have been taking good care of the trails and beaches set aside for dog walking since the original pet policy in 1979. I am in favor of keeping beaches safe for people and dogs, and would not have a problem if there are penalties to specific dogs and dog owners found to be clearly negligent or misbehaving without prompt correction by putting their dogs on leash or muzzle, or even leaving the area. I believe these cases are very rare, and as I've said we never see or encounter problems with other dogs at the various beaches. Enforcing leash laws on all dogs could actually create dog behavior problems, if they can't get their energy out, rather than solve them.

It is my understanding that the proposed dog management plan does not reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the plan released for public comment in 2011. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such drastic restriction of dog-friendly areas. I sincerely believe that the positive experiences of local residents and visitors engaging with dogs in the City is far more common than any negative experience, and I truly hope San Francisco will continue to keep dog-friendly areas like Ocean Beach an off-leash haven for dogs.

**Correspondence Type:** Web Form

**Correspondence:** 02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because

- One of the major attractions of living in San Francisco is that it is a very dog friendly city which allows dogs and their owners a very high quality of life by responsibly enjoying our beautiful environment together. The GGNRA Plan imposes unreasonable restrictions which will have a very negative impact on the quality of life for people AND dogs!

- SEIS never gives results of public comment on the DEIS (neither does the "Response to DEIS Comments by the GGNRA" document on the GGNRA website). They say they received over 4,700 comments, but never say how many opposed restrictions on dog walking and how many supported them. The SEIS says: "NPS received many public comments complaining that dog use precluded their enjoyment of areas." (p. 100). But there's no indication of how many negative comments were actually made. An independent analysis of the DEIS comments showed that the vast majority (at least 3:1) supported dog walking. This is not reflected in the SEIS.

- SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by public comment to the DEIS and by the San Francisco Board of Supervisors in 2011. The SEIS claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. It also claims that because people will still be able to walk their dogs on-leash at some sites, most will continue to walk in the GGNRA. No evidence is given to support either assumption. The SF Supervisors and dog walkers asked for a thorough analysis. What we got was cursory at best.

- SEIS data still does not support claims that there are major safety problems from dogs that require off-leash restrictions. The total number of dog bites or attacks from 2008 to 2011 (four years) was 95 (p. 21). Even if this number is undercounted and should be tripled or quadrupled, it still represents a miniscule portion of the millions of dog visits each year to GGNRA sites. Even the total number of dog-related incidents (nearly all of which were for having dogs off-leash where they weren't supposed to be) from 2001 to 2011 - 4,932 - represent a tiny fraction of the million dog visits each year (p. 252).

<b>Correspondence:</b>	02/15/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because it is simply an abuse of power to make the changes that have made in light of a strong public opinion against the measure. You have eliminated a ridiculous amount - 90% actually, of the off leash area available on GGNRA lands. It is impossible to exercise dogs properly on leash.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

I have been a resident of San Francisco since 1972 and was a supporter in the creation of the GGNRA. It disturbs me greatly that the pet policy which was agreed upon has not been supported and that to the contrary there have been fences constructed and limitations already enforced in many of the areas in which I enjoy the recreation and exercise I get with my dog; Fort Funston, Crissy Field, Muir beach, Mori Point, just to name a few.

I walk with my dogs who are under voice control and within my sight in many areas of the GGNRA at least 4 times a week.

These walks are essential for my health and the health of my dogs. They also greatly contribute to the community of all of the residents of our Golden Gate cities. I always encounter people with AND without dogs and have the healthy important experience of socializing with my community. It is in the best interest of all of our residents to adhere to the original pet policy of 1979.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Anette E. Cohen

**Correspondence:** Hi- I wanted to comment about the severely restrictive Alternative F plan for dog access on GGNRA trails. By now you have heard all the reasons why so many responsible dog owners, including myself, favor the Alternative A (No Action Plan).

I am one of those who helps keep the area clean and does not allow my dog to behave badly on the trail. My Family and I have enjoyed walking with our awesome trail dog, Webster, from my front door to the Oakwood Valley/Alta Fire Road Trails on a weekly basis since moving to Marin County 15 years ago.

I'm sure I'm not the first one to suggest this, but before the dogs are thrown completely out, could there be any consideration for a use permit-type arrangement? You will have to police the area to keep people with dogs out, so why not police the area for permit enforcement? At least permits could generate a modest revenue for improvement and maintenance.

I personally feel these are public lands and their purpose should be for urban recreation and not strictly wilderness preservation like an "official" National Park. Plus, the research is lacking to prove that dogs are a major source of harm to the environment. As it is, some of these lands have already been saved from a terrible fate....remember when there was a proposal for a housing subdivision along the Alta fire Road? Walking a few dogs along that road now does not seem like such a bad idea compared to that scenario.

Anyhow, I am not totally thrilled about paying money to go walk my dog in open space, but I guess either way I would end up paying, especially when I have to get in my car to go find some other area where I can let my buddy off leash.

Thank you for your consideration to leave the 1979 plan in place!

Very Sincerely HYours,  
Melissa A. Robinett, DVM

**Correspondence:** I was at Crissy Field today - an unusually warm day for this time of year. With today being the middle of a three-day weekend the beach was as crowded as it ever gets, with a mixture of picnic groups, families, people walking from east to west beach and back, and lots and lots of dogs.

I have read portions of the dog management plan, and I understand that the park service prefers to have a dog policy that is consistent with the policy in all other national parks. I even understand that this might be the easiest thing for the park service to impose and enforce. However, I find myself disagreeing with every argument made in the planning document. In most cases the arguments consist of statements made as if representing fact, but without any clear supporting evidence. To me, the biggest example is the section that argues that the 95 dog bites recorded over a 4 year period proves that a change in policy is needed. On its own, 95 dog bites in 4 years sounds like a lot, but the report presents no data on the occurrence of dog bites in other parks with a different policy, and with a comparable number of visitors and dogs.

Besides, isn't 95 dog bites in 4 years throughout the entire GGNRA an incredibly LOW number? Perhaps a real data-driven report, which was structured to identify the best policy, might uncover the result that the present policy has had the effect of minimizing the incidence of dog bites!

In any case, my experience today, in which hundreds of people interacted with maybe a hundred dogs, peacefully and joyfully, without any unpleasant incidents, and certainly no dog bites, dog fights, dog attacks, teaches me that the present policy is WORKING WELL. Further, the present policy works well without any large-scale enforcement and without damage to any natural resources. I simply don't believe that the proposed policy change will produce any of the proposed benefits, except that the park service will be able to state that all parks have the same policy. As a citizen and resident of San Francisco, and a taxpayer, and a frequent user of many national parks, I plead with you to leave our park as it is.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog

---

management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Tree Gelb Stuber

**Correspondence:** I learned about these proposed changes via radio and my heart was sad. It seems that everyone wants everything for themselves and their interest as opposed to taking a middle path and learning to be together and share.

I am a dog lover and have taken great responsibility in training and watching my dog when she is off leash. I have to say she often receives compliments and frankly she is more responsive to what she is asked to do and has better manners than many adults in public places and then many children.

The great outdoors is for us all and we can learn to share and all enjoy the space together. I do not bird watch but I believe they have a right to be outdoors. I do not geo-cache but I believe they have a right to be there. I do not have a boy scout or girl scout but I believe they have a right to be there.

I would rather we learn to get along and embrace the beauty of the outdoors together then to hate, segregate, separate and loose the real meaning and healing of being out in these amazing places we are preserving as parks.

Dog owners tend to do well in leaving no trace behind but we can always improve. Humans could leave less litter and not use the outdoors as a restroom thus leaving a predator scent as well as endangering ground water. Fisherman could pick up fishing line and lures. Loud children could learn to take a moment of quiet to observe what a squirrel or bird is doing. We could all simply learn to get along in the same great outdoor spaces.

The Bay Area has been a leader in embracing and creating off leash open spaces and I hope with all of my heart that we don't take a single step backwards but rather continue to step forward in leading the country in recognizing that these precious parks are for everyone to enjoy in a variety of ways together as one common humanity.

thank you

**Correspondence:** To whom it may concern,

This new dog plan for Rancho Coral de Tierra will very negatively affect my dog and I. I have grown up in Montara and I have been using Rancho for walking my dog many years here. I have been responsible and aware of my dog and his impact at all times. To have the pleasure of walking my dog in this beautiful area is a privileged I hold dear. This plan will not only hurt me but the entire Montara dog walking community which makes up the majority of Rancho's daily walkers. This area has recreational needs and dog walking has been one of the main ways that Montarans fulfill those needs. The Montara dog group has over 400 members who have helped take care of the area by maintaining and using trash bins for dogs.

In reading over this document I have found it very unconvincing. There is little to no evidence of dogs destroying or hurting the vegetation or wildlife in Rancho Corral de Tierra. If I am to accept that claim that off-leash dog walking is causing damage then I need scientific proof. If you can reference any hard evidence of the ecological impact then please let me know.

Most of what is proposed seems to be from assumptions about the people and dogs of Montara based on incidents from other GGNRA areas. How can such a plan be proposed based on such speculation. If a thorough report can be done on Rancho Corral de Tierra specifically and it finds that dog walkers are having such a negative impact that a no-dog rule must be enforced then so be it, thus far I have seen no such report.

I suggest that this plan be scrapped and the current policy (of no action) be maintained. This small but beautiful area is very valuable to a great deal of people and this document provides no solid justification for the destruction of the dog walking community.

Sincerely,  
Jeremy MacKinnon

**Correspondence:** Comments on draft GGNRA Supplemental Dog Management Plan/SEIS

I am writing specifically to protest Alternative C. It proposes an off-leash fenced area between LeConte and Tamarind Streets, Montara, CA. (See text at bottom of letter from page 489. It is also mentioned on pp. 79, 489, 548, 699, and other pages throughout the SEIS.)

My reasons for protesting a dog park in a residential area near an elementary school are:

1. Tamarind Street is very narrow street and lacks sidewalks. Currently, cars often have to take turns passing through the narrowest parts, because there is not room enough for two cars to pass. The street is not equipped to support more traffic and more parking.
2. Le Conte Street on which the Farallone Elementary School is located is not a public street, but a privately owned street. (There are some of those in Montara.) The street is in a dreadful state of disrepair.
3. There is no public street lighting on either Le Conte Street or Tamarind Street.
4. It is unwise to put a public dog park immediately adjacent to an elementary school where children could be exposed to possible predators. This proposed park could put our children at risk.
5. For a large concentration of dogs to collect in the middle of our small residential area would lead to a dramatically noisy situation. Barking dogs and owners shouting commands would disturb nearby residents. Neighboring dogs will join in the barking. We residents will experience both a decrease in our quality of life and our property values. We would lose our quiet neighborhood.

**ALTERNATIVES:**

1. Why not put the dog park near the large planned parking lot to be constructed off Highway 1. With the planned central parking area, there would be a place to distribute plastic bags for poop-pickup and a place to dispose of those poop bags.
2. A fenced area close to Highway 1 is more logical than in a tiny residential neighborhood by an elementary school. It would enable easy access for other neighborhoods, such as Moss Beach, and in general easy access for more people.
3. By Highway 1 parking, the barking of dogs will not disturb local residents. Children will not be put at risk from predators. A quiet peaceful neighborhood will be maintained, and our property values will not be lessened.

.....

Below is "ALTERNATIVE C" as set forth in the current SEIS draft:

**GGNRA Dog Management Plan SEIS - Page 489**

Alternative C: Emphasis on Multiple Use - Balanced by County. Under alternative C, dog walking under voice and site control would be allowed in a ROLA (Regulated Off Leash Area) located between Le Conte and Tamarind Street, in a vegetated open area across the street and east of the Farallone View School. On-leash dog walking would be allowed on designated trails in two areas open to dog walking near Montara and El Granada. The vegetation in the ROLA is not comprised of sensitive coastal scrub/chaparral/grassland vegetation, but is mostly annual, non-native grasses in a wet area. This area would become trampled and could become muddy in the winter rainy season, which may cause erosion

during rain events. In general, impacts on coastal scrub/chaparral/grassland vegetation would be limited to the 6-foot corridors immediately adjacent to the trail and within the small-sized ROLA (LOD area). Impacts in the LOD area would be long term, minor, and adverse since the area supports existing vegetation, that would be impacted. Other impacts on coastal scrub/chaparral/grassland vegetation could include trampling and nutrient addition from dog waste and urine; impacts would be measurable and perceptible, but would be localized in a relatively small area.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my two dogs in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dogs for my own health and my dogs' health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. This is a perversion of the public comment process and reflects a worrisome government intrusion into areas that are supposed to be reserved for the benefit of the people and their dogs.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

As a law-abiding citizen who has made extensive use of the GGNRA properties with my two dogs, I strongly urge you to reconsider this ill-conceived plan to prohibit dogs from GGNRA properties.

Sincerely,  
Heather P. Kulp

Dear Superintendent Dean,

My name is Susan Dolder, and I live in San Francisco. I am writing to oppose the GGNRA's draft dog management plan.

The GGNRA can accommodate both recreation and conservation. It was designed as an urban recreation

area, not a pristine wilderness area like Yosemite. In fact, the courts have repeatedly upheld the existing 1979 pet policy. They have said that it was consistent in both fact and intent with the original mandate for recreation upon which the GGNRA was founded.

The GGNRA draft plan disregards the health and well-being of people, dogs, and the community. It arbitrarily excludes the Bay Area residents who exercise regularly with their canine companions. This plan discriminates against all people with dogs, including tourists, seniors, families, the disabled, minorities, and others. The plan does not provide evidence to justify such drastic changes to 40 years of healthy dog and human recreation. The Park Service should revise the dog management plan to:

â–ª Honor the original 1979 Pet Policy. Respect dog-walking as legitimate recreation.

â–ª Provide for extensive off and on-leash dog walking on all trails and other lands acquired by the GGNRA since 1979, especially in San Mateo County.

â–ª Exclude speculative, exaggerated, biased, or misleading statements and studies.

â–ª Provide reasonable ways to address any significant adverse impacts from recreational activities. Use objective standards applicable to other recreational activities (e.g., equestrians, boaters, fishermen, surfers, bicyclists, beach-goers, joggers, walkers).

â–ª Eliminate "compliance-based management," which will allow additional restrictions to be implemented without any public input.

Sincerely,  
Susan Dolder

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As a Marin County resident who walks daily with her dog on GGNRA properties, I am writing to express my strong opposition to the Preferred Alternative F described in the GGNRA's new draft dog management plan. I support Alternative A, the No Action Alternative. The changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in our comments submitted in 2011. As you are aware, the feedback in 2011 ran 3:1 AGAINST the plan. It appears to me that our feedback did not make a difference, that GGNRA's mind was already made up.

Your preferred alternative/plan is overly restrictive and is not based on a single peer-reviewed, site-specific study that supports such a drastic restriction of dog-friendly areas as required by law. By not allowing dogs on most GGNRA lands and requiring them to be leashed on the majority of others, you are banning me and thousands of dog owning Bay Area residents from hiking on neighboring lands and enjoying local beaches which we have been visiting with our dogs for many years.

When I first moved to Marin County, I enjoyed hiking the Tennessee Valley Trail to the beach and back. Then I adopted my first dog in 1997 and I learned to my chagrin that dogs were not allowed in that area, thus I have been there only 2 or 3 times since. No responsible dog owners will leave their dog alone at home and go on a hike in an area where their dog is not allowed. Thus, when you ban dogs you ban people too. Is that the intent? GGNRA land is in a densely populated urban area. It requires a different

management approach than wilderness areas like Yellowstone or Yosemite.

I exercise my dog on weekdays in Homestead Valley and have been for almost 5 years. He runs, he fetches the ball, he socializes with other dogs we meet on the fire road, and I get my exercise while hiking with him. He is under voice control except near the road. The Executive Summary states that Under the no-action alternative, impacts to wildlife would be long-term, minor to moderate, and adverse. What wildlife? I have never seen a northern spotted owl residing there. If there were any spotted owls, they probably already relocated to Mount Tamalpais State Park which is across the road and further from humans. I have seen several coyotes there over the years. We don't mess with them. The only other wildlife I have observed is moles which are digging up the land. Are they under Federal protection?

Most of the visitors I meet in Homestead Valley are local residents walking their off-leash dogs, a few commercial dog walkers, a handful of runners and some bicyclists. Very few people walk in Homestead Valley without dogs. The Executive Summary states that the impact of your preferred alternative would be long-term, minor, and adverse to visitors who enjoy having dogs at the park & while the impact to visitors who do not enjoy dogs at the park would be beneficial. Impact to park operations would be beneficial for all action alternatives, since the site would change from voice and sight control to on-leash. Excuse me, since only 1% of the GGNRA land is currently available to owners of off-leash dogs, why are the preferences of people who do not enjoy dogs and usually do not visit Homestead Valley given priority over people with dogs in this little sliver of land? People who do not enjoy or are fearful of dogs have hundreds of other park options to visit! Furthermore, based on my observations your rangers are not doing anything in Homestead Valley, so any action alternative would require more effort from park operations than status quo. In the 5 years I have been going there I have never met a ranger on the fire road or on the trails, except in a car driving down the fire road once, presumably touring the area. The wildlife and my dog are more at risk from stepping on broken glass from teenagers drinking in the area than this area being at risk from my off-leash dog. Please do not try to restrict me and dozens of other tax-paying residents from exercising our dogs off-leash in the spectacular Homestead Valley.

I have been visiting Oakwood Valley with my dogs for 16 years. Currently I am usually there on the weekends. Most of the people I meet walk their dogs off-leash. It is a very popular dog walking area. Your proposal contains no scientific proof that off-leash dog walking in Oakwood Valley has a detrimental impact on the livelihood of the spotted owl or the mission blue butterflies. Rather than changing the area to leash-only dog walking, can you post some signs in areas where the mission blue butterflies may be found? Finally, since only 1% of the GGNRA allows dogs, I think visitors who do not enjoy dogs could drive one half a mile further to the Tennessee Valley Trail and hike there. I don't think that's a huge sacrifice.

I love to take dogs to Muir Beach. They get super happy and excited when the ocean air hits their noses and they discover where they are. I realize that giving dogs on-leash access to Muir Beach seemed better than no access at all proposed in the original plan, but it doesn't make sense in reality. Would you take your kids/grandkids to Disneyland and not allow them to go on any rides? Dogs like to run, play, fetch and swim at the beach. The only thing they can do on-leash at the beach is dig in the sand. This is a totally unsatisfactory experience for both the dog and her human. Please, keep the no action off-leash alternative! Post signs near sensitive habitat and ticket irresponsible owners who truly do damage to the sensitive areas at the beach.

Somehow the GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. The trails and beaches have been set aside for dog walking and beach going since the original pet policy in 1979. That policy needs to be formalized and supported with more off-leash areas, not less. Make Tennessee Valley Trail accessible to people with dogs! Keep the public informed of sensitive habitat through good signage. Ticket irresponsible visitors. Don't make dogs the

scapegoats.

Sincerely,  
Pavla Sim

**Correspondence:** Please allow our dogs access to the off-leash areas already established. It is already bad that our urbanites have to travel long distance just to enjoy making contact with Mother Nature as they were meant to do. The owners who can manage these drives are the fortunate ones. Can you imagine the thousands of dogs who never get to run freely in an opened area from day one because their owners are limited either financially or mobility impaired or are not aware that dogs need to exercise just like their human owners?! Constricting these areas for dogs is also constricting it for their human families! It is bad enough that public schools do not promote physical education for our children! Shutting these designated areas to man's best friends is shutting down free recreational activities to the American taxpayers and their families! Please reconsider your position by allowing these opened areas to remain as they are - open for dogs off-leash!! California needs these spaces to benefit its children's interests in recreational activities because it promotes healthy behavior! Tapping into recreational activity - taps into the right side of one's brain - thus creativity gets triggered - thus peace and harmony surfaces! Think about our Vets with their dogs and their children or families. Please be generous by allowing these designated areas to exist as designed by your predecessors. We need access to outdoor exercise and for those who love and honor our loyal four legged friends that live in our urbanite confinements, we plea with our hearts and souls. There is nothing more beautiful to experience as a family to enjoy having the family dog join us on an outing where freedom with God's elements can be experienced equally for at least in this outing. Everyday I thank God for allowing me the previledge in being able to access Pt. Isabel Park. As a Nurse, I maintain my health daily along with my dog. It is comforting to do this in a safe environment away from the dangers of traffic and without the confinements of a leash. A promotion of stability gets us home satisfactorily.

I feel sorry for the thousands of owners who have never had an opportunity such as allowing their dog(s) to run freely at least for an hour after being confined in his owner's habitat where only a door exists that allows sounds of people's footsteps or a yard converted into a kennel if there is a yard.

Thank you!

**Correspondence:** Dear GGNRA-

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach and the Oakwood valley fire road.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Many thanks for your consideration in keeping the GGNRA as part of what makes the Bay Area such a wonderful place to live.

Julie Cullinane-Smith

I was disappointed to hear that the GGNRA plans to make 90% o the available off leash areas in San Francisco now 'on leash'. I have a small energetic terrier and it is important that she get to run (much faster than I can ever walk her) a couple of times a week.

I currently visit Chrissie Field, East Beach and the pathway that leads to the warming hut several times a month. I see some areas (tidal pond) and part of the beach already fenced off to protect the wildlife from dogs (and people).

99.9% o the time I visit the area with my dog I encounter no problem letting her run off leash on the beach, nor do I often see any problems with other dogs - even the large packs brought in by the dog walkers. I do, on occasion see a misbehaved dog (and for that matter, a misbehaved person, too).

So why the need to change the current situation? Where is my dog (and all the others in SF) supposed to go for a run?

I strongly urge you to reconsider the proposed change to off leash areas for dogs in GGNRA as the current plan works just fine!!!

Regards,  
Judy Kokura

**Correspondence:** I am not a dog owner. I walk from our home to the Golden Gate Bridge along Crissy Field approximately 200 times a year.  
One of the highlights of my day is to walk on the path along the beach and watch the dogs playing. Most of the dog owners are very responsible and pick up after their dogs. I'm more dismayed at the horse poop that is left by the park police horses that never gets cleaned up. I'm amazed at how well-behaved the dogs are. i so enjoy their romping and chasing and running. If the city/government has an issue with certain dogs off-leash then I would like the city/government to deal with those dogs specifically. The city/gov. should not punish all dogs because of the behaviors of a select few.

PLEASE allow dogs to remain free and to run and play.

In a city/state that is so adamant about free-range animals.....what about dogs? Let them have good lives and run and romp and not be limited by a leash law.

We want our food to be free-range, but the government wants our pets to be leashed? This makes NO SENSE!

Many of these dogs live in small residences as a result of city living. They need exercise, like their owners!!!

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely, George P. Polchow

**Correspondence:** Frank Dean  
GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

February 16, 2014

Dear Superintendent Dean,

My name is Kathryn Coffey and I have been a resident of San Francisco for 20 years. I walk on a daily basis in areas such as Crissy Field, the Presidio trails and weekly at Fort Funston. I walk with my dog in this area precisely because it is located in an urban environment and is unique in offering a safe open space where I can socialize with friends and provide on and off leash exercise for my dog. Walking my dog improves both my dog's and my physical and mental health. My dog is an SF SPCA certified Animal Assisted Therapy dog. Exercise is an important part of her daily routine, both walking with me and occasionally with her dog walker. Access to the GGNRA for this highly social activity is an important aspect of the quality of life in San Francisco. I have noticed over the past 20 years that the dog owners who walk at Crissy Field, specifically since the renovation 15 or so years ago, are responsible, careful, respectful and usually leave the park cleaner than how they found it...picking up trash left by picnickers and other visitors. Walking on the beach with my dog is how my family enjoys our free time and is often the highlight of the visits for friends when they visit from out of town.

I am writing today to express my opposition to the GGNRA's preferred alternative the proposed Dog Management Plan that would greatly limit where I would be able to recreate with my dog(s) in the near and longer term future. The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, and importantly, I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel segregated and discriminated against.

Because dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come per GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It is managed for financial sustainability and contains both residential and commercial activities as an extension of the urban area that surrounds it. As such, it should to be managed to different standards to achieve its fullest potential and provide maximum enjoyment by visitors to and residents of the Bay Area that recreate regularly on this land.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the

SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS permits further restrictions in the future and on newly acquired lands, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS strongly suggesting that this process is only for show and has no substance.

Specifically addressing Crissy Field, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure. Further examining Crissy Field, the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. The reported incidents involving people are much higher. I cannot tell you the number of children I have seen running on the dunes in protected areas where the snowy plover live, families picnicking and playing football right in front of "protected wilderness area" signs, wind surfers displacing people walking on the beach (with and without dogs), trash being thrown around and not in the cans, etc.... Your data has a very narrow lens and, on its own, simply does not statically support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers. Use the money for path restorations and infrastructure upgrades. Where does your data capture the hundreds of thousands of hours of smiles and joy, from dog and non-dog owners alike, that is created by walking with our dogs on the beach and watching them swim.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of historically granted and important dog walking recreation in the GGRNA for generations to come. The SEIS seems to select dog walking as a single threat to the GGNRA. What about the negative impact of very large groups that use the spaces (and take over large areas and roadway access) for events, what about the terrible light pollution emitted from the sports facilities at the west end of Crissy Field ? The myopic approach and grossly disproportional focus on visitors with dogs to environmental impact at Crissy Field and other GGNRA locations is flawed and deeply troubling.

Dog guardians, parents with children, older citizens, disabled citizens and large groups for special events should all have equal access to all GGNRA areas that are not historically designated as wildlife protected areas of the parks. Dogs and people are co-existing now and visits by both groups have grown in the recent years as improvements have been made to the GGNRA lands. Restrictions on dog owners make us a separate class of GGNRA visitors with restricted access. The current preferred alternatives outlined in the SEIS are flawed, based on incomplete information and discriminate against a large population of visitors to the Golden Gate National Recreation Area.

Sincerely,

Kathryn E. Coffey  
San Francisco

**Correspondence:** Dear council member,  
This plan is unfair to dog lovers and their companions. There is so little space for us now, with only tiny

---

little fenced in areas that only create chaos for animals who need space. The guardians of these animals clean up after them, care for them like our children, pay taxes, make good salaries and invest in our dog's and the state - we need the places we have now to spend time that creates healthy dogs, by keeping them exercised and happy. I need to swim my Lab for his hip dysplasia and arthritis and I have no options but the ocean. It's for his health. Please reconsider this ban - I am a tax payer and I want to live here for my career at a large Biotech. I had much better options for a well rounded life in Seattle, but chose my company to have a strong career. I have a dog who helps me through my medical issues and having no space to share with him where he can run and be happy, socializing with people and animals, is not a fair and equitable situation for the many tax paying dog lovers in our cities.

**Correspondence:** I feel strongly that GGNRA and NPS should not take action and should implement alternative A. We need off-leash and voice control areas. Alternative F does not allow for enough off-leash or voice control. Off-leash and under voice control is a must have feature and a reason I and a number of people I know live in San Francisco. I would seriously consider moving to the East Bay/Oakland, should it become more restrictive to walk my dog off-leash and under voice control.

The cost to implement the plan both to the GGNRA and to the people who will get tickets is not positive

---

for anyone in the community. Those without dogs have thousands of options in the Bay Area, and dog owners continue to be forced out across the state. There will without a doubt be thousands of people confronting park staff and it's not something we should move towards. They should be focused on more important things.

Off-leash dogs and responsible owners should not be punished, do not have enough space currently, and should instead be embraced in areas already off-leash. I see more conflicts in areas with leash restrictions than in those without because non-dog owners become even more intense and pissed off when they see people with dogs. My dog is more responsible off-leash than he is when on a leash and he requires exercise which I am not able to provide him with on leash. It's challenging to walk him on leash and it's more stressful. When off-leash, he's able to go at his own speed and he ignores all other animals and park visitors.

I don't really care about commercial dog walking one way or the other, but any time I see large groups they're usually fine.

<b>Correspondence:</b>	Dogs are an important and integral part of our social lives. Dogs need a place to run free. The great majority of dog obey voice commands and their people are mindful of the need to respect cleanliness and wildlife. Allowing areas for dogs and people to enjoy each other and nature with the restriction of a leash is valuable to our quality of life. We want well-managed parks, but not at the cost of too much sterility and loss of freedom to enjoy these parks with our children and dog companions.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to trails within the GGNRA and he is very well behaved.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear Superintendent Dean,

It is painful to even contemplate the effect of the proposed restrictions on dogs in off-leash areas, now under consideration by the GGNRA.

Dogs should be allowed the joy of romping freely in the areas where they are currently allowed- - an area that is minimal enough, comprising as it does a tiny percent of all GGNRA lands.

In an ideal world, more space for this worthy purpose would be available- -but surely, surely, not less!

**Correspondence:** I never thought I would own dogs. But now I do. I have three small rescue dogs all of whom would have been euthanized if not rescued from the shelter. We fostered them, stabilized and socialized them and they became part of our lives.

They are small and we live in a very urban area near the ballpark. They cannot run on the large gravel in the two nearby dog runs. Also, one is very noisy and frightening (at the base of the Bay Bridge) and the other has a lot of big dogs.

Our great joy (and theirs) is going to Fort Funston on the weekend. What a better way to enjoy the open undeveloped areas in the city that walking with our dogs, enjoying the scenery along with other dog owners in the Bay area.

I've always been amazed at how well all of the dogs behave when off leash. I've never seen an incident in the several years I have been going there (other than one dog who got down on the cliffs)

Our dogs are so animated and happy there. They feel safe. They can run around free and stay close to us when we tell them to. We do not let them stray off the path on the way down to the beach.

When they might occasionally bark at another dog when on leash on the sidewalk in our neighborhood, they exhibit no such behaviour when free and running around with other dogs.

And when they hit the beach - it is amazing how they run around and chase each other and meet other dogs. They could not do this safely anywhere else. And it is a joy that should be preserved to all who have access to this.

98% of the people we see at Fort Funston are there with their dogs. These lands are for recreation and it is being used exactly as intended. It is being used well and for joy.

If there have been problems I've not been aware of you should solve them. If that means having a staff member around to monitor any issues (I've never ever seen anyone) then why not fund that by charging for the parking. Or why not let the dog community self organize volunteer "docents"

There could be so many creative ways to address any issues. But banning this joyous resource from well behaved off leash dogs is socially criminal and not what the Bay Area is all about.

I invite you to come for a walk with us one Sunday and see how wonderful it is when a huge number of people from the community can enjoy all the city has to offer its residents (including citizen dogs)

Thank you for considering this letter. Please take this plea seriously. It is important to people like me, who count on their hard earned tax dollars supporting recreational areas like this. We work so we can play. We don't want to pay to be banned.

With kind regards, respect and support for all aspects of the GGNRA - except this proposal.  
Linda Marshall

**Correspondence:** I am opposed to the new severe restrictions being placed on off-leash dogs in the GGNRA. These areas are recreation areas for our urban community. All members of the community should be welcome. The places currently open to dog walking have been successfully used for many years and represent only a small part of the GGNRA. It is unreasonable and unfair to make these changes. I know that the NPS has heard numerous comments opposing these changes. I find it disturbing that our needs as a community are being ignored. This prejudice against dogs in this highly populated and heavily used area doesn't make sense. Please reconsider and allow us to continue as it is. We are not asking for more open space (though I think it would be reasonable to), we are simply asking for continued access. Thank you for your consideration.

**Correspondence:** Out National Parks are a true treasure. They preserve some of the most beautiful parts of our country to be enjoyed by this and future generations. But they are living things not museums. They are to be used responsibly for recreation and enjoyment not preserved to be looked at. They are for individuals and families and those families include dogs. Many of us have wonderful memories of walking our dogs on this region's beautiful beaches, this proposed restriction will prevent those memories being formed in the future. Does the GGNRA really want to be responsible for taking away such a pure and simple pleasure that encourages families to get outdoors and be part of California's natural beauty?

United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,16,2014 19:34:03**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Barri Swett

United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,16,2014 19:42:13**Correspondence Type:** Web Form**Correspondence:** To Whom It May Concern:

As someone who regularly enjoys walking my dog on Crissy Field/Beach, I am writing to express my displeasure with the GGNRA's proposed dog management plan.

The new plan is in direct conflict with the spirit of the use of the land - which is to use it as a recreational

area. The GGNRA was built and designed for dog-walking from the beginning, to allow city residents the ability to walk their dogs in a recreational area. In fact, congressional reports specifically named dog walking as one of the uses for the space when the GGNRA was created. The GGNRA's current plan, however, would seriously restrict dog walking: only 7 of the 22 areas in the supplemental EIS allow off leash dog walking access on GGNRA lands in ALL three counties.â€This management plan allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Additionally, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a blatant reversal without reason. I feel like the plan is set up to fail because it will force more dogs in a smaller concentrated area, which will actually negatively impact visitors than the current system.

Thank you,

Alex Livingston

**Correspondence:** Dear Draft Dog Management Committee;

I think you should spend a bit of time considering the law of unintended consequences in regard to this new plan.

If you continue to push dog owners in to smaller and smaller off-leash locations several things will likely happen. First, as you force the concentration of dogs to higher and higher numbers in these areas, the negative repercussions will increase. To limit damage by dogs and high foot traffic, INCREASING the space available thereby decreasing the concentration of foot traffic will minimize damage. You are doing the exact wrong thing to protect people and the environment.

Second, dog owners in the Bay Area are at the breaking point with restrictions. There are simply not enough areas to hike with dogs. I am a very law abiding citizen. But I will not allow my dog to suffer because of unjust rules. Many, many dog owners feel the same. So we will walk our dogs illegally.

It is unethical to have a city where dogs can be owned, but they are not given ample place to play, socialize, and exercise.

Again, MORE space available for dogs will solve your problems. You are shooting yourselves in the foot with this plan.

**Correspondence:** I oppose the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan.

Our public parks and lands should be for ALL families - including those with furry family members like mine. It is already a challenge to find spaces where my entire family, including my dog, can hike or just enjoy some time sitting outside together without a leash (and actually at all). The GGNRA's draft plan will make the current sub-par situation even worse. The GGNRA should look at the East Bay Regional Parks for an example of how families with dogs can be welcomed in parks instead of shunned.

I believe an acceptable dog management plan must take into consideration the impacts of the proposed plan on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, and must respect the recreational values that are part of the GGNRA's original mission (to provide for the maintenance of needed recreational open space), which this plan fails to do.

**Correspondence:** Good day,

I am writing to voice my opposition to the GGNRA Dog Management Plan.

I am a tax payer, voter, small business owner, nature enthusiast, and a dog advocate.

Discriminating against dog owners by banning dogs from recreational parks such as Fort Funston and Crissy Field under the guise of "compromise" is unjust and bad for the surrounding urban community. GGNRA areas were designed to be accessed for recreational activity and are distinct from protected and isolated habitats such as Yellowstone and Yosemite. Recreational areas adjacent to urban environments need their own form of protection for public recreational use, as opposed to special interests or fringe environmental causes. Less than 1% of GGNRA is lawful dog friendly space. This tiny portion of space allocated for dog families needs not only to be protected and maintained, but it needs to be expanded. San Francisco has a growing population of dog residences. Some estimates say that close to 1/3 of San Franciscans own pets. People and dogs are also products of nature and we require natural space to exercise and socialize. The proposed Dog Management Plan is draconian as it severely curtails and limits the now already small space that dog owners can enjoy. Some maps show up to 90% of existing dog friendly space lost in the GGNRA.

Reducing 75-90% of the currently less than 1% of dog friendly space in the GGNRA is nothing short of an all out government assault against lawful dog owning citizens. We can not afford to "compromise" any more space. The shared recreational use at places like Fort Funston has been very successful since the 1979 handover of territories to the GGNRA. If it ain't broke, than don't fix it.

John Chirico  
Dog owner and nature enthusiast

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash

---

access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

<b>Correspondence:</b>	Dear National Park Service,				

---

I urge you to reconsider your current plan in regards to constraining dog use in the GGNRA. Please do not sacrifice the joys and needs of mans best friend. The land currently provided dogs in the GGNRA not only provides much needed space, play and comfort to many dogs; it gives a wonderful place for their owners to come and relax with their pets, exercise and experience many beautiful areas they might otherwise never see. I hope you can find an alternative to the current plan that does not sacrifice the happiness of so many.

---

Sincerely,

Nathan Hanley

**Correspondence:** I am writing to urge the GGNRA to ensure that imperiled wildlife, including threatened species such as the Snowy Plover and other creatures which live within the GGNRA properties have the opportunity to thrive within the GGNRA boundaries, which means there MUST be areas which are strictly off-limits to dogs.

The GGNRA has a large mix of lands, but it is important in that context that citizens understand that their right to own a dog does not trump the rights of wildlife, or the rights of their fellow citizen to admire the serenity and rare beauty without dog disturbances.

As a lifelong dog lover, I understand that people will want areas to bring their dogs, and even areas where they

may be off leash, but it is absolutely vital that the species which absolutely rely on GGNRA lands have FIRST PRIORITY, and their needs and respect for those needs must always supersede the particular interests of dog owners. Unfortunately, there are many irresponsible dog owners or clueless and short-sighted individuals who think, "Oh, but my dog doesn't chase birds." That is not the point. The point is that the presence of dogs in some areas is absolutely not compatible with allowing the GGNRA wildlife to survive and thrive. If dogs are allowed to be off-leash in some particular portions of the GGNRA, I suggest that those areas

be well marked as the ONLY areas for dogs within the larger GGNRA and, further, that fines for violations of the dog rule in wildlife sensitive portions of the GGNRA be raised significantly. Dogs pose a serious menace to threatened species such as Snowy Plovers just by their presence. In creating a fear-generated disturbance to nesting plovers, for example, a single irresponsible dog owner and canine can undue decades of work to recover the population of the plovers and to set aside areas for them to breed and thrive, at taxpayer expense running in the millions of dollars. The fines for violations of the GGNRA dog rules need to be steep enough to dissuade even the arrogant and irresponsible from even contemplating violating a protected area.

The GGNRA lands are amazing places for RESPONSIBLE citizens and visitors to enjoy, but they must have a very carefully conceived and STRICTLY ENFORCED ban on dogs in wildlife sensitive areas.

Thank you very much for your consideration.

Sincerely yours,

Cindy Margulis

**Correspondence Type:** Web Form  
**Correspondence:** My name is Ronald. I live in Mill Valley. I have lived here for almost 50 years. I use Muir Beach, and Tennessee Valley and Crissy Field and Ocean Beach with great frequency.

I oppose the Preferred Alternatives because they are too restrictive. There is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose the Monitoring-Based Management Strategy that replaced the DEIS Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

The SEIS still lists impacts that might, can, or could happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

The SEIS says that, during the last six years, NPS staff did extensive literature searches to look for reports of impacts from dogs in other parks. In that same time, they could easily have conducted the site-specific

studies that might have shown whether or not impacts are occurring in the GGNRA. Yet they chose not to do them.

The SEIS admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. However these anecdotal claims have no context - how frequent were they, how serious, etc. - and cannot be used to set policy. An SEIS is supposed to be based on science, not anecdote. The SEIS also says it relies on the best professional judgment of NPS staff to determine impacts from dogs and their importance when there are no scientific studies of impacts in other parks available (e.g., p. 396). NPS staff have demonstrated a long-standing, strong bias against dog walking, and the SEIS should not depend largely on their biased judgment and anecdotes for proof that impacts from dogs are currently occurring.

The SEIS says there has to be a no-dog area at all sites where off-leash dog walking is allowed. For example, the SEIS says Muir Beach is too small to have both an off-leash and a no-dog area, so therefore there cannot be an off-leash area at Muir Beach (p. 113). There's no similar idea that sites that are no-dog also have to include off-leash areas. This shows the inherent unfairness of the SEIS.

The SEIS never gives results of public comment on the DEIS (neither does the Response to DEIS Comments by the GGNRA document on the GGNRA website). They say they received over 4,700 comments, but never say how many opposed restrictions on dog walking and how many supported them. The SEIS says: NPS received many public comments complaining that dog use precluded their enjoyment of areas. (p. 100). But there's no indication of how many negative comments were actually made. Are they from a small minority or are they widespread? An independent analysis of the DEIS comments showed that the vast majority (at least 3:1) supported dog walking. This is not reflected in the SEIS.

The SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by public comment to the DEIS and by the San Francisco Board of Supervisors in 2011, and by the Marin County Board of Supervisors in 2014. The SEIS claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. It also claims that because people will still be able to walk their dogs on-leash at some sites, most will continue to walk in the GGNRA. No evidence is given to support either assumption.

The SEIS data still does not support claims that there are major safety problems from dogs that require off-leash restrictions. The total number of dog bites or attacks from 2008 to 2011 (four years) was 95 (p. 21). Even if this number is undercounted and should be tripled or quadrupled, it still represents a minuscule portion of the millions of dog visits each year to GGNRA sites. Even the total number of dog-related incidents (nearly all of which were for having dogs off-leash where they weren't supposed to be) from 2001 to 2011 - 4,932 - represent a tiny fraction of the million dog visits each year (p. 252). The vast majority of incidents (at least 89%) in the GGNRA involve people without dogs, including murder, rape, robbery, drugs, and larceny. People are the safety problem in the GGNRA, not dogs.

The SEIS still does not consider management tools that could mitigate alleged impacts from dogs in the No-Action Alternative. For example, dog training classes, dog-horse workshops, and poop cleanup days could all mitigate concerns about dog safety and pathogens in feces that are used to argue that the No-Action Alternative will not work and therefore the GGNRA must restrict off-leash access.

The SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a national park experience to a large and diverse urban population (p. 1). However, the enabling legislation says the purpose of the GGNRA is to provide for the maintenance of needed recreational open space (Enabling legislation, first paragraph). The SEIS notes, in a negative way,

that In many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities. (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - The objective of [the creation of the GGNRA] is to & expand to the maximum extent possible the outdoor recreational opportunities available to the region. (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972)

The SEIS will not allow off-leash dog walking on any trail anywhere in the GGNRA. The only site-specific consensus agreement to come out of Negotiated Rulemaking was to allow off-leash dog walking on a trail in Oakwood Valley in Marin. This was included in the DEIS. However, it was removed from the SEIS (Oakwood Valley is now proposed to be on-leash only) because the GGNRA decided that there would be no off-leash dog walking on any trail. All the money and work that went into Negotiated Rulemaking was wasted.

The SEIS still will not allow any off-leash dog walking on New Lands acquired by the GGNRA in the future, even if dog walking occurs has traditionally occurred there.

The SEIS cites several surveys of visitor use and visitor satisfaction, including two done in 2011 in response to DEIS comments, that were so poorly done that their results are essentially meaningless. A 2008 visitor use survey at Ocean Beach and Crissy Field used people who intercepted people at these sites and asked about their park usage. However, the interceptors were observed by several people to actively avoid talking to people walking with dogs, hopelessly skewing their results. A 2011 visitor use survey at Fort Funston and Muir Beach, done specifically in response to DEIS comments, only counted people as walking dogs if they had a leash in their hand. People walking with a friend and the friends dog were not counted as a dog walker (because they did not have a dog of their own with them), even though they were only walking there to walk with the friends dog. A 2011 Visitor Satisfaction Survey was so confusing respondents didnt know if they were being asked about their satisfaction with current conditions at GGNRA sites or with the severe restrictions proposed in the DEIS.

The SEIS still describes the visitor experience as focused on people who dont want to be around dogs. This criticism was made of the DEIS too and apparently ignored.

My family visits the area every year and we enjoy taking our ENTIRE family, dog included, to the dog accessible beaches and trails.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I have lived in San Francisco for 35 years and have had companion dogs for most of that time. I have always enjoyed walking my dogs in areas where they can be allowed off leash. I am a responsible dog owner. In the summer of 2012, my wife and I acquired a new puppy, and with the help of SF Puppy Prep, we have trained him to be an excellent companion. He is socialized and well behaved with other dogs as well as people. He is a small (15 pound) cross between a Poodle and an Australian Shepherd. He has been trained to come when called.

For over a year, we have taken our dog to Crissy Field beach on most weekend days. We especially enjoy being able to let him off leash. He is so happy to run and interact with other dogs at the beach, that it brings joy to our hearts and helps to relieve the stresses of living and working in a city. We regard this as one of our favorite parts of living in San Francisco.

In over 100 visits to Crissy Field beach with our dog, I have never observed any problems with off leash dogs. The people who bring their dogs to Crissy Field seem to be a very responsible group of dog owners, and everyone cleans up after their dogs.

I support the status quo. It seems to me that the 1979 pet policy is working very well, and the new draft policy and EIR are not premised on evidence that a change is needed or warranted. To the contrary. If the draft proposed policy were enacted there would be significant adverse impacts. These have not been adequately studied. You would not only reduce the recreational enjoyment for large numbers of people who use the GGRA, you would unduly stress certain areas that remain approved for dogs, as well as SF city parks.

I urge you to consider the recreational purposes for which the GGNRA was set aside, to take a balanced fact-based approach, and to defer any change pending further empirical evidence and study.

Thank you.

Sincerely,

Jeffrey J. Cole  
I urge you

**Correspondence:** The joy that I get from being able to get outside and walk and play with my dog off leash is indescribable. My dog is the reason for me to get exercise, to meet other people and to love the fact that I live in San Francisco. Please do not take that away from me, my dog, and all the other dog owners in our beautiful city.

With that said, I am not thrilled with dog walkers who have four or more dogs running loose. I think they should be regulated and not more than three dogs should be under the supervision of one person.

I love my dog, I love watching him run free, and I love how other people enjoy watching my Golden loving life.

**Correspondence:** I am writing to express my strong opposition to the preferred alternative set forth in the GGNRA's revised draft dog management plan. It is far too restrictive and will significantly impair the culturally valued, time-honored tradition of off-leash dog hiking in small segments of the GGNRA.

On a personal note, I am 63 years old and fighting a fierce battle with stage IV cancer. There is no doubt in my mind that the reason I have done as well as I have in the last year is in very large measure because of the frequent hikes I have been able to take at Fort Funston with my well behaved off-leash dog and the ability to interact with the extraordinary community there.

It is disheartening in the extreme to see such a healthy, community-building activity - an activity that in fact has been enjoyed by humans and their canine companions worldwide for well over 10,000 years - treated as an intrusion, a potential impact to be marginalized if not eventually stamped out altogether within GGNRA. All without a single peer-reviewed site-specific study to support such a drastic change.

Conservation of recreation is a crucial GGNRA value that should not be impaired, and off-leash recreation should be treated with the respect it deserves as a time-honored and cherished cultural tradition.

What legacy are we leaving for future generations if a child receives a new puppy as a birthday present in the year 2050, then realizes there are no hiking trails available, only small fenced pens. Will that child have to learn about the joys of off-leash trail hiking from ancient history books?

Incident reports from 2013 show a small number of dog-related incidents within the hundreds of thousands of visits to the GGNRA, much smaller than the number of reported incidents involving people; again, data that does not support the need for such a drastic change nor the request for a staggering \$2 million for more rangers.

The 1979 Pet Policy was created as a result of extensive public hearings and input from all stakeholders and allows off-leash recreation on a very small fraction of GGNRA lands, with mechanisms in place for dealing with people/dogs who cause problems. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Recreation and resource protection have been balanced for decades within the GGNRA. Let's leave a legacy for future generations that not only supports protection of natural resources but also protects and respects culturally valued recreation in this densely populated urban area, as clearly envisioned by those who established the Golden Gate National Recreation Area. To impair that cultural value significantly without scientific basis would be inconceivable.

**Affiliation:****Received:** Feb,16,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Petra Leible

<b>Correspondence:</b>	I wholeheartedly support the NPS's effort to enact and enforce a stronger dog management policy in San Francisco. The current situation is unsafe for our families, unsustainable for our natural resources and completely out of line with other cities' dog management policies.				

---

As a mother of three living in the city, I am appalled at the misuse of public spaces by dog owners. There are so many dogs off-leash in the public parks that it is nearly impossible to walk anywhere without an off-leash dog running up to me and my children. Unfortunately, the attitude of many of these dog owners is that their dog is entitled to use public space just as people are, but I have witnessed non-service dogs biting children, dogs peeing on personal belongings, running through fenced children's playgrounds and on public transportation. I even see off-leash, non-service dogs in grocery stores.

Last month, a very large labrador approached my two sons who were strapped into their stroller while we were walking down a very busy section of Fillmore Street. It shoved its nose in my son's face. My son pushed him away. This dog was off-leash and the owner casually said "he's friendly." No matter how friendly, dog owners cannot always predict their own dog's reaction, nor can they predict the reaction of a startled toddler who has just been accosted by an uninvited large dog.

Prior to that, my 2 year old son has been knocked over by large dogs running off-leash in Julius Khan Park and again INSIDE the gated playground in Alta Plaza Park.

Dog owners in this city need clear guidelines and signage to tell them where their dogs are welcome and where they are NOT welcome. These areas and laws should be enforced.

I am concerned by the amount of media and grassroots attention that the opposition to this effort has gathered. I believe the supporters of this effort are not going to be as loud as the opposition so I sincerely hope that the NPS take into consideration the years of formalized complaints filed by families of children who have been bitten, elderly who cannot safely walk down the street, beach-goers who cannot find a clean spot to lay their blanket, and cannot sit without fear that a dog is going to charge at their children.

I commend your effort to right something that is horribly wrong with this wonderful city and make it a safe place for all of us.

This is written by a mother AND DOG OWNER who wants the best for my family and city.

Regards,  
Rachel Holbrook

**Correspondence Type:** Web Form

**Correspondence:** I am a native Californian and homeowner living in Bernal Heights and take my dogs to Fort Funston almost every day of the year. Part of the appeal to living in California and San Francisco is the access to parks and the beach. Being able to take my dogs out and get regular exercise benefits both my physical and mental health. It is greatly discouraging to have felt that all talks and negotiations were completely disregarded when this new draft was put forward with very few changes in place.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Enclosed parks are generally stressful for dogs and humans and do not allow enough space to properly exercise my dog or self.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

There is no valid reason being presented to restrict our access to these lands. I would happily pay a yearly or day use fee in order to make sure the land and space was being cared for and supported. There has been no evidence presented that says that dogwalkers are affecting the land or wildlife in a negative way. Please do not make unnecessary restrictions to land that we treasure and frequent.

**Correspondence:** I work for an environmental organization and have a long history in the environmental community, going back beyond the early 1990s when I was chair of the San Francisco Bay Chapter of the Sierra Club (however I do not represent or speak for the Club today; my views are solely my own).

I want to thank the Park Service for many years of dedicated stewardship. I have personally participated in trail maintenance in the GGNRA and have seen much good work at all levels by rangers, staff and administrators. I have been supportive of Park Service rules for a very long time, especially on user group issues.

I have lived very near the Marin Headlands since the 1980s and have never owned a dog or taken one into the GGNRA. But on the issue of Alternative F, I respectfully ask my friends at the GGNRA to consider relaxing some of their proposed dog restrictions a bit.

Like the other National Recreation Areas, the GGNRA is an urban park, not pristine wilderness. Some usage rules that make perfect sense in true wilderness or extremely endangered areas appear harsh and impractical in places that are very close to major population areas.

In Marin especially, many residents live near the GGNRA and have dogs without a lot of other places to take them. Obviously, if we were to turn the entire GGNRA into a dog park for a million canines a day, that would be a problem. But finding a few places where they can run won't kill massive numbers of birds or cause the extinction of severely endangered species of fauna and flora.

Dogs are a beloved and healthy part of many families. Surely we can work together to find a good compromise about where they may be allowed under voice command and how to keep those areas clean. I would urge you to try again to work with the public to find that better solution.

Thank you for listening and for your continued good stewardship of our parks.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** My name is Stephen Austin from Pacifica, CA. As the owner of two small dogs who regularly walks my pets on and off leash (under voice control), I oppose the overly restrictive Preferred Alternative and think that the 1979 Pet Policy and off-leash access is preferable. The SEIS plan focusses on things that "might" "can" or "could" happen, but does not give any evidence that these things have ever happened at specific sites. It does not give any data that supports worries that there are major safety issues that necessitate off-leash restrictions. The vast majority of serious incidents in the GGNRA are serious crimes, including murder, that do not involve dogs at all. The Monitoring-Based Management Strategy focusses on compliance with leash restrictions and not on any actual harmful activities. When Congress created the GGNRA in 1972, it intended that it "expand to the maximum extent possible the outdoor recreational opportunities available to the region." The SEIS, however, seems to be focussed on people who don't like dogs, ignoring those of us who value the recreation and exercise provided by dog walking.

**Correspondence:** Superintendent Frank Dean,

I would like to voice my opposition to your dog management plan. I live in Sonoma and I am handicapped. My well behaved labrador retriever and I regularly drive down to Crissy Field because he loves that beach. It is the only place where I can park myself in my wheel chair and throw the ball for my dog so he gets some exercise and I can sit back and watch him play with the other dogs. After many years of doing this, I haven't seen any conflicts between dogs and people or dogs with dogs. In fact, on the contrary, everyone seems to co-exist perfectly despite it being a very bustling place. I oppose your Preferred Alternative F for that area because it is too restrictive. It seems reasonable to me that people need a large area of beach to spread out and if you reduce that area, you are asking for trouble. I insist that you leave our recreation areas alone. I support the no action or Preferred Alternative A for all the areas. It seems to me that the GGNRA has lost its way in terms of purpose. I urge you to return to your roots and manage the GGNRA as a recreation area not a national park for tourists. Dogs are an important part of people's lives and we need to maintain areas where people can recreate with them.  
Thank you.

**Correspondence:** I need to hit the points, so to begin with:

Dear Superintendent Dean,

As someone who walks regularly with my dogs in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dogs for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Now that that is done, let me get personal. The above is in keeping with my views on this issue, but it is only the tip of one very large iceberg. The lands you administer are lands that have been used in many ways for a very long time by the people who live here. People like me. One of those traditional uses is dog walking. It is one you are right to be concerned about, but not in the way in which you are. You need to be working to insure that it continues...it and the other uses we have for these lands.

My greatest personal interest is in the area known as Fort Funston, since I go there daily with my dogs, as a professional dog walker. At least that has been my profession for the last 4 years. Before that I was there every weekend, sometimes Saturday and Sunday with my own dog for about 5 years. At Funston, we share the land with Horses, surfers, fisherman, hang gliders, families with children, older folks, young people, you name it. And we do so with very little conflict or incident. It is a truly amazing thing, given the diversity, that there aren't more incidents/conflicts, but there aren't. The GGNRA needs to admit that, and to embrace the wonderful thing they are a part of, or they need to get off of our land. The city has said that it isn't feasible to take it back, but if you can't do for the people of this community, you need to get out, and let us make it feasible. If you insist on being our enemies, we don't want you in our town. So just get out. If you would like to help keep this available to the world, and especially to the residents of the Bay Area as an URBAN RECREATION AREA, then you have to listen to the people who live here, and especially to the ones who recreate there.

This is a major coastal city. We are not inland, and so we will have access to our coastline. We need that access. As a matter of fact, I don't know the law, but I do know that that access is our legal right going way back. This is not A national park. Even if it is administered by the National Park Service. This is an URBAN RECREATION AREA, and also our back yard.

This city is beautiful, but have you ever seen our yards. If you are lucky enough to have one, you are not going to be doing a great deal of communing with nature in it, as it is the size of a postage stamp. We depend on our parks (both the city parks, and the beaches and coastal areas) to make life liveable, and even enjoyable, and so do our dogs. They have to get out and exercise, and so do we. In watching them we rejuvenate our spirits, so we can go and do it again tomorrow. If you will not let us do it there, we will have to do it in the city parks, which will be overrun. With dog walkers locked out (that is what you plan does, the areas we have been left will be intolerable due to overcrowding, and so we will have to go elsewhere), very few people will be out there using the land except on the days when it is hospitable, warm and beautiful. You will have the hang gliders, a few surfers, an occasional fisherman. My guess is that you will start working on getting them off your land then, because I really don't think you want to have anything to do with people. I think you actually want everyone off what you now consider to be yours. It isn't. The GGNRA was formed to protect against development as I understand it, development of our lands by people who could buy it and turn us out. You are supposed to help us retain it not turn us out like the people we hoped you would save us from.

We are being ignored in this process, and we will not be silent about it. We can't make you listen, and you have made it quite plain you don't want to hear what we have to say. After previous rounds of comments on previous plans, no changes have been made that amount to anything. Certainly none that address the overwhelmingly negative response to you plans to lock us out of our coastlands.

You truly have no regard for the communities you are in. The impact of your plan on my industry will be huge. Many people will no longer have work. Businesses will fold, debts will go unpaid. People who contribute to society now will find themselves unable to do so anymore. I really think you need to go away, or totally revamp the way you do what you do. If something is urban, it necessarily involves people. If you don't care about people, you can't be expected to take care of an urban recreation area. Thanks for not reading or paying attention to yet another one of my rants.

**Correspondence:** Please do not put such stringent limits on our off leash areas! As a mother and a dog owner who frequents crissy field daily, I see so many examples of people, children, dogs, wildlife and bikers enjoying the area simultaneously and in harmony. Changing the way people can use an area that is so vital to our existence in sf, as dog owners and citizens, will undoubtedly have far reaching and unpleasant repercussions. Off leash areas will become more crowded and there will be more incidents of dogs clashing in such a small area. What about families who bring their off leash dogs to crissy field? Will they now be relegated to the one off leash area with all the other dogs and walkers/owners? Was there any thought about what this would actually look like on a warm spring day, when hundreds of people walk their dogs to enjoy the weather? What about the incidents of children and dogs being forced to be in a small area (in this instance)? This proposed plan will, essentially, create an environment of tense discord and will not be promoting the thing that we as San Franciscans value most: diversity, responsibility for our environment and living harmoniously. There must be a better way that does not isolate or alienate a huge percentage of the population and take away rights of people who have built their lives with the expectation of having equal and free use of such an important and beautiful place. I honestly hope the proposed plan does not go through as it stands now, and that there is serious thought about a more just and equally beneficial solution.

**Correspondence:** Please keep a reasonable amount of off leash areas available to the taxpayers and citizens of California. All the proof you need for the demand for this recreational activity is to see Funston Beach parking backed up every weekend. These are dog people, not people looking for shore birds or sea shells. Allowing our dogs to run and socialize with other dogs makes them happier and safer for the community as a whole. Off leash recreation, yes recreation, is just as valid and important as horses or kids on the beach.

Thank you.

Joe Vohs

I live in the Presidio of San Francisco and live for my time off hiking throughout the aforementioned areas above with my family member, dog, and friend, Wilson the Labradoodle. My wife, myself, and Wilson are constantly enamored by the audacious beauty of Northern California. Our four legged friend deserves to be as moved as we are by such grandeur north of the golden gate.

I absolutely could not disagree more with the potential banning of man's best friend from these areas. As civilization continues to emigrate to higher dense living situations across our major cities in the US, these areas only become more important for us all to stretch our legs.

Keep California Free...For all of us. Humans and Man's Best Friend.

Patrick Harrington, Ph.D.

**Correspondence:** Hello,

I go to play in our neighborhood rec center with my children. There is a sign on the fence that dogs are not allowed inside but there has been consistently at least 4 dogs running free. When I let the owners know that dogs are not allowed there, they tell me that they always go there without a problem!! They treat it as a dog run for their dogs. Also whenever we go play soccer in other fields where dogs are also

not allowed (e.g. Rossi park) there are dogs and their poop everywhere. It is unsanitary and unsafe. Dogs should not be allowed on fields that were designed and reserved for youth recreation. I think there should be clear signs about fines and what number to call to report violators. I think there should be dog parks where owners can bring their dogs.

Thank you working on making our parks and public places safer.

**Correspondence:** I have lived in the Bay Area for more than 45 years, paying State and Federal income tax as well as property taxes for much of that time. I have lived with wonderful rescued German Shepherds for much of that time; they have been socialized and active dogs who loved meeting other dogs and running and playing off-leash. Doing so kept them, and me, healthy and happy.

There used to be many areas where this was allowed, but most have disappeared. More than half of the people I know have dogs and pay taxes, but have very few places they can go to exercise with their off-leash pets. Why isn't this more important to those who govern the National Parks? There should be multiple parks and beaches where dogs and their people can socialize with their peers.

Please expand, not contract, the areas permitted for off-leash activities for dogs.

**Correspondence:** Dear Superintendent Dean,

In the past I have felt constrained by dog-leash policies on Limentour and other beaches around the Bay Area. Frankly they stink. Dogs and their responsible owners need and deserve the freedoms that open space and beaches afford.

I have innumerable memories of exploring with my Scottish Terrier Art, the Presidio, the Headlands, Mt Tam and so many other pristine places. My dog Art served not only as a companion but at times as a much needed guide. To diminish anyone's ability and safety with similar experiences seems a shortsighted measure that serves an ideological agenda and not living people and pets,

Today my Family went for a walk down to Marshall's Beach. other than paw prints there was no evidence of dogs. However I did pick-up 3 plastic cups littering the trail, carelessly left by humans. No feces but some nasty plastic.  
Dogs are NOT the culprit. People are.

While I may understand the intent, the result falls far short of the results.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

R Stutch

**Correspondence:** Dear Frank Dean,

I am just another bay area resident that is very concerned about the GGNRA's overly restrictive dog policy. Please be reasonable. There is enough open space for all to share. Healthy and well-adjusted humans and dogs is a win win factor for any society. It is just smart urban planning for a community to accommodate families like us who have dogs who need the exercise (running, swimming, walking, and or hiking) and socialization to be good citizen dogs in the community. In order to get the proper exercise that some dogs need, they need to be off leash. To run and play with other dogs, to run and fetch a ball, to swimming are just some activities that can NOT be done on a leash with the owner at the other end of this leash. So again please be reasonable in your decision making, for dogs are integral members of today families and their needs are few, but their gifts are immeasurable.

Thank you for your time and consideration,

Nicole Skerry

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Theresa Johnson

To Whom It May Concern:

Thank you for the opportunity to comment on the Supplemental Environmental Impact Statement (SEIS). I live in the city of San Mateo and do visit the GGNRA regularly. I consider myself sympathetic to domestic animals' needs and since a child continue to adopt shelter animals to be my companion pets.

I am compelled to comment on the SEIS because of yet another poor visitor experience due to unruly dogs during my recent visit to Fort Funston, Lands End, Surtro Heights Park, Crissy Field and Ft Mason for a geology class. Like other visits to GGNRA, this one was no different in terms of witnessing dogs eliminating themselves all over the park. I was surprised to observe many owners leaving their dog's solid waste behind in its raw form or packaged inside a doggie bag. I witnessed a person walking thru the Crissy Field fenced wildlife area with their leashed dog, despite the signage stating this type of activity is not permitted. I watched unleashed and leashed dogs lunging and jumping at strangers, who did not request, nor welcome, this type of behavior. I have witnessed this type of owner/dog behavior on many prior visits to GGNRA.

I believe the GGNRA is a unique within the NPS park system, unique because of it many competing interests that need to be managed; very high use by people and dogs, high need for effective and ongoing public education of GGNRA rules/regs, management of sensitive species and natural resource and oversight of cultural/ historical artifacts and buildings to name a few.

After reviewing the SEIS, I do not support Alternatives A, B, C and E. Because I visit GGNRA without my pets, I do support Alternative D but realize the political environment will not.

I do support Alternative F and the monitoring based management strategy outlined in the SEIS. I strongly encourage NPS to move forward with its implementation.

---

**Correspondence:** The GGNRA's proposed dog management plan is too restrictive. If this plan is implemented, there will not be enough places for us to exercise our dogs.

The GGNRA is a Recreation Area, not a wilderness. Most of the land in the GGNRA is not near a trail, anyway, and these lands would not benefit from additional restrictions.

Please enforce the existing restrictions on dogs, not add more restrictions. Any additional lands added to the GGNRA should also allow dogs.

**Correspondence:** Frank Dean  
GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

February 16, 2014

Dear Superintendent Dean,

My name is Michael Carboy and I live in San Francisco. I am writing today to express my opposition to the GGNRA's preferred alternative the proposed Dog Management Plan that would greatly limit where I would be able to recreate with my dog in the near and longer term future.

I have lived here for over 20 years. My wife and I enjoy Crissy Field, Baker Beach and Fort Funston with our retriever. We visit these locations weekly, usually during the very early hours or at the end of the day just before sunset. Our dog loves to swim and play with the other dogs. We enjoy socializing with the other dog guardians and with non-dog walkers who are also enjoying the beach. Very often people with children like to have their children play with our retriever as she fetches balls from the water that the children toss. These places offer a safe place where we can enjoy some open space in an urban environment. Access to the Golden Gate National Recreation Area (which is not a National Park, but a Recreation area) for this highly social activity is an important aspect of the quality of life in San Francisco. It is also important to me that my wife and children have a safe place to go when I am traveling. The presence of other dog owners and professional dog walkers adds a critical element of safety to these areas. People walking their dogs are alert to things that do not look right and are always quick to help others at the park. Further, when my elder parents visit they enjoy walking with us and our dog, on and off leash. Access to these areas is critical for a safe walk.

The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

In addition to finding the GGNRA preferred alternatives to be grossly ill considered and discriminatory, I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens, make the dogs feel trapped and visitors using them will feel segregated and

discriminated against. Perhaps we should put all the families with children in fences ? This way they cannot play Frisbee on the dunes, picnic in the wildlife protection areas and toss their trash around the beach. I know our children would be very unhappy with this arrangement.

Because dog walking was specifically referred to as a long-standing use for the newly created Golden Gate National RECREATION Area in 1972, this specific recreational use should continue for years to come per GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It is managed for financial sustainability and contains both residential and commercial activities as an extension of the urban area that surrounds it. As such, it should be managed to different standards to achieve its fullest potential and provide maximum enjoyment by visitors to and residents of the Bay Area that recreate regularly on this land.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS permits further restrictions in the future and on newly acquired lands, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, in reviewing the SEIS it appears that a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS. Such clear disregard for a large number of comments strongly suggests that this process is only for show and has no substance.

Specifically addressing Crissy Field, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure. I cannot tell you the number of children I have seen running on the dunes in protected areas where the snowy plover live, families picnicking and playing football right in front of "protected wilderness area" signs, wind surfers displacing people walking on the beach (with and without dogs), trash being thrown around and not in the cans, etc.... Your analysis has a very narrow lens and appears to be highly biased.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of historically granted and important dog walking recreation in the GGNRA for generations to come. The SEIS seems to select dog walking as a single threat to the GGNRA. What about the negative impact of very large groups that use the spaces (and take over large areas and roadway access) for events, what about the terrible light pollution emitted from the sports facilities at the west end of Crissy Field ? The myopic approach and grossly disproportional focus on visitors with dogs to environmental impact at Crissy Field and other GGNRA locations is flawed and deeply troubling.

Dog guardians, parents with children, older citizens, disabled citizens and large groups for special events should all have equal access to all GGNRA areas that are not historically designated as wildlife protected areas of the parks. Dogs and people are co-existing now and visits by both groups have grown in the recent years as improvements have been made to the GGNRA lands. Restrictions on dog owners make us a separate class of GGNRA visitors with restricted access.

The current preferred alternatives outlined in the SEIS are flawed, based on incomplete information and discriminate against a large population of visitors to the Golden Gate National Recreation Area.

Sincerely,

Michael Carboy  
San Francisco

<b>Correspondence:</b>	I take my labrador retriever to either Crissy Field or Fort Funston every weekend. It's my favorite time of the week for me, and my dog, Gary. He LOVES running around chasing his ball and meeting other furry friends.				

---

I'm shocked as these proposed new restrictions. I've tried really hard to understand why they are needed, and it just doesn't make sense. Then I found that the proposal is based on either no data, or old data.

Please don't let this happen. It will have a massive impact on many San Franciscans, and just isn't needed.

**Correspondence:** I am writing to protest the GGNRA's draft dog management plan. One of the great joys contributing to quality of life in Marin is access to its trail system with our dogs. It is hard to understand what motivates a plan to eliminate off leash dog walking on trails and on Muir Beach. For many of us, our dogs are our most important companion and encourage us to maintain a healthy lifestyle through walking.

This is to register my strong objection to any plan that changes the current off leash dog walking allowance.

**Correspondence:** I'm the parent of two young boys (7 and 2). I understand that some parents find off-leash dogs disruptive and scary. But I love seeing dogs run on the beach and would absolutely hate if that changed. There are many, many, many parks and places for kids that dogs are not allowed at all. Don't take the few beaches dogs are now allowed away from them and their owners.

**Correspondence:** Dear Superintendent Dean,

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

When Crissy Field was created, one of the stated purposes was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas.

Sincerely,

Jennifer Hooker

**Correspondence:** This is a delicate subject. I have a dog and enjoy going to our parks with and without my dog. As a dog owner, I fully support the proposed alternative F. This alternative provides ample areas for dogs to exercise off leash while enabling the rest of the park to be enjoyed by all citizens. I often see off leash dogs eliminating themselves on the path or on the grass where children (and adults) are playing - yet the dog owner is not there to pick up after his/her dog. We all should be enjoying the sights and views in these parks instead of keeping our eyes glued to the ground in order to avoid stepping in dog waste. Our children should be able to play in our parks without fear of landing a pile of dog poop. These parks are for all citizens, not just dog owners. There is plenty of space for everyone in Alternative F. When my dog was younger and still had some aggression towards other dogs, I would walk my dog in areas designated as "leash required" expecting that we would be able to avoid conflicts. However, every day I would encounter dogs off leash. When I mention the leash requirement to the owner and ask him/her to leash their dog for its own protection, 9 times out of 10 they would not and indicate that I was inconveniencing them! Our park employees have much better things to do than enforce leash laws. Having designated, fenced off leash areas frees them up for other tasks and protect the environment, our pets and our children while allowing everyone to enjoy our parks.

**Correspondence:** Frank Dean  
GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

February 15, 2014

Dear Superintendent Dean,

My name is Barbara Coffey and I live in New Jersey. I am writing today to express my opposition to the GGNRA's preferred alternative the proposed Dog Management Plan that would greatly limit where I would be able to recreate with dogs in the near and longer term future. I visit San Francisco several times a year and going to the beach with my sister's golden retriever is my favorite thing to do when I visit. We take long walks on the beach at Ft. Funston, Baker Beach and Crissy Field. Her dog loves to swim and the children on the beach get very excited when they can throw the ball into the water and our dog retrieves it. It is truly a very special thing that you have in San Francisco, please do not ruin it. I love watching the dogs play and run and swim. It is pure joy in the middle of a city and a welcome escape from the business of every day life. No other city has this special place for all people - with and without dogs - to visit.

My sister called to my attention the proposals in the SEIS. It does not take much to realize that the conclusions reached in the Supplemental Dog Management Plan/SEIS are deeply flawed. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

In addition to finding the GGNRA preferred alternatives to be grossly ill considered and discriminatory, I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens, make the dogs feel trapped and visitors using them will feel segregated and discriminated against. I do not visit San Francisco to go stand in a fenced in area.

Because dog walking was specifically referred to as a long-standing use for the newly created Golden Gate National RECREATION Area in 1972, this specific recreational use should continue for years for come per GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It is managed for financial sustainability and contains both residential and commercial activities as an extension of the urban area that surrounds it. As such, it should to be managed to different standards to achieve its fullest potential and provide maximum enjoyment by visitors to and residents of the Bay Area that recreate regularly on this land.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS permits further restrictions in the future and on newly acquired lands, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). When I visit we like to go to several beaches. It would be an enormous disappointment to not be able to visit some of these beautiful places while other visitors without dogs are welcome.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure. When I visit I frequently see families running on the dunes in protected areas where the snowy plover live, picnicking and playing in areas protected as wilderness areas. You would be well served to increase enforcement among the non-dog walking population.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of historically granted and important dog walking recreation in the GGRNA for generations to come. The SEIS seems to select dog walking as a single threat to the GGNRA. I note the negative impact of businesses in the Presidio and the traffic and noise that they bring, the large charitable events that are held at Crissy Field, and special events such as the Americas Cup. There seems to be no mention of this in your report or any efforts to curtail these activities. The singly focus on visitors with dogs to environmental impact at Crissy Field and other GGNRA locations is flawed and deeply troubling.

Dog guardians, parents with children, older citizens, visitors with and without a dog, disabled citizens and large groups for special events should all have equal access to all GGNRA areas that are not historically designated as wildlife protected areas of the parks. Dogs and people are co-existing now and visits by both groups seem to have grown in the recent years as improvements have been made to the GGNRA lands. Restrictions on dog owners would make me a separate class of GGNRA visitor with restricted access.

Even the small bit of research I have been able to conduct as background for this letter makes it clear that the alternatives outlined in the SEIS are flawed, based on incomplete information and discriminate against a large population of visitors to the Golden Gate National Recreation Area. I urge you to consider alternatives that provide equal access to all families and visitors. I would be crushed if I could not enjoy a walk on Crissy Field, Baker Beach or Ft. Funston with my sister's dog running along side us and playing in the water and with other dogs.

Sincerely,

Barbara Coffey  
85 Norwood Ave

<b>Correspondence:</b>	This is the second time I am submitting comments on GGNRA plans to limit access for dogs in GGNRA lands. The first time, mine, and many other comments were disregarded. So here				

---

were are again. I support plan A or F.

I walk my dog every week in Crissy Field and Marin Headlands, including Miwok Trails, Muir Beach, Rodeo Beach, Tennessee Valley Trails, and in areas in San Mateo county. The provides an opportunity for exercise, enjoyment of trails, socializing with friends as we walk (with friends who own dogs or don't) and keeps me sane, gives me the ability to hike and enjoy our lands which brought me here, and without I would leave. I need this recreation with my dog. San Francisco is full of people like me, who need to recreate with their dogs. Dogs need to recreate as do we. The proposed limitations will make my life, my dog's life, and my friends' lives, who walk with me, impoverished. I can't imagine living in this area if the draconian measures take hold.

I am a scientist, and do not see the validity of statements about dog impact on wildlife and plants. This issue needs to be addressed in order to impose measures such as proposed. I believe it is a legal requirement for Federal Government to make policy changes, where it invokes scientific statements, to present peer reviewed studies. That has not been presented. ie. how are dogs impacting areas with proposed changes in access.

The lands in question are in urban environments, and there was a deal to allow Federal Government to maintain them in the spirit of recreational areas for people and dogs. The proposed changes defy that spirit, and present a disconnect in the way people living in San Francisco, Marin, and San Mateo enjoy the lands, with their dogs or without, and the new draconian measures.

If these policies take effect, the small existing parks that allow dogs will be inundated. There are more dogs in San Francisco than children. Dogs are adored by this population. How does plan take into account shifting demographics, importance of dogs for human health, and the importance of exercise and time spent with dogs as important paradigm in human health?

It's essential we keep current trails and beaches open to dogs. It is such a small percentage of GGNRA already, it would be sad loss to us, and then to San Francisco to those of us who are good citizens and specialized in biotech, high tech, all sorts of industries this area wants to attract, to make this a place we can no longer live with our dogs.

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Building 201, Fort Mason  
San Francisco, CA 94923-0022

RE: SEIS Dog Management Plan

Dear Superintendent Dean,

I am writing to oppose your restrictive dog management plan. As a taxpayer, I am quite shocked that after millions of dollars, and years of compiling information for this tome, there isn't one shred of evidence that dogs are having a negative impact on our recreational lands. I wrote a comment back in 2011 for the DEIS and feel my suggestions for better education, improved signage and enforcement of existing rules were completely dismissed. The fact that comments ran 3-1 against your Preferred Alternative F and you went ahead and rolled out basically the same plan with just a few cosmetic changes is infuriating and telling that you are determined to kick dogs off no matter what.

I have been visiting GGNRA lands, including Oakwood Valley, Miwok, Homestead Trails and Muir Beach, for decades. I now see more wildlife, including bobcats, coyotes, rabbits and deer than I have ever seen before. There have even been reports of mountain lions. It goes to the fact that people, dogs and all kinds of wildlife can and do co-exist. The SEIS admits there are no scientific, peer-reviewed studies that show impacts from dogs. For example, on vegetation or soils, (page 375), so it cites anecdotal observations of impacts made by NPS staff. This document, which unfairly sets out to eliminate or displace a major user group, is supposed to be based on science, not anecdotes. Without site-specific studies, there is no proof impacts are occurring. If you have soil or water reports that conclusively link problems directly to dogs, I suggest you provide them.

The SEIS data still doesn't support claims that there are major safety problems associated with dogs that require off-leash restrictions. In fact, according to GGNRA data collected between 2001 and 2006, incidence reports that involved dogs (7%)aled in comparison with the majority of problems, which involved people (93%).Park personnel and resources required by visitors for instances of injuries, fatalities, rescues and missing persons far outnumbered the same situations for dogs. In other words, millions of dogs visit the GGNRA every year and the problems associated with them are miniscule at best. The other safety argument is that women, in particular, feel safer when with a dog. I would not feel comfortable hiking on any trail alone without my canine companion for protection. By banning dogs on many of our trails here in Marin, you are virtually cutting off access to women, many of whom would stop using the trails if they couldn't bring their dog.

I am opposing the Preferred Alternative F for all Marin sites because it is too restrictive. I would urge you to consider the no action alternative or Alternative A. After reviewing the DEIS, it appears that you didn't incorporate any of the suggestions the public thoughtfully provided. In fact, there seems to be no accommodation or compromise on your end at all. These restrictions are as draconian as it gets. I believe the driving force behind these harsh uncompromising rules are several groups including but not limited to, the Golden Gate Conservancy, The Audobon Society and The Sierra Club. What a shame that these groups have taken over what is supposed to be the people's parklands for recreation. I do believe in balance in usage but this dog management plan is simply unreasonable. Dogs are already banned from 99-percent of lands managed by the GGNRA. By taking away 90-percent of that 1-percent, we will be left with nothing. In fact, here in Marin you've managed to take away all of the looping trails and require dogs on-leash on just five dead-end trails. That is not only harshly restrictive but down right irresponsible. The SEIS also sites that the only off-leash area for all of Marin's 60,000 dogs would be a small stretch of Rodeo Beach. That beach is only accessible via car. Right now, many people can walk to their favorite off-leash trail including Oakwood, Miwok, Homestead and others. These federal lands are intertwined with our neighborhoods. Forcing people into their cars to exercise themselves and their dogs is not only horrible for the environment but also hard on the pocketbook. I also think it's quite fiendish since the GGNRA has been in the process of downsizing the parking lot at Rodeo Beach and will begin encouraging people to take shuttles therefore making it increasingly impossible for Rodeo to become a full fledged ROLA in the future.

Responsible off leash dog walking should be able to continue in as many areas as possible. The 1979 Pet

Policy was a visionary document that was well planned and thought out when it came to deciding which areas would be able to accommodate people and their pets. The idea was to spread it out and make sure all units or areas had a little bit of everything. Trails that dont allow dogs, trails that allow dogs on leash and other trails that allow dogs under voice command. I urge you to reinstate the 1979 Pet Policy and enforce the existing rules.

In Marin, the GGNRA Dog Management Plan is simply devastating to our culture and lifestyle. We rely on our trails and beaches to maintain a connection to nature. And we do this in tandem with our dogs. NEPA law required agencies to consider impacts on surrounding communities. This has not been done and I find that not only illegal but unconscionable.

Please remember that the GGNRA was established to provide much needed recreation for our urban area. You must go back to your enabling legislation.

GGNRA was established by Congress in 1972 (PL 92-589). The language of the enabling legislation states the parks purpose as follows: 'In order to preserve for public use and enjoyment certain areas of Marin and San Francisco counties, California, possessing outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is hereby established.

The GGNRA lands are designed urban parklands with buildings, signage, structures and trails built by humans. It is not a natural zone or back country wilderness area such as Yosemite or Yellowstone. This land is not for visitors but for the residents of the Bay Area. As much as you want it to be, it is NOT a national park and needs to be managed differently. And the needs of the people and their dogs must be considered.

To reiterate. I support the no action alternatives in all 22 areas listed in the SEIS.

Thank you.

Cassandra Fimrite

<b>Correspondence:</b>	I am a dog lover, dog, owner, and dog advocate, yet I feel that the dogs off leash at Fort Funston really interfere with the teaching program that is on-going between the SFUSD and the National Parks service. As a teacher, I was there on an overnight trip with my students. The proximity of the off leash area really interfered with our learning experience. We had some children who are extremely phobic. Many of the dog owners did not have command verbal of their pets. I believe there should be space for off-leash opportunities, but it should be limited to an area where educational goals are not being jeopardized.

Dear Superintendent Dean,

As a person who walks and runs often with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is much too restrictive and will prevent me from recreating with my dog and many like-minded friends for all of our good health as we have on GGNRA properties for many years.

Since there are more dogs than children in San Francisco, it seems a drastic step to discriminate against dog owners. Environmental degradation due to dogs is insignificant and can certainly be mitigated in minimal locations as necessary. I oppose fences as both an eyesore, and, a ridiculous initial as well as on-going expense. Unusual regulations will only require unusual and expensive enforcement. There is no justification in the dog management plan for major changes.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

County and on new lands that the GGNRA acquires in the future.

Thank you for listening to a significant user group who want very much to continue to support and appreciate the GGNRA lands.

Sincerely,

Tom Long

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to the Olema ridge, which is part of GGNRA as well as several beaches. I've always felt comfortable taking my dog there as I have felt welcome. I always thought of GGNRA as being like the forest service, where people could recreate more freely than on the National Park Service lands.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your consideration,  
Laura Szawarzenski

**Correspondence:** San Francisco is a haven for otherwise unwanted dogs who would be euthanized. Many of these are working dog breeds that need significant amounts of activity to be physically and emotionally healthy. These dogs are also of above average intelligence and are easily trained to obey voice commands and hand signals. Off leash exercise for these dogs is essential to their well being.

San Francisco is and has long been a pet friendly place (as is the rest of the Bay Area). Pets contribute to the family unit in a positive way and are often the primary companion to elderly owners. Walking a dog in the beautiful outdoors is a healthy activity for pets and their owners. It is part of the daily routine for many dog owners, who gather so their dogs can play together and meet both social and physical needs.

All new pet owners in San Francisco are urged to take their dogs to training classes in which the owner is trained in ways to effectively control their pet. They also learn how to socialize their dog to a variety of people, age groups, clothing variations, other animals and so on in order to teach the dog appropriate

---

socialization skills to integrate with the public.

Restricting the many dogs and their owners from most of the open space areas to which they have had access for decades is simply wrong. If the parks are suddenly closed off to the huge number of people who enjoy them daily, who is really served? Who will really support parks that close their gates to their most frequent visitors? And what about the collateral damage of this change in policy for these areas? Does it matter to anyone that the few open spaces left will be overcrowded and likely damaged by the excess number of visitors who have no other options? Is the attitude simply "Not my problem"? Is there anything about this that confers a true respect for nature (of which all of us in the animal kingdom are a part)?

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

David Dolinar

**Correspondence:** Dear Sir / Madam.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

My wife and I regularly take our dog to the many trails leading of from Marin Drive (especially Miwok Trail) - and in fact chose to buy our house here, due to close vicinity to a dog-friendly nature.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. So we really cannot see any compelling reasons to eliminate or further restrict the remaining 1%. do not believe you have conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

In short we are very concerned about this sudden change in policy, which will have an impact on where we will choose to have our house & living in the future.

In hope that you and your organization will do the right thing.

Best Regards,

Michael Jonsson

SEIS Comments

Dear Superintendent Dean:

Most of my comments pertain to the stated goal of NPS in developing a dog management policy: to "&minimize conflicts related to dog use by providing a variety of safe, high-quality visitor use experiences, including areas where dogs are allowed" (SEIS, p. 2). I do not believe that the SEIS has provided evidence that NPS can allow mixed use of an area where off-leash dogs are allowed while providing "a variety of safe, high-quality visitor use experiences." I generally support the concept of compromise regarding protecting certain areas of the Park from off-leash activity, while allowing off-leash activity in other areas. However, I do not support the Park Services preferred alternative as presented in the SEIS, because it does not describe the true level of impacts of off-leash activity, and certainly does not provide a management framework that adequately addresses the impacts, stated and not-stated, caused by the presence of off-leash dogs in the GGNRA.

VOICE CONTROL

Voice control should not be used as a concept in the EIS. NPS has not presented any evidence to indicate that voice control is a meaningful concept. The law enforcement incident reports indicate that dog owners routinely bring dogs to GGNRA, over which they cannot exercise voice control. Incident reports show that sometimes they cannot even recall their dog after a serious incident occurs. Superintendent Frank Dean admitted at a public forum on dog management on January 30, 2014 that voice control "does not work" as a policy for managing off-leash activity. GGNRA biologist William Merkle in an email of January 11, 2010 to Sarah Kosher, EA Engineering, Science, & Technology, appears to indicate that voice control is not effective in reducing the tendency of off-leash dogs to chase shorebirds.

The law enforcement incident reports are full of instances of owners of off-leash dogs not being able to recall their dogs or completely losing sight of their dogs leading to hazardous incidents. A few of the incident reports indicate that owners knowingly allow high risk dogs off leash in GGNRA, including dogs with troubled histories that are being rehabilitated for adoption or known aggressive dogs. Since GGNRA does not monitor or issue permits for "voice control," there is no way to control the risk to visitors caused by such dog owners who have the poor judgment to allow such high risk dogs to roam off-leash. There are only three meaningful classifications of Park space for dog management: 1) areas where dogs are prohibited; 2) off-leash areas; and 3) areas where all dogs must be on a leash. GGNRA further must recognize that off-leash areas are essentially single-use areas when crowded and are not safe or appropriate for all user groups.

## VISITOR SAFETY

"Visitors with children who play along the waters edge or in the sand and are approached by dogs, either aggressively or not, may feel that their child's safety may be at an elevated risk for dog bites or other injuries." (SEIS, p. 22)

Visitors with children feel that their child's safety is threatened because in fact their child's safety is threatened. The issue with the safety of children is not just a perception of visitors, it is an established fact. This fact is almost completely ignored in the SEIS. It should be noted that although there is a considerable literature on the especial risks of dogs attacking children, there is little literature on other groups that may be similarly vulnerable, including the elderly, physically or emotionally disabled, and those engaging in sports or other physical activity that conflicts with off-leash dog activity. Although the SEIS does mention that children and the elderly have a increased likelihood of being the victims of attacks by dogs, the SEIS does not fully address the safety issue in an explicit manner and apply safety risk management to policy alternatives of dog management.

Public parks shared by running children and off-leash dogs are potentially unsafe for children (Kahn et al 2003 & De Keuster et al. 2006). Although in theory, it may be possible to somewhat reduce the risk to children exposed to off-leash dogs (Love & Overall 2001), in reality: "Any dog is capable of biting, including those with no history of biting and those whose aggressive behavior has been treated, regardless of whether the dog has received obedience training" (Reisner et al. 2007, Reisner 2003, Rohrich & Reagan 1999, referenced by Reisner & Shofer 2008, the source of the quotation). NPS must intervene to perform a risk analysis and protect visitors by segregating off-leash activity and explicitly warning visitors about the risks of entering areas where off-leash dogs are allowed.

Dog walkers cannot be relied upon to control the behavior of their dogs to reduce the safety risk of off-leash activity. One study found that dog owners had limited knowledge of dog behavior and were unaware of factors that increased the risk of dog bites to children (Reisner & Shofer 2008). Many dog

owners surveyed in the study who indicated that they were comfortable taking their dogs to public areas were making unsafe assumptions about interactions between dogs and unfamiliar children. Reisner and Sofer reported that 41% of respondents surveyed thought that it would be OK to allow their dog off leash in an area where they saw children running.

The GGNRA visitor cannot control the risk to her/his safety where off leash dogs are permitted. Certain types of dogs, such as pit bulls, may be associated with a higher risk of serious bite injury (Bini et al. 2011) and older, active children are more often bitten by pit bulls (Reisner 2013). In one review of dog bite data, most older children bitten in an outdoor setting were unfamiliar with the attacking dog and were not interacting with the dog (Reisner et al. 2011). As stated above under "Voice Control," some dog walkers bring high risk dogs to GGNRA and allow them to run off leash.

Complications of dog bites include cosmetic problems, pain, infection, and emotional consequences such as posttraumatic stress disorder. Dog bites are expensive, in terms of emergency, medical and surgical care, vaccinations and the physical and emotional consequences on children and families (Reisner 2013). As noted below under "Comparison of Dog Management Policies & Regulations / Risk Assessment," a high proportion of owners of attacking dogs in GGNRA either abscond without providing contact information to the victim or provide bogus contact information, suggesting that in many cases attack victims could not recover payments necessary for medical and psychological treatment associated with injuries.

When an attack on a child does occur, there is a significant chance of a fatality. One study estimated that a risk of 2 fatalities per 1,000 reported dog bites exists nationwide (Wright 1985). Although most studies show that fatalities typically occur in residential settings, there is still a real possibility of a fatality in GGNRA because of the concentration of visitors with children and lack of control over the type of off-leash dogs present. GGNRA must fully and explicitly address this risk in the EIS.

#### "NEEDS OF URBAN RESIDENTS"

" Additionally, the adjacent city, county, and state public lands have fewer areas available for dogs and/or more restrictions on these areas, so potential use by urban dog owners is therefore pushed onto NPS lands." (SEIS, p. 22)

Under "Needs of Urban Residents," the SEIS refers to the needs of urban Park visitors as if dog owners were the only urban visitor group. Although there does not appear to be a specific estimate of the proportion of visitors to GGNRA that are dog walkers, one of the surveys cited in the SEIS (Tierney et al. 2009) indicates that among the survey participants, only 13% of those interviewed listed walking a "dog/pet" as the "primary reason" for visiting GGNRA. Other survey results suggest proportions of dog-driven visits at around 10%. What about the needs of the other 90% of urban residents?

In San Francisco, leash laws are almost never enforced in any of the City parks, and many parks, such as Pine Lake Park, are de facto dog parks. For San Francisco residents wishing to pursue an outdoor activity outside the presence of off-leash dogs, there are extremely limited possibilities for enjoying the outdoor environment. The EIS should discuss the limited options for outdoor space not just for dog walkers but for all visitor groups, especially visitor groups especially vulnerable to safety risk from off leash dogs, including: children; the elderly; the physically disabled; equestrians; hand gliders; joggers; etc.; and those who wish to have an outdoor experience without being harassed or disturbed by off leash dogs, such as hikers and naturalists.

## BACKGROUND INFORMATION OBTAINED FOR THE SEIS

During the past seven years the park staff has amassed as much information as could be found on dog management-related topics. (SEIS, p, 28 ff)

Although the park staff amassed information, critical information or analyses were overlooked. My review of FOIA requests for dog management documents by the Center for Biological Diversity in 2004 and Wild Equity in 2011 suggested that NPS staff actually did a poor job in collecting and reviewing relevant information in some areas. The literature reviews for disturbance issues related to shorebirds was initially poor, suggesting that GGNRA staff and EIS authors did not have a good understanding of the basic biology of shorebirds. NPS must realize that allow such a serious impact as off-leash dogs into sensitive areas where visitors and resources are put at risk is not a management policy that has been generally allowed. There has been little need to study such a situation, and few specifically relevant studies have been done that address the degree of off-leash activity occurring in GGNRA. Relevant literature searches by non-specialists will often return little information. In order to prepare an adequate EIS, the study authors must have adequate understanding and knowledge of the basic biology and other relevant sciences pertaining to the resources, sociological knowledge of visitors, and knowledge of canine behavior. It will be difficult for Park staff and contractors who are most likely generalists to obtain the required knowledge without consulting with specialists

The following critical areas of knowledge for dog management seemed to be virtually non-existent in GGNRA records previously reviewed:

- " Risk assessment of off-leash dog activity for visitor safety and experience.

- " Research of the issues involved in dogs impacting the quality of visitor experience: why are people bothered by off leash dogs and what can be done to mitigate or eliminate the problem?

- " Development of professional management techniques for reducing the impact of off-leash dogs on natural resources, visitor safety, and the quality of visitor experience. GGNRA relied on such tools as "voice control" and "visitor education" to improve compliance with dog management regulations. Such tools have proven to be ineffective over the years. GGNRA apparently had no information to suggest such tools would be effective yet relied on them in management documents. GGNRA seemed to make to no effort to understand why leash law compliance was poor and seemed to take no steps to improve compliance.

- " Analysis of dog-related incident data to understand how and why dog-related incidents occur and to incorporate such knowledge into Park management.

## COMPARISON OF DOG MANAGEMENT POLICIES & REGULATIONS / RISK ASSESSMENT

(SEIS, p. 31 ff)

The SEIS mentions the dog policies of National Parks, California State Parks, and other parks or open spaces of counties, municipalities, or other local entities. This section would be much more useful: 1) if there was some discussion about in what proportion of parks and other open space areas entities ban off-

leash dog walking and what type of risk assessment led to those policies, and 2) if in those entities where off-leash activity is allowed, what warnings and rules for visitors entering off-leash areas are operative. Such a survey would provide a much better context to proposed dog management alternatives in relation to how the issue has been handled by other entities than by simply mentioning policies of those different entities.

My initial survey suggested that most parks that allow off-leash dogs have enclosed "dog parks." Most parks that allow off-leash dog play activity provide specific warnings to visitors about the risks involved in entering an off-leash dog zone. There is frequently mention that the park or other entity cannot guarantee the safety of visitors. Since GGNRA is proposing to allow off-leash dogs on some GGNRA beaches and in mixed use areas, the EIS needs to explain how and why NPS thinks it can overcome the problems of off-leash dog activity cited by the other entities while attaining its stated goal of minimizing "conflicts related to dog use by providing a variety of safe, high-quality visitor use experiences."

An example of some of the regulations and warnings to visitors provided by other entities include the following.

The City of Evanston Illinois provides a "Dog Beach Information Packet." The 2011 edition of the document lists the following points among others under a section, "Risk and Responsibility of dog Owners Using the Evanston Dog Beach":

" A dog's behavior or actions, no matter how well trained, if startled or frightened, can be unpredictable and potentially life-threatening.

" Even a well trained dog may attack a patron, another dog, park wildlife or a curious child without provocation or notice.

" Other risks include a dog's natural reactions, such as jumping, pulling , resisting and biting, and the negligence or irresponsibility of a dog's owner/handler.

" It must be recognized that it is impossible for the City of Evanston to guarantee absolute safety.

" Dog owners must understand they participate in Dog Beach activities at their own risk and the risk of their dogs.

The Clark County Nevada Parks & Recreation "Dog Park Rules" include the following warnings concerning visitor use of dog parks (<http://www.clarkcountynv.gov/Depts/parks/Pages/dog-parks.aspx>) :

" All dogs have the potential to bite

" One adult to supervise several children or an infant and the family dog is not sufficient to ensure everyone's safety and control.

" Not all dogs are child-friendly! Never allow your child to approach or pet a strange dog without the owner's presence and approval.

" The Dog Park is Not a Place for Your Child!

" Never let your child have toys or food in the Dog Park. A friendly dog might knock down your child to get at a bright ball or cookie.

" Canine and human visitors enter at their own risk.

" Owners are legally responsible for their dogs and any injury or loss caused by their dogs.

" Clark County will not be responsible for injuries to visiting dogs, their owners or others using the park.

The City of Centralia, WA makes the following statements about visitor use of a dog park  
<http://www.cityofcentralia.com/Page.asp?NavID=449> :

" Entry to the Dog Park is at the risk of dog owners, handlers and guests. Small children must not be permitted to run loose within the off-leash area.

" To prevent fights, no food or toys allowed inside the off-leash area.

" Owners are legally responsible for their dogs and any injury or damage caused by their dogs.

" Maximum 2 dogs per adult allowed in the off-leash area at any time.

The Manatee County Florida "Dog Park Rules" include the following statement  
(<http://www.myanatee.org/home/government/departments/parks-and-recreation/parks/dog-parks/dog-park-rules.html>):

" Canine and human visitors enter at their own risk. Manatee County cannot be responsible for injuries to visiting dogs, their owners, or others using the park.

I noted that a dog behavior expert, Richard H. Polsky Ph.D (dogexpert.com), provides the following among a list of warnings to dog owners for reducing the risk of injury to others caused by their dog  
(<http://test.webzler.com/richard/dog-bite-prevention-safety-for-children-and-others/>):

Comply with local leash laws. Letting your dog run loose in an urban environment or residential area could be dangerous, and imposes substantial risk to the safety of others. For example:

" Your dog might approach a person and frighten that person, causing that person to fall;

" Your dog, albeit non-aggressive, might approach and try to interact with a dog-aggressive-dog (possibly being walked on leash), an altercation starts, and somebody gets injured;

" Your dog might run into the street in pursuit of a squirrel or cat and get hit by a car or possibly cause a traffic accident;

" Your dog could injure a person if it accidentally collided with a person while in pursuit of some object like a cat (or another dog), or while playing with another dog.

(I note that the GGNRA law enforcement incident reports contains specific examples of all of these types of incidents described by Dr. Polsky.)

The SEIS has failed to explicitly discuss the issue of risk to visitors. Although it is mentioned that there is literature on the risk of injury to some types of visitors, there is no attempt made to assess the fact that surveys suggest that a high proportion of visitors don't want to be around off-leash dogs and will probably avoid areas of the park where off-leash activity occurs.

The SEIS seems to have completely avoided explicit discussion of risk assessment of off-leash dog activity that other entities have performed in relation to their determinations about how to manage the risk of off-leash dog activity. The EIS should explicitly provide a risk assessment of off-leash dog activities in GGNRA and use such an assessment to determine how the risks can be eliminated. Where those risks cannot be eliminated, such as many parks have concluded cannot be done, then GGNRA should be explicit about which visitors and/or user groups cannot safely interact with off-leash dogs without risk to their visitor experience or safety.

Here are examples of how risk analysis could be useful.

I examined 29 incidents from the 2009 and 2010 incidents reports involving visitors being attacked by dogs. In 16 of 29 (55%) incidents reviewed, the owner of the attacking dog either absconded from the victim or law enforcement or provided contact information that was bogus. This result suggests that a high proportion of visitors walking off-leash dogs are scofflaws in terms of taking responsibility for the actions of their dogs and having consideration for the other visitors affected. Visitors must realize that if attacked by a dog, it is likely that the perpetrating owner will not be identified. Visitors may have to undergo rabies shots and may not have any possibility of recovering costs associated with a serious injury. Such scofflaw behavior needs to be taken into account by GGNRA in formulating dog management regulations. It suggests that GGNRA should require that all dogs wear collars with proof of vaccination and that off-leash activity should be strictly compartmentalized within the Park, so that visitors wishing to minimize the risk can go elsewhere.

I also examined 37 incidents from the 2009 and 2010 incident reports involving visitors or pets that were either bitten or harassed by off-leash dogs. The incidents were classified according to how many dogs the owner of the attacking dog had off-leash at the time of the incident. In seven cases, there did not appear to be information on how many off-leash dogs the owner had. In the other 30 incidents, 17 of 30 incidents (57%) involved owners who had three or more off-leash dogs at the time of the incident. (It should be noted that such a result is conservative in terms of my analysis, since from the incident report it could not always be verified that an owner with one dog did not have other dogs besides the attacking dog.) The EIS does not present data on the distribution of the average number of dogs for dog walking visitors, but the result of the NAU survey (NAU 2002b) indicated that 77% of survey participants owned only one dog. Therefore, it is likely that a highly disproportionate number of serious incidents are associated with visitors with three or more dogs. Even the proposed limit of three off-leash dogs may not limit the risk associated with visitors having more than one dog off-leash. Such a result suggests that GGNRA should take a careful look at the risks of allowing multiple dogs off-leash, and suggests that any area of the Park where this occurs may not be appropriate for vulnerable visitor groups, such as children.

GGNRA must fully address the risk issue. The best way to control the risk for visitors would be to enclose areas where off-leash dogs are allowed and/or to segregate off-leash activity into specific well-defined areas, outside of which visitors can be reasonably certain they will not encounter off-leash dogs. Based on the management policies of most or all other park or open space entities, GGNRA is going against the grain of management practices across the country by proposing to allow multiple use of space, where off-leash dogs are allowed. It is incumbent upon GGNRA to explain how they can control such risk that most or all other entities have chosen to avoid.

## COMMUNITY BENEFITS OF OFF LEASH DOG WALKING

"Visitors with dogs, including elderly and handicapped visitors may experience beneficial effects of walking their dogs. Dog walking provides mental health benefits by providing a social community for many people."

"Studies have shown that dog owners exercise more than people who do not own dogs. A study in Australia looked at how dog ownership influenced physical activity (Cutt et al. 2008)."

(SEIS, p. 35)

These statements suggest that the SEIS is claiming that allowing more off-leash dog walking in GGNRA will somehow have health benefits for the community. These statements are presented in a suggestive manner that probably leads to false conclusions by the reader. The main policy issue of the SEIS and the underlying management decisions is how much off-leash dog walking to allow in the Park. There is no indication that on-leash as opposed to off-leash dog walking has any less of the health and recreation benefits to humans. The study referred to (Cutt et al. 2008) compares dog owners vs. non-dog owners in a housing tract in Perth, Australia. The study shows slight differences in the total weekly amount of self-reported physical activity of dog owners vs. non-dog owners in this housing tract. However, it is unclear what health benefits, if any, are associated with such differences. There was no statistical difference in "vigorous leisure-time physical activity" between the groups - possibly the most significant physical activity measured that would be associated with actual health benefits. The study may have just measured the fact that people who own dogs have to walk their dogs, so they walk more than people without dogs on average.

Any claim about the health or community benefits of off-leash dog walking should be given the context of the costs to others in the community who may be negatively impacted by off-leash dog activity in GGNRA. What about all the other types of activities in GGNRA that foster physical activity and social community: jogging, biking, fishing, horseback riding, picnicking, etc? Law enforcement data suggests that those engaging in physical activity in GGNRA, such as playing, jogging or biking, have an increased risk of being bitten by or attacked by off-leash dogs, and the presence of off-leash dogs probably reduces the access to GGNRA for people who want to engage in these activities. If Cutt et al. 2008 is cited, there should also be references to articles on the potential benefits of an increase in physical activity realized by providing safe and accessible places for other types of physical activities besides walking dogs, such as running, biking, nature observation, etc., and a discussion of the potential negative impact on these activities by off-leash dogs.

## SHOREBIRDS / BEACH WATCH DATA

(EIS, pp. 119/259/261)

Data from Beach Watch surveys (Beach Watch 2006; 2009) is used in the SEIS. Although the data from this survey may be appropriate to use to mention the presence and general abundance of certain species of shorebirds, there are severe limitations to this data. This data is based on "encounter rates" as were the Snowy Plover surveys done by GGNRA, so the data on shorebirds cannot be considered as an accurate survey of shorebird populations. The surveys were done every two weeks and may not have been conducted during peak migration periods and may have completely missed the presence of some bird species during migration and the peak number of individuals of various species during migration. Although some aspects of the data may be useful, I do not think it should be used to draw conclusions about the relative species numbers or the habitat importance between different sites, such as on p. 260 of the EIS:

Muir Beach and Rodeo Beach sites had documented low shorebird abundance and diversity compared to other GGNRA coastal beaches that had high shorebird abundance and diversity such as Ocean Beach (Central and South) and Fort Funston (or Thornton Beach North) (Beach Watch 2006, 11)

Such a statement may or may not be true. Any use of the data must address the limitations of the survey methods and the fact that some species may have abandoned sites, especially smaller sites, due to off-leash dog activity over many years. The EIS needs to avoid such simplistic interpretations of the data.

## VISITOR EXPERIENCE / SURVEYS

(SEIS, p. 372 ff)

Although GGNRA has utilized various surveys to attempt to collect information on Park visitors and visitor experience related to dog management issues, the surveys have limited usefulness in understanding the impact of off-leash dogs on various visitor groups. The NAU (2002) survey was helpful in revealing that a majority of the surrounding community was in favor of enforcing restrictions on off-leash dogs. As I stated in my comments on the initial EIS draft, the NAU survey did not flesh out why people want restrictions on off-leash dogs and how off-leash dogs affect or would affect their safety and visitor experience. The NAU survey followed up with respondents supportive of off-leash dog walking, who were asked a "series of questions probing specific preferences" to gain a deeper understanding of the nature of the dog walkers use of resources, but there was no similar attempt made to gain insight into why, for example, 35% respondents "strongly opposed" off-leash dog walking.

The subsequent surveys provided no real further insight into the visitor experience related to dog management. The other studies, including Tierney et al. 2009, relied on intercepting visitors at sites heavily used by off-leash dog walkers, where visitors not wanting contact with dogs had been excluded for many years, leading to extraordinarily biased samples of visitors. (For example, I live within a few miles of Fort Funston but have not been there in over seven or eight years because of the off-leash dog activity.) Nakagawa et al. (no date)'s survey compared attitudes across ethnic, age, and income groups but not across various Park user groups. Respondents in this and other surveys were not asked questions specific enough to allow for "probing specific preferences" related to potential conflict with off-leash dogs. In the Tierney et al. (2009) study, respondents were evaluating their visitor experiencing concerning dogs along with factors outside of Park control, such as the weather or park and community infrastructure - essentially incommensurable factors.

Many casual or infrequent visitors to GGNRA do not know the extent of the problems caused by off-leash dog activity and would not be aware of those problems unless informed during the survey. On an average visit, a casual visitor may not see or recognize the significance of dogs chasing birds and may be lucky

enough not to have any conflict with off-leash dogs. It should be noted that Tierney et al. (2009 - Table 71) found that a visitor who had made 101 or more visits to GGNRA in the 12 months prior to the survey had a seven-fold increase in likelihood of mentioning restrictions on dogs as a factor that would improve the experience of visiting the Park compared with visitors who had made one or none previous visits. The NAU survey asked respondents for their opinions on enforcing restrictions on off-leash regulations before and after reading them a mission statement of the National Park Service. The same type of before and after polling could be done by providing respondents with a description of the nature and extent of problems caused by off-leash dogs, such as hazardous conditions and safety risks to vulnerable populations. The 35% category of respondents strongly in favor of enforcing restrictions on off-leash dogs would surely have increased.

The surveys have failed to elucidate the real problems faced by different user/visitor groups in the Park. I am stunned that the SEIS does not refer to the work of Vaske & Donnelly (2007), which provides some insight into why visitors to a park/open space have conflicts with off-leash dogs and to what degree their visitor experience was affected. To be effective in addressing the visitor experience issues at GGNRA related to dog management, a survey would have to involve stratified sampling and detailed probing of the impacts of off-leash dogs on various user groups and vulnerable populations. However, I believe that NPS can make use of existing information if a conservative approach is taken towards addressing the visitor experience issues that are known or can be inferred related to off-leash dog activity in GGNRA.

Given the available information, including anecdotal information in NPS files, the inescapable conclusion is that off-leash dog activity in many cases leads to single-use user group dominance of a space by off-leash dog walkers. The SEIS has failed to "connect the dots" about the consequences of off-leash dog activity on Park visitors.

## VISITOR SAFETY/INCIDENT REPORTS

From the years 2008 through 2011, a total of 2,775 dog-related incidents were recorded in GGNRA for leash-law violations, dog bites or attacks, hazardous conditions or pet rescues, having dogs in closed areas, and failure to pick up pet excrement (tables 11-28). (SEIS, p. 337 ff)

The SEIS presents data on dog-related incidents but does not provide a discussion of the limitations of the data and the context needed to understand and interpret data. The raw data is presented in a way that might lead one to draw conclusions about the total number of dog-related violations per year in GGNRA or to compare the number of dog walking violations and hazards between specific areas of the Park. Without information on the "effort" on the part of law enforcement involved in patrolling each area and the normal behavior of off-leash dog walkers, the data is just a random collection of numbers that show nothing beyond the existence of certain types of violations by dog owners in the Park. In fact, the data represents such a small sliver of the actual violations occurring that without further data it is impossible to even estimate the number and type of violations actually occurring.

For Ocean Beach it does seem possible to make some estimate of the total number of annual leash law violations, since information on the rate of leash law compliance and the number of dogs observed on Ocean Beach (Hatch 1996), suggests that the number of citations for off-leash dog walking in an entire year could be exceeded by the number of off-leash violations occurring in a single day on the beach. Based on Figure 11 in Hatch (1996), it appears that the median number of dogs observed on Ocean Beach in the seasonal closure area during a two-hour weekday survey is approximately 35. Assuming a 40% rate of leash law compliance, in the high range of this rate based on field surveys at various times by GGNRA, there would be approximately 21 violations encountered by an observer walking the entire Beach over

two hours. Over eight hours there would be a median number of approximately 88 violations "encountered." The actual number of violations would be much higher, as an observer would not encounter all such violations on the Beach while walking a transect. 150 violations would be a conservative estimate for the median number of violations per day based on this data. Although additional assumptions would need to be made to reach an annual estimate, that estimate would probably be around 40,000 per year. The EIS should make a similar estimate and discuss it in relation to the actual incident report data. The numbers of leash law violations reported for Ocean Beach between 2008 and 2011 was between 131 and 345 - - truly a minute window into the number of violations actually occurring there.

There is also no discussion about the lack of systematic enforcement of dog-related regulations in GGNRA and how the lack of systematic enforcement biases the dog-related incident data. My review of documents obtained through a FOIA request by CBD in 2004 and Wild Equity in 2001 suggested that GGNRA never had a systematic professional management plan for enforcing dog-related regulations and protecting public safety, natural resources, and the quality of visitor experience. The GGNRA response to complaints about off-leash dog behavior in those documents and personally to me from former Supervisor O'Neill elicited this type of response: Call law enforcement when you see a violation! Yet, as I discussed in my comments to the first EIS draft, informing GGNRA dispatch about a dog-related incident rarely, if ever, results in mitigation of the incident or citation for a violation.

The annual number of off-leash violations issued at Baker Beach varied by a factor of 10 between 2008 and 2011 and was greatest in 2009. Why? Does the data reflect something that happened in 2009 or is this great variance symptomatic of the fact that the data does not reflect the reality of off-leash dog violations? In essence, the incident data we have appears to be some artifact of random and/or inconsistent enforcement activities that may vary from site to site, from year to year, or from individual ranger to individual ranger. The data do not allow any conclusions about the relative behavior of dog walkers compared between sites or to the actual behavior at a site or the trend over time.

On 1/17/2009 a Park Ranger patrolling Ocean Beach encountered 55 dog walkers with off-leash dogs in violation of the seasonal beach closure. Only two violations were issued. The conclusion, besides the fact that the overall risk of a leash law violator actually receiving a citation is low, is the fact that because there were few if any other days on which 50 warnings and/or citations were issued, apparently Ocean Beach was not being patrolled.

Another missing context for the data is a discussion of what proportion of the violations are associated with off-leash dogs vs. on-leash dogs. This result would provide some idea of to what degree different types of violations could be eliminated by limiting off-leash activity.

I reviewed FOIA data obtained by the Center for Biological Diversity in 2004, including law enforcement data from GGNRA and from National Parks nationwide. My impression was that the number of serious dog-related incidents in GGNRA documented was in the same ball park if not greater than all incidents from the rest of the U.S. National Parks combined. The EIS should refer to dog incident data from other Parks in performing a risk assessment of off-leash dog activity and discuss this in the EIS to provide some context for the dog incident data from GGNRA presented in the SEIS.

## NONCOMPLIANCE MONITORING

SEIS, p. 64 ff

One of the most troubling developments in the SEIS is the proposed monitoring-based management strategy, under which Park Service staff will monitor noncompliance and impacts to natural resources and

propose mitigation measures at a later date, instead of using automatic triggers that were originally proposed. This development is clearly the result of lobbying and political pressure and does not have any factual relevance. The previous target for 75% compliance was itself far too low to have any meaningful impact on protecting visitor experience or natural resources. Such a compliance level would not change the type and degree of risks to visitors exposed to off-leash activity, as described above under "Visitor Safety." Vaske & Donnelly (2007) found that even a single negative encounter with an off-leash dog by a park visitor can qualitatively change the quality of experience. Goss-Custard et al. (2006) have used models to estimate in their study area, the a species of shorebird is disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result. As I discussed in my previous comments on the initial draft EIS, just one or two aggressive dogs can cause serious disturbance over long stretches of Ocean Beach, which may be visited by dozens of dogs per hour.

NPS is simply hiding from reality regarding the enforcement issue. It is clear from law enforcement incident reports that dozens if not hundreds of dog walkers, who are aware of leash laws, purposefully violate the laws and are contemptuous towards NPS and any attempt to restrict off-leash activity. An estimate for the number of annual leash law violations at Ocean Beach of 40,000 should immediately indicate to NPS that a high level of enforcement is needed in that area. In discussing management alternatives at various other sites, NPS admits that the level of leash law compliance at many other sites is low. Yet the impact of noncompliance on visitor experience and safety and on resources at those sites is not explored. It should not be necessary to re-evaluate compliance rates to establish enforcement targets, as proposed in the SEIS, which re-evaluation process would allow serious impacts to occur for several more years. It is obvious that as appropriate in the case of contempt for regulations that direct enforcement of rules is necessary (McCool & Christensen, 1996).

It is unsettling that NPS has not performed a full risk-assessment and resource analysis of the impact of off-leash dog activity in GGNRA in the SEIS. It is difficult for me to find NPS credible in the claim that they will monitor compliance and provide a realistic and effective solution to any problems encountered, given the lack of transparency in the SEIS concerning what criteria the NPS will use to evaluate acceptable levels of compliance.

## IMPACTS ON NEARBY DOG WALKING AREAS OUTSIDE OF GGNRA

(SEIS, p 360 ff)

The section on the potential impacts of dog management policy alternatives on off-leash dog use of "nearby dog walking areas outside of GGNRA" is removed from the reality of off-leash dog activity in the Bay Area, specifically San Francisco. It is also another example of the EIS being written in places with blinders and not considering that there are many user groups of GGNRA besides dog walkers.

This section is written with apparently zero knowledge of the actual situation of off-leash dog use of San Francisco City Parks. Although official policy limits off-leash dog use to certain designated areas within specific parks, in actual fact there is almost no enforcement of this policy. For example, Pine Lake/Stern Grove is essentially a dog park. All of the negative consequences discussed in the SEIS in the event of dog management in GGNRA more restrictive to off-leash dog walking are already occurring in Pine Lake/Stern Grove, for example. The authors of the EIS need to be informed that most off-leash dog walkers in San Francisco ignore restrictions on off-leash dog walking in City parks.

In addition, this section also needs to cover the impact of various alternatives on other user groups, comprising approximately 90% of GGNRA visitors, who might need to seek alternative areas outside of

GGNRA based on dog management alternatives that fail to protect their safety or visitor experience from off-leash dog activity.

## DISTURBANCE TO WILDLIFE

(SEIS, p. 376 ff)

Although the section on disturbance to wildlife has been improved since the initial EIS draft, something is missing. Although some relevant literature is discussed regarding disturbance, there is little discussion on the actual disturbance that is occurring at GGNRA that can be observed on a daily basis. A reader of the SEIS who had not observed disturbance by off-leash dogs at GGNRA might not realize the seriousness of the disturbance actually occurring. GGNRA scientific staff have decades of experience observing this disturbance, yet the only actual instances of disturbance mentioned are from law enforcement incident reports, which are random and non-systematic observations that only occur because of a violation documented by law enforcement staff, not scientific professionals. Observations from scientific staff would be much more useful. The SEIS needs to relax its focus on only using peer-reviewed sources. The Department of Interior guidelines for the use of science are concerned with the "integrity" of the use of science. Over reliance on peer-reviewed sources that may not be relevant lacks integrity compared with judicious use of peer reviewed and other sources. There is a sufficient body of literature to describe and determine the probable level of impacts of off-leash dogs in much more detail than currently in the SEIS.

The impact of off-leash dogs on shorebirds in the beach environment at GGNRA is not subtle (<http://www.youtube.com/watch?v=r75OTjvJdX8>). As I described in detail in my comments to the initial draft EIS, off-leash dogs frequently chase flocks of shorebirds for great distances along the tide line. This impact is so severe and obvious that there is little relevant scientific literature on bird populations chronically affected by off-leash dogs to a similar degree, because off-leash dogs are usually banned in beach environments that have significant shorebird populations. It is not difficult for someone with knowledge of shorebird biology to discuss the degree of the disturbance and the potential impact on shorebirds of the disturbance observed at Ocean Beach. However, this is not done in the SEIS, probably leaving most readers questioning why it is important to prohibit off-leash activity where sensitive bird populations occur.

## ROLA ENCLOSURES

NPS stated that enclosures are undesirable because an enclosure would hinder or prevent wildlife movement. (SEIS pg. 95). This statement is not credible. There is a vast literature of how artificial wildlife corridors have been successful in mitigating the impact of natural or artificial enclosures or barriers to wildlife movement.

Sincerely,

Charles Pfister

**Correspondence:** I'm concern that I'm unable to unleash my dogs at Crissy Fields. I enjoy walking my dogs at Crissy Fields as they are able to run at the beach and interact with other dogs. In my experience, I have not seen dogs fight with each other. I see happy dogs that run to their heart's content until they are tired. I see people enjoying each other as they share things about their animals. I have a history of depression. Dogs provide unconditional love when I see dogs running free, I feel peace, contentment, and joy. The interaction between humans and their animals projects happiness. We have busy lives and highly stressed careers. The beach provide fresh air, exercise, and interaction with God's creatures. I see responsible owners who pick up on their dog's mess. I look forward to checking out other parks and recreations in the Bay Area that will allow my animals enjoy running, and interaction with other animals. I pay almost 40% o my income to taxes. Please allow me to enjoy these areas with my animals because I am a taxpayer.

**Correspondence:** Dear Superintendent Dean,

I strongly oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Pei-Chung Ting

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA with family and friends, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is far too restrictive in its current draft, as it would prohibit our regular exercise and enjoyment of the outdoors.

In its present form, the plan fails to reflect the many substantive concerns and objections communicated by the community after the first plan was released. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Yours sincerely,

Phillip Benedetti

**Correspondence:** Dear NPS:

The wilder places of San Francisco need protection. Yes, we live in a City and we all need to share space. But we live in a unique City. It is a desert City lying next to the Pacific Ocean. And we are lucky to have these wild places, not only for the beautiful contrast that they create with the built environment, but also the solitude and serenity they provide.

These wild places need to be protected and cherished. The coastal birds need to be protected and cherished. If dogs are granted all the area to run that their owners want it will be unfair. If dogs can run everywhere why not people running all over the land? You would have chaos and destruction. My point is that we need rules and regulations to maintain our wilder places within our City.

I think you have provided a balanced plan. It is not a sin to have a dog on a leash in our wilder parts of the City. The off leash dog owners, who prefer to call themselves "guardians" have the right to call themselves whatever they want, but they do not have the right to do whatever they want.

This Draft Dog Management Plan allows all of us, all visitors to these wilder places of San Francisco to be the Guardians, the stewards of our land.

Thank you for your hard work in preparing this plan.

Sincerely,  
Georgia Schuttish

**Correspondence:** I was born at Saint Francis Hospital in March of 1945. San Francisco is not only my home, but a city I love more than any other city in the world. As Herb Caen would have written in his "continuous love letter to San Francisco", this city is made up of people with different skin colors, different religions, different educations, different pocket books (bank accounts), different talents, abilities, motivations, desires and dreams. What makes San Francisco the city that it is, is its universal diversity and its ability to find harmony, and progress, within that diversity.

I have watched not only the growth and redevelopment of the city's downtown areas, such as what is now called the South of Market area, from rundown warehouses to ball parks and highrises, and what used to be a freeway enclosed Ferry Building area to a magnificent open space with restaurants, hotels, trolley cars, offices and living spaces, but I have also been a part of the natural beauty surrounding San Francisco, such as Crissy Field, Lands End, Baker Beach, Fort Funston, Fort Mason, China Basin, Aquatic Park, Golden Gate Park, and many more places of natural beauty around this city.

This little jewel on the tip of the San Francisco peninsula land mass should be openly enjoyed by all peoples, their families, friends and family members, specifically their dogs. Dogs have been a part of San Francisco households for generations. Some came here with the ships and crews that sought financial opportunities. Some rode along with the missionaries who sought religious growth. Many dogs were here with The Ramaytush People, a subdivisions of the Ohlone Native Americans who inhabited the San Francisco Peninsula between San Francisco Bay and the Pacific Ocean in the area which is now San Francisco and San Mateo Counties.

Dogs have always been a natural part of this area, and they still are. With respect for the land, people should be allowed to walk, run and enjoy their dogs openly on all the surrounding lands of San Francisco, San Mateo and Marin Counties. Restricting the people from sharing this area with their dogs is wrong and is dictatorial. I strongly oppose the Dog Management Plan proposed by The National Park Service.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,

Zack Kamen  
914-548-4289

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA as well as other off-leash areas in the Bay Area, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is extremely restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

There are many areas that already are banned for dogs. Don't make it any worse than it is now. Most people who walk their dogs off leash are very responsible pet owners and it is unfair to penalize this group of citizens.

Sincerely,  
Maryellen Reed

The Sanders family of Marin County is opposed to the proposed GGNRA Dog Management Plan. We are in favor of keeping the existing areas open to dogs and the current on/off lease rules as they are.

This is a very important issue to us. We urge you to reject the proposed changes to the GGNRA Dog Management Plan.

Your constituents,

Doug, Michelle, and Anna Sanders

<b>Correspondence:</b>	Superintendent Dean,				

I strongly oppose the proposed changes to off-leash policy at the GGNRA. Please formalize the off-leash policy that is the current defacto policy.

My dog and I enjoy the freedom afforded by the open-space of the GGNRA ar Ft. Funston.

I oppose the Preferred Alternative because it is too restrictive. I also oppose fences to surround or delineate any off-leash area in the GGNRA. The GGNRA should not change the leash status simply because not enough people are complying with the leash restrictions.

Thank you,

Russell Ginsberg

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive and appears to be biased. There is no justification in the dog management plan for major changes in my opinion. I support formalization of the 1979 Pet Policy INCLUDING off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like dog parks and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status just because it deems that not enough people are complying with the leash restrictions. There must be another solution that can be worked out.

Sincerely,

Karen Fletcher

**Correspondence:** Hello,

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach and a variety of trails in the GGNRA.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. There is a huge area already of protected land and eliminating dogs or restricting them to only on-leash is unnecessary and excessive while causing a disproportionate impact on dogs and their owners.

The GGNRA is a "recreational" area not a "preserve" and is meant to be enjoyed, not just protected.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.  
Thank you.

**Correspondence:** Please don't take this away. It is so important for the mental health of both dogs and their companions. To take away this opportunity for people and their companions will have detrimental health effects that are bad for both the dogs and their humans. I often suggest that women get dogs to walk with for their health for safety and companionship to get them outside and moving. Being in nature with one's well behaved and friendly dog is also restorative in a time when so much of life is too busy, hectic and jarring.

Please don't let this change go through. What is driving it anyway?

Thank you for your consideration,

Dr Penelope Fetsch

**Correspondence:** I do not support increasing unleashed dogs in the GGNRA. Despite owners' protests to the contrary, dogs' conduct cannot be predicted with accuracy. Keeping a dog under control by voice commands is unrealistic, uncertain and often unsuccessful. Dogs run into and jump onto others, such as hikers, without warning. People fall and get needlessly hurt. Moreover, people are frightened and intimidated. It is unconscionable to permit this. The enjoyment of dogs or dog owners should not trump the safety rights of other people.

The community of dog owners should not impose their wills on the rest of us. There is no need for a dog

---

to be allowed to run off leash at the GGNRA; that is what dog parks are for. People there voluntarily accept the risk. Not at the GGNRA. Thus I oppose increasing the areas unleashed dogs are permitted. They should not be permitted ANYWHERE in the GGNRA. When I hike, I should not have to be on continual look out for unleashed dogs. Watching out for speeding cyclists is difficult enough!

**Correspondence:** I am opposed to the changes in the management plan for dogs. The only off leash location in Marin will be Rodeo Beach. Unfortunately Rodeo Beach is only accessible by auto therefore all the dogs and their owners who do not have cars are unable to go to Rodeo Beach. The highly restrictive proposed plan removes many existing trails and beaches for dogs. Many people moved to San Francisco and Marin specifically because these counties are doggie friendly. Dogs need places to run and play to be healthy and well adjusted. The new proposed plan is a set up for a cascade of expected and unexpected problems.

San Francisco, Marin and San Mateo are popular places to live, in part, because there are accessible areas for dogs and their owners.

Thank you for considering my comments.

**Correspondence:** Dear Superintendent

For over forty years I have enjoyed the beaches of San Francisco and for the first time face the prospect of a reduction in my use and enjoyment of those venues for no logical or historically supported basis.

When Rep Burton first proposed ceding Our beaches to GGNRA it was always identified that the use and enjoyment of those beaches would not be reduced or restricted.

Not only are the proposals exactly contradictory of that stated intent but they clearly failed to take into account all of the comments, are no different from what was proposed before the comment period, were not the product of a truly transparent or fully participatory comment period, apply an identified bias, and fail to understand the use of the lands for an urban community that cares passionately about it's parks.

Use of specious arguments about regulations concerning dogs on Leash in national parks is an intentionally misleading representation about the regulatory process, the historic use of leash laws and the need to tailor regs to actual use and enjoyment.

THESE LANDS ARE FIRST AND FOREMOST INTENDED FOR THE USE AND ENJOYMENT BY THE RESIDENTS OF SAN FRANCISCO AND THE Bay AREA.

If GGNRA fails to understand and appreciate that as it's first priority then it has failed it's mission and you have failed yours.

Very Truly yours

Sheila Gropper Nelson

**Correspondence:** We would like to weigh in on this subject from the perspective of a family with severe allergies to dogs. We have lived in San Francisco for many years and can share the numerous encounters we have had with irresponsible dog owners who assume we want their unleashed animals jumping on us or our personal property in public places before we have to alert the owners of our allergies. Most often the response from dog owners is surprisingly not an apology but rather an indication that they are entitled to do what they wish even to the detriment of other persons.

The proposed plan has become necessary, because unfettered access to the park at large to irresponsible pet owners impinges on the rights of those doing nothing to harm anyone. We have a right to enjoy public lands without fear that our young child with allergies to dogs will not have an unleashed animal jumping on him or even biting him.

It is notable that with the advent of ADA, persons in the protected class are allowed to use dogs for assistance, but those with severe allergies to dogs are not entitled to any protection whatsoever.

We ask that you do whatever is necessary, including implementing the proposed plan, to allow those with dog allergies wishing to have access to public lands to be able to do so safely and without confrontations with persons believing they are entitled to do anything without regard for others simply because they love their dog. If they wish to have expanded off-leash access, then perhaps they can band together and use private resources that do not impact the public at large.

Thank you.

<b>Correspondence:</b>					

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. As a property owner and business owner in San Francisco I stand opposed to the new plan. It is not what the citizens of San Francisco want! There are over 100,000 dog in our fair City and they need a place to exercise.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. Do not turn a blind eye to the DEIS comments. This whole process seems to be amounting to lip service for the pro dog faction and our needs have not been addressed in any way! In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported: 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers. Our money could be better spent!

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

I beg you to listen to the public in this matter and now bow to the pressures of the anti-dog lobby. The GGNRA is an urban park! It cannot be managed like Yellowstone Park or other National Parks. It is not a wilderness, but green space that should be used in whatever manner the citizens choose. And we choose

to walk our dogs!

Thank you for your time.

Sincerely,

John Delaplane

**Correspondence:** As an avid bird-watcher, I support a Dog Management Plan that keeps dogs on leash in and near any sensitive bird habitat- -and that can & will be enforced. Too often I see dog owners letting their dogs run into so-called protected areas, chasing birds. In my experience, placing off-leash areas next to protected or on-leash areas generally doesn't work because it's too tempting for the people or the dogs. Dogs don't need protection; their owners take care of them. Wild birds live incredibly challenging lives, and they do need protection. Thank you for your consideration. -Matt Perry

**Correspondence:** Dear Superintendent Dean,

Although I am not a dog owner myself, I do enjoy walks at the GGNRA with others' dogs. I am strongly opposed to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent much needed recreation for dogs and their owners. I am particularly concerned that elderly and disabled people will not have an area to exercise their dogs off-leash if the new plan is implemented.

The great majority of people who walk dogs at GGNRA sites are caring, thoughtful people who pick up after their dogs and train their dogs. There is nothing better than watching a happy dog romp on the beach.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,

Edwin Marwitz

<b>Correspondence:</b>	To Whom it May Concern,				

The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.

- o We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.
- o Off-leash areas should be marked off with fencing or natural borders such as bushes.
- o Park officials need to enforce the dog rules more vigorously.
- o Visitors to the park should be limited to a maximum of two dogs per person.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

As a dog-lover myself, I have been witness to far too many instances where dogs that are off-leash chase after birds, forcing them to expend precious energy that they need to survive. Unlike our canine friends, our wildlife need us to speak on their behalf in order to protect the habitat that we all share. More balance is needed, and the proposed plan would provide such a balance.

Thank you for your attention.

**Correspondence:** Coming from a parent with a 4 year old that is Terrified of dogs and a family that spends weekends hiking in our great parks, I can tell you that off leash dogs are a problem for my child. He no longer likes to go on hikes with us since there are dogs that "chase" him when he runs from them. Public parks are public and should be enjoyable for all. I'm not advocating that dogs be locked up inside, but I do think that on trails that are frequented by all kinds of people, a dog should be leashed. If I'm at a park or beach and there are designated dog zones, I'll be sure to stay away from those, as long as there are also places that people without dogs can enjoy the beach/park as well. Public space needs to be accessible to all people, regardless if they like animals or not.

**Correspondence:** Hello and I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative. I am 10 years old and I love taking my dog to the beach, watching her run up hills. It makes her so happy to be able to run free without a leash. She is so so so happy when we go for hikes. I don't want to take away from that because of some silly rule. You have no idea what these dogs feel like when they are able to run in the grass, parks, ocean, etc... I think that you should acknowledge that. Thank you. Sincerely, Caitlin Smith

<b>Correspondence:</b>	I believe it is paramount to preserve the GGNRA environment and species that depend on it. We are losing so much habitat and natives species are under so much stress. Dogs are not endangered. Moreover we can't rely on the owners to be voluntarily responsible for managing their pets. Every week I see evidence of "responsible" dog owners who leave their pet's feces on trails, or allow their offleash pets to go tearing through the brush. Believe me, I am not a dog hater. I've had dog pets and enjoy my friend's dogs. I just believe they are not a part of a natural environment. They are at an unfair advantage up against a fragile environment and other creatures who haven't adapted to their presence.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Jonathan Wurtzel

**Correspondence:** As a birdwatcher, I'm opposed to having dogs run anywhere in the GGNRA off leash. Often, when I am trying to bird watch, dogs will run up to me, circle, bark, jump up or nuzzle me between the legs. Dog owners do not have their dogs under voice control and often are apologetic or just use the excuse that it's only a puppy. This is very distracting and often frightening to me not to mention scaring all the birds away.

The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.

We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.

**Correspondence:** Good morning,

I have been a very grateful user of the NPS spaces for over 4 decades. How fortunate we are to have access to such beautiful, inspiring places!

Many of my ventures in the NPS Marin spots have been with a succession of 3 dogs. We have frequented Muir Beach and the beach at Fort Cronkite, enjoying the opportunity for beloved dogs and their tax paying humans to be out together with other like-minded creatures, always carrying doogy bags and cleaning up after ourselves while maintaining careful control of our playful canines so they do not interrupt the experience of other beach goers. It is abhorrent to think that those spots might be restricted to on-leash dogs.

Please protect some spaces for off-leash dogs to play and enjoy one another, posting info for all comers to let them know they are sharing with off-leash dogs, and that disrespectful dog owners who fail to clean-up and/or maintain control of their dogs should be reported.

Thank you for your attention.

Jennifer Lillard

**Correspondence:** To Whom It May Concern,

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Laurel, Miwok, Rhubarb Trail as well as Muir Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Sincerely,  
Matt Sterling

**Correspondence:** Muir Beach is working fine! Please, please continue to allow dogs to enjoy it off leash. For more than 40 years we have been bringing our family dogs to Muir, most recently on Valentine's Day. The beach was filled with happy people and animals with no disharmony to be seen. As I am sure you know, for many of us, enjoying a good time outdoors means having our canine companion along. Our dog, Dorje, hikes the East Bay hills almost daily (where she has been trained not to chase coyotes), has gone camping in the High Sierra many times, and as a special treat sometimes gets taken to the beach. It is her favorite place and playing there takes years off her age. You have done some fine work with the habitat restoration and infrastructure improvements at Muir. The dog regulations state that the animal must be under control at all times, must not disturb wildlife, must be on leash except on the beach, must be under voice control, and that the owner must pick up dog waste. These rules are reasonable and are working well. The people are happy, the dogs are happy and, as evidenced by recent sightings, the wildlife is happy. Apparently river otters have been seen repeatedly. When I first moved to the Bay Area, there were a number of places where people and off leash dogs could enjoy the ocean. Now there are almost none. For many of us, this is a significant loss. Everything is a question of balance. Certainly some individuals will disobey the regulations. This happens in every circumstance where people are present. But these individuals are the exception. To enstate rules based on the exception is too draconian in this instance. I believe that responsible people, happy off leash dogs, and wild animals can continue to enjoy Muir Beach together. Please give this a chance to work. Thank you.

**Correspondence:** What has Marin become? I can no longer take my dog on a hike. I can no longer let him run and play. You have destroyed the image of a kid playing ball with her dog because you can't play fetch on a leash. Responsible dog owners whose dogs are under voice control and who clean up after their dogs should be able to bring their companions on hikes, and to at least some of the beaches.

Increase fines for out of control dogs. Catch people who do not clean up. Punish the irresponsible people... those who have dogs as well as those who do not. But do not punish responsible Marin residents who live here for the nature and outdoor opportunities we have here. Who pay local taxes, start local businesses and hike on local trails... with their dogs.

Some people bring their dogs for fun, other for safety. Many women do not feel safe on trail alone, even in Marin. Dogs allow them to enjoy places they would not otherwise be able to see, and solitude they would not otherwise be able to have. Dogs are vital part of our society. This is codified in the many laws around proper treatment of companion animals, or regulations surrounding service dogs. Why do you now exclude companions from our activities? It questionable whether you will be able to maintain such restrictions. Everyone will soon have a service animal that cannot be excluded from the trails. That companion is a safety animal.

Enforcement of these regulations will cost money, and raise the ire of locals who will protest. Stop Marin from becoming a restrictive and elitist place. It seems that the only thing left for residents of this county will be a requirement that wine and cheese are required on all trails. Keep Marin, Marin. Rural, friendly, with an amazing combination of outdoor and cultural opportunities.

**Correspondence:** Appropriate shared use of park land has become very controversial in San Francisco, and I'm not quite sure why. It seems that some advocates want to turn what have been successful urban public parks into wild lands, which is neither appropriate nor fair to users who behave correctly. The dog policy for GGNRA is one symptom of this controversy, as responsible dog owners are going to be prohibited from nearly all of their prior use of the GGNRA due to complaints about wildlife harassment. I am a frequent user of both Crissy Field and Fort Funston with my family. Just like I would never allow my daughter to touch or bother wildlife there, I never allow my dog near any wildlife and only allow her to be offleash where there is no wildlife present and other park users will not be bothered. I hope that the NPS will seriously consider allowing offleash use to continue, in conjunction with more education and

---

enforcement of existing rules. Otherwise, responsible dog owners will be the ones to suffer, as the irresponsible owners will continue to allow their dogs offleash in inappropriate ways.

**Correspondence:** I am a dog owner in the bay area and I occasionally use the GGRA to exercise my dog. It seems to me that most of the dog owners that use these areas are responsible people who just want their dogs to be healthy and have a place to run in a city where that is not possible in most places. My dog as well as most of the dogs I see there are under voice control. Removing these wonderful off leash beach places will make more dog owners break the law so that their dogs can have some healthy exercise. Please leave these off leash beaches as they are. There are so many dogs in the area that need a place to go. Has there ever been a survey to see how many people and dogs use these areas? There are an awful lot of dog owners in the San Francisco Bay area.

Thank you,

Roberta Rovner

Bay area dog owner

**Correspondence:** Hello,

I support tightening up the leash laws. Many dog owners in this city are inconsiderate and unsafe. They laugh when their dogs jump on young children and leave their dogs' bowel movements all over. If we left dirty diapers on the street, you bet there would be repercussions.

My request is simple: the amount of off leash areas be limited so that there are safe areas for the rest of the city. And the remaining areas plus disposal of waste be enforced strictly, with fines substantial enough to pay for the personnel to do so.

If you want San Francisco to become more child friendly, this would be a huge step forward.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood Valley Fire Road, and Trail, Muir, Rodeo beach, and the Marin

Headland trails.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** As an owner of a young dog that needs exercise, I wish to state that restricting activity to be on-leash only is a terrible idea. It is simply the case that all mammals need exercise - if we were to restrict adults to remain at their desks all day, or prevent children from playing, we would very quickly see negative effects. It is the same with dogs - we need to have these areas in which they can exercise, for their health and for their mental well being. To deny them of this is little more than to deliberately increase suffering of a group (dogs) that want little more than to be able to play.

**Correspondence:** I live in Glen Park.

I visit Fort Funston on a daily basis. I also visit Glen Park Canyon, Baker Beach and Ocean beach with my dog.

Unfortunately Glen Park Canyon is an on-leash area, so I go to off-leash areas (named above) to walk my dog.

The benefits I derive from off-leash is the following:

1. Allows me to get full exercise by either running or climbing, with my dog getting adequate exercise to. With a dog on leash, these exercises are seriously diminished.
2. seeing my dog and other dogs being able to play and be one with nature is incredibly joyful.
3. Being able to have my dog off-leash brings about a sense of freedom, and harmony with nature, which is one of the reasons that I moved to the Bay Area.

â€¢I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

â€¢I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

â€¢I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

â€¢The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

â€¢The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

â€¢The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

â€¢The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

â€¢The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

â€¢The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

â€¢The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I'm writing to express my strong concern and opposition to the preferred alternative described in the GGNRA's new draft dog management plan. I walk my dog regularly in various areas of the GGNRA and the adoption of this severely restrictive plan would significantly reduce my use of these all NPS facilities. As a result, I would also be much less likely to support NPS initiatives as I would no longer be a user, and be very likely to ask my elected officials to divert money from NPS to other budget priorities that do impact me more directly.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The report even states in general that there were only minor to

---

moderate consequences to natural resources for the majority of these changes with moderate to major changes to those of us who walk our dogs in this area. It is specifically mentioned in the report that citizens of the Bay Area have few other options of allowing their dogs to exercise off leash, and removing this highly-utilized resource would result in severe detriment to dogs and humans alike.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with large off-leash areas in San Francisco, San Mateo and Marin Counties and on new lands that the GGNRA acquires in the future. I believe that this change is also contradictory to the NPS mission as it will drastically reduce the enjoyment of these areas for both dog owners as well as non-dog owners alike.

<b>Correspondence:</b>					

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely, Mark Ryle

**Correspondence:** Regarding the plans for Fort Mason, I would like to lend my support for alternative D. Alternative D offers a compromise that allows for the use of Fort Mason by different stakeholders. The Great Meadow is often too busy to allow for dogs to roam freely. While the rules require owners to pick up after their dogs, I have seen far too many cases of dogs defecating on the lawn (which I am sure the owner would attribute to the fact that they weren't watching their dog and the dog went to the bathroom without their knowledge). I shouldn't have to constantly look down when I walk thru an area.

If dog owners want an area to allow the dogs off leash, they can use the Laguna Green area for that type of activity.

**Correspondence:** I support restrictions on dogs in the park. I strongly support enforcement of all dog restriction policies. Currently, our parks are dominated by dogs. Any walk in a San Francisco park involves numerous, non-stop, dog-related frustrations, including dogs jumping on you, dog waste underfoot, and plants destroyed by dogs.

The most important reason for dog restrictions in our parks is the need for wildlife to flourish. Endangered birds, native plants, and all sorts of beneficial wildlife require a modicum of freedom from the pressures exerted by dogs. When we require dogs to be on leash in designated areas and absent from others, we will find a greater number of living things enjoying our parks.

Please restrict dogs' movements to the extent necessary to ensure that people, plants, snowy plovers, and others can all enjoy our parks. And please enforce those restrictions.

thank you.

**Correspondence:** I believe dogs should be allowed off leash and under voice control on certain areas of the beaches and on some of the trails.

Dogs are a part of nature themselves. They are not only pets, but wonderful, happy creatures who love to run free in the wind and surf. I have noticed that not only their owners, but others on the beaches enjoy watching them play.

Of course, they should be kept away from wildlife. In cases where dogs do bother people or wildlife, I am in favor of evicting them, giving their owners citations, and permanently banning those particular dogs. I am also in favor of banning dangerous dogs, such as pit bulls and rottweilers.

**Correspondence:** Dear Superintendent Dean

I'm writing to strongly opposed the GGNRA's draft dog management plan. I am a dog owner in San Francisco and the GGNRA parks have been fundamental to me being able to raise a happy healthy pet.

There's nothing that brings me as much joy as seeing my dog get excited as he smells Chrissy Field's beach air.

But beyond this, the fact is, \*dogs foster neighborhood community in these spaces\*. From the stiffest businessman to the most eccentric animal fanatic, we meet and talk and become friends and better neighbors in these off leash areas. These off-leash areas are the spontaneous town halls of San Francisco's pet owning community.

In addition, data shows dogs are not causing problems at the parks. Last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Please don't take these spaces away from us. It's unfounded by the data, and will greatly impact the quality of life for people and their dogs in San Francisco.

**Correspondence:** We have nearly fallen and been injured several times while running on the dirt path that goes from Crissy Field to Fort Point. The path gets very busy on nice days and on weekends, and off leash dogs dart and make dangerous sudden, unpredictable moves causing runners to risk injury to stop

short or avoid a collision. I have also witnessed several dog fights. For the safety of all, it is my hope that does would be required to be on-leash on the path, and perhaps keep the large field off-leash.

In addition, off-leash dogs near playgrounds can be dangerous to our small, toddling children and I believe a safe-distance perimeter would be helpful so children can also enjoy the grassy areas and not be in fear of getting knocked over by a dog chasing a ball.

<b>Correspondence:</b>	Please make all National Park areas safe for all by requiring dogs to be ON LEASH at all times.				

I am a dog owner but am made to feel unsafe by other dogs that are off leash. My dog was attacked by three off leash Great Danes. The financial cost of seven surgeries required for her survival was \$10,000.

My anxiety remains. Off leash dogs are unsafe. They should all be leashed except for fenced dog run areas.

Thank you.

Sharon Starr

<b>Correspondence:</b>	To All concerned, As a dog owner and taxpayer i am so disappointed that i have to write a letter to plea that you not infringe on the need for our noble best friend be limited to where we can walk our dogs and to have the freedom to do so without a leash. Where is the logic in this. We demand that this be public space. Not controlled by the park system. The beaches and Fort Funston is where we experience freedom. As people living in an urban environment we need to be able to let our dogs experience nature. Banning us from walking our dogs is not only an injustice it is an infringement on our civil rights. We work in offices, commute in cars and now you want to take away our freedom to walk our dogs on the beach and in the parks. Those parks are ours. Not yours to deny us of. You should be ashamed. Anyone who does this should lose there job. I myself will not take this lying down and will fight this. Stop your madness now! Giorgio Anthony

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Emily Christiansen

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely, Tobi Garelick

**Correspondence:** As a longtime walker and birder in the Bay Area, I strongly support the GGNRA's Draft Management Plan, which I regard as a fair and sorely needed approach to the growing problem of off-leash dogs in our park areas. I frequently encounter unrestrained dogs chasing birds in our parks and on our shorelines, and will welcome any and all official efforts to limit and control this problem and its profoundly negative impacts on wildlife, plants, and humans alike.

I subscribe fully to the Golden Gate Audubon Society's position, as follows:

The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area. We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.

Off-leash areas should be marked off with fencing or natural borders such as bushes.

Park officials need to enforce the dog rules more vigorously. The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

Thank you for your thoughtful work.

Sincerely,

Christine Hall  
San Francisco

**Correspondence:** I believe that people need to be put first before dog owners. While I am fine that people have pets, parks are not created for the pets, they are created for the people of this country that pay taxes.

In San Francisco, there are more dogs than children. Whenever I take my son or go with my friends (who also do not have any dogs) to a park in the city, there always seem to be dogs running around off leash, leaving their mess in areas where people would like to sit. They ruin the area for the taxpayers without animals.

I would prefer to see dogs that stay on leash at all times unless there is a dog run. They should be kept away from areas that ordinary citizens enjoy and away from children because you never know if a dog could turn on child or person and bite or maul them. There have been cases where children have been attacked by dogs and as a parent you can never know if a dog will be ok around a child. Our children are more important in this regard.

The GG Parks are beautiful spaces and should be prioritized to people. It's fine to be accommodating to dogs, but they should be kept in different areas.

Thank you.

**Correspondence:** I write to support stricter limits on dogs in the GGNRA.

As you know, the GGNRA has more endangered species than any other unit of the National Park System. The goal of the Park Service must be to provide access to people, education, and protection of the natural resources under your (our) management. When dogs are incompatible with protection of our natural resources, they must be excluded.

Before people were here, beaches were very attractive to birds and other wildlife because they were vast areas with few predators, and so allowed ground-nesting birds like the Snowy Plover safe places to raise their young. Now with 6 million people in the Bay Area, and who knows how many dogs and other commensals, we have taken over that habitat and left these species nearly no place to reproduce. Similarly, we have destroyed well over 90% of the original wetlands in the Bay. We must manage these remnant habitats to allow the species that depend on them to survive and thrive as best they can. Many of these species may go extinct without these habitats, and even those that are not threatened deserve a safe place in this, the most productive estuary in California.

Please designate as much space as possible to the responsible use by people alone. Remove dogs from sensitive areas. Reduce the number of dogs (there is no reason for us, the tax payer, to provide spaces for commercial enterprises like dog-walking services), and enforce these laws. Limit the places for pets to those places that pose no threat to our native plants and animals, and especially to the threatened and sensitive species that call GGNRA their home.

Thank you

**Correspondence:** I am against any changes to the plan that would increase the number of dogs in the parks and recreation areas. There are already numerous places and dog parks for dog owners in Pacifica.

There has been an increase in the number of people bringing their dogs into San Pedro Valley Park, both

---

leashed and unleashed. There are signs prohibiting this, but they are ignored. As a result, there is dog excrement left behind on the trails, frightened deer, and foliage torn up. Each time I gently inform the dog owners of the restriction against dogs in the park and why, they claim ignorance.

Please save these areas for people, plants, and animals that call these parks and areas their home.

Thank you,  
Jennifer Alpaugh

<b>Correspondence:</b>	As a dog owner, avid GGNRA visitor and former Field Biologist for the Fish and Wildlife Service, I understand the complexities of balancing the needs of all stakeholders described in the Draft Dog Management Plan/SEIS.				

The sheer joy my dog expresses while running off leash at his favorite park, Fort Funston, is unparalleled and certainly a difficult experience to recreate anywhere else, especially given the staggering lack of available ROLAs in the Bay Area. After waiting patiently all day for me to return from work, it is the only opportunity for him to socialize, get exercise and simply be a dog. It is also a great opportunity for me to enjoy the beautiful landscapes and soundscapes the GGNRA has to offer. The loss of this daily enrichment would be devastating and have a severe impact on quality of life not only for myself and my dog, but certainly for the hundreds of visitors who flock to the parks each day.

This is a classic case of the tragedy of the commons, as evidenced by the individuals who simply abuse the parks and take every bit for granted. Unfortunately, it is the small few who ruin the experience for others and contribute to the degradation of natural resources and impacts to sensitive species.

I am in favor of a balanced approach as described in alternatives E and F. However, I believe the NPS stands to allow for more community involvement with the release of this plan. Specifically, setting up voluntary activities for visitors to participate in the restoration and continued maintenance of the parks. For example, beach clean up days, native plant restoration, trail improvements, etc. For the many dog owners who love their pets and love their parks, there should be more opportunities for engagement and education.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I love the GGNRA as a place of natural beauty and a sanctuary of solitude from our busy urban lives. I urge you to adopt the most restrictive policy regarding the presence of on leash and off leash dogs. We need more trails and areas within the San Francisco parts of the GGNRA that are off limits to dogs.				

---

Dogs barking, dogs jumping, dogs digging, dogs urinating and defecating do not constitute an acceptable form of recreation the our National Parks.

It is not the mission of the GGNRA to assist or promote dog ownership. Therefore, park officials need to enforce the dog rules vigorously. Despite all the promises made by the dog coalition, it only takes a few irresponsible owners to destroy the work of many. Therefore, I urge you to implement the proposed plan with the addition of fencing for all off leash areas.

Please save us from the DOGPAC.

It is often local politicians who fail to license and enforce local dog regulations that create the howling by dog owners for more space. The NPS should not be pressured by gutless politicians or held hostage by a group of self serving dog owners.

I implore the NPS to implement a plan that is sustainable and results in future generations hailing your brave and enlightened stance against expanded access to dogs. Our children, grand children and future generations will hail your strong stance in favor of beauty and nature.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Ena O'Daniel

---

opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

Thank you for creating a Dog Management Plan for the GGNRA.

Dogs off leash on trails or running on beaches hurt wildlife and lessen the visitor experience. When I visit the trails and the beaches I yearn to experience the park in a natural state without dogs chasing wildlife and mauling children.

I encourage GGNRA to restrict dogs to being on-leash at all time everywhere in the park.

Most importantly, whatever mix of restrictions are implemented, I urge you to vigorously enforce the new regulations by issuing citations from Day 1. Many dog owners are proud scofflaws. Enforcement is the only way for the new regulations to be successful.

Please install clear signage at trailheads and beach access that clearly states "Dogs on-leash only. Citations issued. No warnings given."

Robust enforcement, issuing citations, not warnings, is the only way that the new regulations will be followed. Please issue citations to violators.

Thank you.

**Correspondence:** I believe the GGNRA should adopt Alternative A for dogwalking in the Golden Gate Recreation Area. The GGNRA was set up to allow for recreational use by an urban populace which included off leash dog recreation. To severely limit this historical use is shortsighted and will only lead to further confusion and hostile interactions between all stakeholders. These open hostilities will be supported by the GGNRA and the law enforcement division of the National Park Service as this is the bias of the National Park Service in the management of the GGNRA.

I live close to the Cape Hatteras National Seashore that allows off road vehicles to drive on sensitive habitat for extended periods throughout the year. How can the National Park Service allow this activity but not off leash dog recreation? I'm certain there are equal numbers of threatened species in the Outer Banks Area due to erosion and development, but the NPS allows this recreational activity to continue. The hypocrisy of the National Park Service is sickening.

The bias against one type of recreation (dogwalking) in a very densely populated region is absurd in relation to other types of recreational activity the National Park Service allows in other units including snowmobiling and off leash dogs for hunting purposes.

I hope this will be the last time I have to write a letter to the GGNRA about off leash dog recreation. You have wasted a tremendous amount of money and time in developing "policies" that are contrary to the mission of the GGNRA when it was set up as a unit of the NPS. I hope when the NPS gets the result it wants, no people or dogs on their precious land, the communities in the Bay Area go to their elected representatives have have the lands they gave to the NPS reverted to local ownership. In the meanwhile, I hope that overzealous enforcement rangers do not kill a person or dog while attempting to enforce any new policy that may be adopted contrary to the public outcry against changing the policy.

**Correspondence:** February 17, 2014

Dear Superintendent Dean,

I do not live in the San Francisco Bay area, but my daughter and her family do. My daughter, her husband, and their dog Osby currently live in San Mateo, but over the past five years they have held addresses in San Francisco and Burlingame as well. My daughter exercises regularly with her dog in the GGNRA, and I join them on walks on GGNRA lands every time I visit. As the mother of someone who

has utilized GGNRA properties for years to exercise with her dog (and who would be drastically, negatively impacted by proposed dog restrictions in the GGNRA), I am writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent my daughter and her husband from recreating with their dog- -for their own health and the health of their dog as well- -as they have on GGNRA properties for years.

The new plan was not was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original Pet Policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Martha Clark

**Correspondence:** As a frequent user of the trail network in the Presidio I am writing to express my recommendation that dogs be kept on lease as often as possible. The current on lease regulations are rarely observed by dog owners as dogs are allowed to roam free disturbing other park users and the non-human dwellers of the park. On Saturday 2/18/14, I ran throughout the Presidio on a rainy morning. During my run I encountered over a dozen dogs on the trails and not one was on lease. Having been bitten by a dog in 2000, I am highly sensitive to dogs roaming freely and I'm easily triggered by any aggressive dog behavior. On MLK Day, Monday 1/20/14, my wife and I along w/ our 2 daughters went for a clean-up hike on our favorite Presidio trails. We cleaned up about 6 bags of dog feces left by dogs owners on the side on the trail. Sadly dog owners seem to show little respect for the Presidio on multiple levels and are a very entitled group breaking NPS regs with regularity. Please continue to maintain and enforce current regulations.

Respectfully,

Ron Gutierrez

**Correspondence:** I am very interested in striking a balance between dog off-leash availability, environmental preservation and safety for all who use GGNRA land. However, because GGNRA land is one of the few places that is available to dog walkers, and that those areas are already very constricted compared to GGNRA land available to all other audiences, I would want to see as much space as possible allowed for walking dogs.

Because I use only Marin County and some San Francisco GGNRA areas, I will confine my comments to these. However, in principle, I strongly support as much off-leash area as possible. It seems to me it reduces the environmental and safety pressures the more alternatives are available to those of us who must have places to walk our dogs off-leash. Because dog owners are expected to have dogs under voice control at all times, a great number of options for off-leash walking reduces the number of dogs in any given area at one time.

As a dog owner who also works during the day and must use a dog walker from time to time, it is also important that dog walkers have places available to walk their dogs, and be able to walk enough dogs to make a living so they can continue to provide this essential service.

So I explicitly support Plan A in the following areas: Stinson Beach; Oakwood / Alta Avenue; Muir

---

Beach; Rodeo Beach; Marin Headlands; all sections of Crissy Field; and all areas of Ocean Beach.

CGNRA is, to a great extent, serves an urban population. This isn't some wilderness accessible by a few. As part of our cities its use should be open to all of us. It feels as though the park service is bent on excluding the mass population (us) that walk with our dogs.

**Correspondence:** I am furious at the short sightedness of the proposed plan. Walking my two small dogs twice a day is my meditation, my gym, and my recreation. I do not accept the reasons for the proposed plan as the research is not conclusive about the effect of dog walking on these recreation areas. What I do know is that if this plan goes through and dogs do not get exercise and then flood the small parks we can expect the following; more bites and injuries for dogs and humans, increased euthanasia, more dogs begin abandoned at the shelter, decreased health benefits for people that cannot safely walk their dogs. I HAVE A DOG AND I VOTE!!!!

**Correspondence:** I am a resident of San Francisco, and I am constantly worried about being bitten by off-leash dogs when I go to parks. In my experience, if there is one off-leash area, the vast majority of dog owners treat the entire park as an off-leash area. For example, in Stern Grove/Pine Lake park, dog owners let their dogs run off-leash in the entire park, even though not all areas are off-leash areas and even though the park is clearly signed. I've had a couple close calls while running in the park, and I'm considering buying pepper spray to protect myself. The problem is especially bad on narrow trails where dogs may be surprised by runners and other dogs. Please consider that experience when deciding whether to have off-leash areas next to "leashed" areas- -the vast majority of dog owners will not obey signage.

I would prefer the alternative that recognizes the interests of all San Franciscans, including those of us who want to use the parks without fear of being attacked. Please make sure that all off-leash areas are surrounded by fences or other natural barriers and can be enforced. Thank you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

Regarding the GGNRA Dog Plan, I strongly support formalization of the 1979 Pet Policy, especially as it applies to Fort Funston.

I have lived in San Francisco since 1982 and have walked my dogs off-leash since then, almost exclusively at Fort Funston, at times every day. I have seen many changes to the park to accommodate a diverse population of visitors. I have also seen over the years that an overwhelming number of park visitors are people with dogs, mostly off-leash. What I have NOT seen are damage to the park environment by dogs off-leash, dog fights, and dogs negatively interacting with people. In fact, for me, Fort Funston is the gold standard for a park where off-leash dog walking has been a total success for years.

It seems to me that the purpose of the GGNRA is to establish parks, which are havens of the natural environment, relief from the urban, densely populated areas of the Bay Area. Unnecessary fences and restrictive leash laws undermine this purpose.

If the new Dog Plan must be implemented, at least make an exception for Fort Funston and maintain the status quo for this unique and special place.

Sincerely,  
Janice McIntosh

**Correspondence:** I'm writing to express my strong concern and opposition to the preferred alternative described in the GGNRA's new draft dog management plan. I walk my dog regularly in various areas of the GGNRA and the adoption of this severely restrictive plan would significantly reduce my use of these all NPS facilities. As a result, I would also be much less likely to support NPS initiatives as I would no longer be a user, and be very likely to ask my elected officials to divert money from NPS to other budget priorities that do impact me more directly.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The report even states in general that there were only minor to moderate consequences to natural resources for the majority of these changes with moderate to major changes to those of us who walk our dogs in this area. In my years of frequenting these areas, I have never observed any violation of NPS policies by dogs off leash. It is specifically mentioned in the report that citizens of the Bay Area have few other options of allowing their dogs to exercise off leash, and removing this highly-utilized resource would result in severe detriment to dogs and humans alike.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with large off-leash areas in San Francisco, San Mateo and Marin Counties and on new lands that the GGNRA acquires in the future. I believe that this change is also contradictory to the NPS mission as it will drastically reduce the enjoyment of these areas for both dog owners as well as non-dog owners alike.

**Correspondence:** As as 4 year resident of the Presidio and long time dog owner, I cannot support the current preferred course of action for this plan. The Presidio's relatively accommodating and open policy towards dog walking has played a significant role in my decision to live here. It has been my experience that the vast majority of people exercising off leash walking within the Presidio have done so responsibly.

More broadly, the Presidio is the closet and largest space for dog walking for many San Francisco residents. With a growing dog population, severely restricting owners' options in the GGNRA will only push dogs into other parts of the city which are less safe and less equipped to handle increased dog activity.

I support option A, the no action plan.

Sincerely,  
Stephen Gough

**Correspondence:** I find it extraordinary that a new proposal further limiting dog access needs to be considered at all. Dogs need fresh air and freedom to run just like humans. The existing restrictions are already excessive and further restricting dog freedom in the parks would be deeply saddening. There is no necessity for this plan. Leaving as is, or even opening up more paths for dogs and their owners would be a far better plan; but I see no sign of improvement of access in this dreadful plan - just further constraint. Ooh and how many of our hard earned tax dollars have gone into this pointless one sided anti-dog consultation process?

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Sarah Jane

**Correspondence:** My name is Marta Lutz and I live at Ocean Beach in San Francisco. I walk my daughter's dog, Tucker, either across the street on the beach or take him to Fort Funston for a good run. We have also walked from my place to Funston at a low tide and then all the way to Daly City and back. One of the ultimate dog and human experiences.  
These are the only two places that I know of where we are able to have the freedom to do this. It is a wonderful experience to witness the joy of freedom that Tucker, and so many other dogs we meet, get to have. He is an extremely healthy and fit dog and loves the opportunity to run! Really run. It is what dogs do. It is who they are.  
He gets lots of on leash walking but it is the running that he needs and we need to keep Ocean Beach and

---

Fort Funston open for Tucker and all his other dog friends and all their people that go with them. There is too much 'fatness' in America. We all need places to go that help us stay healthy. Every body needs a workout and it would be a shame and unAmerican to close off these perfect places for dogs and their humans to exercise, be outside and enjoy the beauty and uniqueness our very special corner of California.

Thank you for your consideration and I hope you'll do the right thing and vote for freedom,

Marta Lutz

A Native San Franciscan

<b>Correspondence:</b>	Dear Sir/Madam:				

I oppose the Draft Dog Management plan. It does not consider the needs of San Francisco residents and their pets. Furthermore, I disagree with the entire idea of giving a migratory bird preferential use of an urban park designated for recreational use.

San Francisco and its environs are not some sort of a remote game preserve. Native species have been displaced, non-native species introduced and cultivated and wildlife populations decimated. That horse is out of the barn. To now ban the use of recreational areas because it may disturb some wildlife is ridiculous on its face.

Respectfully,

Victor P Bartolotta

<b>Correspondence:</b>	Dear Superintendent Dean,				

As a strong national parks supporter AND a dog lover who regularly walks her dogs in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is far too restrictive and will prevent me from recreating with my dogs for my own health and my dogs' health the way I have on GGNRA properties for many years.

GGNRA is an essential resource for bay area dog guardians. It is extraordinarily difficult to provide dogs with the exercise and mental stimulation they need in the bay area. I am one of thousands of bay area dog guardians who depends on the physical and mental stimulation GGNRA affords our canine companions. My dogs visit GGNRA lands at least 5 days a week, and those visits are critical to their health and vitality; not to mention my own. **TAKING AWAY OUR ACCESS IS AN ACT OF CRUELTY; GGNRA FACILITIES ARE WHAT MAKES IT POSSIBLE TO HUMANELY KEEP A DOG IN THIS OVERCROWDED REGION.**

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Jacqueline Harlow

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it

---

deems that not enough people are complying with the leash restrictions.

Sincerely,

---

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is much too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for over 15 years (particularly at Fort Funston). I have also been a member of the GGNRA for over 20 years, and I strongly believe that off-leash recreation for dogs and people is fully compatible with the preservation and health of the GGNRA.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Francisco and San Mateo County and on new lands that the GGNRA acquires in the future.

If Fort Funston's off-leash recreation is prohibited or curtailed, the quality of my life will suffer dramatically. That's not an overstatement. Running my dogs at Fort Funston has been a large part of my enjoyment of San Francisco - I go there to take exercise for myself and to visit with other dogs and dogs owners regularly.

Sincerely,

Margaret E. Murray

**Correspondence:** I am the owner of a dog (previously 2). My dog is socialized and enjoys running with other dogs in areas that I understand are under consideration for banning of off-leash and on-leash dogs. If the goal is to simply prevent people from enjoying these areas with their dogs (and by virtue of that, prevent people from going to those areas), then I think such a policy will achieve that goal. If that is NOT the goal, then I ask that the policy be considered more carefully. People with dogs like to enjoy outdoor areas with their dogs. While I'm not one of those dog owners who overly-anthropomorphizes their pets, I do see my dog as another member of the family when I have time to walk or exercise outdoors - much like I view my 11-year-old - I would rather bring him out with me if I'm enjoying the

---

outdoors. If I'm out in the city or elsewhere (in the Sierras), I will not go somewhere where I cannot bring my dog. It just isn't a good use of my quality time to do so because it means that I later have to bring my dog out separately. I hope this viewpoint is considered. I know that it is shared by my friends with dogs.

**Correspondence:** When the Golden Gate National Recreation Area was passed on to the National Park Service for management, a condition was that people would still be able to enjoy the areas with their dogs, including in some places, off-leash dogs. I'm writing to oppose the National Park Service's efforts to restrict those areas.

I'm a dog owner, an avid environmentalist, a backpacker and a frequent visitor of Bass Lake, Fort Funston, Crissy Field and the Marin Headlands. I fully accept that my dog should not be allowed in most parts of our precious national parks. I do not, however, see any compelling reason, after consulting scientific research on the matter, why she shouldn't be allowed in some state parks and in the GGNRA.

Off-leash areas are particularly precious because dogs need to socialize with one another off-leash;

---

socializing is a core behavior and it's cruel to deprive dogs of it.

Dog-friendly areas make up a miniscule fraction of the lands in the GGNRA, and yet the NPS aggressively seeks to reduce them despite consistent public opinion in favor of keeping off-leash and other dog-friendly areas.

Muir Beach, Fort Funston and Crissy Field are vital spots for responsible dog owners to go to socialize and exercise and enjoy their dogs. It's no accident that these areas are so popular; they are successful parks where people enjoy nature and build community.

The NPS cites incidents related to dogs as a rationale for its proposed restrictions. But the number of incidents reported from dogs, according to the NPS's own statistics, is a tiny fraction of the total number of incidents rangers handle. Citing owners who disobey the rules is a sign of the success of the off-leash policy, not its failure. Indeed, if you applied the same rationale to people that you do to dogs, you would simply ban all people from the parks because a handful commit crimes.

On the other hand, unreasonably banning dogs and off-leash dogs from areas which are clearly not pristine wilderness creates a perception that dog rules are unreasonable and unfair, and, as such makes it more likely that reasonable people will break the rules. Because dogs will not simply disappear if these restrictive rules go into place: They will continue to breed, and people will continue to love them and keep them as pets, and they will seek outdoor recreation with their pets.

Dogs that get adequate exercise and socialization are healthier, safer dogs. Dogs that are cooped up become a threat to city dwellers. Any animal deprived of its basic needs becomes a problem, as the NPS must surely know.

The GGNRA lands belong to the residents of California. Many of us moved here to be able to enjoy such areas, in many cases, with our dogs. The NPS has no credible justification for defying the will of Californians. If your internal processes simply can't accommodate dogs, then please return the land to the state for management.

Sincerely,  
Cameron Scott

<b>Correspondence Type:</b>	Web Form
-----------------------------	----------

<b>Correspondence:</b>	We frequently walk our dogs at nearby Fort Funston, and it is a great way for all of us to socialize and exercise. We find that off-leash walking is much more effective in terms of exercise, and dogs in general, not just our dogs, are much better behaved when off-leash. When our dogs are walked on-leash, especially our Australian Cattle Dog, they are more territorial and protective. When our dogs are off-leash they have a chance to authentically interact with each other and figure out how to behave. The only negative encounter we have had with another dog at Fort Funston was with a dog that lives in our neighborhood, and who we encounter on leashed walks.
------------------------	---

Closing the GGNRA to off-leash walking would have a very negative impact on city parks where off-leash walking and playing is allowed. We often take the dogs to Stern Grove and McLaren Park, and can

imagine these areas being overrun with dogs and owners (and professional dog walkers) if Funston and Crissy Field are put off limits.

We are also bird watchers, and are certainly concerned about wildlife. We are conscientious about keeping the dogs out of sensitive areas such as plover nesting sites, and would like to see these areas more clearly protected, while allowing large areas, including other parts of the beach, to stay open to off-leash dogs.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Jay Brezovar

United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,17,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** I support safe sustainable use of GGRNA lands. Wildlife and the natural environment around us need the safeguards requiring better management of dogs in our wild and natural areas. Yes I support this statement:

"The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.

â€ We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.

â€ Off-leash areas should be marked off with fencing or natural borders such as bushes.

â€ Park officials need to enforce the dog rules more vigorously.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

<b>Correspondence:</b>	PLEASE READ!!!!				

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, Rodeo Beach Loop, and several other areas we now have the freedom to enjoy.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

PLEASE CONSIDER that a good many people regard their dogs as family, and the exercise and rigor of off-leash walks keep a great many in the Bay Area with marginal MENTAL HEALTH stable and engaged with the world in positive ways.

<b>Correspondence:</b>	Dear GGNRA,				

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog running on Miwok and Rhubarb trails, as a loop from our house on Marin Ave. I love hills and your proposal would mean absolutely no hills for us. We also take him and our son to Muir Beach regularly and they love the water and sand. It is sch a treat and one of to primary reasons we got a dog, to be outdoors as a family.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. I can't tell you how frustrating it already is to not be able to run my favorite trails of Marincelo and warm springs, with very little reason behind it. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park. And as a woman, often running alone, I feel safer with my dog by my side.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Dear Superintendent Dean:

I sincerely hope the National Park Service and the GGNRA will abandon the proposed unreasonable plans to deny most San Franciscans use of the vast majority of recreational land within their city, and replace them with reasonable plans that serve the people of San Francisco and the surrounding area.

The GGNRA controls nearly all of San Francisco's recreational waterfront, leaving the City powerless to act on behalf of its citizens. From the two proposal drafts submitted to date, it is clear that the GGNRA has completely ignored the wishes of the people of San Francisco and of their local government (the City and County has passed a resolution opposing the GGNRA plan).

Without these areas accessible, San Francisco dog guardians and their canine companions will be limited to city parks. While some have dog-play areas, they are small, cramped, poorly maintained, and very unfriendly to the many dogs who thrive in open areas. This is not a reasonable outcome.

As you know, the majority of San Francisco households have canine family members. Confining those households to small, dangerous areas in remote corners of the city simply fails to serve the needs of the people of the City of San Francisco.

In addition, you also are very aware that small, fenced dog runs are very dangerous for most dogs, and only open park areas - where dogs can easily be distant from dangerous people (and other hazards) are safe. Removing the ONLY open parkland from use by families with dogs puts all dogs in San Francisco in danger.

You also know that there is no danger from off-leash dogs, only the tiny minority of irresponsible guardians. The existing proposals punish all dogs and all responsible guardians (the vast majority) for the actions of a small minority. It is like banning all shopping to prevent shoplifting.

The proposal is untenable and must be changed. While I would love to ask that you act to return these lands to local control, I know that is a longer-term and more complex issue.

For now, please know that a large plurality of your constituents use these areas with their dogs. People and dogs enjoy the freedom of playing on the beach, hikes in nature and (for my dog in particular) the lush grass of Crissy Field. We do so with few incidents of trouble with dogs (which are almost always the fault of the guardian), and fewer incidents than between non-dog-related people in city parks.

Please change the plan. I suggest that you focus the plan entirely on using highly knowledgeable (about dogs) enforcement, and far stricter enforcement, of good, civil behavior within the GGNRA.

Thank you for your consideration,

Jeff Weinberger

<b>Correspondence:</b>	Please reconsider this plan to eliminate so many acres of off-leash areas for dogs. There are literally hundreds of thousands of dogs in San Francisco and it's unreasonable and unfair to the dogs and their owners to make this drastic change. You're ignoring the interests of hundreds of thousands of residents for a short list of flimsy justifications.				

A quick trip to Fort Funston on a weekend illustrates how vital these areas are and how often they are used without frequent or serious negative outcomes.

Please listen to the people and don't make this change.

**Correspondence:** Growing up in Mill Valley and now living in San Francisco, I am spoiled by the beautiful surroundings just minutes from my home. I am grateful for the opportunities I've had to visit trails and beaches for leisure and as a professional. I want to see these areas remain accessible for future generations of people and their pets to enjoy.

Throughout my employment as a National Park Service Park Ranger in Yosemite Valley, it was always difficult turning people away from NPS areas where dogs were not permitted, leashed or not. Although the rationale was to protect wildlife and other hikers, dog activity in the area was hardly ever a problem. The difference here is that Yosemite National Park is a designated wilderness area, unlike the GGNRA. The Dog Management Plan to further restrict areas where dogs are currently permitted in the GGNRA will discourage people from 1) exercising in these beautiful areas, and 2) will cause people to be less supportive of maintaining these areas. Perhaps the efforts and funds to draft lengthy proposals should be redirected to enforcing restrictions that already exist and providing educational outreach to the populations experiencing the GGNRA. In one of my primary roles as a Park Ranger, I was an educator and it is far more efficient to teach outdoor etiquette than it is to discourage people from recreating in areas that were meant for that activity. Each time I enter these areas I am reminded that people and dogs alike love the GGNRA, so why change what already brings joy and promotes health for so many?

I urge you to support Marin County Board of Supervisors president Sears' proposal! Thank you.

**Correspondence:** Please do not let dog owners intimidate you or undermine your commitment to protecting our dwindling wildlife preserves and populations. As it is, I regularly see dog owners violating existing restrictions, letting their dogs off leash on trails where this is forbidden, and bringing their dogs into areas where they are not supposed to be, leashed or otherwise. These dogs then run off the trails and deep into the surrounding hillsides, disturbing any possibility of sanctuary for the wild animals who live there, and when on the beaches, relentlessly chase any shorebirds that are present, making it impossible for them to rest or forage for food.

People's attachment to their domestic animals does not trump the imperative to protect and care for our natural environment and its creatures, whose viability is increasingly being eroded by human cluelessness.

**Correspondence Type:** Web Form

**Correspondence:** My name is Katherine, and I have a large breed dog here in SF. I use Crissy Field every single day to exercise my dog. I use the park to let my dog off-leash in order to give him freedom, fun, and exercise. I strongly oppose the GGNRA's new draft of the dog management plan. Public San Francisco beaches were designated by an act of Congress in 1972 to give open spaces to the residents and visitors of San Francisco. The people of the city are dependent upon this public space for recreation of many kinds, and it would be unfair to repeal this privilege (especially since the city continues to grow in population). This is a recreation area, meant to be used by the people of San Francisco; it is not a national park similar to Yosemite or Glacier National Parks. The trails and beaches of San Francisco were set up with dogs in mind (based on the pet policy formed in 1979), and it would be fair to the residents to keep it that way.

The new plan was not changed in any significant way to reflect the objections opponents to the plan had during the 1st phase. In addition, there hasn't been a single site-specific study (as required by law) that supports a restriction of our current dog-friendly public real estate. Furthermore, when Crissy Field was created, one of the purposes stated for its creation was to make more space for off leash recreation because of the anticipated growth in the number of visitors to the city with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of the original intent for the use of Crissy field. The restriction will also impact all park visitors in a negative way, since there will be increased concentration of dogs in a much smaller area. This is setting the dog management plan up for failure, and it's setting dog owners up for increased risk.

We benefit from off-leash walking because we're able to let our dog play with other dogs (and us) freely. With off-leash play and walking, we aren't limiting the amount our dog wants to run and get exercise. If we lost the privilege to walk our dog off-leash on Crissy Field, we feel that it would hurt the health of our dog. We do not feel that walking our dog in a city dog park filled with other dogs is adequate. He needs continuous aerobic exercise daily to ensure that his weight stays down (which in turn helps ensure he has healthy joints). Off-leash play in open spaces is also important for him to remain comfortable and social around all different types of dogs. The existing dog parks are already too crowded, and too overwhelming for dogs and owners.

I strongly oppose fences to restrict access to areas of the GGNRA. Fences feel like pens to dogs and to humans. When out-of-control dogs are enclosed with other dogs, the possibility for problems becomes higher. Fences also give courage to dog owners who have poorly behaved dogs to let their dogs off-leash. This disrupts the entire area, and encourages dog owners who have well-behaved dogs on voice command to not use the area.

Lastly, the most recent data that was released by the GGNRA (in 2013) shows that in the last year, out of the hundreds of thousands of visits by people who own dogs, there have only been 6 reported dog bites; 5 reported dog fights; 2 cliff rescues; 2 reported cases where people were "scared" by a dog; 1 instance of a wildlife killing; and 1 horse bite incident. Reported incidents involving people are much higher than any statistic involving an incident with a dog. This data, released by the GGNRA, does not support the argument that there is a need for major change. This data also does not support the request for more rangers, which would cost another \$2MM per year.

San Francisco is a unique community that has always embraced dogs and other pets as a part of its culture and happiness. To ban our pets from being able to run off-leash in a park that was created for this very purpose would be a loss of a unique freedom that San Franciscans appreciate, and value very highly.

**Correspondence:** Dear Superintendent Dean,

This is an URBAN park not a rural park, servicing a population of over 1,000,000 people within 30 miles, not a remote park.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

---

County and on new lands that the GGNRA acquires in the future.

Sincerely,

Kenneth Dean

**Correspondence:** I support the GGNRA's dog management plan. Dog walkers should not be earning income from the use of our parks, but this plan at least addresses the reality of our urban/parks congestion. Six dogs on a single width trail is disruptive to visitors and to tour programs. A limit of 3 dogs is preferred.

With the disappearance of 'empty lots' in our developing in-filled cities, pressure to use our parks as dog walking/pooping grounds has increased tremendously. I am grateful to the parks staff for their tireless years of attention to this important issue that will affect the future protection of our beloved parklands. I have been an interpretive docent volunteer leading tours in the natural areas of the Presidio since 2000, and witnessed the proliferation of dog owners whose behavior shows their lack of understanding and respect for other park visitors, valuable natural resources, volunteer stewardship, and basic civility. I also believe that as this issue has now taken years to be resolved, the dog groups have become politically aggressive, so the time is crucial to finalize a dog management plan that will monitor the use of the parks, and have the ability to enforce all aspects of the plan put into use.

I expect the public to additionally be able to monitor and report dog issues, and suggest that appropriate signage, outreach and internal procedures will be in place to empower those most affected most by dog issues, so that the dog community will know that it is not just the park staff and police monitoring their behavior.

thank you,

Barbara Corff

**Correspondence:** Dear Superintendent Dean,

I have lived in San Francisco for 22 years and have regularly walked with a dog in the GGNRA throughout that time period. I mostly use the Crissy Field area, but also recreate with my dog in the Presidio, Baker Beach, Ocean Beach, Rodeo Beach and on hiking trails throughout the area. I am writing today to express my strong opposition to the preferred alternative described in the GGNRA's most recent Dog Management Plan. The preferred alternative does not significantly reflect the substantive concerns and objections that I and thousands of other people submitted in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that the supports the drastic restriction of dog-friendly areas that the preferred alternative would impose.

The preferred alternative of the Dog Management Plan is too restrictive. It will prevent me and the thousands of other responsible people who enjoy recreating with their dogs in the GGNRA from doing so, thus negatively impacting our own mental and physical health and the health of our dogs. This valuable aspect of RECREATION should be retained as outlined in the 1979 pet policy. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Of course there are other voices that support a different position than mine, but the "scientific" and real evidence of the impact of dogs in the GGNRA just doesn't hold up. In the 22 years that I have used the GGNRA spaces with my dogs, the wild flora and fauna of the parklands has thrived. With proper signage and enforcement by the National Park Service, conflicts can be minimized. The preferred alternative is a recipe for disaster, as more people recreating with their dogs will be forced into smaller spaces. The small percentage of the GGNRA that is available to people with their dogs needs to be retained and protected. Please keep the RECREATION in the Golden Gate National Recreation Area for all of us.

Sincerely,

Laurie Berk

**Correspondence:** As someone who recreates on a regular basis with my dogs in the GGNRA, I am strongly opposed to the preferred alternative outlined in the GGNRA's new draft dog management plan. The overly restrictive nature of the proposed restrictions will prevent large number of law-abiding dog owners from recreating in the area and offering dogs a natural and healthy outdoor experience. As a wildlife biologist who has studied dog and wildlife behavior for years, there are simply no credible peer-reviewed studies documenting that dogs have a negative impact on wildlife in the area. There are simply As a regular visitor to the area, it is also evident that unruly children are a more common annoyance than are off leash dogs. This proposed regulations do nothing but further restrict people's ability to offer a natural experience to their dogs and their families.

The current off leash areas are already highly restrictive and while I believe the appropriate action would be to expand off leash pet areas, the current rules have worked well in the GGNRA for decades. This new plan ignores many valid comments from thousands of GGNRA users submitted in response to the first plan. National lands are by charter to be maintained both for the preservation of nature and responsible human use. The current trend toward overly restrictive rules for these areas, including GGNRA, reflects an undoubtedly well-meaning but short sighted approach, essentially banning normal human and pet activities without credible evidence supporting the action. GGNRA is by name a national recreation area for a densely populated region. I strongly oppose new policies that reduce the recreation opportunities for myself, others, and their canine companions.

**Correspondence:** My name is Jennifer Kattula and I walk my dog on Crissy Field every single day. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach (not to mention the other beaches that we frequent as well) in the future.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I am also concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. The need for open space areas for dogs is important not only for the health of the dog, but to maintain adequate space between dogs. Limiting this open space will therefore result in overcrowding of dogs in the dog parks - leading to unfortunate situations of more aggression and a less relaxed atmosphere.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Finally, this proposal is without evidence or merit that it will positively impact the current open space dog areas and surrounding areas. Not only is it an unfortunate use of taxpayers dollars, it dramatically reduces the dog-friendly city that San Francisco has been for many years.

Sincerely,  
Jennifer Kattula

**Correspondence:** Dear Superintendent Dean,

I am writing to express the strongest possible opposition to the new GGNRA's draft dog management plan.

I have lived in SF with dogs for more than 25 years, and I exercise my dogs in different parts of the GGNRA on a daily basis. The new plan is draconic, needlessly restrictive, and will make it incredibly difficult for me and my dogs to exercise and enjoy the outdoors as we have been doing for over two decades.

Many thousands of people have submitted concerns and objections to the new plan, yet all of these citizens have been ignored.

There is no valid reason whatsoever to restrict dogs and the humans who own them from enjoying the existing dog-friendly parts of the GGNRA. 99% of the GGNRA already restricts dogs.

The GGNRA is supposed to be a recreation area, and was created to serve a heavily populated area. The trails, beaches, and areas that allow dogs have done so since 1979. There is no reason to change this existing situation.

I often walk on Baker Beach and Chrissy Field at dawn, and invariably, if there are any other people out at that early time, they are walking their dogs. San Francisco has over 100,000 dogs, and these animals and their human owners need a place to exercise and enjoy the outdoors.

If the misguided and wrong-headed new policy is put in place, an enormous and untenable strain will be put on the city parks in San Francisco. This should not and cannot be allowed to occur.

The original pet policy formulated in 1979 must be continued and formalized.

Sincerely,

Glen Jasper

**Correspondence:** To: GGNRA Superintendant regarding the Supplemental Draft GGNRA Dog Management Plan  
Date: February 16, 2014

As a resident of Montara and previously Pacifica and San Francisco, my dogs and I have enjoyed use of Fort Funston, Mori Point, Rancho Corral de Tierra and other open spaces. I am concerned and

---

disappointed that the GGNRA is proposing an increasingly restrictive policy on dogs on their lands.

The GGNRA's mission is to provide access to nature for residents of an urban area. It's an essential mission - having open places that urban residents and visitors can enjoy and to foster taking care of our natural environment. AND, it's a fact that urban dwellers have pets who bring joy and companionship into their lives. These pets deserve space to enjoy fresh air and exercise. These elements are important components to good health and disposition.

Over the last 19 years I've walked with my dog or dogs on many trails and open spaces now controlled by the GGNRA. I specifically consider access to open space for my animal companions in choosing where to buy a home. When I go walking MOST of the people I see have dogs with them. This is particularly true at Rancho Corral de Tierra in Montara. If dogs are banned or required to be on-leash everywhere, this is a DISSERVICE to the majority of people who use the open space.

The GGNRA needs to consider the comments and suggestions made by local residents - serving the public in an urban area is the organization's reason for existing. It;s time to stop being unrealistic about who really needs and uses your lands. It's time to stop pushing anti-dog restrictions.

Thank you for considering and ACTING in concert with the comments submitted by thousands of citizens who use and love having access to local open spaces for themselves and their dogs.

Sincerely,  
Ann Sasaki

**Correspondence:** For three decades my husband and I have been walking our dogs off leash in the Rancho Corral del Tierra open space. Contrary to GGNRA's stated purpose to maintain recreational activity, the closing of more than 4,000 acres to off leash activity would seriously limited the use of this land. It does not appear that GGNRA did any research into how this land was used before they arbitrarily redefined how it will be used in the future.

During my daily walks in the area between the horse stables (Amber Ridge, Moss beach Corral) and Renegade Ranch I have NEVER seen anyone out there who did not have an off leash dog, a horse or both. Who will use this beautiful open space if dogs are restricted to leashes? Dogs can not be adequately exercised if they are restricted to leashes.

It seems absurd that I live in the middle of over 4,000 acres of open space and I have no where in the area where I can legally run my dog off leash. What I have been doing is driving up to Crissy Field where there is a legal off leash area so my dog can get a good run. How absurd is that? I leave my rural setting to drive to big city so my dog can run.

Our daily off leash dog walks are the single most important component to my husband's and my daily exercise. In all the 30 years we have been doing this I have yet to see any serious altercation involving off leash dogs (unless you count the ranger tasing a violator). The GGNRA report cites things that dogs

COULD do to cause damage. Where is the evidence? What about the bountiful coyotes on this land? These wild animals COULD pose a much greater danger than our coddled pups. Are you going to remove them too?

For all of its volume, this "study" is a poorly thought through and poorly researched document. If you want a successful plan you need to include the people who will be using the land in drafting the plan. Please, come on down to Montara and get to know us and the lovely open land that you are writing about and dictating rules for. You may just find that things were working just fine before your interference. So far I have seen no value added by GGNRA's stewardship, just a few signs and the removal of an "unsanctioned" bench and adding a sanctioned bench. MDG continues to manage the garbage removal and the doggie bags. GGNRA's major impact has been to deprive us of our greatest recreational opportunity.

Thank you for listening,  
Maggie

**Correspondence:** I urge you not to restrict both on leash and off leash dog walking in the GGNRA. I am a longtime resident of San Francisco and visit Fort Funston and other GGNRA areas on a weekly basis because I can walk my dog off leash there. Most times I am at Fort Funston I see hundreds of other responsible dog owners there is well. Being able to exercise in a natural area with their dog off leash provides a vital benefit both physically and mentally for people and their dogs. If off leash dog walking is restricted many of these people will no longer be able to get this benefit. The city parks in San Francisco do not have the capacity to absorb the influx off people and dogs that would occur if dog walking is restricted in the GGNRA.

As Fort Funston and many areas of the GGNRA are within the city of San Francisco it is vital that the GGNRA administration consider the needs of San Francisco and its residents. With over 100,000 dogs in a city with only 50 square miles it is critical that the current areas open to off leash dog walking in the GGNRA stay that way. The Mayor of San Francisco, several of its the Board of Supervisors, representative Nancy Pelosi and many other leaders representing San Francisco have all expressed opposition and concerns about restricting dog walking.

The only restrictions on dog walking that could be justified would be to limit the amount of dogs that professional dog walkers can walk at a time. Virtually all the negative impacts from dog walking I observe are when professional dog walkers are walking groups of over six dogs. Overwhelmingly the people walking their own dogs are responsible and have their off leash dogs under voice control.

A majority of the public comments to the original EIS were opposed to restricting both on leash and off leash dog walking. Yet the SEIS does almost nothing to acknowledge these concerns. Furthermore the SEIS does not provide substantial and specific evidence that restricting dog walking will provide a significant benefit. Therefore the best course of action is to continue with the 1979 Pet Policy that is currently in place.

**Correspondence:** Even if I try to remove my subjective understanding from it, this plan seems like an unfair penalty to dog owners.

---

Yes, there are irresponsible dog owners. Whether they're leaving excrement out of laziness, or lack the

---

will to control their dogs, their actions are offensive to everyone. Fortunately it's a small group.

Conversely, there are people with children that disrupt public space and wildlife. They chase birds. They throw things. They have uncontrolled temper tantrums. Their actions are offensive to parents everywhere. Fortunately it's a small group.

There are fishermen who station themselves at Ocean beach, blocking the water for vast stretches from people and wildlife. Fortunately it's only a few most of the time.

Groups of people discard trash carelessly, ruining parks and beaches for an overwhelming majority who don't behave so carelessly. I could go on citing any number of people behaving in a manner that is less than helpful.

What I'm trying to say, is there are all manners of nuisance born of irresponsibility. But we don't react to every nuisance with a ban that adversely affects huge, targeted sections of our city's population. Particularly one with a bias that seems almost too specific to anything other than politically motivated, under an umbrella of science that discards an opportunity for appropriate discussion, independent audit, or policy.

Dog owners, on the whole, are a very responsible group. And most of the time, our dogs are practically our children. And while I'm not comparing a pet, no matter how beloved, to a human being, I am saying the love is real and that our collective lives will be dramatically impacted by a huge reduction in available space to not only bond with our pets, but for them to simply get outside. A large population of cooped up dogs is good for no one. Unable to socialize and exercise, bad things are more likely to happen than good. Once that happens, I worry the dog owners will also be blamed.

For every person who composes a well crafted argument citing dogs' collective negative impact on our parks, I could find another who could likewise find equal blame and equal potential damage from other sources entirely. These things are often dependent on the lens one peers through. In this case, some like dogs, some do not.

But all of us love our parks. Most of us are quite responsible with them. Everyone deserves to enjoy them without such specific bias. And history tells us that bans are rarely a good idea, typically born out of agenda rather than practicality.

Irresponsible dog owners are bad. This is not in dispute. The solution, one might argue, is not to collectively ban all of us but to fine people for their infractions. Fine them significant amounts. The parks would make money, and offenders would be punished individually. It just seems a more fair way to go. And an option I hope might be considered.

But for now, the most liberal place on earth feels a lot less liberal.

Sincerely,

Ben Dutro  
San Francisco resident

**Correspondence:** I am writing to you with concern and opposition to the Golden Gate National Recreation Areas preferred alternatives in San Mateo and San Francisco Counties. Our family walks our dog almost daily in GGNRA lands including Sweeney Ridge, Fort Funston, Mori Point, Rancho Corral Tierra and occasionally in the San Pedro Highlands. These areas have been open to dog walking for many years and have been a great area for recreation and source of joy for our family. We have been lucky to enjoy the environmental and historical beauty of these lands while exercising with our dog. I understand the need to protect fragile areas and balance public recreation needs; however, it appears we are being excluded from use of these public areas despite years of responsible use and minimal to no environmental impact. Perhaps better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog. Significant portions of Northern San Mateo County are owned by GGNRA. It would be unfortunate to loose our recreation and the associated tax base that dog walkers bring with them.

**Sweeney Ridge**

I prefer option 19A with the addition of all of the Baquiano trail from the trailhead at Fassler Ave. in Pacifica to its conclusion at the Portola Discovery site.

I do not support the current preferred alternative 19-F due to:

"Lack of interconnect-ability of all of the Sweeney Ridge Trail System

"Over stating of damage caused by on leash dog walking given the historical use of area (once an active military site, 4x4 vehicle trails, gas/water/electricity rights of ways, mountain biking, horse riding).

"Degradation of area with existing non-native vegetation.

"No attempt to protect proposed areas with signage or symbolic fencing.

"Consideration for ADA accessibility. 19-F would exclude the least steep only switch backed trail into the Sweeney Ridge Trail System.

"Impact on other local parks (the San Mateo County Parks Department has a no pet policy) making the GGNRA the only legal place to walk our dog in a rural park setting.

"Sweeney Ridge is surrounded by urban areas with direct access from many neighborhoods making the wilderness back country experience unattainable.

"Is enforcement realistic? I would rather have consistent on leash enforcement rather than unregulated off leash due to difficulty of enforcement.

"Failure of EIS to show specific scientific damage resulting from on leash dog walking

"Many rare and endangered species and plants have thrived and not adversely been effected by on leash dog walking.

**Fort Funston:**

I prefer option 16A over any other.

I do not prefer options 16B,C, D, E, or F for the following reasons:

"Lack of interconnect-ability of all of the Funston trail systems.

"Over stating of damage caused by dog usage given the historical use of area (once an active military site, horse riding).

"Degradation of area with existing non-native vegetation.

"No attempt to protect proposed areas with signage or symbolic fencing.

"Impact on other local parks (the San Mateo County Parks Department has a no pet policy) making the GGNRA the only legal place to walk our dog in a rural, open park setting.

"Fort Funston is nationally-recognized as one of the greatest dog parks in the country. This kind of open space is not available anywhere else in the greater bay area.

"Is enforcement realistic? It would seem by virtue of the vast, interconnecting trail system, the GGNRA would have to resort to excessive enforcement measures to regulate the trail use.

"Failure of EIS to show specific scientific damage resulting from on leash dog walking

"Many rare and endangered species and plants have thrived and not adversely been effected by on leash dog walking.

"Fort Funston has no real appeal to any other user group due to its cliffs, steep terrain, and climate. It is my opinion that restricting dog use will not invite the perceived low-impact user(hikers), rather it will invite an element of transients, loiters, and trespassers. The dog users are both the stewards and proprietors of this land; the presence of such unwanted elements is diverted by virtue of the presence of dog enthusiasts among others.

#### Mori Point

#### I Prefer 17A

I do not support the preferred alternative of 17F due to:

"Lack of interconnect-ability of trails

"Over stating of damage caused by on leash dogs given the historical use of area (4x4 vehicle trails, motorcycle trails, mountain biking, horse riding).

"Degradation of area with existing non native vegetation.

"Consideration for ADA accessibility

"Impact on other local parks (the San Mateo County Parks Department has a no pet policy) making the GGNRA the only legal place to walk out dog in a rural park setting.

"Area is in a densely populated area with proximity to neighborhoods not a wilderness back country experience.

"Is enforcement realistic? I would rather have consistent on leash enforcement rather than unregulated off leash due to difficulty of enforcement.

"Failure of EIS to show specific scientific damage resulting from on leash dog walking.

"Many rare and endangered species and plants have thrived and not adversely been effected by on leash dog walking.

"Symbolic fencing and signs have been effective in keeping people as well as people with dogs out of sensitive areas

#### San Pedro Highlands

#### I prefer 20E

I do not support with the preferred alternative of 20F

"Lack of interconnect-ability of trails

"Over stating of damage caused by on leash dogs given the historical use of area (Motorcycle club/ motorcycle trails, mountain biking, horse riding.)

"Degradation of area with existing non native vegetation.

"Consideration for ADA accessibility

"Impact on other local parks (the San Mateo County Parks Department has a no pet policy) making the

GGNRA the only legal place to walk our dog in a park setting.

"Area an urban park with proximity to neighborhoods not a wilderness back country experience.

"Is enforcement realistic? I would rather have consistent on leash enforcement rather than unregulated off leash due to difficulty of enforcement.

"Failure of EIS to show specific scientific damage resulting from on leash dog walking

"Many rare and endangered species and plants have thrived and not adversely been effected by on leash dog walking.

Rancho Corral Tierra

I prefer 21A

"I do not support the the preferred alternative of 21F due to

"Lack of interconnect-ability of trails

"Over stating of damage caused by on or off leash dogs given the historical use of area (Motorcycle trails, mountain biking, horse riding.)

"Consideration for ADA accessibility

"Impact on other local parks (the San Mateo County Parks Department has a no pet policy) making the GGNRA the only legal place to walk out dog in a park setting.

"Area an urban park with proximity to neighborhoods not a wilderness back country experience.

"Failure of EIS to show specific scientific damage resulting from on leash or off dog walking

"Many rare and endangered species and plants have thrived and not adversely been effected by dog walking.

"Has been unregulated for 30 years

"More research needed due to only being a park for less than two years

As you know the GGNRA is a unique special place that was created to accommodate the recreational needs of an urban area, essentially creating an urban park. Any attempt to mirror dog restrictions used in national parks with a wilderness experience would be misguided and would go against the intended mission of the GGNRA when it was created. Please continue to allow us to recreate with our dog in the GGNRA and consider my concerns.

**Correspondence:** Dear Superintendent Dean,

I am writing in support of the formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I am against the Preferred Alternative as it is unfair. The GGNRA should be open to all and to virtually take away all land for those with dogs is unconscionable. The beautiful open space that is the GGNRA should be enjoyed by all. Many of these areas have frequent visitors who own dogs. I think that if the park service were being fair, they would see that these people respect and take care of these open spaces. Please be fair and keep these areas accessible to all.

Sincerely,

Cynthia A Benedetti

**Correspondence:** I am writing to you with concern and opposition to the Golden Gate National Recreation Areas preferred alternatives in San Mateo and San Francisco Counties. Our family walks our dog almost daily in GGNRA lands including Sweeney Ridge, Fort Funston, Mori Point, Rancho Corral Tierra and occasionally in the San Pedro Highlands. These areas have been open to dog walking for many years and have been a great area for recreation and source of joy for our family. We have been lucky to enjoy the environmental and historical beauty of these lands while exercising with our dog. I understand the need to protect fragile areas and balance public recreation needs; however, it appears we are being excluded from use of these public areas despite years of responsible use and minimal to no environmental impact. Perhaps better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog. 51% o The City of Pacifica is owned by GGNRA. It would be unfortunate to loose our recreation and the associated tax base that dog walkers bring with them.

Sweeney Ridge

I prefer option 19A with the addition of all of the Baquiano trail from the trailhead at Fassler Ave. in Pacifica to its conclusion at the Portola Discovery site.

I do not support the current preferred alternative 19-F due to:

"Lack of interconnect-ability of all of the Sweeney Ridge Trail System

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from

recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Russell Ulrey

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Shaul Teplinsky

**Correspondence:** I support the no action alternative in the S EIS for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands. I would urge you to retain the long-standing 1979 pet policy. I have lived in and around Millvalley for over 40 years and have owned four different dogs during that time. I have hiked with my dogs on a regular basis during all those years in the areas mentioned above. It is a wonderful resource that is always been available to people like myself and our dogs. To deny us access to these areas seems to me unfair and discriminatory. Most of the open space around here is restricted. These 4 or 5 areas mentioned above are the few areas available to dog owners like myself that like to enjoy the outdoors with our pets. Please don't take that from us.

**Correspondence:** These off leash areas are the highlight of my life with my pup and also the thing she looks forward to the most in her life. They make living in the city with a pup possible and gives them the proper exercise. I have never encountered a negative interaction or inconvenienced anyone in our outings. I always clean up properly and make sure she doesn't bother with growth or vegetation. I think it's ridiculous that this is even a topic or issue. We will be forced to overcrowd already overcrowded off leash city parks. Please do not go through with this.

**Correspondence:** I favor the preferred alternative regarding the GGNRA's current plan to further restrict dog activity on GGNRA lands. Almost every town and city in Northern California has at least one

---

dog park. Dogs are not people and most can only react to thousands of years of instincts that have made the dog a PREDATOR in the natural world. The wildlife that dwell on the GGNRA lands also must react to their instincts to avoid any predator. Dogs 'mark' where they roam. The wildlife will move from areas that are constantly marked by these predators. The negative impacts to the native wildlife are obvious.

The second large problem with allowing domesticated dogs to roam free concerns the unfortunate ability of the dog to drop a load of waste at almost any given moment. These dropping (feces) carry nasty pathogen and viruses that can be transmitted to wildlife and humans simply by coming in contact with the dropping. It matters little if the droppings are 'picked up' or not. The residue does remain and presents the possibility of human or wildlife contact.

The Cult of the Dog is strong in Northern California. Professional dog walkers are organized and have their 'jobs' on the line. Please do not succumb to the demands by elected officials who are mostly responding to political pressure and potential votes. Many county supervisors and a few other politicians have decided to ignore the real problems of too many dogs roaming free in natural or restored areas that need upmost protection. We have lost too much ground to the whims of special interests and the interference from bonehead politicians. Please stand tall and follow a plan that provides ultimate protection of the wildlife and the habitat that these creatures depend on to survive.

Thank you.

Richard Fraites  
Novato, California

<b>Correspondence:</b>	Many others have stated their objections to the proposed dog restrictions. I reflect their opinions, particularly well-stated by the Marin Humane Society. It would be so helpful to know why, exactly, dogs are considered so detrimental to the parks environment, and then perhaps dog owners would not feel so persecuted. As it stands, I feel like my little dog, my outbound poop bags and my innocent little week-end walks are being victimized for no reason. Are the NPS officials not themselves dog-owners? Do you not get why this new proposal is so cruel? Give us some evidence please, as to why dogs should not be allowed to traipse along the trails with their owners. Otherwise, it just feels like random vindictiveness on your part. Thank you.

**Correspondence:** I am strongly opposed to restricting dog walking in the GGNRA. The new dog management plan could ban people with dogs from 99.9% of the GGNRA's 80,000 acres. There is no way that this plan can be balanced or fair, since it denies dog-walking access to hundreds of thousands of people who live in 1/3 of the Bay Area households and who have dogs. It is vital the GGNRA consider the recreation needs of all of these people with dogs by continuing with the 1979 Pet Policy which gives them and their dogs access to a minute percentage of the total GGNRA land area.

I'm concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When San Francisco's Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation at Crissy Field is a reversal of course without a basis especially where the impact on all San Francisco park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

When San Francisco granted GGNRA the open space lands in our 7 mile by 7 mile city, it was with the granted promise these lands would be for recreation as it had been since it began. Now the GGNRA wants to go back on their promise for made up excuses. San Francisco has a relatively small and limited recreational use areas. We are NOT a national park needing tight oversight by the Fed's. We need our few recreational areas for our local residents. It's not as though the rest of the nation will be coming to SF as they do to national parks.

Re: Draft Dog Management Plan/DEIS  
Dear Superintendent Dean,

My last correspondence about this took place May 26, 2011 - those views remain unchanged (see below). However, I have since learned more about the importance of formulating a rational policy about dogs in the national parks and other recreational areas. There's an epidemic of obesity and other health problems in this country, many of which can be traced to a lack of exercise - recent studies indicate dog owners may get as much as 34% more exercise than non-owners.. As a dog-owner yourself (are you still?), I'm sure you understand how important owning a dog can be in addressing this issue. In addition there are new studies indicating pet ownership can play an important role in preventing allergies.

I realize dogs in national parks is a thorny issue with which the Service has been grappling for several years. However I also think the GGNRA has been a largely successful experiment, a Peaceable Kingdom which those who have been at Ft. Funston on a weekend know firsthand. I agree that Ft. Fun is currently being overused, but attribute this to the scarcity of other options, especially in San Mateo county.

Were the Park Service to draw on the experience the GGNRA has acquired there could be a national policy developed which would allow me and millions of other dog owners to fully enjoy our national parks. Right now, as you know, dogs are mostly excluded, and this also excludes me unless I want to pay \$50 a day to board my girlie while I experience the Great Outdoors. This is nuts. What's required is imagination and WILL to allow some modest changes which could include: off-leash play areas from 1 - 5 (fenced) acres adjacent to campsites; on-site daycare for dogs while owners hike in areas inappropriate for dogs, designated on-leash areas where dogs would have little or no impact on wildlife - surely a panel of dog experts could come up with many more ideas, including the training of Park personnel (which could be funded by a special license for dogs) in dealing with dogs and their owners, preferably without tasing either. Therefore I'm forwarding this correspondence to First Lady Michelle Obama in her capacity as chairman of Let's Move, as well as to Gov. Jerry Brown suggesting a similar program for our state parks to be funded by dog owners and/or a portion of the taxes we already pay.

I understand that the primary NPS mandate is to Preserve and Protect, and listening to recent interviews with the author of *The Sixth Extinction*, Elizabeth Kolbert, have brought home to me how dire the situation is. If the GGNRA is used as a model for recreational options near major population centers it will help reduce carbon emissions as well as contribute to our health.

Having seen how much flak the NPS has been taking in Congress, and how much has been cut from the budget, it occurs to me that dog owners represent a natural constituency which could be incredibly supportive of the environmental principles of the NPS - I, for instance am a long-time member of the Sierra Club. Perhaps its time to build bridges with us rather than continuing to pursue policies which damage us and our dogs.

Sincerely, Judith D. Kucera

Letter dated May 26, 2011

My husband (64) and I (67) have owned our small (lot is 25 x 100 ft.) home in the Glen Park/Bernal neighborhood of SF for 30 years. 2 years ago we adopted a rescue dog for companionship and exercise. Because of our ages we initially looked for an older dog, but fell in love with Penny (now 3, a 60 lb.

Chow/Shepherd mix) at the SPCA pet fair and embarked on a new, demanding and immensely satisfying relationship.

Over the past two years we've spent countless hours exploring San Francisco with Penny, but our favorite spot has been Fort Funston because of the dog-friendly environment where we can go for long walks together and she can socialize with other dogs and humans off-leash. Twice a week she goes there in a play group with a dog-walker (I quite often tag along because it's so much fun watching them play together - Penny's best friend is a year-old Weimie she's known since he was 2 months old), and 2 - 3 times a week she goes there with Mark or me; other days we go to city parks for her daily 2 mile walk. For a year and a half we went to A Better Way for Dogs and learned voice control and how to work with her on and off leash, and we've worked hard to be responsible dog-owners. As long-time environmentalists (I'm a Sierra Club member) we also try to be responsible stewards of the natural world (we used to go to Ocean Beach to do clean-up in the '80's - young people thought we were weird!), so we keep a close eye on her when we're out there, and have worked hard to exercise voice control when she's off-leash.

I've attended 2 NPS meetings as well as the SF Supervisors meeting to learn about the Draft Proposals for the GGNRA and have been utterly dismayed at the extreme reductions in on/off-leash recreation outlined for dogs and their guardians. After studying the Fort Funston ROLA proposals it seems clear that no dog behaviorists were included as DEIS advisors, because neither the on or off-leash areas have any shade!!! Also, as a senior, I'd risk injury trying to get Penny to the beach (which as you know is often unusable because of high tides or bad weather) on-leash, and because the trails would be crowded Penny would be anxious, esp. on-leash, and more likely to be aggressive (evinced possible leash rage). The ROLA proposed next to the parking lot is completely inadequate for the number of dogs using Fort Fun and is an invitation to non-compliance which under the current proposal would eventually result in dogs being banned entirely.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the human environment, but the DEIS fails to do so by failing to adequately address how the proposal affects recreational values for these local residents, or to evaluate the impact on local parks of such a drastic change in existing policies..

The recent brochure I got in the mail from the Golden Gate Conservancy was headed Parks for all Forever - unfortunately as dog-owners we feel excluded from this generous vision by the DEIS. Having read quite a bit about NPS dog policies, it seems clear that our dog, and therefore we, are not welcome in the national park system, with very few exceptions, most of them a thousand or more miles away. Obviously there are areas where dogs shouldn't go, for endangered species preservation or their own well-being. However, in general, we don't understand why the policy doesn't allow leashed dogs wherever humans are allowed, and why there are not many more ROLAs in the NPS as a whole. Since some 60% of American households own dogs, it does not seem unreasonable that 1% of Parklands would be set aside to allow access for them too, and to this end we think:

- 1) The National Park Service should treat the GGNRA as a model for developing more enlightened dog policies throughout the park system, which could be co-ordinated with the Let's Move efforts which our First Lady Michelle Obama is so actively involved in, encouraging families to get outside with their dogs, educating them about dog behavior, and providing room for off-leash recreation (you can't play catch when your dog is leashed!).

- 2) Hire dog behaviorists to improve the existing models Fort Funston, Crissy Field and other important GGNRA dog recreation areas including the New Lands. Point Isabel Regional Shoreline is a sophisticated model of multi-recreational use which could be drawn upon and then used throughout the park system. Consider experimenting with a green approach to dog waste, providing compost stations like those coming into use in Canada, or biodegradable bags which could then be composted instead of going to

land-fills.

3) Signage and fencing or other barriers for areas closed to the public and/or dogs should be abundant and educative.

4) Remove the poison pill plan with regard to compliance.

5) Require all dogs using the GGNRA to display a current license together with contact information in case of emergency and to be under voice control when off-leash.

6) Set up a low-cost automated permit system for dogs (\$1 - \$2 a day per dog) which will help defray any extra maintenance costs.

7) At Ocean Beach either: retain and expand existing snowy plover protections to include human disruption as well as heavy equipment, kite flying, beach fires and other known factors affecting the bird population. Where feasible create plover-friendly areas including oyster shells for cover. Or, recognize that Ocean Beach may never become a nesting area because of the heavy human presence there. Is it true that only 7 plovers have been sighted in the annual counts since the dog ban was instituted? Maybe GGNRA plover restoration efforts should be concentrated elsewhere instead of closing off 2 miles of a beach much needed for human recreation, with dogs welcome on-leash and off in a larger designated ROLA..

After much thought, I support Alternative A, the No Action alternative, and retaining the existing 1979 policy with changes as outlined above. Its especially important that the New Lands policy be changed to include respect for existing uses of the lands including on and off-leash dog-walking. I see many dog-walkers at Fort Funston who drive up from San Mateo County because there are so few off-leash areas there, and the New Lands proposal would exacerbate this situation. State and county parks in San Mateo have extremely restrictive dog policies - perhaps an enlightened NPS policy would have a trickle-down effect in this regard. Its important to remember that dogs have important well-documented roles to play in providing companionship, exercise and protection (I feel much safer hiking now that I have a dog) for their humans.

Other changes we would support:

Pit-bulls (and other breeds specified in local ordinances) must be neutered or on-leash.

Owners/walkers must have a leash for each dog and a bag for feces pickup.

Dogs may be off-leash during daylight hours only

Dog caregivers must leash excitable dogs within 50' (? not sure how far) of horses, hang-gliders, and other stimuli known by the owner to cause prolonged barking or aggression. When sharing paths with young children and bicyclists, owners must leash their dog and/or withdraw a safe distance to reduce other users anxieties. Owners are expected to act as good-will-toward-dogs-ambassadors, recognizing that many people have a high level of anxiety about dogs. Inappropriate or aggressive behaviors which caregivers dont take immediate steps to control should be reported and may result in the dog and its caregiver losing access privileges.

Those reporting such behavior can call a hotline and give an incident report describing the dog, its caregiver, time/place and vehicle license number if known, as well as a brief description of the problem. If urgent they should call 911.

No off-leash dogs in or within 25' of parking lots.

We hope that you and the Park Service can find ways to reconcile the many conflicting interests surrounding this issue, and develop a more humane and sensible approach to the problem which will continue to welcome us and our dog in the GGNRA.

Sincerely, Judith D. Kucera and Mark Hein

cc The Honorable Nancy Pelosi, Secretary Ken Salazar, Mr. Jon Jarvis, NPS Director

**Correspondence:** In the years that I have lived in the Marina district of San Francisco, I have walked Chrissy Field virtually every day. I have long commented that both dog owners and walkers are incredibly responsible with their dogs. They manage them, pick up after them and insure that their dogs have no impact on the many people who enjoy this recreation area and co-exist without a hitch. It is a social gathering spot that breeds community. Why limit the usage of this area and dictate rules that are not necessary. I truly hope that you can let the park continue as harmoniously as it always has without uncalled for monitoring or enacting of a policy that the majority are content to leave be.  
Thank you,  
Minette Nelson

**Correspondence:** Off leash in San Francisco has built a great dog community. It is social and more healthy for dogs to be able to roam freely in parks. I strongly appose this move toward banning off-leash and fetch.

As long as people pick up after their dog and socialise their dog so the dog is safe and able to be among other dogs, there is ABSOLUTELY no reason for this change.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I take my dogs to Muir Beach almost every day!  
I don't understand why they are trying to ban dogs?

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County, San Francisco and on new lands that the GGNRA acquires in the future.

Sincerely,

Jane Adams

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Amy Levine

**Received:** Feb,05,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** To whom it may concern:

Just one more effort to ask you to reconsider or, at the very least, modify your up and coming decision to reduce the open space we enjoy with our pups.

I grew up in Marin. I cherish the memories of hiking with my German Shepherd Dog in the hills surrounding my home. I left for college, married and did not return for 30 years. Oh what a difference a day makes!!!! Clearly, I am saddened but, more than that, I wonder if you could think out of the box for a moment.

For a number of years, my husband and I have been cognizant that dog walkers and irresponsible pet owners are chipping away at our rights to enjoy this breathtaking landscape.

Why was it ever allowed that DOG WALKERS may "walk" 10 plus dogs at a time? Many of these dogs are loosely under voice control. That would mean that they eventually come when called but, only after they have sniffed out every bird, trampled plantings and eliminated just about any old place they wish! Why not require additional, recognizable licenses of every dog that profits from the open space we so desperately want? If there was for example, a large red heart hanging from the collar of every dog we see on and off leash in open spaces, we would all know that dollars had been paid for the privilege. Owners would feel more responsibility if they knew that a hefty fine would follow if the license was not visible. Additionally, all the rest of us would know who paid and who did not. There is emotional power in numbers.

And, what about DOG WALKERS? Whenever was it O.K. to safely and responsibly walk (I use the term loosely), 10 dogs at a time?! We think nothing of requiring smog controls of our automobiles. People break and test rules when they think they are not being monitored. I am certain that those many of us who are responsible, who do have our pets under visual and voice control would be happy to help the state/parks etc. identify the rule breakers. All we need is visual identification. Somewhere around 80% of Marin is already off limits. Why cannot we police ourselves or, at least intimidate the less responsible with a few rules that make not complying uncomfortable?

Can't we come up with some solution that presents compromise?

Sincerely, Carmelita and Bill Ellis

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear NPS and GGNRA,				

Please do not implement the proposed changes to dog-accessible areas within the GGNRA lands! As a dog owner I strongly believe that people have a right to visit places sans dogs, and people with dogs have a right to enjoy the outdoors - a healthy compromise is certainly possible. The current rules are already very restrictive of dog access, and limiting where we can go will create further difficulties.

I've owned dogs for 17 years and can attest that the vast majority of owners are very responsible people who care about the environment. Please do not let a few bad apples represent the vast majority. Should dog owners be fined when their pets chase birds - absolutely! But people are the big culprits when it comes to creating damage. I live across from Ocean Beach and am constantly picking up garbage and

hearing illegal fireworks being set off, not to mention watching people themselves chasing birds. The environmental problems facing Ocean Beach are vast and pinpointing a few canines is only the tip of the iceberg of the problem, scapegoating dogs here is inaccurate.

As a woman I greatly enjoy the peace of mind of being able to hike solo on trails with a dog by my side. This is one of my most treasured activities. Without my dog along I do not feel comfortable alone on hikes, and I know there have been cases of women being harassed and attacked on trails. Limiting dog friendly trails even further also limits my own access and enjoyment of the outdoors. With precious free time, many other dog owners also only get to enjoy hikes and trails if they combo that activity with their dog. By limiting where the dogs can go, the people lose access as well.

Another place I've greatly enjoyed has been Fort Funston. If Funston dog activity is limited, that place will likely see a crime spike as it is isolated and has many hidden nooks and crannies. In addition, dog walkers voluntarily have monthly cleanups of the park. People really care about and love the fort, and this cleanup is pure volunteer work that costs taxpayers nothing. As for concerns about native plants, the outer sunset and Fort Funston used to be sand dunes. The plants at Funston are introduced, usually via the bottom of people's shoes. To truly return Funston to a natural state, the foliage would have to be ripped out. Obviously this is no solution either.

I beg you not to restrict the dog access within the GGNRA further. It leaves very few outdoor places for people and their pets to enjoy. Dog owners care about the outdoors because we spend so much time in it. Please do not take that away from us!

Sincerely,  
Alison Clinch

<b>Correspondence:</b>	To whom it may concern,				

Recreating with a dog is a common and healthy practice. It lifts our spirits and gets us out into the fresh air. Some people, especially the elderly, would not make the effort to go outside for a walk on a daily basis if not for the desire to take their best friend out for some necessary exercise.

I'm very concerned about the NPS's dog management plan for the GGNRA. It would take away that opportunity from countless people. Having your dog tethered to you is much different from being able to run and play with your dog off leash. And having to walk your dog on city streets instead of being able to enjoy the beauty of nature lessens the experience.

We need more off-leash areas, not fewer. I urge you to reconsider the dog management plan.

Thank you for taking the time to read this.

**Correspondence:** I have lived at my home on Ivy Street in Montara for 28 years. During this time, I have been fortunate to have enjoyed the companionship of three dogs. A ritual my dog and I have enjoyed together nearly each day is to walk up Alamo, down Park, then onto the bluffs west of Torrello Ranch where I've let her off leash to run and smell the fresh smells from the Pacific Ocean not far away. We return to our home after a 40 minute "holiday" from the restraint of being house-bound, both refreshed and stimulated by the exercise, the views and the smells of the great outdoors. We rarely pass anyone, but when we do, it's typically a horseback rider with his dog whom we've met on our walk many times before. It may be selfish of an old man such as myself, but I can't bare the thought of having this special time each day, with my favorite companion, denied to me because of fears that something "bad" might happen which has never occurred, from my experience, for the last 28 years! Can't everyone just get along in the future as they have in the past? Must we change what hasn't been broken, just because our size and power says we can? Please let those of us who have depended upon such wonderful landscapes in the past continue to be good stewards over this land, manage any discord should it arise, and enjoy where we live for the rest of our days.

- David Biehl

**Correspondence:** Dear Superintendent Dean,

My wife and I walk our dog Lou regularly both at Fort Funston and Chrissy Field and I was shocked when I heard that restrictions to off leash might be put in place. As a regular visitor I can verify that the VAST majority of people who access Fort Funston are walking their dogs - the number of people sans dog is sub 10% even including the handful of hang gliders. At Chrissy Field it is about 60% dog owners, still a clear majority. Both parks I see dog owners consistently picking up after their dogs and the parks always seem pristine, no dog litter or other litter. So what alleged problem is this plan addressing? I can't help but feel that the proponents of this new plan are a small but vocal minority. From a purely political perspective, think about it - if you own a dog you are very likely to have a partner to help with the walking duties and due to basic dog needs own outdoor yard space. So you are talking about primarily married homeowners who keep dogs. These people are passionate about their dogs and they will VOTE accordingly.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. <b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely  
Nancy C. Rasmussen

**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,17,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The primary focus of the ocean and bay front in this densely packed urban environment should remain recreational, as opposed to the nurturing of species that can be accommodated elsewhere. Species protection remains important, but not blindly pursued in areas that already support a wide variety of people-oriented uses. And don't lose sight of the fact that people threaten far more species than dogs ever will!

Sincerely,  
Andrew Leahy

**Correspondence:** Dear Superintendent Dean,

GGNRA is not really a National Park, designed to keep a pristine environment for generations to come. It was cobbled together out of city land and ex-military land. Many parts of the current GGNRA have been used for off-leash recreation \_long\_ before the National Park Service was ever involved. The S. F. Bay Area has a reputation as a very dog-friendly area, in part because of these off-leash areas. The new draft dog management plan is way too restrictive and will prevent me and my dogs from playing the way that we have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. **Correspondence:** As a resident of San Francisco's Lower Pacific Heights for the past 14 years, and a dog-owner for the past 9, I am writing to strongly oppose the preferred alternative described in the GGNRA's new draft dog management plan.

It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston for many years.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

It will drive dog owners, like myself, to the neighborhood parks in masses. Not good for park lawn upkeep, picnickers, etc.

The notion that \$2,000,000 will need to be allocated for more rangers is not supported by the data. The numbers released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. The reported incidents involving people are much higher. This data does not support the request the need for a change.

Please understand how this alternative will negatively impact not only the open spaces that currently allow off-leash access, but will in turn impact the health of the city's dogs, dog-owners, and crowding in neighborhood parks.

That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Thank you for your time,  
Lisa

<b>Correspondence:</b>	There are so few open spaces in San Francisco, it would be a shame to change the current policy at Chrissy field. If I did not want to be around dogs, there are many other ocean access/beaches to select but so few places that are dog/family friendly.				

I have never heard of a dog bite at Chrissy Field and in the many visits, I have not witnessed any dog aggression.

Thank you for your consideration.

Susan Baranowski

**Correspondence:** My dog plays respectfully off leash every day at Crissy Field or Fort Mason. She has never caused any problems, never gotten into a fight, never left her poop on the ground and never broken any laws nor will she ever unless you take away her right to exercise off leash.

She goes for walks everyday and has never been hit by a car because she looks both ways before crossing and follows the rules of the road. She has never taken up the time or resources of the police or fire department.

Perhaps the City of San Francisco should be focusing on their resident humans, not dogs as I do not think the same can be said for them. Why punish the ones who are behaving?

**Correspondence:** I am very much opposed to the Draft Dog Management Plan. It appears to be responding to anecdotal information. There are no hard data to support this change. Given that 90% of the Golden Gate National Park does not allow dogs off leash, people who do not want to associate with off leash dogs have plenty of places to go. However, those of us who consider our dogs to be part of our families are already extremely restricted. As a driver of the New Economy, the San Francisco Bay Area is innovative in its approach to our canine companions. Many workplaces, hotels, cafes and bars allow dogs, so this Draft Plan seems to be reactionary. Like it or not, we dog owners are not going to accept this proposed change without a fight, and I hope the National Park Service is willing to spend the money, time and resources to defend this change, and if worse comes to worse, enforce it. At a time when energies should be put to planning for the effects of climate change, it is utterly lamentable to me that our taxes are going into something like this Draft Plan which seems to be responsive to NOTHING.

**Correspondence:** I oppose any changes to the GGNRA dog-restriction policy. I regularly walk in areas where dogs are permitted and have seen many examples of owners scooping dog waste into bags and then leaving them right there on the trail or path. This is not the exception, it is the rule. Anyone who

walks such areas will tell you that they are littered with bags of dog waste which are not removed by the owners, they simply remain on the path. This is unacceptable and don't believe for a moment that an "educational information program" of any sort will help to change this well-established behavior. It won't. Prohibition of dog presence is the only policy that will work.

Sincerely,  
Rob Hughes

**Correspondence:** This plan has ignored several things and is SO confusingly presented it is very hard to understand what the government is suggesting. But regardless of this, there are some things that are clear and need to be fixed.

1. The needs of people with handicaps has not been addressed. Some of us can't walk dogs on leashes.
2. The proposal "emphasizes (meeting the needs of) the diversity of users of GGNRA sites...across the counties" and then gives San Mateo County no off leash dog walking trails.
3. In San Mateo County the EIS states that dogs could have a negligible impact on endangered species. With some fencing or other mitigations, we bet this could come down to no impact. It seems as though this wasn't even considered.

**Correspondence:** There are so many other user groups for the GGNRA beyond owners of off-leash dogs. And of course, the NPS must prioritize protection of the place and its flora and fauna.

In some areas, I think this current dog management plan almost strikes a good balance (eg Crissy Field with its no dog areas, dogs on leash areas, and limited off-leash dog areas); however, I suggest that you increase the no-dog areas (on or off leash) so that users who do not like dogs/are afraid of dogs / or want a more peaceful experience can enjoy more of the incredible Crissy Field environs.

At Fort Funston, I think that the plan gives way too much space for off-leash dogs - I love Fort Funston, but it is essentially a dog park now and in the current plan. I suggest that the future plan should further reduce areas for off-leash dog use. Fort Funston should have a much smaller area for dogs (especially off-leash dogs), so that people who want a dog-free hike can also enjoy this beautiful area.

I feel that the dog owners who are pushing for more off-leash areas are incredibly entitled; it never ceases to amaze me that they are unable to see that there are other park users to accommodate as well as park resources that must be managed. Please do not let these well organized and very vocal dog owners push

the park to over-accommodate them at the expense of the other user groups or park resources.

Thank you!

**Correspondence:** I am opposed to the NPS plan to close down access on the Golden Gate National Recreation Area to off-leash dog recreation. The NPS/GGNRA new version of its proposed "dog management plan" would be a disaster for dogs and their people. It is a fact that we live in a world with dogs as companions. Until this is outlawed, we need to be responsible for the well being of our dog friends. That means access to off leash areas so they may be physically and mentally healthy. You can't ignore the fact that we live with dogs-this plan would be cruel and inhumane.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Sheri Shima

**Correspondence:** It is already insane that we can't take our dogs on dirt hiking trails but we can take them into Nordstrom and Tiffany's! These areas are great for dogs and the owners are very mindful of others that are there. I have never seen someone not picking up after their dog and think it's a travesty that you would remove these areas for dogs to run and play. Owning a dog leads to a healthier and happier life which has been proven through several research studies and in this day and age that is great to have. Why restrict where we can take our dogs and therefore restrict our happiness in this great area of the country!

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

---

**Correspondence:** I admit that I have not read the various plans under consideration, nevertheless on the issue of dogs in the park I have had a long held view. I would oppose plan A if that merely maintains the status quo since it would turn GGNRA into a dog run which it should not be. A national park should be for preserving nature and wildlife and for those who wish to enjoy them not for recreating one's domesticated animals. I am not a dog owner but I enjoy the company of dogs and I can get that in urban parks around the bay area. I gave up on going to Muir beach years ago because of the preponderance of unleashed dogs, which I can accept, but we must restrict dogs in the rest of the park. There should be rules and they should be enforced, since, unfortunately, too many dog owners have a sense of entitlement

---

- - - they simply ignore signs. Whichever of the other plans is chosen, I endorse the Park Service's effort to protect wildlife above all and I believe that involves limiting the presence of dogs.

Sincerely,

David Kimball

**Correspondence:** I visit Fort Funston daily with a several fellow dog-owners. It is a very important part of our day, providing exercise and contact with nature. We love Funston. We have great respect for its environs, and we feel a sense of stewardship towards it. We diligently keep our dogs from disturbing the land or its animal occupants. We also clean up trash left by others, and that which washes up on the beach. Requiring us to leash our dogs would not serve to protect Fort Funston, it would only serve to ruin the experience for both dog and human.

**Correspondence:** I just caught wind of what is going down on this. WE CAN NOT limit even more area's for dogs. I don't even own a dog at this point (but grew up with them), and I know how limited the areas are in SF for dogs to run free. ESPECIALLY Crissy fields, and Fort Funston. I am a Mom of toddler, and do respect there should be boundaries for dogs in certain areas, especially when kids are around. However, we need to trust that the majority of people who won dogs, know their dogs well enough to NOT let them run free if they were a risk. Don't let a few bad apples ruin it for everyone else. I'm a SF NATIVE (one of probably only 10 left in this city) and I'm tired of how uptight this city has become. We need to just CHILL OUT everyone and stop being so uptight!!!!!! CHILL OUT ON ALL THE CONFINEMENT! Thank you!

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

It seems like more dialogue is needed before moving forward since such a large number of people and pets will be impacted by this. Is there more of a middle ground that can be met? I appreciate that there is a need for preservation, but perhaps it would be more prudent to take smaller steps in cutting back dog off leash areas to test things out? Also, is there something else that dog owners can do to help? Are volunteers needed to help keep the areas in question more clean? Is there a small tax or fee that dog owners might pay, which could help? I think it important to understand where both sides are coming from and that dog owners can't have everything that they want, but right now, this proposed GGNRA plan seems far too restrictive.

Sincerely,  
Mary Cronin

Frank Dean  
General Superintendent  
Golden Gate Nation Recreation Area

Mr. Dean:

I am an environmental consultant (over 25 years) who is familiar with the federal document process. I am also a San Francisco dog owner for 20 years who has been frequenting Fort Funston, Ocean Beach, and Crissy Field at least once a week for that duration of time. While I support changes to the 1979 Golden Gate National Recreation Area (GGNRA) Pet Policy (and associated updates), the preferred alternative (Alternative F) in the Supplemental Environmental Impact Statement (SEIS) is too restrictive and not supported by the data provided. In addition, the SEIS is over 1,500 pages (not including maps and appendices), organized using only major section numbers and the Table of Contents is not hyper-linked to allow the reader to easily find a specific section. This makes the document virtually impossible to navigate, let alone to provide useful comments. Never the less, general comments are provided below.

Estimation of Visitor Use

The 2008 and 2012 visitors surveys, upon which it appears the SEIS conclusions are based, are inherently flawed, thus making any conclusions regarding both current and future visitor use erroneous. In San Francisco County, the 2008 survey was conducted at Crissy Field, Baker Beach, and Ocean beach for four days (two weekdays, two weekend days) and the 2011 survey was conducted at Fort Funston (two weekdays, two weekend days). This is not a representative sample of park use. As noted, on page 307, "... the mix of seasonal visitor activities could have been impacted by unusual weather or special events." At Fort Funston, the annual hang gliding race and barbeque occurred during the on-site count weekend. There was also unusually warm weather during the weekend counts in 2008, which may have increased the number of visitors pursuing water-related activities. Yet, the next paragraph states that "monthly visitation estimates were developed by combining visitation estimates from the four-day count period with monthly vehicle counts provided by NPS." At Crissy Field, the use of monthly vehicle counts to estimate park use is even more inherently erroneous since a large number of visitors are tourists either walking or on bicycles and do not drive to the park. In addition, the methodology that is essentially one dog per one person is in error because the majority of people who frequent parks tend to do so in groups; therefore, the estimation of visitor use for dog play/exercise is at best inaccurate. Based on the inherent flaws in the underlying data calculating park visitation, it is unclear how any conclusions can be made as to the advantages/disadvantages of any of the alternatives developed. It is recommended that visitor surveys be conducted at least quarterly on two weekdays and two weekend days and that count estimates are modified to include the total number of people who use the GGNRA (i.e., total number surfing, total number dog walking, etc), and specifically at Crissy Field, to differentiate between promenade and beach use; these data will allow the NPS to obtain a more realistic understanding of park use. The lack of understanding of visitor use may be due to the fact that the environmental contractor does not have a local office (indeed per their website, they have no presence in California) and therefore was unable to conduct more reliable visitor surveys.

## Environmental Consequences

For sites in San Francisco County, Table 4 indicates that there is only a minor difference in the benefits of Alternative F over Alternative E. Completely closing off portions of Fort Funston, Ocean Beach, and Crissy Field from dog access may minorly benefit vegetation and soils, wildlife, special status species, and cultural resources at these locations (although numerical estimates have not been provided), but will have a negative impact to these same items in other parks of the Bay Area where dog owners/walkers will be forced to frequent. As such, there is inherently no difference between Alternative E and alternative F in relation to environmental consequences.

## Health and Safety

Table 5 shows that over an 11 year period, there were a total of 4,932 reported dog-related incidents out of a total of 45,700 total incidents over this period. This is approximately 11 percent of total incidents and averages about 450 per year. Figure 5 presents the annual visitation to the GGNRA from 1973 to 2011. Looking at years 2001 - 2011, visitation at the GGNRA is approximately 14.5 million visitors per year. This equates to about 3 dog incidents per 100,000 visitors per year or 0.003 percent per year. This is substantially less than approximate 1-2 percent of dog incidents in the United States (Centers for Disease Control and US Census Bureau). Dog-related incident data for the 11 year period for on- and off-leash dogs at GGNRA, which is especially dog-friendly, shows that these incidents are substantially less than national averages.

Off-leash violations account for the majority of dog incidents in the San Francisco County sites; 74 percent, including off-leash violations from the Wildlife Protection Area at Crissy Field and the Snowy Plover Protection Area at Ocean Beach (Table 36). These violations do not suggest that there have been any beneficial or adverse environmental consequences. While limiting both on- and off-leash dog access at GGNRA will undeniably be beneficial to health and safety, the current threat to health and safety is

below the national average.

#### Park Operations

There is little difference in cost between Alternative E and Alternative F (Tables 32, 33, and 34). Detailed comparison shows that in fact estimated cost is exactly the same except in the areas of Visitor and Resource Protection and non-personnel costs. These differences are 11 percent and 8 percent, respectively (higher for Alternative E). Costs for both of these alternatives are substantially higher than Alternative A - No Action (4.5 to 5 times higher). It is unclear how the difference in costs for the Visitor and Resource Protection Division between Alternative E and Alternative F were determined. In addition, it is unclear where funding will come from to pay for the overall increased cost. With overall federal funding for the NPS decreasing, it seems unlikely that five times current funding will be provided for GGNRA dog management.

#### Conclusion

Overall, Alternative E is the best compromise as it restricts access to areas currently used for dog walking, which is beneficial to both human health and the environment, while simultaneously providing the most dog walking access of the alternatives evaluated. The cost-benefit between Alternative E and Alternative F has not been sufficiently evaluated and as such, the cost-benefit of Alternative F as the preferred alternative is not substantiated.

Sincerely,  
Lynne Srinivasan

<b>Correspondence:</b>	My dog Porkchop and I are regular visitors of Fort Funston and Sutro Bath trails. Porkchop is happiest when he is able to run freely (he is designed to run and explore) and frolic in the water with his doggy friends. We live in SF, where space is VERY limited. The only time we get to enjoy quality time together is out here at the off leash parks. There are already so many people needing a place to hang out with their doggy besties, where on good days it is already almost near impossible to find parking and access, limiting the amount of area we have by a staggering 75% rally is cruelty and neglect for these animals, as well as their owners. I honestly believe that having these quality off leash areas promote healthy ownership of animals. Please keep your citizens happy, who in turn takes care of the city. Please do not take away my puppy's biggest joy in life.

**Correspondence:** I am a resident and tax payer of San Francisco. I have lived in San Francisco for over 13 years and 16 in the Bay area. I have had the pleasure to live in other major cities such as Seattle, Washington DC, Paris (FR)and London. This is one of the best cities in the world (the best in my opinion) and one huge reason is the terrific number of diverse and beautiful open spaces the residents of San Francisco can take their beloved four legged family members. Dogs are family and they need to exercise and socialize in open, safe and large areas. Restricting exercise and socialization to limited contained spaces will increase the risk of dog fights and make those areas unfit for good use due to the sheer volume of dogs in one area. Further, the majority of tax paying homes in this city have dogs as members of their families. The tax payers of this city demand their tax dollars are not used to limit access to park and beaches for their 4 legged companions but instead are used to preserve abundant safe and fun access to parks and beaches. Please listen to the tax payers of this city and not to the various special interests who seek to limit access for their own narrow benefit. Please do not restrict the use of beaches and parks for dogs and their human companions. Thank you.

**Correspondence:** As a Bay Area resident since 1996, I've long enjoyed the wonderful beaches, forests, and trails contained within GGNRA. For 16 years (1996-2012) I hiked and recreated without a dog and never encountered any issues with misbehaving dogs.

In 2012, my wife and I adopted a dog and have become even more dedicated users of GGNRA lands. Our small, sweet mutt is an avid hiker who loves following us through the hills of the Marin Headlands, though Fort Funston is her favorite recreation area. Our dog inevitably charms and wins smiles from all who meet her, whether or not they have a canine companion.

Having seen the dog issue from both sides, I am sympathetic to the concerns raised by some members of the community. However, it's clear to anyone who spends a great deal of time in these wonderful natural areas that dogs are nearly always well behaved and carefully guarded by their humans. The city's most irresponsible dog owners, in my experience, tend not to frequent the GGNRA lands.

Off-leash areas are particularly important for positive relations between constituents: most dogs are more relaxed and less likely to feel threatened when off-leash (under voice command). On-leash walking is better than nothing, but dogs are on their best behavior when obeying voice commands and moving at their own pace.

Any reduction or restriction in today's off-leash / voice-control areas would be a great loss to this city's community. In particular, I advocate strongly for continued off-leash access to the trails in the Headlands, including the Coastal Trail, and continued on-leash access to the Coastal Trail north of Hill 88, which we utilize on longer hikes despite the limited access.

Similarly, at Fort Funston, any new restrictions would be a great loss. The area is a great melting pot of those who pursue different types of recreation, and conflicts between groups are rare enough that we've never witnessed any issues despite our weekly walks.

If ecological or environmental impact is a concern, note that Funston's commercial horseback-riding operations routinely deposit large piles of horse feces on the beach, whereas dog feces is rarely seen.

In summary, the public benefit of allowing dogs and their guardians to hike and explore GGNRA, off-leash whenever possible, should be among the biggest factors considered in this debate. The health and happiness of our community rely on such opportunities.

**Correspondence:** Dear Superintendent Dean,

As a native of San Francisco, who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

There are very few places that I can hike with my dog off leash! Please, do not take them away from us.

Sincerely,

---

<b>Correspondence:</b>	To whom it may concern.				

I've lived in San Francisco for 17 years and can't imagine living anywhere else. This city is my home and I cherish it.

I have owned a dog in San Francisco for 11 of those years. I live within walking distance of several on-leash parks and a bit farther from off-leash alternatives. My dog is not the kind of dog that can go without regular exercise. At roughly 60 pounds, she's very energetic and active. Without daily exercise my personal belongings are in serious jeopardy.

It may seem unreasonable to own an animal like that in the city. Where I in New York I'd probably agree with you. But in San Francisco, a city with more dogs than children, it's not only possible but pleasant. My dog is one of the reasons that I walk so much. Every day I head out and walk a few miles with her. This is part of what makes San Francisco \*my\* home - I cover a lot of it on foot each day.

The current plan to reduce off-leash dog areas in the city seems wrong headed to me. The city has so many dogs and already there are so few places where it's legal to let them run. The city needs more places not less.

The recent conversion of Duboce Park comes to mind. This park is in the middle of some nice neighborhoods and features a playground, an off leash dog area, and an area that is not for dogs. It's a vibrant part of the neighborhood, a nexus even. A new park side cafe opened around the same time and is thriving. On any given day one can pass through there and see a crowd of people on the benches, with their kids around the playground, and owners with their dogs playing in the dog area (which isn't fenced in but rather bordered by an open chain rope that implies the dog limited area). This kind of cohabitation \*improves\* a park area and energizes more citizens to both use it and care for it.

If this plan were more widely circulated - on a city wide ballot initiative or something - I'm certain it wouldn't pass. I only found out about it because of my dog walkers who are some of the most awesome people I know. If the purpose of the parks is to care for the public commons, it makes little sense to me how it can clearly offer less value to the public and be a good plan.

Please reconsider this initiative.

Sincerely,  
Aaron Newton  
San Francisco resident since 1997  
Dog owner since 2003

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Madeline Feldman

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** As a San Francisco resident, I object to any plan that prohibits or greatly reduces off-leash areas in the City. Dogs are family members and they need off-leash exercise just as children do. As any parent loves seeing their children enjoy and benefit from free play, running and ball play, so do dog owners.

Restricting off-leash activities to small defined areas causes many problems, including dog fights since the pooches lack adequate personal space. In addition, small "dog parks" generally force needless congestion causing excessive terrain damage due to non-dispersed foot and paw traffic. Places like Chrissy fields, Fort Funston, Baker Beach, the Pan Handle and Golden Gate Park should be generally open to off-leash activities. Of course areas that require protections for bird nesting, etc., should be fenced off so humans and dogs stay out. Of course dog owners must act responsibly and clean up after their pets and fines imposed if they don't.

If needless or excessive restrictions on off-leash areas are enacted, I will work to have the City take back control and full ownership of areas under GGNRA control. And I stop our donations and will oppose any additional funding for the GGNRA. Thank you.

February 16, 2014

Mr. Frank Dean,  
GGNRA Superintendent,  
Building 101, Fort Mason,  
San Francisco, CA 94123

Dear Mr. Dean,

I recently became aware of the Park Service's plans to restrict off-leash dog walking on Crissy Field and I am writing to object to this proposed policy. I have reviewed the GGRNR Dog Management Plan and its accompanying EIS and find that the arguments presented in the Plan fail to make a persuasive case for the need for a change from the status quo. Furthermore, the analysis presented in the EIS fails to present actual adverse impacts from off-leash dog use of Crissy Field, relying entirely on speculation as to what "may" happen, or what "might" be the case. On the other hand, the EIS entirely ignores the very real adverse impacts that would occur if off-leash dog walking were further restricted at Crissy Field.

My dog and I visit Crissy Field several days a week to run the promenade between the Crissy Field Center and Fort Point, and we know Crissy Field intimately. The location and views, the quality of the landscape design and the diversity of visitors from the Bay Area and around the world all make Crissy Field a local and national treasure. Restricting off-leash areas would significantly degrade this environment by eliminating an activity enjoyed by thousands of visitors every year.

This letter presents three separate comments to the EIS:

- 1) Law enforcement issues related to the presence of off-leash dogs are very minor in relation to the heavy use by dog owners at Crissy Field;
- 2) Conflicts between dogs and wildlife at Crissy Field are non-existent given the extent of currently fenced areas; and
- 3) Crissy Field is a unique urban park and regulations that apply to National Parks and Wilderness Areas elsewhere should not be applied at Crissy Field without consideration of the differences.

Law enforcement issues are minor. As the Park Service well knows, the number of dog-related incidents is extremely low, with reports showing a total of six dog bites throughout the entire GGNRA during 2013, among hundreds of thousands of visitors. While a dog bite is a serious matter regardless of how few occur, the Park Service currently has the authority to restrict dogs that do not respond to voice command. Furthermore, a leash is no guarantee that a dangerous dog will not bite a stranger. Restricting the freedom of all dog owners because of the actions of a very small number of irresponsible dog owners is fundamentally unfair.

All uses of Crissy Field present potential undesirable consequences: bicycles collide with pedestrians and other bikes, picnics create litter and packaging endangers wildlife, auto access generates air pollution and pedestrian and cycling hazards, surfers and sail boarders create risks to self and others, yet these activities are encouraged because they serve the GGNRA's recreational mandate and enhance the diversity of visitors to the site. Off-leash dog walking is indistinguishable from these other uses.

Conflicts between dogs and wildlife on Crissy Field are non-existent. I have read the letters from the birding community and respect their opinions. My family and I have in the past been members of the Golden Gate Raptor Observatory and watching the birds at Crissy Field is a big part of the joy of being there. In twenty years of running on Crissy Field, I once, and only once, saw a dog chase a bird on the meadow. The dog was a puppy who did not know any better, and the bird simply flew away. Dogs are not predators like feral cats. The assertion that the off-leash dogs at Crissy Field endanger wildlife is unsupported by evidence and absurd on its face. I fully support the extensive fencing of sensitive areas to protect landscape and wildlife, including the Snowy Plover nesting area from humans and dogs, but the

current policy of allowing off-leash dog walking cannot be shown to have any impact on the well-being of the avian population of Crissy Field.

On this point, I would also add that I am very sympathetic toward the goals of birders at other sites within the GGNRA where landscape and wildlife may not be well protected by fencing. Preservation of bird habitat should be a high priority within the GGNRA. I support fencing and limiting off-leash pets in such sensitive areas. Crissy Field, however, is a model of how sensitive habitat can be protected by fencing in such a way as to eliminate conflicts between birds, sensitive habitat, people and dogs. It needs no additional restrictions.

Crissy Field is Unique. Aristotle wrote: "There is nothing so unequal as the equal treatment of unequals" and that certainly describes the proposed GGNRA Dog Management Plan. When I started running on Crissy Field twenty years ago, the site was derelict and resembled a superfund site more than a park. Thanks to the efforts of the non-profit Golden Gate National Parks Conservancy and the generosity of the Haas family and other private donors, Crissy Field has become an urban paradise, but it is a man-made paradise. Crissy Field is a simulation of a natural shoreline, designed by Hargreaves Associates, to replace the industrialized wasteland the Army left behind.

Quoting Michael Boland in "Crissy Field: A New Model for Managing Urban Parkland," in the Design Observer: ([http://places.designobserver.com/media/pdf/Crissy\\_Field:\\_925.pdf](http://places.designobserver.com/media/pdf/Crissy_Field:_925.pdf))

"Until the mid-nineteenth century Crissy Field was occupied by sand dunes and salt marshes. Filling began in the 1870s and was completed in time for the area to become part of the grounds on which the Panama Pacific Exhibition was staged in 1915. Then, when the exhibition came down, the site was transformed into the first military airfield on the West Coast. Thus it was that when the National Parks Service inherited the site in 1974, 70 of its acres were covered in asphalt and hard packed dirt while rubble lined much of its 6,000-foot shoreline."

Treating Crissy Field as a pristine wilderness area just because it looks like one today misses the mark. There may be other areas within the GGNRA that qualify as preservation sites but Crissy Field is not one of them. Crissy Field is an urban recreation area designed for local community uses and paid for by a local community with the clear goal of encouraging a rich and diverse range of human recreational activities. I share the belief that the National Park System is "America's Best Idea," but it is important not to conflate the National Park System, including its mandate to preserve our natural resources, with this "new model" of an urban park. Crissy Field was conceived through ten years of intense local community participation, designed with artistic imagination and ecological research, and constructed on a brownfield site formerly owned by the U.S. Army. Superimposing wilderness preservation restrictions on a man-made park in contradiction to the priorities set by the community that created the park, disrespects the community and is unjust on its face.

Throughout its history, Crissy Field has permitted use by off-leash dogs under voice command as part of a happy mix of uses that reflects the needs and desires of its local community. The conflicts between dogs and people, and dogs and wildlife, which have been asserted by the Dog Management Plan and analyzed by its EIS, do not occur at Crissy Field except on very rare occasions. Restricting off-leash dog walking at Crissy Field ignores Crissy Field's community legacy and degrades the richness and diversity of its environment.

Very truly yours,

Richard Springwater

**Correspondence Type:** Web Form  
**Correspondence:** Hello,

As someone who walks regularly with my three rescue dogs in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dogs for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

thank you very much,  
Amy Blanchard

**Correspondence:** My wife and I bring our dog to Crissy Field and Fort Mason regularly, and it is one of the few opportunities our dog has to really run and get the exercise he needs. This is a meaningful and valuable part of our lives in this city, and it is essential in keeping our dog happy and healthy. There is \*no way\* that we could get him the kind of exercise he needs on leash, and the dog parks, which are fine for daily use, are not a substitute for the kind of safe and vigorous exercise our dog Kid can get in more open spaces.

We are respectful and responsible dog owners, and we always pick up after our dog and watch his play carefully, as do most of the owners in this community. That is more than you can say for many of the humans in this city, who litter our parks with beer bottles, garbage, and excrement every day.

It's unfair to responsible dog-owners and to their dogs to take away these venues as off-leash areas, simply to cater to the wishes of a few loud opponents.

San Francisco is a dog-friendly city, and it ought to stay that way. Save off-leash for the health and happiness of our four-legged citizens.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Louise Wees

**Received:** Feb,17,2014 00:00:00

**Correspondence Type:** Web Form

**Correspondence:** We live in Muir Beach with our 4 year old dog. We moved to Muir Beach in 2010 and bought a home. One of the most attractive parts of moving to Muir Beach was the dog friendly beach where our pup could exercise and play freely. We take him to the beach almost every day and he is a very happy dog. Our daughter loves to visit the beach and play with all the dogs too.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy Plus off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

**Correspondence:** My partner and I live a half mile from Ocean Beach with Carmen, our dog. The highlight of our day is to walk on the beach and experience its power and beauty. There we exercise our bodies and minds. We share our walk with birds, people and other dogs. Everyone not only gets along, but thrives in this coveted, natural place. It is a myth that dogs are endangering other species. The gulls, crows, willets, comerants, sanderlings, snowy plovers, and other birds know how to survive with people, dogs and horses. This is an urban space they have chosen as their home. There is NO PROBLEM. The management at the GGNRA is creating serious divisions between dog owners and others. This is an abuse of power. Wars are being fought around the world. Ocean Beach is a sanctuary of peace among all species. I say to the management: DON'T CREATE WAR WHEN WE CAN LIVE IN PEACE.

Sincerely,  
Anne M. Herbst

**Correspondence:** I am writing to oppose the GGNRA's dog management plan. I am in favor of some regulations on dog access and limits of numbers of dogs dog walkers can walk and limiting commercial dog walkers to certain areas but your plans are overreaching and would increase pressure on The already limited space we have to exercise our dogs in now. It is my understanding that all of the land given to the ggnra to manage by the city of San Francisco was given with the understanding that recreation would not change in these areas without public input. I hope you stick to that agreement and make your decisions based on what looks to me like overwhelming opposition to your plans.

**Correspondence:** Taking our dogs to ocean beach is the most enjoyable part of my weekend. I feel very fortunate to have found something that so simply embodies happiness for myself, my dogs, and my

family.

I spend every possible moment of I have the beach, and I respect it as one of the great benefits of living in San Francisco.

I clean the beach, and preserve it in a way to provide for others the same benefits have enjoyed.

Finally, while I work full time, I also hire the services of local professional dog walkers. Having ocean beach as an alternative for them is also very important to me, and the service they perform is very important.

Please reconsider this law to ban off leash at the proposed affected areas.

Thanks for your consideration.

<b>Correspondence:</b>	As a dog lover and former dog owner of many years, I give my wholehearted support to the Golden Gate Audubon Society's recommendations for management of dogs in the GGNRA. The presence of wildlife in our midst, in its many forms, brings beauty and mystery to our lives, in often unpredictable and surprisingly touching ways. In a small lake this last weekend in Golden Gate Park, two Pied-billed Grebes splashed and charged each other in an early territorial display, a Snowy Egret, Great Egret and Great Blue Heron were fishing at the edge, and numerous American Coots were swimming around. I was looking for an American Bittern, a more rare bird that occasionally frequents a small bath of reeds here. This natural scene (and any chance of seeing the bittern) was completely disrupted by an unleashed dog that jumped in the water and charged the birds - the egrets and heron flew away and the grebes scrambled for safety. The dog's owner paid no attention to the wildlife and ensuing disruption; he was oblivious to how much this ruined the enjoyment of the lake for others. It is sad that such places of refuge for wildlife and small snippets of tranquility are destroyed by irresponsible dog owners. It is clear that further measures need to be put into place to raise awareness and increase responsibility for resolving these problems.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To: Superintendent, GGNRA				

I am writing to oppose The GGNRA Supplemental Environmental Impact Statement which will severely impact my wife's and my enjoyment and exercise at a variety of GGNRA sites.

I am a long time resident of San Francisco and my wife was born here. We have two miniature poodles

who are responsive to voice command and are walked off leash only under voice control. We are very careful where we walk our dogs because they are vulnerable due to their small size. We walk in areas that are away from joggers, crowded pedestrian areas and bicycle riders because of their small size. We enjoy walking with our dogs over the area from East Beach to the Bay Bridge as well as Fort Funston and areas north of Ocean Beach. We usually go monthly, but more often since my retirement. Our dogs move much more quickly when off leash, allowing my wife and myself to get real exercise while walking at our normal pace with our dogs heeling or just in front of us. This type of walking is not possible when they are on leash and now many areas where we could walk them in parks, areas of Pine Lake and in GG Park are too dangerous due to reports of coyotes. While I have joined the Sierra Club of the Bay Area, I do not agree with their support for the SEIS - - their leaders do not speak for me nor, I suspect, for many other members on this issue.

While I do agree with the present fence demarcations of sensitive dune areas around Crissy Field and the beaches, I oppose any expansion of fences. Such fences will ruin the welcoming feeling and open quality to the current spaces and have not been studied with regard to their impact on wildlife: if they are secure enough to prevent our dogs from wandering-which they absolutely do not do under our voice command-they are likely to impact movement of wildlife and cut the area into small pens. If they are not secure enough to corral dogs, why have them?

The Preferred Alternative in the SIES is too restrictive and the SEIS does not rely upon actual valid studies at GGNRA areas to support any major changes. The 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands acquired by GGNRA is much more reasonable.

Even on the most crowded weekends at the areas from the SF Yacht Club to Fort Point, we see that bikers, joggers, pedestrians and dogs get along very well. As mentioned earlier, we tend to have our dogs scamper along the beach itself or on the grass of Crissy field. They never interfere with walkers and always stay under our control. We are two dogs and two humans, and this area is by far the safest and most enjoyable of any walk we take in the Bay Area. We see others walking their dogs with respect and at Crissy field and on the beach we see very little dog litter, if any.

The entire methodology of the SEIS demonstrates a purely political agenda. The important thing to monitor is the actual impact of dogs on resources and other users at these specific spaces. No other methodology is valid. Therefore, we oppose the Monitoring-Based Management Strategy of the SEIS.

It is a disappointment to me that this anti-dog agenda has extended to the inadequate response of the SEIS to comments made by those in favor of dog walking. In addition, the citations regarding dog impacts on wildlife have not been based on actual studies in the areas in question. It should be quite straightforward to study the impact of the current practice of dog walking at specific sites but on literature reviews! Well designed, unbiased studies at the sites regulated by policy are the least owed to a public which will be impacted for decades by any change in policy.

There is no need to talk about possible or hypothetical impacts in GGNRA. They have no place whatsoever in the formulation of policy. Surely this is not the same as introducing off leash dog walking for the first time in GGNRA where it never has occurred. In such a case, one might be justified in extrapolating from studies in other areas that are not in the GGNRA. But here we have a perfect laboratory-off leash dog walking is occurring and any impact can be defined with regard to seriousness and then studied in the real world. If it cannot be measured, then it cannot be a basis for policy. Therefore, it is inexcusable in our democracy to make policy based on extrapolation, bias and supposition when real actual data on environmental impact can be gathered. I call into question the validity of any policy which will impact thousands or tens of thousands of residents, which is not based in site specific real world data. Don't we deserve that? Literature searches are no substitute.

When policy is to be made, actual controlled valid studies are required. Anecdotal reports may point to studies that should be done, but are never considered sufficient and in the field of medicine have been invalidated time and time again. Peer reviewed studies are needed and these have not been done at the sites in question. Therefore, every anecdotal observation of impacts, especially where the impact was not quantified and where it is based on already biased NPS staff, should be stricken from the SEIS. Opinion surveys, such as 2008 visitor use survey at Ocean Beach and Crissy Field, which are not rigorously controlled for observer bias, are similarly invalid for the sake of public policy.

By now, the GGNRA has firmly established its anti-dog bias and lack of competence and interest in doing studies and obtaining data -the only valid pillars for public policy. This bias, however, extends even to reporting of the opinions solicited by GGNRA. What is incredible is that of the 4700 comments obtained on the DEIS, there has been no disclosure of how many were for and how many against. What is the purpose of seeking opinions when they are not released and have no chance of impacting the policy or impacting public opinion? Is it merely to give window dressing to prescribed process?

Finally, the intention of Congress in creating the GGNRA was " expand to the maximum extent possible the outdoor recreational opportunities available to the region." The SEIS goes against the wishes of Congress.

In summary, walking off-leash with my dogs, in a mindful way, respectful of non dog owners and the environment is hugely important to my enjoyment and well-being. I find that the SEIS and the GGNRA attitude toward responsible dog owners such as myself, will preclude our enjoyment, exercise and some of our most treasured experiences. If the proposed policies were based in site specific data, if the surveys conducted were adequate, valid and free of observer bias, if the GGNRA did not show an implacable anti-dog bias, and if the GGNRA showed any flexibility and responsiveness to those of us who have walked our dogs off-leash for decades without demonstrable negative impacts, then I would have to respect the findings and recommendations of the SEIS. However, clearly none of this is the case.

I personally plan to oppose any curtailment of off-leash walking with civil disobedience, even if it means significant fines.

Sincerely,  
Sanford Goldstein, MD  
San Francisco

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. I have enjoyed the GGNRA with and without my dog for many years, and in that time, I have never had a negative experience because of a dog. In fact, it has been quite the opposite, and I believe the off-leash areas of GGNRA are some of the biggest benefits to living in the Bay Area.

Broadly, this kind of recreational area offers great benefit to the health of myself, family, friends and extended community. Given the positive experiences I have had, I don't see any evidence that merits such a drastic restriction of dog-friendly areas in GGNRA.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Without that, these new restrictions seem unnecessary and extremely limiting.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for the needs of a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Kristin

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Please do not further restrict off-leash areas for dogs. Dogs need exercise, and while it is a form of recreation, it also serves important purposes, with life-and-death consequences. Dogs need exercise to behave appropriately. Not properly exercised dogs often develop behavior problems out of boredom, and too often then end up at shelters because they are deemed unmanageable. A simple walk on a leash will not suffice to keep these behavior problems at bay.				

Dogs need to be able to run free, to explore their surrounding with all their senses, which is most stimulating to them, and therefore most tiring. Off leash play is the most efficient and effective tool dog owners have to maintain healthy and well-behaved dogs. Many dog owners run busy lives, and having to suddenly travel far to get to an off-leash area will mean that many dogs no longer get to go, or get to go as often, which will result in more dogs with more behavior problems who end up at shelters. Many people, including myself, purposely live near off-leash areas so that we can maintain busy lives and still uphold our responsibilities to our dogs. Drastically reducing the current off-leash areas will upset the lives of dogs and their owners.

Having access to the fantastic off-leash areas we currently have also means that owners are more likely to obey on-leash or no-dog rules at other locations. Dogs will still need to be exercised despite any restrictions that take place, and many owners will feel compelled to break these rules, not only in former off-leash areas, but also in no-dog or on-leash areas that they once respected. While your interests are valid, restricting off-leash areas is not the answer. These regulations could be drastic for the health and well-being of dogs all over the Bay Area. Shelters are already overrun; please do not enact regulations that will contribute to the death of animals.

**Correspondence:** ear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Ariana Luchsinger, CTC, CPDT-KA

**Correspondence:** As an older person with mobility problems due to a disability, I find that the East Beach of Crissy Field is the only place I can comfortably take my dog to the beach. Parking is close enough to the water and there is an access ramp that makes it possible to get to the water with ease. To take away that particular area from off leash possibility would, in my view, discriminate against the older and disabled people that take their dogs there for exercise. Please consider this in your dog management plan.

**Correspondence:** I am writing to express my strong opposition to the plan.

Since when does the recreation in GGNRA mean taking away recreational venues for residents?

Is enough attention being given to actual use of the areas for which new restrictions are being imposed? I walk my dog at Baker Beach (for example) almost every single morning. So I can tell you firsthand that the folks enjoying that beautiful stretch of land in the early morning consist only of (happy) people with their (happy) canine companions (and seasonal crab fishermen).

Why would you take that away from those tax paying, appreciative recreators? Are school aged families vying for a little beach time on weekdays from 8 am to 10 am? No.

And Fort Funston? Really?

Please consider a solution that truly works for residents.

Thank you.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To whom it may concern:				

As a Marin County resident, and a hiker, I am dismayed to find that further restrictions are proposed on dog access in the GGNRA paths of the Marin Headlands. I will not refer specifically to the voluminous A through F proposals but rather simply state my comments.

I frequently walk my dog on the paths in the Marin headlands and less frequently on Muir Beach. As a hiker I enjoy the various pathways in the headlands and want to have dog company as walking is a solitary joy for me.

As an urban dweller in a major metropolitan area and a professional geographer, I am delighted to have such close access to nature. However having grown up in Africa and been concerned with wilderness degradation I understand that the sheer volume of visitors poses a problem to the long-term management of parks and recreational areas.

The reduction of access for dogs in Alternative F appears to unfairly restrict a particular group. I have no problem accepting dog leash restrictions that allow me access on paths, for I believe dogs must be restricted to roads and pathways and not trample the natural vegetation. In my rambles I have been chagrined to see people (often without dogs) straying over the natural vegetation.

I believe that

1. the current access should be preserved and dog access even expanded but that much more emphasis should be placed on the education of ALL users to walk on the trails, and
2. a system of planned and rotating closures of hiking trails be instituted so that access by hikers, dog

walking, horse riding and bikers can be allowed for a period of time before the trail is closed. This type of system will reduce the impact on the land in a more just manner and continue to allow "recreational access" to areas that are invaluable the quality-of-life for urban dwellers.

The reduction of access for dogs as proposed from the 1979 plan appears to unfairly target only one segment of users. By instituting a more measured opening and closing of paths and open-access areas, the same objective will be reaching in protecting the wilderness while being impartial to all groups of users. This is a system that has been applied successfully in other parts of the world with similar struggles to protect nature from overuse by residents of nearby urban areas.

Education and information is the bedrock of what I have suggested, (I like many responsible dog owners deplore those who don't cleanup and/or control their pets in these areas).

Just as location,location, location is paramount to the joy of using these natural areas, so I believe is education, education, education in instituting a system of resting the land to prevent its degradation by dog-users or indeed any other users.

Sincerely,

Dr.Sandra de Montille

<b>Correspondence:</b>	Dear Superintendent Dean,				

I use the GGNRA parkland at both Crissy Field and Fort Funston with my dog regularly, and I am extremely upset by and strongly opposed to the preferred alternative described in the new draft dog management plan. It's way too restrictive, and will inhibit my ability to use this land to support mine and my dog's health and well-being as I have for many years.

SF is a city full of loving responsible dog-owners, and I don't understand why this new plan doesn't reflect the importance of our feedback... not to mention there haven't been any peer-reviewed, site-specific study, as required by law, to support such a draconian measure.

Our recreation areas are for RECREATION, after all. Just because I choose to share my recreation time with a well-mannered, well-trained, four-legged friend rather than a two-legged one, that doesn't mean I should be prevented from enjoying the parkland that makes SF so special. These trails and beaches have been set aside for dog walking since the original pet policy in 1979â€¢ a policy that needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely and passionately,

<b>Correspondence:</b>	Oh, come on. Don't fix something that isn't broken. You want stricter rules regarding voice control, picking up after one's self, sure, go for it. But the park is for everyone, and that includes dog owners. The school system is already chasing families and their children out of the city, go ahead and make the GGNRA clamp down on families and their dogs to move out of town too.

<b>Correspondence:</b>	The proposed plan should be put back on the shelf where it was in 2011. This is preposterous, to shut down so many areas with no concrete reasons. These dog areas are already in balance with other users and wildlife. Your plan isn't about dog management - it's about dog removal.				

---

Leave things the way they are and find something else to do with your time. The minimal amount of space the dogs have now is the least they should have. It's no wonder that you lost the SF Board of Supervisors by a unanimous vote - the plan is that bad.

Mike

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash

areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I understand people's fear of some dogs. But all dogs must not be denied any free space just because of some others. Dogs that are known (by their owners) to be people friendly, and owners who pick up after their dogs must also be allowed to use public, tax-supported lands and parks.

Thank you for your consideration  
Dolores Richards

<b>Correspondence:</b>	Please, dogs need to have off leash options in our city. Isn't SF supposed to be the city of the patron saint of animals? I don't have the good fortune to be able to have a dog, but I know the need for dogs to have off leash play time, especially in a city. Please....do not enact these leash laws. It's a very sad day for our area if we do this.

<b>Correspondence:</b>	I am deeply concerned that GGNRA does not consider those of us who are not visitors, we have invested our lives in these communities of the Bay Area.				

The term preferred in Preferred Alternative is alarming, like a sugar coating on a plan of extreme and unnecessary restrictions. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

As a divorced woman I feel secure while walking with my dogs, and it is part of their joy to have time off leash. They are always within my voice control range.  
Adding fences is a bizarre solution... we live here, pay our taxes here,vote here-GGNRA should not be the bully in our neighborhood!!!

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Elia Haworth

**Correspondence:** As a person that likes to watch wildlife, implementing more rules to help keep sensitive areas of GGNRA dog-free is very important. Areas with dogs on-leash has negative effects on wildlife as well but in such an urban area, I see the importance of compromising with the dog community if deemed compatible with the GGNRA mission and their responsibilities to plants and animals with special status. Please reduce the number of off-leash areas, fence these areas for better protection of people and natural resources, increase signage so that visitors can easily identify where each activity is allowed, include both law enforcement and outreach personnel to reach out to visitors, and include monitoring to track the effectiveness of removing or limiting dog use and the positive effects on plants and animals.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to many of the different areas throughout the bay area, especially Marin and Chrissy Field in the city.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you,  
Alicia Robb

**Correspondence:** Dog ownership is not something most people living in a big city undertake lightly. Most of us pondered all the details involved in having an active pet in an urban setting. One of the resources that makes it possible to have a fit, healthy and happy dog is off leash running and swimming which we undertake at our, and I stress our, parks and beaches including but not confined to Crissy Field and Ocean Beach.

The notion that this resource would be taken from us is confusing. People and animals have coexisted for many years and will continue to do so regardless of a fence or a posted sign. 75 percent of dogs in this country are spayed and/or neutered indicating a level of commitment toward and responsibility for their pets that is hard to deny. Most dogs are off leash only if they have recall and someone is supervising them. Of course there are exceptions as there are to all generalizations. This kind of drastic limiting measure will not just impact the quality of life of our dogs but also our families who enjoy the companionship and small amount of freedom allowed in these parks. I often meet people who don't own pets but come out to watch the dogs swim and run around as well as tourists who enjoy taking photos of my dog's "swim team". This plan is too punitive and severe for a city known for being tolerant to one and all.

**Correspondence:** I applaud the National Park Service for its efforts to regulate dog activities in the GGNRA through the setting of goals and public debate, and I fully support reasonable limitations on dog walking (particularly off leash areas and activities).

It is prudent and necessary for the National Park Service to adopt a Dog Management Plan that will provide the opportunity for a quality National Park experience for all visitors, not just the vocal few who use park areas for the recreational use of their dogs. As such, the Plan must adhere to all established NPS management policies and practices elsewhere in the Park system, and include strong protection for park resources, especially the protection of habitat for birds and endangered species.

The plan must not allow commercial dog walking, which is not an appropriate activity for national park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain. Commercial dog walking provides no service or benefit to other park users, adversely impacts park resources and values, and only serves private enterprise at the expense of the American public.

Having witnessed countless violations of posted NPS policies and flagrant disregard for the park environment by dog owners, it is most imperative that the NPS not only implement a strong Dog Management Plan, but also ensure appropriate resources for its monitoring and enforcement.

Thank you.

**Correspondence:** In the midst of the development of the Dog Management Plan, it just astounds me at the amount of time that GGNRA is spending developing this plan and still they are not looking at the core of what GGNRA is all about. The dog walking issue should not even be an issue if they would not keep overlooking the main word in their title "Recreation".

I just cannot fathom why and how this is done on a continuous basis. So, in my rational thinking, it is totally done purposely, and again I ask WHY?

Why do they not want to allow off-leash dog walking?

What is it they do not understand about Recreation and the Urban Environment, ignoring any and all comments that would be a positive for dogs off-leash or on leash. How do they figure that dogs are having such a negative impact on the lands that are in GGNRA? More people are coming to these areas since they have taken over, does this not cause more of a negative impact...why just dogs?

When GGNRA was acquiring their most recent lands, no forethought was given as to public access points. GGNRA was planning on going into populated housing areas and establish portals at the main entrances to these housing areas. Who in the world would want their home next to that, with potential visitors parking anywhere they can and walking through owners yards. What that would do to the value of their homes was not even a thought to the officials at GGNRA.

At one meeting I asked if these recently acquired lands are the first for NPS to have so close to populated neighborhoods, the comment back was oh no, they have quite a few. I was not given any names or areas of where these parks were, they all of the sudden got to busy to continue the conversation with me. This happens to be the only one I have been able to find with this of location.

Why doesn't GGNRA establish off leash areas around the housing developments that their land borders?

---

These areas that have been used for decades for the purpose of dog walking and the land is still here and pristine.

so, my questions on all of this is:

- 1) When will GGNRA really consider why they were established?
- 2) When will GGNRA learn what Recreation really means?
- 3) When will GGNRA learn what the term Urban Development means?
- 4) When will GGNRA have actual true facts to back up their claims of how bad dogs are on their lands?
- 5) When will GGNRA realize that one of the most dangerous things on their lands has been proven to be their own Rangers?

Once GGNRA can answer the above questions, we can then go forward with clear and honest conversations of how the lands can be best utilized and how off-leash dog policies can be a positive for all involved.

Do I have confidence in GGNRA's ability to be honest and forthcoming in these topics? I think not, there has not been evidence of that to date.

5)

**Correspondence:** As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for over 20 years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** Hi, My name is Shana, I have lived in Palo Alto for 5 years, and I bring my dog to Fort Funston, Crissy Field, and Muir Beach once a month for off-leash play time under voice control.

I am writing to oppose the restrictive "Preferred Alternative" and support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands GGNRA acquires in the future.

These beautiful spaces allow for much-needed exercise and socialization outside of the small fenced pens available at most other parks. When dogs are off leash and allowed to interact with one another in a large, open spaces, they have a sense of freedom and joy that is wonderful to watch and interact with. They get much better exercise with these large swaths of beach to run on than is possible in a small, fenced city dog park or on leash running beside a human on city blocks.

Sometimes my friends and I meet up at these beach locations to let our dogs run and play together. My dog loves to interact with his friends on these beaches, wrestling and playing. He also benefits from meeting canine and human strangers and learning to interact appropriately with them while off leash. It is important that these interactions occur off-leash because leashes can change dynamics between dogs and create more tension in interactions with new dogs.

Furthermore, these recreation areas are intended to function as social "steam release valves" to allow residents of a heavily populated Bay Area access to fresh air, quiet, undeveloped scenic land to relax, get exercise, spend time with friends, and enjoy some peace. I respect the National Park Service's commitment to ecological protection, but I know that the Golden Gate National Recreation Area was given over to National Park Service leadership with the agreement that these parks were to remain as recreation areas (which we know serve a different purpose from much-needed nature refuges).

To my knowledge, there is no comparison with Fort Funston anywhere in the USA for a beautiful beach that allows off-leash dogs under voice control all year round. It is a gorgeous place that feels like paradise to dogs and humans and I urge you to preserve this cherished space for Bay Area taxpayers and visitors and their canine companions.

thanks,  
Shana

**Correspondence:** I understand that the Park Service is concerned about the possibility that large numbers of off-leash dogs in the same space as a large number of park visitors can lead to an increase in the number of dog bites. I understand that this concern is one of the reasons that the draft dog management plan cites to support a change in policy that will greatly reduce the amount of space available for off-leash dog walking. However, I have read the report carefully, and I have not found any evidence in the report that shows the planned change in policy will reduce the number of dog bites.

Does the park service have any statistical data reporting the incidence of dog bites for the two scenarios being compared (present rules or revised rules)? Without such data, I don't believe that there is a

---

reasonable basis for expecting the proposed policy change to reduce the incidence of dog bites. Please don't institute a dramatic policy change without first showing that the desired effects will be obtained.

**Correspondence:** I strongly oppose GGNRA's plan to ban dogs from much of its' land. This plan would be a hardship to the 50% oS.F. households with dogs. It would also force large numbers of dogs into the small, already crowded city parks to try to exercise. We know that problems occur when too many dogs/people are crowded into too small a space. The existing rules have been working fine for years with no problems. This new plan is no good for anyone.

**Correspondence:** Dear Superintendent Dean,

Please be advised that I strongly oppose the preferred alternative described in the GGNRA's new draft dog management plan. Simply put the plan is way too restrictive.

I support formalization of the 1979 Pet Policy and off-leash access on any new land the GGNRA acquires.

I am also letting you know I am concerned that the new plan was not modified in any significant way to reflect the many substantive concerns and objections of submitted in response to the first plan. I am also concerned that there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA was set up to be a recreation area for a densely populated, urban area. The land subject to the dog management plan is not a pristine natural environment requiring protection.

Moreover, the trails and beaches have been set aside for dog walking since the original pet policy in 1979. That is the policy that needs to be formalized, not what is being proposed.

Sincerely,

Troy W

**Correspondence:** Hello,

I am writing as a dog owner because I find the GGNRA Draft Dog Management Plan too restrictive. Part of the reason I have a dog in San Francisco is because of the wonderful off-leash areas where I can take her to run free. I primarily use Baker Beach, Crissy Field and Fort Funston, and all of the dog owners and walkers I encounter in those places are respectful of the environment and other people and pets. Everyone I see cleans up after their pets, and most people carry extra bags to carry out garbage and dog waste that other people have left on the beach.

The GGNRA should not put fences around off-leash areas - this defeats the purpose of having off-leash areas in the first place.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please ensure that the GGNRA remains a multi-use area that includes plenty of off-leash space for dogs.

Thank you.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

---

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Best,

Shirley Foster

<b>Correspondence:</b>	Dear Superintendent Dean:				

As someone who has regularly enjoyed walking with my dog in various parts of the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is excessively restrictive and will prevent me from using park properties (principally Fort Funston and Ocean Beach) in the manner I have been accustomed to for many years.

The present plan was not modified in any meaningfully significant way to reflect the many substantive concerns and objections of the thousands of people- -including me- -who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of off-leash, dog-friendly areas.

Furthermore, adopting strict new standards because some people are ignoring current restrictions is essentially regulation to the lowest common denominator: some drivers speed and run stop signs but that does not mean we ban driving. I have seen obvious violations of posted "no-entry" rules and it galls me just as much as it does you. It seems to me, however, that a better solution is increased enforcement of such rules; something tells me that a few stiff fines and the message will be received loud and clear.

I also support efforts to exclude dogs (as well as people) from particularly sensitive wildlife habitat or other sensitive areas, but in my view the modified plan goes well beyond that goal.

I echo the concerns of those who feel that GGNRA has lost sight of its purpose: it was established to be a RECREATION AREA adjoining a densely populated urban environment. GGNRA trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy should be formalized and expanded to apply to GGNRA areas in San Mateo County.

Sincerely,

---

**Correspondence:** As a longtime resident of Marin County I have enjoyed many years of visiting Marin's beaches with our dogs. I am in favor of keeping the restrictions as they exist since this has worked successfully for many years, even before the national government took over. Regarding Stinson Beach, I prefer 2-A or 2-F. Muir Beach: A or 5-E. And Rodeo: 6-A or 6-E. I also would not object to partial closures of the beaches to protect nesting birds. I hope you will consider the great benefits to our canine friends that being off-leash can bring: freedom and joy!  
Thank you

**Correspondence:** I am a resident of Sausalito for about 3 years and an avid hiker and nature enthusiast. I hope that dog access to Alta trail in Sausalito is also part of the review process. In the last 2 years the Alta trail towards the trail head at the end of Donahue Street in Marin City/ Sausalito has been overrun by professional dog handlers who come here daily by the dozens, bringing hundreds of dogs per day. Even though the majority of them is quite courteous regarding pet waste ( There is a pet waste bin and bag dispenser at the trailhead ) there are so many dogs on this trail every day that lots of dog piles remain in the open, making this trail especially on warm days a disgusting experience.

I am also very concerned about the local wildlife, since lots of dogs can be seen in the underbrush , often unattended. When I started walking this trail more than 3 years ago I spotted bobcats several times, but did not see them since many months now.  
A lot of digging activity by dogs makes areas to both sides of the trail look like hog wallows which raises concerns about erosion.

I love dogs and don't think that the few dogs of my neighbours and local residents cause a problem, but these hundreds of daily dog visits are just too much for this area.

In my opinion an enforced leash policy might take care of the digging and wildlife problem , but what about the piles of pet waste ?

Sincerely,  
Steff Sommer

P.S. I ask you not to publish my name and address but will be happily available to local authorities for further questions, just email me.

P.P.S. I heard about this document by the posters that have been put up at the trail head of Alta trail.

**Correspondence:** I strongly oppose the 90% reduction of off leash areas for dogs in the SF Bay area, specifically Fort Funston. A large portion of people and their dogs in the area use these parks to exercise their dogs, which in turn helps reduce destructive and aggressive tendencies in some dogs when properly exercised. I have never felt threatened or in danger at the dog park from a dog owner or their dog. If park maintenance is a concern, as in Washington where I once resided, I would be happy to pay a daily fee or even a monthly/yearly fee to attend the park. I depend heavily on these off leash areas to exercise my two large dogs as I cannot run alongside them to tire them out fully.

**Correspondence:** February 17, 2014

To Whom It May Concern:

This letter is an addendum to my letter sent to NPS electronically on February 16. In my February 16 letter, I stated my support Alternative F because it is the best solution to balancing the needs of the competing interests and stakeholders who use GGNRA (Golden Gate National Recreation Area).

In this addendum, I would like to reiterate the importance of ensuring all dogs that use GGNRA are licensed in the owners' county of residence. This is a very important from a public and canine health and safety perspective.

It is important because licensing helps to prevent the transmission of disease and rabies from dog to people and from dog to dog. A dog can only receive its annual license if it has received certain inoculations such as rabies. Assuming the dog's license is current; if the licensed dog were to bite a person, the transmission of rabies would be non-existent.

Knowing which dogs at GGNRA have or have not been licensed can be difficult to determine for the rangers who need to enforce this provision. To help the ranger with enforcement, NPS could include in the GGNRA dog management regulations that the dog's license tag must be visible to allow random, unplanned inspection, within GGNRA boundaries, by the ranger in order to confirm the status of the dog's license. In the event displaying the license tag is not possible, the person walking the dog would need to present the papers confirming the dog license status to the park ranger.

Also for NPS to issue a GGNRA dog usage permit, the owner would need to provide documentation to demonstrate the dogs' licensing status is in good standing.

In the event the dog's license is not current or it cannot be confirmed, that is there is no tag or papers, the permit is not issued or the dog must leave GGNRA.

If a person tampers with or falsifies a dog's license status, that would result in a warning, a fine or possibly a misdemeanor. I have heard of instances where dog licensing was required to enter a location and owners swapped tags between dogs in order to enter the location.

Licensing is important from a public and canine health and safety perspective. I have found some people do not know they have to license their dog and once they know do act properly. On the other side of the spectrum there can be people who choose to ignore the regulation because they believe it will not be enforced by the local authorities. Fortunately, these people are few.

Having the ranger confirm dogs are properly licensed while in the GGNRA or before a dog walking permit is issued will go a long way to ensuring public and canine health and safety

Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely, Joe

<b>Correspondence:</b>	I have lived in San Francisco near 40 years. I have had active dogs, all WELL TRAINED, under voice control, all needing space to run (one can spit across my back yard). Not only do my dogs need to run, I need to walk, being ridden with rheumatoid arthritis. Moving, walking allows me to be functional, working and out of pain. I remain in San Francisco because of all the gorgeous areas in which I am able to walk and my dogs run. PLEASE do not take away this from me and all the MANY dog owners and dogs (still more dogs per capita than anywhere else in the nation, I believe!). I could go on and on, but will not. I will say that dogs are my joy- they do not rob, rape, cheat, they do not graffiti buildings, break into cars, murder..... I have worked (and still do) as an RN in ICU for many years- I cannot say this about human beings, Oh.. by the way, dogs do not do drugs.

**Correspondence:** Alternative A is the only solution. Keep the status quo. The 1979 Pet Policy is PERFECT and should not be altered at all.

I oppose all other plans because they are too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

As someone who walks regularly with my dogs in the GGNRA (6-10 times a month on Baker Beach, Crissy, Ft. Funston), I'm writing to express my strong opposition to the new draft dog management plan and any changes in the current laws. Any changes will significantly prevent me from recreating and exercising my dogs. Will adversely affect my health and my dogs' health. I have been using this recreational space in this way for over 20 years (well before the GGNRA took over) and it is extremely unacceptable to me for these changes to go in effect.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely, Denise Jasper

**Correspondence:** Dear Park Service,

I strongly oppose the preferred alternatives listed in the draft Plan as I feel it is quite a drastic change from the current policy.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

It seems like more dialogue is needed before moving forward since such a large number of people and pets will be impacted by this. Is there more of a middle ground that can be met? I appreciate that there is a need for preservation, but perhaps it would be more prudent to take smaller steps in cutting back dog off leash areas to test things out? Also, is there something else that dog owners can do to help? Are volunteers needed to help keep the areas in question more clean? Is there a small tax or fee that dog owners might pay, which could help? I think it important to understand where both sides are coming from and that dog owners can't have everything that they want, but right now, this proposed GGNRA plan seems far too restrictive.

<b>Correspondence:</b>	As a former dog owner I would be very sad if the options for of leash dog walking where restricted. As a young child before my family got a dog I was actually very afraid of large dogs. Even then I still enjoyed Crissy Field and Fort Funston. When we got a dog my enjoyment of these places increased 10 fold. I could not have imagined our dog faith being able to get all of her puppy energy out any other way. These areas create great places for dogs and people alike to walk and enjoy the fresh air. Walking a dog on a leash is no where near as pleasant for ether the dog or the human. I would be such a loss to have these great dog and human parks be turned into a space where dogs could not freely run.

<b>Correspondence:</b>	Hello GGNRA,				

My dog Teddy, a shih tzu, and I have enjoyed and thrived in our time spent on the Chrissy Field for 5 1/2 years. Teddy has become a relaxed and social dog, good with all kinds of adults and children, and all kinds of dogs. I attribute this to our many wonderful hours of playing off-leash with the mix of people and dogs at Chrissy Field beach as well as the many other beaches of the Presidio.

As Teddy's owner, I have had the opportunity to meet and become friends with a wide circle of San Franciscans and Bay Area folks that ordinarily I would never have had any reason to overlap with. This is what a tolerant caring community is all about. Having first hand experience I know our dogs of San Francisco contribute to the harmony of our city - small in geography and big in heart.

Kind regards,  
Carol Kranhold Ames

<b>Correspondence:</b>	To the NPS administration,				

I live in San Francisco, walk my dog regularly in the GGNRA, and am a restoration volunteer in the Presidio of the GGNRA. The "Preferred" alternative is MUCH TOO RESTRICTIVE. I strongly support, recommend that you adopt, and will fight for, Alternative A.

The bulk of the resource degradation that I see as a restoration worker with Presidio Park Stewards is caused by HUMANS, not by dogs. The best way to protect our park resources is to have the people using the park invested in taking care of it and understanding, in their heart, its value. The people who walk their dogs off leash in the GGNRA are major caretakers of this land. They use it regularly, pick up trash, appreciate it and love it. THE NPS POLICY OF NOT ALLOWING DOGS OFF LEASH IS THE REGULATION THAT IS OUT OF WHACK, not the current, sane practices of the GGNRA.

Dogs and people walking together, in their own species-specific way is beneficial to both and encourages awareness of each other (dog of person and person of dog) and, very importantly, of their surroundings. My daily off leash walks with my dog enhance my quality of life in a way that is far superior to walking with the dog on a leash. I can walk at my pace and she can sniff and run at her pace. The level of stress relief is wonderful for both of us. Dogs interact with each other much more calmly off leash. They can actually play. Dog play, which is very important for the well-being of the dog and of tremendous enjoyment to their humans is not possible on leash.

In the 5 years that I have walked my dog daily off leash (over 9,000 hours) I have seen exactly 2 instances where dogs have actually done damage to another creature. The "safety" issue is really a fear issue. When people break the law or cause damage, or are in imminent danger of doing so, they should be corrected, or in the case of actual criminal activity punished. We should not create a situation where breaking the law is merely having ones dog walking or running without a leash. The current laws and regulations are more than adequate for this non-problem. The NPS could also formalize the 1979 Pet Policy plus off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I am a scientist (UCSF) and I realize that I have above just given you some anecdotal data. This is not sufficient for making a conclusion, but these are the kind of data that you (the NPS) have used so far in bolstering your "preferred" alternative. The lack of data in the literature supporting canine-caused resource degradation coupled with the absence of site specific data for GGNRA leave these restrictions completely unsubstantiated. I strongly object to our freedom being impinged by fear and lack of proof that there is a real problem.

I also object to the lack of accounting of and response to the extensive comments that were made to the Draft Environmental Impact Statement. Of the 4700 comments how many supported off leash use? How many support restrictions? Such extraordinary restrictions require extraordinary proof. None of the comments and suggestions (such as time restrictions at Baker Beach) were mentioned.

In addition, I would like to specifically oppose the use of fenced off leash areas. Has anyone proposing this actually used one of these areas? It concentrates the impact of dogs to a ridiculous degree, turning the area into the dog version of a feedlot. It stinks and people and dogs just stand around! To think that this substitutes for an off-leash walk with your dog just shows the level of misunderstanding on the part of the folks proposing such "alternatives". I also am a wildlife rehabilitator and know how that kind of fencing can adversely affect wildlife.

This issue is very important to me, to my health and well-being and that of many of my friends and acquaintances. At this stage I do not believe that the regulatory and democratic process is working. I sincerely hope, and will follow up to encourage, that you will do the right thing and avoid these draconian regulations.

Sincerely,

Annemarie A. Donjacour

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to the Coastal trails, Muir and Rodeo Beaches.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I oppose the plan to throttle off-leash dog walking on GGNRA lands. As part of the legislation creating it, the GGNRA was explicitly meant to preserve existing recreational opportunities for all residents, not provide a wilderness experience immediately adjacent to a major city underserved by other kinds of parks. I would not even have known about Fort Funston years ago if it were not for going there with friends who had dogs, and I treasure the experience of visiting there to this day. I believe the arguments for changing the status quo are disingenuous in the extreme, and I have consequently lost my enthusiasm for visiting (or supporting) other national parks as well. As we might say, you are biting the hand that feeds you in pushing this plan forward over the objections of area residents.

**Correspondence:** Dear Superintendent Dean,

I feel the need to write you to state my opinion against the proposed changes.

I moved here from Oakland in 2003 with my dog, Nomie (recently departed), and could not have imagined a better place to land. Well trained (he would never cross a corner without my directive) and fully under voice control, we enjoyed so much the city has to offer on a daily basis (especially Crissy, Ocean Beach, Baker Beach and the Headlands/ Rodeo) that was so special to both of us.

I always believed I would adopt another dog (Nomie found me and am waiting for the next connection). However, the potential restrictions proposed make me wonder whether it it would not be a fair environment to raise a dog (someone I consider a respectful member of my family).

Please reconsider the extreme measures being proposed. I understand there may need to be some changes or policing but it seems wholly unfair to penalize the majority that respect and enjoy a recreation that is unique to San Francisco.

Regards,  
Kara Forman

**Correspondence:** The GGNRA should take a leadership role in allowing and promoting recreation that involves off-leash dogs and their owners. As we understand animals and human-animal interactions it is becoming more apparent that walking and running free, but in a responsible manner, is very important for both dog and person. People visiting GGNRA from all over the country have expressed to me their appreciation for the freedom to walk/run/play with their dogs without a leash. This feature of the GGNRA is something that actually attracts such visitors here. In the absence of data on any harm caused by dogs

(and there is not hard data in this impact statement) we should continue to be pioneers in this area of outdoor recreation.

**Correspondence:** Dear Superintendent Dean,

My name is Carol Selsted, a resident of San Francisco and an Animal Assisted Therapy volunteer with the SPCA. Among the many amazing things about living in the Bay Area is having access to diverse recreational resources in the Golden Gate National Recreation area. Specifically, my dog and I enjoy early morning off-leash walks on the beaches at Crissy Field. My dog Sophie, is well behaved and is under my voice command at all times. I am mindful of cleaning up after Sophie and we are respectful of the designated ecological enclosures. These walks bring a sense of community and wellness to our daily routine.

I oppose the GGNRA's current Preferred Alternative as it significantly restricts and eliminates off leash walking in many areas within the GGRNA. As a resident of the Bay Area, I too am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these natural resources as well. The DEIS notes some studies and the perception of dogs and the harmful impact on our natural resources, but there is little site-specific documentation to support the proposed restrictions. There is also insufficient documentation that considers other impacts to the environment, such as: other wildlife, cyclists, joggers, boaters, kite surfers, exercise boot camps, visitors, and large crowd events like races and walk-a-thons. I recently picked up a syringe from the shoreline and disposed of it. After a holiday

weekend or a warm weekend, the beaches are littered with food wrappers, glass bottles, plastic children's toys, clothing and other items.

SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space" (Enabling legislation, first paragraph). The SEIS notes, in a negative way, that "In many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities." (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - "The objective of [the creation of the GGNRA] is to ... expand to the maximum extent possible the outdoor recreational opportunities available to the region." (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972)

Please support the diversity of our population and of our visitors and come up with a more inclusive alternative to GGNRA's current Preferred Alternative.

Thank you for your consideration.

<b>Correspondence:</b>	Job 1 of a national park is to preserve the natural resources. The capture of large parts of the GGNRA by off-leash dog owners is a blot on the record of our National Park Service system.				

The presence of large numbers of hyperactive dogs is damaging to these resources. They harass birds and trample plants. They interfere with other people's pleasure, making some areas unusable for large numbers of people.

San Francisco is the third densest city in the United States. Yet some people journey here daily from the East Bay and down the peninsula, where they are not allowed to run off-leash. Does this make sense?

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and

---

objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Escalon and Muir Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Regards,  
Jill and Steven Fugaro

**Correspondence:** As a Board member of GGAS I feel strongly that The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area. We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.  
Off-leash areas should be marked off with fencing or natural borders such as bushes.  
Park officials need to enforce the dog rules more vigorously.  
Visitors to the park should be limited to a maximum of two dogs per person.  
The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,Mandy willian

February 17, 2014

Mr. Frank Dean  
General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, California 94123

Dear Superintendent Dean:

I oppose the Preferred Alternative and all proposed Alternative as Dog Management Plans for the Golden Gate National Recreation Area ("GGNRA"). Each proposal is too restrictive. There is no justification , scientific or otherwise, in the Dog Management Plan for any changes from the 1979 Pet Police, as supplemented by the 1996 Compendium Amendment. Instead,I support formalization of the 1979 Pet Policy along with off-leash access in San Mateo County and on new lands that the GGNRA has acquired since 1979 and acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Moreover, the GGNRA has violated federal law by failing to support its preferred Alternatives with peer-reviewed science. In fact, as was the case with the Drake's Bay Oyster Company, the GGNRA has fraudulently concealed relevant science, including the Warren Study out of U.C. Berkeley demonstrating the absence of any disturbance to the Western Snowy Plover's feeding habits from off-leash dogs.

The GGNRA has no power to regulate the tidelands it manages in the GGNRA. The GGNRA does not own these tidelands; they are held in trust by the State of California for the recreational uses of the citizenry. The management permit between the GGNRA and the California State Lands Commission only allows imposition of federal law to the extent it does not conflict with State law. There have never been any on-leash laws on the tidelands in the Bay Area managed by the GGNRA. Accordingly, State and federal law conflict on this issue and, pursuant to the management permit, the GGNRA must follow State law in attempting to change the historical uses of these tidelands. The California Administrative Procedures Act is far more exacting than federal law when it comes to changes in land management that are significant or highly controversial. As a result, the GGNRA, in following federal law, has violated the management permit and forfeited management over the tidelands it manages.

The GGNRA's attempt to change the 1979 Pet Policy is rife with illegalities and should be abandoned short of litigation.

Sincerely,

/ SSS /  
Stephen Samuel Sayad

**Correspondence Type:** Web Form  
**Correspondence:** This letter supports the "No Action Alternative" for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of these areas.

Please retain the longstanding 1979 Pet Policy. The GGNRA was established to give outdoor RECREATIONAL opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite.

My family and dog enjoy Muir Beach and every remaining site available to us as responsible dog guardians. Of course we understand the need for multi-use areas and we respect all posted requirements. Citizens are capable of self-monitoring these wonderful areas for enjoyment with their dogs, through training, voice control over their pets, keeping leashes handy and being aware of the regular interactions of life. Socializing dogs and people- -all kinds, young and old- -help us appreciate and value each other, rather than polarize populations based on forced prioritized notions of oppositional recreational needs or enjoyment. One size does not fit all, keep diversity in our recreational ares and interactions.

Thank you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

This is not a National Park like Yellowstone, Yosemite or Grand Teton where restrictions are completely logical. But to restrict off-leash dog use in a recreational area that is part of a city like San Francisco, which has a long tradition of its people recreating with its dogs in many forms, goes completely against the grain of the use of these lands and is not what the City of San Francisco intended when they deeded you these lands. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

The GGNRA has lost sight of its purpose: it was set up for recreational use for a densely populated, urban area. That policy needs to be formalized and supported with off-leash areas in San Francisco, San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you for your understanding and I hope you are able to arrive at a much fairer compromise for both your needs, the environmentalists' needs, and the people of The Bay Area.

Sincerely,

Merrick Wolfe  
Pacifica, CA

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I am opposed to the entire GGNRA Dog Management Policy because I disagree with its premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. By their own admission, the GGNRA had no data or studies to support these claims and they are relying upon these claims to initiate a process whereby access for people with dogs will be severely limited or completely banned. Even now, with this SEIS, the GGNRA admits they have no site-				

---

specific peer reviewed studies (required by Federal law) to substantiate their claims that dogs are a problem for wildlife, water quality or vegetation in the GGNRA. Instead, they rely upon anecdotal evidence and baseless assumptions to claim dogs have the potential to damage this Recreation Area.

Additionally, in the SEIS the GGNRA asserts they have the right to redefine the term "recreation" as utilized in its enabling legislation and in the promises made to the voters of San Francisco back in 1972 by the GGNRA/NPS/DOI and the GGNRA's first Superintendent, the Honorable William J. Whalen, in order to secure various properties then owned by the City and County of San Francisco. These promises, most importantly, stated that this National Recreation Area would retain historical recreational access (including off-leash recreation) should the citizens vote to include SF park properties in the GGNRA. These promises, along with the conventional definition of the term "recreation", do not comport with GGNRA's current philosophy exemplified by Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA, who in 2007 was quoted as saying "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard." The GGNRA does not have the legal authority to rewrite history or its enabling legislation to their own design.

Once again, buried deep within the SEIS is the GGNRA's poison pill. Only the name has changed; it is now the Monitoring-based Management Strategy. The GGNRA gets to decide whether we are in compliance, and the measures of compliance are subjective. Under this SEIS the GGNRA may decide to impose short-term or long-term closures of areas. These short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which dog guardians have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston could be their reason to ban dogs entirely from these beaches. This is unacceptable.

The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. All properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time.

If the GGNRA does not want to manage these properties as a Recreation Area, then they should transfer the Recreation Area to another entity better able to manage it, e.g. the Forest Service or Bureau of Land Management. Alternatively, for sites heavily utilized by dogs and their guardians, such as Ocean Beach and Fort Funston, these properties should be reverted back to San Francisco.

<b>Correspondence:</b>	If there is no enforcement of dogs being off leash in specified leashed areas what point is all this?				

Every time I go for a walk/hike where dogs are supposed to be on a lease , there are dog owners who think that since there is no ranger giving them a ticket, it is OK to have their dogs off leash. Often I see folks with more than two dogs off lease, running in restricted areas, 40 Ft away from the owner. The owners cannot see what there dogs are doing and if they poo'ed the owners do not even know, or most times do not care. I've had dogs off lease run up to me and jump on me, and I am afraid of big dogs. Why do people who just want to go and take a hike/walk in a park , have to put up with this?

I say, "No enforcement, do not bother with rules about where leashed or unleashed dogs can or cannot go".

**Correspondence:** Everything I have heard and read about this proposal seems directed at blaming dog and their owners for the problems.

Especially in the Bay Area, much effort is being made to improve conditions to be conducive to families and their health. Dogs are part of family life, as well as wonderful companions to those living alone and seniors. Where are the dogs to get their exercise if they cannot run in the parks and beaches. Looking around Fort Funston this morning, everyone there had a dog. How many people would be walking and getting their exercise without a dog?

Chrisy Field is another favorite of ours. Areas that are protected are easily kept that way by fencing. A great option. The accusation that dogs dig up the lawns is incorrect...actually they may dig at the holes that the gophers make, but I have never seen a dog dig a hole in a lawn that is not already dug up by gophers.

Most dog owners are caring, respectful people who only want to enjoy the beautiful area we are lucky have with their pets. We clean up after them. They give us love and enjoyment in return.

please reconsider this very flawed plan. Thank you.

**Correspondence:** I strongly urge the Park Service to limit dog use of the GGNRA in such a way as to protect the habitat values for wildlife. GGNRA should not be a big dog park. Being so close to a populated urban area the unique wildlife within the GGNRA is already threatened by intense use by people. We do not need a lot of dogs running around on or off leash to harass the flora and fauna and leave their excrement around which could spread disease. The park service should make every effort to protect existing habitat and the wildlife which use it.

Edward Nute

**Correspondence:** I am a daily user of these areas affected by the GGNRA policy. Not only in my neighborhood on the SUNset/Parkside area but also in Marin and San Mateo. The majority of the time I am enjoying these areas, there are only a handful of others that do as well. The enjoyment I derive from

---

Ocean Beach is why I chose to buy a home in this area. The GGNRA proposal will severely impact my enjoyment of the beach, my home and my neighborhood.

I am opposed to the entire GGNRA Dog Management Policy for the following reasons:

In the event of the transfer of our beaches and other properties owned by the City and County of San Francisco to the NPS to become the GGNRA promises were made to the voters that this new recreational area would retain historical recreational access, including off-leash recreation.

When congress established the GGNRA in 1972, they included two "specific provisions" unique to the GGNRA:

First, the park was established "to provide for the maintenance of needed recreational open space necessary to urban environment and planning."

Second, the GGNRA statute imposes a unique limitation on NPS's discretionary power for "management of the recreation area" by providing that the "Secretary of Interior...shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and

management."

The GGNRA does not use sound principles of land use planning and management or even follow their own rules and regulations.

The premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area is absurd. By their own admission, the GGNRA has no data or studies to support these claims. They ignore/omit all studies that contradict their desired outcome.

The GGNRA proposal fails in foresight of the environmental and societal impact of closing the beaches to dogs. If the claim of dogs compromising visitor safety were true, then their proposal should reflect such impact. In other words, why would they allow dogs to be in the areas of Ocean Beach that are more highly populated with humans. If this claim were justified then they should allow dogs to be where most humans are not. Yet their proposal restricts the areas of Ocean Beach to the areas where there is easy access, parking lots and known use by the majority of those that visit the beach. Why place the highest population of people in close proximity to the one thing they claim is compromising their safety?

The volunteers they use to conduct their "research" on the populations of the snowy plover is all volunteer who come out at varying times of the day, week, etc. There is no scientific approach. There is no one conducting long term research in the standard of viable data collecting to warrant a verifiable and repeatable outcome.

I am a citizen of San Francisco. I live a block from Ocean Beach. I am out there at least twice a day, every day. The impact I see on the environment from humans themselves is far more damaging than a few dogs running off leash. Humans bring all kinds of trash and leave it in the beach. They bring furniture, burn it

and leave the remains on the beach. Fisherman's sharp lures are buried in the sand or seaweed leaving potential dangers, fishing line is wrapped around birds legs and they do nothing to set the bird free.

If GGNRA is truly concerned about environmental impact, why have I never seen them stop to pick up trash? Why do I see them driving on the beach just to hand out tickets/warnings to dog owners? Why are they allowed to drive motorcycles on the beach disturbing the wildlife just to give tickets to dog owners? Don't these practices alone cause a detrimental impact?

I only see dog owners picking up trash as they walk their dogs, because they care about the environment they utilize and the safety not only of themselves, their pets but others.

If these areas are closed the impact on the rest of the city will take a toll. Dogs walkers walk their dogs at all times, in the morning, late at night. They have been one to report crimes, deaths, and other potential hazards on the beach. Dog walkers move out, homeless, vagrants, increased crime and gangs move in. Dog walkers act as a no cost preventive measure against these.

I would like the GGNRA to realize that the ones who care about the beach are the ones who use it daily, the surfers, the runners, the dog owners. We see the changes that happen and we do something about it, even if it is as little as picking up trash.

How can the GGNRA undertake a Dog Management Policy change as proposed in this SEIS without any evidence of monitoring or site specific studies (as required by federal law) as a means to identify the alleged impairment?! Anecdotal comments and the "potential" to damage the area just don't cut it.

Once again, buried deep within the SEIS is the GGNRA's poison pill. Now called the Monitoring-based Management Strategy, the GGNRA gets to decide whether we are in compliance, and the measures of compliance are subjective. Short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which dog guardians have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston could be their reason to ban dogs entirely from these beaches. This is unacceptable.

My preferred option is one the GGNRA deliberately omitted: the original 1979 Pet Policy which was affirmed as legal and the current law of the land by Federal Judge William Alsup in 2005.

I urge you to reconsider the proposal because the after effects will be more damaging to the city of San Francisco and my neighborhood the Outer Sunset/Parkside and it will do nothing to address those issues because it will then be outside of your jurisdiction.

---

GGNRA w. my dogs, for the past 20 years and I see more benefit to dog owners/walkers than I see them causing trouble or a disturbance. Walking your dog out in nature is a enlightening experience and makes for happy peaceful people that care about the nature around them and take an interest in keeping it clean, pristine and safe.

I oppose your Alternative F and I strongly support leaving things the way they are; Alternative A. More rules and regulations are not going to change bad people in to good people, it will only cause more stress and conflict among those who generally get along really well on the trails and beaches.

Maybe a solution could be what I have experienced in San Diego County where there are A LOT OF BEACHES AND A LOT OF DOGS. They allow Dogs off leash on almost ALL BEACHES from sunrise until 9:30 a.m. and from 1/2 hour prior to sunset 'til dark in the evening.

There are also some trails that are open to dog traffic during the week but not during the week-ends. I guess this is to limit congestion on the week-ends?

Thank you for the opportunity to express my point of view.

<b>Correspondence:</b>	This responds to the Draft Dog Management Plan/ Supplemental Environmental Impact Statement.				

Our family is comprised of me, my husband and our 2 year old, well behaved, fun loving rescue dog, who is a border collie mix. We walk daily around Sharp Park Beach, and the trails that lead us to Rockaway, Mori Point and the Moose Lodge in Pacifica.

What struck us about the area is the community and love of the open space. We encounter people fishing, kids playing, people walking, jogging, and biking with and without dogs. We have met people who have lived in this area for 10-30 years who have walked their dogs for years. We have not yet met an aggressive dog. We have simply made friends with others whose family includes joyful dogs. To increase restrictions for dogs to access this area is to create a hardship for a strong, established, law abiding community.

What struck me about the Draft Dog Management Plan are these points:

1. The vast majority of respondents prefer off leash rules: 550 v. 191. The vast majority oppose the management plan: 1279 v. 343. The vast majority of visitors enjoy dogs: 301 v. 153.
2. There is neither adequate evidence nor basis in any original mission statement that should restrict access by well-behaved dogs on leash or under voice control.
3. Comments and alternatives that include barbed wire, enclosed restricted areas for dogs, and allegations that dogs cannot respect human boundaries do not understand the cause of inappropriate dog behavior: inappropriate human behavior.

Dogs are loving family members of many families who live in the communities affected by the

Management Plan. To restrict access of our family members is a cruel hardship that cannot be justified or supported by any discussions or facts outlined in the new Draft.

What our family does support are:

1. Continued access by dogs that are leashed or under voice control.
2. A serious commitment to implement a plan that recognizes that dogs are family members and are a substantial part of our community who need and enjoy access to our trails and beaches.
3. Strict rules against owners who cannot control their dogs, who litter our open spaces, and who do not respect human boundaries.

Your own document comments on how the majority of dog owners support regulations against dog owners who act inappropriately. Don't punish all our dogs. Punish those dog owners who are in the small minority.

**Correspondence:** I have been a resident of Muir Beach for over 14 years. Our house sits directly above the beach on which our off-leash and supervised dogs run or swim everyday. In addition, we regularly run or hike with our dogs on many of the Marin Headlands Trails mainly on the Coastal, Miwok, Homestead & 4-Corners trails as well as fire roads.

I am writing to share my comments for the 2013 SEIS specifically pertaining to Muir Beach and the Marin Headlands Trails (Coastal Trail/fire road to Hill 88). While I applaud the efforts to produce this plan I am deeply concerned that the preferred alternative F will have devastating impact on the residents of Muir Beach and my family as we rely on the open space of the GGNRA everyday for exercise in the natural environment as this is literally both our front and backyard! My comments to the 2011 DEIS were not adequately addressed and most criticisms and concerns expressed in all comments filed in 2011 ran 3:1 AGAINST the plan.

Our isolated Muir Beach community of some 150 houses is home to about 60 dogs, and is completely surrounded by the GGNRA with the nearest town a 20-minute drive on the twisty rural 2-lane coastal highway 1.

Muir Beach is listed on the GGNRA website as a a quiet cove, beach and lagoon favored by locals. Reviews on popular social networks, Trip Advisor and Yelp describe Muir Beach:

Not usually crowded, low-key, folks playing fetch with their dogs and everyone just chills."

Love Muir Beach - Great for kids, kites, dogs BBQ's.

I found it to be very dog friendly which is good because I brought my doggie here and she loved it.

It's a dog beach (where the heck do I find a cat beach?) -  
So there are pets about - but generally it's a very good  
crowd of people in this area, it is Marin after all, and I have  
yet to see any problems with loose dogs.

Nice beach. Dog friendly.

The beach was perfect and lovely! Its dog and beer friendly...

Great place to have a picnic and bring family and friends.  
Also a dog if you have one.

People watching is also fun with folks grilling, chilling,  
surfing, kite flying and romping with dogs.

## OVERALL COMMENT

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Marin Headlands. I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Marin County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values. This plan ought to be about stewardship of a park that is situated within an urban environment. The SEIS does not include any peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

It is key note that the both the Marin County Board of Supervisors as well as our own Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

## SPECIFIC CONCERNS

Address the needs of communities whose backyard is the GGNRA  
Page 1104, 'Limiting dog walking areas would reduce these (Muir Beach residents) visitors enjoyment of this site. Some visitors in this user group may prefer to find a different park in which to exercise their dogs off leash.

The plan reduces Marin Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force our community into their cars to drive a minimum of 20 minutes to access this experience. The highway to Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA. Since the new parking lot opened this year, a large portion of that traffic and user group is now descending upon Muir Beach. The plan further suggests that those who want an off-leash beach experience for their dog can go to Rodeo Beach. This change would force Muir Beach residents into cars to drive 45 minutes on the congested 2-lane highway, then the freeway and then another 2-lane rural road for an off-leash experience that currently exists literally steps in front of their homes. The 45 minute drive is assuming that there is no traffic congestion. On a crowded day when visitorship to Muir Woods tops

5,000 people, it takes residents nearly double the time to travel out of the community. It will be devastating to our community of 60 dogs and the environment!

On Page 114, the document calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the 'off-limits' creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

#### Need to Substantiate Claims with Scientific Analysis

There are not any single peer-reviewed, site-specific studies (as required by law) included in the plan that support such a drastic restriction of dog-friendly areas. The GGNRA has the burden of proof to justify this drastic reduction in access to public land before making it legislation.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves - it passes the buck to towns, cities and the county.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic; and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day! In fact as I write this letter, there are 7 people wondering around the dunes!

Regarding Visitor Use and Experience, on pages 1090 -1091 it states that "The practice by local residents of allowing their dogs to roam the beach unsupervised would be addressed by law enforcement staff; allowing a dog to be off-leash would be citable. Adverse impacts would be expected for visitors and local residents who enjoy seeing and playing with dogs off leash. Dog owners may also feel that their pets are not receiving adequate exercise when restrained on a 6-foot leash. In addition, it would be difficult for some visitors, particularly those that are disabled or elderly with mobility issues, to adequately control their dogs on-leash. Having dogs on-leash also limits the exercise dogs can obtain to the exercise abilities of their owners, which may not be sufficient. Some visitors in this user group may find a different park to exercise their dogs off leash.

This misleading paragraph implies that all local residents allow their dogs to roam the beach unsupervised. This is a false and unsupported statement. Residents legally allow their dogs off-leash, and these dogs are supervised. Off-leash does not mean unsupervised.

In addition, we are home to several elderly residents, most of whom own dogs and walk them on the Beach. The requirement to have a dog on-leash may diminish their ability to adequately exercise their pets and themselves. This is unjust.

On page 113 there is discussion regarding the planned changes to Muir Beach including the new footpath to the beach and fencing along the dunes. These have been installed. It is interesting to note that the report states that "The fencing would act as a visible barrier, but would not completely exclude dogs from the area, as this type of fencing would be inappropriate at Muir Beach and not sustainable due to tidal action. Allowing on leash dog walking on the beach and installing visual barriers would enable the park to

manage the area in order to restore, protect, and sustain the wetlands, creeks, dunes and lagoon. Allowing 'on-leash dog walking on the beach would protect visitor experience and enhance visitor safety.

The dune fences have been installed and block access to the dunes and wetland area for dogs, unless the dog enters the creek to cross to the county beach on the other side (as the SEIS directs dog owners to do (page 114) , or an owner is in the area with their dog. On most days, I watch from my living room window as people without dogs disregard the fence and signage and enter the areas behind the fence anyway.

Regarding safety, the plan states that the cumulative impacts for Alternative A are the same as for Alternative F: Negligible. Page 315, Table 14 indicates a total of only 24 dog-related incidents in Muir Beach over a 4-year period from 2008 - 2011. We have hundreds of visitors visiting the beach each weekend. On holidays and warm days the beach is packed and cars park along the highway and along community roads. On page 1253, Muir Beach Alternative A, Conclusion Table the language states 'Therefore, the cumulative impacts to the health and safety of park staff and visitors under this alternative are expected to be negligible.

To conclude, page 1085, 'Muir Beach receives heavy visitation by beachgoers and walkers on the weekends and moderate to high use on the weekdays. Overall, the number of leash law violations is low for this site, with only nine occurring in 2008 through 2011; no dog bites or attacks were reported during this period (table 9).

So why the concern over safety?

I have concern over being on trails without my dogs and feeling unsafe due to predators, both animal and human.

## SUGGESTIONS FOR CONSIDERATION

Educational signage and enforcement be used to change behavior with respect to sensitive habitat, refuse and visitor and staff interaction.

The plan calls out a budget to educate and enforce. Why not utilize this budget to educate and enforce the current rules and regulations that are currently not adequately enforced.

I watch each day as people traipse through the newly restored and fenced delicate dune and riparian areas. Children play in the lagoon and creek. Bonfires burn after hours. People camp in the dunes. Litter is strewn across the beach and left at the bridge entrance on the beach. I carry home an armful of trash each morning when I walk the dog. Where is the park maintenance staff to clean up the litter every day? The dispenser by the footbridge should have signage notifying owners and be filled with plastic bags, and in addition a disposal bin could be placed for pet waste.

Trail/Fire road access from Muir Beach to nearest town

Residents and their dogs need access on foot out of Muir Beach to Mill Valley (the nearest town) for recreation and safety. Two trail suggestions:

A) Muir Beach - Coastal trail & Coastal Fire Road - Coyote Ridge  
Fire Road - Miwok Fire Road.

B) Muir Beach - Diaz Ridge - Miwok Fire Road.

Both would connect to Homestead trails and allow access to Mill Valley.

#### Create On-leash Loop Trail

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or

Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

#### Fire Road Access

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

#### IN CONCLUSION

Dogs are already off-limits on over 99% of the GGNRA. There are many trails and areas that currently do not allow dogs. These are areas that users who would like a dog-free experience can access. There isn't any compelling reason to eliminate or further restrict the remaining 1%. The GGNRA SEIS does not include any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. To remove recreational access to these lands is not substantiated.

The GGNRA was established by involving communities, communities such as Muir Beach, to provide recreational activities for residents in the densely populated Bay area. This is not a pristine wilderness area like Yellowstone or Yosemite. It is a designed landscape with many constructed environments including the new parking lot in Muir Beach and the reconstructed wetlands. The GGNRA requires a different management strategy than a traditional National Park. While a keystone objective for the GGNRA is 'recreation, it does not appear at all in the plan's objectives, nor is it referred to as one of the park's resources and values.

The GGNRA is unique. There is not other National Park quite like it. Its mandate states that the Park possesses 'outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning. This dog plan should support these values and not diminish them.

Marin residents rely upon this open space to enjoy a balance in their lifestyle. It is the very essence of Marin. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

As a Yelp reviewer described Muir Beach:

Muir Beach is surrounded by mountains, dogs are playing in the sand, and artists painting. It's a true sight to behold.

Thank you for your consideration,

Coleen Curry

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Lisa Higgenbottom and Trooper

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Cynthia Skovlin

**Correspondence:** One of the wonderful things about Californians is our appreciation and enjoyment of mother nature. Part of this enjoyment comes from sharing our experience with those we love...and this includes our 4-legged family members.

We walk our dog (a Border Collie Mix) every day on the trails of Marin. This keeps us all both mentally & physically fit and is an important part of our daily routine. The ability to enjoy mother nature with our

---

companion animal is one of our favorite things about living in Marin & one of the reasons we can justify the high cost of living (including property taxes) in this beautiful area.

We have great respect for our Open Space...we pick up, keep our dog on trail and keep after others who do not do the same. We would be devastated to lose access to the proposed areas...and an important part of our way of life in Marin County.

Thank you, Lisa

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

---

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet

policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Maria Da Costa

**Correspondence Type:** Web Form

**Correspondence:** I have been a resident of Muir Beach for over 14 years. Our house sits directly above the beach on which our off-leash and supervised dogs run or swim everyday. In addition, we regularly run or hike with our dogs on many of the Marin Headlands Trails mainly on the Coastal, Miwok, Homestead & 4-Corners trails as well as fire roads.

I am writing to share my comments for the 2013 SEIS specifically pertaining to Muir Beach and the Marin Headlands Trails (Coastal Trail/fire road to Hill 88). While I applaud the efforts to produce this plan I am deeply concerned that the preferred alternative F will have devastating impact on the residents of Muir Beach and my family as we rely on the open space of the GGNRA everyday for exercise in the natural environment as this is literally both our front and backyard! My comments to the 2011 DEIS were not adequately addressed and most criticisms and concerns expressed in all comments filed in 2011 ran 3:1 AGAINST the plan.

Our isolated Muir Beach community of some 150 houses is home to about 60 dogs, and is completely surrounded by the GGNRA with the nearest town a 20-minute drive on the twisty rural 2-lane coastal highway 1.

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Marin Headlands. I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Marin County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values. This plan ought to be about stewardship of a park that is situated within an urban environment. The SEIS does not include any peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

It is key note that the both the Marin County Board of Supervisors as well as our own Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

The plan reduces Marin Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force our community into their cars to drive a minimum of 20 minutes to access this experience. The highway to Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA. Since the new parking lot opened this year, a large portion of that traffic and user group is now descending upon Muir Beach. The plan further suggests that those who want an off-leash beach

experience for their dog can go to Rodeo Beach. This change would force Muir Beach residents into cars to drive 45 minutes on the congested 2-lane highway, then the freeway and then another 2-lane rural road for an off-leash experience that currently exists literally steps in front of their homes. The 45 minute drive is assuming that there is no traffic congestion. On a crowded day when visitorship to Muir Woods tops 5,000 people, it takes residents nearly double the time to travel out of the community. It will be devastating to our community of 60 dogs and the environment.

The SEIS calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the 'off-limits creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves - it passes the buck to towns, cities and the county.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic; and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day.

The plan calls out a budget to educate and enforce. Why not utilize this budget to educate and enforce the current rules and regulations that are currently not adequately enforced.

Residents and their dogs need access on foot out of Muir Beach to Mill Valley (the nearest town) for recreation and safety. Two trail suggestions:

A) Muir Beach - Coastal trail & Coastal Fire Road - Coyote Ridge  
Fire Road - Miwok Fire Road.

B) Muir Beach - Diaz Ridge - Miwok Fire Road.

Both would connect to Homestead trails and allow access to Mill Valley.

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or  
Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

Dogs are already off-limits on over 99% of the GGNRA. There are many trails and areas that currently do

not allow dogs. These are areas that users who would like a dog-free experience can access. There isn't any compelling reason to eliminate or further restrict the remaining 1%. The GGNRA SEIS does not include any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. To remove recreational access to these lands is not substantiated.

The GGNRA was established by involving communities, communities such as Muir Beach, to provide recreational activities for residents in the densely populated Bay area. This is not a pristine wilderness area like Yellowstone or Yosemite. It is a designed landscape with many constructed environments including the new parking lot in Muir Beach and the reconstructed wetlands. The GGNRA requires a different management strategy than a traditional National Park. While a keystone objective for the GGNRA is 'recreation, it does not appear at all in the plan's objectives, nor is it referred to as one of the park's resources and values.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you

Mr. Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco, CA 94123-0022  
Attn: SEIS

Dear Superintendent Dean,

I am writing today to submit my comments on the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan/Supplemental Environmental Impact Statement (Draft DMP/SEIS). I am a resident of Montara, California and have lived here for 26 years. It is very important to convey to you how severe an impact the GGNRA's preferred alternative for Rancho Corral de Tierra in the current Draft DMP/SEIS will have on recreational dog walking.

I write to you with a statement that you will not read in any of the hundreds of letters that will be submitted on this topic. My words are rooted in my seven years of experience working with the Congressional Sponsor (introduced as H.R. 1953 and passed as S.136, and became Public Law 109-131) of the GGNRA's acquisition of the Rancho Rancho Corral de Tierra property, Congressman Tom Lantos. As you may know, Congressman Lantos was an ardent dog lover and was frequently seen roaming the halls of the United States Capitol with his little white poodle. I can tell you with great certainty, that if Congressman Lantos were alive today, he would be first in line to defend the continued legal practice of on leash dog walking within the park.

I personally accompanied him on multiple tours of the property and remember clearly how excited and supportive he was of our community and its dog walking character. He was well aware of the importance of open space to the residents and understood the importance of providing continuity of the cultural and environmental values that we hold dear in Montara.

If the GGNRA's preferred alternative for Rancho Corral de Tierra (Alternative B, No dog walking allowed except on-leash on a few trails near Montara and El Granada) is enacted, it will be to serve the Park Service, not the taxpayers. It will also be a sad day for all of the residents and visitors who have used

this land for dog walking over the last five decades. The GGNRA is referred to as a "park" throughout the SEIS. The GGNRA is not a National Park. It is a National Recreation Area. If Congress had wanted GGNRA to be a national park, that is what they would have authorized. Also on the first page of the Executive Summary, the SEIS states: "The purpose of the GGNRA is to offer national park experiences (emphasis mine) to a large and diverse urban population while preserving and interpreting natural, historic, scenic and recreational values." If I want "national park experiences" (whatever that is) I will go to a real national park, such as Yosemite, Yellowstone or the Grand Canyon. I understand that the GGNRA's mission requires balancing the various values, but this SEIS does not give nearly enough weight to recreational values (such as dog walking), the main reason for the GGNRA's existence.

I fully support the Montara Dog Group's "preferred alternative" for Rancho Corral de Tierra: Alternative A, the "No Action" alternative, with the addition of two off-leash dog walking areas, one near Montara and the other near El Granada Dogs would be allowed on-leash throughout the remainder of Rancho Corral de Tierra as indicated in Alternative A in the SEIS.

There is a fundamental error in the status quo assumed for GGNRA's No Action alternative in the SEIS. As acknowledged on page 60 of the SEIS, there has been a long history of off-leash dog walking at Rancho Corral de Tierra, although not officially sanctioned. As such, off-leash dog walking should be the status quo or baseline for GGNRA's No Action alternative, not on-leash dog walking. As you know, Montara Dog Group and Crissy Field Dog Group have previously corresponded with you extensively on this issue, so instead of rehashing the contents of those letters, I have attached them to my SEIS comments, for the record.

The tone of the SEIS tends to pit dog walkers versus environmentalists, and that is not necessarily the case. With proper education, signage and enforcement, there is no reason for dog walking to cause environmental damage, either to wildlife or plants.

Another flaw in the SEIS and GGNRA's preferred alternative is the total lack of off-leash dog walking opportunities in San Mateo County. Page 43 of the SEIS refers to "Management objectives in the draft 2011 General Management Plan that are relevant to dog management include the following: The park has significantly expanded in size and includes many new lands in San Mateo County. This planning process takes a comprehensive parkwide approach that will help ensure that the management of the natural and cultural resources and visitor experiences are consistent throughout all park areas." The SEIS does not meet this objective because Marin County and San Francisco County both have off-leash dog walking areas, while GGNRA's preferred alternatives for San Mateo County have none. Off-leash dog walking areas should be provided by GGNRA in San Mateo County as well as the other two counties.

In conclusion, GGNRA's draft Dog Management Plan/SEIS is extremely biased against people who recreate with their dogs, with insufficient documentation to support that bias. It appears that the GGNRA's goal is to restrict people with dogs to the maximum extent possible, in spite of Congress' mandate in the enabling legislation to preserve and encourage recreation, including dog walking. I hope that the final plan will take our comments to heart, and provide more areas for dog walking, both on-leash and off-leash, within Rancho Corral de Tierra and the rest of the GGNRA.

Very sincerely,  
Marilyn Wacks

**Correspondence:** I am a retired widowed woman, on a budget, and who walks my dog, off-leash, but under voice control in the GGNRA. I am a responsible dog owner. I do not allow my dog to chase birds, children, horses, or other animals. He does not roam through the bush or the forest, and I always pick up after him (as well as trash that is often left by other hikers and mountain bikers. I hike alone. Without an income, this is my form of entertainment and social activity. I hike alone, so my dog offers me security.

I strongly object to your "research findings", analysis, and Proposed Alternative for dog management in the GGNRA.

The reasons for my objections are as follows.

I"

Oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. Support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Oppose fences to surround or delineate any off-leash area in the GGNRA. The SEIS Preferred Alternative proposes to install fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fences secure enough to keep small dogs in will hinder movement of wildlife. If fences are not secure enough to keep small dogs in, why have them?

Oppose the Monitoring-Based Management Strategy that replaced the DEIS Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

Optional Points to Make (Choose as many or as few as you want):

SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative. The SEIS lists many, many comments from people opposed to dog walking and very few from people who support dog walking. The SEIS copies, without change, entire sentences and text from the DEIS about studies of dog impacts, especially on wildlife and birds, even though DEIS comment showed that this text was inaccurate, misleading, and misrepresented what the studies actually said. Yet the SEIS copied it word for word. Comments supporting dog walking were not used to argue that there should be more off-leash restrictions, while comments opposing dog walking were used to argue for more restrictions.

SEIS still lists impacts that might, can, or could happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA

has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

SEIS says that, during the last six years, NPS staff did extensive literature searches to look for reports of impacts from dogs in other parks. In that same time, they could easily have conducted the site-specific studies that might have shown whether or not impacts are occurring in the GGNRA. Yet they chose not to do them.

SEIS admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. However these anecdotal claims have no context - how frequent were they, how serious, etc. - and cannot be used to set policy. An SEIS is supposed to be based on science, not anecdote. The SEIS also says it relies on the best professional judgment of NPS staff to determine impacts from dogs and their importance when there are no scientific studies of impacts in other parks available (e.g., p. 396). NPS staff have demonstrated a long-standing, strong bias against dog walking, and the SEIS should not depend largely on their biased judgment and anecdotes for proof that impacts from dogs are currently occurring.

SEIS says there has to be a no-dog area at all sites where off-leash dog walking is allowed. For example, the SEIS says Muir Beach is too small to have both an off-leash and a no-dog area, so therefore there cannot be an off-leash area at Muir Beach (p. 113). There's no similar idea that sites that are no-dog also have to include off-leash areas. This shows the inherent unfairness of the SEIS.

SEIS never gives results of public comment on the DEIS (neither does the Response to DEIS Comments by the GGNRA document on the GGNRA website). They say they received over 4,700 comments, but never say how many opposed restrictions on dog walking and how many supported them. The SEIS says: NPS received many public comments complaining that dog use precluded their enjoyment of areas. (p. 100). But there's no indication of how many negative comments were actually made. Are they from a small minority or are they widespread? An independent analysis of the DEIS comments showed that the vast majority (at least 3:1) supported dog walking. This is not reflected in the SEIS.

SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by public comment to the DEIS and by the San Francisco Board of Supervisors in 2011. The SEIS claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. It also claims that because people will still be able to walk their dogs on-leash at some sites, most will continue to walk in the GGNRA. No evidence is given to support either assumption. The SF Supervisors and dog walkers asked for a thorough analysis. What we got was cursory at best.

SEIS data still does not support claims that there are major safety problems from dogs that require off-leash restrictions. The total number of dog bites or attacks from 2008 to 2011 (four years) was 95 (p. 21). Even if this number is undercounted and should be tripled or quadrupled, it still represents a minuscule portion of the millions of dog visits each year to GGNRA sites. Even the total number of dog-related incidents (nearly all of which were for having dogs off-leash where they weren't supposed to be) from 2001 to 2011 - 4,932 - represent a tiny fraction of the million dog visits each year (p. 252). The vast majority of incidents (at least 89%) in the GGNRA involve people without dogs, including murder, rape, robbery, drugs, and larceny. People are the safety problem in the GGNRA, not dogs.

SEIS still does not consider management tools that could mitigate alleged impacts from dogs in the No-Action Alternative. For example, dog training classes, dog-horse workshops, and poop cleanup days

could all mitigate concerns about dog safety and pathogens in feces that are used to argue that the No-Action Alternative will not work and therefore the GGNRA must restrict off-leash access.

SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a national park experience to a large and diverse urban population (p. 1). However, the enabling legislation says the purpose of the GGNRA is to provide for the maintenance of needed recreational open space (Enabling legislation, first paragraph). The SEIS notes, in a negative way, that in many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities. (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - The objective of [the creation of the GGNRA] is to & expand to the maximum extent possible the outdoor recreational opportunities available to the region. (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972)

SEIS will not allow off-leash dog walking on any trail anywhere in the GGNRA. The only site-specific consensus agreement to come out of Negotiated Rulemaking was to allow off-leash dog walking on a trail in Oakwood Valley in Marin. This was included in the DEIS. However, it was removed from the SEIS (Oakwood Valley is now proposed to be on-leash only) because the GGNRA decided that there would be no off-leash dog walking on any trail. All the money and work that went into Negotiated Rulemaking was wasted.

SEIS still will not allow any off-leash dog walking on New Lands acquired by the GGNRA in the future, even if dog walking occurs has traditionally occurred there.

SEIS cites several surveys of visitor use and visitor satisfaction, including two done in 2011 in response to DEIS comments, that were so poorly done that their results are essentially meaningless. A 2008 visitor use survey at Ocean Beach and Crissy Field used people who intercepted people at these sites and asked about their park usage. However, the interceptors were observed by several people to actively avoid talking to people walking with dogs, hopelessly skewing their results. A 2011 visitor use survey at Fort Funston and Muir Beach, done specifically in response to DEIS comments, only counted people as walking dogs if they had a leash in their hand. People walking with a friend and the friend's dog were not counted as a dog walker (because they did not have a dog of their own with them), even though they were only walking there to walk with the friend's dog. A 2011 Visitor Satisfaction Survey was so confusing respondents didn't know if they were being asked about their satisfaction with current conditions at GGNRA sites or with the severe restrictions proposed in the DEIS.

SEIS still describes the visitor experience as focused on people who don't want to be around dogs. This criticism was made of the DEIS too and apparently ignored.

Finally, I strongly object to your department TASERING people. It is unjustifiable. Dog owners are not criminals.

strong opposition to the GGNRA's new draft dog management plan. This plan is very restrictive and will prevent me and my family from using the RECREATIONAL spaces with our dog in a way that supports our health and the health of our dog. We routinely walk together, AS A FAMILY, and enjoy these spaces with our dog. Our dog is well-behaved, under control and we always clean-up after her.

The GGNRA was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. Please do not limit our family's ability to utilize and enjoy these spaces.

Sincerely,

Rachelle

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who lives in and walks regularly with my dog in the GGNRA, I am extremely saddened and disappointed by the preferred alternative described in the GGNRA's new draft dog management plan. The plan is simply a veiled attempt to rid the park of the already very limited areas open to dogs. Instead of "balancing" interests, every decision in the plan ignores the interests of dog owners and everyday park recreational users, and does not attempt to take common-sense decisions into serious consideration.

The new plan is deficient in several key respects: 1) it is nearly impossible to wade through the 2,200 page document to make sense of it or find any of the required foundation or support for decisions; 2) the plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan; 3) the plan for such a drastic restriction of dog-friendly areas is not supported by any peer-reviewed, site-specific studies (as required by law) and instead is based on conjecture and speculation of "impacts"; 4) the plan is clearly biased toward the very small percentage of the population that promotes extreme habitat values and dismisses recreational use of the park; 5) the plan does not evaluate common sense approaches such as enforcing habitat destruction laws already in effect; and 6) it is unclear what additional protection "on leash" laws have over "sight and voice-control" laws which, if properly enforced, serve the same purpose - to ensure dogs are not destroying habitat and interfering with other recreational users' experiences.

I support one simple alternative for all GGNRA areas that are already dog-friendly: VOICE AND SITE CONTROL. If enforced, this alternative clearly balances the various uses and interests of the park as it prevents dogs from destroying cultural and natural resources and bothering other users of the park.

I live on Baker Beach, walk my dog nearly every day on the beach, and hike with my dog on the already very limited trails in Marin Headlands. I spent over an hour combing through the proposed plan to find any support for the "on leash" proposal for Baker Beach and severe restrictions on Marin Headlands trails - I never found it. What can possibly be gained by requiring my well-behaved dog to be on a leash rather than voice control on the beach? What is the NPS trying to protect? The only "wildlife" I ever observe on the beach are large ravens and sandpipers. Ravens are non-native predators that kill off native species - surely the NPS is not trying to protect the ravens. The sandpipers are too fast for any dog to catch. As for

the native habitat existing around the parking lots and trails, humans are causing more destruction than dogs as I continually see humans tramping and urinating on habitat. I see nothing in the proposed plan regarding enforcement of errant human activity which is the root of these problems. The native habitat and species surely are not going to re-populate areas that are still heavily populated and used by humans - what difference does it make if a dog on sight and voice control is accompanying the human?

As for Marin Headlands, I have hiked dog-friendly trails from Rodeo Beach and have never once observed a dog running amok throughout the habitat. Even if one were to do so, doesn't NPS already have existing habitat destruction laws to fine offending citizens? How can you possibly state that the dog policy as-is is harmful when only <5% of the Marin Headlands trails are open to dogs now and habitat destruction laws are already in effect?

Please do not adopt this extremist plan. The GGNRA would be better served by focusing on enforcement of errant human activities that ruin the experience of dog owners and non-dog owners alike.

Sincerely,

Genevieve Coyle

<b>Correspondence:</b>	Dear				

I am writing to share my comments for the 2013 SEIS specifically pertaining to Muir Beach and the Marin Headlands Trails (Coastal Trail/fire road to Hill 88). While I applaud the efforts to produce this plan I am deeply concerned that the preferred alternative F will have devastating impact on the residents of Muir Beach who rely on the open space of the GGNRA everyday for exercise in the natural environment.

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Marin Headlands. I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Marin County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values. This plan ought to be about stewardship of a park that is situated within an urban environment. The SEIS does not include any peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

It is key note that the both the Marin County Board of Supervisors as well as the Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

The plan reduces Marin Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force the community into their cars to drive a minimum of

20 minutes to access this experience. The highway to Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA. Since the new parking lot opened this year, a large portion of that traffic and user group is now descending upon Muir Beach. The plan further suggests that those who want an off-leash beach experience for their dog can go to Rodeo Beach. This change would force Muir Beach residents into cars to drive 45 minutes on the congested 2-lane highway, then the freeway and then another 2-lane rural road for an off-leash experience that currently exists literally steps in front of their homes.

The SEIS calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the 'off-limits' creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves - it passes the buck to towns, cities and the county.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic; and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day.

Residents and their dogs need access on foot out of Muir Beach to Mill Valley (the nearest town) for recreation and safety. Two trail suggestions:

A) Muir Beach - Coastal trail & Coastal Fire Road - Coyote Ridge  
Fire Road - Miwok Fire Road.

B) Muir Beach - Diaz Ridge - Miwok Fire Road.

Both would connect to Homestead trails and allow access to Mill Valley.

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or  
Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

Dogs are already off-limits on over 99% of the GGNRA. There are many trails and areas that currently do not allow dogs. These are areas that users who would like a dog-free experience can access. There isn't any compelling reason to eliminate or further restrict the remaining 1%. The GGNRA SEIS does not

include any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. To remove recreational access to these lands is not substantiated.

The GGNRA is not a pristine wilderness area like Yellowstone or Yosemite. It is a designed landscape with many constructed environments and thus requires a different management strategy than a traditional National Park. While a keystone objective for the GGNRA is 'recreation', it does not appear at all in the plan's objectives, nor is it referred to as one of the park's resources and values.

Access for all users, including people and their dogs, was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you

<b>Correspondence:</b>	Dear Superintendent Dean				

I STRONGLY oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
JK JOHNSON

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who lives in and walks regularly with my dog in the GGNRA, I am extremely saddened and disappointed by the preferred alternative described in the GGNRA's new draft dog management plan. The plan is simply a veiled attempt to rid the park of the already very limited areas open to dogs. Instead of "balancing" interests, every decision in the plan ignores the interests of dog owners and everyday park recreational users, and does not attempt to take common-sense decisions into serious consideration.

The new plan is deficient in several key respects: 1) it is nearly impossible to wade through the 2,200 page document to make sense of it or find any of the required foundation or support for decisions; 2) the

plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan; 3) the plan for such a drastic restriction of dog-friendly areas is not supported by any peer-reviewed, site-specific studies (as required by law) and instead is based on conjecture and speculation of "impacts"; 4) the plan is clearly biased toward the very small percentage of the population that promotes extreme habitat values and dismisses recreational use of the park; 5) the plan does not evaluate common sense approaches such as enforcing habitat destruction laws already in effect; and 6) it is unclear what additional protection "on leash" laws have over "sight and voice-control" laws which, if properly enforced, serve the same purpose - to ensure dogs are not destroying habitat and interfering with other recreational users' experiences.

I support one simple alternative for all GGNRA areas that are already dog-friendly: VOICE AND SITE CONTROL. If enforced, this alternative clearly balances the various uses and interests of the park as it: prevents dogs from destroying cultural and natural resources and bothering other users of the park.

I live on Baker Beach, walk my dog nearly every day on the beach, and hike with my dog on the already very limited trails in Marin Headlands. I spent over an hour combing through the proposed plan to find any support for the "on leash" proposal for Baker Beach and severe restrictions on Marin Headlands trails - I never found it. <b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is

way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Kathryn Bodle

**Received:** Feb,17,2014 18:37:51  
**Correspondence Type:** Web Form  
**Correspondence:** To Whom It May Concern,

As a San Francisco native and lifelong Mill Valley resident (excluding undergrad academic years at Stanford), I write in full support of Option F within the Draft Plan (or Supplemental Environmental Impact Statement/SEIS). I note the following, fall 2013 edits to the original SEIS:

- 1) Chapter 3 includes updated law enforcement, visitor use and experience, health and safety impact data. Importantly, it cites authoritative, additional peer-reviewed studies on resource impacts. This science-based data shows the importance of ensuring the availability and health of the GGNRA for the long term. These changes reinforce the future orientation of the Park Services 2011 Draft SEIS as it addresses and balances the needs of people, pets and wildlife for the future.
- 2) Chapter 4 elaborates on these meaningful updates, and includes expanded analysis of park operations budget data. Crucially, Chapter 4 addresses operational issues such as additional fencing and financial impacts. Taken together, these additions provide robust support for both the feasibility and the benefits of implementing the SEIS.

I appreciate the attention the Park Service has paid to both scientific and qualitative input in crafting the 2011 and 2013 drafts. The Park Services SEIS simultaneously addresses the long-term health of the GGNRA, and addresses the varied needs of a diverse and growing population of local and non-resident visitors and supporters. Importantly, it does so through evidence-based and ecologically-sound land management practices.

As do current regulations, some of the other Alternatives include provisions for owner voice control instead of dog-leashing or -exclusion. Previously, Park Service data has shown the failure of this restraint method to protect the safety of both dog and human visitors and employees. Leashless dogs provide even more opportunities for damage and injury, to both dogs and humans. Unfortunately, this damage potential extends to the unique habitats of the many rare and endangered plants and animals in the area. (All Sources cited below.)

In contrast, Alternative F offers a well-supported plan to ensure the GGNRA stays ecologically and financially healthy, and accessible for a diversity of visitors. Within the GGNRA, there are a total of 115 miles of recognized walking and hiking trails. The Park Services Preferred Alternative would allow 31 miles of these trails for dog walking use (27%).n Marin County alone, there are over 440 miles of on and off leash dog recreational trails. (All sources cited below.)

To show the returns on, and viability of, implementing Alternative F, I humbly offer the data relating to its benefits for the Western Snowy Plover, whose range includes many areas within the GGNRA. The Western Snowy Plover is a special status species whose habitat and individuals would be protected through restricted dog-access and other abatements, according to Alternative F (p. 272 of the Fall 2013 full text SEIS). These low-impact yet meaningful steps would be consistent with the recovery plan for the species, one of the many wildlife attractions for the millions of visitors to the area. They would also reinforce and sustain the GGNRA's ecological variety, which results from the synergy of its diverse species and habitats.

As a crucial attraction within the Bay Area's vital tourism industry, the GGNRA serves a wide range of resident and non-resident visitors. Alternative F addresses the varied needs of its diverse visitor population, through a science-based and future-oriented plan. While effectively balancing the needs of a wide variety of stakeholders, Alternative F promotes the health and availability of a vital Bay Area resource, for generations to come.

Please don't hesitate to contact me for any questions or concerns.

With appreciation,  
Aria Yow, MA (Political Theory)

<b>Correspondence:</b>	I live in the city. I don't have a yard. Most of us don't. We live in apartments.				

Because we city dwellers have no yards, we rely on parks and communal green spaces for the basic ability to exercise and play- and so do our dogs. Dogs need a chance to be dogs. Walking on a leash is great- but running to chase a ball is better! Playing with other dogs is the best! Romping in the waves, digging in the dirt, rolling in whatever smells most likely to cause a bath later- those things are important to dogs. They need designated, safe spaces to do them.

I love wildlife, and if the dogs are impacting the wildlife, that needs to be addressed. But we NEED off leash parks. Big, roomy ones with varied landscapes. Places to hike with a dog. Places a dog can actually run. If some of these places are badly affecting the wildlife, just designate us other, less fragile, equivalent spaces to use! But don't leave us without.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Supervisor Dean,				

As an avid hiker, surfer, sailor, and nature lover I would like to write you to thank you for not bending to the vocal minority of off leash dog owners. I am a regular to heavy user of the park from Tamales Point to Fort Funston. It is a difficult task balancing the needs of a vast variety of park users in a densely populated area. At times I'm sure you must feel stuck between Pinchot and Muir themselves discussing how we should manage park lands while still allowing access to visitors.

I support the preferred alternative and fencing of off leash areas. My park experiences have shown that dog owners do not follow leash and off leash restrictions. Just one example would be Limantour beach, where dog owners regularly do not follow off leash boundaries and let their dogs run freely along the beach. The trails down to the beach are filled with dog feces where owners do not pick up after their dogs. It was disgusting, and all the dogs on the beach does degrade my park experience.

Being a dog owner is a life choice, just as living in a densely populated area is a life choice. If an owner can't provide for an animals health and happiness without imposing on others or breaking laws, then perhaps they cannot afford to own that animal.

Thank you again,  
Pete Rowland

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir and Rodeo Beach as well as the Miwok trail. There are so few dog friendly trails left. I pay a huge amount of tax to have the privilege of living in Mill Valley. Do we really want to create community where pets are not welcome to enjoy the out of doors with their owners? Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

---

friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

My dog and I love to spend time together on the Oakwood Valley Trail, the Miwok Trail, the Coastal Trail, Wolf Ridge Loop, Rhubarb Trail, Stinson Beach, Muir Beach, Rodeo Beach, Chrissy Field, Ocean Beach, and Fort Funston. We love the fresh air, exercise, variety of landscapes and social aspect of meeting other people and dogs.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Since I am out on the trails so often I see the impact of horses, bikes, running events, hikers, too. Everyone needs to share the land and share the responsibility of taking care of this beautiful land.

Thank you for your time,  
Polly Ing

<b>Correspondence:</b>	I do not currently own a dog but often visit various parts of the Golden Gate National Recreation Area. In my hundreds of visits to parks on both the North and South sides of Golden Gate Bridge, I cannot recall a time in which dog did anything but add to the experience.				

In particular, I am concerned by the plan's limiting of off leash areas at Crissy Field. We live in an urban area and keeping dogs happy and healthy can be a challenge. Providing dogs access to off leash areas in and around the city is essential. Further limiting the area provided for off leash areas seems completely unnecessary and not in the best interest of the city's citizens or its dogs.

Thank you.

**Correspondence:** Dear Superintendent Dean,

I have been walking my dogs since 1990, when I lived in San Francisco. Even after moving to Berkeley, I make an effort to come to see the ocean and walk on the beach with my dogs, and meet friends a a wonderful way to enjoy the GGNRA.

I oppose the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from enjoying this lovely expansive park with my dog for my own physical, social, and emotional health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

Please keep the GGNRA available as a park space for all kinds of use in this densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Mary

**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,17,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dear GGNRA,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Dog access is such a great resource to promote healthy outdoor activity for both people and their canine companions.

Thank you.

I want to start by saying that Bay Area, CA is one of the most beautiful places to hike in the USA. I may be biased, but we are very lucky to be able to hike with so many beautiful things to look at: the pacific ocean, redwood and eucalyptus trees, San Francisco and all the other wonderful cities. One of the best parts about hiking if you have a dog is letting your dog be free from restrain. Dogs are couped up in human homes or stuck in the backyard all day while we are at work. Even through these daily turmoils they greet us with all the love in the world. If the hiking trails in the bay area no longer allowed dogs off leash or on the trails all this would spread out devastation to not only people living in the bay area, but

people who visit the bay area with their dogs. I don't know what the harm is to having dogs on the trails? Is it their poop? We pick up the poop? Is it them harming nature? They hike by our side.

I beg you with all the dog love in the world to keep bay area hiking trails off leash. A happy dog is an active dog. And sad dog is a sad owner. We don't want sad people in the bay area, right? One of the best parts about living in the bay area is the open minded free spirit aura that is spread here. Voting to ban off leash hiking trails would not carry on this mentality.

<b>Correspondence:</b>	Please stand firm against the lobbying. People of San Francisco deserve access to intact natural spots, and the snowy plover needs protection. Fort Funston and other spots have been ruined for enjoying natural beauty.				

---

I have been a dog owner most of my life, but the attitude of dog owners in San Francisco has persuaded me not to replace my most recent very beloved pal. I just decided I did not want to contribute to the sense of entitlement many people have about taking over public spaces with little regard for children or for people who are elderly or disabled, or even other dog owners, not to mention the widespread reluctance to clean up after the dogs.

There are already over 300 acres of off-leash dog parks in San Francisco. This is according to a website operated by dog lovers. Most of the ones listed below do not require leashes, and the rule is not observed in the two that do say "leash required."

[http://www.sfdogparks.com/All\\_Parks.html](http://www.sfdogparks.com/All_Parks.html)

McLaren Park

Approximate size: Under 10 acres

Leash rule: Off leash.

Bernal Heights (Read Review)

Approximate size: 39 acres

Leash rule: Off leash

St. Marys Park

Approximate size: 10-35 acres.

Leash rule: Off leash.

Corona Heights

Approximate size: 10-35 acres

Leash rule: Off leash

Glen Canyon Park (Read Review)

Approximate size: 35 acres

Leash rule: Leashes required.

Buena Vista Park

Approximate size: Over 35 acre

Leash rule: Off leash

Fort Funston (Read Review)

Approximate size: 35 acres

Leash rule: Leashes required.

Lake Merced

Approximate size: 35 acres

Leash rule: Off leash.

Lafayette Park

Approximate size: 10-35 acres

Leash rule: Off leash.

Dolores Park (Read Review)

Approximate size: 10-35 acres

Leash rule: Off leash

Upper Noe Park

Approximate size: Under 10 acres.

Leash rule: Off leash.

Alta Plaza Park

Approximate size: 10-35 acres

Leash rule: Off leash

McKinley Square

Approximate size: Under 10 acres

Leash rule: Off leash

Potrero Hill Mini Park

Approximate size: Under 10 acres.

Leash rule: Off leash.

Mountain Lake Park

Approximate size: 10-35 acres

Leash rule: Off leash in east end of park.

Golden Gate Park (Read Review)

Approximate size: 35 acres

Leash rule: Off leash in above areas.

Stern Grove

Approximate size: 10-35 acres

Leash rule: Off leash in north side of park.

<b>Correspondence:</b>	To the GGRNA General Superintendent				

Having visited with you at several GGNRA meetings re. Dog Management Plan, herewith i am reiterating as a long term resident of the coast, walking my dogs in the area for decades, my concerns and opposition to the GGNRA 'preferred alternative' dog management draft.

The area has provided RECREATIONAL, energizing and healthy activities in conjunction with our dogs, horses, bickers and the community in general for many years. Thus, coinciding with the fundamental values for which the GGNRA was established, ie. natural, historic, scenic and RECREATIONAL values.

The threatening and restrictive scope of the GGNRA plan would prevent us inhabitants from the privileges the area has traditionally benefited us, reversing fundamentally the recreational character of our territory.

Therefore, i respectfully ask you to take our citizen request into account, maintaining the GGNRA values, including RECREATION, in force, as opposed to the severe planed restriction to our traditionally dog friendly areas.

Confident in your understanding,  
Respectfully, Michail

Consequently, again i manifest

**Correspondence Type:** Web Form

**Correspondence:** The changes in the 2013 seis are not founded by any data nor addressing the criticism expressed in 2011. These proposed changes will achieve nothing. Banning off leash areas and further restricting where dogs are allowed will do nothing to prevent damage to nature or the environment. The only thing it will create are unhappy unbalanced dog, who are never permitted to run, and unhappy dog owners. I urge those reading this to maintain the 1979 pet policy as it allows an outlet for healthy animals and healthy owners. It promotes physical exercise for both and allows the dogs to learn to socialize with each other. By isolating dogs in their houses you are doing no one good and everyone harm.

**Correspondence:** Dear GGNRA,

I have lived in Marin County for 45 plus years, mostly in West Marin. I live here because of the open areas available for hiking, biking and walking my dog. Over the years I have noticed more and more places I can no longer bring my dog. I am a responsible dog owner, I have always trained my dogs so they are sociable and always under voice command if needed. In areas where a leash must be used, I have no problem using a leash. However, there are places that are meant for people and dogs to run free, playing ball, throwing sticks or frisbees and just enjoying life.

There should always be places within Marin County (GGNRA & State Parks), besides only the few fenced in county dog parks, where dogs have a chance to run and play and socialize with other dogs/people. There are already so many areas of open space between the Federal and the State parks where dogs are not allowed at all....There is an abundance of open space and wilderness,there is enough open space for the birds, the wildlife, as well as our abundant sea life that is all protected by the Federal and State rules. We, the taxpayers of this County should have some say into how OUR land is being used and how we want to enjoy OUR land. There is plenty of space for everyone!! I am not asking for MORE space to be open to dogs, I just want the open dog areas we currently have to stay the same. After all these years, why NOW is the GGNRA looking to no longer allow dogs to visit the same areas that have been open for years?? I have seen NO reason to change things. This on-going study of the GGNRA dog planning that has cost our TAXPAYERS millions of dollars is a waste of time and money. The monies that have been spent over these past years could have been better well spent on our open GGNRA areas, with visitor education about protecting wildlife inhabitants and why it is so important to protect these special areas. Use the funds to educate!!! If needed put in additional trash collection for people to use to dispose of dog bags, and human trash, etc. There are many dog lovers and people who love the outdoors, we (the people)should be able to come up with a plan that will work for all.

Aside from all the above, over the years, the people who I have met who walk their dogs on trails, beach's and open space are those people who have a special appreciation of their surroundings, they all realize how lucky we are to live in one of the best places in the world and enjoy time with "man's best friend" their dog. Most of the people with dogs have a special appreciation for the outdoors and tend to stay healthy physically and mentally; scientific studies back up the wonderful relationships between people and their pets.

So please keep the dog areas that are currently open,as is,it has worked all these years and with continued

education of our citizens, we can all share this land and take care of it responsibly while enjoying our pets, families and friends. Please keep the Alternative A Plan!!!

**Correspondence:** I am an animal lover and nature lover too. I enjoy open spaces on a weekly basis- I hike, bike and lead groups of people on nature outings. Please do NOT add more dog-friendly trails and

---

keep/enforce on-leash rules. I also think confined dog areas would be fine in areas of high foot traffic/low wildlife populations. These areas should be fenced.

Dogs, as much as I love them, disrupt wildlife resulting in unbalanced ecosystems. We need trails free of domestic dogs. And when dogs are permitted on trail they should be on leash always. Allowing dogs to scare and chase wildlife, and poop all over (or leave plastic bags all over) takes a big toll on our wild lands and wildlife. Too many times I have witnessed dogs running after deer, squirrels, birds and other animals. Many of our bird species are migratory. Every time they fly off the water or nest takes energy- the energy they are should be storing up for their migration which can be 1000s of miles. I've had dogs run up and jump on me and the adults/children I am with which can be very scary too.

Again, please keep dogs on-leash and limit the number of dog-friendly trails. Do this in the name of the voiceless, our wildlife.

Thank you,

Sharon Barnett

**Correspondence:** I would like to come out strongly in favor of permitting dogs unrestricted access in the Golden Gate National Recreation Area. I live less than a block away from the trail head at Dias Ridge Spur Trail (intersection of Lattie Lane & Waterview in Mill Valley) and I walk my dog or ride my MTN bike on the trails there almost every day for the last 10 years. I have yet to see a single problem regarding interaction with dogs, humans, or wildlife, either on the trails or at Muir Beach where I take my dog once a week. For that reason I suggest that the GGNRA to retain its longstanding 1979 pet policy and take the "No Action Alternative" for the SEIS area in Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

thanks for your consideration,

Sam McMillan

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Jim Carrington

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo, San Francisco, and Marin Counties and on new lands that the GGNRA acquires in the future.

Responsible and humane stewardship of caring for a dog includes a healthy amount of off-leash exercise and play. San Francisco has a large population of pet dogs, and these dogs and their families deserve the right to use the GGNRA lands for recreation just as do other citizens. I am a self-supporting SF resident and dog guardian. I pay many thousands of dollars per year in property taxes, including school tax ,even though I have no children. I should have the right to bring my dog to run with me off leash in GGNRA recreation areas. I truly appreciate your consideration in making an equitable decision about who gets to have meaningful recreation and why. Thank you,

Sincerely,

Karen Berlin

**Correspondence:** Dear National Park Service,

On behalf of my family, I want to support the strictest controls over loose dogs on the trails above Marin City, especially Alta Fire Road and Oakwood Valley.

We have reviewed your plan, and our preferred solution is Map 4-F.

Our family has lived near the trailhead since 1999, and my wife has never felt safe to walk the trail either alone or with our two young children. There are just too many dog walkers (including professionals), who let their dogs off leash.

I have been bitten while jogging the trail, and I can attest to feeling fear every time I am approached by a random dog there. I would hate for something to happen to my 2 year-old daughter, or 11 year-old son. And there's just no way a dog walker can control 10 dogs with voice alone.

Please create a safe haven for hikers along the Marin Headlands by enforcing and strengthening the leash laws.

Sincerely,

David Swope  
Jennifer Diessel

**Correspondence:** I strongly urge the GGNRA to keep and even expand the areas open for off-leash dog walking. In my experience, dogs and people mingle much more safely and happily in off-leash areas. When dogs are on leash they are much more likely to be protective of their owner and not friendly with other people or dogs. We have enjoyed Fort Funsten many times over the years, and hope to in the years to come.

I would be very concerned about crowding at other city and county parks that do allow dogs if these GGNRA areas were closed to dogs. The other parks are much smaller and could be easily overwhelmed. I feel that GGNRA is an important RECREATION area for all, including dog owners.

**Correspondence:** My name is Tianyu Li. I live in Mountain View. I have an 8 year-old Jack Russell Terrier, who is still not showing any sign of slowing down and require a lot of activities daily. I try to take him to the Fort Funston beach every weekend because even though it's a long drive it is the only place that he gets to run so freely. Regardless of the weather, I've always enjoyed the beach because all dogs big and small walk, run, and play with no leash in such an open space and I've never seen anyone having any issue with any dog in any way. The beach always reminded me how peaceful life can be where humans and animals can indeed coexist.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative. The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils. The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

**Correspondence:** If there is no enforcement of dogs being off leash in specified leashed areas what point is all this?

Every time I go for a walk/hike where dogs are supposed to be on a lease , there are dog owners who think that since there is no ranger giving them a ticket, it is OK to have their dogs off leash. Often I see folks with more than two dogs off lease, running in restricted areas, 40 Ft away from the owner. The owners cannot see what there dogs are doing and if they poo'ed the owners do not even know, or most times do not care. I've had dogs off lease run up to me and jump on me, and I am afraid of big dogs. Why do people who just want to go and take a hike/walk in a park , have to put up with this?

I say, "No enforcement do? Then do not bother with rules about where leashed or unleashed dogs can or cannot go".

**Correspondence:** Dogs bring such peace and joy to people! They are truly our best friends. Enjoying nature with them is such a wonderful treat that makes San Francisco just a rare and amazing place.

Please don't change that!!!

If dogs are restricted from running and socializing and getting their energy out, they can go stir crazy and their frustration can make everyone around them sad and frustrated too. I think that the risk is great that the issues some people have with dogs will get worse if they are unable to get the proper exercise they need.

Please keep the dog areas as is.

Thanks!

**Correspondence:** The "Preferred" alternative is MUCH TOO RESTRICTIVE. I strongly support, recommend that you adopt, and will fight for, Alternative A.

Off leash dog walking is not causing problems. I do not usually walk with a dog, but do walk on Ocean Beach and Ft. Funston quite often. I find that dogs and their walkers are caring and responsible users of the GGNRA. I am happy to meet dogs and their owners. It just makes no sense to require dogs to be on a leash on a walk. It makes the walk worse for the human and the dog.

**Correspondence:** I strongly oppose Alternative F, your proposed, preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead I support Alternative A, the No Action Alternative.

I have lived on Mt. Tamalpais for 43 years and was relieved when the lands, now the GGNRA, were protected; however, over time the use of the lands has become increasingly restricted. Early on I could run with my dog almost anywhere. I still am able to and do regularly take my current dog to the Four Corners area and to Muir Beach. Dogs are already off-limits on over 99% of the GGNRA. I can see no compelling reason to eliminate or further restrict the remaining 1%. There have not been any peer-reviewed, site specific studies conducted that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate national Recreation Area was established to provide access for recreational activities to local residents in a densely populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents, adults, children and dogs, rely on this open space. It requires a management plan different from that for a national park.

Access for all users, including people and their dogs, was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. ADOPT ALTERNATIVE A.

**Correspondence:** Dear Superintendent Dean  
I am writing to voice my strong opposition to the Draft Dog Management Plan/Supplemental Environmental Impact Statement for the Golden Gate National Recreation Area, particularly the proposed restrictions for dog walking in the newly created Rancho Corral de Tierra in San Mateo County. My wife and I have lived in both San Francisco and San Mateo counties since 1994 and have enjoyed the recreational benefits of the GGNRA. However, the proposed new restrictions on dog walking throughout

---

the GGNRA contradict the very reason why the GGNRA was created in 1972- to provide recreational opportunities for the people of the bay area. We have enjoyed walking our dogs in both Fort Funston and Crissy Field precisely because no other similar areas are available in a dense, urban area such as San Francisco. We then moved to the coast side for the specific purpose of finding areas where we could walk our dogs off leash. Dogs have been walked off leash in the Rancho Corral de Tierra for decades by locals without incident. In fact, the SEIS even notes that dog walking is the primary use of Rancho. It is one of the many reasons we cherish the coast side. Now we are told ( without any evidence) that off leash dogs are a menace and our long history of this uneventful activity must be curtailed or even prohibited. Continuing the "No action alternative" which was put in place in 2011 and allows for both off leash and on leash walking is the option that makes the most sense. Again, GGNRA has presented no evidence why this alternative is now unacceptable.

The Golden Gate National Recreation Area was created to protect land from development and to provide recreational opportunities for the people of the bay area. It would be a shame that, in the interest of "protecting" the land for the "public", the GGNRA now seeks to prohibit the very public that uses that land. Please reconsider this ill advised Draft Dog Management Plan and create a plan that allows for all of the public, both dog walkers and non dog walkers alike, to enjoy the wonderful treasures of the GGNRA.

John Skerry

**Correspondence:** Hello, I would like to comment on the proposed changes of dog use in GGNRA. I understand the reasoning behind limiting dog use in the park but I feel like these proposed restrictions are too confining for dogs. I have a dog and I am out at Oakwood trail, Rodeo Beach, and Muir Beach often. My impression is that vast majority of dogs and dog caretakers are very respectful and and really benefit from using these areas, specifically off leash. The bay area is a dog friendly place to live and many dogs need to run around off leash to truly have a high quality of life (not to mention helping their people have a higher quality of life). Please consider keeping Oakwood trail, which most people consider a dog trail anyway, off leash okay, and Muir Beach, and Rodeo Beach as well. Thanks very much from my canine friend and my family!

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Sheng Hsu

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

As a long time Bay Area resident and an ardent supporter of the NPS and nature in general, I am frankly appalled that you are in effect forcing out a significant body of supporters in the many recreational users of the GGNRA. This area is truly a gem in the bay area, and makes it a much nicer place to live. I fail to understand the rationale of these plans that would turn many ardent users of this treasure into adversaries of the NPS. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. The location very much dictates the use of this facility. To ignore the fact that this facility is in the midst of a densely populated urban area is non-sensical. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Regards,

Jonathon Simmons

San Jose, CA

**Correspondence:** The review provided by NPS for GGNRA is very complete and educational. As a dog owner and supporter of environmental protection, I am happy that the analyses have been as expansive as they have been. Of all the sites considered in the in-depth document, Fort Funston is the one that concerns me most. It is a joy to walk along the water with my small dog, who leaps and runs along the surf with great enthusiasm.

---

I would hope that maximum (responsible) beach accessibility continue to be allowed for persons with 3 or fewer dogs. It is hard to imagine how walkers with 6 dogs could adequately monitor dog behavior in a way that respects the environment and other users.

Thank you for the opportunity to contribute to this discussion.

**Correspondence:** Please do not eliminate the off leash dog parks that currently exist. Having a place to play off leash is very important to help dogs socialize. If you take away these areas, dogs in California will become leash aggressive and unfriendly as is fairly common in Washington, DC where we have lived. We have noticed that most dogs in California are much friendlier than the dogs on the East Coast and it is probably because they have many more opportunities to socialize off leash.

**Correspondence:** My name is David. I was born and raised in San Francisco. I visit Fort Funston on a weekly basis with my dog Kato and I see how happy he is while playing there. Not only does he thrive while visiting the off leash areas, I benefit from it too. As a young combat Veteran, I fought to maintain the freedoms and rights of people and animals of the United States. Kato has helped me through some tough times and I admit it, sometimes I speak to my dog and wish he could speak back to me. As a responsible dog owner, citizen, and Veteran I have to be an advocate for him so I need to oppose the potential changes. I know my dog would feel just as strongly as I do about the restricted access to the current off leash areas, therefore, I opposed the following:

1. Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. And,

2. I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash

areas feel like pens and visitors using them will feel unwelcome. And,

3. I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Remember the focus is about encouraging recreation on GGNRA land, not limiting or restricting it.

I appreciate the opportunity to address my concerns and my dog's concerns.

Respectfully,  
David Yip & Kato

<b>Correspondence:</b>	To Whom It May Concern:				

As it states in the SEIS, most of the current Rancho Corral de Tierra park users are local. My spouse and I, like many people in our community moved to the area because of the opportunity to walk our dog in open space areas such as Rancho. Given that local communities are the primary users of Rancho and the local communities have a demonstrated history of responsible off-leash dog walking, I am writing as a citizen of this community to urge GGNRA to continue off-leash dog walking in the Rancho Corral de Tierra in Montara & El Granada.

In Montara we have a Dog Group, which has more than 400 members, has provided dog waste bins and bags, as well as promoted responsible dog guardianship. In spite of this history of strong community commitment, the GGNRA's preferred alternative does not provide any off-leash opportunities for dog walking in Rancho - something that has responsibly existed for years! On top of that, San Mateo County is the only county where GGNRA is proposing to completely ban off-leash walking. We do not understand the rationale for this proposal.

We strongly ask that the current policy/no Action Alternative be continued but with the additional provision that GGNRA allow off-leash dog walking in the the areas near Montara and El Granada where the practice has been going on for decades.

Sincerely,  
Susan Andrews

**Correspondence Type:** Web Form

**Correspondence:** I write this comment in support of Alternative A, which offers owners control of their dogs by leash and voice. I have hiked the many trails of Marin County with my dogs and enjoy living here because of access to open space, with an abundance of trails and wildlife that is not available in most of California and elsewhere. I read and heed the signage regarding accessibility to dogs and preservation of wildlife and it seems that Alternative A presents the best approach to preserving our natural surroundings and accommodating owners and their pets. Rather than placing more constraints on accessibility, the strategy should be to educate and inform owners about the impact dogs left unattended or uncontrolled may have on the wildlife and the native growth. I would favor such methods as having owners of dogs attend an awareness of wildlife and native habitat class that would inform them about the detrimental effects that GGNRA is experiencing and how people can modify their habits to curtail these. Perhaps this class could be a requisite of getting a dog license; or it could be part of a trails access card that owners could carry to certify that they are aware of the impact their use of GGNRA is having. Education of owners should include local scenarios that cite the damage done by owners who are not adhering to the leash laws or who do not have their dogs under voice control. Education should include examples of what damage can be done if a dog enters a restricted area. In addition, foot patrol by the rangers and volunteers can help to educate hikers and their dogs about the wildlife and native habitat. I love being in GGNRA and other open space areas and it is made even more enjoyable when I can share that experience with my pets. I am not going to intentionally do anything to harm the beautiful natural surroundings we live by. So, I support a more informative approach that clearly defines accessibility and the impact skirting the current restrictions may have on our precious resources.

**Correspondence:** I walk my dog regularly off leash via voice command in the GGNRA and I strongly oppose the preferred alternative described in the GGNRA's new draft Dog Management Plan. For me, this plan is too restrictive and will prevent me from exercising with my dog, impacting not only my health, but the health of my dog. I frequent the following GGNRAs on a daily/weekly basis - Crissy Field's

---

Middle Beach, Baker Beach, Ocean Beach, Fort Mason, and Fort Funston.

In reading the most recent plan, it has not been modified in any significant way to reflect the many substantive concerns and objections from the thousands of people who submitted comments in response to the initial plan. There also doesn't appear to be one single peer-reviewed, site-specific study (isn't this required by law?) that supports such a drastic restriction of dog-friendly areas.

I staunchly oppose the addition of fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and are unwelcoming to visitors. My experience in many current dog parks in San Francisco is that provide dog owners who lack control of their dogs the false perception that they can now bring their dog to the GGNRA off leash because the "fence" will supply a barrier. I think this will cause more problems because now ill behaved dogs will be brought off leash to the GGNRA and will cause problems for those owners that have their dog under voice command.

I noticed the plan lists impacts that "might," "can," or "could" happen, but without any site-specific evidence or examples that any of these supposed "impacts" occur now or have ever occurred in the GGNRA. The new plan even admits the GGNRA has not conducted site-specific studies of the GGNRA sites that document the "impacts" from dogs on the environment.

I am also deeply concerned about overcrowding. The plan also lacks any acknowledgement of it's impact on other areas - how will dispersion affect local communities, neighborhood parks, and other dog recreation areas? I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be finalized and supported with current off-leash areas, and even new areas that the GGNRA acquires in the future.

Sincerely,

Amy Puffer

**Correspondence:** To Whom it May Concern:

I've lived in San Francisco for 9 years, 4 of which i have been a dog-owner, and i am writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

I live and work in the city and I give back to our community both through working at a local non-profit organization and through volunteer activities. So many people are already fleeing the city because of soaring rent prices, unfair evictions, and other city policies that are not conducive to engaging and nurturing people, families, and communities. I vote here, I live here, I pay a shit-ton of money in taxes every year here, and I would like to be able to enjoy time- - in a respectful and responsible manner- - with the dog i rescued from a local shelter.

the impact of this law will not only impact the overall happiness and well-being of many bay area citizens, but it will also put undue stress on local parks and other areas that dog-owners will have no choice but to rely on for recreation. these areas were designed and intended for recreation- - for families- - and, yes, that does include the 4-legged members.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong

**Correspondence:** Dear Superintendent Dean,

As someone who walked regularly with my dog and now walks recreationally daily in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is overly restrictive and will prevent me from recreating with a dog for my own health and my dog's health the way I have on GGNRA properties for many years.

Please help me understand why the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. Additionally, there was not a single peer-reviewed, site-specific study, incidentally required by law, supporting such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose. It was created to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. This policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Catherina Paolino

**Correspondence:** I implore you to keep a significant number of areas in the GGNRA off-leash. This is not about dogs, but about the citizens of this area that own these dogs. These areas exist for our enjoyment, and I find it truly enjoyable to allow my dog to go for a walk with me while he is off of a leash. The current proposed plan is simply to restrictive to dog owners.

Thank you for your consideration in this important matter.

**Correspondence:** This plan punishes all dogs and dog-owners for no reason whatsoever. In an urban environment, we need open spaces even more, and the spaces managed by GGNRA are our only outlet.

There are no reasons to ban off-leash usage of these areas. Where there are environmental rules, enforce them. Where there are clean-up rules, enforce them.

Please, please, please abandon the proposed unreasonable plans to deny most San Franciscans use of the majority of recreational land within this city, and replace them with reasonable plans that serve the people of San Francisco and the surrounding area.

The GGNRA controls nearly all of San Francisco's recreational waterfront, leaving the city powerless to act on behalf of its citizens. In the two proposal drafts submitted to date, the GGNRA has completely ignored the wishes of the people of San Francisco and our local government, which is fighting the current plan.

Without these areas, San Francisco dog guardians and their canine companions will be limited to city parks. While some have dog-play areas, they are small, cramped, poorly maintained, and very unfriendly to the many dogs who thrive in open areas. This is not a reasonable option.

The majority of San Francisco households have canine family members - more than have human children. Confining those households to small, dangerous areas in remote corners of the city simply fails to serve

the needs of people.

Small, fenced dog runs are very dangerous for most dogs, and only open park areas - where dogs can easily be distant from dangerous people (and other hazards) are safe. Removing the ONLY open parkland from use by families with dogs puts all San Franciscans - human and canine - in danger.

Off-leash dogs in these areas pose no danger; a tiny minority of irresponsible guardians is to blame for any issues that arise. Deal with them, and you will eliminate any safety issue.

A large plurality of San Franciscans use these areas with their dogs. People and dogs enjoy the freedom of playing on the beach, hikes in nature and the grass of Crissy Field. We do so with few incidents of trouble, and fewer incidents than between non-dog-related people in city parks.

Please change the plan. I suggest that you focus the plan entirely on using highly knowledgeable (about dogs) enforcement, and far stricter enforcement, of good, civil behavior of all PEOPLE within the GGNRA.

**Correspondence:** February 17, 2014

Golden Gate National Recreation Area Committee:

I am writing this letter to comment on the Golden Gate National Recreation Area's proposed plans to limit both off leash and on leash access for dogs in GGNRA lands. I am not a resident of San Francisco or San Mateo counties (current Contra Costa County resident) but am a frequent visitor to the areas that would be impacted by the plan. I enjoy the use of the National Recreation area for hiking, bike riding and touring. I have just learned of the proposed plans (Monday 2/17/14) and am happy that I have the chance to comment even though I have not had much time to prepare.

As I understand the proposal, both on and off leash dog walking would be severely limited in the Golden Gate National Recreation Areas. When I visit GGNRA, I enjoy seeing the responsible dogs and owners that frequent these areas and take the time to get their dogs out for exercise and socialization. I have had positive experiences with the pets and owners. These restrictive proposals would push too many dogs into neighborhood parks or limited on leash areas within the GGNRA.

I am also concerned that if I or my children should move to San Francisco or Marin or bring dogs with when we visit, we would not be able to enjoy these areas with our pets. As a hiker, biker and outdoor enthusiast, I have not had negative experiences with dogs in the GGNRA and would like to see the off leash access preserved for ourselves as well as future residents and visitors at these recreation areas.

---

**Correspondence Type:** Web Form

**Correspondence:** I am an avid outdoorsman. I utilize the GGNRA for recreation on a daily basis and have for over 20 years. I surf and run at Ocean Beach.. I Kite-board at Crissy Field. I Hike/Bike the trails in Marin. I do not own a dog. But, I feel compelled to weigh in on the GGRNA Dog draft proposal as I think it has been blown out of proportion to the situation.

I love Crissy Beach on a busy Saturday morning. Folks visiting from far away places - seeing the Golden Gate for the first time. Kids splashing in the water. Dogs Running Off-Leash with their owners or digging in the sand with other dogs, chasing Frisbees and making friends. Kiteboarders launching their kites. I enjoy the Beauty, the sense of freedom and diversity of activities and visitors. I love how proximity creates new relationships, new ways to balance our needs. It is an essential skill for all creatures - Both human and canine.

The Bay Area is a unique place. We have dense population centers connected to beautiful open spaces. And in San Francisco we also have a population where the number of dogs is Greater than the number of children. It is essential that that they have a place to recreate - Owners AND Dogs. There is not enough room now. You would propose ½ of the current arrangement; with far too many leash restrictions. This is not acceptable. We need open spaces and freedom to move in it!

The impact this policy will have on the city parks and surrounding communities will be catastrophic. Our City Parks are overcrowded already. There are simply not enough dog-friendly areas in the city to handle

---

the canine population. We don't have the infrastructure or the space to expand. Simply put.... they have nowhere to go.

I think it is important to reiterate the fact that the GGNRA is NOT a "National Park". It IS a recreation area. This is not Yosemite. Crissy Field is a beautiful stretch of land with incredible wildlife that provides a much-needed outlet for a city filled with people - Tourists and Locals alike AND dogs. I believe the balance is here already. We need to fight to protect that.

I think the barriers and signs send a clear message as to where dogs belong or not.  
I really hope we don't need to revisit this in court.  
Let's save the tax dollars for the important fights!

Regards,

Michael Moore

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I also oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I also oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

Thank you.

<b>Correspondence:</b>	Please continue to allow off leash parks such as Fort Funston. Good, clean, flea free parks such as Fort Funston is an extreme rarity in the Bay Area; this park allows both dog and owner to enjoy its fresh air, space, and beautiful views in an extremely relaxing and leisurely manner. Owners here pick up after their dogs and are courteous of others, again fairly rare in the bay area. It would be absolutely tragic to make it illegal off leash parks such as doggie heaven aka Fort Funston.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Walking my dog in these areas is a privilege I value and respect. I would like to honor it for many more years.

Sincerely,

Stacey and Yogi Herrera

**Correspondence:** I am a proud San Francisco homeowner of two years at 361 29th St. in Noe Valley. At least once a week, despite having a fenced dog run around the corner from my home, I take my papillon mix Daphne to Fort Funston for off-leash recreation; that dog run and Fort Funston are the only two places she goes off leash. SF is a lovely city, but Fort Funston is the place here that I love the most, because of these trips. Daphne is normally a shy, reserved dog, but her intrepid side comes out as we explore the dunes and the beach. We both get so much exercise, and I find it to be a terrific stress reducer at the end of a work week. I have met more than one new friend while dog walking at Fort Funston, and having such a tremendous off-leash resource is a jewel in the city's crown. I should add that Daphne is always under my voice control and I always clean up after her.

I strongly oppose any alternative plan that would restrict off-leash voice control access to Fort Funston. Putting up fences would not only detract from the natural beauty of the site, but it would also defeat the purpose of our trips. The park would cease to be a useful recreational area to me and my dog. I have plenty of places where I can already walk her on-leash, and more convenient, albeit less enjoyable and

---

more cramped, off-leash areas. My quality of life would be noticeably diminished if restrictions were put into place, and as someone who plans to live and vote in San Francisco for the next few decades, I will be paying close attention to GGNRA's response to the concerns of responsible dog owners like myself.

Chris Fleitas

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Suzy Goldsmith

**Correspondence:** Re: Golden Gate National Recreation Area Dog Management Plan

We support the preferred alternative proposed by the National Park Service to bring some level of control to dogs in the Golden Gate National Recreation Area.

As it is now, there is no area of the park where one can go and not expect to find off leash dogs, quite frequently running out of control and with all too much frequency threatening wildlife and people while doing extensive damage to vegetation and the terrain. That simply must be rectified. Leashed dogs, though much less prevalent, are a matter of concern. With extension leashes these dogs pose a similar threat to people and park resources. A standard 6 to 8 foot leash should be adequate for dogs in areas where the resource permits dog walking.

There are two areas of GGNA in which I have a considerable amount of experience, so I will limit my comments to those areas and the problems they face now.

FORT FUNSTON is an area I started visiting in the 60's when I ran the sand hills there. In the early 70's I started birding there, and by 1978 I knew the site very well. I wrote an article about it which appeared in a number of publications, most recently "Birding the San Francisco Peninsula", published by Sequoia Audubon Society. It was then an excellent place to bird. It was the only place left in western San Francisco where jackrabbits could be found. It was around then dog walkers discovered it and started letting their animals run off leash. One acquaintance I made took great joy in letting his German shepherd chase the jackrabbits and brush rabbits. At that time there was a healthy population of California Quail, Spotted Towhees, Bewick's Wrens and other birds that nested on or near the ground. Around the groves of trees, shrubs provide cover and sustenance for many birds, particularly fall migrants. One such shrub stands out, the largest coffeeberry I've ever seen. It was at the north edge of the Y grove. When the berries ripened it was not unusual to see 20 or 30 migrating Western Tanagers in it. They joined large numbers of sparrows and finches that used that single food source to fuel part of their migration. I watched over the course of a few years as more and more dogs trampled that huge coffeeberry into oblivion. The Park Service stood by and did nothing to save the plant or even to collect berries so the gene pool of that remarkable plant could be preserved. Too late now. Not only is that plant gone, so too are most of the shrubs that provided habitat around the Y grove, Battery Davis and the Skyline grove. The smaller shrubs were stomped down, the larger ones seem to have succumbed to the constant flow of dog urine inflicted upon them. The ground dwelling animals are gone too. Jackrabbits, California Quail and Spotted Towhees are all gone. It is likely they were chased to the point they could no longer reproduce, so either left for other places or just lived out their lives until their species were extirpated. I do not know the fate of the brush rabbits, but I haven't seen any in many years. I've stopped using Fort Funston except for an occasional visit to the hang glider observation deck, to bird from the north parking lot across from the Westside Sewage Plant or to check the Bank Swallow colony from the beach.

During the 70's we brought our children for walks at Fort Funston every week or two. As they grew up, more and more dogs were running around and sometimes threatened the children. We stopped taking them there and eventually stopped going ourselves. Now that we have a grandchild we wouldn't think of bringing her there. Through the 1980's I continued to lead field trips and bird there, but the presence of dogs posed a danger to the people in the groups I led, so I felt it necessary to stop that activity as well. That is not the intent of a National Park. Areas of National Parks that are easily accessible, like Fort

Funston, are supposed to be available to all visitors, not just a single special interest group. Clearly that is not the case at Fort Funston.

OCEAN BEACH is the other area with which I have extensive knowledge. I survey Snowy Plovers there every week or two between late July and the end of April. I bird the north and south ends of it frequently and walk there regularly. Dogs on the beach are an absolute hazard to all wildlife. Off leash dogs are the primary offenders. Though some owners intentionally sic their dogs on flocks of birds, more often they allow them to run through bird flocks, or they throw a ball which sends their dog running into the birds. Even dog walkers with controlled dogs pose a problem. The birds have no way of knowing whether a given dog will go after them or not. A dog is a predator, so any close approach is very likely going to result in the birds flying off. The problem with this is that is a gross violation of Federal regulations upheld in every other National Park. Dogs simply cannot be permitted to destroy the natural resource. But in GGNRA that is exactly what they do. They chase huge numbers of migrating birds off the beach and send them on their way north or south at a stage when they should be resting on the beach or feeding along the tide line. They do the same thing to gulls, terns, Snowy Plovers, Sanderlings and other shorebirds that reside here during some part of the year.

If we are to preserve this resource, or any other in the National Park System for future generations, we must continue to prevent special interest groups from destroying the resource in this generation. Time and time again, in virtually all of our National Parks, the Park Service has upheld the standard that cattle grazers, miners, loggers and developers to name only a few may not consume parks' resources for their person use. That is the standard that must be met in Golden Gate National Recreation Area. This park, in all its component parts with the possible exception of Alcatraz and Muir Woods, has been hijacked by a special interest group, dog owners. They destroy the park with abandon and without personal consequence. The parklands have diminished habitat value than when the park was established and they will provide much less still if dogs and their owners are not limited in their use of the park. Adopt the preferred dog management alternative, strictly enforce it and begin to regain this park for the future generations who will surely wonder why we wasted it for dogs if we don't do something now.

Joan and Dan Murphy

<b>Correspondence:</b>	My name is Kate Gruen and I have lived in Mill Valley, California for 24 years. I walk at Crissy Field frequently and walk on the Miwok Trail several times a week. I have a dog and sometimes walk with my dog.				

I oppose the Preferred Alternative because it is too restrictive and I do not believe that there should be major changes in the dog management plan.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them.

THE PLAN WILL NOT ALLOW OFF-LEASH DOG WALKING ON ANY TRAIL ANYWHERE INT HE GGNRA. There is no evidence that off-leash dog walking has any negative impacts, yet this plan is a major restriction of off-leash dog walking that has existed for decades.

I walk on the Miwok Trail several times a week. The impacts of horses on the trail is significant and awful and I find it ridiculous that you can ban off leash dog walking based on dog poop when the piles of horse manure on the trails are offensive and massive.

My husband and I have given \$1,000 to the GGNRA for the past 20 years because we love this beautiful place. But if you change the rules so that we cannot enjoy it anywhere with our dog off-leash we will find a better use for our money.

Please keep the existing plan in place.

**Correspondence:** After reviewing the supplemental document I have two issues of concern:

1) Political persuasion- It appears Jackie Spear and other Politicians (both local and federal) are starting to put pressure on the park to stop the management plan or perhaps to choose the "No Action Alternative". The Park has spent over a million dollars in tax payer money putting together this plan. NPS has complied with the judge's court order and followed NEPA. There is a reason that the "No Action Alternative will not work and has not been selected as the "Preferred". The dog situation in GGNRA has gotten out of control and new management of this particular type of recreation needs to be implemented.

2) Implementation- A big part of seeing this plan be successful is the implementation process. I don't think it has been clearly spelled out how the plan will be implemented. Will each area have to do an implementation level plan of their own and environmental review? For example, will Fort Funston itself have an implementation level plan which will detail how the off leash and on leash areas will be contained? For example, if the Preferred Alt is chosen there is a ROLA on the beach which butts up against private property to the south, followed by state beach which is on-leash only ...will signs be posted to to tell people with dogs that they are leaving a ROLA and entering an area that is on-leash?

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from

recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. This is one of the pertinent reasons I have chosen to live, work and spend my time and \$\$ in Marin and the San Francisco Bay Area for 20 years.

My dog is a valued and loved family member. She is under voice control and requires time off-leash to obtain the exercise she needs to support her physical and mental health. I would compare it to a child taking ballet, playing a sport, or a family going out for a hike or kayaking on the bay.

We enjoy places like Stinson Beach, Rodeo Beach, Coastal Trail, Loop Trail, Wolf Ridge Loop Trail, Crissy Field, Baker Beach, and Ocean Beach because they are beautiful and coveted places. They are extra special because everyone in my family get the exercise we need, can spend time enjoying each other while enjoying this incredible place we call home.

A dog park or fenced in area does not work. Our dog does not get the exercise she needs in a fenced in area or pen. Being so friendly, she says hello to all the dogs and people at the park, and unless the "right" dog is there, she will stand around and not get any exercise. Also a dog park does not give us, my family, the opportunity to experience and exercise in a beautiful environment, one of the pertinent reasons we chose to live and work in Marin and the San Francisco Bay Area, together.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there has not been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. <b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Being able to let dogs run free is good for their mental health and to that of those who watch them! National recreation areas are one of the things that make our country so special.

Thank you for your consideration.

Katie Callahan

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I am very surprised by the actions of the GGNRA. I urge you to find an equitable solution to allow dogs and their people access to the beaches and trails that our tax dollars support.

Sincerely,  
Dona Turner  
Oakland, CA

**Correspondence:** Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123-0022

Dear Superintendent Dean,

I am a frequent user of GGNRA in San Francisco, a volunteer for five years at Crissy Field's restoration, and an ardent national park supporter.

Having reviewed the Draft Dog Management Plan / Supplemental Environmental Impact Statement (SEIS) Preferred Alternative F, I welcome the opportunity to offer the following comments:

The Preferred Alternative does not specify how the ROLAs will be achieved.  
The Preferred Alternative does not describe how park visitors will be adequately informed of the ROLA boundaries for the six sites in the Preferred Alternative F.  
Nor does it state that ROLAs will be fully enclosed, to guarantee that off-leash dogs are contained.

The NPS rationale for not specifying fencing was its claim that such enclosures are undesirable aesthetically; an enclosure of "sufficient construction" would "hinder or prevent wildlife movement. This justification by the Park Service is ill-founded and should not preclude an alternative for enclosing all ROLAs from consideration under the SEIS alternatives section.

There are attractive designs which adequately restrain dogs while allowing wildlife free access and protecting park visitors from bumping into a ROLA.

Even the off-leash advocacy group SFDOG endorses the creation of barriers to prevent potential conflicts between dogs, vehicles, and other park users.

The establishment of an enclosed ROLA was the only point of consensus of the Negotiated Rulemaking effort. Its astonishing that the Park Service would choose to ignore the one thing ALL constituents agree on: Fence the ROLAs

Commercial dog walking is an inappropriate activity for National Park lands.  
Commercial dog walking has never been legally permitted on any of our National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of parklands strictly for private financial gain.

Commercial dog walking will not provide any service or benefit to park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public. The GGNRA is probably the least desirable Park in the National system in which to allow commercial dog walking, heavily used as it is, in a densely populated urban setting where open space is at a premium.

Permitting commercial dog walking contravenes the NPS Criteria for appropriate park use: it fails to provide for visitor safety, disrupts the atmosphere of peace and tranquility, subtracts from public understanding and enjoyment of the park, and undermines a sense of ownership and stewardship for the park

The SEIS fails to provide evidence that voice control is an effective off-leash dog management option. While the SEIS does loosely describe and discuss the concept of voice control, it fails to evaluate its degree of effectiveness. The Park Service has provided no evidence that off-leash dogs respond to voice control.

Even the best trained dog can become uncontrollable in the presence of wildlife.

To account for this problem, off-leash dogs must only be allowed in an area that is fully enclosed, either by a fence or natural boundary.

Voice control should not be considered as an option for use in any area of the GGNRA that is open to multiple visitor uses.

A simple and effective violation reporting system should be established. The dog management plan should include a method by which park visitors can easily and effectively report non-compliant behavior.

Perhaps a smart phone app that directly connects to the Park Police or to a reporting system could be devised.

At a minimum signs could be posted at entrance points, (ie., Ocean Beach) with a phone number to call and report forms/information.

The SEIS fails to adequately state the impact of off leash dogs on wildlife. There have been many incidences in the GGNRA of wildlife killed by dogs. Countless studies, at least one by the GGNRA itself, have documented the adverse effects off leash dogs have on wildlife. I myself have never been to Ocean Beach without witnessing the harassment of shorebirds by a series of dogs. Yet these impacts on natural resources is given too scant attention in the SEIS and not enough weight put on preventing stress to wildlife.

After weighing the above noted reservations about the Preferred Alternative, I believe the only reasonable solution is for GGNRA to ban off leash dog walking. The cost of management and enforcement as proposed for scenarios in the SEIS are too onerous.

GGNRA is too rich in endangered species, its trails too heavily used and the demand for more outdoor recreation in the Bay Area growing too fast, for off leash dogs to be a sustainable usage.

Sincerely,

Arlene Gemmill  
861 Clayton Street

**Correspondence:** I'm a homeowner in the Bernal Heights neighborhood of San Francisco. I walk my dogs off-leash and under voice control at Fort Funston 2-3 times a month. Having direct access to the beach and the permitted trails increases my quality of life because I get to exercise myself and my dogs in this beautiful environment. In addition, my dogs go to Fort Funston almost every weekday with their dogwalker while I am at work, which gives me peace of mind because their need for physical activity is fulfilled. There is no other nearby park in San Francisco which offers the same off-leash space and access to the beach.

I absolutely oppose the NPS Preferred Alternative outlined in the SEIS, including the massive reduction of off-leash areas, fences enclosing the remaining off-leash areas and implementing the Monitoring-Based Management Strategy. There is no valid justification in the SEIS for these major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** I know that many dog owners feel that being able to have their dogs off leash everywhere in the GGNRA should be sacrosanct. However, there are other users of the park who do not want to encounter loose dogs. Dog owners complain that there are not enough places to let their dogs run, but there are plants and animals, some of them endangered, that don't have ANYWHERE else to go. They should have priority.

I support your proposal with the caviot that off leash dog areas should be enclosed in some way..

Thank you for considering my comments.

**Correspondence:** I've been going to the Golden Gate National Recreation Area for my mental health for the entire 22 years I've lived in the Bay Area. My dog is 12. I've been taking him to Limantour Beach and other locations for his entire life. This is one of the highlights of our life.

Golden Gate National Recreation Area is one of the jewels in the Bay Area. How is it possible that you would consider reducing the "recreation" factor of the area? People love those areas, and so do their dogs.

Dogs keep people healthy. They get people out walking and exercising in other ways too, and going to undeveloped areas with fresh air keeps the dogs keeping their people healthy.

In the Bay Area, we have the great good fortune of having beautiful open national park recreation areas, where we can take our dogs and keep them healthy by walking and exercising. Many of us go to undeveloped areas with fresh air to get our dogs out.

With the high cost of living and the extreme stress many of us have, this is extremely important for us humans. Our dogs get to go along for the ride. They run and have fun, go home and crash. It gets and keeps them healthy, and decreases aggression in the dogs and their people. Doing this gets and keeps us healthy.

I can only think that anyone who could come up with a plan to limit humans as well as dogs in these areas doesn't get out in fresh air with his/her own dog or anyone else's, and must live in a small place and work in a small office, and doesn't get the importance of exercise in fresh air for him/herself or any dogs.

We AND our dogs need those open spaces and the accompanying fresh air. We pay taxes, and as such, federal lands are ours. There are already areas where dogs are allowed, and people who don't like dogs already have plenty of other places to go for fresh air and open space. Please do not further limit the spaces we can take our dogs to.

<b>Correspondence:</b>					

Why we oppose the Golden Gate National Recreation Area's Dog Plan

Areas where our dogs have been welcome to walk or play off-leash for decades could be severely cut or banned outright under the revised GGNRA dog plan. The new rules would affect off-leash as well as on-leash access at Crissy Field, Fort Funston, Muir Beach, Rancho Corral de Tierra on the slopes of Montara, and many other parklands.

The San Francisco City Council recently unanimously passed a resolution objecting to the GGNRA plan, which prompted the head of the Sierra Club to say that SF is pandering to a small group of dog extremists.

However, we believe that as responsible citizens, we must be realistic and fore-thinking about how to accommodate more than 100,000 local dogs in a city with limited space.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

We are not suggesting unlimited dog walking access, and we advocate responsible dog ownership in all GGNRA lands. But there is no credible reason to deny fair and reasonable access for both on- and off-leash dog walking that has taken place on GGNRA land for more than 50 years.

I can't believe that you are creating hardships to dogs' owners but at the same time you are completely protecting wild animals in your dreams.

**Correspondence:** Please direct the below comments to GGNRA General Superintendent Frank Dean:

Dear General Superintendent Dean-

I live on Eltheldore St in Moss Beach, just down the street from Seton Medical Center. Rancho Coral Del Tierra is a short walk right up the hill from us. We have been walking dogs on those trails for as long as I can remember. I was extremely disappointed to see that this area, which is now GGNRA land, is being proposed as off-limits to dogs.

As you know the coast is becoming more crowded and often times we find ourselves prisoners in our own town due to the extreme automobile traffic in the area. It is essential that we maintain the option of not using a car as a means to get to a place to exercise ourselves and our dogs.

Please keep the area above the town accessible for ALL of us who live here, hikers with dogs, mountain bikers and horses.

Thank you,

Charles Holman

<b>Correspondence:</b>	I live in the heart of San Francisco, in the Lower Haight. I very much enjoy that I can take my dog to the beach at either Fort Funston, Chrissy Field or Ocean Beach north of Gate 20 and let Akeena run as she pleases. It's good for her and allows her the freedom to explore without being attached to me by a leash. I think this is very important for a dog. it also allows me to practice control commands with her from a reasonable distance, also important for both my dog and me. We go FREQUENTLY to these areas, sometimes daily. It would be heartbreaking not to be able to do this.				

## 2) Essential Points to Make:

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Jennifer Fang

**Correspondence:** I am writing because I care deeply about how the GGNRA is made available to the public. I have been a San Francisco resident for the last few years and a Bay Area resident my whole life. My wife and I take our dog and our daughter to Fort Funston every few weeks - it is an essential part of our lives. The beaches at Fort Funston are one of the few places where our dog can roam and explore a wide open space while also being under our watchful care and command. We really enjoy seeing her so happy running in the sand and dodging the waves, knowing that while she is exploring we can always call her to us if needed. It is a fantastic experience for our whole family.

I vehemently oppose the current preferred alternative. It is far too restrictive and it completely ignores the value residents currently derive from the park. I also vehemently oppose fenced in off-leash areas as opposed to the current open spaces. Fenced in areas are simply not the same experience for my dog or my family, and their presence would reduce Fort Funston to being just another dog park, instead of the unique joyful experience that it currently is.

I urge you to formalize the previously established 1979 Pet Policy PLUS off-leash access in San Mateo County and to also apply it to any lands that the GGNRA acquires in the future. The current proposal ignores the many advantages we derive from the park as it exists today; should it go into effect, I would be extremely unlikely to patronize the park in the future - as it would have no advantages over my neighborhood dog park at that point.

populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I am a federal employee, working for DoD. I chose to work for the US government, because I believe it is important as a citizen to help my country and keep it free. As a federal employee our job is to serve the citizens of the United States of America. It is clear that many, many citizens of the USA enjoy the freedom to take their dogs, off lease and on, to a small part of the GGNRA. I respectfully request you keep the current areas dogs are allowed to stay as they have been since 1979.

Sincerely,  
Mark W Holm

<b>Correspondence:</b>	Superintendent,				

In 1979 San Francisco entrusted GGNRA to provide an urban recreation. There are more dogs than children. This park is our home and should be managed accordingly, not like Yosemite.

I'm a frequently user of Crissy Fields and Fort Funston. Current maintenance is poor. The Crissy Fields protected area for the Snowy Plovers is sand with dried and or dead plants. Why is there a need to restrict off leash while current maintenance falters? Your report stated the snowy plovers have decreased due to mercury. That is an ocean problem, not dog.

The walkways at Fort Funston have cracks, crumbling, and collective sand dunes .

Please review and perform current responsibilities. First things first.

The conflict is a small area 1% leash access. The preferred alternative plan is too restrictive!  
What is the role and responsibilities of the rest of the land, 99% isn't 99% accurate?  
Are the protected wildlife and birds thriving? What are the restrictions in the 99% area.

Regards,  
Shirley

**Correspondence:** I live by 8th ave and Balbao ave in Inner Richmond and am 2 blocks from Golden Gate Park, where I frequent on a daily basis with my pet where I either a) run through the park with him, as well as play Frisbee/fetch. Not only do I get great exercise for both myself and my dog, but this is usually one of the highlights of my day.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

I hope the GGNRA will reconsider this ban for our pets, who for some of us, are part of the family like children are.

Sincerely  
Angie

**Correspondence:** This is about as corrupt as SF politics gets. There is no basis or rational for restricting dogs. Beaches like Fort Funston are beaches for dogs and the dog community. Dog owners are responsible and clean up after their dogs and it is incredulous that the City is trying to pass this measure without fully taking into account the opinions of dog owners. Dog owners are generally upper class individuals with disposable income and these are the people we want in SF. Additionally, why are we restricting dogs but allowing homeless to take over our city and our parks. Why don't we enforce that all of our tourists that barely know how to ride a bike, ride the bike on the bike path along Crissy Field and the road and not on the sandy walking path where children and walkers, runners and dogs interact. Why don't we also focus on the tourists that have no idea how to ride a bike over the Golden Gate bridge and put everyone in danger by not riding single file, lying down bikes in the middle of the path and basically not skilled bikers, or what about focusing on all the traffic caused by tourists lining up in cars and backing up the GG bridge to park in the very limited parking on the Marin side of the bridge. Why don't we focus on what is really broken in our public land which is the extreme congestion and abuse caused by tourists

**Correspondence Type:** Web Form  
**Correspondence:** Hello,

Keep it simple: Off leash or On leash area or areas only; no need for designated verbal control area(s) because an animal that is off leash should be under verbal control or the animal is not under control by the responsible owner and the owner is ultimately responsible for the animal or animals behavior. Even though some owners believe the animal or animals can actually understand them when they attempt have a two way conversation with an animal which is often demonstrated by the verbal demeanor of the owner and the way they speak to an animal. Verbal control might work in a controlled environment such as a dog show but in the natural environment with numerous distractions and long distances it is impossible for one person to control six or eight animals or even one animal via voice control or for that matter even if the dogs are on leash.

No matter what an area is designated have professional or even non professionals that have more than one dog should pay a concession use licensing fee to use an area. Have them register, license, and pay the fee with NPS and in return NPS supplies the permit. This would aid in conflicts, dog incidents, and even assist in identifying owners if necessary for enforcement.

Not everybody likes dogs or animals and everybody has a right to utilize public lands without infringement or disturbance of a dog or animal sniffing, barking, running up, digging up, chasing the wildlife, or leaving fecal or urine matter and residual smells upon areas that are for the preservation of our future generations. Even if a dog or animal lover picks up after their pets or service animals there is still a very distinctive and noticeable stench that is left behind in areas that experience highly concentrated dog or animal use. Just move the sand and dirt around the garbage cans, watering areas, and in high use areas and the stench will stimulate your senses.

Dog waste is not environmentally friendly and can be classified as a health hazard even if it deposited in trash cans it still must be handled and removed safely from the area placing the additional burden of cost to the tax payer who might have a different opinion of dogs or animals; think and practice leave no trace in our natural public lands. Dog and animal owners should remove and pack out all waste on their own to include supplying and removing dog fecal matter disposal bags.

All rules, regulations, policies, and directives are useless unless they are enforced, by committed enforcement personnel who have the equipment, personnel, and support of their actions by the agency and legal system. Empower the right authorized personnel with the tools and support to do the job and the issues that have last over numerous years would become a moot issue.

Keep our pristine public lands pristine by allowing dog and animals lovers areas away from concentrated high use areas. Let them run free and wild in designated dog use areas such as Funston or Muir Beach away from densely populated areas such as East Beach, the Coastal Trail, Stinson Beach, Ocean Beach, Muir Woods, and Crissy Field. This would eliminate the off leash or on leash debate and allow everyone the opportunity to verbally control their animals in these areas and to have the owners interact with similar like minded population.

Sincerely,

John Q. Public

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dogs in various parts of the GGNRA, Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dogs for my own health and my dogs health the way I have on GGNRA properties for the past dozen years.

As it stands today, off leash is only allowed on roughly 1% o the entire GGNRA, which is incredibly low already given the size of the GGNRA, and the number of dogs that live in the bay area.

The new plan was NOT MODIFIED IN ANY SIGNIFICANT WAY to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasnt been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

if these new rules are implemented, hundreds more dogs will flood into already crowded city parks, and the results will not be good for SF or any other area.

Leave us the tiny amount of free leash space that we have - in all these years i have barely witnessed any confrontations or issues certainly far less than what I witness regularly on city streets.

thank you and Sincerely,  
Val Ornoy

**Correspondence:** I oppose the proposed Dog Management Plan and firmly support off-leash dog walking at Fort Funston, Ocean Beach, Chrissy Field & Marin Headlands.

I am a responsible dog owner and rely on the GGNRA to provide a comfortable place to walk and run my

---

dog. Fort Funston (& the other locations) are happily enjoyed by many persons & their dogs, and are highly functional and rewarding in their current form. It is important to have a safe (away from traffic) and spacious area for dogs to run, interact, socialize and enjoy. San Francisco has many city parks - but which are unfortunately too small to properly accommodate the needs of its canine residents in the long term. Small spaces = aggravated dogs. Closing off GGNRA areas that are traditionally off-leash will lead to overcrowding at MacLaren (which is not easily accessible for everyone); Douglas Park is (still!) not open and also limited in its scope. Not every resident in this city is fortunate enough to own a spacious garden of their own - the GGNRA is an essential open space for us.

Responsible dog owners know when to keep their dogs on leash and off leash, and well trained dogs behave well when walking alongside their owners. More restrictive leash laws will not turn irresponsible dog owners into better owners, nor will their make badly trained dogs behave better - it would increase leash aggression instead, in my view.

I frequently enjoy walking at GGNRA with my dog and letting her run freely at Fort Funston or Ocean Beach - and I would not have reason come and enjoy the GGNRA without her as often. I do not think that limiting off-leash dogs will increase visitors to these areas - a large part of the GGNRA is already on-leash (or without dogs), so I do not see how limiting the historically off-leash areas materially affects the choices for those without dogs.

San Francisco has more dogs and fewer children than other, similarly sized cities - off-leash dog walking for our canine companions is a very important issue for local residents, one that will impact us disproportionately.

I will close with something I observed at Fort Funston the other day: a small child (about 5 years old) exclaimed joyously: "this place is magical!" when surrounded by dogs passing by. Have you ever raced down a sand dune with your dog? Don't take that wonder away from kids, or from adults.

Re: Comments on Draft Dog Management Plan/Environmental Impact Statement

Dear Mr. Dean,

I am writing to request that the Draft Dog Management Plan be modified to make dog use in the GGNRA more, rather than less, accessible.

Personal:

I have lived in the Bay Area since 1972, and currently reside in San Rafael. I have made extensive use of GGNRA lands since the inception of the park. I am seventy-one years old and now retired. I am also a dog owner, spending much of my time with a wonderful twelve year old rescue dog, an Australian-Shepherd/Border Collie mix. We do frequent/daily walks, at least ten to twenty hours weekly. I make extensive use of GGNRA lands, especially in Marin County. Walking is an essential part of both my dog's health and my own. Off-leash exercise is critical to my dog's health and happiness.

The Draft Proposal:

I read the GGNRA analysis in the Draft Dog Management Plan with interest and concern. I believe the fundamental flaw in the analysis is the failure to consider dogs as part of the urban environment in which the GGNRA was created.

The GGNRA was never a pristine natural environment such as that found in Yosemite, Glacier, or Capitol Reef National Parks - all of which I love and enjoy. The GGNRA is a unique urban open space, the historical product of lands preserved from residential and commercial development as a result of military use and political will in the Bay Area. It was created to serve the outdoor recreational needs of a large metropolitan area and contains a significant portion - and some of the best - of the open space in the Bay Area.

There are valid reasons why the dog policy in the GGNRA has always differed from the policy in other national parks. Dogs and dog-walking, both on and off leash, existed in the lands now controlled by the GGNRA before the GGNRA was created. Dogs should be regarded not as something foreign from which the environment must be protected, but as part of the urban environment which can co-exist in harmony with the the other parts of that environment.

The GGNRA was not created to "offer a National Park experience". It resulted from a legislative mandate

---

to "preserve for public use and enjoyment" and "provide for the maintenance of needed recreational open space" in this unique urban environment. This mandate for public recreational use must surely include appropriate provision for traditional dog-walking activities that predated the creation of the GGNRA.

Recommendations for more extensive dog use:

I have been privileged to enjoy many areas within the current GGNRA jurisdiction for many years, and to share that enjoyment with my dog. In particular, we have made extensive use of Stinson Beach, Muir Beach, Rodeo Beach, as well as the Marin Headlands trails, and the trails above Sausalito, including Alta Trail and Oakwood Valley. My dog is well-trained and not a problem for other hikers or animals. To prohibit our long-standing use of these areas, or to limit that use to on-leash walking only, would be tragic. I believe it would also be a distortion of the mission of the GGNRA.

A multi-use policy is appropriate for the GGNRA, including an adequate balance of dog-friendly and non-dog areas. The vast majority of GGNRA lands are already closed to dogs. The GGNRA should continue to allow a significant portion of its lands for both on-leash and off-leash use. In fact, I believe that the GGNRA policy should be made more, rather than less, dog friendly. Because of its unique position as the primary open space provider in this magnificent Bay Area, the GGNRA would do well to expand dog use areas to allow even more responsible dog ownership enjoyment.

Sincerely yours,

steve gimber

<b>Correspondence:</b>	To whom it may concern;				

I am a 12 year resident of San Francisco. I have, in my 59 years, traveled extensively, visiting many great cities and living in a few of them. None has the combination of attributes of San Francisco - perfect weather, unique culture, vibrant arts, creative community and unsurpassed location. Most importantly,

accessibility to all of the above, if one chooses to afford it! I do. I pay half of my monthly income, at the expense of savings for retirement, to live in a city where I can be urban yet have access to assets as natural as one could possibly hope to find without getting into a car, driving 2 hours, and creating negative impact to the environment. And I enjoy these natural assets, specifically the GGRA, with my family - my wife and our 3 very small dogs. Mostly we go to Fort Funston, occasionally to Crissy Field. We mix with other users of these assets, people running, on roller blades and bicycles, people in wheelchairs, people with crazy children. Some days those parks I've mentioned are as busy as downtown, but they're not downtown, the built environment is minimalized. We don't go to those places looking for a wilderness experience, we go for a recreational experience based on access to the ocean, the beach, the stands of eucalyptus, and the paved walking paths, public toilets, food concessions, and easy parking. Central Park in New York City is beautiful but it doesn't hold a candle to Fort Funston.

I'm a pretty hardcore environmentalist. My title at work is 'Developer, Global Sustainability Systems'. I don't own a car. I swim in San Francisco Bay. I am a member of the Sierra Club, Greenpeace, NRDC, and a couple of others. And I FIRMLY believe that if we want to protect our natural environment, our wilderness, we have to densify our urban centers. But the residents of those densified urban centers need access to natural environments like Crissy Field and Fort Funston. And they need that access for their entire families, which includes the non-human members of their families. Their dogs. And the dogs need to be free, just like children, and cyclists, and skateboarders and whoever else might want to use the asset.

Any model of the natural environment that fails to recognize humans, with their pets as part of the equation, is flawed. Humans with pets is the natural order and has been for thousands of years. So that condition needs to be recognized and reflected in setting policy.

People who pay outrageous premiums to live in San Francisco do so to be able to enjoy access to an urban version of the natural environment - NOT WILDERNESS. The natural environment we have access to is not "wilderness" and nobody expects or desires that. What we ALL want is recreational areas. And for the vast majority that includes our dogs, OFF LEASH.

Please do not make the mistake that we want the areas concerned to be natural preserves. For that we would go to Yosemite. What we want in San Francisco is "recreational areas". We don't want change. We want what we have, what we pay so much to enjoy, what makes this the greatest city in the world to live in and enjoy. Do NOT take that away from us.

<b>Correspondence:</b>	I strongly oppose Alternative F, the main proposed dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

My house is located approximately two lots from the GGNRA in the unincorporated area of Mill Valley. I have lived here and enjoyed walking in the GGNRA for 18 years, and I depend on these walks to keep fit and active. My dogs have kept me company and motivated to walk daily for the last 16 years. To deprive ANY dog from walking, running and playing on the fire trails is inconsistent with the original planned use of the area, and violates the long established norms of our community to regularly enjoy the outdoors with our well-behaved and voice-controlled pets. The original charter and 1979 pet policy are more than

adequate to protect this beautiful area, and there is NO NEED to inhibit our enjoyment and use of these trails. We purchased our house so we could easily access this resource, and strongly object to your proposed restrictions which will negatively impact our quality of life, and also our property values.

We also regularly take our dog to Muir Beach, where he enjoys being able to swim- he recently had knee surgery, and his recovery includes exercising the knee by swimming without the stress of climbing in and out of a steep entry. Muir Beach is perfect for this therapy, and is one of the few spots available in Marin where he can engage in this important off-leash activity for his recovery.

I am particularly distressed that this plan did not conduct any peer-reviewed, site-specific studies that provide support for this excessive restriction of public use on OUR public lands. Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

Limiting beach off-leash access to the remote Rodeo Beach is ridiculous- and shows how truly insensitive your plan is to the environment- residents will have to drive their cars to this remote location- adding to carbon emissions, pollution and wasted time and energy. When now we can just step out our door for a quick or long enjoyment of open space- why should you have the right to alter our enjoyment of this beautiful spot where we purchased our home, and force us to defile the environment and spend additional money and time to fully exercise our dog? The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

YOU MUST consider the RIGHTS of LOCAL home owners and LEAVE the ORIGINAL CHARTER INTACT- Access was and should be for ALL USERS- including dogs and their people!

<b>Correspondence:</b>	I just heard some very disturbing news on the radio that Fort Funston and other dog friendly areas may soon be off limits to dogs. Please reconsider this position. I love taking my dog out to Fort Funston for walks on the beach. Even though we don't live that close by its worth the drive to us because there are so few dog friendly area's around. I feel that this would be a great dis-service to the bay area to make this change.				

Regards,

Scott

**Correspondence:** Dear Superintendent Dean,

I have lived in San Francisco for 22 years and have regularly walked with a dog in the GGNRA throughout that time period. I mostly use the Crissy Field area, but also recreate with my dog in the Presidio, Baker Beach, Ocean Beach, Rodeo Beach and on hiking trails throughout the area. I am writing today to express my strong opposition to the preferred alternative described in the GGNRA's most recent Dog Management Plan. The preferred alternative does not significantly reflect the substantive concerns and objections that I and thousands of other people submitted in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that the supports the drastic restriction of dog-friendly areas that the preferred alternative would impose.

The preferred alternative of the Dog Management Plan is too restrictive. It will prevent me and the thousands of other responsible people who enjoy recreating with their dogs in the GGNRA from doing so, thus negatively impacting our own mental and physical health and the health of our dogs. This valuable aspect of RECREATION should be retained as outlined in the 1979 pet policy. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Living in San Francisco requires all citizens and visitors to comprise and understand that a wide variety of people use the GGNRA in different ways and all of these uses can co-exist as they have for decades, long before the Presidio and other areas became part of the GGNRA. Off leash dog walking is a positive and does not interfere with other people's use or enjoyment of the park, especially when compared to the never ending foot races held in the park, bicycle riders and picnickers who leave trash in the park. Dog walkers are the most frequent users of the beaches in all types of weather and thereby make it safer for others due to their constant presence. Having access to GGNRA with our dogs makes city living more enjoyable and possible.

Of course there are other voices that support a different position than mine, but the "scientific" and real evidence of the impact of dogs in the GGNRA just doesn't hold up. In the 22 years that I have used the GGNRA spaces with my dogs, the wild flora and fauna of the parklands has thrived. With proper signage and enforcement by the National Park Service, conflicts can be minimized. The preferred alternative is a recipe for disaster, as more people recreating with their dogs will be forced into smaller spaces. The small percentage of the GGNRA that is available to people with their dogs needs to be retained and protected. Please keep the RECREATION in the Golden Gate National Recreation Area for all of us.

Regards,

Brian Kerester

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Angela Flynn

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	My family and I live in Muir Beach. We moved here with our children and our dog hoping to enjoy the environment as well as be caretakers of it. We often hike in the Marin Headlands and on the local beach, with our dog. We respect the paths that are marked for our use and pick up poop and use a leash, where required. Of course, we value the open spaces where we can all run and play together and hope these could continue to be available. We therefore oppose the Preferred Alternative as it restricts such recreation. Apparently, there is no justification in the dog management plan for major changes. We support the 1979 Pet Policy PLUS off-leash access in Marin, SF, San Mateo County and on new GGNRA lands. We also oppose fences which take time and money and only serve to remind us that we are unwelcome, where we could rather be embracing the great outdoors and celebrating the area in which we pay taxes to live and find a moment to be able to walk together with our families, our friends and our pets. We oppose the Monitoring Based Management Strategy that replaced the Compliance-based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it believes that not enough people are complying with leash restrictions. As a resident in Muir Beach, I would be willing to volunteer to help pet owners "do the right thing" and respect the areas that are designated as restoration recovery zones. Our dog and I would happily hike and be ambassadors of the trails. In addition, I would like to add that not only does our dog not adversely impact the trails, she positively enhances them. Hikers, runners and sightseers always pet her and - in addition - she is more than company, she is a loyal and reliable safety harness for the family, even without a leash.

**Correspondence:** I am opposed to the entire GGNRA Dog Management Policy because I disagree with its premise that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. By their own admission, the GGNRA had no data or studies to support these claims and they are relying upon these claims to initiate a process whereby access for people with dogs will be severely limited or completely banned. Even now, with this SEIS, the GGNRA admits they have no site-specific peer reviewed studies (required by Federal law) to substantiate their claims that dogs are a problem for wildlife, water quality or vegetation in the GGNRA. Instead, they rely upon anecdotal evidence and baseless assumptions to claim dogs have the potential to damage this Recreation Area.

Additionally, in the SEIS the GGNRA asserts they have the right to redefine the term "recreation" as utilized in its enabling legislation and in the promises made to the voters of San Francisco back in 1972 by the GGNRA/NPS/DOI and the GGNRA's first Superintendent, the Honorable William J. Whalen, in order to secure various properties then owned by the City and County of San Francisco. These promises, most importantly, stated that this National Recreation Area would retain historical recreational access (including off-leash recreation) should the citizens vote to include SF park properties in the GGNRA. These promises, along with the conventional definition of the term "recreation", do not comport with GGNRA's current philosophy exemplified by Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA, who in 2007 was quoted as saying "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard." The GGNRA does not have the legal authority to rewrite history or its enabling legislation to their own design. Once again, buried deep within the SEIS is the GGNRA's poison pill. Only the name has changed; it is

now the Monitoring-based Management Strategy. The GGNRA gets to decide whether we are in compliance, and the measures of compliance are subjective. Under this SEIS the GGNRA may decide to impose short-term or long-term closures of areas. These short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which dog guardians have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston could be their reason to ban dogs entirely from these beaches. This is unacceptable.

The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. All properties added subsequent to the 1979 Pet Policy and in the future should have historical off-leash recreational usage allowed. This would accurately reflect the enabling legislation for this National Recreation Area which GGNRA management has held in disregard for quite some time.

If the GGNRA does not want to manage these properties as a Recreation Area, then they should transfer the Recreation Area to another entity better able to manage it, e.g. the Forest Service or Bureau of Land Management. Alternatively, for sites heavily utilized by dogs and their guardians, such as Ocean Beach and Fort Funston, these properties should be reverted back to San Francisco.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to many of the GGNRA areas that you are trying to close to dogs. I believe that it is for the good of everyone to have their dogs receive off leash time and get exercise that makes them better doggie citizens!.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. The residents rely upon this open space for the health of their pets. It requires a different management strategy than a National Park. I utilize those parks as well and it's a completely different use system and not one size fits all!

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** Hello, please reconsider the draft on dogs being on leash or no dogs at all in places. At least hold the draft for a bit longer or talk to me directly. Would love to attend your meetings. The no dogs at all includes places like Coyote Ridge. Dogs being on leash includes the beaches: Muir, Stinson, and others. What is a beach, hikes, without dogs? Won't go to any beaches or hikes without dogs. It is lonely without your friendly furry buddy! Dogs are animals too and know more what their doing than children. Children can be destructive too? Why not make leash laws for children as well? What you are doing seems selfish thinking only on humans side not dogs. Dogs have done so much for us, loyalty, friendship, family member, find people who are lost, guide people, protect, and there is so much more. They do not put us down, betray, cause wars, do not cause needless harm. We need to return the favor by given dogs more rights change the policies for dogs. Even take down breed discrimination for German shepherds, Dobermans, and even Pit Bulls who are on high liability lists. Someday I will change the world for animals giving them rights that they deserve. You may destroy freedom for our beloved dogs who will enjoy life a lot less. Life is short we can't do what you say. You know what if you continue these leash laws/ no dogs allowed, perhaps we could still go to those no dogs allowed and let are dogs go off leash going against the leash laws. If rangers come we will refuse to obey just like Rosa Parks did on that buss in 1958. I swear on my word that we will get the rights for our dogs back or just reconsider your campaign of the Draft Dog Management Plan. Want to talk? Talk to me directly I double dare you in a meeting or something.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Thank you for this opportunity to comment on the draft Dog Management Plan for GGNRA.				

I fully support the National Park Service's efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. Invaluable wildlife, such as the snowy plover (and all other native species), must be protected from off-leash dogs. Off-leash dog running should not be permitted anywhere in GGNRA, but if, for political reasons, it is, it should be restricted to areas of no habitat value where native wildlife will not be harmed.

I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity for a quality National Park experience for all visitors.

Commercial dog walking is NOT an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands for private financial gain. Commercial dog walking would provide no service or benefit to any park users, would adversely impact park resources and values, and would serve private profit at the expense of the public resources. Nearly all national parks strictly control the presence of dogs; it would be an extraordinarily bad precedent for the Park Service to sanction commercial dog walking in GGNRA, essentially turning a resource that belongs to all Americans over to a commercial enterprise that would damage park resources and make GGNRA a less desirable (and, for some, frightening) place to visit.

As one who has long observed the irresponsible behavior of many dog owners who seem to believe that they are entitled to run their dogs off leash wherever and whenever they please, I urge the Park Service to restrict off-leash activity anywhere it could have a negative effect on native wildlife and plants and to rigorously enforce leash regulations. As recently as this afternoon, I observed 2 hikers in a county park in Marin County on a leash-only trail with a large dog off leash. When another dog walker warned them that a ranger was ticketing hikers for off-leash dogs ahead, they (with much shouting at the dog before they could get it to come to them) leashed it. Once they'd passed the ranger on the trail (we were walking a short distance behind them) and he was out of sight, off came the leash. Only consistent enforcement with fines large enough to be a deterrent will bring these folk to heel.

Thank you for this opportunity to comment.

Trent W. Orr

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dogs in various parts of the GGNRA, Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

As it stands today, off leash is only allowed on roughly 1% of the entire GGNRA, which is incredibly low already given the size of the GGNRA, and the number of dogs that live in the bay area. If these new rules are implemented, hundreds more dogs will flood into already crowded city parks, and the results will not be good for SF or any other area.

Further, the new plan was NOT MODIFIED IN ANY SIGNIFICANT WAY to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there has not been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Please leave us the tiny amount of free leash space that we have - in all these years I have barely witnessed any confrontations or issues, and certainly far less than what I witness regularly on city streets.

Sincerely,

Alexis Stricker

---

RECREATION AREA was established to give outdoor RECREATIONAL opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite. It is hard to imagine, even after reading the SEIS, how dogs could be significantly problematic for wildlife over and above the impact of the human impact in these areas. It is hard for big dogs in particular when they do not have places to get exercise, and the more difficult it is for people to find opportunities to let them run, the more strain it is on these animals. The dogs play an important role in many people's lives. The changes in policy would adversely impact many individuals who have chosen to reside near these public recreational areas. The SEIS preferred alternatives force people in to their cars, in search of places to walk their dogs. This is bad for the environment and bad for Marin County.

I support the "No Action Alternative" in the SEIS for each area: Muir Beach, Homestead, and the Marin Headlands. Please retain the longstanding 1979 Pet Policy.

Thanks for your consideration.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

**Correspondence:** This plan is a facist take over of our public lands. Never did the park service do any research on use. Had they done so they would realize that the majority of daily users are dog owners. I have walked on either Chrissy field, fort Funston, ocean beach, Muir beach, oak valley or alta trail every single day with my dog since 1996. This is my life style you are trying to ban. You may as well try to take surf boards away from surfers.

This is not Yosemite. The urban Area around the park land was here before NPS.  
Dog owners are a huge percentage if the Bay Area. If you pass this we will continue to walk our dogs.  
The rangers who will be ticketing will be foreigners on our land. College grads from Michigan etc.  
This is not right.

You will have to ticket, taze, arrest on repeat because we will continue our life style. The flag of Mill Valley has a paw print on it for fucks sake. You will be fighting one of the wealthiest counties in the country. You will lose. How much money do you want to waste?

Go to hell if you pass this.

Sincerely,

Kristin Van Til

<b>Correspondence:</b>	Dear Superintendent Dean,				

My husband and I frequently walk our dog, Tundra in the GGNRA. Most frequently, we visit Fort Funston, but we have also enjoyed days at Ocean Beach and Chrissy Field. The three of us have spent

many happy weekend mornings along the beach together - - it's something we look forward to mid-week when we're up to our ears in meetings and responsibilities. The walks are like mini-vacations since we drive up from San Carlos. It feels like a different world when we breathe the fresh water and play on the beach. To be honest, if we couldn't bring Tundra with us, we wouldn't take advantage of the beautiful parks of the GGNRA because the appeal for us is that we can enjoy the land as a family. Tundra loves to sniff in the sand, charge at the ocean, and greet other dogs. My husband and I take time to catch up with each other, chase Tundra, enjoy the fresh air, and meet other dog walkers. The whole experience is rejuvenating for people and dogs alike, and provides us with great exercise and mental relaxation after a long week at work.

I have been so impressed by the dog owners that we have personally encountered on the trail; they are careful to clean up their dogs' messes, keep control of their dogs, and respect the beautiful land that is currently open to off-leash dog walking. People seem to be respectful towards boundaries when they are clearly marked and help educate new dog walkers about the policies for off-leash areas.

We were so sad to learn about the potential changes to the off-leash laws. We have heard that new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, we have read that there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

One quick anecdote about the success of an off-leash dog experience in San Mateo county: in San Carlos, there was no centralized location for dogs to play off-leash as recently as 2012. In response to the call for a dog park, City officials began a pilot program at Burton Park on Brittan Ave. During the trial period, dog owners were allowed to bring dogs to the park to play off-leash during certain hours. In exchange, we were asked to clean up the park and respect the boundaries for dogs. When the City of San Carlos reviewed the program during a public Parks & Recreation meeting a year later, studies indicated that the park was actually cleaner since the off-leash area had been established because owners so much appreciated having a designated area for dogs to play and they took pride in cleaning up after the dogs and being responsible for their behavior. I truly believe that dog owners understand how lucky they are to have parks and areas to play with their four-legged friends, and given the chance to behave well or loose that privilege, they will go above and beyond to take care of the land being offered to them. There is real potential for mutual benefit between dogs, dog owners, and those wanting to protect GGNRA in working together to keep the land clean and beautiful.

We are a young couple and we plan to remain in the bay area for years to come and to raise kids here. We sincerely hope that we can take our kids to the wonderful areas in the GGNRA that are open to dog walkers and spend days as a family taking advantage of the wonderful recreation areas in the beautiful SF Bay with Tundra.

Sincerely,  
Noelle (and Kevin) Gibbs

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Lydia Kim

<b>Correspondence:</b>	National Park Service,				

I am writing regarding your proposal regarding the GGNRA in the San Francisco Bay Area. A beloved park system used by EVERYONE. Now you find the need to restrict the usage. I am 65 years old. I have used Ft Funston and Crissy Field for parent walking as well as dog walking. In fact it's always been so wonderful to take my parents, their dog and my dog out for a walk at either location. How disappointing if your proposal goes thru. How harmful for so many people and their pets. I am a member of the Audabon Society, Nature Conservancy and am a bird watcher. I appreciate the need to protect habitat for the bird community but I do believe there is plenty protection. What about the well being I for the residents of San Francisco , the Bay Area and their family members, pets included. I'm curious, will horseback riders continue to be allowed at Ft. Funston as well?

I hope you make the right decision. A decision that will allow all peoples to enjoy the GGNRA with their family members whether they be two legged or four legged.

Respectfully,  
Robin Blackstone

**Correspondence:** As a dog owner, I believe that removing access to dog-friendly beaches and trails as part of this plan will have a decidedly negative impact on the well-being of pets and their owners in our community. We believe that there is already a dearth of open spaces where dogs can have healthy, stimulating exercise. We would like to continue to have access to these great areas for years to come.

**Correspondence:** I am a dog owner.

If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

Yours,  
Barbi Lazarow  
Hillsborough, CA

**Correspondence:** I've taken my dogs to Beaches in San Francisco and Albany California. Both of these areas provide a natural saltwater environment and waves which my water loving dogs enjoy. In addition to the exercise (without joint load) the swimming provides, the saltwater eventually evaporating in their fur facilitates a healthy (flea free) dog. I've never seen the dogs defecate in the water, although I've had to clean-up after them on the beach. None of the parasites that are common in dogs present a hazard to life in the ocean or beach flora & fauna.

Please continue to allow responsible dog owners to continue their use in restricted beach areas as you have been.

Janis Cary BS Zoology UCB

**Correspondence:** I am very concerned about the huge changes proposed to the GGNRA. These lands were intended to be for recreational use for urban members of the bay area. For many years I & members of my community have enjoyed the currently limited options for off leash recreation with our beloved dogs and our families. It is unfair and hard to even imagine the type of restrictions at the GGNRA is proposing. I am strongly opposed to everything I've heard and seen and hope you will consider that the vast majority of Bay area residents value these lands as recreational areas.

**Correspondence:** I'm commenting on behalf of the dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that one of my family's favorite activities will be swiped off our "Fun to-do List".

We are an active family with an active lifestyle and much of our lifestyle includes our dog. Our household is happy hugely in part to our dog and limiting access to our dog's favorite playgrounds (I.E. Fort Funston, Muir Beach and Ocean Beach) will be devastating to us all. Especially to our English Shepherd Toby.

The points brought up in the SEIS are completely unjust for such a radical change to be made. My family and our dog won't be able to have the bonding time and exercise like we do on the GGNRA lands at our local, fenced-in dog park. Nothing is quite as fulfilling as having my family together, Toby included, out for a day of hiking, observing and learning about the great environment around us.

Please consider keeping the 1979 Pet Policy - it keeps all points of nature and recreation in harmony. It ensures my dog and any other future dogs my family has; will have their space now and for years to come.

<b>Correspondence:</b>	Hi There,				

I am both a dog owner and a nature lover and want very much to see habitat preserved for both native plants and animals. If the closing of off leash areas is for the restoration of habitat I understand and appreciate the need. However, I do not see why both off leash areas and habitat restoration cannot coexist. Why not corden off areas-more parts of these areas you propose to take off leash for habitat restoration, compromise for both dog folks, & wildlife.

Sincerely,

Lisa Cohen

Ps I heard about this from a poster at Fetch cafe

Superintendent Dean

My name is Laura Pandapas and I am a resident of Muir Beach.

I am writing to express my opposition to the 2013 Dog Management Plan SEIS.

-The SEIS does not adequately address the concerns of the public comments filed in 2011 that were overwhelmingly opposed to the alternatives of the DEIS.

-The 2013 SEIS continues to shun real data. Instead it is a veritable stew of "might", "could", and "may". There are no peer-reviewed, site-specific studies included in the SEIS for Muir Beach and the Headlands. The SEIS admits that there are few scientific, peer-reviewed studies that even show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. However, these anecdotal claims have no context-how frequent were they, how serious, etc-and cannot be used to set policy! The SEIS is supposed to be based on science, not anecdote. The SEIS also says it relies on the best professional judgment of NPS staff to determine impacts from dogs. NPS staff have demonstrated a long-standing, strong bias against dog walking, and the SEIS should not depend largely on their biased judgment and anecdotes for proof that impacts from dogs are currently occurring. The SEIS does not differentiate human caused impacts from alleged dog impacts. And the SEIS just asserts as fact that which is not.

-The 2013 SEIS also disregards and does not consider a single impact to the surrounding communities that are adjacent the GGNRA. Nor does it consider the severe impacts to the actual users of the GGNRA who've relied upon and cherished these lands since their inception as a park.

-I oppose the Monitoring Based Management Strategy. It is still based largely on compliance with leash restrictions. Even though the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws, and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

The GGNRA was established as an urban recreation area, tightly interwoven with urban cityscapes and communities, to provide much needed out-door recreational opportunities to a densely populated urban area. The 1979 Pet Policy thoughtfully balanced the needs of all visitors throughout the GGNRA's 80,000 acres, with a meager 1% mde accessible to people with their dogs. Attempts to further reduce that access by an additional 90% pts a heavy burden of proof directly on the NPS to demonstrate factual justification for such a profound taking away of access to our public lands. The SEIS does not pass that threshold, even remotely.

I support the "No Action" Alternative "A" for the trails of the Marin Headlands. First, I want to go on the record as saying that your maps conveniently don't show the Coastal Fire Road from Muir Beach. It's easy to miss that ALL your alternatives ban dogs completely on this trail. I use the Coastal Fire Road and Trail almost every day with my well-behaved leashed dog. I hike alone, for exercise before work, and take my

dog along for my own safety and security. We walk from our house, along the beach and up the Coastal Fire Road to the Coastal Trail and then back to my office in Muir Beach. If we have time, we go to Pirate's Cove. I would never be comfortable taking this hike alone if not for my dog. And, the Coastal Fire Road and Trail is the ONLY GGNRA trail from Muir Beach accessible to a person with a dog, and is therefor the ONLY option for people in Muir Beach to use without getting in a car and driving over the hill and out of area completely. Having to leave Muir Beach and get in to a car just to walk a dog is UNREASONABLE. Tam Valley doesn't need more cars, and neither does Mill Valley. Traffic is already a nightmare, and leaving Muir Beach via car on a busy weekend is just not practical or wise.

I also use the Miwok Fire Road above Muir Beach as a spot to meet friends who live in Mill Valley. It's a natural meeting spot in between Muir and Mill Valley, and it's the ONLY other GGNRA trail in the area that allows for access with even a leashed dog. And it's the only through access to Tennessee Valley.

The newly minted Muir Beach Trail is not a trail. Its an access path. And its now a heavily beaten path with large intrusive signs. It used to be lovely, quiet and bucolic. Now, the parking lot is never out of site. The path goes .2 mile to the sand from the parking lot, and .4 mile to the gate of Green Gulch. No trails are available up from Green Gulch, and the path then deposits a person with their dog out on the busy roadway or makes one turn around. Its UNACCEPTABLE, and insulting that these are being called trails. They dont go anywhere, and they are not for hiking.

Only Alternative A allows for true hiking trails to remain accessible to people with a dog, even for leashed access. I do not support any other alternative for the Headlands, as they are too restrictive, unsubstantiated by any data or studies, and would leave Muir Beach surrounded by GGNRA lands with not a single dog-accessible trail! The result of such a drastic restriction would mean that I, and many women like me, would no longer be able to enjoy hiking alone in the Headlands that surround Muir Beach. I would effectively be prohibited from using them, even with my dog leashed! Ideally, the GGNRA should be ADDING dog-friendly trail access from the Miwok, down Coyote Ridge to the Coastal Fire Road, so that people can come and go between Mill Valley and Muir Beach without using a car! This is just common sense, and better for the environment, and would truly serve the needs of communities adjacent to the GGNRA!

I also support the No Action Alternative for Muir Beach, or "A".

First of all, I reject that Muir Beach is some sort of pristine environment and sensitive area. Muir Beach is comprised of not just the beach itself, but also of a community of approximately 160 multi-million dollar homes. All those homes are on septic. All those homes have cars. All those households have laundry, and dishwashers and FAMILIES living in them. Then theres the busy Pelican Inn, with its newly expanded septic system, and many visitors. Add to that the hordes of tourists that the NPS is trying to shove in to Muir Woods (and suggesting to them to also check out Muir Beach) and the new GIANT parking lot and the many more people than ever that are coming to Muir Beach by car and you've got about as far from "sensitive" as you can get. To suggest that Muir is somehow a remote wilderness is ridiculous. And to suggest that there aren't more birds or otters or salmon because of the dogs is disingenuous at best. The beach is covered with people! The NPS can't just gaze out on Muir Beach and pretend that the thriving community that has been here for over a century doesn't exist. And lets not forget that this thriving community is a true partner to the NPS. We provide first responder fire and emergency support with our volunteer fire department. Our dog-loving and dog-owning fire fighters are the first on the scene for Muir Woods, on Muir Beach and in the Headlands trails around Muir Beach. Muir Beach the community couldnt be a better, more supportive park partner. I am proud to sit on the board of our Volunteer Fire Association.

As a Muir Beach resident, I am personally offended that the National Parks Conservancy has come in and

done their pet project with private dollars, and now they are advocating such a change in how we use and live with OUR beach. The National Parks Conservancy doesn't own Muir Beach. The public does. And the National Parks Conservancy isn't the greater public. I was shocked to hear a volunteer in the new lot tell a group of kids who were volunteering to do plantings, "Welcome to your Golden Gate National Park!" Wow! How dare the Parks Conservancy use their own made-up name for Muir Beach or the GGNRA. Nancy Pelosi tried to change the name in 2008, and it was so controversial that she had to withdraw HR 6305 and it didn't even make it out of subcommittee. To hear a Parks Conservancy volunteer dis-informing visitors made my blood boil. And the National Parks Conservancy likes to do this on their website and in their printed material as well. It's a pattern of dis-information meant to change public opinion about Muir Beach and the GGNRA, and an attempt to get the GGNRA to remove RECREATION from its mission. Its unacceptable.

The alleged impacts to Muir Beach that the SEIS say "could" be caused by dogs are NOT. I live and work right over the beach. I see the real offenders EVERY SINGLE DAY, and they aren't dogs. I see people jumping over the new fence, without dogs. I see people walking around the fence and up the creek leading their children in to the bushes to relieve themselves because the parking lot bathrooms seem too far away. Both these things I witnessed today, and many other days. I've found dirty diapers in the sand. And dirty underwear. My friend's 3 year old son got 3rd degree burns on the soles of his feet because he accidentally stepped on a partially buried smoldering fire that some humans decided to have outside of the established fire rings. My neighbors and I pick up trash on our daily walks across the beach. It's amazing what beach goers leave behind! I've watched kids kick and stab starfish and smash tide pools with rocks. I've watched kids climb up eroding hillsides and kick the dirt with their feet to INTENTIONALLY further erode the hill for fun. I've seen entire cases of beer bottles left on the beach. I've had a fisherman's hook go in to my clothing on an errant cast. I've gotten snagged in the invisible fishing lines that drag across the surf at the water's edge. I've cut my feet on broken glass because I had the audacity to take my shoes off at the beach! I've seen entire Webber bbq's abandoned in the sand! And then there's the lagoon.....I've seen a lot with the lagoon. I grew up swimming in the lagoon as a toddler. The water was warm and shallow and "safe". It's where we who grew up in or near Muir Beach played. And today (even post restoration) is no different. I see parents pushing their kids on boogie boards. I see parents wading and walking up the lagoon in to the wetland with children because it's a fun adventure. I've seen, and just witnessed yesterday, an entire family trying to shortcut back to the parking lot by crossing over the newly restored wetland. NONE of these things involved dogs. NOT A SINGLE ONE.

Alternative "A" is the only acceptable alternative for Muir Beach. "E" could also work, but the GGNRA has dismissed this in your own SEIS, as supposedly unworkable because Muir Beach is too small for a ROLA. But then on page 113 of the SEIS, park visitors seeking off-leash opportunities are actually instructed to just head to Little Beach, which in the GGNRA's alternative "F" becomes a de facto ROLA! The SEIS doesn't tell visitors that they will be crawling across private property to get to Little Beach unless the tide is low. Simply outrageous and unacceptable!! I've brought this up to park staff repeatedly, since 2011. No fewer than 3 times. And I was and continue to be told that it will be removed. But it doesn't matter. I've got the printed copy and I've given it to a lawyer, so even if you remove it from the next version of the plan, it's clear and undeniable that its inclusion was definitely part of your planning PROCESS and presented to the public all through that process.

Little Beach doesn't belong to the GGNRA, so how can you cite it and establish a use for it in your SEIS??? How can you suggest something so impactful on our community and beach without any consideration of impacts on the surrounding communities??? Without a single impact study??? I'm pretty sure you can't, and so are the lawyers I've spoken to. So is the County of Marin. And so is the Muir Beach Community Services District. The SEIS has no impact studies for turning Little Beach in to a de facto ROLA, and it also has no impact studies for an outright ban of dogs on Muir Beach, which would force all people with dogs in to a tiny neighborhood beach that has no parking, no bathrooms, no trash and no

maintenance by the County in any way. The street that accesses Little Beach, Sunset Way, is not even County-maintained! Therefore, any alternative that either requires leashes for Muir Beach, or outright bans dogs on Muir Beach will have a dramatic impact on Little Beach and the surrounding community. You can probably count on the fact that the GGNRA will incur a lawsuit over this issue.

In the SEIS, the only alternatives are A, "No Action", or to establish a ROLA at the South end of Muir Beach or consider allowing off-leash access at the surf line and on wet sand, and require leashes on the dry sand.

The GGNRA could actually try to be a partner to the beach itself and the surrounding community, instead of to the Parks Conservancy and Audubon Society, by coming up with solutions that help all users coexist. Try putting actual dog waste bags in the empty dispenser in the lot. And try making better signage letting people know all the rules. Inform and educate people, and then enforce the rules. The NPS has not provided a single ranger or staffer on the beach to make sure the restored wetland is properly cared for since the beach re-opened. I just witnessed, not more than a few hours ago, a family of three, without any dog, marching over all three fences to use the bushes as a latrine. The GGNRA should try and make things work, not spend so much money and drama pretending to prove that things aren't working. You can't not enforce laws, and then say that we need stricter ones. Enforce the laws from the 1979 Pet Policy!!

Muir Beach is a vibrant community and beloved beach and hiking area. It is a favorite portion of the GGNRA for many. It is HOME for many. It is NOT a National Park by definition. It's an extremely accessible beach used by many people- -locals, travelers and weekenders alike. It's not remote, nor is it a wilderness. We are 20 minutes from the Golden Gate Bridge! The NPS needs to come up with better alternatives, that respect the surrounding community and the needs of the people who rely on the GGNRA for what it was established for: OUTDOOR RECREATIONAL OPPORTUNITIES. The SEIS tries pretty hard to remove the "recreation" part of the mission, and that makes it a non-starter. And that is why I support only the "No Action" alternatives for Muir Beach and the Marin Headlands.

Sincerely,

Laura Pandapas  
Muir Beach CA

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hello, and thank you for providing this website for comments on this important project.				

I would like to begin by saying that I am an animal lover and advocate. I am a former cat and dog owner. I do not have an issue with dogs: I am not afraid of them (in general), and in fact would have my own if I had time in the day to devote to a dog's care.

That being said, I am also a DAILY visitor to Ocean Beach, and am dismayed by what I very frequently

see there. I live in the Outer Sunset, (Judah/44th Ave) and going to walk along the beach in the morning or evening (or both) is routine for me. And despite the signage at the entrance to Ocean Beach (where Judah St. would terminate) re: the Snowy Plover habitat, dogs on leash at this part of Ocean Beach are the exception and not the rule.

Dogs absolutely love the beach: they are often not under voice control because they are so excited to be running in the dunes and along or in the water. And many, many times, I have seen dogs chasing the birds at the edge of the water, while the dog owners do nothing to control the dog's behavior. And many times, I have politely asked the dog owners to control or leash their dog, and am met with indifference, or "this is the first time he's ever done this" (followed by inaction), or occasional, grudging leashing of the dog.

I am not a cop. I don't want to tell people what to do especially when they are enjoying themselves. But the flagrant disregard for the needs of both people and wildlife, not to mention other dogs, is shocking to me. It really seems that the fact that there is an endangered species that needs protection has absolutely no bearing on the "needs" of the dogs and their owners.

Here's what I have regularly observed: Dogs chase birds. Off-leash dogs menace other dogs. They defecate and urinate wherever they choose, often while the owner isn't watching. The owner then doesn't pick up the waste. Dogs chase the occasional horse and rider. They bother people who aren't fond of dogs, as well as small children, who then learn to be afraid of all dogs.

It is NOT a crime to not love dogs, or not want them disturbing you. But many dog owners act as though the only thing that matters to anyone is the "right" of their dog to "run free". But we live in a civilized society. There are rules and regulations we all must follow in order for society to function properly. Consideration for the world around us is a crucial component of a functional, engaged society and citizenry. We all deserve to be treated with respect. It is, in the end, disrespectful toward our fellow citizens, toward nature, and toward our beloved pets to allow dogs to roam at will. Because the will of a dog is unpredictable, despite the protestations to the contrary by its civilized owner.

I do not know how the Park Service intends to police the Beach, but I wish that there was more enforcement of already existing regulations. I'm tired of having to speak up for the Plover, only to be met with scorn. And as San Francisco's population density increases, the number of off-leash dogs grows, and the enjoyment of the Beach for many is diminished.

Again, thank you for opening up comments to the public. I know that the Park Service wants to do the right thing by everyone concerned, and I hope they will especially consider all those that cannot protect themselves, or voice their needs.

<b>Correspondence:</b>	Letter #2				

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's

health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

My dog takes me to the park. For over 20 years, I have enjoyed the off-leash areas at Fort Funston almost daily, with occasional visits to Crissy Field, Lands End and beaches and trails in the Marin Headlands. (I used to walk at Ocean Beach before the ban.) Without off-leash recreation, I probably wouldn't have visited these parks more than 3-4 times a year. The opportunity to walk and enjoy nature with my dog is keeping this senior citizen fit and socially connected hundreds of other people who come to the park for off-leash recreation. I'm glad my tax dollars provide for recreation in the GGNRA.

I am strongly against the Preferred Alternative. Please support the 1979 Pet Policy, and traditional off-leash areas in San Mateo GGNRA. If anything, areas for off-leash recreation should be expanded rather than reduced if more and more people are enjoying it.

I almost feel it is useless to submit any public comment on the SDEIS, since the GGNRA failed to address the previous substantive comments submitted in favor of off-leash, in favor by an overwhelming majority. The well-researched submission from Crissy Field Dog, SFDOG and others were brushed off. So much of the GGNRA's DEIS response referred back to their faulty errors in the original document, and only a few insignificant changes were made.

(And please stop saying "the GGNRA is the only national park that permits off-leash dogs," and imply that we should feel privileged to have a crumb of acreage. Howard Levitt has already been corrected on this error. Unless things have changed in the last 2 years, there are several national parks which have off-leash areas for hunting dogs. I don't think anyone is advocating for hunting in the GGNRA. We just want to walk. )

Is there ANY amount of public comment or presentation of fact that would change the preference of the GGNRA? I haven't seen evidence of this. However, since any lack of comment on the SDEIS might be considered as support for the minor/insignificant modification made, I'm submitting comment....again.

Below are some of the reasons I oppose the Preferred Alternative and support expanded off-leash

recreational access.

- -Packing off-leash recreation into small spaces will create unpleasant, crowded "dog runs." Many people, me included, will simply stop going to legal off-leash areas. Will people simply stop walking their dog off-leash? Some may, but many others will probably crowd into city parks. And some will simply walk in areas of the GGNRA where they are not likely to encounter a ranger/citation.

- -Off-leash recreation is currently enjoyed by a diversity of people, e.g. young & old, rich and poor, able-bodied and differently-abled. Additionally, unlike many other GGNRA/NPS activities, dog walkers include many people of color. Spend weekend at Fort Funston and you'll see a wide variety of folks. One might contrast this to the demographic of some other outdoor recreational activities. (Do not count student "volunteers" who are in weeding the park for community service credits.) Although some opponents of off-leash dog walking will say "\*seniors & children & various ethnicities, etc. are afraid/avoid dogs," note there are hundreds of seniors & children and people of color who LIKE off-leash dogs. The NPS doesn't even have to advertise or do outreach to get hundreds of people to Fort Funston, a typically cold, windswept park.

(\*Sometimes opponents of off-leash say that people don't go to the park because there are so many dogs; implying people would go to the parks if dogs weren't there. However, there are many parks with outstanding flora and fauna that do not allow dogs, e.g. in San Mateo County there is San Bruno Mountain, and Edgewood Park. And most of the time, these parks are empty. I visit these parks during "high season" e.g. wildflower blooms, but I always go with other people because I don't feel safe in these empty parks. Where are all the dog-avoidant people?)

- -The GGNRA is an urban park and one of its purposes is to provide recreational access. The Preferred Alternative needs to give weight to recreational needs of the SF Bay Area. This is not Yosemite.

- -The GGNRA has failed to support its Preferred Alternative with facts. There is a glaring lack of scientific studies measuring the impact of off-leash recreation on wildlife. The GGNRA's fight against off-leash recreation has been going on for more than a decade, i.e. plenty of time to do scientific site-specific studies. Instead of vague nightmarish fears about what dogs MIGHT do, there needs to be facts documenting the impact of off-leash recreation as well as a variety of strategies to minimize any unacceptable impacts, if found. For example, there needs to be a study documenting the population of snowy plovers, whether there has been a decline relative to other sites. Did the Ocean Beach population of plover increase when off-leash was banned 11 out of 12 months? Are plover populations at non-dog beaches (Half Moon Bay) thriving compared to Ocean Beach? Or note, the Audubon representative said there are no longer quail at Fort Funston because of the dogs. Are there quail in no-dogs-allowed sites in San Francisco? The quail at the Botanical Garden have disappeared, in spite of having no dogs (and even being provided with a California Native Plants habitat.). Dogs are a convenient scapegoat.

I believe the GGNRA rep stated that it will cost two million a year to enforce the Preferred Alternative. If there is money, why not use it to do study or to design strategies that won't turn away thousands of people from supporting the NPS? The GGNRA might use some money to administer a program to educate dog walkers about responsible off-leash recreation. Additionally, the money could be used to enforce the current laws about littering, lack of voice control, etc.

**Correspondence:** I strongly disagree with the proposed Draft Dog Management Plan, as defined in the Fall 2013 Plan / EIS. The NPS does not demonstrate a need for action. In the Plans pre-amble, the Plan argues for action because the parks resources and values, as defined by the parks enabling legislation, could be compromised without action. NPS does not make a compelling case that the existing 1979 Pet Policy is at odds with the recreational mandate of the GGNRA. The 1,504 page Plan presents general surveys and highlights what could and might happen. It does not make a reasonable case for change. In the Alternative F presented in the GGNRA, the Plan is applying a more restrictive Dog policy to each and every site within the recreation area. This is not a balanced approach to dog management; it represents a heavy handed rollback of the recreational mandate of the GGNRA uniformly across the park.

GGNRA is a recreation area, and not a park. The 1975 agreement for the lands transfer from the city of SF to the GGNRA explicitly called out for the need to utilize the resources of the GGNRA in a manner that will provide for recreational and educational opportunities. The Plan argues that recreation was not explicitly defined with the transfer of the lands from San Francisco to the GGNRA. Yet the GGNRA Citizens Advisory Commission issued a detailed Pet Policy in 1979 that very clearly codified the recreational purpose of the GGNRA with respect to dog use. The 1979 Policy is a balanced dog management plan that is already in place and proven to have been effective. Over 95% of the GGNRA is off limits to dogs. In the areas that allow dogs and off-leash dog activity, humans, dogs and the environment have successfully co-existed for nearly forty years.

The proposed Alternative F represents a heavy handed unilateral rollback of the recreational mandate that created the GGNRA and the need for the plan is not supported by the data. There is no compelling need for action, and no ability to force action without countering the recreation mandate of the GGNRA.

I personally invite those of you that are reviewing Alternative F to come to San Francisco, visit each individual site covered by the plan, and make an assessment as to whether the nearly 40 years of precedent in the GGNRA requires change. I think when you evaluate each site individually, you will find that the status quo is quite successful and delivers on the recreational mandate of the GGNRA, especially given its urban location.

A few comments on the Plans specifics:

The NPS cites a very general survey of public opinion on restricting dogs at the GGNRA conducted in 2002 by Northern Arizona University as support for its Plan. In the survey, 53% of respondents stated that they opposed allowing off-leash walking in GGNRA sites, while 40% were in favor. The survey is too general to be of use. The GGNRA spans 117 square miles and contains 24 defined sites with dog walking / off-leash dog walking. This is the equivalent to asking if survey participants like Democrats in general, and then inferring that their response applies to each Democratic member of Congress equally. The Plan uses this faulty logic as a justification to make very specific changes to each of the 24 sites with the GGNRA.

The NPS cites Environmental Justice as a reason for implementing the Plan, but the survey data presented by the NPS indicates that this rationale is not based in fact. Within the flawed 2002 phone survey, African-Americans, Asians, Caucasians, and Hispanics all show the same general support for off-leash walking (37-44%, with African-Americans showing the most support). A separate NPS visitor survey cited later in the report shows no measurable difference in the opinion between Caucasians and Asians on dogs, and no issues cited by Black/African Americans:

Visitors were asked during the survey if they had any suggestions on how their experience at the park site could be improved, allowing for open-ended answers. Of the respondents, 3.3 percent noted that dogs should be kept on leash, visitors should be cited for off-leash dogs, or that there should be no dogs (Tierney et al. 2009, 69). White respondents suggested that dogs be kept on leash 3.4 percent of the time,

and Asian respondents suggested this 3.2 percent of the time (Tierney et al. 2009, 75). This concern was not cited by Black/African American, Native Hawaiian, or American Indian respondents who were asked for suggestions on how to improve the park experience (Tierney et al. 2009, 75).

More importantly, only 3.3% of all survey respondents cited an issue with dogs at the GGNRA, or 96.3% did not.

The GGNRA cannot proceed with its broad based plan without conducting a survey on each of the 24 sites under review.

To recap, the NPS 2002 survey is too general to be applied to 24 different sites at the GGNRA. No strong racial differences are found within surveys, and over 96% of surveyed visitors on site indicate no issue with dogs at the GGNRA. The survey data does not support the claim of a need for action.

Instead of reviewing survey data, let's look at reported dog incidents. If there is a problem with dogs within the GGNRA, the NPS dog incident data should contain a record of the issues. Between 2001 and 2011, the GGNRA recorded 4,932 dog-related incidents, or 448/year or less than two per day across all 80,000 acres and 24 dog sites in the GGNRA. The GGNRA sees over 13,000,000 visitors per year and yet only records 448 incidents per year. This is hardly indicative of a problem, and in fact proves that the 1979 Pet Policy works. Further, the NPS recorded 45,700 total incidents over the same 11 year period. Dog-related incidents only make-up approximately 10% of the total. The GGNRA is not recommending limiting camping or hiking, even though these activities generated several times the number of incidents as dog and their owners.

Over the 2008-2011 period, the NPS recorded a total of three incidents of dogs damaging vegetation and fifteen incidents of dogs disturbing wildlife. These numbers are recorded in a period of over 40,000,000 visitors to the GGNRA, again hardly indicative of an issue.

Looking at specific sites in the Plan:

#### Muir Beach

From 2008-2011 (four years), the NPS recorded 24 total incidents (averaging 6 per year, or one every two months). Over this period, the NPS recorded only 1 wildlife disturbance and only 6 violations of possessing a pet in the closed areas nearby the beach (or less than 2 per year). These figures indicate that the current policy is working and that there is no need to implement a more restrictive policy to address perceived wildlife issues at the site.

#### Rodeo Beach

From 2008-2011 (four years), the NPS recorded 30 total incidents (averaging about 7 per year, or one every month and a half). Over this period, the NPS recorded only 2 wildlife disturbances and only 7 violations of possessing a pet in the closed areas nearby the beach (or about 2 per year). These figures indicate that the current policy is working and that there is no need to implement a more restrictive policy to address perceived issues at the site.

#### Baker Beach

From 2008-2011 (four years), the NPS recorded 86 total incidents (averaging about 21 per year, or two per month). Over this period, the NPS recorded only 48 off-leash violations and 19 incidents of dogs in closed areas, totally 67 incidents. Since the beach is open to off-leash dogs, by definition these incidents did not occur on the beach. Removing the off-leash/closed area incidents, only 19 incidents occurred that could have taken place on the beach (less than 5 per year, or less than one every two months). Alternative F proposes to close the beach to off-leash dogs, but the incident data suggests that there is no issue on site.

#### Lands End

From 2008-2011 (four years), the NPS recorded 10 total incidents (averaging about 2.5 per year, or one every five or so months). Alternative F will take what is currently a voice control area and severely limit access to dogs. The data suggests that there is no measurable issue with dogs within the site, and no change is required.

Ocean Beach:

The NPS Plan states that Compliance with the current dog walking regulation at Ocean Beach is low. The NPS own data shows that this is not true. Ocean Beach is one of the most frequently visited sites within the GGNRA, and the incident rate is low given the number of visitors to the site.

From the NPS plan:

During the GGNRA Dog Walking Satisfaction Visitor Study (NPS 2012a), when dog walkers were asked which site at GGNRA they visit most, 5.7 percent indicated Ocean Beach, making it the fourth most frequently visited GGNRA site by dog walkers (NPS 2012a, Appendix A: 6). Ocean Beach was also indicated as the second most frequently visited GGNRA site by non dog walkers during the survey (18 percent) (NPS 2012a, Appendix A: 69).

Despite these usage levels, from 2008-2011 (four years), the NPS only recorded 729 violations of the SPPA leash restrictions (averaging about 180 per year, or 15 per month, or less than one per day). Thus, the second most visited site in the GGNRA is creating one incident every two days. This is hardly indicative of a problem.

In summary, the NPS own data shows that dog incidents are rare, especially in the context of total usage levels. Human related incidents far outnumber (9 to 1) Dog related incidents. The NPS needs to consider the data on a site by site level as it evaluates the new plan.

I wanted to add a couple of comments on usage at two sites: the Coastal Trail and Baker Beach.

Alternative F proposes closing the Coastal Trail to dogs and closing Baker Beach to off-leash dogs. The incident data cited above shows that no measurably problem exists. Further, the NPS own assessment indicates that dog usage is low. On the Marin Headlands Trails, Park staff estimate that the Coastal Trail is used by about 10 dog walking visitors per week, and use of the Miwok Trail section varies from 1 dog walking visitor per day on weekdays to 25 per day on the weekend. At Baker Beach, Park Staff states that Baker Beach receives low to moderate visitor use by dog walkers and low to moderate visitor use by beachgoers and picnickers on weekends and holidays. I am one of the dog walking users at both sites. Alternative F seeks to curtail dog activity at both sites, but it is already limited and generates no measurable issues. There is no compelling reason to make changes to the policy at these sites. I encourage the commission to take a closer look at these two areas and maintain access consistent with the recreation mandate behind the creation of the park.

I dont see how the NPS can, with Alternative F, conclude in all cases at all sites to reduce access and reduce recreation opportunities. It seems strange that in no case at any of the 24 sites did the NPS conclude that it made sense to increase access and increase dog-related recreation opportunities. To me, this shows a bias in the process.

With Alternative F, the NPS is ignoring 40 years of successful precedent, backtracking against the recreational mandate of the GGNRA and the conditions of the land transfer from San Francisco to the NPS, and implementing a heavy handed policy that is uniformly reducing access at all 24 sites in every case. Site level data at Baker Beach, Muir Beach, and Lands End show that there is no dog issue. Site level data at Ocean Beach shows that the current policy works.

There is no need for action, no crisis captured in the data across all sites, and no major issue raised in public surveys. The 1979 Pet Policy has proven to be effective and captures the original recreation mandate of the area. My family, and many families in the Bay Area, utilize the GGNRA with our dogs in a safe and responsible manner. I encourage you to keep this recreational opportunity open to all. I encourage you to make the reasonable decision on each site, evaluated on an individual basis in the context of recorded data. I encourage you to personally visit each site and see how well the status quo is functioning today, especially at Ocean Beach, Baker Beach, Muir Beach, Lands End, and on the Coastal Trail.

**Correspondence:** I am a resident of San Francisco. This City is known for its high quality public open spaces that integrate the urban area and its residents with nature. There are many examples of such spaces in the City, but the GGNRA is perhaps the most emblematic. The GGNRA is a huge asset to the City as a place for humans (as well as their four-legged companions) to experience the outdoors in a variety of ways.

The current draft plan is far too restrictive and would negatively impact many residents who currently enjoy access to the GGNRA. Recreation is a vital component of a vibrant urban area and we should preserve and expand recreation opportunities, not limit them, if we hope to create a more livable City. I recommend that the plan maintain the access that is permitted today for humans and dogs alike. A critical component is the preservation of off-lease areas in Crissy Field. The vast majority of people try to be responsible in park areas and treat them with respect; the Park Service should come up with a plan that uses effective tools like education, signage and well-designed trails and areas, so recreation is preserved and conflicts are minimized.

Thank you for your consideration,  
Lily Gray

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Shana Abell

**Correspondence:** On January 23, 2014, a gloriously sunny day, I took an afternoon walk from Divisadero St. in SF, west along Crissy Field and the Golden Gate Promenade to Fort Point and back again. During this walk, I got to see some of the problems with the GGNRA's current dog management policy. I have not had time to read most of the proposed Dog Management Plan, but I provide my comments based on this walk. The observations and experiences during this walk are similar to many other walks taken at this location and others covered by the proposal.

In the parts of the walk closest to parking, there appeared to be many commercial dog-walkers, almost all of whom had 6 dogs, so that, in the vicinity of many of these groups of dogs, especially along the water, the barking was so loud, it was like being in a kennel. This racket was not at all what I was looking for when I took this walk.

I saw many dogs with leashes attached to their collars, but no one holding the leashes. These dogs were running around dragging their leashes. This is hardly "on leash." The other thing I observed was the use of very long retractable leashes so that the walkers appeared to be as much as 20 feet from the dog. This is a problem for a person whose strategy for dealing with unknown dogs is to give them wide berth. With a leash of this length, I end off the path, even if it is wide.

As is often the case in an area frequented by dogs and their walkers, there were many plastic bags containing dog poop, presumably waiting to be retrieved on the return walk. But the rest of us don't want to look at these brightly colored plastic bags along the beach. Dog walkers should be required to immediately put these deposits into some container that they carry so that they don't trash up this beautiful natural area, even temporarily.

In my experience, voice and sight control is not a form of control that a person, such as myself, who doesn't like to be approached, jumped on, barked at in very close range, or otherwise harassed by unknown dogs can count on. A person walking on the beach has no way of knowing which dogs on voice control are really on voice control and which are simply running around without leashes. As an example, while I was walking, an unleashed dog, which appeared to be part pit bull, ran out of the dunes, coming to a halt about 2 feet from me. For about a minute, it stood there, barking and growling and looking at me in a threatening manner. I froze, my heart racing, looking in vain for someone whose voice would control this dog and get it away from me, but there was no one in the vicinity. Eventually the dog ran beyond me toward the ocean and I was able to continue on. In a minute, two people, who appeared to be looking for and calling a dog by name, came out of the dunes. I asked them if they were looking for a dog of this

dog's description. When they said they were, and I told them about the encounter I had with this dog, they told me that was impossible, that their dog had never threatened anyone, etc. and they accused me of threatening their dog! I do not support the use of voice control in any of the areas under discussion in the Dog Management Plan. Dogs should be leashed at all times, except in a "Dog Park." I don't believe the National Park Service should be in the business of providing dog parks.

Dog owners consistently maintain that they get a bum rap as a result of a very small proportion of them who are irresponsible. That may be, but there is a lack of resources for sufficient enforcement of the large population of dogs and their walkers that are drawn to some of our national parks, especially those in the San Francisco Bay Area (e.g., the Presidio, Marin Headlands, Muir Beach, and others). Furthermore, the irresponsible owners know that there are insufficient enforcement resources and that the probability of enforcement action is very remote. Given inadequate resources and the commonly stated view that the irresponsible owners are a distinct minority, it is surprising that I have never seen a dog owner step in when a dog owner or other person's dog is misbehaving. Given the inadequate resources for enforcement of dog regulations, other people are on their own to deal with whatever comes up. Sometimes, I choose to avoid certain areas with a significant canine population. But I, and others who simply want a peaceful walk in a beautiful natural setting, should not have to manage problems with dogs and their owners by giving the space over to them.

Finally, the need to limit dogs in these areas is often stated in terms of their effect on wildlife, which can be considerable. What this analysis seems to miss is the effects of dogs on other people who are drawn to these areas for peace and quiet, to take in the incredible vistas, to watch birds, and to commune with nature. For example, if there's a bird or birds in the vicinity of a dog or group of dogs, the latter are often chasing the former, which is a hardly what you're after if you come to the park in order to observe birds and other wildlife in nature.

The NPS is to be commended for soliciting comments and inviting community participation in developing this plan over many years. Thank you for the incredible stamina and perseverance you have demonstrated in crafting a plan that is consistent with the mission of the National Park Service and that accommodates the needs of wildlife, these special natural environments, and park users. I look forward to the resulting plan and its implementation at last.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** The GGNRA was set up for recreation of Bay Area residents, not as a National Park and certainly not for conservation. As such, National Park rules such as dogs in parking lots do not apply. Furthermore there is legal precedent for off-leash recreation, especially up to the high-tide line on beaches where the land belong to all Californians. The historical use of these lands has been for military purposes for several centuries, so continued human and pet use is consistent with historical use.

---

Considering the commercial use of the Presidio in particular, it is inconsistent to declare current non-commercial areas as natural areas when they would be converted to commercial use should the opportunity arise. Either declare the entire area to be natural lands and turn the GGNRA into a museum, or open it up for development of recreation like significant parts of the Presidio.

**Correspondence:** To: GGNRA Regarding Dog Management Plan

I am writing to express my disappointment with the latest GGNRA Supplemental Dog Management Plan that does not allow for any off leash dog walking areas in San Mateo County.

I live in Montara and have been walking my dog in the open space next to Montara and Farallone View School for many years. It is a wonderful community of hikers/walkers, mountain bikers, equestrians and dogs who for decades have shared the land and treated each other with respect and courtesy.

I agree with Jackie Speiers comment at her community forum in Stern Grove that in this area of innovators, creators and entrepreneurs, we can do a better job developing a plan that allows for, and balances, recreation and preservation in the vast GGNRA lands.

I did not see evidence presented of the need to remove dogs from the Rancho or evidence to ban off leash areas. I also would expect any evidence of detrimental effect to be considered alongside evidence of the benefits of recreation and outdoor enjoyment for families with dogs. The GGNRA purpose is for recreation in this urban setting as much as for preservation. Dogs and their families are already restricted to 1% of the GGNRA lands. It is not equitable to further restrict and target dog walkers.

There have been many suggestions on how to keep dog access while protecting sensitive habitat and these suggestions should actually be evaluated. I hope GGNRA will seriously work with the community on the

proposals being suggested in numerous forums and letters, so that dog access and identified off leash areas on the Rancho and in San Mateo County GGRNA will be allowed.

Regards,  
ShellySmith Montara, CA

**Correspondence:** I'm commenting on behalf of the dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that one of my family's favorite activities will be swiped off our "Fun to-do List".

We are an active family with an active lifestyle and much of our lifestyle includes our dog. Our household is happy hugely in part to our dog and limiting access to our dog's favorite playgrounds (Fort Funston and Ocean Beach) will be devastating to us all. Especially to our Jack Russell mix, Hank.

If radical changes are made- my family and our dog won't be able to have the bonding time and exercise like we do on the GGNRA lands at our local, fenced-in dog park. Nothing is quite as fulfilling as having my family together, Hank included, out for a day of hiking, observing and learning about the great environment around us.

Please consider keeping the 1979 Pet Policy - it keeps all points of nature and recreation in harmony. It ensures my dog and any other future dogs my family has; will have their space now and for years to come.

**Correspondence:** The current changes to the dog management plan undermine the ability of the GGNRA to meet its goals and objectives. Parks are not a place for pets, and the GGNRA, with all the sensitive habitats found therein, should not allow any dog walking, on leash or not.

I am well aware that the GGNRA is under extreme pressure to bow to the requests of dog owners and dog walkers, but I see no reason why the public must suffer because of the unreasonable and irrational demands of dog owners and dog walkers. These lands are fragile, and at much effort and cost, the GGNRA is trying to restore and maintain these habitats and historic areas. Allowing dogs anywhere in the GGNRA completely undermines the ability of the GGNRA to do its job or meets its objectives.

Moreover, personally, the presence of dogs completely destroys my ability to enjoy the potential beauty and serenity that I seek in the GGNRA. I frequently walk and hike at Lands End, Ocean Beach, Baker Beach, Crissy Field, and other areas within the GGNRA. I am never able to enjoy any of these walks and hikes for long, because I always encounter dogs, very frequently off leash. No matter how prominent the

signs are stating dogs can be on leash only, there are always people who let their dogs off leash. I have never taken a hike or walk anywhere within the GGNRA in which I didn't encounter off leash dogs. This breaks my heart, and causes me much personal stress. People simply do not obey the rules.

And dogs on leash, though better than off leash, are still extremely problematic. Their waste pollutes the environment, and they walk on plants and soil near trail edges. These are not minor problems for the environment. In addition, their very presence destroys the character of the environment and undermines my ability to enjoy the GGNRA.

Because of the presence of dogs, everyone is forced interact with them or to take in their behavior as part of the environment. Dogs are dogs, and they always interact with other dogs, other animals, and humans. And often they bark, fight other dogs, sniff or approach people. Visitors to the GGNRA should not be forced to have these experiences.

Dogs do not belong in park lands. They are not a form of recreation. Dogs are pets, and though I am aware that dog owners have responsibilities to care for their animals, public money should not have to be spent to support their care of their animals. And the public should not be forced to encounter their pets in park lands. I am very angry and extremely sad that the current changes to the Dog Management Plan have resulted in the allowance of any dogs anywhere within the GGNRA.

I would ask that the NPS and GGNRA reconsider the changes to the plan, have courage, and forbid any dogs within the GGNRA so that they can focus their time and money on taking care of the area and fulfilling their objectives and responsibilities.

<b>Correspondence:</b>	As a dog owner in SF, I place a high value on the open beaches which allow for open human and canine enjoyment along side and in awe of nature. As a strong environmentalist, I understand the environmental concerns the new plans endeavor to address, however I feel the current system is highly functional and should not change. I vote in favor of option A and believe better enforcement and education around highly sensitive habitats will achieve all goals while still allowing the city's dogs to have a safe place to romp. I fear closure of the most frequented spaces would create a backlash elsewhere in a city which has long been friendly to man and beast, either packing smaller parks or making the city less desirable for those who want to live here. Please help the city's dogs and dog owners continue to enjoy GGNRA without further restrictions.				

---

Thank you,  
Amanda Serenyi, CPA

**Correspondence:** I'm commenting on behalf of the dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

sincerely,

david pham

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston for many years.				

I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fenced-in areas are MORE likely to generate dog fights. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,  
Frederick Leach

**Correspondence:** Please don't ban the dogs. Marin county residents are doing an outstanding and much needed job in adopting unwanted dogs that the government shelters are currently killing, up to 6 million a year, which of course costs a bundle of cash, not to mention this and the toll on our sense of good. They need the beaches and trails to exercise their dogs, they are being environmentally considerate by adopting these dogs in the first place. This will take away the tools they need to care for the animals that our society has thrown away like trash. please consider allowing us to give them the exercise they need, whilst adhering to the wildlife issues, there has to be a compromise don't you agree??

Sincerely,

Deborah Birmingham

I'm commenting on behalf of the non-dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that my small, neighborhood parks (I.E. Insert park names here) will be over-run with people and their dogs.

Dog owners out of desperation will fill up already crowded dog parks if places like Fort Funston, Crissy Field and Rancho Corral de Tierra are cut off. I do not doubt that dog owners will not only fill the neighborhood parks, but also the baseball fields and school yards because of the lack of exercise space for their dogs.

From a parent's point of view, I find this plan unfair and biased. If my child's favorite playground was at risk of being torn down for unsupported scientific reasons, I too, would react much the same as the dog owners are.

This proposed plan poses many risks to not only dog folks but to all folks in my county.

I don't want to stop having to frequent my favorite parks with my children because of this drastic change proposed for GGNRA properties. Please consider keeping the 1979 Pet Policy - it's one of recreation, nature and comradery of all species. It ensures dogs will have their space and my children will have theirs now and for years to come.

**Correspondence:** My name is Mark Pandapas and I have been a resident of Muir Beach for over 7 years. Our house sits directly above the beach, and we interact with the beach and witness the activity on the beach daily. In addition, we regularly hike with our dog on many of the Marin Headlands Trails mainly on the Coastal and Miwok Trails. My wife hikes the more remote trails alone and takes our dog along for her own security and safety.

I am writing to share my comments for the 2013 SEIS specifically pertaining to Muir Beach and the Marin Headlands Trails (Coastal Trail/fire road to Hill 88). I am deeply concerned that the preferred

---

alternative F will have devastating impact on the residents of Muir Beach and my family as we rely on the open space of the GGNRA everyday for exercise in the natural environment as this is literally both our front and backyard!

Comments to the 2011 DEIS were not adequately addressed and most criticisms and concerns expressed in all comments filed in 2011 ran 3:1 AGAINST the plan.

Our isolated Muir Beach community of some 150 houses is home to about 60 dogs, and is completely surrounded by a State Park and the GGNRA, with the nearest town a 20-minute drive on the twisty rural 2-lane coastal highway 1.

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Marin Headlands. I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Marin County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values. This plan ought to be about stewardship of a park that is situated within an urban environment. The SEIS does not include any peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

It is key note that the both the Marin County Board of Supervisors as well as our own Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

I am concerned about direct impacts to the community of Muir Beach.

Page 1104, 'Limiting dog walking areas would reduce these (Muir Beach residents) visitors enjoyment of this site. Some visitors in this user group may prefer to find a different park in which to exercise their dogs off leash. This is no easy proposition for residents of Muir Beach, and this dismissive statement undermines the credibility of the SEIS.

The plan reduces Marin Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force our community into their cars to drive a minimum of 20 minutes to access this experience. The highway to Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA. Since the new parking lot opened this year, a large portion of that traffic and user group is now descending upon Muir Beach. The plan further suggests that those who want an off-leash beach experience for their dog can go to Rodeo Beach. This change would force Muir Beach residents into cars to drive 45 minutes on the congested 2-lane highway, then the freeway and then another 2-lane rural road for an off-leash experience that currently exists literally steps in front of their homes. The 45 minute drive is assuming that there is no traffic congestion. On a crowded day when visitorship to Muir Woods tops 5,000 people, it takes residents nearly double the time to travel out of the community. It will be devastating to our community of 60 dogs and the environment!

On Page 114, the document calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the 'off-limits creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

There are not any peer-reviewed, site-specific studies (as required by law) included in the plan to support such a drastic restriction of dog-friendly areas. The GGNRA has the burden of proof to justify this drastic reduction in access to public land before making any changes.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The estimated 60,000 dogs in Marin County will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves - it passes the buck to neighborhoods, towns, cities and the county.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic; and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day! In fact as I write this letter, there are 7 people wondering around the dunes!

Regarding Visitor Use and Experience, on pages 1090 -1091 it states that 'The practice by local residents of allowing their dogs to roam the beach unsupervised would be addressed by law enforcement staff; allowing a dog to be off-leash would be citable. Adverse impacts would be expected for visitors and local residents who enjoy seeing and playing with dogs off leash. Dog owners may also feel that their pets are not receiving adequate exercise when restrained on a 6-foot leash. In addition, it would be difficult for some visitors, particularly those that are disabled or elderly with mobility issues, to adequately control their dogs on-leash. Having dogs on-leash also limits the exercise dogs can obtain to the exercise abilities of their owners, which may not be sufficient. Some visitors in this user group may find a different park to exercise their dogs off leash.

This misleading paragraph implies that all local residents allow their dogs to roam the beach unsupervised. This is a false and unsupported statement. Residents legally allow their dogs off-leash, and these dogs are supervised. Off-leash does not mean unsupervised.

In addition, Muir Beach is home to several elderly residents, most of whom own dogs and walk them on the Beach. The requirement to have a dog on-leash may diminish their ability to adequately exercise their pets and themselves. The same with residents with mobility issues. This is unjust.

On page 113 there is discussion regarding the planned changes to Muir Beach including the new footpath to the beach and fencing along the dunes. These have been installed. It is interesting to note that the report states that 'The fencing would act as a visible barrier, but would not completely exclude dogs from the area, as this type of fencing would be inappropriate at Muir Beach and not sustainable due to tidal action. Allowing on leash dog walking on the beach and installing visual barriers would enable the park to manage the area in order to restore, protect, and sustain the wetlands, creeks, dunes and lagoon. Allowing 'on-leash dog walking on the beach would protect visitor experience and enhance visitor safety.

The dune fences have been installed and block access to the dunes and wetland area for dogs, unless the dog enters the creek to cross to the county beach on the other side (as the SEIS directs dog owners to do (page 114) , or an owner is in the area with their dog. On most days, I watch from my living room window as people without dogs disregard the fence and signage and enter the areas behind the fence anyway.

Regarding safety, the plan states that the cumulative impacts for Alternative A are the same as for

Alternative F: Negligible. Page 315, Table 14 indicates a total of only 24 dog-related incidents in Muir Beach over a 4-year period from 2008 - 2011. We have hundreds of visitors visiting the beach each weekend. On holidays and warm days the beach is packed and cars park along the highway and along community roads. On page 1253, Muir Beach Alternative A, Conclusion Table the language states 'Therefore, the cumulative impacts to the health and safety of park staff and visitors under this alternative are expected to be negligible.

To conclude, page 1085, 'Muir Beach receives heavy visitation by beachgoers and walkers on the weekends and moderate to high use on the weekdays. Overall, the number of leash law violations is low for this site, with only nine occurring in 2008 through 2011; no dog bites or attacks were reported during this period (table 9).

So why the concern over safety?

I have concern over my wife being on trails without our dog and feeling unsafe due to predators, both animal and human.

## SUGGESTIONS FOR CONSIDERATION

Educational signage and enforcement be used to change behavior with respect to sensitive habitat, refuse and visitor and staff interaction.

The plan calls out a budget to educate and enforce. Why not utilize this budget to educate and enforce the current rules and regulations that are currently not adequately enforced.

I watch each day as people traipse through the newly restored and fenced delicate dune and riparian areas. Children play in the lagoon and creek. Bonfires burn after hours. People camp in the dunes. Litter is strewn across the beach and left at the bridge entrance on the beach. I carry home an armful of trash each morning when I walk the dog. Where is the park maintenance staff to clean up the litter every day? The dispenser by the footbridge should have signage notifying owners and be filled with plastic bags, and in addition a disposal bin could be placed for pet waste.

Trail/Fire road access from Muir Beach to nearest town

Residents and their dogs need access on foot out of Muir Beach to Mill Valley (the nearest town) for recreation and safety. Two trail suggestions:

A) Muir Beach - Coastal trail & Coastal Fire Road - Coyote Ridge  
Fire Road - Miwok Fire Road.

B) Muir Beach - Diaz Ridge - Miwok Fire Road.

Both would connect to Homestead trails and allow access to Mill Valley.

Create On-leash Loop Trail

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or

Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

Fire Road Access

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

## IN CONCLUSION

Dogs are already off-limits on over 99% of the GGNRA. There are many trails and areas that currently do not allow dogs. These are areas that users who would like a dog-free experience can access. There isn't any compelling reason to eliminate or further restrict the remaining 1%. The GGNRA SEIS does not include any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. To remove recreational access to these lands is not substantiated.

The GGNRA was established by involving communities, communities such as Muir Beach, to provide recreational activities for residents in the densely populated Bay area. This is not a pristine wilderness area like Yellowstone or Yosemite. It is a designed landscape with many constructed environments including the new parking lot in Muir Beach and the reconstructed wetlands. The GGNRA requires a different management strategy than a traditional National Park. While a keystone objective for the GGNRA is 'recreation, it does not appear at all in the plan's objectives, nor is it referred to as one of the park's resources and values.

The GGNRA is unique. There is no other National Park quite like it. Its mandate states that the Park possesses 'outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning. This dog plan should support these values and not diminish them.

Marin residents rely upon this open space to enjoy a balance in their lifestyle. It is the very essence of Marin. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your consideration,

Mark Pandapas

**Correspondence:** PLEASE DO NOT ENACT THE SEVERE RESTRICTIONS ON DOGS IN VARIOUS GGNRA PARKS AND TRAILS.  
Why try to solve a problem that doesn't exist?  
You wasted so much money on your faulty study to no avail.  
We, people with dogs, want and need to use these areas, and do so without any adverse effects.  
If there is one in a thousand whose presence is harmful, well, that's how any population is.  
Frankly, it is rather incomprehensible that responsible and intelligent people would want to enact the proposed restrictions on dogs in the GGNRA.

**Correspondence:** Dear Superintendent, My name is Susan Nightingale and I have been walking my dogs at Fort Funston for 25 years now.  
These regular excursions provide my dogs much needed exercise and myself some much appreciated time in nature with my dogs, who I love dearly. Over all this time I have seen many people enjoy their walks at Fort Funston. Some without dogs and many with dogs. I have never seen a dog fight or any person be harmed by a dog. I have seen families, couples, and professional dog walkers, all enjoying the ocean and the trails. I have never seen a dog digging in the dunes or disturbing the birds nesting in the cliffs. I wrote to you when changes to the dog management within the GGNRA were considered previously. It looks as if my comments and those of many others were completely disregarded by you. Open space is needed by everyone. If you restrict areas that have been used for decades by people walking their dogs off leash, there will be no place for this activity. If you eliminate off leash access for dogs within the GGNRA you will be changing the original intention for these parks.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence:** Mori Point: At Mori Point, I think it would be important to be able to have a "loop" trail. At this time, there are only trails that allow for one way in and out when walking dogs. The Mori Headlands trail should be open to leashed dogs as well. The Mori Bluff trail, if possible, could provide a loop trail in the area for leashed dogs. Dogs on leash would not disturb habitat in these areas.

Pedro Point Headlands: The trails that are currently maintained by the Pacifica Land Trust (South Ridge, Middle Ridge and Arroyo Trail) should be considered as on leash areas. The habitat does not include areas of concern for red-legged frogs and SF garter snakes.

The trail by the Sheldance nursery (Sweeney Ridge) ought to be considered for on leash access as well. San Bruno seems to have a lot of trailhead access for dogs, while Pacifica has very little.

**Correspondence:** Your proposed policies are in contradiction to the conclusions you draw in one of your studies.

You conclude that dogs have minimal impact on compacted trails. On the south loop of the Oakwood Valley Trail, where the GGNRA plans to mitigate dogs off-leash, the park service built a compacted trail (built by the Conservation Corps.) Also on the Oakwood Valley Trail, your policy indicates that you want to protect the Mission Blue Butterfly habitat. No lupine grows on either the north or south side of the loop.

I know the valley trails intimately and have walked my dog there for 3 years. This is one of the only areas to walk dogs off-leash. Your proposals are out of sync with the needs of the population. My experience is that about 85% of the people on the trails are walking with their own dogs, about 15% are without dogs. The only aggressive dog incident I know about was the falsely reported one submitted by a ranger the last time the GGNRA tried to shut down the trail.

Here are several alternative solutions to closing trails and beaches. They are less expensive solutions for land management and people management:

1. Require and enforce people to CARRY leashes for their dogs. Monitor for voice control.
2. Require and enforce people to clean up after their dogs.
3. Limit professional dog walkers to three or four dogs per outing in all areas.
4. Add a fee onto dog licensure to pay for these services.
5. Use ticketing fees to deter irresponsible behavior. Put fees towards management.
6. Establish a complaint line.

Those of us who own dogs thrive on the parks and beaches! This is the reason I moved to marin from SF so I could get a dog and take them on hikes etc. I for one pick up after my dog. Always have and always will. Please don't take this away from us or our dogs! You cant play fetch with a leashed dog!!!!

thank you!

Suzy

**Correspondence:** My wife and I have lived in Moss Beach for the last three years. We have a dog called Gus that we regularly walk in Rancho Corral de Tierra.

Since NPS have taken over Rancho we have been very disappointed by the way it has been handled by the park service. The approach seems to be to disenfranchise dog owners by eliminating the very few off-leash dog areas that exist. This is despite the fact that a large proportion of users of Rancho are dog owners. Organizations such as Montara Dog Group have put in large amounts of effort over the years and now dog owners walk in fear on public lands of being tazered by GGNRA peace officers who are zealously enforcing these unpopular rules. The possession of Rancho by the NPS is nothing short of a disaster for the Montara and Moss Beach communities who were very happy when POST owned it.

The SEIS is flawed in its approach in that it regards the GGNRA more like a regular national park than the urban recreation area that it is. Many of the off leash dog areas, like Fort Funston, have already been detrimentally affected by the activities of the federal government and are far from pristine. The GGNRA preferred option is not balanced in its approach, which is not surprising given the GGNRA history of stripping dog owners of their rights. The GGNRA is making these recommendations citing environment reason and user conflict issues. The environmental claims are lacking the backing of peer reviewed scientific studies. Based on my experience walking in Rancho I do not believe the user conflict issues are significant. For the most part dog walkers seem to co-exist quite happily with other users of the park.

My preference is the "no action" option called Alternative A. I believe this best represents the wishes of the majority of the local community here in Montara and Moss Beach with the addition of the two lower areas in Montara and El Grenada that have been traditionally used as off-leash dog walking areas for years. In fact I predict that the community will reject the preferred option, if it is chosen and that GGNRA will have a long and protracted battle with enforcement.

Why is San Mateo the only county where GGNRA are proposing to completely ban off-leash dog walking? San Mateo county already is awash with lots of park land that is hardly used, largely because walking dogs off or on leash has been banned by the county.

Regards,  
James Cowdery

**Correspondence:** We moved to Pacifica because of the beautiful dog friendly parks in the city. We only exercise with our dogs, so parks like San Pedro Valley are already off limits for us. Please consider options such as a license (fee) for locals to walk dogs, or possibly limiting use to Monday through Friday. We would very much welcome a compromise to allow limited (rather than no) use. Our favorite park is Mori Point, and we hope to be able to visit the park in the future. Thank-you for your consideration.

---

**Correspondence ID:** 5262 **Project:** 11759 **Document:** 55416**Address:** Mill Valley, CA 94941  
United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,17,2014 23:30:29**Correspondence Type:** Web Form**Correspondence:** Dear GGNRA,

One of the things I love about living in Marin is the ability to walk my dog in so many beautiful places, including off-leash areas. Sadly there are few off-leash zones where I can train and exercise my dog but luckily there are more than most SF Bay Area counties and other parts of the state. In Marin, we love our open space, we fought personally very hard to save and protect it and we have a right to enjoy the land we helped to set aside. The GGNRA was established with the idea of providing recreational areas for local residents in an increasingly developed world. Access for all users, including people and their dogs is a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

I strongly oppose Alternative F restricting off-leash use within the few limited areas that remain accessible. I feel safer when I can hike, bike, exercise in the company of my dog. Women are unfortunately vulnerable on the trail. Within the time I have lived in southern Marin women have been attacked on trails near my home. On the other hand, few dogs have caused any significant problems on the trails, people not dogs are the issue here. Owners will walk their dogs off-leash only if they have reliable recall. As such off-leash dogs are generally the good dogs, the ones that come when called, stay close to their owners, greet other dogs and people in a friendly manner. Why penalize good behavior and limit recreation for Marin citizens and their companions, GGNRA's most neighbors, who also happen to be some of the best stewards of parklands in our backyard. Only 1% of the GGNRA is open to off-leash dogs, is it too much to ask to keep this amount without further restriction?

I went to the open house regarding the proposed rule changes to talk to park staff and learn more about the rule change. I do not think the GGNRA has any evidence to support the rule change. Although dogs are seen by the service as a nuisance or potential threat to other users or wildlife there is no data to support this view. Furthermore, no studies or peer-review have been solicited to determine whether there are any negative effects from dogs. I am appalled by the amount of time, energy and money that has spent on this issue already when there was no real need to change the rules. So many other issues within the park need attention, such as Sudden Oak Death, weed management, and landscape restoration for climate resilience.

I urge you to maintain the 1979 dog rules as they were written, choosing Alternative A, no change. I use many areas of the park within Marin and San Francisco. I am particularly concerned about limits to access on the Oakwood Valley to Alta trails that I use daily, as well as changes to Homestead Valley, Muir Beach and Crissy field.

Please remain true to the overwhelming sentiment of the community within which the park is located and

preserve our off-leash areas for our health and welfare.

Thank you for your time,  
Colleen Lenihan

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
San Francisco, CA

RE: Draft Dog Management Policy

Dear Superintendent Dean:

I urge you to adopt the proposed Preferred Alternative for managing dogs in the Golden Gate National Recreation Area.

I am a frequent visitor to San Francisco areas of the GGNRA, and a longtime resident of the City.

I would support a stronger management policy in some respects; in particular:

Off-leash dog areas should have physical boundaries of some sort. Unfortunately, "voice control" does not work, as I've repeatedly seen in the GGNRA. The worst case I witnessed was of a young woman who ran into the water off Crissy Field to "rescue" her off-leash dog, then screamed that she couldn't swim. Fortunately, both survived on their own. More often, I see off-leash dogs chasing wildlife, unintentionally intimidating small children on the beach, leaving droppings that are never picked up . . . Enforcement of any new policy would be a problem at the outset. So the Park Service should develop a simple system for the public to report enforcement problems.

But the GGNRA's proposed plan is a thoughtful compromise among competing interests. Above all, its overlying goal should be the preservation of the GGNRA as a unique natural and cultural resource for the Bay Area and the nation.

Sincerely, Nancy Smith

**Correspondence:** Thank you for moving forward with this document for dog management. I spend time at Ocean Beach and unfortunately witness a lot of bird chasing and bad behavior of dogs and their owners. I can offer many, many specific examples if needed.

Please do more public education! The signs about dogs required on leashes from Stairwell 21 to Sloat are almost nonexistent. Also, enforcement is a problem. I have called dispatch twice, but I am not comfortable with the situation: I have to go to the Great Highway, wait for the police to show up and then off he/she marches to the beach with all his/her guns and weapons, like now it's a criminal activity. Can't you have interns and others on the beach educating the dog owners on the rules and their responsibilities?

I understand that humans are often very emotionally attached to their pets, but the reality is that dogs are predators and many do chase and harm wildlife. Yes, they are damaging to ecosystems. (And please pick up the poo!! It's so rude to leave it, particularly in high density urban areas.)

I was disappointed and shocked to hear that politicians like Pelosi and Spieir are supporting dogs running wild in the national park land. During the public forums that I witnessed and heard about, the "no leash required" dog people actually hissed and boo-ed when scientists, naturalists and other defenders of wildlife made comments.

So the bully gets the backing from the elected officials?! What an error. The most aggressive and vocal group is not the democratic majority, particularly in regards to this dog issue.

Thank you for taking my comments.

Deidre Martin

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and

---

objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Gina Lee

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Adele Christensen, Proud Corgi Owner

<b>Correspondence:</b>	It is imperative that ample off-leash dog spaces be preserved, particularly in the park lands of Northern California. I visit these park lands (Ft. Funston, Crissy Field and Ocean Beach) with my dog several times a week and with a reduced footprint of off-leash access areas will likely not see them again for years. My freedom to enjoy beautiful open spaces with my off-leash, well-behaved dog is a major quality of life issue. The 'research' the GGNRA has gathered erroneously implies that removing dogs from these areas will remove the threat to fragile restored wildlife populations. Unless the GGNRA plans to also ban children, adults, hang-gliders, hawks and radio-controlled planes, then this line of thought is seriously flawed. As a Sierra Club member, I take these issues very seriously, and I also know the value of choosing your				

---

battles. That the GGNRA has chosen to funnel precious resources into this unnecessarily punitive proposal, rather than focus on areas in which it might have a real impact is beyond disappointing. Beyond.

Clearly the people of San Francisco have spoken, simply in their usage patterns. It is important to remember that this is a recreation area created to serve the needs of an entire city. Something like 1/2 the households in San Francisco and Northern California have dogs. To restrict the recreational access of over half the tax paying households in the area is heavy-handed and wrong. The GGNRA has completely lost touch with the mission and intent with which these spaces were created. It's clear that the needs and desires of the citizenry are not fairly being taken into account.

The GGNRA needs better research and to shift its myopic approach to correcting and addressing impacts on these lands that we all pay for and are entitled to enjoy.

Christine C. Cowdery  
1020 Etheldore Street

Moss Beach, CA 94038

Frank Dean, GGNRA Superintendent  
Building 201, Fort Mason(  
San Francisco, CA 94123-0022  
Attn: SEIS(

Dear Superintendent Dean,

Thank you for the opportunity to comment on the Golden Gate National Recreation Areas (GGNRA) Dog Management Plan SEIS. My name is Christine Corwin Cowdery, and I am a resident of Moss Beach and a long-time parks advocate, environmentalist, and hiker.

Before I delve into my substantive comments on the SEIS, just wanted to share some general thoughts and feelings about what is happening with GGNRA and our local communities. At a time when the National Park Service is struggling with how to make parks more relevant to its constituents, especially in urban areas, the poorly thought out and executed GGNRA Dog Management planning process has created a hostile environment that for the most part has pitted local communities and elected officials against the National Park Service.

When the lands that are now GGNRA were handed over to NPS in 1973, it was with the understanding that the lands would be managed for the recreational needs of our urban population, which includes dog walking. The fact is that GGNRA is not a destination national park such as Yellowstone, Yosemite, or the Grant Canyon-it is an urban national recreation area that needs to be managed for both recreation and natural values.

In October 2013, I attended a meeting on the issue in San Francisco held by San Franciscos Board of Supervisors. It was incredibly eye opening and a shame that NPS refused to attend. Dozens and dozens of citizens of different backgrounds and ages took time off from work to share the reasons why they are opposed to GGNRA's Dog Management Plan. Speakers included an urban planner talking about the benefits of layered uses in an urban environment, people with disabilities and others who rely on these open space areas to properly exercise their dogs, senior citizens who are healthier because they have been hiking with their dogs in GGNRA, to mothers who raised their children going to places such as Fort Funston with their dog, to those who do not own dogs, but value the experience of diverse uses and community in our urban parks.

The fact is that park leadership has dismissed the dog walking needs of the city of San Francisco and local communities such as where I live on the San Mateo Coast claiming that GGNRA is federal land and that local governments have no jurisdiction. While this may be legally true, this goes against the true spirit in which GGNRA was created and is extremely short-sighted given that GGNRA benefits from a wealth of city and county services from police, medical, and fire services to animal control and wildlife rehabilitation services provided by the SPCA.

As long as this insular mentality prevails among park leadership, GGNRA will not be able to fulfill its potential for making national parks more relevant to diverse urban constituencies-constituencies that we need in the environmental and parks movement. I hope that you rethink the current dog management planning process-a process that so far seems to be unfairly discriminating against a diverse user group without the peer-reviewed science to justify GGNRA's significant policy changes around dog walking.

SEIS Comments

As mentioned earlier, I am a resident of Moss Beach, which borders Rancho Corral de Tierra, the newest

addition to GGNRA. My husband and I moved to Moss Beach just over three years ago. We, like so many other local residents, were drawn here because of the areas small town feel, the amazing hiking areas, and the fact that it is a community of dog lovers. We have a seven-year-old black lab mix named Gus. I have always been a hiker. Being able to hike with our dog in the areas of GGNRA that are dog friendly has been one of my greatest joys in life. He is a part of our family. If I could not bring him on trails in GGNRA, I would not visit the park.

After reviewing the SEIS (all 1,500 pages!), I am advocating for Alternative A in the SEIS with the addition of the two historical off-leash areas in Montara and El Granada (the true baseline-please see the enclosed map). Local communities are the primary users of Rancho and have a long history of responsible dog walking, including off leash dog walking in the lower portions of Rancho Corral de Tierra in Montara and El Granada. The Montara Dog Group, which has more than 400 members from Half Moon Bay to Pacifica, has provided dog waste bins and bags, as well as promoted responsible dog guardianship.

Despite this history of responsibility, GGNRA's preferred alternative does not provide any off-leash opportunities for dog walking in Rancho. Why is San Mateo County the only county where GGNRA is proposing to completely ban off-leash dog walking?

In addition, the SEIS fails to link off-leash and on-leash dog walking with documented resource impacts. GGNRA's SEIS has failed to provide actual scientific data about dog walkings impact on natural resources in Rancho, such as wildlife and vegetation. Not only does GGNRA not have any peer-reviewed scientific data about resource impacts, all of the resource impact statements in the SEIS are purely speculative. Off-leash and on-leash dog walking has occurred in Rancho Corral de Tierra for decades, including during the past two years while it has been under the management of GGNRA (as acknowledged in the SEIS). Despite this history, Rancho continues to provide valuable habitat for wildlife. As reported by Peninsula Humane Society & SPCA President, Ken White, in his February 8, 2011 letter to GGNRA: Our professional wildlife rehabilitation staff completed a review/analysis of the site (Rancho) and the proposal (GGNRA's Dog Management Plan) and we believe that there is no observable reason related to the protection of native wildlife which would justify denying access to off-leash dogs in the area. (\*Please see attached a copy of Ken Whites February 8, 2011 letter.)

In general, characterization of dog-related issues in the SEIS is misleading. The SEIS document has failed to provide evidence that dog walking is resulting in conflicts and resource degradation. From 2008 through 2011, a total of 1,537 dog-related incidents associated with natural resources occurred at GGNRA according to Table 6 in the SEIS. However, out of a total of 1,537 dog-related incidents, there were only three incidents of dogs destroying vegetation. Meanwhile, there were only 15 dog-related incidents of dogs disturbing wildlife. 1,519 incidents were related to dogs being off-leash in on-leash areas or dogs being in closed areas-incidents that could be attributed to lack of public education and signage by GGNRA.

Because Rancho Corral de Tierra was just transferred to NPS in December 2011, law enforcement data and statistics are not yet available for this site. I will say that with the exception of the January 2011 incident when an NPS ranger tased a dog walker, that I have never experienced or heard of any negative dog-related incidents in Rancho-just happy people with dogs, bikers, and equestrians who all peacefully coexist and recreate in this part of GGNRA. The Peninsula Humane Society & SPCA also says in their February 8, 2011 letter that they cannot recall ever receiving complaints about off-leash dogs or dogs acting aggressively in the area.

In addition, GGNRA's preferred alternative is proposing to dramatically cut the number of dog-friendly trails in Rancho. Given the fact that Rancho's primary user group is local residents and their dogs, why isn't there an alternative in the SEIS that considers increasing the number of dog-friendly recreational

trails?

Also, the area of Rancho Corral de Tierra in Moss Beach-the area where GGNRA is proposing to completely ban dogs-is not even mentioned in the SEIS. This area has been used by equestrians with dogs and by hikers with dogs for decades without any conflict or resource degradation. The SEIS fails to give any rationale for banning all dog walking from this section of the park. This major policy change should require some sort of justification.

Another impact which the SEIS fails to consider is the impact on the local community culture. San Mateo Countys coastal communities are communities of dog lovers. Rancho is more than just an open space area. It is a community space where people go with their dogs to walk and to catch up with their neighbors and friends. In many ways, Rancho is the heart of our community. If dogs are banned except for on a few trails, GGNRA will be gutting the very thing that makes it enjoyable to live here.

This negative community impact is not unique to Rancho. This community impact is something that is common among all of the 22 areas targeted in GGNRA's dog management plan. Where does GGNRA propose that we all go? Approximately 50% of households in San Francisco have dogs. I would estimate that at least that many households on the coast have dogs. Dogs are a part of our culture, just as they were in 1973 when the park was founded and in 1979 when the 1979 Pet Policy was crafted.

I am whole-heartedly in favor of protecting the environment and wildlife. There are already a number of areas in GGNRA where I am not allowed to go with my dog and I accept that. With that said, GGNRA's current Dog Management Plan/SEIS goes too far. It is a highly restrictive plan that is being proposed without any hard evidence that these restrictions are warranted. The plan's language and Alternatives B-F are highly biased against people who recreate in GGNRA with their dogs. We need a common sense, balanced approach to park management that takes into account the recreational needs of Bay Area residents-as intended by GGNRA's enabling legislation.

Again, I support Alternative A in the SEIS with the addition of the two historical off-leash areas in Montara and El Granada (please see the enclosed map). Thank you for your time and consideration.

Sincerely,

Christine C. Cowdery  
Montara Dog Group Member

**Correspondence:** I feel strongly, as a working environmental scientist for the Federal government, that the conclusions in this document are not science based and the SEIS should undergo peer review per the

---

policy of the NPS (Interim Guidance Document Governing Code of Conduct, Peer Review, and Information Quality Correction for National Park Service Cultural and Natural Resource Disciplines, 2008). Please submit the SEIS for peer review.

This document is essentially a programmatic EIS as there is insufficient information and analysis for each site to adequately inform science-based decision-making for such a large geographic area. The NPS should treat this document as a Programmatic EIS and tier off site-specific NEPA documents from it.

Page 920 states that chronic disturbance of snowy plover at Ocean Beach during the nonbreeding season could indirectly affect breeding behavior of the species. Therefore, impacts would result in measurable and/or consequential changes in individuals of a species through frequent disturbance". The SEIS does not define "chronic disturbance" and the data does not reflect recent increases in plover populations. The old data from the 1990's should be discarded. The newer data does not provide an example of anything that could be termed "chronic disturbance". The SEIS should define chronic disturbance for Ocean Beach plover and utilize recent data to defend the conclusion that it is occurring.

The SEIS cites violations as proof of impacts, but violations are given for wildlife disturbance whether or not it was observed. I was once given a violation for disturbing wildlife for simply having my dog off leash while playing ball in the surf, and no wildlife disturbance had occurred. This violations data cannot be a proxy for actual observed wildlife disturbance - it is not sound science.

The FSEIS should include population counts of plover at Ocean Beach during the last 10 years to substantiate the impact that is said to be occurring.

The SEIS does not discuss the impacts occurring to the plover from the marked increase in raven populations, which predate on plover, at Ocean Beach. Ravens, a much larger bird that forage and scavenge closer to the surf, are more likely to be chased by dogs. The SEIS should document the indirect impact on plover predation by ravens and other predators if dogs are banned. Additionally, provide the scientific support that disturbance during the nonbreeding season is affecting breeding behavior. There is much unsupported conclusory statements in the SEIS regarding the impacts to the plover. Decisions that affect so many urban recreationalists should not be made on unsupported conclusory statements of what "could" happen, but on what is actually happening. Restrictions should be commensurate with demonstrated impacts.

In addition, there is no reason to not allow dogs on Ocean Beach when plover are not present from mid-May through June 30.

The SEIS does not demonstrate that dogs in the GGNRA are compromising visitor safety and damaging the resources of the Recreation Area. It states that in the last year, out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. The reported incidents involving people are much higher which reveals that these dog-related incidents are negligible and do not support a change in management.

The fencing proposed along with the concentration of dogs that would result from the dog plan will increase conflict between dogs. I noticed this phenomena when the San Bruno Dog Park was replaced with the current much smaller dog park. I was unable to use the new dog park because there were frequent dog fights as a direct result from crowding of dogs in a smaller space. The FSEIS must address the impacts to visitor and recreationalist safety from the NPS's proposals to crowd dogs into smaller spaces surrounded by fences.

I'm very disturbed to see that leashes are still being proposed for the sand ladder at Fort Funston. I raised this serious safety concern at the DEIS stage and it has not been corrected in the SEIS. Footing is very difficult to keep walking down the unmaintained sand ladder, which is sometimes composed of stair logs in the air, with the sand underneath having eroded away. The stair then moves when one steps on it, and having a dog pulling on a leash will surely result in falls and injuries. I have found it hard to keep footing just walking without a leashed dog in this location. With this, and the dog crowded that NPS is proposing, the Dog Management Plan will result in increases in safety hazards. This is based on my experience as a frequent dog walker in GGNRA lands.

It is outrageous that the NPS is not considering and working with the City of San Francisco, which voted unanimously to oppose this plan as too restrictive to its citizens, as did Marin County. There is much lost public trust in the Federal government as a result of this planning effort.

**Correspondence:** By significantly reducing the off-leash dog areas, we will undoubtedly over time see an increase in aggressive dog behavior. Dogs need to be exercised, and more importantly, well socialized.

---

The off leash dog parks allow for this to occur.

By eliminating 90% of the off-leash areas, all the pet owners, dog walkers, etc will be forced to go to the small local parks., and therefore creating a new problem.

The Bay Area is known for how dog-friendly it is (or at least, was). The government shouldn't take these privileges away from us, or punish us. San Francisco (purportedly has more dogs than children now ....

Where should all these animals go to be exercised or socialized if the 'allowed' areas are cut back by 90%? I will reiterate, we will absolutely see a rise in dog aggression if they don't have a place to 'just be dogs', and run and play freely.

Dog walkers, and Pet Owners should be responsible, and there should be consequences for the individual if he or she (or his or her dog) misbehaves.

I oppose the Preferred Alternative because it is too restrictive.

Please don't take this away from us!!!

**Correspondence:** I have lived in San Francisco for 40 years, most of that time sharing my home with a dog. I've reviewed the Executive Summary of the Dog Management Plan and believe the proposed regulations go too far. The dramatic restrictions on dog walking in the GGNRA will put an untenable burden on the few areas in San Francisco and Marin left where dog walking, especially off-leash, is permitted. It is not a balanced plan.

San Francisco is an densely populated urban area. There are not national forests and open space nearby to absorb the loss of areas where people can enjoy the outdoors with their dogs. Forcing people with dogs into fewer and smaller spaces will result in a density of use that will make those spaces unfit for their purpose. While the plan makes note of protecting wildlife, habitat, cultural resources and visitors that don't like dogs in the GGNRA, it makes no mention of the protecting tax paying citizens who happen to own dogs.

The plan's preferred alternative punishes the many responsible dog owners for the few who are not. Why not focus on measures that address the few.

objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Sherry Suisman

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Mike W

<b>Correspondence:</b>	I adopted numerous reused dogs from SPCA in the past 7 years and there is nothing that gives me and my dogs more enjoyment in life than to walk my beloved dogs off leach at Fort Funston. I can assure you the higher up authority as well as the general public that the off leach dogs are genuinely grateful for being free from any physical restrictions and they are better behave and responsive than if they were on leach. I would therefore urge that you DO NOT pass any new ordinance/ law to impose any unnecesarry restrictions on limiting the walking off leach of dogs in the National Park Area.				

Sincerely,  
Yvonne Lo

**Correspondence:** Dear Superintendent Dean,

I strongly oppose the Preferred Alternative described in the GGNRA's new draft dog management plan.

As someone who walks regularly with my dog in the GGNRA, I am horrified that the GGNRA would even consider the "preferred alternative." It is way too restrictive and will prevent me and countless others from using the public space in the recreational way that best serves the communities of the bay area.

Smart urban planners recognize the value of ample public space designated for recreation for people and for dogs - - for the benefit of human health, pet health, and the public health benefit of reducing the amount of pet waste on public sidewalks in urban areas. Over the years, the benefits of the off-leash recreation areas have been clearly demonstrated, not only in terms of health benefits, but also by the harder-to-measure value added in terms of the cultural richness of the area. Bay area pet owners often cite the dog-friendliness as one of the most-valued attributes of the bay area's offerings.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. If GGNRA is truly concerned about leash restriction compliance, then better enforcement of leash restrictions is a much more appropriate response. (The current preferred alternative would be more like responding to a report of a house on fire by bombing that building - not a proportional or rational response to a perceived problem.)

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you in advance for your careful consideration of this important matter.

Best Regards,

J.L.W.

**Correspondence Type:** Web Form  
**Correspondence:** Thank you for taking the time to read my comments on the draft dog management plan. I feel strongly that the GGNRA should uphold the policy established in 1979 that provides for off leash dog areas in the park.

I have owned my dog for 6 months, and as she continues her training and has become capable of being off leash in permitted areas, we have both enjoyed Crissy Field and Marin County. Dogs need off leash time to get adequate exercise. People and dogs have been enjoying the GGNRA for this purpose for decades, and off leash areas should be protected in the GGNRA. I am troubled by the proposal that not only seeks to severely reduce the quantity and size of off leash areas, but also provides only for further restrictions in the future. This seems unfair, and I believe there should be an opportunity to expand off leash areas in the future if and when that makes sense.

I am concerned about the impact of off leash restrictions in the GGNRA on San Francisco parks. In addition to enjoying the GGNRA, I also take my dog to Lafayette Park in San Francisco, which has an off leash dog area. Unfortunately, Lafayette Park can barely accommodate the high volume of dogs it receives daily, as evidenced by the grass being completely run down in the off leash dog area. I am certain that the situation at Lafayette Park would worsen if the off leash areas of the GGNRA were further restricted.

I urge you not to restrict the off leash areas in the GGNRA and to maintain the policy adopted in 1979. The GGNRA is a special place enjoyed by so many people and dogs, and the off leash opportunities it affords residents and visitors alike contribute to making the Bay Area a unique place.

Thank you,  
Jane

<b>Correspondence:</b>	We live right by the Donahue St head of Alta Trail - we take our dog on runs there all the time, and cherish the time we spend there with the dog and kids. We also head to Muir Beach - a place I've been for the last 20 years. And always with a dog. There are so few places left in Marin and SF where we can take our dog off leash and get proper exercise. We live in a very densely populated area, and part of the trade off are the magnificent lands of GGNRA. We depend on the limited space we do access with our dog to get her exercise and play. Please do not ban dogs, and certainly leave the Donahue side of the Alta trail as an off leash area, the same with Muir Beach - dogs are an important part of the landscape and of living in the bay area.

-----------------------------	----------

<b>Correspondence:</b>	I have made comments on this plan at every step along the way, including back before the proposed rule changes were started. I got involved when the GGNRA began restricting dog access in Fort Funston without involving the public. One of the last things I did with my father before he passed away early in 2001 was attending a meeting at the Presidio Officers Club when the GGNRA started putting up signs restricting dogs without public comment.
------------------------	--

The public outcry over the changes without consulting the users forced the GGNRA to come up with a dog plan. I have found this process discouraging. I have spoken in person and in writing of my desire to keep the 1979 plan in place. And that any property added since then should be allowed to continue being used in the same way it has historically been used.

Each new version only makes slight adjustments that really don't come close to what historic users would like to see. I have found this process discouraging. This has been long and drawn out. The 3 dogs my family had at the start of this process have all passed away during the course of this rule making.

I understand the park service's goals are to preserve wild lands but this is not Yellowstone or Yosemite.

This is basically open space in an urban area and it should not be run or forced to follow the same rules and expectations as Yosemite. With Fort Funston in particular it is not remotely natural. It is an old army

battery and is not some wild land that needs protection. When local governments gave control of the properties like Fort Funston to the GGNRA the idea was to preserve open space for generations. Not to create a people free wilderness. My conclusion is that the park service should not be involved in running the GGNRA. I also suggest we change the name to reflect its unique status.

My experience as a San Francisco resident is with Fort Funston. It is a great place and it is one of the first places new residents discover if they have a dog. It is a place where I have met people who I ended up dog sitting for. It is a community.

I feel safe there walking alone. I feel safer there than in my own neighborhood.

I realize there is a process to this rule making but I feel like the park service is trying to wait out the dog lovers.

I have lost some of my faith in government over this. The idea of big government overstepping its welcome in local affairs is real to me now. It has turned me as someone who majored in environmental biology and wanted to be a park ranger when I was a kid into someone who has turned away from the environmental movement.

One of the things I studied when at UC Davis was environmental policy making. Something that stuck in my head was it is hard to make policy work if you don't have the buy in of people involved. Right now you don't have local buy in. There are a few environmental groups trying to protect the birds but they are not the daily users of the GGNRA property.

The GGNRA property could be a great stepping stone into environmental learning for generations of city and suburban kids. Instead we are being fenced out of property without really knowing if we are helping any native plants or animals. We are not allowed to take our dogs with us into these natural areas so that we can enjoy some outdoor time and remember why outdoors are important to us.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendant Dean,

I am a San Francisco native and have lived in this wonderful city for all but 5 of my nearly 50 years. Growing up in the Richmond district, I have happy memories of taking our two cocker spaniels for family outings at Baker Beach. They would run the beach, chase each other and play with their toys. These were some of the days we enjoyed most as a family and the dogs always came home tired and satisfied. If they had been forced to remain on a leash, or even not allowed on more than half of our wonderful Baker Beach, it would have been an exercise of frustration, similar to taking a kid to a candy store and not allowing them any candy.

Now with a husband, two children and two dogs of my own, we enjoy this resource so much, in fact, that we have been members of the William Kent Society for 10 years. Our daily walks with our dogs are often the happiest part of my day. I take them for runs down to Crissy Beach where they get a welcome reward swimming in the Bay, retrieving balls just off shore on East Beach, where we rarely run into very many people (yes, even sometimes on warm weekend days). On the days when I am short on time and they are not able to swim, run and play on East Beach, they look at me with disappointment and we return home feeling largely unsatisfied, sad and even frustrated.

I write now, after having written a letter to the Draft EIS in 2011 which was ignored, in partner with the SF Board of Supervisors, Mayor Ed Lee, Congresswoman Speier, Congresswoman Pelosi, The Crissy Field Dog Group, Animal Care & Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax-paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact-based in its planning or findings. This proposal demonstrates a lack of understanding that the Bay Area GGNRA must serve an urban population.

When the GGNRA was created in 1972, dog walking was already a long-standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture - and this use must continue indefinitely.

I strongly support preserving the GGNRA's 1979 Pet Policy. This plan works and if properly enforced, I believe it would strike a balance between many users of this great resource. The Bay Area GGNRA is a unique national recreation area in an urban environment - not an isolated park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

With more than 120,000 dogs in San Francisco alone, and millions in the greater Bay Area. People who work, who have families like mine, and have dogs need access close to home that allows off-leash dog walking in the mornings, afternoons and evenings. The proposed preferred alternative will results in millions of people being unable to recreate with their dog(s) - in the GGNRA lands these same families support with taxpayer dollars.

The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. The proposed restrictions in the current plan seriously restrict dog walking, only 7 of the 22 areas in the

SEIS allow off-leash dog walking access on GGNRA lands in ALL three counties.

In Marin County, it will be disaster if there will only be one beach where all Marin's residents and visitors can recreate with their dogs off leash. The beach has extreme tides, forceful waves, and will be packed with thousands of dogs if this plan is enacted - because it's the only off leash beach that will be preserved for all Marin County in the preferred alternative. Additionally, the SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on or off-leash).

The GGNRA's preferred alternative intentionally proposal sets up the proposed dog policy to fail - by restricting a large dog and urban resident population to use such small areas that over-crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And the fact that this will cost millions of dollars of our taxpayer money is inexcusable. You are spending our money on a plan that the majority does not want and that will not work.

I understand that part of the rationalization for this overly-restrictive policy is to protect the wildlife, particularly birds. In my many days at Crissy, I have never seen dogs chasing birds. They leave each other alone. There is a large group of geese that visit the big lawn regularly and this provides an environmental concern greater than the very rare and occasional dog (or even human!) poop. When our son was exposed to goose poop, he suffered serious diahrea that required antibiotic treatment.

Here are a few questions regarding my serious objections to this proposal:

- Why does the GGNRA rely on outdated studies and information for the latest environmental impact statement?
- - Why hasn't the GGNRA updated its enforcement data since the last draft EIS was released?
- How is it that the SEIS has many assumptions that are not documented? How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?
- How is it possible for the GGNRA to simply ignore the voices of so many individuals, groups and elected representatives?
- How is it possible for the GGNRA to simply not consider or address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS?

These unanswered questions lead to the conclusion that the process is only for show and the GGNRA never intended to incorporate public or even elected representatives' views.

I cherish the opportunity to walk with my dogs at Crissy Field, Baker Beach, Ocean Beach, Fort Funston, Land's End, Rodeo Beach, and Fort Mason. Please don't follow through with this seriously flawed plan. Putting an off-leash dog area next to busy Bay Street across from Safeway is only one of the terrible ideas incorporated in this plan.

Your consideration will be greatly appreciated for generations to come.

Sincerely,

Leslie B. Dicke  
William Kent Society Member, 10 years

CC: Congresswoman Nancy Pelosi  
Senator Diane Feinstein

**Correspondence:** Greetings Members of the GGNRA and NPS,

I live and work in San Francisco with my husband and our dog. I was born and raised in this fair city and if you inflict this intense restriction on parks land it will negatively impact half of the humans living here. I regularly visit Crissy Field, Fort Funston, Ocean Beach, and many other public recreation areas with my dog- it is a huge benefit to both of us to have access to these beautiful natural resources. If I was unable to take my dog with me on these trips to decompress from city life I would likely stop visiting some of my favorite recreational areas because seeing my dog happy and running free is also a huge stress reliever for me! Please reconsider this drastic and hurtful proposal.

All the best,

Gaelan, Gareth, and Lois.

**Correspondence:** Greetings,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Ocean Beach, Fort Mason and Fort Funston for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and

---

objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,  
Anna Hogan

<b>Correspondence:</b>	I am opposed to the proposed changes to the GGNRA Pet Policy. I support the "No Action Alternative" in the SEIS for all Marin GGNRA lands: including Muir Beach, Homestead, Oakwood Valley and the Marin Headlands. The 1979 Pet Policy was part of the founders vision for the GGNRA and should be respected and retained.				

The GGNRA is primarily an urban RECREATION AREA and requires a different management approach than wilderness areas like Yellowstone or Yosemite. Using a "One policy for all National Parks" approach is inappropriate, considering the substantial differences between the GGNRA and other National Parks.

Many GGNRA lands in Marin County were once inhabited; with many buildings that included families and ranches with herds of livestock and many sheep and cattle dogs on thousands of acres. If a small percentage of dog owners do not manage their dogs properly, they should be cited, but that should not translate into banning all other responsible dog owners and their well-behaved dogs from the vast majority of the GGNRA. Following this path of logic means that:

>We should ban children from the vast majority of the GGNRA, because a few children chase wildlife,

run excitedly through and damage sensitive habitat, scream at the top of their lungs and throw rocks at birds, or rip branches from trees to use as play swords, or hiking poles.

>We should ban mountain bikers from the vast majority of the GGNRA because some of them erode trails and damage hillsides and wildlife habitat, aggressively confront hikers and horseback riders on single-track trails where they are not allowed, and build illegal and destructive hidden trails for their personal sport.

>There are smokers tossing cigarette butts, litterbugs tossing trash, pot farmers using pesticides and polluting creeks, and parents leaving detritus behind from family beach picnics. Does it thus follow that we ban all humans from the vast majority of the GGNRA?

No, of course not. So why restrict just one category of park user over any other, when all user categories have bad actors among them? Please exercise common sense when making your decision regarding dogs in the GGNRA. Thank you very much.

**Correspondence:** Re: GGNRA Off Leash Areas

I would like to express my opposition to the plan to reduce the size of designated off leash areas in San Francisco's parks operated by GGNRA. These parks are a vital resource for the large community of dog owners in San Francisco, and serve their purpose as recreational spaces for the residents of this city and their pets. Off leash walking is extremely beneficial for both pet owner and pet alike. It provides a sense of freedom that is not attainable on city streets or many of the other existing parks in San Francisco. For me personally, it provides my primary source of exercise on a daily basis to hike at Fort Funston with my dogs. There are hundreds of people and their pets that will be displaced from an activity that is and should be available to them. Please consider the impact that it will have on the current and future dog owners as well as the neighborhoods and city parks that will see a large increase in dog activity. If changes need to be made, please let the users of these areas be a part of that discussion so we can make things work for everyone. We are the people that these parks are supposed to serve and if there are others that are looking for change, let's discuss it. Don't just shut us out. There can be other ways to solve whatever problems need to be addressed.

Regards,  
Adam Damico

**Correspondence:** 1. It is obvious that regardless of the will of the majority of those who most use and enjoy the lands given over to the NPS by the citizens of Marin and San Francisco counties, to hold in perpetuity and to preserve for those citizens the access to open space to enjoy without development or malicious interference, the NPS will not relent in its determination to rid these areas of those it finds personally undesirable and a hindrance to its goal of creating a pristine, limited use wilderness area.

2. The alternative plans offered for on and off lead dog areas are at best disingenuous, and at worst dangerous. You provide a range of concepts from near total prohibition to such restrictive ideas that at their best restrict and confine the current numbers of dog owners now frequenting the open space into tight concentrations of such high density that issues of sanitation, overcrowding of trails, canine territorial disputes, and most simply put, a miserable environment that discourages access. ( Mission Accomplished ? )

3. I frequent Fort Funston. Have done so since the Army vacated it. It has survived decades of abuse by the military, and like most of San Francisco's open space bears little resemblance to it it's native state. However, it is in it's present form and appearance, a paradise, an oasis, and the last remaining open space in an ever encroaching urban environment where i can walk with my dogs, enjoy the nature that it is, wander among the ruins and remnants of the past, and renew my spirit without the confining barriers, limits, and restrictions of the city. I am renewed and refreshed by the effort of walking in the dunes and on the beach, and I take an incredible joy in watching my terriers racing about like children at the playground. I know that every other dog owner there would share to some degree that sentiment.

4. What you are offering is little more than a doggy latrine, and a crowded sidewalk. If you are determined to fix what ain't broke, a million heartfelt entreaties won't stop you. I truly question the wisdom though of taking away such an essential urban environment in violation of the original intent by which it was acquired. I know that intent because I made the case for it at inception and was in fact supported in that brief by the first local director of the GGNRA.

**Correspondence Type:** Web Form

**Correspondence:** I urge you to move away from plan A to an alternative that takes into account the detrimental effect of dogs on the environment, wild animals and on human visitors. I live in Marin and

---

will comment specifically on Marin County. At Muir Beach, I would like to enjoy the beach without being surrounded by dogs. As it is now, I do not go to Muir Beach nearly as often as I would if dogs were more restricted on the beach. The dogs are barking, running fast and wild, and seem to outnumber human beings. There should be a large area at the beach where no dogs are allowed and people could rest, nap or picnic without staying on a constant vigilant watch for dogs running over their blankets or getting into their food, fighting, etc. I love the beach, and Muir Beach is the closest to my house but it seems so unfair that I just can't enjoy it without the never ending hyper activity of dogs.

Dog owners are campaigning hard for off-leash access everywhere they can get it. But I ask, what about people who don't want to be surrounded by dogs every time they hike or go to the beach? Why is the dog's privilege of being off-leash more important than a person's desire to enjoy nature in peace?

Here in Mill Valley, residents complain several times a week about dog poop on Marin trails. Those who have dogs and walk dogs complain just as much as non-dog owners. Some dog walkers are not acting responsibly about picking up poop and the rest of us are left to suffer. Dogs create conflicts, between off leash dogs that attack each other to dogs that attack humans or knock over children. I had a dog until recently, and we plan to get another. Our dog was attacked by off-leash dogs a few times on separate trails in Mill Valley. I love animals, but when I have my own dog I act responsibly and obey leash laws. Many people here feel that they and their dogs are above the law, and I don't see anyone enforcing those laws. I would opt for dogs on leash on most trails, but the problem is that no one has seemed to enforce leash laws. I feel that the on-leash rule almost never works, since no one is there to enforce it. I cannot go on a relaxing hike if I have to be the one to contend with those who do not respect the rules nor my right to feel secure.

We have plenty of trails open to dogs in Marin, but ones that ban dogs are very hard to come by. In Mill Valley, dogs are on every trail except Tennessee Valley main trail. I'd like to be able to hike or run Miwok and Coyote Ridge and Coastal trails without dogs running free. Dog walkers often ignore leash laws and let their dogs run free. I've had dogs run full speed at me or at my children, and the owner ignoring me or arguing when I ask that they leash their dog. The more aggressive the breed, the more the person seems to argue. "My dog is friendly" they call as the pitbull is rushing at my child. If I politely ask them to put their dog on a leash while they pass us, the response is typically that their dog is harmless, and they would rather argue and defend their dog's character than to comply with the rule and my request. I plead that you give hikers or joggers more trails without off-leash dogs and more trails without dogs at all!

I urge you to adopt a more restrictive plan on dogs especially at Muir Beach, Stinson Beach, Miwok Trail, Coyote Ridge trail, and Coastal Trail. That is, I vote against plan A, and would like either F, B or C. I have studied the whole plan, and the alternative that I most agree with Plan F. This seems to be the most balanced and fair plan to compromise between opposing interests. I do want there to be places where dogs can walk and run, but also more places where dogs must be on leash, and more dog-free places including longer sections of trails for hikers. The on-leash trails and beaches will only work if signs are clearly posted and you employ workers to actually enforce these rules.

The pro-dog groups are very vocal, but don't be fooled; there are many of us who want to enjoy the outdoors without hordes of dogs, even if some of us haven't voiced our opinions as loudly. Stay strong and go forward with a more fair and balanced solution than the status quo of alternative A. Thank you!

**Correspondence:** I am a tax payer and voter and I have children and a dog. I would like to see a much more balanced approach to allowing dogs and families to walk and play together. There certainly is enough space for all the inhabitants of the city and its environs to enjoy being outdoors together. I don't feel that your mandate to manage the recreation area includes the intention or the direction for the exclusion of so many people from use of these facilities. Management might mean co-ordinating the various uses and users to everyone's satisfaction. All of the stakeholders should be accommodated if you are doing your job. A great many people and their family pets depend on these areas for exercise and mental recharge from the pressures of everyday city life. Why is it that we should support your work if we can find no relief or recreation in this park? Everything in moderation; nothing to excess. Your new plan for dogs and their owners is excessively restrictive for poor reasons and dubious science. Relax and stop trying to reorder the world; please.

**Correspondence Type:** Web Form

**Correspondence:** Dear Superintendent Dean,

I have enjoyed and cherished being outside in nature my entire life. I have been a member of the Sierra Club, the Nature Conservancy, the Yosemite Fund, and the World Wildlife Federation. I am a current member of the California State Parks Foundation. I have backpacked in the Sierra Nevada, the Trinity Alps, Kings Canyon, at least 10 California State Parks, and three National Parks in California.

The park system in California, including the GGNRA, is my sanctuary, my church. I am grateful for it and I work to protect it for future generations on the local, county, state, and federal levels. But my love for and my protection of the park system does not encourage the exclusion of canines especially in an urban setting where dogs desperately need space to run freely.

My dog, Yoki, is my companion and a huge part of my life. She has stood by me and asked for very little. Since I developed a serious illness 10 years ago, Yoki has lifted my spirits when I am in despair and has shown me unconditional love every day. But I am happiest when I see that she is joyfully playing and

running as a dog should. A walk on the beach at Fort Funston is just the ticket. It is not far from my home and we try to get there 3-4 times per week depending on my physical stamina. Once there, Yoki gets to run freely under my voice control with her dog friends. It is so good for her health and for mine. She is a happy dog because she is able to run and play, then come back to me. And I am her happy human companion being witness to her pure joy. This off-leash freedom is something I can give her when she gives me so much every day.

Without a large off-leash open area like Fort Funston I would not be able to allow my dog this kind of play time pleasure. Due to my illness I am not able to run with her to keep her exercised. So the off-leash freedom to run at Fort Funston in a safe area with other dogs is a godsend to my current life situation. And it is a beautiful sanctuary that supports my spirit at the same time, not at all like a worn out fenced in dog park. There are no other nearby areas in San Mateo County where I can do this. The San Bruno Mountain County Park right next to where I live will not even allow on-leash walking with a dog.

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from being able to provide adequate exercise for my dog. For both my own wellbeing and my dog's, I want to continue to be able to enjoy the GGNRA properties with my dog as I have for the years prior to and since my illness.

From what I have learned, the new plan was not modified in any significant way to reflect the significant concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA may have lost sight of its purpose. It was set up to be recreation areas for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Using fences to surround or delineate any off-leash area in the GGNRA is unreasonable and will be difficult to maintain and unsightly in these natural environments. Fences will make off-leash areas feel like pens and visitors will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please seriously consider the above comments and help those of us who are older or physically limited. We cherish our dogs and their companionship and want them to be able to benefit from off-leash areas in the GGNRA where they can get the exercise and play time they so deserve.

Sincerely,  
Susan L Damron

**Correspondence Type:** Web Form  
**Correspondence:** To Superintendent Dean,

Thirteen years ago, I wrote letters and attended meetings to express my opposition to the NPS/GGNRA's decision to rescind the 1979 Pet Policy.

Tonight I am writing yet again to express my OPPOSITION TO THE PREFERRED ALTERNATIVE OF THE GGNRA'S DOG MANAGEMENT PLAN with the proposed restrictions to off leash recreation.

On a rainy night in January of 2001 I was among 2000 Bay Area citizens who came to protest the GGNRA/NPAs decision to rescind the 1979 Pet Policy which would end off leash dog walking recreation throughout the GGNRA.

Many of us were standing outside in the rain because the venue you selected for this event was too small to accomodate all of us inside.

It was not a good night to be stuck outside. But this meeting was so important to each one of us that despite the rain, cold and darkness, we did not leave. We stayed and tried to hear and see what was going on inside. We had all written many letters, made many phone calls, all in opposition to this move by the GGNRA. That night thirteen years ago, we were there in person to tell you how much we opposed this decision.

I have been walking, with my dogs, at Fort Funston for years. Long before the GGNRA. All the dogs that walked with me during those years, are long gone and I have gone from my late thirties to my 60s. I am now officially a senior citizen.

And still I find myself standing outside in the rain trying to tell you how important off leash recreation is in my life. It is the only recreation I engage in. I dont hang glide. I dont surf. I dont ride bicycles. I dont jog.

I DO walk with my dogs off leash.

If I had known then, what I know now, I would never have voted to turn these lands over to the NPS. But back then, who knew what the NPS was capable of doing to the residents of the Bay Area.

Almost all of our coastline is now within your control. You ignore credible science in favor of junk science because it suits your end goal. You mis-state statistics on purpose. At a recent town hall meeting in Stern Grove you made the statement that dogs are at the top of your list of reported incidents. This is not true. Ive seen the data.

You want us banned from the areas where we have always walked with our dogs off leash. They comprise less than 1% of the entire GGNRA and you want to take away 75% of that 1%

I often think of all the wasted time and money. Time and money that could have been allocated to make this tiny area of the entire available GGNRA lands a destination for tourists and locals alike, where they can walk with their dogs off leash along the dunes or beach. People today travel everywhere with their dogs, and visit areas where their dogs are welcomed.

Ive been hearing a local radio commercial that encourages people to bring their dogs along when they visit Mendocino. Mendocino gets it. Theyre dog friendly and are proud of it! Im sure youve heard that

Carmel is dog friendly as well.

But instead of welcoming tourists and their dogs to the Bay Area, the GGNRA is preparing to allocate two million dollars so you can enforce keeping people and their dogs away from your park, as I saw it referred to in a recent newspaper article.

These areas are an urban park. Our park. Not Your park.

We are here to stay and we will continue to take our dogs on off leash walks in the same areas where we have walked for decades.

I will continue to fight fo preserve off-leash access in the GGNRA.

Sincerely,  
Jean Kind

<b>Correspondence:</b>	We need to preserve off leash recreation for the health and well being of our pets. This in turn will promote the health and well being of our citizenry as we can exercise ourselves as well as our pets. Restricting off leash areas is dangerous for all pf us as we all become less able to properly exercise our bodies along with our canine companions.

<b>Correspondence:</b>	This is serious!				

Dear Superintendent Dean,

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash

access in San Mateo County and on new lands that the GGNRA acquires in the future.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA should not be allowed to change the leash status just because it deems that not enough people are complying with the leash restrictions.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

ilia gvozdenovic

<b>Correspondence:</b>	I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. â€œâ€œ				

I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for all visitors. â€œâ€œ

Commercial dog walking is not an appropriate activity for National Park lands! Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain. Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public.â€œ

Dogs in national parks are incompatible with multiple use activities such as nature viewing. Dogwalkers often fail to observe leash laws and voice control regulations. I have often observed off leash dogs in flushing wild birds. There are many other places for people to enjoy being outdoors than a national park. Please help preserve our national parks.

Thank-you,

Marjorie Siegel

**Correspondence:** In my opinion the recommendations in the of the Supplemental Environmental Impact Statement of the GGNRA are misguided and imprudent with respect to reducing the off leash area of the park. They address a problem that does not exist and create problems that shouldn't exist.

I am 67 years old, retired, and living in the East Bay. Every day my two dogs and I go hiking somewhere around the Bay, frequently on the Marin Headlands and Fort Funston trails. I've been doing this since before I retired for the last fourteen years. In all that time and on all those occasions there have been very few encounters (I can count them on the fingers of one hand) with other park users who have problems with off leash dogs. Instead all the different types of folks I've encountered on the trail seem to have learned to get along with one another, especially after it became evident that, due to funding cuts everywhere, there's no authority figure they can run to with their problems. So dog walkers and dirt bike riders and joggers and hikers and families with children out for a stroll all seem able to accommodate and get along with each other in civil and sociable manner, knowing that they have no choice. I have never had any unpleasant encounters in the GGNRA at all. On the contrary, people usually seem delighted to encounter my dogs and if anyone has any anxiety about them, which is rare, they generally let me know and I take appropriate action to address their concerns.

But I consider myself an open minded person and looked at the report trying to understand what the problem was that led to the drastic recommendations. To my surprise, I found nothing to indicate there was a problem. The majority of park users surveyed were in support of off leash dog walking.

"approximately 22 percent of all respondents who had visited the park and had seen an off-leash dog reported that off-leash dogs detracted from their visitation experience. Twenty-seven percent said that seeing an off-leash dog added to their visitation experience and 49 percent stated that off-leash dogs did not affect their experience" and when I looked at the compilations of incident reports relating to off leash dog walking I was startled to find how few incidents there were of environmental damage or park user conflict. I'm fact the overwhelming majority of incidents involved violations of the off leash laws.

So I'm at a loss to understand what problem needs to be addressed here.

Furthermore the GGNRA has, in my opinion, created animosity and resentment among park users by its very insistence on discriminating against a segment of park users whose behavior doesn't seem to bother other users. Who's next? Can we single out horse riders or dirt bikers or joggers, spotlight whatever incidents are associated with their activities, make them feel as unwelcome and irresponsible as off leash dog walkers?

Rather than let people work out their differences among themselves, as I've observed they can do quite well, this report suggests that an authoritarian bureaucracy needs to impose its will regardless of evidence that there is a problem, creating conflict, resentment and acrimony among park users to justify its actions in the process.

**Correspondence:** My name is Tracey Gold and I'm a responsible dog owner living in Pacific Heights. I take my dog to Crissy Field everyday where he socializes with other dogs and gets his exercise. Off leash versus on leash makes a world of difference in terms of his happiness and and overall health.. He has very strong name recall and has been trained to stick by my side ever since he was a puppy. Training him properly allowed us both to have the quality of life that is far better than making a dog stay on leash or fenced in. I never take my dog to fenced parks because they are DANGEROUS. Nervous owners with nervous dogs are attracted to fenced areas because their dogs are not behaved and the likelihood of a fight is much higher. Attacks are common in fenced areas that serve as bullpens.

I support the 1979 Pet Policy plus off leash access in San Mateo and on our new GGNRA lands. The new Preferred Alternative is extremely limiting and scary. Thank you for listening and I hope you will take my plea and those coming from so many other responsible owners into strong consideration. Please do right by us and our pets.

**Correspondence:** I have two little children; agree that there should be dog management plan in San Francisco ex. Clearly designated spaces where dogs can run free. However I'm more concern with the dog feces left on sidewalks all over San Francisco, dog owners should have serious fines to discourage these areas especially poop visible on frequent public/common spaces/areas. There should be a night & early morning patrol giving out hefty fines to prevent dog owners & dogs from allowing this to continue. In the City & County of San Francisco, a major metropolitan City & County, homeless people living on the street should not be allowed to have a dog or pet. It's not fair to the pets who are malnourished & lack proper hygiene/grooming/cleaning. The City & its people should honestly tackle these sensitive real life issues.

<b>Correspondence:</b>	I absolutely oppose any changes to the long-established dog walking policy at GGNRA. Maintain the 1979 pet policy.				

If wildlife or a sensitive area needs protection, then build fences to exclude dogs from those areas, not the other way around. Fenced off leash areas are completely unacceptable.

Thank you,

Dave Johnson

**Correspondence:** I oppose restrictions on current off-leash areas for dogs.

First, the Preferred Alternative is too restrictive. There is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Second, I oppose fences surrounding or delineating any off-leash area in the GGNRA. The SEIS Preferred Alternative proposes to install fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Fences secure enough to keep small dogs in will hinder movement of wildlife. If fences are not secure enough to keep small dogs in, why have them?

Third, I oppose the Monitoring-Based Management Strategy that replaced the DEIS' Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

**Correspondence:** I'm commenting on behalf of the dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any

compelling reason to eliminate or further restrict the remaining 1%. u havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Samuel

**Correspondence:** I am a dog owner and lover!!!

Being able to take my dog to an area that allows them to run free and play with other dogs is not only fun for the dog, but fun for the owners. In my experience most dog owners are responsible and take pride in the environment.

For those that aren't, education is key.

**Correspondence:** Thank you for the opportunity to comment on proposed leash law changes in GGNRA. I support maintaining a large voice-control region in Crissy Field - - more or less equivalent to Map 10-A. This is one of the few large areas in SF County where dogs can run and play, and for the most part, owners do a good job of keeping their dogs in line.

My wife and I regularly use Crissy Field to let our Westie run and play. Even on heavy-use weekends, it is not the case that dogs interfere with non-dog-family beach usage - - they get along quite well. It is not clear to us what user groups would be benefitted from a significant revision of the GGNRA leash laws, but it is quite clear which user groups would be disadvantaged.

I wish to make it clear that we are not "dogs are every bit as important as humans" dog owners. While we love our dog, and greatly appreciate other dog owners who let theirs play with ours at Crissy Field, if it were clearly established that human interests were significantly diminished by such play, we would be very willing to consider a leash-law change. In our opinions and experience, however, supporting data for such diminishment do not exist.

Finally, we do not believe that the fact that the GGNRA is part of the National Parks System - - with its own history of leash-laws and rules - - is a sufficient reason for changing those in the GGNRA. In general, the NPS was created in order to both maintain existing natural beauty and eco-systems, and allow the public to experience them pristinely. Crissy Field, however, has been a dog run for longer than it has been a part of the GGNRA. We do not believe that the relatively new designation as a NPS area should preclude dogs from enjoying the area as they and their parents did well before that designation. Please note: we neither contest nor lament this designation. The "N" of GGNRA has been a profoundly successful and beneficial structure for the parklands in the Bay Area which it protects, and has allowed thousands and thousands of persons to "R" in ways that would not have been possible had these lands been privatized. We only ask that dogs be allowed to play off-leash in a few of the GGNRA acres in ways that allow them maximal enjoyment as well, so that when they return to their homes in a very densely-populated urban area, they are more relaxed and content. This, too, is an overall feature of the NPS.

Thank you again for this opportunity to comment, and best wishes as you make your decision.

**Correspondence:** The GGNRA's ad hoc off-leash policy is no longer tenable. The GGNRA is currently reviewing comments on a Draft Environmental Impact Statement that discusses pet management in the Park. The outcome of this environmental impact assessment process will dictate how the park is managed for many years.

We all love our dogs. The question facing us all is whether we love each other enough to recognize that how we recreate with our dogs at the GGNRA has impacts on other people and other forms of life. The Wild Equity Institute believes that the GGNRA has not struck a proper balance with its draft document, because it fails to ensure that off-leash dogs remain safe in the park.

The best way to ensure dogs remain safe while roaming off-leash is to ensure that any off-leash area is enclosed with a physical boundary. These boundaries could be post-and-cable fences or natural features. But if a physical boundary cannot be placed around a specific off-leash area, than that area should not be an official off-leash area: it is simply too risky for our dogs.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** I'm commenting on behalf of the dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

---

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I was born and raised in Marin. I am 52 years old. I remember a time when every park allowed dogs as long as their owners were respectful to the park and others that were using it. My family used to hike all over Mount Tam, China Camp, the Presideo and the Headlands growing up. They are some of my fondest memories and may soon be just that; memories.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there has not been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I am very active in my community through Rotary, serving on CSAs, neighborhood associations, MALT, the Environmental Forum of Marin, Boy Scouts, etc and have always tried to lead by example. There has to be a better way of dealing with this than closing access which has already been done to numerous places around the Bay Area. Please do not go forward with this draconian solution. I feel like my efforts

over the years will have been wasted and will give me one more reason in the negative column to move on. Thank you.

Sincerely,

Karl Dannecker  
President  
CMS, Inc.

**Correspondence:** My family and I visit Fort Funston often. It is our favorite place to take our dog to roam free and play in the waves. There are so few areas where we can visit that allow Lucy to be a dog, and for that reason we oppose the GGNRA's dog restrictions.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote. The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Thank you,  
Stephanie

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,

Jeff Dillender

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Building 201, Fort Mason  
San Francisco, CA 94123-0022

Re: Comments on Draft Dog Management Plan/Environmental Impact Statement

Dear Mr. Dean,

I am writing to request that the Draft Dog Management Plan be modified to make dog use in the GGNRA more, rather than less, accessible. I am concerned about the welfare of dogs and dog owners, particularly the urban population that exists in and around the GGNRA lands.

The reality is that the park lands under discussion are part of an urban community, not a wilderness.

The GGNRA is a unique urban open space, the historical result of lands preserved from residential and commercial development as a result of military use and political will in the Bay Area. It was created to serve the outdoor recreational needs of a large metropolitan area. The current analysis and recommendations fail to consider dogs as part of the urban environment in which the GGNRA was created.

Dogs and dog-walking, both on and off leash, existed in the lands now controlled by the GGNRA before the GGNRA was created.

People and dogs have lived together in urban environments for thousands of years and will continue to do so. It is critical to the emotional and physical health of dogs to be able to exercise fully. This is rarely possible on leash or in small postage stamp sized "dog areas"

If dogs are not given adequate exercise they are prone to more physical health problems. More importantly they often exhibit more behavior problems that affect people. As a veterinarian of 30 years I can tell you that dogs that need exercise and do not get it are more likely to have aggression related

issues, including dog bites. I am concerned that if you do you not continue to provide space for dogs to run you will see an increase in the incidence of dog related problems.

The dog policy in the GGNRA has always differed from the policy in other national parks for valid reasons. Dogs should be regarded not as something foreign from which the environment must be protected, but as part of the urban environment which can co-exist in harmony with the other parts of that environment.

Given that people will continue to have dogs, and that these park lands have permitted dogs to run, there is an established expectation that they will continue to do so. Many people made responsible decisions to get dogs while thinking that they had a wonderful place close by to exercise them

In fact, many people made choices about where to live, and bought homes, with the expectation that they would be living in a area where they had access to many beautiful trails that allowed dogs to walk with them. As a veterinarian, I know how important dogs are to people in the bay area. Many people consider them as family members, and they will make life decisions with their dogs in mind.

Personally, I would not move to an area with severe restrictions for dogs, and it would be a factor in my decision to move elsewhere.

It is unfair to punish all responsible dog owners with such severe measures for the problems created by a few dog owners. For example, we do not see similar severe measures being taken against bicyclists for the actions of a few.

Elderly people, special needs people and lower income people are more severely and unfairly punished by these current GGNRA proposals because they will have to travel so far to properly take care of their dogs. They may not be able to do so and may be forced to surrender their beloved companions.

A culture is judged by its wisdom and kindness to the old, the frail and to animals. This harsh proposal reflects poorly on the awareness of the GGNRA. There are more cooperative and community oriented approaches to this problem. A collaborative, educational approach is more humane and balanced.

A multi-use policy is appropriate for the GGNRA, including an adequate balance for dog-friendly and non-dog areas. The vast majority of GGNRA lands are already closed to dogs. The GGNRA should continue to allow a significant portion of its lands for both on-leash and off-leash use. The GGNRA policy should be made more, rather than less, dog friendly and expand dog use areas to allow even more responsible dog ownership enjoyment.

Sincerely yours,

Pamela Bouchard DVM.  
Medical Director, VCA Tender Care Animal Hospital

**Correspondence:** 2/18/14

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Thanks

<b>Correspondence:</b>	02/16/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because...				

I have walked my dogs in Montara, Moss Beach and El Granada on Rancho Corral de Tierra trails for the past 7 years. I mainly meet other local people with their dogs and we sometimes chat while our dogs play together. These dogs are off-leash with no incident.

The Dog Management Plan of GGNRA is to restrict or ban dog walking on and off-leash on the trails that dog walkers use every day (and have for decades). The reasons for these restrictions (dogs destroying the environment and wildlife) are unfounded and all the responsible people who use the park lands regularly

---

(with exception of people who just like to complain and control) know this to be true. Seeing my dogs sniffing and playing with other dogs is sometimes the funniest stuff--we all laugh our heads off. Nothing can replace the joy we all feel being out with our dogs in such a beautiful place. Good for both physical and mental health. Please convince the GGNRA to reconsider their restrictions of dog walking. The local people and dogs will be the ones to suffer and pay the price for such an outrageous, negative plan. Thank you for reading this.

**Correspondence:** I don't take my dog to Fort Funston or to Crissy Field often, but the few times I've taken my pup have been fantastic experiences and not something I'd like to see dog owners (and lovers) everywhere to lose. It's great for people and dogs alike to be able to get out and enjoy the beautiful California coast and weather, and for the dogs to frolic and socialize and run out their energy. Dog owners already have so few places they can take their dogs, and I sincerely hope the NPS deeply considers all of this when they make their final decision about what to do with Fort Funston and Crissy Field, but removing these as options for dog owners in they bay would be a huge loss for everyone.

**Correspondence:** I regularly use the ggnra trails which allow my pet access. I see the same people enjoying the same trails without harm or bother to all people who visit the area. The new regulation is a contradiction to the 1979 agreement for use already in place. The areas in question do not fall under the guidance and use of national parks and should NOT be subject to those regulations. Further review and input from the tax paying individuals like myself is needed. We will not stand by idle where free access to this treasured area can be canceled. The GGNRA needs to reconsider and change to a more inclusive use of the areas agreed upon since 1979.

Sincerely,

William Tyma

Tax payer / dog owner

**Correspondence:** 02/16/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because my dog(s) and I have made Fort Funston our place for rejuvenation and sanity in this vertiginous world for over 25 years! We hike the bluffs to the south of the stairs for about 45 minutes and then we make our way down to the beach. It is spectacular through all seasons and during day light hours. We are respectful of the bird life and other people and their 4 legged beasts. The area is amazingly free from dog feces and litter. Dog walkers are respectful of other groups and keep their packs in tow. All people out at the Fort are sensible, attentive and excellent stewards of the park. Please don't restrict our usage.

**Correspondence:** COMMENT ON GGNRA SEIS Feb., 17, 2014

I live in San Francisco in the Presidio, I have a dog and I vote. I love the GGNRA and all the options for walking/hiking with my dog. I regularly visit Crissy Field, Baker Beach, Ocean Beach and all the trails in the Presidio. Off leash is our preference as both of us get more exercise and the natural interactions with other dogs and people are priceless. Off leash but under voice command, which is a key component of ensuring that dogs are behaving responsibly. When at the beach we play frisbee to the delight of men, women and countless children. We cannot play frisbee on leash!

I am an amateur birder and enjoy watching birds wherever I am. As I continually mull over the proposed restrictions on off leash dog walking I look out at the San Francisco Bay and see that the majority of land has no access for humans or dogs, surely we can afford to let people walk their dogs and share the beach with the birds. This is San Francisco and this is a Recreation Area and so lets not short change the humans and their canine companions.

Love vs. Hate this is an observation made at one of the meetings, which the NPS hosted at Fort Mason where there were lots of easels up so people could write down their comments. My memory of the

comments was that the anti-dog comments came from people who HATE dogs whereas the prodog comments were from people who love dogs. I understand that in comments submitted in 2011 for the DEIS they were overwhelmingly in favor of off leash dog walking and the 1979 Pet Policy by 3:1. So how can hate trump love? Remember this is San Francisco the "City of Love" so cast off your regional biases and let San Franciscans walk their dogs like it is 1979.

Swimming is good for dogs and humans. While it really could be done, for all practical purposes: You cannot swim a dog on leash!

Fencing in your minimalist planned off leash areas would be a travesty and further diminish the magical park experience by separating people from the dog people, bad idea.

Lastly it is a huge waste of the taxpayer's money for the NPS to continue their campaign to push through these unpopular new restrictions.

Sincerely, David Caldwell 411B Washington Blvd., San Francisco, CA 94129

**Correspondence:** As a passionate environmentalist and an advocate for public safety in public places, I understand and share the concerns that both park managers and members of the public have about off-leash dogs in parks. However, regulatory restriction is the wrong tool to deal with these issues. Cultural change through education would be a far more constructive approach, and one that would provide much greater benefit to the parks over the long term.

Dog people are park people. Many of the best stewards and advocates for public parks are those who enjoy them in the company of their dogs. Denying access to the large and rapidly growing segment of the public for whom off-leash dog play is an essential part of their park experience may offer some short-term conservation benefits. But it is the wrong thing to do, and will ultimately damage the parks by cutting off important public support that may be essential to their future.

A much better way to approach this problem would be to reach out to dog owners to engage them in helping to change the culture of dog ownership, to emphasize the necessity of effective voice control and cleaning up after one's dog. If the behaviors of concern - such as allowing dogs to approach people who do not want them near and chasing wildlife, as well as failing to clean up after them - are frowned upon by dog walkers themselves, and are reported to rangers and/or sanctioned by direct comments to the offenders, then people who are trying to do the right thing will change their behavior.

Granted, these changes that will not happen overnight, but they will happen, and ultimately they will be far more sustainable as well as more appropriate than the current proposal to simply exclude so many innocent park users.

For many dog owners, especially the growing numbers of childless people and empty-nesters, their dog is a member of their family. Denying such families the ability to use the parks for the simple pleasures of off-leash play - such as throwing and chasing a stick - is not only unnecessary and wrong, but is ultimately not in the interest of the parks. Please reconsider, and join with responsible dog owners in developing a more just and sustainable approach that will build rather than diminish public support for parks as a social priority.

Thank you for considering this comment.

**Correspondence:** 02/17/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because we were at Ft. Funston Saturday with 2 families and 5 kids and 2 dogs. We wouldn't have been there if it weren't for the dogs because they need to get out every day. But we adults need to get out too. The kids definitely need to get out or they'd be inside and play video games. It benefits us all. The kids would only play video games and be com e loners and psychopaths (probably not only my kids), the adults would lounge (which would be fun for a few days) and start drinking, eventually get into drugs and probably end up on the street. The dogs would get cabin fever, escape and cause who knows what havoc on the streets.

That's why we need open spaces for the dogs ... and the humans.

**Correspondence:** 02/17/14. I oppose The Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan because... A huge number of San Franciscans rely on these spaces to provide recreation and relaxation for themselves and their families- including the family dog!! San Francisco is so unique in its access laws and provisions for people with dogs. This is an absolutely essential piece of living in this area. Without access for humans AND their dogs to the coastline, many residents, myself included will be robbed of the simple recreation I most treasure. Whatever issues and impacts arise from the use of these spaces by dogs, can certainly be managed and mitigated through education and thoughtful appeal to a very sensitive, responsible, and responsive public, which is exactly how I'd describe 99% o SF dog owners.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Curtis Cochran

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my service dog to many GGNRA trails and beaches here. This is the third dog that I am training for search and rescue work and she NEEDS to run while under control in areas that allow this. We simply cannot just train at Rodeo Beach!

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you.

Bob Burns RN

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Michael Yablon

**Correspondence:** We are completely against the trails in question being closed to dogs. We have lived in Mill Valley for 17 years. We choose to live here to enjoy the open space and to hike and walk with our dog. We have always respected the trails as we share them courteously with dog owners and non dog owners alike.

The banning of dogs on the trails in question will make our community less desirable for so many of us to live here.

Please count me among the hundreds of folks that are against this outrageous plan.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

As an East-coast person I've participated with the dog walkers at Fort Fungston while visiting. Having seen first-hand the current amazing use of this recreational area, I can only say the GGNRA is as misinformed about this issue as Mayor de Blasio of New York is misinformed about the tradition of the Carriage Horses of New York. I can only assume, the GGNRA has a hidden agenda, as de Blasio has. Ignore what constituents want and watch your smaller parks absorb the 75% displaced dogs converge on the smaller parks and still open off-lease areas.

I oppose the Preferred Alternatives because they are too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on NEW LANDS that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome, including those without dogs. Multi-use areas must remain open and accessible for all uses. Fences require maintenance. That's an added cost to whom?

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Lack of foresight regarding traffic, parking, over-crowding and inconvenience for owners who employ dog walkers will forever change the current amicable status-quo. Like that Direct TV commercial, don't change, because if you do you may have to watch the downfall of an entire civilization.

Sincerely,  
Amanda Birnbaum

**Correspondence:** Frank Dean, GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

February 3, 2014

Dear Superintendent Dean,

I have lived in Sausalito and owned a business in San Francisco for 23 years. During that time I have loved and lost three golden retrievers - and I can honestly say the best moments of those 23 years were spent walking with my dog(s) off leash on beaches in the GGNRA that you now propose to restrict from dog walking.

I chose San Francisco as my place of business and Sausalito as my residence, precisely because of its dog friendly policies and the extensive urban recreational access both locations afforded.

I write now and I join the San Francisco Board of Supervisors, Congresswoman Speier, Congresswoman Pelosi, the Crissy Field Dog Group, Animal Care and Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact based in its planning or findings.

How is it possible for the GGNRA to simply ignore the voices of so many individuals, groups and elected representatives?

How is it possible for the GGNRA to simply not consider or address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS?

These unanswered questions lead to the conclusion that the process has been only for show and the GGNRA never intended to incorporate public or even elected representative's views.

For 23 years I have walked at Crissy Field, East Beach, Ocean Beach, Baker Beach, Rodeo Beach and throughout the hills of Fort Cronkhite. I cherish these walks with my dog(s) and the opportunity to enjoy recreation with my dogs after work, and close to the places I live and work.

I located my business in San Francisco for the very reason that East Beach, Baker Beach and Fort Cronkhite provided easily accessible off leash dog walking on my way to and from work. I have paid California's high taxes on my home, my income, and San Francisco's additional city taxes on my small business - because San Francisco and Sausalito have provided such wonderful dog recreation access.

I'm shocked at the GGNRA's conclusions and preferred alternative which demonstrate a lack of understanding that the Bay Area GGNRA lands must serve an urban population.

When the GGNRA was created in 1972, Dog Walking was already a long standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture - and this use must continue indefinitely.

There are millions of people with dogs in the Bay Area. People who work, who have families, and have dogs. Bay area residents need access to off leash dog recreation in the mornings and afternoons - access that is close enough to their homes and work to allow them to strike the balance between work, family, pets, and recreation. The preferred alternative will result in millions of people being unable to recreate with their dog(s) - in the GGNRA lands these families support with their tax dollars.

I firmly support preserving the GGNRA's 1979 Pet Policy. The Bay Area GGNRA is a unique national recreational area in an urban environment - not an isolated untouched park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties.

In Marin County there will be one beach where all of Marin's dogs can recreate off leash. This beach has extreme tides, forceful waves, and will be packed with thousands of dogs - because it's the only off leash beach that will be preserved for all of Marin County in the preferred alternative. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

It would appear the GGNRA's preferred alternative intentionally sets up the proposed dog policy to fail - by restricting a large dog and urban resident population to use such small areas that over crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And this will lead to even more restrictions - which is precisely what the GGNRA has preferred all along.

Why does the GGNRA rely on outdated studies and information for the latest supplemental environmental impact statement?

Why hasn't the GGNRA updated its enforcement data since the last draft EIS was released?

Is it possible the GGNRA has gone through this process always intending the end result to be an overly restrictive dog policy that ignores the urban location of the recreation area, is unfair to tax paying residents, and is designed to fail before it is even released - ensuring the GGNRA can eventually simply do away with any dog access in the Bay Area GGNRA locations?

How is it that the SEIS has many assumptions that are not documented?

How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?

Again. I join thousands of residents, elected representatives of California and San Francisco, and groups dedicated to animal safety and I ask the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,

Lynn Keller  
Resident  
Sausalito, California

<b>Correspondence:</b>	If we want to have "balanced dogs" we need to meet their needs. The end of a 6 foot leash is not enough to create a balanced life. I have seen incredibly stable and balanced dogs in the off-leash areas where I walk my dog. I have great concern for what behavior we will create with our canine companions when we limit their balanced life.

<b>Correspondence:</b>	People have rights that dogs do not have. People have the right to take a walk in a national park without being concerned about a loose dog attacking them, or even coming up to sniff them, with a slobbery snout. People should be able to sit down without strange dogs swarming around them, and disturbing their peace.				

---

Wildlife also has the right to peace. Dogs are supposed to be on a leash in a park. Dogs do not pay taxes. Domestic animals are not allowed to roam free in National Parks.. If you choose to have an animal, it's your responsibility to find some recreation for it that does not disturb other people.

II don't want to have to worry..."oh, he's friendly."

**Correspondence:** My name is Sarah and I live in NYC. But I grew up playing in the sands of Muir Beach with our family dog! And I am visiting my sister in Muir Beach and was horrified to learn of the GGNRA's intention to restrict dogs so heavily in this historically dog-friendly area. I oppose your "preferred alternative" for Muir Beach, and also for the surrounding trails of the Marin Headlands. Both are far too restrictive and unsubstantiated. I support the "No Action" alternative for these areas. "A"!

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't included any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. There are no studies differentiating impacts as human or dog caused. The SEIS is biased against dogs, and is sloppy science.

The Golden Gate National Recreation Area was established to provide recreational activities to people in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. My Dad and my sister and my brother live right up against the GGNRA, and it's literally their front yard. They use it regularly and rely upon it. I use it and enjoy it every time I'm home, which is several times a year. All Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained, and enforced. Try initiating policies that help make the situation more workable, like better signage, better education of ALL park users about good stewardship, and poop bags at trailheads and parking lots. ENFORCE the Pet Policy and stop barking up the wrong tree!!!

Sincerely

---

Sarah Lovitt

**Correspondence:** I am in opposition of the GGNRA plan to reduce off leash dog walking. I have been an SF resident for 25 years. My family, dogs and I have enjoyed, benefitted from and contributed to our off leash walking areas as well as neighborhood parks.

Walking and playing with a dog provides incredible benefits. I doubt my daughter would have much interest in walking with me at Ft. Funston without our dogs! Dogs make it fun! Being able to take my dogs and daughter out together improves our family dynamic. It also teaches a sense of responsibility and community. We have regularly participated in park and beach clean ups. We clean up messes when we see them. We get to know other people (dogs have a way of allowing people to talk) and have made many friends. We ALL get exercise. Community and responsibility are values I hope my daughter continues to experience as she grows up in SF.

Areas to walk dogs off leash are already so limited. Reducing them further will truly be a detriment to our area- -it certainly will be to me and my - -both the human and dog memebers.

Sincerely,

Susan Fry

**Correspondence:** It is essential for the enjoyment of the public and the protection of wildlife that dogs be allowed off leash only in specified enclosed areas. I have a 70 pound active dog that needs off leash exercise to maintain health. It may be inconvenient, but I find ways to offer him space to run and play that will not threaten precious wildlife resources or frighten those who are trying to find peaceful relaxation in their parks. Dog parks may not be the most esthetic places to be with your pets, but they do allow off leash romp and play time. There are many places one can walk or jog with their dogs on leash.

Many favorite trails are now overrun with off leash dogs that are not command responsive or may respond "sometimes". When chasing rabbits or squirrels or birds, commands are ignored by the majority of canines. These trails are no longer pleasant and instead intimidating, as one never knows when they will encounter an animal that is often wary and nervous. Dog fights on trails are not uncommon, likely due to nervous or territorial dogs. Trails in the East Bay once had horses, but in large part due to dogs, equestrians can no longer use them safely.

I fear that strict enforcement and significant penalties will be the only way to change the attitude of many dog owners. It is a sorry situation when they feel entitled to have so many parks and trails open to their pets, while denying the impacts to others including those animals who rely on minimal disturbance to survive.

Thank you for your consideration.

**Correspondence:** I personally would not have a dog for a pet in the city. It is so unnatural for a canid to be cooped up in a house or apartment or confined to a small yard all day....they are thwarted every day, since their nature is to roam a territory. This should be obvious. It is a difficult question, but I do feel the wildlife that co-inhabits our open spaces is harmed by a daily onslaught of overwrought dogs.....thus, a policy protecting indigenous wildlife is necessary. Truly if I had my way i would discourage people from having dogs in the city on the premise that it is cruel to confine an animal in such an unnatural habitat.....

**Correspondence:** To Whom It May Concern,

I'm concerned with the planned reduction of off-leash areas planned in the SF Bay Area. While crucial habitat and nesting sites should be protected, San Francisco is a highly dog-centric city, with more dogs than children. Dogs often provide a link with the natural world and the crucial impetus for residents to get outside and exercise.

I'd prefer to see more education for dog owners, teaching them the importance of not allowing their dogs to chase birds or dig holes in parks, rather than banning some of the favorite off leash areas.

Thank You,

L Roth

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please, please please do not move forward in pushing this action through. I will be devastated and Charlie will be devastated, too. This is what makes San Francisco so wonderful - is allowing open fields in an urban environment for all!

Sincerely,  
Jena Garlinghouse

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Leah Goldberg

**Correspondence:** Thank you again for accepting comments on the GGNRA Proposed Dog Management Plan. The following text is a revised submittal from an earlier comment period being offered here as a reminder that the problems experienced due to off leash dogs in 2009 are generally the same as those experienced today only more so: there are now more dogs than ever being brought to the area covered by the GGNRA. Also, based on recent personal experience and relevant studies there has been little to no improvement in the behavior of animal owners and acts of civil disobedience in regards to the existing rules are on the increase.

---

These records are based on the GGNRA's Criminal Incident Records for the year 2009 (Redacted) that relate to domestic animal issues at the GGNRA. The incidents that were available to us have been categorized and copied into this comment for the record.

These reports were provided at the request of a colleague under the Freedom of Information Act. We believe information included in all Criminal Incident Records related to domestic animal incidents should have been included in the Draft Environmental Impact Statement.

In reviewing the 2009 Criminal Incident Records several items stand out.

1. Based on these 2009 reports the professionalism of the U.S. Park Officers and Rangers was outstanding during this difficult period of transition and should be commended for their performance. As local naturalists and wildlife advocates these officers have our gratitude for performing a very tough job with patience and dignity. Thank you!
2. There are a high percentage of non-compliant dog owners and professional dog walkers who provide false information or are rude and verbally abusive to the U.S. Park Officers. We are saddened to read about these incidents but not surprised based on our own experiences with non-compliant dog owners in the GGNRA.
3. There are a surprising number of fraudulent representations of dogs as Service Dogs
4. There are a high number of non-compliant dog owners who are repeat offenders.
5. Professional Dog Walkers place a tremendous burden on the natural resources of the parks and GGNRA Staff.
6. There is a high degree of variability between Park officers and at different park properties as to whether a non-compliant dog owner will be cited or given a warning.
7. Many dog owners whose dogs have acted aggressively towards other dogs or visitors flee the scene when an injury occurs or a complaint is registered.
8. Many non-compliant dog owners are abusive to visitors who complain to them about their dogs behavior or their handling of their dog.
9. Overall there is a tremendous burden to the U.S. Park staff in dealing with non-compliant pet owners.

Some conclusions:

1. Based on many hundreds of hours over decades of personal observations while at the GGNRA and the number of records in this 2009 report, the officers are observing only a very small subset of the number of actual domestic animal code violations that occur within the GGNRA. Of course the most egregious violations, if observed by visitors or park staff, are reported and handled quickly by officers. It is apparent that the vast majority of violations of rules are never reported by visitors or observed by park staff. Naturally, many non-compliant owners change their illegal behaviors quickly upon noticing the presence of park staff. Due to the size of the parks compared to the parks small number of staff a visitor can hike for many hours, even days, without ever coming in contact with park staff. Therefore the incidents in this report should be considered as a small percentage of the overall violations that do occur within a year at the parks.
2. The non-compliant dog owners listed in the majority (>90%) of incidents in the 2009 Criminal Incident record are given a verbal or written warning. The reports indicate that their names are entered into a database and they will be cited for subsequent infractions. During this transition and education period I personally concur with this method. However, using traffic law violations as a metaphor for pet rules in the parks is not unseemly and if licensed auto drivers come to expect only a warning when they are caught running a stop sign they are much less likely to comply with that law in the future.
3. Repeat dog rule offenders should always be cited and chronic offenders fines should increase with the number and severity of the offense.
4. Professional Dog Walking should not be allowed but being that the burden of proof is so high for the officers, all dog walkers should be limited to three dogs per walker.

5. The burden on the patrolling officers could be greatly reduced by reducing the area that domestic animals are allowed. While on-leash will always be the preference for naturalists the burden of cat and mouse game of on-leash/off leash game that is repeatedly played by irresponsible pet owners in the many areas of sensitive habitat could be virtually eliminated by making these changes.

#### GGNRA 2009 Criminal Incident Records involving dogs

Off-leash dogs at the GGNRA have harmed park visitors.

13 Records, at least 13 people injured

140009008641 Muir Beach, dog and juvenile on boogie board collide in water, boy taken to hospital for medical care

070009-012319 Ft. Funston 3 dogs charge visitor, one bites visitor

060009-000882 Ft. Funston 1 Dog bites NPS Employee, owner flees

270009-003014 Presidio Pacific Arguello 1 dog off leash bites visitor

Being walked by Professional Dog Walker

200009-003278 Crissy Field One child bitten, another harassed by off leash dog

270009-004443 Presidio Pacific Arguello - Bicycling tourist attacked, bitten by group of dogs being walked by Professional Dog Walker - hospitalization required

070009-006549 Ocean Beach Off leash dog attacks, seriously injures off-leash dog and then bites dog owner

260009-009703 Presidio Riley Ave. 8 dogs off leash, one bites visitor

Being walked by Professional Dog Walker

070009-009837 Ft. Funston 1 dog off leash bites Hang Glider when landing, owner flees

070009-011151 Ft. Funston Off leash dog attacks, seriously injures off-leash dog and then bites two dog owners

200009-011718 Crissy Field Visitor bitten by off leash dog, dog owner flees but tracked by vehicle license and cited

070009-011102 Ft. Funston Two off leash dogs attack, injure third off-leash dog, a visitor (not a dog owner) was bitten breaking up the three dogs, requiring care. One owner was slightly injured. All three dogs over 125 pounds in weight.

150009005047 Stinson Beach - dog bites adult jogger

070009009173 Ft Funston person with leashed dog that had been attacked by group of unleashed dogs asked person responsible for off leash group to leash her 10 dogs. Person with unleashed dog group accused of throwing coffee on car.

Non-compliant, aggressive and/or abusive dog owners interfere and endanger Federal Officers and Rangers:

260009-001736 Portola St, Pres. 4 aggressive off leash dogs nearly bite ranger

200009-011332 W. Bluff Picnic area - off leash dog harassing Police Horses

Disorderly Conduct

200009-009110 Mountain Lake Professional Dog Walker, 7 off leash dogs, 2 harassing Police Horses, walker rude and disorderly to officer

260009-010113 Ecology Trail 6 off leash dogs, harassing Police Horses, Professional Dog Walker rude, non-compliant and disorderly to officer - only verbal warning due to hazard to horses and officers

260009-010431 Ecology Trail 24 dogs off leash in on-leash zone, 3 Professional Dog Walkers given verbal warnings due to hazards to horse and officer

030009-011260 Ft. Mason Non-compliant, disorderly, abusive conduct towards a Police Officer from off leash dog owner in an on leash area while officer is performing duties. Dog Owner resisted arrest and claimed to have an illegal agreement with another U.S. Park officer.

260009-011736 Pops Field Professional Dog Walker, 6 off leash dogs, 1 charging, harassing Police

Horse, professional dog walker non-compliant to officers commands  
 070009-012408 Ft. Mason Off leash dog in on-leash area attacks Police Horse on Ft. Mason Horse Trail requiring use of force (pepper spray) by officer  
 070009000382 Ocean Beach off leash providing false information  
 070009000615 Ocean Beach 1 dog off leash, resisted officer requests  
 070009000615 Ocean Beach 1 dog off leash, resisted officer requests  
 060009000909 Sutro repeat, 2 dogs off leash, resisted officer

 260009-001283 Portola Dirt 3 dogs off leash, owner disorderly  
 070009-001883 Ocean Beach 2 dogs off leash in WPA, 2 disorderly owners  
 030009-002486 Ft. Mason 40 dogs off leash, abusive & non-abusive owners  
 230009-007759 Kobbe/Washington 1 dog off leash in on-leash zone  
 disorderly owner  
 170009-007110 Milagra Ridge 2 dogs off leash - disorderly owner  
 230009-010532 Ft. Mason 3 dogs off leash in on-leash zone, owners disorderly  
 130009-011660 Tenn. Valley 1 Dog in No Dog area, disorderly report

Off-leash dogs have been involved in many dog fights and dog bites at the GGNRA.  
 260009-000538 Lombard Ruger Pres. Off leash dog attacks, injures on-leash dog  
 070009-001603 Ft. Funston Off leash dog attacks, injures on-leash dog  
 070009-002888 Ft. Funston Off leash dog attacks, injures off-leash dog  
 030009-005768 Ft. Mason Off leash dog attacks, injures off-leash dog, false information given by dog owner  
 070009-006064 Ocean Beach Off leash dog attacks, injures off-leash dog, owner flees scene  
 200009-006422 Crissy field Off leash dog bites, injures off-leash dog  
 030009-007267 Ft. Mason Off leash dog attacks, injures off-leash dog, false information given by dog owner, flees scene  
 080009-008403 Mori Pt. 6 dogs off leash, one attacks, causes stroke to on-leash dog  
 20009001231 WPA off leash dog bites officer  
 07000902736 2 dogs off leash, one bit officer and growled  
 070009007313 Ft Funston woman bit by German Shepard, woman required medical care  
 2000097656 WPA two dogs bit a miniature leashed horse, stopped when bystanders kicked the dogs and

pulled their collars, horse required UC Davis vet hospital care  
070009008771 Ocean Beach pit bull attacks bulldog, bulldog injured in head and eye requiring vet care. Racist, foul language from group associated with bulldog, group fled before officer arrived. Person separating the dogs, punched dog, and was bit.  
14009188 Muir Beach pit bull and boxer fight, boxer required \$315 vet care from bite  
0700090140048 Ft Funston group of off leash dogs, one dog bit human  
0700090003500 Ocean Beach off leash golden retriever bit by 1 of 3 off leash pit bulls. Dog required 36 stitches \$950 in vet costs  
130009004632 Marin Oakwood Valley Trail May 8, 2009- coyote bit off leash dog which was off trail, dog required vet care.  
1140009013962 Rodeo Beach - unleashed dog snapped, growled, humped another unleashed dog then dog was bitten. Owners argued, foul language ensued.  
60009001627 Sutro 2 dogs chased another dog, false information to officer  
70009001710 Ft Funston 2 off leash dogs; 1 dog owner kicked dog

Off-leash dogs have been injured at the GGNRA falling off steep cliffs:  
070009002454 Ft Funston, off leash dog ran away, stuck in cliff, Fire Dept, Ambulance  
070009008417 Ft Funston dog stuck on cliff, technical rescue required  
070009009156 Ft Funston dog stuck on cliffs, Fire Dept. dispatched for rescue. Two beach patrol officers, 3 rangers, 1 park police, 10 firefighters required 2 hours for this preventable rescue.  
0700010001 Ft Funston man and dog stuck on cliff, SF Fire Dept rope rescue required  
070009004582 Ft Funston dog and person stuck on cliff, 3 park rangers, 2 life guards, rope rescue required  
070009013710 Ft Funston dog and person stuck on cliff 12/16/2009, several park officers required for rescue  
070009-001832 Ft. Funston Dog fell over cliff - Heavy Rescue required  
070009-010997 Ft. Funston Dog fell over cliff - Heavy Rescue required

Charging and growling off-leash dogs frighten visitors and hamper their ability to enjoy the GGNRA:  
200009-006182 Halleck/Mason 1 dog off leash repeatedly runs into path of bicyclists in Escape from Alcatraz triathlon Race, interrupting endangering riders  
070009-007421 Ocean Beach 1 off leash dog knocks down, bruises two children  
070009-008052 Ft. Mason 2 Dogs harass 2 horses whose owners harass dogs  
200009-008867 CF Beach 2 dogs off leash aggressive towards complainant visitor  
020009-010027 Aqua. Park 1 off leash dog harasses visitor who complains to dog owner - dog owner then abuses visitor  
260009-012622 Ecology Trail Visitor Complaint - 8 dogs off leash in on-leash zone, 2 dogs attack visitor, Professional Dog Walkers flees  
070009013141 Ft Funston - dog jumped out of car, nearly hit by officers vehicle, owner did not stop immediately, visitors helped place dog in officers vehicle

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Hanna Bockh

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Please reconsider this on behalf of all of the good dogs and dog owners here in San Francisco.

Sincerely,  
Alica Lemler

**Correspondence:** Dear National Park Service Personnel -

Thanks for this opportunity to comment on the GGNRA dog management plan. I am a strong supporter of National Park values and policies, and I appreciate what you have done so far to uphold park values within the GGNRA - especially those values that protect wildlife, seek to preserve nature, and that allow responsible recreation ensuring the sustainable future of the parks. Thanks for providing these lands and for protecting them for people and nature of the Bay Area.

In general, I am pleased and supportive of the Draft Dog Management Plan/ Supplemental Environmental Impact Statement. I appreciate the thoughtful review that you have done, and the careful presentation of the various alternatives for each of the open spaces. I feel that The National Park Service should maintain its strong and effective dog management policies within their parks, including the Golden Gate National Recreation Area.

1) We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs. San Francisco is a relatively small urban area that hosts dozens of endemic and/or endangered species. Many users - including myself - come to these areas to learn about and see the nature enclosed in the parks. Many of the park segments contain critical patches of habitat for endangered species and other nature. The presence of dogs in many of these areas can be disturbing to wildlife, and should be restricted in some. Please make sure that the most critical wildlife areas are designated as off limits to dogs.

2) If there are to be off-leash areas, these should be clearly marked off with fencing, a cable boundary marker, or natural borders such as thick bushes. In many city parks without boundaries, I have seen off leash dogs (often on "voice control") spill over into adjoining areas. This essentially extends the off-leash area and allows other visitors in adjacent areas to be affected by dogs when they don't wish to be. It will be easier for everyone if there is a clear boundary; dog owners can relax and let their pets run more freely, and other visitors and wildlife can have more assurance that they will not be disrupted by off leash dogs.

3) Park officials need to effectively enforce the dog rules. Unfortunately, many of the park rules are not followed by dog owners. Just recently my family was hiking in Marin County when an off-leash dog ran up and began aggressively barking at my wife, with the dog owner nowhere in sight. My daughter, who is under two years old, was visibly shaken and brought to tears. By the time the owner approached, with claims that her dog "never acts like this", the day and hike were already ruined for my family. When I asked the owner to please keep her dog on a leash, she became hostile, and barked that she said she was sorry, what did I want from her. I simply said that she should keep her dog on a leash in this area, to which she gaffawed and walked off with her dog still off leash. My baby daughter could not be calmed, and we had to end our nature walk.

Unfortunately, although there are many dog owners who respect the laws, there is a visible and vocal minority of dog owners who do not respect laws or the rights of other citizens. These people ruin the park experience for all users - dog owners and non-dog owners alike. They give other dog owners a bad name, and honestly if all dog owners were respectful and aware of the needs of wildlife and other people, perhaps there would be less need for stringent dog laws. Unfortunately, too many of our San Francisco citizens will not respect these laws unless they are effectively enforced.

I recently attended a town hall meeting organized by Jackie Spier at Stern Grove to discuss and learn about the GGNRA dog walking plans. Even at this meeting, an off-leash pit bull was allowed to disrupt the meeting. Not only was the owner not in control of her dog, she admitted to not even having a leash. And of course, there were absolutely no repercussions for this dog owner. Does someone need to be attacked or injured before we hold people accountable or enforce our laws? How much wildlife is attacked or chased every day by dogs with no accountability?

4) Visitors to the park should be limited to a maximum of two dogs per person. I live at the trailhead of a large open space, and I see that people with more than two dogs are often not in control of all of their dogs; they do not notice when their dogs defecate and they do not keep them under control. There must be limits to the numbers of dogs that people can bring, and this number allowed must be justified with real information about how average users handle their dogs.

5) Commercial dog walking should not be allowed in the GGNRA. Other commercial enterprises typically must go through review to evaluate their impacts, benefits, and alignment with the parks' mission. This has not been done for commercial dog walking. Furthermore, commercial dog walking - often with many dogs in tow - can have a greater impact on trails, wildlife and other users than is fair. And this is not a recreational activity - it is a commercial activity that does not align with park values or mission.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it is by far the most dog-welcoming of any real estate under the park's jurisdiction.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

<b>Correspondence:</b>	Dear National Park Service managers,				

Please accept this brief comment on the National Park Service's proposed Draft Dog Management Plan/Supplemental Environmental Impact Statement. I am concerned that the Plan does not strike the proper balance between the Park's mandated duty to protect endangered, threatened, and sensitive wildlife, particularly bird species in the GGNRA with the Parks' discretionary decision to provide access for users' dogs. Protection of listed and sensitive species must take priority over dog use. That being said, the proposed plan appears to be a good faith effort by the NPS to provide more trails and areas where dogs are prohibited within the San Francisco portion of the GGNRA and to better enforce the park's dog rules, while still allowing substantial opportunities for persons with dogs to enjoy the GGNRA. One addition should be to include fencing off or otherwise restricting areas designated for off-leash dogs. Any visitor should be limited to no more than two dogs. Although if I were writing the Plan, I am sure I would think even more stringent restrictions on dog-owners would be appropriate, I do believe the NPS's proposed compromise is a reasonable balance that is absolutely essential for the NPS to meet its mandatory wildlife protection obligations.

Thank you for your efforts to create a sustainable GGNRA.

Sincerely,

Michael Lozeau

**Correspondence:** As a parent of two dogs, I ask that you do not suspend off leash privileges for any of the parks, especially Fort Funston or Chrissy Field. We have grown quite fond of them. I can understand that there are dog owners who do not clean up after their pups. I see more people doing this than not doing it. If I happen to notice someone leaving a mess, I offer them one of my bags. Please reconsider this idea and do not punish the good dog owners. Taking our dogs on day hikes is a big part of every weekend, as well as many fun afternoons.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a

---

drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,

Adam D. Borod  
3245 Clay Street, Apt. 3

February 17, 2014

Dear Superintendent Dean,

I believe it is important to note that when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs in this urban recreational area. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas.

This makes no sense and is setting the dog management plan up for failure.

I strongly urge you to keep Crissy Field and East Beach open to off leash dog access.

I also strongly urge you to keep Muir Beach open to off leash dog access.

I also urge you to maintain the off leash dog access in the trails at Fort Cronkite which are currently open to off leash access.

I also urge you to maintain the on leash dog access in the trails at Fort Cronkite which are currently open to on leash dog access.

Thank you for your consideration in creating a more balanced plan.

Sincerely,

Lynn Keller  
Resident  
Sausalito, California

**Correspondence:** Having safe, accessible and public areas for our animals/dogs/pets is essential. One only has to look at the plight of dogs in Russia in these olympics to see what the effects of overly restrictive policies can have. While there are multiple options for humans to enjoy public spaces, many of us have 4-legged friends that also come with us. To restrict our ability to access these areas takes away areas that our taxes pay to maintain. Please save off leash areas for mixed use by both off leash animals and people. Help educate people about safe handling of off leash dogs. Provide education, provide assistance, provide training, but do not legislate barriers that only generate more aggression and animosity.

**Correspondence:** I'm writing to express my strong opposition to GGNRA's new draft dog management plan. I exercise my dog on Crissy Field/Fort Mason and Ocean Beach daily and our walker takes her to Baker Beach and Fort Funston. There would be very few places in the city where she (and I) would get sufficient exercise if this plan were implemented, and roaming the beaches and parks is one of the reasons I love living in San Francisco.

I oppose fences for off-leash areas in the GGNRA because my dog is very shy and does not feel comfortable running in the fenced areas within dog parks. With no alternative free space, she will not have anywhere to exercise.

The purpose of these recreational areas within the city is to give people and their dogs access to trails and beaches. Denying access for our dogs would prevent many people for enjoying these recreational areas.

Sincerely,

Anna

**Correspondence:** In the many times I've been to these parks, I haven't experienced any safety or off-leash dog misbehaviour hazard, dog to dog or dog to person. Dog owner's who take off the leash are well aware of their dog's need to be properly trained to begin with.

The original platform to promote these areas being converted into National parks to begin with and garner proper support was to allow pets being off-leash, so it will be a contradiction of promises.

**Correspondence:** It shocks me to think that so much space is designated to be taken away from people that enjoy using these areas with their beloved pets. If they are no longer allowed to go there to enjoy the outdoors and exercise their dogs, where do you think they'll end up going? They have to take their dogs somewhere to exercise them. I foresee many, many people using areas such as small city parks to run their dogs; areas where dogs have either always been banned or only allowed on-leash. Perhaps the powers that be see this as a new revenue source for issuing tickets to such offenders? I also see many more aggressive dog issues as people are forced to use smaller, congested designated dog parks; areas that are frequently used by owners that are either ignorant of the need, or are just too lazy to provide proper supervision. I thought recreation areas are for people to enjoy 'recreating' in . . . without their beloved dogs, I don't see these same people going there at all. So who exactly benefits from banning dogs? The occasional GGNRA user and the tourists, rather than the local people that have come to enjoy using these areas daily? It makes absolutely no sense to me! I'm just glad that I have places to go with my dogs, and that I don't live in and around SF!! Please reconsider these bans. Take a page out of Carmel-by-the Sea's book, and allow everyone the same benefits that the lucky folks down there enjoy!

**Correspondence:** Hello,

My name is Ashley and my dogs name is Lilly. Lilly is a Husky mix, she needs at least 2 hours of exercise a day at a minimum, which she gets. However, she does love walks, but even more she loves to run! She can do this on leash with me, but not as fast as she can with out it. Her favorite part of the day is getting to get off the leash and run as fast as she can, sniff things, and play with other dogs. She is loving and kind, she would never hurt anyone or anything. She is more afraid of people then they are of her.

---

It would be horrible and she would be very sad if she wasn't able to run off leash. Dogs are like children, they are messy and they run and play with no fear. If you think that dogs should be on a leash, then why shouldn't kids be on leashes. They are wild, and out of control, messy and dirty, they scream and cry. It's the same thing, our dogs are, our children. We love them and want the best for them. We will do anything to protect them. I understand that there are some bad apples, but that shouldn't be the reason to punish all dogs. I always pick up my dogs messes, and even ones that are not ours. Dog owners are a community and we are there to help each other out. Tell us what we can do, to make the situation better. Don't take it to extremes yet, give us some help, throw us a bone.

There are not many dog parks, and we don't have a lot of options. We are trying to keep the small areas we have. Think about your options. Please don't go through with this. Lilly and I would greatly appreciate it! She loves to run and this would be heart breaking to me and her. Her mood will change and just like humans she will be depressed due to her lack of exercise. Please, please don't go through with this!

Thanks,  
Ashley Hiben

<b>Correspondence:</b>	Dear Superintendent Dean,				

I'm writing to express my concerns regarding the preferred alternative proposed by the National Park Service on the Golden Gate National Recreation Areas' dog management plan. I was recently made aware of the new proposed policy and was surprised and disappointed to hear about it. Although I don't live in the San Francisco area, I frequently come to the area to visit family and friends. When I do, I always bring my dog partly because of all of the wonderful off leash dog areas. Reducing the amount of off leash dog areas will restrict where I can take my dog out to run, play with other dogs and get some exercise. In all of the off leash dog areas I have been to in San Francisco, the one thing I have always appreciated is

how clean and open they are. From my experience, dog owners who come to these areas pick up after their dogs, are responsible with their dogs and enjoy the opportunity to let their dogs be free to run and play. I've had nothing but positive experiences. The new policy seems to be too restrictive and will make it more difficult for me to take my dog out when I'm in th area.

I really hope your agency re-thinks this proposed new policy and at the least, reduces the restrictions being proposed. One of the wonderful things about taking my dog to the San Francisco area are all of the great off leash dog areas especially those managed by your agency.

Sincerely,

Teresa Ernst

**Correspondence:** Dear Sir or Madam:

I strongly oppose the preferred alternative in the GGNRA's new draft dog management plan. I regularly take my dog to Crissy Field and other GGNRA areas. My dog Olive loves to run and play fetch off leash. She is very well behaved and responsive to verbal commands, so is never in danger of harming off-trail wildlife. Depriving her of and I of this activity is a major blow to each of us and our respective physical and mental health. As has been commented before, having off-leash areas are especially important in highly dense urban settings and gives us and our dogs a release.

Thank you,  
Lauren

**Correspondence:** I'm commenting on behalf of the dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that one of my family's favorite activities will be swiped off our "Fun to-do List".

We are an active family with an active lifestyle and much of our lifestyle includes our dog. Our household is happy hugely in part to our dog and limiting access to our dog's favorite playgrounds (I.E. Fort Funston, Muir Beach and Ocean Beach) will be devastating to us all. Especially to our (breed of dog) (name).

The points brought up in the SEIS are completely unjust for such a radical change to be made. My family and our dog won't be able to have the bonding time and exercise like we do on the GGNRA lands at our local, fenced-in dog park. Nothing is quite as fulfilling as having my family together, (your dog's name here) included, out for a day of hiking, observing and learning about the great environment around us.

Please consider keeping the 1979 Pet Policy - it keeps all points of nature and recreation in harmony. It ensures my dog and any other future dogs my family has; will have their space now and for years to come.

**Correspondence:** The EIR greatly understates the extent to which visitors fail to comply with dog rules, in GGNRA and in other areas. In fact, I was astonished to read the claim "The East Bay Regional Park system does not have any major compliance issues" (p.31). I spent a lot of time in the East Bay Regional Parks and cannot imagine a reasonable definition of "major" that would result in that statement being true. Specifically, I frequently see dogs that are supposedly "under voice control" chasing birds (including flightless birds such as quail) and deer, while the dog owners helplessly yell for their dogs to stop. Dogs that are "under voice control" when nothing interesting is happening become unmanaged and unmanageable when their instinct to chase is triggered. And I have seen dogs chasing coyotes. Indeed, one dog owner I spoke with says she likes to visit a specific area of Tilden Park because "every now and then we see coyotes, and my dogs love to chase them."

The evident assumption that dogs that are under voice control will indeed be under control leads to the EIR grossly understating the impacts of dogs in areas where they would be permitted off-leash under some of the plans. Areas that permit off-leash dogs will experience substantial declines in terms of wildlife and bird habitat. This should be acknowledged.

<b>Correspondence:</b>	Please go forth with the preferred alternative for Ocean Beach. I believe the current regulations would be sufficient if they were actually enforced, but that is not the case.				

Dog owners do not regulate each other, and the Park Service doesn't either. As such, I have witnessed dogs chasing endangered species (snowy plovers) as well as migratory shorebirds (willets, gulls, terns, marbled godwits, sanderlings) foraging to build up strength for their journey. I've even seen dogs walking along the rock revetment at the south end of the beach barking at nesting bank swallows. They shouldn't be subjected to the threat of dogs, especially in a National Park.

In addition to wildlife being harassed I have also witnessed people being harassed by dogs. Some people are very sensitive to animals and they do not appreciate it when dogs approach them or their kids. The percentage of dog owners who actually have "voice control" is very low.

Please do not let Ocean Beach become a dog park the way Fort Funston and Crissy Field have. I understand that dog owners in San Francisco need places to take their dogs, but during my visits I have witnessed the blatant abuse of the privilege of being able to bring dogs into a National Park. Ocean Beach is a unique place and should be protected for the sake of the wildlife and park visitors such as myself.

Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** As a pet owner in San Francisco, I'm greatly concerned about the overtly restrictive new draft dog management plan. This plan must be stopped so we San Franciscans can continue to live in dog-friendly, healthy city. The benefits to off leash areas far outweigh the concerns that the plan attempts of solving. Please do not move forward with the plan.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Thank you for your consideration and attention.

Heather

<b>Correspondence:</b>	Keep the dogs out!				

Please, please, please prohibit dogs on Ocean Beach. According to the current signs protecting the Snowy Plover from Lincoln Way to Sloat Blvd, they should be on leash almost all months of the year. 95% of the dogs are off leash. Is the law not enforced? Are the signs wrong? What do I tell my kids- - signs and laws don't matter? I am a San Francisco native, grew up in the sunset district, and now have lived 3 blocks up Lawton Street for 20 years. Walking on the beach is a daily event. My children grew up playing on this beach.

Let me outline my reasons for urging prohibition, or at least a fully enforced leash law. We have drunken driver laws. 99% of drivers aren't drunk, but we need the laws for those who are. A very few dog walkers on Ocean Beach obey the leash laws or have their dog under "voice control", so we need the law for this vast majority who are breaking the current rules or will break the new policies.

I realize the dog owners are a very powerful force and I fully assume they will get most everything they want in this decision from the most powerful government on earth. But in the hopes of making you think a little about the upcoming decisions, let me tell you a few examples of my experiences on Ocean Beach:

1) Several times playing peacefully in the sand with my small children we had barking, angry dogs approach us, kick sand in our faces, destroy our sand castles, with us not knowing how far the attack would go.. bites? Each time the distant owner would do nothing- maybe lamely call the dogs name or look at us like we were the ones at fault for enjoying some quiet family time in a national treasure. Or even get angry at us! We often just went home disappointed and sad.

2) Stepping on dog feces numerous times. Seeing dogs putting ther feces on the beach while their owners are off in the distance. The new one- collecting their dog's feces in a plastic bag and leaving the bags in piles on the beach or on the paths. Not even the dencency to put it in a public garbage can!

3) Several times being approached by a vicious appearing dog, yelling at the owner to call it off, not knowing if my leg is about to bit off. Owner far away or looking at me like something is wrong with me, not with the dog. Or the frequent remark: "oh, he's really a friendly dog, never hurt anybody".

4) Countless times seeing dogs chasing the protected snowy plovers down into the water. Owner does nothing. Very sad.

5) Just this morning a loud barking dog, audible from 1/2 mile away in both directions, ruining the peaceful morning.

The dog owners lay claim to the land as if it is theirs to do what they wish. They say it's part of being in a city, we must all live together, they threaten to take their dogs out into our neighborhoods if they are denied access to beach, or even, god forbid, required to put them on a leash.

<b>Correspondence:</b>	I will start this with.....All creatures great and small, the Lord God loves them all.				

I am a 4th generation San Franciscan. I have lived in Marin from 1969-1975 and 1999-to the present. It is the most wonderful place. So many people move out of the city to live in this beautiful county and be able to enjoy the mountains and beaches with their families and dogs.

Everyday I hike with my dogs and meet up with other people and their dogs. In so many of our conversations we say how truly blessed we are to be living here and enjoying the outdoors with our dogs and children. There have never been any altercations in all the years I have been hiking.

Why would the GGNRA want to cut off the enjoyment of the majority of the people who hike, with their dogs. Having the freedom to let your dog run , using it's God given energy , and love of outdoors, is something we cherish and should cherish for all our generations to come. The GGNRA issued a Pet Policy in 1974 that should stand on for all those generations.

Has the GGNRA considered what will happen if they ban dogs on all those trails. Where will people take their beloved companion to run ? Dog parks where there have been so many fights not only from the pent up dogs , but from the owners. I have seen way too many people screaming at each other in those parks. They are toxic places for many reasons.

The GGNRA is a recreation area, not a National Park. This area has been enjoyed by hikers, hikers with their families and dogs, bicyclers, visitors from all over the world. It should remain as it is.

Please be considerate and keep the Plan A in effect, the 1974 Pet Policy in effect, for the enjoyment of all creatures great and small.

Mary Lyons

**Correspondence:** As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston for many years.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,  
Meagan

Subject: Public Comments on the GGNRA Draft Dog Management Plan/Supplemental EIS

Dear Mr. Dean:

I hereby submit the following additional concerns and comments on the GGNRA Draft Dog Management Plan/Supplemental EIS regarding the proposed Preferred Alternative for the Cattle Hill / Sweeney Ridge Trail System located in San Mateo County:

1) I am a Pacifica resident who has been using the Cattle Hill / Sweeney Ridge Trail System for over 6 years. I typically hike and run the trails 4 days a week with my dog on-leash between the Mori Ridge Trail located at the base of Sheldance Nursery and Portola Discovery Site or SFPUC Portola Gate (Please Note: the Mori Ridge Trail is mistakenly labeled as the Sweeney Ridge Trail in the Dog Management Plan/Supplemental EIS Alternatives Maps). I am fully in support of continued multi-use of the Cattle Hill / Sweeney Ridge Trail System for all uses including dog walking (leash only), hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I am opposed to GGNRA Draft Dog Management Plans revised Preferred Alternative (Alternative F), which would ban on-leash dog walking on portions of the Cattle Hill / Sweeney Ridge Trail System (including Mori Ridge Trail located at the base of Sheldance Nursery). Alternative F is still too restrictive and severely limits the community of Pacificas use of the Cattle Hill / Sweeney Ridge Trail System for on-leash dog walking purposes. My preference would be for Plan adoption of Alternative A (Map 19-A), which would allow continued multi-use (including on-leash dog walking) throughout the Cattle Hill / Sweeney Ridge Trail System. I would also support Plan adoption of Alternative E (Map 19-E) since it includes Mori Ridge Trail for authorized on-leash dog walking. I would like to reiterate, based on my experiences using the Cattle Hill/ Sweeney Ridge Trail System, that this trail system (including Mori Ridge Trail) is appropriate for continued multi-use purposes for the following reasons:

2

- a) The trail systems existing ranch/paved roads are wide enough to support multi-use purposes and avoid user conflicts.
- b) The trail systems existing ranch/paved roads are surrounded by extremely dense coastal scrub habitat, which serves to prevent and deter trail users (including dogs) from going off-trail and impacting sensitive habitat.
- c) The GGNRA maintains the trail systems existing ranch/paved roads on an annual basis through re-grading of the roads and clearance of overgrown vegetation on either side of the roads. Currently, the GGNRA is in the process of clearing overgrown vegetation within the trail system. On Mori Ridge Trail, I have witnessed trimming of overgrown vegetation (including coastal scrub) up to 4 feet on either side of the trail. This annual maintenance surely causes more impacts to sensitive habitat along this trail system than trail users (including dogs).
- d) The GGNRA makes no clear distinction between on-leash dog walking, mountain biking, horseback riding, or hiking regarding their intensity of use. Therefore, it would be unreasonable to limit or favor one type of use over another.

2) Based on my comments in item 1 above, can you explain why Alternative A (Map 19-A) or Alternative E (Map 19-E) would not be suitable as the Preferred Alternative in order to avoid use conflicts and protect sensitive habitat from trail user degradation?

3) I previously submitted comments on the GGNRA Draft Dog Management Plan/EIS in a letter dated April 26, 2011. This letter focused on the Sweeney Ridge Trail System in San Mateo County and provided detailed comments regarding my trail use experience, problems with the very restrictive preferred alternative, and inaccuracies/discrepancies contained in the analysis of the EIS. My letter is documented in Appendix A of the Public Comment Summary Report for the GGNRA Dog Management Plan/EIS dated September 2011 as Correspondence 2295 (first letter within the Appendix). I was disheartened to find out that none of my comments were adequately addressed in the Supplemental EIS, and that it appears that none of my comments would be responded to on an individual basis. It was my

understanding, per Appendix A of this document, that this appendix contains letters coded differently than others due to the nature of the comments. These letters were not assigned codes as the majority of the letters contained detailed comments referring to specific text within the Draft EIS. Instead responses will be prepared for each letter individually. I am requesting that the GGNRA explain why they did not follow through with responding to the correspondence contained in Appendix A on an individual basis. I am also requesting that the GGNRA reconsider my previous comments as they are valid to the construct of the Dog Management Plan and Supplemental EIS as it pertains to the Cattle Hill / Sweeney Ridge Trail System in San Mateo County (attached is my previous comment letter for your reference).

Please feel free to contact me via email at bcbecker13@gmail.com if you have any questions regarding my concerns and comments. I would also like to request that you continue to place me

3

on your mailing list so that I may receive notifications of future public hearings and updates regarding the GGNRA Dog Management Plan/Supplemental EIS.

Sincerely,

Brett Becker, AICP

Subject: Public Comments on the GGNRA Draft Dog Management Plan/EIS

Dear Mr. Dean:

I hereby submit the following concerns and comments on the GGNRA Draft Dog Management Plan/EIS regarding the proposed Preferred Alternative for the Sweeney Ridge Trail System located in San Mateo County:

1) I am a Pacifica resident who has been using the Sweeney Ridge Trail System for over 3 years. I typically hike and run the trails 4 days a week with my dog on-leash (6 feet in length) between the Mori Ridge trailhead and Portola Discovery Site or SFPUC Portola Gate. I have also used the trail system for regular hiking with my family without dogs as well as mountain biking. I am fully in support of continued multi use of the Sweeney Ridge Trail System for all uses including dog walking (leash only), hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I am opposed to GGNRA Draft Dog Management Plans Preferred Alternative, which would ban on-leash dog walking on the Sweeney Ridge Trail System. My preference would be for Plan adoption of Alternative A (Map 19-A), which would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge Trail System with the exception of the Notch Trail, which would allow hiking only. I would also support Plan adoption of Alternative A with Modification by also limiting use of the Meadow Loop Trail to hiking only. By providing two trails for hiking only, this would help reduce potential user conflicts while protecting the most sensitive habitats within the Sweeney Ridge Trail System. The Notch Trail is a narrow

single track trail located within an identified sensitive Mission blue butterfly corridor. The Meadow Loop Trail is also a narrow single track trail located next to a sensitive fresh water wetland that likely supports California red-legged frog and potentially San Francisco garter snake. The rest of the trails within the Sweeney Ridge Trail System are wide enough (8-12 feet) to allow continued multi use while avoiding user conflicts. Further, these trails are heavily degraded from a habitat standpoint since they are old ranch roads or paved roads that were used to access the old Nike Missile Site. Can you explain why Alternative A or Alternative A with Modification as described above would not be suitable to avoid use conflicts and protect sensitive habitat from trail user degradation? Please explain.

2

2) Please address the following observations that Ive made based on my long term use of the Sweeney Ridge Trail System:

a) The trail system is made up of mostly wide dirt ranch roads and paved roads (8-12 feet wide) that can easily accommodate multi use and allow for safe passing by users. These roads are wide enough to allow park ranger and CDF fire truck use. Please explain the reasons why this was not considered when deciding to ban dogs on-leash from the Sweeney Ridge Trail System.

b) Much of the trail system and surrounding area is degraded with abandoned and graffitied buildings, paved roads and ranch roads. These disturbed areas are not pristine in terms of sensitive habitat with the exception of the butterfly corridor at the Notch Trail and the freshwater wetland next to the Meadow Loop Trail. Please explain how banning dogs on-leash from the Sweeney Ridge Trail System would help reverse this existing degradation. There was no mention in the Dog Management Plan that the abandoned buildings would be removed and those areas restored with native vegetation. Wouldnt this be more effective in improving the trail user experience? Please explain.

c) The existing ranch and paved trails are surrounded by thick coastal scrub/chaparral vegetation (4-6 feet high in most places) with poison oak. It is highly unlikely that trail users with dogs on-leash would desire to go off trail or let their dogs off-leash so that the dogs could go off trail. Please explain why this was not considered in the Dog Management Plan.

d) Most of the small offroad trails appear to be caused by wildlife (deer, coyote, etc.). Please explain why this was not considered in the Dog Management Plan.

e) The Sweeney Ridge Trail Systems topography is steep and rugged and is not suitable for beginner trail users, small children, or people with physical disabilities. This limits the number and diversity of users on the trail system and overall user conflicts. Please explain why this was not considered in the Dog Management Plan.

f) In my experience, I have never had a conflict with another user while walking my dog on-leash and typically see between 0-20 people during my hikes on average. Considering this low number of user traffic, how can there be a case for significant user conflict to justify banning dogs on-leash from the Sweeney Ridge Trail System? Please explain.

g) I have never observed professional dog walkers with multiple dogs (3 or more dogs) on the Sweeney Ridge Trail System. Please explain if this was a consideration in proposing to ban dogs on-leash from the Sweeney Ridge Trail System.

h) The Sweeny Ridge Trail System is a multi-use trail system typically used by hikers, hikers with dogs on-leash, horseback riders, and mountain bikers. How can the EIS analyze the environmental impacts from hikers with dogs on-leash in isolation from the rest of the users? Please explain.

3

i) The Dog Management Plan and EIS make the assumption that most hikers with dogs dont have dogs on-leash while on the Sweeney Ridge Trail System. However, in my observations, most hikers with dogs have their dogs on a 6 foot leash as required by

GGNRA regulations. Please provide additional factual support for these assumptions.

j) During my 3 years of use of the Sweeney Ridge Trail System and being on the trails approximately 4 days a week, I have observed park rangers only a handful of times. I think that additional ranger presence would help provide incentive for all users to follow the GGNRA regulations, including having dogs on a 6 foot leash. Please explain why this wasn't considered in the Dog Management Plan.

k) There is limited signage at most of the trail heads. For example, there is not much signage at the Mori Ridge Trail entrance and the Portola Discovery Site area (intersection of Sweeney Ridge Trail, Baquiano Trail, and Sneath Lane Trail). There should be additional signage that explains the important rules and regulations applicable to all users similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would significantly help in reducing potential user conflicts by educating trail users and reinforcing the regulations. Please explain why this wasn't considered in the Dog Management Plan for reducing user conflicts.

l) In order to protect the surrounding habitat and make sure trail users stay on the designated trails, there should be additional signage installed at the trail heads explaining w/illustrations the local habitat and wildlife. This signage should be similar to the signage installed at the Notch Trail entrance within Skyline College and the Milagra Ridge Trail System entrance. This would also help educate and reinforce GGNRA regulations. Please explain why this wasn't considered in the Dog Management Plan for reducing potential user conflicts within the Sweeney Ridge Trail System.

m) Banning hikers with dogs on-leash would remove a significant user group from the Sweeney Ridge Trail System. Most of the hikers with dogs are local community residents and hike the trail often. Considering that the trails are steep and rugged and fairly remote, hikers with dogs serve as important eyes and ears on the trail system, especially since there is limited ranger presence. Please explain why this was not considered in the Dog Management Plan.

n) The Sweeney Ridge Trail System is one of the few trail systems left in the Bay Area to allow hiking with dogs on-leash. The trail system offers long and steep hikes that are great exercise for both the dog and dog owner. The Dog Management Plan does not provide an apples to apples analysis when describing alternative nearby locations to the Sweeney Ridge Trail System for hiking with dogs on-leash. Please explain this discrepancy.

3) Please address the following specific comments regarding sections of the Dog Management Plan/EIS:

4

a) Page 108, Chapter 2, the National Park Service Preferred Alternative section, Sweeney Ridge / Cattle Hill subsection -

i) Please elaborate on how not allowing dog walking within the Sweeney Ridge area would protect Mission blue butterfly habitat? Dogs are required to be on a 6 foot leash per the regulations and most dog walkers using these trails have their dogs on a leash. Also, there are other users on the trail system, including hikers without dogs, mountain bikers and horseback riders. How is it that dog walking can cause impacts to Mission blue butterfly habitat but hiking without dogs, mountain biking and horseback riding doesn't? Please explain.

ii) Considering that the Sweeney Ridge Trail System is made up of wide dirt ranch roads and paved roads and includes numerous abandoned structures and debris, how is it that this portion can be considered undisturbed contiguous habitat that is rare and contains wildlife that could be disturbed by the presence of dogs? Other areas outside of the designated trail system are inaccessible to hiker and dog alike due to the rugged topography and dense chaparral and poison oak vegetation. These are the areas that

should be considered undisturbed contiguous habitat and by its very nature is already protected from degradation by humans and dogs. Please explain.

iii) The Sweeney Ridge / Cattle Hill subsection states that this site is contiguous with the San Francisco watershed, which also does not allow dogs. This statement is misleading and incorrect. In fact, the Sweeney Ridge / Cattle Hill Trail System is contiguous to the San Francisco Public Utilities Commission Watershed Lands, which is predominantly off limits to the public, not just dogs, since these are pristine lands that provide the Bay Area with 15% of its drinking water source. Please explain why this incorrect comparative statement was made to support the Preferred Alternative?

iv) This subsection states that Alternative C would be clear to the public and would be easily enforceable by park law enforcement staff. This statement is incorrect since it's not clear how the GGNRA will notify the public that dog walking is not allowed within the Sweeney Ridge area. Not to mention, other nearby San Mateo County and San Francisco County GGNRA sites are proposing their own site-specific areas where dog walking will be allowed, including such nearby sites as Mori Point and Milagra Ridge. Please consider that the public can access the Sweeney Ridge Trail System from multiple access points, and that there currently is limited signage to help educate the public to the GGNRA rules and regulations at the major trail heads within the Sweeney Ridge Trail System. This all seems like it will be a nightmare to effectively make clear to the public where dog walking is allowed/not allowed and to enforce. Wouldn't it be more effective to educate the public with appropriate signage and ranger presence while still allowing dog walking within the designated trails as is currently allowed? Please explain.

v) This subsection states that Alternative C would allow multiple user groups to experience the trail and provide balance. This statement is incorrect. By not

5

allowing hikers to walk with their dogs on-leash on most of the trail system, you are not allowing a significantly large user group from experiencing the trail. Please consider that many of the users of the Sweeney Ridge Trail System live locally and access the trail system from 3 very different geographical trail access points. These include the Mori Ridge Trailhead at Shelldance Nursery in North Pacifica, the Sneath Lane Trailhead in San Bruno, and the Baquiano Trail in South Pacifica. Please explain how this will allow multiple user groups to experience the trail system and provide balance?

b) P. 203-207, Chapter 2, Sweeney Ridge and Cattle Hill section of Table 5 -

i) There is a consistent argument made in this portion of Table 5 that Alternative C, the Preferred Alternative, which would not allow dog walking within the Sweeney Ridge Trail System, would have a negligible impact on most of the environmental resources because of the physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails. Why isn't this same argument made for Alternative A, the No Action Alternative? Under the No Action Alternative, dog walking with a leash would continue to be allowed throughout most of the Sweeney Ridge Trail System. The current GGNRA regulations require that dogs must be on a leash (6 feet in length) at all times and dog walking shall only occur on the previously disturbed/designated trails within the Sweeney Ridge Trail System. Per the GGNRA regulations for the Sweeney Ridge Trail System, off-leash dogs are prohibited. Therefore, wouldn't Alternative A have similar negligible impacts on most of the environmental resources because of the mandatory physical restraint of dogs via leash and dog walking only occurring on previously disturbed/designated trails? Please explain.

c) P. 273, Chapter 3, Table 9 -

i) For the Sweeney Ridge / Cattle Hill site, the percentage of visitors walking dogs is described as Low to Moderate. However, it has been my experience (using the trail system approximately 4 days a week for at least 3 years) that the percentage of visitors walking dogs out of the total visitors (hikers, dog walkers, horseback riders, mountain bikers, etc.) is Moderate (10-30 percent) to High (> 30 percent). This means that visitors walking dogs represent a significantly large proportion of total visitors using the Sweeney Ridge Trail System. Please elaborate on how this visitor data was collected and why there seems to be a discrepancy in the proportion of visitors walking dogs?

d) P. 278, Chapter 3, Sweeney Ridge / Cattle Hill subsection -

i) This subsection states that Sweeney Ridge has low visitor use, consisting mostly of bikers and hikers, and low to moderate use by dog walkers (table 9). Based on my experience using the Sweeney Ridge Trail System, I agree that Sweeney Ridge has low visitor use compared to other GGNRA sites. I disagree that visitor use is mostly bikers and hikers. In my experience, visitor use is mostly hikers and dog walkers.

6

Please explain how this information was assessed and why it was assumed that bikers make up a large proportion of users on Sweeney Ridge? I also disagree that the proportion of dog walkers is low to moderate. Based on my experience, the proportion of dog walkers is moderate to high. Please explain this discrepancy.

ii) This subsection states that the closest off-leash dog walking areas outside park property are Esplanade Beach in Pacifica and the San Bruno Dog Park. First, why are off-leash dog walking areas provided as examples when the Sweeney Ridge Trail System only allows on-leash dog walking? Other nearby examples should include on-leash dog walking areas. Second, even though the City of Pacifica allows dog walking on Esplanade Beach, for several years, Esplanade Beach has been completely inaccessible to the public, especially for dog walking, due to significant coastal erosion and storm destruction of coastal access points to this beach. Please explain these discrepancies.

e) P. 279-282, Chapter 3, Visitor Experience -

i) This section provides a description and analysis of the visitor experience to the GGNRA sites relative to off-leash dogs. Please explain why this section does not also provide a description and analysis of the visitor experience relative to on-leash dogs? This would be especially applicable to the Sweeney Ridge Trail System (which currently allows dog walking on-leash only) since none of the Alternatives proposed for the Sweeney Ridge Trail System would allow off-leash dog walking. Please explain.

f) P. C-10, Paragraph 2, Appendix C, Potential Impacts to Vegetation from Dog Walking -

i) This paragraph discusses that to minimize impacts to coastal scrub, chaparral, and grassland plant communities that are found at the GGNRA sites (including Sweeney Ridge / Cattle Hill), on-leash dog walking would be required at all sites except Oakwood Valley. It further discusses that by restricting dog walking to a 6-foot leash, the impacts would be limited to a 6-foot corridor immediately adjacent to the trails. This paragraph concludes by stating that overall, impacts would be limited to the trail and the 6-foot corridor, which is a relatively small impacted area when compared to the size of each site. Based on my observations using the Sweeney Ridge trails, the trails are located predominantly within coastal scrub, chaparral, and grassland habitat. These trails consist of dirt ranch roads or paved roads that are approximately 8-12 feet in width. Using the same logic and analysis described in Paragraph 2, one should conclude that since the Sweeney Ridge Trail System already

requires dogs to be on-leash (6 feet in length), and since trails are 8-12 feet in width, the impacts to the predominant habitat surrounding these trails would be negligible. Therefore, why does the Dog Management Plans Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? As described throughout the Dog Management Plan, physically restraining dogs on-leash would protect habitat and wildlife off trail and would eliminate chasing after wildlife. Please explain.

7

g) P. 293, Paragraph 4, Chapter 4, Potential Soil Impacts Common to all Alternatives -

i) This paragraph states that on-leash dog walking is based on an allowed 6-foot dog leash. In general, and assuming compliance, impacts as a result of the action alternatives (B-E) would be limited to the existing trails/roads and the 6-foot corridors of land adjacent to both sides of the trail (limit of disturbance, or LOD; LOD = width of trail plus 12 feet). Restricting dogs to trails would concentrate impacts on the already compacted soils of trails/roads, whereas dog walking off-leash may cause more dispersed impacts over a wider area. Based on my observations using the Sweeney Ridge trails, the trails consist of already compacted dirt ranch roads or paved roads that are approximately 8-12 feet in width. Using the same logic and analysis described in Paragraph 4, one should conclude that since the Sweeney Ridge Trail System already requires dogs to be on-leash (6 feet in length), and since trails are 8-12 feet in width, the impacts to soils and erosion would be negligible. Therefore, why does the Dog Management Plans Preferred Alternative propose to not allow dog walking on-leash within the Sweeney Ridge Trail System? Please explain.

h) P. 438-439, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action -

i) It is stated that this site has documented high visitor use by dog walkers and 55 leash law violations were recorded in 2007/2008 (table 9); therefore, off-leash dog walking is currently occurring along the trails of Sweeney Ridge. I agree that there is high visitor use by dog walkers. Please make this correction in table 9 since it currently says low to moderate. I disagree with the assumption that because there were leash law violations over a two year period, that most dog walkers using the Sweeney Ridge Trail System have their dogs off-leash. Based on my experience of using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), I have observed that most dog walkers have their dogs on-leash. Rather than proposing to ban on-leash dog walking within the Sweeney Ridge area, wouldnt it be more effective to increase ranger presence (especially during busier times such as on weekends) and educate users of the GGNRA's on-leash rules in order to deter this behavior? Wouldnt it be more effective to provide better signage at the trail heads to explain the rules and regulations and why its important to keep dogs on-leash and on trails in order to deter this behavior? Please explain.

ii) What is the total number of dog walkers that visited the Sweeney Ridge Trail System during 2007/2008? Without knowing this number, it is impossible to know what percentage of total dog walkers were not obeying leash laws. This makes the 55 leash law violations meaningless without a total number of dog walkers to base it on. Please explain this discrepancy.

iii) Is there more comprehensive data over a longer time frame (10 years) that can be evaluated to determine dog walking trends within the Sweeney Ridge Trail System?

8

Making off-leash dog walking assumptions based on two years worth of incomplete data does not follow appropriate statistical methodology. Please explain.

i) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple

Use, Balanced by County -

i) It is stated that under Alternative C, no dog walking would be allowed at Sweeney Ridge. Therefore, no impacts on soils from dogs would occur at this site, because dog use would be eliminated. Soil disturbance and compaction would no longer occur. I disagree with the statement that soil disturbance and compaction would no longer occur. Other users that would be allowed within Sweeney Ridge include hikers, mountain bikers, and horseback riders. These uses would surely cause further soil disturbance and compaction. Please explain this discrepancy.

j) P. 440, Chapter 4, Sweeney Ridge / Cattle Hill Alternative C: Emphasis on Multiple Use, Balanced by County -

i) It is stated that on-leash dog walking is based on an allowed 6-foot dog leash. Since dog walkers may walk along the edges of the trails, dogs would then have access to the adjacent land 6 feet in both directions, resulting in an LOD area for soils that would extend 6 feet out from both edges of the trails. In general, impacts on soils would be limited to the existing trails and the 6-foot corridors immediately adjacent to the trails. I disagree with the statement that there would be an LOD area for soils that would extend 6 feet out from both edges of the trails. The Sweeney Ridge Trail System consists of 8-12 feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Please explain how there can be impacts within these 6-foot corridors immediately adjacent to the trails due to this natural vegetative obstacle?

k) P. 677, Chapter 4, Sweeney Ridge / Cattle Hill Alternative A: No Action -

i) It is stated that under Alternative A, dogs would continue to contribute to physical disturbance at both sites through trampling, digging, and dog waste. In addition, since off-leash dog walking currently occurs at the sites, it is likely that dogs would continue to walk or run through other undisturbed areas. Therefore, impacts on coastal scrub/chaparral/grassland vegetation as a result of Alternative A would continue to be long term, minor, and adverse at these sites because effects would be measurable and perceptible, but would be localized in a relatively small area. I disagree with this assessment. The Sweeney Ridge Trail System consists of 8-12 feet wide dirt ranch roads and paved roads surrounded predominantly by extremely dense chaparral and coastal scrub (poison oak) vegetation. In most places the chaparral and coastal scrub vegetation is at least 6 feet in height. This makes the side of these trails inaccessible to both humans and dogs. Further, on P. 540 of the Dog Management Plan, a study by Andrusiak (2003, 3.2) is cited that suggests that dogs

9

traveling quietly along a trail with screening vegetation on both sides are unlikely to disturb or even encounter wildlife. This study along with other studies were summarized in this section to provide a basis for discussing impacts on vegetation. Since the dense and tall chaparral and coastal scrub vegetation within the Sweeney Ridge Trail System acts as barrier and screening vegetation, how can it be concluded that dogs would cause continued measurable and perceptible impacts to coastal scrub/chaparral/grassland vegetation if its unlikely for dogs to trample through it or be triggered to trample through it by wildlife? Please explain.

l) P. 681, Chapter 4, Sweeney Ridge / Cattle Hill Alternative E -

i) It is stated that physically restraining dogs on-leash would protect vegetation off trail. Therefore, assuming compliance, the overall impacts on coastal scrub/chaparral/grassland vegetation from on-leash dog walking at Sweeney Ridge and Cattle Hill would be negligible because impacts would result in no measurable or

perceptible changes in these plant communities. Why wasn't this same assessment made for Alternative A: No Action? Alternative A would continue to allow dog walking on-leash and similarly should assume compliance. Further, why isn't this 'physical restraint with a leash' argument not applied for all environmental resources under Alternative A with a conclusion that there would be negligible impacts on resources? Please explain.

m) P. 698, Chapter 4, Wetlands and Aquatic Habitats -

i) Within the Sweeney Ridge Trail System, there is a freshwater wetland located adjacent to the Meadow Loop Trail. This section did not include an analysis for Sweeney Ridge and this freshwater wetland. Please address.

n) P. 1158-1159, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative A -

i) This section states that Alternative A would continue to result in long-term minor adverse impacts on the Mission blue butterfly at Sweeney Ridge through damage to host plants and habitat in the trail beds and adjacent areas as a result of dogs. Please explain whether there is a high occurrence of lupine host plants and habitat within the trails beds. In my experience, the Sweeney Ridge Trail System is made up of wide dirt and paved roads/trails. The only vegetation observed within the dirt roads are invasive weedy species. Paved roads do not contain vegetation. Further, these roads/trails are used by park ranger vehicles, horseback riders, mountain bike riders, and hikers without dogs. Wouldn't these other uses also have a damaging effect on host plants and habitat in the trails beds? Please explain.

o) P. 1162, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative E -

i) This section states the long-term minor adverse impacts from dogs in the LOD would occur in a relatively small area when compared to the site as a whole; therefore, the overall impact on the Mission blue butterfly from on-leash dog walking  
10

at Sweeney Ridge would be negligible, assuming compliance. Why wasn't this assessment also applied to Alternative A? Please explain.

p) P. 1210-1211, 1213, Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative -

i) This section states at Cattle Hill, dogs would be allowed on-leash on the Baquiano Trail from Fassler Avenue up to and including the Farallons View Trail. Physically restraining dogs on-leash would not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat. Therefore, assuming compliance, Alternative C would result in negligible impacts on the frog at Cattle Hill because no measurable or perceptible changes in frogs or critical habitat or nonbreeding habitat would occur. Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to any water bodies that support the frogs or nonbreeding or critical habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment made for Alternative A? Please explain.

q) P. 1231-1232, 1234 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative -

i) This section states that although dogs would be allowed on the Cattle Hill trails, dogs would be physically restrained on-leash and the leash policy would be enforced. If dogs are physically restrained on-leash at this site, they should not gain access to dispersal habitat and should not affect the snake. Therefore, assuming compliance, alternative C would result in negligible impacts on the snake at Cattle Hill; no measurable or perceptible changes to individual snakes, the population, or designated critical habitat would occur. Since Alternative A would also require all dogs to be on-leash, physically restraining dogs on-leash would also not allow dog access to

dispersal habitat located within the Sweeney Ridge Trail System and would therefore result in negligible impacts. Why wasn't this assessment made for Alternative A?

Please explain.

r) P. 1545, 1548 Chapter 4, Part 2, Sweeney Ridge / Cattle Hill Alternative C / Preferred Alternative -

i) This section states that impacts on visitors who would prefer to walk dogs at the park would be long term, minor, and adverse. Adverse impacts would occur since dog walkers would no longer be allowed in the Sweeney Ridge site. Visitors would no longer be able to enjoy exercising, socializing, and playing with their dogs at Sweeney Ridge. Impacts would be minor since this is a low to moderate use site for dog walkers. Some visitors in this user group may find a different area in GGNRA or a local city or county park to walk their dogs. As a result, visitation by local residents may decrease slightly in this area. Based on my experience using the Sweeney Ridge Trail System (approximately 4 days a week for the past 3 years), the proportion of dog walkers out of the total number of users is moderate to high and therefore

11

adverse impacts should be moderate, not minor. Considering that most Bay Area state, county and local city parks do not allow dogs on-leash, there are not many options for dog walkers to choose from when they wish to hike with their dog on-leash. Dog parks are very limiting since they don't allow the owner to exercise with their dog. Other GGNRA sites are also limiting since they do not offer similar long and steep trails to hike that the Sweeney Ridge Trail System has to offer. Further, most dog walkers I've observed using the Sweeney Ridge Trail System are regular local community users. Therefore, visitation to Sweeney Ridge by local residents who wish to hike with their dogs on-leash would significantly decrease. Please explain how this information and analysis was derived since it conflicts with my experience and observations at Sweeney Ridge.

Please feel free to contact me via email at bcbecker13@gmail.com if you have any questions regarding my concerns and comments. I would also like to request that you place me on your mailing list so that I may receive notifications of future public hearings and updates regarding the GGNRA Dog Management Plan/EIS.

Sincerely,

Brett Becker, AICP

Sweeney Ridge Trail User

<b>Correspondence Type:</b>	Web Form
-----------------------------	----------

**Correspondence:** I OPPOSE the Preferred Alternative because it is too restrictive for dog owners. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I OPPOSE fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I OPPOSE the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be

allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Anne Walzer

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Angela Gardner

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

**Correspondence:** Please look at the big picture and our integration with the land. Most of the people who walk dogs are stewards of nature, contributing to the overall health of the land and love integrating with it. Restricting that access will be detrimental to many and Lessing opportunities to keep eyes on some of our most valuable assists. The actions of the few can not block the needs of the many. Let's police those that don't follow the law and allow respectful citizens the freedom to enjoy the outdoors with their canines.

Sincerely

Brian Reccow

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Both of the adults in our family work for environmental organizations. We, and many people like us, choose to live in SF because of the dog-friendly opportunities to be in nature with our families. When we want wilderness we leave our dog at home and travel a short distance to it. We believe that city and state parks near urban areas that the entire family - pets included- can enjoy are an integral part of a healthy and sustainable lifestyle.

Sincerely,  
Melina Selverston Scher

**Correspondence:** My name is Kerry Fischer and I am a tax paying, home owner living in SF. One of the small joys I receive living in the city when I'm not dealing with the dysfunctional public transportation system and stepping over homeless people who seem to have more rights then me, is walking my 2 dogs in Golden Gate Park, Crissy Filed and Fort Funstun.

I strongly oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

I also oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. I live here and I do not want ugly and restrictive fences put up all over the place.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Why don't you fine the people who are not complying and respecting the laws and not penalize everyone else who is complying? Ridiculous!

The new dog management plan does not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

Unless the above questions can be answered in a thoughtful way - this is perceived as government making changes without respecting the people's opinions?

---

**Correspondence:** My name is Kalyn Chomko and I am a San Francisco resident. I have a dog who I walk with regularly on Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, and Fort Funston, I strongly oppose the preferred alternative described in the GGNRA's new draft dog management plan because it is too restrictive. There is no justification in the dog management plan for major changes.

The plan also does not adequately analyze impacts on nearby city parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new

---

plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. But no evidence is given to support either assumption. And if people do move to the city parks, they will be overwhelmed with dogs and their owners, making it an unpleasant and unsafe environment for all city dwellers.

Our National Park space here in San Francisco is a recreation area, not a national park like the Great Smoky Mountains, Glacier or Zion National parks. The GGNRA was built and designed for dogwalking from its inception. Congressional reports referred to dog walking specifically as one of the uses for the space when the GGNRA was created.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. I sincerely ask for a fair, well balanced and fact based approach to environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for myself, my dog and future generations of dogs, owners and all city dwellers to come.â€

Thank you,  
Kalyn Chomko

<b>Correspondence Type:</b>	Web Form				

**Correspondence:** Hello, my partner and I just adopted a 9-month old rescue puppy named Foxy. We've only had her a few weeks but have enjoyed socializing her with other dogs and people at Ft. Funston, Chrissy Field and other GGNRA sites. She's already learned to stay by our side off leash, and she has started to develop the confidence to play with other dogs.

Because these sites are so important to our enjoyment of Foxy, and to the continued healthy development of her, my partner and I strongly oppose the so-called Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

Most importantly, we oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Foxy will not get the recreation nor socialization she needs in a pen.

We also strongly oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred

alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote. The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Please do not make us regret rescuing Foxy!! The proposed changes will make it very challenging for us to get her the exercise and attention she needs.

Thanks very much.

Scott Willoughby & Camiel Becker

<b>Correspondence:</b>	Dog owners have already been denied most of the trails in Marin County. What we have left is the minimum we can put up with. Our dogs need "off leash" exercise for everyone's sanity and safety. If they don't get it you will probably see a rise in biting incidents. Because dogs, like humans, get a little loopy without running.				

Please do not lessen our ability to exercise our dogs. If anything we need more off leash opportunities. Why hasn't someone at GGNRA designed a schedule for dog use on beaches and trails? We can have

---

alternate weekdays and time periods for the weekends. This way the people that don't like dogs can enjoy dog free days/periods. It makes a lot of sense.

Rob Ficarro

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. I am physically handicapped and cannot run with my dog. I walked slowly. I therefore need the ability to play fetch with my dog in order to exercise her so she is low stress. Therefore I feel this plan is biased.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Avi Helman

**Correspondence:** As a resident of San Francisco and an owner of two rescued dogs, I understand the desire to have spaces where my dogs can run and play, but I also recognize I have responsibility not to have my dogs not ruin the chance for others to enjoy those same spaces. When family members complain that they are uncomfortable taking their small children to the beach at Crissy Field because they fear an unpleasant interaction with off leash dogs, I have to wonder if we as a society have our priorities correct. When I go to Fort Funston and see the denuded landscape north of the parking lot due to off leash dog activity, I have to wonder how the National Park Service is meeting it's legal requirement to "the service thus established shall promote and regulate the use of Federal ares known national parks, monuments, and reservations hereafter specified, except such as are under the jurisdiction of the Secretary of the Army, as

---

provided by law, by such means and measures as conform to the fundamental purpose of said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and provide for the enjoyment of the same in such a manner and by such means as will leave them unimpaired for the enjoyment of future generations." All one has to do is look at the southeast corner of the site to see what the landscape should look like since few dogs run free in that area. I believe the preferred alternative is the best compromise balancing the needs of the park users and mission of the service.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I've always been under the impression that SF is a very open and accepting place to live. Please let that legacy continue.

Sincerely,

Anne Wu

<b>Correspondence:</b>	I have been a resident of, and in love with, this great city of San Francisco for twelve years. The main reason I love it so much is it's urban "live-ability." It is a city that understands the balance of metropolitan life vs our need for access to nature.				

Off-leash areas like Crissy Field give vitality to the city. Tourists often cite watching dogs play as one of their favorite aspects of the beach. I have built part of my community around the other dog owners and dog lovers who gather on the beach every morning to watch their dogs romp together over a cup of hot coffee from the Beach Hut Cafe.

Without vital community hubs like this, dog owners and dog walkers will be crammed into tiny neighborhood parks. I imagine residents around these parks will feel this overcrowdedness as well.

Urban life connected with nature is the most unique aspect of San Francisco and what makes it a more attractive place to live than any other city in the country. Taking away city residents' ability to connect with nature in this way, alongside their dogs, will erode the very feature that connects us most to the city and to each other as a community. Please don't take this away.

**Correspondence:** Dear Superintendent Dean,

I am writing to express my strong opposition to the GGNRA's new draft dog management plan. I got my dog four years ago ONLY after completing due diligence on what his life would be like in San Francisco. What I learned made me so proud of this city I have lived in for 16 years. The city's "dog friendliness" is an important differentiating factor - and one of the few that makes me truly believe that all of the premiums we pay to live in SF are worth it.

The thought of not being able to take my dog to Crissy field anymore makes me anxious, devastated, and furious. These trips to "the beach" are the reason I live where I do, and provides so much joy, community, and pride for SF. When Crissy Field was created, one of the purposes stated was to create more space for off-leash recreation because of the anticipated growth in the number of visitors with dogs. This new proposed reduction in off-leash recreation area at Crissy Field is a reversal of course without a basis, especially where the impact on all park visitors will be increased concentration of dogs in smaller areas.

It is shocking how many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan have been ignored. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas and on new lands that the GGNRA acquires in the future.

The law requires a peer-reviewed, site-specific study that supports such a drastic restriction of dog-friendly areas. The data I have reviewed does not support it: in the last year out of the hundreds of thousands of visits by people with dogs, there have been only 6 reported dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing, and 1 horse bite incident. The reported incidents involving people are much higher. Further, this data does not support the request for \$2,000,000

for more rangers.

Let's keep San Francisco a leader in community. To lose the off-leash culture is to lose a piece of this city that makes it so incredibly special to so many of us that live, work, and thrive here.

Sincerely,

Jen Tedesco  
3208 Pierce Street  
San Francisco, CA 94123

<b>Correspondence:</b>	I'm writing to you to express my deep concern about the alternative to create a Regulated Off-Leash Area for dogs between Le Conte and Tamarind streets in Montara, CA. I am STRONGLY OPPOSED to this.						

Both Le Conte and Tamarind streets are very narrow, and will not accommodate parking for dog owners' cars. In addition, the surface on these streets, especially Tamarind, is marginal and is patched continually. Additional traffic on this normally quiet street will cause more rapid deterioration and increased cost for maintenance, which San Mateo County can ill afford.

This is a quiet, peaceful neighborhood and numerous barking dogs and shouting owners in a concentrated area will be disruptive to everyone in the area, including those in the adjacent Farallon School. I don't believe it is right to construct fences and change the nature of an entire neighborhood for the sake of only the dog owners. This is supposed to be OPEN space for everyone, not fenced-in space for dog owners created artificially in a quiet residential area.

Rancho Corral de Tierra is a large space. Please find a more suitable location with adequate access and parking for this. Or better yet, simply require that dog owners leash their dogs as is required by the County.

Please keep my personal identification information from public view.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dogs health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasnt been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

As a resident of San Francisco since 1972, the freedom of movement for me and my dog for recreation is one reason I moved here and why I stay here. San Francisco is gifted with enough wilderness areas in the city to not need restrictions that are reflected in your plan and does not reflect the community's opinion. We live here and expect to be considered when changes that would drastically limit our lifestyle are on the table. San Francisco is very possibly the most dog friendly city in the country ...other than Carmel, CA. I oppose the plan 100% as a pet owner and a business owner located 1 mile from Ocean Beach in San Francisco, CA.

Sincerely,  
Neva Joy Bonehill

\*\*\*\*\*

Thank you for your support.

**Correspondence:** I think the whole problem is easily solve by making places exclusively for dogs and their owners and whoever wants to risk being bitten by a dog. I think the fakir it's of people want to take the risk if it means having their dog leash free. So why don't we leave the choice to owners and people who want to hang around leash free dogs. It'd be fair to put it to the votes of dog owners and see the results. They should have a say. Don't you think?

<b>Correspondence:</b>	Please don't take away our pets' opportunity to play off leash! It is very important for dogs to have some time to run without being leashed up in a safe environment, and the off leash dog parks are the best place for this to happen. As the owner of 2 fairly large dogs in a fairly small apartment, it is crucial for me to be able to take my dogs out for long walks in morning and afternoon. Without off leash play areas, my dogs would not be able to play catch with me, or run and romp with each other and other dogs. There are far too few safe places for us to do this as it is! Please don't punish innocent dogs by taking away their chance to play off leash!

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.
------------------------	--

A dog breed club that I belong to, the Portuguese Water Dog Club of Northern California, regularly gathers for fun days at Fort Funston and Crissy Field. We are responsible dog owners who manage our group even though they are off-leash. We have never had an incident with others who are using the great bounty that these two areas have to offer.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. The Bay Area is not only dense in human population, but it is one of the highest densities of dog owners, surpassing homes with children. Forcing dog owners back into the urban parks, most of which are already over crowded will have a disastrous impact on the quality of time spent for owners and dogs.

This RECREATION AREA is not a wilderness area like Yellowstone or Yosemite. It is not even a National Park; the Bay Area governments who ceded responsibility to the National Park Service had an agreement. That agreement is being ignored to the detriment of a sizeable group of Bay Area residents. Dog owners rely upon this open space for the recreation it was designed and mandated for, and as such it requires a different management strategy than the country's National Parks.

I am especially appalled at the restrictions being proposed for Marin County areas of the GGNRA! Not even allowing on leash access to areas that have been available to residents in Marin and Sonoma counties for literally decades and decades. This is beyond reasonable and I support the "No Action Alternative" for each area. The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

<b>Correspondence:</b>	To whom it may Concern: Regarding your proposed dog management plan: I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I am a tax-paying citizen who regularly walks my dogs in Marin County, responsibly, safely, and cleanly. I have tried the so-called Dog Parks and they are not much but filthy, crowded, dog gulags. Dogs NEED to run - we need to play with our dogs - and we cant accomplish that with all of the restrictions already in place. Please DO NOT restrict us further.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. Theres no compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local

---

residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. We all rely upon this open space for daily recreation. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your time,  
Suesan Saucerman

<b>Correspondence:</b>	Dear Superintendent Dean,				

Please READ this letter and think about what's being said here.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. Any action other than that surely will be challenged in a court of law, wasting time and precious tax payer dollars.

Sincerely,

---

**Correspondence:** 2/16/14

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,  
Peyton Lister

<b>Correspondence:</b>	Dear Superintendant Dean, The GGNRA has been a very special destination for our family for many years. Our family includes our beloved Lab, Sam. In hundreds of trips to Crissy Field, Fort Funston, Marin Headland and other GGNRA areas, we have				

---

never seen any cause or justification for the restrictive plan being formulated.

We want to strongly express our objection to any restrictive or containment plans that would prevent our family from enjoying the GGNRA.

Thanks for reconsidering your plan,

Kent Anderson

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Adriana

**Correspondence:** To whom it may concern,

I strongly oppose the alternative plan proposed the GGNRA's regarding the new draft dog management plan. This plan will create many problems and is far too one sided. The GGNRA is presenting little to no evidence to support how dogs are providing are creating negative impacts to the ecology and the park, any

more than a person hiking, running, or walking within the park are already doing (without the presence of dogs). Also, we could include how mounted horse cops are permitted to run their thousand pound horses in these areas. I continue to support the 1979 Pet Policy and off-leash dog run areas in San Mateo County.

The GGNRA is proposing taking away nearly 90% of all off-leash lands that dog walkers (like myself) and the general dog owner uses. Not to mention that dog outnumber children in San Francisco, the GGNRA is proposing that the other 90% of people essentially "stack" their dogs on top of one another at the specific parks that sanction. This will create FAR MORE PROBLEMS in the community. As a professional dog walker and business owner since 2005, the negative ramifications far outnumber the reasons to pass along their plan. The analogy can be made for people as it is for dogs, the less "space" in a park, the more agitated people and or dogs may become. Dogs do not have the same reasoning and decision making we do, and therefore dogs will become more territorial and dog fights will become epidemic. Not only dog fighting, and barking creating constant noise problems for local residents, but all fights may lead to humans be injured. Also, I oppose fences to surround off-leash area in the GGNRA. Fences will make off-leash areas feel like pens leading to less supervision of owners own dogs, but also a mayhem of dogs from dog walkers that are using the park.

Has the GGNRA provided any site specific studies to prove that dogs are "in fact" causing many of the problems they proclaim. It is my knowledge that the GGNRA is making ONLY ASSUMPTIONS on the impacts that "might happen" should dogs continue to use the off-leash areas that we have been using freely for decades. Where is the site-specific evidence to support that any of those negative impacts they are claiming are from dogs only? Or, have they ever occurred or have ever occurred in the GGNRA. For the GGNRA's claims that dogs are negatively impacting vegetation or animals, they ONLY continue to make assumptions as there are NO site specific examples.

In summary the GGNRA the benefits of their proposed plan falls very short of taking away parks and lands, that we (the community) love to use. Bringing a dog into the park that is under voice control and/or dogs that might be within a dog walkers group should not be punished. Sure, the very few poor dog owners need to be fined for not picking up their dog feces or having a dog that is not under voice control. But, this is no different that humans that act unjustly. We can not just pick up a person we didn't like and have them walk only where they wont bother us? I hope that you can come to a fair conclusion.

Best Regards,  
Corey Vitale  
Business Owner of SuperDog City, LLC

<b>Correspondence:</b>	I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.				

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits

the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	It is very concerning to have a few people come in and what to change something that was put into place for the good of the people who live here and near the GGNRA years ago. I STRONGLY OPPOSE the alternative F the plan that wants to restrict our family members (DOGS) off leash & dog friendly access to the GGNRA. I SUPPORT the " NO ACTION ALTERNATIVE" in the SEIS for : Muir Beach, Homestead,Oakwood and the MARIN HEADLANDS. The GGNRA was established for the outdoor RECREATION for people and their families (including DOGS) the ability to have somewhere to go in densely populated urban areas. This is not a wilderness area like Yosemite or Yellowstone which require a different approach to management. Restricting these areas would force more people on the roads which are already congested.				

---

Have you seen Route 1/Shoreline highway congestion on the weekends??? It is so back up already and now these new STUPID LIGHTS have made it even worse and now even through the week it backs up. If you close these areas it is only going to get worse.

Please retain the longstanding 1979 PET POLICY. If anything we need more access to more trails for dog families. More loops not just dead end trails. As it is 99% of trail are off limits. WE only have 1% and you want to take that away, really?? I DON'T THINK SO!!! There have been no site specific studies done that support restrictions. WHY ARE THE PEOPLE WITH DOGS being targeted. What about the mountain bikes & horses I see them in areas they aren't suppose to be and your not kicking them off the mountain. We (Hiker with dogs) do a lot less damage with our feet then they do. I'm not saying go after them I'm just saying we are not being treated fair. There is enough room for EVERYONE & more than enough room to give us more access. I would love to be able to hike to Muir beach from my house with my dog but the trails don't allow it. Why am I being targeted I have felt left out (bullied) on the trails for years. I can't afford a horse why do they have so much access? This is PUBLIC LAND for the PEOPLE in communities of this area to use.

If this new ban is imposed it will just cause a lot of hostility on the trails !!!! I can see more people just getting ticketed and heated verbal exchanges. Next it will be the bikes then the horse then the people. Open space left for no one to enjoy. Lets not spread hate and exclusion let there be love and inclusion.... Let the beauty shine for all of us to enjoy! Thank you ..... Shelley Losch

>>>>>>>KEEP OUR TRAILS OPEN FOR ALL TO ENJOY >>>>>>- - - - ->

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Heidi Krakovsky

**Correspondence:** The majority of dog behavioral issues stem from lack of exercise. Banning the ability for a dog to run free, off-leash WILL increase the number of aggressive dogs who are unstable. These animals will be more likely to bite children and other dogs, among other issues. Surprised that San Francisco would place the risk of children as a lower priority than the potential damage of some wild rodents.

Most dog owners have trained animals who are on recall and do not pose a threat to other dogs, people, or wildlife. The few people who have untrained animals cannot be used as an excuse to ban the parks from all dogs/people.

If this bill passes and dogs are not allowed to run free, we WILL see an increase in dog aggression and dog bites due to frustrated animals.

**Correspondence:** I'd like to strongly advocate the importance of keeping our public areas open to off leash dog walking and play. Though others may find this an annoyance or danger it is a very important aspect in a dogs health and happiness. I can understand the opposing views fear of danger however these are public areas that should be free for residents and their dogs to enjoy. It is no more dangerous than skateboarders or bikers and accidents may happen in any form however I believe it is wrong to take away the freedom of our Shared public areas. Though some incidents may have occurred that responsibility lies in the hands of individual dog owners and should not be taken out on the entire dog community most of whom have well trained and loved dogs who deserve the freedom to run free and play and discover in nature and be a part of the city. It's very important that dogs are given the opportunity to simply be dogs and enjoy the freedom of the nature and environment they come from and belong in. It is a city to be enjoyed by all residents as well as resident dog owners and their pets and I find it unjustified to take that away. It is important for dogs health longevity to roam free. It is everyone's right to appreciate and enjoy this city including dog owners who make this incredible city what it is.

<b>Correspondence:</b>	As 30-year residents of Muir beach with experience as dog owners and periods without dogs we feel entitled to comment with some knowledge. We strongly support the original 1979 plan allowing voice control dog recreation in the GGNRA.				

The original GGNRA land was "saved" by citizens such as Martha and Frank Gerbode and thousands

more of us. We then tasked the NPS to be its guardian for us. This relationship has been arrogant and heavy handed. Both the late former director, Brian O'Neill, and an attorney for the Presidio have told me that the NPS has looked at demolishing the entire Muir Beach community only failing for the economics.

This is a RECREATION area and the unique situation of a real community in the middle of it must be dealt with in an equally unique manner. National park policies can not be applied here unilaterally.

We successfully fought and saved these trails and beach areas and we wish them to remain accessible to ourselves and our pets. It is recognized by all that the people are the problem not the animals. Dr and Mrs Lloyd gross

What sets the Bay Area apart from many other parts of the country is its reasonable approach to allowing people to exercise their dogs and enjoy their company in nature. And there IS abundant nature here- - certainly enough to go around.

Whatever objections there may be to off-leash dogs- -or dogs' presence in certain areas, period- -the fact is that living among thousands of pent-up, frustrated dogs who are not allowed to run and play properly cannot possibly be a desirable consequence of limiting exercise areas.

(The fact is, too, that the damage and destruction that people do- -compared to dogs- -is infinitely greater,

---

yet the option of banning people from certain areas doesn't appear to be on the table.)

Please do not put further restrictions on leash-free areas.

**Correspondence:** Dear GGNRA,

I am against this plan because it takes away the traditional uses that come with the land when it was transferred from the City of San Francisco to the GGNRA. The 1979 recreational uses included allowing people to throw a ball or a frisbee to their dogs on the beach or to go running with their dogs off leash or to simply allow their dog to play with another dog on the beach - one of the loveliest sights ever. This is the second time I have commented on this plan, only to have my comments ignored as the revised plan came back pretty much like the first one - eliminating off leash dog areas from Fort Funsten, Crissy Field, Marin etc. and even banning dogs altogether in places! A huge takeback by the GGNRA from the people of San Francisco and Marin. I'd just like to add that I am the mother of child who attends public school here in San Francisco and who plays Little League baseball and used to play soccer, so I understand the field shortages. I also plant native plants in my own garden. I understand that we all have to share limited resources, but this plan takes away too much from the dog owners. Who, by the way, are all kinds of

people of various races, ages, and income levels. A few people who think their children are afraid of dogs is no reason to take away all this land from such a large number of other people, the vast majority who are responsible people and have well trained, gentle dogs. Kids love dogs for the most part. Many of us would like to be able to take our children and our dogs to the same recreational area at the same time. The people who don't like dogs already have plenty of places to take their children. San Francisco is losing families because of the public school lottery assignment system and high housing prices - dogs have nothing to do with it. Many of the families who are left do have dogs and this misguided policy impacts us negatively as well as the many other dog owners who are upset. I hope the fact that elected officials such as House Minority Leader Nancy Pelosi, Congresswoman Jackie Speier, and San Francisco Supervisor Scott Weiner are listening to those of us who are contacting them and are coming out against this plan will make a difference. - - Megan Smith, mother and dog owner

**Correspondence:** I believe these harsh regulatory restrictions are the wrong way to deal with these issues. Cultural change through education would be a more constructive approach and would provide much greater benefit to the parks over the long term.

People with dogs are a group of people who enjoy the outdoors and are among the most responsible and devoted people to our parks. Many use the parks and beaches as a daily routine and can be seen taking care of their beloved natural environment by cleaning up after others (ex. removing trash left by others who recreate on the weekends). Off leash exercise and play is healthy for both the dog and the owner and also increases the owner/dog bond allowing a dog to become a balanced and healthy member of society.

A much better way to approach this problem would be to reach out to dog owners and encourage them to work with their dogs (training programs. etc) to create effective voice control and socialization. It would be great to see trainers and dog owners working together at the parks educating the community and non dog owners about dog behaviors.

Please join with responsible dog owners to develop a more educated, equitable and sustainable approach that will help build public support for parks.

**Correspondence:** Please don't force dog owners to put leashes on their dogs at Fort Funsten. It is one of our FAVORITE places to go with our dog. She LOVES being able to run freely on the beaches and the dunes of Fort Funsten. We've always found all of the dogs there to be very friendly and the owners are very respectful and pick up after their dogs.

We started going to Fort Funsten with our chocolate lab nearly 15 years ago. He has since passed but now we take our new dog and she loves it.

Please, there are so few places for pets to run freely. Don't take this freedom away!

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Kate Rice

**Correspondence:** I was deeply disappointed to hear that this dog management plan may restrict walking with our dog off leash at Fort Funston. As owners of a young, friendly and energetic dog, a monthly trip to Fort Funston is a highlight outing for me, my children and especially the dog. The few areas close to my home that allow off leash walking are small dingy and dusty fields with nothing interesting to do other than sniff other dogs and romp. Not suprizingly we all lose interest after a few minutes and head home.

We are very aware of leash laws in any park we go, and ensure our dog is on leash as required, but appreciate the freedom that is available at Fort Funston.

I understand that trails and beaches have been set aside for dog walking since the original pet policy in 1979. It sounds as though policy should be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you for your time on this matter.

Sarah Murphy

That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I lived in San Mateo County for a number of years and was only able to enjoy a few small areas of their parks because of the unfair and overly restrictive GGNRA pet policy. I wasn't even able to hike with a LEASHED dog in most of the areas. It's unfair I am paying to support these areas that I'm not allowed to enjoy myself because I don't want to leave my dog at home.

Sincerely,

Georgia Clark

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management

---

Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** As a dog owner and San Francisco resident for over 10 years, I am strongly opposed to GGNRA's new dog management plan. This is a city where DOGS OUTNUMBER CHILDREN and LEADS THE NATION IN ANIMAL WELFARE... and yet, the GGNRA has been persistently, aggressively and unfairly enforcing their extreme plans to get rid of off-leash dog areas in the SF Bay Area.

The GGNRA's current plan would seriously restrict dog walking: only 7 of the 22 areas in the supplemental EIS allow off leash dog walking access on GGNRA lands in ALL three counties. This management plan allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). Instead, the GGNRA should institute a dog "green tag" system - - which certifies dogs and their owners to use the area. Irresponsible dog owners could have their privileges suspended, instead of all people losing access to a particular dogwalking area.

We urge the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.â€

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Nicky

**Correspondence:** I regularly walk my dog in the GGNRA - Fort Funston and Ocean Beach. As such, I am \*strongly\* opposed to the proposed changes as they will drastically impact my experience at the beach.

I see no reason why the rules should need to change. All dogs I encounter on the beach are well behaved and controlled by their owners. I have not encountered any instances of dogs harassing either wild life or other people. If anything, human impact from littering and walking on the dunes has a far greater negative impact on the beach wildlife than dogs.

These parks are not wilderness preserves - they are urban parks, intended to be used by people and their pets, not maintain the natural preserves. Banning dogs violates the spirit/intention of these parks, and is very unfair to the large majority of responsible dog owners who depend upon these parks to provide their dogs a healthy recreational opportunity.

**Correspondence:**  
Dear Superintendent Dean,

I live less than a mile from Crissy Field and rely on it for regular exercise with my 16 lb miniature poodle, Fozzie. The days we spend on the beach and the field are what kept me out of severe depression after the sudden death of my business partner last year. The progressive crackdowns, deceptions, and in some cases outright falsehoods (the signs on the lands' end trail for one) are disturbing to me as a resident of San Francisco, named after St. Francis, the patron saint of animals. There is no scientific evidence to what you are claiming- -I've reviewed it with several of my fellow birder friends, some of whom are not dog owners, as well as an environmental scientist. I'm at that beach and field multiple times a week, and I have only once seen someone let their dog into the bird sanctuary, and I promptly called park police to handle it.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for

many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The impact on the city of San Francisco's budget and parks will be substantial and my supervisor is well aware of these issues and that I vote and pay attention to them. There are more dogs than children in the city of San Francisco, and we do NOT welcome your policies in this regard. Our supervisors are mobilized against you and you WILL face a protracted legal battle. There's a lot of libertarian, educated, science minded tech money in this town, lots of young people with dogs who will donate to this cause and fight against your unscientific justification for restrictions on freedom. Do you really want that for your career?

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely yours,

Melinda Byerley

San Francisco resident, dog owner, voter since 2002.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I am writing today to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dog in the near future. The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and are deeply flawed.

I have been a resident of San Francisco for 20 years. I walk on a daily basis in Crissy Field, Fort Mason and The Presidio, and often visit Rodeo and Stinson Beaches with my dog. We walk in these areas because they are located in our urban environment within very close proximity to our home and therefore are conveniently used for casual and formal recreation.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. In fact, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation at Crissy Field is a reversal of course without basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three Bay Area counties.

Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards than nonurban sites to achieve its fullest potential.

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,

Susan Spiwak

That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

SF has had a long history of allowing/encouraging off-leash dog activity in designated areas of our beautiful open spaces. Since turning those lands over to stewardship by the GGNRA, this tradition has been under fire. Besides taking a much loved freedom away from dogs and their guardians, citizens of this fair city, disallowing off leash activity in these areas will over crowd city parks, as well as the city shelters with dogs that are unmanageable without getting regular vigorous exercise.

Sincerely,

Lindsey Sheehy

**Correspondence:** The reason why myself and many of us reside in the Bay Area (North. Bay) is because of its rich nature. The parks and trails are essential to human health. To remove the very few trails and spaces that our dogs can com along on would be detrimental to all of us, not just our pets. It is often the dogs that help us out of the house everyday for a much needed walk/hike. I Personally use the oak wood vallety trail, rhubarb trail, occasionally montara slopes where my in laws live, Chrissy fields on a daily basis would leave us nowhere to enjoy nature. So many trails are already banned altogether to us animal lovers and many of us have devoted our lives to help and save pets from traumatic pasts by rescuing them. Please keep whatever little is left for dogs to roam free. Not having these trails, will force me to use my car and drive further distances something I rarely do now. This will impact the carbon footprint that we also must look to for a healthy future. I urge you, please leave whatever is left alone!

**Correspondence:** I am a homeowner in San Francisco and the guardian of 3 dogs. We regularly go to Fort Funston where my dogs walk off-leash under voice control.

I am dismayed that the SEIS contained only very minor changes from the DEIS, despite the significant number of public comments which opposed the plan. It appears that the GGNRA intended to severely limit off-leash dog access all along and has not operated in good faith to represent both sides.

Of the 4,700 public comments the GGNRA says they received, they do not say how many opposed restrictions on dog walking and how many supported them. An independent analysis of the DEIS comments showed that the vast majority (at least 3:1) supported off-leash dog walking. However, the SEIS over-represents comments from people who oppose off-leash dog walking and under-represents comments from those who support off-leash dog walking.

Please heed the voice of the public and do not move forward with the Preferred Alternative in the SEIS. I support the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** Superintendent Dean-

The current Fort Funston Policy is just fine. I own a well-behaved Australian Shepherd (a very active breed). I have taken him to Fort Funston several times.

I suggest that if you are going to change the policy, you ban both humans and animals so the environmentalist can have what they really want: a pristine natural preserve that is undisturbed by humans or humans with dogs.

The current CA government is doing a great job driving established businesses out of California, now you can do the same with dog owners. Workers in enlightened companies will still be able to bring their pets to work, but, oh no, not Fort Funston.

Your Board must have some big (\$\$\$\$) campaign contributors who hate dogs. I hope it's worth it because you'll still be voted out of office by the legions of dog lovers.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to

support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Lisa Earl

**Correspondence:** I am a SF taxpayer. I own a home, a car, and recently got married to a Bay Area native. I've lived in SF for 15 years. We are here to stay, contribute to our local community, and raise a family. That family includes our dog Wilbur who is a rescue dog that we adopted from wonder dog rescue.

I'm sharing all of this because we have made SF our home and plan to do our part to add value to the city. One thing we love about our home are the open spaces where we can walk Wilbur off leash freely. There are so many things happening in our city that are making it hard for working people to stay and thrive in SF. In fact many of our friends have moved away due to cost of living. We do not need another reason to dislike SF, and taking away off leash areas for us to enjoy SF with Wilbur would sadden so many people, my family included. Having places like Fort Funston to walk Wilbur off leash is honestly one of the contributing factors as to why I chose to remain living in SF and buy a home and start a family. It is a huge part of our lives. I walk there, I pick up trash along the way, while Wilbur gets the necessary exercise and socialization he needs to remain a physically and emotionally happy dog.

Please save off leash dog space. My happiness depends on it.  
Sincerely,  
Rebecca Dworkin

**Correspondence:** Hello. I just want to say that these measures appear rather extreme to say the least. I feel it is unfair to apply such restrictions on folks who want to take their pets out in nature and allow them to "do their thing." I have had dogs for years. Their favorite place, and thus mine, is the beach - off leash. They have excellent recall and I have never experienced a problem with anyone while at the beach with them. The idea of walking a dog on a leash on a huge open area is absurd to me. I think these restrictions would dampen the experience of many many people (not to mention their animals). It will also encourage folks to break the rules, though I know this generates revenue. I would much rather see certain areas designated to dogs. Even a small fee per pet would be more acceptable. Please please NO NOT LET THIS MEASURE GO THROUGH. I feel it will negatively effect the lives of so many. I am a responsible dog owner who cleans up after my dogs, is respectful of others, and derives great joy and health from romping on the beach with my mutts. Please do not stifle this crucial source of health and enjoyment for myself and thousands of others. Thank you.

**Correspondence:** Dear Superintendent Dean,

I have been walking my two dogs in San Francisco in a mature responsible way for the past 10 years and fully understand the trade off between dog owners and other users when it comes to our parks and beaches. For instance I agree that the beach facing Chrissy Field parking lot should be on-leash as there are many picnicking families with young children in that area, but at the other extreme Fort Funston is a barren, remote location that rarely sees the general public (other than the occasional school group) and it would be ludicrous to stop off leash dog play in this area because it would create no benefit for the non dog owning public and only punish dog owners by restricting their dog's activities.

Ocean beach is another area that is going to be affected. The current off-leash area is no where near the environmentally protected area of the plovers and the beach already is half zoned as on-leash so if the non dog owning public are afraid of animals they have plenty of space to be away from animals. With these two factors 1) no environmental impact and 2) no human impact, I see no reason to change the existing planning there. If you ask the beach patrol that is regularly on Ocean beach you will find that this beach too is rarely used compared to beaches in warmer, prettier locations. The changes proposed here again are nonsensical.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is

way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. <b>Correspondence:</b>	Dear Esteemed Panel,				

I am most fortunate to live within one mile of Fort Funston (since 1990).  
For many years I did not know the value of this area other than the many hang gliders who use it on most fair weather days.

About 6 years ago, we (my wife and I) adopted a rescue dog from the Animal Care and Control (SF). And shortly thereafter, we discovered that this is an off-leash area AND it's a mere stone's throw from our house. This area is a Godsend for local dog owners.

My wife and I are very responsible dog owners. We are vigilant in abiding with the doggie litter laws and keeping the park clean. In fact, almost all of the dog owners we've met there are equally as responsible.

We have recently adopted a second dog from the ACC and look forward to the benefits that this area has to offer.

Dogs, like humans, need to interact with each other in order to build social skills. These areas currently being discussed are the perfect venues for such doggie intermingling.

I realize that there are some opponents to the off-leash privileges currently allowed in this park. BUT I believe this is the best and most effective use of this land.

It is a well-studied fact that mankind has benefitted greatly through his relationship with his canine companion.

I wish I could thank the government officials who had the foresight, determination and heart to designate these areas as "off-leash" in the first place. Please have the courage to walk in their footsteps.

Sincerely,

Rick Matsuno

PS - Have you ever seen how happy a dog becomes when you allow them to run off-leash? It's incredibly uplifting!!

**Correspondence:** Dear Superintendent Dean,

Our city is named for the patron saint of animals. It is depressing and offensive to me that San Francisco would consider severely limiting the freedom of our dogs and their happiness (as well as mine) with the prospect of this restrictive dog leash law. I have been a resident of this city for 23 years and would like to loudly voice my opposition to this archaic proposition.

I live 2 blocks from the beach in San Francisco and witness the horrors that HUMANS (not dogs) inflict on nature and our beautiful land daily. This includes garbage and oil on the beach, among other atrocities. My experience has been that dog lovers are nature lovers. I pick up trash as I walk my dog. I want to protect our wildlife. I am mindful of disturbing anyone else's experience with nature. I try to compensate for the very few irresponsible dog owners I come across (as well as educate them too).

I plead with you to hear the voices of your city that have repeatedly decried these changes and only fallen on deaf ears. I worry about what will become of our society when we refuse to protect the rights of those without a voice. It is not hard to see how unfair and unhealthy this would be to such gentle creatures whose sole purpose in life often seems only to love us. Please keep San Francisco a wonderful place for our best friends.

Sincerely,  
Meredith Preble

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Rhonda Spencer  
Oakland

**Correspondence:** Please continue to allow me and others I see every day to continue to have our dogs off leash.

I frequent Fort Funston every week and have been for 10 years with my dogs.

This is one of the best places for off leash dogs. I actually do not understand the reason for any ban on off leash dogs? In all my time spent there I have never seen a major altercation between dogs or dogs and humans. So why the ban?

Doesn't make sense. These places are known for dogs to run around at, so maybe the people that want the ban should go to another location.

thanks,

-Eric Chanpman

---

Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote. The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** Dear GGNRA,

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir beach, Stinson beach and the few dog friendly trails we have left off Tennessee Valley Road in Mill Valley.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area! I have not seen any research supporting such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your time,  
Nancy

<b>Correspondence:</b>	To Whom it may concern,				

I'm commenting on behalf of the dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

Best,  
Jasmine w/ Pups Bonnie & Baloo

<b>Correspondence:</b>	To All concerned,				

I am writing to express my strong disapproval of the preferred proposal of off leash restrictions by GGNRA. Since rescuing my dog, Monkey, five years ago she and I have spent nearly every Tuesday at Fort Funston and nearly every Saturday at Ocean Beach. We rely on the exercise and scenery to keep us active and agile. Being a shelter dog was tough on my dog. She does not do well in confined spaces such as a dog parks. She feels safest in open spaces and shows a profound change of character when at one of 'her' beaches. And because I'm out there enjoying my time with her this GGNRA proposal would in a real sense take away this space/exercise for me.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerly,  
Dorothy Adams

**Correspondence:** Dear Superintendent Dean,

Please READ this letter and THINK about what's being said here.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. Any action to the contrary will surely be challenged in a court of law, wasting time and precious tax payer dollars.

Sincerely,

Joyce A. Greene

**Correspondence:** Please do not ban off lease dog play in the Bay Area. We have a large, thriving dog community here in San Francisco. It gives us the opportunity to socialize our dogs and exercise them in ways most other dense urban environments can't. It promotes healthy dogs and healthy people but getting both man and dog out and active. It would be nothing short of a tragedy to lose the privilege of sharing such amazing outdoor areas with man's best friend. Dogs thrive in our parks and on our beaches. I've never met a single human who had a problem with the current dog situation in the Bay Area. Please reconsider this new policy. I do not currently own a dog, but I love meeting dogs here in SF and hope to one day have a dog of my own that can be my adventure partner and help my girlfriend and I achieve our fitness goals. This new policy will change the fabric of the Bay Area.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Jean Bogiages

**Correspondence:** On page 264 when describing a plant community that should be protect, this is written: Chaparral is dominated by many species of manzanita (*Arctostaphylos* spp.), buckbrush or California lilac (*Ceanothus* spp.), poison-oak, buckthorn (*Rhamnus* spp.), chamise (*Adenostoma* spp.), and other shrubs, including yerba santa (*Eriodictyon* sp.) and black sage (*Salvia mellifera*).

And again on page 265 this is written: Coastal scrub is dominated by low shrubs and herbaceous species, such as California blackberry (*Rubus ursinus*), poison-oak (*Toxicodendron diversilobum*), and toyon (*Heteromeles arbutifolia*). The coastal scrub community is dominated by coyote brush (*Baccharis pilularis*), California sagebrush (*Artemisia californica*), bush lupine (*Lupinus arboreus*), and poison-oak, with variations in dominant species based on moisture levels, soil types and slopes, and past land use history (NPS 2005b, 192).

I take issue with a park plan for an urban park adjacent to a large population to put protection of poison oak (*toxicodendron* is its name) as a value above the people of the area. There is probably no human who would not have a negative reaction to this plant. It therefore is a danger for humans. For a plan to want to protect this toxic plant in this busy area of recreation for so many people is unconscionable. This plan reeks of a value system that needs revisiting. It seems the "native plant society" has too much control over this plan. Not everyone in San Francisco agrees with this society's goals nor mission. When I acquired my undergraduate degree in Environmental Studies in 1989, this society was seen as rash and radical and extreme in its views by my department. Native Americans were here for centuries and then the Spanish then other settlers. People have always been a part of this landscape modifying it and it seems protection of people balanced with nature should be the goal of any plan for a recreation area. How can "native" be defined so specifically when evolution is nature. This is not an area miles from a large human habitat and is certainly not a balanced plan. I most definitely would like an answer to this concern.

**Correspondence:** To Whom it May Concern,

I am writing to indicate my strong opposition to the draft GGNRA Dog Management Plan. The GGNRA was established to give outdoor recreational opportunities to people in a densely populated urban area. It requires a different management approach than wilderness areas like Yellowstone or Yosemite. The plan addresses dog presence in the GGNRA as if it were destroying the ecosystem in these areas. The ecosystem in urban areas is already altered by people, hang gliders and horses who also frequent these areas. To target dogs as a major factor in altering the ecosystem is unfair and shortsighted.

In addition, the SEIS preferred alternatives force people in to their cars, in search of places to walk their dogs. This is bad for the environment and bad for Marin County. I would like to bring the following items to your attention:

1) The changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011. In fact, comments in 2011 ran 3:1 AGAINST the plan.

2) The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands.

I support the "No Action Alternative" in the SEIS for each area: Muir Beach, Homestead, Oakwood Valley and the Marin Headlands.

Please listen to the people who use these areas, and RETAIN THE LONGSTANDING 1979 PET POLICY!

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of

---

needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I am writing to voice my strong opposition (and severe disappointment) for the preferred alternative proposed in the GGNRA's new draft dog management plan. As someone who regularly takes advantage of the few spaces we have available for off leash recreation, I find it concerning that the promise that was made in the 1979 Pet Policy is being threatened. The GGNRA was created as a multi-recreational area for everyone and should be kept as such. If more education and community action needs to be taken to protect endangered species, then so be it.

I was initially drawn to and have stayed in San Francisco because it is so dog friendly. There are few

things more uplifting than taking my dog for a walk/run/playing fetch, even on a gross, rainy day. I spent this last Sunday at Fort Funston and could not stop thinking about how great it is that the Bay Area offers a place where people can run, play with their dog off leash, have a picnic with their family, fly a kite, hang glide, fly their parrots, AND go horse back riding, among other recreations I may have not seen that day. Not to mention the number of seniors and differently abled individuals who were out taking a stroll with their dogs running around them.

To be fully honest, I am disappointed and horrified that the new plan was in no way modified to incorporate the feedback that was given previously. Thousands of people objected to the loss of recreational areas, but it was completely ignored.

People care deeply about recreation and the environment. Please do not have a blanket assumption that dog owners are irresponsible and ignorant of how they affect the environment and people around them. I have been nothing but impressed with the way people interact with others. I've run into more inconsiderate people flying kites than I have dog owners in the GGNRA. In fact, there were fewer than 20 reported incidents involving dogs in the most recent data released.

Furthermore, I find it grossly irresponsible to propose banning dog recreation as the preferred alternative dogs. This will adversely affect our city parks and neighborhoods.

Sincerely,  
Colleen McNulty

<b>Correspondence:</b>	Dear Sir,				

For many years I have been taking my dog to Chrissy Field and Baker Beach when I'm in the city, which is quite often since I run a non profit working with arts organizations there. During this multi decade experience I have often been on the beach. I can say with certainty that most days the only people using the beach are the dog walkers and the occasional jogger. The weather in SF is such that most people only go to the beach on the occasional warm and sunny day. On the typical cold and foggy day the beaches are empty except for us. I have not noticed dogs going into the fenced off areas where seeding and native plants are being grown. The dogs stay with their people and other dogs. I have much more often seen children playing in those areas picking flowers and plants. So it might be more effective to ban children. I don't see how you can justify not allowing dogs at Chrissy field, they are much less likely to impact anything than the wind and kite surfers who occasionally take over the whole beach. Yet there is no talk of banning them.

The dogs are very low impact on these areas. I very rarely see scat on the beach and when it's there a dog owner picks it up. This is an important and possibly the most important activity on the beach. I was at Chrissy field this past Saturday Feb 15th from about 9am till 11:30 and easily 90 % o the people on the beach had a dog with them. This has been an important part of the Bay Area for many decades, we police ourselves and require very little from you. The reasons you have stated for banning this activity are specious at best.

Thank you  
Ted Helminski

Well, I am not sure how many times we have to comment on your plan for dog access in the GGNRA before you hear what the citizens of the United States want from OUR Recreation Areas.

At this point, I will only comment on the dog issue. However, I await the opportunity to address the NPS' GGNRA General Management Plan in April with dread but resolve. Citizens of all party affiliations are getting a bit tired of your bureaucracy "planning" what is best for us and our environment from three

thousand miles away.

Given the five EIS Alternatives, my comment this time is simply that we continue with the 1979 Pet Policy rules.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Kris Degaut

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I am strongly express my opposed to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and fails to consider the positives of an off leash dog policy. Further it will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. This short sided approach is unjust and unfair to the very people and pets that support and enjoy GGNRA properties.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

<b>Correspondence:</b>	Frank Dean, GGNRA Superintendent Building 201, Ft. Mason San Francisco, CA 94123				

Dear Sir,

I have lived in Sausalito for nearly 30 years.

I chose Sausalito as my residence, in large measure because of its dog friendly policies and the extensive urban recreational access both locations afforded. I applaud the San Francisco Board of Supervisors, Congresswoman Speier, Congresswoman Pelosi, the Crissy Field Dog Group, Animal Care and Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact based in its planning or findings.

I too believe the proposed policies are too restrictive and not based in fact. I am surprised the GGNRA is not responding to the comments of so many individuals, groups and elected representatives. Nor do I understand how the GGNRA chose not to address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS. This has lead me to question if process has been for appearances only and the GGNRA did not intend to incorporate public or even elected representative's views.

The key point missing is that the Bay Area GGNRA lands serve an urban population with millions of residents - not a wilderness.

When the GGNRA was created in 1972, Dog Walking was already a long standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture - and this use must continue indefinitely.

There are millions of people with dogs in the Bay Area. The preferred alternative will result in thousands of people being unable to recreate with their dog(s) - in the GGNRA lands these families support with their tax dollars. I firmly support preserving the GGNRA's 1979 Pet Policy. The Bay Area GGNRA is a unique national recreational area in an urban environment - not an isolated untouched park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

It would appear the GGNRA's preferred alternative intentionally sets up the proposed dog policy to fail - by restricting a large dog and urban resident population to use such small areas that over crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And this

will lead to even more restrictions - which is precisely what the GGNRA has apparently preferred all along.

The GGNRA relies on outdated studies and information for the latest supplemental environmental impact statement.

Further the GGNRA has not updated its enforcement data since the last draft EIS was released. This makes the conclusions and preferred alternative unfair and flawed as it is not fact based.

It leads to the appearance the GGNRA has gone through this process always intending the end result to be an overly restrictive dog policy that ignores the urban location of the recreation area, is unfair to tax paying residents, and is designed to fail before it is even released - ensuring the GGNRA can eventually simply do away with any dog access in the Bay Area GGNRA locations?

How is it that the SEIS has many assumptions that are not documented?

How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?

I join thousands of residents, elected representatives of California and San Francisco, and groups dedicated to animal safety and I ask the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,â€

Ken Horiszny

Sausalito, CA

**Correspondence:** As an animal lover and a long-time resident of San Francisco, I support better regulation of dogs in GGNRA. Please do not allow the doggy folks to take over the use of our parks. The proposed regulation is a good first step, but does not go far enough to protect the parks and allow use by all, not just by dogs and dog people.

GGNRA needs to provide more opportunities for people to visit and NOT have to interact with dogs. I'm not a dog owner, but I'm not a dog hater, either. But at Crissy Field and Ocean Beach, the off-leash dogs can be a nuisance. I cannot walk without off-leash dogs rushing up to me, or having to listen to owners shouting at their off-leash dogs to obey them. I came out to enjoy the scenery and to watch for birds, not to have to dodge dogs. Moreover, it isn't possible to bring a very small dog or a small child to these places due to the number of large dogs off leash: the owner may think the dog is friendly, but the rest of us have to take precautions with the safety of a small child or small dog.

GGNRA needs to mark off-leash areas with a physical barrier. Dogs should certainly be able to use the parks, but NOT THE ENTIRE PARK. There should be well-defined areas where dogs can be off-leash. This allows the rest of us to enjoy the parks in peace, and better protects sensitive wildlife areas. While some dog owners are conscientious, many others fail to comply with leash requirements in certain areas, to clean up after their dogs, or to maintain voice control over their off-leash dogs.

GGNRA needs to educate dog owners about the damage their pets do when they chase shorebirds. I have stopped going to the southern portion of Ocean Beach (including the supposed Snowy Plover areas) because it is too upsetting. People allow (and even encourage) their huge dogs to chase shorebirds. Birds and other wildlife in GGNRA deserve to also have space where they can rest, forage and live without constant disturbance and fear of death.

There are plenty of City parks in San Francisco that allow off-leash dogs. There is no need to turn the GGNRA into another dog run. GGNRA needs to accommodate many users - families, cyclists, dog owners and nature lovers, as well as wildlife.

Please must move forward with the proposed Dog Management Plan to ensure that ALL park users may enjoy every aspect of the park in the future.

**Correspondence:** On page 258, there is one report of a dog killing wildlife. This is just terrible. It is a horrible situation in which an owner did not control his dog. There is no excuse but if dogs were licensed to be off-leash, have demonstrated their response to their owners and if signage were more adequate, this would have been prevented. It seems this is the park's fault as well as the owner's. The park service has a duty to protect the natural environment while involving people of an urban area in a recreation area as is stated in the founding of the GGNRA. It is incumbent on the NPS to provide this balance. Requiring owners to have a license to have their dogs off-leash would prevent this. A plan in Boulder, CO has been successful and the NPS should be required to review that plan as it is a great way to keep nature protected while before barring more responsible, tax-paying local citizen's from living their lives as they have for 50 years.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to most of the trails and fire roads listed to become banned or on leash access only. As a responsible dog owner, I do not allow the destruction of habitat, disturbance of wildlife, or unwanted interactions with people.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I live in the Marina and walk my dog in the GGNRA at least weekly. I'm writing because I would extremely disappointed if the GGNRA decided to implement their Preferred Alternative because it is unjustly restrictive. Losing valuable off leash areas and privileges would significantly alter the experience in the GGNRA which I enjoyed before I was a dog owner.

Honestly, I don't understand why the GGNRA plans to make such restrictive changes when there seems to be a better middle ground which has yet to be explored. In fact, the changes don't really take into account the comments or requests make by city residents or even San Francisco's Board of Supervisors. Specifically, I don't understand the decision to restrict off leash walking on trails or the overarching decision to restrict off leash walking on all new acquired land. Rather than make such a sweeping decision, the GGNRA should try to evaluate these changes on a case by case basis. The proposed plan just seems extremely one sided and is downright punitive to dog owners.

I understand the need to regulate off leash dog walking in the GGNRA, but it seems like there are better ways to accomplish this. For example, I'm sure many dog owners would be open to the idea of a off leash license which could be obtained for a small fee and could help offset some of the GGNRA's maintenance costs. Additionally, people with poorly behaved dogs could have their license revoked.

Lastly, take a walk in an off leash area of the GGNRA and tell me that it's not a beautiful sight or a unique experience in San Francisco. I overhear tons of tourists and others remark on how wonderful it is to see so many dogs running and playing off leash in the GGNRA. Losing the proposed privileges and putting dogs behind a fence would seriously change the GGNRA and not in a good way.

Please do NOT implement the proposed changes as is and please listen to the comments and concerns of the people that use the park. There HAS to be a better way to help accomplish the goals of both sides.

**Correspondence Type:** Web Form

**Correspondence:** It is important to balance the needs of all park users but let's not be extreme in the restricting off leash recreation use. I think it is worthwhile to review current usage and adapt as needed, however these changes are too much and don't reflect the local population of the SF bay area. At Fort Funston, which is overrun with non-native invasive plant species, I don't see how off leash impacts the native environment. In the areas that are sensitive, where the fence line is in tatters, I could see greater enforcement to reduce impact.

Lastly, the SF bay area has a large canine population. Dogs need to be socialized in order to keep them happy, healthy and most importantly human safe. They need to know how to interact safely with humans and especially children. Off leash areas are important in the development of good dog behaviors.

Thanks for the opportunity to comment!

Kevin

**Correspondence:** Having dogs running around parks is one of the most special and unique parts of San Francisco. Every time that I take my pup out to the park dozens of people stop and talk to me about him, want to play with him, and experience genuine joy because of their interactions with him. It seems completely unnecessary to take away this element of San Francisco. Furthermore, the dogs themselves need the ability to run free in the designated park areas. It would be a huge travesty to take this away from the residences and their pup companions. Please focus on real issues of the city that create challenges and difficulties, not the ones that create happiness and already improve the quality of life for San Francisco residences.

I do not have a dog of my own, but I am an avid dog lover, and I enjoy all of the dogs i run across. I believe dogs need space to run and play and socialize with other dogs. They need the recreation areas to stay free from strict leash laws, as they are now. Please don't let the fear, irrationality, or other personal issues a few people may have take away a right and a joy from dogs and their people.

<b>Correspondence:</b>	Please consider leaving the national parks open to dog use. I understand that dog use needs to be limited in certain areas, like at the end of Stinson Beach, etc. So as not to interfere with other beach goers. But, it is of utmost importance to have dog walking parks in the area that are not city parks. Dog walking is healthier for dogs and individuals. Smaller city parks are not meant as dog use parks. These are small facilities meant for family use for picnics, games, parties where dog use is only a nuisance. In more open areas, dog are free to excersize and socialize as are their owners. I am not a dog owner, but I clearly see the need and benefit to continue open use of recreational parks and beaches for dogs. Having rules to clean up after your dogs is all that I ask as far as rules are concerned. Most people in the bay area are responsible when it comes to cleaning up after their dog as long as supplies and garbage bins are available. Thanks you for leaving the parks open and free to dogs and humans!

**Correspondence:** For many years I have contributed money to the GGNRA as a way of saying thank you for the open space available for dogs to run and be free (under voice control of course) It seems the latest restrictions on dog access did little to take into consideration the pro-dog comments since 2011. There are so few areas where I can hike with my dog, please to not further reduce the areas currently available to us. I have hiked the trails and walked the beaches for many years, I have yet to see a dog leave behind candy wrappers, beer and soda cans, broken glass, plastic bags, and garbage- -- -all of which to great harm to wild life and the environment. Thank you

**Correspondence:** This plan makes no sense. Dogs need the freedom to run and enjoy the outdoors. Ft. Function as an example would not be used for anything other than a launching pad for wind surfers. It is a shame that people don't see the benefit of the off leash areas instead of crowding the sidewalks of the inner city with dogs on leash. Do not reduce the amount of off leash space.
