I am writing in response and OPPOSITION to the current proposal set forth by the GGNRA for the 'Preferred Alternative' Draft Dog Management Plan. It is unclear to me why the GGNRA has wasted a great deal of time and numerous resources regarding this poorly constructed and conceived management plan at least as concerns Fort Funston.

- 1) Most important regarding Fort Funston, it is imperative that any revision allow off-leash dog walking under voice control on the uplands paved pedestrian pathway. The vast majority of visitors stay on this path, and many are elderly or handicapped, preventing them from leaving the pavement. In fourteen years of visiting Fort Funston with our dogs several times a month, we have never seen any significant unpleasant incident regarding dogs. What we have seen is the occasional unpleasant tangle of peoples' legs from leashes in use in this constrained pathway.
- 2) Fort Funston has essentially been abandoned for the past few YEARS by the GGNRA, leaving large portions of the trails in this beautiful area inaccessible for the elderly, the handicapped, families with strollers, and others. While the concrete trails used to be cleared after high winds have caused sand to build up, this has not occurred in the past few years. In fact, a very large sand berm has formed at the northern end that makes it the end point for many walkers who are able to and choose to go that far. Where have the workers been?? I have left messages for GGNRA officials notifying them of this but no response has been forthcoming.
- 3) Some of the garbage bins along the trails have been removed so that the GGNRA doesn't have to do the work required to empty them.
- 4) The water fountain just off the parking area is a disgusting, malfunctioning mud puddle that needs attention. Necessary minor fixes to allow drainage have been ignored by GGNRA my our understanding that the GGNRA personnel involved in this project includes a number of inherently anti-dog people, which in and of itself demonstrates undue bias.

Finally I would say Thank You to all the dog owners who have acted responsibly and proactively to keep Fort Funston a pleasant and mostly clean and orderly place despite GGNRA neglect. People and animals need socialization and outdoor open space areas in which to exercise and appreciate the beauty of nature. I urge you to leave the long-standing dog rules in place and make minor / reasonable repairs and updates while still allowing off-leash activities in those areas currently de facto used for that purpose. As a supporter of numerous organizations that protect wildlife and open space, and a conscious environmentalist, I believe that urban areas serve numerous people, animals, and agendas that are different from wilderness and more rural National Park areas like Yosemite or Yellowstone.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Bldg. 201  
San Francisco, CA 94123

Dear Superintendent Dean:

The Marin Conservation League previously commented in 2011 on GGNRA's Plan to provide clear, enforceable policies to determine the manner and extent of dog use in various areas of the park. On the basis of information in the Plan and DEIS, we concurred at that time with the NPS selection of the Preferred Alternative for all seven sites in Marin, as a reasonable compromise between the Environmentally Preferred Alternative "D" and the other "action" alternatives.

We have a similar response to the revisions in the Draft Supplemental EIS: We support the National Park Service's (NPS) Preferred Alternative "F", in that it balances the need to protect natural and cultural resources and ensure visitor safety with the designation of appropriate areas in the Park for no dogs, or dogs on- and off-leash. We are fully aware of the potential for adverse effects of large numbers of dogs caused by trampling vegetation, depositing dog waste, and adding nutrients. Such degradation of high quality habitat can result in displacing wildlife from preferred habitats, with eventual loss of species from the area. For each of the seven sites in Marin, the Draft SEIS identifies sensitive species, habitats, and/or cultural resources that may be threatened by dogs and has recommended an appropriate response. Therefore, where a choice must be made between allowing dog access and protecting native wildlife, endangered species or sensitive vegetation, the Draft SEIS tips the balance toward protecting the resource. We believe that this approach accommodates a variety of recreational experiences, both with and without dogs, while ensuring that these resources are protected for future generations.

Other comments are as follows:

1. Under Alternate F, the NPS preferred alternative for Muir Beach, is appropriate for that site to protect the restored habitat at the mouth of Redwood Creek and several sensitive species. The Preferred Alternative in the Draft Supplemental EIS allows access for dogs on leash on the beach. MCL agrees with this approach, despite strong pressure from Muir Beach dog-owners to allow an unfenced ROLA on a portion of the beach. The large expanse of Rodeo Beach provides that opportunity.

2. The on-leash access proposed for the Oakwood Valley Fire Road under Alternative F would remove the fence and gates proposed for the fire road and thus remove a barrier to wildlife movement. Hikers, bikers, and equestrians will share the fire road with on-leash dogs. The Fire Road is currently used by all three, and the almost parallel Trail is used by hikers and dog walkers only. That trail will be closed to dogs under Alternative F from Tennessee Valley Road to the junction with the Fire Road, and thereafter open to dogs on leash to the junction with the Alta Trail. We agree with this approach, which will keep dogs off the lower wooded section of the Trail.

3. MCL also agrees with Alternative F's general approach to trails in the Marin Headlands, which is to allow on-leash dog access on the perimeter of the area, while protecting the integrity of wild inner portions frequented by coyote, bobcat, and other wildlife with large territories and need of protections. This approach safety also enhances visitor safety.

4. The revised Monitoring-Based Management Strategy is less rigid than the previous compliance-based strategy, which did not consider the trail context. Nonetheless, given the size and diverse conditions of GGNRA and a limited number of personnel, the Monitoring-Based Management Strategy needs to be supported by clear standards and vigorous enforcement that includes (a) visible increase in uniformed law enforcement presence; (b) increased issuance of citations, particularly to aggressive violators; and (c) tracking of repeat offenders. We agree with others that enforcement of regulations sends the clearest message to people about what is expected of them. Clear and prominent signage is also important.

Finally, the effectiveness of Alternative F in protecting resources and enhancing safety of visitors and dogs will depend heavily on the combination of responsible observance by dog walkers and enforcement actions taken by GGNRA. Because neither of these can be assured, adoption of this alternative should be conditioned on establishment of a date-certain to allow for review of the Plan's effectiveness based on monitoring of user compliance.

We appreciate the NPS's efforts to inform and engage the public in this long and difficult task, and look forward to your responses.

Sincerely,

Jon Elam Nona Dennis  
President Chair, Parks and Open Space Committee

**Correspondence:** Dear National Park Service,

I strongly urge you to curb access of dogs to the GGNRA. I would prefer that dogs not be allowed at all. If that is not possible, then I would hope that the Park Service will allow dogs on leash only in limited areas.

Dogs off leash do not belong in the GGNRA. Dogs off leash belong in fenced areas where they do not interfere with the peace and safety of wildlife and human visitors to the Park.

I think your recommendations for off leash and on leash dog use in the GGNRA are overly generous to dog owners.

Dogs frighten off wildlife in the park. They chase birds. They are the only park 'visitors' that routinely defecate and urinate in the park. They bite people! Children who are at face level with most of the dogs in the park are at risk from dog attacks while playing in the park. Dogs bark. The tranquility of a day in the park is disturbed by the presence of dogs.

I love the GGNRA and visit it often. I will not, however, go to any area of the park where off leash dogs are allowed and I will question the advisability of visiting areas where dogs are allowed on leash due to the irresponsible behavior of most dog owners who either use very long leashes or let their dogs off leash when they think no one is watching.

I understand from reading newspaper articles that the Park Service has been seriously bullied by dog owners. Well- there are many,many people who don't like to have to share their recreation time with other peoples "pooches" and their "poop".

Thank you for standing firm for the rights of birds, other wildlife and people, especially children.

Sincerely, Georgina Monahan

**Correspondence:** PLEASE MAINTAIN THE CURRENT 1979 PET POLICY.

I grew up here in Muir Beach and was taught to love animals by this great SF city in which our patron saint is St. Francis De Assisi- of animals. Being around people that loved and were so committed to animals, inspired me to go to veterinary school, which I did. I grew up riding the trails on my pony with my dog, my friends and so many adventures that I want for my children. Closing more trails and beaches to dog use further restricts the possibilities of children learning about dogs, big, small, etc... Programs such as "read to a dog", "Pen Pals", and "Foster Mutts" have provided psychological/psychiatric relief for many people as maintained by these established programs. This positive work has been recently continued with anxiety dogs, further establishing the importance of these creatures to us, humans on a

physiological level. These programs have paved the way in opening doors for dogs, not restricting them. Restrictions are a backwards thought in this day and age with pet policies.

Given the current data that suggests the importance and attachment of these creatures both to us, and us to them, further restriction will cause backlash from all involved in pet care sectors. Pets desperately need adopting from shelters. If restrictions continue with regard to when/where these pets are allowed, it will become too much trouble to adopt them and the mortality rate at shelters in the area will SKY ROCKET. In addition, pets with less exercise in their daily routine develop behavioral problems and will likely be given up/destroyed. For what?

Additionally, I did my undergrad in Upstate NY in the Adirondack State Park. What makes us similar is the fact that Muir Beach is a community in the middle of state land, like the hundreds of residential homes in the middle of the largest state park in America. They have made it work, and they have a great relationship with the park committee because they listen to what is being said, what the PEOPLE living in it and paying for this land WANT.

Hilary

**Correspondence:** Since I have been going to the Fort Funston site, I have seen a great improvement in the families and pets that have been there. Prior to it becoming a dog park, it was at times scary. There would be homeless in the bushes, or people in the bushes doing who knows what. I would be on paths, but I didn't always feel safe. As time went on, I began to see more families, most with and some without their pets. Some pets on leash and some off leash. But with time and the increase of dogs and dogs walkers/owners, I felt safer to walk my dog here.

The site should continue as it is. as a dog park to take our dogs to walk, play and socialize, on or off leash, throughout the park without proposed limitations.

Today, it is rare that I see folks behaving badly, and I believe that the use of the park as is, and if it were able to continue as is, would actually be an asset to the site at Fort Funston, as well as the other sites. If it were to be changed as proposed, I believe there would be less visitors to the site, since most of the visitors are dog owners/walkers, and crime would likely return and become the problem. There are visitors who do not have dogs and they are still able to enjoy the beautiful scenery and vegetation the dunes offer. Off trail, or destruction of the plant life, wildlife, dunes would not be the problem. The crime would be the problem and few to no one would be able to use the site safely.

As for the other sites, I also hope that no changes will be made to these sites with regards to dog owners bringing their dogs to the sites. We are responsible owners/care givers to our pets, and take responsibility for our pets.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Lauren Deane Evans

**Correspondence:** I have grown up at Muir Beach since 1963. My Parents were strong advocates and helped the development of the GGNRA. Their idea was for the land to be a "National Recreational Area" not a National Park or Monument. They did not want the area to be built up like Southern California with roads, houses and businesses. The premise is and was for the land to be used by the people, including pets, horses and other recreational activities! They have always supported the current dog policy as it is today.

After living in the area for 50 Years, I have personally seen way more damage and disrespect to the land and wildlife from humans than from the small amount of dogs.

With that said, I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach and The Marin headlands trails surrounding Muir Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** My name is Jamie Coughlan and I am an owner of 2 dogs. We frequently visit John Muir Beach and Stinson Beach mainly because we can bring our dogs here. We are originally from the state of Washington where the areas that are dog restricted are far fewer than here in California. We were very unwelcomely surprised when we moved to California and learned how little choice we had in outdoor areas that we could bring our dogs and family. It is important to us as a family to be able to visit outdoor areas and beaches that allow our dogs because it provides our whole family with exercise, vacation, and a community feeling. Especially during the summer months when it is hot out, we cannot leave our pets at home on the weekends, thus restricting beaches and off leash areas will severely limit our ability to travel to Muir Beach and Stinson Beach on the weekends. I know we are not the only one of our dog loving friends and family who will not be contributing to the local economy of Marin county if you restrict our whole family access by not allowing our dogs.

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and

human health from off-leash restrictions were not considered in the development of the preferred alternative.

Thank you,  
Jamie Coughlan

**Correspondence:** To whom it may concern:

These park areas are an important resource for everyone, especially those living in an urban area where the city parks are already overburdened. The plan is overly restrictive and serves no legitimate purpose, since there is no problem with the current use of the GGNRA by dogs and people. Over 50% o San Francisco households have dogs, and to implement the plan would adversely impact the use and enjoyment of these areas. Please listen to the overwhelming local response to the issue, which has been in

favor of keeping the off leash use as-is. Those who live in urban areas help the environment by limiting suburban sprawl, but need these adjacent parks for health and recreation. Restoration of these areas to their previous state (before humans and dogs) should not be a goal here. They are and have been since 1979 dedicated to use by city residents. Please keep it that way. Thank you. Best regards, Chris Stuart

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to

support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

**Correspondence:** I have been taking my 3 pound dog to the Dog Park at the Fort Funston and hope that there will be no changes to the site. My dog is very small and is not comfortable when we go to the designated gated parks throughout the City. He is overwhelmed with dogs, many of which are aggressive. While at Fort Funston, we have never encountered any problems. The owners/dog walkers and the dogs are well behaved, well socialized and not intimidating. I believe it is because they are allowed space which is such a rare commodity in San Francisco for humans and pets alike. Our dogs love this site and I believe that it is because we pet walkers are there is why the site is getting so much more attention. There are also folks walking through that do not have pets with them and they do not appear to be intimidated by the dogs.

Please do not take away our Dog Park/s.

**Correspondence:** I hope the GGNRA takes into account the needs of other user groups in addition to dog-lovers. I am an birdwatcher, hiker, lover of beaches and parent of a small child who is tired of being harassed by packs of out of control dogs running loose on GGNRA beaches. "Voice control" is a euphemism for "no control" and unless GGNRA has insufficient funding to provide ranger services during the day, these abuses will continue. Currently, there are typically no rangers present even on popular beaches on sunny weekend days - this past weekend on Rodeo Beach, for example, between 10 and 1 pm, not a ranger seen, and many loose dogs running roughshod over sunbathers, picnickers, and small children. When confronted dog owners are hostile and argumentative and deny any responsibility for their animals' behavior. I have been told at Crissy Field that this is a "dog beach" and children are not welcome (my son was trampled to the point of screaming because a dog wanted his sandwich).

In addition, there is no way "voice control" can prevent dogs from trampling sensitive wildlife in the dune areas which may be critical nesting habitat for Western Snowy Plover, Least Tern and other special status species. Please consider the interests of all user groups, including wildlife, and police the beaches effectively to enforce any new regulations, which dog owners are already vowing to ignore.

**Correspondence:** I strongly oppose the preferred alternative described in the Golden Gate National Recreation Area's (GGNRA) dog management plan (the "Plan") because it violates the spirit and intent of the GGNRA, it does not provide a suitable alternative for a significant current user base, and it institutionalizes inequality by unfairly gives some users priority of a common space.

The GGNRA dog management plan violates the spirit and intent of the GGNRA. As part of the original 1972 Act, the area now known as GGNRA was authorized as an area of recreation with the intent of providing green space for visitors and residents alike. The intent was not to restore the GGNRA to it's perfectly natural state prior to civilization as is evidenced by the cultivation of non-native species (palm trees at Crissy Field and Fort Mason, birds of paradise at fort mason, fertilized grass at both areas). Intentionally excluding one aspect of the recreation area in the name of restoration while letting other "nature violations" remain is a clear violation of the original intent of law and a mistake by the NPS.

The GGNRA dog management plan does not provide a suitable alternative for responsible dog owners. Fenced in pens with no open space alternative confine large groups in a small space. Many dogs are fearful or aggressive in confined spaces with unkown dogs present; these pens would encourage irresponsible dog owners to never teach voice commands while simultaneously keeping responsible dog owners away who fear for their dog's health at the hands of others.

The GGNRA dog management plan excludes a large portion of the Park's current user base. Responsible owners who manage their dogs with voice control make up a large portion of residents and visitors. Their animals keep away from others on the beach and do not violate protected zones. Excluding all owners from the area effectively creates a class tier, putting some park users in higher priority to others.

As a 10 year military veteran I understand the concepts of Intent, decision alternatives and equality. I strongly oppose the preferred alternative described in the Golden Gate National Recreation Area's (GGNRA) dog management plan (the "Plan") because it violates these three major concepts.

<b>Correspondence:</b>	PLEASE do not get rid of the off-leash play areas for dogs!				

I am a long time SF resident and homeowner. I have a dog and two kids so I see all sides of this issue. We NEED the various GGNRA areas for dogs to run free. Walking on a leash is not the same thing as being off-leash. And dogs need to be able to run free. Ft. Funston is dog heaven just for that reason. And all dogs get along, owners are respectful of each other and the grounds. It all works very well. SO why would we change that?

Chrissy too. A wonderful spot- where everyone is able to co-exist and use the space jointly.

The dog "parks" are not enough.

This city has more dogs per person than children...so make sure the dogs have a place to run. For many people- they ARE their children. For someone like me- who has both- I would consider my dog my first born :)

And my first born needs to be able to run free as much as my other children do.

thank you-

Lauren Schwartz  
home-owner, business owner  
mother of one dog and 2 children

**Correspondence:** I grew up in San Francisco, taking family walks with the dog at Crissy Field. The dog happily running free on the beach and fetching sticks in the water were what made those walks so very special for me as a child. I hate to think of that going away for the next generation. I do understand that times change, as do populations and recreational needs, and I also understand that some people prefer to walk without dogs around. But in a city where dogs are beloved family members in so many households, I believe the current GGNRA plan does not sufficiently take into account the needs of its dog owning and loving community members.

Please keep more of the GGNRA dog-friendly.

Thank you.

**Correspondence:** We, the undersigned, oppose the Golden Gate National Recreation Area's (GGNRA) Draft Dog Management Plan. The plan proposes to either eliminate or severely limit dog-walking access in 21 locations in Marin, San Francisco and San Mateo counties - including traditional off-leash areas like Crissy Field, Fort Funston, Marin Headlands, Mori Point, Muir Beach, Ocean Beach, and Rodeo Beach.

The GGNRA is located in a major urban area with minimal open space, so these restrictions will have a dramatic impact. We believe an acceptable dog management plan must take into consideration the impacts of the proposed plan on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, and must respect the recreational values that are part of the GGNRA's original mission (to provide for the maintenance of needed recreational open space), which this plan fails to do.

Kelly Clark

**Correspondence:** Since I have been going to the Fort Funston Dog Park site, I have seen a great improvement in the families and pets that have been there. Prior to it becoming a dog park, it was at times scary. There would be homeless in the bushes, or people in the bushes doing who knows what. I would be on paths, but I didn't always feel safe.

As time went on, I began to see more families, most with and some without their pets. Some pets on leash and some off leash. But with time and the increase of dogs and dogs walkers/owners, I felt safer to walk my dog here. The site should continue as it is. as a dog park to take our dogs to walk,play and socialize, on or off leash, throughout the park without proposed limitations. Today, it is rare that I see folks behaving badly, and I believe that the use of the park as is, and if it were able to continue as is, would actually be an asset to the site at Fort Funston, as well as the other sites. If it were to be changed as proposed, I believe there would be less visitors to the site, since most of the visitors are dog owners/walkers, and crime would likely return and become the problem. There are visitors who do not have dogs and they are still able to enjoy the beautiful scenery and vegetation the dunes offer. Off trail, or destruction of the plant life, wildlife, dunes would not be the problem. The crime would be the problem and few to no one would be able to use the site safely. As for the other sites, I also hope that no changes will be made to these sites with regards to dog owners bringing their dogs to the sites. We are responsible owners/care givers to our pets, and take responsibility for our pets.

**Correspondence:** Plain & simple: dogs need to be dogs and running free, at least part time in a big city, is an essential component of their nature...

My dog Scarlett knows the way to ALL of her favorite places and literally starts whimpering & crying in the back seat of the car as soon as she smell the ocean air. Sadly she doesn't get to enjoy that thrill often; I can't imagine her life without ever being able to run free once in a while.

PLEASE preserve a small slice of the natural order for our canine companions!

**Correspondence:** Dear Superintendent Dean,

I'm writing to let the GGNRA know that I am strongly opposed to the new draft dog management plan. It is a very extreme change to the current plan, and is extremely restrictive to both dogs and their owners. The new plan, if enacted, will prevent me and my family from enjoying the GGNRA areas I grew up with. I was born and raised in San Francisco and have very fond memories of going to Fort Funston and Crissy Field with our dog. Now that I am an adult, I have my own rescue dog. My husband and I love to go hiking and going to the beach early on Sunday morning. We often hike around Marin county,

including Mt Tam and Muir beach. However, our favorite spot is Ocean Beach, early in the morning. Often is is just us and our dog out there at these times. Almost all of our hiking and outdoor activity revolves around our dog, as he also needs to get out on the weekends and it doesn't make any sense for us to go out and hike without him. Furthermore, it will severely restrict our dog walker, who takes our dog to Fort Funston daily. Without this opportunity, our dog would be confined in doors during the week.

The GGNRA has lost sight of the purpose it was created for. Congress intended, when it created the GGNRA in 1972, that "the objective of [the creation of the GGNRA] is to ... expand to the maximum extent possible the outdoor recreational opportunities available to the region." (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972). The draft dog management plan would, for thousands of families, wipe out the opportunity to enjoy the recreational opportunities of the GGNRA. The parks would lose visitors, and future generations would not be able to enjoy the beautiful areas the GGNRA controls.

Furthermore, the new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Dog owners who live in the densely populated city will have nowhere to go. There are very few open areas. When these become too crowded, dogs get nervous and accidents occur.

If the GGRNA wants to limit the impact of dogs in their areas, there are other ways to do it. There should be more opportunities available for people who want to be responsible dog owners, including training classes, workshops, clean up days, etc. The current draft plan only punishes those who want to do the best for our dogs. Banning dogs from GGNRA areas is not a well thought out solution.

Sincerely,  
Elizabeth

**Correspondence:** The only effective way to deal with off leash dogs and their owners is to put them in fenced, designated off leash areas. The use of other natural barriers, rather than the standard 4' cyclone-type fence is just asking for trouble. The off leash dog community has a long history of ignoring rules designed to protect the general public from their uncontrolled dogs. The concept of "voice control" is completely without merit in the context of off leash recreation in public parks. Not only is it irritating to have to listen to owners shouting at their dogs, the lack of formal training in most dogs makes the efforts ineffective as well.

Asking the public to share sandy beaches with dogs that are defecating and urinating on a constant basis goes against all of the historical norms of prudent public health and safety standards. No responsible parent would allow their child's school playground to be turned into a off leash dog park. In fact, state law prohibits this. Why should it be any different in public parks? People and their children use the sandy beaches for many activities that involve close contact with the sand on bare skin. In fact that is one of the joys of beach recreation, feeling the warm or cool sand on your body while you listen to the sounds of the surf or birds or nothing at all. Allowing dogs and their owners, whether leashed or unleashed, to freely cover the beaches with urine and excrement (some of which gets picked up and some that doesn't) flies in the face of commonly held public expectations for clean, safe and secure beaches.

The total lack of any type of training required for dog owners before they are set loose on the public lands coupled with their misplaced sense of entitlement has resulted in a completely incompatible activity which routinely causes the non-dog-owning public to abandon their prized beaches. The unwillingness or inability of law enforcement agencies to control illegal off leash activity has left the general public with no recourse. My recommendation would be for the Park Service to take positive steps to leverage their limited enforcement activities so as to be effective in combating this scourge on our public parks. Bearing in mind that history has shown that if you allow leashed dogs on the beach, those leashes will come off when the owners see fit. Dogs should be prohibited entirely from the beaches. This simplifies the enforcement process. No more cat and mouse game where dog owners carry their leashes for use only when the ranger comes into sight. This way the ranger sees a dog on the beach, he/she writes a citation. Repeat offenders should see sharply escalating fine amounts and/or jail time. Honestly, this has been an on-going criminal conspiracy amongst the off leash crowd, to defraud the public of their unfettered use of public parkland, for decades. When does the public get some relief? People are being maimed and torn to pieces by pit bulls and rotweilers while law enforcement agencies do what? Please protect the people, the environment and insist on fenced parks for dogs.

**Correspondence:** I am strongly opposed to the "Preferred Alternative" change to the GGNRA policies. I have lived next to the GGNRA and, before it was established, the Presidio Army base. During the 35 years I have lived in this neighborhood, I have owned a few dogs. I have therefore had experience walking my dogs, off-leash, for a long period of time. I OPPOSE the "Perferred Alternative" and it's policies. There is no absolutely no justification for the oppressive policies being proposed.

We the people, lead by Phil Burton, worked to preserve the Presidio Army base as a recreation area for the City. This was a continuation of the open policy the army base had. The City and the GGNRA are safer because of the off-lease policies and, as I have stated before, there is absolutely no justification for the changes the GGNRA has been trying to force upon the residents for the last 29 years.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Joe Vargo

**Correspondence:** I strongly oppose attempts to outlaw off leash dog activities in the areas of the GGNRA which this document addresses. People with dogs deserve access to commonly held land. I believe banning off leash dogs will not work. Criminalizing the historic relationship between humans and canines is a step in the wrong direction. Please, instead, put efforts into programs to educate dogs, owners, and the general public about what constitutes appropriate dog behavior in public space.

**Correspondence:** I support a balanced use of the incredibly diverse lands of Golden Gate National Recreation Area(GGNRA).

I support the preferred alternative F. It adds a lot of good protections and balances wildlife protection with the many uses of the park lands.

I sincerely hope that the plan will not be weakened from pressure by dog walkers and the Marin County Supervisors.

There are good protections of wildlife in Alternative F. I encourage GGNRA to back up the

---

implementation of the new plan with genuine enforcement. That would mean issuing citations to violators.

Thank you.

David Wimpfheimer

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and

human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

<b>Correspondence:</b>	I live in San Francisco and have the pleasure of frequently walking my dogs off-leash/under voice control at Fort Funston. There is no park in San Francisco that can provide the same experience with respect to size and beach access.				

The GGNRA admits that they have not conducted site-specific studies at GGNRA sites to document alleged impacts from dogs on vegetation and soils. However, the SEIS claims that these unproven impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them. Anecdotal observations made by NPS staff, who may or may not be biased against dog walking, should not be used to set policy.

Since there is no specific evidence which proves these impacts are occurring as a result of dogs, please do not reduce the quality of my life by implementing the NPS Preferred Alternative in the SEIS. Instead, please formalize the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** I am a resident of San Francisco with a 10yr old Border Collie. I've been taking daily trips to Crissy Field and/or Baker Beach for the last 5years with my dog. This has been a crucial part of the overwhelmingly positive experience I've had living in San Francisco.

I'm a strong supporter of the off-leash environment because, as many dog owners might agree, the freedom of movement is an integral part of the participating in the outdoors. Requiring a leash limits my ability to enjoy my freedom outdoors and makes my experience seem limited at best.

I understand not every person in San Francisco enjoys dogs. I'm not adverse to building more off-leash areas IN CONJUNCTION with our current off-leash areas. However, I'm not in support of limiting the off-leash areas so severely that there is little form of compromise.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.  
The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Danesha Vasquez

**Correspondence:** February 18, 2014

To the GGNRA:

My name is Nancy Wilder, I live in Montara and am a member of the Montara Dog Group.

I am writing to comment on the inaccuracies of the SEIS document addressing dog walking in the Rancho Corral de Tierra which encompasses Montara and surrounding communities.

The general tone of the SEIS states that dogs are a huge problem in all the spaces that the GGNRA manages for the people of California and wants to greatly restrict access by people with dogs in these areas. That is completely wrong, and an overreaching action.

The SEIS does not give, or link to, any documentation for negative environmental impact on this area from dog walkers. There is no logical reason for banning dogs from this area, no scientific data collected, and since the GGNRA has only been managing this area since December of 2011, there is no evidence for the GGNRA to state that dogs have caused any problems here.

Many people walk here daily, at different times of day, and will attest to the fact that dogs running amok or destroying vegetation is extremely rare. There are so many trails and a few open fields here for dogs to run and play; dogs in general prefer to be near their humans and interact with them or other dogs.

People have been responsibly walking their dogs both on and off leash in this area for decades. Dog walking, and being out enjoying the Rancho, has brought our community together and has actually been beneficial to the area by providing waste cans and bags, and facilitated communication and resolving of issues that arise in the open space (fallen trees, lost dogs or people, illegal dirt biking, etc) I have lived in Montara for almost 7 years and consider walking my dog in the Open Space integral to my love for this area, and to the value of my property. It is an important part of my day to connect with my community in this way, get some exercise, and enjoy the outdoors in a safe environment for both me and my dog.

Much as I love Montara, I have considered leaving the area if dogs are not allowed or even severely restricted in the Rancho. This is not a light decision for me.

Most folks I see on my daily walks in the Rancho Corral de Tierra Open Space have their dogs with them, whether people are running, biking, horseback riding or walking, they are generally responsible and friendly, and care about and respect the natural habitat. What I don't understand is why the GGNRA does not seem to remember the fact that they were formed for ensuring San Francisco Bay Area residents would continue to have areas of open space in which to recreate. Dog walking as recreation, especially off leash, is of utmost importance to a vast amount of residents. Dog walkers, especially in the Rancho, have a decades - long history of off leash dog walking and caring for the habitat. The SEIS dog management plan preferred alternative does not provide ANY off leash opportunities in the Rancho, and bans off leash dog walking completely in San Mateo County. There is absolutely no rationale for this, making it an act of totalitarianism, and is not acceptable.

I would like to point out that the state of Oregon allows off leash dog walking on most of their beaches; some are restricted due to wildlife activity at certain times of the year, but there is adequate signage and updated information available on the State Park website. This is another fact that demonstrates how the GGNRA is being completely over restrictive in the management of the Rancho Corral de Tierra. Yes, the beach is not the same as our Open Space but the comparison lies in the fact that there are environmental and wildlife concerns in all natural habitats.

The fair and just decision to be made in this situation is to continue to allow off leash dog walking in the areas in which it has been common practice for decades, (the Open Space in northern Montara adjacent to the coast, and near El Granada) and allow dogs on leash in other areas such as the trails above Moss Beach. I hope the GGNRA will come to reason and make the decision that the majority of people want in this situation.

Respectfully,

Nancy Wilder  
452 6th Street  
Montara, CA 94037

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I have already left one comment and I understand today is the last day to comment so I wanted to add a few things.				

1. My original comment was supportive of the preferred alternative, particularly at those location in San Francisco. I continue to feel the same and that providing large areas at Crissy Field, Ocean Beach, and Fort Funston for off leash dog use while also providing on leash and no dog areas is a fair compromise to all users.
2. I commend the GGNRA for going through this long/exhaustive process and making an effort to listen to concerns by all parties. I have attended several of the open houses and found your staff helpful and the general tone of the conversation to be positive and constructive even among folks with differing opinions.
3. Most of my dog owning friends are supportive of the preferred alternatives at the locations within San Francisco. They recognize the need for balance in these public spaces. They were pleasantly surprised that large areas would still be maintained for them to run their dogs off leash.
4. I hope that this public comment process is a productive one. I read many non-productive comments after the last version of the DEIS in opposition to making any changes whatsoever. There are very organized groups such as Ocean Beach Dog and Crissy Field Dog actively engaged in trying to sabotage this process as much as possible. Recent comments from Rep Jackie Speier asking for the GGNRA to start from scratch represent ignorance of the history of this subject and a denial of all the hard work and time that has been spent heretofore. This 10 year long odyssey needs to come to a close.
5. However, if there are dog owners making reasonable requests for modification to the plan that have merit, I would strongly request that the GGNRA consider these requests as part of this DEIS process. In particular, there are areas such as Muir Beach, where off leash will be prohibited in its entirety. This doesn't seem fair to me. Providing a portion of the beach as off leash seems reasonable. Perhaps balancing this with a reduction in the off leash area at Rodeo Beach might be a fair compromise.

Thank you again and am looking forward to a day when I can enjoy these places without off leash dogs everywhere.

**Correspondence:** I strongly support the Draft Dog Management Plan. It is crucial to have some trails available with no dogs on those trails. At present it is very difficult to find a trail where there are not dogwalkers. Trails should be very well marked and fenced if needed. Visitors should be limited to only two dogs in the park. It is crucial that new dog regulations be enforced.

**Correspondence:** Dear GGNRA -

PLEASE do not change the current approach to off-leash dog areas.

Dogs are the children of san francisco, and are known around the world for their friendliness. Those of us that are dog owners are proud of our well-behaved, trained dogs and love that young children (local and visiting) get to learn about pets and dogs when we meet at the beach.

I am constantly impressed with the level of respect SF dog-owners give to our city, keeping it clean, staying outside of protection areas, and in general always keeping our animals under voice control.

We need to keep San Francisco San Francisco. It is a home for US, not for tourists, and we should ensure the decisions that are made are for those of us who call San Francisco home, one we love in part due to our strong and historical dog culture.

San Francisco is a special city, and has always been a leader in allowing its citizens the right to be who they are. With 50% dg ownership in this city, dogs are a part of our heritage.

Have you ever come to Chrissy Field early on a Saturday morning? If not, I plead with you to do this and experience the beauty of dogs playing with dogs and humans meeting, becoming friends and sharing the beauty of this city, our weather, the sea, and good health.

Sincerely,  
Jill Jepson

**Correspondence:** My husband and I moved up to Oregon with our rescue pitbull Applesauce nearly 3 years ago. Fortunately our local park allows us to make our own judgment calls about the interactions of our dogs. Applesauce is well behaved and loves playing with other dogs. Some people have dogs who don't love playing with other dogs, or are aggressive, and those dog owners responsibly walk dogs on leash. We put Applesauce on her leash when passing dogs who are leashed, then let her off again. It isn't rocket science, and the majority of owners are responsible and aware. Occasionally Applesauce gets nipped or chased by a little yappy dog who shouldn't be off-leash - but that's the risk that we accept when allowing her to socialize with other dogs. The same was true in San Francisco while we were there, and we felt fortunate that it was so easy to exercise and socialize Applesauce at the dog parks. It is very important to socialize dogs like pitbulls, German Shepherds, huskies, etc. and if all interactions from a young age were stressful, on-leash encounters, I think more dogs would be aggressive when meeting other dogs out for a walk, pulling and barking and snapping. All that aside, the quality of life of many San Franciscans and their dogs will be greatly diminished by strict leash-laws, and the cost of enforcing it seems a bit ridiculous. We'd much rather have the parks nicely maintained, and let dog owners continue to do their own dog management as we have done for many years. Of course there will be unfortunate incidents, as there are anywhere that human beings live in such close proximity to one another. But draconian leash laws aren't going to change that - dogs and people will still get bitten from time to time. Accept that and focus your energy somewhere more productive.

**Correspondence:** So, I was hiking Miwok to Coyote Ridge Trail yesterday, in Tennessee Valley, and there were so many dogs. Wildlife viewing is nil. Just a few brave little sparrows. One woman got way ahead of her dog on the trail, and the dog was digging into some little creatures' burrow just off the trail. You can not depend upon owners to control their dogs. These places are special because they are wild. Don't let them become devoid of all wildlife, thanks to the proliferation of dogs.

Sincerely,  
Christine Holmes

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

**Correspondence Type:** Web Form

**Correspondence:** \* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Optional Points to Make (choose as many or as few as you want):

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** Protect wildlife and meet needs of many people.

The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.  
We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs. Off-leash areas should be marked off with fencing or natural borders such as bushes.

The GGNRA's proposed plan will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

**Correspondence:** As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from interacting with my dog for my own health and my dog's health the way I have regularly at Fort Funston for years.

---

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of its impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,

Jon Solorzano

**Correspondence:** Concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

I believe we'd see a huge increase in reported incidents if all the dogs in this city don't have a place to workout off-leash.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or

---

Fort Funston for many years.

I have worked in San Francisco as an Emergency Medical Technician for 6 years. Emergency medical services is an industry that comes with significant stressors, such as long hours, intense situations, and the occasional gruesome scene. As a dog owner I understand and value the freedom that many parts of the Bay Area offer me. I lived in Chicago from 2005 to 2007 and the best legal dog park I could find was a fenced-off, rocky run underneath an overpass. Compare that with the expanse of Fort Funston, Chrissy Field, or Sweeney Ridge, and it immediately becomes apparent (to me at least) the benefit of off-leash. To exercise complete physical freedom - in the form of watching my dog run unbound - is as pure an anti-anxiety medicine as anything prescribed. And speaking unsolicited for the entire dog-walking population of the Bay Area, with the wonderful, stress-reducing freedom we enjoy here, comes a recognition of our responsibility to care for the lands on which we play and walk. I believe dog owners are some of the best custodians of the rich land we have here in the Bay; we value it because we are constantly immersed in it during all the time we spend walking around in it with our dogs. Personally speaking, I can think of no better way to decompress and normalize after a twelve hour shift of wailing sirens, pain, and illness than a morning walk with my dog off leash. Seeing my domesticated beast running free and happy is the best therapy I could ask for.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. **Correspondence:** It is one of the joys of my life and my dog's life and my family to be able to go off leash in designated areas. While I do not understand why dog owner do not pick up their dogs litter or take untrained aggressive dogs to public areas I absolutely do not understand why everyone should pay for their mistakes.

Let's start using the laws on the books. Police should give tickets for not picking up dog poop and for taking an untrained aggressive dog to a dog park. Community service would be the best punishment.

Cesar Millan has awesome videos and a website to help people learn about dogs and how to deal with aggression. The rest of us who are responsible dog owners should not pay for the mistakes of a few.

**Correspondence:** The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area. The GGNRA should be a place of recreation and peace for all people (sightseers, hikers, birdwatchers, kids, etc.) and wildlife - not just people with dogs. And the NPS needs to adopt dog management policies to ensure that the GGNRA is preserved in perpetuity for the enjoyment of all people, and wildlife. The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

<b>Correspondence:</b>	trongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to Muir Beach and GGNRA trails.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash

---

recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

OFF LEASH IS ONE OF THE THINGS THAT MAKES SAN FRANCISCO GREAT - ACCESS TO AREAS LIKE THE GGNRA SHOULD CONTINUE TO SUPPORT DOG OWNERS AND OFF LEASH AS A POSITIVE.

This is an outrage. This a very short sided thing to do that will affect the lifes of thousands of people and their dogs. If this restriction passed we will be losing almost all areas that we have to give our dogs room to run and be healthy.

<b>Correspondence:</b>	Hello All,				

---

I am a resident of the west side of San Francisco, and walk my well behaved dog on Ocean Beach, at Fort Funston, and occasionally on Chrissy Field. Our household is a member of the local Sierra Club, and they do not speak for us. I have been absolutely horrified that this sham of public process you are perpetrating, and cannot believe you are ignoring the wishes of the people who use these pieces of land.

My understanding is that the SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative. The SEIS lists many, many comments from people opposed to dog walking and very few from people who support dog walking. The

SEIS copies, without change, entire sentences and text from the DEIS about studies of dog impacts, especially on wildlife and birds, even though DEIS comment showed that this text was inaccurate, misleading, and misrepresented what the studies actually said. Yet the SEIS copied it word for word. Comments supporting dog walking were not used to argue that there should be more off-leash restrictions, while comments opposing dog walking were used to argue for more restrictions.

SEIS still lists impacts that "might", "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. This point was raised in DEIS comments, and should have been addressed but was not. For example, the SEIS admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils (p. 373). Yet they also claim these impacts are currently occurring in the GGNRA and therefore dog walking must be curtailed to stop them (e.g., p. 97). Without site-specific studies, there is no proof impacts are occurring.

SEIS says that, during the last six years, NPS staff did extensive literature searches to look for reports of impacts from dogs in other parks. In that same time, they could easily have conducted the site-specific studies that might have shown whether or not impacts are occurring in the GGNRA. Yet they chose not to do them.

SEIS admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. However these anecdotal claims have no context - how frequent were they, how serious, etc. - and cannot be used to set policy. An SEIS is supposed to be based on science, not anecdote. The SEIS also says it relies on the "best professional judgment of NPS staff" to determine impacts from dogs and their importance when there are no scientific studies of impacts in other parks available (e.g., p. 396). NPS staff have demonstrated a long-standing, strong bias against dog walking, and the SEIS should not depend largely on their biased judgment and anecdotes for "proof" that impacts from dogs are currently occurring.

I strongly urge the NPS staff hold an \*actual\* public collaborative process to balance the needs of the local population with regards to the use of these areas.

Thanks so much,

Kate

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Leah L. Nanni

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who regularly walks my sister's dog, Pixie, at Fort Funston, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with Pixie for my own health and Pixie's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Misha Zatsman

**Correspondence Type:** Web Form

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence

presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I'm commenting on behalf of myself and my partner as dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog, Sweeney (Named after our favorite hiking place - Sweeney Ridge) and our family will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area and specifically in Pacifica.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and our family, but our entire community. Our dog is not a dog park friend, she prefers open trails, long hikes, or big grassy fields to play catch at. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

Not allowing dogs on most of Pacifica's trails will keep us from these spots or cause us to become lawbreakers when in reality we are stewards of the trails we frequent, always monitoring litter, watching for graffiti, and caring for the native plants.

Please, please, please keep our parks friendly for 2 and 4 legged beings who need each other and need fresh air and exercise. We surely get more together than we would ever get alone!

**Correspondence:** This is IMPORTANT:

I became a Marin County resident 6 years ago. I adopted my first dog 2 1/2 years ago. My life changed in several ways after I adopted my dog, Lucy. This is how:

A dog loves to explore and that's exactly what Lucy and I do. This past weekend we hiked over 10 hours on trails that include Bon Tempe, Alpine Lake, Coyote Ridge and Oakwood. The discovery that Lucy and I have enjoyed has allowed us to not only discover the beauty of Marin, but make life long friends throughout the communities, and in turn, this has made me more passionate and mindful about my surroundings and has increased my drive to engage and improve within it.

A NEW GENERATION is upon us. People are chosing NOT to have children, and like me, we see our animals as extensions to our family. I still pay the taxes for our schools and yet I will never have a child attend one. I pay a lot to live in Marin County and how dare the GGNRA cut off the one privilege that single familes, without children, cannot enjoy. IT'S TIME TO GET WTIH THE CURRENT TIMES.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood, Muir Beach, Stinson and Coyote Ridge.

Unfairly, Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

We will continue action on PR and Federal level, continuing with the media and starting a petition with CHANGE.ORG, then moving our way up to the White House, as these restrictions are not compliant with the Health Acts that our leaders are enforcing.

Stop restricting our lives.

**Correspondence:** As a dog owner Fort Funston in San Francisco is one of the few places we can take our dog to run free. The number of dogs and there owners who use the park is incredible , and considering the number of dogs, the place is very well maintained. Most dogs are under voice command, and dogs get along well. If you remove this location from dog owners to use off lease, I fear the will simply go to other parks and beaches and let there dogs run off lease where they do not belong. There would be more beaches effected by dogs running off leash and the problem would only become worse. There are many parks and beaches where people who do not want to be around dogs can go, that is there choice, please ensure that dog owners still have the choice to go to a beach where there dogs can run and play off leash as well.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To whom it may concern:				

As a local SF native and who walks regularly with my dog in the GGNRA areas, I'm writing to share my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

This plan is extremely restrictive and unfair to dog owners and dogs as it not only limited the areas available to maintain my dog's health and wellness but also my own health. Being able to access areas such as Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston has been a valuable asset and one of the amazing things that add value to San Francisco.

The new proposed plan does not at all reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like cages and those individuals using them (residents and visitors) feel unwelcome and uninvited in such a beautiful habitat that should be enjoyed by all. Like numerous dog parks across the city, they will give the few owners who lack control of their dogs the ability to take them off leash causing significant and unnecessary problems for the thousands of responsible dog owners who have dogs controlled by voice command and who are very well trained.

The proposed plan lists impacts that "might," "can," or "could" happen, while providing no sited evidence that any of those impacts that have, are or will occur in the GGNRA. It is also stated in the plan that the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils therefore making all accusations speculations and biased assumptions

The plan lacks any acknowledgement of it's impact on other areas throughout the greater San Francisco area. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. Most all city dog parks that have been developed are too crowded, there's not enough room to exercise, and they're not at all relaxing. In addition the environment is often dirt vs. natural surroundings and in such an over-populated area, increased stress levels and confrontations are eminent.

The GGNRA has significantly lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,  
Miriam Libonati

**Correspondence:** I'm a dog owner lucky enough to live next to 3 dog-friendly open space parks in San Carlos. Owning a dog builds community- it gets you outside every single morning and evening to see your neighbors who would otherwise only pass in cars or live behind closed doors. It leads to a healthier community, encouraging each other to stay active. But nothing compares to the joy of seeing a dog happily running in his element, joy that is absolutely contagious and makes our community a better place to live. These places are treasured because of this joy, and to take that away would take away some of the greatness of san francisco.

I was particularly suprised to hear about some of these access-threatened locations, because there is very little wildlife in them to protect. Crissy field is a lawn, not wilderness. Fort Funston and Ocean Beach have no plant life. These restrictions feel very arbitrary in the public eye and do not seem to serve the greater good.

From this small voice of one, I urge you to reconsider these closures for the greater good of our treasured San Francisco and its huge population of dog owners. Thank you

**Correspondence:** Dear Superintendent Dean,

Crissy Field is where we regularly walk with our dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreational activity with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. This city is expensive and walking our dog 3-4 times per week at Crissy Field is an amazing experience that we cherish. Being able to enjoy, specifically, the Central Beach & Airfield off leash is a draw as to why we continue to live in San Francisco. We also enjoy Fort Funston and Ocean Beach but those locations are inconvenient from our home but we do venture there when we have more time. Taking our dog with us on long walks is a main activity for us in the Bay area.

Specifically, turning Crissy Airfield and the Central Beach into leash required territory is such a drastic restriction of dog-friendly areas. East Beach being a leash required area is understandable since that is used for Kiteboarding and on nice days families enjoy the easy access to the East Beach. Personally, we keep our dog on leash past the East Beach on busy days or we enter via the Airfield. Most weekdays and evenings the beach is desolate void of either families or kite boarders. Losing the entire Central Beach and Crissy Airfield areas (illustrated in Map 10-B) would not only be heartbreaking but an overly drastic

reduction to the purpose of RECREATION AREA it was declared to be and a total waste of accessible space for not only individuals with dogs but the lively hood of dog walkers. On a daily basis the waterfront is not being used by anyone other than those with dogs or a tourist on a rented bike. Please do not restrict access to all the off leash areas around the city. Map 10-E is a compromise.

Other maps that are OVERLY RESTRICTIVE: 11-D, 12-B, 12-C, 12-D, 12-F, all proposals for usage of Sutro Heights Park and Land's End proposals, 16-B, 16-D. The fear is once you start restricting access you will continue to take recreation areas away in the future which is opposite of the spirit of San Francisco.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Francisco and San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Kelly Smith

**Correspondence:** Greetings! I am writing to underscore how important it is to have off-leash areas for our four-legged canine friends! I am a frequent visitor to Fort Funston, and other areas, with my lab/shephard mix. We are very respectful of the area and pick up our poop. We rely on these off-leash parks to be able to exercise in areas of natural beauty, and also to keep us from adding to dog-parks that are over-crowded and small.

We respectfully disagree with the Dog Management Plan, and would like you to reconsider. We need our off-leash areas to stay open!

Best,  
Audrey Zmuda and Emmy

<b>Correspondence:</b>	Dear Superintendent Dean,				

We love running with our dog off leash in the GGNRA and its one of the reasons we live in the Bay Area.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

KM

**Correspondence:** Concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

**Correspondence:** Dear Superintendent Dean,

I have walked, hiked, and jogged with and without dogs in the GGNRA for more than twenty years, and I strongly oppose GGNRA's new draft dog management plan. It is far too restrictive and ignores the very important fact that San Francisco, the city, and the surrounding areas are growing in population. Such a restrictive policy in an urban setting will prevent me and other San Franciscans from recreating freely for my own health and that of my dog as I have for these many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Despite these omissions, the GGNRA has consistently further and further restricted access to all users to open space, preferring "native species" restoration over recreation.

I believe that the GGNRA has lost sight of its purpose: to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported throughout current holdings and on any new lands that the GGNRA acquires in the future.

Sincerely, Penelope Wisner

**Correspondence:** I am the Superintendent of the Cabrillo Unified School District and I have just learned of plans to construct an off-leash dog walk area adjacent to Farallone View Elementary School in Montara. The proposed location is adjacent to this school. The location is on a private road that is very narrow and is not suited for additional traffic or parking. In addition, locating off-leash dogs is problematic adjacent to an elementary school. Care needs to be taken to ensure dogs and their owners have no way of interacting with our students If the Park Service is to move forward, then I request a meeting to discuss how to mitigate our concerns. Thank you.

**Correspondence:** Please make Muir Beach friendly for all - wildlife, humans (including seniors and babies and those who don't want dogs running over their towels and eating their picnics, etc), and dog owners. I understand that Alt E allows for a ROLA on the south side. This seems like a reasonable approach. Little beach must not become the defacto dog park. There are many problems with this idea. Lack of amenities and lack of accessibility will lead to unsafe parking on Sunset Way where there is already not enough parking and too many problems with emergency vehicle access on the long, one lane road. It will lead to a concentration of dogs that will leave no room for other uses for the neighborhood and other uses. There will be almost no enforcement of laws and it will become littered with pet waste and human waste. Little beach should have a leash rule, at least during most of the day (perhaps off leash hours beginning in the later afternoon).

**Correspondence:** My name is Alex and i oppose the GGNRAs movement to leash dogs widely across a vast majority of our public parks here in San Francisco. I strongly oppose, not solely because I am a dog

---

owner, but also because the irrational nature of the GGNRA. In 1972 the beaches were given to the public by SF congress, and as you know in 1979 the beaches and trails were designed for public use with dogs in the plans. The notion that these parks not allow dogs off leash juxtaposes the initial planning of these parks. I would like to address the following items, the current issues with our parks, the impact of the neighboring communities around the off leash zones, and the allocation of the funds necessary to enforce the proposed Dog Management Plan.

When I visit the GGNRA parks that we frequent, my concern is not an offleash golden retriever, so much as it is the inability to restrict littering and squatting. The fact is, currently it will cost a proposed 2 million dollars to populate all of the GGNRA parks with enough employees to police our dog walking, however that money should be used to address far greater problems first. I will use ocean beach as the primary example here, there is more garbage along the north end of ocean beach than should be acceptable, I surf there many mornings, and the state the beach, a national recreation area, is horrid, this also applies at Crissy Field and Baker beach. Personally, I am disgusted that the GGNRA would even consider hiring rangers to police dog activity and not focus 100% on preserving these areas. The second issue for me is the squatting. Ironically located next to a sign restricting off leash dog walking at the Dunes in front of Judah, you can find on any given day up to 10 squatters polluting in many ways and making it unsafe for people like me who frequent the beach in the mornings. Put bluntly I would much rather come face to face with a dog, even an extremely aggressive one, than any one of those thousands of squatters who inhabit your national recreation area. In fact, so long as I see people squatting in and around our parks, I will refuse to accept a ticket for my dog being off leash. In fact, I will happily redirect your rangers to the problem areas, I will do this free of charge, you will not even have to pay me. Policing dog walking is not the way to spend the budget, when we have far greater problems on hand, please write me any time if you agree with this. In fact, I believe there have been less than 5 accounts of dog aggression across all of your parks, but hundreds of human on human altercations, which should tell you indiscriminately that you are focusing your finances irresponsibly.

Secondly, the congestion that will be caused by dog walking in the proposed areas allocated for off leash dogs will be astonishing. With the heavy concentration of people, comes with it, pollution, traffic, noise ect. 50% of SF residents have dogs, and those people will be heading to these few designated locations on weekdays and weekends. I feel like the proposed Dog Management Plan has not even scratched the surface of what a problem that this could cause. I am not a policy maker, however, if I were confronted with this problem I would handle it in the following way. Have more availability as to not make the dog accessible locations undesirable to live near to. San Francisco presents the amazing opportunity for dog owners, why would you feel it necessary to so bluntly cut this off. The Management does not even call to implement over time, or to allow those hundreds of thousands of inhabitants to adjust, but instead handles this all at once. It is fool hearted to think that this will end well.

Finally, GGNRA beaches and parks can not, and should not be held to the same restrictions as National Parks, such as Yosemite or Yellow Stone, there is not entrance fee to these areas, they are for the public, and planned for dogs. If you would like to supply the infrastructure and man power to give them the same treatment as a national park, please do so, I think we would all benefit. In fact, I could handle a lot of the changes, if you were to charge admission to the parks to ensure a clean and safe experience, but that is not the case. The dog management seems only to limit dog users but not address any of the problems persistent in the parks, like pollution, squatting, and unsafe conditions. I find the idea of even having to write this as silly, since so obviously the focus of the GGNRA should not be on restricting off leash dog access, but on far greater problems. However, that is not where we stand, we need to protect the rights of the inhabitants of SF, we need to keep our parks clean, and safe, and we need a Management Plan that addresses human issues first and Canine further down the priority list. The Management Plan has many

short comings, but for me, the budget to enforce these off leash restrictions, and the impact on the proposed dog parks are the most obvious.

**Correspondence:** My letter is to voice my concern over the proposed GGNRA dog management plan. I am a responsible owners of three small dogs.

I do NOT support the GGNRA dog management plan.

- the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there were only a few actual incidents including: only 6 dog bites report, 5 dogs fighting, 2 cliff rescues, 1 wildlife killing and 1 horse bite incident. There were 2 additional incidents reported where "people were scared." Taken in context of the hundreds of thousands of dog visits to the GGNRA, this data does not support the requested need for a change. Further, the data most certainly does not justify the funding request for \$2M to fund more park rangers.

When Crissy Field was created, one of the purposes explicitly stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. The GGNRA dog management plan includes a proposal to reduce the off leash recreation area at Crissy Field. This is contrary to the stated intention, policy and principles that were originally used to garner public support for the Chrissy Field plan. This proposed reduction of off leash area is acting in bad faith and without sound basis as the impact on all park visitors will be resulting increased concentration of dogs in smaller areas.

The GGNRA dog management plan is not supported by fact, is ill conceived, and risks imposing greater risks to both visitors to GGNRA parks and costs to the citizen-tax payers that would be required to fund it.

I do NOT support the GGNRA plan as currently drafted and request an alternative planning process be initiated that balances the needs of ALL visitors in a proper context that addresses safety and resource access and enjoyment for all.

Yours truly,  
Hugh McDermott

**Correspondence:** Dear Sirs: We NEED to continue to have SAFE off leash areas for our dogs. The east beach in the GGNRA has ALWAYS been available for us. This new plan is too restrictive. I have lived here for 30 years and have enjoyed taking my well behaved dog running OFF leash in the presidio. Your new plan is too restrictive and punitive. We were promised this open space for our off leash pets/ (family members. Please do not close out our right to exercise our dogs. They must have a safe space to run.

I ABSOLUTELY disagree with the positions of the executive boards of groups who want to limit our use, these local boards do not speak for their members and they do not speak for me.

AGAIN to reiterate: I oppose the Preferred Alternative because it is too restrictive. There is no justification in the SEIS for major changes. I Support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I am concerned about the current move to build fences at the eastern and western ends of Middle Beach at Crissy Field, around the proposed off-leash area at Fort Mason, and around the proposed off-leash areas at Fort Funston.

Unless they are constructed properly, Fences will make off-leash areas feel like pens If Fences are secure enough to keep small dogs in they will hinder movement of wildlife.

I oppose the Monitoring-Based Management Strategy that replaced the DEIS Compliance-Based Management Strategy. The MBMS is still based largely on compliance with leash restrictions. Although the SEIS says the MBMS will consider impacts on resources from non-compliance, it still is primarily focused on mere compliance with leash laws and the GGNRA can consider changing off-leash status for non-compliance even if no impacts on resources or other visitors are reported.

Thank you, Charna Ball  
LONG TIME resident of the Marina District SF, CA 94123

**Correspondence:** As a lover of the outdoors and a lover of dogs, who finds the GGNRA one of the most beautiful places on earth, I must say that I am disgusted by the obscenely bureaucratic process that has been created for what appears to be the sole purpose of taking away Americans' freedoms.

It's a fine example of why people should never turn their local freedoms over to the Federal government and why most people in the San Francisco area probably regret ever allowing this land to become Federally-controlled. The Federal code now contains over 200,000 pages and is growing at a greater rate than at any time in history. These "rules" are laws created by unelected bureaucrats in painful, drawn-out processes such as we are seeing unfold with the GGNRA. It's a testament to the creepy resilience and impersonal growth of government bureaucracy that something as simply and broadly accepted by Americans as the 10,000 years old love between humans and their dogs must be quashed.

Chuck this whole process and revert back to the 1979 Pet Policy that has been reaffirmed since 2005, and stop, just stop the creeping omnipotence of government rulemaking.

**Correspondence:** My family and I have a 120 pound dog that is still growing. The only space for activity our dog recieves is at fort funston and at stern grove's dog park. In these areas we are allowed to train our one year old puppy to be off leash, play fetch, and learn to socialize with dogs of all breeds and sizes. Without these abilities, my puppy will not be able to learn to behave civilized. He needs an outlet to release all his doggy needs and to ban such spaces is good reason for more dogs on sidewalks, placed in dog pounds, abandoned, even worse-confined.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Joshua Miller

---

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

-----------------------------	----------

<b>Correspondence:</b>	As a dog owner and Marin County resident for more than 30 years, I am deeply opposed to adding more restrictions on off-leash dog use in any part of the Golden Gate National Recreation Area (GGNRA). This is an urban area and should not be treated like a wilderness. More, not less, use of GGNRA land for off-leash dogs should have been considered; did any of the alternatives studied allow more off-leash access? Dogs need vigorous exercise and they can only get such off-leash. I am an active person, but with a bad knee that prevents me from running. My dog needs to run and he can only do that under voice control, off-leash. It is distressing to see so many limitations on where dogs can be off-leash. How is a dog any different from a coyote? I routinely see coyotes freely roaming the Marin hills, and have sometimes initially mistook the coyote to be a dog.
------------------------	--

Additionally, a better executive summary of the plan is needed so that the public can easily see what is being proposed without having to read through a huge volume. I would also like to see a real public notification process, with posting at trails that are affected or having a mailing list so that the public can stay up to date on the changes.

I appreciate your consideration of these comments, and again, hope that MORE (not less) areas will be opened to responsible off-leash dog use. For those that are not responsible dog owners (picking up after their pet, limiting pet to trails only, etc.), consider penalties, but do not punish all dog owners.

**Correspondence:** As a dog owner but also someone who understands that dogs can be a nuisance and that the needs of the general public should come first, I appreciate the time taken to propose alternative plans for the different park areas. I don't understand why some of these changes are needed, however. I ask that you consider the data released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. I don't feel that data supports the requested needs for a change. Moreover, if you limit the areas where dogs can be off leash, you will have to increase the time and attention of your excellent personnel devoting themselves to enforcement. I would rather they use thier time and resources for more interesting activities such as park promotion and nature conservancy. Perhaps, more aggressive enforcement in areas that are designated on-leash needs to be done, thereby setting some clear boundaries.

With that being said, specific to Crissy field, if your committee does find that there needs to be changes, I strongly suggest that you select Alternative E that limits off leash activities but still provides a balanced and fair division. Alternative B is a really bad idea and I think you are setting yourself up for failure if you don't allow for even one area for off leash activities. C and D seem more fair but I think that for a lot of dog owners, the off leash on the beach is an excellent way to enjoy park. I will say that if you find strong evidence that dogs are impacting the ecosystem in a negative way, then dogs should be limited on the beach. Nevertheless, I strongly believe that dogs and people can coexist.

thank you for letting me voice my concerns.

Diego Castaneda

**Correspondence:** I'm a very athlete person that loves to train outdoors. Exercise is key to a balanced lifestyle. It keeps me motivated, focused, healthy and makes me a happier person. I can't imagine working out inside home, with 10sq feet space. So for me it's really hard to imagine my dog on leash at all times. I have a tiny terrier chihuahua mix. The best moment of his day is when we go to the park. For him, interacting with other dogs, run, fetch, jump and have the freedom to move around keeps him in shape, makes him happier, more social and as a result, I have a better dog.

Dogs, as humans, need to have freedom to move around, to run, to socialize. On leash, this won't be possible anymore. A dog can't run on leash, can't fetch on leash, can't swim on leash, can be himself on leash. I find really hard and cruel not to have open spaces for dogs to exercise in the way they have to.

I beg you to consider this initiative. Healthy dogs make better pets. We need this. All. Animals and Humans.

**Correspondence:** the alternative plan is a bad one and is just mean. no reason to have outright bans.

---

i think that fencing off the areas for off-leash dog play is fine as long as the areas are large enough to provide real physical activity for dogs- not just areas to stand around sniffing each other but to really run and fetch and chase.

**Correspondence:** What are you thinking??? I give you money all the time so I would like to think that as a member of this community and an ardent supporter of yours AND as a dog owner in a city of small spaces that you would take our furry family members needs into consideration.

I am absolutely against banning pets from Ocean Beach, Fort Funston and Crissy Field. I have always been proud of the tolerance my city shows to people and animals and am broken hearted to think that you would make these areas off limits to pets. Before we had a dog, we would take out kids to Fort Funston just to SEE other people's dogs!

Please rethink these ridiculous polices. If you enact these bans, I will forever withdraw my financial support of you.

Sincerely,  
Nanette Kroupa

**Correspondence:** As a dog owner AND A BIRDER I support the GGNRA plan for reasonable regulations of dogs in the parks. The Park Service needs to adopt stonger, more effective dog management policies. On-leash regulations should be more strongly enforced while off-leash areas should be clearly marked with fencing or natural borders.

The proposed plan is an important step towards a more balanced, sustainable use of the park. With appropriate enforcement, the plan will protect wildlife and allow for more equal use of the park.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

Thank you for considering my comments.

**Correspondence:** I am against the current proposal.

The proposal to drastically reduce the amount of off-leash areas for dogs in the city is misguided, and a reversal of course set years ago. Where are the driving factors that require such a drastic change to current policy? The data provided by the GGNRA simply do not merit such drastic changes. The impact to dog owners and their dogs will be to eliminate existing spaces and concentrating them into even smaller areas. Dogs need space to run free and the areas selected in the past met the criteria but also protected critical wildlife areas.

Personally I am more concerned with drunk/stoned Marina girls and frat boys behaving badly in these open areas, as well as the people who discard their childrens' soiled diapers into planting area than from any behaviors from the dogs I have seen.

This is an example of over reaching to solve something that is not a problem.

<b>Correspondence:</b>	The draft dog management plan for the Rancho Corral de Tierra is based on conjecture and guesswork. The fact is that dogs have had free access to the Rancho for years and the plan is concerned with future possible impacts. The plan cites no current impacts of the years of dog usage, and thus lacks scientific merit to restrict dogs in the future. The overly restrictive dog use recommendations would be hardship to both dogs and their owners and it in direct contradistinction of the purpose of the RECREATIONAL area. The NPS needs to adopt a plan that is more dog and people friendly.

**Correspondence:** Please do not reduce off-leash dog parks further. San Francisco is becoming a playground for the rich only, with families and productive yet lower-income citizens getting edged out. Please do not further edge out residents with dogs who want to simply run their dogs in a healthy manner. There is room for off-leash dog runs. We need these parks to foster the inclusion of the beauty of San Francisco's outdoors along with the gorgeous buildings and that famous hustle-and-bustle! Dogs need homes. They need homes where they are allowed to run outdoors. While many actual residences do not have such space, they depend on the parks for this need. Please do not reduce these off-leash park spaces! Thank you for your consideration.

**Correspondence:** Dear Sir / Madam

I have professionally specialised for 13 years in the management of greenspaces visited by walkers with dogs. Apart from working throughout the UK, I have also studied, first-hand, management approaches in Australia, New Zealand and Canada.

I also greatly appreciated fact-finding site visits and meetings with GGNRA, SFDOG and SF City Council last summer.

While many local people will comment on the detail of the proposals, without doubt, to me the fundamental thing that needs to happen to improve the current situation for all interests, is an integrated approach to managing the considerable demand for access, particularly off-leash, in and around the GGNRA area.

Without such an integrated approach between GGNRA, SF City Council and other landowners / bodies (eg Harbours authority), the Draft Dog Management Plan will simply displace and intensify problems even more, leading to further conflict for all concerned.

Everyone I met last summer was working with positive intentions, but to do so in isolation, without recognising the reality of how access management plans overlap on an area wide basis is in my view naive, perpetuates conflict and is not a good use of public funding.

In my meetings with city council officials, officers recognised the benefits of an integrated approach. But if public officials and politicians from all organisations cannot seem to work together for the widest public good, then it is hardly surprising that dog owners, parents' groups and environmental organisations will not be inspired to do so either.

At a time when there are ever-fewer resources for enforcement, developing a plan that manages off-leash demand in an integrated way to truly minimise impacts on the environment and all other interests, is the most sustainable way forward.

It's clear that for decades this issue has been festering in and around SF. And from my heart as a specialist looking in from the outside, keeping going with a silo approach based primarily on restrictions - rather than accommodating demand - will not solve or reduce the practical and political conflict that has served no-one's best interests for very many years.

Of all the places I've visited in a professional capacity across the globe, SF is THE place where, more than ever, public bodies need to work together to address this issue. The reality is that demand for off-leash is not going to be suppressed to a significant degree by adding ever more restrictions. It also seems inevitable that restricting off-leash to ever fewer areas overall, is just going to create even more problems and unwanted interactions.

In the UK, interventions to increase wanted behaviours by working with the dog walking community have been found to be the most cost effective ways forward. Sadly, the current approach in SF seems to severely limit the opportunity to develop such ways forward by creating alienation, rather than constructive collaboration.

I hope these external comments are helpful and I remain happy to advise further if helpful and wish you luck and the confidence to develop a step-change approach to the issue.

Stephen Jenkinson MSc PgDip(CABC) FIPROW

**Correspondence:**

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Chistina Martorana

**Correspondence:** I understand the GGNRA's position of having to preserve native lands but part of the park system's job is to also provide a space for the public to enjoy those lands. Banning over 50% o San Francisco's population from enjoying the public parks is not in line with that.

Please be respectful of your majority population - a population that fuels and generates millions of dollars in revenue through jobs, goods and services, and pays taxes from those millions that help support the park

system.

By banning dogs from the GGNRA parks, or by severely limiting their access, you're essentially denying taxpayers access to a 'service' they've been paying for. We all know the phrase "taxation without representation is unconstitutional" and the reason for that is it's just plain unfair.

No one is asking that dogs take over the parks completely, but that a FAIR plan be devised to treat all parties and concerns respectfully and equally.

Thank you.

**Correspondence:** oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits

the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	As both a dog owner and a biologist who works with birds and mammals in San Francisco, I encourage GGNRA to work towards a happy medium between allowing dog owners to have their dogs on GGNRA land while also preserving natural habitats. I fully support on-leash areas for dog owners to walk their pets, while not letting them trample through sensitive habitat. If off-leash areas will exist, perhaps they could be fenced in or surrounded by bushes or other more natural materials. Seeing the				

---

damage that has been done on beaches by hundreds of irresponsible dog owners is upsetting, and I know that many species of birds and mammals have been driven out of these habitats due to off-leash dogs.

I own a Greyhound that must be kept on-leash at all times unless in an enclosed area, due to his propensity for wandering. It's frustrating to responsibly walk him on on-leash trails and come into contact with off-leash dogs and their irresponsible owners. More enforcement of these on-leash areas really is necessary to teach people that the rules DO apply and they must follow them. Without proper enforcement, people will constantly let their dogs off-leash and nothing will really change from the past.

It would be unfortunate for all GGNRA land to be completely closed off to dogs. I encourage a compromise to be found - one that allows responsible, on-leash dog use while still preserving natural habitats.

**Correspondence:** I have always felt that dogs off leash, even if responsive to vocal control, have been a problem. I have witnessed them chasing shorebirds and approaching stranded marine mammals so many times I can't even count. I am the owner of a small dog who is always on leash and has been rushed up on by larger dogs off leash, which frighten both of us. I think having certain beaches open to on-leash dogs is important and maybe even go so far as to designate a couple of "sacrificial" beaches where they can run off-leash, like Fort Funston, which is already pretty much ruined and heavily used by dog walkers. Perhaps the people who use Funston as part of their dog walking business could have a stipulation in their permits (if they have them) to clean the beach once a month or charge them so somebody can walk that beach and clean it up. It's disgusting with all the poop and poop-filled bags. I'm ok with Funston being a dog beach since I don't go there with my dog. I just would like to see it cleaned up a bit.

I would also like to see some of the trails that allows dogs remain open. I like to hike with my dog and would hate to lose that.

**Correspondence:** Hello,

This comment is made in support of the NPS Draft Dog Management Plan. The San Francisco Board of Supervisors, and in particular, Supervisor Scott Weiner, are of the opinion that requiring dogs to be on-leash, and under the control of their owners, will result in negative consequences for owners and for San Francisco city parks. Moreover, he believes that should this draft plan be put into place as effective policy, more dogs will end up in shelters and rescue centers. None of these are the case.

I lived and worked in San Francisco for eight years and in a variety of capacities, including twice as a summer seasonal employee for the National Park Service. During those years, when I encountered dogs

and their owners, it was often unclear if either or both were friendly and well-behaved or if the opposite were true. On countless occasions, owners have let dogs contaminate waterways by not picking up feces; have actively ignored posted signs pertaining to presence of endangered species; and have created situations in which both humans and dogs could be injured. When a dog is off-leash, it is unknown to the general public whether the animal will or will not listen to voice commands or if the animal is in fact of a more peaceful demeanor or not. The issue at hand is less about dogs than it is about humans. If dog owners were required to undergo training sessions with their animal and if they clearly understood and abided by the requirements of good behavior, than perhaps, there would be no need for this change of policy nor for laws about such basic things as cleaning up after one's dog.

As for Supervisor Weiner's claims that requiring dogs to be on-leash in GGNRA areas will cause undue stress to San Francisco city parks or that there will be a sudden onset of dogs being brought to shelters, both of these would not be an issue if dog owners actually cared for and were considerate of their city and of their dogs.

Best regards,

Andy Keller

<b>Correspondence:</b>	I am not in favor of any legislation which restricts the off-leash areas for dogs.				

â€ Concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

â€ When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Dear Superintendent Dean,

As someone who walks regularly with my dogs in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dogs for my own health and my dogs' health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Elena Curnyn

<b>Correspondence:</b>	To Whom it May Concern;				

As someone who walks weekly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It horribly restrictive and will prevent San Franciscans from enjoying GGNRA lands in the way we have for many years. Recreation is a public health issue- and having spaces where people can exercise with their dogs encourages exercise, which as we know, greatly improves population health.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Every time I go to one of the parks, I see people and dogs co-existing peacefully. I hope that this will continue to be an available space for exercise, recreation, and nature exploration that it has been for so many years. This is a public health issue, and now is not the time to restrict recreation space for people who exercise with their dogs.

Sincerely,

Nicole Wilson, MPH

<b>Correspondence:</b>	Dear Superintendent Dean,				

I am 70 years old and have spent my whole life in the Bay Area. Marin, San Francisco, Redwood City, Palo Alto and Santa Clara.

I have had good dogs my whole life.

When I was a boy in the avenues, I would ride my bike to Ocean Beach with my dog. My dad would take my dog and me fishing. Sacky never left my side

My wife and I took our first yellow lab on our first date in the Marin Headlands. We fell in love.

We love the the Bay Area and the GGNRA.

I oppose the Preferred Alternative.

Most dogs and dog people are good. A few bad eggs should not change the laws.

The NRA says guns don't kill people and will not let us change the gun laws because of a few bad eggs.

Please continue to allow me to walk freely in the wind along the bay and ocean with my wife and dog. We meet a lot of nice people.

John C. Ferguson

**Correspondence:** To Whom It May Concern:

Since I've been a resident of California & Sausalito I've averaged more 2 visits to the GGNRA per month and our well trained yellow lab comes with us every time. We are incredibly fortunate to live in a place that celebrates responsible human enjoyment of what is, in my opinion, the country's most beautiful coastline. What strikes me as incredible is just how well it works - every time I visit I see dogs & humans enjoying the trails and the natural surroundings without incident. What's been completely absent from any visit ever, is abuse of the trail or others enjoyment by dogs and their owners. To me it speaks to what makes this part of Northern California so great, we celebrate and appreciate what we have and don't take it

for granted. I completely oppose this plan that will not allow off-leash dog walking anywhere in the GGNRA. This plan is sad and irresponsible to the people that enjoy these parks the most - the typical Marin residents that have been bringing their dogs on trails in this area for decades.

I just don't find there is enough specific evidence of negative impact compelling enough to punish us for what has been (to date) completely responsible enjoyment of these parks.

Please don't move forward with the plan.

Sincerely,

Chris & Brisby Dog

February 18, 2014

Mr. Frank Dean  
General Superintendent, GGNRA,  
Fort Mason Bldg 201,  
San Francisco, CA 94123-0022

Attn: Dog Management

Dear General Superintendent Dean,

I am commenting today on the Dog Management in GGNRA as a member of the Conservation Committee of the 985 member Napa-Solano Audubon Society (NSAS).

NSAS feels the key is the Organic Act, which is the law that created the National Park System: <http://www.law.cornell.edu/uscode/text/16/1>, and the key part of that is "the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. "

Management of all parks must be in accord with the Organic Act, regardless of the Enabling Legislation for a specific park unit (i.e., law that created the park unit) or the management guidance for the type of unit that it is designated as. In other words, everything tiers back to the fundamental conservation mission. That is explained in Management Policies on p. 2 in the underlying principle that states "ensure that conservation will be predominant when there is a conflict between the protection of resources and their use."

As explained in chapter 1 of the Management Policies in your NPS regulations, preserving park resources and values unimpaired is the core or primary responsibility of NPS managers. The Service cannot conduct

or allow activities in parks that would impact park resources and values to a level that would constitute impairment. To comply with this mandate, park managers must determine in writing whether proposed activities in parks would impair natural resources. Park managers must also take action to ensure that ongoing NPS activities do not cause the impairment of park natural resources. In cases of uncertainty as to the impacts of activities on park natural resources, the protection of natural resources will predominate. The Service will reduce such uncertainty by facilitating and building a science-based understanding of park resources and the nature and extent of the impacts involved.

Natural resources will be managed to preserve fundamental physical and biological processes, as well as individual species, features, and plant and animal communities. The Service will not attempt to solely preserve individual species (except threatened or endangered species) or individual natural processes; rather, it will try to maintain all the components and processes of naturally evolving park ecosystems, including the natural abundance, diversity, and genetic and ecological integrity of the plant and animal species native to those ecosystems. Just as all components of a natural system will be recognized as important, natural change will also be recognized as an integral part of the functioning of natural systems. By preserving these components and processes in their natural condition, the Service will prevent resource degradation and therefore avoid any subsequent need for resource restoration. In managing parks to preserve naturally evolving ecosystems, and in accordance with requirements of the National Parks Omnibus Management Act of 1998, the Service will use the findings of science and the analyses of scientifically trained resource specialists in decision-making.

GGNRA has threatened or endangered species for you to protect along its beaches. These animals and plants have no spokesperson to defend their needs. So NSAS feels there should be NO area in the National Park that dogs should be allowed to go off leash to protect them, people, and some other dogs themselves. We are sorry to take such a tough stance on this, but wildlife, especially those rare and endangered species as stated above are in your charter to protect. Dogs and cats have an excellent sense of smell and can find and disturb nesting birds and loafing animals. So do those animals. If they get a whiff that there are predators, they will not use that habitat. It is very unfortunate that these pets have been surrogate children for some of adults that use GGNRA. And it is also irresponsible for those that unleash their dogs in a LEASHED zone. In our opinion they care more about themselves than anyone (wildlife, other people and other dogs). It is very understandable why they want their dog (who of course can do no harm) to go unleashed. However we think they truly do not understand the issue here. Responsible dog owner have alternatives to take their dogs to a place where they are allowed to roam unleashed, not a National Park where they are not allowed. If they want to enjoy this National Park, do it without your dog. It is disturbing to NSAS that the policy on dogs off leash can be made by your administration which would set a precedent to other parks, monuments, etal under the National Park Service jurisdiction.

Perhaps an analogy might work in this case. How many humans would feel comfortable with trained lion or tiger walking around unleashed? Probably NOT. Well, wildlife, certain visitors to the GGNRA, and certain smaller non aggressive dogs would most likely not feel comfortable with dogs roaming unleashed.

How your preferred alternative will be administered and enforced is another matter. Thank you for allowing NSAS to comment on this important matter.

Sincerely,

Robin L. C. Leong

Member of the Napa-Solano Audubon Society Conservation Committee.

**Affiliation:****Received:** Feb,18,2014 14:39:56**Correspondence Type:** Web Form

**Correspondence:** As a lifelong outdoor enthusiast, retired ornithologist, and aspiring 'Master Birder,' I urge you to establish the highest level of protection for birds and other wildlife. The habitats in GGNRA are among the most sensitive and most important for birds. In particular, snowy plover populations are declining in California and elsewhere. As a CA Species of Special Concern, the NPS is will within its authority and is, frankly, duty-bound to afford the highest possible protection for the plovers. Not only will the plovers benefit from strictly limiting access for dogs, rare plants, amphibians, and microhabitats well benefit, too.

The very reason people enjoy GGNRA is the same reason the NPS must protect the high quality of the Area's natural systems from overuse and abuse. Please don't let people 'love this park to death' ie to the detriment of all those elements and beings that make it a rare and exceptional resource. Please be guided by Golden Gate Audubon: "Harassment of birds protected by the Endangered Species Act is against the law (5). It is also inhumane - birds and other wildlife deserve to have space in the GGNRA where they can rest, forage, and live without constant disturbance and fear of death."

I am a dog owner and dog lover. I take my dog hiking in the hills every day. She has plenty of legal off-leash time in safe areas. I obey the law and keep her leashed or out of forbidden areas as required. She and other leashed dogs are perfectly fine following the rules and staying where they belong. It's their people who have a problem - not the dogs. I personally witness the frequency of scofflaw conduct among dog owners on a regular basis. The only way to protect these areas is to keep dogs out entirely. I urge you to protect wildlife and keep dogs out. The dog-fanatical humans are a minority with an oversized, overfunded sense of undeserving entitlement. Don't let them kill the GGNRA.

**Affiliation:****Received:** Feb,18,2014 14:40:49**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Robert Patrick

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Further, I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

Lastly, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Sincerely,

Justin Rocks

**Correspondence:** Dear Superintendent Dean,

---

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I take great care to leash my dogs if there are any birds or wildlife around and also pick up any waste my dog might make. I must admit that people are much more destructive and disrespectful of the environment. I picked up quite a lot of garbage on Stinson beach yesterday and the dogs were all well behaved.

Sincerely,  
Barbara DeGaetano

**Correspondence:** We are a senior disabled couple who live in the Mission. Despite the distance and our general disinclination for exercise, one or both of us have walked our dogs off leash at Fort Funston every weekend and holiday from 1989 to 1995 and daily ever since. Our lives have been enriched by the community of friends we have made there - friends from all social, economic and ethnic backgrounds, people we would never have met otherwise. Our dogs have always been active and the too small city dog parks do not afford them or us the opportunity for enough exercise. Our dogs have passed the canine good citizenship test, come when called and served as SF SPCA animal assisted therapy dogs.

1. The City of San Francisco gave this land to the GGNRA "in order to provide for the maintenance of needed recreational open space necessary to urban environment." The enabling legislation specified historic and recreational uses. That's why there's "recreational" in the name. Fort Funston is an urban park and should not be treated like pristine wilderness. It's not as if the GGNRA does not have enough land in its 80,000 acres to maintain historic patterns of use by dog walkers, horse riders and hang-gliders.

2. Fort Funston should not be turned into Asilomar, with fences restricting people to paths, so that only tourists will visit.

3. The preferred plan scapegoats dogs. When you look at the GGNRA's own statistics and consider the hundreds of thousands of dog visits annually at Fort Funston, the number of problem dog incidents is astoundingly low. This should be a case of "if it ain't broke, don't fix it" instead of throwing \$2 million at a bogus problem.

4. There is no justification in the proposed plan for such drastic changes -- citing only "potential" conflicts, without any objective site-specific and scientific studies to prove that it's dogs and only dogs that change/harm the habitat. So this is a political decision made by the GGNRA - and political decisions should be made by the people who use the land and pay the salaries of the bureaucrats.

5. Then there's the lack of the required peer-reviewed scientific studies. The GGNRA isn't even following its own rules.

6. As for the monitoring-based management plan: It's like banning all driving because there are a few bad drivers. Cite the people who cause problems, don't punish the victims.

Yes, we oppose the preferred alternative as too restrictive and think that the 1979 dog policy should not be changed. There should also be off-leash access in San Mateo County and any further acquisitions of the GGNRA.

Sheila Mahoney and James B. Frame

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area. The GGNRA Draft EIS is a very well reasoned and balanced document. The GGNRA is striving for a balance - balancing unsustainable recreational practices with the need to create a national park and habitat for wildlife!				

We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs. Off lease areas should be marked off with fencing or natural vegetation borders. Park officials need to enforce the dog rules more vigorously. Visitors to the park should be limited to a maximum of two dogs per person.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I am a dog owner and would happily follow these rules.

I urge you to implement the proposed plan with the addition of fencing for off-leash areas.

Thank you for considering my comments.

**Received:** Feb,18,2014 14:43:09  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I live in Woodside, San Mateo County, and I also spend a lot of time in Bolinas, Marin. I do not own a dog.

I emphatically oppose the proposed further restrictions on the amount of dog-friendly access lands in the Golden Gate National Park.

I don't know if you have had the same feeling that I have had lately, that the world is getting in more and more trouble, in many dimensions. Democrats and Republicans seem to have increasing difficulty in finding means of civil discourse as do so many different factions in our society, be they religious, cultural, class-based, or just the 1% trying to communicate with the 99%.  
Young people seem further and further divorced from nature. Their life experience seems based on what they interact with on a screen rather than what they see and feel and taste and touch in the real world.

And our relationship to the environment is out of balance. Climate change is appalling, and undeniable, and to city dwellers, who have little connection with the land around us, there is a hopeless sense of inability to control this change, a feeling that no individual action can be taken to affect change, to save the planet.

I think that we need to increase our access to nature, to reawaken our sense of connection to nature. I think we should be encouraging more people to have dogs (and cats) because through that connection with animals I believe our sensitivity to the planet, to our place as caretakers of the planet is made vivid and tactile.

It is astounding to me how people with serious philosophical differences will often be brought to a common and very cheerful discourse, when the topic is shared enthusiasms about dogs and cats. This is no small thing.

I realize that there are a number of people from other cultures newly arrived to the US who are afraid of dogs, as their only experience of dogs has been slum dogs, dangerous, untrained, wild creatures. We don't have many of those in the US, but I have seen a number of immigrants who react with fear to the laziest yawn from a Golden Retriever. While wishing to respect people's cultural beliefs and backgrounds, and while I don't believe that everyone needs to have dogs in their lives, none the less I don't believe that the rights of people who are dog-lovers should be restricted.

And children need that animal connection to nature as well. So little of their life is allowed to simply flow, and be a piece of the exploration of nature, in all it's chaotic and busy wildness. The opportunity to take a dog on a walk in the GGNP is a wonderful experience, revitalizing, inspiring, rich.

The number of trails which do not allow dogs on them today, especially in the counties of San Mateo and Marin, is, in my opinion, a crime. I think that the reason for this is that legal advice has been given that if any bad incident occurs of a bad owner who has a badly trained dog in a national park, then it will be the park that will be held liable. Of course the job of lawyers is to advise one on how to mitigate risk. But if you were to follow the most extreme of all legal advice, wouldn't parks be safer with no access for bikes? Or skateboards? Or actually no access for young men (who are the cause of most violent crimes)? Life does involve having some risk. I would far prefer to read a board at the entrance to a park that tells me if anything bad happens to me due to some ill-trained animal, it is not the fault of the park, than lose access to many, if not all of the trails I would have otherwise used with my accompanying dog.

I think it is far more important for our culture that the recreation areas which have been paid for by my tax dollars, are free and open to everyone, including responsible people with their dogs.

And even if the off-leash areas are to be restricted, why on earth must so many trails be designated as NO DOG trails?

I don't own a dog, but I have friends with dogs. There are a number of trails I have never been on, because they are "no dog" trails, and my friends inevitably have their dogs with them. I specifically resent the restrictions on the trail to Bass Lake in lower Point Reyes Natl Park. That trail, by the way, is almost always in use by people with dogs on leash, against regulation.

I'm sorry this is so rambling a note to you, but I am not a great writer. But I do know that so many of our problems today come from our alienation from nature. Restricting access to nature for our dogs is yet another step in the anomie of urban life. Deny this step, please! As the Superintendent, I would think your job success would be measured by the number of hours people spend on the trails, engaged with nature. Don't implement another restriction on those hours, a way which will reduce them further.

Thank you for listening to my thoughts in this matter, Superintendent Dean.

Now I think I'll go take a dog for a walk.

Cheers,  
Sheila Brady

<b>Correspondence:</b>	As a member of the GGNPC and the Sierra Club I am disappointed to read that off leash areas will be further reswtricted in the Recreation Area. It seems that the burden should be on the Park Service to explain why restrictons must be imposed after decades of use by dog owners and their companions. When I visit the area beaches in particular, I am always happy to see dogs and their owners enjoying themselves and that is one of the attractions of the area for me.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Matt O'Connor

<b>Correspondence:</b>	Frank Dean, GGNRA Superintendent Building 201, Ft. Mason San Francisco, CA 94123				

February 18, 2014

Dear Superintendent Dean,

My name is Jane Green, and I have been a resident of San Francisco since 1999. Almost every day, I walk with my dog in areas such as Crissy Field and the Embarcadero, as well as other dog parks in the city, because these are wonderful recreational places for individuals, families and their pets to enjoy the beauty of the environment together and help to create a sense of community.

I am writing today to express my strong opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to walk with my dog in the near future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. In addition, I believe that the vast number of people who use these areas for recreation enjoy the fact that individual and families with dogs also populate them, and that the number of people who would seek to restrict or limit these areas to dogs is very small, and not representative of the majority point of view.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off-leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to

believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,

Jane Green  
50 Lansing Street #703

<b>Affiliation:</b>					
<b>Received:</b>	Feb,18,2014 14:46:34				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	The GGNRA was established to "provide for the maintenance of needed recreational open space," according to its enabling legislation. I am opposed to proposed restrictions on off-leash recreation with dogs in the park, now and at future sites. I will oppose expansion of the GGNRA to new lands if this will mean the exclusion of off-leash use.				

I do not have a dog now, but I walk weekly with friends who have their dogs under voice control. I also visit areas, without a dog, just to enjoy the dogs playing. I frequent Fort Funston, Crissy Field, Mori Point and other areas. The exercise I gain from these walks is not obtainable in the vastly smaller space of my local city parks.

I believe that the National Park Service should honor and formalize the 1979 Pet Policy, a reasonable plan for allowing off-leash recreation in a small portion of the GGNRA.

I am against placing fences and pens on the beautiful land of the GGNRA. This is not necessary and may limit wildlife, as well as marring the views.

I am opposed to the Monitoring Based Management Strategy and in favor of site-specific studies, not general, anecdotally based reports, when it comes to showing the impacts of dogs on the environment.

I disagree with the concept that every area that allows off-leash use also must have no dog areas. This is not feasible or needed.

The presence of many people walking their dogs in the GGNRA adds to public safety. We should not be restricting this healthy form of recreation.

Please allow citizens to use their park for off-leash recreation in the few areas where it has been allowed.

- Michael B. Goldstein

**Correspondence:** I strongly oppose the preferred alternative described in the GGNRA's dog management plan. As a resident of the cow hollow neighborhood with a high-energy needs dog, I rely on big open spaces like Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston to properly exercise my dog. Proper exercise is very important for a dog's health, and my companionship with my dog is an important part of my own pursuit of happiness as a resident of San Francisco. I believe the new plan reduces my right to enjoy living in my city, for reasons that have not been scientifically substantiated or are simply administrative over-reach.

The GGNRA was designed to be a place for urban residents to enjoy nature, these new restrictions are contrary to that charter when considered from the perspective of a resident who finds most enjoyment in experiencing these lands with their canine companion.

I am a responsible dog owner who practices safe voice command. I and others like me should not be punished for the misdeeds of less responsible owners in a large action such as the one under consideration. Fines and fees for irresponsible behavior should be levied at the offending individuals, not the innocent population at large.

Sincerely,

Michael Zimmer

Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Jill HEnderson

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Bay Area Resident

**Correspondence:** I am writing to voice my opinion about leashed dogs in San Francisco/Bay Area. There should be no reason to have well-trained dogs off-leash; however, I have been witness to off-leash dogs killing or chasing birds.

One particular instance stands out while at Ocean Beach, San Francisco. While surfing I noticed a cormorant playing on the inside of the breaking waves, which caught the attention of an off-leash Labrador, I think. The dog chased the bird as it bobbed in and out of the water, ultimately, catching the bird. The owner's threats and commands to stop we're futile. After the bird was fetched back to the owner, I showed my disguised, and in response, the owner berated and hit his dog. In the end, the bird died.

Responsible and well-trained dogs should be allowed off-leash but how does one regulate this?

**Correspondence:** Thank you for extending the public comment time so that additional people can weigh in on this issue of such importance to us in the Bay Area.

I am both a dog owner and a supporter of protections for natural environments and wildlife. I am an avid hiker and find hiking with my dogs adds to the enjoyment of the outdoors. I also strongly support having some outdoor recreation areas where no dogs are allowed or they are only allowed on leash but I believe the preferred proposed plan (alternative F) bans dogs in WAY too many areas of the GGNRA.

The Negotiated Rulemaking Committee worked very hard to come up with a plan that had consensus among the many GGNRA stakeholders. Alternative F disregards the majority of the consensus recommendations from the Committee. I support Alternative C as the best alternative for revising the plan. I am strongly opposed to Alternative B which severely limits my ability to participate in GGNRA outdoor recreation.

The GGNRA is over 80,000 acres of precious open space with amazing natural beauty in a densely populated urban area. The preferred proposed plan (alternative F) does not even come close to fairly balancing the needs of people who wish to walk where there are no dogs, the needs of people who wish to share their outing with their dogs and the needs of wildlife/natural resources. It unfairly limits the percentage of areas where people are allowed to take their dogs compared to the other competing needs.

I have seen reliable surveys indicating between 30%-40% of Bay Area families have dogs. Many of these same households have children. And many of these families routinely do outdoor recreational activities together. We are some of the strongest supporters of funding and political support for outdoor recreation. I find it challenging to understand why the GGNRA is proposing a plan that essentially limits my enjoyment of this national treasure so drastically that I would rarely use it. Currently I play in the GGNRA 1-2 times a week, almost always with my dogs. This plan would take away one of my primary outdoor recreation areas.

The GGNRA is unique. It was not created as a National Park like Yosemite where recreation activities, including dog access are extremely regulated. Nor is it in the remote back-country of the Sierra. The GGNRA was created as a "National Recreation Area" rather than a "National Park" with the understanding that the broad recreational uses in place in the 1970's for urban Bay Area residents would be continued. Please keep this promise to Bay Area residents.

Thanks so much.

Kate Clayton

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

<b>Correspondence:</b>	Dear National Park Service,				

I am writing to express my displeasure with the proposed plan to prohibit dogs from most of the trails and beaches within the Golden Gate National Recreation Area.

I live near the Oakwood trail. I take my dog, Gilda, for on the Oakwood trail several times a month. I love the fact that this trail is so close to where I live. Gilda gets so excited when I take her to this trail.

Thank you for this opportunity to express my feelings concerning the proposed plan.

Sincerely,

Robert

February 17, 2014

Frank Dean, Superintendent  
GGNRA  
Building 102, Ft. Mason  
San Francisco, CA 91423

Dear Mr. Dean,

I am writing to you regarding the DSEIS for dog management in the GGNRA.

As you are aware, I have been personally involved in the dog management issue for over twelve years as the chair of the Crissy Field Dog Group. I participated as a member of the Negotiated Rulemaking for Dog Management in the GGNRA and have been one of the few people who have visited all 22 areas under consideration for dog walking in the GGNRA. I am writing to you as a very concerned citizen who has lived in the San Francisco Bay Area for over thirty years.

Just remind you again, this is a recreation area. This is NOT a national park. It was established in 1972 to improve the quality of life in a major urban area, namely the city of San Francisco and its two neighboring counties, Marin to the north and San Mateo, to the south.

The issue of dog management in the GGNRA is not a contest to see what party will outlast the other party but rather should be about a thorough land use process that objectively evaluates the impact of dogs in the GGNRA and creates a viable and workable plan that creates a balance that will accommodate dog walking as originally intended by the GGNRA enabling legislation.

Unfortunately, this newest version of the GGNRA's DSEIS is far from adequate and is unduly restrictive about where dogs and their owners may continue to walk in Marin, San Francisco and San Mateo counties. There is no justification to warrant such draconian measures other than to force out dogs and their owners in the long term. It seems like that is what the GGNRA wants to accomplish here. We will never let that happen.

So far, Congresswoman Jackie Speier, San Francisco Mayor Ed Lee, the San Francisco Board of Supervisors, the Marin County Board of Supervisors, the President of the San Mateo Board of Supervisors, the San Francisco SPCA, and the Marin Humane Society have expressed concerns opposing the restrictive nature of the GGNRA's preferred alternative and highlighting the GGNRA/NPS need to acknowledge or incorporate many of the public comments that were submitted in the DEIS in 2011.

Around 4700 public comments were submitted for the DEIS in 2011. A forensic accountant took the time to do a count of these comments and found that the people who were in support to retain the status quo of the GGNRA's 1979 Pet Policy (dogs under voice control in certain areas of Marin and SF counties) plus including the new San Mateo county lands was a clear 3 to 1 majority. We are tired of the GGNRA spin of saying that the dog supporters had a little over fifty per cent support for this issue. That is simply incorrect.

#### The DSEIS - - General Comments

I have read the DSEIS document several times and I will let our NEPA experts convey their specific NEPA concerns on behalf of the Crissy Field Dog Group, and from our present and former attorneys, as articulated in Ashley Miller and Ken Weiners letters. I concur with everything that they have written in their letters. I wish the GGNRA would take NEPA more seriously and produce an objective environmental analysis and follow the letter of the law. To date, that has not happened. In addition, I encourage the NPS/GGNRA to actively engage with relevant stakeholders to create a dog management plan what is workable and reasonable. NEPA encourages this type of dialogue and the NPS/GGNRA has flatly refused to collaborate with relevant stakeholders.

The DSEIS proposes too many restrictions with too little analysis and factual basis. There isn't any reliable scientific data to form a foundation for this plan. These proposed restrictions (only 7 of the 22 areas proposed would allow dog walking access on GGNRA lands in all three counties), in turn, will likely increase user conflict because of the limited remaining space for dog recreation. For example, the proposal to have dogs on leashes at places like Baker Beach or Muir Beach will simply not work and is unrealistic. And there is no factual or scientific basis in closing off leash dog walking at East Beach or the Grassy Airfield at Crissy Field nor at any of the areas under consideration. What dog can you take to the beach and not have them romp and have fun? Dogs and people need socialization for a healthy and happy lifestyle.

This DSEIS is clearly biased against dog walking. According to the 1972 GGNRA enabling legislation, the GGNRA should be protecting one of its core values, recreation. Both the House and Senate reports identify dog walking as a popular recreational activity but the benefits for dog walking are not properly recognized in this document.

When Crissy Field was restored in 2000, one of the purposes was to create more space for off leash

recreation because of the anticipated growth in the number of visitors with dogs. The proposed reduction in off leash recreation area at Crissy Field is a reversal of course without basis especially where the impact on all park visitors will be increased concentration of dogs in a smaller area (Central Beach and a small portion of the Grassy Airfield). This makes no sense and is setting up the dog management plan for failure.

Concerns identified from Chapter 2 (Alternatives):

" The GGNRA makes the assumption that there needs to be a no dog experience at all of the 22 areas under consideration for dog walking access. Where and how did the GGNRA make a unilateral rule that mandates such an action?

" The GGNRA manages around 80,000 acres and already less than one per cent of GGNRA lands in all three counties are being considered for dog walking access. People who do not want a dog experience can go to the other areas of GGNRA lands to have a dog free experience.

" Many visitors (including families and seniors) to the GGNRA who do not own dogs actually go to places like Crissy Field so they can enjoy watching dogs having fun. For a variety of reasons, some people cannot afford dog care, are allergic to dogs, or are simply too busy and understand that they do not have the time to take care of a dog but enjoy the opportunity to watch the playful doggies.

" The notion that dogs and their owners and other visitors to the GGNRA are incompatible is erroneous. The GGNRA uses the phrase multiple user groups with a negative connotation as if co-existence does not already occur. It occurs successfully everyday in these specific areas and has for years. A fact to consider: in the year 2012 to 2013, (data I received from a GGNRA staffer) out of the hundreds of thousands of visits by people with dogs; there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. While I am troubled that these dog-related incidents occurred and want to prevent any type of further dog incidents, I believe that expanding the San Francisco SPCAs Off Leash Open Space dog-training class would help to reduce such dog related incidents in the future. Also, it is my understanding the human incidents rate in the GGNRA for the same time period is much, much higher. This data does not support a need for change to further restrict off leash dog walking.

" The descriptions of places like Upper Fort Mason, Baker Beach, Ft. Miley, and Lands End are identified as low to moderate use but there is absolutely no factual or scientific basis to restrict voice control or off leash in these areas. There are a large percentage of people who use and have used Upper Fort Mason, Baker Beach, Ft. Miley, and Lands End for generations. These are people who live in San Francisco and consider the GGNRA to be their backyard, naturally. The same concept holds true for areas under consideration in Marin and San Mateo counties. Literally, the GGNRA is near or adjacent to peoples backyards.

" Two plant species (Marin dwarf flax and the SF Lessinga) have been identified at Baker Beach and the adjacent high bluffs as an endangered species. Yes, we want to protect them and this could include implementing mitigation measures like appropriate post and cable fencing and appropriate signage. However, the DSEIS omits analysis of the design of the built environment altogether. Again, there is no factual or scientific basis to restrict dogs under voice control at Upper Fort Mason, Crissy Field, Baker Beach, Ft. Miley, Lands End, Ocean Beach, and Fort Funston or the other areas under consideration in Marin and San Mateo counties.

Real and Significant impacts not addressed in the DSEIS:

The year round special events at Crissy Field present the most significant environmental impact as many as several million people impact this area. It is not the dogs that have a significant impact here; it is the people and the heavily attended events such as Fleet Week, Americas Cup, corporate fundraisers, etc. that have a deeper and lasting impact on the environment. Additionally, the biggest safety concern at Crissy Field is the bicyclists, primarily tourists who blindly run into people along the promenade. The dogs and their owners are not a safety issue- -there isnt any empirical data in the DSEIS that supports that. I am not saying that there arent any situations that need attention, but the DSEIS is so biased against off leash dog walking you would think dogs present a daily hazard, which they do not.

And unfortunately, there were thousands and thousands of fireworks casings (made of cardboard, metal and plastic) that washed up on Baker Beach and Crissy Field as the result of the celebration of the Golden Gate Bridges 75th anniversary. It was the dog walkers who cleaned up this mess at Baker Beach and Crissy Field for several days running.

It would be helpful if the GGNRA would place signs about where people can walk their dogs under the 1979 Pet Policy now so everyone can understand the boundaries. This would also give the US Park Police and NPS Park Rangers an idea about where to enforce or not on GGNRA lands. These immediate possible mitigation measures should be given a chance to work before the GGNRA implements any significant restrictions as are proposed in the DSEIS.

The SDEIS states that dogs harass marine mammals at the beaches. However, the Marine Mammal Center has relied on dog walkers for years to inform them about stranded marine mammals on beaches - - these beneficial aspects of dog walkers should be taken into account in all fairness. The TMMC wrote an email letter to Jane Woodman in 2006 stating this information and is attached for your information. The dog walkers are the first responders when these marine mammals wash up on beaches because of illness or injury and TMMC depends on these sightings so if possible, they can help the distressed marine mammal in a timely manner.

#### Misrepresentation in the DSEIS

Boulder Green Tag Program: The DSEIS reported that the Boulder Green Tag Program wasnt successful and therefore the GGNRA dropped any consideration in pursuing the program as a viable enforcement tool for the GGNRA. Clearly the GGNRA did not do its homework. I personally spoke with the Green Tag Program Director and in fact, the Green Tag Program is highly successful with a compliance rate in the high 80% to low 90%. They have made some recent enhancements to the program to make it more effective - - but in short, it works. This program model would be an excellent model as a clear enforcement program.

Consider Urban Design to accommodate changes for Fort Funston:

The GGNRA should consider innovative structural solutions that were dismissed from the DSEIS entirely for Fort Funston (e.g., vegetative barrier, post and cable fencing). These are concrete ways to manage the protection of natural resources and dog walking at Fort Funston.

#### Workable Solutions

I believe that a workable and reasonable dog management plan would include:

- 1) Maintain the status quo of recreational dog walking areas: the 1979 Pet Policy plus designated off leash areas in San Mateo lands, with additional enforcement and mitigation measures identified here.

- 2) Implement variation of the Boulder Green Tag Program for clear enforcement
- 3) Educational Outreach: partnering with the SF SPCA and Marin Humane Society in developing and expanding an Off Leash Open Space Training Program.
- 4) Mitigation Measures: Vegetative barriers, post and cable fencing to protect plant species, clear signage
- 5) Recreational Roundtable: Community stakeholders who are committed to resolving on-going issues within the GGNRA (public private partnership)

#### Creating a Workable, Representative Plan Based on Public Comment

This is not simply a paper trail process but an opportunity to create a workable plan for the future. You are affecting ordinary citizens whose lives will be greatly affected about their ability to walk their dogs off leash in a responsible manner. This issue was highlighted for me recently when I looked at some older documents relating to this issue and found a resolution from 2006 from some members of the Negotiated Rulemaking committee sent to the Committee facilitators and it struck me that the same issues that we were concerned with in 2006 are still relevant today. Clearly, this failure to incorporate substantive comments into the preferred alternative indicates that NPS/GGNRA is focused on what outcome it wants, not what the public at large is saying. I hope that the GGNRA/NPS really listens to the people who use the GGNRA on a daily basis and incorporates and takes the public's comments seriously.

Crissy Field Dog Group has been collaborating on constructive solutions for many years in the GGNRA. For example, working with SFSPCA and GGNRA, Crissy Field Dog Group helped develop the Off Leash Open Space Training Program. Working with the San Francisco Board Sailing Association and the GGNRA we were part of the building of the dog rinse station at Crissy Field. CFDG has purchased and distributed dog waste bags on a daily basis throughout Crissy Field for many years.

We wish to take this spirit of collaboration into the next phase of this process, so that we may truly work together to develop a workable solution to dog management.

I ask that the GGNRA to take a balanced, fact based approach to its environmental analysis that will result in the preservation and protection of important dog walking recreation in the GGNRA for generations to come.

Thank you for the opportunity to comment on this critical document.

Martha Walters

**Correspondence:** Please let pet owners have a place to allow our pets to run free and happy. It is important that as long as the world has domesticated dogs, that we treat them the way they were intended to live- running fast and free. We can not do this on streets with cars, in schools with children, at parks with people and kids and food, but we can at Fort Funston.

Taking our dog to Fort Funston has been the best thing not only for our dogs mental and physical health, but it also brings our entire family together. We have 3 teen aged boys who will go with us anytime we offer to bring our dog to the beach. They put on their grubby clothes and we head to the beach. The only other activity that warrants that kind of enthusiasm for a family day out is when we are in the mountains skiing as a family.

Please keep kids close to their families. Please keep dogs running free.

Thank you.  
Linda Spira

**Correspondence:** I visit either Ft Funston or Crissy Field almost everyday. About 95% o visitors to Crissy field and Ft funston are people with dogs or wind surfers. Only on rare bright sunny days are there many other beach visitors. The preferred plan seems not to take into consideration how the parks are currently used. I support less restrictive plan. Leash required in parking lots , the beach adjacent the lot and the promenade to the fort and picnic area makes sense.

I have seen no study that documents the positive effects of these restrictions. I can see major noncompliance and civil disobedience if the principal users of this urban park are restricted for no clear purpose.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash

access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely, Danny castillo

**Correspondence:** This is a recreation area within a city. This is not a pristine wilderness. 99% o the GGNRA isn't enough? The main 'argument' of the GGNRA seems to be that 'dogs make birds fly away'. This happens when runners pass birds. This happens when children approach birds. This happens when NPS employees drive past on ATVs. It would be helpful to see ANY numbers that indicate that bird populations have been affected by these dogs- but, after spending 3/4 million USD on the proposal, GGNRA has not been able to provide any compelling evidence against dogs. This proposal is pushed by data from the GGNRA that does not in any way support the proposal. As a middle-school science project, this study would most certainly fail.

**Correspondence:** Please do not change the current rules for off leash dog use. Dogs are not a menace to nature and have very little freedom to run in Northern California. The use of places like Muir Beach and Rodeo beach has been a weekly part of our lives for years. I clean up all their waste and leave the nature as we found it unharmed. Imagine all the pent up energy and not being able to run and play. If you change the current rules my dogs who love to swim will be unable to do so. They are hurting no fish and no nature when they swim and cannot see any damage they do to sand on a beach. Incidents of bad dog behavior are very infrequent and most mean dog owners do not bring their animals to places like this.

---

I would even consider paying a fee yearly to be allowed to continue to allow my dogs to run free. Please consider keeping off leash available to the public.

Thanks, Will Shore

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative. I could support an alternative which did not close any areas currently open to dogs but did institute on-leash requirements in all areas. Unfortunately, GGNRA did not include that as an Alternative. (Alternative B is misnamed, because it does eliminate dog access in some areas.)

The changes that GGNRA made in the 2013 SEIS do not adequately respond to the concerns expressed by the public in 2011. Recall that public comments in 2011 were 3 to 1 against further restrictions of dog access to GGNRA. Like every branch of the federal government, the NPS has a statutory obligation to heed public views with regard to administration of the resource.

I regularly take my dog to Oakwood Valley, the currently dog-legal stretches of the Miwok trail, Crissy Field and Ocean Beach. My use and enjoyment of these areas would be entirely curtailed if I could not take my dog with me. Since dogs are already off-limits on over 99% of the Golden Gate National Recreation Area, I would no longer have any reason to visit or use the Recreation Area. There isn't a compelling reason to eliminate my access to the remaining 1%. GGNRA hasn't conducted peer-reviewed, site-specific studies to prove that the impacts of dogs on the habitat and public enjoyment of the small areas still open to dogs is severe enough to justify such dramatic restrictions of the public's use of our public lands. I believe such studies are required in an SEIS under the law.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. Unlike wilderness National Parks like Yellowstone or Yosemite, the communities surrounding GGNRA existed within stable boundaries before the creation of GGNRA. Marin residents have relied upon this open space and specific areas for exercising our dogs for decades. As such, GGNRA requires a different management strategy than a National Park.

GGNRA was and is an area preserved for recreation. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. People who wish to visit GGNRA without encountering dogs have vast areas and miles of trail where dogs are already prohibited.

**Correspondence:** I'm disabled with a mobility service dog and this is the only way to exercise my dog while she's not working. Please expand the off leash areas, not limit them. The coyotes are more damaging to the birds than any dog I've ever seen in 20 years of going to Ocean Beach or Chrissy Field. The birds can fly away when anything goes near them. Duh.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.  
I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits

the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote. The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I am a proud 16 year resident and dog owner in San Francisco. I live in the Mission but visit Chrissy Field, Ft Mason, Ft Funston and especially Ocean Beach with my dog Annie. She loves being off leash (though under voice control) at these beautiful natural areas, sharing them with my family. We are always very respectful of the natural area (almost every dog owner I see is) and we make sure to keep a close watch around other people. We are also very respectful in places where on-leash is required.

I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

Please do NOT restrict off leash access for Annie and other dogs. Nor do we think fenced in areas are the right solution. Of all places in the country, San Francisco Bay Region dog owners are responsible and nature loving people who understand the balance that needs to be kept.

Thank you for looking out for Annie, an important member of my family.

Geoff Garinger

It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
L. Daniels

As someone who walks regularly with my dogs in the GGNRA, I write to express my exceedingly strong opposition to the preferred idiotic alternative as described in the GGNRA's new draft dog management plan. Folks who drafted the idiotic alternative clearly are not dog people nor do they appreciate the joys that comes with walking your dogs in nature.

As a resident of San Francisco and a native to the Bay Area, I pay taxes from which GGNRA supposedly utilizes for the upkeep and maintenance of the parks. This includes Crissy Field which is a favorite of my three dogs.

Instead of targeting dogs and their parents (owners), target the children and their parents (owners)! They don't clean up after themselves nor do they respect the boundaries set to protect native plants. Garbage in the plants and/or the ocean/bay are directly attributed to their disregard for the environment. Target the smokers who dump their cigarette butts all over the place! Butts are not environmentally friendly by any means! Target the tourists who have no understanding of the history of each park under GGNRA. In their stupidity, they trample all over native plants. Target the cyclists who speed or barrel down the paths harming the plants on the paths.

Responsible dog parents promote the environment every time they clean up after their dogs. Dogs that run contribute to the joy we feel when in nature. People who have dogs in their homes, are committed to maintaining a healthy environment, inside and outside their homes.

Wise up and back off. Or rather, bark off.

<b>Correspondence:</b>	I am opposed to the proposed 2014 GGNRA Dog Management Plan (based on the 2011 GGNRA DEIS and the 2013 GGNRA SEIS) for the following reasons:				

1) The GGNRA/NPS is basing this plan on limited anecdotal complaints by biased organizations (GGNPC, etc) and individuals rather than on sound science consisting of site-specific, peer-reviewed studies.

2) By enabling this arbitrary disenfranchisement of a specific class of GGNRA users, the GGNRA/NPS is violating the 1972 Congressional enabling legislation and the mandate to manage the GGNRA lands for public recreation. Repeat; public RECREATION, not conservation, not habitat restoration, not development, just public RECREATION.

GGNRA/NPS appears to be exhibiting a bad case of "mission creep" or "mission slippage" on its substitution of "conservation/habitat restoration" and "park visitor experience" for "recreational park user".

3) By reducing the number of GGNRA users and limiting their "vistor experience" to what is considered a "properly regimented visitor experience" by the elitist GGNRA/NPS, general public emotional attachment to the GGNRA will decline. With declining public emotional support, declining financial support will inevitably follow.

To paraphrase Baba Dioum: In the end we will conserve only what we love; we will love only what what we understand; we will understand the GGNRA lands only by our joy in being in them.

4) If GGNRA/NPS cannot or will not comply with the 1972 enabling legislation and the original 1979

GGNRA Pet Policy (upheld by the 2005 Federal Court decision), it should transfer the lands back to the Forest Service or the Department of Land Management and/or the cities and counties (such as San Francisco, San Mateo and Marin, etc).

I live in the East Bay so it is a special treat for me when I can come and enjoy the GGNRA. I routinely bring foreign or east of the Rockies visitors to the GGNRA, and they all have been awed.

Please maintain inclusive access to the GGNRA lands for public recreation.

Thank you.

**Correspondence:** The preferred alternative seems to strike the proper balance between dog owners' need to get outside with their dogs, wildlife's and vegetation's need for protection against rampant trampling and defecation by dogs, and the rest of the public's (and other dog owners') need to be protected against unwanted interactions with dogs. Requiring dogs to be leashed does not constrain dogs; it requires dog owners to move along with their dogs, thus enabling both to exercise. Allowing dogs to be off leash, even under voice control, is a prescription for deposition of feces unseen by owners, and thus that remain in place until stepped on by the unwary, even if bags are provided. Even if bags are provided, unless waste receptacles are placed and convenient intervals, bags of feces will be left scattered.

One aspect of the preferred alternative needs improvement: all fire roads should be open to leashed dogs, and there should be at least some trails that provide unbroken linkage between dog-legal trails, making both loops and point-to-point trips feasible. Bags and barrels should be provided at trailheads that either have parking lots or road access.

**Correspondence:** Please, please, please keep the off leash areas as they are today. There are so many dogs in the bay area who love to run free. I love to take my dog to Fort Funston several times a month.

Where are we supposed to go if we loose all these areas?

I really hope we can keep on going to Fort Funston and run around free.

Anne & Indie Rock

**Correspondence:** I live in the Inner Richmond district in SF, near Mountain Lake Park and the Arguello Gate of Presidio National Park. I walk with my dog (on leash) on the trails of the Presidio every day. I love exploring the trails with her, and typically hike to Baker Beach or Chrissy Field to run off leash on the beach 2 - 3 times per week. About once a week we explore the off leash trails at Fort Funston.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** As a father of two young boys living in the city, I get very frustrated by how a city of people is over run by dog owners and dogs who have abused the lack of signage to allow all sized dogs to run free without a leash. Many times a week when one approaches my kids, I am told 'he is friendly'. That doesn't matter to me...maybe my 1 year old isn't friendly because he hasn't spent a lot of time with an 80 lb lab and will poke him in the eye because the dog is pushing his mouth in my sons face; and who knows how friendly that un leashed dog will then be? I have been biten and harassed by all kinds of "friendly" dogs. My wife also enjoys it when off lease large dogs come up and shove their nose in her lap. Imagine if my 3 year old ran up to a women and shoved his head in her lap...pantingâ€..?

I have owned dogs and am fine with them as a part of our city however, dog owners need to see and heed to clear signage as to where they can be off lease. When I lived in Atlanta, there was a huge fenced in dog park in Peidmont Park that both dog and non dog people loved. Everyone knew that is where you go to take your dog off leash. It will take a long time for dog owners to get used to any changes as they feel entitled so some kind of enforcement will unfortunately be required. If I see the proper signage and am trying to enjoy family time in a leashed zone, I will say something to the owner of an off leashed dog but the number of times I have seen owners bring non-service dogs into say a grocery store - which is obviously not allowed - everyone looks the other way. No one likes confrontation and dog owners are very comfortable asking for forgiveness rather than permission. The word I hear dog owners say non stop is - "I'm sorryâ€"

Thank you for understanding a father's perspective.

**Correspondence:** As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence

---

that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,  
Richard Francoz, MD

<b>Correspondence:</b>	As a long-time San Franciscan who is both a former dog owner (dog died last year) and a parent of two young children, as well as an emergency physician who sees the consequences of dog attacks on children, I am writing to voice my strong support for any and all measures to place reasonable limits on dogs in this city. I'm sure many other letters you've received have detailed all the ways in which dogs restrict people's use of public spaces and often prohibit children from safely and freely playing. When children (often 2-4 years old) are attacked by dogs, the resulting lacerations (often on the face) are often large and deep and leave scars; they can lead to serious infections. In the worst case, dog attacks can				

---

be fatal, as happened years ago here in an infamous and gruesome case.

I've lived by Duboce Park, where dogs dominate and children are essentially excluded from the best field in the park (the dog feces scattered everywhere are just one reason for this), and now the Inner Sunset, where the Big Rec Ball Field places limits on dogs: the difference between these two parks is night and day. Dogs still have plenty of play space in GG Park, but having fewer dogs off-leash (some run free because certain owners break the rules) means a totally different experience for people/families/children. I hope we can place similar limits, including as much dog-free space as possible (on-leash rules are often flouted), in all the park space under consideration.

**Correspondence:** We take our dog Otto to Fort Funston at least once or twice a month and have been going for the past two years. We also take him to Ocean beach. My observation is that the dogs at Funston are well behaved and do not damage the environment. I have never seen dogs harass birds or other wildlife, and the overwhelming majority of people at Funston are meticulous about cleaning up after their dogs. Birds on the beach will move or fly off to a slightly different location if approached by dogs or humans. Feral cats are far more damaging to bird populations in the Bay Area than dogs walking on the beach. Controlling feral cat populations would be a more effective way to help ensure healthy bird populations in the Bay Area.

I thus see no justification whatsoever for banning off leash dogs from Fort Funston or Ocean Beach. It will be a huge loss for dogs and their owners. Without beach access the only area dog owners can let their dogs roam free also places them at grave risk for a large part of the year: The majority of non-beach dog parks I have visited in the Bay Area are heavily overrun with foxtails from the late spring to early autumn months. Allowing dogs to roam free in these environments puts their health and life at risk. A colleague lost her dog due to secondary infections resulting from an inhaled foxtail that punctured the dogs lungs. Our Otto suffered from an infection due to a foxtail that migrated underneath his skin last year.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Fort Funston, Muir beach and others.

Dogs and their humans need off leash time and deserve to enjoy the beauty our area has to offer. The health of dogs and their humans rely on this. Dogs that are under control cause no problems and laws are already in effect for out of control dogs, so please don't add more restrictions.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park. Our tax dollars support these areas too.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. Please don't take this away from us and from my patients.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hi,				

I live one block from the Presidio. I have visited Baker Beach at least twice a week every week for the last 7 years. Every time, my dog Ripley has visited with me. I have been going since I was 25. I'm now 33 and I take my two sons along with my dog with me. Baker Beach, San Francisco, my Dog, and my Family: these are some of the most important things to me. I own a business in San Francisco and employ 8 people who live in San Francisco with their families.

I strongly oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Thank you,  
-Zach

<b>Correspondence:</b>	As a transplant to this area, I am consistley surprised at how difficult it can be to own a dog in a place that is supposed to be so dog-friendly. This is the most beautiful place I've ever lived and all I want to do is take my best buddy with me to enjoy it and to help keep me safe. There are already restriction sufficent to make it more diffucult than I would expect to accomplish this. My dog can't come in most stateparks and our hiking and camping options are severly limited, when I do distance trail running I have to create ridiculously complicated maps to try to stay off access limited trails. Please don't create any additional limitations to where I can bring her.				

---

Every years tens of thousands of dogs are put to sleep becuase they don't have homes. Dog friendly people are working hard to bring this number down, but making it more difficult to own a dog by further restricting the places their owners can bring them, is in direct contradiction to this goal. Please don't make this work harder than it already is, please don't give more reasons why saving a dog isn't worth the trouble.

What I do support in terms of regulation is enforcing the basic rules that are already in place. It seems to me that a lot of restrictions are born out of visitor complaints about people who are not following the rules which are already set. The parks create restrictions as a result and then create furhter restrictions when the rules continue to be broken - skipping the step where the current restrictions are inforced. Typically, people don't like dogs around because of the waste or becuase dogs are not behaving. Waste removal and basic behavior skills are already an expectation but I can't say I've ever seen them inforced. Before we re-draw boundaries and create hardship for people who are just trying to give a full, active life to their k-9 friends, let's work on getting people to follow the rules that already exist.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I strongly and urgently support the Preferred Alternative of the Dog Management Plan, because Dogs must be balanced with the wildlife and precious natural resources as well as the many other users of public land.				

I am a native of San Francisco, and I have been visiting the GGNRA lands since before the park was established in 1972. I am an avid walker, cyclist, and beachgoer in both San Francisco and Marin Counties (more recently exploring San Mateo lands) and I remember cycling through the abandoned warehouses of Fort Mason before the Great Meadow, on my way to the Golden Gate Bridge.

Recently, however I have witnessed something like dog anarchy at Crissy Field and at Fort Funston, and seen trails blocked by the professional dog-walkers with packs of a dozen or more dogs. I have seen unsanitary, smelly waste left by a few irresponsible owners.

I even talked with a neighbor who had a dog jump on her back while she was jogging in Fort Funston, only to have the owner blame her for the attack because she was running!

The Regulated Off Leash areas are a fine compromise allowing this use, while regulating pet's impact on nature and people of all ages, genders, and abilities.

Sincerely,  
James Osborne

**Correspondence:** Thank you for soliciting public comment on this important issue.

I am writing because I am both a dog owner and a supporter of protections for natural environments and wildlife. I am a walker, hiker, and cyclist and greatly value my time spent in the outdoors as a way to recharge, refresh, and reduce stress. I value my canine companions for the same reasons and spend many hours per week enjoying the outdoors with them. I greatly appreciate the opportunities currently offered for places to hike with my dogs in the Bay Area, including GGNRA sites, which I utilize about 2X per week. I strongly support having some outdoor recreation areas where no dogs are allowed or they are only allowed on leash, but I believe the preferred proposed plan (alternative F) unnecessarily bans dogs in too many areas of the GGNRA.

The Negotiated Rulemaking Committee worked very hard to come up with a plan that had consensus among the many GGNRA stakeholders. Alternative F disregards the majority of the consensus recommendations from the Committee. I support Alternative C as the best alternative for revising the plan. I am strongly opposed to Alternative B which severely limits my ability to participate in GGNRA outdoor recreation.

The GGNRA is over 80,000 acres of precious open space with amazing natural beauty in a densely populated urban area. The preferred proposed plan (alternative F) does not even come close to fairly balancing the needs of people who wish to walk where there are no dogs, the needs of people who wish to share their outing with their dogs and the needs of wildlife/natural resources. It unfairly limits the percentage of areas where people are allowed to take their dogs compared to the other competing needs.

I have seen reliable surveys indicating between 30%-40% of Bay Area families have dogs. Many of these same households have children. And many of these families routinely do outdoor recreational activities together. We are some of the strongest supporters of funding and political support for outdoor recreation. I find it challenging to understand why the GGNRA is proposing a plan that essentially limits my enjoyment of this national treasure so drastically that I would rarely use it. Currently I play in the GGNRA 1-2 times a week, almost always with my dogs. This plan would take away one of my primary outdoor recreation areas.

The GGNRA is unique. It was not created as a National Park like Yosemite where recreation activities, including dog access are extremely regulated. Nor is it in the remote back-country of the Sierra. The GGNRA was created as a "National Recreation Area" rather than a "National Park" with the understanding that the broad recreational uses in place in the 1970's for urban Bay Area residents would be continued. Please keep this promise to Bay Area residents.

Please clarify the map/poster showing the access route for dog walkers accessing the Sweeney Ridge Trail from the end of Sneath Lane in San Bruno onto SFPUC lands up slope to Sweeney Ridge. The current map shows access for dog walkers beginning at the inner gate at the intersection of the SFPUC service road and the trail at the northerly terminus of the GGNRA parcel number APN 018170010 (latitude 37.6166 longitude -122.4524). This location is approximately 350 yards short of the existing SFPUC gate at the end of Sneath Lane. The map should show access for dog walkers to the Sweeney

---

Ridge Trail beginning at the end of Sneath Lane southwards across SFPUC parcels APN: 093910040 and 093010010 connecting up with the Sweeney Ridge Trail as shown on the existing map/poster.

In addition we request that the GGNRA continue providing facilities (trash cans) at the Sneath Lane Gate and the toilet at the top of the Ridge to receive dog wastes collected by dog walkers.

Many thanks, John Fournet, Community Liaison, SFPUC Natural Resources and Land Management Division  
650-652-3207

**Correspondence:** Seeing that I am a local Muir Beacher, with a dog, that can't imagine not being free to take our daily beach runs which would not have the same effect if on a leash. How does a dog run freely and swim in the ocean on a leash? I grew up looking forward to the myriad of dogs on Muir Beach. When I did not have a dog, I could always count on MB to fill my doggie needs. It is pure pleasure and joy to watch all shapes and sizes of dogs playing in the sand, running like the wind, jumping the waves. Please keep dogs being dogs on MB. It would be a great loss to the dogs, owners and non dog owners who benefit from seeing these creatures in their glory.  
I am happy to supply doggie poop bags, contribute financially in some way or what ever it takes to keep my pup and all other dogs leash free anytime on Muir Beach.

I think there are more dogs than people in our small community. Muir Beach is a great place, a perfect place, a beautiful place, a safe place to gather our dogs and meet old and new neighbors and friends while the dogs play and get good exercise. I enjoy the exercise I get with my dog too and I don't have to drive to do it. It would be a sin to see dogs banner or put on leashes...i just can't even imagine it so....

Sincerely,  
Denise Landucci

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition,

there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Melanie Barti

**Correspondence:** Actually as a dog owner myself I would feel more comfortable to have my dog on-leash. I have no idea what predatory animals would be out there who may consider making a snack of my Poms. Also as an individual who was personally attacked by an off-leash pit bull, I would strongly recommend providing more areas where I can walk my dog on-leash. Perhaps if there were more areas in the park where dogs were on-leash, it would make it easier to understanding the pet policy, rather than have all of these wishy washy rules. I understanding that the policy as it exists is receiving pressure from off-leash dog owners, but not all dog owners are responsible. Heck I'm getting sick of those who do not pick up after their pets and giving the rest of us a bad name. I also know that the ones who are mostly irresponsible are in the minority, but generally speak the loudest. I implore for more regulations for on-leash laws so I can enjoy the park with my pets responsibly.

The only other option would be to provide enclosed areas for dog owners, but I know that would never be considered a compromise, since it is not something the park service would ever entertain.

**Correspondence:**

Since 1978 I have been a daily user of the lands now know as Rancho Corral de Tierra. I have walked my dogs on the Rancho off-leash for 35 years without incident.

I have enjoyed the only means of interacting with my neighbors in the rural community of Montara. It has been our mutual love of our dogs.

We have built bridges into the Rancho; we have picked up trash, cleared trails and placed trash cans at key points on the Rancho. This is where the community meets, where we gather the news of our neighborhood.

I live at the corner of Edison and Tamarind. On any given Sunday I can count 30 to 40 of my neighbors with their dogs pass my house to cross a bridge we built to enter the Rancho. Many of us live in Montara for the benefits of the Rancho which we share. This area has been used by equestrians with dog's off-leash and by hikers with off-leash dogs for decades.

I am writing to urge GGNRA to continue off-leash dog waking in the lower portion of Rancho Corral de Tierra of Montara and El Granada as well as on-leash dog walking in Moss Beach section.

This is our community, our home. We are the eyes and ears of this section of the Rancho. We know these lands better than anyone.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Anita Yip

**Correspondence:** I've reviewed the GGNRA draft dog management plan, and in particular the 'Preferred Alternative',and I am quite unhappy. I am an environmentalist first, and a dog lover second, but I see absolutely no reason that the two should clash here, let alone to such an extent as to leave the GGNRA a complete loss for dog owners. I am aware there were supposedly changes made to it to make it more palatable to dog owners, but I suspect that they were mostly limited to spelling corrections because it is horrible.

---

Possibly the involved parties are not dog owners or dog lovers, or possibly they all are wealthy and have large yards and easy access to any park in the Bay Area, and all the time in the world to get there. (I know which I suspect to be the case.) But these changes would literally change the lives of thousands of dog owners in significant, perhaps even dramatic, ways. Many of them might even have to get rid of their dogs entirely. And if you don't care about that, you really do have no dog owners of any kind on your committees, and your members have entirely lost touch with any shreds of empathy you might once have possessed.

Even those who won't have to get rid of their dogs will lose a very valuable resource, one for which there is simply no other alternative anywhere in San Francisco. Nor, for those who live in the city and work long hours, or don't have a car, is there any credible replacement for it outside the city.

And to cause that kind of unhappiness to people, for the skimpiest of reasons, and on absolutely no evidence that it will significantly impact the environment? I can't help but wonder what the actual motivation for these changes are, because it is clearly not what is put forth in the official document. Do most of the decision-makers in this case simply hate dogs, and wish to see less of them? Is there some kind of back-office deal going on here, some kind of money to be made off of this prohibition? Are you simply irrationally terrified of a lawsuit? (Thus proving the old notion that humans are HORRIBLE at risk analysis... did you know that many schools spend an order of magnitude more on preventing lawsuits than they could reasonably be expected to ever be sued for without such preventative measures, even if they were in the top 5% most sued schools in the country?) Or possibly you are simply operating on the gut instinct of some people that this will do something helpful for the environment, without studying it? In which case need I remind you that 'gut instinct' environmentalism is no more reliable than 'gut instinct' risk analysis?

I wish I could understand. Because it looks like you guys do not give the faintest hint of a shit about what the public thinks. It is obvious you will go ahead with this despite all the public outcry. You will damage people's lives simply because you have the power to do so, and because nobody has the power to stop you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog

management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Cynthia Burgess

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any

compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I must implore you to cancel all drafted plans to change the off-leash dog parks to a leash required dog park. As more and more urban development takes place in our community, the only area where a dog can be a dog are at these off-leash dog parks. I do not pay taxes to the state in order for me not to enjoy a national park. It is already difficult to find hiking trails where dogs are allowed off-leash. I am especially bias towards fort funston as that is the closest and biggest dog park around. It is where I take my two dogs to enjoy the sun and other dogs. As a parent would fight for their right for their children to go to school, I fight for my right to have my dogs go to dog parks. It is unnecessary to spend this kind of money trying to enforce an leash required dog park. I understand that we are trying to preserve the natural state of the park, but no one tried to preserve its natural state when we were placing military defenses at both forts. It does not make sense and is a double standard.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. It is restricting dogs and their owners from something they have enjoyed for centuries. A man or woman with their best friend (their canine) should not be restricted from their pursuit of happiness: the ability to enjoy life with one another. Whether it be playing fetch or going on walks, it is ultimately necessary and just simply cruel to restrict pets and their owners from doing so. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

**Correspondence:** Dear Superintendent Dean,

I come from a state that has many off leash areas for dog walking (New Mexico) and I was so pleased to find off leash areas in San Francisco when I moved here. I regularly walk my dog in the GGNRA, and I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. My dog is very sweet but gets incredibly nervous when on a leash. Furthermore, it is important that she (and I) get enough exercise, which can be very difficult since I can work long hours. Fenced in areas never allow for enough exercise, for either me or my pup. Fort Funston and a few of the other off leash areas in San Mateo county are the only places I have found to serve my, and my pup's, needs.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Mantissa Johnston

A tax paying, national park loving, citizen of San Mateo county

**Correspondence:** As a regular volunteer who not only enjoys working nearly 200 hours a year restoring and enhancing natural areas of the Presidio, I'm also a frequent user of the park, I inline skate, hike, bike and often simply sit in peace and quiet, watching and listening to the beauty around me. All of the activities listed above, including the volunteering, have been disturbed, interrupted, and or threatened by unleashed domestic pets on countless occasions. While many poorly trained, leashed pets are just as bad, at least they are somewhat constrained.

Aside from harrasing humans and leashed dogs, I have observed uncontrolled pets chasing birds, running through and pooping in naturally sensitive areas, digging for gophers and voles in erosion vunerable trail banks, attacking ducks at El Polin, and herons, seagulls, and numerous shorebirds at Crissy field as well as on the beaches. I once saw a large dog get dangerously close to a great blue heron at Ft Scott, ending the magnificent bird's patient and graceful hunt for a meal.

No dog owner, lover, or walker can guarantee the good behavior of all off leash pets, let alone their own. I strongly support the dog management plan as proposed by the National Park Service. Please adopt it as is.

Andrew Morrison

**Correspondence:** Please reconsider the off-leash prohibition on our national parks and beaches. I have two service dogs which I take to Crissy Field and Stinson beach daily. These places give my dogs and myself pure bliss and fun. I suffer from fibromyalgia and anxiety. These areas allow my dogs to get the proper exercise they need to fulfill their happy yet short lives. I am a responsible dog owner. I pick up after them, make sure they don't chase the birds or disturb wildlife and fauna and that they respect other people and dogs. I moved back to California three years ago from Jackson Hole Wyoming. I loved it there but many of those parks did not allow dogs. I have found absolute solitude and happiness from the Golden Gate park system because the dogs are allowed in certain areas. I have discovered at lease 100 trails in Marin and SF counties that dogs can roam. This area is most definitely the most dog friendliest of all counties and states. That is something to be very proud. Please don't take away our off leash privileges. There will be way too many unhappy dogs and owners. If anything, set up a reform on off leash laws not take away it all together, please!

**Correspondence:** Dear Superintendent Dean,

---

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Cathleen Valentine

**Correspondence:** As senior resident of San Francisco who is also a devoted dog owner who uses the GGNRA parks several times a week to exercise my dog responsibly, I am insulted by this attempt to impose these restrictions on my freedom and enjoyment of these areas that have traditionally been used by thousands for this purpose. I would venture that 98% of the dog-accompanied visitors to these parks are at least as responsibly behaved as are any visitors to any parks. A much less drastic solution is needed to address any real problems the NRGGA is experience that avoids needlessly punishing the vast majority.

As a taxpayer, I am appalled by this study and its recommendation. The NPS and GGNRA administration have been pouring resources (my tax dollars) into pushing their patently inappropriate agenda for this urban recreation area and they have been doing this for well over 10 years. I only wish the same money had been spent on efforts improving the paved areas in Fort Funston, for just one example. Who knows, Fort Funston could have become more widely ADA accessible, although I do see many physically challenged people enjoying the paths along with their pets off-leash in spite of the poor state of repair the GGNRA maintains. I think that speaks to the appeal the current use that this resource offers everyone who chooses to avail themselves of the pleasures of sharing open spaces with well-behaved dogs.

As a taxpayer, I am also appalled to think that in over two years, all the proposal writing team could manage to provide in this "updated copy", was several more pounds of pages pushing their last recommendation, often with irrelevant or imprecise detail, while failing to document or even to acknowledge appropriately the many opposing points of view voiced since the last go around. What are we paying you guys for? You need to think a little more about what the "S" in NPS stands for and a little less on having every property you manage fit in the same tidy little rule box when you set the management goals for anywhere and, most especially, for the GGNRA.

As a consulting and business professional who has developed many proposals and project justifications, I am appalled by the very approach taken to creating the proposal. Starting with narrowness of the focus of and options considered all the way through to the shallowness of research supporting either the motivation for the "project" or the efficacy of the proposed changes, how can one take this document seriously? I would be embarrassed to present such a document to any client or executive management team; I expect that I would not have been given a second chance.

Consider, for example, the motivations as stated in the document for needing to take action. Basically it says the very differences for which GGNRA was formed cant really work anymore if it doesn't fit in the mold for NPS rules in general. It also states that sometimes problems occur in these GGNRA areas.

As to the first motivation, why not acknowledge the existing anomaly in the NPS governing rules and be done with that motivating issue?

In terms of the incidents that sometimes occur, the sparse documentation provided vis- -vis the incidents reports in the document imply less than one dog-related incident per 20,000 to 30,000 visits. Not bad. People dont behave that well in shopping malls. As to the environmental issues, the case for any serious consequences has not been made. Concessions in use by dog walkers for environmental considerations have already been made and, I am sure more would be made with compelling education. The time spent counting occasional bird chasing by certain dogs would be better spent making attractive national park quality signs that could educate visitors on why they should discourage such activities? Sadly many of our visitors remain undereducated in this regard and the NPS is doing virtually nothing about it other than pushing to ban responsible dog access drastically. Does this really serve NPS goals?

As to the stated purpose of the GGNRA, I think it fine as is written. The problem with the proposal,

which starts with a "solution" and then strives to justify a need (which it fails to do) is that the proposal also fails to recognize that national park experience is only a small part of that mission statement. More time needs to be spent rereading the second part of the statement and incorporating the servicing of those objectives in any plan.

In the document's stated objectives, I see much more of an objective to push consistent and narrow policies and much less of an objective to provide service in the form of access to local residents as they have chosen to use it traditionally. Is that service to the GGNRA users by the NPS? No one disputes how dog use has grown at Fort Funston, Ocean Beach, Crissy Field and other places over the past decade. This speaks exactly to the popularity of its current use and to the necessity our residents have for this traditional use. The objectives, as stated, sound more representative of an inward looking bureaucracy than like a customer facing service organization. Even as the document examines the various properties under GGNRA management and the alternatives, it is a complete cookie cutter approach of presenting the same options and same ultimate restrictions across the board. Even within the GGNRA, these are vastly different parcels in each way. Meet the dog people enthusiastically by renaming the big three to be National Dog Parks, and you may find less resistance in areas where your case for change may be more compelling. Sadly, your objectives don't even begin to show any desire to meet in the middle. Perhaps, this same inflexibility is reflected by those opposing the plan. Have you considered leading toward compromise by example?

I have only begun to address my concerns with the document but I don't think it really warrants such an effort. What is needed is a complete reexamination of why the GGNRA was formed, what service it provides to its current users, and what can be done to improve their experience while addressing some of the inherent problems that you perceive. Yelling Stop may be the easiest solution, but it is neither the best nor the most enforceable.

I suggest shelving the current document in its entirety rather than spending a few more years and who knows how many dollars trying to revise a fatally flawed premise and document. Start by revisiting the origins of the GGNRA and the 1979 use documents and then try to move forward on accomplishing conservation and administrative objectives appropriate to the GGNRA charter using baby steps. Recognize the lands that you manage are each unique in their geography, use, and importance for conservationist protections and stop beating a dead horse in the name of uniform policies. Improve education of your visitors. Sell them on the worthiness of those goals dearest to you and your visitors will try to help you accomplish them. Yell Stop without respecting current use and your visitors will fight you forever. Please be reasonable and try to lead by example.

**Correspondence Type:** Web Form  
**Correspondence:** To Whom It May Concern-

Regarding the proposed GGNRA ban on off-leash areas for dogs, I am strongly against this ban. Furthermore, I consider this issue a relatively high priority for my own family since we regularly take advantage of these areas with our dogs, and my voting preferences will reflect this.

The bay area is world-renowned for the many things it has to offer, not least among which are the many natural areas set aside for preservation and shared use. Many people frequently make use of these areas. Also, nearly 50% of homes in San Francisco have dogs, and the areas set aside for off-leash use are an important part of what makes this possible. In taking this away you would effectively be reducing the value of these areas to a large percentage of the population. If you want to maintain a world-class standard of living, you must attempt to provide world-class resources to the people who live there. This includes providing a variety of opportunities for dog owners to make use of natural areas.

As any dog owner will tell you, there are many protected areas where dogs must remain leashed or are banned altogether. In fact it is already quite difficult to find nearby opportunities for off-leash walking in most places. Further reduction of these areas will cause suffering for both dog owners and dogs and are unnecessary. Raising healthy dogs requires giving them opportunities to roam and explore in a natural fashion.

Please do not let short-sighted politics erode the value of our beautiful bay area. Please continue to allow dog owners the opportunity to have these areas where they can let their pets off leash.

Thank you,  
/Stefan Amshey

**Correspondence:** I live in San Francisco (the northern section of Western Addition) and I am a proud and frequent visitor and supporter of the GGNRA. I am providing a view that takes into account both, my visits without my dog (only with my family) and also now with our young dog that responds very well to voice commands. I am quite disappointed to learn of the restrictive nature of the new dog management plan being considered by the GGNRA that restricts off-leash areas, and strongly wish to voice my opposition to this preferred alternative plan described in the GGNRA's new draft dog management plan.

This plan does not take into account the numerous concerns of the San Francisco public who have submitted their feedback and will also prevent me from taking part in the various benefits that the GGNRA offers and is intended to provide. I also oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel restrictive, and visitors using them will feel unwelcome. Like some current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing problems for other dogs under voice command, and for others in general.

The most recent data (2012-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have been very few negative incidents involving dogs as

compared to the many more reported negative incidents involving people. This data therefore does not support the request or the need for a change as proposed in the draft dog management plan.

Crissy Field was created, to also create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. Congressional reports referred to dog walking specifically as one of the uses for the space when the GGNRA was created. This proposed reduction in off leash recreation area at Crissy Field is a change of course without much basis. Furthermore the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes little sense and I would urge you to reconsider.

The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I used to also frequent my city parks with my dog under voice command, less now, because they are too crowded, my dog feels more tense, there's not enough room to exercise, and they cause more stress to both me and my dog, rather than relaxation.

Instead of having a bold inclusive vision plan for dog walking, this management plan allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). I also notice that, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future. I urge the GGNRA to reconsider implementing this restrictive draft dog management plan and instead take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come. Thank you for your consideration

Sincerely,  
Sanj Madan

<b>Correspondence:</b>	Dear National Park Service,				

I strongly oppose the dog management plan for many reasons. These off-leash areas are critical for the health and welfare of San Francisco dogs and citizens. As a taxpaying citizen of Cow Hollow who chose to live to San Francisco in part due to its dog-friendliness, I feel that the proposed legislation is damaging and unfair, and will be an expensive endeavor that the residents of the Bay Area DO NOT WANT and SHOULD NOT HAVE to pay for. A few facts to support my belief that the proposed changes are entirely unnecessary:

1. I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not

support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

2. When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Again, for these and a multitude of other reasons, this legislation is a waste of time & money, and will prevent dogs from getting the essential exercise and interaction needed for them to continue to live happily in the San Francisco area. As a taxpayer, it is unacceptable that these essential areas that are enjoyed by the masses could be negatively impacted by the complaints of a few. The complaints are unwarranted and it would be unfair to penalize hundreds of thousands of people because of the personal biases of a few.

Thank you,  
Anne Schnobrich

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for all too few years - since my dog is now only 2 years old. I had hoped to have been able to walk him on-leash and play fetch with him in appropriate areas of Golden Gate Park, Fort Funston, Crissy Field, and Mori Point for years to come.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

There are lots of dog owners in the Bay Area who count on these locations to safely exercise their dogs (and themselves.) These places are where we have adventures with our dogs, meet new friends (both canine and human) and enjoy the bond of sharing nature together. If the only places left for us are over-crowded dog parks, so much of the joy of dog ownership will be taken from both dog and owner, because both dogs and humans need exercise and the joy of variety of experience for health and happiness. Please keep to your original purpose of taking care of those of who want and need recreation with our "best friends."

Sincerely,

---

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Alison Zampino

**Correspondence:** I'm concerned about the GGNRA plan to severely limit where dogs, and their people, can exercise within the park. The title of the park itself states that it is a recreation area, and I don't understand why a park that contains major highways and dozens, if not hundreds of buildings, is considered too pristine to accommodate dogs. San Francisco donated land to the park with the understanding that it would remain a recreational area. If the restrictive GGNRA dog management rules are enacted, San Francisco's parks will be flooded with all the people and dogs that currently use GGNRA areas. Also, there are only a limited number of rangers available whose time could be better spent on more serious matters. This dog management plan is going to put the park in conflict with a significant number of people who they are supposed to be serving, resulting in bad publicity.

I am totally against your dog management plan. You are heading in the wrong direction. More areas of the park should be open to dogs off leash - not fewer. Walking in nature with an unleashed dog at your side is one of the most natural activities that humans can do. We should be encouraging this activity - not putting ever more restrictions on it.

Of course there are some unruly humans with uncontrollable and even dangerous dogs. But laws already exist to deal with these idiots and their stupid dogs. Why should a few of these morons ruin a beautiful natural activity for the rest of us?

The vast majority of GGNRA users and their dogs are well behaved. In 9 years of using the park (usually the Rodeo area) on a weekly basis, I have NEVER had a bad experience with any dog or human.

Let's face it, the NPS is full of people that hate dogs. Many of them hate humans too (although someone at GGNRA sure loves the Ghilotti Brothers). It seems that the Park Service is all about law enforcement these days.

Please do not criminalize one of the most basic human instincts - to walk in nature with our canine friends (unleashed).

Thank you.

Joseph Hughes

<b>Correspondence:</b>	Hello,				

---

I would like to voice my strong support of the proposals to limit the off-leash areas for dogs in the GGNRA. I am an animal lover, however, I feel the area is completely overrun by dogs and is negatively impacting the area. I am an avid runner and have had several incidents with dogs including being chased, scratched, and nearly bitten on three different occasions. This has happened along crissy field, baker beach, batteries to bluffs, and throughout the presidio. The reactions from these dog owners has varied from apologetic, to laughing, to outright hostile and confrontational. The last being an incident involving a young man with a large male pit bull off- leash which I reported to the park police. The situation has become so bad that I have resorted to carrying dog spray while running. Although these incidents have

been rare, they have the capability of resulting in grave bodily harm or even death.

This land is for the use and enjoyment of people first and foremost and there is no reason that dog owners cannot leash their animals for the protection and respect of others. This is a major public safety issue as there are several incidents throughout the year. I strongly support the entire area being leash only, with a few specific fenced areas where dogs can run off leash.

Thank you for the time,

Kavan Manson

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely, Elly Gibbs

**Correspondence:** Please do not take away the biggest off-leash dog walking area near to my home. The few remaining off-leash parks are going to be severely impacted by the large dogs that need space to run on a daily basis. The Golden Gate National Recreation Area covers a lot of territory across several

counties. It seems unfair and arbitrary to prevent dog owners from walking their dogs without a leash on so much public land.

**Correspondence:** My wife is a physician at Stanford medical center and has limited time off from work. Taking our dog to Fort Funston is our main weekend activity when she is able to, and we strongly oppose any plan to reduce off-leash access, or access in general, for dogs in areas in and around SF. The off-leash dogs at Fort Funston make it a special place that we share with our friends and family and it is central part of our recreational activities in the bay area.

There is no justification for major changes proposed by the dog management plan. Adding fences will just make the parks feel like the tiny terrible dog parks we experienced while living in New York City and are a completely different experience than what we are able to enjoy now. We moved to the bay area to be able to enjoy the outdoors and go out of our way to do so with our pet. We oppose the monitoring-based strategy in the dog management plan. Just because some people are not complying with leash restrictions does not mean the GGNRA should be able to change policy and ruin it for everyone.

Thank you for your consideration.

**Correspondence:** GGNRA Dog Management Plan

This is certainly an exhaustive (maybe exhausting!) study and I congratulate you on your efforts. My dogs and I are only affected by a small portion of it: Rodeo Beach and surrounding trails, and on occasion Oakwood Valley. So I'll limit my comments to those areas.

I'm not sure of the distinction between off-leash under voice control and ROLA. They sound very similar, so I'll treat them as such. The present red status of Rodeo Beach (6-A) is fine with me and fellow dog owners. Your preference (6-F), changing the red area to yellow, seems okay, although the yellow ends before South Rodeo Beach. Does colorless mean no designation, so off-leash is permissible? Similarly, the cliff trail to the north of Rodeo Beach that I walk with the dogs every morning - usually entirely on our own - has no color or text designation. I hope it remains that way.

I can't see any reason to change the Old Bunker Fire Road from off-leash to leash required. It is closed to traffic, except for bicycles, and they are a rarity, particularly at the time we hike. So I prefer 7-A or even better 7-B or 7-D, to your preferred 7-F. As far as I know, it ain't broke so why fix it? Similarly I don't understand why the Batteries Loop Trail is designated on-leash, considering how few people use it, at least in the morning when we climb up from the beach to wander round the loop.

On to Oakwood Valley. We walked it over the weekend, meeting a number of friendly people with off-leash dogs. Your preferred Map 4-F has a ROLA color bar under Alternative F, but there is no ROLA marked on the map. Just an On Leash on the Fire Road section to the juncture with the Oakwood Valley Trail, which has no color-coded designation. I don't understand why the wider fire road should not be a ROLA. I've walked there for many years and people seem to get along just fine with off leash dogs. So my preference here would be 4-E.

In closing, I would like to add that while walking the dogs on Rodeo Beach and the trails I also pick up garbage. Probably tons of it over the past decade, including items that other dog owners have overlooked. It's my way of thanking nature for its beauty, and making life more pleasant for visitors and wildlife. We couldn't be more fortunate.

Cheers!

Martin Russell  
Mill Valley

<b>Correspondence:</b>	Dear GGNRA,				

I request that you do not go forward with these new dog leash laws.

I am a gay male with no children. My dogs are my children and my immediate family. My family and I have spent countless hours at Fort Funston and Chrissy Field enjoying the outdoors and exercise that off leash activities allow. This update to your leash laws will without a doubt reduce my quality of life.

I do not get a federal tax credit for my dogs as people with children do. I do pay additional property taxes for the local schools that I send no children to. This is an insult from my government to even be considering this update to the laws when my tax monies are being used, yet do not address my needs.

Let me remind you that the GGNRA is not a National Park, but a recreation area. Therefore, the correct thing for you to do is to take the local citizens recreational needs into greater consideration than the other priorities that the environmental groups are touting.

I am a member of the Sierra Club and have environmental concerns. I would support limiting access in certain areas to allow endangered species to flourish if that was the case. But to close down 90% of the current space is an over-reach of the needs of wildlife over the needs of citizens.

Please consider my my family when making your decisions.

Concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

<b>Correspondence:</b>	To Superintendant Dean,				

Please keep Ft. Funston and off leash experience for our dogs and people. We need this area and have always relied on its beauty and openness for an amazing day out with our dogs and emotional well being. We have all worked together as owners and handlers to make Ft. Funston an ALL INCLUSIVE place to go!

Dogs have shown to lower blood pressure and bring depressed persons joy just by being in their company....even if someone does not own a dog they get joy out of watching them play and watching them with their owners.

Taking Ft. Funston away from us as dog owners would mean squeezing hundreds more dogs into city parks which has already shown to create stress for the dogs and owners resulting in more fights between dogs AND owners because of confined space and lack of room to run and be free.

I don't want to have to tell my dogs that they no longer can go to Ft. Funston and run because it has been part of their daily routine now for 12 and 14 years!

PLEASE KEEP FUNSTON OPEN TO DOGS OFF LEASH!

Thank you!

Steve Baechtle  
San Francisco resident for 26 years

**Correspondence:** i have written detailed comments related to ggnra dog policy multiple times in the past and have attended numerous informational meetings, etc. you can cross reference those carefully considered and written documents for my point of view on off leash dog policy within the ggnra. i am finally profoundly disappointed in the ggnra leadership team. there are numerous successful models available for developing respectful consensus between stakeholders. san francisco dep't of public works facilitated such a process in the run up to the refurbishment of sigmund stern grove. after a series of public meetings which spanned approximately two years, a respectful plan was developed and all stakeholders signed off. over 10 years later, that plan continues to be adhered to with excellent, measurable results. the lake has been restored to health as witnessed by the presence of year round and migratory birds and other wildlife, the day camp functions in peaceful co-existence and interaction with those enjoying the off leash dog areas. the theater area continues to boast a healthy, ecologically sound infrastructure. native plant advocates (including n.a.p.), children's advocates (inc. coleman's), wildlife advocates (inc. sierra club and audobon), dog advocates (inc. sf dog and sigmund stern dog) and the citizens of s.f. have successfully cooperated in creating and maintaining a valuable urban outdoor resource. off leash dogs are allowed in significant portions, with linking off leash trails, of sigmund stern grove.

if san francisco, a city which is known for its contentious, passionate, activist citizenry can succeed in respectfully adapting and nurturing collaborative change the ggnra leadership should be able to do the same. i am appalled at the ongoing lack of respect shown for all stakeholders by an apparently incompetent leadership team. i am using trust as a measure of competency. it would seem that no stakeholder group has evolved trust in the ggnra leadership during the prolonged planning process. i respectfully suggest that a new leadership team be assigned to this project. that team needs to confer with local leaders, who are the experts in evolving successful collaboration between stakeholders, to learn what processes can be successfully applied to the planning process for our beautiful national recreation area. i would suggest that both phil ginsberg, director of sf recreation and park dep't, and mohammed nuru, director of sf dep't of public works, may provide invaluable insights to, &/or training for, the ggnra leadership team.

in the absence of respectful collaboration regarding the future of the ggnra, i will actively advocate for the removal of san francisco lands from the ggnra and for significant changes in oversight of the administrative processes and civil servants in the national parks service. while i am a frequent visitor to our national parks, i am sadly accepting the fact that, based on our experience with ggnra leadership, the national park service does not possess the appropriate credentials or personnel for managing urban recreation areas.

**Correspondence:** having lived on the San Mateo County coastside for for 39 years, I have spent many wonderful hours walking with dogs on the slopes of Montara Mtn.

Our area is now within the boundaries of the Corral de Tierra section of GGNRA, and we are told that soon dogs will be banned.

GGNRA is a recreation area, not a highly sensitive pristine wilderness or national park. It is adjacent to residential and commercial property in a very popular tourist area. Recreation is the opporative word here.

I am a responsible dog person. I clean up after him and do not let him bother people, other dogs, or wildlife. As an elderly woman with arthritis and cancer, I feel more secure having my German Shepherd with me when I walk.

I have yet to hear a good reason why dogs will be banned from most or all of GGNRA.

**Correspondence:** I read about this in the Pacific Sun. It sounded like the dog-owners would not be able to walk their dogs if Plan F were approved. But that was hysteria. Looking at the maps, I gather that all the dog-friendly places are preserved. The major differences among the plans is that some of them allow for "voice control," while others limit the dog access to on-leash. Although I understand that some people would like to have their dogs run on the beach, I personally would be happy if my dog could go with me at all. We went down to Tennessee Beach the other day and couldn't bring our dog, because dogs are prohibited there - but horses are okay! Please explain that from an environmental or any point of view. Oddly, midway down the trail, there was a section where dogs were allowed. What are you supposed to do, drop your dog down by helicopter???

My idea is, allow dogs everywhere if they're on-leash. It's simple and doesn't require people to read maps to know where they can bring their dog. If they want their dogs to run free, take them to a dog park.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** I am fully supportive of proposed language to limit or abolish allowing off leash dogs.

I have been negatively impacted by off leash dogs almost every time I go to GGNRA beaches and parks. Areas are fouled by dog waste - - regardless of signs and bags being provided. People do not take responsibility to manage their pet or follow existing leash restrictions. I love dogs and appreciate the desire of owners to have an off leash experience - - however that experience should not be at the detriment of others or diminish my rights to safely enjoy the area.

There are a lot of dog owners that feel off leash use is a right. It is not. It is a privilege. Resources spent managing dogs and related waste could be better spent on other costs within GGNRA.

Thank you.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Mark Khoury

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. Additionally, I feel that by virtue of the fact that I along with other Marin and San Francisco residents pay taxes, we should be able to use the land for which we are paying and supporting.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.				

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred

alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Paula Cunningham , CTC 4084894194 (SF resident )

**Correspondence:** I would like to voice my support of restrictions on off leash dogs in the GGNRA. Habitat degradation, the stressing of wild life, the trampling of restored areas and numerous incidents of having off leash dogs jumping on or barking at me has curtailed my enjoyment of this national park. There are already areas where off leash dogs are banned but dog owners ignore the rules and there seems to be no enforcement of them. I would urge that enforcement of off leash dog regulations be enforced. Off leash areas should be clearly demarcated with signage and natural or artificial barriers. I also feel that there should be areas where there are no dogs, leashed or unleashed.

The dog population in San Francisco has dramatically increased in the last decade and dogs are everywhere. As the population in the Bay Area increases, natural areas will become more valuable and to avoid them from becoming de facto dog parks will require strict enforcement of the current laws.

Please keep the GGNRA a park for everyone and not just dogs and their owners.

Sincerely,

Rob Cullison

**Correspondence:** Dear Superintendent Frank Dean,

I am writing today to officially oppose the National Park Services preferred alternative for their Dog Management Plan to restrict on and off leash activity in the Golden Gate National RECREATION Area.

I support Alternative A - the No Action alternative.

As a Muir Beach resident, I take my 4-year-old rescue dog Wanda to the beach a few times a week. It truly is a high point of my day - and certainly a high point for Wanda. I often see other neighbors there with their dogs and it is a chance to not only get exercise for my dog, and myself but a chance to socialize with neighbors as well. My husband moved to Muir Beach as a baby and my children are third generation Muir Beachers and have always enjoyed the great character of Muir Beach with dogs. We must keep Muir Beach open to dogs off leash. Furthermore, to suggest that people be able to take their dogs to an area of Muir Beach called Little Beach with absolutely no parking, no trash cans or restrooms, would leave a giant mess for the residents.

Right now dogs are only allowed on 1% o the GGNRA land. To reduce what remaining access we now have by 90% wuld be awful. So far, I have not seen any scientific evidence produced by the NPS supporting the fact that dogs are detrimental to the wildlife in the area. There is no basis for such drastic restrictions. This is not a National Park - it is a National RECREATION Area.

Please keep Muir Beach and other current dog-friendly areas of the GGNRA unchanged.

**Correspondence:** To whom it may concern,

This sweeping plan indicates that all the NPS is interested in is to bring this park in line with all the other national parks. It is bureaucracy gone mad!

Congress created the GGNRA in 1972 to: "to provide public access along the waterfront and to expand the maximum extent possible the outdoor recreation opportunities available to the region." The proposed dog plan appears to be in direct opposition to that mandate.

Please consider:

1. This park is in a city, not a wilderness. It should be treated differently from other parks.

---

2. This park is mostly used by LOCALS who live here and cherish the open space in their city, not tourists.
3. Dog owners are the ones who use the beaches most. In all weathers and on all days. Other beach users are only there on warm days. (Rare in San Francisco).
4. Dog owners report all sorts of problems to the NPS authorities, dead and injured animals, wash outs, leaks, crimes. Dog owners are the only people I have ever seen who pick up random trash on the beach and dispose of it. Not the runners, not the sunbathers, not the mothers with kids, not the kids drinking beer, not the fishermen.
5. The beaches are empty most of the time, even on the weekends when the weather is cool. What is the problem here???
6. All of the "problems" cited in your ridiculously long report can be addressed by signage( i.e. educating the dog owners) and fencing (a lot cheaper than paying a park employee to police this).
7. If it is birds you are worried about fencing and signage are the answer. The complaints from the Audubon Society and the Park Service that dogs are somehow a threat to the coastal areas is ridiculous and vastly overblown. Any instances of dogs harming birds are very rare and unusual, this can be addressed by proper dog training. As for disturbing the nesting sights this can be addressed through education and signage. The FERREL CATS are the problem here, please spend your time and MY money on addressing this much more significant problem.
8. If it is non dog owners using the beach you are worried about then ask the people with dogs not to come on to a crowded beach on a hot weekend.....most will comply. SIGNAGE!
9. If there are too many dogs at once then reduce the number of dogs one person can bring. The professional dog walkers are allowing many families/individuals to have dogs even though they are not home to be with them. Make it very expensive for the dog walkers to operate their businesses, at the moment they operate for free. It will reduce the number of professional dog walkers and dog owners and therefore dogs!
10. People who walk dogs are in better physical shape than other people (new study out of England). They are less of an expense on our health care system. We should be encouraging this!
11. The NPS does not appear to be interested in making dog owners responsible for the behavior of their dogs and insisting that off leash dogs are well trained. More legislation against off leash dogs is not the answer.  
Put up signs asking dog owners to always be respectful of the other users of the beach and not allow their dogs into the areas where the shore birds nest....an education campaign. Even a license system for owners to have their dogs off leash where they have to prove that the dog is properly trained (rather like a drivers license) might be a solution.
12. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the interest of anyone who cares about open space to work together - with the people who use that open space most often - dog owners. **DO NOT MAKE AN ENEMY OUT OF YOUR GREATEST ALLY.**

Surely PERSONAL RESPONSIBILITY with freedom is better for our society than yet more restrictions

and legislation!

Dogs provide so much love and support to humans in so many ways; they need places to run free. And remember A TIRED DOG IS A WELL BEHAVED DOG.

Yours truly,

Vivien, who walks her well trained dog on Baker beach every day and is most often there with only a handful of fishermen and a few other dog owners!

**Correspondence:** I am concerned because the most recent data (2013-2013) released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

I also feel that the concerns of those who walk with and exercise dogs are being brushed over, because it's just easier to take this away and slap "No Dogs" signs everywhere than to put real thought and research into this, and to understand just what kind of an impact it will have on the many good people of San Francisco and the surrounding areas who want to enjoy the beauty of the area with their dogs.

Thank you,

Carla Kozak  
San Francisco

**Correspondence:** The off-leash areas are a valuable resource for those of us with canine companions, and we all endeavor to maintain a respectful relationship with other park users. Animals certainly also deserve consideration in use of public spaces; conservation efforts are a clear global good, and so is maintaining awareness that even 'domestic' creatures have certain needs to maintain emotional and physical health and well being. The goal should be for safe and respectful co-use, rather than simply dismissing the needs of our beloved companions.

**Correspondence:** To whom it may concern:

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach, Oakwood Valley Trail, the Rodeo Beach Loop and the Coastal Trails. Two years ago I was diagnosed with stage 3 breast cancer. To this day, the only exercise I can do is walking which I only do with my two dogs. I cannot take them on leash because I cannot have them pull me and risk complications. Me, my entire family and our dogs would be significantly limited in our exercise, exposure to wilderness, and our outdoor family time if we are not able to take our dogs to these areas. I feel VERY strongly that this legislature cannot take place.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. Last summer when I was looking for trails to take both my children and dogs to get the kids away from any screen and exposed to trees, birds, landscape and overall nature, I was astounded at how limited the possibilities are. It was very difficult to find a trail where we could explore areas we had never been before.

We live in an area where the outdoors is essential and a large part of why we have chosen to live here. IN addition, Marin families are families with dogs who bring so much delight and love into the family. The dogs are happiest when they can walk outdoors with their owners and be off leash. I strongly urge you to keep the remaining dog friendly off leash trails available for our use. Not doing so will greatly families and dogs to less healthy choices.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

With Respect and Hope,  
Lori Fineman

<b>Correspondence:</b>	Dear Superintendent Dean,				

---

I am writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. There are virtually no open spaces left for individuals and families with dogs to enjoy off slash activities. Recently, my husband died after a long illness. Being able to take him to open spaces with our dog and watching our dog chase a tennis ball unencumbered by a leash was a joy that made his last year easier. Rarely rarely have we had problems with other dogs or their owners. We have seen more problems with poor drivers than dog owners in our lifetime here in the San Francisco area.

Thank you for your attention to this matter

Maria Burrington

**Correspondence:** We take our dogs to Fort Funston at least twice a month and love the fact that they can run around 'free' without their leash. It is one of the few, beautiful places in the Bay Area in which we can do this!

Please do not pass legislation that would take this freedom away.

Best,  
Leslie Goldstein

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Elaina

<b>Correspondence:</b>	please do not change the leash laws at Crissy Field. We very much enjoy it as one of the few places in the City/County of San Francisco where we can RFID the family and let her run free under the understanding that we are responsible for watching her and picking up after her. I have not experienced the off leash dogs as interfering with non-dog owning patrons of the park in any significant way. thank you for the opportunity to leave comments on this before any decision is finalized.

**Correspondence:** Dear Superintendent Dean,

I wish to formally and firmly oppose the new GGNRA draft dog management plan. I am a frequent user of local park areas with my dog, who is always well behaved, and who I always clean up after. These outdoor recreational areas are what makes life in the city possible for my family and my dog, and it would be severely restrict our ability to happily and healthily live in this city we call home.

Sincerely,  
William Geddes

**Correspondence:** I'm commenting on proposed regulations for GGNRA ONLY in Rancho Corral de Tierra, in which I have extensive hiking experience. This is based on the Draft Dog Management Plan/ Supplemental Environmental Impact Statement published online. I can say with significant experience that your proposed alternatives badly miss addressing the real needs of the Rancho area. Here are the details:

1. The dog walking plan is missing and overlooking the erosion and public dangers caused by other factors, which are individually and collectively more stressful to the environment than dog walking. Those are:

a. Mountain bikes:

The vast majority of erosion on the Rancho and Montara mountain is caused by mountain bikes going off-trail. That is patently obvious to anyone who hikes these hills. Also, my personal safety has been threatened numerous times by speeding mountain bikers, but never by a dog. In a recent event, a mountain biker came down a ridge at about 50 mph - and fortunately yelled in time for me to jump out of the way.

b. Horses:

The major source of excrement on these trails is from horses, not dogs. Dog owners seem to clean up regularly, but I've never seen a horse rider do so. Note that dogs, but not horses, are native species in this area. Horse tracks also cause far more disruption of vegetation than dogs.

c. Cars and motorcycles: Both types of vehicles have climbed to the top of the eucalyptus ridge southwest of Montara Mtn. Extensive tire-based erosion is visible in the wooded gullies east of this ridge.

Motorcycles occasionally continue down the ridge to the old San Pedro road.

d. Mountain lions: My dog has found enough parts of adult deer to make it clear that a large predator forages in this area. The S.F. Chronicle has reported mountain lion sightings in this area, and the local paper again on Nov. 13th. <http://halfmoonbay.patch.com/groups/breaking-news/p/mountain-lion-spotted-on-montara-mountain-trail>

e. Human safety:

In the Rancho area, the above four risk factors affect humans more than dogs do. In fact, I do not believe it is safe to hike the hills without a dog to warn off large predators.

2. The Plan is missing giving appropriate weight to the benefits of dog walking on humans. Those benefits are stated in the report, but nowhere is there a calculation of the benefit thereof in weighing the four alternatives.

3. There are no dog-related smells at the Rancho site in my experience. The weather is cool. Horse manure can be smelled, especially in concentrations near the horse ranch.

---

4. Voice control of dogs is a sensible regulation, and should be authorized at Rancho.
5. If there are valuable, sensitive areas within Rancho, then mark them off-limits and apply those restrictions to mountain bikers, horses, and humans, not just dogs.
6. Creating a narrow off-leash park for dogs is an invitation for intensive use that will concentrate erosion and dog smells - thus creating the problem that is cited for elimination elsewhere. The NPS is well aware that spreading use over a larger land area where vegetation can recover if damaged is a lower impact strategy. Similarly, restricting dog walking to concentrated areas will intensify any impacts thereto.
7. If there is evidence at Rancho that dogs are creating erosion or environmental damage, please refer me to those reports - because I do not see dog-related impacts.
8. Take a poll or vote of local residents on whether your proposed dog restrictions are merited. Posting signs and websites is not sufficient outreach for a change this impactful on the lives and health benefits to local residents. I submit the local users of Rancho will deny the need for dog restrictions - but might heartily endorse restrictions on mountain bikes,

**CONCLUSION:**

Something has motivated the NPS to narrowly focus on the dog issue at Rancho, while ignoring the far more damaging safety and environmental impacts of mountain bikes, horses, predators, and vehicles. Further, with these institutional blinders on, the agency has not sufficiently weighed the benefits of unencumbered dog walking to local citizens. Address the real problems, please. You're spending our tax dollars.

<b>Correspondence:</b>	As well as wildlife and natural habitat there are other things to be preserved in the Ranch Corral de Tierra acquisition: among them recreational opportunity and civic responsibility.				

Recreation: In the dog management plan the issue of off leash is presented as "off leash dog walking". Off leash dog hiking better represents the issue from the viewpoint of many off leash proponents. Hiking is a form of human recreation; a hike is generally recognized as taking place over a distance on unpaved trails and through varied terrain. That's what I do in the Rancho. Hiking with one's dog off leash is an excellent form of recreation with the great benefit to the human. Walking the dog connotes a benefit for the dog. Hiking is a human activity I value. Hiking with my dog adds to my pleasure as well as my sense of safety. I urge GGNRA to preserve this form of recreation within the newly acquired Rancho Corral de Tierra property in San Mateo.

Civic Duty: There are long established off leash areas bordering Montara, Moss Beach, and El Granada. The area in Montara is currently well maintained by a neighborhood volunteer group. Civic participation and stewardship is well worth preserving. I hike there frequently with my dog and maintain one of the waste collection cans. I meet other hikers with off leash dogs, hikers on leash dogs, bicyclists, some with off leash dogs and hikers without dogs. Off leash hikers are attentive and control their dogs when approaching others. The trails are clean. Montara's community effort benefits the GGNRA. My refuse can contains dog waste, but also contains beverage cans, food wrappers and even a discarded tee shirt.

Wildlife: I suspect wildlife in this region also benefits from off leash hiking areas. It should be recognized that GGNRA is part of a very large contiguous area of protected wild lands in San Mateo County. Abundant wildlife roams free here including mountain lions, coyotes, bobcats, and other predators. Human activity including responsible off leash dog hiking create a buffer between wild lands

and the small discontinuous but densely populated communities adjacent to Rancho Corral de Tierra. When wildlife venture into town it seldom works out for wildlife. A buffer protects wildlife.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Teri Miller

**Correspondence:** I am both a bird lover and a dog person. I am writing to say that after thinking about this from both sides, I fully support the plans for limiting access to important natural areas to dogs off leash. When we think about how little open space in San Francisco actually offers shelter to the few wild species of bird, plant and animal that call this home, I am happy to put my dog on a leash. There are enough options for off leash dog play in the new plan. I wish that my fellow dog lovers would think about the big picture and value the natural areas for what they are, truly natural and rare.

**Correspondence:** Dear National Park Service:  
Please consider adopting stronger, more effective dog management policies in the Golden Gate National Recreation Area. We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs. Off-leash areas should be marked off with fencing or natural borders such as bushes. Park officials need to enforce the dog rules more vigorously. The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

Thank you,  
Anne

**Correspondence:** As a senior diagnosed with osteoporosis, I am constantly fearful of being knocked over by dogs running at large in areas where they are supposed to be leashed or are not allowed at all. So many of my favorite beaches and parklands are now areas I am forced to avoid due to the impacts of dogs off-leash. I fully understand why people like to run their dogs off-leash but it should not be at the expense of other parkland and beach users.

The only solution is to have fenced dog parks where no other activity is allowed. Where there is the expectation of other users, then dogs should be leashed. Given that the leash laws are routinely ignored by so many dog owners and enforcement is unable to secure compliance, separate places for dogs, well outside of sensitive habitat areas, is the only reasonable solution.

**Correspondence:** Two years ago, I wrote you about the General Management Plan. Looking at the new Dog Management Plan/Supplemental EIS, I feel that the same points apply:

â€ I very much appreciate the access to the parks you provide, the access to California's beautiful coast, and the joy our family can have at Funston, Lands End, Ocean Beach, and Crissy Field.

â€ At the same time, I wonder if the GGNRA sees it as part of its mission to support urban parks. Both plans seem to me more designed to keep people out of the GGNRA - - to make them more like native plant musuems - - than to serve the recreational needs of the many bay area residents.

San Francisco has something like 340,000 households out of which 110,000 to 160,000 have dogs. Dogs need exercise every day and urban residents with busy schedules may not have more than one opportunity to exercise outside. If that time is with a dog - - under your plan - - it will be less likely to be in the GGNRA By reducing access to dogs, you are reducing access to over one-third of San Francisco households. Is that your intention? I firmly believe it will be a consequence of this plan.

I cannot help but feel that the kind of balance you seek is one of fewer people and more plants.

There are many ways I would be willing to help the GGNRA accommodate dogs. A permit system could help fund whatever extra efforts required to support them. Encouraging training programs would reduce the already very small number of annual dog incidents (wouldn't it be great if such training worked for the much larger number of human incidents the park faces?). And in multi-use parks like Crissy Field, some segmentation could be helpful. But, the restrictions in Funston, Ocean Beach, and Lands End are too severe.

Consequently, with the exception of Alternative A, I find none of the options you propose to be acceptable. That doesn't mean that there aren't other options which could work. It means that your proposals are not designed to support the a large urban population.

On January 9, Newsweek published an article about how demand for family and pet recreation is expanding and how government agencies are responding in support. The number of such parks more than doubled in the last five years. It saddens me that the GGNRA is out of step with the rest of the country.

Respectfully,

Gary Beberman

<b>Correspondence:</b>	[A more detailed version of this comment letter in hard copy with citations and attachments has been submitted via mail]				

#### COMMENTS ON THE SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT FOR PET MANAGEMENT AT THE GOLDEN GATE NATIONAL RECREATION AREA

Dear Superintendent Dean:

We submit the following comments on the National Park Services (Park Service) Supplemental Environmental Impact Statement (SEIS) for Pet Management at the Golden Gate National Recreation Area (GGNRA or Park).

We do not support the Park Services preferred alternative in the SEIS because it does not adequately address the clear environmental threats and visitor impacts caused by the presence of off-leash dogs in the GGNRA. The Park Service has presented several objectives, including providing a clear, enforceable dog management policy; preserving and protecting natural and cultural resources and natural processes; improving visitor safety; and reducing user conflicts. However, the SEIS still does not achieve the level of management necessary for the Park Service to meet its stated objectives.

The evidence is clear that off-leash dogs must be heavily regulated in the Park, and that areas where off-leash dogs are allowed must be fully enclosed by a fence or natural boundary. This comment letter analyze the issues associated with off-leash dogs in the GGNRA, including wildlife disturbances, visitor impacts, and safety, and highlights areas where the SEIS is inadequate.

Unless the Park Service makes the necessary changes to the preferred alternative in the SEIS, it will fail to fulfill its fundamental purpose to conserve park resources and values, and will not be in compliance with its mandate prohibiting impairment of park resources and values.

#### SEIS Does Not Adequately Assess Impacts on Park Users.

It is well documented that off-leash dogs create problems for various park users including people with guide dogs, ethnic minority groups, children, picnickers, and on-leash dog walkers, among others. Over the last few years there have been numerous accounts of dogs negatively impacting visitor experiences. A woman visiting Crissy Field reported that her five year old son was attacked by a dog, which also gouged the leg of another child, and complained that other dogs were harassing small children in the area; a park

visitor at Ocean Beach reported a dog being attacked by three off leash dogs; a hang glider at Fort Funston was bitten by an off-leash dog; and an off-leash dog harassed a guard on horse patrol to the point of having to be pepper sprayed. These are just a few examples of the conflicts that can occur with off-leash dogs.

Offleash dogs pose a particularly significant challenge to individuals who rely on service animals to help them enjoy the GGNRA. As stated in previous comments to the Park Service on this issue, a 2003 survey conducted by a national guide dog user group indicated that 89% of individuals with service animals had their guide dogs interfered with by offleash dogs, and 42% of graduates of the groups training programs had their guide dogs attacked by offleash dogs.

Thus, the failure to enforce the leash law in the GGNRA has exposed those with service animals to a highrisk of interference or attack, and in most cases has precluded these individuals from enjoying the park altogether. This is a disproportionate impact on accessibility for individuals who rely on guide dogs to traverse the park: and since dog management and accessibility planning will impact many of the same locations within the GGNRA, if this disproportionate impact isnt addressed the GGNRA may unwittingly exclude guide dog users from the very places that it is trying to make accessible.

Off-leash dogs and dog waste also create barriers for ethnic minorities who want to use the park. There are already disproportionate rates of general park use between white and ethnic minority users, as GGNRA visitors are still much more likely to be white than city or state residents. In addition, recreational opportunities for those with lower incomes have become increasingly more difficult as income inequality rises and income gaps between White citizens and Black and Latino citizens have also continued to increase. These economic constraints create even further barriers for ethnic minorities to use public parkland. Although some have argued, as noted in the SEIS, that park use by ethnic minority populations would increase with more available off-leash areas, several reports and studies show the opposite is true. (SEIS pg. 330). A 2007 study conducted by Nina Roberts of San Francisco State University found that Asian and Latino park users consider uncontrolled dogs and dog waste to be a barrier to visiting the Park. The Park Service acknowledged those findings in the SEIS; however, the Park Service also cited to a 2002 Northern Arizona University study in an apparent effort to discount or downplay those findings. But a review of the 2002 studys relevant data in fact confirms the concerns regarding off-leash dogs discussed in this letter, and the Final EIS must reflect this.

The Park Service stated that the 2002 study found that Hispanic and non-Hispanic populations supported off-leash dog walking by almost the same percentages; however, the fact remains that the Hispanic community is already underrepresented in the Park. Thus, it is inappropriate for the Park Service to compare the response rates of the two groups in light of the later 2007 findings, and importantly, in light of the fact that the 2002 survey was conducted only in English with no available Spanish translation. Moreover, the 2002 findings show overwhelmingly that ethnic minorities oppose off-leash dog walking in the Park, particularly in light of the Park Services mission, and support regulations that prohibit off-leash dog walking.

Three relevant questions that were asked in the 2002 survey include questions 11, 13, and 17. Question 11 asked [c]urrent regulations allow for walking dogs on-leash at most GGNRA sites and prohibit any off-leash dog walking. Do you support or oppose this current regulation? 70.5% of respondents of Hispanic origin, 69.3% of Asian Americans, and 72.8% of African Americans responded that they either strongly or somewhat supported current regulations. Question 13 asked [d]o you support or oppose allowing off-leash dog walking in GGNRA sites? 52% of respondents of Hispanic origin, 49.2% of Asian Americans, and 49.6% of African Americans responded that they either strongly or somewhat opposed allowing off-leash dog walking. Question 17 asked the same as question 13, but explained the mission of the GGNRA beforehand. Knowing the GGNRAs mission, 56.6% of respondents of Hispanic origin, 59.7% of Asian

Americans, and 67.5% of African Americans responded that they either strongly or somewhat opposed allowing off-leash dog walking in the Park.

The SEIS does not provide enough consideration for the negative experiences park users have when confronted with an off-leash dog. Even on-leash dog walkers have expressed discomfort with off-leash dogs. In 2005, Congresswoman Jackie Speier stated, after having worked with dog owner organizations and GGNRA officials regarding off-leash behavior for years, that:

Off-leash activity should be in areas that do not involve interaction with leashed dogs, or a fragile environment; i.e., the area should be fenced and properly noticed as to its use. For example, according to dog park experts, canine dominance factors preclude the placement of tables in dog parks—dogs jump on tables to be dominant—and problems will arise when a leashed dog is confronted by a free dog.

Recently, at a meeting organized by Congresswoman Speier, she stated that her position on this issue had not changed. It is clear that in order to accommodate all park users, off-leash dogs must not be able to roam free and bother, harass, and even injure other visitors and their dogs. Enclosing all off-leash dog areas is the only way to sufficiently deal with this issue, as discussed below.

#### Wildlife Disturbance.

It has become abundantly clear throughout this environmental review process that the presence of dogs in the GGNRA negatively impacts wildlife, including federally protected species. Wild Equity and others have previously submitted substantive comments and provided evidence on the issue, and the Park Service has acknowledged this. Plovers and other birds are often disturbed by dogs, which they see as natural predators, and disturbance triggers reactions that can lead to death of these birds. Disturbance of wildlife by dogs has been recorded within the GGNRA and documented in several published studies and reports.

For instance, incident reports show that dogs often chase, and sometimes kill, birds and other wildlife. One incident report states that three different dogs chased shorebirds at Ocean, and in two cases dogs chased the federally protected Snowy Plover. At Crissy Field, a ranger witnessed a dog kill a western grebe. In another incident at the Marin Headlands, a ranger witnessed a dog chasing a herd of deer in a wildlife protection area.

These are just a few examples of the problems that occur for wildlife in the GGNRA. The Park Service has provided no evidence that off-leash dogs respond to voice control, and the difficulty of controlling a dog in the presence of wildlife is insurmountable. To account for this problem, off-leash dogs must only be allowed in an area that is fully enclosed, either by a fence or natural boundary.

#### Failure To Consider Alternative of Enclosing All Regulated Off-Leash Areas Is Arbitrary.

If off-leash dogs are to be allowed in the GGNRA at all, the Park Service must implement a plan that more adequately addresses the growing number of conflicts between off-leash dogs and wildlife or other park users. Such a plan necessitates that off-leash dog play areas be fully enclosed with a physical barrier—with all entry and exit points double-gated—to ensure the safety of park users and protect park resources. Fully enclosed dog parks are standard and even recommended by dog safety advocates. Wild Equity and other commenters provided valid arguments as to why all ROLAs should be enclosed by physical boundaries during the DEIS comment period. However, the preferred alternative in the SEIS still does not propose to fully enclose all ROLAs. Enclosing ROLAs will not unreasonably restrict dog use in the

GGNRA, but failing to enclose them will result in more user conflicts and will create more risk for off-leash dogs. If the Park Service feels that it is not appropriate for a ROLA to be enclosed, then the ROLA should not be proposed for that particular area.

Hundreds of dogs have been lost, injured, or killed, while roaming the GGNRA off-leash. This is because voice control is not an effective means to protect pets from getting lost or hit by cars. Enclosed off-leash dog play areas ensure that our dogs do not fall off cliffs, run into traffic, or are lost while visiting the GGNRA and they ensure, when properly located, that wildlife will not be harmed or harassed by dogs.

Furthermore, enclosing ROLAs would empower park visitors, giving them the ability to choose if and when to have off-leash dog experiences by entering an enclosed area, rather than having the experience imposed upon them whenever they visit the GGNRA. The Park Service acknowledges in the SEIS that dog walking under voice control may be more of an 'exclusive than a shared use . . . [for reasons that include] visitor safety and experience. (SEIS pg. 19). Although the Park Service suggests this is a debatable point, it is clear that when dogs are allowed to roam free, other uses are severely limited as evidenced by visitor complaints of dogs interrupting picnics and other activities. In the minds of park visitors, off-leash areas are already characterized as exclusive use zones, and consequently an argument that incorporating physical boundaries creates an exclusive use zone on its own is unacceptable.

Enclosed ROLAs would also increase compliance of regulations, as visible fencing details clearly identifiable boundaries and reduces public confusion on where a ROLA begins and ends. This also benefits GGNRA operations, as the Park Service can reduce spending its limited staff and financial resources on addressing matters such as illegal off leash dog-walking and visitor conflicts caused by off leash dogs.

In addition, enclosed areas are solidly grounded in the non-impairment mandate that governs the National Park System. An enclosure, like seat belts, bicycle helmets, safety goggles, and other safety devices, allow us all to participate in activities that are inherently risky while reducing the probability that drastic consequences from those risks materialize. The Park Service promotes the goal of ensuring that today's activities do not degrade existing resources or future recreational opportunities, and, accordingly, it should not permit risky activities without adequate safeguards in place.

As Wild Equity and other commenters have stated previously, this design principle has been adopted by animal welfare organizations and park managers around the country. The American Society for the Prevention of Cruelty to Animals urged dog owners to [k]eep your dog on a leash when you are outside, unless you are in a secured, fenced-in area and recommends fenced-in dog parks because even if your dog reliably comes when called, its safest to take her to a securely enclosed area to play off leash. The State of California concluded during a dog management study in 2001 that off-leash dog parks should [b]e enclosed, unless located in areas where there is clear and functional topographical or other significant boundaries. The San Francisco Recreation and Parks Departments (RPD) dog park policy states that off-leash dog parks require adequate delineation, natural or man-made, to protect dogs from vehicles, steep cliffs, and other hazards as well as to prevent conflicts with other park users.

The Park Service has stated that enclosures are undesirable because of aesthetic concerns and because an enclosure of sufficient construction would hinder or prevent wildlife movement. (SEIS pg. 95). The justification by the Park Service is arbitrary and should not preclude an alternative for enclosing all ROLAs from consideration under the SEIS alternatives section. Off-leash dog parks can have a variety of physical barriers, including features from the natural environment. Many of these can be designed in such a way that allows the movement of small wildlife through those areas. In addition, the aesthetic issues can be addressed simply by being creative. For example, a fully enclosed off-leash dog park proposal for Lake Merritt included butterfly garden draped around the enclosure. Furthermore, the San Francisco RPD

dealt with aesthetic concerns over physical boundaries by promising that all barriers will strive to be aesthetically pleasing using landscape features such as shrubs and vines.

If the Park Service still feels that physical barriers are not acceptable, then it should revert to the National Park Services leash law as the preferred alternative, because the Park Service has failed to demonstrate in the SEIS that voice control is sufficient to keep dogs from encountering dangerous situations and impacting wildlife and visitor experience.

#### SEIS Does Not Have Adequate Enforcement Mechanisms.

The SEIS incorporates a monitoring-based management strategy that allows Park Service staff to monitor noncompliance and impacts to natural resources, rather than the initial automatic triggers that were originally proposed. This strategy allows management actions to be implemented when the level of compliance is deemed unacceptable based on violations and/or impacts to resources.

However, this leaves the door open for limited enforcement by the Park Service. There must be some kind of demonstrable commitment of enforcement from the Park Service, rather than simply a wait-and-see approach. If the Park Service must use adaptive management, it still needs accountability mechanisms in place that guarantee effective management of the GGNRA.

One change that should be made is a lower percentage of compliance triggering further review for an area. The Park Service previously admitted that it was only striving for 75% compliance, and now it does not even have a specific threshold at all, only what will be deemed unacceptable. Even if there are no measures that apply automatically, there should still be a clearly defined compliance rate in place that triggers further review. The SEIS states a 75 percent threshold could trigger restrictions in some areas by only one hundred violations, while other sites might require several thousand violations before a change was implemented, despite greater impacts to resources and values in the latter case. (SEIS pg. 64).

The same amount of review that would be required to determine what is unacceptable for a site could be done during the current planning phase. This would promote transparency and allow for public review of the Park Services plan to address non-compliance in each area. The environmental review process is intended to be comprehensive and failing to set specific goals thresholds does nothing but further delay the inevitable.

#### The SEIS Does Not Adequately Justify Commercial Dog Walking.

One of the established objectives of the SEIS is to evaluate commercial dog walking (SEIS pg. 2). Though the SEIS does provide some information pertaining to commercial dog walking, the evaluation is lacking and it is unclear how conclusions were drawn that justify the inclusion of commercial dog walking as a component of the Preferred Alternative.

Evaluation shortcomings include the following:

The SEIS fails to adequately describe the existing condition or reference point baseline condition for commercial dog walking within the GGNRA. While the SEIS states, Under current management, commercial dog walking occurs, but is not an authorized use (SEIS pg. 8), it fails to disclose that this unpermitted commercial activity is prohibited under 36 CFR 5.3.

The SEIS fails to make clear that the 1979 Pet Policy pertains to dogs that are being managed by their

owners and makes no provision for commercial dog walking.

The SEIS fails to disclose that commercial dog walking does not meet the criteria to qualify for Commercial Use Authorization (16 USC 5966).

The SEIS fails to include 36 CFR 1.6 and 36 CFR 5.3 on the list of relevant sections of the Code of Federal Regulations. (SEIS pg. 47)

The SEIS fails to include Directors Order #53 on the list of relevant National Park Service Directors Orders. (SEIS pg. 48)

The SEIS fails to evaluate the range and types of activities for which Special Use Permits are typically issued throughout the National Park system.

The SEIS fails to evaluate the precedent setting potential of issuing Special Use Permits for commercial dog walking within the National Park system.

The SEIS fails to evaluate the impacts that are specific to commercial dog walking including: impacts to visitor experience, impacts to recreational activities, impacts to parking availability, impacts to management resources, impacts to aesthetic qualities, and impacts to Park Service values. These omissions of fact and failures of evaluation leave the SEIS lacking as a properly transparent and adequately informative document.

As a decision document, the SEIS fails to articulate a rational connection between the facts and the final decision. As commercial dog walking has never been legally permitted within the GGNRA, it must be clearly demonstrated that all Park Service criteria will be met prior to sanction as a valid activity. However, this is not the case.

The SEIS does not demonstrate that commercial dog walking is an appropriate activity for national parklands, meeting qualifications under the Organic Act. The Organic Act clearly indicates that the granting of use permits shall be for the accommodation of visitors. The SEIS proposes to grant use permits not for the accommodation of visitors, but rather for the accommodation of the commercial dog walking industry.

The SEIS does not demonstrate that commercial dog walking is an appropriate activity for the GGNRA, meeting qualifications under the GGNRA enabling legislation. The enabling legislation provides for public use of the Park for recreational and educational purposes and makes no provision for commercial uses that do not support or enhance the established park resources and values.

The SEIS does not demonstrate that commercial dog walking meets the criteria to qualify for Special Use Permitting under NPS Directors Order #53. Commercial dog walking will not support the mission of the Park Service, will not add to the public understanding and enjoyment of the GGNRA, will not promote a sense of ownership and stewardship for the Park and its resources, will not enhance the protection of park resources and values, and will not provide for an increased level of visitor safety. Furthermore, commercial dog walking is contrary to the purpose for which the park was established, may create impacts on park resources and values, may disrupt the atmosphere of peace and tranquility, may create an unsafe environment for other visitors, and may result in conflict with other existing uses.

These points of reason demonstrate how the SEIS has not achieved the objective of properly evaluating commercial dog walking, and therefore, commercial dog walking should not be included as a component of the Preferred Alternative.

## Conclusion.

The preferred alternative for the Plan in the SEIS is more accommodating to dogs than any other park in the National Park system, offering extensive on- and off-leash dog recreation in the GGNRA. Moreover, San Francisco's city park system has ample space for off-leash dogs, with 28 off-leash dog parks in 47 square miles for over 800,000 residents. There is no evidence that dog owners or dogs will lack for open space to recreate, yet off-leash advocates continue to push for more space. However, off-leash dogs should not be given precedence over safety, visitor experience, and environmental concerns.

For all the reasons stated above, we urge the National Park Service to revise the preferred alternative in the SEIS on the issues of ROLAs, enforcement, and commercial dog walking to better accommodate park visitors and protect natural resources in the GGNRA. In addition, we refer the Park Service to previous comments submitted by the undersigned groups during the DEIS process and by Charles Pfister for both the DEIS and the SEIS, and to comments submitted by the Wild Equity Institute and the Center for Biological Diversity during the ANPR process, the NEPA scoping process, and the numerous other hearings that have occurred on this issue over the past decade, and incorporates those documents here by reference.

Sincerely,

Laura Horton

**Correspondence:** I would like to express my strong opposition to Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, of the published alternatives, I support Alternative A, the No Action Alternative.

I am a resident of Central Marin. I regularly take my dog to the following areas under GGNRA control: Muir Beach, Oakwood Valley Trail, Oakwood Valley Fire Road, Alta Trail, Rodeo Beach and Rodeo Beach Loop. Most often, the only encounters we have on these trails are other people walking their dogs. I believe this use by my family and my dog and other dog owners is completely consistent with the founding goals of the GGNRA - to provide recreational opportunities for both local residents and visitors.

I've never encountered any hostile or destructive dogs, though I accept they must exist. As do hostile humans, and other predatory wildlife - they can all be controlled via existing enforcement mechanisms. Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area, so using logic and mathematics alone one can conclude that they cannot possibly be having a detrimental impact on the area as a whole. There does not seem to be any compelling reason to eliminate or further restrict the remaining 1%. It would appear that the NPS has failed to conduct any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. The public as a whole must agree since their comments in 2011 ran 3:1 against the plan as proposed back then.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite and it is most certainly not a wildlife preserve or sanctuary such as the Mojave National Preserve or the Gulf of the Farallones National Marine Sanctuary. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Further, restricting access in this manner will force Marin residents to have to drive further afield in order to exercise their dogs off-leash. This is not a particularly green alternative, and will increase traffic and pollution.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. So again I reiterate my support for Alternative A.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Brad Vaughn

<b>Correspondence:</b>	I find it incredible that this issue rages on year after year with no apparent resolution and increasing acrimony. I have traveled all over the United States and know that environmentally sensitive areas can be developed, maintained, and preserved in locations shared with dog recreational use as long as there is mutual respect, cooperation and accountability from all interested parties.				

I suggest two ideas that could be key elements to peaceful coexistence.

1. Voice Control be maintained because diminution of leash aggression can add substantially to the effectiveness of any good dog management plan. Poor use of leads on frustrated dogs is a trigger to conflict. A trained and well-maintained dog allowed to make, and be rewarded for proper behavior is a permanent solution to many of the objections raised by proponents of the 'anti-dog' mindset. This assumes an aware, educated, responsible and cooperative dog-owning population. The dog community has some distance to travel before attaining this status.

2. Equally important is educated, aware, responsible, reasonable and cooperative enforcement personnel. The NPS has some distance to travel before attaining this status. NPS' goal must not be perceived as the eradication of dogs and their owners. Doing little to improve a perceived problem, then using inaction to justify the need for change is not acceptable. For example, in clearly-identified, controlled access areas with dog feces pollution, such as Marin's Upton Beach, why haven't fines paid for staffing and enforcement to correct the problem?

Hefty fines and other penalties should be levied on irresponsible dog owners. However, penalties must be applied with the goal of education of both owners and park staff's efforts to eradicate improper behaviors.

Legislation must be factually-based, defensible, and perceived as fair and beneficial to all stakeholders. It appears the draft Dog Management Plan has not reached anything like consensus within the communities where NPS proposes to levy it.

Allowing so much time with so little resolution has added exponentially to rancor between the parties. It is very apparent, no matter what Alternative is chosen, heavy-handed adherence to any action is unwise and will fail in the face of continued resistance. Alternative F is far less likely to succeed than Alternative A.

This is a People problem: the public and the NPS. Without willing cooperation to achieve widely-understood goals that are supported by fair and sensible measures, it is wasted time to enact any regulation change.

<b>Correspondence:</b>	Bias alert: I'm a Presidio Trust intern, and am in favor of dogs being leashed in all areas, if not totally banned.				

Honestly, this policy doesn't strike me as terribly restrictive of dog walkers at all, unless it's compared to the current situation in The Presidio. I think any amount of regulation would be beneficial in high-use areas, especially long West Pacific near Mountain Lake. Hundreds of off leash dogs are walked through that area daily, and I wouldn't be surprised if the volume of urine and feces contributes to nitrogen and fecal coliform levels in Mountain Lake.

Eight dogs is a pretty high limit and wouldn't significantly impact the current level of use in dog walking areas - maybe that limit should be lowered or commercial dog walkers should be charged a fee or banned.

**Correspondence:** I have lived in the bay area my whole life, 64 years, and in that time I have owned many dogs. Dogs are amazing companions and there is nothing more wonderful than taking a dog for a walk. Even more wonderful for the dog and the dog owner is watching dogs play off leash. Dogs need to be socialized as they are pack animals and want to be with each other. Playing together gives them exercise, enjoyment and lets off tension and stress, just like it does for humans.

Fort Funston is a treasure for dogs to romp and play and has been for decades now. I have taken my dogs and friends dogs to this place and never have I seen problems with playing and getting along. The oppoisite is always true, more fun and play here than any problems. Even the people get along which is another benefit, socialization of both dogs and people...a win win.

We need more places like Fort Funston where dogs and their people can play off leash. To cut these areas out of our lives is not only short sided but detrimental to the enrichment and enjoyability of everyone. At Fort Funston and other places like Crissy Field dog owners are responsible and polite. Yes there are some exceptions, but mostly things go really well. Dogs like to romp, play, swim in lakes and the ocean, walk and bark in delight.

If you are planning to close these places to dogs and their owners then where are we all supposed to go to get exercise, socialize and let go of stress?

DO NOT close Fort Funston, Chrissy Field, the beach, parks or other places where dogs and their people go to play. If dog poo is a problem, that can be fixed by people who are always willing to make sure there are garbage cans and bags for pick up. If dogs fight that can be fixed by banning the people who bring these dogs to the parks and do not take care of thier dogs. We can make these places safe and accessable for all if you will just keep them open and stop trying to close off leash play areas in the Bay Area. We want them, we need them and we demand they stay open now and forever.

Thank you.

**Correspondence:** These off-leash areas are very important for our community. Most families with dogs search for areas to be able to take the whole family to (the dog is often considered part of the family). Thanks to these areas, families can take their whole families out to exercise and see nature. It is awesome to be able to see so many happy dogs running free off-leash. It is great socialization for humans and dogs. Not only that, but these areas increase the home values of surrounding areas. The Bay Area is known for being dog friendly and this would go against that. Most owners are responsible in picking up their animal's poo. If this is a problem, bigger penalties could be imposed. Also, you could start charging day use for these areas. I would not mind paying as it is a great experience for the whole family. It makes one appreciate nature more as one is often restricted from many trails that are not dog friendly. It is truly a gem to have off-leash areas. Please do not take these away from us.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to every one of the places you intent to ban or minimize use. Dogs need to run and reducing the places to go will only serve to over crowd the areas where they are allowed.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

In addition, you will likely find that people will ignore the new rules. It will be very expensive to hire the number of rangers required to patrol all of these areas. People are watching how our Government, including the President and the US District Attorney, either ignore or recraft laws that are not compatible

with their agenda. If they do not follow the law or Constitution then why should the people? Please reconsider the current plan.

**Correspondence:** Recreationareas in all counties should have areas for dog Walking on and off leash. The plan as it is set now is unfair to dog owners and is likely to have a negative effect on their parts of communities such as dog and neighborhood parks. As it is already it is difficult to find Dog friendly and family friendly areas of recreation. Please don't make it even harder.

Thank you,  
Celeste Neumann

**Correspondence:** Dear GGNRA,

I am opposed to the GGNRA plan to substantially reduce off leash dog play areas. I live in a city where more people have dogs than children and having dog is the reason i get out to parks, beaches and off leash hiking areas.

GGNRA seems to have lost its way, I believe the last two letters of your name include Recreation Area, not preservation area. Please consider the wishes of your constituents before making any further unnecessary changes.

thanks  
Jim

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Qi Chen

**Correspondence:** Hi,

I am writing to opose any changes to the laws surrounding off leash rules at the park. Dog and owners activate and use the parks to their fullest. I have never heard anyone complain that they don't use a park because it has dogs. Actually I heard the opposite where like children people enjoy the activity of seeing dogs and children. These laws are dumb and an infringement on the rights of the users of the parks. I strongly discourage any changes to the law. People, children and animals have happy coexisted in the parks for years. Don't mess up a good thing.

Collin Burry

<b>Correspondence:</b>	I strongly object to decreasing the off leash areas at any of these parks. There are very few areas for our dogs to run off leash, and even fewer in a natural setting, not a fenced in dog park. We have been going to Fort Funston almost weekly ever since we got our dog, and it is the happiest we ever see him. It is great for all the dogs to run free, and play and swim, and we have never had a bad experience with other dogs, or witnessed a bad person/dog interaction. There are plenty of beaches and trails for people who do not like dogs, please do not take away the few that exist for dogs and dog lovers.

<b>Correspondence:</b>	We need our off leash areas left in place. There are many dog owners in the city that use them daily. Many of the dog owners are elderly and/or disabled and it is difficult for them to get to parks that aren't part of the National Park Service. Most people enjoy watching the dogs play together. I believe the areas that are already in place, should be left as is.

<b>Correspondence:</b>	As a dog owner who has walked 7 mornings per week for the past eight years, I am disappointed that this subject keeps coming up and seems to be so unreasonable to me. These areas comprise such a tiny amount of GGNRA public lands, and are beautifully kept by the "dog" people. I walk several times each week on the beach at Fort Funston, and there are regulars who pick up bags of trash from the beach daily. I have heard many stories about how Funston was in huge disrepair when the dog people began using this park, and we have helped to maintain it- -frankly, we do more than it seems the Park Service does.				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. We are responsible, tax-paying citizens and we need places to exercise our dogs and ourselves. Take a look at how many seniors are in these parks with their dogs.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Please listen to your constituents. It sort of feels like these decisions get made in a vacuum and the GGNRA is just going through the motions this restrictive, unfair and unreasonable plan happen. Thank you. Nina Steinman

**Correspondence:** Dear Superintendent Dean,

The dogs in the Bay Area are awesome.

Why?

Because they have great off-leash places to play.

Those places are limited as it is, and the new draft will take away some of the best spots.

Please please reconsider the new draft dog management plan.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. **Correspondence:** I'm writing to protest the proropsed off leash changed in the GGNRA.

I've lived in the city for 35 years, and have had many wonderful dogs in that time.

Daily walks (rain or shine, or at midnight for that matter) have been some of the high points of my time spent here. I realize the pressure the park service has been put under with the recent rapid population growth of San Francisco, the limited space and resources, and ever present 'progress' that has ultimately paved, re-utilized, or just plain encroached on all the parks, shorelines, and vacant lots.

I fully support reasonable off leash policy, but I fear that much of the fear and misunderstanding that many people have about off leash dogs is caused by ignorance of the animals themselves, and how (and when) to deal with them. It's not complicated. Learn about dogs, just like leaning to swim, or cross a street safely. I feel that individuals should take responsibility for themselves in a world with a variety of creatures, not just enact, may I add, virtually unenforcable laws that restrict an already tightly restricted community.

On a personal note, I have had experience with park police enforcement. For DMV Tags. Lets just say that it took me 9 hours at the Federal Bldg, with a number of other hardened criminals; off leash included...to have the ticket dismissed.

Yours,

Shady's Dad

**Correspondence:** I very strongly disagree with Alternative F. I am only in support of Alternative A, the "No Action" Alternative.

I regularly take my dog to Oakwood valley trail, and there is no reason for restricting the access to dogs. If they are friendly and not causing harm, then why do you wish to harm them, and there owners! I am told that there has been no peer-reviewed, site-specific studies that support such dramatic restrictions of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents. Marin residents and there pets rely upon this open space, It requires a different management strategy than a National Park. Alternative F is unacceptable, and it will not be tolerated.

<b>Correspondence:</b>	I urge the National Park Service to adopt strong, effective dog management in the Golden Gate National Recreation Area. Dog owners should be provided with well fenced off leash areas, and then off leash laws must be enforced. Enforcement will require persistence, since a culture of dog 'freedom to roam' has been fostered for many years. I have seen policies like this work in other jurisdictions. A well fenced off leash area along the Bay Trail in the Berkeley/Albany area allow all users				

---

to enjoy trail the trail and the wintering birds to feed and rest in peace.

Commercial dog walkers have no place in the National Park areas. They typically have 6 or more dogs, which they cannot pick up after effectively. I have seen several instances where they don't even control their charges effectively. Their favored areas have become a tread at your own risk area.

Some trails should be totally off limits to dogs, so humans who do not wish to

**Correspondence:** I'm commenting on behalf of the dog parents. If this proposed dog management plan is implemented, I'm highly concerned that my dog and I will be losing one of the many great reasons as to why we live here in the San Francisco Bay Area.

There is an estimated 120,000 dogs in the Bay Area. It's been stated since 2007, that dogs outnumber the amount of children in our community. This fact alone is reason enough to not deplete our use of the dog-friendly areas of the GGNRA.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on my dog and I, but our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

The "facts" stated in the SEIS are not fair and are completely biased. Public comments from 2011 were not taken into consideration when drafting the new plan. Why is this just? Why is this happening? There is not enough scientific substantial evidence to merit these changes.

We've been coexisting fine all these years. Let's keep the 1979 Pet Policy. The policy's backbone is recreational and nature based. Nature and recreation are two things the Bay Area is made up of and should continue to be made up of.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, Im writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dogs health the way I have on GGNRA properties for seven years.

I am particularly concerned that the new plan is far too restrictive at Fort Funston and in the Marin Headlands. At Fort Funston, especially in the winter, the tide level can make the beach effectively unusable. Removing the upper areas - which are in no way "natural" - from use by off-leash dogs means that I will have no large open play area within 5 miles of my house that is usable in the winter. I do, however, strongly support repairing the fences and enforcing the boundaries of the current protected wildlife areas between the cliffs and the main service road at Fort Funston. In the Marin Headlands, the current trails open to dogs are the only trails within reasonable reach of the city that I can enjoy with my dogs.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches, which make up less than 10% of the total area of the RECREATION AREA, have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Eric Staten  
San Francisco, CA

-----------------------------	----------

**Correspondence:** I'm strongly opposed to the dog management plan proposed by the GGNRA. 99% of GGNRA land is already off limits to dogs. When I spend time outside in nature, I want to share that experience with my dogs. My dogs are part of my family. I end up not going to areas that don't allow dogs, because I feel my experience is not the same if I have to leave family members behind. This plan makes no sense for the community where the land is. Dogs need to run off leash. To be free and to release pent up energy. Without that ability to release, they can suffer, just as humans do when they are kept restrained. I rarely visit dog parks and city parks with my dogs because I find that many of the owners who take their dogs there, are just there as a quick way to let their dog off leash. There can often be unbalanced dogs at parks like this. These parks will be overrun with people and dogs if GGNRA restricts access to existing lands. Dogs need to run off leash, period. If the area where they are allowed to do that is minimized, that doesn't change that I will find places to allow my dogs to run. So will thousands of others who love their dogs and know what it takes to keep them balanced and happy.

If we are restricting dog access, we should also restrict access to children who can run rampant trampling plants and screaming and squealing. We should restrict smokers and horses and mountain bikes, and the list goes on. This land was set aside for recreation. Spending time in nature with beloved family members is recreation.

GGNRA's vision is very short sighted and caters to small interest groups with a loud voice.

Thanks for reading  
Sarah Jensen

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive for the dogs that enjoy the freedom to run and socialize freely. I support formalization of the Pet policy as well as off leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences in the off leash area because they remind dogs of cages and physical restrictions, and they make visitors feel unwelcome.

As someone who walks frequently with both family dogs , I feel that turning the off leash area into a restrictive area will prevent me from recreating with our dogs. It will also be detrimental for my dogs' health as I rely on that open space for them to run and exercise.

The GGNRA has lost sight of its purpose: it was set up to be a recreation area for densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. This policy needs to be formalized and supported with off leash areas in San Mateo county and on new lands the GGNRA acquires in the future.

Sincerely,

A Concerned and Devoted Dog Walker

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Michael Lopez

**Affiliation:****Received:** Feb,18,2014 17:32:33**Correspondence Type:** Web Form**Correspondence:** Hello,

I am a proud and responsible dog owner currently living in the Mission District in San Francisco. I am very concerned with the the possible ordinance prohibiting off-leash walking in public parks which have traditionally been friendly to dogs and their owners. Here are only a few of my concerns:

-The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

-The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

-The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

I urge you to reconsider this plan and keep our open spaces friendly for all inhabitants, even four-legged ones. Thank you for your time

Sincerely,  
Lynette Rosenblum

Frank Dean, Superintendent

Golden Gate National Recreation Area

Fort Mason Building 201

San Francisco, CA 94123

Re: Dog Management Plan (SEIS)

Dear Superintendent Dean:

San Francisco Tomorrow believes that the Dog Management policy put forward by the National Park Service after many years of outreach, research and discussion is a worthy one. We agree that regulating dogs in the GGNRA is a necessary action to ensure visitor safety, protect natural and cultural resources, preserve national park values, and provide for a quality national park experience for all park visitors. We urge speedy approval of the Dog Management Plan. We support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area.

SFT Board has voted to support a limit on the number of dogs that are brought to the park by recreational

dog walkers. Our Board believes that three dogs per dog-walker should be the maximum number to strive for in the future but we recognize the difficulty of bringing any changes to the Plan at this time; we would therefore support the limitation of six dogs per person for the time being. But the question of whether the Park should allow commercial dog walking in any form will remain.

SFT Board also voted that all dogs should be on leash in the Park, as with the longstanding NPS national policy. The idea that there could be "designated areas" for off-leash dog walking would need thoughtful landscaping, implicit boundaries and signage, if it were to be proposed for adoption in the future.

In the worst possible case, it is important to avoid "another Fort Funston" where dog walking, dog running, ball fetching and dog trampling have virtually destroyed the tough natural terrain on the northern segment of the bluff there.

The NPS has been exceedingly generous to propose a Special Rule to accommodate recreational dog walking, while ensuring visitor safety and resource protection, instead of merely implementing the standard national park policy.

But caveats remain and it is still not clear that NPS should accept commercial dog walking at all, since it is in fact allowing the Park to be exploited for private financial gain.

Sincerely,

Mary Anne Miller for  
Jennifer Clary  
President, San Francisco Tomorrow

**Correspondence:** Having room to run without being on leash is important for the health of our dogs. It's also good for the health of humans because it usually involves much more walking on the part of people than going to the small areas designated as off leash. Being able to play off leash is not only important for the physical health of dogs, but also their mental health as well. The same for the people who walk them, live with them. Cecil Myers

**Correspondence:** I'm commenting on behalf of the dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that one of my family's favorite activities will be swiped off our "Fun to-do List".

We are an active family with an active lifestyle and much of our lifestyle includes our dog. Our household is happy hugely in part to our dog and limiting access to our dog's favorite playgrounds (I.E. Fort Funston, Muir Beach and Ocean Beach) will be devastating to us all. Especially to our (breed of dog) (name).

The points brought up in the SEIS are completely unjust for such a radical change to be made. My family and our dog won't be able to have the bonding time and exercise like we do on the GGNRA lands at our local, fenced-in dog park. Nothing is quite as fulfilling as having my family together, (your dog's name here) included, out for a day of hiking, observing and learning about the great environment around us.

Please consider keeping the 1979 Pet Policy - it keeps all points of nature and recreation in harmony. It ensures my dog and any other future dogs my family has; will have their space now and for years to come.

**Correspondence:** We have a huge goldendoodle puppy. The only way for him to get enough exercise is to run around off leash and play with other dogs. I can power walk our puppy for 6 miles (trust me, I've tried) and it's just not enough exercise. He needs to run and wrestle with other dogs or else he's a little hellion at home. Plus, the ability to run around and play with other dogs is what gives dogs a great quality of life. Dogs can't have or do any of this if they have to remain on a leash.

<b>Correspondence:</b>	Dear Superintendent Dean,				

Even though my legal residence is in Butte County, I work in Redwood City, rent a room there, and spend more of my days off in San Francisco and the North Bay than I do in Chico. My wife packs up the dogs for a day trip or a weekend and we enjoy our time together walking at Crissy Field or on one of the beaches where dogs are allowed off-leash. This is essential for our physical and spiritual well-being, and I know the same is true for many people, dog owners or otherwise. We live in a densely-populated area, we work hard, and we need places we can go to get fresh air, exercise, and reconnect with nature. Places that are close by so that we can reach them in the limited time available to us, and places that allow dogs off-leash so we can give our canine companions the free activity they need while at the same time being drawn by them to live in the moment, enjoy the freedom and the natural beauty around us, and forget about the stress that seems to be the fuel that powers the Bay Area economy. Eliminating recreational options for the majority of people who live and work in the Bay Area is not the correct approach to achieving any environmental goals. Some people are content just knowing that natural places exist, but most people protect what they have a stake in. Keep the GGNRA areas that are currently off-leash and open to the public, and add more. Educate people to protect the sensitive habitat areas within the GGNRA. Build a supportive community through cooperation and mutual respect, not through added restrictions.

Thank you,

Chuck Humpal

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence:** To whom it may concern,

I walk my two dogs almost every morning at Chrissey Field. In twelve years, I have never had a problem with any resident or their dog.

Chrissey Field has more dog walkers now. Most have a minimum of six dogs. They arrive around nine thirty. I believe very few people can control six to ten dogs off leash. Many of the dog walkers visit in the East Beach area and are not watching their dogs closely.. I believe that there should be a two dog limit at the East Beach so that residents can bring their children and dog. Dog walkers should have to park by the warming hut since there are fewer people and children in that area.

I hope you are getting money from the dog walkers since the average one makes \$100,000,00 in San Francisco. They are running a business on federal land.

Sincerely,

Nancy Zacher

That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Considering the city of San Francisco has more dogs than children it worries me that more dog friendly off leash areas get restricted resulting in more dogs being at the designated fenced in dog parks. This does not give any dog the freedom to run and burn energy. Having off leash area's will also not cost more money than creating and maintaining fenced in dog play area's.

Sincerely,

Best,

Andreas Wieder

<b>Correspondence:</b>	Dear Superintendent Dean,				

I walk my dogs in the Golden Gate National Recreation Area (GGNRA) almost every day.

I strongly oppose the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement.

San Francisco is a dense, urban environment (as is the entire Bay Area). Dog owners need open spaces to recreate with our dogs for our own health and the health of our animal companions. San Francisco has more dogs than children, and certainly dog owners have just as much need for healthy recreation as families with kids, not to mention families with kids and dogs.

The objective of having designated recreation areas is to provide open space for recreation for all residents. I am careful not to take my dogs into areas currently off limits in the GGNRA, and keep them on lead in areas that require it. But off-leash areas are essential for the health of dogs. The tiny back yards in San Francisco don't begin to provide enough space. And the transit first, dense urban planning (of which I wholeheartedly approve) depends on access to public space for recreation - including for dog owners.

The new plan clearly has not been significantly modified in response the substantive concerns and objections of thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with continued off-leash areas on current GGNRA lands, and on new lands that the GGNRA acquires in the future.

We need more (not less) areas for safe, healthy, off-leash recreation.

Sincerely,  
Rhodes Klement

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog Ramone for my own health and my dog's health the way I have daily at Crissy Field's Middle Beach, Baker Beach, Ocean Beach, Fort Mason, or Fort Funston for the past eight years without any incidents.				

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. Like many current dog parks they will give owners who lack control of their dogs the ability to take them off leash causing much more problems for other dogs under voice command, and for visitors.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan lacks any acknowledgement of it's impact on other areas. The GGNRA plan has not adequately studied how dispersion will affect local communities, neighborhood parks, and their preferred dog recreation areas due to overcrowding. I myself do not frequent my city parks with my dog under voice command because they are too crowded, there's not enough room to exercise, and they're not at all relaxing.

The GGNRA has lost sight of its purpose: it was set up to be a Recreation Area for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in

1979. That policy needs to be formalized and supported with current off-leash areas, and on new lands that the GGNRA acquires in the future.

Sincerely,

Emily Sheppard

**Correspondence:** I am writing to support the proposed GGNRA plan to limit dog accessible areas for the protection of wildlife and enjoyment of people who would rather not be forced to interact with dogs.

I have owned dogs and very much appreciate the valuable companionship they provide, but have always felt that ownership brings a responsibility to prevent imposition on others in society, including not giving concern to those who may not be comfortable around a dog and ensuring that there be no adverse impact on public places, including no disturbance of any kind of other creatures. I understand this means critical areas must be totally off limits to dogs, had no problem with that when with my dog and expect other owners to respect that as well. The suggestion that dogs can be adequately controlled is a fiction, both in theory- -very few dogs actually obey- -and practice- -very few owners bother to even try. This past weekend I was on public beaches in San Mateo county where most dogs were running free in front of signs clearly requiring leashes on all.

I hope you will realize that the rabid opposition from some dog owners does not represent the interests of the vast majority of park users or the long term health of the parks and values they are intended to preserve for all to enjoy. Limit dog access areas clearly, protect the birds and other wildlife and enforce the restrictions when violated.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan/supplemental environmental impact statement. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Annalisa Joecks

**Correspondence:** Thank you for accepting comments on this important issue.

The primary issue is not and should not be whether someone has a right to bring a dog to an ecologically sensitive area or not, and/or whether someone's dog can be in a park/recreation area and be on or off leash. Instead, the primary issue must be whether a National Park or National Recreation Area has the right to protect the natural resources and the ecological balances from negative impacts, no matter how large or small they may be, or may be perceived.

GGNRA governing officials and scientist must take ever precautionary step to protect the GGNRA's

---

resources. If this means either having no dogs in area(s) at all, or having dogs only in specifically designated areas, then the GGNRA should have full authority to issue such a regulations and be given the power to fully enforce them.

The secondary issue comes about IF, and only if, GGNRA governing officials determine that the presence of dogs in a specific area will not have a negative impact. Then it behooves the GGNRA to insist that as a concession to allowing dogs, that every dog must be totally under control via being on leash. A four-year old 70 lb child holding the leash of a 125 lb dog is NOT an indicator of being fully under control. Voice control should never be allowed any more than allowing someone to drive 100 mph in a 45 mph speed zone because he/she has the vehicle "under control."

We urge regulations to (1) support GGNRA in any decisions as to protecting the natural resources that may be negatively impacted by various types of activities; and (2) stop all off-leash activities of any kind in our National Recreation Areas.

**Correspondence:**

I would like to voice my concern for the loss of off-leash areas for dogs in the GGNRA. In particular, I routinely use Fort Funston for recreation with my dog Baxter (always in a responsible way, respectful of plants, wildlife, and other people).

One of the things that makes San Francisco a unique and great place to live is that there are many beautiful places that can be fully enjoyed with our dogs because of the wide off-leash access. In most metropolitan areas, dog lovers who want to live in the city have to sacrifice the joy of sharing nature with their pets in a pure and free way. I love that I can enjoy the benefits of urban living, including the lower per-capita carbon footprint of cities over rural and suburban areas, and still have the opportunity to escape to nature with my dog, unencumbered by strict leash laws.

If San Francisco became like all the other cities with highly restrictive dog policies, the life that I chose when I moved here would no longer exist. And I know the same is true for many of my friends and colleagues.

Please don't restrict the freedoms of responsible dog owners in a misguided effort to address the behavior of irresponsible ones. Let's find a way to enforce the restrictions that matter, so everyone can enjoy what makes this place great.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the

GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** I've been a Dog Walker for over a year & feel VERY strongly that you consider a 'more' dog friendly agenda to the GGNRA Dog Management Plan. I often use the Crissy Field BECAUSE it was created to be an off-leash park & it's purpose perfectly meets my needs & that of the company I work for. In my time as a Dog Walker I've NEVER had a problem with another dog or their walker, in fact just the opposite - I feel overall we police the area ourselves very well & in no way do I feel \$2,000,000 should be used in support of more rangers. There are certainly many other areas that would benefit from those funds like MORE parking! There's not enough off leash areas as it is & if people without dogs want an area to go - there are MANY places already for them & if people are afraid of dogs - they should go to those areas NOT designed & set aside for Dogs. Sure, there have been a few complaints & problems but there's no perfect place. I think it's important to remember that the number of complaints about people (visitors) out weigh those about dogs. When I have a dog that poops, when I pick it up (& I always do) I go out of my way to pickup nearby trash left by visitors - most Dog Walkers do that - because they are already picking something up. The area's are safe for people using common sense. You can spend all kinds of money putting up fences, etc but if someone is going to be foolish enough to walk near the edge of a cliff, those are the same people that would consider the fence inviting & want to jump it!

**Correspondence:** Dear Superintendent Dean,

Please do not restrict off leash areas! This is one of the few areas left where people and dogs can enjoy the beach together. I know I will visit less often if I am forced to leave my pets at home. Please don't take money out of the hands of your city by limiting visitors.

I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome. These packed in areas cause more issues than they solve. They are usually gross and unpleasant places to visit. I avoid them at all costs.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Making more restrictions will only raise the number of non-compliant pet owners.

Sincerely,  
Cristin McKee

**Correspondence:** Of course, I want to protect any species not just the Snowy Plover. feel the dogs should be able to run around but I don't feel they should terrorize the Plovers or any other species.

Not all dogs are out of control, in fact, the majority of the dogs are very well behaved. It is not the dogs fault but their human owners faults for not controlling their pet. These are also the same people who do not pick up the dogs feces or if they do they leave the little bag on the beach instead of walking it to the garbage can.

Here, is my problem with passing the no dog zone, having the leash law etc., the laws are only as good as their enforcement. This means that the public shouldn't have to tell others they are breaking the law or public shouldn't have to call the GGNRA to have a patrol officer come out to ticket them.

What it means is if you're going to add the NO DOG ZONE ALONG WITH THE LEASH LAW then you NEED to hire more officers or have the officers make their presence known on the beach and other areas the law will impact so they can warn, ticket or arrest.

Thank you,  
a Native San Franciscan

**Correspondence:** Dear Superintendent Dean,

I have used GGNRA for many years to give my dogs much needed off-leash activity. Canine access to these lands is a huge part of what makes the San Francisco Bay Area such a wonderful place to visit, to live, and to play, and, quite frankly, implementing the drastic changes proposed in the GGNRA's new Draft Dog Management Plan would completely change my life and the lives of my beloved pups. While I don't reside in the Bay Area, I spend a great deal of time there largely because of the fabulous off-leash areas. I clean up after my dogs, I never allow them in areas designated off-limits, nor do I ever allow them to bother anyone. And judging by the many lit up faces I encounter in response to my happy canines, it appears the general public thoroughly enjoys sharing the natural beauty of the GGNRA with dogs. I have a deep concern for protecting the environment and I use GGNRA lands with the utmost respect and responsibility. So why am I, my dogs, and many others like me, being punished? It is my strong belief that making nature off-limits is not the answer to environmental issues. Rather, educating the public about the importance of preserving the environment and teaching them methods to achieve this should be the goal. Irresponsible people without dogs cause damage, not responsible people with dogs. I believe the GGNRA is completely missing its purpose, which is to provide a place for public recreation in an urban area that happens to be home to many dogs and the people who love them and value their companionship. Forcing dogs to live their lives at the end of a leash is inhumane. And the very real concern that dogs need to be able to socialize and play in off-leash areas in order to be well-adjusted canine citizens should be given serious thought, as it is of particular significance in a densely populated setting such as San Francisco. The clear thinking people behind the original 1979 Pet Policy, which allows for off-leash activity on beaches and trails throughout the area, got it right. I adamantly oppose the new Draft Dog Management Plan and adamantly support formalizing the 1979 Pet Policy, as well as adding off-leash

areas in San Mateo County and providing off-leash areas on new lands the GGNRA acquires in the future.

Respectfully,  
Patricia Inman

**Correspondence:** 35 years ago I joined with other citizen volunteers to create responsible off-leash dog parks at Point Isabel in Richmond and at Cesar Chavez Dog Park at the former Berkeley city dump. These parks are models of success today. Well-exercised dogs and their people are healthy and better adjusted. Responsible dog people recognize that safe, off-leash freedom in our crowded parks and beaches comes with requirements: dog training and socialization, cleaning up all waste, respecting others' rights and well-being. Point Isabel and Cesar Chavez improve these behaviors and promote community consciousness.

We agree that the GGNRA is unique: a natural gem in an urban region- -the heart and lungs of our connected cities. We must not only preserve this rare natural resource, but we must also balance the needs of all constituents. If 50% o Bay Area households include dogs, we must preserve accessible open space in our counties, especially at urban beaches. The current plan is far too restrictive, especially for Marin and San Mateo counties. Dog people with cars will have to drive farther for off-leash exercise, making regional traffic worse and greatly impacting the remaining off-leash areas. Please do not vote for the plan as it is currently configured. Thank you.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo

County and on new lands that the GGNRA acquires in the future.

Sincerely,

Peter Wan

**Correspondence:** To All Persons involved in proposing and implementing unreasonable reductions of dog off leash areas.

My personal history is as a worker and user of the GGNRA. Dogs are not a worthy subject of review. The percentage of what problems they cause through out the years are fractional compared to other important topics such as: money saving, safety issues, environmental impacts, inner city youth exclusion, corrupt contractors and NPS officials not hold accountable for the duties they are responsible to perform for the

GGNRA.

As a dog owner for the last 14 years I have been to all of the areas that are available. In all of these years very little has changed. That is said in the best possible way. The only thing that has changed is the Management and where the money/funds come from. I feel with each new onset of players that there is a hidden agenda to rid the GGNRA OF THE REGULARS WITH DOGS WHO MAINTAIN A CARING CONSTANT PRESENTS DAILY.

Please consider scraping all of these proposals. Start a more people/dog friendly conversation. Open up your sources of findings, information, research and science from more well versed avenues for future actions.

The joy of a dog swimming, running and enjoying the same places I do is why I live here, pay taxes here, and support any dog off leash areas.

Thank you, DAB

**Correspondence:** For about fifteen years, I have observed the impact on our parks, and specifically GGNRA, by off-leash dogs. I have also witnessed many dog-owners behave with careless disregard for whatever dog use rules might apply in a given situation. I have concluded that enclosed off-leash dog areas are the best way to keep pets, people, and plovors (as well as other wildlife) safe from harm. The other solutions tried, which allow, for example, for owner discretion, or for off-leash dogs in designated open spaces, or for timed use, simply do not work to protect people, pets, wildlife and the environment. It seems that very specific, enclosed areas will clarify the situation. Enforcement becomes pretty obvious. If outside an enclosed area, the off-leash dog must be considered in violation, a ticket issued.

I have watched countless moments when handicapped people, children, other pets, as well as birds, are frightened by roving off-leash dogs. I also watch the degradation of the ground and ground cover by uncontrolled dogs.

It is time for the final plans to roll out, time for enclosed areas only for off-leash dog recreation. The GGNRA belongs to all of us, it is a natural gem that must be safe-guarded.

**Correspondence:** My name is Sienna Rogers, I live just a few blocks from the Presidio in San Francisco and have been a resident of San Francisco for over 10 years. Two years ago I adopted a dog from the SPCA. Both before then and now even more, I have been a frequent walker, runner, hiker, and biker at many of the locations throughout the GGNRA. It is a wonderful resource for all bay area residents and I am grateful for all the work and investment the community and the park service invest in this resource. It is one of the principle reasons I love living in the Bay Area.

As a user of the GGNRA prior to having a dog, I never felt a conflict or observed any conflict with

---

different stakeholders. I personally hope you will find that off leash dog areas are sustainable and acceptable in most of the areas that currently permit off leash activities.

Since adopting my dog, I have found myself out in substantially all of the GGNRA parks even more. Being a dog owner has enhanced my sense of community and I've met and engaged with countless other dog owners as well as hikers and runners in the GGNRA and in my neighborhood.

I believe protecting our environment should be a high priority for our community, however, I encourage you to ensure that the policies implemented in the plan for the GGNRA don't overly rely on perceptions or assumptions about impacts of dogs on the GGNRA. Any decisions that would have a significant impact on the availability of this immense resource should be based on sound scientific evidence and process. I also encourage you to think creatively, and potentially institute pilot programs that try to maximize the benefits of all users while reducing risk to the environment and the visitors and bay area residents as well as our canine companions.

Thank you for taking my comments.

Sienna

**Affiliation:****Received:** Feb,18,2014 18:25:54**Correspondence Type:** Web Form**Correspondence:** I live in San Francisco and take my dog to the Presidio and Chrissy Field regularly.

I oppose the Preferred Alternative and feel it is too restrictive, and in fact will likely create more dangerous situations in our parks for people and their pets. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. I am specifically opposed to fencing surrounding or delineating any off-leash area in the GGNRA. Penning in animals and their owners will make visitors unwelcome, and I feel will also make off leash areas less safe.

In my experience, people who do not have good voice control over their dogs to to parks with fences, such as Lafayette Park, near our home. There have been incidents there of people bringing out of control dogs to these areas because they feel there is a safety mechanism in place. This is dangerous for other pets, their owners, and especially children.

We must have areas that are off leash for people to take their dogs, under strong voice control at all times, for the health, safety and vitality of our community.

Thank you.

I'm not sure if you're aware, but humans are not meant to live in cities - we were built to walk on dirt not pavement, to breathe pure air, to see the stars in the sky. The human body is designed to walk at least 10, 000 steps per day. For some people, the only walking they get to do is when they take their pet outside. If you reduce the places available for people to take their pets for fresh air and exercise then you are depriving people of an essential experience that enhances their lives and makes modern city living bearable.

**Correspondence:** The preferred alternative would unfairly discriminate against disabled and senior recreational access by unreasonably enforcing a six foot limit on leash length. For seniors and disabled persons there needs to be greater flexibility in the tether, such as either voice control or the popular retractable leashes. Having recently suffered a neck injury I have found that even with my well-trained dog I can not comfortably walk with a fixed length shorter leash without experiencing occasional painful and damaging pulls on the leash. Consequently I think that the Park Service should accommodate disabled and senior access by allowing use of retractable leashes greater than six feet in length in some portions of the Recreation Area..

I think plan unreasonably tries to fit a one size fits all approach to the park Obviously, in some parts the

key factor is congestion and human interaction with dogs. In such areas longer length retractable leashes may be less of a favorable alternative than in less congested beach areas where the Park Service presumably identifies the key factor to be wildlife interaction with dogs.

The Park Service preferred alternative fails to consider less restrictive alternatives that would achieve the goals that the Park service articulates for certain beach areas. For example as to Ocean Beach the Park Service asserts that it needs to separate dogs from birds. However, a short six foot leash is not the least restrictive alternative. A longer leash or retractable leash would still allow some individuals to walk on the beach, as would voice control. Similarly the Park Service could largely achieve the same presumed wildlife protection goals by simply enforcing a ban on any dogs being allowed within 50 or 75 feet of a bird. Alternatively the Park service could in the interim test a program of certifying people with well trained voice control proven dogs for off leash recreation in some areas.

A total ban on walking dogs on Ocean Beach, even if it were enforceable, would likely have marginal impact on wildlife and fails the balancing test when analyzing any potential benefit in comparison much greater downside impact on recreational access. The Park Service purports to want to ban off leash beach walking to encourage the snowy plover population but fails to apply a proportionately different approach to areas with the least chance of plover presence. Particularly, the beach area south Sloat Ave is not known to have many plovers and is largely free of tourists. It is a traditional area for off leash dog walking and adjoins Ford Funston which is also a traditional off leash area. There is an advantage in park planning to allow for contiguous areas so that enthusiasts can enjoy longer recreational access experiences. This would be a perfect area to allow continued off leash access, even if the Park service insists on making the mistake of overly restricting off leash access in other areas.

If the Park Service wishes to engage in a more balanced public policy evaluation, and fairly consider the best locations for public access, the Park Service should evaluate all possibilities and paint on a full canvass evaluating all potential sites for dog walking recreational access rather than arbitrarily limiting the areas under consideration and only considering alternatives restricting access further. Such an arbitrary approach limiting the potential for the best public input is all the more a problem when it is clear that the overwhelming public opinion is that the Park Service should consider expanding access.

The Park Service needs to have an unbiased review of the costs vs. benefit consideration of the proposals. 34 years ago the Citizens Advisory Committee made a reasoned evaluation and determination of the best areas to locate off leash access with the least impairment of resources. Making a change off the prior sound analysis will be exceedingly costly and have little environmental or social policy benefit, if any. I, like many, believe it will actually have adverse impact on the people, and also will be adverse to the Park Service. Such expensive and likely contentious changes should not be made absent a clear showing of benefit. Here, there is a great debate over whether there is any benefit at all. Hence the proposal does not meet the most basic test of cost-benefit-risk analysis.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I am a native Marin resident who, for most of my life, has had a dog.

I regularly take my dog to Muir Beach to run and play and we also hike the Miwok and Coastal trails. This is a long established part of my recreational activity. One of the truly great aspect of living in this area is the access to this urban recreation area. i do not look to the GGNRA to provide me a Yosemite, Yellowstone, ZION, Grande Canyon,.....etc wilderness experience. We live nested among 6-7 million residents with in a virtual stones throw. i look to the GGNRA to fulfill it's promise as a place where we the people of this area can benefit from the varied, urban recreational access we have to these open natural spaces. Bringing my dog along is a part of it.

Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions on the publics use of our public lands.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Sincerely,  
Charles Kingsbury

**Affiliation:****Received:** Feb,18,2014 00:00:00**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA parks in the Bay Area, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is far too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections for which I previously wrote and of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Statements like "dogs impact the habitat of California's Humpback Whales" is a case in point.

The GGNRA has lost sight of the fact that the Bay Area Parks are set in a densely populated, urban area while most of the parks like Yosemite and Yellowstone do not have the close population that the Bay Area has. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I currently am part of a task force for Burlingame/Hillsborough looking to revamp the dog parks, but if the dogs are unable to be off lease such as you are planning, the dog parks will be over run with too many dogs and puts all the animals at risk for disease.

There are many avenues to generate additional income to assist with some of the concerns that citizens against dogs and your department have raised. I implore you to be open to other options.

**Correspondence:** Hi there,

My name is Kiley Nichols and my husband and I live in SF and are weekly visitors of Crissy Field. As the owners of a high energy Italian Greyhound mix, the off leash areas at Crissy Field have been very important to us, not just for an exercise standpoint, but also for Penny's ongoing training. She is trained to stay near us, avoid other dogs and people unless we give her permission to "say hi." This isn't something we could have accomplished without access to off-leash dog walking areas.

For this reason, I am writing to express my significant opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It restricts the area to off leash dog walking way too strictly and will have detrimental effects on both my health and that of my dog.

Further, the language used in the plan - what "might," "can," or "could" happen - is too vague and does not provide specific instances of these events/impacts happening. There has been no research published or conducted by the GGNRA to support the restrictions mentioned in the plan. It is simply not based in fact.

Finally, the fences proposed over off-leash recreational areas can and will do more harm than lack of fences. If areas of fenced off, owners who do not properly train their dogs will feel entitled to let them roam free and dogs that are trained by voice commands will suffer as will their owners. This will be seen as an excuse to let their dogs run without supervision, which is not a solution, but the creation of another problem.

The GGNRA was given jurisdiction over this areas under the promise/agreement that the area was to be used for public recreation in a highly dense urban environment and the measures mentioned in the new draft dog management plan do not align with those wishes. I strongly oppose this new plan and do not want to see it put into action.

<b>Correspondence:</b>	Dear Superintendent Dean,				

---

My dog is too old now to walk regularly in the GGNRA, but in his youth we went almost daily. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

The needs of wildlife and residents must be balanced, and I don't believe that the "preferred alternative" does so.

Its severe restrictions will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The R in GGNRA is for RECREATION. San Francisco was never a verdant wonderland: it was a city of sand dunes and swampland that have been already changed forever by human use. I believe strongly in preserving natural areas that are still wild, but it seems short-sighted to try to return urban parks such as Ocean Beach to a "wild" state where people and their pets are not welcome to exercise or relax.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I am disgusted with the pattern you've adopted so far, which seems to avoid real engagement and ignore the will of the people.

Sincerely and apprehensively,

Kelly Ryer

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Ray Kuhn

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog

management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Caroline Kwan

**Correspondence:** My name is Andras Petery and I live at 2232 Divisadero Street in San Francisco where my service dog, Cu Chulainn, and I responsibly enjoy off-leash walks in our local neighborhood park, Alta Park, and Chrissy Field multiple times per week. I am writing to express my deep concern and opposition to the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. Specifically, my concerns are based on the following:

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Optional Points to Make (choose as many or as few as you want):

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits

the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A /supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Sincerely,  
Andras Petery

**Correspondence Type:** Web Form  
**Correspondence:** I am a resident of Pacifica, and a dog owner as well as an equestrian. I enjoy recreating on Rancho Corral de Tierra land on an almost daily basis - and have done so for the past nine years. Because I spend most of my time on the part of Rancho land that lies between Montara and McNee Ranch State Park, my comments are specific to that area.

I support Alternative A for this area. No rationale has been presented for banning leashed dogs from so many trails, as proposed by the preferred Alternative F. Hikers, cyclists, and equestrians are allowed on those trails. Why would a dog on a six foot leash be more harmful to the environment than any other user group?

On the other hand, I am very much opposed to any Alternative that would officially allow "ROLA" dog walking in this specific area. The Old Pedro Mountain Road trail is the only non-motorized route between Montara and McNee Ranch State Park. As a broad, paved, and relatively flat trail, it is heavily used by hikers, joggers, cyclists, and equestrians. It is frequently used by school groups, as well as families with children in strollers or riding their first bikes.

In the past, the area has primarily been used for recreation by local residents. Those who chose to exercise their dogs off leash practiced courtesy to other users, and problems were rare. Times have changed since opening of the Devil's Slide Tunnel, as well as greater awareness of the area due to becoming part of GGNRA. The result has been a large influx of users who cannot control their dogs, and (apparently) see no reason why they should.

Every outing now involves being run at by unrestrained dogs. While these animals may have friendly intentions, that is not enough to ensure the safety of other users. I won't walk my own dog on leash there anymore - having been charged, attacked, and bitten by a loose dog (in another area), he doesn't like unrestrained dogs running up to him. While on horseback, I have been confronted by multiple loose, unfriendly dogs, with no owner in sight or earshot of my calls for help. I have also been verbally abused for asking people to stop their dog running around my horse's feet - despite my expressed concern for the safety of their dog!

All of the current issues are occurring despite the threat of expensive federal tickets for leash violations. GGNRA has not demonstrated any capacity for sensible enforcement of existing laws; rangers either rigidly enforce leash laws or (for the most part) are completely absent from the scene. Why would anyone expect ROLA enforcement to be any better? At least under the current regulations all park users can understand that those who choose to take their chances and violate leash laws risk facing legal sanctions as well as liability for any injuries or property damage caused by the actions of their uncontrolled pets.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly both with and without my dog on the beaches and trails within GGNRA borders, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's newest version of the Draft Dog Management Plan. The newest proposals remain way too restrictive and violate the purpose and intent with which these lands were deeded to the GGNRA by our local governments.

The GGNRA's preferred alternate will prevent me from recreating for my own health in the way I have on GGNRA properties for over 20 years - for which I have caused, I might add, no more adverse affect on these properties or the local environment than have my fellow hikers, joggers, bicyclists, hang gliders or windsurfers who use the same beaches and trails. My use needs no more legislation than theirs, and all are within the parameters of the recreational use for which these properties were set aside.

The DEIS received thousands of comments with the majority opposed to the preferred plans, yet there is little change between the DEIS and the newer SEIS, and in many cases the changes are even worse than the original proposal:

â€ The SEIS continually quotes from comments received that uphold its own viewpoint that dog walking is a negative use, yet fails to quote the much higher percentage of comments that refute the plan's proposals and uphold the validity of existing uses and the lack of need for any change.

â€ The proposal to install fencing to designate dog accessible areas is unacceptable for a multi-use nature-based recreational area. What is next, fenced children's areas, fenced windsurfing zones, fenced bicycle paths? No one wants to see a singular use "dog park" within Crissy Field or other parklands.

While I can understand and would even accept a timed-use plan for the East Beach at Crissy Field, I can see no scientific, social or necessary purpose provided by any well-researched documents that would require any changes to dog walking access anywhere else on Crissy Field. And the SEIS provided nothing to prove otherwise.

â€ There is no verified study within your documents showing what the environmental consequences will be from forcing tens of thousands of current users into less than 1/4 of the area currently accessible to dog walking. With NO beaches available in San Mateo County properties, and only one off-leash beach remaining in Marin County, Crissy Field, Ocean Beach and Fort Funston would see even higher dog walking use within a much smaller footprint.

â€ The issue of how having less access will affect local municipal parks has been swept away as negligible within the report, however no additional study was done as was requested by the San Francisco Board of Supervisors. The only parks mentioned as taking up the overflow from the GGNRA are designated dog parks, but the affects will be on closer proximity parks such as the Marina Green, the Palace of Fine Arts, Moscone Park, and Mountain Lake Park. The impact on these properties will be significant with less access to traditional dog walking areas in the GGNRA, yet has not been addressed.

â€ Claims by Mr. Dean himself that dog-related incidents are the largest percentage of complaints received by the GGNRA are not supported by either the data provided in the DEIS or SEIS, or by the the most recent data (2013-2013) released by the GGNRA. Out of the hundreds of thousands of visits by people with dogs last year alone, there have only been 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing, and 1 horse bite incident documented. However, the reported incidents involving people are much higher. This data does not support the reported necessity for any change in policy.

â€ The request for \$2,000,000 for more rangers to implement the dog management plan would be much better spent on simply enforcing the existing 1979 Pet Policy and on new educational and dog-friendly park programs, as well as supporting the existing infrastructure used by all park visitors.

Quite simply, the GGNRA has lost sight of its purpose: it was legislated as a RECREATION AREA for a densely populated, urban area, NOT as a national park. These trails and beaches have allowed for dog walking since before the original Pet Policy of 1979. A Federal Panel concluded in its November 2002 recommendation that it would be appropriate to create a Section Seven Special Regulation to allow off-leash recreation in the GGNRA. At that time, the GGNRA could have instituted the 1979 Pet Policy as the Section Seven Special Regulation for the GGNRA. Instead, they decided to institute Negotiated Rulemaking (NR) to create a new pet management policy for the GGNRA based on will, not science or necessity.

No change in existing policy is the only alternative that I support. The 1979 Pet Policy needs to be formalized and supported with off-leash areas in San Mateo County and on any new lands that the GGNRA acquires in the future. Recreation is the purpose of the GGNRA. Let's keep it that way.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Marcia N

**Correspondence:** Dogs do not belong in public parks. Perhaps in some urban settings where there are paths, dogs could be allowed on leash. However, for most areas where there are trails through nature areas, dogs are non-native species that upset the natural wildlife. From an environmental standpoint, dogs belong in their own yards, not on public lands. Dogs by their nature harass other wildlife, especially when off-leash, so this is in direct contradiction to the premise of a park where people can enjoy a natural setting.

From another angle, dogs off-leash are dangerous to the public. When one goes to enjoy a public park one should not have to be worried about being harassed, nipped or bitten by dogs running free. Dogs should be allowed to run free only in those public park areas that are fenced and well labeled for dogs to run free.

**Correspondence:** My wife wrote the following eloquent expression of the short sighted decisions that GGNRA managers have engaged in during the comment period. I wholeheartedly support her sentiment and statement of facts.

- - -

Dear Superintendent Dean,

My dog is too old now to walk regularly in the GGNRA, but in his youth we went almost daily. I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan.

The needs of wildlife and residents must be balanced, and I don't believe that the "preferred alternative" does so.

Its severe restrictions will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The R in GGNRA is for RECREATION. San Francisco was never a verdant wonderland: it was a city of sand dunes and swampland that have been already changed forever by human use. I believe strongly in preserving natural areas that are still wild, but it seems short-sighted to try to return urban parks such as Ocean Beach to a "wild" state where people and their pets are not welcome to exercise or relax.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

I am disgusted with the pattern you've adopted so far, which seems to avoid real engagement and ignore the will of the people.

**Correspondence:** I oppose the preferred alternative described in the GGNRA's new draft dog management plan. As someone who regularly walks, runs, and picnic's with my partner and her dog in these areas, the plan would severely impact our use and enjoyment of these areas. It is already hard enough finding a place where we can go to run with the dog, and this new plan will make it even more difficult.

**Correspondence:** In the draft report, a section on Park Operations states that " Park staff, time, and money would be needed to manage any existing or future dog policies." While this statement is obviously true, it says nothing about the need for a change from the present dog management policy to a new dog management policy. The statement applies equally to both the present and the proposed policy. I expected the report to provide a comparative analysis of the staff time use under the present and the proposed policy. So, I kept reading...

In chapter 2, the report describes the expected costs of implementation of the various options. Option A, which is the "no action" option currently costs approximately \$430K. I assume that these are the annual costs for the staff and materials associated with the operations for the present policy. For each of the other alternatives, the report estimates implementation costs of between \$2M and \$3M, with the added costs associated with "hiring of additional personnel for implementing the dog management plan". These added staff are presumably permanent. Based on this set of statements, it seems true that the proposed changes to the operations are all at least 5X more expensive than the supervision of the current policy because of the significant increase in staff needed to impose and manage the new policy.

So, if I understand this correctly, the Park Service is interested in imposing new rules and regulations that will severely limit the use of the GGNRA by the local population, and will need a 5x increase in staff in order to implement and enforce these new restrictive policies. A consequence of this proposal will be 5X more park service staff wandering about in the GGNRA writing tickets and otherwise interfering with the use of the park by a smaller and smaller number of citizens.

As a taxpayer, and a user of the GGNRA under the present policies, I am strongly opposed to any plan which costs the taxpayer significantly more money and provides significantly less benefit.

**Correspondence:** Dear Superintendent Dean,

Please don't take any action to change the current environment that exists in our beloved GGNRA. As citizens of these counties and as dog lovers - these are our beaches and trails and open spaces, and we respect them, and steward them with the utmost respect for the land and all forms of life there. It's vital that these recreation areas remain unmolested by more rules and fences, and less access for the citizens of the counties that ceded these areas to the NPS.

I think House Minority leader Nancy Pelosi stated it eloquently and succinctly in her letter to you, as stated in the San Francisco Chronicle (12/03/2013):

"Our city is named for Saint Francis of Assisi, patron saint of animals and the environment," wrote the congresswoman. "There is a long history of off-leash dog recreation in San Francisco which began before the transfer of land from the city and county of San Francisco to the National Park Service. Responsible dog guardians must continue to enjoy recreational activities with their pets in our spectacular setting."

Thank you.

Sincerely,  
Edward O'Connell  
Tiburon, CA

**Correspondence:** I am writing to comment on the GGNRA Dog Management plan. I have reviewed the document and would like to add my support for less restriction on dog accessible areas within the park system. My family, which includes our dog love to visit and contribute to the GGNRA park system. We feel that families with dogs deserve places to let dogs run free and enjoy nature as much as any other animal. Certainly they should be given equal access as those places as horses. Please do whatever is possible to retain the access that dogs currently enjoy. If there are problem dogs, the owners should be responsible for them and laws should be enforced enforced as appropriate. Don't discriminate against dogs and their owners who abide by established rules and policies.

Thank you,

Michael Lee

**Correspondence:** I very strongly oppose the plan put forth by the GGNRA to ban dogs from Muir Beach as well as from the hiking trails. Not only will this harm local businesses that I currently frequent when I take my dog to these locations, but it will also concentrate more dog owners to fewer places, increasing congestion and causing over-use.

I also strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Muir Beach and the Coastal trail.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Sincerely,

Harald Loeffler

**Correspondence:** I am a San Francisco resident whose dog regularly frequents Crissy Field, Fort Funston and Ocean Beach. More importantly, I am vehemently against a proposal that would limit off-leash dog areas. Particularly given the lack of supporting evidence to justify such a change, and the dramatic affect it would have on dog owners who utilize the space to permit their dogs to get exercise, it appears prudent to permit the off-leash areas to remain as is.  
Thank you for your consideration.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the Ft Funston and Ocean Beach, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

As a dog owner we need designated locations to take our dogs for them to run off leash to properly exercise and experience the outdoors. It is in these moments as a dog owner when my dog and I are able to run free in open space that I most enjoy GGNRA properties. For years I have chosen to donate to GGNRA parks to support these beautiful properties that allow dogs off leash. If GGNRA applies this new management plan, I will no longer visit these properties or donate to them. I strongly urge you to reconsider removing the privilege of these dog friendly areas.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. **Correspondence:** Dear GGNRA Superintendent:

I live in San Francisco and regularly walk with my dog at Fort Funston and Ocean Beach, and occasionally at Muir Beach and along the Miwok trail. I also run at Crissy Field and mountain bike in the Marin Headlands. The comments I am submitting today are from my personal experience as a frequent user of these recreational areas and my response after carefully reviewing the draft supplemental plan.

On a related note, I had submitted comments to the draft plan in 2011 and I am disappointed that the current plan did not address my significant concerns. If there is any question that people who use these recreational areas and their political representatives want to be heard and taken seriously, please see the letter from U.S. Representative Nancy Pelosi to GGNRA Superintendent Frank Dean on December 2, 2013 asking that Comments from the community not only be reviewed, but carefully considered and incorporated into the final dog management rules.

My overall comment is that the Preferred Alternative is too restrictive and I oppose it at all recreational units in the GGNRA. There is no justification in the EIS for such major changes. I urge you to formalize the 1979 Pet Policy and add reasonable and adequate off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I am opposed to the Monitoring-Based Management Strategy that replaced the previous Compliance-Based Management Strategy. The strategy is still based largely on compliance with leash restrictions and there are no thresholds for violations or other conditions that would trigger any change in status even if on a temporary basis. The plan allows the GGNRA to unilaterally make additional closures without providing meaningful descriptions of the conditions and metrics that would warrant such actions; these changes in use would not be subject to a requirement that public review and input be obtained. Any compliance based plan needs to be adequately developed with sufficient detail to enable meaningful public comment.

After almost three years and two draft plans comprising a combined 4,300 pages, where is the scientific study conducted at Fort Funston or any other recreational unit in the GGNRA? There are few, if any, scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so the plan cites anecdotal observations of impacts made by National Park Service Staff. However these anecdotal claims have no context - how frequent were they, how serious, etc. - and cannot be used to set policy. An EIS is expected to be based on science, not anecdote.

Fort Funston is arguably the most popular place for dog walking and the plan to eliminate the vast majority of space for off-leash access and condense dogs into small areas is dangerous. There is no rationale and it could set up confrontations between dogs as well as people in small places. Furthermore, there is no justification for cutting off beach access between Fort Funston and Ocean Beach. Why would you want to do that? The plan cites two protected species at Fort Funston, the state threatened Bank Swallow (State) and the federally and state threatened San Francisco lessingia. However, there is no evidence that dogs or humans for that matter affect the swallow and the lessingia does not exist at Funston.

Your data still does not support claims that there are major safety problems from dogs that require off-leash restrictions. Even the total number of dog-related incidents (nearly all of which were for having dogs off-leash where they weren't supposed to be) from 2001 to 2011 - 4,932 - represent a tiny fraction of the million dog visits each year (p. 252). The vast majority of incidents (at least 89%) the GGNRA involve people without dogs, including murder, rape, robbery, drugs, and larceny. People are the safety problem in the GGNRA, not dogs.

Why does the GGNRA refuse to acknowledge these lands are national recreation areas and they are to be managed differently than a back country remote wilderness of a National Park? You misrepresent the enabling legislation and the reason for the founding of the GGNRA: the purpose is to offer a national park experience to a large and diverse urban population (p. 1). However, the enabling legislation says the purpose of the GGNRA is to provide for the maintenance of needed recreational open space (Enabling legislation, first paragraph).

I fully support the letter from Ken Weiner to GGNRA Superintendent Frank Dean on February 14, 2014 that says the GGNRA dog management draft plan and supplemental EIS contains serious bias and lack of objective analysis. His letter clearly demonstrates the significant problems with the plan and I believe it letter raises critical questions about the motives of the GGNRA and National Park Service, as well as your competency, in drafting the plan.

You have an opportunity to craft a plan that is balanced and fair, one that offers reasonable and adequate access for people with dogs for areas that are on- and off-leash like they have been since before the creation of the GGNRA.

Sincerely,

Dave Emanuel

<b>Correspondence:</b>	GGNRA is a wonderful place to recreate and to experience nature and even seek solitude.				

I am writing to say that the National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.

â€ We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs.

â€ Off-leash areas should be marked off with fencing or natural borders such as bushes.

â€ Park officials need to enforce the dog rules more vigorously.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I urge you to implement the proposed plan, with the addition of fencing for off-leash areas.

<b>Correspondence:</b>	I want my tax dollars to support EVERYONE in the city of San Francisco, not restrict some people.				

I have recently learned that it could cost 2.5 million dollars per year to enforce the proposed ban on off leash dog walking in some of San Francisco's most favorite areas for dog lovers (and this represents more than 40% o the population of SF Bay area).

That money should be used to enhance this recreational activity (if spent at all), not to ban it. I cannot understand why dogs cannot play on the beach under the supervision of their owners. This has always been a popular activity and is not detrimental as far as I can see.

The areas where dogs can be now is already quite restricted and I cannot see why it should be further diminished. Let the tax paying citizens of the city and their canine companions continue to enjoy the less than 1% o GGNRA lands - as they can now.

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I have lived in the UK for the past 20 years. During this entire time my husband and I have had Labrador Retrievers in London, where fortunately we have been able to walk our dogs off leash in beautiful open spaces, but much smaller than the GGNRA. We are moving back to Marin County and we have been looking forward to enjoying the open space with our dog Riley. We were shocked to find out this might not be possible, even though he is always under voice control and he has attained Gold Medal Status with the UK Kennel Club's "Good Citizen Dog Scheme".

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed

---

in the 1979 pet policy. That policy still works today and should be retained.

I urge you to reconsider this ill-conceived plan. We are counting on you to be able to exercise both ourselves and our dog responsibly.

<b>Correspondence:</b>	Dear Superintendet Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Chris Hackler

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly (with friends who own dogs) in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with dogs for my own health and my friends' dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in the bay area and on new lands that the GGNRA acquires in the future.

I am lucky to have friends with dogs, even though I don't own one myself. When we are out walking, I see that most other non dog owners react favorably to having dogs off leash. The vast majority of dogs stay close to their owners and behave themselves. Most dog owners are very attached to their animals, care for them & clean up after them. Dogs are an asset. From my perspective, there are far more humans that leave garbage and trample on sensitive areas.

Sincerely,

Susan L. Schoen

**Correspondence:** I am writing to you concerning the dogs in the Golden Gate Recreation Area. I have resided in San Francisco since 1980. I would love to visit the GG recreation area, to go for walks on Crissy Field or other places of natural beauty. I find it impossible to have a pleasant walk because of the many many many dogs running loose. Their owners stand around with their cell phones, talk with each other, throw things for the dogs to chase, but the owners DO NOT mind their pets. I love dogs. I grew up with beloved pets. However, I feel that I should have as much right to go for a walk on the beach or in a park as someone's dog. I do not. There are too many dogs and they are running loose. Even on park areas where there is supposed to be a leash rule, no one keeps a dog on a leash. Seriously, in the past at least ten years I think I have seen two dogs on leash, and they may have been about to be set loose or may have been just recalled and leashed. The running loose of the dogs is not good for the beach. It is harmful to the carefully restored natural areas. It is a death sentence for the birds. It makes no sense at all. Allowing it is just giving in to the self-indulgent, selfishness of the dog owners. I feel this situation is very like the days when smokers were allowed to smoke in restaurants and other places. A person who did not want to have to breathe their smoke was considered anti-social. Rather than criticize the smokers for their anti-social behavior, it was anyone who dared to say, "yes, I do mind," when asked the formula "Do you mind if I smoke?" That question was considered all that was required of the fashionable smoker. A park is not just a public toilet for dogs. Dogs are not part of the natural environment. I have also had the extremely unpleasant experience of having to stop, start, stop, wheel my car around in order to avoid dogs which were not on leashes. After endangering my life in order to save the life of a little dog running loose in a parking lot or in the middle of a street adjacent to a park, the owners appear and tell me that the dog is under "voice control." This is simply insane. Each time this happened, the owner would be calling and calling while the dog, either confused and lost or over excited by the traffic and running, just kept running away from the owner. In both cases, if I had not had great reflexes the dogs and possibly the owners would have been smashed. I know that the dog lobby is powerful because it is so well organized and vocal. I also know that the beaches, the tide pools, the shore birds, and yes, individuals such as myself do not have a voice. I appreciate the opportunity to beg you not to give in to this lobby. This is a group which wants its own way and will cry and pout until you give them what they want- -even if that is just so that they will be quiet and go away. I beg you not to capitulate. These parklands are a tiny per centage of our natural heritage. It is little enough that is left to allow us to imagine nature in a natural setting and

allow us a chance to relax while breathing in fresh air and enjoying a quiet atmosphere. That quiet atmosphere cannot exist with packs of dogs chasing birds, balls and each other. I am so tired of having to tip toe around the edges of the beach or park so that I am not in the way of the dogs. I do not enjoy seeing them urinate on the beach and the delicate plants. I do not enjoy seeing them defecate and then wondering if the owner will stop talking long enough to clean up. Nine times out of ten, they do not. I have friends who are guilty of this: they look around and away from the dog. "Oh, that's not my dog," and walk away a little.

Even if they do clean up, does that really belong in the parkland? Dogs are not natural, wild animals who are part of this natural environment. We worked so hard to win the protection of this magnificent place which can never be duplicated or replaced. Please act as champions of the park lands and limit areas in which the dogs can run and limit to the greatest degree possible off leash dogs. Thank you.

<b>Correspondence:</b>	To Whom It May Concern,				

Thank you for allowing us to make comments. I am a NON dog owner. Here are the reasons why there should be strong restrictions on dog walking / owners:

- NON dog owners have not organized, or raised funds like the SF PAC: <http://www.dogpacsf.org/>
- please take note of the SF Dog PAC - bc there will be many more comments generated by this group, that will disproportionately outway NON dog owners.
- just this Saturday, I was hiking on a "leashed" trail, the Cataract Trail, and there were 4 dogs off leash.
- It's not the dogs but the owners that are the problem:
- I'm tired of seeing the green, black, or blue dog poops bags that owners have left on the ground.
- I've found those bags on my street in SF, in the Marin headlands, on Ocean Beach, at the trails by Ocean beach.
- The dog owners have purchased dogs that they cannot exercise in their city apartment - but that doesn't mean the the responsibility falls on our shared public property or NPS land.
- The dogs remind them every day that they need to get out.
- When I go to our shared public / NPS land, I don't want to be interrupted by someone else's dog.
- Dog owners often think.... oh, it's not that big of a deal. The problem is.... the dog owners think this!!
- I like to see the bobcats, coyotes, rabbits, squirrels on the public property / NPS land.
- Research clearly shows that there are less critters around when dogs are present - bc they scare them off!

- please be our voice for the non dog owners and make strong protections.

- Don't let dogs take over our space!

Thank you!

Matt

**Correspondence:** I am an Asian pharmacist who works and resides in the East Bay. I belong to the Nature ConservancyI and have a dog. I have visited almost all of the SEIS sites of the GGNRA in San Francisco and Marin County, and hope to expand my travels to San Mateo County. I visit a GGNRA site about once every 3 weeks for an off-leash ( and under voice control) dog walking experience in nature. 30% o the time I am accompanied by other adults and/or children ages 2-17.

There is a great feeling of discovery, spontaneity , freedom and relaxation that happens when out on an off-leash outing to the GGNRA that does not occur with the "chore" (the tugging, the pulling, the untangling, the forced stops on both ends of the leash - I feel like I'm out and about with a canister-style vacuum cleaner ) of on-leash walking.

I read the SEIS alternative plans A-F for all sites. I find Plan F, the NPS Preferred Plan, unacceptable as it is too restrictive for off-leash dog walking. Yes, unacceptable.

I am disappointed that " SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative. The SEIS lists many, many comments from people opposed to dog walking and very few from people who support dog walking. The SEIS copies, without change, entire sentences and text from the DEIS about studies of dog impacts, especially on wildlife and birds, even though DEIS comment showed that this text was inaccurate, misleading, and misrepresented what the studies actually said. Yet the SEIS copied it word for word. Comments supporting dog walking were not used to argue that there should be more off-leash restrictions, while comments opposing dog walking were used to argue for more restrictions," to quote SFDog.

Recreation - The GGNRA has a recreation mandate and the DEIS treats recreation as an adverse impact, rather than a value to be preserved. DEIS should add section evaluating benefits of recreation.

Urban Environment - The GGNRA is in a dense urban area, yet the DEIS is written as if the Bay Area and its residents dont exist just outside its boundaries. This is an urban area, not a pristine wilderness. The DEIS ignores impact on residents or area resources, especially city parks if restrictions take effect. Note that the SF Board of Supervisors passed a resolution opposing the Preferred Alternative because of the lack of study of impacts on city parks.

Undocumented Assumptions - The DEIS is full of assumptions about impacts - things that might or could happen - but there is no evidence of actual observed impacts. Cannot base management plan on hypotheticals. The GGNRA has had years to observe and document actual observed impacts. The fact the GGNRA did not include them in the DEIS indicates they dont exist.

Safety - DEIS claims a major safety problem with dogs in the GGNRA. But their own data indicates dogs accounted for only 2% o serious safety incidents involved dogs. The vast majority of serious incidents involved people only. Even if you include non-serious incidents, dogs accounted for a mere 7% o incidents in the GGNRA. Dogs are not a major safety problem.

Diversity - Dog walkers constitute the most diverse group of people who use the GGNRA - people of all

---

ages, people with disabilities, gay and straight, all ethnic groups, all religions, all social and economic classes - all interacting in positive ways, bound by their common love of dogs. There is no mention of this diversity in the DEIS. Minorities are mentioned only in the context of being afraid of dogs. The DEIS incorrectly quotes from a focus group of people who had largely never been to the GGNRA as proof that minorities don't come to the GGNRA because of the dogs. " to quote SFDog.

Areas in San Mateo County that the GGNRA administers or will in the future should have full recreational off-leash dog areas.

Thirteen years ago, on Jan.23, 2001, 7:30 pm, I was one of the many who stood outside the packed meeting room at the Presidio in SF to protest restrictions in the GGNRA to off-leash dog walking. On Oct.21,2013, I went on record at an SF City Council meeting to support SF Supervisor Scott Wiener's resolution opposing the GGNRA's restriction on dog access.

Thank you for your attention to my concerns as a tax-paying, voting citizen! Have a great day!

<b>Correspondence:</b>	Please reconsider your incredibly restrictive pet policy and revert back to the 1979 policy. Do not try to "fix" what it is not broken. The GGNRA is not your average National Park and should not be treated as such. Our urban area needs to preserve the BALANCE of humans/pet recreation with wildlife, not eliminate it completely. Education of the public and enforcement are the best tools we have available. Please employ them instead of taking away our valuable open space.

**Correspondence:** Given that the name of the area is the Golden Gate National RECREATION AREA, I am surprised to see that the preferred plans do not emphasize what is obviously a recreational priority for a great number of Bay Area residents - walking dogs in natural areas. I understand the appeal and importance of re-establishing native plants and providing opportunities for contemplative appreciation of nature and solitude. However, I believe it is also important to offer diverse recreational opportunities, and, to the extent possible, to accommodate the interests of people who live in a particular area. With such a huge space available within GGNRA, and many, many other natural areas that people can enjoy without dogs (or with dogs on leashes), I would hope that GGNRA could re-brand itself, at least partially, as "Off-Leash Heaven."

I wish that the GGNRA planners would work WITH dog owners, as county officials did in Redmond, WA, where they allotted 150 acres as an off-leash dog park, maintained completely by volunteers, and eventually funded with a small parking fee. Instead, it feels as though the comment periods are a perfunctory step in a process that has a foregone conclusion, namely that of drastically reducing off-leash dog exercise/recreation areas.

If nothing else, give us more of Fort Funston for off-leash use. Reducing the available off-leash areas as much as you propose will mean more dogs in a smaller space, putting greater stress on the existing vegetation and soil, and likely producing an increase in dog feces per square foot. Most of us clean up, but not everyone does or will - with more dogs in less space, it won't be pretty.

Ever since the last report was released, I've treated every Fort Funston trip with my dog as though it might be my last. If I have to switch back and forth between on-leash and off, or stay restricted to a small, unattractive area near the parking lot, I am much less likely to go there at all.

Finally, I hope you will consider doing an "impact study" a year or two after you impose whatever new plan you choose - to see whether more or less people are using the area, how satisfied they are, and so on.

**Correspondence:** I used to live in San Francisco, and though I am now in the East Bay, I come to the city to enjoy the Presidio, the Crissy Field area, and other open spaces that are part of the national park- - just as I would travel east to spend time in Yosemite. Over the years, I have been surprised, even shocked, by the number of off-leash dogs. If I were a dog owner, I would certainly want to have places where I can walk and exercise my dog. But the park is for many users, some of whom want to enjoy a dog-free area as much as they want to be free to roam in open space free of buildings and cars. I am very much in favor of the new GGNRA dog rules. I think that they require everyone to compromise. After all, the GGNRA is one of the only, if not the only, parks in the system that permits dogs, especially dogs on leash. I hope that the new rules are approved and put into effect.

<b>Received:</b>	Feb,18,2014 19:23:23				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	In the section on page 91-92, which describes how the proposals meet the alternatives, I have several concerns.				

1) The report says that objective for "Minimize conflicts related to dog use by providing a variety of safe, high-quality visitor use experiences, including areas where dogs are allowed" is met. There is an inherent conflict between "minimizing conflicts" and "including areas where dogs are allowed", and the report says nothing about how these conflicting goals are weighted or balanced. At present, the number of conflicts is exceedingly low (only 95 reports in 4 years, compared against 4.5 million incidents nationwide), and the present arrangement provides for a tremendous quantity of high-value experiences, as any visitor to the GGNRA can plainly see. The proposed plans will dramatically curtail experiences related to dog walking while providing no obvious reduction in the number of dog-attacks. Therefore, I do not believe that this objective is met by any of the new proposals, and is in fact, worsened by each of them.

2) The report says "Maximize dog walker compliance with clear, enforceable parameters in order to improve park operations and use of staff resources in managing dog walking.". In fact, each of the proposed alternatives will cost between \$2M and \$3M to implement, as compared to the \$400K for present operations. Therefore, the proposed preferred alternatives will degrade park operations, requiring hiring of significantly more staff, and increase the costs of the entire operation. How can it be that the proposals are "improvements" if a clear consequence is that 5X MORE staff are required to operate under those proposals? Isn't the outcome expected by the NPS in its own reporting the EXACT OPPOSITE of this objective?

3) The report says that a goal is "Provide adaptability and flexibility so that information gathered from monitoring can be used in future decision making based on estimated outcomes, including in new park

areas." In fact, the proposed policies are substantially less flexible than the present policy. Further, the proposals are being offered without any clear data indicating that the changes will deliver any of the supposed benefits, because of the absence of any of the data required to offer any such analyses - So, how are we to believe that implementation of a policy that is broadly applied elsewhere in the NPS will lead to "information gathering"? If information is not being gathered in any of the other 60 parks operated by the NPS, how will the addition of the GGNRA to this structure suddenly lead to "information gathering"? Therefore, I do not believe that the proposed changes will meet this objective at all - in fact, the proposed changes will reduce flexibility and produce no new data - exactly the OPPOSITE of this objective.

4) the Natural resources objective is to reduce the detrimental effects of dogs on wildlife and natural vegetation. However, throughout the report, I find no evidence that shows that the present policies have produced any particular detrimental effects. There are many hypothetical statements, and plausible observations, but the plain truth is that the overwhelming majority of off-leash dog use in the GGNRA is on beaches or on planted lawn areas, where none of the detrimental effects are even possible. For example, it simply makes no sense to assert that removal of off-leash dog walking from the east and west beach areas of Crissy field will have any effect at all on wildlife or vegetation.

5) The report cites as an objective "Protect cultural resources from the detrimental effects of dog use." I have read this entire report carefully, and found no reference to any "cultural resources" of any substantial value that are being degraded by dog use. This objective is not altered under any of the proposed plans, and is of no use in justifying any of the plans.

6) Under "Education", the report has an objective of "Build community support for the plan to maximize management of dog walking use." Exactly - The goal is to "maximize management". Who decided that the Goal of the NPS should be to MAXIMIZE MANAGEMENT of anything? As a taxpayer and a user, I prefer a lean model for the management of activities - and especially the management of harmless and beneficial activities. I am strongly opposed to any notion that the NPS should have a goal of maximizing management.

7) Further, under Education, I see the goal of "Increase public understanding of NPS policies." So, regardless of the value or benefit of the policies, the NPS is offering to "increase public understanding" by imposing policies crafted for parks situated in remote wildernesses upon our urban GGNRA. Sure, by imposing inappropriate policies at the GGNRA, the NPS will be able to increase public awareness of these policies. Each and every time a citizen is given a ticket for behavior that has been allowed and shown to be harmless for decades, there will certainly be an increase in public awareness. I find it absurd that this objective is being satisfied in the proposed manner - by imposing wilderness park policies in an urban setting simply to generate "awareness" by heavy-handed imposition of policies from DC.

I apologize for some of the tone of my comment, but I honestly find it exasperating that these "objectives" are imposed without concern for the present successful public use of the GGNRA, and that, in several cases, it is obvious that the proposed changes will have effects that are the OPPOSITE of these objectives.

I hope the NPS recognizes that it is trying a One-Size-Fits-All solution that is probably appropriate for remote wilderness parks to a unique urban recreation area where the objectives of the NPS make no sense, and where the most likely effects are unrelated to or even opposed to the objectives,

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Ashley Lyon

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Christina Pappas

**Correspondence:** Once again, the vast majority of law abiding citizens, in this case dog walkers, are being forced to put up with an aggressive minority of people, who would force yet another issue in the name of ... what? Public safety? Because of the three wild dogs owned by owners who are rude? Really?

Must we always solve the problem caused by the few with restrictions on the many? It is called the tyranny of the minority. Can we just stop all of this regulation, and let civility creep back onto the public square, and let us work things out ourselves? Please, please, do not punish nearly all dogs and dog owners because of the few bad ones....thank you!

**Correspondence:** I recognize the difficulty in trying to please so many diverse user groups. However, as a dog owner, I do not support the Preferred Alternative because it is too restrictive. It will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. The SEIS did not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative.

Overall, I support allowing dogs on-leash in the study areas rather than prohibiting dogs altogether, particularly in areas where dogs have been historically allowed. It's no critically important to a visitor's wellbeing to take a hike in the beautiful and re-energizing of the park, and it equally as important to have the option of bringing along our best friends. The plan should include more on-leash trail access.

There is not enough justification in the dog management plan for major changes. Consistency seems to be lacking in the decisions of where dogs are permitted, and in cases the decisions seem arbitrary. For example, dogs are permitted on leash at Ocean Beach in the Snowy Plover Protection area, yet the preferred alternative prohibits them all together from the Wildlife Protection Area and Easy Beach at Crissy Field (where there have never been any snowy plover sightings). The plan states that dogs are also restricted South of Sloat, yet the map shows that area with season closures only; it is unclear if dogs are prohibited from this area entirely. Instead of prohibiting dogs entirely in wildlife areas, they should be allowed on leash.

Limiting the central beach at Crissy for off leash use is unacceptable. This is an established and well used off leash area. To provide for a consistent use of the area, some of Crissy could be off-leash, but no areas should be prohibited. Limiting only a portion of the airfield for a ROLA is also unacceptable. The entire airfield is entirely underutilized to begin with. Delineation of the ROLA and leash required areas would be difficult, and I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens, create visual impacts, and add to the cost of park operations. Dogs should be permitted on more areas in Fort Funston. Dog walkers transformed this once dangerous area of the park into a safe and welcoming site. Opportunities are too limited. Please consider adding the Funston Horse Trail for on-leash dog access, so that we could have a loop trail to enjoy with our dogs, and as stated above, leashed access north of the Funston Beach Trail.

Congress created the GGNRA in 1972 to "... expand to the maximum extent possible the outdoor recreational opportunities available to the region." (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972). We need more places to recreate with our dogs, not less.

**Correspondence:** I often walk on Chrissy field beach from the Chrissy field parking lot to Fort Point. Most days when I walk there, there are at least one if not more dog owners walking their dog or dogs inside the protected area for the Snowy Plovers. They do not read the sign asking them to stay close to the water line. They trample the plants, and the area where the snowy plovers like to rest and hide, with their

---

dogs. They usually don't listen when I ask them to observe the guidelines on the signs, by putting their dogs on leash and avoiding the areas away from the water line. This is very upsetting to me knowing how vulnerable the snowy plovers are.

I am so sick of having to deal with dogs on the beach. It is a public beach that is overrun by so many dogs it makes it difficult to enjoy it. My husband will not walk with me there because he dislikes contending with all the dogs. I really support the restrictions on dogs on this beach so that the birds can have their habitat, and the beach will be a peaceful place for humans to enjoy again. Thank you for protecting the beach.

So many parks are overrun by dogs and their rude insensitive dog owners, that it is difficult to enjoy the parks. For that reason I only go to the Stribling arboretum where dogs are not allowed. You cannot sit in the grass at a park without smelling dog excrement or urine. Even in parks like Duboce park, the areas that are supposed to be dog-free are not observed by selfish dog owners. I really look forward to being able to enjoy the outdoors more in the areas where dogs will be restricted. Thank you!!!

<b>Correspondence:</b>	To the Dog Management Planners for the National Park Service - PEPC				

Regarding: The Draft Dog Management Plan for the Mid-Coast of California

I strongly oppose the placement of a fenced dog walking area in the middle of our Montara residential area near the elementary school. I am not sure we "need" a dog park at all, but if anyone needs it, I do not want one that is a neighborhood disturbance.

Text in the GGNRA Dog Management Plan references the potential of fenced dog walking area between Le Conte and Tamarind Streets in Montara near the Farallone elementary school. If you have any input to this situation, I hope that you will recommend a different dog park location. I do not believe this proposal has been duly approved by the community.

Each evening for many years, my husband has sat out on our deck to enjoy the peace and quiet, watch the sunset, contemplate, and relax. And he often stays out there hours until it is completely dark. Doesn't he as a homeowner, have a right to do this in peace? Isn't there another place to put a dog park that is away from residents seeking peace and quiet?

I am hoping that the National Park Service will take care of people like my husband and people who do not have a dog and will respect our rights as well.

We pay our property taxes, and dog owners pay no additional taxes. So, there is no reason that the needs of dog owners, should be put ahead of the rights of residents to sit on their front decks in peaceful contemplation.

It would be more appropriate to have a dog park, away from private homes, closer to Highway 1 (where the paved parking is planned for the Golden Gate Recreation area) where the noise and activity would be a large open space area. After all, the purpose of this new National Recreation area, was for people to get out of urban, residential areas, and to enjoy the wide open spaces.

For a large concentration of dogs to collect in the middle of a residential area would lead to a dramatically noisy situations in which barking dogs would disturb all nearby residents. If unacquainted dogs of different breeds, size and sexes mix in this small area, there will be many dog conflicts and much barking. If dogs are under "voice command" and not a leash, that means owners will have to be shouting commands. This will be a major disturbance to the quiet of the street.

Aside from the noise and the lack of community approval, there are other reasons that this area near the school is inappropriate.

1. The proximity of the school. It is never a good idea to mix small elementary school children and a local

playground with a large concentration of dogs of different breeds. Children are more vulnerable to dog bites than adults.

2. The narrowness of Tamarind Street. The undeveloped street of Tamarind is very narrow and lacks sidewalks. Currently, cars often have to take turns passing through the narrowest part, because in places there is not room enough for two cars to pass. The street is not equipped to support more traffic and more parking.

3. The lack of integration with the GGNRA area. Residents of the coast who own dogs surely would want to see the scenic rural beauty of the GGNRA, as opposed to local residential streets and rows of houses. Put these dogs and dog owners out where they can enjoy open spaces.

4. Urine/manure buildup and dead vegetation in a residential area. A fenced area for dogs on Tamarind Street would cause the current vegetation of sensitive coastal grasses to be trampled and die, turning the area into a highly visible blight in summer and a mud pit in winter. Although there would be distribution of plastic bags for poop-pickup and a place to dispose of those poop bags, poop collection is often not totally complete. Urine and manure would collect in a residential area.

5. Lower Property Values & Harm to Residents. The collection of urine and manure, the trampling of natural grasses, a new unattractive fence, barking dogs, noise, increased traffic, all are destined to transform a peaceful area for quiet walks into a disturbance that lowers property values.

The Alternative:

Instead we recommend a larger fenced area within the GGNRA closer to Highway 1 near to where parking is planned to be developed. In this other area, the dogs can bark as much as they want and still not disturb residents trying to sleep or read or smell their dinner.

<b>Correspondence:</b>	To whom it may concern:				

I hike in various parks in San Francisco everyday. This activity is very important to my health and well being. My 14 pound Berger des Pyrenees / Griffon mix accompanies me, is my walking partner, and is the reason I use the Parks regularly and consistently.

My dog is well trained, has perfect recall, is well socialized BECAUSE we get out daily. I pick up and dispose of 100% of my dog's feces and carry the bag until I find a proper waste can. We are the responsible regular visitors of the parks, respecters of the wildlife, and the park's eyes and ears - discouraging illegal activity by simply being present. During the week there is NOBODY at the park except dog walkers, tourists, retired people, and vagrants. I have had zero conflicts with others over park usage.

The parks in our city are important to we who pay the bills (taxes), it is how we have our downtime, and if you tell me certain members of my family are no longer welcome, ie my dog, we will stop going and our parks will go unappreciated and could fall into the hands of droves of vagrant's encampments, trash,human feces, illegal activity, and even more used needles.

If there are a few people not following existing laws, and there are, please punish the troublemakers. Fine \$1000 for not cleaning feces, I welcome that. (Make sure to include ALL depositors of feces, human included) punish those who have untrained dogs off leash.

Do not punish me - who leaves the park in the same condition if not better when I leave.

Sincerely,  
Ginny

**Correspondence:** On page 93-94, the report discusses the various ROLAs that have been eliminated from consideration in any of the recommended alternatives. In each case, the decision is stated, with one or two accompanying reasons, but without any discussion of the reasons for preserving these ROLAs, or analysis of the benefits -vs- detriments of these decisions. I think it is obvious that elimination of off-leash dogs from all of these areas may have one or more minor beneficial effects, but I also believe that there will be significant impact to the opportunities for public enjoyment of these spaces. The report does not even pretend to offer a balanced analysis of the benefits and impacts of these decisions.

I disagree that the goal of the NPS should be to absolutely minimize impacts without concern for public use. In the case of the GGNRA which is a public park situated in the middle of a dense urban population, the value of public use is MUCH HIGHER than in a remote park. The NPS wants to use exactly the same analysis on Crissy Field as it would use on a beach in the Alaska National Wildlife Refuge. However, it should be obvious that the potential benefits associated with public use at Crissy Field are immensely different than they would be on a remote beach in a wilderness. Therefore, a different analysis, based on the obviously different value opportunity, should be used.

In this section, the authors of the report demonstrate that they do not appreciate the unique value of public enjoyment for a park in a unique urban setting within easy access of millions of visitors, as weighed against the incremental benefit of preserving one more beach out of thousands in the entire NPS. The goal of this report should be to consider a balance of objectives. The NPS pretends that public use is equally unimportant for a remote wilderness beach as it is for a beach in San Francisco. If nothing else, this demonstrates that the NPS are fundamentally incapable of appreciating the value of an urban park, and I think they should not be granted responsibility for management of the GGNRA.

**Correspondence:** My name is Robert Dewey. I am 69 years old, a native Californian and a resident of San Francisco since 1972. I am a writer and editor who lives on Eighth Avenue, just south of the Presidio. I have walked in the Presidio and Golden Gate National Recreation Area (GGNRA) with three successive dogs since 1978. I also walk with my dog in Mountain Lake Park where I have been active in efforts to restore the lake.

During walks in the Presidio my dogs and I have come to the aid of an owl caught in barbed wire fencing. We alerted to Presidio post veterinarian who freed the bird and saved its life. We have chased off vandals, reported broken water lines and participated in various activities to benefit the park.

GGNRA is an important resource for us for exercise, quiet contemplation, picnics and pleasure. We have submitted comments during the past several years that GGNRA management has been muddling about what to do about dogs in the park.

I'm appalled that after all of these many years, draft plans and redrafted plans and delays, GGNRA's proposed Dog Management Plan and Environmental Impact Statement pays so little attention to the public's input. In fact, with each iteration, GGNRA's gets more restrictive and less responsive.

What's missing is recognition that GGNRA is an urban recreation area. Taking that stance is contrary to the GGNRA's founding principal. Why does GGNRA refuse to create a balanced plan for a recreation area that recognizes that people with dogs use and enjoy the park?

â€ Specifically I oppose the plan's "Preferred Alternative" because it is too restrictive.

â€ I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences may make for good neighbor relations out on the range - - not within the city. We don't need animal pens here.

â€ The Supplemental Environmental Impact Statement (SEIS) does not adequately consider comments to the Draft Environmental Impact Statement (DEIS) from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative.

â€ The SEIS still lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA.

â€ The SEIS says that, during the last six years, National Park Service (NPS) staff did extensive literature searches to look for reports of impacts from dogs in other parks. Why didn't they bother to study GGNRA and the Presidio? After all that's the subject at hand.

â€ The SEIS relies on anecdotal observations of impacts made by NPS staff. These comments have no context - how frequent were they, how serious, etc.. How can these be used to set policy? NPS staff is recognized for its long-stand bias against dogs and the people who walk them. That's all the more reason to discard any anecdotal observations.

â€ SEIS never gives results of public comment on the DEIS. It reports more than 4,700 comments were

---

received, but says nothing about how many comments were in support or opposition. Shouldn't public sentiment be reported and considered?

â€ The SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. What little attention is paid to this is just an estimate. Why wasn't the issue studied thoroughly as the San Francisco board of supervisors has requested?

â€ The SEIS data still do not support claims that there are major safety problems from dogs that require off-leash restrictions. Between 2008 to 2011 it reports 95 dog bites. That's a minuscule number considering the tens of thousands or even hundreds of thousands of dog walks that must have taken place within the GGNRA during those four years. I'm just guessing but I imaging there were thousands of more instances of vandalism in the park during those four years. That's a "serious" problem. It's caused by people, not dogs. I've seen no effort to close off substantial portions of the GGNRA to people as you are proposing to do with dogs.

Overall, I see little in the way of a response to the public interest in this latest Draft Dog Management Plan and Draft Environmental Impact Statement. Based on the response from dog-owner groups, local governments and various elected officials, I'm not alone in my view.

Why can't you either create a plan that responds to the public interest or quit wasting time and taxpayers' money and just maintain the status quo?

---

<b>Correspondence ID:</b>	6143	<b>Project:</b>	11759	<b>Document:</b>	55416

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>					

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis

---

was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

Pamela Wyman, CTC @ 415-867-1333

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is

way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

David Scherr

**Correspondence:** I could go on about the finer points about what I disagree with your plan. But first I have to tell you about how walking my dogs at Fort Funston has saved my sanity. My building burned on January 23, 2014. The Wag Hotel has been taking care of my dogs. Every morning I pick them up and go for an hour or more walk at Fort Funston. I then go to clean up my house. Fort Funston has saved my sanity once again. I have been walking my dogs there since 1983.

Thank you,  
Patricia LaCava

**Correspondence:** I am in favor of the NPS Preferred Alternative 'F,' it seems to allow access to the many types of users while also improving safety to visitors. This will allow the vegetation in the parks to not be overrun by packs of dogs. Maybe we can all share this recreation area!

Fort Funston has been inundated with professional dog walkers coming day after day, mornings and afternoons. To have them limited to 6 dogs per person would be great. Keeping track of 10 or 12 unleashed dogs, especially while simultaneously talking on a cell phone is just not possible. If this goes through, please require them to throw away their bagged dog feces in trash cans and not leave them at the top of stairway/sand ladders (because who wants to carry bags of poop down and back up again?) for later (maybe) pick up.

When I have mentioned Fort Funston, there have been mainly 2 reactions - 1) "Oh the dog park! I have

friends who are planning/have just started a dog walking business and they love it" or 2) "Ugh, we took the kids there once but all those dogs running around scared them and us. We're never going there again." Please let us all share the park and not give it to the dogs, it is a beautiful area. And please find some money for proper fencing for the GGNRA, these plans are only as good as the signage and fencing. People need to be able to see what is out of bounds or not. Thank you.

**Correspondence:** On page 96-97 of the report, the concept of ROLA certification is discussed, but dismissed, on the basis of marginal success at implementation for a similar program in Boulder.

Compared to the rest of the report, this may be the one and only instance of the NPS providing specific

evidence of the effect of a policy change on an issue. In this case, only ~40% of the public participated in the certification program, and the costs were deemed to be excessive - this being offered as a definitive reason for dismissal of this option.

For comparison, the NPS intends to impose other policy changes on the GGNRA, such as elimination of off-leash walking in many areas without any particular evidence that the policy change will have beneficial impacts, and ignoring the substantial reduction in opportunities for public enjoyment and, all the while, admitting that the proposed changes will come with a significant increase in the costs of management.

It would be nice if the same quality of analysis used to dismiss certain proposals (such as ROLA Certification) was also applied to the proposals preferred by the NPS. If this were the case, I believe that the NPS would recognize that its proposed policy changes will have very few beneficial effects, substantial negative effects, and come with increased costs - All of which seem like clear and obvious reasons NOT TO CHANGE THE POLICIES FOR THE GGNRA.

<b>Correspondence:</b>	Dear Superintendent Dean,				

We regularly walk our dog in the GGNRA. The beach at Ft. Funston is an enjoyable experience for people of all ages with and without dogs. I am writing to express my opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is too restrictive and prevents me from enjoying the beach with my dog.

The new plan was not significantly modified to reflect concerns and objections of people who submitted comments in response to the first plan.

The GGNRA is a recreation area for a densely populated urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. For the most part, dog owners have been quite respectful of the needs of non-dog owners and off-leash areas should be formalized and supported in San Mateo County. Thanks for your consideration.

Sincerely,

Phil Battat

**Correspondence:** Hi,  
Please allow dogs on leash above Seton Hospital in Moss Beach all the way up above Park st.  
These are lands w many dog owning neighbors who use these acres daily(currently).  
There are long lines of sight, ample wide fire roads that are conducive to dog walking.  
Striking a fair balance by allowing dog walking from the surrounding neighborhood on Vicente Ridge is a fair expectation.  
Not 1 horse rider I have ever spoken with(dozens over the years) have voiced opposition to allowing leashed dogs on these trails.  
In fact, I'd venture a guess that at least 75% o equestrians have their dogs with them when riding from the stables area.

Thank You,  
Jim

**Correspondence:** Sample Letter

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

In the past, I regularly took my dog to Muir Beach. It was one of the most treasured and rewarding parts of living in the area. I'd like to think that this important right remain in place so that I can visit and contribute to the support of this area.

Dogs are already off-limits on over 99% o the Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. ou havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you for your consideration,  
Jennifer Morris

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification for the dog management plan to make major changes to the existing policy.

I support formalization of the 1979 Pet Policy, plus providing for off-leash access in San Mateo County and on any new lands that the GGNRA acquires in the future.

Per the latest data released by the GGNRA, the claim that dog-related incidents are the largest percentage of complaints received is false. Out of the hundreds of thousands of visits by people with dogs last year alone, there have only been 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing, and 1 horse bite incident documented (2012-2013 report). However, the incidents involving people are much higher. This data does not support the reported necessity for any change in policy for improved public safety or visitor experience.

I especially oppose fences to surround or delineate any off-leash area in the GGNRA. These lands are meant to act as a foil to our compartmentalized urban experience. Fences will make off-leash areas feel like pens, visitors using them will feel unwelcome, and it will disrupt the view and experience for ALL

park users.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Enforcement of the existing policy will be far more economical (instead of the \$2 million dollars requested to implement the proposed Dog Management Plan) as well as solving any problems currently perceived or existing.

Quite simply, the GGNRA has lost sight of its purpose: it was legislated as a RECREATION AREA for a densely populated, urban area, NOT as a national park. These trails and beaches have allowed for dog walking since before the original Pet Policy of 1979, and the 1% of current GGNRA lands allocated for dog walking should remain accessible as is.

**Correspondence:** On page 100 of the report, the authors state that "NPS received many public comments complaining that dog use precluded their enjoyment..." and proceeds to list all of the negative things that can go wrong when people interact with dogs in open spaces. However, there is no quantitative analysis of these incidents or comparisons to the likelihood of such incidents under different policies.

It is also true that people riding horses complain about the presence of humans on trails, that bird-watchers complain about the presence of humans or any sources of non-natural noise, and that some environmentalists would prefer to close the parks to all humans. The fact that there are some complaints is not compelling - there will be complaints under any of the proposed alternatives. Since the report makes no effort to provide a quantitative analysis of the complaints, it is unreasonable to use some complaints as

justification for a policy change, and ignore complaints that will still arise under that proposal. Further, if the NPS is allowed to implement its preferred alternative, there will be an avalanche of complaints from residents near these parks, and I think it is fair to say that the NPS will ignore most of those complaints as well.

Therefore, some complaints cannot be used as a basis for a policy change, if other complaints are ignored.

We must face the reality that the GGNRA is an urban park with unique capacity to provide immense human enjoyment to an enormous number of visitors and local residents. The balance between enjoyment and preservation must be different for a park in an urban setting as compared to a park in a remote setting. If the NPS is unwilling to recognize this difference of values and opportunities, it is the wrong agency to have authority over an urban park, such as the GGNRA.

Further, the NPS must face the fact that the present policy does provide immense opportunities for public use, in a manner that generally has only very minor negative impacts, and that all of the preferred alternatives will only marginally reduce the negative impacts while substantially reducing the opportunity for enjoyment.

<b>Correspondence:</b>	Dear Superintendent Dean, As a family, we regularly walk our dog in the GGNRA and we need to let you know that we strongly oppose the preferred alternative described in the dog management plan set forth by the GGNRA. As members of the greater San Francisco community, it is important that all of us have the opportunity to freely utilize - without human roadblocks -this beautiful scenic recreation area that so many of us enjoy. Knowing that this dog management plan is in the offing, I took the extra time a couple of weekends ago to observe my fellow dog-walkers around me - specifically at Fort Funston. I was struck by what a cohesive, environmentally aware group, and of course dog-loving group that is naturally attracted to this beautiful scenic area. Surely San Francisco can come up with a more creative solution to their concerns about human environmental impact in the GGNRA than to set up artificial boundaries in this scenic gem				

---

that is our own. Public awareness campaigns through newspaper and radio, community service groups, environmental coalitions - the list goes on.

**Correspondence:** Chrissy Beach is one of the few off leash areas for dogs in San Francisco proper. In a city which has more dogs than children, it's a shame that removing this area is even being considered. There is very little negative impact by this use of the area. The dog owners are responsible visitors, cleaning up after their pets, and others. It is often non-residents and tourists who litter, and the residents and dog owners who are cleaning up, in order to protect their dogs, and the ocean.

<b>Correspondence:</b>	Frank Dean				

After the meeting with congresswoman Jackie Speier recently at Stern Grove I asked you why you didn't have the sand dunes fenced in the Snowy Plover area on Ocean Beach. I have read about beaches managed by the state of California where this fencing is installed to protect Snowy Plover habitat. YOU HAD NO ANSWER FOR ME! When I walk on Ocean Beach and I see 50 people at a time trampling these dunes, and the dry sand transitional area to the wet beach, which you yourself admitted to me that this is an important area for the Snowy Plover; I ask you again Frank Dean: Why isn't this area fenced to protect the Snowy Plover? It seems if you really were concerned with wildlife you would have this area fenced to protect the Snowy Plover and stop several hundred people from trampling the dunes and the transitional area from the dunes to the beach every week.

You claim to be protecting wildlife by trying to deny dog owners and their dogs long standing off leash privileges in the lands known as the GGNRA, but it seems if you were actually really concerned with the protection of wildlife you would have these dunes fenced.

<b>Correspondence:</b>	I am a daily user of the trails, very often with my small dog. I live near the Miwok trailhead. I have used the trails since 1980 with my dog/dogs. I have seen over the years hundreds of dogs on the trail, and 99% o them had responsible owners- -thereby the dogs have been very well behaved users of the land. So many people depend on their dogs as companions (especially the elderly), as a reason for getting exercise, and for protection. For those not wanting to be around dogs- -there are many, many trails and beaches on which they are already banned.				

People enjoy their dogs off-leash, and dogs are better behaved around other dogs when off-leash. The proposed provisions are totally unnecessary for the protection of the wildlife and the flora. The provisions are not based on legitimate scientific studies.

This issue is a waste of a lot of people's time and the government's money.

**Correspondence:** I regularly run with our dogs on many of the Marin Headlands Trails and Muir Beach.

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Marin Headlands (Coastal Trail/fire road to Hill 88). I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Marin County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values.

It is key note that the both the Marin County Board of Supervisors as well as our the Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

The plan reduces Marin Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force our community into their cars to drive a minimum of 20 minutes to access this experience. The highway to/from Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA.

The SEIS calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the 'off-limits' creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic' (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic; and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day.

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or  
Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Thank you

**Correspondence:** Dear Superintendent Dean,

As my dog's guardian, I am standing up for his rights to walk off leash on GGNRA property.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Best,  
Jade

<b>Correspondence:</b>	To whom it may concern,				

The proposed changes to dog policies at Fort Funston, Crissy Field, Rodeo Beach, and many many other great locations will be a terrible blow to our family. Our two dogs join a responsible dog walking group of 4-6 dogs for 60-90 minute exercises in Fort Funston 4 days a week. My wife and I also love walking them at Crissy Field and going for hikes at Rodeo Beach. You can see evidence of their perfectly wonderful uses of the space here: [http://instagram.com/sitstayplay\\_sf](http://instagram.com/sitstayplay_sf) We hope you reconsider preventing our four-legged friends from enjoying our shared spaces.

Sincerely,  
Eric and Aryiro Toan

<b>Correspondence:</b>	What in the world is the point in banning off-leash dog areas? Simply ludicrous. I am sure others can be far more eloquent on the topic. For me, it's absolute bullcrap. Designated space for humans and their dogs in no way-shape-or-form hinders those who, for whatever ridiculous reason other than allergies, do not have a dog from anything. How!? How is it a problem?				

---

That's it. Just do not be stupid. Think about this logically and come up with three legitimate reason off-leash parks are a problem in the least.

**Correspondence:** Dear Superintendant Dean,

It is with great sadness I see you are preparing to ban my access with my dog to large areas of Ocean Beach, Ft. Funston, Baker Beach, Rodeo Beach and many other areas. My dog and I go for long walks in these and other areas that will be curtailed under most the plans that have been published, especially the 'preferred alternatives'. In fact the long walks we take will be impossible in all of these areas. We obey the current laws and don't chase wildlife. We are healthy and happy due the access we have enjoyed.

I consider myself a conservationist. I support organizations like the Nature Conservancy that promote working with the stakeholders of an area to reach the desired outcome of protecting habitat and wildlife. Wouldn't it be wonderful if the GGNRA would work with people who recreate with their dogs in these areas and the organizations that support them to educate them and also hold them as esteemed allies in protecting the land at the same time as they are having good exercise and fun.

What about giving something back? These plans are about restricting access to small areas where long walks are impossible. GGNRA is taking over new lands and it seems you are restricting the access in those locations as well.

In short, our walks will be curtailed or eliminated at almost every site. We don't just go sit on a spot on the beach. I hope the GGNRA will take no action on any of the plans.

**Correspondence Type:** Web Form

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Jason Feinberg

**Correspondence Type:** Web Form

**Correspondence:** Dear Mr. Dean

I am a Pacifica resident who has been using GGNRAs Sweeney Ridge trail system for over 5 years. My dog and I typically walk to Sweeney Ridge from our house to the Baquiano trailhead at the dead end of Fassler Ave. in Pacifica. I typically hike with my dog on-leash the Baquiano trail to the Portola Discovery Site down to Sneath Lane in San Bruno or the San Francisco Public Utilities watershed boundary at the Portola Gate. This gives us a good two hour round trip hike on GGNRA lands.

I support the use of the city of Pacificas GGNRA lands for all including on-leash dog walking, hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I understand the need to protect fragile areas and balance public recreation needs but it feels dog owners are being excluded from the use of this public recreation resource when there has been years of use and very little environmental impact. I would hope better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog. 51% of the city of Pacifica is owned by GGNRA. It would be unfortunate to lose our recreation and the associated tax base that dog walkers bring with them.

Sweeney Ridge/Cattle Hill

I support GGNRA Draft Dog Management Plan's Alternative A with the addition of the Baquiano Trail from the trailhead at Fassler Ave. in Pacifica. The adoption of Alternative A with the mentioned additions would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge trail system.

I do not support the current preferred alternative 19-F due to:

Lack of interconnect-ability of all of the Sweeney Ridge Trail System. Many users of Sweeney Ridge live

locally and access the trail system from three very different geographical trail access points.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Most trails are existing 4x4 vehicle roads at least eight feet wide-if a dog is leashed it will not impact sensitive habitat areas. Currently a gas, water and electrical right of way. Mountain biking and horse riding are permitted on Sweeney Ridge. These activities are just as destructive if not more so to sensitive habit areas and species.

No attempt to protect sensitive areas with signage or fencing.

Visitor use of Sweeny Ridge is relatively low compared to other GGNRA areas, making visitor and on-leash dog contacts very minimal.

Consideration for ADA accessibility. 19-F would exclude the least steep, only switch backed trail into the Sweeney Ridge Trail System.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Sweeney Ridge is surrounded by urban areas with direct access from many neighborhoods making the wilderness back country experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking. Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

#### Mori Point

I support GGNRA Draft Dog Management Plan's Alternative A (Map 17-A)

I do not support the preferred alternative of 17F due to:

Lack of interconnect-ability of trails

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Some trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on Mori Point. These activities are just as destructive if not more so to sensitive habit areas and species.

Degradation of area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Mori Point is surrounded by an urban area making the wilderness National Park experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

## San Pedro Highlands

I support GGNRA Draft Dog Management Plan's Alternative A (Map 20-E)

I do not support with the preferred alternative of 20F due to:

Lack of interconnect-ability of trails. Please open up the South Middle and Valley Ridge Trail for on-leash dogs. These would connect to the new Devils Slide Trail.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. All trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on San Pedro Highlands. These activities are just as destructive if not more so to sensitive habit areas and species.

San Pedro Highlands was until recently a dirt bike club. There is heavy degradation of this area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

San Pedro headlands is surrounded by an urban area making the wilderness National Park experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

As you know the GGNRA is a unique special place that was created to accommodate the recreational needs of an urban area, essentially creating an urban park. Any attempt to mirror dog restrictions used in national parks with a wilderness experience would be misguided and would go against the intended mission of the GGNRA -TO RECREATE- when it was created. Please continue to allow us to enjoy our public lands with our dog and consider my concerns.

Sincerely,

Emily Read  
Pacifica, CA

**Correspondence:** This would be very short sighted to close down Funston as a leash free area for dogs. My wife and I take our dogs there at least 5 days a week. We drive 20 minutes each way and it is worth it for the dogs and for us as we will walk at least 3 miles each time. I know there are some environmental issues but let's not forget that dogs are animals also and should have the right to the environment also. In the grand scheme of things, Funston is a small part of that coast line. Please don't deprive the dogs and their human owners of the outdoors. Walking a dog on a leash around the neighborhood just does not cut it compared to the Funston experience.

Thank you for your consideration.

Jim Thanos

**Correspondence:** I carefully read the section of the report from pages 252-258, which describes many of the reported dog-related incidents. Over a 10-year period, there are reports of about 4000 events, which averages to 400/year or about 30 each month - roughly one each day.

This sounds terrible, but there is no data offered for comparison. What is the incidence of dog-related incidents in a comparably-sized park with comparable volume of visitors, and dogs either not allowed or only allowed on leash? Is it much lower, the same, or much higher? Without any comparative analysis, this data is absolutely meaningless, and is not useful as a basis for a massive change in policy. If the NPS wants to impose a policy change on the GGNRA, and wants to offer data to support this change, the NPS should offer enough data to show that the policy change will have the intended effect. This data does not indicate anything useful about the proposed policy change.

Further, the written descriptions of particular events include some peculiar features. For instance, quite a few of them appear to be written by the same individual, in response to their own experiences on a particular day or two. If these are representative, I think it may be true that there are really only a very few individuals offering the majority of these complaints.

Further, to the extent that many of these complaints are related to incidents where "birds took flight" (as seems to be the case for most of the incident reports selected for inclusion in the report), I think we're over-reacting a bit. I see birds take flight all the time, and generally don't regard these incidents as crimes against nature. If one incident each day of birds taking flight is caused by a dog, out of thousands of such incidents every day in the GGNRA, I think we should all find something else to worry about, even is there is one bird lover out there that finds these events unacceptable.

<b>Affiliation:</b>					
<b>Received:</b>	Feb,18,2014 20:24:24				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I have read a couple hundred pages of the proposal and have found the language to seem to describe every inch of the GGNRA as covered in rare flora and fauna species and soils.				

One section here from Pages 268-9: The park has installed fencing to restrict access by dogs and people to Crissy Field Tidal Marsh, and signage has been installed to educate visitors on the access restrictions; however, dogs gain access to the marsh through the tidal channel under the pedestrian bridge, and have been observed by park staff in the tidal marsh (NPS 2010a, 1).

seems to point out that the NPS does not think a rare occasion of human/dog error is acceptable. That is unacceptable. If every time a car accident occurred, the powers that be threatened "Ok, humans, you only get a few more accidents then we will remove cars from the road", one would say that is preposterous. To be human and to live among others, sometimes accidents happen. The goal should be to minimize the accidents with more non-threatening actions that don't punish the "good drivers" for the actions of the "bad ones".

And having read hundreds of pages, one can infer that the NPS seems to think NO area of these thousands of acres should be touched or visited by humans or non-native animals of any kind. I am sure coyotes and dogs have been native for thousands of years. The well respected show Nature on PBS, based on DNA analysis, has stated that domesticated dogs have probably been around for 100,000 years, not only the 15,000 years previously determined. Domestication only occurs if humans think an animal has use for them. Therefore, dogs and people come together, and have been existing together before we even had agriculture. Especially in this city where there are more dogs residing than children, one should show some RESPECT for the local culture which is essentially historical proven.

To save me time in writing this comment, I will just cut and paste from Wikipedia which has all the references for this data on their website. But here it is clear that by banning dogs, you are banning a long standing tradition of the coexistence, (( A TRADITION WHICH IS MUCH LONGER THAN THE DEFINITION OF THE DATE OF WHAT THE NPS (Native Plant Society which is now synonymous with the National Park Service) CONSIDERS IS A NATIVE PLANT)).

ALL BELOW IS COPIED FROM WIKIPEDIA:

Due to the difficulty in assessing the structural differences in bones, the identification of a domestic dog based on cultural evidence is of special value. Perhaps the earliest clear evidence for this domestication is the first dog found buried together with human from 12,000 years ago in Israel and a burial site in Germany called Bonn-Oberkassel with joint human and dog interments dating to 14,000 years ago.[26][27][28][29][30]

In 2008, re-examination of material excavated from Goyet Cave in Belgium in the late 19th century resulted in the identification of a 31,700 year old dog, a large and powerful animal who ate reindeer, musk oxen and horses. This dog was part of the Aurignacian culture that had produced the art in Chauvet Cave.[31][32]

33,000-year-old skull of a domesticated canid from Siberia

In 2010, the remains of a 33,000 year old dog were found in the Altai Mountains of southern Siberia.[33][34] DNA analysis published in 2013 affirmed that it was more closely related to modern dogs than to wolves.[35] In 2011, the skeleton of a 26,000 to 27,000 year old dog was found in the Czech Republic. It had been interred with a mammoth bone in its mouth-perhaps to assist its journey in the afterlife.[31][36]

TO SUMMARIZE, the NPS wants to classify the whole of the GGNRA, especially the areas used by humans and their dogs as areas to remove from human use. Every area is given a name to protect from us horrible humans such as DUNE... From page 258:

In the study area at GGNRA, coastal dune habitat is found at Muir Beach, Rodeo Beach, Crissy Field, Baker Beach, Ocean Beach, and Fort Funston. There is also beach and coastal dune habitat at Stinson Beach,...

To continue with such excessiveness as is written into this dog management plan, by wanting to ban humans and their dogs from the lands adjacent to the city, we should perhaps start to look at what the dunes under the area of Golden Gate Park would look like and relocate the homes and humans and their dogs of the Richmond district from there so that natural Sand Dune vegetation can reclaim the area.

**Outside Organization:** Unaffiliated Individual  
**Affiliation:**  
**Received:** Feb,18,2014 00:00:00  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Mr. Dean

I am a Pacifica resident who has been using GGNRA's Sweeney Ridge trail system for over 5 years. My dog and I typically walk to Sweeney Ridge from our house to the Baquiano trailhead at the dead end of Fassler Ave. in Pacifica. I typically hike with my dog on-leash the Baquiano trail to the Portola Discovery Site down to Sneath Lane in San Bruno or the San Francisco Public Utilities watershed boundary at the Portola Gate. This gives us a good two hour round trip hike on GGNRA lands.

I support the use of the city of Pacifica's GGNRA lands for all including on-leash dog walking, hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I understand the need to protect fragile areas and balance public recreation needs but it feels dog owners are being excluded from the use of this public recreation resource when there has been years of use and very little environmental impact. I would hope better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog. 51% of the city of Pacifica is owned by GGNRA. It would be unfortunate to lose our recreation and the associated tax base that dog walkers bring with them.

Sweeney Ridge/Cattle Hill

I support GGNRA Draft Dog Management Plan's Alternative A (Map 19-A) with the addition of the Baquiano Trail from the trailhead at Fassler Ave. in Pacifica. The adoption of Alternative A with the mentioned additions would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge trail system.

I do not support the current preferred alternative 19-F due to:

Lack of interconnect-ability of all of the Sweeney Ridge Trail System. Many users of Sweeney Ridge live locally and access the trail system from three very different geographical trail access points.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Most trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Currently a gas, water and electrical right of way. Mountain biking and horse riding are permitted on Sweeney Ridge. These activities are just as destructive if not more so to sensitive habitat areas and species.

No attempt to protect sensitive areas with signage or fencing.

Visitor use of Sweeney Ridge is relatively low compared to other GGNRA areas, making visitor and on-leash dog contacts very minimal.

Consideration for ADA accessibility. 19-F would exclude the least steep, only switch backed trail into the Sweeney Ridge Trail System.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Sweeney Ridge is surrounded by urban areas with direct access from many neighborhoods making the wilderness back country experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-

leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

#### Mori Point

I support GGNRA Draft Dog Management Plan's Alternative A (Map 17-A)  
I do not support the preferred alternative of 17F due to:

Lack of interconnect-ability of trails

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Some trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on Mori Point. These activities are just as destructive if not more so to sensitive habit areas and species.

Degradation of area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Mori Point is surrounded by an urban area making the wilderness National Park experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

#### San Pedro Highlands

I support GGNRA Draft Dog Management Plan's Alternative A (Map 20-E)  
I do not support with the preferred alternative of 20F due to:

Lack of interconnect-ability of trails. Please open up the South Middle and Valley Ridge Trail for on-leash dogs. These would connect to the Devils Slide Trail.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. All trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on San Pedro Highlands. These activities are just as destructive if not more so to sensitive habit areas and species.

San Pedro Highlands was until recently a dirt bike club. There is heavy degradation of this area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

San Pedro headlands is surrounded by an urban area making the wilderness National Park experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

As you know the GGNRA is a unique special place that was created to accommodate the recreational needs of an urban area, essentially creating an urban park. Any attempt to mirror dog restrictions used in national parks with a wilderness experience would be misguided and would go against the intended mission of the GGNRA when it was created. Please continue to allow us to recreate with our dog in the GGNRA and consider my concerns.

Sincerely,  
Lynn Jetke  
Pacifica, CA

**Correspondence:** I regularly hike with my dog in the GGNRA - specifically in Muir Beach and the headlands. The proposed plan is way too restrictive on dogs and I'm writing to express my opposition to the preferred alternative described in the draft dog management plan. It will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years. What is this about!!??

I made comments on the 2011 SEIS and they were largely ignored!!!! The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. What was it 3:1 opposing the plan!!!! In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas included in the study. Besides in your own report it talks about the effects on Muir Beach as negligible.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. YES THIS IS AN URBAN AREA!!! It isn't Yosemite dude. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

Wake up and bark!

**Correspondence:** Dear Superintendent,

I am writing to express my opposition to the possible new restrictions of off-leash and leashed dog walking areas in the GGNRA. I have lived in Berkeley for almost 60 years and have owned two dogs as an adult. My dogs and I have been well trained in the etiquette of considerate and responsible dog ownership.

Taking my dogs to our beautiful local parklands is one of the joys of living in the Bay Area. Over the years I have frequented Fort Funston, Crissy Field, Rodeo Beach, Muir Beach and various Marin trails. The carefully crafted 1979 Pet Policy achieved a good balance in preserving areas historically used for people to recreate with their dogs and protecting open space in places that are not wilderness. This agreement is part of what makes the GGNRA such a special place, somewhere to enjoy the out-of-doors with our animal companions in the midst of a large urban setting. Some of these locations have already instituted additional restrictions, but trying to further limit dog use to conform to National Park rules is not appropriate.

Even though I am a long time member of the California Native Plant Society and The Sierra Club these organizations do not represent my views in regards to dog off-leash restrictions. I appreciate and value the natural environment, but believe preservation does not preclude reasonable use.

Having accessible and safe places for people and dogs to exercise and socialize together is a very important component of building a healthy community. Please preserve these off-leash areas and keep in place the agreement that was part of the original concept of the GGRNA.

Respectfully,  
Eve Lednicky  
2/18/14

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I Find offensive the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes.

I firmly support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I strictly oppose adding restrictive Unsightly fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

This GGNRA is a National Recreation Area- Not a National Park. It is located in a very Dog Dense URBAN area. The dogs are part of many of the Bay Area Families who have enjoyed access to the public lands since 1979.

Reconsider the HARSH restrictions you have "Considered".

Sincerely,

Bennie

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Frank Dean, GGNRA Superintendent Building 201, Ft. Mason San Francisco, CA 94123				

February 18, 2014

Dear Superintendent Dean,

My name is Martha Stabler and I am a native San Franciscan, home-owner, tax payer and community volunteer. I am married and have two children and two dogs that I walk on a daily basis in areas such as Crissy Field, Golden Gate Park, Fort Funston and Stern Grove. The parks have been a consistent source of recreation, pleasure and pride for my family.

I am writing to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dogs and family in the near future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is using in its latest supplemental

environmental impact statement are outdated - having sourced enforcement data from a previous draft. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process has been a mockery. Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

Like so many arbitrary and narrowly focused land-use and urban planning decisions made in the City in recent years, this is yet another example of family-unfriendly policies that will lesson the quality of life for families and drive ever more of us out. I hope you will arrive at a more reasonable, inclusive and practical

Sincerely,

Martha Stabler  
601 Moraga Street, S.F.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Mr. Dean and NPS Leadership Team,				

Briefly, I would like to outline an alternative to the current proposal for a GGNRA dog management plan that speaks to the purpose of the GGNRA and that could be implemented without the drastic effects of the current proposal.

1. Implement an education plan that could include improved signage about the effects of such things as dogs chasing birds or flushing bushes and why certain limited areas may be restricted for safety or justifiable conservation purposes. (Very little is provided at most GGNRA locations as opposed to what is expected in most national parks.)
2. Solicit input on the most likely to reach consensus issues such as limits on dog-per-caretaker ratio or restricting certain sensitive areas as well as on where greater accommodation could be offered to responsible dog walkers for off-leash access.
3. Investigate a credentialing program that recognizes those guardian/dog relationships that meet reasonable standards for responsible off-leash guardian control.
4. Differentiate the various GGNRA land parcels by appropriate criteria for each parcel and suggest the most important and urgent steps towards achieving the stated goals on a case by case basis while acknowledging (quantifying current use, problematic issues, and expected benefits of any imposed restrictions vs. any displacement expected) and use this as the basis for your recommendations.
5. Start developing a focus on making the major "dog parks" excel at being what they really are, which is a special and unique recreational experience for the dogs and their owners and stop constantly trying to shut out thousands from an intense personal and spiritual experience that they have traditionally enjoyed without quantifiably justified research.

I know you all have a tough time pleasing everyone but why pursue such a no-win confrontational path instead of a path of accommodation and compromise that could make everyone a little happier?

Thank you for your consideration.

Doug Morgan,

A concerned resident, taxpayer, voter, responsible dog owner, and frequent visitor to GGNRA lands

**Correspondence:** Dear Superintendent Dean:

The Golden Gate Audubon Society (GGAS) has reviewed the Draft Dog Management Plan/SEIS (SEIS)

---

and, while supportive of many aspects of the Preferred Alternative (Alt. F), we submit the following comments in the hope of improving the Plan. While we continue to have concerns about the adequacy of the Plan and believe that the Preferred Alternative fails in many ways to adequately protect park visitors and resources, GGAS sees this as a good first step toward a balanced approach to managing dog-related recreation in the GGNRA.

GGAS' mission is to conserve wildlife and their habitats and help Bay Area residents connect with nature. The Bay Area's densely urban environment presents significant challenges to both goals. Human activities have significantly reduced available native habitat, resulted in persistent-and often fatal-disturbance to wildlife, and consistently prioritize human-based recreation over a balanced accommodation of wildlife or other natural values. Sadly, for all the talk about the humane treatment of dogs in this process-we have never heard expressions of concern for wildlife from those advocating for more dog recreation in the GGNRA.

Following our mission, our concern with dog management in the GGNRA is two-fold. First, dog-related recreation clearly has significant impacts on wildlife. The overwhelming body of scientific literature-much of it cited in the SEIS-demonstrates that dog-related recreation has a strong negative impact on wildlife and habitat. Empirically, GGAS members have observed these impacts as local, native species such as the California Quail and brush rabbits have been extirpated by dog-related recreation at Ft. Funston; elsewhere, our members have recorded and observed dogs actively harassing and sometimes killing birds within the GGNRA. By failing to act for so long, the National Park Service has failed to protect the resources that it stewards in trust for all Americans.

Second, dog-related recreation has clear and negative impacts for park visitors. As discussed further below, the presence of dogs-especially off-leash dogs-acts as a barrier for many visitors to using and enjoying the parks. As an organization concerned about getting as many Bay Area residents outside and enjoying the natural beauty of our environment, GGAS must concern itself with these issues of access.

This concern with getting people outdoors extends to ensuring that dog owners have adequate space to enjoy time outside with their dogs. GGAS supports the creation of off-leash areas in San Francisco-indeed, the city already has more off-leash play areas than any other in the US. Moreover, it is widely accepted that San Francisco's city parks are de facto off-leash parks; leash laws are rarely followed and almost never enforced, again with significant impacts to local wildlife and non-dog owners in city parks. We also do not oppose the creation of off-leash areas within the GGNRA, provided they are (1) in appropriate areas, (2) fully enclosed by natural or symbolic barriers, and (3) patrolled to ensure compliance.

Given the broad accommodation of dogs in San Francisco and the GGNRA, GGAS must ask where the accommodation for wildlife is to be found. We are forced to fight for every bit of remaining habitat because so much has already been taken away and what is left is subject to so much disturbance. At least, the proposed Preferred Alternatives represent a first step toward a more balanced, respectful, and sustainable approach.

Golden Gate Audubon represents Audubon members in San Francisco and western Alameda and Contra Costa Counties. These comments are submitted on their behalf. We join in and support the comments provided by Audubon Society members in Marin and San Mateo, represented by the Marin Audubon Society and Sequoia Audubon Society, respectively.

## I. COMMENTS ON POLICIES AND FINDINGS

### A. The GGNRA Should Provide More Opportunities for Visitors to Recreate in the GGNRA in San

San Francisco without Interacting with Dogs.

Currently, the Preferred Alternatives only provide a few areas where visitors, including those with small children, may go without having to interact with dogs. This is not fair to community members that have a right to enjoy the park without fear or discomfort due to the presence of dogs.

While dog walking provides many benefits for dog owners, including socialization and exercise, it can act as a barrier to physical activities and park enjoyment for non-dog owners. For many, the presence of dogs and dog waste negatively affects their park experience and acts as a barrier to using and enjoying the park.

The Canadian Fitness and Lifestyle Research Institute (CFLRI) published a summary of the Toohey (2011) and McCormack (2010) studies and summarized impacts to non-dog owners due to dog activity in urban parks to include:

- Dogs are often perceived as a nuisance, due to dog waste, litter and disturbance;
  - Uncontrolled dogs create perceptions of risks to public safety; and
  - Older adults, women, and ethnic minorities are more likely to perceive dogs as barriers to physical activity than other groups.
- o Women who perceived off-leash dogs in their neighborhoods had 50 minutes less of physical activity than women in neighborhoods who did not observe off-leash dogs in their neighborhoods; and
  - o Latino women perceived off-leash dogs in their neighborhoods or parks as barriers to letting their children play outside.

These perceptions create barriers to outdoor physical activity for many. The SEIS fails to adequately emphasize the disenfranchisement or loss of activity to many in the community due to the status quo of dog-related recreation in the GGNRA.

The CFLRI summary, like the Toohey and McCormack surveys, both also identify the substantial benefits that come with dog ownership and exercising dogs outside. GGAS acknowledges that and encourages the City of San Francisco and the National Park Service to ensure there are adequate opportunities for such activity. However, we also note that San Francisco already has more off-leash play areas than any metropolitan area in North America, and that its city parks are de facto off-leash parks. We also note that the GGNRA will be the first and only National Park to accommodate on- and off-leash activity to the scale provided in the Preferred Alternative. Dog owners will continue to have ample opportunity to benefit from dog-related recreation and exercise in San Francisco.

GGAS notes that the observations of the Toohey and McCormack surveys—the two most comprehensive and updated surveys of their kind—agree with findings in the SEIS and its supporting documentation, including The General Technical Report submitted to the GGNRA and the Golden Gate National Parks Conservancy in 2007, which found:

Dogs as problems were mentioned by all Latino and Asian groups. For example, dogs off-leash create fear. Dog owners not picking up feces in fields, on trails and beaches, and picnic areas reduce enjoyment of the experience. Latinos, overall, expressed concern about dog owners "not caring" or lacking control (e.g., owners assume other people will like their dog as much as they do; allowing dogs to approach other people without their permission; dogs begging for food and owners not retracting them).

(Roberts, 2007, at ii). Quotes from park visitors that Roberts surveyed include:

"Every time we go to picnic the dogs come and eat our food, they wander around and the owners don't do anything. The same with their bowel movements! The owners don't clean after them." [31 year old, Latina]

Female, GED student, San Francisco]

(Id., at 34). These are not outlier sentiments and are common concerns from park visitors.

Moreover, GGAS' members have repeatedly informed us about negative interactions with dogs and dog owners in parts of the GGNRA, typically because an off-leash dog has charged one of our members (on occasion, resulting in a bite) or charged wildlife. Members report avoiding areas they once visited, including Ft. Funston (once a great spot for birding), and Ocean Beach (one member stated she will no longer take her grandchildren there for fear of off-leash dogs and the presence of dog feces in the sand). Our members' experiences are borne out in the hundreds of Criminal Incident Reports that were cited in our May 2011 letter (attached hereto and incorporated by reference).

#### B. Regulated Off-leash Areas Should Be Well Defined by Physical Barriers and Signage.

Regulated Off-Leash Areas (ROLAs) should be configured, enclosed and marked with adequate signage to (1) provide dog owners with clear guidance as to where on- and off-leash dog recreation is appropriate, (2) provide non-dog owners with certainty that unwanted interaction with dogs will be minimized and provide non-dog owners with a choice to interact with dogs, and (3) clarify and simplify enforcement, to the benefit of the Park Service and park visitors.

The decision to enclose ROLAs really is fundamental to the protection of national park values. Natural areas, wildlife, and other park resources should not be fenced off as if in a zoo. Rather, the recreational activities which disrupt the park resources-in this case, off-leash dog recreation-should be appropriately enclosed.

Even the off-leash advocacy group SFDog has endorsed the creation of barriers to prevent potential conflicts between dogs, vehicles, organized sporting events, and other park users. Barriers must also be present to protect dogs from steep cliffs or other natural hazards. (Ewing, John. 1999. Managing Off-leash Recreation in Urban Parks. SFDog. Available at [http://www.sfdog.org/do/olrm\\_scan.pdf](http://www.sfdog.org/do/olrm_scan.pdf)). Indeed, the establishment of an enclosed ROLA was the only productive outcome of the Negotiated Rulemaking effort. GGAS cannot understand why the Park Service elected to ignore the only point of consensus to come out of the Negotiated Rulemaking process in choosing to not enclose ROLAs.

ROLAs can be enclosed by site-specific appropriate means. Natural barriers, shrubs, cliffs or other rocky barriers, may all be appropriate. Where fencing is the most appropriate solution, post-and-cable may suffice. It will not impede wildlife movement and will not unduly negatively affect the aesthetic values of the area. It will also not make dog owners or their dogs feel "caged". NPS' statement that it rejected the notion of enclosed ROLAs due to concerns to wildlife or aesthetics appear to be nothing more than pretext and are not supported by evidence in the SEIS. In any event, if an area is not appropriate for an enclosure, the area should not be designated as a ROLA.

Dog owners have rightly complained that the National Park Service has not provide consistent, clear guidance about where on- and off-leash recreation is appropriate under the 1979 Pet Policy. A failure to do so under the new plan will undermine and undo the years of work (and millions of dollars invested) in this plan.

Some dog owners prefer to walk their dogs on-leash and wish to avoid contact with off-leash dogs. Clearly marked ROLAs will allow those dog owners to continue to walk their dogs on-leash and to choose when, and if, they wish to encounter off-leash dogs. Indeed, McCormack (2010) found that "[t]he separation of dogs from other park users by fences enclosing off-leash areas as well as dog-specific signage were considered important for encouraging park use among dog owners: 'clear notices so that

people know that it is a dog-friendly park."

Notably, the American Veterinary Medical Association's Task Force on Canine Aggression and Human-Canine Interactions clearly states that dog bites represent a demonstrable threat to communities and that dog bite prevention requires (1) acknowledgement of the issue, (2) clear and deliberate action to prevent bites, and (3) a transparent and credible reporting process for interactions. The AVMA specifically concludes that "[r]easonable and enforceable laws or ordinances are required for good control of unrestrained or free-roaming animals..." in order to prevent bites.

Moreover, as discussed above, non-dog owners should be given a choice before interacting with off-leash dogs. A non-dog owner will have no legitimate grounds for complaint if he or she interacts with a dog in an appropriately enclosed ROLA. Complaints to this effect should decline considerable.

#### C. The SEIS Fails to Establish that "Voice Control" Is a Valid Method of Controlling Off-leash Dogs.

At the February 6th panel discussion held by Rep. Jackie Speier, Superintendent Frank Dean conceded that there is no evidence that demonstrates that dog owners in the GGNRA consistently have "voice control" over their off-leash dogs. He further conceded that the SEIS is bereft of evidence that "voice control" is a legitimate form of restraint for dogs or is supported as a management measures.

Indeed, the Criminal Incident Reports produced by the Park Service's rangers consistently demonstrate that off-leash dogs are not on "voice control" within the GGNRA. The Criminal Incident Reports record dogs attacking people, wildlife, and other dogs while ignoring owners' commands to heel or stop. Nothing in the SEIS or elsewhere in the record demonstrates-or even implies-that "voice control" is anything other than a myth.

Clearly, some responsible dog owners maintain very good voice control over their dogs. But given as how there is no requirement that voice control be demonstrated as a precursor to permitting a park visitor to letting his or her dog off-leash, the National Park Service cannot legitimately point to voice control as a practice that will minimize impacts to other park users or park resources.

Therefore, barring a revision of the SEIS, voice control as a component of management measures, should be stricken from the Dog Management Plan and not considered a factor that mitigates impacts to the environment.

#### D. Commercial Dog Walking Should Not Be Included as a Component of the Preferred Alternative.

The SEIS does not justify why commercial dog walking (CDW) is included as a component of the Preferred Alternative. A proper evaluation should examine whether commercial dog walking is consistent with applicable laws, executive orders, regulations, and policies, which in this case include the Organic Act, the GGNRA enabling legislation, the National Parks Omnibus Management Act of 1998, the National Environmental Policy Act, NPS Management Policies 2006, and Director's Order #53.

Clearly, many National Parks allow for commercial activity within their borders. For example, the Rocky Mountain National Park provides for Commercial Use Authorizations (CUA) for certain activities within the park. NPS states:

CUA activities must be appropriate to the mission of the park, compliment resource protection, visitor protection and interpretation goals, and not pose any potential derogation of values or purposes for which the park was established.

While some may argue that dog walking is part of the mission of the GGNRA and was intrinsic in the "values or purposes for which the park was established", no one can credibly argue that the commercial enterprise of dog walking-i.e., walking a dog that you do not own for financial gain-can in any way be considered part of the GGNRA's mission or core values or purposes.

Commercial dog walking does not meet the criteria to be authorized as an appropriate activity for national parklands. It constitutes a commercial exploitation of park resources (both in environmental impacts and personnel to manage the activity). To our knowledge, commercial dog walking is not allowed in any other unit of the National Park System. Rather, where commercial activities are allowed, they are permitted only to the extent that they provide for or enhance park visitor experiences. Commercial dog walking does not provide any park enhancement benefit. At a minimum, the SEIS must be revised to demonstrate how this commercial activity complies with applicable laws and regulations.

GGAS' specific concerns are addressed in greater detail below:

1. The SEIS fails to sufficiently demonstrate that commercial dog walking (CDW) is an appropriate use of national parkland. CDW is not provided for as a park purpose under the Organic Act, is not provided for under the GGNRA enabling legislation, and does not meet the criteria of Management Policy 8.1.2 as an appropriate use of the park.

A proper evaluation of CDW must include a determination of the appropriateness of this activity to be conducted on national parklands. The process for determining appropriate uses, as described in Management Policy 8.1.2 Process for Determining Appropriate Uses, must include an evaluation of the following:

- consistency with applicable laws, executive orders, regulations, and policies;
- consistency with existing plans for public use and resource management;
- actual and potential effects on park resources and values;
- total costs to the Service; and
- whether the public interest will be served.

The SEIS fails to address each of these criteria as they apply to CDW, fails to demonstrate that CDW meets these criteria and thereby fails to demonstrate that CDW is an appropriate use of national parklands.

2. CDW will have unacceptable impacts on the park including:

- Large groups of dogs and commercial dog walking vehicles will create an aesthetic in the park similar to that of a dog park-including related visuals, sounds, and odors.
- NPS personnel will have to dedicate more time to regulating CDW, increasing the economic impact that CDW will have on park resources without recouping costs from the businesses-the dog walkers-profiting from exploiting park resources.
- CDWs will typically bring in many more dogs than private dog owners and walkers, resulting in increased displacement of dog owners and other park users. Notably, the SEIS fails to address any such impacts.

3. CDW does not qualify for Commercial Use Authorization. CDW does not provide services to visitors and CDW activity would be more than incidental use of the park. (See Management Policies 2006 Sec. 10.3)

4. CDW does not qualify for Special Use Permit. The SEIS fails to demonstrate CDW's qualification for Special Use Permit (See Directors Order #53).

A. The SEIS fails to demonstrate that CDW will in no way harm the integrity of park resources or values,

including the opportunities that otherwise would be present for the enjoyment of those resources or values (See DO#53 Sec. 3) (See Management Policies 2006 Sec. 1.4.4-1.4.5).

B. The SEIS fails to cite an existing legal right or statutory authority for CDW use of the park (See DO#53 sec. 3) (See Management Policies 2006 Sec. 1.4.4-1.4.5).

C. The SEIS fails to demonstrate that CDW will not trigger any of the following criteria: (See DO#53 Sec. 4)

â€¢ will create an unacceptable impact on park resources or values, or  
â€¢ is contrary to the purposes for which the park was established, or  
â€¢ will unreasonably disrupt the atmosphere of peace and tranquility, or  
â€¢ will unreasonably interfere with visitor activities or NPS administrative activities, or  
â€¢ create an unsafe or unhealthy environment for other visitors or employees, or  
â€¢ result in conflict with other existing uses.

In fact, as discussed above, CDW will (1) impact park resources, (2) disrupt the atmosphere of peace and tranquility, (3) interfere with visitor activities or NPS administration of those activities, (4) create unsafe or unhealthy environments for visitors or employees, and (5) conflict with other existing uses. At a minimum, the SEIS must be revised to address these points and explain why CDW is permissible.

5. CDW can be accommodated elsewhere in the local area. The SEIS does demonstrate the imperative to permit CDW on national park land. Commercial dog walkers have access to at least 28 off-leash dog play areas throughout the City of San Francisco and make frequent-and unrestrained-use of San Francisco's remaining city parks. (See, e.g., SEIS at 31).

6. NPS policy should not be determined based on regional politics. National park values should be upheld with the national interest in mind.

7. CDW is a local concern and should be managed within the jurisdictional boundaries of local municipalities. The GGNRA should not be devalued and used as a cheap solution to a local, urban problem. National parks provide immense social and economic value to adjacent local communities; however, they do not exist to be exploited for financial gain by members of the local community unless the commercial activity closely aligns with park values, resources, and administrative needs.

The proposed ban on CDW may seem overly harsh. However, irresponsible commercial dog walkers have, for years, let loose dogs that have harassed other park visitors (including dogs) and wildlife, trampled vegetation and other habitat, and left behind feces. The status quo is unsustainable because of the behavior of the community involved and the National Park Service is under no legal compulsion to accommodate a commercial use that diminishes park resources without any effort to mitigate its impacts or otherwise offset their costs.

E. Park Visitors Should Be Limited to Two Licensed Dogs per Visitor.

On trails, visitors with more than one dog have a wider space requirement and have the potential to impact other park visitors by disrupting or impeding their progress along the trail. In ROLAs, it is not practical to allow voice control of more than two dogs per person- -indeed, there is no evidence that owners can reliably establish voice control over one dog. With few exceptions, dog handlers are not capable of adequately managing more than one off-leash dog at a time.

The Park Service wishes to accommodate visitors that have more than two dogs per visitor, the Service

should explore a permitting system that ensures that the visitor is able to control more than two dogs at one time. Any such permitting system should (1) include an educational component, (2) a test of the visitor's ability to handle multiple dogs, (3) active enforcement of the permit requirement, and (4) be cost-neutral to the Service (i.e., paid for by those receiving the permit).

Moreover, the National Park Service should require that dogs allowed into the park-especially off-leash dogs-should be licensed by a local municipality. The American Veterinary Medical Association strongly supports dog licensing requirements. San Francisco's local SPCA and Animal Care and Control agency also support licensing. To our knowledge, none of the dog advocacy groups involved oppose dog licensing. All agree that responsible pet guardians comply with local ordinances and license their pets.

Licensing ensures ready identification of lost dogs or dogs involved in incidents of concern; it also provides greater certainty of vaccinations. Because the City of San Francisco's ordinances require licensing of dogs, this requirement is complete agreement with local laws and policies. The GGNRA could enforce the licensing requirement easily and without punitive remedies: owners or guardians of unlicensed dogs could simply be informed that licenses are required within the park and be asked to leave until the dog is licensed. Moreover, increased licensing would directly benefit the City by providing increased revenue to its Animal Care and Control agency and greater safety and security to community members and dogs within city limits. Permitting only dogs with licenses into the GGNRA is a win-win for all stakeholders.

#### F. A Simple and Effective Violation Reporting and Enforcement System Should Be Established and Records Made Publicly Available.

Compliance with any dog management plan is essential to the plan's success and the sustainable, balanced use of the park. An effective compliance system must include the following components:

1. Clear guidelines that are easily communicated to and understood by park visitors;
2. Signage, brochures, and enclosures (for ROLAs, where appropriate);
3. A simple system for reporting violations to NPS by members of the public;
4. Consistent and active enforcement of park rules by NPS rangers;
5. Completion of Criminal Incident Reports (or other written reports) regarding violations;
6. Easy and efficient public access to reports and statistics of compliance rates, violations, and conflicts recorded by NPS; and
7. An adaptive management approach, open to adjusting to resolve problems with compliance or unanticipated impacts to people, park resources, or park personnel.

The American Veterinary Medical Association states: "Enforcement of restraint laws is, therefore, essential if the incidence of dog bites is to be reduced." The same could be said about overall numbers of dog assaults (where no bite occurs) or other disturbances within the GGNRA. Even under the 1979 Pet Policy, NPS has been inconsistent and lacked a clear, transparent enforcement program.

Unfortunately, the current version of the Dog Management Plan and the SEIS lack specificity as to how NPS will improve upon the status quo. Notably, none of the criteria identified above are met under the 1979 Pet Policy or its current implementation. The SEIS lacks adequate information to demonstrate that the status quo will be changed.

At a minimum, the National Park Service should implement an online database for reported incidents that area searchable by members of the public. This could include digital copies of Criminal Incident Reports (with personal information redacted). The American Veterinary Medical Association Task Force concluded:

Accurate and complete reporting of dog bites is an essential element of a bite prevention program. These reports are vital not only for case management and judicial review but for planning, implementing, and evaluating the status of the problem.

A requirement that all dogs within the GGNRA be licensed will greatly help with incident reporting and tracking.

Finally, the National Park Service should produce an annual report with statistics regarding compliance with the existing rules (whether it be the 1979 Pet Policy or the new dog management rule). The report should include site-specific information on (1) statistics of compliance, (2) counts of incidents involving dogs, (3) an estimate of costs for (a) enforcement, (b) natural resource damages, and (c) other incidental costs associated with managing dog-related recreation at the site. The annual report will assist in adaptive implementation of the dog management plan and help the public and the Park Service understand the true financial cost of this recreational activity in the Park.

G. The Accepted Taxonomic Binomial for the Western Snowy Plover Is Now *Charadrius nivosus*.

The SEIS and plan continue to refer to the Western Snowy Plover as *Charadrius alexandrinus nivosus*. The species is now identified as the Snowy Plover and recognized as distinct from the Kentish Plover. The binomial for the Snowy Plover should be corrected in the SEIS to be *Charadrius nivosus*.

In the GGNRA, the Snowy Plover has both biological and historical significance. Biologically, the Pacific Coast population of the Western Snowy Plover is federally listed under the Endangered Species Act of 1973 as threatened, and is a Bird Species of Special Concern in California. Historically, the Snowy Plover was first known to science by a specimen collected by Lt. William P. Trowbridge on May 8, 1854, from the shoreline dunes of the Presidio, making the Presidio the "type locality" for the species.

## II. SITE-SPECIFIC COMMENTS

While many of our general concerns reach to the SEIS as proposed for the entire GGNRA, we have restricted our site-specific comments to areas in San Francisco. While our members have concerns about the alternatives and their elements in Marin and San Mateo Counties, we defer to the Marin Audubon Society and the Sequoia Audubon Society, respectively, based on their local expertise and representation of local community members. We join in and support the comments submitted by both groups, as well as comments provided by the San Francisco Bay chapter of the Sierra Club, Nature in the City, the California Native Plant Society, and the Wild Equity Institute.

Ft. Mason - GGAS supports the Preferred Alternative with the following changes: (1) no commercial dog walking; (2) two licensed dogs per visitor, and (3) establishment a simple and effective reporting system.

Crissy Field WPA - The language of the plan should allow the National Park Service flexibility in determining the exact location of the fence and consideration should be given to the visual penetration effect as well as the geographical conditions of the immediate area.

Under the Preferred Alternative, off-leash dog activity directly adjacent to the east boundary fence will pose a visual threat that will penetrate into the Wildlife Protection Area, effectively rendering a portion of the eastern WPA as non-viable habitat during daytime use hours. Given this concern, the fence should be placed a reasonable distance eastward, beyond the actual 900-foot border line, to allow for an adequate buffer zone.

Additionally, the geography of the ROLA fence placement is somewhat complicated by non-uniform conditions which include a variety of substrates, varying elevations, several lobes of fenced dune habitat areas, and a variety of pedestrian pathways. Consideration should be given to all of these conditions and fence placement should accommodate ease of pedestrian traffic flow while maintaining adequate protection of the WPA.

When installed, the fence should extend to the water at extreme low tide.

Crissy Central Beach - The Central Beach ROLA should be fenced and gated. Fences at the west and east ends should extend to the water at extreme low tide. Adequate buffer zones (~300ft) should be included beyond the west and east boundary fences to protect the WPA and the lagoon outlet from the influences of excessive dog play activity. Access points from the promenade should be gated. Signs should be posted clearly identifying the area as an off-leash dog play area and stating the voice and sight control rules.

Crissy East Beach - Fencing should be installed to protect the lagoon outlet zone. Outlet areas from bodies of water into bays or oceans are of high habitat value. The outlet zone should be included as part of the protected lagoon area and similarly fenced.

Crissy East of the Lagoon - The Freshwater Swale should be designated as a no dog zone.

Crissy Promenade - GGAS supports the Preferred Alternative with the following changes: (1) no commercial dog walking; (2) two licensed dogs per visitor; and (3) establishment of a simple and effective reporting system.

Crissy Airfield - The Crissy airfield attracts a wide variety of grassland bird species, including rare vagrants, and is a popular venue for wildlife viewing. This fact is not adequately represented in the SEIS. The eastern portion of the airfield, in its proximity to the Crissy lagoon, is the most environmentally sensitive portion of the airfield. Establishing a ROLA on the eastern portion of the airfield will create a greater potential for conflict between dog walking activities and wildlife, wildlife viewing, and visitor experience.

We prefer to have no off-leash dogs on the airfield. However, if a section is to be chosen as a ROLA, off-leash activity in the central portion of the airfield would have the least impact on wildlife and those engaged in wildlife viewing. Any ROLA should be fully enclosed with, at a minimum, post-and-cable fencing and clear signage.

Ft. Point - GGAS supports the Preferred Alternative with the following changes: (1) no commercial dog walking; (2) two licensed dogs per visitor; and (3) establishment of a simple and effective reporting system.

Baker Beach - The Preferred Alternative for Baker Beach is problematic for several reasons. Splitting the beach into leash-only and no-dog areas will lead to confusion, non-compliance, visitor conflict and continued management problems. Furthermore, allowing dogs near the creek outlet, an area often used by shorebirds, will increase the potential for wildlife conflicts. As a means of eliminating these problems and of creating more opportunities for visitors to enjoy dog-free National Park experiences, the entire Baker Beach area should be designated as a dog-free zone.

Lands End - GGAS supports the Preferred Alternative with the following changes: (1) no commercial dog walking; (2) two licensed dogs per visitor; and (3) establishment of a simple and effective reporting system.

Sutro Heights Park - GGAS supports the Preferred Alternative with the following changes: (1) no commercial dog walking; (2) two licensed dogs per visitor; and (3) establishment of a simple and effective reporting system.

Ocean Beach - GGAS supports the Preferred Alternative for Ocean Beach. To improve upon the Preferred Alternative, it is suggested that symbolic fencing and adequate signage is used to delineate the south border of the ROLA. A simple post and cable fence could be placed along the border from the sea wall to the plover sculpture. A well-defined border will help to reduce compliance problems and visitor conflict. Additionally, GGAS suggests changing the name Snowy Plover Protection Area to Wildlife Protection Area. A designation of Wildlife Protection Area would be inclusive of all wildlife species that use the beach habitat area.

Ft. Funston - To the extent that NPS proceeds in allowing a ROLA at Ft. Funston, it must be fenced and fully marked to provide adequate notice to dog owners and other park users about where on- and off-leash dog activities are appropriate.

GGAS strongly opposes the Preferred Alternative, which creates a ROLA along the beach south of the Funston Beach Trail access. Given the historic noncompliance by dog owners at Ft. Funston and the sensitivity of the habitat, GGAS has concluded that dog related recreation on the Ft. Funston beach is not an appropriate use of the park land.

Because dogs should not be accessing the beach at Ft. Funston, GGAS further recommends that NPS not allow dogs on the beach access trails. The presence of dogs on the beach at Ft. Funston will adversely impact shorebirds. Additionally, the presence of dogs on the beach at Ft. Funston will adversely impact park visitors, including equestrians, some of whom have suffered attacks from dogs when riding at or near Ft. Funston.

GGAS opposes permitting dog recreation south of the main parking lot. Dog-related recreation on the Ft. Funston beach is not an appropriate use of that park land, there is no need for dogs to be on the beach access trails, especially Sand Ladder Trail. GGAS recommends that this area be designated as a "no-dog" area.

GGAS does not oppose the establishment of a ROLA north of the main lot at Ft. Funston provided (1) that the ROLA is not established on sensitive habitat, (2) that the ROLA is fully contained by a natural or physical barrier with adequate signage, and (3) that the ROLA and surrounding areas are adequately patrolled and leash requirements are enforced.

### III. CONCLUSION

Thank you for your consideration of our comments. It is our hope that the FEIS will reflect a comprehensive analysis of the impacts that will occur under the selected alternatives and that active education and enforcement is part of ongoing management in the GGNRA for dogs. With a reasonable regulation and adequate enforcement, we believe the GGNRA can continue to accommodate dogs while protecting the valuable natural and cultural resources that make the GGNRA an urban national treasure.

If you would like to discuss these issues further, please do not hesitate to contact me at [mlynes@goldengateaudubon.org](mailto:mlynes@goldengateaudubon.org) or at (510) 843-9912.

Respectfully submitted,

Michael Lynes  
Executive Director

<b>Correspondence ID:</b>	6192	<b>Project:</b>	11759	<b>Document:</b>	55416
<b>Address:</b>	Burlingame, CA 94010 United States of America				
<b>Outside Organization:</b>	Unaffiliated Individual				
<b>Affiliation:</b>					
<b>Received:</b>	Feb,18,2014 00:00:00				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Mr. Dean				

I am a Burlingame resident who has been using GGNRA's Sweeney Ridge trail system for over 5 years. My dog and I typically walk to Sweeney Ridge from the Sneath lane trail head to meet our son who comes over the from Fassler trail head in Pacifica. I typically hike with my dog on Sneath Lane in San Bruno or the San Francisco Public Utilities watershed boundary at the Portola Gate. This gives us a good two hour round trip.

I support the use of the city of Pacifica's GGNRA lands for all including on-leash dog walking, hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I understand the need to protect fragile areas and balance public recreation needs but it feels dog owners are being excluded from the use of this public recreation resource when there has been years of use and very little environmental impact. I would hope better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog.

#### Sweeny Ridge/Cattle Hill

I support GGNRA Draft Dog Management Plan's Alternative A (Map 19-A) with the addition of the Baquiano Trail from the trailhead at Fassler Ave. in Pacifica. The adoption of Alternative A with the mentioned additions would allow continued multi use (including on-leash dog walking) throughout the

Sweeney Ridge trail system.

I do not support the current preferred alternative 19-F due to:

Lack of interconnect-ability of all of the Sweeney Ridge Trail System. Many users of Sweeney Ridge live locally and access the trail system from three very different geographical trail access points.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Most trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Currently a gas, water and electrical right of way. Mountain biking and horse riding are permitted on Sweeney Ridge. These activities are just as destructive if not more so to sensitive habit areas and species.

No attempt to protect sensitive areas with signage or fencing.

Visitor use of Sweeney Ridge is relatively low compared to other GGNRA areas, making visitor and on-leash dog contacts very minimal.

Consideration for ADA accessibility. 19-F would exclude the least steep, only switch backed trail into the Sweeney Ridge Trail System.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Sweeney Ridge is surrounded by urban areas with direct access from many neighborhoods making the wilderness back country experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking. Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

#### Mori Point

I support GGNRA Draft Dog Management Plan's Alternative A (Map 17-A)

I do not support the preferred alternative of 17F due to:

Lack of interconnect-ability of trails

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Some trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on Mori Point. These activities are just as destructive if not more so to sensitive habit areas and species.

Degradation of area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Mori Point is surrounded by an urban area making the wilderness "National Park" experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

### San Pedro Highlands

I support GGNRA Draft Dog Management Plan's Alternative A (Map 20-E)  
I do not support with the preferred alternative of 20F due to:

Lack of interconnect-ability of trails. Please open up the South Middle and Valley Ridge Trail for on-leash dogs. These would connect to the Devil's Slide Trail.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. All trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on San Pedro Highlands. These activities are just as destructive if not more so to sensitive habit areas and species.

San Pedro Highlands was until recently a dirt bike club. There is heavy degradation of this area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

San Pedro headlands is surrounded by an urban area making the wilderness "National Park" experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

As you know the GGNRA is a unique special place that was created to accommodate the recreational needs of an urban area, essentially creating an urban park. Any attempt to mirror dog restrictions used in national parks with a wilderness experience would be misguided and would go against the intended mission of the GGNRA when it was created. Please continue to allow us to recreate with our dog in the

GGNRA  
and consider my concerns.

Sincerely,  
Michael Read  
Burlingame, CA

**Correspondence:** Frank Dean

I attended the meeting at Stern Grove recently featuring you and congresswoman Jackie Speier. When a question came up as to why there are no off leash areas in the GGNRA in San Mateo county you indicated local law, or local precedent. How is this relevant Frank Dean? Doesn't federal law supersede local and state law?

Also, I am noticing a double standard here in your policy. When pressed about there being no off leash areas in the GGNRA in San Mateo county you indicated it is because there is precedent in San Mateo county for not having off leash areas. WHAT ABOUT THE PRECEDENT IN SAN FRANCISCO COUNTY FRANK DEAN? There is precedent here for off leash in the GGNRA, which you are trying to take away these rights. How can you respect precedent in one area and give this as reason for your failure to establish off leash lands, and disrespect precedent in another area by trying to take away these rights that have been long established?

And what about the fact that the San Francisco city supervisors voted unanimously to recommend for you to keep the long standing off leash dog rights the same as they always have been? Why do you give false respect to lawmakers in San Mateo, who actual probably do not care if you establish off leash lands in that county and disrespect lawmakers in San Francisco by not complying with their wishes for the people who live in our city after this issue was much studied, contemplated and debated by them?

**Affiliation:****Received:** Feb,18,2014 20:39:10**Correspondence Type:** Web Form**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Simone Echeguren

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Jennifer Cappelletti

**Correspondence:** On pages 310-328, there is an extensive and details presentation of data describing dog-related incidents in many locations throughout the GGNRA. I read this section with great interest.

For the years from 2008 to 2011, in most cases, there has been a steady and significant downward trend in the number of these incidents. For example, at Crissy Field, the number of incidents falls from almost 200 to much less than 100, including a dramatic reduction in the incidents of dogs in the WPA.

These reductions have come about because of increased efforts at education, as well as self-policing of these areas.

On the basis of this data, I believe the present policy is working, and that some additional investment in education would produce significant benefits. In contrast, the report gives no evidence to show that the proposed policy changes will have beneficial effects, or that the presence of the proposed policies in other comparable urban park settings has had these benefits.

**Correspondence Type:** Web Form  
**Correspondence:** Dear Mr. Dean

I have been using GGNRAs Sweeney Ridge trail system for over 5 years. I support the use of GGNRA lands for all including on-leash dog walking, hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I understand the need to protect fragile areas and balance public recreation needs but it feels dog owners are being excluded from the use of this public recreation resource when there has been years of use and very little environmental impact. I would hope better signage and enforcement could accomplish your goal without restricting the areas we are currently able to bring our dog.

Sweeny Ridge/Cattle Hill

I support GGNRA Draft Dog Management Plan's Alternative A (Map 19-A) with the addition of the Baquiano Trail from the trailhead at Fassler Ave. in Pacifica. The adoption of Alternative A with the mentioned additions would allow continued multi use (including on-leash dog walking) throughout the Sweeney Ridge trail system.

I do not support the current preferred alternative 19-F due to:

Lack of interconnect-ability of all of the Sweeney Ridge Trail System. Many users of Sweeney Ridge live locally and access the trail system from three very different geographical trail access points.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Most trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Currently a gas, water and electrical right of way. Mountain biking and horse riding are permitted on Sweeney Ridge. These activities are just as destructive if not more so to sensitive habit areas and species.

No attempt to protect sensitive areas with signage or fencing.

Visitor use of Sweeny Ridge is relatively low compared to other GGNRA areas, making visitor and on-leash dog contacts very minimal.

Consideration for ADA accessibility. 19-F would exclude the least steep, only switch backed trail into the Sweeney Ridge Trail System.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Sweeney Ridge is surrounded by urban areas with direct access from many neighborhoods making the wilderness back country experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking. Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

#### Mori Point

I support GGNRA Draft Dog Management Plan's Alternative A (Map 17-A)  
I do not support the preferred alternative of 17F due to:

Lack of interconnect-ability of trails

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. Some trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on Mori Point. These activities are just as destructive if not more so to sensitive habit areas and species.

Degradation of area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

Mori Point is surrounded by an urban area making the wilderness "National Park" experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

San Pedro Highlands

I support GGNRA Draft Dog Management Plan's Alternative A (Map 20-E)  
I do not support with the preferred alternative of 20F due to:

Lack of interconnect-ability of trails. Please open up the South Middle and Valley Ridge Trail for on-leash dogs. These would connect to the Devil's Slide Trail.

Over stating of damage caused by on-leash dog walking given the historical use of the area which once was an active military site. All trails are existing 4x4 vehicle roads at least eight feet wide-if dog is leashed will not impact sensitive habitat areas. Mountain biking and horse riding are permitted on San Pedro Highlands. These activities are just as destructive if not more so to sensitive habit areas and species.

San Pedro Highlands was until recently a dirt bike club. There is heavy degradation of this area with existing non native vegetation.

Consideration for ADA accessibility.

Impact on other local parks. The San Mateo County Parks Department has a no pet policy making the GGNRA the only legal place to walk our dog in a rural park setting.

San Pedro headlands is surrounded by an urban area making the wilderness "National Park" experience unattainable.

Is enforcement realistic? I would rather have consistent on-leash enforcement rather than unregulated off-leash due to difficulty of enforcement.

Failure of EIS to show specific scientific damage resulting from on-leash dog walking.  
Many rare and endangered species and plants have thrived and not adversely been effected by on-leash dog walking.

As you know the GGNRA is a unique special place that was created to accommodate the recreational needs of an urban area, essentially creating an urban park. Any attempt to mirror dog restrictions used in national parks with a wilderness experience would be misguided and would go against the intended mission of the GGNRA when it was created. Please continue to allow us to recreate with our dog in the GGNRA  
and consider my concerns.

Sincerely,

Christine Read  
Burlingame, CA

**Correspondence:** Reviewing the Dog Management Plan, I find myself shocked by all of the work and expense that has gone into managing dogs in our local National Park. And San Francisco residents know

---

that dog owners often do not follow the rules anyway, as can be seen by looking at SF city parks and green spaces, so even making rules seems like a very optimistic undertaking. That said, I support Alternative D.

I do not think that commercial dog walking belongs in a national park. It is a business, not a recreation. It may be very pleasant to get to conduct one's business in a beautiful national park, but that is not fair to the rest of us who want to enjoy being outdoors and are tired of the vast number of dogs. There are 32 dedicated off leash dog parks in San Francisco already and more on the way. Millions of dollars have been spent on SF dogs, yet they now prefer our national park.

I think that the maximum number of dogs that a private person should walk is two. I also support fenced ROLAs. Please require that every dog walker carry an ID that can be presented if there is a problem.

Dog owners are very politically organized, but their opinions do not accurately reflect the rest of the population who are too cowed by their bullying angry stances. Our parks are for people, not dogs. Many older people now avoid parks and the GGNRA because of all of the dogs, mostly off leash. Even on-leash dogs can jump on a person, especially when they are walked on the long expandable leashes. I think that you need to specify a maximum leash length of 6 feet. I get tired of having leashes wrap around my legs and that entrapment is also dangerous.

I enjoy the wild landscape and the wildlife of the GGNRA. Any day on the beach dogs can be seen chasing birds that are feeding, forcing them to fly off. And dog waste is frequently left, especially in wilder areas where the dogs go off the trail but the owners don't leave the trail to pick up the waste.

Please limit the number of dogs in the GGNRA. And please give the public a phone number for reporting dog problems of all sorts and submitting photos of wildlife harassment. There presently appears to be no way to do that.

Thanks!

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. The management plan is too restrictive and will prevent me from enjoying the area with my dog in the way I have enjoyed GGNRA properties for many years. The GGNRA is a wonderful local resource for the dog owning community.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

My grandfather was a great outdoorsman and I learned to love and respect nature and public space through times I shared with him. While we need to protect nature, it is public caretakers' responsibility to find a balance so that nature is protected and the community may enjoy and actively use the land.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Please do not move forward with the planned changes to the GGNRA dog management plan.

Sincerely,

Michelle Murray, MSN, RN

<b>Correspondence:</b>					

As a frequent visitor and future resident of Montara, I oppose the proposed 'Regulated Off Leash Area' (ROLA) in the area between Le Conte St. and Tamarind St., Montara in the Rancho Corral de Tierra area of the GGNRA. Reference Alternative 'C' and 'E' of the GGNRA draft Dog Management Plan / Supplemental Environmental Impact Statement (SEIS)."

Some reasons to oppose the 'dog park' in this area:

- Preserve / conserve the open space
- The operation of the adjacent school and student safety will be adversely impacted
- The streets accessing the area are not suited to additional traffic
- The existing quiet neighborhood will be degraded by noise and traffic

A fenced off-leash area directly adjacent to a residential community will be unsightly - dog excrement will accumulate despite best efforts by owners to cleanup. This is not only unsightly, but a potential public health hazard where dog parasites can contaminate the soil. Urine and fecal matter accumulation will smell and will ruin grass and topsoil. Barking and yelping will contribute to noise pollution.

We are dog owners and are very saddened to learn of the planned severe restrictions for on-leash dog walking in the GGNRA in Pacifica. We would be very happy if you will allow leashed dogs on the Bootlegger Steps at Mori Point. We always liked to go down a different trail - the road going east should be fine for dogs since it's very wide. If these are not kept open for dogs we won't be walking there as we won't go without our dog and we need uphill walking.

We like Councilmember Sue Digre's suggestion of opening the trails around Sheldance Nursery for dog walkers. Please keep trails in Pacifica open for dog walkers.

Thank you for your consideration.

<b>Correspondence:</b>	I have been a regular weekend user of Ft. Funston for 20 years. I've seen many thousands of people and their dogs enjoying this unique space - especially the stretch of beach at the bottom of the bluff. I understand that the present tolerance for off-leash enjoyment of this space is different than other locations in the national parks. However, in all of the time I've been there, I can recall only a few minor incidents of inappropriate behavior - far less than I regularly see at on-leash dog parks.				

I suppose that the National Parks may achieve a very slight reduction in certain kinds of events by eliminating the use of this location for recreation, but there will be an immense reduction in my enjoyment of these lands. I am happy to let the National parks administer all of the other lands under their management in a manner that is consistent with wilderness preservation. I do not agree that the lands at Ft. Funston should be treated as if they are a remote wilderness. In the case of Ft. Funston, there needs to be a balance between public use and preservation, and in this case, preserving an opportunity for public

use should be the higher priority. there are hundreds of miles of beaches that are preserved - why not let this one small stretch be an exception?

**Correspondence:** Please do not restricted or band dog access in our state parks. Limiting access for dogs would also limit access for so many dog owners. For so many people dogs are a huge and enriching part of our lives. Dogs do so much for people with disabilities, people who may suffer from depression, people that may otherwie not make it out of their houses and into the parks. Dogs help people feel connected and can easy anxiety. walking dogs daily can have great health benifits for dog owners. My dog has got me through some pretty rough times. Enjoying our parks is one of my favorite past times and is an enriching experience and great luxury that I do not want to loose. I'm not sure what all the driving forces are to baning dogs within certain parks, but I hope the people in charge can consider working on the specific problems that are caused by dogs in parks and try to find solutions rather than restricting.

Thanks for your time.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

---

**Correspondence:** Re dog management plan

A worthy undertaking, to try to manage the already excessive population in beaches and parks. They represent, by their numbers, a large and negative impact on plants and birds and non-dog toting humans.

**Correspondence:** I just moved here from the East Coast a half year ago and love walking my dog off leash as much as possible for it truly hurts my back when I constantly clench his leash. I used to farm and land scape and have a bad back and easily sore arms from working on a computer constantly and my only joy of every day is walking and running my dog off leash, giving us both a great exercise. It is nearly impossible to run with a dog for they need to consistently stop and smell for enjoyment and to catch their breath... running with him off leash allows him to take a break and go to the bathroom and for me to keep on running as well (obviously I stop and pick up his #2 if he goes)!

I always hike Tennessee Valley, Blithedale Canyon, and love taking him to the many beaches Marin has to offer and noticed the signs warning that this privilege may be taken away due to dog walkers not picking up after their animal... However, it is odd to me since all the soccer fields seem to be covered in geese feces and the trails covered in deer droppings and no one seems to care about those! If people continue to pick up after there dog and keep them under voice control, I don't understand what difference a leash law makes...

I know the geese are not native and come down from Canada seasonally and I know the deer are over populated here so it seems that having dogs off leash should not be a problem. I totally understand wild life preserves and never take my dog anywhere that doesn't allow them for I respect nature and all animals. However, dogs like humans, need to enjoy a variety of new locations to wander and roam, which is why I plead my case for allowing new comers like myself to enjoy this vast wonderful land of Redwoods with my dog off leash.

There are too many sport fields that don't allow any dogs and too few dog parks with wood chips that are so small a dog can barely run around... it is quite sad to see such little love for a state claims to be so dog friendly. What a shame it would be if dogs were to be harnessed and never allowed to roam free and get the exercise they deserve. I know that Indian just passed a law declaring dolphins as non-human citizens and they are no longer allowed to be held captive... Dogs may not be as smart as dolphins, but they sure are incredibly intelligent and need to be able to run wild and free!

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong

---

opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Jelte Liebrand

**Correspondence:** Ours and all dogs need plenty of space to run off leash. Countless reasons that are stated to support maintaining the off leash trails and beaches. To maintain good health dogs need to run hard and the most effective way to run is off leash. Please consider the behavior that may result when our well exercised dogs are denied their right to run free.....possible bad behavior which may include aggressiveness. Thank you for your consideration of all of the thousands of dog owners.

**Correspondence:** I believe dogs should be able to roam in parks to remain strong and healthy. If dogs don't get the energy that their bodies require, it can lead to behavior issues.

The website: <http://voices.yahoo.com/the-importance-exercise-dog-exercise-can-6166548.html?cat=53> proves that if dogs do not get a sufficient amount of energy the dog could do things from chewing on a shoe, to attacking another dog, or even a human being.

If an owner is not able to take their dog anywhere local to exercise it is not so much that the humans will suffer; it is that the dogs will. If the owner does not have time to take them anywhere out of their way (you know how busy we all are) dogs will not be able to get exercise and would live a very unhappy life. Any dog owner would understand how much your dog's happiness means to you and if their dog cannot be happy (it can be very hard to see a dog be unhappy) owners might feel as if they did not do a good job caring for their pet.

In conclusion, if parks and trails no longer let dogs roam and get the exercise that their bodies need, it can result in aggressive behavior, unhealthiness, and most importantly unhappiness. If dogs can roam free, these things have a better chance of not occurring.

Sincerely,  
Laila LoRe Age: 10

**Correspondence:** I am appalled at the extreme nature of the proposed changes in the GGNRA dog management plan/SEIS. The existing situation is not perfect, but as a 30 year (frequent NON-DOG OWNING) user of the GGNRA (mostly in SF and Marin Headlands), I am at a loss to understand the severity of the proposed changes. I have never seen (and I can't even remember hearing) of any problems caused by the presence of dogs on or off-leash. Please reconsider the radical restrictiveness of these rules. Dogs are one of the universe's greatest creations (as is the GGNRA). Dogs benefit greatly from the recreational opportunities at the GGNRA and their humans gain an immense amount from their companionship and well-being, especially in a gorgeous natural setting.

I wish that I had the time to respond to the SEIS point by point, but I did read it thoroughly and am in strong disagreement with both the spirit and the details of the proposal. I'm sure that there are hundreds of people who will make the argument against the SEIS in a detailed and succinct manner. I hope that you will take their comments/critiques and mine very seriously!

Thanks for your (re)consideration,

Jay Kammen

**Correspondence:** Please don't place additional restrictions on dog walking in the GGNRA. I am a resident of San Francisco and have been going to Fort Funston, Ocean Beach, Crissy Field and Baker Beach on a weekly basis for the last 10 years because I can walk my dog off leash there. Being able to do this improves the quality of my life and my health and gives me great joy. San Francisco is a very dense city and like many other dog owners I don't have a yard large enough that my dog can run freely. I'm sure most other owners of the 100,000 dogs in San Francisco feel the same way as I do about the benefit they get from walking their dogs off leash in the GGNRA.

The GGNRA manages all ocean front land in San Francisco and it needs to consider the recreation needs of the city residents. A one size fits all dog policy for the National Park System should not be applied to the GGNRA which is unique in that it is located within a major urban area. The 1979 Pet Policy provides access to off leash dog walking in only a minute portion of the GGNRA. Several of the proposed alternatives drastically reduce or totally eliminate the already small amount of dog walking areas. There is no justification for such a sudden and drastic change. Please consider the needs of the over hundred thousand dog owners in San Francisco and the Bay Area and do not impose any additional dog walking restrictions.

<b>Correspondence:</b>	To whom it may concern,				

I oppose the revised plans regarding re-zoning areas of Fort Funston as "on-leash" zones under the new dog management plan. This park is currently one of the most wonderful oases for dogs, unrivaled by anywhere else in the state. It seems like every person at this park comes here with their dogs - it is rare to find someone there without a dog. There are so many parks in the city where dogs are required to be on leash, which is fine, but why change this park? I bring my dog here almost every day and the dogs here all seem to get along, and I have never had an issue with "dog-violence" or any other problem due to animals not being on a leash. Please do not change this park. It's such a wonderful place to visit, but under these new rules, I and many others like me, would no longer find it as great of a place to visit. Thanks for your consideration.

Scott

<b>Correspondence:</b>	Dear Superintendent Dean,				

I walk my dog regularly in the GGNRA, I'm writing because I'm strongly opposed to the GGNRA's new draft dog management plan. It is grossly restrictive and will prevent me and many people I know from enjoying time with our dogs, as we have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. As a city with far more dogs than children, a restriction like this takes away the rights of citizens to enjoy our open spaces with our pets. There are plenty of places where dogs are not allowed, and we respect that.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area, one where once again, there are far more dogs than children. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Emily Charnes

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Mary Robblee

<b>Correspondence:</b>	dogs and dog owners are increasingly polluting the hiking/walking/running landscape. Stepping on dog poop is an every week and frequently everyday phenomenon. Exercising, yoga, circuit training, playing catch, kicking the soccer ball, playing frisbee are mightily constrained by the presence of dogs and dog poop. Dog owners and dog walkers do forget to clean up after their animal. Cryptosporidiosis proliferates...dog barking is irritating...dogs scare deer away...ex military service dogs are insulting...dog-ism is a sad substitute for human interaction...

<b>Correspondence:</b>	Dear Superintendent Dean,				

I regularly walk my dog in GGNRA. I have never had any issues with her, she is on great voice control and stays with me without issue. I love the opportunities I have to run or walk with her along the paths and beach in Fort Mason and the Presidio especially. If we are limited to one small area, I will be forced to simply watch my dog play, instead of getting exercise with her. I have many, many friends and neighbors who feel the same way. Unfortunately, living in a densely populated city, this is the only way for me and my dog to get great exercise and enjoy time together.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Nicole D. H.

**Correspondence:** Thank you for making comments available on this draft plan. This is my first time contacting the government about any kind of issue or proposed plan, and I hope that the tens of thousands of other area residents who share my concerns will comment as well.

I have lived in SF for about 13 years, and am the type of resident who will try to sell anyone on how wonderful it is to live here. Yes, it's expensive as hell, but it's an amazing place to live - in particular if you have a dog (or 2, like me. Both were rescued after being abandoned or mistreated). I happily pay taxes to schools and other services that I don't use directly, in support of a city I cherish - feeling that it is worth it to live and work here every day.

Having moved here from NYC, I truly appreciate access to offleash space and believe it is a critical component in keeping dogs healthy, and well socialized. The dog owners I see are responsible - we pick up after our dogs, are cautious towards people who may or may not like animals and do not allow dogs to harass or encroach on wildlife. In short, I believe people with dogs are earning this access with good behavior and that we present relative little risk to the quality of life for wildlife and nature.

What I do not believe is that there is legitimate, UNBIASED scientific evidence that offleash areas are threatening wildlife. I would be more concerned with parades, races and generally irresponsible park attendees who leave trash, fires, etc and have no incentive to keep these spaces in tact.

If this plan passes I'll be looking for a job in another city, and potentially another state, where they offer more rational governance over nature and open spaces.

Thanks again for your consideration

Christine Brumback

**Correspondence:** I would like to see much more of GGNRA be truly dog-free, so people and wildlife can enjoy the natural setting without being harassed by dogs. The only way to achieve this is to designate areas closed to all dogs, either on- or off-leash. Fences will be needed to keep dogs in their designated areas.

San Francisco dog owners consistently demonstrate that they consider themselves entitled to allow their dogs to do whatever they like, wherever they like, whenever they like. One example of this is Lafayette

---

Park. It is clearly posted that in most of the park dogs must be leashed. Most dog owners choose to disobey this regulation. Dogs are usually released from their leashes as soon as they are at the park side of the street. Dogs run off-leash throughout most of the park in spite of the signs and regulations.

Another place dog owners disobey regulations is on trails in the Presidio. We choose to walk on trails that require dogs to be leashed, but most dogs we encounter there are off leash. We have heard dog owners there saying they knew leashes were required, but that is is really OK to not use leashes.

San Francisco dog owner behavior is that if dogs are allowed, the owners will let them off leash. There is no reason to expect this behavior to change. There are not enough park rangers in the universe to enforce compliance with leash regulations in GGNRA.

For any plan to be successfully implemented, it needs to based on two givens:

- 1) San Francisco dog owners will disobey leash requirements;
- 2) Voice control is no control.

Regarding (1), San Francisco dog owners are by far the most law-breaking, inconsiderate, irresponsible group I have seen in years of living in cities around the world.

Regarding (2), with the exception of border collies, dogs in San Francisco ignore voice commands. All you get is a bunch of owners making lots of noise hollering, while the dogs run wild.

For Fort Mason, I prefer maps 9-D or 9-F (I cannot see a difference between them), provided the ROLA is fenced to restrict off-leash dogs to that area.

For Crissy Field, I prefer map Map 10-D provided the ROLA is fenced to restrict off-leash dogs to that area.

For Fort Point, I prefer Map 11-D.

For Baker Beach, I prefer map 12-D.

For Lands End / Fort Miley, I prefer map 13-D.

For Sutro Heights Park, I really prefer map 14-D. It would be so nice to have a park in San Francisco where you could sit on the grass with reasonable expectation that a dog has not just relieved itself on it. That certainly is not the case in Lafayette Park; all of it is dog toilet.

For Ocean Beach, I prefer map 15-C, provided the ROLA is fenced to restrict off-leash dogs to that area.

No comment on Fort Funston. I am unfamiliar with it.

Thank you for your efforts, and good luck controlling dogs in GGNRA.

Re: Draft Dog Management Plan, Supplemental Environmental Impact Statement (SEIS)

Dear Superintendent Dean:

Thank you for your ongoing public service to the country in your leadership position of the GGNRA.

I am a long time homeowner and resident of San Francisco with one dog, whom I have owned for several years. My primary form of daily exercise is walking and hiking with my dog. Where permitted, she walks off-leash under my voice control. We recreate on GGNRA land (primarily Fort Funston and Crissy Field) regularly, as well as in SF City parks.

I strongly oppose the GGNRA's new Draft Dog Management Plan, specifically, the Preferred Alternative. I wrote to you previously in response to the DEIS, and now write in response to the SEIS, in support of Alternative A, No Action. Your proposed plan is far too restrictive and will prevent me from recreating with my dog for my own and my dog's health the way we have on GGNRA properties for many years. I also have other objections which I detail below.

My concerns regarding the SEIS and Draft Plan are several. I begin with the public health impact. Every owner knows "a tired dog is a happy dog," and many people like me are urban residents who rely on these GGNRA areas to give ourselves and our dogs the daily exercise they require for our physical and mental health and socialization. Your Plan would impose an undue burden on SF dog owners for whom daily commuting to some remote rural location to allow their dogs to run freely while under voice control

would be prohibitive.

Dog ownership helps promote the public health and well-being, and the GGNRA serves as an important resource for Bay Area residents with and without dogs in this context, especially in the current areas where off leash walking is permitted. I frequently walk with friends who own dogs, and others without dogs who are local friends, as well as visitors from across the country. I know that many people who cannot personally own a dog gain psychological benefit of being in a natural setting where they can observe and interact with people and dogs while walking/hiking. Of course, all dog owners bear full responsibility for observing all signs and rules, such as fenced areas protecting natural flora and fauna, maintaining voice control of their dogs, picking up dog waste (of their own pets and others), and assuring that their dogs' interaction with people and animals is positive (including avoiding those people who wish to have no interaction and avoiding all harassment of wildlife).

Next, I wish to address the legislated purpose for establishment of GGNRA and authority to alter that purpose. Our U.S. Congress created GGNRA and it is up to Congress to legislate any changes, not the NPS via incremental usage restrictions. GGNRA was not established as a National Park within the meaning of "National Park" and all that that implies with respect to priorities and policies. Contrary to the SEIS, the purpose of the GGNRA is not to offer a "national park experience to a large and diverse urban population." Congress created GGNRA as a "Recreation Area" to serve the reasonable recreational needs of Bay Area households in this densely populated, urban environment. Walking one's dog off-leash is a reasonable recreational need and has been throughout modern history. As my Representative Nancy Pelosi indicated in a letter to you recently, "While Park Service regulations may ban off-leash dog-walking in National Parks, there is a long history of off-leash dog recreation in San Francisco which began before the transfer of land from the City and County of San Francisco to the National Park Service."

The original 1979 GGNRA pet policy should be formalized and supported, expanding to include off-leash areas in San Mateo County and on new lands that the GGNRA may acquire in the future.

The SEIS was not modified in any significant way from the DEIS to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. Why not?

Given all the time and effort the NPS has put into the DEIS and SEIS, why has there been no peer-reviewed, site-specific study, as required by law, of dog-walking impact in the GGNRA? The DEIS & SEIS assert that such impact exists and is negative, based purely on anecdotal evidence of NPS staff and a potentially skewed limited sample of respondents to the DEIS. Rigorous scientific peer-reviewed study must be undertaken so that the resulting Dog policy comports to reality, not a pre-conceived agenda to remove off-leash dogs and more broadly, individuals recreating with their dogs, in the GGNRA.

I also oppose the Management-Based Monitoring Strategy (MBMS). It will, de facto, permit GGNRA authorities to unilaterally alter or terminate Regulated Off-Leash Areas (ROLAs). Any proposed changes to ROLAs should be made only after significant enforcement action has been taken and documented, ongoing widespread violations continue, there is a strong case for environmental protection of the area, and all of this is put to public review and input.

I oppose the SEIS recommendations to fence in ROLAs, because if the fencing is made of split-rail open design (as they are at Fort Funston) they do not truly limit or contain access, and if tightly enclosed as with chain-linked fence, they are incompatible with the area and greatly detract from the recreational experience arising from the location.

Specifically regarding Fort Funston, per the SEIS there is just one native plant species that is federally endangered, the lessingia. The locations of this plant and damage to this plant by dogs is not documented in the SEIS. Substantially restricting dog-walking access in order to potentially protect a single plant species is an imbalanced response that places one plant above the recreating needs of SF residents. The vast majority of the upper Funston dunes and trails have been covered by non-native species since the military used this area decades ago. Contrary to the SEIS, these upper Funston dunes are not "denuded" but rather the ice-plant and other plants routinely rejuvenate, and the dunes shift with the weather over the paved trails. The SEIS is written in a manner that is clearly biased against ALL dog presence, and for that matter, human presence. Large numbers of people and dogs walking across an area is considered "trampling", rather than simply walking. I find the SEIS quite biased, and strongly urge you to adopt Alternative A, the No Action Option.

Finally, the SEIS fails to adequately address the impact on SF City parks. My federal taxes support GGNRA and I expect my household to be able to undertake recreation there. The Preferred Alternative will tip the balance strongly away from GGNRA's prime founding mandate, which is to serve its surrounding urban community. I strongly urge you to adopt Alternative A, the No Action Option.

Sincerely yours,  
Rhonda Vitanye

**Correspondence:** Dear Supervisor Dean:

I am saddened by your complete and total disregard for the tens of thousands of comments you've received from the dog-walking community regarding the "dog management plan". This process has, from the very beginning, been a huge smokescreen. Despite the very active participation of our community, we have been shut out and/or ignored at almost every juncture.

Amy Meyer expressed it very well at a GGNRA Advisory Board hearing in 2001 when she said "I don't know why these people are bothering. We've already made our decision." She said this in the hallway, during a break, when 3000 people showed up to protest the GGNRA's proposed dog restrictions. I was still nominally a park service contractor, and Ms. Meyer thought she was speaking privately to an inner circle of allies.

Because the new plan was just a cut and paste job, I feel free to do the same. Therefore, let me echo what has been so eloquently stated by my comrades:

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is extremely restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

THE GGNRA HAS LOST SIGHT OF ITS PURPOSE: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Thank you very much for your time.

Lisa Vittori

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management

---

Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Manny Vargas

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Emmy Starr

**Correspondence:** The SEIS fails to make any meaningful change to the EIS even though the majority of public comment was opposed to reducing areas where on leash and off leash dogs are permitted.

The SEIS does not provide any peer reviewed site specific study on areas affected by dogs. Yet some of the proposals would cut access to people with dogs by over 90%. This is not in any way sound decision making for public policy.

The 1979 Pet Policy should be kept in place until specific and persuasive evidence is found to indicate a change is needed. And if that does happen change should be implemented gradually.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I am confident that I may speak on behalf of the 900 or so families who signed a petition I circulated to validate off-leash dog play as a form of human recreation in the Dogpatch District of San Francisco,				

Dog walking and dog play are more than just healthy human recreation. Dog walking and dog play are a daily, bona fide need for families that include dogs as family members. Many responded to pleas by organizations like San Francisco's world-famous SPCA to adopt dogs. As responsible animal and nature lovers, we will fulfill our commitment to care for our recreational needs and the needs of our canine companions one way or another.

Parks in heavily-populated areas will not be able to remain as pristine as wilderness; fortunately, there are thousands of miles of unpopulated seashore along the Pacific Ocean in North America where wildlife that is too sensitive to readily cohabit dense urban areas can flourish.

The Golden Gate National Recreation Area is a gateway for environmental awareness and appreciation that could serve, in turn, to protect true wilderness areas. If the GGNRA chooses to accept the reality of our urban demographic - that approximately one-third of all households in San Francisco include dogs as family members - then the GGNRA could avoid an adversarial relationship with the urban population, and could expand support to protect truly wild areas where fragile wildlife can actually survive.

Thousands of Bay Area citizens responded in prior Golden Gate National Recreation Area comment periods. To be fair, their numbers should also be counted in the tally of respondees for this current comment period. Even if there are a few duplicate respondees, the increased numbers would still not fully represent the actual statistic of all dog families in the Bay Area. Dog owners that spoke up to be able to continue to enjoy the human recreation of walking or playing with their dog at the GGNRA, as was originally promised, cannot reasonably be expected to have changed their minds.

I urge the GGNRA to recognize its urban location, and to serve the needs of true wildlife areas by

providing recreational choices suited to an urban environment. We are all in this together, as far as the broader environmental movement is concerned, and by embracing animal-loving Bay Area citizens, the National Park Service could inspire many more people to work to protect and enhance survival prospects for wildlife that live in truly wild areas, worldwide.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean:				

I write to you again, as I suspect and hope many others have, to comment on the future of dogs in the Golden Gate National Recreation Area (GGNRA).

The last time I wrote, it was in response to the 2011 Draft Environmental Impact Statement (DEIS) on Dog Management in the GGNRA. This time, I write in response to the 2013 Supplemental Environmental Impact Statement (SEIS). From my point of view, there has been some positive change from the DEIS to the SEIS, but not enough for celebration.

In 2011, Jane Woodman and I wrote you representing Marin Unleashed. The name Marin Unleashed was a bit of a misnomer, as most of what we requested was access to the Headland's peripheral fire roads on-leash.

We included the following general comment in 2011, and it still applies

"First, we have a suggestion that is applicable no matter what rules the NPS adopts: The most important aspect of dog management (as with every management issue) is clear communication, e.g. signs, brochures, websites, and maps all provide, the same information in a clear concise manner. To date, this has not been the case with dog management in the GGNRA.

Much of the conflict between humans about dogs in the GGNRA is a direct result of conflicting rules, and of the public's versus the Park Rangers' and Park Police's understanding of these rules. There are many trail signs in the Headlands that say 'no dogs' or 'dogs on-leash' in direct conflict with the Headlands map that correctly represents the current rules, the 1979 Pet Policy. It is no wonder if there have been resulting conflicts between GGNRA visitors, and with Park Staff."

There are still signs on some of the fire roads that are in conflict with the current Headland's map. I understand that signage and maps will likely need to be replaced when a new Dog Management Plan is put into place, but in the meantime, these differences can (and do) cause user conflict.

We proposed, and continue to propose:

"Allow access into the GGNRA in Marin to humans with dogs from the communities that border the GGNRA; allow access to humans with dogs on the fire roads that run around the borders of the GGNRA with the neighboring communities, e.g. Sausalito, Marin City, Tam Valley, Tennessee Valley, Homestead Valley, Mill Valley, Muir Beach."

We would prefer voice control/off-leash access on some portions of these fire roads. Neither the DEIS, nor the SEIS has convinced us that voice-control/off-leash access along at least some stretches of these fire roads is unreasonable, nor that it would cause harm to wildlife or habitat.

Alta Fire Road from Donahue to Orchard Fire Road is especially amenable to voice control/off-leash access. The first section of Alta fire road from Donahue is not on GGNRA land. Alta Fire Road from Donahue to Orchard Fire Road has been heavily used for years by dogs off-leash without adverse effect.

One of the two 'gives' from the Dog DEIS to the SEIS is added on-leash access to the Headlands from Sausalito. Alternative F would allow on-leash access on Morning Sun Trail and on the Rodeo Fire Road up to Alta Fire Road, and on Alta Fire Road from Morning Sun Trail to Oakwood Valley Trail. This added access would allow a person with a dog to walk from Sausalito across Alta Ave to Marin City, or to Oakwood Valley Trail and then down to Tennessee Valley Road. We thank you for that.

While we applaud this addition, we are concerned about the loss of access to GGNRA fire roads from other communities bordering the GGNRA. Muir Beach will be land and water locked. Residents there will be unable to walk with their dogs outside of town, except on-leash, and then only on the beach, in the parking lot, and up a short stretch of trail and back. With the SEIS Preferred Alternative, Tam Valley also loses all access to the fire roads that have been accessible with dogs on-leash under the 1979 Pet Policy.

Is it really necessary to remove the existing on-leash access to fire roads from some of the GGNRA's neighboring communities, to allow access on-leash to other neighboring communities? This is not a rhetorical question. It feels more than a little bit like 'robbing Peter to pay Paul'.

SEIS Preferred Alternative F has a second 'give' from the former DEIS Preferred Alternative F. Alternative F has gone from no dogs on Muir Beach to on-leash dogs on Muir Beach. Frankly (no pun intended), walking a dog on-leash on a beach is analogous to taking a bath with your clothes on. You get wet, but the pleasure of it is all gone, in this case for both the human and the dog. A dog on-leash on a beach is a recipe for frustration for all concerned.

The only off-leash/voice-control area in the GGNRA in Marin in the SEIS Preferred Alternative F is the northern portion of Rodeo Beach (less than 1/4 mile). If the lagoon at Muir Beach is adequately fenced, it would be protected from not only dogs, but also from humans. Residents of Muir Beach contend the human element causes much more disruption of the lagoon than the dog element. Why not adequately 'fence off' the lagoon and protect it from both elements?

If the lagoon is adequately protected, what is the argument against voice control/off-leash access for humans with dogs on Muir Beach?

Since, I can't improve upon them, I close with the same comments as in 201: We humans who live with dogs, and find our lives enriched by their company, are not by definition foes of the environment. In particular, many of us are members and volunteers of environmental organizations; we also support domestic animal rights organizations. We find no contradiction between walking in the GGNRA with our canine friends, and in being strong advocates for the preservation of the natural resources we enjoy there.

We argue that the preservation of the environment in the GGNRA is enhanced by most of us who visit with our dogs, not destroyed by it. Walking in the GGNRA is an integral part of our lives with our dogs; we are passionate in our protection of both.

Sincerely,

Sonja Hanson

**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I have always considered myself an environmentalist and have consistently supported programs to promote the environment. I remain committed to preserving our natural resources but am sorry to say that your agency's recent actions (both with respect to the local oyster farm that you are putting out of business and) with respect to your unbelievably draconian proposal to largely ban off leash dog walking in the GGNRA (after, I would note, your agency's sneaky and illegal effort to implement a ban some years ago requiring a federal judge to intervene) have turned the vast majority of the public against you. You and your agency are out of control and, to be frank, a disgrace. I know of no other organization that has been more successful in turning environmentalist against those charged with hooding our (not your) lands in trust.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In fact the comments ran 3 to 1 against the proposal. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. This is not your private property, nor that of your employees, to do with what you or they see fit. It is our land and it was provided to you for the express purpose of preserving it as a recreation area, a designation that is designed to include the walking of dogs, as has been done for decades. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Libby Kiernan

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Hi,				

I live in Daly City and take my two dogs to Fort Funston DAILY. We also sometimes visit Crissy Field. I love being able to go to Fort Funston. Given it's size, there is so much for the dogs to do. They can hike and go to the beach, but most importantly, because it's off leash, they can really run to get their exercise. They get 2-3 hours of off leash exercise a day, and are able to socialize properly with other dogs and people.

I understand that there are a LOT of dogs at Funston. This is because of the lack of off leash areas in the Bay Area. Sure, there are off leash dog runs, but nothing like Funston, where a dog can be close to nature and run free under voice control. It's truly something special and a rare gem to have in a urban city. It gives city dogs the opportunity to romp freely.

I am against any reductions in the voice control area. To help manage the dog population, you should look into permits for people who use the Fort for business. Charge a fee for permits and limit the number of dogs to 12. I'm sure you'll see the numbers drop radically and you can use the funds for park improvement. (a real bathroom would be great!!)

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

\* The new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative.

\* The plan does not adequately analyze impacts on nearby parks of the Preferred Alternative. This analysis was requested by the public and by the San Francisco Board of Supervisors in 2011. The new plan claims that, because some off-leash space will still available in the GGNRA, even though much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption.

\* The plan lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA. The new plan admits the GGNRA has not conducted site-specific studies at GGNRA sites to document impacts from dogs on vegetation and soils.

\* The plan admits there are few scientific, peer-reviewed studies that show impacts from dogs (e.g., on vegetation and soils, p. 375), so they cite anecdotal observations of impacts made by NPS staff. A supplemental environmental impact statement needs to be based on science, not anecdote.

\* The plan misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space."

\* The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Marin County in areas where it had been practiced for decades.

\* The plan will not allow any off-leash dog walking on new lands acquired by the GGNRA, even if dog walking has traditionally occurred there, such as recently acquired Rancho Corral di Tierra.

**Correspondence:** Please do not reduce the area available for off leash dog walking in the GGNRA. Our dogs need s place to play and interact with each other and the environment. On-lease walking does not provide the same quality of exercise for our pets, which is essential for their happiness, health and wellbeing.

Since the number of dogs using the open areas is fixed (or only slightly variable), if you remove the majority of the open areas impact will be focused and magnified in those areas. This will lead to more complaints from people who are afraid of dogs and the eventual removal of all off leash walking in GGNRA. Dog walking will then be concentrated on the few remaining bay area parks that allow off leash walking, and the cycle will repeat itself. Diffusion of impact is a better solution.

If you make ridiculous laws you will only turn more people into law breakers.

**Correspondence Type:** Web Form

**Correspondence:** Based on the numerous bay area open space and park areas listed starting on page 29, there are many places that already restrict huge swaths of land from dogs even on leash such as huge state parks like Mt. Tamalpais State Park and most of San Mateo County. There are hundreds of thousands of adjacent acres that already provide protected areas for the plant, bird, and mammal species discussed in great length. Currently off-leash dog usage is in very few sites of the GGNRA and on very few acres. Considering how there are so many areas dogs aren't allowed in which species are able to live untouched by dogs, the GGNRA should support Plan A and not reduce the few acres that allow off leash access as it is. These areas are close to neighborhoods who have used these areas for decades.

Page 19 says this:

The comparatively relaxed regulations on GGNRA lands may attract visitors with dogs from other areas that have more restrictive policies.

The language is speculative. This argument is not strong enough to use to restrict dog walking.

Page 16:

Issue. Intensive dog use of an area could disrupt its use by wildlife or degrade the habitat, resulting in a multitude of possible negative consequences for wildlife population viability.

Once again, the language of "could" is speculative, not an argument. At a park presentation, as I am concerned about removing multiple Marin headland trails from on-leash walking, I asked a ranger if there had been any reports of dogs to bobcat or coyote or other wild life interactions and she said "NO". So added to the speculative nature of the above "issue", the GGNRA does not seem to have a valid argument. MORE DATA NEEDS TO BE COLLECTED before changing the dog walking access.

These are just two that I'll illustrate. I don't have all night to go through your document to pull out all the speculative "coulds" and "mays" that are spread all throughout these pages. There are just way too many.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
J. Canales

**Correspondence:** Moving from Texas, I was absolutely amazed and utterly impressed with how dog-friendly the city of San Francisco is. Taking our dog to Crissy Field, Golden Gate park, etc. etc. is the highlight of his day and also a great way for us to meet and bond with fellow dog owners. Limiting the areas in which dogs can play really takes away from a lot of the charm and camaraderie of this amazing city.

**Correspondence:** I have owned dogs over many years and could be considered pro-dog, but I also live in a very densely populated area where compromise and consideration for others is essential for a peaceful existence. My office overlooks a heavily used park by both dog owners and those that enjoy it for other activities. This is a dog-on-leash park and is well marked as such but is almost totally ignored. Even though most of the dogs are well behaved and are voice controlled it is common, almost daily, to observe dogs that are totally out of control; dogs chasing and fighting with other dogs, chasing after other walkers and bicyclist, nipping or biting people (this even happened to me as I walked to my office), and much more. And, it's not just the dogs but also the owners who don't pick up after their dogs, or if they do they leave the plastic bags lay on the ground for someone else to pick up. How is any of this considerate for others.

The plan by the Park Service has no choice but to take into consideration ALL the people who use these federal lands (including urban)when developing their Dog Management Plan and it's obvious they did just that. As in all compromises not everyone will be perfectly happy but with a plan that has something for everyone we should be grateful that we can live in a society that can accept compromise for consideration of others.

I fully support the Park Service's Dog Management Plan.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Anon.

<b>Correspondence:</b>	Please do not change the rules for off leash dogs. I know from experience working at the U.S. EPA that some so called environmentalist will do anything to prove their point, including giving false testimony, false scientific data, and conceal their true motive. I believe that the NPS should reevaluate the proposed rule changes. The GGNRA is in a major metropolitan area unlike the Yosemite, or Grand Canyon. People and dogs have lived peacefully in the GGNRA for a long time. Do not increase the tension by making the rules change, it will backfire and the NPS will be scorned. A minority of people want the changes to go into effect. This is a democracy where the majority rules just like in the U.S. Senate.

**Correspondence:** Dear Mr. Dean:

I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative. This is not your land. It is our land and you are responsible for doing what we the public determine is appropriate for our property. Despite appearances and your extreme arrogance, you work for us.

I regularly take my dog to Muir and Baker Beaches, and occasionally Fort Funston.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Sincerely,

Ed Kiernan

**Correspondence:** Superintendent Dean:

I have been walking my dogs for the past 35 years at Ft. Funston. I always picked up my dog's feces and bothered no one. I was glad that my Federal tax dollars were going to support such a wonderful off-leash area for me and my dog. I do not have the money to travel to other national parks, so Ft. Funston was my only option to enjoy Federal parkland.

It became my main recreation. I met many wonderful people and their dogs. It was a peaceful, friendly place.

Then, a number of years ago, the Federal government started to want us to leash our dogs and to restrict us to only certain areas. I and others like me wrote letters over and over and testified at numerous hearings - - all to no avail. The Federal government has come up with a plan that is exceedingly restrictive and appears to be designed to drive law-abiding, tax-paying, good citizens like me out of Ft. Funston. Why are our voices not being heard? Why does the Federal government want to deprive decent people like me of this innocent pleasure of walking with my dog in freedom.

I am now 66 years old now and have severe arthritis so I can no longer walk fast. If my current dog (a rescue from San Francisco's city animal shelter) is to get any decent exercise she needs to run off leash. I cannot possibly give her enough exercise on a leash. What are people like me to do? Why are you trying to destroy the wonderful thing that Ft. Funston has been for so many, many years.

Do the people making these decisions live in San Francisco? Do they know why having a place for people and dogs to recreate together right next to our densely populated City is so precious to so many of us? What does it take to get through to these people. I am exhausted from fighting this battle for so many years, but I will not stop.

Please finally hear us!

Sincerely,

Carolyn Lucas

**Correspondence:** GGNRA administrators,

The following comments are opposed to a change in dog management policy.

I'm a 45 year old software developer and have lived on 8th Ave near Lincoln for the past 18 years. I enjoy spending time in Golden Gate Park to get away from city noise and traffic. I walk and run in the park to relax and exercise, and have walking meetings with business associates.

I often jog through the dog play area between 7th Ave and Kezar Stadium on my way to the track, and always see off leash dogs. Sometimes dogs get excited and come up to greet me, but I have never had a problem with them. We all live in this city together, and it's the responsibility of each one of us to get along with others.

I briefly reviewed the 1,500 page GGNRA plan to revise dog management policy. As a taxpayer I was appalled to find that an administrative project of such scale, undertaken at my expense, was not based on statistics or scientific evidence of any substantial problem.

Please register my opposition to change in the current policy, and my strong dissatisfaction with the process surrounding the proposal.

Sincere regards,  
Matt Siegel

**Correspondence:** I am an elderly (?) 65 year old small dog owner. My wife and I have had dogs separately growing up and together since married many years ago. We have been going to Fort Funston almost daily for nearly 2 full decades. When we hear about off leash restrictions we are greatly saddened. I am a retired physician who trained and lived in New York City and downtown Chicago for many years previously, and for what that's worth, my comment is that having dogs being able to interact naturally leads to healthier pets. Dogs (and owners) in the other highly urban, only leashed dog environments, yields more neurotic behavior including fighting, biting, social inappropriateness and other behaviors not normally seen when dogs are allowed to run around; running around naturally occurring trees, hills, up and down dunes, running into the water, etc. These are happy dogs. They support happy owners.

I am also an old (!) Eagle Boy Scout, continue to camp and hike with my wife and children. I have tremendous respect and appreciation for our sensitive environment. That is why, in part, we go to Fort Funston (and occasionally Glen Park and Stern Grove). I feel that the concerns regarding environmental damage are unproven over any long term. I've taken the time to read the 335 page commentary from a couple of years ago and find no 'evidence' to support that dogs damage the concerned areas in any way more or less than humans or the natural environment. In fact I believe - and submit the same 'proof' - that both wind and natural erosion have changed the area around Fort Funston more so than any humans and their canine companions. Also seen over 2 decades is the unacceptable, illegal and rude behavior of weekend and holiday visitors and young school age children who swarm after school over the dunes through and into the existing fenced off areas of habitat recovery and dune ridge protection. Also the weekends and holidays leave more food-related trash than any amount of unclaimed dog poop during the rest of the year. Where are the park rangers to protect our environment from obviously damaging if also illegal human behavior?

In summary, we believe that

- Closing off more areas will lead to increased degradation of these spaces,
- For those who insist on more natural protections for endangered wildlife, fence off sensitive areas during the time of year when these species come back to live with us,
- Existing regulations pertaining to commercial dog walkers and existing protections directed at other areas should be enforced
- Adhere to the spirit of the 1979 Pet Policy where the City of San Francisco gave land to the GGNRA with the express purpose that it be used as it had been historically used for recreational purposes.

Thank you for the opportunity to comment.

**Correspondence:** After reviewing the draft dog management plan I suggest that you not move forward with any of the very restrictive plans proposed. Specifically, I oppose the plan for San Francisco that will reduce or eliminate the dog use of the beach at Crissy Field. Map 10-A currently allows a small zone where we can take our dogs off leash. Dogs need the option to swim for exercise. Swimming is a good exercise and not hard on joints. We often take our dog to the beach at Crissy Field. It's her favorite place to go and she wears herself out swimming and running. It's also relaxing and enjoyable for us to walk along the beach with our dog. We've met some very nice dogs and dog owners when the dogs play and chase each other running down the beach.

Many people are not able to run with their dogs, especially older people, so there needs to be a place where the dogs can safely run or swim off leash. Dogs that have sufficient exercise are better behaved. In San Francisco, dogs need to be on leash the majority of the time when they are outdoors. That comes with city living, but it is unreasonable to restrict dogs from having a small area where they can enjoy the beach, swim and safely be off leash.

I oppose the draft dog management plan and suggest that you continue to allow dogs the ability to swim in our beautiful bay. Thank you.

**Correspondence:** I urge you not to reduce the areas open to off leash and on leash dogs in the GGNRA. Most owners are responsible and have well behaved dogs that are under their control. It is not justifiable to deny the responsible dog owners and their dogs access to the GGNRA beacuse of the few

---

dog owners that do not follow current regulations. The solution is to better enforce the current 1979 Pet Policy and not to deny access to responsible dog owners who follow the regulations. Almost all the current dog problems are caused by dog owners not abiding by the current guidelines. The answer to this problem is not to close off areas to dogs but to provide enforcement to those that do not comply.

**Correspondence:** I feel very strongly that further restrictions should not be made to off leash use of the beaches.

I have no objection to ON LEASH access paths from parking lots or road side in fragile areas, but Muir Beach, Stinson, Fort Cronkite are heaven to my family and we do not want to go there without our canine family member.

Humans ask a lot of their animals and a small reward is the joy of running freely on the beach with their people. I think this helps pets stay healthy physically and mentally.

Of course there are always irresponsible people who could do a better job of cleaning up after themselves AND their pets and children, but the rest of us usually pick up their share of the trash and poop in order to preserve the quality of these places.

Please help keep beautiful Marin County a place for family recreation that includes the pets we love. We don't feel good spending the day at the beach when we leave the dog at home. We live here because of these activities. And we pay taxes and increased cost of living because this is the place we choose to be with our family and pets.

Thanks for acknowledging my desire to keep it easy to have our pets with us while we enjoy the beaches and trails.

It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

---

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. My dog and I both need the type of exercise you can only get from off-leash running!

Sincerely,

Tracey (taxpayer and longtime SF resident) and dog Little Bean

**Correspondence:** I hope strict ON LEASH laws are passed.

For the sake of people with children. These  
Off leash areas are unsafe. Animals are unpredictable  
We became aware of this when our 4 year old  
Was bit by a pit bill this year.

Additionally, The Gardner at Lafayette park in  
PAC heights have been attacked over 30 times  
I'm under 12 months. Please protect your  
Families and pass the leash laws. It's not fair for  
The rest of us to be scared to let our kids Rome  
Around. Also please enforce the current leash laws  
With tickets. People brake them all the time and the officers  
Explained to me tickets are rarely given.

Thank you

**Correspondence:** One of my biggest weekend joys is to take my dog to Fort Funston to watch her run free along the beach and play with other dogs. It would be a shame to see either Alternative B or D (Map 16-B, Map 16D: Fort Funston) implemented as a solution. In fact, I don't even consider either a viable alternative, if I want my dog to have the freedom to run along the beach. In doing so, I don't see her playing on the beach an environmental threat. Thanks for your consideration.

**Correspondence:** The dog management preferred alternative is appropriate. The comments by pro-off leash groups are one sided, and misguided. The comments I have heard from groups saying that they will put dogs on leash to cross creeks, and sensitive habitats is ridiculous. The notion of voice control is an exaggeration, I witness voice controlled dogs follow their instincts all the time, especially my mutt I rescued from the pound.

My dog is a hound, he will follow scents, regardless of how many times I will call his name. I am also part of a community group board with a off leash dog advocate, and while his dog is mostly under voice control, I have seen her not respond after 1-2 calls, and follow her instincts.

I am not against dogs off leash, I think GGNRA's proposal is actually too liberal, but fair given the emotions involved, and the urban interface of the park. The only reason SF representatives are against the preferred alternative is that they don't want more dogs in their parks, what does that tell you?

**Correspondence:** Frank Dean, GGNRA Superintendent

Building 201, Ft. Mason

San Francisco, CA 94123

February 17, 2014

Dear Superintendent Dean,

My name is Lisa Carey and I have been a resident of San Francisco for 24 years. I walk on a daily basis in areas such as Crissy Field and Baker Beach. I walk with my dog in this area precisely because it is located in an urban environment and is used by so many for casual and formal recreation. I am a member of the

Nature Conservancy, a birder, and avid conservationist. I also have children and bring my family to the beaches (with and without our dog). To this end, I believe I represent many of the constituencies that you seek to protect with these rules.

I have read your draft SEIS and reviewed the proposed alternatives. I am deeply disappointed that the National Park Service continues to misrepresent the practical purpose of GGNRA and its founding legislation. I am also very concerned that an arm of our U.S. government is using advocating dramatic changes in usage for off leash recreating based on some "future concern that does not reflect current usage of the GGNRA areas today. Therefore, I am writing today to voice my support for alternative A (1979 Pet policy) and strong opposition to alternatives that dramatically restrict off leash use of the GGNRA by dog owners and dog walkers.

Please consider:

1. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972 and that this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy and existing off leash area designation (option A in most of your maps). This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.
2. The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). The NPS has already restricted access with fences and closures to large swatches of the GGNRA. Establishing a "new baseline" for further restrictions undermines the original intent of the founding of the GGNRA and vastly restricts the rights of the many citizens who own dogs and live and use GGNRA.

Further, please consider:

1. Crissy Fields, Baker Beach and most of the GGNRA in San Francisco is in the city, not in a wilderness. It should be treated differently from other parks.
2. These recreation areas are mostly used by LOCALS who live here and cherish the open space in their city, not tourists. They are used every day; not just for a single vacation (like Yosemite or Glacier National Park).
3. Dog owners are the ones who use the beaches most. In all weathers and on all days. Other beach users are only there on warm days. (Rare in San Francisco). At 9am in the morning (such as this morning), 90% of those at Crissy were dog owners and a few dog walkers. There were runners and walkers on the path but the beaches (all) were empty but for dog owners and walkers. This is what you see Monday through Friday. The only time a larger contingent of multi-users is present on the beaches is weekends and holidays, 11am or so until 4pm (and that assumes the sun is out and it's seasonably warm). Therefore, if there is competition for use of these areas, it is during a very limited time and most dog owners don't come to the key beaches or are reasonable about using leashes on high traffic areas during those times: 11am-4pm on weekends and holidays.
4. NPS fails to even acknowledge that the beaches are empty most of the time, even on the weekends when the weather is cool.
5. Dog owners report all sorts of problems to the NPS authorities, dead and injured animals, wash outs,

leaks, crimes. Dog owners are the only people I have ever seen who pick up random trash on the beach and dispose of it. Not the runners, not the sunbathers, not the mothers with kids, not the kids drinking beer, not the fishermen. I have seen many dog owners pick up trash on a regular basis because they care about these areas.

5. Regulation and restriction of off-leash usage by dog owners is not needed. All of the "problems" cited in your report can be addressed by signage (i.e. educating the dog owners) and fencing environmentally sensitive areas. The NPS has put fences up on Baker and Crissy and has blocked off a large section of Central Beach (now wildlife protection area on your map) at Crissy to protect the Snowy Plovers. You have also put fences up at Baker and Funston. You have done your work. It is inappropriate to create a new baseline claiming adverse environmental impact when you have already addressed these concerns. Your responsibility should be to monitor these areas and enforce where necessary.

6. Additional signage could be put up to ask dog owners and walkers to restrict their off leash usage on weekends during busy times. At Crissy, signage could be effectively used to recommend that off leash recreation at busy times (mid day/ afternoon on weekends) be restricted to Middle Beach or the Airfield. Most owners and walkers avoid very busy areas, bicyclists, etc. and have their dogs on leash during these times. During the week, early and late on weekends, these restrictions are not necessary as there is not a conflict.

7. People who walk dogs are in better physical shape than other people (new study out of England). They are less of an expense on our health care system. We should be encouraging this!

8. Dogs not only get people out exercising, they are companions for families and for seniors. Many seniors walk their dogs on and off leash. Their dogs get them out and give them an opportunity to be social. Why are we regulating man's best friend when they provide so much benefit to citizens of all ages.

9. NPS has spent a lot of time enabling coyotes to return to San Francisco, yet, NPS is contriving to create regulations that restrict domestic dogs freedom and their owners ability to exercise them properly. This is counterproductive, unnecessary and a waste of taxpayer dollars.

10. Dog owners are law-abiding citizens who by their presence on the GGNRA lands discourage crime of all kinds. It is in the interest of anyone who cares about open space to work together - with the people who use that open space most often - dog owners. **DO NOT MAKE AN ENEMY OUT OF YOUR GREATEST ALLY.**

Surely **PERSONAL RESPONSIBILITY** with freedom is better for our society than yet more restrictions and legislation!

Dogs provide so much love and support to humans in so many ways; they need places to run free.

I ask that the National Park Service back away from imposing and regulating additional off leash restrictions. Instead, I ask that you monitor current areas set aside for conservation protection, use signage to re-enforce sensible behavior, and work with dog owners and the extended community of dog walkers and advocates to encourage responsibility and respect of this special resource. You will find that most of us are not just dog owners, but also family members and conservations who share the same goals as the broader community.

Thank you for your time and consideration.

Respectfully yours,

Lisa Carey (husband Bob and two children, and one Labrador)

**Correspondence:** The voluminous materials generated by NPS are both commendable and lamentable. They indicate a desire to be thorough and balance complex and competing needs. They are lamentable in that the volume and complexity of the document makes it difficult to navigate and may diminish the utility of the feedback you receive.

Having reviewed the documents, I write in favor of Alternative A as the best option and alternative E as a second most favorable option.

My rationale is as follows:

Despite the hassles created by the status quo, I suspect Option A is the lowest cost option as I question whether NPS has (or should have) sufficient resources to enforce greater restriction than presently exists. I believe limited resources could be better spent attending to basic safety, education, and other purposes. I

recognize that, presently, time is devoted issues and difficulties related to dogs but enforcing more restrictive options poses on a constant battle that I think is imprudent to pursue.

Futhermore, while population growth in the area and increased usage of the GGNRA may exacerbate current difficulties, those same factors would be intensified further by restriction. Amidst competing priorities growth justifies greater consideration to social and cultural needs of visitors relative to prioritizing the environmental factors.

I want to specifically endorse the idea that dogs should have a play to recreate off leash at Muir Beach and Stinson Beach. My family has longstanding roots at Muir Beach and we are not dog owners. So, even as people who do not bring dogs to the beach ourselves, we recognize the importance and enjoyment of beaches as a place where dogs and people can circulate easily.

**Correspondence:** To Whom It May Concern,

I'm a San Francisco native and have lived here all my life. When I retired I got a dog and we go to Fort Funston daily. We also have enjoyed going to Crissy Field. These are truly beautiful urban park areas. What makes them in more special is the leash free dog access. There are few places near to San Francisco where urban dwellers and their dogs can enjoy leash free walking and playing. Please don't take this away from us. The little fenced in dog runs are not the answer. San Francisco and San Mateo dog owners have the crown jewel of urban dog parks at Ft. Funston. It is beautiful. I go there every day with my dogs. Please save this crown jewel of dog parks. It is truly special.  
Sincerely, Michael Yep

**Correspondence Type:** Web Form

**Correspondence:** I am writing specifically to protest Alternative C. It proposes an off-leash fenced area between LeConte and Tamarind Streets, Montara, CA. (See text at bottom of letter from page 489. It is also mentioned on pp. 79, 489, 548, 699, and other pages throughout the SEIS.)  
My reasons for protesting a dog park in a residential area near an elementary school are:

1. Tamarind Street is very narrow street and lacks sidewalks. Currently, cars often have to take turns passing through the narrowest parts, because there is not room enough for two cars to pass. The street is not equipped to support more traffic and more parking.
2. Le Conte Street on which the Farallone Elementary School is located is not a public street, but a privately owned street. (There are some of those in Montara.) The street is in a dreadful state of disrepair.
3. There is no public street lighting on either Le Conte Street or Tamarind Street.
4. It is unwise to put a public dog park immediately adjacent to an elementary school where children

could be exposed to possible predators. This proposed park could put our children at risk.

5. For a large concentration of dogs to collect in the middle of our small residential area would lead to a dramatically noisy situation. Barking dogs and owners shouting commands would disturb nearby residents. Neighboring dogs will join in the barking. We residents will experience both a decrease in our quality of life and our property values. We would lose our quiet neighborhood.

**ALTERNATIVES:**

1. Why not put the dog park near the large planned parking lot to be constructed off Highway 1. With the planned central parking area, there would be a place to distribute plastic bags for poop-pickup and a place to dispose of those poop bags.

2. A fenced area close to Highway 1 is more logical than in a tiny residential neighborhood by an elementary school. It would enable easy access for other neighborhoods, such as Moss Beach, and in general easy access for more people.

3. By Highway 1 parking, the barking of dogs will not disturb local residents. Children will not be put at risk from predators. A quiet peaceful neighborhood will be maintained, and our property values will not be lessened.

Brady Logan

1071 Tamarind St.

Montara Ca. 94037

<b>Correspondence:</b>	I have enjoyed recreating with my dog off-leash from Marin to Half Moon Bay for years. I have also donated to the parks accordingly (San Mateo, Parks Conservancy, etc), but do not plan to continue until this dog restriction matter is cleared up. The GGNRA has clearly over-stepped its bounds, & is not working in the best interest of those of us who enjoy the parks on a daily/weekly basis. Its role is legislated to "provide for the maintenance of needed recreational open space." Period.
------------------------	---

\* I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. â€

\* I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

\* I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

**Correspondence Type:** Web Form

**Correspondence:** Off lease dog walking in Rancho Corral de Tierra should be allowed. It should be allowed in the existing area that has been used for off-lease dogs for decades. The trails are clear and there are even trash/dog poop containers and bag supplies at several convenient places. These containers and poop bag supplies have existed even before the take-over by GGNRC, and have been policed by our local dog owners group, [www.montaradogs.com](http://www.montaradogs.com) with excellent results. Dog owners in RCdT want to co-exist peacefully with other outdoor lovers and (mostly) try to limit the interaction with people who don't want to have contact with dogs.

People and dogs are healthier if they can walk/hike together in beautiful open spaces. Dogs are healthier and happier if they can romp off lease for at least some part of their day. And their owners are glad to have healthy, happier and maybe even tired-er dogs as well.

Having a fenced dog "park" in the middle of a Montara residential area that is extremely close to the elementary school is wrong. There is no convenient parking and the roads (Tamarind and Le Conte) are narrow and poorly maintained. More cars will make things worse, causing potential harm to innocent cars/people who travel these roads. The danger to young children if dogs do escape and harm them is too much to risk. This planned "park" will also be an "attractive nuisance" enticing children to come and put themselves at risk of an unpleasant dog interaction. If a dog "park" is indeed needed- -and I do not believe this is the case in Rancho Corral de Tierra- -do not put it here.

Thank you for your attention to these very important issues.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Anna Belak

**Correspondence:** Dear Golden Gate National Recreation folks:

I strongly oppose Alternative F, your preferred dog management plan to restrict. Instead, I support Alternative for Muir Beach, Homestead, Oakwood Valley and the Marin Headlands

Dogs are already off-limits on over 99% othe Golden Gate National Recreation Area. There isnt any compelling reason to eliminate or further restrict the remaining 1%. u havent conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the publics use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. that the changes made in the 2013 SEIS did not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 AGAINST the plan.

The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the public's use of their public lands". We need to retain the longstanding 1979 Pet Policy and not force people in to their cars, in search of places to walk their dogs. This is bad for the environment and bad for Marin County.

Thank you, David Lehr

**Correspondence:** I am commenting as the primary guardian for 4 dogs regarding the dog management plan for the SF Bay Area. Please keep the rules as they have been since 1979 and maintain off-leash dog walking. I bought my first house in 2008 in Montara primarily because of its proximity to the open space with off-leash dog walking. I have been walking my dogs in Rancho Corral de Tierra for nearly six years now without incident. Our morning routine starts with a run on the trails in the park and is the primary exercise that we all get every day. Walking in the streets with them on-leash is not enough exercise for me or for my dogs. I have a border collie mix, and his "job" is to chase the ball. He can't do this in the street on-leash, or in the park on-leash. His mental state will also be adversely affected if he is unable to run off-leash and do his job. And that means my mental state will also be negatively impacted with a high-strung border collie who has no outlet for his energies. I will not be able to get the exercise I need either if the leash law is enforced. I depend on that precious hour in the park every morning to get my exercise with my dogs. I don't have any other time to work out, and if I have to choose, then I will be walking my dogs on-leash in the street rather than spending that hour in a gym without them. I have also made many friends who are fellow dog guardians in the park, and they are my neighbors. We look our for one another and for our dogs. In Montara, at least, dogs are a major part of our community and off-leash walking in

---

the open space is integral to our way of life. Please don't take that away, especially without any data to support why enforcing the proposed dog management plan would be better for anyone.

Laura Hansen, Ben, Marley, Hawkeye, and Beau

If 71% of respondents to the last version of this proposal stated that they support off leash usage in the GGNRA, why is the GGNRA considering restricting it? The review of ethnic responses showed an equality in positive response in ethnic responses when looking at the categories that support somewhat or strongly. I would think this would be a selling point. But that format of randomly calling people for a sampling of the population might be more effective in another subject matter. One should survey park users, not people who may never go or who may never have been so their response to the experience seems irrelevant. The 71% represents people who go to and use the parks and who will be affected the most by these restrictions. Their voices should matter.

As a person who has been going to Crissy Field at least weekly if not multiple times every week since before the Haas Family donation to clean it up, I can tell you the users of this area are majority dog owners and historically have been. Before it was cleaned up when there were 6 foot chain link fences to

navigate on a bicycle to traverse the old cement areas, the beach always had dogs and their owners there chasing balls and exercising. When I moved here in 1985, I would jog down there at dusk and always felt safe because people with their dogs were ever present. I could depend that if I were to get jumped, I could scream and these people would hear me and come running at least to witness. The dog owners have always been the staple population down there.

Now that I have been a dog owner since 1995, I know about that level of dedication in attendance to that beach and can speak to who is still ever-present. We dog owners are there when it rains, when it's cold and windy as well as when its a nice day. We are the only ones there, aside from a few overly dedicated joggers, when it rains. For almost 30 years I can attest that the true users of the park are the dog people, they are the one constant and shouldn't have their lives altered so drastically by this plan.

As for complaining about dogs in the GGNRA, one highlighted comment said this:

During the public comment period for the draft plan/EIS, many park users noted disturbances associated with dogs. (AGAIN THIS IS FROM THE 29%, ot the 71%) ne commenter stated, We are very frequent visitors to the GGNRA and long- time members of the Golden Gate Parks Conservancy. We love to hike, ride our bikes and enjoy the beaches. Dogs significantly detract from our enjoyment of the park areas (NPS 2011a, Correspondence 431)

I would like to report that I do not like stepping in HORSE MANURE and actually, beyond being disgusted by the lack of hygiene, I find it very dangerous when I'm hiking up a hill as it reduces my chance for traction. There are requirements even now that dog feces is picked up and we all are very good at it around here but horse manure is always left behind for us to step in with no requirements.

Recently I was hiking in the Santa Monica Mountains on Westridge Trail and at Runyon Park in LA, both off leash trails, as I often have before. The difference in culture between that area and here is striking. There, you find uncollected dog feces many times on a hike. Here thanks to our responsible dog culture, it is a much rarer event.

Page 19 says:

Various dog groups and associations have even organized dog cleanups, provided bags, and tried to influence their members; but despite these efforts, many dog owners still do not comply with picking up dog waste.

But this is NOT true. MANY is not accurate. MANY do and SOME do not. And many who do, as I and numerous people I know do, pick up others' waste as part of our responsible culture. It seems in the LA area, it is less common to come together and try to make up for the few bad apples. Do not punish the MANY good citizens for the sins of a few.

Local culture MUST be considered in any rule making process.

**Correspondence:** Thank you for accepting comments until 11 pm today.

We empathize with the task the GGNRA is directed to accomplish. We are dog aficionados, rescuers, fosters, and "lovers." But we leave those sentiments at the gate with regard to how our national public resources should be managed.

In Appendix G, a letter from a Member of Congress states, "...GGNRA has a unique mandate. The final plan must include options for public use, both with and without dogs, as well as safeguards for environmentally sensitive areas." Although we agree that GGNRA may have a unique mandate, we strongly disagree that it includes public use "with dogs." This perception may be what some constituents have fabricated to their representative, but no where can we find any such mandate. Thus, we urge the GGNRA to discount any such assumption or claim that the GGNRA must include public use with dogs. We have come to the conclusion that voluntary compliance must be abandoned as a policy when multiple facts and experience show that it does not work. There are many times and areas where we would love to take our dogs, but the bigger issues of protecting natural resources, maintaining public peace, health and safety, avoiding altercations, etc., must take priority over allowing dogs, or allowing them with unenforceable stipulations.

Dog Control: Voice v Leash Control. In areas where dogs may be allowed, only leash control should be required. Voice control is an illusion-an after-the-incident, unenforceable, and dangerous stipulation. It must not be a part of the GGNRA regulation. Award winning voice control trained dogs may excel in competition. However, when in a new environment, those same dogs can and do repeatedly ignore voice commands, as pointed out in the CA State Parks letter, "â€many dog owners believe they have voice control over dogs when, in fact, they do not." (Reference: Appendix G, page 130 of pdf file, "Letter from the State of California Parks and Recreation," from Randolph Sederquist to Mr. Brian O'Neill, GGNRA [pages 3 thru 5 of document]) That letter devotes three pages to the negative impacts of dogs. On public lands, "voice control" is an unacceptable stipulation standard. In areas where dogs may be allowed, only "on leash" (NO EXCEPTIONS) should be the standard requirement in GGNRA public lands.

The letter from Congressman Pet and Helen McCloskey [Appendix G, pg 178, pdf] claims that the significant restrictions on, and elimination of, off-leash dog walking â€[are] not fact based. The people who have been to public areas where there have been ugly altercations, injuries, and no accountability, simply never come back to those public areas for fear of more of the same. The McCloskey letter acknowledges the importance of dog companionship and healing capabilities. But it is for those exact reasons that off-leash dogs should not be allowed. When an altercation occurs, the "victim" dog that is seriously injured is then compromised for the rest of its life, and the owner loses both a quantity and quality of companionship. To keep those qualities in tact for all, requiring on-leash at all times will serve

the public much better than allowing off leash areas. We do agree that blame can be spread for negative impacts-large events, bicyclists, etc.-but that is no reason to restrict a known impact that can be easily mitigated by enforcing leash laws.

General Policy-Licensing Laws. The strongest GGNRA licensing laws should be firmly established by the GGNRA to protect wildlife and other natural resources. The general policy should NOT rely on any city, county, or out-of-town/state/country "practices" nor should it be dependent upon other jurisdiction regulations.

While we agree that the laws should be posted throughout the park, we strongly recommend that the penalties for noncompliance should also be posted, and that enforcement should be incorporated in to the dog management plan.

Policy-Marin County. No national public recreational areas should be reserved and/or restricted to a specific group, no matter what the worthwhile purpose. If a designated area of public land is set aside for "dog training," and then another for "advanced training," this is a form of discrimination. Any person should be able to use the public lands and abide by the laws established. But "designations" give one group a public-property "use" advantage over others. If dog training is needed, it should be conducted on private property. Possibly a one time event, special-use permit with associated fees to cover all contingencies and costs would be acceptable.

Last, because a National Park or Recreational Area is adjacent or close to urban areas is no excuse or reason to abandon strong regulations to protect the natural resources. In fact, if anything, the closer to an urban area that such a public areas are, the more protection is needed. We do not see parks' purpose to "serve the public" or adjacent communities, but rather we see them as places where people can visit to enjoy nature, recreate within limits so that natural resources can be enjoyed while being protected and preserved. Dogs can always be walked in urban areas, on streets and exercised in local dog parks.

We respectfully urge the GGNRA to not allow dogs in any sensitive areas and to require dogs be on leashed in any and all other areas with no exceptions where dogs may be allowed.

Thank you for considering our views.

RE: Comments on Golden Gate National Recreation Area Draft Dog Management Plan/Supplemental Environmental Impact Statement

Dear Mr. Dean,

The Marin Audubon Society (MAS) appreciates the opportunity to comment on GGNRA's Draft Dog Management Plan Draft Supplemental Environmental Impact Statement (DSEIS). As noted in our comments on the Draft EIS, Marin Audubon has a long history of working to protect wildlife and wildlife habitat. We understand that the Park Service is under intense pressure to open more areas to on- and off-leash dogs. We applaud GGNRA's focus on protecting wildlife and habitat and we urge that that approach be sustained and strengthened, most importantly to protect endangered species, wildlife and habitat. Our specific questions and recommendations discussed below. Our comments address Marin County sites only, but we support protecting wildlife, habitat and endangered species throughout GGNRA.

It is a primary responsibility of the National Park Service (NPS) to ensure that natural resources, particularly endangered species and their habitats, are fully protected. This includes ensuring that endangered species are not harassed or otherwise adversely impacted by people, dogs and other stressors.

MAS continues to support Alternative D because it would provide more comprehensive and effective protections for the natural resources within the boundaries of GGNRA. It is clear to us, after reviewing the record, that protecting wildlife and habitat is the primary reason the NPS has restricted dogs use on Marin trails. MAS supports this criterion for guiding decisions. In our view, however, adequate protection will not be achieved because the proposed restrictions are not adequate, enforcement is unclear and compliance is far from certain. The Plan is weighted in favor of dogs and dog walkers and does not go far enough to protect habitat. The DSEIS proposes to allow dogs on every Marin area and, since the DEIS, dog use has been expanded on a number of Marin sites, including Muir Beach, and Rodeo Beach.

According to our calculations from acreage figures in the DSEIS, 25.32 miles of trails and 54.32 acres of beach are open to dogs on GGNRA in Marin County. Considering this, it is hard to believe that dog walkers are not able to sufficiently exercise their pets on GGNRA trails. We also note that the Marin has many dog parks, and more that 200 miles of public trails. Dogs are allowed on most, if not all, of the trails in Marin. It is unfortunate some dog owners can't rise above their own interests to support protecting habitat for endangered butterfly, owls, fish and other at-risk species, in the limited areas where these species need to live.

We appreciate the extensive research that went into the preparation of the Draft SEIS, especially the 24 peer reviewed studies that confirm the impact of dogs on wildlife and habitats. The findings of these studies are applicable to impacts of dogs everywhere and provide ample support for recommendations to limit dog use to protect wildlife in sensitive habitats.

We also appreciate that fire roads are not considered separately from trails because use of fire roads by dogs can be just as damaging to adjacent habitats and wildlife as dogs on trails. They may even be more damaging because they are wider and could encourage more heavy use.

Inadequacies of the DSEIS:

Precedent Setting Nature Not Addressed

The DSEIS reports that GGNRA is the only facility in the entire national park system that allows off leash dogs. "Dogs that are not controlled by caging or a leash no longer than six feet are currently prohibited across the entire national park system (36 CFR 2.(a)(2))...." The DSEIS should address the nationwide implications of opening areas to off-leash dogs at GGNRA. It is a significant concern that

allowing off-leashed dogs at GGNRA could be used to justify and encourage opening other parks to off-leash dogs. This would significantly broaden the adverse impacts of off-leash dogs on wildlife and natural habitats. This is a major potential impact that should be addressed.

#### Monitoring Based Management Strategy Unclear

As explained in the Park Operations section: All sites would be regularly monitored. When the level of compliance is deemed unacceptable, based on violations and impacts to resources, primary management actions such as focused enforcement of regulations, education, time and use restrictions, establishment of buffer zones and SUP restrictions would be implemented. If non-compliance continues, secondary management actions including short-term closures would be implemented through the compendium. The schedule includes a 1-3 month period of public education followed by a 1-3 month period testing the monitoring based strategy.

With the above process, the NPS expects that impacts on wildlife and habitats would also decrease. How would those impacts be evaluated and what criteria would be used? What level of non-compliance would be tolerated? Would there be a plan for monitors to visit all sites at regular intervals over what period of time? We understand that monitors not be able to issue warrants but would have to communicate findings to enforcement staff. How would monitors communicate with enforcement personnel efficiently? How would such a communications system successfully identify violators in a timely manner and hold those violators accountable? By the time enforcement personnel appear, wouldn't it be likely the incident would be over?

#### Enforcement not Adequately Addressed

Enforcement is key to successful implementation, to compliance and to protection of wildlife and habitats. Too many people seem to feel that they will never get caught, don't care, or feel that they are somehow different and entitled to behave as they wish. The description of the enforcement program or management activities is vague and leaves many components poorly defined.

There should be a more comprehensive description of the planned enforcement program. What are the anticipated threshold levels for implementing management actions and would they differ among sites? What thresholds or triggers would be used to decide when to take enforcement actions management actions such as to close a trail? What specific enforcement actions would be initiated, besides issuing warrants to violators and or closing trails, and for what non-compliance activities would they be initiated?

GGNRA is in the process of developing a warrant process. Information should be provided about the warrants: how they would be issued; for what infractions; how many times would offenses have to be repeated before warrants would be issued?

#### Problems with Impacts Analyses

##### - Compliance Not Accurately Evaluated

The cumulative impact analyses for virtually all trails, roads and park segments consistently cite park programs such as restorations by the Golden Gate Park Conservancy and "ecologically beneficial" restoration and management activities by others, including controlled burns and invasive plant removal. Impacts at each location and cumulatively are deemed negligible when compared and considered with the restoration and management activities and agency projects. We have several problems with this approach:

The impact analyses as well as the Environmentally Preferred Alternative rely on compliance to evaluate the impacts of the Plan as negligible. This is an unrealistic approach because many people will not comply. The Plan, therefore, would be ineffective in achieving impact levels that are negligible.

The DSEIS acknowledges that even with "assuming compliance" the preferred alternative would result in localized impacts but these would be considered minor based on the assumption that dog users will comply with the regulations. Repeated observations of dog users over time, however, clearly demonstrate that this is not the case. Dog's users throughout Marin County violate dog restriction, ignore signs and sometimes destroy or steal them, and disregard policies and regulations with impunity. While many people do obey the law, particularly if they understand why, many will not. This cannot be ignored in evaluating the significance of the impacts. In addition, even localized impacts could be major when endangered species and their habitats are involved.

Conclusions that the potential impacts will be negligible are unsubstantiated and invalid until and unless the NPS presents a dependable program that will ensure dog walkers will stay on trails and not harass wildlife or damage habitat. The only way this can be assured is through an effective monitoring and enforcement program. At minimum, there needs to be a strong enforcement program that ensures dogs are restricted from sensitive habitats. It would also be helpful if dogs were restricted on more trails.

The DSEIS should acknowledge that non-compliance is a likely possibility and is highly probable. This impact should be addressed by identifying an enforcement program and actions that would mitigate this individual and cumulatively significant impact.

#### - Significance of Impacts Not Adequately Assessed

The DSEIS evaluates the significance of impacts in comparison with and consideration of beneficial activities that are being conducted in the GGNRA and even outside of GGNRA. The impacts of dogs are weighted and evaluated with activities being conducted by GGNRA, the Park Conservancy and others, including wetland and other habitat restoration and enhancement projects and management actions such as controlled burns. Offsite restoration projects and projects implemented by others than the federal government are also cited. This is a slippery slope.

These restorations/enhancements are not being implemented to mitigate for or justify dog impacts. Furthermore, most or none of the restorations would not in any way offset impacts from dog use. The argument can be made that restoring habitats would actually increase impacts because the habitat areas that dogs could disturb would be increased. Also most or all of those restoration/management activities within the park would be done anyway because it is GGNRA's responsibility to protect, enhance and restore habitat for endangered species.

Finally, the NPS must consider the consequences of claiming unrelated restoration activities as mitigation to offset or balance impacts of their project. What if shopping center or housing project developers were to claim their impacts are negligible because restoration projects of GGNRA and others created offsetting beneficial conditions? This is a real and potentially disastrous outcome, if perhaps unintended, of the approach taken in this document. MAS certainly doesn't want habitat restoration projects we have implemented to be used to offset damage to other habitats

The only effective mitigations for dog impacts are suitable protective restrictions and an education and enforcement program that works.

#### Impacts of Increased Visitor Use Not Considered

It should be recognized that, just as use of GGNRA lands has increased over the years, uses will undoubtedly continue to increase as our human population increases. Mitigation should be presented to address the increased impacts on habitat and wildlife that would accompany the anticipated increased uses of some or all of the trails.

#### Need for Environmental Review for New Trails

It appears that trails that are not presently in existence are being considered part of the Management Plan and evaluated in this DSEIS, such as new trails at Homestead Valley. It also appears that the trail locations may have not even been determined at this time.

This DSEIS should provide sufficient information about these and any other trails that are not currently in place. This is necessary to enable evaluation of the potential adverse impacts on adjacent habitats and wildlife of human and dog use and to evaluate whether there is a less environmentally damaging alternative location. If this information is not provided in this DSEIS, a separate environmental review for these non-existent trails should be conducted.

#### Comments on specific sites:

##### Stinson Beach

We continue to support Alternative D which complies with federal regulation that dogs not be allowed on swimming beaches. We question whether it is the responsibility of GGNRA, or any jurisdiction for that matter, to provide access to property owned by others. Should GGNRA continue to allow their land to be use to reach Upton Beach, an effective barrier should be constructed. The nature of this barrier should be more thoroughly discussed in this DSEIS. Whatever kind of barrier is used, it must be designed to not impede wildlife movement.

##### Homestead Valley

GGNRA preferred Alternative would allow on-leash dogs on the Homestead Fire Road and on future neighborhood connector trails that are yet to be established. We are concerned about approving additional "neighborhood connecting" trails without knowing their location, so that their impacts can be adequately evaluated. Further, MAS has a long-standing position in opposition to the development of new trails because there already are ample trails in Marin County and in GGNRA. We recommend that any new trail construction be accompanied by decommissioning of an existing trail of the same length in the same area. In particular, because Homestead Valley habitats support the endangered Spotted Owl, it is essential that any new trails, as well as all existing trails, be carefully evaluated to avoid habitat for this endangered species. In this sensitive habitat, at minimum all dogs should be required to be on-leash.

The DSEIS speaks to actions that would benefit the Spotted Owl, but these are merely suggestions in the Marin County Plan for Homestead Valley. This plan was recently out for public review and, at that time, the plan discussed the presence of Spotted Owl but did not include protective policy recommendations or policies that even recognized endangered species.

The DSEIS also mentions that the Barred Owl has more impact on the Spotted Owl than dogs. It is not a matter of "either-or". The impact analysis should consider the impacts of both dogs and Barred Owl cumulatively. Impacts from both sources increases the significance of the impacts of both.

##### Alta Trail/Orchard and Pacheco Fire Roads

The Preferred Alternative now would allow on-leash dog walking on various sections as well as walking more than three dogs with a permit. According to the DEIS, the areas that support Mission Blue Butterfly habitat are located "away" from the trails, which is beyond the 6-foot LOD corridors.

In this area, protection of endangered Mission Blue Butterfly would rely on compliance with leash restrictions. Dogs would no longer be allowed on social trails. Impacts from commercial dog walkers are expected to increase, but are considered insufficient to cause a change in the threshold level. The "threshold level" is not defined.

The preferred approach would not provide effective protection for the endangered Spotted Owl and its habitat. Monitors and enforcement personnel would have to be present frequently or daily to ensure that no social trails are used.

#### Oakwood Valley Trail

The preferred alternative for this site has been modified to allow on-leash dog walking on the fire road and on a portion of the Oakwood Valley Trail to the junction with Alta Trail. Dogs would no longer be allowed on social trails that meander through Mission Blue habitat. We support on-leash dogs on the fire road only. People without dogs also should be restricted from the social trails to protect Mission Blue Butterfly habitat. We strongly support not including a ROLA because of its impact on wildlife movement.

As with the Alta Trails above, for this Alternative to be effective frequent monitoring and effective enforcement will be required to ensure people do not go off designated trails.

#### Muir Beach

The protective provisions of the previous preferred Alternative D, have been greatly modified, to allow dogs on the bridge, Muir Beach Trail and the beach. This site supports multiple endangered species including Red-legged Frog, Coho Salmon, Steelhead as well as shorebirds. This is also the location of a large habitat restoration project to benefit the endangered Red-legged Frog and other aquatic resources.

The discussion on page 113 states that fencing would be installed to protect the dunes and lagoon, would serve as visual barrier and would enable the NPS to manage the area to protect the natural resources. It is acknowledged that the fences would only be visual barriers, and would not actually "protect resources as off leash dogs would still be able to access resources." In apparent conflict the discussion on page 862 states that the preferred alternative would "provide protection of the habitat at the lagoon and Redwood Creek...."

It appears that the NPS is going out of their way to provide dog access in this sensitive location. We have little confidence that visitors will comply with leash regulations to ensure protection of the habitat and endangered species. The DSEIS acknowledges that the proposed fencing and leash provisions will not be effective in keeping dogs out of this sensitive habitat area.

The preferred alternative might protect the visitor experience for dog walkers, but would do little to protect wildlife and habitat. Its success is based on assumed compliance which, as discussed above, is unrealistic and not supported by observations. No information is presented to change our minds that on-leashed dogs should be allowed only in the parking lot and picnic areas.

#### Marin Headlands

Alternative F for this area was modified to expand on-leash dog-walking on the Rodeo Avenue and Morning Sun Trails, also on the Lower Rodeo Valley trail corridor, the North Lagoon Loop Trail, Old Bunker Fire Road and Batteries loop trail. Allowing dogs on perimeter trails only is intended to preserve the integrity of the interior habitat. The DSEIS reports that Mission Blue Butterfly habitat is not located along the roads/trails therefore impacts would be negligible.

Again, this alternative relies on "assuming compliance" to evaluate potential impacts on Mission Blue Butterfly to be negligible. As discussed above, compliance cannot be assured. Various actions are mentioned to benefit Mission Blue Butterfly: protecting habitat outside the Headlands and Fort Baker; several past projects, and "Additional acreage of mission blue butterfly habitat that will be restored under an agreement with the USFWS." The success of the two completed projects (1984 and 2007) is not stated, nor is it clear how they would offset or render negligible impacts from dog use. They could simply be

providing more habitat for dogs to impact. Also, it is not clear what additional acreage would be restored, where and when, and whether or how these projects would minimize or offset impacts from continued and increased dog use. It is not demonstrated that the projects described would offset or mitigation the impacts of dogs on the species, but at least the impacts would largely be confined to the perimeter.

#### Rodeo Beach and Lagoon

A ROLA is established on Rodeo Beach and dog use is expanded to the entire north beach, south to the sea stacks. A post and cable fence would be constructed along the west side of the lagoon. It is acknowledged that such a fence would discourage but not physically exclude dogs and people from the lagoon area. Dogs of certain breeds would find it most inviting to leap over or under a fence to fun and swim in the lagoon. Water quality and habitat degradation are noted as causes of the listing of Tidewater Goby, which inhabit the lagoon. The discussion reports water quality and habitat degradation, both of which would result from dogs swimming in the lagoon, are reasons this species is listed as federally endangered.

Protection of any birds that may land on the beach depends on off-leash dogs being under voice control. How will the NPS assure that dogs are actually under voice control and that their owners even are paying attention to their activities? The justification for allowing unleashed dogs here is that shorebird counts on this beach are low. It does not appear to have been considered that the numbers are likely low because of dog use.

Impacts are expected to increase from commercial dog walkers but are not expected to increase enough to change the "threshold level" although what that level would be is not defined. Again, the effectiveness of these restrictions will depend on compliance which in turn will depend on monitoring and enforcement. Assuming compliance is especially troublesome at this location because few, if any, dogs are actually under voice control.

#### Fort Baker

Leashed dogs would be allowed basically everywhere except the beach area. We think there should be some trails, other than the beach, in this area where dogs are not allowed. It is important that dogs not be allowed on the beach to better ensure protection of the lagoon waters for aquatic birds.

We continue to support our previous recommendation: to allow on Bay Trail and other paved roads/trails, but not on unpaved trails.

#### Conclusion

Thank you for considering our input. We very much appreciate the efforts of the NPS to protect the natural resources of the park and we urge that you continue and increase efforts to do so.

Sincerely,

Barbara Salzman, Co-chair  
Phil Peterson, Co-chair  
Conservation Committee

**Correspondence:** Dear National Park Service,

I am writing to support no changes be made to your current dog regulations on your properties. Having said that, I would also like to emphasize that I do not enjoy sharing many of these trails with dogs. The reason I don't enjoy sharing the trails with dogs is because some of their owners have taken the attitude that the laws/rules do not apply to them. In particular, picking up after their dogs and maintaining their dogs in control. I routinely walk your trails in Marin county with a small child and have to avoid excrement left behind in and out of bags by the owners. Have been trampled on my picnic blanket with my child by dogs not under voice control or on a leash. I have even had a dog urinate on us while on a pic-nic.

Even though, I have had several bad experiences with dogs on trails I do not want to fault the many good owners for the mistakes and bad behavior of few. I would like to encourage the National Park Services to spend more resources enforcing the current laws/rules. Dog owners who can not or will not pick up after their dogs should pay a fine. I also believe that owners who blatantly walk on trails that are not currently dog friendly should also face a fine. I realize enforcement would be costly, but enforcing a total ban would also be very costly.

I am not a dog owner but I don't want to prevent to dog owners from enjoying the same areas I use. My goal is for all of us to enjoy nature that does not include bags with feces or dog feces where we walk. I also would like to be able to sit for a pic-nic and not be worried that a dog is going to run up on me or my child. I would hope good dog owners would encourage their fellow dog owners to exercise good behavior and call out bad behavior when they see it.

I hope The National Park Service finds a fair way to address this issue and puts the resources to keep our parks clean and enjoyable for all citizens: dog owners and non dog-owners alike

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Sue Guynn

**Correspondence:** I'm commenting on behalf of the non-dog owning parents with children. If this proposed dog management plan is implemented, I'm highly concerned that my small, neighborhood parks will be over-run with people and their dogs.

Dog owners out of desperation will fill up already crowded dog parks if places like Fort Funston, Crissy Field and Rancho Corral de Tierra are cut off. I do not doubt that dog owners will not only fill the neighborhood parks, but also the baseball fields and school yards because of the lack of exercise space for their dogs.

From a parent's point of view, I find this plan unfair and biased. If my child's favorite playground was at risk of being torn down for unsupported scientific reasons, I too, would react much the same as the dog owners are.

This proposed plan poses many risks to not only dog folks but to all folks in my county.

I don't want to stop having to frequent my favorite parks with my children because of this drastic change proposed for GGNRA properties. Please consider keeping the 1979 Pet Policy - it's one of recreation, nature and comradery of all species. It ensures dogs will have their space and my children will have theirs now and for years to come

**Correspondence:** Superintendent Dean:

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many year (35!).

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Carolyn Lucas

**Correspondence:** Page 22 of the Dog Management Plan:  
Issue. Guide dogs are at risk from off-leash dogs which can compromise the safety of the guided individual. Off-leash dogs can interfere with guide teams by attacking the guide dogs, threatening the physical and emotional well-being of guide dog teams. Even without physical injury, attacks and interference can negatively affect a guide dog's behavior and work performance. Following an attack, guide dogs may be unable to work because of physical injuries, and they may develop undesirable behaviors towards other dogs...

I am at Crissy Field multiple times a week at various times of the day and evening and almost never see Guide Dogs for the Blind training there. I know some people with guide dogs and also service dogs who need to let their dogs get off leash play time and exercise. So just because the (The Seeing Eye Guide 2011, 6) reference projects this fear, people with these working dogs need to be able to exercise their dogs and the GGNRA is a good place for them.

<b>Correspondence:</b>	The most heavily-used parts of the GGNRA are unique resources, placed within a densely-populated urban environment. They could not be more different from wilderness parks, where the standard regulations for use and for dog-walking activities must be highly restricted.				

Throughout this report, the authors provide arguments about policies and impacts that are reasonable for wilderness parks, but make no sense at all for a park located within the San Francisco city environment. Most importantly, there is no actual data showing how these regulations might or might not work in a city setting. Before imposing a huge change in policy on our entire city, I would like to see some real data showing what, if any, of the intended consequences are even possible within San Francisco. The report really has no data that is relevant to the situation in San Francisco

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Nicholas Sciandra & Pippa (Bulldog)

<b>Correspondence:</b>	This is most unfair to animals and the kind loving people that home them. I find it ridiculous to have this as a law, as they don't bother people that litter constantly at these beaches and parks. Everyone is thoughtful and appreciative of these open spaces for our four legged kids. Our dog parks are kept clean, with water and structures and beaches are supplied with bags to pick up. I have				

---

never seen a dirty place and the animals learn to socialize in these places.

It is important and nurturing for children, older people, everybody to be around animals. PLEASE don't do this. PLEASE don't make it impossible to have a pet.

If it wasn't for my dog, whom I have had for 8 years now since she was 5 weeks old I couldn't have survived some of the stress I have been going through. To have my "best friend" alongside me in the parks and beaches has helped me cope tremendously with personal loss and loneliness. Taking walks with your dog is the most soothing helpful therapy I can imagine. PLEASE DON'T DO THIS.

**Correspondence:** I commented earlier but I want to add a comment based on information I received at the. open house I attended.

As I said earlier, I think that humans and our domestic companions already are taking up more than our share of space I. the world, and it's way past time to do everything we can to practice compassion for wild species. The GGNRA is in the path of the Pacific Flyway, and we need to do everything possible to protect the birds that are part of this, as well as other wild birds.

Just two more points, other than the ones I previously made.

1) When I go to Ocean Beach and see dog owners let their dogs chase wild birds, as I always do, I wonder what kind of example this sets for the children who are observing this. That it's okay to harass beings that

don't benefit you in some way? Not a good lesson.

2) Even if there are enough patrols to protect birds during relatively good economic times, the new regulations must be realistic and take into account the inevitable budget cuts. How will they affect the ability to enforce the boundaries, especially if dogs can go on some parts of the beach and not others? Right now, on Ocean Beach at least, this isn't working at all. I don't think most dog owners are serious about self-policing, so I think if dogs are allowed on any part of the beach, this is an abdication to the dogs in the long run, unless the dogs are in an enclosed area with specific, visual boundaries (fences).

I really hope the interests of wild animals are kept front and center.

Thank you.

**Correspondence:** The 1979 Pet Policy was two years in the making and involved many key stakeholders, including Audubon, Sierra Club, and others. That policy has worked well and should continue to stand. The National Park Service appears to have an anti-recreation agenda - - and to be unduly influenced by well-organized, well-funded, activist organizations with what appears to be an anti-dog agenda. Time and again, the claims made by those organizations - - about how destructive dogs are, about how much the public fears dogs - - have turned out to be mostly emotional arguments. The data do not support them. The NPS's data doesn't, either.

Given the strong public support for the 1979 Pet Policy and the specious justifications for making changes, I ask you to leave the existing Pet Policy in place.

Sincerely,  
Mary Barnsdale

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many months. My husband and I decided to move our business to SF and then rescue our puppy from SPCA in great part because this city is so progressive and friendly to pet owners. If SF wants its residents to share in the responsibility of the community's public health by caring for otherwise stray animals, then it must create conditions for those animals to remain

healthy during their life time, which can only happen with exercise in off leash areas in our county.

The GGNRA is a RECREATION AREA for a densely populated, urban area where most residents own pets. These trails and beaches have been set aside for dog walking since the original pet policy in 1979 and are crucial to our well being.

Sincerely,  
Ana Evans

**Correspondence:** My family and I enjoy Marin's outdoors. We have been visiting our beaches with our young kids before we had dogs. Having experienced annoying dogs (mainly caused by inattentive or careless dog owners) we understand a need for better controls. However, banning canines from public lands and beaches is unjust. We feel that stronger enforcement of already in place regulations is all that's needed. Leash law, voice control and, most importantly, "picking up after your pet" (including horses in my opinion). Just like the wild animals we are trying to protect, humans and dogs have a right to enjoy our Marin County as long as there is respect for other users and a care of the environment. I would like to see more emphasis on educating the public (in schools and outdoors). Sometimes age old advice is best: give a man a fish, he eats for a day. Teach him how to fish he eats for a lifetime. Let us teach people to care for our land and respect each other. Please keep our current pet policies in place!

**Correspondence:** PERMITS FOR COMMERCIAL DOG WALKERS

Why should the GGNRA value the livelihood of commercial dog walking businesses over the public visitor's experience at any of the parks? How would permits be monitored or enforced? at what cost? I recently saw a couple with 22 out of control dogs between them completely monopolizing a large area at Ft Funston. They made no pretense of caring what kind of experience anyone other than themselves and their dogs could have with them there. Please don't allow commercial interests to dictate the parameters of public access to public land.

Please take Ft Funston back from dog walking businesses and return that irreplaceably beautiful spot to human visitors to enjoy. Dogs can't appreciate those stunning views; make it a park for people again, please.

#### OCEAN BEACH SNOWY PLOVER PROTECTION AREA, STAIR 21 TO SLOAT BLVD

It's unclear what option F is proposing. No regulation for this area except for the walkway by the great hwy? or no dogs allowed ever? I am in favor of no dogs ever; give the plovers a break, they deserve not to be harassed endlessly.

Seasonal leash laws don't work, not enough signage, no compliance, ignored by all but a few dog walkers. If dogs are allowed in this area it should be only on leash ever. Preferably keep this a shore bird sanctuary; it's the spot they've chosen, give them that small space.

#### OCEAN BEACH NORTH OF STAIR 21

How will the GGNRA clearly distinguish this area from the SPPA? How will dog walkers know not to continue allowing their dogs to run wherever they like, chasing whatever they see?

#### FORT FUNSTON

This entire site is one giant dog park, rendering it inaccessible to regular visitors hoping to take a walk without being harassed by dogs.

At present, there are way too many dog owners with enormous numbers of dogs - more than they can reasonably be expected to control.

While attempting to walk there recently, I was nearly knocked to the ground by two dogs leashed together. Once their owner - who was off trying to corral other dogs- noticed, she acted like it was my fault the dogs were inconvenienced. Sounds like an exaggeration, but it isn't.

I've felt threatened there by unruly dogs whose shouting owners seemed oblivious to anyone's experience other than their own. Voice control doesn't work; in addition why should anyone have to listen to scores of owners shouting at multiple dogs anyway?

One dog owner recently voiced a doubt I had a right to be at the park without a dog, putting into words the reality - Ft Funston has been degraded into one enormous dog park, there is no room for non dog owners at this public recreation area.

How can the NPS preferred option F be to concede to dog owners such a large and vital portion of this site to be designated ROLA? That would mean Ft Funston will effectively remain one large dog run, while continuing to be off limits to regular visitors.

I would like to see any ROLA area at Ft Funston fenced off from the paths and kept to one or two clearly designated areas. Give people a chance to use the trails again, please.

Why show greater preference to dogs than people? really. I would hope to see not only the number of dogs per person limited but the total number of dogs at this site brought under control. When visitors are outnumbered 10:1 by dogs, it's not a public recreation area anymore, it's a dog park.

Thank you for soliciting input from the public. It is such a vital piece of keeping public recreation areas available to all the public and not for the exclusive use of special interest groups.

**Correspondence:** I strongly advocate for Plan A, under which current dog walking practices would continue. There are very few places for dogs and their owners to enjoy public spaces together in the Bay Area and there is an historic precedent, for several decades, of homeowners and the general public walking their dogs at Rancho Corral de Tierra. I would especially argue for the flat area between Montara's Farallone Ave. to the south and the horse ranch to the north, just before the North Peak Access Road, to continue to be accessible to dogs, as this is the most-used area for local dog walkers and not as utilized by horses or mountain bikers.

Montara is an extremely dog-friendly community. People literally walk their dogs here every day. They have have moved to Montara just to be near this open space or they obtained dogs shortly upon moving here, like me.

It is against the public interest and will of the local community to prohibit dog walking.

Thank you for your consideration.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	OPPOSE all Fort Funston Alternatives				

To Whom It May Concern:

I am writing in OPPOSITION to the current proposal set forth by the GGNRA for the 'Preferred Alternative' Draft Dog Management Plan, as it applies to Fort Funston. In fact, I am opposed to all the

alternatives shown for Fort Funston.

1) Fort Funston is heartily enjoyed by a great many Bay Area residents as the best place to enjoy the outdoors with one's dog, allowing the dog to be off-leash under voice control. The elderly and disabled are able to enjoy this beautiful spot for that purpose as well as others. It is safe and very friendly, and at least in the uplands areas, the vast majority of off-leash dog walking is on the paved path.

2) My wife and I have visited Fort Funston with our dogs hundreds of times over the past decade and have never experienced any untoward events related to dogs. The owners are in very large part responsible, sensible, self-policing, and respectful of one another and the dogs. The dogs that come to Fort Funston in turn are almost completely well-behaved, to an extent that is remarkable.

3) The reports of dog-related violations in the Draft Dog Management Plan are not broken down as to types of incidents; it is quite likely that a large portion of those reported are merely leash-law violations and the like. The failure of GGNRA to include such a breakdown to allow discernment of this type itself should cause great concern regarding the fairness and accuracy of the report/ plan.

4) It is critical that Fort Funston continue to allow off-leash dog walking on the paved pathways. In addition to the benefits to visitors, including the elderly and disabled, there is a real risk associated with requiring leashes in the constricted pathways, with tangled leashes around people's feet and ankles, risking falls and rope burns. These are neither trivial nor merely theoretical concerns; as a physician I have seen both kinds of injuries from dog leashes more than once, as well as other orthopedic injuries associated with the use of leashes. It appears to actually be safer in many respects for dogs to be off-leash when circumstances allow. The very fact that the current de facto off-leash dog walking protocol at Draft Dog Management Plan has continued without noticeable incident during our very frequent visits indicates that this situation does not need to be restricted.

5) Moreover, the paved areas are surely not where one needs to protect wildlife; adding restrictions to these paved areas is a misconstrued effort to fix something that is not broken.

6) Finally, the prospect of funneling off-leash dogs deliberately into the areas shown in the Preferred Alternative would be an enormous risk to the dogs' health, as these areas are full of "foxtails", which are very dangerous to dogs' health. The GGNRA would be acting recklessly to encourage such activity.

The obvious neglect of the entire Fort Funston area for the past several years by the GGNRA itself indicates that there is no urgency in going forward with the Plan at that location. Simply keeping the paved path clear to allow passage by the elderly and disabled, and fixing the nearly completely deteriorated signage and fencing, would be sufficient to allow continued enjoyment with safety and no additional environmental impact, at least as concerns the upland areas.

**Correspondence:** A key piece of evidence cited throughout the report is the data showing 95 dog-attack incidents in the GGNRA from 2008 to 2011. This is cited as an argument in favor of a change in the dog management policy, because it seems to reflect an unacceptable number of such dog bites and attacks. However, the more I think about this, the less convinced I am that this data indicates a truly unacceptable problem.

I've noticed a significant difference in the behavior of dogs when approaching each other on leash, as opposed to the approach when off leash. On a normal city street, these encounters are generally marked by lots of barking, growling and hostile behavior, driven by the insecurity of the dog on a leash and their uncertainty about their mobility and ability to defend themselves.

In contrast, the incidence of hostile behavior among unleashed dogs, such as at Ft. Funston, seems to be significantly lower - especially given the high density of dogs in that environment.

My conclusion is that unwashed dogs are much less likely to exhibit hostile behavior, and that the present policies have contributed to a relatively low number of dog bites. I would like to see the report discuss the rate of dog attack for leashed -vs- unleashed dogs before imposing a leash-only policy. Otherwise, I fear that the proposed policy changes will lead to a dramatic increase of dog bite incidents in San Francisco

**Correspondence:** To Whom It May Concern:

I oppose the proposed draft of the GGNRA Dog Management Plan because I haven't heard a reasonable explanation as to why it makes sense to take away recreational resources that are depended on by myself and others to exercise the most beloved members of our families, our pets.

I attended the open forum on January 30th at Sterns Grove and I left extremely disappointed in the GGNRA. I expected them to provide hard facts and justification as to why they were making the changes that they were proposing. Unfortunately, they did not. If anything, I am further angered by the fact that they are proposing these changes without hard research and facts, and without engaging the government and citizens of the City of San Francisco, as well as those of the other affected cities.

I walk with my dogs at Fort Funston at least once per week. One dog walks with me off-leash while under voice control. One walks with me on-leash. I live in San Francisco, so I cherish these moments when all three of us can get away and exercise in the quiet beauty that is Fort Funston. Dogs and humans all co-exist together. It never feels crowded, because there is so much space designated for our use.

I have no children. My dogs are my family. It's important to me that I am able to use Fort Funston as a recreational outlet WITH MY FAMILY, in a way that allows us all exercise in a free and enjoyable way. Proposing fenced-in pens does not allow us all exercise in a free and enjoyable way.

I sincerely hope that someone is actually reading these comments.

Sincerely,  
Nicole Kurth

**Correspondence:** As an animal lover, of both wild and domestic, I am distressed at the thought of the GGNRA wildlife coming into contact with off-leash dogs.

There are plenty of existing dog parks in the city, and when I feel like enjoying the company of domestic pets I visit such a park. However, when I feel like enjoying wildlife, I visit the GGNRA to immerse myself in the natural environment. The last thing I'd like to see on a hike is a lovely snowy plover being run down by someone's pet pooch.

**Correspondence:** I attended the Stern Grove meeting and felt the person with the physical disability was only representing his own view, not those of us who have other mobility issues. I have recurring foot and leg issues with occasional flair ups of knee arthritis and so from time to time have limited mobility. A couple years back I had to wear a "boot" for 4 months. During these months, the only way for me to get my dogs exercise (and I had a new puppy at that time) was to drive to Crissy Field, which I live near, sit on the sea wall and throw the ball for the dogs. I could walk out and clean up after the dogs but that was as far as I could venture. I was not be able to walk the dogs on leash to adequately walk them for months.

If the only off leash area is the middle beach, I will not be able to exercise my dogs. My puppy is not even 3 years old yet and needs lots of running. My dogs are very responsive to voice control, having been through multiple training courses offered at the SPCA and are the kinds of dogs who deserve the kind of freedom earned by being well-behaved. Their occasionally mobility-limited owner deserves it too.

I can't see how only offering the Middle Beach can comply with ADA being so far from the restrooms. Whether or not you think it may, it will negatively impact me and my access to use.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

David Evans

**Correspondence:** I am a native san franciscian. While much of my city has been taken over by non-natives, what hasn't is our beaches and our parks. Having designated off leash dog walking areas has been my saving grace, as well as my dogs. It gives us a chance to escape from the chaos of city living and enjoy the natural part of sf. The beauty that brought my grandparents here. The beauty that keep my parents from moving away from here. Our dogs are part of our families. I love that there are places they can run and be dogs. Places that we can enjoy together. I have 2 small children and 1 on the way. I've been to other counties and states where dogs have to be leashed everywhere, where there are few and far between dog parks and it's horrible. Trying to walk my 2 leashed dogs w/ 2 active kids or a stroller. It's not enjoyable for anyone. Please don't take that away from us. We need our nature, and we need to be able to enjoy it's beauty w/ our dogs who need a slice of it too.

**Correspondence:** Concerning the proposed new GGNRA's Dog management plan:

1. The longstanding (as restrictive as it is) 1979 pet policy must be maintained.
2. The changes made in the 2013 SEIS do not adequately address the criticisms and concerns expressed in comments filed in 2011, and that comments in 2011 ran 3:1 AGAINST the plan.
3. The SEIS contains no peer-reviewed, site-specific studies or vital monitoring as REQUIRED BY LAW to initiate such a dramatic change to the public's use of THEIR public lands.
4. The SEIS preferred alternatives will force us into our cars, in search of places to walk with our dogs. This is bad for the environment and bad for Marin County.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Lauren Locke

<b>Correspondence:</b>	Dear Superintendent Dean,				

I will be very dissapointed for the residents of this city if Fort Funston is no longer a free area for people and their pets to enjoy this public space equally. An off leash environment is what makes it so special and over the last 7 years I have not once seen an incident where both people and dogs couldn't share in its fun and beauty.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. **Correspondence:** I am a frequent visitor to Crissy Field. On warm weekend days, such as this past holiday weekend, there can be a diverse mix of users, including family picnics, and people enjoying the space with their dogs. Unfortunately, these days are rare in SF, and the vast majority of days offers a colder, windier, foggier experience. On typical SF days, almost all of the people experiencing Crissy Field are people with their dogs.

If this use was eliminated, the beach areas of Crissy Field would experience a dramatic reduction in use - this may be the goal of the policies preferred by the park service, but this would be a truly sad loss of public use and enjoyment of these lands.

To me, the majority use of these spaces is for dog walking, and the majority of this use is truly harmless to others, to the land, and to the wildlife. I cannot understand the stubborn determination of the Park Service and its intent to treat Crissy Field as if it was nowhere near an urban center.

Please leave Crissy Field as it is - there is tremendous public use and no harm. A policy change will cause huge problems of enforcement, public outrage, increased costs, and other unpleasantness. All for what?

**Correspondence:** Dear Superintendent Dean,

As a dog owner, a taxpayer, a voter, and a citizen, I have strong opposition to the changes being proposed by the new GGNRA dog management plan. It is overly restrictive, will be a setback for both canine and human health, and fails to achieve any of the goals theoretically proposed by the plan. I use GGNRA land for my and my dogs' exercise multiple times per week. The new plan will prevent me from doing that.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasnt been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Proponents of the plan would have you believe that other recreational uses are impossible while off-leash dog walking is allowed. Comments at meetings and in public forums imply that the elderly, families with children, and non-dog-owners can't enjoy the GGNRA facilities currently. They would have you believe that eliminating off-leash dog walking is necessary in the name of fairness and equality so that they may enjoy those facilities. This is nothing more than an example of the false-middle fallacy.

The current situation best reflects equality - everyone can enjoy the GGNRA lands today. Nowhere is there a policy that prevents any citizen from using the GGNRA without a dog. There are no child-free parks; there are no dog-only parks. If someone wants to enjoy GGNRA land without dogs, the answer isn't to eliminate dogs, it is to suggest that they select a different park for their recreational activities. 99% o GGNRA lands already do not permit dogs - why must they take the remaining 1% fom us? If I were to point to a park with a children's playground and demand that it be removed so that I could use the park people would find that ridiculous. The GGNRA must serve all the citizenry, including those with dogs who need an urban recreation area.

Sincerely,  
Scott W. Kurth

**Correspondence:** My comments are related to Fort Funston, the enjoyment of which would be significantly marginalized by the proposed changes. The primary use of Fort Funston is by those who walk dogs and use the park in harmony with not only each other but those there without dogs. Spend a day at Fort Funston and one will see the constant joy of dogs running around the grounds and down to the beach, and the joy of their owners, and realize that the proposed changes come from a place of ignorance of how the park is actually enjoyed most and how the changes will harm the dog loving community in San Francisco, a city where dogs outnumber children. Anyone who sees how and how much the park is enjoyed would never support limiting the use of the park or the freedom and joy being off leash allows the dogs lucky enough to enjoy Fort Funston. It is truly very difficult to make sense of the proposed changes, and the use of the park should remain as it is and dogs should be allowed to remain off leash on GGNRA grounds and particularly Fort Funston. Thank you for your consideration.

<b>Correspondence:</b>	I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.				

I regularly take my dog to (put your preferred GGNRA trails and beaches here).

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

I am extremely disappointed in the National Park Service. If this passes, I will no longer buy my annual passes. This is a very sad day if you allow this Management Plan to succeed.

**Correspondence:** I work in Palo alto, but am a regular visitor to the parts of san francisco that allow dog walking, such as the airfield and Ft. Point. I love to come up to the City because of the scenery and the opportunity to walk about in a dog-friendly environment. This is truly one of the best features of the city.

I read the report, and appreciate that the use of the lands in these areas is very different from the use of lands in the other national parks. However, I think these spaces are special, featuring a mix of paved walkways parking lots, picnic areas, and recreation areas for dogs that are established and highly-functional. A change in the policies governing these areas will cause confusion and anger, and will require a huge increase in staff to enforce, explain, and deal with all of the unhappiness that will be caused. I think this would be doomed to failure. Certainly the national parks have better things to do with their time and energy and limited resources than to try an transform this part of San Francisco into a wilderness?

Please don't do this!

**Correspondence:** I support the Draft Dog Management Plan / SEIS and commend the improvements from the 2011 draft. I await the passage and implementation of the Plan. As one who shares a household dog in Marin, I feel there are ample dog-friendly locations (GGNRA and otherwise) available to residents. Although it is not a requirement of the Park, the Park has done a great deal to provide areas for dogs and their owners to recreate. I feel that dogs in natural areas, especially when off-leash, can interfere with others' enjoyment; I have experienced this first-hand as a casual ornithologist and naturalist. The impacts have ranged from unattended dog waste (bagged or unbagged); excessive digging to disturb the natural profile of the beach; dog bites; and wildlife harassment in the form of waterbird chasing (a common phenomenon at Ocean Beach). The GGNRA serves as a sanctuary for wildlife and humans who enjoy that wildlife within the Park's urban surroundings. It should remain so; and what the park can do to increase biodiversity in the face of so many unknown future factors should be encouraged. That includes setting aside areas where sensitive plant and animal species have taken residence for some or part of the year, like snowy plover and coho salmon.

**Correspondence:** beaches and parks off leash, are the places where we can play fetch and run with our four legged family members and most importantly bond further, and socialize to take this away is totally unfriendly, and totally unsatisfactory. There are enough "Dog on leash parks and beaches" for those who are wanting no dog beaches already.. We NEED dog friendly beaches! Otherwise we will end up with happy dogs everywhere I socialized and mean like most dogs in Japan.

Lisa George ( Fukuda)

**Correspondence:** I am concerned about the Preferred Alternatives put forth by your Dog Management Plan. They seem to have selected areas doomed to fail.

For example, even though page 27 states this:

The literature review found very few investigations or peer-reviewed, scientific studies that document the isolated effects dogs have on water quality in recreational settings. Water quality has therefore been dismissed as a resource topic in this document due to lack of literature. There is concern about potential impacts of dog waste from a proposed regulated off- leash area (ROLA) on the airfield at Crissy Field on the water quality in Crissy Marsh. This is because the eastern 1/3 to 1/2 of the airfield directly connects to the marsh through perforated underdrains that connect to the stormwater system, which ultimately drains into the marsh in this area. During rainy periods, especially large rainfall events, contaminated runoff from dog waste could drain into the marsh and negatively impact water quality. However, compliance with regulations to pick up dog waste and organized pet waste clean-up days for this area would minimize this threat to water quality.

...the area you have chosen for a ROLA is the area next to the lagoon. So as it's not shown yet but if you produce data later that shows a bit of run off into the lagoon (If it ever rains again) you can just close off this area of the airfield. Why not choose the middle portion of the airstrip or more importantly: **KEEP THE AIRSTRIPOFF LEASH COMPLETELY AS IN PLAN A TO DISPERSE THE DOGS OVER A LARGER AREA SO AS NOT TO CONCENTRATE THEIR WASTE MATTER.** If there has been no problems as of yet, why set it up so that problems **MIGHT** occur later on.

Secondly, at Fort Funston, you have chosen to require leashes on the sand ladder and on the path from beach to trail on the north end of the beach. Have you ever walked with a dog on a leash up or down either or those? **THIS WILL SET THIS UP FOR FAILURE AS THE ELDERLY OR ANYONE WHO HAS A DOG OVER 20 LBS WHO PULLS ON THE LEASH (AS ALL DOGS CAN DO) COULD DESTABILIZE THE PERSON AND CAUSE INJURY.** Currently, dogs can take themselves up the leash. There are **SO SIGNS** that inform owners that dogs should not go off the paths anywhere along the sand ladder or on the path on the north end. It is unfair to report incidents of dogs going in those areas as a negative incident without having put up **SIGNS!** Much more public education is needed.

**INSTEAD OF MILLIONS OF DOLLARS TO MAKE ALL OF US CRIMINALS IN OUR OWN BACK YARDS, HOW ABOUT \$1-\$2 MILLION IN SIGNAGE AND PUBLIC EDUCATION AND getting**

more involved with the dog groups to produce volunteer corps to perpetually educate the public on a daily basis.

**Correspondence:** My name is Jeff Ubersax, age 38. I have lived in San Francisco for 15 years. I enjoy San Francisco's proximity to wilderness areas, including the GGNRA. I visit Crissy Field weekly and Fort Funston monthly. I make trips to Muir Beach and Rodeo beach a couple of times a year. I am a dog owner. I have a Ph.D. in Biochemistry and Molecular Biology from UCSF. I am currently employed by Amyris as the Director of Biology where we are working to make renewable chemicals to displace petroleum usage. I am a current member of REI and the Sierra Club and consider myself an environmentalist.

I have a well trained and well behaved dog and get great enjoyment from walking him off leash. I have invested significant amounts of my time in training him to be under tight voice control and keep him from going into restricted areas such as the tidal marsh or dunes of Crissy Field, the habitat restoration areas along the sand ladder at Fort Funston, and the lagoons at both Muir Beach and Rodeo Beach.

Prior to being a dog owner, my wife and I visited Crissy Field and Fort Funston a few times every month. We enjoyed walking along the beach and taking in the beautiful scenery and watching other people's dogs run and play off leash. Watching dogs run and play off leash was a major reason for us going to these two areas and added greatly to the recreational value of them. The SEIS has not taken into account the fact that many people who are not dog owners, including many of my friends and family in San Francisco, gain significant recreational enjoyment from watching dogs run off leash in these areas.

The GGNRA is located in and adjacent to a large urban center. Much of the land is no longer in a pristine native state. I applaud and support efforts to restore the GGNRA to a more native state, as has been done at the Crissy Field tidal marsh. That said, much of the areas around Fort Funston and Rodeo Beach have been highly impacted by military use. The military planted large amounts of ice plant to stabilize the sand dunes at Fort Funston and Rodeo Beach. Parts of the SEIS that treat these areas as pristine wilderness are misguided.

The SEIS makes a number of general statements about the negative impact of dogs. The SEIS fails to present any site specific evidence of these impacts caused by dogs on soil, vegetation, and wildlife. The SEIS needs to show evidence that dogs have negative impacts on site specific soil, vegetation, and wildlife to justify restrictions on dog activity. The SEIS is full of possible impacts of dogs on wildlife and vegetation and other visitors that 'could' occur, but there is little evidence that these impacts do occur. The SEIS should base its management plan of actual observed impacts. The SEIS uses anecdotal evidence of negative impact of dogs as a way of supporting the proposed changes. In science, a common statement is that the plural of anecdote is not data. Any proposed rule changes that are meant to limit the recreational use of a GGNRA site must be based on data showing a negative environmental impact. Anecdotes do not meet this standard of proof. Furthermore, these points were raised by comments in the DEIS and should have been addressed in the SEIS and were not.

The SEIS fails to note that there is conflicting scientific evidence about the impacts of dogs on birds and vegetation. There is no scientific consensus that restrictions on off-leash dogs are needed to protect

---

wildlife and vegetation. Forrest and Cassidy St. Clair (2006) and Warren (2007) show that there is little to no impact of off-leash dogs on bird diversity, abundance and feeding. The SEIS needs to test the hypothesis that off-leash dogs are harmful to these sites before it can justify further restrictions.

There is evidence that humans alone and humans with leashed dogs have greater impact on the environment. Knight and Miller (1996, Wildlife responses to pedestrians and dogs) shows that the flush distance of birds is greater for human or humans with leashed dogs than unleashed dogs. This suggests that the birds in this study view humans as more of a threat than dogs. The SEIS needs to present a balanced view of the scientific literature and as there is no consensus about the impact of off-leash dogs, site specific studies should be carried out. It is often very difficult to differentiate the impact of dogs vs humans in an area. The raw data in the studies presented in the SEIS often shows that the conclusions reached in those studies and in the SEIS are not supported by the data.

My own observations suggest that humans have a bigger impact on many of the areas sited in the SEIS. I have seen far more people and children climbing and degrading the cliffs at Fort Funston than I have seen dogs. The SEIS should observe and report of the frequency of violations by people vs. dogs.

Furthermore, standard practices in land management, such as better fencing, signage, and enforcement of current rules, could demonstrably mitigate any negative impact of both human and dogs to many GGNRA sites, including Crissy Field and Fort Funston. The fencing between the beach and the dunes of Crissy Field is very effective at limiting both human and dog intrusions into this sensitive environment. Better fencing along the sand ladder at Fort Funston is all that is needed to preserve the dunes in this area.

The SEIS suggests that dogs are the main driver of complaints by visitors. Complaints about the smell of urine around the batteries of Fort Funston have no evidence that those smells are coming from dog urine. In my many visits to Fort Funston and the Marin Headlands (Battery Rathbone), there has been the smell of urine around old batteries. There have also been beer cans and cigarette butts in the area. I find it much more likely that the smell of urine is from human urine rather than dog urine, especially as there are dramatically fewer dogs at Battery Rathbone than at Fort Funston.

Problem interactions between park visitors and off-leash dogs represent a tiny fraction of the total incidents and citations issued by the GGNRA. Visitor fears of being attacked by an off-leash dog are fears based on emotion, not empirical evidence. The vast majority of citations in the GGNRA are leash law violations or being in closed or restricted areas and did not reflect any safety issues between dogs and park visitors. It is unfair to restrict a class of users from the GGNRA based on the irrational fears of another class of users. The GGNRA should focus on enforcement on the small number of people whose dogs misbehave, not on excluding the entire class of users.

I had numerous comments about the compliance-based management strategy in the DEIS and find the monitoring-based management strategy of the SEIS to be a slight improvement. My main issue with the MBMS is that it assumes that rangers will begin to do a new activity that they should currently be doing. I find this unlikely to happen or to happen very sporadically. At Fort Funston, as an example, ranger patrols of the sand ladder or beach would already be enough to mitigate damage to the dunes or other guest experiences. I would support more ranger presence at sensitive areas under the current rules. Changing the rules without increasing ranger patrols will be ineffective.

As a whole, I find that the SEIS does not adequately consider comments to the DEIS from dog walkers and appears to have dismissed nearly all of them. The SEIS appears to pull many comments from people opposed to dog walking and very few from people who support dog walking, even though there were far more comments from supporters of dog walking. I find myself disappointed in the NPS for being biased in their approach to the SEIS.

Furthermore, the SEIS misrepresents the enabling legislation and the reason for the founding of the GGNRA. It says the GGNRA's purpose is to offer a "national park experience to a large and diverse urban population" (p. 1). However, the enabling legislation says the purpose of the GGNRA is to "provide for the maintenance of needed recreational open space" (Enabling legislation, first paragraph). The SEIS notes, in a negative way, that "In many parts of the San Francisco Bay Area, residents have come to expect that GGNRA lands will be available for dog walking and other recreational activities." (p. 19). Yet that is exactly what Congress intended when it created the GGNRA in 1972 - "The objective of [the creation of the GGNRA] is to ... expand to the maximum extent possible the outdoor recreational opportunities available to the region." (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972)

The SEIS continues to not allow any off-leash dog walking on new lands acquired by the GGNRA in the future, even if dog walking has traditionally occurred there. This is not in the spirit of the original mission of the GGNRA.

I could support modifications to the preferred alternatives at Crissy Field and Fort Funston, the two areas I use most frequently. At Crissy Field, the shift of dog activity to West Beach should only happen if similar facilities to those provided at East Beach are provided at West Beach, perhaps by the Sports Basement site. As a minimum, rest area or portable toilets and free parking should be provide. Right now, there are only about 20 parking spots to the west of Sports Basement that are free and then many paid parking spots (\$3/hr) and no restrooms. The lack of these facilities will discourage an entire class of users from enjoying the site.

At Fort Funston, the sand ladder should be off-leash and more fencing and enforcement should be provided.

If no modifications to the proposed alternatives are offered, then I support the Alternative A plan (no change or no action) along with additional visitor education and enforcement. I believe that this plan will help bring together dog owners and the GGNRA. This plan best represents the original intent behind the GGNRA as a way to preserve open spaces for recreation.

Respectfully,

Jeff Ubersax

Re: GGNRA Dog Management Plan and DEIS [revised]

---

Dear Superintendent Dean:

The Marin Conservation League previously commented in 2011 on GGNRA's Plan to provide clear, enforceable policies to determine the manner and extent of dog use in various areas of the park. On the basis of information in the Plan and DEIS, we concurred at that time with the NPS selection of the Preferred Alternative for all seven sites in Marin, as a reasonable compromise between the Environmentally Preferred Alternative "D" and the other "action" alternatives.

We have a similar response to the revisions in the Draft Supplemental EIS: We support the National Park Service's (NPS) Preferred Alternative "F", with one exception - see Muir Beach below), in that it balances the need to protect natural and cultural resources and ensure visitor safety with the designation of appropriate areas in the Park for no dogs, or dogs on- and off-leash. We are fully aware of the potential for adverse effects of large numbers of dogs caused by trampling vegetation, depositing dog waste, and adding nutrients. Such degradation of high quality habitat can result in displacing wildlife from preferred habitats, with eventual loss of species from the area. For each of the seven sites in Marin, the Draft SEIS identifies sensitive species, habitats, and/or cultural resources that may be threatened by dogs and has recommended an appropriate response. Therefore, where a choice must be made between allowing dog access and protecting native wildlife, endangered species or sensitive vegetation, the Draft SEIS tips the balance toward protecting the resource. We believe that this approach accommodates a variety of recreational experiences, both with and without dogs, while ensuring that these resources are protected for future generations.

Other comments are as follows:

1. Under Alternate F, the NPS Preferred Alternative for Muir Beach is generally appropriate for that site to protect the restored habitat at the mouth of Redwood Creek and several sensitive species. The Preferred Alternative in the Draft Supplemental EIS allows access for dogs on leash on the beach. MCL believes that an unfenced ROLA should be designated on the southern portion of the beach. This provision would still ensure protection of sensitive resources and at the same time offer a practical solution to dog-owning residents of Muir Beach who have long-frequented the beach. The large expanse of Rodeo Beach provides that opportunity, but it is distant from Muir Beach.
2. The on-leash access proposed for the Oakwood Valley Fire Road under Alternative F would remove the fence and gates proposed for the fire road and thus remove a barrier to wildlife movement. Hikers, bikers, and equestrians will share the fire road with on-leash dogs. The Fire Road is currently used by all three, and the almost parallel Trail is used by hikers and dog walkers only. That trail will be closed to dogs under Alternative F from Tennessee Valley Road to the junction with the Fire Road, and thereafter open to dogs on leash to the junction with the Alta Trail. We agree with this approach, which will keep dogs off the lower wooded section of the Trail.
3. MCL also agrees with Alternative F's general approach to trails in the Marin Headlands, which is to allow on-leash dog access on the perimeter of the area, while protecting the integrity of wild inner portions frequented by coyote, bobcat, and other wildlife with large territories and need of protections. This approach safety also enhances visitor safety.
4. The revised Monitoring-Based Management Strategy is less rigid than the previous compliance-based strategy, which did not consider the trail context. Nonetheless, given the size and diverse conditions of GGNRA and a limited number of personnel, the Monitoring-Based Management Strategy needs to be supported by clear standards and vigorous enforcement that includes (a) visible increase in uniformed law enforcement presence; (b) increased issuance of citations, particularly to aggressive violators; and (c) tracking of repeat offenders. We agree with others that enforcement of regulations sends the clearest

message to people about what is expected of them. Clear and prominent signage is also important.

Finally, the effectiveness of Alternative F in protecting resources and enhancing safety of visitors and dogs will depend heavily on the combination of responsible observance by dog walkers and enforcement actions taken by GGNRA. Because neither of these can be assured, adoption of this alternative should be conditioned on establishment of a date-certain to allow for review of the Plan's effectiveness based on monitoring of user compliance.

We appreciate the NPS's efforts to inform and engage the public in this long and difficult task, and look forward to your responses.

Sincerely,

Jon Elam Nona Dennis

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Emmanuel Romero

**Correspondence:** To the reader:

If I could give you one piece of advice it is this:

Consider how the problem with the terminology "under voice control" is that it is baldly illogical,so patently hollow, naked and preposterous that a reasonable person who expects to be engaging in civil discourse is like a person at sea for the first time and in a squall at that. The deck of the dialog is heaving and bucking trying to bounce the sane person off the legs of her logic. But the person used to reasoned sober choice of words is at a disadvantage when the opposite persons corrupts logic with inside out constructions such as "under voice control."

Dump "under voice control" it is like unto the Gordion knot. Slice it away from the heart of reasoned dialog on the limits of dog owners uses of their dogs in the park.

Dump "under voice control" it is an albatross around the neck of the people and species the park is here to serve and protect.

Dump " under voice control" it is a red herring used to confuse the good natured and civilized persons who want to get along with others. This confusion is even a systemic poison on the heart of this topic's civil discourse.

Dump "under voice control" the quicker the better and the sooner the wound it leaves behind can be healed. Good will follow. The other dog management matters will fall more easily into a sensible balance.

That being the best I can suggest I will stop while I am ahead.

And now dear reader, I thank you for putting up with my perspective. Please use these words ,if you can find a way, in any way that serves the protection of the parks integrity and its products of health and wellness for the society and the biosphere.

Best Wishes,  
James Marks, a citizen

<b>Correspondence:</b>	I am against the expansion of dogs into any additional natural areas. Dogs should be limited to the most developed, least sensitive natural areas. Dogs can introduce a variety of illnesses and diseases into nature. These include: canine distemper, rabies, parvovirus, plague, giardia, muscle cysts, and leptospirosis. They also transport ticks, keds, tapeworms and fleas. Dogs can bite or attack other hikers. This opens the NPS up for liability. Dogs can be bitten by rattlesnakes or other wildlife. Dogs are best left out of wilderness areas.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Lori Olivero

**Correspondence:** As a resident of southern Marin county, I would like to focus my comments specifically on the areas in southern Marin where I, my wife, and my 11-year-old daughter most frequently walk our 2 dogs: Muir beach, Oakwood Valley and the Marin Headlands. My wife and I have lived in Mill Valley for 17 years and have, throughout this period, regularly taken our dogs to the aforementioned areas. Over this period, my wife and I have frequented these areas with our dogs, on average, several times a week, and throughout this period, we have never once witnessed any kind of incident in which the presence of a dog in these areas posed an issue either with another visitor to the area, or to any native wildlife. I am truly perplexed as what outstanding issue would be addressed by further curtailing dog access in these areas. As a matter of fairness and balance, we feel that the policies currently in place already represent a rather severe limitation on the areas where dogs are permitted, either on-leash or under voice control - a further limitation beyond those currently in place strikes us as unfair, unbalanced, and draconian towards the sizable segment of the population of this area who are dog owners and enjoy taking their dogs to the limited number of open spaces where they are permitted. For those people who wish, for whatever reason, to avoid dogs, they can already do so in most of the area under GGNRA jurisdiction.

Moreover, it is our understanding that, historically, these areas have not always been part of the GGNRA, and that where dogs were previously permitted, an agreement was reached, when these lands were turned

---

over to the GGNRA, to the effect that dog-owners would continue to have access to some areas, with their dogs, where they had previously been permitted. Indeed, in the Draft Dog Management Plan, that is the explicit rationale for the current policy at variance with the policy in effect in other National Park lands. Since the policy of the National Park Service is, in fact, whatever the National Park Service decides upon, it strikes me as arbitrary to assert that the same policies regarding dogs must apply uniformly throughout all park lands. To now reverse a long-standing agreement, in order to favor one segment of the population, whose wishes vis-a-vis dog restrictions are already given precedence in most of the GGNRA, over another, equally deserving segment, seems an act of bad faith. As far as any disruptive effect on native wildlife, where such an effect is truly a factor (such as habitat of nesting birds) I am completely in favor of restricting dogs from those areas. But any native wildlife, in Oakwood Valley or the Marin headlands, that could not easily and with trivial effort remove itself from threat by a domestic dog, would long ago have been devoured by a coyote, bobcat, hawk, owl, or some other far more capable predator, of which there are many in these areas. So I find the argument that dogs in these areas are disruptive to wildlife to be insultingly specious.

In summary, I do not object to the principle that, in the Park Service's policies, various interests must be weighed and addressed, and that some degree of regulation is essential in achieving a reasonable balance among the competing interests. But if "balance" is truly the desired end, I feel it important to acknowledge that if the existing policies are left in place, these policies already represent a significant curtailment of access to GGNRA lands by dogs and their owners - a curtailment I am willing to accept. But Alternative F, in particular, would represent an extreme departure from the policies currently in place that have, to my knowledge, worked quite well in the areas I frequent, and would represent an act of bad faith on the part of the agency whose responsibility it is to administer these public lands fairly and reasonably.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. I consider it too restrictive. If implemented, the proposed changes will affect negatively my longstanding habits of recreation in the area.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

- -Jacobco Valdes

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Louis DelCorto

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To whom it may concern,				

I write because I am concerned that the most recent data released by the GGNRA shows that in the last year out of the hundreds of thousands of visits by people with dogs, there have only been reported 6 dog

bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. And the reported incidents involving people are much higher. This data does not support the request the need for a change. Moreover, this data does not support the request for \$2,000,000 for more rangers.

When Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Making the proposed change will also greatly affect the people of San Francisco. Being able to take our dog out of our tiny apartment to give her the freedom to run around (supervised of course) is one of my most treasured activities. It is one of the things that makes this city great. Please don't take it away.

Thank you for your consideration.

Dani (and Kingsley the dog)

<b>Received:</b>	Feb,18,2014 22:42:43				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I have lived in the Inner Sunset in San Francisco for almost seventeen years and I have owned a dog for the last five years. I regularly visit GGNRA lands to enjoy hiking, beach access, and historic sites. Since becoming a dog owner, I have continued to take advantage of the opportunities for recreation in the GGNRA. I take my dog to Crissy Field once a week and to Fort Funston about once a month. I am a responsible dog-owner who walks with my dog under voice-control, respects areas of the GGRNA that are restricted to dogs, and always cleans up after her dog.

I submitted several objections to the Draft Plan/Draft Environmental Impact Statement (DEIS) released in 2011 and I do not believe the recently released Supplemental Environmental Impact Statement (SEIS) adequately addresses them. For this reason, I remain opposed to the planned changes to the GGNRA dog policy. Specifically, I object to the decrease in areas allowing off-leash dog walking and the plan to automatically ban off-leash dog walking in newly acquired lands even if it has traditionally been allowed.

A major flaw shared by both the 2011 DEIS and the 2013 SEIS is they provide no site-specific studies or evidence to support their strongly stated conclusions that allowing dogs access to limited areas in the GGNRA results in a negative impact on those areas. This process has been going on for more than eight years, giving the GGNRA ample time to gather data demonstrating a severe negative impact from off-leash dog walking, but they have chosen not to do so. The report continually treats as fact the idea that dog waste contaminates soil and water and poses a threat to human health but provides no data to support this. It would not require a tremendous amount of resources to test samples for microbes commonly found in dog waste, but I suspect the GGNRA fears the results would not support their conclusions. For instance, the GGNRA often cites the Crissy Field tidal marsh as a particularly healthy body of water, even though Crissy Field is currently a widely used off-leash dog recreation area. Also, the lack of an epidemic

of microbial infections in the Bay Area would seem to be proof itself that the current dog policy in the GGNRA represents a minimal, if any, risk to human health.

Like the DEIS, the SEIS also fails to put many of their claims about the negative impacts of dogs into context. The report states as fact that dogs cause soil erosion or the degradation of vegetation, but it makes no attempt to rigorously document this claim let alone compare it to the levels of erosion and degradation caused by humans. I have personally witnessed adults and children climbing up the coastal cliffs at Fort Funston and, surely, dogs are not responsible for the graffiti that can be seen carved into the cliffs. I have also witnessed people walking on the dunes near Funston Beach Trail South and using paths other than the sand ladder to travel between the upper section of Fort Funston and the beach. The SEIS also emphasizes the incidence of hazardous interactions between dogs and people in the GGNRA. No one would suggest that these incidences are not serious, but the report implies they are the norm rather than an extremely rare event. Although this information is not presented side-by-side in the report, by gathering data from separate sections of the SEIS, I estimate that there were ~140 hazardous dog citations over four years (2008-2011) in all GGNRA lands out of ~2000 total dog incidences in the same period, or less than 10%. There were 95 documented dog bites in all of the GGNRA during those four years or approximately 24 per year. The GGNRA estimates 15 million visitors every year and estimating that ~20% of those visitors are accompanied by a dog (3 million), that puts the rate of dog bites at 0.000008%. When put into this context, the threat from dangerous or aggressive dogs is vanishingly small and does not justify the disproportionate focus of the SEIS.

The SEIS also fails to investigate the effect of improved enforcement of current rules, increased citations of violators, and improved signage and fencing on minimizing negative impacts on habitats and wildlife while still maintaining the more permissive current dog policy. The Crissy Field tidal marsh provides an excellent example of how a combination of consistent enforcement, clear signage, and effective wire fencing led to a thriving protected area coexisting with an extensive off-leash dog area. I have been going to Fort Funston for seventeen years, and I am still unsure of which areas are protected habitats and which are open to hikers. I often see people with AND without dogs walking on the cliffs north of Funston Beach Trail North, although I believe this is a restricted area. I have never seen a clear sign explaining that or any park staff informing visitors or issuing citations. The post and cable fences along this area are mostly eroded away or buried by sand, making entry into the protected habitat, intentionally or otherwise, almost unavoidable. The GGNRA could have spent the last two years-or even better, the last eight years-on a concerted effort to educate visitors about the existing restrictions in areas of the GGNRA and determined if such an effort would achieve a state of dog-human-habitat interactions that is acceptable to all parties.

I also oppose the Monitoring-Based Management Strategy (MBMS) described in the SEIS, which I feel is not a significant improvement over the Compliance-Based Management Strategy outlined in the 2011 DEIS. The MBMS is still a subjective system that gives GGNRA staff unchecked decision-making power over what constitutes unacceptable levels of compliance and what can trigger long- and short-term closures of areas of the GGNRA to dogs. There is no requirement to present scientific evidence or to prove negative impacts have occurred nor is there a sufficient mechanism for the public to appeal such a decision, both of which are necessary parts of a fair monitoring policy.

A fundamental question not thoroughly explored in the SEIS, as it was not the 2011 DEIS, is why a drastic change in the mission of the GGNRA is justified at all. When Bay Area cities and counties turned over much of their open spaces in 1972 to create the GGNRA, they did so with the understanding that all residents of their urban areas would continue to have a place to enjoy open-space and experience nature under a variety of circumstances. The founding legislation cites as the primary goal provid[ing] for recreational and educational opportunities consistent with sound principles of land use planning and management not the reverse. The GGNRA was never meant to be exclusively a nature preserve and

certainly not to offer visitors a national park experience as the SEIS states. It is vital that it continue to balance the recreational needs of the community, including dog-owners, with its commitment to the environment. For this reason, it is important that, as the GGNRA expands in the future, it incorporate established dog policies into its management of newly acquired lands rather than automatically restricting access for dog walkers.

I believe off-leash dog walking is an essential part of the founding mission of the GGNRA to preserve recreational open space for the urban environment. A small, designated off-leash play area for dogs or on-leash only paths cannot adequately replace the experience of hiking with an off-leash dog. My dog and my two-year-old walk at very different speeds, and having the freedom to responsibly let my dog play off-leash in parts of the GGNRA while attending to my child is a rare and invaluable experience for us in the Bay Area. It would be difficult to engage in outdoor activities as a family without it. Access to off-leash dog recreation areas also allows those with limited physical capabilities such as the elderly or disabled to provide their pets with sufficient exercise. Additionally, the veterinary community recognizes that off-leash, open-space interactions between dogs reduces overall aggression and is an important aspect of dog socialization.

Since the GGNRA first tried to unilaterally impose changes on the existing dog policy more than eight years ago, this entire process has left me with the sense that the NPS and the GGNRA management do not take the negotiated rule-making process seriously. Rather than engaging with the public in the development of a dog policy that represents a compromise between various constituencies, the NPS treats the process as a pro forma exercise, temporarily delaying the implementation of their predetermined agenda. For no other reason than continuity as far as I can tell, the NPS wants to place the GGNRA under the same regulations it applies to all national parks under its purview, even though the lands are meant to serve a very different purpose. This agenda is apparent in the SEIS, as it was in the 2011 DEIS, when one analyzes the instances of inherent bias within the report.

Although public comments for the 2011 DEIS were roughly 3:1 opposed to reducing access for dogs in the GGNRA, the authors of the SEIS overwhelmingly chose to quote comments from those supporting the proposed restrictions to the dog policy. The report repeatedly cites the same handful of irrelevant studies with no bearing on the question of dogs in the GGNRA specifically, the Seeing Eye Guide 2011 being a particularly egregious example. Worse than non-peer-reviewed studies, the report relies heavily on anecdotal reports and observations by park staff (the very definition of bias) without demonstrating such observations were done in any sort of systematic way. Often the SEIS refers to negative consequences that could or might occur without even a minimal effort to justify such a view or confirm its likelihood. The SEIS is full of seemingly unreasonable statements about the burdens dogs in the GGNRA place on staff and resources-for instance, citing the cost and labor required to collect garbage from garbage cans, which strikes me as a legitimate responsibility of a public park regardless of whether it is a human or a dog who creates the garbage.

For the reasons stated in this submission, I oppose the changes being proposed to the dog policy for the GGNRA. As a member of the community who enjoys visiting the GGNRA regularly, I ask that the GGNRA responsibly study the problem of dog-walking within park lands, reevaluate the assumptions underlying their conclusions about the impacts of dogs, and take seriously the founding mission of the GGNRA before restricting access to the GGNRA for a significant population of frequent visitors.

Thank you,

Sarah Green

**Correspondence:** The proposed change in limiting off leash areas which dog owners have come enjoy for years is dramatic and harsh to dog owners. This will force more dog owners into smaller more concentrated areas which creates an unhealthy environment for all concerned. Congress was clear about the purpose of the Golden Gate National Recreation Area (notice the operative word RECREATIONAL in the name)- concentrate on the outdoor recreational needs of the people. These people include dog owners. If anything, changes to off leash areas should be increased. San Mateo County is particularly hit hard, virtually eliminating any off leash areas. This draconian change needs to be adjusted to substantially increase off lease areas in San Mateo County. Considering the love President Teddy Roosevelt had for animals, he would be sorely disappointed if he were alive today to witness your plans to so dramatically reduce the areas made available to people allow their dogs to run free. 25 year resident of Pacifica CA.

**Correspondence:** I have carefully read more than 300 pages of the draft dog management plan.

I find a preponderance of unsupported statements about the impact of dogs on the areas of the Recreation Area. Many of these statements make no sense to me, given the spaces that are being considered for a dramatic change in use policy.

I find many statements that could be true in a remote wilderness area, but make no sense at all when placed in the context of park spaces in the middle of San Francisco. Fort Mason, for example, is within 50 meters of a Safeway, and is surrounded on 3 sides by Bay and Van Ness streets. There are fire engines, ambulances, cars, motorcycles and aircraft in the air and on the ground around Ft. Mason. . The Ft. Mason parking lot has food festivals, music festivals, a farmer's market, and many other uses. This is not a space where sensitive birds come to find undisturbed rest or where sensitive plants need to be protected from people and their pets. It is absurd to apply the standards and goals of the national parks to these areas, because there is simply no possibility of achieving the "preservation of natural habitats" that is the normal objective.

I read the report, and I just don't understand how most of it applies to these spaces in San Francisco.

I appreciate the national parks, and the beauty provided by the preservation of truly wild spaces. However, these values and objectives just don't apply to the situation here.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I wish to express my support for the National Park Service's goal of finally creating a Dog Management Plan (DMP) for Golden Gate National Recreation Area (GGNRA). Of the six alternatives being considered in the Draft Dog Management Plan / Supplemental Environmental Impact Statement, I most strongly support "Alternative D: Most Protective of Resources and Visitor Safety," but I am extremely disappointed by how much of the park would still remain open to pets, and I am very opposed to the proposals to allow off-leash pets in any area of the park. National Park Service (NPS) areas are not the appropriate location for dogs, let alone for dogs to be allowed off-leash. The NPS's mission is to protect the natural and cultural resources; not to allow recreation to undermine it.

While I recognize that the NPS has long been involved in trying to find the right balance for protecting the natural values of the GGNRA and meeting the demands of a variety of park users, I strongly believe that pets should not be permitted in any NPS area. NPS areas- -particularly wild areas- -are not the appropriate location for dogs; they should be reserved for native wildlife and for human visitors who are willing to take only photos and leave only footprints, hopefully leaving the park in a better condition than when they arrived. There are so many other public lands on which pets are permitted throughout the nation- -and the San Francisco area already has a very high concentration of other public parks in which pets are permitted, both on- and off-leash (there are more than 28 official off-leash dog areas in the San Francisco city park system- -more off-leash space per capita than any other U.S. city, according to city officials)- -that there is no need to allow pets in NPS sites- -areas in which we as a nation are, if the rhetoric is to be believed, trying to provide some of the greatest protections for wildlife against human-related disturbance. The NPS set a horrible precedent when it didn't restrict pets when the GGNRA was created, and this DMP, to a large degree, just perpetuates that terrible decision.

If dogs are to be allowed in certain areas, they should be restrained on leashes at all times, as they are required to be at other NPS sites. And those areas in which on-leash dogs are permitted should not be near to or within wildlife habitat. Recognizing that the NPS will inevitably cave to those who believe that they have a god- and/or dog-given right to take their pets with them wherever they go and let their dogs run amuck, I encourage the NPS to modify the SEIS as described below.

Leash requirements must be strictly enforced throughout the life of the policy. Otherwise proposed on-leash areas will become de facto off-leash areas, as has already happened under the old rules. Any DMP or EIS Alternative must also include funding for thorough enforcement. As it is, dog owners recognize that there is little chance that they will encounter a law enforcement ranger, so they readily let their dogs off-leash and/or take their dogs into closed areas without fear of negative repercussions. The DMP should establish a simple and effective violation reporting system to provide a means by which park visitors can easily and effectively report non-compliant behavior.

I would prefer to see the DMP completely abandon all proposals for regulated off-leash areas (ROLAs).

---

The SEIS provides no evidence and fails to establish that "voice control" is a valid method of controlling off-leash dogs or protecting people, natural resources, or other dogs within GGNRA. A few pet owners may be able to keep their pets under "voice control," but in my experience, the vast majority of pet owners who let their dogs off-leash in "voice control required" areas have no ability to recall or control their pets with just their voice. Far too many times I've encountered pets well out of ear-shot of their owners, or pets that just ignore their owners. When asked to better control their dogs and keep them from chasing after shorebirds, people, or other dogs, these owners invariably insist that their dog is under control. And my anecdotal accounts are born out by the fact that the NPS records hundreds of Criminal Incident Reports relating to out-of-control dogs each year; more often than not, the dog owners and walkers do not have any voice control over their dogs. The adopted alternative should, at a minimum, require that all off-leash areas be enclosed or in some manner separated to protect other park users, wildlife, and other dogs and limit off-leash recreation to areas where it will not have negative impacts on sensitive wildlife and habitats. Park visitors should be given a choice about whether they will interact with off-leash dogs.

GGNRA is the world's largest urban park and provides critical habitat for some of the state's most rare and threatened species. There are over 80 rare or special-status wildlife species currently identified as permanent or seasonal residents of the park or dependent on park lands and waters for migration, and there are 38 rare or special-status plant species currently identified within GGNRA. I am concerned that the DMP could lead to changes that would continue putting sensitive park resources and public safety in jeopardy. Numerous academic and government studies identify off-leash pets as threats to visitor safety, wildlife, and the integrity of natural and cultural resources. For example, a study by the American Humane Association documented injuries to humans, wildlife, and pets as a result of unleashed pets and recommended that pets be leashed in public areas set aside for natural resource protection purposes. GGNRA records indicate numerous incidents of dog bites, threats of dogs to park visitors, and instances where park rangers were forced to risk their own safety to rescue uncontrolled pets and pet owners trapped on cliffs or in the ocean. Over the years, the Golden Gate Audubon Society has documented that approximately 2/3 of dog walkers in the Crissy Field Wildlife Protection Area (WPA) ignore the leash requirements and let their dogs roam off-leash even while the threatened Snowy Plover is present. The rates of non-compliance are even higher on Ocean Beach and at Fort Funston.

I am please that, aside from at the north end of Funston Beach, the NPS has eliminated seasonal closures from most of the alternatives. To adequately protect wildlife, current and potential nesting areas should be off-limits to dogs year-round. Seasonal closures are largely ineffective, even with the best of signage and education campaigns. By permitting dogs near Bank Swallow habitat during any portion of the year, the park will reduce compliance with regulations when the swallows are present, as many people will not realize that the closure is seasonal. I frequently visit the beaches of Point Reyes National Seashore (PRNS) where there are seasonal closures for beaches upon which Snowy Plovers nest and elephant seals haul-out. I have lost track of the number of times I have encountered people with dogs- -usually with the dog off-leash- -in areas closed to dogs, and when I inform the owner that pets are not permitted there, the response is often to the effect of "but the beach was open to dogs a few months ago." It doesn't make sense to open an area of the park for just a couple months each year to allow a small segment of the population to conduct an activity which has proven to be disruptive (and even deadly) to the wildlife the park is supposed to protect.

The DMP is also inadequate for protecting Snowy Plover habitat because it does not include the entire portion of Crissy Field and Ocean Beach. It draws imaginary boundaries that do not comport with typical visitor's understanding of GGNRA, and the plovers are not, to the best of my knowledge, able to discern where these boundaries are either. A typical visitor with a dog will not always know if he or she is entering an area where pets are restricted, especially if the regulatory signs are vandalized or torn down by individuals who disagree with the rules, as too frequently happens. This, again, will invite violations of

pet regulations as people claim ignorance or confusion over the exact boundary. A closure prohibiting pets- on- or off-leash- -should apply to all of Ocean Beach and Crissy Field.

The DMP would also preclude the possibility of the Snowy Plover or other shore birds from ever adopting many coastal areas of GGNRA as nesting areas. According to the background information printed in the Federal Register during a previous comment period pertaining to dogs on Ocean Beach and Crissy Field, "Snowy Plovers do not nest in the park; they overwinter from approximately July through April. During the overwintering period, Snowy Plovers rest and feed to gather reserves necessary to successfully breed at other more suitable nesting locations up and down the Pacific coast." Given that Snowy Plovers nest on the beaches of Point Reyes, I would assume that Snowy Plovers used to nest on the beaches of the San Francisco peninsula, beaches which are now part of GGNRA. Aside from disturbance by dogs and humans, are there any other factors that prevent Crissy Field, Ocean Beach, and other park coastal areas from being suitable nesting locations for Snowy Plovers and other shorebirds? If not, then the presence of dogs and humans in these areas during the nesting season is likely the reason why the Snowy Plover has to migrate to other locations. And, by allowing pets in these areas when Snowy Plovers would otherwise be nesting, this will surely prevent the plovers from ever selecting Crissy Field and/or Ocean Beach as a nesting site. And given how few suitable nesting sites are left for the Snowy Plover, it is incumbent upon the NPS-which is mandated to protect the wildlife unimpaired-to do everything it can to preserve whatever habitat there is for the plover to thrive. The NPS should therefore restrict dogs and other pets from potential nesting areas throughout the year.

And it's not just Bank Swallows and Snowy Plovers that are negatively impacted by dogs in GGNRA. Too many times I have witnessed off-leash dogs in NPS areas chasing after and harassing birds and other wildlife. A friend has related to me how, on a weekly basis, she witnesses a professional dog walker release up to 6 dogs to run and chase each other and wildlife in Oakwood Valley, trampling and tearing up the host plant to the endangered mission blue butterfly. I've heard other friends describe witnessing off-leash dogs in national parks attacking or harassing pinnipeds and chasing after shorebirds, including the threatened Snowy Plover. These reports lend more validation to the argument that dogs- -especially off-leash dogs- -have no place in national parks.

But it is not just park flora and fauna that are negatively impacted by pets. On several occasions as I have hiked in national parks or strolled along a park beach (more often than not where pets are prohibited, but also frequently in areas where they are at least required to be on leash), I've encountered off-leash dogs running out-of-sight of and well ahead of their owners, and frequently out of earshot. A number of these dogs have charged me, and many have made contact. So far, I have been fortunate and have not been bitten or injured. The same cannot be said for many of my friends or their pets which were on-leash. When I politely try to inform the dog's owner of the park regulations pertaining to pets, the owner more often than not interrupts me and generally is downright rude, making comments such as "Mind your own business" or "Go home." My friends relate similar stories. Granted, many pet owners are responsible and do not take their dogs where they do not belong, but it seems as though many of the pet owners who take their dogs to national parks are not amongst the ranks of the responsible or courteous. I grew up with dogs and am therefore familiar with them and know how to react to the dogs charging at me, but it still is not a comfortable situation to be in- -not knowing whether the dog will actually attack or not. And for those who are unfamiliar with or afraid of dogs, such encounters are terrifying.

As a result of these encounters, I endeavor to hike on trails and visit areas where pets are prohibited. The DMP would provide those of us who share such sentiments with few trails within certain sections of GGNRA where we would not likely encounter dogs. It is disturbing how little of our nation- -let alone the San Francisco Bay area- -is left for those of us who wish to visit natural areas without encountering dogs- -or cell phones, guns, horses, bicycles, ATVs, aircraft, etc. We as a nation are quickly destroying wildlife habitat and the wilderness in the pursuit of doing whatever we feel like doing with no regard for how it

affects others.

GGNRA is also perpetuating a horrific precedent that will reverberate throughout the National Park system by having regulations pertaining to pets at odds with those at nearly every other NPS site. I already encounter many pet owners walking their dogs on the trails of PRNS who express surprise that pets aren't permitted on these trails given that they frequently walk their dogs in GGNRA...and aren't both PRNS and GGNRA NPS sites...and if they can walk their dogs on GGNRA trails, why not within PRNS?

By establishing some areas where pets are prohibited, others where they are permitted on-leash, and then others where they are permitted off-leash, GGNRA and the NPS just seem to be doing their best to confuse the public and to give pet owners the excuse of ignorance when they are caught with their dogs in a closed area or off-leash in a leash required area. The NPS should have uniform regulations pertaining to pets throughout the system. And in order to protect the wildlife, their habitats, as well as other visitors, the only sensible conclusion is to prohibit pets from all NPS sites. By maintaining one park-system-wide pet policy and instituting a nationwide education effort to inform pet owners about the policy, pet owners won't have an excuse for not knowing that pets are either prohibited from national parks or are at the very least required to be on-leash in a handful of specific areas at NPS sites.

And prohibiting pets at NPS sites would reduce another problem I frequently witness: dogs left in vehicles- -often very hot vehicles. Another excuse I have frequently heard from those walking their dogs in areas where pets are prohibited is that they didn't want to leave their pet in the vehicle. This is understandable. I am outraged when I see a pet locked inside sun-heated vehicles while their owners are off hiking. I would assume that many dog owners, having become accustomed to hiking in GGNRA or other non-NPS public lands with their dogs, automatically take their dogs with them whenever they go hiking thinking that they will be able to go for a hike with their dog like they do at GGNRA. But then they arrive at parks like PRNS and realize that dogs are not permitted on the trails. They have a choice to make: leave the dog in the vehicle, take the dog on the trails despite the regulations, or to go home or elsewhere where dogs are permitted. Far too many people choose one of the first two options. If the dog is left in the vehicle, it frequently sets to barking non-stop until the owner returns, sometimes several hours later. The rate at which pets would be left in vehicles or taken on trails because the owner didn't want to leave the dog in the vehicle would likely be greatly reduced if pets were prohibited in parks. Pet owners would hopefully have heard through a public information campaign that pets aren't permitted at NPS sites and will leave the pet at home if the owner wants to visit a NPS site.

And then there are all the dog owners who refuse to clean up after their pets, and all of the resultant disease and pollution issues, which are well documented and upon which I won't elaborate in this comment. But dog feces which are not cleaned up is just one more reason to prohibit dogs from NPS sites.

If pets are permitted within GGNRA, park visitors should be limited to two dogs per visitor. On trails, visitors with more than two dogs have a wider space requirement and have the potential to impact other park visitors by disrupting or impeding their progress along the trail. In off-leash areas, few dog owners or walkers are capable of exerting voice control over one or two dogs, let alone more than two at the same time.

Commercial dog walking should not be included as a component of whatever alternative is adopted. Commercial dog-walking constitutes an economic use of park lands that is not permitted by the NPS's Organic Act, the GGNRA enabling legislation, the National Parks Omnibus Management Act of 1998, the National Environmental Policy Act, NPS Management Policies 2006, and Director's Order #53. Commercial activities within the National Parks are allowed only to the extent that they support the park mission to protect resources and enhance the visitor experience. Commercial dog-walking constitutes a

use of the public land that puts a drain on park resources without any financial or mission-oriented returns for the Park Service.

Some may argue that a prohibition against pets in NPS sites is excessive and unnecessary; that proper signage of where pets are and are not permitted would be sufficient. Those who make this argument must either willfully ignore or be blissfully unaware that a large number of pet owners are, apparently, oblivious to signage relating to pets or are somehow incomprehensibly ignorant as to what the signage means. Pet owners can pass by multiple signs indicating that pets are prohibited or are required to remain leashed, and when they are informed that they passed by such signs, they declare that they never saw the signs. Or, if they did see the signs, they claim that they thought that the signs meant something else. I've had a staggering number of individuals who must have thought that I was an idiot or extremely gullible tell me that they understood the signs with the red slash through the silhouette of a person with a dog on leash to mean that dogs were permitted to be off-leash.

Some who want to maintain the destructive status quo may argue that they have long been able to walk their dogs in certain areas, even before GGNRA was established, and that the NPS has no right restricting their ability to continue walking their dogs there. Following this rational, upon those lands that the NPS has acquired which have been previously logged, mined, or hunted, logging, mining, and hunting should be allowed to continue largely unabated. Except for a few exceptions, these activities are not permitted. When NPS sites are established, we- -as a nation through our elected representatives- -are agreeing that these areas are special and deserve the highest level of habitat or cultural resource protection and that any activities that might have previously occurred there will be ended if such activities do not leave the "scenery and the natural and historic objects and the wildlife...unimpaired for the enjoyment of future generations." When NPS sites are created, activities that impair park resources are, more often than not, ended. So, logging was prohibited within Sequoia National Park, Olympic National Park, Redwoods National and State Parks, and a number of other sites, when these areas were designated as National Parks, even though people had been logging in those areas for, at times, generations. Similarly, mining, hunting, and other extractive activities have been prohibited at various sites when they are included within National Parks.

Granted, dog walking is not an extractive activity; it's recreational (although far too many birds and other wildlife have been destroyed by dogs in parks). And while dog walking may not impair park resources to as great of a degree as logging, mining, and hunting, no one can truthfully claim that there is no impairment caused by dogs to park resources. With regard to other recreational activities, when the use of Personal Water Craft (PWC) was deemed to pollute park waters, disrupt the natural quiet, and disturb park wildlife and visitors, PWCs were banned from many NPS sites where they had previously been permitted. There are many other recreational activities which the NPS has curtailed or prohibited because of the activities' negative impacts to park resources. But for some bizarre twist of logic, the NPS at GGNRA has created a large exemption for dog owners, which continues to result in the impairment park resources. Why? It's not as if the NPS will be prohibiting the pet owners from walking certain trails or visiting favorite beaches. Pet owners would be more than welcome to visit these sites, so long as they do not bring their dog along for the hike. It isn't in any sense different from PWC enthusiasts wishing to go to, say, Tomales Bay within PRNS. They are welcome to visit and kayak and participate in other low-impact activities on Tomales Bay, but they may not use their PWCs. And loggers, miners, and hunters are all free to visit National Parks, but they are prohibited from logging, mining, and/or hunting during their visit. If a pet owner wanted to go for a walk with a dog, the pet owner would have to find a different location to do so- -similar to how a hunter has to find other locations than national parks at which to hunt.

Regardless, I am unaware of any other regulated recreational activity that the NPS allows to continue within parks with such high levels of non-compliance. Maybe I'm wrong, but it seems as though the NPS would prohibit any other activity with similarly large numbers of participants refusing to adhere to

pertinent regulations. What is so different about visiting parks with dogs that results in this special treatment?

National Parks and National Recreation Areas have been created to conserve the resources in those areas in an unimpaired state so that current and future generations may experience and enjoy those resources. "The mission of the Golden Gate National Recreation Area is the preservation, unimpaired, of the natural and cultural resources, and scenic and recreation values, of the park for present and future generations to enjoy." The NPS, therefore, cannot legally permit activities that would harm or impair those resources, lest the resources be lost to future generations, regardless of how much enjoyment current visitors may obtain from participating in those activities. Nor should the NPS allow activities by some that negatively impact the enjoyment of the park by others. Yet the NPS and our government seems to quickly cave-in to every user group that claims their rights are being infringed upon because the NPS prohibits a particular activity that is detrimental to the wildlife and habitats which the NPS is supposed to protect. Why can't the NPS adhere to its mission?

In light of NPS officials inevitably bowing to political pressure from pet owners and considering that much of GGNRA is already urban and heavily developed, GGNRA would be one NPS site where I can understand bending the rules by allowing a few areas to be opened for walking pets on leash, so long as those areas are adjacent to San Francisco residential neighborhoods that have no other parks where pets are permitted, and so long as those areas do not include wildlife habitat or sites on the Marin Headlands. And under no circumstances should pets be allowed off-leash outside of a handful of areas.

I strongly support prohibiting dogs in the picnic areas and parking lots at Stinson Beach (Alternative D) to remove the potential for conflicts between dogs and visitors and to provide visitors the opportunity to experience Stinson Beach without the presence of dogs. If the NPS does not choose Alternative D, but instead chooses Alternative F, I hope that dogs would be restricted to the northernmost Picnic Area and that the southernmost and middle Picnic Areas would provide visitors the opportunity to picnic at Stinson Beach without the presence of dogs.

I support Alternative D's providing visitors the opportunity to experience Homestead Valley without the presence of dogs by limiting on-leash dog walking to only the fire road. This would also better protect native plant communities and wildlife, including habitat for the federally listed northern spotted owl. I am disappointed that under Alternative F, there would be no trails in Homestead Valley where one could walk without the near certainty of encountering dogs, and that Alternative F would not provide the most protection for native plant communities and wildlife.

I am concerned that Alternative F would not adequately provide protection for contiguous habitat beyond the Oakwood trail and fire road junction and would increase the potential for dog/coyote interaction. Nor would Alternative F provide protection for potential habitat for species of concern, such as the mission blue butterfly habitat nearby and possible habitat for the northern spotted owl.

Similarly, at Muir Beach, Alternative F would not provide the most protection to sensitive dune, riparian, and wetland habitats, nor to species such as the federally listed steelhead and coho salmon- -which will continue to suffer impacts resulting from dog waste and disturbance in shallow water areas- -nor wintering and migrant shorebirds. I also support Alternative D at Muir Beach in order to provide visitors a no-dog beach experience.

I am very disappointed that the preferred alternative for Rodeo Beach includes a ROLA adjacent to Rodeo Lagoon, much less that the preferred alternative was modified to extend the ROLA the entire length of the main beach. What is the rationale for designating a ROLA immediately adjacent to Rodeo Lagoon, which serves as critical habitat for the federally endangered tidewater goby and is considered sensitive waterbird

and shorebird habitat? Does not the SEIS elsewhere state: "NPS Management Policies 2006 require that NPS 'ensure that conservation will be predominant when there is a conflict between the protection of resources and their use.' A ROLA is inappropriate in areas where there is core habitat, including habitat for listed species and habitat, which can be harmed by off-leash dogs."? Given the number of off-leash dogs chasing birds on the beach and given that park staff "observe dogs in the lagoon at least once a week and during good weather on a daily basis," it's not too surprising, that "compared to other beaches within Marin County, shorebird counts along [Rodeo] beach are considered low... ." And for the NPS to then conclude that low shorebird counts "allows a ROLA with minimal disturbance to shorebirds" is a bit of a stretch, especially when the NPS is hoping against all evidence and reason that "compliance in the ROLA would not allow dogs access to Rodeo Lagoon or along shorelines used by shorebirds, wading birds, waterbirds, and other wildlife." And doesn't the NPS memorandum of understanding regarding migratory birds, signed in 2010, require park units to restore and enhance migratory bird habitat and support conservation of migratory birds. And despite the SEIS's claim that "this site is considered a low conflict area and due to the large size of the beach, other users such as school groups would continue to safely use the area without conflicts," I have yet to visit Rodeo beach without some off-leash dog under "voice control" bounding unbidden towards me. Only Alternative D would improve resource protection of Rodeo Lagoon (maximizing resource protection would entail prohibiting dogs completely), better providing habitat for resting and feeding for shorebirds and waterbirds in the area, be compliant with the 2010 memorandum of understanding, and provide visitors the opportunity to experience a portion of the beach without the presence of dogs.

Allowing the other trails in the Marin Headlands to remain open to dogs, as per Alternative F, would not maximize the protection of park resources nor maintain the integrity of the native plant communities and wildlife habitat, including habitat for the federally listed mission blue butterfly.

Please modify the Upper Fort Mason component of Alternative D and F to provide visitors the opportunity to experience portions of the Great Meadow without the presence of dogs by limiting dogs to the southwestern section of Great Meadow, i.e., change Map 9-C so that the Great Meadow ROLA would be a Leash Required area. Although it would be in contravention with NPS policies requiring pets be on leash at all times, the Laguna Green ROLA is one of a couple ROLAs proposed in this SEIS that could be deemed not irrational. It would provide an area in a dense neighborhood for those who want to let their dogs run amuck to do so.

I don't understand why, in the Environmentally Preferable Alternative (Alternative D) for Crissy Field, the NPS would locate a ROLA adjacent to the WPA, or in the NPS Preferred Alternative (Alternative F), the NPS would locate a ROLA adjacent to the Tidal Marsh and along Central Beach. As noted in the SEIS, "the park has installed fencing to restrict access by dogs and people to Crissy Field Tidal Marsh, and signage has been installed to educate visitors on the access restrictions." Yet, this has not been effective enough and "dogs gain access to the marsh through the tidal channel under the pedestrian bridge, and have been observed by park staff in the tidal marsh." Again, "NPS Management Policies 2006 require that NPS 'ensure that conservation will be predominant when there is a conflict between the protection of resources and their use.' A ROLA is inappropriate in areas where there is core habitat, including habitat for listed species and habitat, which can be harmed by off-leash dogs." Please modify the Crissy Field component of Alternative D and F to eliminate each alternative's ROLA, or at least limit the ROLA to solely the eastern portion of the airfield (area east of the easternmost north/south path). And make the western portion of the airfield a location where visitors will have the opportunity to experience a grassy section of Crissy Field without the presence of dogs

Alternative F does not adequately address safety concerns for visitors and dogs on the Fort Point Promenade, which is between the edge of a heavily used roadway and the edge of the seawall, and on trails in the Fort Point area that are heavily used by visitors and can be congested. Even with the current

requirement that dogs be kept on leash, during my visits to the area, I noticed a number of dogs off-leash. Please adopt Alternative D in order to better reduce the potential for conflicts among users and the possibility of interactions with aggressive dogs and compromised visitor and dog safety.

Allowing pets along the eastern section of the Lands End Coastal Trail, as permitted under Alternative F, will not provide visitors more than a handful of short trails in the Lands End area where one could experience the area without the presence of dogs. Please adopt Alternative D for the Lands End area.

I am very disappointed that under Alternative F, "areas for a no-dog experience would not be available due to the small size of [Sutro Heights Park]." The SEIS attempts to provide some solace to those who wish to avoid dogs, noting that "A no-dog experience would be available on the no-dog trails at Lands End, adjacent to Sutro Heights Park," yet appears to not realize that the number of no-dog trails at Lands End under Alternative F are, as I noted in the above paragraph, a handful of short trails. Given the frequent weddings and other special events, in addition to the formal landscaping, the only sensible alternative for Sutro Heights Park is D.

Similar to Rodeo Beach and Crissy Field, the NPS's preferred alternative for Ocean Beach once again, inexplicably, places a ROLA right next to a WPA, this one for Snowy Plovers. I am please to see that Alternative F would impose a year-round prohibition against dogs in the Snowy Plover Protection Area(SPPA), but having a ROLA immediately to the north of the SPPA is just an invitation for off-leash dogs to disturb the plovers. Please, at least adopt Alternative D for Ocean Beach. The on-leash designation at the north end of the beach would reduce the potential for conflict among visitors in the heavily used north end of the beach, closest to the parking lot, and would maximize protection for wintering and migratory shorebirds south of Sloat Boulevard.

After the Laguna Green ROLA at Fort Mason, the ROLA in Alternative D for Fort Funston, while, again, in contravention of NPS policies, would not be completely unreasonable. Alternative B, with the modification of the beach area north of the Funston Beach Trail North being closed to pets, would be more consistent with NPS policies. I am pleased that Alternative F includes this closure in order to provide visitors the opportunity to experience the area without the presence of dogs and to provide protection for wintering and migratory shorebirds and the seasonal Bank Swallow colony in the sand cliffs at the north end of the Fort Funston beach.

Alternative F for Mori Point does not maximize the protection for newly restored, sensitive habitat and for the federally listed California red-legged frog and San Francisco garter snake. Please adopt Alternative D.

I urge the NPS to better protect the federally endangered mission blue butterfly, San Bruno elfin butterfly, San Francisco garter snake, and California red-legged frog and their habitats that exist at Milagra Ridge by adopting Alternative D, which would be more consistent with the park wide management of mission blue butterfly habitat areas than Alternative F.

To better protect mission blue butterfly habitat and a large area of relatively undisturbed, contiguous native habitat, and to be more consistent with regulations of adjacent lands managed by the San Francisco Public Utility Commission, please adopt Alternative B for the Cattle Hill/Sweeney Ridge area.

There is little debate that off-leash dogs both harm the natural resources- -primarily by harassing and scaring off the wildlife- -and that off-leash dogs negatively impact the enjoyment of other park visitors who don't appreciate or might be frightened by large dogs bounding toward them, or by scaring off the wildlife other visitors may be observing. For these reasons- -along with promoting humane treatment of pets and providing uniformity between national park pet policies- -I encourage the NPS to prohibit pets

from GGNRA- -or at a minimum to prohibit them from all but a few locations and to vigorously enforce the Park Service leash policy where pets will be permitted. Thank you for considering my comments.

Sincerely,  
Christopher Lish

<b>Correspondence:</b>	Dear Superintendent Dean,				

I walk with my dog in the GGNRA on a weekly basis and am opposed to the preferred alternative described in the GGNRA's new draft dog management plan. It's important to me as a dog owner that I'm able to walk my dog off leash under voice command in these public areas.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Bradley Collier

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I have lived in San Francisco for seventeen years and frequently visit the GGNRA. Since getting a dog five years ago, I go to Crissy Field every week and to Fort Funston about once a month. I enjoy walking with my dog under voice-control in these areas and I always make sure to have my dog in sight and to pick up all pet waste.

In a separate comment I submitted in response to the SEIS, I expressed my objections to wide-ranging changes to the dog management policy in the GGNRA; however, after following the process of the development of a dog policy in the GGNRA for many years, it has become clear to me that the NPS and the GGNRA are determined to implement their plan regardless of public opinion. Consequently, I would like focus in this comment on several changes to the Preferred Alternatives for Crissy Field and Fort

Funston that I feel are imperative to making the impending changes tolerable for dog walkers.

Regarding the Preferred Alternative for Fort Funston, I feel it is unreasonable to require dogs to be on-leash on the sand ladder along Funston Beach Trail South. I do not understand why the two trails down to the beach (North and South) are treated differently in this alternative. To a frequent user, both seem to be of equal difficulty and average steepness. The sand ladder can be difficult to negotiate without being tethered to a dog and could become dangerous for those walking dogs if they are forced to leash up their pets before ascending or descending. I frequently go to Fort Funston with my dog and my two-year-old, and I feel it would be impossible for me to ensure my child's safety on the sand ladder while holding onto my leashed dog. If dogs are truly under voice control, other visitors on the trail would not be exposed to any significant risk of injury from off-leash dogs, at least not more so than from a child running ahead of his or her parents. With some initial fair-minded enforcement and judicious citation, the GGNRA could help establish a culture of responsible off-leash dog ownership. Adequate fencing flanking the sand ladder, which does not currently exist, would prevent dogs from veering off the trail. There is sufficient space between the trailhead at the cliff top and the parking lot to ensure owners have ample time to leash their pets upon ascent without risking any dog-car interactions. For these reasons, I submit that the south Funston Beach Trail should remain an off-leash trail.

I believe there are several outstanding issues with the Preferred Alternative at Crissy Field that must be rectified before that option could represent a legitimate plan. If all visitors to Crissy Field that are accompanied by dogs, a number I estimate to be about half of all the visitors, are to be concentrated on the east end of the airfield and the Central Beach area, then improvements to the parking in that area need to be made. The parking lot near East Beach provides 400 spaces of free parking available seven days a week. The parking nearest to the proposed off-leash dog area consists of roughly 30 free-parking spots behind Sports Basement and street parking for a fee along Mason Street with fees enforced seven days a week. This strikes me as grossly unbalanced and unfair. Also, in contrast to the situation at the East beach parking lot, visitors parking in the central area of Crissy Field need to cross Mason Street to access the GGNRA lands. Additional pedestrian safety measures such as a crosswalk or stop sign accessing the airfield are needed to protect the influx of park visitors redirected to this area. Parking near the proposed off-leash dog area will become an even more pressing issue once the Presidio Trust settles on a development plan for the site currently occupied by Sports Basement. If this area becomes a citywide cultural destination, the volume of people visiting the Mid-Crissy Field area will increase even more dramatically, making parking virtually impossible without an equivalent increase in available spots.

Another improvement to the Crissy Field Preferred Alternative I believe is vital is the installation of bathroom facilities and showers/water spigots near the border of the airfield and the tidal marsh. The East Beach has bathrooms both near the parking lot and in the Crissy Field Center. There is also easy access to water for hosing off dogs or children. The closest bathrooms for the Central Beach area are in the Warming Hut, which is both a great distance away from the proposed off-leash dog area and on the other side of a dog-restricted region of the beach. If the GGNRA demands that visitors to Crissy Field accompanied by dogs confine themselves to a particular section of the parklands, it is only fair to provide this segment of park patrons with the same level of access to facilities as other patrons.

Without the above-mentioned changes to the Preferred Alternatives for Crissy Field and Fort Funston, I feel the proposed changes to the dog policy at these sites represents an undue burden on park visitors that would significantly curtail their ability to enjoy the recreational potential of these areas of the GGNRA. Since recreation is the founding principle for the establishment of the GGNRA more than forty years ago, the Preferred Alternatives should not be accepted as is.

Thank you for considering my comments,

Sarah Green

<b>Correspondence:</b>	Dear superintendent Dean,				

One of the greatest aspects of living in s.f is the number of off leash areas for sf residents and their dogs to enjoy. In my 5 years of living in s.f, I've yet to encounter a dangerous situation with other pets and their owners. I believe most residents of the city are responsible with their pet ownership and the few that aren't shouldn't represent the majority.

Having grown up with fenced dog parks in Sacramento, I've witnessed more than 3 dozen unsafe incidents involving dogs and their owners. I believe the fenced atmosphere creates a stressful environment for the dogs causing more aggressive incidents. I've also noticed owners are less mindful of their dogs in a fenced setting due to the false security of the enclosures.

I'm fortunate enough to live near stern grove and fort funston and grateful to be able to utilize the off leash area on a daily basis. I can't imagine where I would take my dogs should these two areas be restricted.

Sincerely,

Jamie

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Grace

**Correspondence:** I'm writing in response to your request for comments about dog policy at Muir Beach. In no way do I consider this to be public comment because there was no way to respond in an open forum, At all the meetings I attended public comment was not allowed. All we have is the word of the park service that they will read this and may publish the text. Why are the posts allowed to be anonymous? Why is there no link to comments as they are written?

I have lived in Muir Beach for 13 years and have owned a dog for most of that time. I walk the beach in the morning and at night most days. I am arguably the most frequent visitor to the beach. I would like to voice my choice for alt A (no change to current policy).

The park service has claimed that dogs are doing harm to the beach. My question is how do they know? in my travels to the beach I have not seen one researcher doing a study. Never have I seen a dog running down the beach with a salmon in it's mouth. What I have seen is trash everywhere especially on a holiday weekend. If it not for myself and a few neighbors the beach would be a wreck.

I did some research and looked at the environmental impact report for Dog beach down in San Diego. It unlike the report that this proposal is based on is site specific and peer reviewed. Dog beach is adjacent to a major breeding ground for several endangered shorebirds. they found that the birds were doing just fine even with up to 200 dogs at the beach at any given time. Maybe the park service just needs to stop driving bulldozers through the marsh every 3 years

This is not a national park, Its name is GGNRA and I believe the R stands for recreation lets maintain the status quo and keep the dogs at the beach where they belong.

Thank you for allowing me to post my concerns,

Chris Gove

Sunset way Muir Beach

It is way too restrictive and will prevent others from recreating with their dog for their own health and their dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Joanne Lim

Dear Superintendant Dean,

In addition to my previously submitted comments, I would also like to point out some specific problems with your plan. While I strongly believe the entire plan is ill-founded and set up for failure, these are just a few specific proposals that I would like to point out.

1) At Fort Mason, the area has long been used for dog walking, both on leash and off. It is a convenient location for many SF residents who need to walk and recreate with their dogs before and after work. In order to separate the dog walkers, you have set aside the green space on the corner of Bay Street across from Safeway for off-leash walking. This land slopes directly into the street! If dogs are allowed to play here off-leash there will surely be balls and dogs going into the busy street, which would be disaster. I imagine the only way to rectify this would be to build a very tall, expensive and unwanted fence. This will block views and destroy the open space San Francisco have enjoyed for a very long time.

What is more important, I was at Fort Mason walking my dogs in January, during the unusually warm weather, and came upon an incredible amount of trash strewn all across the great lawn under the palm trees. It was disgusting. Beer bottles, wine bottles, leftover food in styrofoam containers, used napkins, paper and plastic shopping bags, just to give you a taste. I took a photo and would be glad to share it. How can it be that dogs are not allowed to recreate here but people who trash it are?

2) While the middle beach at Crissy is often a great place to walk dogs, there are times when the tide is so high that the beach virtually disappears. At these times it becomes almost difficult to walk that part of the beach, particularly if there are a lot of other dogs there. And with the ocean level predicted to rise two feet in the not so distant future, that beach will likely be inappropriate for walking dogs, even in low tides. That would leave no beach access at Crissy for dogs if you close off East Beach. How can you deny access to possibly the most common users of East Beach?

3) It does not make sense to close off part of the lawn at Crissy (old Crissy airfield) to off-leash dog walking. My greatest concern here is that you build an unwanted fence around the section you think makes sense for the only of leash dog area. How else would you be able to enforce this? Like most dog owners who enjoy recreating on this large green lawn, the joy would be lost if you closed in the area. Dogs, including mine, enjoy running free here, and I have many happy photos I could share of this as well. Please leave this the beautiful open space that it was made to be and allow dogs to run free on voice control. It works.

Again, these are just a few examples of where your plan is seriously flawed. Please go back to the 1979 Pet Policy and figure out better ways to enforce good behavior of the very few who are irresponsible. This plan is not what the majority wants and you have been told thousands of times as such.

Sincerely,

Leslie Dicke

Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Diane McDermott

**Correspondence:** As a longtime SF city resident, I understand the concern with preserving our national parks for all citizens to enjoy. But this should include their pets as well! There is not one single reason why a person should not be able to walk their dog off-leash in a permitted area, as long as they exercise control over that dog and pick up after it. As a permitted commercial dog walker in San Francisco, I understand the problems presented by irresponsible dog walkers and owners who let their dogs run amok, unsupervised and unleashed even if they are not friendly dogs. BUT why not just enforce the rules already in place, rather than punish everyone? For every irresponsible dog walker/owner, there are at least 7 responsible, alert and very attentive walkers/owners. So why punish the larger portion for problems created by the very few? Why not just ENFORCE the rules that exist? It makes so much more sense to me to simply do this rather than go and re-write tons of existing policy.

**Correspondence:** I oppose the Dog Management Plan proposed and believe A/no change should be implemented.

I hope the Supervisor of the GGNRA will respect the wishes of the SF Board of Supervisors, the Marin County Board of Supervisors, Representatives Speir and Pelosi of the populations and areas affected and 71% o the respondents to the plan 2 years ago along with the SF Park and Recreation Department and stop the implementation of any plan that will restrict traditionally off leash areas in the GG National RECREATION Area.

Please respect our local culture. We have all been very disturbed by the disrespect shown the Drake's Bay Oyster Farm that had responsibly run a local culture business for 100 years, (and provides 30% o the oysters farmed in this country) as long as San Francisco has been a vibrant city. I have never felt any connection to the Tea Partiers but for the first time I am surprised how I finally understand their call for more local control of a local area, a respect for local culture. If homogenization is your goal, then please let us disappear as a culture that sets trends in technology, culture, environmental protection, agricultural production and everything else that we lead the country on (as the 7th largest economy in the world). There is a reason for this. Let us set the example for the rest of the world.

Your data shows you are FAR more safe from a dog bite or attach within the GGNRA, where our dogs are off leash and know how to behave due to their experience with it, than in any other part of the United States as a whole.

**Correspondence:** Dear Superintendent Dean,

As a citizen and resident of San Francisco, I am writing to oppose the Preferred Alternative in the GGNRA's new draft dog management plan/supplemental environmental impact statement (SEIS). I oppose the Preferred Alternative because it is too restrictive.

As someone who has lived in San Francisco for over 18 years, Crissy Field has been a primary outlet for both my and my dog's recreational activity. I now have a 20-month toddler, and we have added frequent trips to Crissy into our weekly routine.

I have participated throughout both draft EIS and public comment periods and have taken a considerable amount of time to review and try to understand the issues and impacts being raised within the new draft plan. However, I feel strongly that the new dog management draft plan continues to be too restrictive, and I believe the GGNRA intentions with the dog management plan are misguided and biased as a process.

1. The GGNRA is an urban RECREATION AREA. The language of the enabling legislation states the park's purpose as recreational open space in an urban environment.

I feel strongly that RECREATION should continue to be the unique value to visitors and residents in consideration of a balanced plan. For example, when I am at Crissy Field with my dog, I am enjoying the time with my dog off leash as much as I myself am enjoying Crissy. My dog and I walk the stretch of beach and grassy meadow from East Beach to the Warming Hut picnic area and back. The new Preferred Alternative would directly impact MY quality of recreational experience and value.

2. Despite the initial public comments GGNRA received during the first public comment period, I do not feel the new plan has been modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who took the time to submit their comments. You can bet for your average citizen of San Francisco, or user of the GGNRA, this public comment process is not an insignificant gesture of civic action. It has involved a significant commitment of time, energy and faith in the process.

3. Given the points above, in addition the final examples I would cite below - I have concluded and strongly believe that both the process and language in the new draft plan is biased and not objective.

Example #1 - the language in the Preferred Alternative for Fort Point reads as follows:

Alternative F- Fort Point

Alternative F: Preferred Alternative. The preferred alternative is the same as alternative B. On-leash dog walking would be allowed along the Fort Point Promenade, the Battery East Trail, Andrews Road, the Presidio Promenade, and the grassy area near the restrooms.

\*\*The chance of park visitors and staff encountering uncontrolled aggressive dogs would exist. Although dogs would be on leash, there would still be the chance of dog bites and other physical injuries occurring.\*\*

The language in this Preferred Alternative would infer to the reader that dog violence was an issue.

However, within the SEIS report, the number of incidents reported at Fort Point during the four-year timeframe of 2008-2011 included only ONE dog bite/attack:

a total of 23 pet-related incidents were recorded at this site. Pet-related violations included 15 leash law violations, 3 cases of visitors walking dogs in closed areas, ONE dog bite/attack, and one pet rescue (table 36). No unattended pet or pet excrement violations were documented at this site between 2008 and 2011.

Example #2 - I believe that residents and agencies that utilize and represent the GGNRA's recreational value should have been involved and solicited as an advisory committee or cooperative to help the GGNRA reach a more balanced solution to dog management (e.g. SF Board of Supervisors, Rec and Parks, and the various dog owner groups such as Crissy Field Dogs). In the latest draft plan, the Presidio Trust is cited as an agency "cooperative": I do not feel that the Presidio Trust represents the public's recreational value and needs - as they have a vested commercial interest and stake in the properties adjacent to the GGNRA recreational area.

Thanks for your consideration of these important objections to the Preferred Alternative.

Sincerely,

Carolyn Suh

<b>Correspondence:</b>	I do not think forbidding dogs from GGNRA lands is reasonable.				

If owners have abused the privilege, enforcement of the existing laws would be an excellent idea, but many people who have dogs depend upon access to these lands for proper exercise for the dogs and for themselves.

The people own the land. You should be able to arrive at a solution.

Thanks.

**Correspondence:** I do not always agree with the National Park Service, but as a dog lover and owner, I am satisfied that the GGNRA Dog Management plan has reached a balance between off-leash dog recreation (of which I take advantage) and dog-free areas. The National Park Service has worked to uphold its responsibility to protect wildlife, especially on or around its beaches and waterways. These areas are obviously important to creatures such as shorebirds who, by definition, can live nowhere else, as well as other wildlife.

While I do own a dog, and love to see it run free, GGNRA's plan does not- -no matter how SFDog yells- -ban dogs or off-leash walking, and in fact leaves huge swaths of land on Ocean Beach and Crissy Airfield for off-leash play that will exhaust most any dog.

My most serious disagreement with GGNRA is that they haven't used the Northern Arizona University poll, which showed that a majority of Bay Area residents do not want dogs off leash in National Park lands. As far as I know, this is the only independently run, academic poll on the opinions of Bay Area residents.

Furthermore, I am baffled that GGNRA has not reminded San Mateo County residents that their county bans off-leash dogs entirely. Why should the GGNRA go against what is rather obviously the opinion of county residents?

But beyond these disagreements, GGNRA has reached a balance that will allow dog owners like me to walk their dogs off-leash, and has an enforcement mechanism so that continued flouting of leash-laws will result in further restrictions. Without this enforcement mechanism, the dog community- -me included- -will have no incentive to ask as the community we are, and ensure that other dog owners don't end up ruining the privileges we will have under the current plan.

General Superintendent Golden Gate National Recreation Area Building 201, Fort Mason  
San Francisco, CA 94123-0022

Re; Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

My name is Paula, I live in San Francisco, Southern California and Montana. When I am working in San Francisco, I walk my dog once or twice a day in Crissy Field. I belong to the Crissy Field Dog Group.

We meet with our friends nearly every evening in the recreation area on the airfield and walk for a hour. We often run into our friends in the morning on the airfield as well.

Our dogs are very well behaved, mine is under-voice command and is well known to the staff that maintains Crissy Field. Many times I have heard she is their favorite dog in the park because she listens, is mellow and careful with people and other dogs. When she is off leash on the green space, she approaches slowly to make sure people or dogs are okay to interact with. She will stop in her tracks if she senses any strange behavior in a human or another dog. I have brought her to Crissy Field since she was 8 weeks old. People who visit the area take extremely good care of their dogs.

The people who visit Crissy Field pay a premium to live in or near the park. The dogs who visit have their shots and are well trained or on leash. Over the course of my 15 (with a dog) - 20 years (visiting dogs on my runs/walks) walking in the park, I have never seen a problem with a dog and a human - or - a dog and a dog. I clean up after my dog and carry extra bags on me. I keep her out of the Snowy Plover area, etc.

It is important that the entire green space/airfield remain off leash. The area tiny off leash green space proposed is inadequate for exercising a dog of any size. We need peace in our lives, ample exercise and socialization. This means, in fairness to my dog, walking a few miles each day. Our walks keep us healthy. When we are happy, and healthy we contribute more to the tax base overall.

There are 130,000 dogs and 70,000 kids in the Bay Area. The number of children in San Francisco is declining each year (in the low thousands each year). The number of pets is growing. In San Francisco, in 2011 there were about 110,000 dogs, that number has increased a dramatic 20,000 in only 2.5 years. This is a national trend as well in cities like New York, Austin, etc. If the issue of off leash adequate free walking on open green space as a necessity is ignored, it will come back to the stewards of the recreation area and on the national level again and again. It will also push dogs into already over-burdened areas of the city of San Francisco and Julius Kahn Park.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site specific conditions.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog-walking access) need to be vetted out completely.

Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also extremely good stewards of the environment.

I've noticed destructive behavior on the part of moms & dads with children on West Beach (digging deep holes, building castles, pushing strollers, lugging umbrellas and beach gear, flying drones, running electric cars both on the crushed walk path and under the fence on W. Beach). This behavior is far more destructive than anything a dog has ever done anytime I have been there. Dogs typically, run in the water, chase a stick or ball and then move on with their owners. People set up camp, stay for hours and leave behind trash & toys in the designated Snowy Plover area. Humans should have been banned from the area long before dogs. This can be proven in a balanced observation of the area.

With a rate of 93% human violation (all human crimes), 7% animal violation (animal complaints) in the GGNRA the human issue is more urgent than the off leash dog recreation issue. (See the history of GGNRA complaint records)

Without access to the already restricted areas of land we have to walk in the GGNRA, I am very concerned that many dogs and dog guardians will not have sufficient opportunity to exercise and recreate. This will have an effect on the health of the dogs and dog owners.

GGNRA should be a partner with the City of San Francisco and other communities, not act as an adversary. The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so.

The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts - other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, moms and babies, drones, electric cars, crowd attracting events such as Fleet Week, bicyclists, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS needs to provide full disclosure to the public and decision makers. If dog-related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone - so that an informed decision can be made.

1979 Pet Policy has been working where sensitive species are not present. Please keep it the way it is. We do not desire a change to our rights to walk freely in the recreation area which was created for the good of the people and their dogs who live near, work in or near, and support the recreation area.

Warm Regards,

Paula  
San Francisco

**Correspondence:** I support Alt A for Mori Point, dog walking has existed on and around Mori Point for decades. Providing opportunities for on leash dog walking when visiting Mori Point will engage acknowledge a large segment of not only the Fairway neighborhood residents who promoted the transition of this property into NPS holdings, but the thousands of visitors from afar that frequent this park with their dogs every month.

I support Alt A on Map 19 A , Cattle Hill Sweeney Ridge area.

The value of loop options is paramount in spreading out user groups.

Spreading out user groups is key in our highly populated area to ensure a pleasant park experience for all including dog walkers.

Providing human-dog walking opportunities is critically important to these historically dog friendly lands

I support map#20-E Alternative E for Pedro Point.

This area is highly disturbed from past uses, and would be suitable for dog walking on the entire parcel.

Spreading out user groups is key in our highly populated area to ensure a pleasant park experience for all including dog walkers.

Providing human-dog walking opportunities is critically important to these historically dog friendly lands

I support map 21-A Alternative A for Rancho Corral de Tierra.

Also,

All NPS trails-lands above Seton hospital to above Park st, referred to as Vicente Ridge on NPS maps should be all be open for dog walking.

The parcel consists of existing ranch roads multiple loop trails for excellent dog walking options Lines of sight are ample,leash enforcement is complimented by these fire roads trails easily accessed from multiple locations by NPS patrol vehicles.

The value of loop options is paramount in spreading out user groups.

Spreading out user groups is a key to ensure a pleasant park experience for all including dog walkers.

Providing expansive dog walking within the Rancho will engage a valuable segment of trails users in protecting these remote coastal lands.

Providing ample human-dog walking opportunities near every neighborhood surrounding the Rancho is paramount in reflecting the National "Recreational" Area aspect of GGNRA's mission in serving the broadest segment of citizenry.

<b>Correspondence:</b>	Dear Superintendent Dean:				

As a senior who lives in the Marina District of San Francisco and does not own a dog, I oppose the Preferred Alternatives proposed in the SEIS of the Dog Management Plan because they offer inadequate access to lands that were given to the National Park System for the specific use as a NATIONAL RECREATION AREA. These lands were handed over willingly to federal stewardship with the caveat that existing recreational uses, specifically including dog walking, be maintained in their existing locations.

The DEIS/SEIS is not a management document - its proposed form of management is simply to eliminate the perceived problem of dogs. Management could be easily accomplished by simply enforcing the existing rules in place under the 1979 Pet Policy.

The funds proposed for implementing a new plan based on suppositions of what could happen and on insufficient (and sometimes incorrect) data would be a waste of taxpayer money when it would cost far less to more uniformly and clearly implement the existing policy.

The fact that the numbers of dog-related incidents within the GGNRA are just a small fraction of the human-caused incidents (as outlined in the DEIS/SEIS and in figures just released by the GGNRA for 2012-2013) makes one ask why management resources are not being better focused on these far-more-serious threats to visitor safety.

Due to those incident numbers, I feel safer walking on a beach or pathway frequented by dogs and their guardians than on those that are not.

I am appalled by how much money has been spent to date on producing these obviously biased documents, but cannot justify that as a reason to choose any of the alternatives proposed.

I do support formalization of the existing 1979 Pet Policy as was recommended by the federal commission that reviewed this issue in 2002, plus providing for off-leash access in San Mateo County and on any new lands that the GGNRA acquires in the future.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Kalinda Law

**Correspondence:** I am an SPCA dog trainer and walker who uses the GGNRA on a frequent weekly basis to exercise and socialize the dogs in my care. I have attended numerous open houses, meeting, town hall events on the off leash debate over the past 10 years. I even attended the 2005 City Hall meeting that the GGNRA tried to give back the lands they had acquired to the cities and towns they boarder. I know this has been a struggle for years and there are many passionate people on both sides.

My surprise has always been that there has never been any input or consult from Bay Area Dog Training Professionals on this specifically dog focused legislation and its restrictions. The GGNRA and the DEIS reporting has never sought out the advice and suggestions from this highly canine educated population who are here and more than willing to contribute. These people also frequently use these off leash areas because of the benefit it provides to dogs in their care (both personal and professionally) on so many levels: mental stimulation, socialization, exercise and all around positive effect of these factors results in a more behaved dog.

What I can predict from the legislation and reduced areas of off leash access is many folded. Smaller dog areas and more ON-leash requirements will escalate the number of dog fights especially in a group

setting. The familiar "flight or fight" response: Dogs who will feel threatened or scared and can not create space to make them selves safe will have to fight because they have no choice. Which will inevitably result in more dog on dog and dog on human altercations which will only reinforce the nay-sayers who were against dogs all along. The dog community is strong in numbers, although not that vocal compared to other groups. By utilizing this local dog resource group we could have been so much more effective by educating the dog owning public and the dog walking companies by advising them on where to walk, where not to walk, what to do with ill behaved dogs, how to use voice control effectively and if not to put them on leash since it is a privilege not a right.

Additionally, as a business owner focused on dogs and a San Francisco resident is does not make sense that the GGNRA and the City of San Francisco have 2 different numbers of dogs that can be walked LEGALLY off leash. Right now the GGNRA is swamped with commercial dog walkers who are abusing the infinite number of dogs that they can walk. When the ruling changes to 6 at the GGNRA those walkers will infiltrate the city parks and bombard the surrounding communities: parking, barking, erosion, other public park users, etc. It only makes sense if the reciprocity in numbers was consistent.

I strongly feel that the draft needs to be redone including the input of dog care professionals along with establishing outreach programs for dog owners on how to respectfully share the park with other users and wildlife.

<b>Correspondence:</b>	A great deal of the report deals with the impact of off-leash dogs on trails in wilderness areas of the Marin Headlands, and I can appreciate that these are sensitive areas with a high density of wild animal species and unique vegetation.				

A great deal of the actual use of the GGNRA happens in the parks at the northern edge of San Francisco - such as Ft. Mason, Crissy Field, and Ft. Point.

To me, the flaw in this report is that the comments about goals and considerations are equally applied to these very different spaces, even though the benefits of public use are immensely greater in these SF city areas, and the potential improvements for habitat and wild animals are basically non-existent in these areas. Crissy Field East and West beach are mostly barren sand-scapes without any fragile vegetation, and no native wildlife. Aside from some very infrequent disturbance of the Plover habitat, these beaches are areas without any real opportunity for protection, which also provide an immense public recreational benefit.

Unfortunately, the report fails to distinguish these areas from each other. In failing to do so, the report fails to provide any true appreciation for the benefits of public use - instead, preservation of habitat for plants and animals is treated s an absolute objective second to none.

I think it is essential to understand that the mostly urban park circumstances of Crissy Field, Ft. Point, Ft. Mason and similar spaces MUST be considered in a different way than a trail at the top of the marin headlands, far from the noise and craziness of the city

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,  
Kristine and TiCo

**Correspondence:** As an animal lover I have no problem with dogs being allowed throughout the GGNRA. However, I have had many unfortunate experiences attributed to the lack of concern and control that many dog owners have over their pets while visiting the parks.

First, it seems I can't walk any trail any more without finding bags of dog feces left behind on the side of the trail. The dog owner takes the time to bag it, but just leaves it on the side of the trail. So we have gone

---

from a naturally biodegradable product to wrapping it in plastic and littering, brilliant!

Second, leash laws must be enforced. Recently, my wife was sitting with our 14 month old son in the grass when a 100 lb. Rottweiler comes running straight at them at full speed. My wife grabbed the baby and cradled over him to protect him. The Rottweiler lifts his leg over her back and completely drenched my wife in piss. She was completely soaked! The owner come running up about 10 seconds behind his dog and was very apologetic and felt horrible. Not only could the situation have been made much worse had the dog reacted in a violent manner but the entire situation could have been prevented had the dog been on a leash.

Lastly, most dog owners say that their dog is "sweet". While that may be how your dog interacts with you, the one that feed him, it doesn't mean that that is how your dog is going to interact with complete strangers. And no matter how comfortable you are with your dogs temperament, no one else feels the same way.

It all comes down to dog owners taking full control of and responsibility for their dog so that it does not interfere with the experience of others. I ask the National Park Service to keep your current regulations but spend more time and resources actively enforcing your regulations to ensure an optimal experience for all.

Best,  
Don

**Correspondence:** I am in strong opposition to the Dog Management Plan proposed by the GGNRA, to anything other than plan A. The main reason is that this plan will continue to reduce the area in which

---

dogs can be off-leash. When a dog is off-leash, it learns how to communicate with it's owner. When it is limited to small area dog parks and doesn't practice it's voice control in larger areas/distances such as on roads, paths and trails, those skills are limited and can be lost. The ACC and the SPCA are in opposition to limiting off leash opportunities.

GGNRA is part of San Francisco and should be a part of it's culture.

My example is that my first dog in SF was always off leash on the streets and in the GGNRA and everywhere. My ex moved back to NYC and took her. She lived on leash in the city for years and so lost her training and her communication with her owner. On a trip to visit the countryside, she saw a dog across the road and didn't listen to voice control which she had always been perfect at. She had lost her training living in a city that requires a leash and only allows her to play in fenced in parks. She ran across the road at age 8 and was hit by a quick on-coming car. She died.

I would hate to see the GGNRA contribute to the loss of training and the loss of this great San Francisco culture of communication with our dogs, our friends, friends we created, since civilization began. Hence they are part of civilization!

**Correspondence:** Your restrictions on dogs are already substantial, with many places allowing no dogs (Tennessee valley), and many trails requiring leashes (much of Mt. Tam). You are not only over-reaching by making these rules more stringent and exclusive, but you are betraying the motivation and struggle of people, small groups and large, who fought to keep this space open. Because of them, you have the stewardship of these lands and the responsibility to keep access as open as possible, not as limited as possible.

Sincerely,  
Terry Strauss

**Correspondence:** I am a lifelong bay area resident and have grown up enjoying the out of doors - with my family, and with our dogs. One of the great joys of living in the bay area is being able to hike, trail run, walk empty beaches - with my family, and with our dogs. The beauty of this area is that, with a little planning and effort, you can get away from other people, other dogs, etc and enjoy peace in the out of doors. Yet, your proposed plan will remove that ability, will forcibly remove a key piece of the good life here in the bay area. And, this change will have a significant effect on dog owners and non dog owners alike.

Taking away access to the various beaches and trails that we visit now will not only have a drastic effect on our entire community. Dog parks will become over-run. Vehicle traffic will increase in densely populated areas at these said dog parks. Dog owners will flock to any open space available simply for their dog to have a really good, stimulating work out which will inconvenience children, schools, etc. Inevitably causing animosity between dog folks and non-dog folks.

Off leash areas are notably lacking in this plan, and where present are confined to limited areas. Many dogs - my own included - do not do well in these confined, dense spaces, and are happiest and healthiest when able to walk trails or beaches off leash. Again, many of the areas that are currently open to off leash walking feature low usage once one makes their way away from the trail head. Our dogs - as are the vast majority that we encounter - are well behaved and kept under control when we encounter others, but often we'll enjoy a long walk and see only a handful of other people. Why remove the ability to walk a dog off leash when there is so much lightly used space in which to enjoy this activity?

The proposed plan will negatively impact quality of life here in our beloved bay area.

**Correspondence:** The National Park Service needs to adopt stronger, more effective dog management policies in the Golden Gate National Recreation Area.

It is highly unfortunate that the GGNRA at one time adopted a policy of non-enforcement of the National Park Service's leash law. It was the wrong thing to do and it is way past time to correct that mistake and bring the GGNRA into line with other parks throughout the country.

We need more trails and other areas within the San Francisco part of the GGNRA that are off limits to dogs whether on- or off-leash.

Off-leash areas should be marked off with fencing or natural borders such as bushes; signage is insufficient.

Park officials need to enforce dog-related regulations more vigorously - - for the survival of wildlife, the safety of law-abiding dog owners and their dogs, and the enjoyment of all park users.

The GGNRA's proposed plan is an important step toward balanced, sustainable use of the park. It will protect wildlife and meet the needs of the many people who want to enjoy the park's natural beauty without constant interaction with dogs. At the same time, it will still provide over 21 miles of trails and beaches for dogs and their owners.

I support the adoption and implementation of the proposed plan, with the addition of fencing for off-leash areas.

**Correspondence:** I support the NPS plan to exclude dogs from sensitive areas of the Golden Gate National Recreation Area. It is the function of the National Park Service to protect the resources of our parks - the landscape and the critters - from any and all negative impacts. That includes people and dogs among other potential threats.

Dogs on voice control is a farce. Many owners cannot control their dogs this way. There are many incidents where out of control pets have attacked birds, people and yes, a ranger and his horse. Law enforcement records document this.

Pet owners find it easy to talk about decades of use on these public lands. Forty years ago Fort Funston was overrun by motorcycles and dune buggies. The Presidio was under the control of the US Army and their beaches were not open to this public use.

Let the National Park Service do its job and protect these public lands for all of us.

<b>Correspondence:</b>	When I saw the sections titled "Cultural Landmarks", i was expecting to read about burial grounds or ancient archaeological sites. I was surprised to read that the gun placements along the west side of the city are considered to be "cultural landmarks"! THese are only about 70 years old. These were constructed using methods that the National Parks would strongly object to. The residue of these materials (Cement, Iron, and Explosives) is more consistent with a toxic waste site than something requiring protection.				

Is the National Park Service really concerned that some dog urine is a threat to these gun placements? The report says so!

I think some sections of this report, and especially these sections about protecting the gun placements from the loose dogs, is just plain absurd. The NPS should pick a few vital things to defend instead of pretending that every square foot of the GGNRA is a fragile and defenseless resource that is to be protected from people and their dogs at all cost.

I could be persuaded that some changes are necessary and appropriate. However, the proposed changes are so far-reaching, and have such a huge impact on the public use of space in the middle of San Francisco that the entire thing loses credibility. I can agree that some parts of the GGNRA are fragile, but there are other parts that we should be allowed to trample on and enjoy. If the Park Service is unable to appreciate the value of public use of public land in the middle of the city, someone else should be asked to manage the park.

**Correspondence:** Please let Fort Funston remain an off-leash area for dogs. There are so few places in the Bay Area where dogs can share the pure joy of running in an open and natural area with their humans and dog friends. Our dog has bad joints, and his vet recommends a sandy beach as the ideal place to exercise him with minimal stress to his ankles. We love and respect the coast and always clean up after our dog, as well as ensure that he is well-behaved so that equestrians and others are not disturbed. I hope you will consider keeping Funston as a place where we can continue to share the great outdoors with our canine kids.

**Correspondence:** I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Anna Salcone

**Correspondence:** The beauty of the restored coastal areas adjacent to the Golden Gate Bridge are among the most beautiful and inspiring in the entire United States. My wife loves to visit this area and walk the path near Crissy Field, and I used to join her until recent years when this amazing place has become overrun by dogs. The entire experience of this area is now a hugely negative one, for me and many others I know who used to go to there to reconnect with the natural world. On weekends dogs running through fragile and protected areas, jumping on people, shitting on the beach and barking at their owners to throw them balls has ruined the experience of the area to the extent that it is no longer an enjoyable place to visit. Recently I had relatives in town and they wanted to go there and once I told them what a terrible place it was because it had been turned into one big dog park they agreed that this was not somewhere that we wanted to go. The fact that dogs have destroyed this special place is an embarrassment for the city of San Francisco and I hope that you will take action to restore it to be an inspiring and uplifting place for people of all ages to enjoy without the disturbance and danger of our four-legged friends, the dog. Thank you!

**Correspondence:** I have been a longtime supporter (both physically and financially) of the NPS, State Parks, and regional open space lands. However, I cannot and do not support the direction of the proposed dog management plan.

The trails and beaches in the Bay Area as multi-use and shared space to exercise, enjoy nature and be with my family was absolutely the primary driver for buying a home in this location. We have invested in this region, built roots, contribute to the community and the economy. The plan impacts our desire to live and work in the SF Bay Area.

The plan is unfair and I'm disappointed that the overall impact to our community has not been a consideration. I question the decision-making from the NPS and will be selective and apply increased scrutiny to ongoing support of the organization.

Frank Dean, Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123

Dear Superintendent Dean:

We are pleased to offer the comments of the San Francisco League of Conservation Voters (SFLCV) on the proposed Draft Dog Management Plan/Supplemental EIS for the GGNRA. SFLCV was an official participant in the Negotiated Rulemaking Advisory Committee for Dog Management in the GGNRA process, and we are pleased to see this management proposal at last (for a second time!). The GGNRA is an extraordinary unit of the National Park system, and its rich and unique resources are imperiled by the current levels of off-lease dog walking in particular. This supplemental draft plan is a major step toward ensuring better protection for these resources for future generations.

There are many threats to the irreplaceable species, habitats and historic resources of the GGNRA. Some, such as climate change, cannot be stopped on a local level and can only be adapted to as best as possible. However, those threats that are within the abilities of park management to control and prevent must be addressed firmly and with aggressively, as islands of species diversity such as the GGNRA are the best hope for the survival of what remains of the planets rich and varied ecosystems. Unfortunately, for a variety of reasons, the use of this park for recreational off-leash dog walking is long past the point of causing serious damage to the very resources this park was created to protect. We are hopeful the final plan will reverse this trend.

We will, further in these comments, address the site-specific proposals in the draft plan. However, there are certain overarching principles we believe must be noted. While our strong belief as an organization would lead us to support Alternative D for all situations (and there may be a few instances where we might suggest that alternative does not go far enough), we recognize - as evidenced by our participation in the Neg-Reg process - the necessity of some compromise.

There are several general concerns we wish to note here:

There was an agreement by all parties in the Neg-Reg process that park visitors who desired to have a no dog experience of the park should be able to do so conveniently. It is our belief that the preferred alternative does not meet this goal in all areas, particularly in the portions of the park within San Francisco. We would encourage further examination and expansion of opportunities for those people desiring an experience of the richness of this park without encountering canines to be able to do so.

While we have deep concern about the precedent-setting nature of the proposed Regulated Off-Leash Areas (ROLAs), we grudgingly accept this inevitability. However, we continue to strongly request that the park find clear ways of physical separation of ROLAs from non-ROLA areas, preferably by means of a clear barrier. We are not asking for an impenetrable barrier - in most cases, a post and cable fence as is used in many areas of the park already would be acceptable. On beaches, other solutions may need to be found. We are simply concerned that for there to be sufficient enforceability of these rules, boundaries between areas must be abundantly clear and not open to any question or interpretation.

Commercial dog walking has been a source of some of the worst resource-damaging abuses of off-leash activity. We strongly encourage that it be banned within the GGNRA. There should be steep fines for

violations above those which are levied on dog owners for violations. If commercial dog-walking is allowed, which we oppose, it must be strictly regulated and fair fees must be required. We concur with these comments submitted by the Wild Equity Institute (and others):

The SEIS does not demonstrate that commercial dog walking meets the criteria to qualify for Special Use Permitting under NPS Directors Order #53. Commercial dog walking will not support the mission of the Park Service, will not add to the public understanding and enjoyment of the GGNRA, will not promote a sense of ownership and stewardship for the Park and its resources, will not enhance the protection of park resources and values, and will not provide for an increased level of visitor safety. Furthermore, commercial dog walking is contrary to the purpose for which the park was established, may create impacts on park resources and values, may disrupt the atmosphere of peace and tranquility, may create an unsafe environment for other visitors, and may result in conflict with other existing uses.

The entire success of this plan lies in the concept now referred to as the monitoring based management strategy. If this management strategy fails, these rules become meaningless, and we are not just back where we started, but worse. We understand the problem posed by picking a 75% level of compliance measured by violations, which we already suggested were too lax. We are encouraged that the monitoring will look at sites more comprehensively, and in particular paying attention to habitat destruction or other impairment of park resources. We are frustrated, however, that the details of the monitoring plan have yet to be developed, so must yet have to go through yet another public planning process. We encourage the Park Service to embody habitat and resource protection as the primary focus of the strategy guidelines. We also note with concern the Park Service's acknowledgment of limited staffing resources, and encourage NPS to recognize those sites where it has insufficient resources to adequately protect the park from either on-leash or off-leash dog impacts and eliminate those sites as areas where dogs are allowed.

## Site-Specific Issues

### Marin County

We find the proposed preferred alternative either desirable or acceptable in the following sites, assuming the incorporation of our general comments: Stinson Beach, Homestead Valley, and Marin Headlands trails. In particular we commend not allowing dogs on the South Lagoon trail, Smith-Guthrie Loop, South Rodeo Beach and the Coastal Trail in the Marin Headlands.

Oakwood Valley Trail and Fire Road, Alta Trail, Orchard Fire Road and Pacheco Fire Road - We support the Preferred Alternative treatment of Oakwood Valley Trail and Oakwood Valley Fire Road, and the elimination of the proposed ROLA. We prefer the Alternative D treatment of the Alta Trail, Orchard Fire Road and Pacheco Fire Road because of habitat concerns. If sufficient means can be found to protect the Mission Blue butterfly habitat along these trails, we would find the preferred alternative acceptable.

Rodeo Beach - we feel that many visitors who may desire a no-dog experience at Rodeo Beach will be disappointed. This is especially true of park visitors taking advantage of bus transit from San Francisco that only brings people as far as the Marin Headlands and Rodeo Beach. We appreciate the proposed improved access and no-dog status of South Rodeo Beach. We support the construction of the proposed fence around the west end of the lagoon, and propose a double fence to create a connection between the North and South sections of the Lagoon Loop Trail, to protect hikers from unwanted dog interactions.

Fort Baker - We generally support the preferred alternative, with the exception of Drown Fire Road. We believe the mission blue butterfly habitat should not be subjected to sacrifice for personal recreation. This

also prevents visitors staying at the conference center from enjoying a nearby dog-free hiking experience in nature.

#### San Francisco

We find the proposed preferred alternative either desirable or acceptable in the following sites, assuming the incorporation of our general comments: Fort Mason, Baker Beach and Ocean Beach. We are very pleased to see substantial areas without dogs on both Baker Beach and Ocean Beach. This is good for wildlife, vegetation and people

Crissy Field - we support the preferred alternative here also, though note that this area will require more intensive and ongoing management than most. Resource monitoring will be very important here.

Fort Point - We continue to believe there is a decided lack of opportunity to have a no dog experience or to even avoid unwelcome approaches by dogs, given the narrowness of many of the trails. However, we understand the NPS' rationale.

Lands End and Fort Miley- We commend and strongly support the elimination of dog activity in East Fort Miley.

Sutro Heights Park - We continue to prefer seeing a greater accommodation to those visitors who would prefer a no dog experience, which here could include a number of people with physical challenges that would find it more difficult to visit other units of the GGNRA.

Fort Funston - We appreciate that this is a challenging unit for the GGNRA, and strongly support the modifications from the previous plan.

#### San Mateo

We find the proposed preferred alternatives either desirable or acceptable in all the San Mateo GGNRA units, assuming the incorporation of our general comments. While again, we would prefer full resource protection, we believe the proposed preferred alternatives provide adequate accommodation for dog walkers and adequate options for visitors seeking a no-dog experience, as well as habitat protection.

We would like to once again express our appreciation for all the hard work that has gone into the preparation of these plans to manage dog walking activity in the GGNRA. We are eager for the impacts of previous lapses in proper enforcement and communications to diminish, and to see the park fully live up to its Organic Act mandates. We look forward to visitors seeking experiences that do not include dogs to regain access to some of the amazing portions of the park that have been less desirable to visit as a result of unregulated dog activity. We will be happy to work with park staff in the future to assist in any way with the further final adoption of these rules and their subsequent enforcement.

Respectively Submitted,

Amandeep Jawa, President

Steven Krefting, Board Member and SFLCV Representative,  
GGNRA Negotiated Rulemaking Committee for Dog Management

**Correspondence:** I am fervently opposed to the draft dog management plan. I take my dog to Crissy Field to swim at least twice per week. It's the availability of off leash areas like this that add TREMENDOUSLY to the quality of life in San Francisco. Having areas that I can walk my dog off leash is quite possibly the BEST thing about living in San Francisco for me. I can honestly say I don't know what I would do without it to exercise my dog, who has severe arthritis and loves to swim.

I have not observed that the current system is broken. What are you trying to fix with this new plan? The effect will be to alienate and infuriate those residents of this city who want to enjoy the natural beauty of our city with their dog. I HATE the idea of establishing "dog areas", which are glorified pens. How is this fair? There are many, many days when I am out at Crissy, and the weather is not nice, and the wind is blasting, and the beach is nearly deserted, except for me and a handful of other dog folks. We are the REGULARS, and the vast majority of us are responsible and sensitive to the environment.

I have been fuming ever since I heard about the potential changes. Dogs are not allowed off leash, or at all, in almost every National Park, State park, and County park - such as the Mid Peninsula systems of parks. This means these parks are basically off limits to me, too. This is not in keeping with the charter of the National Park System, which is to foster RECREATION AND ENJOYMENT, as well as preservation. We are talking about URBAN parks here, not pristine remote areas. People impact the park environment as much - or even more - as any dogs I have seen.

Don't take away one of the best qualities about San Francisco. It's a benefit to us ALL.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is

way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely, Lovise Mills

<b>Correspondence:</b>	Dear Superintendent Dean,				

Every time I visit Ft. Funston with my pup, I take a deep breath and think "this is the reason I moved to San Francisco." I have lived in San Francisco for 6 years and recently moved to the East Bay. I still make the trip with my dog because it is a place where I can really feel at peace and the scenery is breathtaking. My dog, Ella, also loves running free on the trails - you should see her smile from ear to ear. Please reconsider before taking away this one piece of joy in our lives. There is no other place like it.

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. **Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

The off leash areas are part of what makes our city so special. Our dogs are a vital part of this community. If you restrict the off leash area this will ruin one of the most unique and worthwhile aspects of living in our city. Please do not destroy the lifestyle of all the families in our community with pets.  
Sincerely,

Rebecca and joe Blum

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative.

I regularly take my dog to Oakwood Valley, parts of Alta Trail and Donahue as well as Stinson, Rodeo and Muir Beach.

Dogs are already off-limits on over 99% of the Golden Gate National Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. It is not a wilderness area like Yellowstone or Yosemite. Marin residents rely upon this open space. It requires a different management strategy than a National Park.

Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

Lovise Mills

**Correspondence:** I bring my dogs to the grassy area that was the airstrip for the Presidio in the world wars. I understand that the draft dog management plan wants to restrict the use of this space for off-leash dog recreation, and that one of the arguments is that the pollution associated with dog urine is a threat to the estuary just east of the airfield.

Does anyone in the Park Service remember that the airfield was once a military airfield? The toxic waste, spilled fuel, and lots of other residue of the military use of this space has to be substantially more threatening to the estuary than a million dogs urinating in unison.

I can understand that dogs have some negative effects, but we're talking about the Presidio here. This isn't some piece of remote Utah landscape.

<b>Correspondence:</b>	I strongly disagree with the proposed Draft Dog Management Plan, as defined in the Fall 2013 Plan/ EIS. The NPS does not demonstrate a need for action. The Plan argues for action because the parks resources and values "could be compromised" and speaks in ifs and mights but does not make a reasonable case for change.				

The proposed Alternative F represents a heavy handed unilateral rollback of the recreational mandate that created the GGNRA and the need for the plan is not supported by the data. There is no compelling need for action, and no ability to force action without countering the recreation mandate of the GGNRA. Each of the sites should be assessed individually and factual proven data should be provided on any negative effects that the presence of dogs is creating in these areas. especially given its urban location.

I believe that an acceptable dog management plan must take into consideration the impacts of the proposed plan on neighboring city parks, on the health and well-being of people who enjoy recreational dog walking, and must respect the recreational values that are part of the GGNRA's original mission (to provide for the maintenance of needed recreational open space), which this plan fails to do.

**Correspondence:** To Whom It May Concern:

As a dog owner and professional dog trainer/walker in San Francisco, I would like to object to the preferred alternatives labeled as Alternative F for each site in the Draft Dog Management Plan. While I completely support the Park Service's need to regulate the park's use and I acknowledge the fact that certain areas like Fort Funston are overrun with irresponsible commercial dog walkers and private handlers, so greatly limiting the access to Regulated Off Leash Areas (ROLAs) is not the way to approach it. With the current state of no enforcement at the parks, it is obvious that individuals will do as they please unless someone with a badge is immediately ready to ticket them. If you plan to enforce the new regulations, you will only be cramming the same number of off leash users into a smaller area, which will only increase the number of public safety issues as off leash dogs need plenty of space from each other to ease social tension.

As a professional dog handler, I never walk more than 3 off leash dogs at one time, require impeccable recall and voice control, and pick up all of my dogs' refuse and any litter that I find along our way. I've documented how projects like the Mark di Suvero installation on the Crissy Field lawn and regular human activities such as birthday/company parties have resulted in tremendous amounts of plastic, zip ties, and other refuse collecting on the dunes, around the lagoon, and in the grass. I've also watched how irresponsible handlers use the parking lots at most dog-friendly GGNRA locations as off leash areas (recently watched a pro playing fetch with her whole group there) and leave their bags of poop behind thinking that they'll remember to get it later.

I'm an avid birdwatcher, and I can often be seen with my camera shooting the birds and connecting with other nature lovers in the park. It is very important to me that the longevity of the GGNRA is preserved and activity is reasonably managed throughout the park system. One way this could be done is by having volunteer park monitors or designated users with badges authorized to remind park users of proper park etiquette. I once saw a sign for the SF/SPCA's open space etiquette course at Crissy Field, but it was buried behind a construction notice. Etiquette courses should be held AT THE PARK and open to casual park users to join. The GGNRA should have the same permitting standards as the City of San Francisco already has. While I don't believe these permitting standards are tough enough, I do believe they provide a basic structure for reasonable regulation of the professional users in park areas.

There are ways to allow reasonable co-recreation between off leash dogs and other park visitors without so significantly slashing the ROLAs.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

---

**Correspondence:** Thank you for the opportunity to comment. The following are my comments regarding the Draft Dog Management Plan/Supplemental Environmental Impact Statement (draft plan/SEIS).

First of all, I want to comment on a personal note that I myself have been injured due to off-leash dogs in the GGNRA at Fort Funston. Back in 2011, I twisted my ankle on the beach and while resting my injured angle on my way back to my car, I was painfully knocked off my non-injured leg onto my injured leg by two off-leash dogs playing. An emergency room visit revealed that my ankle had three torn ligaments and required months of healing.

Off-leash dogs can be a serious safety risk and are a huge disturbance to the increasingly smaller numbers of wildlife that remain in the GGNRA. There is no easy way to balance human pets and wildlife in the GGNRA, but the scientific evidence presented by the National Park Service and independent experts clearly point to the conclusion that dogs must be on leash or excluded from any GGNRA area where endangered and threatened wildlife and their habitat, plus native plants, have been documented.

Please protect the wildlife in the GGNRA parks as wildlife in the GGNRA have become the embattled minority. Wildlife protection is truly an issue of diversity and highlights the importance of identifying all species that use the GGNRA and then giving all those diverse species an opportunity to use and enjoy the GGNRA safely and without disturbance.

Humans and dogs do need to exercise and some small areas of the GGNRA have the potential to be used as off-leash areas as identified in the SEIS. As pertains to any off-leash dog areas, these areas must be enclosed with a physical boundary in order to protect dogs, humans and the natural environment surrounding the off-leash area. These boundaries could be post-and-cable fences or natural features. But if a physical boundary cannot be placed around a specific off-leash area, than that area should not be an official off-leash area. If a dog is allowed off-leash in any open park area, including the GGNRA, the vast majority of dogs will naturally and normally chase wildlife, thereby disturbing the wildlife and the experience of park visitors enjoying the presence of the wildlife. There is no scientific evidence to support the proposition that dogs are not natural predators and will not uniformly chase wildlife if off-leash. Please limit any off-leash areas in the GGNRA to small areas already damaged by previous dog use and/or areas with little or no existing environmental value. Then enclose those off-leash areas completely.

Any regulations that address "managed dogs" by including dogs off-leash can not adequately address the issues of public safety and wildlife disturbance as off-leash dogs will never as a species or individually be completely under the control of their owner/human companions at all times. Or in other words, the only way to prevent or reduce disturbance of wildlife and concurrently address the issue of safety is to require that the definition of "managed dogs" only applies to dogs on-leash. As currently defined, "managed dogs" is entirely subjective and not legally defensible. There is no scientific evidence to support the conclusion that voice control of dogs is effective in preventing harassment or harm to other animals or humans. The federal regulations must address this discrepancy and limit the definition of "managed dogs" to on-leash dogs.

Please address the fact that the SEIS is using a subjective unenforceable definition and standard for "controlled" dogs. Please identify a scientific basis for using "controlled" to define behavior that is not definite and is variable for each dog subject to the standard. Most, if not all, dogs will exhibit different behaviors in the context and presence of variable factors, including different humans, other dogs and

multiple species of wildlife. Many dogs will exhibit erratic behavior if confronted by unfamiliar circumstances or circumstances that they perceive to threaten their owners/human companions. Please identify scientific evidence that supports the definition/standard that "controlled" as used to describe dogs is a reliable and effective standard to support a federal regulation.

As a resident of San Mateo County, I am directing my more specific comments on parks in San Mateo County, yet I urge the Park Service to adopt Alternative D or Alternative F in all GGNRA parks with the caveat that I am open to the potential of a few off-leash area in those areas specified, but only if the off-leash areas are completely fenced or include areas that are completely enclosed by physical boundaries. I support Alternative D especially in areas where endangered, threatened or sensitive species habitat exists.

Please adopt Alternative D or F in San Mateo County, especially in Mori Point, Pedro Point and Rancho Corral De Tierra. Please minimize use of GGNRA lands by commercial/professional dog walkers. Keep the GGNRA safe for all users.

The DEIS documents disturbance of wildlife such as plovers and other birds which are often disturbed by dogs, which they see as natural predators, and disturbance triggers reactions that can lead to death of these birds. Disturbance of wildlife by dogs has been recorded within the GGNRA and documented in several published studies and reports, many of which are cited in the Draft Dog Management Plan DEIS. Please adopt the alternative(s) that are supported by the studies and experts cited in the SEIS.

In addition, the Park Service has a fiscal obligation to taxpayers to minimize the cost of habitat restoration from any dog use of the GGNRA. Please recognize that in park areas such as Fort Funston where the ecosystem damage from off-leash dog use is extreme that habitat restoration is useless unless dogs are required to be on-leash in the future, and is a waste of taxpayer funds.

Thank you for protecting our environment, supporting species diversity and elevating the issue of public safety in the SEIS.

Celeste Langille

I don't even understand the park area I live by without the freedom of taking my dog for a walk.

There are a thousand other remedies to people who don't like dogs and still want to use the park.

I seriously think this plan should be reconsidered.

**Correspondence:** I'm opposed to segregating dogs into fenced areas. I don't have a dog because my apartment doesn't allow it, so I love to see the dogs running on the beach and in the Parks without leashes! It adds a lot to my enjoyment of the outdoors and to have dogs on leashes seems to go against one of the very reasons why we have the parks- -to remind us of what it's like to be free. Dogs without leashes are great reminder of that. Go ahead and ticket irresponsible dog owners but don't penalize everyone for the sins of a few - - or the fears of a few. Thanks for your consideration. I'll be looking forward to your response.

**Correspondence:** I have been a regular member of and contributor to the Parks Conservancy since 1998, appreciating and valuing the unique opportunities a National Recreation Area brings us in the Bay Area. I am writing to tell you I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A, the No Action Alternative. I regularly take my dog to Rodeo Beach, Muir Beach, and frequently to Chrissy Field.

Dogs are already not allowed on over 99% of the GGNRA land. There is not a compelling reason to limit dogs to even more of the land of the GGNRA. As a responsible dog owner, I rely on these lands as a place to bring my dog to run off leash and allow me to enjoy the GGNRA lands. If I can't bring my dogs to these places, I will not use this precious national resource for myself, either, since when I enjoy the outdoors I like to bring my trusted companion with me.

The Golden Gate National Recreation Area is not like other national parks such as Yosemite or Yellowstone. Since it is situated in an urban area, many Marin residents rely on the open space provided by the GGNRA. This requires a different land management strategy than a National Park.

Access for all users, including people and their pets, was a cornerstone of the original charter as detailed in the 1979 pet policy. This policy is not broken - so please leave it be.

I urge you to listen to the many voices of the people who support Alternative A - the No Action Alternative. I am feeling great sadness and frustration at the thought that the National Park Service would take any sort of action to further limit access to the people's land. This unique land in this spectacularly beautiful place deserves a unique plan of action for our four-legged family members. Please do not further restrict our access. Please, please, please.

Thank you for listening,  
Elizabeth (Betsy) Muir

**Correspondence:** Dear Sir/Madam,

Among the many things that make San Francisco unique is its dog-friendliness. I have always been proud that this city has many dog parks where 'men's best friend' can roam around off-leash. It is a sweet freedom for one hour a day in their life the most. I grew up in a country where dogs weren't as fortunate as their peers here. Until today I am still haunted by my family's treatment to our family dog, who I loved dearly. He was leashed every day until the day he died. Therefore living in San Francisco where dogs are family who actually get to enjoy off-leash experience in the nature, has special meaning to me. I hope that this little warm feeling will not change in the future.

Being able to bring our dog to the park has also helped us a lot in our life. Both my husband and I are busy professionals who commute long hours every day. We don't get to spend time with our dog much. We like taking little hikes in the city's parks on weekends. Being able to bring our dog with us has allowed us to enjoy our life and taking care of our dog as a responsible owners at the same time.

Experience in the city's park will not be the same anymore if my dog isn't allowed in certain areas, or that I can't see his happy expression when chasing the balls we throw. I ask you to reconsider your plan.

Sincerely,  
Shinta Halim

**Correspondence:** The proposed changes to the off/on leash policy along ocean beach and fort funston are outrageous. In such a densely populated city there are not many places for dogs to interact with one another and run free. By putting leash restrictions, it would totally damage the atmosphere of these areas. Additionally, there is just no reason for these restrictions to be put in place. There are never any aggressive animals or incidents in the current off leash areas and I go there ever day with my dog!!! Who ever is reading this, I hope you take this seriously and don't make a decision based on money or some selfish issue because in the end the ones that suffer are the dogs, many of whom are locked in a kettle or cage when there owners aren't around. Let the dogs play, socialize and most of all run without restrictions.

**Correspondence:** Based on what I've seen in my 21 years of living in San Francisco and visiting many areas of the GGNRA, it is my strong feeling that dogs need to be more carefully regulated in the GGNRA.

---

One thing that would help and is absolutely necessary is to have off-leash areas entirely enclosed. Dogs can't read signs and many dog walkers (owners and paid walkers) don't pay much attention to where their dogs are going. (Or just don't seem to care.)

Enforcement is another key piece of the puzzle. In my experience, folks will do what they want (for example, let their dogs chase birds, run off-leash in leash-required areas, etc), unless there's a clear incentive to follow the rules. Citizens attempting to enforce the rules themselves is not a good plan. I've had way too many scary experiences with dog walkers when I try to point out signage, for example, that says dogs need to be on leash.

To sum up, I feel strongly that the GGNRA should be regulated in a way that makes it safe and usable for everyone. Right now, that's not how it feels to me, and I'm convinced we can do better.

Also, let's protect the birds and other wildlife who need the GGNRA to survive. Seems like the least we can do since we've mucked up so much of their other habitat.

If the city of San Francisco needs to build more dog parks to accommodate the booming dog-walking business and the city's large dog population, so be it. The GGNRA shouldn't be used as release valve for (what I'm assured are) over-crowded dog parks.

Thank you.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
pat lopez

**Correspondence:** Thanks for soliciting our input.

I walk on the trails almost daily. There is no day that I see lose dogs running around doing what dogs do when unleashed. Running, exploring, playing and taking a dump whenever they feel the need, which is quite often. About 50% o the dog owners are responsible people and have a certain degree of control of their dogs. They clean up after them and have them on a leash.

Unfortunately, about half dog owners dont give a damn about other people. Their dogs come first and when confronted they react aggressively.

Heres an example that happened last week. It had rained and the trail was muddy. Out of the blue a labrador runs onto me and starts jumping on me getting my clothes dirty with mud. When I finally managed to gain control of the dog, his owner comes to me screaming LEAVE MY DOG ALONE!

I reminded him that dogs should be on a leash at all times, especially the ones that are difficult to control. His response:

If you cant handle a dog you shouldnt be in an Open Space, asshole!

I pulled out my camera to document the incident and when I was about to take a picture of him and the dog I thought he would hit me so I just left as fast as I could. The incident wasnt worth a fight.

Its this kind of people who ruin everything for everybody.

I love animals but humans are humans and dogs are dogs. You never know what they will do next. Often they mean no harm. Often they just want to play. But they are unable to distinguish those who are in the mood for playing and definitely have no concept of hygiene. They poo whenever they feel the urge. Mud is just part of the fun. Thats why they should be on a leash.

Please maintain the leash policy for dogs.

Thanks again,

Jim Barton

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

#### Why we oppose the Golden Gate National Recreation Area's Dog Plan

Areas where our dogs have been welcome to walk or play off-leash for decades could be severely cut or banned outright under the revised GGNRA dog plan. The new rules would affect off-leash as well as on-leash access at Crissy Field, Fort Funston, Muir Beach, Rancho Corral de Tierra on the slopes of Montara, and many other parklands.

The San Francisco City Council recently unanimously passed a resolution objecting to the GGNRA plan, which prompted the head of the Sierra Club to say that SF is pandering to a small group of dog extremists.

However, we believe that as responsible citizens, we must be realistic and fore-thinking about how to accommodate more than 100,000 local dogs in a city with limited space.

There hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The GGNRA should be obligated to provide a factual report before they pass legislation.

The Golden Gate National Recreation Area was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979.

If the dog management plan is adopted, the majority of the Bay Area's dogs will have to find somewhere else to go, overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves.

We are not suggesting unlimited dog walking access, and we advocate responsible dog ownership in all GGNRA lands. But there is no credible reason to deny fair and reasonable access for both on- and off-leash dog walking that has taken place on GGNRA land for more than 50 years.

**Correspondence:** I am writing specifically to protest Alternative C which proposes an off-leash fenced dog area between LeConte and Tamarind Streets, Montara, CA.

---

With the vast land which makes up the Rancho, it simply makes no sense to have the park infringe on the privacy of residents and potentially endanger the children in the school on the park's perimeter.

There are decades of history where dogs have walked off-leash in the Rancho. It is a very tiny portion of the park. It makes the most sense to me to officially adopt this area to be used in the manner in which it has been used for decades. The remainder of the park could then be closed to dogs or be dogs on leash.

**Correspondence:** The off leash areas of ggnra are one of the biggest reasons we choose to live in sf. We have kids and a dog and we spend every weekend in one of the ggnra off leash areas. Its an integral part of our life in the city. Since the charter of the ggnra is for the enjoyment of all we fully expect that dog owners deserve these areas as much as our fellow citizens. We are responsible dog owners who want to coexist in harmony with our neighbors. Exclusion is a terrible proposal for dog owners with few options in the city.

<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Amy Mugg MD, MPH

<b>Correspondence:</b>	Dear GGNRA,				

The Dog Management Plan is a welcome step in your efforts to manage dogs in the GGNRA. The main issue I hear about from friends and colleagues who are reasonable people, and yet are skeptical of your dog management efforts, relates to enforcement. My understanding is that upon the conclusion of this process, the Park will finally be empowered to enforce the law with respect to dogs in the GGNRA. I truly hope that is the case. Please find the resources to enforce the law that emerges from this process.

The whole issue of dogs in San Francisco (and in the other counties, but mostly the city) has become one of the biggest political footballs in our local community. But the challenges are not insurmountable, assuming that people are willing to have productive dialogue. Your Dog Management Plan is the product of community dialogue, however chaotic and stressful it can be. The Dog Plan is a reasonable compromise that the overwhelming majority of San Franciscans would get behind. Naturally, the GGNRA will not hear from a representative cross-section of the public, as only those who have been directly engaged in this debate will weigh in and will convince their friends and colleagues to comment. I hope that you consider the actual demographics of the city and the probability of views of the majority of the public when you make your final decision about dog management in the GGNRA. Off-leash dog walkers are not the majority of the population of any of the three counties.

From the first EIS to the SEIS, you have made a dozen changes to the preferred alternative, all of which are increases in dog walking opportunities. Many of these are logical and reasonable, and they are all in response to listening to the dog walking community. You should feel confident and satisfied that you have made a strong effort to respond to the needs of the dog walkers while working to protect natural and cultural resources and the diversity of visitor experiences at the GGNRA. The proposal to keep dogs on leash on all trails is absolutely logical, reasonable and critical for the overall National Park visitor experience.

Some problems do remain with the preferred alternative, however. For example, I believe you should have left Rodeo Beach the way it was in the first EIS. Visitors who want a dog free experience should not have to go so far away for that. They already had to go most of the length of the beach, and now they must go even further. I am concerned about Baker Beach and Muir Beach in terms of the proposal for on-leash only. As someone who wants a dog-free experience at the beach, I like these proposals, but given the reality of dog owner behavior, I am concerned that these are unsustainable from an enforcement perspective. While I believe the Dog Plan should be about encouraging some new - more ecological - behavior (and philosophy) change, the community has its limits. I would recommend you think about how you would reasonably manage the Muir Beach and Baker Beach proposals in the preferred alternative.

All of these beaches have sensitive habitat, and so there is absolutely no reason why they cannot all have dog exclusive fencing, such as exists at Crissy Field. The fencing at Baker Beach should be improved, and Muir Beach should definitely have fencing to protect the endangered species habitat. Rodeo Beach also has important wetland habitat for birds, mammals, amphibians and rare plants, and so good fencing is

absolutely warranted there as well. No dogs along the Snowy Plover habitat at Ocean Beach is absolutely crucial and sensible. We can refer to both coasts for heroic efforts to steward plover habitat on popular beaches.

In San Francisco, I see several areas where dogs are only allowed on leash. Given the phenomenal, epidemic number of dogs in the city, I would encourage you to think about places that are not sensitive that could be fenced off ROLAs, more like the DPAs on the City properties. I understand that the jury is out as to the effect on the City's natural areas that your plan will have. But let's be precautionary, and assume that the possibility is real that decreasing off-leash access in the GGNRA could put more pressure on the City's Significant Natural Resource Areas, as well as areas of land with habitat value that as of yet, do not have the Natural Area designation, and also have not yet been discovered by dog walkers. I think it was smart to put a ROLA into Fort Mason, and the placement is appropriate, not taking away from the majestic beauty of the site. Fort Point should not have a ROLA, both due to natural and historic resources, but also because of very high tourist visitation. Tourists come to see sweeping vistas and natural and cultural landscapes, not dogs running amok. At Baker Beach, there may be some candidate Monterey Cypress-Ehrharta erecta biological wastelands - sufficient distance from the restored dunes, Battery Chamberlain and other resources - that would be appropriate for a ROLA. Similarly, there are probably like areas at Fort Miley, though I confess I am not as familiar with that site and do not know the pattern of use. The same logic applies to Sutro Heights Park, but here again, I am not familiar with the site to recommend anything, and I know that this is also used by tourist, as is Lands End now more and more.

Finally, I do not support commercial dog walking in the GGNRA. That is an environmentally exploitative private enterprise for profit that has no place, and no Park-serving function at the GGNRA.

Thank you for the opportunity to offer these comments. I hope that we see a successful end to this process and a set of rules that protect natural and cultural resources and the incomparable National Park experience at the GGNRA.

**Correspondence:** Dear Superintendent Dean,

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

Sincerely,

Mary Shea Hagebols

My name is Scott Stawicki and I live at 2510 Diamond St., San Francisco, CA. As a voting resident who has lived in San Francisco for over 15 years - 5 years as a dog owner & 10 years as a volunteer for GGNRA lands - I am writing to officially comment on the DDMP - SEIS. In 2011, I publically commented on the DEIS, and rejected the plan as biased against Bay Area dog owners, flawed in both public and management practices. Furthermore the DEIS was grossly deficient in it's presentation of scientific research and data. As a biologist I felt ashamed at the way the NPS had egregiously manipulated and skewed it's presentation to forward it's own narrow goals of eliminating dogs from the Bay Area public land. The SEIS draft mirrors all of the initial flaws of the DEIS - but does further damage by ignoring the local community and users. The SEIS sends of message of betrayal to a community that is attempting to work with the NPS to find a dog management program is evolves to the changes needs of the land and it's users.

I oppose the "Preferred Alternative " to in almost every area outlined in the SEIS. I have previous commented on the lack of scientific data (Comments to DEIS 2011) supporting the " Preferred Alternatives". Furthermore, instead of a graded and graduated approach across limited numbers of GGNRA areas - a strategy that would allow pertinent scientific data to be generated while giving communities/managers and users to explore/evaluate changes- the NPS proposes huge restrictions on decades-long dog use covering most of the GGNRA areas. This is an adolescent approach that could lead to countless problems and issues.

It is this same heavy-handed approach that led NPS ranger to use potentially lethal force on an unarmed, non-violent dog walker in 2012. No individual - even if guilty of providing false information to a Federal Ranger - deserves to be shot in the back with a weapon that could potentially kill while posing no threat of physical harm to the public or officer.

The idea for fences at Crissy Field is outrageous. Crissy Field is not a natural place which requires special protection. It was a salt marsh/ tidal wetland that was used as a dump by the US Army then filled in starting in 1846. This land is artificial, and the naïve attempts for humans to "recreate" complex ecosystems are folly. If the NPS is sincere on its attempts to protect sensitive habitat, it would be better to fence off NATURAL areas from ALL HUMAN ACTIVITY. Unfortunately, such pristine or near pristine areas are absent from the GGNRA areas. All are constructs of over 300 years of continued human/urban development. Logic would argue that maybe the NPS would start with a much more modest plan, like eliminating the Presidio Golf Course and rehabilitating the area to a park with more use to the general public (instead of a small population of "golfers" who are privileged to afford access to our "Public" land)....

As with most of the SEIS, the monitoring based system is deeply flawed. It still employs a punitive system of compliance that does not engage the dog walking community and users. Systems that only punish and do not actively partner with the dog community/users can only have the purpose = a designed failure with the purpose of removing dogs from the GGNRA.

The SEIS also seems to ignore all of the comments the dog-owning users, and SF/ Federal leaders surrounding impacts on the community at large and its outdoor space needs. With well-documented data on the amount of dog owners, dogs, and users - it is bewildering that the NPS is attempting to greatly restrict access to these areas. The NPS seems to have ignored and failed to address my own questions, as well as countless others who commented in favor of less-restrictive dog policies during the 2011 DEIS public outreach. With over 4500 comments to the DEIS by our community - why has the NPS not done justice to individuals who support expanded dog access? Where is the process to give consideration to those that support consistent off-lease access to GGNRA? The NPS and the DEIS/SEIS has systemically ignored the Bay Area dog community.

The National Park Service and its release of the 2013 SEIS has once again squandered a chance to work with the hundred of thousands of residents & dog owners around the Bay Area to craft a forward-thinking and sustainable management policy for our public lands. Millions of US tax dollars and years have been wasted by the NPS. The SEIS is an outdated and backwards approach to attempt to deceive & bully the local citizens & communities toward a goal of "sustainability" to public land - land that has thrived and prospered with a dog policy in place for decades. Instead of working with the public and citizens of the Bay Area to craft a new community-guided policy, NPS has taken an approach to polarize an issue and ignore public input from a large- perhaps largest- group of local users. The DEIS, SEIS, and the NPS's entire DDMP process is a reflection of its failed leadership. It further exposes NPS leadership's inability to distinguish/ understand/manage a National Recreation Area (not National Park) in the center of a large population center. I hold Frank Dean responsible and would look for new NPS leadership and direction to bring a more responsible and community-partnered dog management plan into consideration. If this public comment against the NPS and its DDMP SEIS seems like a pro-dog rant - it is only a reflection of the biased and thoughtless policy against the Bay Area dog community that is being proposed by the SEIS and National Park Service.

I support efforts to protect wildlife in the Golden Gate National Recreation Area and call on the GGNRA to implement the Dog Management Plan (however, I wish this plan were called the Threatened and Endangered Species Protection Plan).

It is completely reasonable to require that dogs be more carefully regulated in the GGNRA and that off-leash areas need to be fully enclosed. Clear and active enforcement will be necessary for success of the plan.

Thank you.

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is significantly too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

It has been my greatest joy to see my dog grow and develop the many relationships with dog owners and non-dog owners while being recreational at these amazing parks. These parks are a recreation area, NOT a national park. It is here where I been able to train him to become a therapy dog for children with special needs.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. <b>Correspondence:</b>	Dear Superintendent Dean,				

Over 50% ohouseholds in San Francisco have a dog in the home. These are not mere animals but valued members of the family. Restricting their rights is akin to restricting the rights of a human child. Please consider how important their role in life is to human beings. They provide companionship to the lonely, a playmate to the young and a security guard to the elderly. It is imperative to keep the emotional health and physical well-being of these members of society as its best possible level. This will in turn benefit the lives of the people who own them. Happy dogs = happy humans = less anger in the world = less violence = less people going to jail = more harmonious society - clearly a win/win for everyone!

With that being said, I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

County and on new lands that the GGNRA acquires in the future.

Some parting thoughts....

There do not appear to be any site-specific studies showing that off-leash dogs harm public recreation areas.

The areas slated for restriction do not appear to be pristine in any way or environmentally sensitive rather they are urban recreation lands.

Instead of imposing more restrictions which tend to complicate people's lives, let's put our resources towards educate people about caring for their public recreation areas - packing out trash, not removing rocks or plants from areas, staying on trails, picking up dog feces and disposing in proper trash receptacles etc.

I sincerely hope you take all these points to heart as there is more at stake here than meets the eye.

Sincerely,

Todd Latham

San Francisco is known as a dog lovers paradise. If this plan proceeds, then it is going to set a precedence where all public places would be deemed leash specific. These are spaces I can run with my dog without worrying about traffic, or other obstacles that could be dangerous. If your plan succeeds, I would then also like San Francisco to ban using bicycles on public footpaths and can use only designated bike lanes, no skateboarders anywhere both of which are a menace to pedestrians, ban from playing soccer or other disruptive sports in parks where the folks goes to relax and unwind etc etc. I'm not sure why this law is

being implemented and I think San Francisco would be taking a step down from improving the life of its residents

Sincerely,

Tushar Prabhakar

SUGGESTION:

If there is a concern regarding multi-use on trails then why not create a plan like the one on the Tahoe Rim Trail where people share the trail on certain days. If people don't want to be out there with dogs off-leash then they can choose to be on the trails on DESIGNATED ON-LEASH DAYS.

Other days can be DESIGNATED OFF-LEASH DAYS. Perhaps every other weekend and certain can be OFF-LEASH DAYS. I am so often trails during the week where I do not see anyone at all or maybe one person after several hours of hiking.

**Correspondence:** I live near the Presidio, and have watched the Doyle Drive construction project proceed for the past several years. As I read the Draft Dog Management Plan, I don't understand how the park service can be concerned about dogs in the Presidio and not be significantly more concerned about the construction equipment, truck traffic, and chaos associated with the demolition of the old skyway and the activities associated with the digging of tunnels and development of the new drive.

---

These park lands are set in the middle of a complex urban environment. It is impossible to provide the kind of protection that the National Parks can provide for remote habitats. The draft dog management plan seems to be trying to create protections that simply do not make sense in the middle of this urban environment. The arguments and scientific studies presented are all incompatible with the reality of the urban spaces that are the subject of this report.

In contrast, we have had a 50-year experience with an urban park use pattern that includes off-leash dog recreation. The present use of these spaces is extremely beneficial to the citizens of the city. This urban experiment has been a fantastic success. This report does not provide any clear evidence that the proposed changes will produce the intended benefits in our urban park.

**Correspondence:** Dear Superintendent Dean,

I live in San Francisco and walk my dog daily in GGNRA (Fort Funston primarily) and local city parks (including Bernal Hill, Holly Park, Glen Park, St. Mary's, and McLaren). I oppose the Preferred Alternative as too restrictive, and support formalization of the 1979 Pet Policy plus off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future. Per GGNRA's enabling legislation this is a RECREATION area, for the second densest urban area in the country. The new plan does not provide peer-reviewed, site-specific studies as required to support such a major restriction on dogs, nor does the SEIS adequately address the public comments sent in response to the DEIS.

In particular, the SEIS is seriously inadequate in addressing the impact of such severe restrictions on nearby city and state parks, as well as the proposed remaining off-leash areas in GGNRA. Many dogs require regular off leash running to get adequate exercise - and sufficient exercise is perhaps the most important element in having a well behaved dog. Under the Preferred Alternative, more dogs will be concentrated into smaller off leash areas - in GGNRA as well as in local parks.

Established packs of dogs may get along well in a small space; concentrating a number of unfamiliar dogs, even friendly ones, in a space can raise the arousal and tension levels, resulting in increased dog

fight, aggressive pack behavior, etc. The parks I visit are already frequently crowded in the off-leash areas; early mornings are about the only time I can count on avoiding crowded conditions. Restricting off-leash areas in GGNRA will result in higher concentrations of dogs in the remaining off-leash areas in GGNRA as well as in local parks, compounding the problem.

Furthermore, GGNRA seems concerned with the experience of non-dog walker's interactions with dogs. How will pushing more dogs into often even more crowded (human as well as dog) urban city parks affect the experience of non-dog walkers there?

In addition, many people drive to the various parks specifically because they are looking for an off-leash experience. To the extent GGNRA is concerned about environmental impacts, what about the impact of people having to drive further to find suitable off-leash access for their dogs? I much prefer to walk my dog to a park rather than drive, but my nearby local parks are sufficiently crowded (and some now closed for maintenance as well) that I now drive some days to less crowded parks to walk my dog. If the Preferred Alternative is implemented, I anticipate needing to drive out of the city entirely on a more regular basis to find good off-leash opportunities for my dog.

I sympathize with people not wanting to step in poop, get jumped on, etc. Rather than restricting access, why not explore more alternatives such as dog training, owner education, and citation of inappropriate behavior? If stronger measures are really required, how about requiring that dogs have passed a test to obtain an off-leash license for GGNRA, rather than restricting off-leash access to everyone?

As a final note, walking a dog has dramatically increased my sense of local community. In the first month I had a dog, I met more of my neighbors than in the past 9 years in the neighborhood without a dog. While I do meet people when my dog is on-leash, the time spent and connections formed are much stronger when our dogs are off-leash, as we watch our dogs play together.

Sincerely,  
Bernal Heights resident

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

I am writing to oppose the Preferred Alternative. I appreciate that GGNRA has made some changes in response to public comments in 2011, and I want to acknowledge the care that you and your staff have put into crafting alternatives.

My husband and I are San Francisco resident homeowners. We are the parents of a 12-year-old daughter and 2-year-old son, and we both work full-time jobs outside the home. We have very limited free time, and we choose to use a good portion of that time visiting GGNRA parks. Over the past 5 years, we have visited GGNRA parks an average of once per week - - primarily Ocean Beach, Crissy Field, Baker Beach, Fort Funston, and Lands' End.

Visiting the GGNRA brings our family exercise, fresh air, and natural beauty, but visiting the GGNRA \*with our dog\* brings us joy. No matter how many times he has been to Ocean Beach, each time his paws

hit the sand at Stairwell 21 is like the first time; he lights up with palpable, contagious joy. As much as we love visiting the GGNRA, 8 times out of 10 we might have stayed home if it weren't for our dog. He provides the little nudge we need to get out to the coast.

Visiting the GGNRA is a big part of our family life, so when I saw the Preferred Alternative maps for San Francisco county, my heart sank. With our very limited free time, we like to be together as a family of five - 4 people and 1 dog. We have enjoyed many wonderful family hikes from Seacliff through Lands End to Mile Rock Beach; but under the Preferred Alternative, our family would no longer be welcome there. We have enjoyed many weekend mornings starting with breakfast on Judah Street, then a walk along Ocean Beach to Sutro Baths and back; but under the Preferred Alternative, our family would no longer be welcome there. We have enjoyed many lazy Sundays wading in Lobos Creek with our toddler son, while our pre-teen daughter chased the dog up and down Baker Beach; but under the Preferred Alternative, our family would no longer be welcome there. I am grateful for all the wonderful memories we have made in the GGNRA over the past 5 years, but I am heartsick at all the memories we will never have under the Preferred Alternative.

I have a Masters in Public Policy from UC Berkeley, and one of the key lessons we learned is that policy-making hinges on how you define the problem. I think it is telling that the GGNRA has constructed this entire exercise around the how "to determine the manner and extent of dog use in appropriate areas of the park." If the GGNRA has already decided that dogs are the problem, then it is inevitable that restricting dogs will be proposed as the solution.

As a park user, I have difficulty squaring this view of the problem with what I have observed in my hundreds of hours at GGNRA parks. At Ocean Beach, I sometimes bring a tall garbage bag with me on the walk; before I get halfway from the parking lot to the waterline, that bag is full of condoms, food wrappers, soda bottles, and beer cans left behind by previous visitors to the beach (particularly the fire pits). I see kids digging huge pits in the sand, horses walking past (and leaving their poop behind), rangers driving their trucks on the beach, and bulldozers hauling sand from one end of the beach to another. And I marvel that, of all the factors with a negative impact on the environment here, the GGNRA has decided to focus on dogs.

At Lands End, I rarely see more than a handful of dogs on any given walk. From what I can tell, the vast majority of park users are tourists who exit tour buses on the west side of the trail, walk as far as they can (less than halfway, generally) and then turn back. They leave plenty of litter behind, but they don't bring dogs. I have trouble understanding how dog access was even identified as an issue at this park.

The GGNRA is a national recreation area in an urban area - in my urban area, my adopted hometown. I am grateful to the GGNRA for improving these areas and working to conserve them for future generations. (I have been around San Francisco long enough to remember what Crissy Field used to look like - the GGNRA has effected a stunning transformation there, and deserves acclaim for it.) But I urge the GGNRA not to lose sight of its responsibility to its neighbors - the urban users who depend on this open space for exercise, fresh air, and family recreation. In San Francisco, the majority of us are conscientious environmentalists, good citizens, and dog owners. We don't deserve to lose access to our parks.

Sincerely,

Amanda Johnson

**Correspondence:** Dear GGNRA,

I strongly oppose the proposed changes to the dog policy in the GGNRA via the 2013 SEIS in Marin and San Francisco. While I would like to focus my comments on the Marin areas in which I use on a frequent, even daily basis, I am also opposed to the proposed closure of Crissy Field to dogs in San Francisco.

In Marin County, we the citizens have worked hard to strike a balance with the GGNRA as per the recreational use of our lands. We are an urban interface with the park and we have a large population that uses the park lands in ways that are very different with most of the other National Parks and National Recreation Areas throughout the USA. The parklands in Marin County are, for the most part, not in a wilderness area, such as parts of Yosemite NP and Yellowstone NP. Our large, urban population has historically used these lands for a wide variety of public recreation, including walking and training our dogs. There simply is not enough other lands in Marin County that offer the opportunity to be in nature with our dogs, and have our dogs learn how to behave properly in a natural environment.

The value of this goes far beyond what it seems to be on the surface. It contributes greatly to our social fabric in Marin, to our health, to our property values, and to our way of life. We have been walking our dogs in the Marin GGNRA lands long before the 1979 Pet Policy, and continue to do so today. I personally have been walking my dogs in Oakwood Valley since 1988 - nearly 25 years! I do not want to see this changed unnecessarily.

I say unnecessarily because there is no significant reason to close these trails to dogs. Oakwood Valley lands and wildlife has not been significantly impacted by dog use, nor has several of the other trails in Marin that are proposed to be closed to dogs. Yes, dog poop on the trails, especially at the trailheads, is a problem that needs to be addressed - and can be dealt with. Closing the trails to dogs is not the answer. There has not been any peer-reviewed, site-specific studies or science-based monitoring, as should be required by law, before effecting these large-scale changes to the public use of the lands. The public is against these changes, 3 to 1, as shown in the comments to the 2011 plan. I'll bet those numbers are even higher now in opposition to the current plan.

In reading key parts of the 2013 SEIS, I see that there is little threat to the status of endangered species or landscapes due to people walking their dogs on trails in Marin County. I understand that there may need to be seasonal or temporary closure to trails for both humans and dogs due to special circumstances in limited areas. While it may be "easier" for the GGNRA to simply close dog access permanently to so many areas, it is not "easier" for the public they serve. I believe we all need to work together to achieve a balance of use, including dogs, on the trails that we have used historically.

In talking with one of your Ecologist Rangers at a recent meeting on these issues at Tamalpais High School, we discussed that in above Oakwood Valley and along the Alta Trail, there has been identified some Mission Blue butterfly habitat that needs restoration work. I applaud that work and am sure that a way to do that without banning dogs from those trails is very possible. Perhaps the limited sections where that work is taking place could be fenced, or posted with "dogs on leash in this area" signage. Trails could be re-routed to avoid these areas.

Similarly, I was told of one report of a Northern Spotted Owl heard only once recently in Oakwood

Valley. As those birds are not disturbed much by humans and dogs, but more by habitat loss, I don't see a conflict with having spotted owls in the area. They are active mostly at night, and are generally found high enough in the trees as to not be effected by dogs. Yes, I could see the need for a temporary closure of a trail if a spotted owl happened to be nesting or fledging young in the area, much as we do for other sensitive species. It does not make sense to close this trail to dogs just because one spotted owl was heard one time. That bird could easily have been dispersing or passing through.

I was also told there was concern over dogs going down to the creek in Oakwood Valley. Actually, while dogs may access just a few points along the creek, in general the creek bank is too steep and often covered in poison oak. Most, if not all dog owners tend to keep their dogs out of the creek for those reasons, except for a small pool outside the park near the entrance to Oakwood Valley, near the bridge up the valley and at an old stock pond near the top of the valley. Dogs do not roam the creek here. That would be common knowledge if a study had been done (or through dialogue with the park users).

It is my view, and the view of many other dog owners that I have talked with, that we should have a system of looping fire roads and trails that are accessible to people and their dogs, so that we can minimize out-and-back traffic in many of our current dog-walkable areas. All current dog-walkable fire roads should be available for current use as off-leash dog walking areas, while many of the trails should also be considered for off-leash use. I am certain that a few areas may be inappropriate for off-leash dogs and those can be dealt with on an appropriate basis.

An example of a good plan for dogs in parks is close to home in the East Bay Regional Parks dog policy. In general, dogs are allowed off-leash on fire roads, but must remain under voice-control. If they demonstrate that they are not under voice control, they will have to be leashed or removed from the park. They must be on leash in parking and picnic areas, and often within the first 500 yards of the trailhead. THESE RULES MAKES SENSE! We should do this in the GGNRA as well!

<b>Correspondence:</b>	Dear legislation! This project Can only prove to be a failure. There are so many civilians that live in this city and the number will only rise. These civilians, many of which are tax paying adults with families, have dogs. As a citizen of this city and a dog owner myself, I have lived here long enough to see more and more local dog parks overcrowded and prohibiting off leash parks only make the overcrowding worse. Overcrowding can lead to many issues such as more frequent dog fights, lost dogs, improper cleaning up after dogs and				

---

handlers not being able to focus on their dogs to maintain order. San Francisco may be a great city but it is small, we must be resourceful and save what free roaming we have to benefit the community. Don't take away our off leash parks!!

<b>Correspondence:</b>	From the beginning of the dog management controversy (at the inception of the GGNRA when off-leash walking was initially banned) and at every meeting or opportunity to comment to the Park Service (including almost 2 years of negotiated rulemaking) dog owners have made it clear that we want a recreational experience. Dog play areas (small areas where owners drink coffee while they watch their dogs play) are not what we have asked for. Dog owners are asking for recreational opportunities; places to hike; the opportunity to be in nature - with our well-behaved dogs. This interest is 100% aligned with the new Healthy Parks Healthy People US initiative.				

The Supplemental EIS fails in much the same way that the Draft EIS failed:

1. It assumes that off-leash dog walking has negative impacts that can only be remediated by eliminating that activity. The document is filled with might when referring to impacts, yet proposes an alternative based on the "fact" of these impacts occurring.
2. It does not consider alternatives other than restricted use and leash law enforcement. A Tag program is rejected because of cost, yet we understand that the initial annual cost of the proposed plan is over \$2M (for enforcement); timed-use is rejected as being too hard to manage, but is offered as a possibility for future changes to the proposed, reduced off-leash areas.
3. It seems to be the assumption in the SEIS that conflict disappears with the proposed plan; that under the current rule there is conflict, but when you drastically reduce the area we're permitted in, conflict disappears. This makes no sense. We've asked for a recreational oversight committee to help resolve user conflict and take some of the burden off of the GGNRA - this was rejected. We asked for a tag program to educate visitors and provide some way of controlling dog owners who can't/ don't obey the rules - rejected. Without education, oversight, and some way to separate out people who cause the problems, how can any plan be successful? And, if these are important for success, why aren't they tried BEFORE the more drastic punishment of eliminating so much off-leash space?

Re the Fort Funston proposed alternative:

The upper meadow proposed for off-leash use is called "the tundra" by regulars. It is the coldest, windiest part of the Fort and on many days we move past it as quickly as possible. The eastern trail ("horse trail") is designated as "no dog", yet this provides us with a really lovely loop and is well-protected from the elements on windy, rainy days. There is no evidence of impact with the current use, except possibly for the graffiti, beer cans and homeless encampments - none of which are related to off-leash activity.

As with all the other sites, any change at Fort Funston should be based on evidence, not conjecture. I found nothing in the references that justifies such significant closure or change.

Re Baker Beach proposed alternative:

This proposal is a complete mystery. On most days, Baker Beach is completely empty. With the

exception of the restoration areas (which are well-marked and fenced already), it is impossible to understand how off-leash dogs could have an impact here. There may be a few sunny week-end days where there are sufficient visitors that some might be uncomfortable with off-leash dogs, but these days are few and far-between. This was a PERFECT site to consider timed-use for week-ends and holidays. That would have been a win-win. As it is, the proposed alternative begs for non-compliance - when people see an enormous beach with no one on it, it is going to be very difficult to persuade anyone that walking off-leash is going to harm anything or anyone.

At the end of the day, the only workable off-leash plan is one that people will support. Given the public and political outcry over this proposal, this is clearly not that plan.

Regards  
Linda McKay

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Dean,				

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

In conclusion, I would like to add that, like for many others in the Marin, our move here was dictated by a lifestyle choice more than geographic expedience. The experience of living in close proximity to nature is something we all treasure and do not take for granted. However, this mindset naturally echoes that of a dog owner, and one of the most profound manifestations of this experience entails being able to take in the natural beauty alongside our four-legged companions. This is not just our view, but that of a great majority of the dog owners in our area and, of the several hundred families living in our association, almost everyone has a dog. Imposing limits on our ability to responsibly enjoy the nature with our dogs runs counter to the very fabric of our experience as Marin residents and we, therefore, hope that you take these decisions very seriously and only promote what is absolutely necessary for nature preservation and what cannot be achieved through any other means. We strongly believe that the current situation does not warrant such harsh measures and our opinion echoes that of a much wider community of Marin residents.

Please consider our position in finalizing your decision.

Kind regards,

Sergei Lubensky  
Shelter Bay resident, Mill Valley, CA

<b>Correspondence:</b>	Dear Superintendent Dean				

I am submitting a public comment OPPOSING the GGNRA Dog Management plan's Preferred Alternative

I have lived in San Francisco for over 40 years and have walked my dogs for decades at Fort Funston, Ocean Beach and Crissy Field

The NPS, using "junk science", has turned dogs and their humans who walk them, into scapegoats for just about every environmental problem they can come up with.

Just one example I personally witnessed:

Many years ago, the GGNRA decided that dogs and people walking on the sand dunes in the area above where the bank swallows nest, were most likely negatively impacting the swallows, especially when nesting and raising their young. To that end, they fenced off a large area above the cliffs where the swallows nest.

It wasn't long until several of us noticed that the swallows were no longer seen in the now "protected area". Instead they were regularly flying in areas where we really hadn't seen them that often before. It became clear they were following us, flying above as we walked. You could see that they were feeding on insects that flew up as a result.

We also saw something we had rarely witnessed before. Large numbers of sea gulls and ravens sitting on the dunes, by the edge of the cliff, above the bank swallow nests. They would fly down, pluck baby swallows right out of their nests, flying back up to the dunes where they sat and ate the baby birds. It was very hard to watch.

When we used to walk along the dunes in that area, the predator birds were kept at bay. But by fencing off the sand dunes above the bank swallow nesting area to keep people and their dogs from walking there, the GGNRA created a safe haven for the sea gulls and ravens. They could feed on baby bank swallows at will. It was heartbreaking.

.

Sincerely,  
Jean Kind

**Correspondence:** Hello, I would like NPS to consider the current usage of Fort Funston and Crissy Field in the Golden Gate National Recreation Area while considering changing the dog rules. Almost all of the people at Funston and many at Crissy field are in those parks with dogs and those dogs are off leash. About one of every 3 San Francisco households has a dog and limiting dog off-leash options will force dogs to cram into only a handful of other San Francisco parks that allow off-leash exercise. We love taking our dog out to Ft Funston and are out there twice a week while our dog also goes with a dog walker 3 more times a week. We would have never got a dog if Funston didn't allow dogs off leash. The park is a great place, full of great dogs and I fail to see how this usage is a problem, especially since Funston is such a small percentage of the acreage included in the GGNRA that does not allow dogs. Please do not change the off leash rules at Funston and Crissy field.

Thank you,

Brandon

**Correspondence:** I love playing fetch with my canine friends. Sometimes I like to visit places without my canine friends because they are rambunctious and scare off the wildlife. Some places are appropriate for off-leash dogs and other places are not. There needs to be a clear distinction of where off-leash dogs are allowed to frolic freely and where they need to be on-leash. At Ocean Beach, I have seen off-leash dogs steal sandwiches from the hands of children, I have seen off-leash dogs run up to people that clearly have a fear of dogs, I have seen off-leash dogs chase birds. The saddest day was when I saw an off-leash dog run into traffic and get hit by a car. All of these dogs seemed to be very sweet, but these incidents could have been prevented had there been an enclosed area for off-leash dogs. Enclosed off-leash dog areas remove all confusion of where dogs can roam. Enclosed off-leash areas make enforcement of leash regulations much easier.

Without enclosed off-leash dog areas and well enforced leash regulations the GGNRA will cease to be a place for the many, it will become a place for the few. I want the GGNRA to be a place that I can visit with my canine friends, but I also want it to be a place where I can observe the wonders of nature without the threat of an excited off-leash dog galloping through. There are so many fantastic examples of off-leash dog areas with double gates and benches in San Francisco. All the dogs I know get great exercise playing in enclosed-off leash areas. They don't care if there is a fence as long as I as continue to throw the ball.

The best dog management plan for the GGNRA will enclose all off-leash dog areas.

**Correspondence:** In the Draft Dog Management Plan, the authors cite the confusion about policy that arises because dog-walking rules in the GGNRA are different than the rules in other national parks. The report makes the argument that there will be less confusion on this topic if the policy in the GGNRA is consistent with the policy in other national parks.

This perspective ignores a many-year history of these policies in the GGNRA, and the significant local confusion that will be caused by a sudden and dramatic policy change.

The plan also points to costs associated with this confusion, and the need for park staff to spend time and energy explaining this unique local policy. However, this argument ignores the significant cost that will be associated with implementation of a policy change, and the need for the staff to deal with the local confusion that will be caused by the policy change. I noticed that the report indicates that the implementation of a policy change will require somewhere between \$2M and \$3M in staffing expenses, which is significantly more than the \$430,000 presently spend on staff in these parks.

So, a change in policy will probably lead to increased confusion about policy, and even the draft report indicates that the increased confusion associated with the new policy will require a significant increase in staffing and costs.

If one goal of the authors of this report is to reduce confusion and reduce costs, why does the report advocate a policy change that will increase confusion and increase costs?

I think the best conclusion from all of the information in this report is that the present policy should not change, because any change will increase confusion and increase costs.

**Correspondence:** I am very much against the proposed Dog Management Plan which would nearly completely destroy the access dogs and their owners have to the GGNRA. This severe reduction in both the number and quality of their activities and interactions. These banned behaviors are in fact precisely what the citizens of our great country need in order to restore their equilibrium and sense of peace, love, and respect for nature and all of creatures who live in and visit these places. The best way to preserve the ideals upon which this nation was built is to do exactly the opposite of what this plan proposes. I propose that those who draft the final legislation take the time to read about and experience the wonderful joy, loving energy, and peace that these dogs bring to countless people every day in these locations.

Dear Superintendent Dean,

As someone who has regularly participated in coastal cleanups, has spent hundreds of hours doing native plant restoration work, and who often walks with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for close to 30 years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. We can all get along, and criminalizing/losing responsible dog and nature loving citizens is NOT the answer!

Sincerely,

Mary Gerber

---

**Correspondence ID:** 6518    **Project:** 11759    **Document:** 55416**Address:** San Francisco, CA 94122  
United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,18,2014 23:50:22**Correspondence Type:** Web Form**Correspondence:** I support the 1979 Pet Policy. In addition, as the GGNRA expands, they should add new off-leash areas. The proposal for visitors to have " a back country visitor experience" is unrealistic in a dense urban area. "Controlling access" and using "aggressive administering" to do so is contrary to the reason the park was established. "To expand to the maximum extent possible the outdoor recreational opportunities available to the region."

The SEIS has few scientific peer reviewed studies to show that dogs have a significant impact. They rely on the "best professional judgement of NPS staff." Anecdotal observations are not a scientific way to compile evidence. NPS staff have demonstrated a bias against dog walking, so their opinions cannot be trusted.

During negotiated rule making NPS staff were adamant that fencing of dog areas would not be considered. The SEIS preferred alternative now proposes fencing. The fencing allows for the movement of wildlife and so will not keep small dogs in, therefore fencing makes no sense and is a waste of money. Families with dogs and small children will not be able to use the enclosed areas due to dogs running around and the possibility of a child getting knocked over accidentally.

I oppose the Monitoring-Based Management Strategy because it is no better than the DEIS Compliance-Based Management Strategy. The emphasis is still on compliance of leash laws. The GGNRA would still be able to change the status of off leash areas for non-compliance, even if there was no proven negative impacts to resources or visitors.

Safety issues concerning dogs: The data cited by the SEIS of dog incidents does not justify the need for off-leash restrictions. The number of dog bites or attacks (95) from 2008 -2011 is tiny compared to the millions of dog visits over the GGNRA 80,000 acres. The latest compilation of incidents for 2013: 6 dog bites, 5 dog fights, 2 cliff rescues, 2 complaints from people who were frightened, 1 wildlife killing and one horse bitten. So incidents have gone down in spite of the increase of human population and by inference dog population.

According to Parade Magazine 2012 Survey, 42% o households nationwide have a dog. The SEIS does not consider the continued growth of the population surrounding their lands. San Francisco asked the GGNRA to investigate the effect the reduction in off-leash areas would have on city parks and were ignored. How can a supposed EIS not study that?

SEIS misrepresents the comments made to the DEIS by promoting negative statements concerning dogs and adding few positive ones. In spite of the fact comments ran 3-1 against the DEIS. In addition, no significant changes were made and substantive comments were not responded to.

Social and Economic Impacts: The SEIS did not address the social and health benefits of dog walking. Cities are advertising how dog friendly they are, Mendocino and Carmel for example. How will these restrictions effect tourism?

People with their dogs who come from other parts of the Bay Area may not come as often and will not be spending money at local restaurants and shops.

<b>Correspondence:</b>	Dear Superintendent Dean,				

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status just because it deems that not enough people are complying with the leash restrictions.

Sincerely,  
Eva

**Correspondence:** Dear Superintendent Dean,

As a native San Franciscan who regularly walks her dog off leash on the various GGNRA lands, and have done so for forty five years now, I would like to express my strong opposition to the preferred alternatives as described in the SEIS. There is no justification for the drastic changes. Where are the site-specific, peer reviewed studies as required by Federal law? Where is the science in any of it? The document seems skewed very much against dog walking as a legitimate form of recreation. I've watched over the years as the areas we have traditionally walked in have been gradually taken away. This is my main form of recreation and there is a wonderfully diverse community attached to it. I doubt there is any other user group to rival the passion and diversity of the dog community.

Formalization of the 1979 Pet Policy that so many worked so hard on would be my choice. That has worked well for years and only needs enforcement to cite the people that are causing problems. Don't punish the majority of respectful park users for the actions of a few "bad apples".

We, the people of San Francisco, gave our lands to you with the understanding that traditional recreational uses , including off leash dog walking, would continue.

It now seems the GGNRA is more concerned with creating habitats that never existed in certain areas of the GGNRA and then using those habitats as an excuse to keep people out. We do not need wilderness on the edge of a city of 800,000, we need recreational areas! There should be more off leash areas in Marin and definitely some in San Mateo county where there are none. How is that fair and balanced to have no off leash area in an entire county?

Sincerely,

Georgette Musante

**Correspondence:** Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I'm writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is way too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Sincerely,

Thomas D. Sabin

**Correspondence:** Re: Support of Preferred Alternative F and any Management Plans that includes some voice-command dog walking (including Preferred Alternative A)

I am writing to express my support of Preferred Alternative F and any Alternative Plan that includes some voice-command dog walking (including Preferred Alternative A).

My credentials include&

- President of the North Coast Hockey League, a unit of the Coastsides Youth Association
- 7-year stint as a board member of the Boys and Girls Club of the Coastsides
- ongoing participation in the MidCoast Parks Task force
- long-time contributor to Moss Beach Park efforts

&and my reasons for support of continuing existing policies that include voice-command dog walking include:

- The GGNRA's goals include a diversity of visitor use, and some of the most heavily used areas by locals would be the areas that include voice-command dog walking.
- Local Montara and Moss Beach residents have committed to a self-policing effort regarding dog walking, and are good custodians of the land. They will volunteer to lessen any possible disturbance to wildlife and other park visitors, and remove pet waste as necessary.
- There are site-specific considerations that need to be included in the evaluation, and part of that is the pre-existing tradition of voice-command dog walking on the Rancho Corral de Tierra parcel.
- The GGNRA's goal of preserving and restoring the Rancho Corral de Tierra parcel CAN be accomplished even while permitting off-leash dog walking. Allowing off-leash dog walking would actually still be consistent with the fundamental values for which GGNRA was established.
- Selecting the alternative that includes voice-command dog walking IS possible, due to the very nature that it's one of the alternatives that merits consideration.
- Voice-command dog walking is most consistent with long-held policies within the neighboring community.
- With a parcel the large size of Rancho Corral de Tierra, certainly the GGNRA can find SOME small area - even 0.01% of the size of the parcel - that could be used for off-leash dog walking.
- Half Moon Bay is the urban center of the coast, and is woefully short on active recreational areas. It has closer to .06 acres per 1,000 residents than the national standard of 6 acres per 1,000. The HMB dog park that allows off-leash dog walking is 8 miles away, and does not provide the active dog walking experience that exists on the hilly terrain of Rancho Corral de Tierra.
- Choosing any Preferred Alternative other than F would be a more balanced approach, enabling many types of visitors to enjoy the Rancho Corral de Tierra parcel.
- The research that argues against off-leash dog walking in parks has been subjectively chosen to support the GGNRA's previously stated position against off-leash dog walking.
- With minimal work by the GGNRA, the no-action alternative would have little long-term impact on vegetation and negligible impact on special-status species.

Like many Coastsiders, I am a huge advocate for parks, and active recreation, and for outdoor family activities that include dog walking. When GGNRA officials met several times with the public, they heard overwhelming support for dog walking, plus support for horses and other uses of the park. To address the public's concerns, GGNRA should find a way to implement a plan that allows off-leash dog walking in at least part of the large Rancho Corral de Tierra property.

I encourage you to respect the wishes of the community of the northern Midcoast, which has been known for years to be dog-friendly. Please continue that tradition, and continue the existing management policies that would enable voice-command dog walking on Rancho Corral de Tierra.

Respectfully submitted, -Joel Farbstein, 412 6th St, PO Box 371064, Montara, CA 94037-1064

Ocean Beach SPPA

Background

My spouse and I are retired senior citizens. We live a half mile from the Ocean Beach SPPA, two blocks north of Sloat Boulevard. We have a five pound terrier mix dog, Izzy (short for Isadora-ble, but just lost our elderly cocker spaniel, Riley. We are very responsible dog owners; we always walk our dogs on a leash, even when it is permissible to do otherwise.

While I'm originally a second generation San Franciscan, I lived in the Santa Cruz Mountain for 40 years, until moving back to San Francisco 2 years ago. I lived on over three acres on the side near the top of a hill with a distant 220 degree view of almost nothing but trees. We had all kinds of birds: Red Tailed Hawks, Wood Peckers, Stellar and Scrub Jays, Owls, Humming Birds, Wild Turkeys, Turkey Vultures, Great Blue Herons, and we lived in harmony with them. I love nature, I'm also a member of the Sierra Club, and I was a Volunteer Fireman for over 14 years, protecting the woodland and wildland.

A number of people have asked me, "How, could you move from such a beautiful natural setting?" And I say, "Have you ever heard of the Pacific Ocean?" This is one of the primary reasons we moved back here, and now our access to the beach is being threatened.

"The Beach"

Ocean Beach SPPA spans the western boundary of the entire Sunset District, which is one of the most densely populated districts in the city. Therefore one of the advantages of living in the Sunset is having access to this beach; it is mostly a local's beach, because unlike most other beaches there is a lack of dedicated parking. The locals value the fact that is big and not very crowded, this as "our beach," and therefore we are willing to take care of it. Including doing what we can do to help protect the Snowy Plover, if also reasonably access.

Getting our exercise is critical to our wellbeing, and that of our dogs. So we look forward to taking a daily walk to the beach, and can't imagine not taking our leashed dog(s). We walk with other elderly friends who do not have dogs and we are able to socialize and meet new people who live in in the Sunset, and many of those are also senior citizens. For many people this is large part of their only social life.

Poor Alternative

While I understand and support the protection of the Snowy Plover, I do not believe that the preferred Alternative F is reasonable or fair solution:

- It is one sided, and does not consider the needs of responsible dog owners, who may value dogs and birds.

- It penalizes responsible dog owners because of irresponsible dog owners. "It throws the baby out with the bath water." I don't like irresponsible dog owners either, and it is offensive to me to be lumped together with them.

- It does not consider that most of the visitors to this beach are actually locals who live within reasonable walking distance and that to deny them access to the beach would mean, as in our case we would have to drive our car 2.5 miles if we wish to walk on the beach with our leashed dog.

- It also does not consider the beach cannot even be seen from many parts along the Great highway without actually standing on the dunes or bluffs, so responsible dog walkers will have to walk even further just to see the beach.

- It does not consider that more dog walkers, joining bicyclist, and strollers on already crowded paths and or trails creates an unintended consequence which does not appear to be addressed

- It does not consider that most people are not even aware of what you are planning (we have asked a lot

of people about, especially local dog owners and no one else seems to have a clue about what you're doing). You have not really gotten the word out. With this in mind, if this action is taken, you'll need to be prepared for a lot of pushback.

#### Best Alternative

The only fair approach is the moderate solution, which is why my spouse and I support Ocean Beach SPPA Alternative E. On-Leash Dog Walking Only

- It allows on-leash access to responsible dog owners with minor impact to Snowy Plover. And, yes on-leash all- the-time would be less confusing and easier to manage.
- In time, it will eliminate irresponsible dog-owners, through easy to understand signs, with phone numbers to report offenders through use of social media, with stiff progressive fines for repeat offenders (i.e. first warning, then \$250, then \$500, then \$1,000, etc.
- It allows the sense of community that already exists at the beach to continue.
- It will promote more good will than bad. It will make people feel that government agency is really able considers a variety of opinions and moderate their decisions to serve more people.

Best Regards,  
John

**Correspondence:** I've read this report carefully. My conclusions, based on the data provided :

The policy changes will require a significant increase in cost and staff  
The policy changes will not reduce the number of dog attack incidents in the GGNRA.  
The policy changes will significantly reduce public use and enjoyment of the GGNRA spaces.  
The policy changes will be very difficult to enforce. Some civil disobedience is likely.  
The policy changes will have almost no impact on habitats or wildlife in Ft. Mason, Crissy Field, Ft. Point (as there are really no wildlife or habitats in these areas).  
These policy changes will produce some significant unhappiness with the NPS in a city that is normally likely to be filled with strong supporters.  
There are many negatives and very few positives.

I think this is a mistake. Surely, the NPS has better places to focus its efforts, where real good can be done.

**Correspondence:** I strongly oppose Alternative F, your preferred dog management plan to restrict off-leash and dog-friendly access to the GGNRA. Instead, I support Alternative A.

The #1 reason I moved to Marin was in order to have space and accessibility to enjoy life with a dog. For the past three years, I have regularly enjoyed time with my dog in a small number of GGNRA areas where they are allowed. I have witnessed behavior of dogs and dog owners hundreds of times at Muir Beach, the Oakwood Valley Trail, the Miwok trail and others, and have seen responsible behavior the vast majority of the time. Your proposed plan is overly restrictive and not grounded in the realities of the southern Marin community. There are tens of thousands of dogs in the area that will need to be exercised. It is not a responsible action to so severely limit dog access in the GGNRA lands, amidst an urban and suburban area, putting undue pressure on a small number of Marin County trails and lands.

The Golden Gate National Recreation Area was established to provide recreational activities to local residents in a densely-populated area. Marin residents rely upon this open space. It requires a different management strategy than a National Park. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

**Correspondence ID:** 6540 **Project:** 11759 **Document:** 55416**Address:** San Francisco, CA 94116  
United States of America**Outside Organization:** Unaffiliated Individual**Affiliation:****Received:** Feb,18,2014 23:59:22**Correspondence Type:** Web Form**Correspondence:** I object to the dog management plan, and I feel that the process to develop the plan was not appropriate for this national recreation area.

I have lived in San Francisco for over 35 years. I have had dogs for 20 years and have carefully used all of the areas in both the city and the GGNRA where dogs can be off leash. I follow dog policies in the city so that I can express my views as an informed citizen.

The GGNRA is fundamentally different from a national park. While each share many similarities, the GGNRA is part of an urban area and it has a historical emphasis on recreation uses. Recreation has not been given enough weight in the dog management plan. The proper balance of interests and uses for the GGNRA is not the same as for a national park, where preservation of pristine areas and conservation and protection of the natural environment was the reason for creation of the national park.

The dog management plan fails to adequately acknowledge the GGNRA's location within San Francisco; it lacks integration with other parks and public spaces in the city that are not part of the GGNRA, but are also used by city residents. The too-severe restrictions on off-leash dogs will result in displacement of those dog uses to other city parks. That environmental impact needs to be studied equally with the GGNRA impacts.

When one uses the various places where dogs can be off-leash [and I'm taking it as a given that off-leash activities with dogs cannot at all be replaced by on-leash activities or caged dog runs], it seems obvious that there could be many creative ways in which competing interests could be compromised. The approach to date has been too geared toward picking one advocacy group over another. I have personal experience with the mediation of disputes. A mediator would take a wholly different approach, that I think would be more creative and would result in a plan more responsive to all of the groups advocating on the GGNRA plan.

Related to this, the data collected was too limited. It did not take into account the broader urban area and what would happen in San Francisco, as a whole, if the GGNRA plan is adopted. An approach more similar to mediation of competing interests would lead to data collection that would support compromise. The present approach has been data collection in an attempt by one side to win an argument over another side. This leads to data being used only for argument and not for the practical use of fashioning compromise, whether that compromise is allowing for restricted hours of various uses or uses of various locations on some days or not others. Data collection with the goal of compromise and mediation would improve the end result of the process.

<b>Correspondence:</b>	I strongly oppose the proposed 'Regulated Off Leash Area' (ROLA) in the area between Le Conte St. and Tamarind St., Montara in the Rancho Corral de Tierra area of the GGNRA. Reference Alternative 'C' and 'E' of the GGNRA draft Dog Management Plan / Supplemental Environmental Impact Statement (SEIS).				

---

A 'dog park' in this location is a very inappropriate use of this land and would significantly degrade the quality of the open space in this area adjacent to the community.

Since it provides direct and easy access this portion of Rancho should be conserved and preserved for the community to enjoy.

Frank Dean, Superintendent

Golden Gate National Recreation Area (GGRA)

Fort Mason, Building 201

San Francisco, CA 92123

Dear Superintendent Dean:

Unable to attend Thursday's meeting, I am writing to convey my views on dog access to the GGNRA. I respect the life of all living creatures.

I am a dog lover who urges that dogs be required at the very least to be on leash when visiting the Golden Gate National Recreation Area.

Dogs have many places to roam and enjoy being out of doors. They live in peace in the comfort of our homes, where they are

allowed to eat, rest, sleep, and mate, bear and raise their young.

Wild beings do not have those privileges. Indeed, their habitat grows smaller by the minute. They cannot eat, rest, sleep, mate or

bear or raise their young in peace. These wild beings need a voice among us to speak on their behalf.

This dog lover wishes dogs were barred from entering the Golden Gate National Recreation Area. We have many doggie-parks and

other places for our pets.

On the other hand, wild creatures- -Snowy Plovers, Great Blue Heron, and other wild beings- -are limited to habitat that is getting

smaller and smaller.

I urge the reasonable course: do what we need to do to allow wild creatures the safety and comfort of their homes in the GGNRA

while we and our pets let the live in peace in our homes and designated parks.

I'm unable to attend the January 30th meeting, but I thank you for considering my perspective. I very much hope you share it.

Respectfully,

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Esteemed Superintendent,

My name is Mary-Lynn. I am a San Francisco resident for over 20 years now living in the Ingleside district. I am a mom to Delilah, my first dog and daughter. We make use of Fort Funston and Ocean Beach every week as a crucial part of our health and wellbeing regimen. I am a member of the National Park Foundation and a social worker devoted to working with people with disabilities. I am very concerned about preserving the areas that my family and I as well as my clients have to enjoy with their entire families including their dog family-members.

In regards to the Supplemental Environmental Impact Statement, I am primarily concerned about the lack of specificity and documentation of the negative impacts dogs have on the areas. I am often impressed with how well within the areas are organized by the GGNRA to limit the negative human and pet impact on the areas. I keep myself and my dog out of designated protected areas and observe that other visitors do the same out of respect, enjoyment and desire to preserve the GGNRA and what it offers us every time we visit. If the negative environmental impact can be better measured and specified, I am confident that dog-owners can better participate in reducing or eliminating that impact while preserving off-leash privileges.

Additionally, I believe the plan can become more focused in proposing more feasible alternatives in terms of preserving the natural resources in conjunction with our recreational enjoyment of the areas for ALL visitors- those with dogs and without. I understand some visitors have been having excessive, unacceptable and lasting effects to some of the sites; improved education and signage are two ways to significantly impact their impact.

It is so crucial to me and my family that we utilize the GGNRA sites with the regularity and freedom we currently do. There are so many benefits to us as a whole that are at our doorstep despite living in an urban area. It improves my mental health, physical health, commitment to my community and motivation to think forward of our shared responsibility to make it as available and pristine as it is for us now. I really seek ways that my disabled clients can better reap those benefits with improved access and outreach efforts. It is immeasurable how the GGNRA sites aid and support me, my family, and the city as a whole. I look forward to an improved plan that preserves the privileges we currently have, expands access to more visitors and perfects environmental preservation. Please considerable the no action alternative.

Sincerely,

Mary-Lynn Garrett

**Correspondence Type:** Letter  
**Correspondence:** Mr. Frank Dean, GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123  
Dear Superintendent Dean,

I, Mary Gregory, have been a resident of San Francisco for 57 years and Stinson Beach in Marin County for 51 (first as a child and now as a homeowner.) For 54 of my 59 years of age, my family and/or I have owned dogs: dachshunds, a basset hound, and labradors.

I have walked often at Crissy Field with my dogs precisely because it is located in an urban environment and is used by so many for casual and formal recreation. I also walk my dog frequently at Stinson Beach, and in both places, I am acutely aware of protecting wildlife while giving my dogs the exercise that they and I need.

I am writing today to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dog in the near future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy.

This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in San Francisco, Marin, and San Mateo counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released.

Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I really think that this shows that the GGNRA has an on-going, knee-jerk, indefensible bias against dogs and once again has not even bothered to properly research this issue. Or, realizing that it has very little evidence to stand on, the GGNRA is just trotting out the same old unconvincing arguments.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGNRA for generations to come.

Sincerely,  
Mary L. Gregory

Bldg. 201

Fort Mason, San Francisco, CA 94123

Attn: SEIS

Dear Sir/Madam,

My wife is 72 years old and weighs 110 pounds. Recently she got charged by a 50-60 pound dog in the Sutro Heights Park. The owners tried to call it back but it ignored them. I had to fend it off with my walking stick until the owners could get it on a leash. Dogs are supposed to be on-leash in this park, but most dog owners let them run free.

Also in the Sutro Heights Park, I once got surrounded by three little dogs, the kind that yap at you insanely. The owner did not even try to call them off until I started to phone the police.

In the Marin Headlands out above Rodeo beach, my friends and I-all old people-got charged by four aggressive dogs. One of my friends, aged 78, lifted his coat above his head to make himself look bigger, and charged back. The dogs scattered.

Once I was walking near the Octagon just below the VA hospital when I was charged at by five or six little yapping dogs. The owner was not able to get them under control for a long time.

All this has happened in the last five or six years. I think that as I get older, dogs sense my frailty and attack. Now I have to carry a walking stick for fear of being bitten. You will see a lot of old people carrying walking sticks, and in some cases, golf clubs. Having to go armed takes a lot of the joy out of walking. More often old people simply stop walking in the parks. This is a shame because when you get old, walking is about the only exercise you have left.

Not one of the owners of the dogs which attacked me apologized. To a dog owner who loves his or her pet, the fact that a dog attacks someone is hard to understand. An example of this is Marjorie Knoller, a highly educated San Francisco woman who watched her dog tear Diane Whipple, a neighbor, to shreds. Nonetheless, Ms. Knoller continued to believe that her dog was "gentle and loving and affectionate." She said so in court(1) and the judge said that this was the only time during her trial when he

believed she was being sincere.

Not all dog owners are like this, but enough are to make walking in the Golden Gate National Recreation Area dangerous and unpleasant for old people. So I would like to ask you to try to separate the dogs and their owners from the rest of us, so we can walk in peace.

Very truly yours,

Robert Hanenberg

1 Supreme Court of California, People vs. Knoller, SI 34543, Filed 5/31/07.

Mr. Frank Dean, General Superintendent

Golden Gate National Recreation Area

Fort Mason, Bldg 201

San Francisco, CA 94123-0022

Attn: SEIS

Dear Superintendent Dean,

Thank you for extending the comment period regarding dog walking in GGNRA. I live next to part of the new Rancho Tierra and have done so for 32 years.

As this is a recreation area and not a preservational park setting, I believe that the community would be well served by perpetuating on-leash dog walking throughout the GGNRA and that selected sites should be

recognized for voice-control dog walking as well. A few other points and suggestions:

1. I bring to your attention this phrase regarding Rancho:

"Historically, although off-leash dog walking was not officially sanctioned by the previous private owner, off-leash use occurred frequently." This statement is weak in its portrayal of historic use because 1) POST (Peninsula Open Space Trust) was the landowner for only about 13 of the past 32 years; their policies of dog walking were not clearly posted throughout that period. For the preceding 20 years, there have been NO OBJECTIONS posted or otherwise by landowners to dog walking by voice control. This was not just negligence on the part of the previous landowners - I was in touch with each of them because of my sustained lease of pasture for horses.

My point: your premise of "Historically" is biased to a minor portion of our history, rather the majority of time supported voice-control dog walking. A more accurate portrayal of our historic use would be "Historically, off-leash dog walking was highly used and valued in two concentrated areas"

2. Being a good neighbor is important for government agencies now buying up so much land for future generations. Presenting an agency to a local community on behalf of a federal agency is particularly problematic. My personal experience of your moving in LITERALLY next door is that the burden of newcomers has so far outweighed any privileges. Conceptually it would be great to use US regulations to protect local citizen's interests and values rather than to marginalize them with the logic that they represent

such a small part of the federal constituency. This COULD be done with the use of buffer zones or buffer times\* that accommodate privacy and the local, historic values of your neighbors.

My point: seek methods, places, and ways to accommodate the dog-walking community in ways that are expansive and protective of their interests. Ask them to embrace your plan and partner with you in regulating it. This would require your reconsidering your current "preferred alternative" - give us some room, opportunity, circumstance to allow voice-control walking. As a minimum, do this in places that operate voice-control historically (where you have indicated leash-only on your maps)

3. A workable concept might be \*buffer times, in which you allow voice-control dog walking within an hour or two of sunrise and sunset, thereby allowing a controlled opportunity for locals. I suggest this because it recognizes a basic respect for neighbors' burden and opportunity.

Respectfully,

Jennifer Harden

**Correspondence:** February 7, 2014

Superintendent

Golden Gate National Recreation Area

Fort Mason

Building 201

San Francisco, CA 94123

Dear Superintendent,

My name is Pamela Aden and I am a physical therapist living and working in San Francisco. I am writing to you because GGNRA must mandate that all off leash dogs be kept in very limited (and fenced in) areas of the National Parks here in the Bay Area.

I've written to you in the past detailing 2 injuries I sustained due to off leash dogs. One injury left me w / a labral tear of my hip, fractured hand and torn abdominal muscles and I was unable to work for 5 months. The second injury happened when a "friendly" high spirited dog lunged at me and it's claw drew blood all the way down my leg. Over the past several years, I've watched as dog owners took over Crissy Field with little intervention by the Park Police to enforce existing leash laws because they are scared of confrontation w / dog owners. Active people like myself fear being hit by a pack of dogs running off leash at high rates of speed; I can't imagine what would happen to the elderly or the very young should they be caught in the path of such unrestrained force. The worst are the dog walkers who bring down 8-10 dogs at a time to run and somehow believe they are in control.

If GGNRA would construct fenced in parks for large and small dogs it would protect the public, environment and the dogs from harm. Also, let the dog owners contribute some additional cash for the damage their animals cause to the landscape by paying a small fee to use the off leash areas ~~at Crissy Field~~ this would be designated exclusively for upkeep of the area. How many times do I see dogs defecating on the Crissy Field beach without their owners cleaning up after them?

Owning a dog in the city requires dog owners to give up their idea that dogs should just "run free. If that is their priority move to the country, but don't put the rest of us at risk just so they can be lazy and not exercise their leashed animals properly.

Once again I believe that owning a dog is a RESPONSIBILITY, not a right.

Thank you for your consideration.

Pamela Aden

**Correspondence:** Dear Frank Dean, General Superintendent Golden Gate National Recreation Area

It is a travesty to wildlife and their shrinking habitat that dogs are allowed to roam at the Golden Gate National Recreation Area. Dogs on leash areas are a farce. A large proportion of dog owners let their canines run free no matter what the rules are. Leash compliance on Ocean Beach is less than 30%! secure fenced area is where dogs should go to play so that dogs do not have the chance kill, maim, chase, or otherwise harass birds, wildlife and unsuspecting humans. The hard-wired canine instinct is to seek, chase, and kill prey. There are other users of GGNRA besides dog owners and dogs, many of whom want to enjoy our National Park without the disturbance of somebodys barking dog running down birds. Many people visit GGNRA to picnic, hike, walk view wildlife, and simply enjoy nature and the beauty of the ocean. GGNRA is the only national park with off-leash zones. Un-leashed dogs and wildlife are not compatible and should be kept physically separated In our national parks. The following excerpts are quoted directly from the NPS strategic plan: (NPS wording is in bold lettering, my comment is in parentheses.)

Since our 1916 creation, the National Park Service has preserved many of Americas finest treasures and made them accessible to millions of visitors. (Dogs are not the visitors the NPS is referring to, by any stretch of the rules. - my comment)  
Parks show us wonders, both natural and historical, that grace our lives and provide us cherished experiences.

Category I goals - Preserve Park Resources - reflect the NPS 1918 Organic Act  
SC conserve the scenery and the natural and historic objects and the wild life therein.

Category II goals - Provide for the Public Enjoyment and Visitor Experience of Parks - reflect the NPS Organic Act mandate to provide for the enjoyment of the [resources] In such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

#### MISSION STATEMENT

The National Park Service preserves unimpaired the natural and cultural resources and values of the national park system for the enjoyment, education, and inspiration of this and future generations. The Park Service cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world.

GGNRA has gone too far accommodating dogs and their humans. Please use diligence and common sense to protect our wildlife and peaceful beaches. Please use the NPS goals and mission statement to safeguard our natural resources, not trample and abuse them.

Sincerely,

A concerned Californian

Golden Gate National Recreation Area,  
Fort Mason, Building 201, San Francisco, CA 94123

â€ I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area.

â€ I urge the National Park Service to adopt a Dog Management Plan that adheres to all established NPS management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for all visitors. Additionally, please include the following comments regarding Commercial Dog Walkers using the GGNRA for commercial business:

â€ Commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain.

â€ Commercial dog walking will provide no service or benefit to any park users, will adversely impact park resources and values, and will serve only private enterprise at the expense of the American public.

Please help to regulate this fast growing industry. As a resident of San Francisco, I am concerned about the aggressive nature of commercial dogwalkers and their sense of entitlement over resources which should be shared and enjoyed by everyone. People who go to enjoy the wonderful natural areas which are the gems of our modern society don't necessarily want to be bombarded by a gaggle of dogs. Often, these groups are led by a single person, who is motivated by profit and not the safety and comfort of those around them. I

urge you to regulate this and I

applaud you for considering this measure. It's a relief to know that I

might be able to enjoy the natural areas with protection for myself and the wildlife who call this region their home. They need your support. I was very

distressed to see the photo of an unrestrained dog aggressively pursuing a great grey heron. This is

unacceptable! The Dog Management Plan is exactly what we need.

Thanks for your support,  
Sharon Arnold (native San Franciscan)

Part : Below are my personal comments:

Please help to regulate this fast growing industry. As a resident of San Francisco, I'ts not fair that we can't enjoy the parks with this many dogs running around unsupervised. I want to be able to enjoy myself when I go out in nature and not have so many dogs at once. There are too many dogs per person and they are off the leash. There are a lot of people who don't have dogs and they deserve to enjoy the park too. The wild animals in the Nati. Rec area are getting a raw deal too. I was upset to see the photo of an unrestrained dog aggressively pursuing a great grey heron. This is unacceptable! The Dog Management Plan is exactly what we need.

Why should their business get free land to operate while others have to pay and get licences, etc? Who suffers because of this? The wildlife and other parkgoers who want to have a peaceful day in nature.

Thanks for your support,  
Ian Arnold-Eitz

Dog Policy

Dear Superintendent,

I am distressed to again see efforts to reduce recreational areas for dogs - a reduction that, in fact, means reduced recreational experience for our family as we have a dog and a child that are bound together. My nine year old daughter likes going places with her dog. We already encounter a near impossibility to go camping because of leash restrictions - how can a dog and a child run together when one of them is on a six foot leash? The simple fact is kids and dogs were meant to run - the entire purpose of the land set aside we are talking about is captured in the name "Recreation". In the Golden Gate Recreation Area we are restricted to a relatively small portion of it if we wish to include the dog: it is not too surprising that we express a strong position to any further restrictions.

I do support areas where no dogs are permitted - there are people who are not comfortable around dogs and should have spaces free of them. East Beach comes to mind ' it seems to me there should be a section where dogs are banned.

While GGRA has a responsibility to save local species, the GGRA is not a wild preserve. In the first place its location next to one of the most densely populated areas in the country would make this impractical and I think would be at direct odds with its purpose as a recreation area. You need to think how crazy it is that families with dogs - and dogs are family members that play an important role in the family dynamic - to be forced with a decision between leaving the dog at home or watching a dog suffer at the end of a leash when it wants to run and listening to a child asking why she cannot play with her intimate pal or simply writing off the largest open space in the vicinity as 'forbidden'.

Finally - just where do you expect the dogs can go to run. Anyone that has been around them knows they play and that means running and exploring without a leash.

Respectfully,  
Michael Austin

Subject: Public Comments on the GGNRA Draft Dog Management Plan/Supplemental EIS

Dear Mr. Dean:

I hereby submit the following additional concerns and comments on the GGNRA Draft Dog Management Plan/Supplemental EIS regarding the proposed Preferred Alternative for the Cattle Hill / Sweeney Ridge Trail System located in San Mateo County:

1) I am a Pacifica resident who has been using the Cattle Hill / Sweeney Ridge Trail System for over 6 years. I typically hike and run the trails 4 days a week with my dog on-leash between the Mori Ridge Trail located at the base of Shelldance Nursery and Portola Discovery Site or SFPUC Portola Gate (Please Note: the Mori Ridge Trail is mistakenly labeled as the Sweeney Ridge Trail in the Dog Management Plan/Supplemental EIS Alternatives Maps). I am fully in support of continued multi-use of the Cattle Hill / Sweeney Ridge Trail System for all uses including dog walking (leash only), hiking, trail running, mountain biking, horseback riding, wildlife watching, etc. I am opposed to GGNRA Draft Dog Management Plan's revised Preferred Alternative (Alternative F), which would ban on-leash dog walking on portions of the Cattle Hill I Sweeney Ridge Trail System (including Mori Ridge Trail located at the base of Shelldance Nursery). Alternative F is still too restrictive and severely limits the community of Pacifica's use of the Cattle Hill / Sweeney Ridge Trail System for on-leash dog walking purposes. My preference would be for Plan adoption of Alternative A (Map 19-A), which would allow continued multi-use (including on-leash dog walking) throughout the Cattle Hill / Sweeney Ridge Trail System. I would also support Plan adoption of Alternative E (Map 19-E) since it includes Mori Ridge Trail for authorized on-leash dog walking. I would like to reiterate, based on my experiences using the Cattle Hill! Sweeney Ridge Trail System, that this trail system (including Mori Ridge Trail) is appropriate for continued multi-use purposes for the following reasons:

a) The trail system's existing ranch/paved roads are wide enough to support multi-use purposes and avoid user conflicts.

b) The trail system's existing ranch/paved roads are surrounded by extremely dense coastal scrub habitat, which serves to prevent and deter trail users (including dogs) from going off-trail and impacting sensitive habitat.

c) The GGNRA maintains the trail system's existing ranch/paved roads on an annual basis through re-grading of the roads and clearance of overgrown vegetation on either side of the roads. Currently, the GGNRA is in the process of clearing overgrown vegetation within the trail system. On Mori Ridge Trail, I have witnessed trimming of overgrown vegetation (including coastal scrub) up to 4

feet on either side of the trail. This annual maintenance surely causes more impacts to sensitive habitat along this trail system than trail users (including dogs).

d) The GGNRA makes no clear distinction between on-leash dog walking, mountain biking, horseback riding, or hiking regarding their intensity of use. Therefore, it would be unreasonable to limit or favor one type of use over another.

2) Based on my comments in item I above, can you explain why Alternative A (Map 19-A) or Alternative E (Map I 9-E) would not be suitable as the Preferred Alternative in order to avoid use conflicts and protect sensitive habitat from trail user degradation?

3) I previously submitted comments on the GGNRA Draft Dog Management Plan/EIS in a letter dated April 26, 2011. This letter focused on the Sweeney Ridge Trail System in San Mateo County and provided detailed comments regarding my trail use experience, problems with the very restrictive preferred alternative, and inaccuracies/discrepancies contained in the analysis of the EIS. My letter is documented in Appendix A of the Public Comment Summary Report for the GGNRA Dog Management Plan/EIS dated September 2011 as Correspondence 2295 (first letter within the Appendix). I was disheartened to find out that none of my comments were adequately addressed in the Supplemental EIS, and that it appears that none of my comments would be responded to on an individual basis. It was my understanding, per Appendix A of this document, that "this appendix contains letters coded differently than others due to the nature of the comments. These letters were not assigned codes as the majority of the letters contained detailed comments referring to specific text within the Draft EIS. Instead responses will be prepared for each letter individually." I

am requesting that the GGNRA explain why they did not follow through with responding to the correspondence contained in Appendix A on an individual basis. I

am also requesting that the GGNRA reconsider my previous comments as they are valid to the construct of the Dog Management Plan and Supplemental EIS as it pertains to the Cattle Hill / Sweeney Ridge Trail System in San Mateo County (attached is my previous comment letter for your reference).

Please feel free to contact me via email at bcbecker13gmail.com if you have any questions regarding my concerns and comments. I would also like to request that you continue to place me on your mailing list so that I may receive notifications of future public hearings and updates regarding the GGNRA Dog Management Plan/Supplemental EIS.

Sincerely,  
Brett Becker, AICP

<b>Correspondence:</b>	Dear Decesion Makers,				

---

I am writing in expressing my desires that as much of the park land bordering Moss Beac and Montata be left as they were before the park came into existence. This is very personel to me since I am a long time resident of this area, some 40 years, with a very good portion of those years spent walking my dogs. In that time frame there have been very few problems that I am aware of.

I would like to point out that in my point of view, and a very important point I think, is that there are Two types of National Parks. First of all there are urban-area parks and I believe these parks should be more relaxed when it comes to rules about dogs. Parks of the second kind, rural of wilderness, could be more restrictive about rules for dogs.

I would also like to point out an honest observation. First of all there are alot of dog owners that walk their dogs in the Moss Beach - Montara area. Secondly, believe it or not, you are more likely to encounter a dog walker on these trails than any other kind of recreational user. Also dog walking is a legitimate form of recreation. Walking is healthy for the dog as well as the owne

I am aware that the environment is fragile. I also would like to see as little damage in an environmental sense to this area in order to preserve its beauty. Why single out dogs a the enemy numero uno? Just look what cars and over crowding have done to Yosemite Valley here in California. Why single out dogs as damaging when horses and mountain bikers and excess use by hikers can also damage the terrain?

It is my hope that dog walkers and ordinary visitors can co-exist peacefully on the trails of the GGNRA area of Moss Beach and Montara  
Please give the dogs as much area as you possibly can here.

Best Regards,  
Roberta Kenneth Bergenson

Enclosed please find my comments on the Draft Dog Management plan that I sent to Supervisor Farrell, Senator Dianne Feinstein and Representative Pelosi.  
Please consider these as comments to you on the plan from me-  
Thank you-  
Isabelle Beekman

Hello Mr. Farrell.  
My name is Isabelle Beekman.  
I live in Pacific Heights in San Francisco.  
I strongly oppose the Preferred Alternative Plan for GGNRA lands..  
My husband and I take our dog to Crissy Field four days a week where we walk him off leash.  
We "work" our dog: sitting, staying, heeling, coming, are rewarded by a ball thrown into the water or along the beach. Over the 25 years we have been going to Crissy, we have seen people

with dogs, families with young children, and water sports enthusiasts happily recreating alongside each other.

As part of the GGNRA, Crissy Field was set up to "provide for the maintenance of needed recreational open space" in the City of San Francisco. The new plan seeks to change people recreating at places like Crissy Field, to their experiencing a national park. We do not need a national park in the City of San Francisco. We need to recreate.

Moreover, this new plan ignores comments from dog walkers on an earlier version with no justification. Furthermore, assumptions made by the new plan regarding the impacts of off leash dogs are not based on any scientific studies. There is no scientific evidence that off leash dog walking has had any negative effects on GGNRA lands.

In summary, I strongly oppose the Preferred Alternative Plan. This plan is unresponsive to previous criticisms; it is not based on science; and most importantly, it seeks a "national park experience" on lands that were intended to be used for recreational purposes, including off leash dog walking.

Thank you so much for listening to my family's opinion on this plan. We hope you will oppose it too.

Most sincerely,  
Isabelle Beekman

Dear Ms. Pelosi,

My name is Isabelle Beekman, I live on Washington Street near the Presidio.

I strongly oppose the Park Service Preferred Alternative plan, in part because it seeks to limit off leash dog walking.

There are many benefits to off-leash dog walking. My husband and I have been walking our dogs at Crissy Field for twenty-seven years. We are usually there four days a week, working our dog: heeling, staying and coming exercises are rewarded by a throw of the ball along the beach, or into the water. Crissy Field is an ideal space for off-leash walks. It is large and away from roads. On any day you can see families with young children, wind surfers, and people with dogs happily mingling in the same space. As part of the GGNRA, Crissy Field was set up to "provide for the maintenance of needed recreational open space" in the city of San Francisco. "Recreational" is the operative word here. The new Preferred Alternative Plan seeks to change people recreating at places like Crissy Field, to their experiencing a national park. We do not need a national park in the city of San Francisco. We need to recreate.

Moreover, in the new plan, previous comments by dog walkers on an earlier version of the plan are completely ignored with no justification. Furthermore, assumptions made by the new plan regarding the impacts of off leash dogs are not based on any scientific studies. There is no scientific evidence that off leash dog walking has had any negative effects on GGNRA lands.

In summary, I strongly oppose the Preferred Alternative Plan. This plan is irresponsible to previous criticisms, it is not based on science, but most importantly, it seeks a "national park experience" on lands that were intended to be used for recreational purposes, including off-leash dog walking.

Most Sincerely,  
Isabelle Beekman

Dear Senator Feinstein,

My name is Isabelle Beekman; I live on Washington Street near the Presidio in San Francisco.

I strongly oppose the Park Service Preferred Alternative plan, in part because it seeks to limit off leash dog walking.

There are many benefits to off-leash dog walking. My husband and I have been walking our dogs at Crissy Field for twenty-seven years. We are usually there four days a week, working our dog: heeling, staying and coming exercises are rewarded by a throw of the ball along the beach, or into the water. Crissy Field is an ideal space for off-leash walks. It is large and away from roads. On any day you can see families with young children, wind surfers, and people with dogs happily mingling in the same space.

As part of the GGNRA, Crissy Field was set up to "provide for the maintenance of needed recreational open space" in the city of San Francisco. "Recreational" is the operative word here. The new Preferred Alternative Plan seeks to change people recreating at places like Crissy Field, to their experiencing a national park. We do not need a national park in the city of San Francisco. We need to recreate. Moreover, in the new plan, previous comments by dog walkers on an earlier version of the plan are completely ignored with no justification. Furthermore, assumptions made by the new plan regarding the impacts of off leash dogs are not based on any scientific studies. There is no scientific evidence that off leash dog walking has had any negative effects on GGNRA lands. In summary, I strongly oppose the Preferred Alternative Plan. This plan is irresponsible to previous criticisms, it is not based on science, but most importantly, it seeks a "national park experience" on lands that were intended to be used for recreational purposes, including off-leash dog walking. Most Sincerely,  
Isabelle Beekman

Re: The GGNRA Draft Dog Management Plan

Dear Mr. Dean:

I am writing to oppose the Preferred Alternative. I reside in San Rafael and regularly take my two dogs to Crissy Field, Fort Fusion, Ocean Beach and other parts of the GGNRA. The Preferred Alternative is overly restrictive. The draft plan/SEIS fails to factually justify the necessity of a major overhaul of existing policies.

The Bay Area has a huge need for off-leash dog areas, without fences. Such areas should be increased, not decreased. Moreover, the erection of fences around off-leash areas will make them feel like pens and will those who use them feel unwelcome. Dog walkers and their animals need large open areas to recreate in the increasingly urbanized Bay Area.

The draft plan/SEIS is fundamentally flawed because it is not supported by empirical evidence. It relies on pure conjecture in speculating that dogs "could" or "might" cause environmental or other harm to specific areas of the GGNRA.

It also fails to acknowledge the self-evident fact that by restricting off-leash activity in the GGNRA, the draft plan/SEIS will force dog owners and their pets into smaller and less available city dog parks, which will become more congested and increase potential conflicts.

I urge you to reject the Preferred Alternative and, instead, expand the number and square footage of off-leash spaces in the GGNRA.

Sincerely yours,

Joel Yodowitz

RE: Dog Management Plan/Draft Supplemental Environmental Impact Statement

Dear Superintendent Dean:

I am writing regarding the draft Dog Management Plan and Supplemental Environmental Impact Statement (DEIS) for the Golden Gate National Recreation Area. I frequently use and enjoy the GGNRA lands and am concerned about impacts from dog-related recreation on wildlife, habitats and other park users.

The GGNRA has more federally-listed endangered and threatened species than any other National Park in the United States! Biologists have documented how dog-related recreation is harming wildlife and their habitats. On Ocean Beach and in other parts of the GGNRA, dog walkers follow leash requirements less than 30% of the time-meaning the vast majority of dogs in the park are off-leash and are not kept on voice-control. Every year, there are hundreds of incidents of dog attacks on wildlife, people and other dogs in the GGNRA.

The National Park Services mission is to manage its lands to protect them for users for all time and to allow recreation only to the extent that it does not harm the park resources. Management of dogs in the GGNRA is essential to ensure that the park remains healthy, sustainable, and enjoyable by all visitors.

I strongly encourage you to improve the plan by implementing the following:

1. Require all Regulated Off-leash Areas to be fenced, at least in areas where fences do not pose risks to wildlife and habitats. Fences provide more security for all park users and create clearer boundaries so that dog owners are aware of how to comply with park rules.
2. Close some GGNRA trails in San Francisco entirely to dogs. Under the current plan, nearly every trail in San Francisco-more than 21 miles-is open to dogs (on- or off-leash), meaning no trails are available for people who want to enjoy the outdoors without interacting with dogs. We also know that where on-leash dogs are allowed, it is common to see many off-leash dogs.

Thank you for the opportunity to comment on the Dog Management Plan. I encourage you to adopt the best measures to protect the National Parks valuable resources for everyone and for future generations.

Sincerely,  
Marjorie Blackwell

on and off leash in areas where it is marked NO PETS or NO DOGS.

Frequently dogs run after wild animals and horses without being called by their owners. Several times barking dogs have jumped on me with dirty paws and the owner responding to my request to hold their animal was, "It is a friendly dog". surprisingly frequently dog owners do not pickup waste left by their dog.

It is reasonable and wise that a small number of trails should accomodate dogs, but more trails should be free of pets and dogs, and enforcement applied.

**Correspondence:** Dogs and dog owners are increasingly polluting the hiking and walking and running landscape. Stepping on dog poop is an every week, and sometimes every day occurrence. Exercising, yoga, circuit training, playing catch, kicking the soccer ball, playing frisbee, are mightily constrained by the presence of dogs and dog poop. Dog owners and walkers do forget to clean up after their animals.

Cryptosporidiosis proliferates.. dog barking has an unpleasant ring...dogs frighten away deer...let's eliminate dogs in public spaces.

**Correspondence ID:** 6564    **Project:** 11759    **Document:** 55416

**Address:** Belvedere, CA 94920

United States of America

**Outside Organization:** Unaffiliated Individual

**Affiliation:**

**Received:** Feb,12,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** Dear Superintendent Dean,

My name is Edgar Peters Bowron and I live in Belvedere, California. I have been visiting GGNRA lands, specifically Crissy Field, Oakwood Valley Fire Road and Trail, Muir Beach, and Stinson Beach, for the past

thirteen years. I exercise there with my dog off leash and under voice control both for my own health as well as the health of my pet.

I oppose the preferred alternative for these areas because it is too restrictive. There is no justification in the 2013 SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around.

The GGNRA has lost sight of its purpose: it was set up to be a recreation area for a densely populated, urban area, not a national park. The GGNRA was built and designed for dog walking from its inception, to better the quality of life of San Francisco metropolitan residents by making dog walking a well-established

priority. In fact, Congressional reports at the time referred to dog walking specifically as one of the uses for the space when the GGNRA was created.

Moreover, in my experience, many of these areas are utilized primarily by dog walkers and not by visitors without dogs. Take Oakwood Valley Fire Road and Trail, for example. I often make note of the people I meet on the trail and irrespective of day of the week or time of day, approximately only two of

every ten visitors are accompanied by a dog. When I count the visitors with and without dogs on the actual beach at Crissy Field, as opposed to the bike and walking path, a similar ratio prevails. After 2-1/2 years in review, the 2013 SEIS was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the DEIS released in 2011, opposing the proposals in that plan by a margin of 3:1. Moreover, there hasn't been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. The SEIS document admits there are few scientific, peer-reviewed studies that show how these areas are affected by the presence of dogs (e.g., on vegetation and soils, p. 375), and instead cites anecdotal observations made by National Park Service staff. However, such anecdotal claims have no validity and cannot be used to set policy. I would ask the GGNRA to conduct the necessary site-specific peer-reviewed studies (as required by law) before making any changes to the uses of our recreational land.

The SEIS does not provide the results of public comment on the DEIS (neither does the "Response to DEIS Comments by the GGNRA" document on the GGNRA website). You say you received over 4,700 comments, but do not specify how many respondents opposed restrictions on dog walking and how many supported them. The SEIS reads: "NPS received many public comments complaining that dog use precluded their enjoyment of areas (p. 100)." But there's no indication of how many negative comments were actually made. Are they from a small minority or are they widespread? An independent analysis of the DEIS comments showed that the vast majority (at least 3: 1) supported dog walking. This is not reflected in the SEIS. Rather, a community forum or roundtable should be set up to evaluate management going forward, including dog walkers and other GGNRA users.

Instead of curtailing off-leash privileges, the GGNRA could institute a dog "green tag" system ' which certifies dogs and their owners to use the area. Irresponsible dog owners should have their privileges suspended, instead of all people losing access to a particular dog walking area.

In conclusion, I oppose the Preferred Alternative because it is too restrictive- -there is no justification in the SEIS for major changes. I support formalization of the 1979 Pet Policy as well as off-leash access on new lands that the GGNRA acquires in the future. And, I urge the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of dog walking recreation in the GGRNA for generations to come.

Sincerely,

Edgar Peters Bowron  
318 Bella Vista Avenue  
Belvedere, CA 94920

Re: The GGNRA Draft Dog Management Plan

Dear Mr. Dean:

I am writing to oppose the Preferred Alternative. I live in San Rafael and have for years regularly taken my two dogs to Crissy Field and other parts of the GGNRA. The Preferred Alternative is overly restrictive. The draft plan/ SEIS fails to factually justify the necessity of a major overhaul of existing policies, let alone the draconian restrictions suggested.

The draft plan/SEIS does not present any site-specific evidence that dogs cause problems or environmental damage. The Supplemental Plan, like the prior Draft Plan, lists purely hypothetical impacts and damage that "could", "may", or "might" happen, but does not provide any credible scientific evidence that any of those impacts ever actually occurred in the GGNRA, or are occurring now. Mere conjecture does not provide a legal basis for valid rulemaking.

The draft plan/SEIS also overlooks the commonsense fact that by severely limiting the off-leash space in the GGNRA, dog owners and their pets will be squeezed into much smaller municipal park areas of local communities, which will increase potential conflicts and negative impacts. This is also true of forcing people with dogs into much smaller areas within the GGNRA itself.

The Bay Area has a huge need for off-leash dog areas, without fences. Such areas should be increased, not decreased. Moreover, the erection of fences around off-leash areas would make them feel like pens and will make those who use them feel unwelcome. Dog walkers and their animals need large open areas to recreate in the increasingly urbanized Bay Area.

I urge you to reject the Preferred Alternative and, instead, expand the number and square footage of off-leash space in the GGNRA.

Sincerely yours,

Shannon S. Yodowitz

**Correspondence:** Superintendent, GGRNA  
Fort Mason, Bldg 201  
San Francisco, CA 94123  
Attn: Dog Management

Dear Superintendent Dean,

I am writing to express my support for the GGNRA Dog Management proposals. I support Preferred Alternative F in the categories listed in the SEIS.

In the years that this debate has been going on, I have never been persuaded that we need a different set of rules for "urban" parks than we have for "wilderness" parks. It seems to me that the heavy use of urban parks by surrounding populations requires more safeguarding not less. That said - the compromise that I am willing to make is that dogs off-leash be allowed in some areas but not all areas. Balance doesn't mean that 50% of GGNRA should be off-leash dog areas.

The fact that Marin County Board of Supervisors has labeled this a "defacto dog ban" policy and that Congresswoman Speier considers the plan "unacceptable" makes it clear that no amount of discussion will change the minds of those who want to be able to walk their dogs where they want. So I hope whatever plan is eventually approved will include the enforcement procedures that will ensure compliance.

I was 12 years old when my parents took my sister, a cousin, and me on a two month camping trip from Pennsylvania, where we lived, to the 1962 Seattle World's Fair. We visited many magnificent sites that were administered by the National Park Service. It is an experience that planted in my heart an appreciation for the diversity of the natural beauty of our country. It is why I believe the the GGNRA needs to be protected so that 100 years from now a 12 year old visiting them will experience the same sense of awe and wonder I did when first viewing these incredible areas.

I have faith you will do the right thing.

Sincerely,

Bill Wilson

Re: comments on Supplemental Draft GGNRA Dog Management Plan/EIS (SDEIS)  
Date: February 18, 2014

I am a 68 year old resident of San Francisco for whom walking with my dogs on and off leash in the GGNRA, especially Ft. Funston and Crissy Field, has been an important part of my life since about the mid-1970's. I have been a Sierra Club hike leader as well as being involved in birding and nature oriented trips nationally and internationally, and I have been a supporter of nature conservation groups for many

years. As I have gotten older it has become more important for me to have outdoor recreational access for myself and my dogs near my home. I need to keep myself and my dogs fit in order to pursue dog agility and hiking with dogs, which activities help keep me physically healthy, mentally stimulated, and in good emotional health. And the local dog walks also keep me part of an important community of other active people with dogs.

I have been disturbed in recent years by what I perceive as efforts to make the GGNRA into a park more fit for a wilderness area than as a park founded as a recreation area to serve the needs of a dense urban area as well as visitors who come to enjoy the natural beauty as well as the culture of this San Francisco Bay Area. I believe this problem may have come about because of the phenomenon of popular areas being loved to death. The park administration has to contend with the demands of many different users, but I don't think kicking users out of the park is the solution, and I do think that better ways need to be found to keep heavily used areas planted for maintenance and not turned into sand dunes again. Therefore I support revising Alternative A or Alternative F to provide more access to GGNRA by people with their dogs.

The current preferred alternative does not adhere to the enabling legislation to provide for needed recreational open space necessary to urban environment and planning. Off leash dog walking was described as one of the recreational activities to take place on GGNRA lands when Ft. Funston was given by the city of San Francisco to the GGNRA. There are ways to mitigate the toll of heavy usage on the most accessible areas of the GGNRA that haven't been fully explored in the current preferred plan. For example, permits could be required for commercial dog walkers and the fees could go toward rotating renovation of heavily used areas. There could be timed usage so that people who don't like dogs can have access to areas without dogs at times, for example an easy to remember policy could be no dogs on Sundays (or at least Sunday afternoons ' many families who like to have outings to Ft. Funston or Crissy Fields like to do including their dogs).

The current preferred plan also doesn't make good sense for the ecology of the whole Bay Area, which includes the humans as well as plants and animals, and which should take a look at use patterns in city, regional and state parks. There have been declining areas for recreation with dogs through the years, as county beaches became state beaches, and there need to be more areas for such recreation not less. Dogs contribute to physical and emotional health of people, who are under stress just being in an urban environment, so dog walking should be prioritized as an activity. The GGNRA should not be cutting off leash dog walking areas to next to nothing at a time when there are fewer city parks available due to the expanding coyote population. The beaches of the GGNRA remain one of the safest places for people to seek recreation with dogs. Too much area has been set aside for the snowy plovers to feed. Perhaps there could be some fenced areas where no people or dogs are allowed up and down the coast, and then the plovers could find food without disturbance and people and dogs could still have lots of space for recreation.

Respectfully submitted,

Linda Wilford

Subject: 'Comment on GGNRA draft Dog Management Plan I SEIS'

RE: ROLA Location In Montara (Alternative 'C' and 'E' of the GGNRA draft Dog Management Plan / Supplemental Environmental Impact Statement (SEIS)

Dear Mr. Dean,  
I'm writing to you to express my deep concern about the alternative to create a Regulated Off-Leash Area for dogs between Le Conte and Tamarind streets in Montara, CA. I am STRONGLY OPPOSED to this.

Both Le Conte and Tamarind streets are very narrow, and will not accommodate parking for dog owners' cars. In addition, the surface on these streets, especially Tamarind, is marginal and is patched continually. Additional traffic on this normally quiet street will cause more rapid deterioration and increased cost for maintenance, which San Mateo County can ill afford.

This is a quiet, peaceful neighborhood and numerous barking dogs and shouting owners in a concentrated area will be disruptive to everyone in the area, including those in the adjacent Farallon School. I don't believe it is right to construct fences and change the nature of an entire neighborhood for the sake of only the dog owners. This is supposed to be OPEN space for everyone, not fenced-in space for dog owners created artificially in a quiet residential area.

Rancho Corral de Tierra is a large space. Please find a more suitable location with adequate access and parking for this. Or better yet, simply require that dog owners leash their dogs as is required by the County.

Please keep my personal identification information from public view.

Sincerely,

Ronald Welf

Dear General Superintendent Dean:

The National Park Service has a rich resource in the Golden Gate National Recreation Area. This resource needs stronger, more effective dog management policies in the Golden Gate National Recreation Area to protect the resource for our future.

We need more trails and areas within the San Francisco part of the GGNRA that are off limits to dogs. Today you can encounter dogs everywhere in the park and it is not enjoyable for people that seek a quiet walk or want to enjoy birds and other wildlife. As a birdwatcher I no longer visit some parts within the GGNRA for example Fort Funston, because it is disturbing to see the dogs flushing birds along the trails and shoreline. Designated off-leash areas should be extremely clear to the public with obvious fencing and educational signage.

The National Park Service needs funding to support the staff required to enforce the dog rules. The GGNRA proudly boasts that there are 25 federally listed as endangered and threatened species that can be found within the park.

The National Park Service should protect these and other native species for future generations. One example of a federally listed species found within the park is the Snowy Plover. The US Fish and Wildlife Service Recovery Plan for the Snowy Plover states Pets should be prohibited on beaches and other western snowy plover habitats if, based on observations and experience, pet owners fail to keep pets leashed and under full control. The sensitive habitat for the Snowy Plover today is clearly ignored by some irresponsible dog owners. The compliance with the leash rules is weak. In 2008-2009 compliance was 34% and about 40% since that time. See [http://www.goldengateaudubon.org/wp-content/uploads/10819-GGA-Crissy-Field-WPA-SNPL-Report-2009-2010-finalRep\\_2f0Q\\_20\\_10-final11.pdf](http://www.goldengateaudubon.org/wp-content/uploads/10819-GGA-Crissy-Field-WPA-SNPL-Report-2009-2010-finalRep_2f0Q_20_10-final11.pdf)

General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco CA 94123-00 22

Dear Superintendent Dean,

I am writing to comment on the proposed plan for usage of the Rancho Corral de Tierra area handed over to Golden Gate National Recreation Area (GGNRA) by Peninsula Open Space Trust (POST) in 2011.

I have lived in San Mateo county since 1975 and El Granada since 1999. I bought my home in El Granada (and tolerate a lengthy commute every weekday) specifically and solely for the proximity to areas where I could hike with my dogs. I have enjoyed hiking with dogs in the area behind El Granada regularly since I moved in, continuing in the traditional use of that land that has gone on for decades, and likely since the time of human inhabitation of the area. Like most of my neighbors, I am a responsible dog owner. I pick up and carry out feces. I do not allow my dogs to disturb habitat, chase animals. Dogs have no greater impact on the environment than, for instance, a child would, and certainly less impact than a bicycle would.

Because I love the land behind our town, I have taken it upon myself to help protect and maintain the area. I never hike without a large garbage bag, and I pick up all garbage I see - which, at times, has been a whole lot and necessitated several trips for removal. Several of my dog-walking neighbors do the same thing. There are others who hike with pruners and shovels and work to maintain the patency of the trails. The people of this area greatly value the Rancho land and take care of it voluntarily. I am an environmentalist. I contribute time and money to many national and international associations dedicated to preserving wildlife and the environment, such as the Cornell Laboratory of Ornithology, Sierra Club, Audubon Society, World Wildlife Fund, National Wildlife Association, Nature Conservancy, and Zero Population Growth. I contributed regularly to POST to specifically aide in the preservation of our little area of Rancho. Hiking with dogs is not antithetical to caring about the environment. Clearly, many very avid and contributory environmentalists are dog owners.

I am dumbfounded that the preferred plan (Alternative B) that GGNRA proposes for Rancho is to completely prevent off-leash dog walking and severely limit access even for leashed dogs. This is so out of alignment with my experience of the current and historical usage of this land, as well as with my observations of lack of environmental impact of dogs, that I wonder if there is some unknown, malevolent motivation behind the proposal. What could possibly cause the GGNRA, part of our government - which is supposed to be by and for the people - to wish to completely change the way the local people enjoy public land? Why would a governmental body move to reduce the property value of citizens who have lived here for decades? Why would GGNRA risk alienating all the volunteers who have worked for years to keep Rancho clean and safe, providing this rare bit of natural habitat for the native wildlife? Why would GGNRA discriminate against citizens who wish to hike in this beautiful territory with their families, when their family members, in part or in whole, are composed of dogs? This is not responsible government. This is oppression, discrimination, and thoughtlessness. Proceeding with Alternative B will bring you ill will, passive resistance, legal action, and trouble and heartache for years to come.

Mr. Dean, I urge you to consider Alternative A - the usage plan which would continue to allow responsible dog owners to hike with their dogs on leash in all parts of Rancho, and even off-leash in specific areas behind Montara and El Granada. This is exactly how people are currently using this land. This will not cause the loss of goodwill and cooperation of the locals. You will retain your volunteer garbage collectors, trail custodians, and stewards of the environment. You will ensure that the people and dogs of San Mateo County have someplace to go to get fresh air and exercise and contribute to the

general health of the populace. You will be maintaining the wonderful aura that permeates this wild territory. As a government employee, you will be accurately representing the local peoples' will - truly governing by and for the people.

Thank you for allowing me to comment on GGNRA proposals for Rancho Corral de Tierra. If you have questions, or would wish to more fully understand my position, I provide my telephone numbers and email address below and invite you to contact me.

Frank Dean Superintendent GGNRA Building 102, Ft. Mason San Francisco, CA 91423					

Dear Mr. Dean,

I am writing to you regarding the DSEIS for dog management in the GGNRA.

As you are aware, I have been personally involved in the dog management issue for over twelve years as the chair of the Crissy Field Dog Group. I participated as a member of the Negotiated Rulemaking for Dog Management in the GGNRA and have been one of the few people who have visited all 22 areas under consideration for dog walking in the GGNRA. I am writing to you as a very concerned citizen who has lived in the San Francisco Bay Area for over thirty years.

Just remind you again, this is a recreation area. This is NOT a national park. It was established in 1972 to improve the quality of life in a major urban area, namely the city of San Francisco and its two neighboring counties, Marin to the north and San Mateo, to the south.

The issue of dog management in the GGNRA is not a contest to see what party will outlast the other party but rather should be about a thorough land use process that objectively evaluates the impact of dogs in the GGNRA and creates a viable and workable plan that creates a balance that will accommodate dog walking as originally intended by the GGNRA enabling legislation.

Unfortunately, this newest version of the GGNRA's DSEIS is far from adequate and is unduly restrictive about where dogs and their owners may continue to walk in Marin, San Francisco and San Mateo counties. There is no justification to warrant such draconian measures other than to force out dogs and their owners in the long term. It seems like that is what the GGNRA wants to accomplish here. We will never let that happen.

So far, Congresswoman Jackie Speier, San Francisco Mayor Ed Lee, the San Francisco Board of Supervisors, the Marin County Board of Supervisors, the President of the San Mateo Board of Supervisors, the San Francisco SPCA, and the Marin Humane Society have expressed concerns opposing the restrictive nature of the GGNRA's preferred alternative and highlighting the GGNRA/NPS need to acknowledge or incorporate many of the public comments that were submitted in the DEIS in 2011.

Around 4700 public comments were submitted for the DEIS in 2011. A forensic accountant took the time to do a count of these comments and found that the people who were in support to retain the status quo of the GGNRA's 1979 Pet Policy (dogs under voice control in certain areas of Marin and SF counties) plus including the new San Mateo county lands was a clear 3 to 1 majority. We are tired of the GGNRA spin of saying that the dog supporters had a little over fifty per cent support for this issue. That is simply incorrect.

#### The DSEIS - - General Comments

I have read the DSEIS document several times and I will let our NEPA experts convey their specific NEPA concerns on behalf of the Crissy Field Dog Group, and from our present and former attorneys, as articulated in Ashley Miller and Ken Weiners letters. I concur with everything that they have written in their letters. I wish the GGNRA would take NEPA more seriously and produce an objective environmental analysis and follow the letter of the law. To date, that has not happened. In addition, I encourage the NPS/GGNRA to actively engage with relevant stakeholders to create a dog management plan that is workable and reasonable. NEPA encourages this type of dialogue and the NPS/GGNRA has flatly refused to collaborate with relevant stakeholders.

The DSEIS proposes too many restrictions with too little analysis and factual basis. There isn't any reliable scientific data to form a foundation for this plan. These proposed restrictions (only 7 of the 22 areas proposed would allow dog walking access on GGNRA lands in all three counties), in turn, will likely increase user conflict because of the limited remaining space for dog recreation. For example, the proposal to have dogs on leashes at places like Baker Beach or Muir Beach will simply not work and is unrealistic. And there is no factual or scientific basis in closing off leash dog walking at East Beach or the Grassy Airfield at Crissy Field nor at any of the areas under consideration. What dog can you take to the beach and not have them romp and have fun? Dogs and people need socialization for a healthy and happy lifestyle.

This DSEIS is clearly biased against dog walking. According to the 1972 GGNRA enabling legislation, the GGNRA should be protecting one of its core values, recreation. Both the House and Senate reports identify dog walking as a popular recreational activity but the benefits for dog walking are not properly recognized in this document.

When Crissy Field was restored in 2000, one of the purposes was to create more space for off leash recreation because of the anticipated growth in the number of visitors with

dogs. The proposed reduction in off leash recreation area at Crissy Field is a reversal of course without basis especially where the impact on all park visitors will be increased concentration of dogs in a smaller area (Central Beach and a small portion of the Grassy Airfield). This makes no sense and is setting up the dog management plan for failure.

Concerns identified from Chapter 2 (Alternatives):

" The GGNRA makes the assumption that there needs to be a no dog experience at all of the 22 areas under consideration for dog walking access. Where and how did the GGNRA make a unilateral rule that mandates such an action?

" The GGNRA manages around 80,000 acres and already less than one per cent of GGNRA lands in all three counties are being considered for dog walking access. People who do not want a dog experience can go to the other areas of GGNRA lands to have a dog free experience.

" Many visitors (including families and seniors) to the GGNRA who do not own dogs actually go to places like Crissy Field so they can enjoy watching dogs having fun. For a variety of reasons, some people cannot afford dog care, are allergic to dogs, or are simply too busy and understand that they do not have the time to take care of a dog but enjoy the opportunity to watch the playful doggies.

" The notion that dogs and their owners and other visitors to the GGNRA are incompatible is erroneous. The GGNRA uses the phrase multiple user groups with a negative connotation as if co-existence does not already occur. It occurs successfully everyday in these specific areas and has for years. A fact to consider: in the year 2012 to 2013, (data I received from a GGNRA staffer) out of the hundreds of thousands of visits by people with dogs; there have only been reported 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. While I am troubled that these dog-related incidents occurred and want to prevent any type of further dog incidents, I believe that expanding the San Francisco SPCA's Off Leash Open Space dog-training class would help to reduce such dog related incidents in the future. Also, it is my understanding the human incidents rate in the GGNRA for the same time period is much, much higher. This data does not support a need for change to further restrict off leash dog walking.

" The descriptions of places like Upper Fort Mason, Baker Beach, Ft. Miley, and Lands End are identified as low to moderate use but there is absolutely no factual or scientific basis to restrict voice control or off leash in these areas. There are a large percentage of people who use and have used Upper Fort Mason, Baker Beach, Ft. Miley, and Lands End for generations. These are people who live in San Francisco and consider the GGNRA to be their backyard, naturally. The same concept holds true for areas under consideration in Marin and San Mateo counties. Literally, the GGNRA is near or adjacent to peoples backyards.

" Two plant species (Marin dwarf flax and the SF Lessinga) have been

identified at Baker Beach and the adjacent high bluffs as an endangered species. Yes, we want to protect them and this could include implementing mitigation measures like appropriate post and cable fencing and appropriate signage. However, the DSEIS omits analysis of the design of the built environment altogether. Again, there is no factual or scientific basis to restrict dogs under voice control at Upper Fort Mason, Crissy Field, Baker Beach, Ft. Miley, Lands End, Ocean Beach, and Fort Funston or the other areas under consideration in Marin and San Mateo counties.

Real and Significant impacts not addressed in the DSEIS:

The year round special events at Crissy Field present the most significant environmental impact as many as several million people impact this area. It is not the dogs that have a significant impact here; it is the people and the heavily attended events such as Fleet Week, Americas Cup, corporate fundraisers, etc. that have a deeper and lasting impact on the environment. Additionally, the biggest safety concern at Crissy Field is the bicyclists, primarily tourists who blindly run into people along the promenade. The dogs and their owners are not a safety issue- -there isnt any empirical data in the DSEIS that supports that. I am not saying that there arent any situations that need attention, but the DSEIS is so biased against off leash dog walking you would think dogs present a daily hazard, which they do not.

And unfortunately, there were thousands and thousands of fireworks casings (made of cardboard, metal and plastic) that washed up on Baker Beach and Crissy Field as the result of the celebration of the Golden Gate Bridges t7h5 anniversary. It was the dog walkers who cleaned up this mess at Baker Beach and Crissy Field for several days running.

It would be helpful if the GGNRA would place signs about where people can walk their dogs under the 1979 Pet Policy now so everyone can understand the boundaries. This would also give the US Park Police and NPS Park Rangers an idea about where to enforce or not on GGNRA lands. These immediate possible mitigation measures should be given a chance to work before the GGNRA implements any significant restrictions as are proposed in the DSEIS.

The SDEIS states that dogs harass marine mammals at the beaches. However, the Marine Mammal Center has relied on dog walkers for years to inform them about stranded marine mammals on beaches - - these beneficial aspects of dog walkers should be taken into account in all fairness. The TMMC wrote an email letter to Jane Woodman in 2006 stating this information and is attached for your information. The dog walkers are the first responders when these marine mammals wash up on beaches because of illness or injury and TMMC depends on these sightings so if possible, they can help the distressed marine mammal in a timely manner.

Misrepresentation in the DSEIS

Boulder Green Tag Program: The DSEIS reported that the Boulder Green Tag Program wasnt successful and therefore the GGNRA dropped any consideration in pursuing the program as a viable enforcement tool for the GGNRA. Clearly the GGNRA did not do its homework. I personally spoke with the Green Tag Program Director and in fact, the Green Tag Program is highly successful with a compliance rate in the high 80% to low

90%. have made some recent enhancements to the program to make it more effective - but in short, it works. This program model would be an excellent model as a clear enforcement program.

Consider Urban Design to accommodate changes for Fort Funston:

The GGNRA should consider innovative structural solutions that were dismissed from the DSEIS entirely for Fort Funston (e.g., vegetative barrier, post and cable fencing). These are concrete ways to manage the protection of natural resources and dog walking at Fort Funston.

#### Workable Solutions

I believe that a workable and reasonable dog management plan would include:

- 1) Maintain the status quo of recreational dog walking areas: the 1979 Pet Policy plus designated off leash areas in San Mateo lands, with additional enforcement and mitigation measures identified here.
- 2) Implement variation of the Boulder Green Tag Program for clear enforcement
- 3) Educational Outreach: partnering with the SF SPCA and Marin Humane Society in developing and expanding an Off Leash Open Space Training Program.
- 4) Mitigation Measures: Vegetative barriers, post and cable fencing to protect plant species, clear signage
- 5) Recreational Roundtable: Community stakeholders who are committed to resolving on-going issues within the GGNRA (public private partnership)

#### Creating a Workable, Representative Plan Based on Public Comment

This is not simply a paper trail process but an opportunity to create a workable plan for the future. You are affecting ordinary citizens whose lives will be greatly affected about their ability to walk their dogs off leash in a responsible manner. This issue was highlighted for me recently when I looked at some older documents relating to this issue and found a resolution from 2006 from some members of the Negotiated Rulemaking committee sent to the Committee facilitators and it struck me that the same issues that we were concerned with in 2006 are still relevant today. Clearly, this failure to incorporate substantive comments into the preferred alternative indicates that NPS/GGNRA is focused on what outcome it wants, not what the public at large is saying. I hope that the GGNRA/NPS really listens to the people who use the GGNRA on a daily basis and incorporates and takes the public's comments seriously.

Crissy Field Dog Group has been collaborating on constructive solutions for many years in the GGNRA. For example, working with SFSPCA and GGNRA, Crissy Field Dog Group helped develop the Off Leash Open Space Training Program. Working with the San Francisco Board Sailing Association and the GGNRA we were part of the building of the dog rinse station at Crissy Field. CFDG has purchased and distributed dog waste bags on a daily basis throughout Crissy Field for many years.

We wish to take this spirit of collaboration into the next phase of this process, so that we may truly work together to develop a workable solution to dog management. I ask that the GGNRA to take a balanced, fact based approach to its environmental analysis that will result in the preservation and protection of important dog walking recreation in the GGNRA for generations to come.

Thank you for the opportunity to comment on this critical document.

**Correspondence:** Dear Superintendent Dean,  
My name (as you can see above) is Eleanor Burke, and I am a 75-year-old grandmother, a native San Franciscan, a retired high school English teacher, and an author.  
I love to walk along Crissy Field and watch people and their dogs, enjoying the fact that families still find life worthwhile in this city. The dogs are an important part of that - the fact that within the city limits a dog owner can let his dog run free along the sandy beach, romp in the water, play with other dogs, is a source of delight to me, to their owners - and to the doggies themselves. Quality of life is so important to people who have decided to stay in the city, not flee to the suburbs, a decision my husband I made long ago for our children - and dogs. We had dogs for many years, loved taking them to Baker Beach and Crissy Field, where the exercise joy they got from running free made them great pets and companions. Please do not ban off leash dogs from the proposed areas along Crissy Field. Please do not disregard the positive value of letting dog owners let their dogs play run.  
Sincerely,  
Eleanor Burke

RE: Dog Management Plan

Dear Mr. Dean:

I have reviewed the subject Plan and attended many of the National Park Service's public meetings at which the Plan was explained and discussed. I have lived in Montara, California a little over three decades and therefore will limit my comments to that part of the Plan, Rancho Corral de Tierra (Rancho), that affects me directly and with which I am most familiar. When I moved here with my wife and daughter in the fall of 1983 we had three dogs and since that time our pack has varied from as few as a single dog to as many as five, most rescued animals. Since that time we exercised the dogs on Rancho property, usually only on week-ends but when I retired in 2004 almost daily on and off leash without incident.

Our walks generally were confined to that portion of Rancho located north and west of Farallone View School. This parcel of Rancho is crossed by many trails and has been greatly altered by agricultural uses, construction of the Ocean Shore Railroad, San Pedro Mountain Road, and Highway 1, and most recently by CalTrans' construction of the "Montara Mosquito Ponds" as mitigation for its construction of the northern approach to the Lantos Tunnel. Within this area the terrain varies greatly from flat to fairly steep hills. The vegetation also varies from grassland and shrub to impenetrable thicket to stands of trees which tend force adherence to the trails. It is for these reasons I have recommended to you and your staff previously that this area be considered as one that dogs would be permitted off-leash. Within this area off-leash dogs can easily be contained from the suburban neighborhoods to the south and east, by fences and terrain from Highway I to the west, and by the trees and higher terrain to the north. There is enough variety of land and vegetation to allow bigger dogs to run and get the kind of exercise they require. The Plan's proposal to provide a bit of off-leash area north of the alpaca farm between Le Conte and Tamarind has to be a joke. That area would create a dog park too small to allow for proper exercise, create a nuisance in a residential neighborhood, the same one that fought you with regard to the location of trailheads. and create a major concern for the alpacas and their owner.

In making your final decisions with regard to the Plan within Rancho I encourage you to permit off-leash exercise for dogs in the area roughly bounded on the west by the former Farallone View cut-off and old San Pedro Mountain Road to the stables; then east across the hills and valleys to the formerly proposed CalTrans Devils Slide Bypass right-of-way; and then south along a line which approximates an extension of LeConte. Avenue. This will provide a meaningful off-leash area large enough to avoid congested use and further damage to the environment. In addition the final Plan should permit leashed walking of dogs on all existing trails leading to this area and throughout Rancho.

Your thoughtful consideration of the above recommendations in making your decisions on the Plan is appreciated.

Sincerely,

Louis S. Wall

**Correspondence:** Dear Superintendent Dean,

My name is Eleanor Burke. I am a 75 year old grandmother, lifelong San Francisco resident, former high school English teacher, author of a book on San Francisco sold in GGNRA stores, and former dog owner who loved walking our dogs along the beach at Crissy Field.

Because dog walking was specifically referred to as a long-standing use for the newly-created GGNRA in 1972, this specific recreational use should continue for years to come. I support preserving the GGNRA's 1979 Pet Policy. This is NOT a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed according to different standards, with the understanding that it is part of an urban environment that draws thousands of families with dogs to Crissy Field every year.

Sincerely,  
Eleanor Burke

I'm writing this letter because not all dog owners are irresponsible. It's a public place people nit to have fun with there dogs. Dogs need exercise for they could be a good dog becouse a dog that not exercise might misbehave. 50% homes in Sf have dogs. Dogs and dogwalkers keep parks safe.

With Love

Kellyn Umanzor

Thank you

**Correspondence:** Dear Superintendent Dean,

My name is Eleanor Burke, as indicated above, and I am a 75 year old grandmother, longtime dog owner, native San Franciscan, retired high school English teacher and author of a book on San Francisco Neighborhoods - Sketching SF's Neighborhoods.

Please consider the thousands of dog owners who enjoy letting their dogs run on the beach at Crissy Field, and do not restrict their access by requiring that dogs be on leashes in most areas. I feel that doing so would only encourage dog owners to scatter into neighborhood parks or on streets, which would probably make an impact on them all in forms of dog poop and probably more dog fights between leashed dogs. I've noticed that off leash dogs quarrel with each other very rarely - when they are unleashed not restricted, they are much less likely to engage in turf battles that can escalate and end up in dog bites of anyone trying to break up the fight. This all was quite the case with our own dogs - Crissy Field was a godsend and definitely promoted much more civilized behavior on their part.

Given how many dogs there are in this city, I think the proposed restrictions would be terrible.

Sincerely-

Eleanor Burke

To whom it may concern.

Re: Fort Funston:

Please do not reduce the size of the off leash areas. As a dog owner we have been using the "Fort" for our dogs and it has been a blessing to us and our dogs. We always adopt shelter dogs who are older and often in need of socialization with other dogs and very often with people. We first got acquainted with Fort Funston after adopting a dog who was 3 yrs old and had been locked in someones back yard all her life and was very fearful. Our vet suggested taking her there because it is non territorial so she could get adjusted to people and other dogs. Fort Funston was a God send! She adjusted and lived a long, happy life. I have other stories about our other rescued dogs. Fort Funston has been a place of socialization for my family and our dogs that has made our lives better. The only real damage I have seen over the years is erosion due to the removal of the Ice Plant that was stabilizing the sand now with out the Ice Plant the sand has blown and made the walkways impossible. The ability to walk around Fort Funston for us and to run for our dogs has made for healthy dogs and people. Please do not make it more difficult. We have been going to Fort Funston for 25 years.

Thank you,

Mrs. Loretta Teiber

Dear Superintendent Green,

My is Bernard Burke, a 77 year old native San Franciscan. I am writing to express my dismay over the GGNRA preferred alternative that so severely restricts dog walking areas. The conclusions in the supplemental Dog Management Plan/SEIS seem flawed and not based upon fact. It seems to overstate a problem.

The GGNRA is not a National Park, it is a "Recreation area" in an urban environment. I support the 1979 Pet Policy being maintained.

Crissy Field especially should undergo only minimum changes, if any. Please be reminded that all 3 county boards of supervisors of the impacted counties oppose the plan.

I urge you to take measured changes to the current dog walking rules.

Thank you for your attention.

February 14, 2014

Dear Superintendent Dean,

My name is Gina Symczak, and I have lived in San Francisco for over fifty years. Most of that time, Ive lived across the street from the Presidio in Cow Hollow. Over these years, I have always walked my dogs at Crissy Field -both when it was an army base and a national park. Its been an important part of my experience of city life - - - actually, a wonderful blend of city and nature, unique and important to San Franciscos history.

One of the primary reasons my husband and I adopted our current dog, Lucy, was to help us overcome a tragic loss. We got her, expecting that walking her everyday in such a beautiful place would help us to find some joy and heal. And, in fact, it has. We have walked off leash every morning at Crissy Field for the past seven years- -basically since the day we adopted her. Nothing makes us happier than to see her confidently walking down the paths, wagging her tail, and turning around every once in a while to make sure we're catching up. And the tourists and little kids love watching her, too-it makes everyone smile. She adores the freedom, and we think she is a better-behaved dog because of the exercise and trust that off-leash walking provides. Anyone who has a dog knows of the special joy in seeing them want to engage and walk with you- - when they aren't made to with a leash. It's a sign of love and trust that is very gratifying.

I can tell you that after the 2500 walks that I have taken at Crissy over the past seven years, and countless others before then, I can count on one hand the number of issues I have seen involving dogs. Has anyone from the GGNRA making these proposed alternatives had that much first-hand experience walking there?

Dogs need a lot of exercise from running and socializing in order to behave, and the best way for them to get this is by being off-leash. A good, respectful dog is a tired dog, and one that is treated well; pet parents can't provide that if their options are limited. There are far more issues - and more important issues - - arising from humans degrading the area, such as during the Fourth of July fireworks at Crissy, than there are from dogs degrading the area. At least the dogs have responsible humans picking up after them; sadly, the humans don't often pick up after themselves.

I want you and our representatives to know that my husband and I support preserving the GGNRA's 1979 Pet Policy and we oppose the GGNRA's preferred policy. This is a unique national recreational area in an urban environment - - not a pristine wilderness. It needs to take into consideration the needs, habits and expectations of the residents of the wonderful city in which it has the privilege to be. With almost twice as many dogs in San Francisco as there are children, dog owners need to have easy access to recreate with their best friends (whom they often treat like their children), and the 1979 policy respects that. Dog walking was specifically referred to as a long-standing use when the GGNRA was created in 1972, and we believe this specific recreational use should continue for years to come. After all, it is called the Golden Gate National RECREATION Area for a reason, right?

The GGNRA's "preferred alternative" is definitely not our preferred alternative. It would greatly limit where Lucy and I could walk freely, together. I have walked so much on the sand, that I have actually injured my hip. It would be terrible if I could no longer walk freely with Lucy on the paths at Crissy, and had to be limited to the sand. I can't take her all the way to Ft. Funston and, even if I could, it's too dangerous for her because she's had two surgeries on her legs and the cliffs are difficult for her to navigate. I don't know what we'd do.

Additionally, my husband and I are concerned because the conclusions reached

in the Supplemental Dog Management Plan/SEIS are unfair and flawed:

- This SEIS allows even more restrictions in the future, but wont allow for new areas to be opened up to dog walking (either on- or off-leash).
- The studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasnt updated the enforcement data since the last draft ETS was released.
- A significant number of comments submitted for the GGNRAs Draft ETS in 2011 were not considered or addressed in the GGNRAs Supplemental EIS -is this process only for show or are you taking things seriously?
- The SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

We want the GGNRA to take a balanced, fact-based approach to its environmental analysis that 1) considers the unique needs of this urban recreation area and its residents, and 2) will result in the preservation of offleash dog walking recreation in the GGRNA for generations to come.

Sincerely,

Gina Symczak

RE: Dog Management Plan  
Dear Superintendent Dean,  
I live and work in San Francisco and have been walking my dogs at Crissy Field for almost 24 years. I use the park on a daily basis and walk my well-trained dogs off-leash and under voice control. My dogs and I value the social, physical and mental benefits of walking and playing on the beaches each

---

day. Crissy Field is my front yard, my escape from frenetic life, my prescription for good health.

Preferred Alternative not workable

Since 2001 I

have written numerous letters to three different superintendents regarding continuation of off-leash in the GGNRA. The 1972 enabling legislation provides for the maintenance of needed recreational space and to expand to the maximum extent possible the outdoor recreational opportunities available to the region. (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972). Your preferred alternative removes huge areas at Crissy Field (most of the airfield and the East and West beaches for dog walking).

Under your alternative Baker Beach has no off-leash. Ocean Beach and Ft Funston are restricted. Areas in Mann and San Mateo that have historically allowed off leash have been eliminated.

After the overwhelming response to the DEIS, three to one in favor of continuation of off-leash, the SEIS seems to ignore those responses and has created more restrictions. Your preferred alternative so greatly reduces or eliminates off-leash areas that your plan does not seem workable. By reducing offleash and other areas for dogs by 90%, our alternative, I fear,

will result in people and dogs venturing into areas that are currently not open for dog walking.

What you do not seem to understand is that law-abiding people with dogs have to and are going to walk their dogs at least twice a day. By restricting or eliminating areas for walking, these people will seek out other places to walk in the GGNRA, places you really do not want them to go. To protect the resources on your 80,000 acres, you need to allow more off leash areas to absorb the thousands who flock to the beaches and wooded areas each day. You need to provide adequate space for recreation and play. Good people have to walk; you need to provide enough space for them to do so.

Airfield at Crissy Field

Your preferred alternative as regards the airfield is counter productive. The area is very large and can absorb a huge number of people with dogs without interferring with walkers and joggers on the path or people walking on the beach. By restricting the use to a small middle section, you miss an opportunity to keep dogs away from the people and resources you want to protect.

In addition, there is no easy access to parking if people with dogs want to access this section of the field. I

fear that people

will park alongside the low buildings opposite the field and will not be able to safely unload their dogs and will have to dart across a section of Mason Street where cars drive too fast and there is no crosswalk to protect pedestrians. This is

dangerous! In addition, both areas are now permitted paid parking which is expensive and prohibitive for many who want to use the park.

The rest of the airfield is rarely in use by anyone but people with dogs and should be open to use. There is no sensible reason for it to be restricted. Many people park in the lot behind Sports Basement which allows free and safe unloading of dogs and well as safe crossing of Mason Street for access to the field.

It makes sense to limit the section of the airfield west of the sidewalk opposite Stillwell Hall as many families using the facilities in the hangars play and picnic in this area.

#### East Beach

By eliminating all dogs on East Beach you prevent many elderly, disabled or infirm dog owners as well as families with small children access to the beach. These groups may find it difficult or impossible to walk from the parking lot to the Middle Beach. It is imperative that all citizens have access in the park. A weekend restriction at one end of East Beach could accommodate these groups.

#### West Beach

I full endorse protection of the snowy plover when they are at West beach. But it makes no sense at all to eliminate this beach for walking when the birds are at Pt Reyes from April to September or October. Closing off the beach to dogs year round is nonsense. As explained above, removing areas that are safe for wildlife and other resources when there is no risk and the need is great is bad management.

Enough space for dogwalking will protect the park

There is a long history of off leash dog walking on our beaches and in our woods, plus an expectation that we will continue have this access in the park. Reducing access for dog walking by 90% in the few areas we have is not acceptable. In addition, the SEIS does not allow any off-leash dog walking on new areas and lands acquired by the GGNRA in the future, even if dog walking occurs has traditionally occurred there.

I believe that the 1979 Pet Policy, which you signed off on, is the only acceptable choice. Keep the status quo.

Sincerely,

Sally Cancelmo

February 2, 2014

Dear GGNRA,

Fort Funston is by far my favorite place to go in all of San Francisco. My name is Erik Christianson; I live

in Daly City and work in San Francisco. I am a lecturer at San Francisco State University and an instructor

at City College of San Francisco. Six to seven days a week I visit Fort Funston with my two year old dog, Whitney. It provides great exercise and socialization for both of us. As a responsible dog owner, it is important to me that I can go somewhere safe with my dog. There is no place I feel safer than Fort Funston. The dog owners that go there are responsible and caring people, who have created a community. This community is important to Whitney and me. I have made many friends there with people from all different backgrounds. She has regular playmates who she loves to see and frolic with. When we walk on the city streets we are much more vigilant than Fort Funston. We have been chased numerous times by dogs that are off leash and not under their owner's control, while trying to enjoy our neighborhood. We have never had any issue like that at Funston.

Not only that, since going to Fort Funston I have gone from having borderline high blood pressure my entire adult life to normal blood pressure. With that said, I eat well and exercise regularly, it seems that time spent with Whitney at Fort Funston was the catalyst. As an avid environmentalist and naturalist, I credit that to the time I am able spend hiking around Fort Funston with Whitney. I feel safe there, for her and myself.

We have met so many wonderful people at Fort Funston. Some people who go out there do not have dogs of their own, but are grateful for the opportunity to be around other's dogs and enjoy nature with us. Some of these people have disabilities, some are elderly, and some are even my students. So many in our community enjoy and benefit from the beauty and joy that Fort Funston provides both humans and animals. Almost daily, I make the drive to Fort Funston with Whitney; we walk on the sands, I feel centered, she is free to roam while under my voice control, and we both have better lives because of it. I strongly oppose the Preferred Alternative that the GGNRA is proposing. It does not support the current use of the land, or the 1979 law regarding off-leash. I oppose putting fences or delineating off-leash areas. Fences will take away the feeling of freedom the land provides and be restrictive to wildlife in the area. The current land use and policies have been effective for many years, and my hope is that without any changes we can continue enjoying the full use of the land for the dogs and our community for many years to come.

Sincerely,

Erik Christianson

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Regarding Pets in the GGNRA:				

I'm 66 years old; have lived in S.F. county, San Mateo, and now Marinlo for the last 36 yrs.

I'm an avid outdoors person who has never seen a dog trained well enough to be allowed off-leash in areas designated voice control area.

I've seen dogs running and chasing water foul, snowy Plow other shorebirds and clapper Rail in where

they must be on leash and in some areas where they are not allowed at all.

I love dogs, and have frustrated many of my friends when we are hiking and I stop to greet almost every dog we pass by. But there is fast growing anarchy among lots of dog owners. When reminded of the rules they often say I am not a Ranger and until they get caught they will continue to do as they wish.

I have been told by some employers at Sonoma County Park that the reason for many owners to obey the leash law is there is a mandatory court appearance for a citation.

I am sure any animal shelter or SPCA would say that there are many more pets now than in decades past.

We must have rules; and restrictions for some places in GGNRA.

Please call for any Questions

Michael Stevenson

Attn: Dog Management Plan

January 21, 2014

Dear Sir or Madam,

Re: GGNRA Dog Management Plan

I lived in the Marina in San Francisco for nine years and I now live in Mill Valley in Marin County. I am the owner of two Vizslas. I walk my dogs three times a day and send them out with a dog walker twice a day while I am at work. Every day after work I take my dogs on a walk on GGNRA land for 30-45 minutes. On Saturday and Sunday I usually walk them at Chrissy Field in the morning and in the Presidio or Marin in the afternoon. In addition, my dog walker takes the dogs to GGNRA trails in Marin daily Monday through Friday.

I am from the East Coast and have lived in the Bay area for 15 years. I consider myself fortunate to live in such a beautiful and historical city. Some of the areas I treasure are Chrissy Field and the Presidio, and the GGNRA hiking trails in Marin. There are few cities anywhere in the world where one can walk with their dog in a National Park or along a beach. Chrissy Field and the Presidio are two special places in that they are bursting with natural beauty and yet are also grounded in rich history. The trails in Marin are gorgeous and allow one to get out into nature on multi-use trails with hikers and other dog owners.

Chrissy Field, the Presidio and Mann are perfect places to walk your dog off leash. At Chrissy Field the dogs can run on the beach and romp in the field. Few other places provide such diverse terrain and excellent play areas. The Presidio is also an excellent place for dogs to walk off-leash as there are few people, no cars and ample trails. Other excellent off-leash dog walking areas are the Mann Headlands, Fort Funston and Baker Beach. These are all ideal spots for us dog owners to walk and exercise our dogs safely away from traffic and other hazards.

As I am sure you are aware, it is very important for a dog's mental and physical health that they get plenty of exercise. Some dog breeds require more exercise than others and it would be difficult for those breeds, such as the Vizsla, to get the proper exercise they require if they cannot run and play off leash. My dogs are very high energy and need to exercise at least two hours a day. Exercise and socializing is critical to a dog's health and well-being. I make taking my dogs out for exercise my number one priority.

I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better. I hope you will consider the impact on San Francisco and Mann if off leash dog walking is banned in the GGNRA. Banning or further limiting off leash dogs will have a significant negative impact on San Francisco and Mann parks. And recreation areas At least 10,000 dogs visit the GGNRA every day. San Francisco city parks are much, much smaller than the GGNRA and will be unable to absorb the impact of all those dogs if they are forced out of the GGNRA. The negative impact on parks and other recreation areas in San Francisco and Mann far outweighs any potential negative impacts in the GGNRA.

Given that I walk my dogs several times a day, I am able to get out and meet many locals in both San Francisco and Mann as well as tourists on my daily walks. Given my passion for the Bay area, one of the things I am able to do is share stories and history with people who are visiting from out of town. One of the things that makes it easy for them to approach me is my dogs as they form a common bond between people. Every day I am out with my dogs I meet and socialize with people young and old; people gay and straight, people from the city or Mann or out of town folks who are just visiting.

One of the nice things about Chrissy Field, the Presido and GGNRA trails in Mann is that they are multi-use areas. So on any given day one is apt to encounter joggers, walkers, hikers, school children, botanists, photographers, people picnicking, etc. One of the charms of the area is that it attracts and supports such as diverse group of people and wide range of activities. The community of people recreating with off leash dogs represents a tremendous cultural resource in San Francisco, Mann and the GGNRA. Where else can you see people from nearly every ethnic background and race, all socio-economic levels, seniors, families with kids, etc. all getting together every day and every week to socialize together while their dogs play off leash. Walking and playing with off leash dogs brings together people who otherwise would rarely see or interact with one another.

I oppose the Preferred Alternative plan because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel

unwelcome.

I oppose the Monitoring-Based Management Strategy that replaced the Compliance-Based Management Strategy in the earlier version of the dog management plan. The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

I am alarmed that the new dog management plan did not adequately consider comments to the earlier version of the plan from people who support dog walking and appears to have dismissed nearly all of them. There is no explanation why these comments from 2011 about issues such as negative impacts on the community and human health from off-leash restrictions were not considered in the development of the preferred alternative. I have written numerous letters over the years and feel my voice and comments, and those of others, have not been heard!!

The plan will not allow off-leash dog walking on any trail anywhere in the GGNRA. There is no evidence presented that off-leash dog walking on GGNRA trails has had any negative impacts. Despite this, the GGNRA decided not even to consider the possibility of off-leash dog walking on any trails at all. This results in a major restriction of off-leash dog walking in Mann County in areas where it had been practiced for decades. This will impact hundreds of dog owners such as myself! I am extremely alarmed about the possible restriction. It will be a nightmare for myself and all other dog owners!!

San Francisco and Mann residents have been walking dogs off leash in the GGNRA for decades and this is yet another valid consideration for maintaining off leash areas. Off leash dog walking is the status quo. Banning or further limiting where off leash dogs are allowed constitutes a change to the current and historical use of the park. Continuing to allow significant off leash recreation opportunities constitutes a "continuity of use" of park land. I implore you to maintain continuity of use. I am strongly in favor of allowing dogs off-leash in as many GGNRA areas as possible. The more places that one can walk their dog(s) off-leash, the better.

Thank you for your time.

Sincerely,

Emily Church

Ladies and Gentlemen:  
RE: Draft Dog Management Plan/Supplemental Environmental Impact Statement (EIS)

---

Please accept and consider these comments with regard to the GGNRA Dog Management EIS.

We are devoted owners, caregivers, rescuers, and fosterers of rescued dogs with over 100 collective years of intense, dog advocacy. We love dogs very much and want what is best for them. However, we firmly believe that the only places where dogs should be allowed off leash are in designated dog parks or on private property. Any public areas where sensitive natural resources may be disturbed should either not allow dogs at all, or should allow dogs on leash only. Just as in the Bodega Bay area, there are natural areas where neither dogs or people are allowed.

Many people may believe that their dog is the "special" one, that the leash laws do not apply to their "baby," or that their dog will behave and cause no problems. Thus enforcement, altercations, and negative reactions from non-dog aficionados are created.

In a public place, people without dogs or those with their dog(s) on leash can never trust that unleashed dog owners (1) are responsible (behavior, disease, vaccinations, etc.) or (2) actually know the dog's temperament in stressful situations. Thus, defacto "Russian Roulette" is being played any time strange dogs are allowed in public areas off leash.

One stated GGNRA purpose is to offer national park experiences to large and diverse urban populations. This in no way obligates the NPS to accommodate either dogs or dogs off leash. In fact, some people have dogs who are not socialized with other dogs. Those people must stay away from public areas where dogs are off leash. Thus, an off leash or voice/command control area denies these very responsible people the opportunity to walk/recreate in the GGNRA. If all dogs were on leash, they could enjoy the GGNRA with their dog(s) on leash.

GGNRA lands are not, and should not be considered, the "backyards" of urban or any other citizens to do whatever they want. There should be no expectation, and is none for the most part, that public lands are or must be made available for dog walking and other recreational activities. If citizens want to exercise their dogs, and walking on leash is not an option, then it is their responsibility to create a dog park/public or private. The responsibility for dog exercise is not the purview of NPS or the GGNRA. Off-leash, voice and sight controlled dogs are an oxymoron. We have seen award winning dog obedience trainers have their dogs bolt, completely ignoring a command, when squirrels or other wildlife appears. The dog may be duly scolded, but usually the damage has been done either to wildlife, vegetation, and/or another dog or person. National Park Service (NPS) must set the regulations and enforce them accordingly; its first concern should be to protect natural resources and wildlife, which are known to be especially stressed due to dog presence. Disease is another negative impact that dogs can introduce to wildlife.

Since there appears to be "confusion" generated due to changing laws, regulations, and policies which need to be flexible to respond responsibly to issues, then only a blanket, strict, conservative position should be taken by NPS. "Confusion" is not a legitimate, valid reason to loosen NPS rules. Certain sites must be permanently closed (to people and/or dogs), and other sites may allow dogs but on leash only. Proper licensing and vaccinations should be required in any area where dogs are allowed in the GGNRA.

Please do not allow "dog walkers" demands and flagrant noncompliance of regulations to dictate GGNRA's policies. There are bully dogs just as there are bully people. We urge the NPS to increase patrols for enforcement purposes and to cite and fine scofflaws to the fullest extent allowed to help pay for the additional expenses incurred. We appreciate greatly GGNRA staff's work and hope they know that there are plenty of

citizens who support their efforts to protect our natural resources.

Sincerely,

Randall Cleveland for the PEACE Team

**Correspondence:** Dear Superintendent Dean,  
I have been walking my dog(s) at San Francisco parks from 1989 to the present. They include Christopher Park, Douglas Park, Stern Grove and Fort Funston. In 1993 I bought a house in Westlake, Daly City minutes from Fort Funston and the fort became my go to place for physical exercise for both my dog and me. It also gave me an amazing social life. I have made some wonderful relationships over the years due to friendships my dogs made playing and running with dogs off leash.

I retired in 2002 after 34 years of teaching and 5 years of substitute teaching in the SFUSD and now walk at the fort twice a day 7 days a week.

As a 71 year old single woman with a hefty mortgage and relying on only my pension restrictions on off leash walking at Fort Funston would affect me economically, physically and emotionally.

I disagree with the GGNRA's current preferred alternative. The recreational needs of the people of the Bay area must be preserved.

Thank you.

Sincerely,

Barbara Cohen

Dear Superintendent Dean,

Thank you for the opportunity to comment on the Golden Gate National Recreation Areas (GGNRA) Dog Management Plan SEIS. My name is Christine Corwin

---

Cowdery, and I am a resident of Moss Beach and a long-time parks advocate, environmentalist, and hiker.

Before delve into my substantive comments on the SEIS. just wanted to share some general thoughts and feelings about what is happening with GGNRA and our local communities. At a time when the National Park Service is struggling with how to make parks more relevant to its constituents, especially in urban areas, the poorly thought out and executed GGNRA Dog Management planning process has created a hostile environment that for the most part has pitted local communities and elected officials against the National Park Service.

When the lands that are now GGNRA were handed over to NPS in 1973, it was with the understanding that the lands would be managed for the recreational needs of our urban population which includes dog walking. The fact is that GGNRA is not a destination national park such as Yellowstone, Yosemite, or the Grant Canyon-it is an urban national recreation area that needs to be managed for both recreation and natural values.

In October 2013. I attended a meeting on the issue in San Francisco held by San Franciscos Board of Supervisors. It was incredibly eye opening and a shame that NPS refused to attend. Dozens and dozens of citizens of different backgrounds and ages took time off from work to share the reasons why they are opposed to GGNRA's Dog Management Plan. Speakers included an urban planner talking and others who rely on these open space areas to properly exercise their dogs, senior citizens who are healthier because they have been hiking with their dogs in GGNRA, to mothers who raised their children going to places such as Fort Funston with their dog, to those who do not own dogs, but value the experience of diverse uses and community in our urban parks. The fact is that park leadership has dismissed the dog walking needs of the city of San Francisco and local communities such as where I live on the San Mateo Coast claiming that GGNRA is federal land and that local governments have no jurisdiction. While this may be legally true, this goes against the true spirit in which GGNRA was created and is extremely short-sighted given that GGNRA benefits from a wealth of city and county services from police, medical, and fire services to animal control and wildlife rehabilitation services provided by the SPCA.

As long as this insular mentality prevails among park leadership, GGNRA will not be able to fulfill its potential for making national parks more relevant to diverse urban constituencies-constituencies that we need in the environmental and parks movement. I hope that you rethink the current dog management planning process a process that so far seems to be unfairly discriminating against a diverse user group without the peer-reviewed science to justify GGNRA's significant policy changes around dog walking.

SEIS Comments As mentioned earlier. I am a resident of Moss Beach, which borders Rancho Co rai d Tien, the newest addition to GGNRA. My husband and I moved to Moss Beach just over three years ago We, like so many other local residents, were drawn here because of the areas small town feel, the amazing hiking areas, and the fact that it is a community of dog lovers. We have a sevenyear-old black lab mix named Gus. I have always been a hiker. Being able to hike with our dog in the areas of GGNRA that are dog friendly has been one of my greatest joys in life. He is a part of our family. If I coLild not bring him on trails in GGNRA, I would not visit the park.

After reviewing the SEIS (all 1,500 pages!), I am advocating for Alternative A in the SEIS with the addition of the two historical off-leash areas in Montara and El Granada lthe true baseline-please see the enclosed map). Local communities are

the primary users of Rancho and have a long history of responsible dog walking, including off leash dog walking in the lower portions of Rancho Corral de Tierra in Montara and El Granada The Montara Dog Group, which has more than 400 members from Half Moon Bay to Pacifica, has provided dog waste bins and bags, as well as promoted responsible dog guardianship.

Despite this history of responsibility, GGNRA's preferred alternative does not provide any off-leash opportunities for dog walking in Rancho. Why is San Mateo County the only county where GGNRA is proposing to completely ban off-leash dog walking?

In addition, the SEIS fails to link off-leash and on-leash dog walking with documented resource impacts. GGNRA's SEIS has failed to provide actual scientific data about dog walking's impact on natural resources in Rancho, such as wildlife and vegetation. Not only does GGNRA not have any peer-reviewed scientific data about resource impacts, all of the resource impact statements in the SEIS are purely speculative. Off-leash and on-leash dog walking has occurred in Rancho Corral de Tierra for decades, including during the past two years while it has been under the management of GGNRA (as acknowledged in the SEIS). Despite this history, Rancho continues to provide valuable habitat for wildlife. As reported by Peninsula Humane Society & SPCA President, Ken White, in his February 8, 2011 letter to GGNRA: Our professional wildlife rehabilitation staff completed a review/analysis of the site (Rancho) and the proposal (GGNRA's Dog Management Plan) and we believe that there is no observable reason related to the protection of native wildlife which would justify denying access to off-leash dogs in the area. (\*Please see attached a copy of Ken White's February 8, 2011 letter.)

In general, characterization of dog-related issues in the SEIS is misleading. The SEIS document has failed to provide evidence that dog walking is resulting in conflicts and resource degradation. From 2008 through 2011, a total of 1537 dog-related incidents associated with natural resources occurred at GGNRA according to Table 6 in the SEIS. However, out of a total of 1,537 dog-related incidents, there were only three incidents of dogs destroying vegetation. Meanwhile, there were only 15 dog-related incidents of dogs disturbing wildlife; 1,519 incidents were related to dogs being off-leash in on-leash areas or dogs being in closed areas/incidents that could be attributed to lack of public education and signage by GGNRA.

Because Rancho Corral de Tierra was just transferred to NPS in December 2011, law enforcement data and statistics are not yet available for this site. I will say that with the exception of the January 2011 incident when an NPS ranger tased a dog walker, that I have never experienced or heard of any negative dog-related incidents in Rancho—just happy people with dogs, bikers, and equestrians who all peacefully coexist and recreate in this part of GGNRA. The Peninsula Humane Society & SPCA also says in their February 8, 2011 letter that they cannot recall ever receiving complaints about off-leash dogs or dogs acting aggressively in the area.

In addition, GGNRA's preferred alternative is proposing to dramatically cut the number of dog-friendly trails in Rancho. Given the fact that Rancho's primary user group is local residents and their dogs, why isn't there an alternative in the SEIS that considers increasing the number of dog-friendly recreational trails?

Also, the area of Rancho Corral de Tierra in Moss Beach—the area where GGNRA is proposing to completely ban dogs—is not even mentioned in the SEIS. This area has been used by equestrians with dogs and by hikers with dogs for decades without any conflict or resource degradation. The SEIS fails to give any rationale

for banning all dog walking from this section of the park. This major policy change should require some sort of justification.

Another impact which the SEIS fails to consider is the impact on the local community culture. Sari Mateo Countys coastal communities are communities of dog lovers. Pancho is more than just an open space area. It is a community space where people go with their dogs to walk and to catch up with their neighbors and friends. In many ways, Rancho is the heart of our community If dogs are banned except for on a few trails. GGNRA will be gutting the very thing that makes it enjoyable to live here

Thrs negative community impact is not unique to Rancho This community impact is something that is common among all of the 22 areas targeted in GGNRA's dog management plan. Where does GGNRA propose that we all go? Approximately 50% of households in San Francisco have dogs. I would estimate that at least that many households on the coast have dogs. Dogs are a part of our culture, just as they were in 1973 when the park was founded and in 1979 when the 1979 Pet Policy was crafted.

I am whole-heartedly in favor of protecting the environment and wildlife. There are already a number of areas in GGNRA where I am not allowed to go with my dog and I accept that. With that said, GGNRA's current Dog Management Plan/SEIS goes too far, it is a highly restrictive plan that is being proposed without any hard evidence that these restrictions are warranted. The plan's language and Alternatives B-F are highly biased against people who recreate in GGNRA with their dogs. We need a common sense, balanced approach to park management that takes into account the recreational needs of Bay Area residents-as intended by GGNRA's enabling legislation.

Again, I support Alternative A in the SEIS with the addition of the two historical offleash areas in Montara and El Granada (please see the enclosed map). Thank you for your time and consideration.

Sincerely,

Christine C. Cowdery Montara Dog Group Member

COMMENT: DRAFT DOG MANAGEMENT PLAN/SUPPLEMENTAL ENVIRONMENTAL  
IMPACT STATEMENT

Dear Superintendent Dean,

I am writing this public comment on the GGNRA's Draft Dog Management Plan/Supplemental Environmental Impact Statement (SEIS) as Chair and on behalf of the San Francisco Dog Owners Group. SFDog is the largest citywide dog owners/guardians group in the City, with a thousand active members, and at least a thousand more that we reach regularly through our emailed newsletters and list serves. SFDog pushes for responsible dog guardianship, and advocates for off-leash recreation for dogs that are under voice control. We are a 501(c) (3) nonprofit, and work to educate dog guardians, non-dog people, and elected and appointed officials about responsible dog guardianship and the benefits of having a dog in our modern, often isolated, society. We have organized workshops on how to deal with the three most common dog behavior problems seen in parks (poor recall, jumping, and resource guarding), and publish a Park Petiquette flyer (how to behave in a park with your dog) that has been posted in city parks for years.

We conducted a Dog-Horse Socialization workshop to desensitize dogs to the presence of horses. This workshop was conducted in conjunction with the SF Police Departments Mounted Patrol unit, who provided the horses and riders for it. We organized workshops on understanding dog body language and behavior for gardeners and rec center staff of the SF Recreation and Park Department. We helped design and implement a pilot "Kids Read to Dogs" program (called Pawsitive Reading) with the SF Boys and Girls Clubs to foster literacy in at-risk populations of children. We work with members of the SF Board of Supervisors, along with SF Recreation and Park Department staff and other park advocates, on dog issues in parks and elsewhere in the city. SFDog had two representatives on the GGNRA's Negotiated Rulemaking Committee, and has been involved in off-leash and other dog-related issues in the GGNRA for over a decade.

The SEIS for a new Dog Management Plan is so extraordinarily poorly done, it, frankly, should be an embarrassment to the GGNRA and the National Park Service (NPS). It is fatally flawed and cannot be used to justify any management decision or policy.

Three years ago, I used those same words to describe the DEIS. I suggested the DEIS be thrown out and redone in an unbiased, science-based way. Unfortunately, nearly all the criticisms I leveled at the DEIS also apply to the SEIS. Faced with significant substantive criticisms of the DEIS, the GGNRA chose to make only minor changes in the SEIS. Clearly, they did not adequately respond to the substantive criticisms of the DEIS made in many public comments, including mine. The GGNRA has proven that it cannot produce an unbiased, science-based EIS. The SEIS and the Dog Management Plan it supports must, once again, be thrown out.

#### THE SEIS DOES NOT INCLUDE A SUMMARY OF THE DEIS COMMENTS

Both the SEIS and the DEIS Comment Response Report mention the total number of comments about the DEIS that they received (over 4,700 pieces of correspondence). Neither document gives an overall summary of the comments - how many comments opposed the GGNRA's Dog Management Plan? How many supported it? How many supported off-leash dog walking? How many opposed it? The DEIS Comment Response Report does include a list of sample comments to give a "flavor"

of the overall comments, but there is no "tally" of how common those comment were.

The description of public comments on the ANPR on p. 9 of the SEIS indicates that 71% of the respondents favored off-leash dog walking at selected sites in the GGNRA. This allows you to get an overall sense of the public comment and to put it in some kind of context. There is no similar overall summary of the public comment on the DEIS.

An independent analysis of the DEIS comments showed that they were overwhelmingly opposed to the GGNRA's proposed Dog Management Plan and overwhelmingly supportive of dog walking, including off-leash. You would never know that, however, from reading either the SEIS or the DEIS Comment Response Report. Every time there has been public comment (the ANPR, the DEIS), it favors dog walking, yet the GGNRA continues to push to restrict access for people with dogs against the will of the people.

#### THE GGNRA DID NOT ADEQUATELY RESPOND TO COMMENTS ON THE DEIS

Comments on the DEIS made by SFDOG and other dog owners and walkers raised many issues that the DEIS did not consider, e.g., human health benefits and community building aspects of dog walking, and negative impacts on nearby city parks. These comments are listed in the DEIS Comment Response Report as substantive. However, nowhere in the SEIS or in the DEIS Comment Response Report is there a clear explanation of how those substantive comments were considered, what role they played in the revised SEIS impact analysis, or even if they were considered at all or merely dismissed without reason.

For example, the DEIS Comment Response Report identifies Concern ID #30445 (p. 335): "If the proposed restrictions were implemented, it would result in the loss of a community of dog walkers. Many visitors felt this community was their main tie to the GGNRA, and for many, it is a main channel of social interaction. Visitors felt the loss of this community would have a negative impact on their quality of life." The Response to this Comment given on p. 336 is: "Comments were considered during revision of impact analysis. Please see Chapter 4, Visitor Use and Experience for details."

Yet when you read Chapter 4, Visitor Use and Experience, there is no detailed discussion about how these comments about community were included in the alternative evaluations or even if they were considered at all. There is what amounts to a simple list of comments made by visitors who like walking with dogs that includes "community". However, there is no way to tell, when reading the discussions of impacts of the various alternatives at each site, whether any consideration was given to the effects of each alternative on the social community of dog walkers. Chapter 4, Visitor Use and Experience does not give the details that the DEIS Comment Response Report said it would.

Similarly, concerns in the DEIS Comment Response Report about the human health benefits of dog walking and negative impacts on human health of restrictions on dog walking (e.g., p. 154) refer to Chapter 4, Human Health and Safety in the SEIS for

details as to how they were considered. Yet again, when you go to Chapter 4, Human Health and Safety, you find another list of comments that include the human health benefits of dog walking, while the analyses of the alternatives at each site focus entirely on dog bites and unruly dogs, with no mention of positive human health benefits from dog walking or of negative impacts on human health from restrictions on dog walking.

As I said in my DEIS comment, NEPA law requires the GGNRA to consider impacts on humans, including human health and social community in an EIS:

- Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment. (see the definition of effects (1508.8).) 40 CFR 1508.14
- Effects and impacts as used in these regulations are synonymous. Effects include ecological (such as the effects on natural resources and on the components, structures, and functioning of affected ecosystems), aesthetic, historic, cultural, social, or health, whether direct, indirect, or cumulative. 40 CFR 1508.8 (emphasis added)

It is not enough to merely provide a list of sample DEIS comments made in the SEIS. There is no way to tell from the DEIS Comment Response Report or the SEIS whether the GGNRA actually considered impacts on human health or social community. The GGNRA's failure to adequately address my DEIS comments indicates the SEIS is as flawed as the DEIS, and it and the Dog Management Plan it supports cannot be accepted.

#### THE GGNRA IGNORED DEIS COMMENTS THAT SHOWED MISLEADING CITATIONS THAT BIASED THE ANALYSIS AGAINST DOGS

In a DEIS public comment dated May 17, 2011, Keith McAllister listed over 15 cases of incorrect or misleading citations of articles that the DEIS claimed showed negative impacts from dogs on vegetation and wildlife. He showed, by quoting from the source articles, how the way the DEIS referred to these articles was misleading or inaccurate, or that the articles cited did not include evidence to back claims made in statements. Sadly, these same misleading citations appear in the SEIS, word for word the same as in the DEIS. In particular, citations of Sime 1999 are repeated over and over in the SEIS (in particular from pp. 374 - 378), despite McAllister's proof in his DEIS comment that her quoted statements are not supported by evidence in the reference cited or refer to impacts on "sensitive alpine habitat" that are not found in the GGNRA. Similarly, McAllister showed in his DEIS comment that citations of Miller et al. 2001 that say the articles shows that dogs disturb wildlife more than people alone and that dogs increase a person's radius of disturbance are, in fact, incorrect. Miller et al 2001 actually showed the opposite - that dogs disturbed birds less than people with dogs or people alone. Yet the incorrect DEIS claim recurs in the SEIS on p. 376. The fact the SEIS repeated the same, misleading citations that McAllister debunked in his DEIS comment without change is further evidence the GGNRA did not adequately respond to the DEIS comments. All of the misleading citations push the analysis in one direction only - dog walking is bad. Not a single misleading citation would lead you to say dog walking is beneficial. This is not just sloppy work; it is outright bias in the analysis. That kind of bias has no place in an EIS. Therefore the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS OFFERS NO SITE-SPECIFIC EVIDENCE OF IMPACTS FROM

## DOGS

The SEIS, like the DEIS before it, offers no solid, site-specific evidence that dogs, and especially off-leash dogs, are causing major environmental or safety impacts. Instead, it lists impacts that dogs "could", "might", and "can" cause, while offering no evidence any are actually occurring now in the GGNRA or ever have.

For example, the SEIS says, on p. 373: "Site-specific, peer-reviewed studies have not been conducted at the GGNRA sites for the sole purpose of documenting impacts to vegetation or soils from dogs." And on p. 376: "Very few site-specific, peer-reviewed studies have been conducted at GGNRA for the purpose of documenting impacts to wildlife as a result of dogs." Yet the SEIS claims, without supporting evidence, that the GGNRA must restrict access to people with dogs to protect vegetation and wildlife from dogs. An EIS is supposed to be a site-specific technical planning document, based on hard evidence of actual impacts and effects. This SEIS does not come close to that description.

The SEIS, on p. 373, goes on to say: "... during the past six years, park staff has amassed scientific and technical information that is available on dog management related topics." In other words, GGNRA staff spent the last six years doing literature searches for articles about impacts from dogs on vegetation and wildlife at sites that may or may not be relevant to conditions in the GGNRA. In those same six years, however, GGNRA staff could have done actual studies at the GGNRA sites that would show whether or not the impacts are actually occurring. Yet GGNRA staff chose not to do any site-specific studies.

The SEIS uses the results of the literature searches to describe impacts that "could", "might", or "may" occur in the GGNRA. But, of course, because they've not done any site-specific studies, they cannot say that any of these impacts are actually occurring in the GGNRA now or that they ever have.

As mentioned above, the literature citations in the SEIS, like those in the DEIS, are often misleading, inaccurate, or misrepresent what was said in the cited reference. Many misleading citations were mentioned in DEIS comments, but were still repeated in the SEIS.

The SEIS does contain additional references not cited in the DEIS. However, many of these are also misleading. For example, the SEIS on p. 1231 cites a 1998 Northern Virginia Planning District Commission report: "For example, in the 20-square-mile Four Mile Run watershed in Northern Virginia, a dog population of 11,400 has been identified as a major contributor of [fecal coliform] bacteria in the watershed." However, a later study that used DNA analysis of the bacteria detected found that dogs actually contributed less fecal bacteria to the watershed than waterfowl and humans. Don Wayne, in *Bacteria Source Investigation in an Urban Watershed: DNA Sleuthing in Four Mile Run* (Northern Virginia Regional Commission, December 14, 2000), found that waterfowl accounted for 37 percent of the coliform, humans 17 percent, raccoons 15 percent, deer 10 percent, and dogs 9 percent. Dogs were not a major contributor. The reference in the SEIS should be removed as it was proven by the later study (not referenced in the SEIS) to be wrong.

Frankly, given the problems with the literature citations in the SEIS, I do not think

they can be used to justify any restrictions on access for people with dogs.

Without evidence of actual, site-specific impacts, the GGNRA's insistence on changing recreational access for people with dogs can only be described as arbitrary, capricious, and an abuse of discretion. Government agencies cannot act without good cause and solid evidence backing up the decision. Because that is sorely lacking in this case, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS USES ANECDOTES TO PROVE IMPACTS FROM DOGS

Given the lack of site-specific, peer-reviewed evidence that dogs cause impacts, the SEIS cites anecdotal reports from GGNRA staff of "observed" impacts. For example, on p. 375, the SEIS says: "In conclusion, very little peer-reviewed literature exists documenting disturbance to vegetation and soils specifically as a result of domestic dogs in recreational/park settings. However, NPS rangers have observed dogs affecting soils and vegetation at GGNRA sites." No other information is given. How many dogs? Was it 10 dogs or 10,000? What were they doing? We don't know because the SEIS doesn't say. Because it doesn't say, there's no way to know whether these "observations" represent a significant impact or not. Frankly, I expected a rigorous scientific analysis of impacts in the SEIS, not anecdotal stories.

Similarly, the SEIS includes anecdotal stories of impacts from the DEIS comments to support its claims of impacts from dogs. For example, on p. 1231, the SEIS says: "Currently, adverse impacts on visitor human health and safety from dog-related pathogens exist at all park sites considered in this draft plan/SEIS." The only evidence to support this statement are anecdotes from DEIS commenters, e.g., "At San Francisco General Hospital, we have seen over the years innumerable dog bites and many of these parasitic and bacterial infections transmitted by dogs." Sounds bad. But, because it is an anecdote, rather than a peer-reviewed study or official statistic, there is no way to judge the comments veracity. Yet it is presented in the SEIS as "proof" of an impact. There's a reason public policy is based on science not anecdotes. Because the SEIS relies so heavily on anecdotal accounts of impacts, it and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS RELIES ON BIASED GGNRA STAFF JUDGMENTS TO DETERMINE IMPACTS FROM DOGS

The DEIS Comment Response Report says on p. 134: "In lieu of site-specific data, research methods generally accepted in the scientific community and best professional judgment have been used to draw conclusions regarding expected impacts to resources..." Indeed, throughout the SEIS, the phrase "best professional judgment of park staff" occurs frequently when discussing impacts. For example, the Assessment Methodology section for Vegetation and Soils (p. 386) says: "The information in this analysis was obtained through best professional judgment of park staff and experts in the field, as well as supporting literature..." A similar statement is made in the Assessments Methodology section for Wildlife impacts (p. 554). This assumes that the "best professional judgment of park staff" is science-based and unbiased.

However, we know that GGNRA staff have shown repeated, long-standing, deep-rooted

bias against dogs and people with dogs. Their "best professional judgment" is highly biased and should not be relied upon to determine whether impacts from dogs are or can occur in the GGNRA.

For example, at the November 8, 2006 meeting of the Technical Subcommittee during Negotiated Rulemaking, a GGNRA law enforcement officer, specifically asked to speak to the Subcommittee as an expert witness by the GGNRA, stated as fact that most dogs walked off-leash in the GGNRA do not even wear collars, and romp at least a quarter mile ahead of their owners, bothering wildlife all the time. The clear implication of this statement is that dog walkers are irresponsible (they don't even put collars on their dogs) and have no voice control of their dogs. When challenged by dog walkers on the Subcommittee, she acknowledged that she had no data to support her claims and was just giving her personal opinion. Yet she had been specifically asked to attend the meeting and give her "best professional judgment" to the Subcommittee.

In another example during Negotiated Rulemaking (NR), Daphne Hatch, GGNRA Chief Biologist, led a site visit for NR Committee Members to Ocean Beach. During the visit, Committee members observed a single dog walk past a plover without causing any disturbance of the bird. Then a horse and rider galloped through the plover protection area (and then circled around again), flushing snowy plovers. Yet at the end of the visit, Hatch reminded the Committee members that they had seen a dog flush plovers during their visit so they could see for themselves the need to restrict off-leash dog walking there. Committee members corrected her that it had been a horse, not a dog that had flushed the birds. Hatch remembered what she had wanted or expected to see, not what had actually happened.

In her 1996 report on dogs and snowy plovers at Ocean Beach, Hatch says (p. 13): "Disturbance [of plovers by dogs] results in lost energy intake due to reduced foraging and feeding efficiency, and increased energy expenditure as a result of fleeing from disturbance." The very next sentence is: "Little research has been conducted on the energetic expenditure as a result of fleeing from disturbance." The first sentence is stated as fact, as a reason to restrict off-leash dogs at Ocean Beach (the conclusion of the report), but the second sentence is proof that the first sentence is an untested assumption. Policy should not be based on untested assumptions.

Indeed, Hatch reports that the highest number of plovers observed at Ocean Beach was in 1994 (a maximum of 85 and a median of 40 plovers reported, p. 16) when dogs ran off-leash on Ocean Beach. She reports that (p. 10): "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach." Yet, Hatch's best professional judgment, given in the conclusion of her report, is that unleashed dogs should be restricted to protect the snowy plovers.

In her 2006 report on dogs and snowy plovers at Ocean Beach and Crissy Field after the court ruling reinstating the 1979 Pet Policy, Hatch recommends that dogs be leashed in those areas because of an increased number of dogs observed on the beach since the court ruling, and an increased number of dogs harassing snowy plovers (a total of 4 incidents were reported (p. 16), out of the tens of thousands of dogs on the beach during the study periods; not exactly a major problem). The

report says (p.8) that the maximum numbers of plovers observed from 2000 to 2005 ranged from a low of 23 in 2000 (when dogs were off-leash) to a high of 62 in 2003 (when the GGNRA had banned off-leash dogs), apparently making her case that off-leash dogs affect numbers of the bird. Of course, the purpose of the report is to study impacts on plovers after the 2005 court ruling that reinstated off-leash dog walking, but those numbers are not given in the report text. However, raw data from the 2006 Hatch report posted on the GGNRA website during Negotiated Rulemaking actually shows an increase in the median number of plovers at Ocean Beach after the court ruling reinstating off-leash dog walking, from a median of 28 in 2004 to a median of 33 for 2005. Yet this is not included in the report. The GGNRA's own data indicate there was no negative impact on plover populations after the court ruling allowed off-leash dogs back on Ocean Beach. Yet, Hatch's best professional judgment, as stated in the conclusion to the report, is that dogs should be leashed to protect the plovers.

Hatch was also quoted in the September 7, 2005 San Francisco Chronicle: "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard." This shows a high level of bias against recreation at Ocean Beach, and a misunderstanding of the purposes of the GGNRA in its enabling legislation.

This is all reminiscent of the controversy over an oyster farm in Drakes Bay at Point Reyes National Seashore. The National Academy of Sciences (NAS) conducted an independent evaluation of the work of National Park Service scientists that had claimed in reports that the oyster farm caused significant negative environmental impacts. The NAS found that NPS scientists "selectively presented, overinterpreted, or misrepresented the available scientific information" and "exaggerate[d] the negative and overlook[ed] potentially beneficial effects." The exact same criticism can be leveled at the work of GGNRA staff, including Hatch, and the way scientific information is presented in the SEIS.

That is why I suggested, in my DEIS public comment, that GGNRA staff had demonstrated such a bias against dog walking that they could not impartially and fairly analyze the public comments on the DEIS and therefore, I called for a independent analysis of the DEIS public comments. It is not clear in the SEIS, if that happened or not. However, if GGNRA staff are too biased to impartially and fairly evaluate public comments, they are also too biased for the SEIS to use their "best professional judgment" as part of an impartial and fair analysis of impacts, especially where no site-specific studies have shown an impact. Because the SEIS, in fact, does rely heavily on analysis from park staff who have demonstrated bias against dogs, it and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS DOES NOT ADEQUATELY CONSIDER HOW THE PRESENCE OF DOGS MAY BENEFIT SNOWY PLOVERS AND BANK SWALLOWS

The SEIS assumes dogs have only negative impacts on snowy plovers, primarily by chasing them or flushing the birds if a dog runs nearby. However, there may be benefits to having dogs around that the SEIS does not consider. In a January 31, 2014 letter to the editor in the San Francisco Chronicle, Tom Lurtz, from McKinleyville, writes: "Controlling crows and ravens that prey on the nests could be as important as monitoring people and dogs. The state has been working for years to help snowy plovers breed on Clam Beach in Humboldt County. Unfortunately, the

intelligent ravens and crows have learned to recognize areas that have been fenced to protect the nest sites from dogs and humans."

In the April 2011 edition of the West Portal Monthly, Dan Murphy, a local plover counter and expert from the Golden Gate Chapter of the Audubon Society, is quoted as saying: "Ocean Beach isn't really suitable for nesting [of plovers]. Not only is it overrun with people and dogs, it's loaded with predators." He continues, "There are typically between 15 and maybe 40 ravens in the plover protection area at any given time. There are additional birds that come and go during the day. Then there are the other predators that use the beach, mostly at night. In other words, there are way too many predators and disturbances to suggest Ocean Beach is a likely spot for successful plover nesting."

Finally in the December 2013 edition of the West Portal Monthly, Dan Murphy is quoted as saying: "Birds and birding are endlessly interesting. Watching ravens teach their young to hunt the rare Bank Swallows at Fort Funston was mind-blowing."

There is no evidence that dogs have ever injured or killed a snowy plover or bank swallow. Clearly natural predators, and in particular ravens and crows, present the real dangers to snowy plovers and bank swallows in the GGNRA. The presence of dogs may keep ravens and crows away from the plovers and bank swallows, protecting them from their 'real' enemies. This interaction should be studied and included in the SEIS. Because it was not, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS RELIES ON FLAWED SURVEYS TO DETERMINE VISITOR COUNTS AND EXPERIENCES WITH DOGS

To understand visitor use in the GGNRA, the SEIS refers to two on-site visitor count studies, both of which are significantly flawed. The first, a two-phase study was conducted in 2008 at Crissy Field, Ocean Beach, and the Presidio is described on p. 310 of the SEIS: "The first phase of the survey involved an intercept survey (personal contact with visitor) to provide a visitor population profile, including a more thorough understanding of who visits the parks, use patterns, their likes and dislikes, and a preliminary understanding of their visitor experience... The second phase of the survey included a follow-up telephone survey with the same visitors interviewed in the first phase to gather more detailed information on visitor experiences, satisfaction, and opinions of park management."

Whether this survey is valid or not depends primarily on how the interceptors chose the people to interview. If it was randomly chosen, there might be some validity in the results. However, at both Ocean Beach and Crissy Field, interceptors were observed actively avoiding talking to people walking with dogs and talking primarily with people walking without dogs. At Crissy Field, after watching an interceptor talk to many people without dogs and not talk to anyone with a dog, a dog walker asked the interceptor what he was doing. When he responded he was doing a survey of visitors, she asked if he wanted to interview her and he responded, "No." GGNRA staff were alerted to problems with this survey at the time it was done, yet it is cited here. The inherent bias shown by the interceptors means any results of this survey - e.g., that 9.6% of the respondents listed dog walking as their primary reason for visiting the site - are essentially meaningless.

A 2011 on-site visitor count study conducted at Fort Funston and Muir Beach is described on p. 307 of the SEIS: "Visitor counts were maintained on a tally sheet where field personnel recorded all visitors leaving the site. Visitors were placed in one, and only one, category, including dog walker, surfer, angler, etc. When visitors left the park in groups, each person in the group was categorized individually..., if two visitors were walking a single dog, only one would be classified as a dog walker."

I was at Fort Funston when the visitor count was done in 2011. I saw two men sitting, back to back, near the parking lot, one facing the Sunset Trail and the other facing the Chip Trail, tallying people. I was there to walk with my friend and her dog (my own dog died several years ago and I am currently dogless). By the study protocol, I was likely tallied as either someone walking without a dog or as "other." But I was there specifically to walk with my friend's dog. Had I wanted to walk with my friend without her dog, we would have gone somewhere else. What about people walking the family dog? Would mom be listed as a dog walker, while her children were listed as not there to walk with their dog? Clearly, the survey miscategorized me and others like me walking with more than one person to a dog. The survey clearly underestimated the number of people using the sites to walk dogs. The SEIS says (p. 307) that people in a group carrying a picnic basket were all classified as picnickers even though only one had the basket. Similarly, all people walking with a dog should have been listed as being dog walkers, even if there was only one dog walking with them. Because of the problems with this survey, its results are essentially meaningless.

Finally, the SEIS describes a GGNRA Dog Walking Satisfaction Visitor Study done in 2011 on p. 304 as: "designed to evaluate the perception of and satisfaction with the current on and off-leash dog walking policies by both dog walkers and non-dog walkers, and the potential for redistribution of use based on access changes." The survey was done online and was by invitation only. It was not a random sampling of dog walkers or park users. Invitations were sent to people who had given the GGNRA their email addresses at some point over the years and who expressed interest in dog walking in the GGNRA (both supporting and opposing it). The SEIS admits that only 897 people out of 7000 people contacted for the study actually completed the survey. Given such poor response rate, it's not clear that the survey has anything meaningful to say.

One stated purpose of the survey was to determine where people who now walk dogs in the GGNRA would go if dog walking was restricted as proposed in the DEIS Preferred Alternative, an attempt to quantify impacts on nearby city parks if DEIS restrictions were adopted. Then why were people who don't walk dogs or who oppose dogs in the GGNRA included in the survey?

The SEIS reports one result of the survey on p. 305: "Of the dog walkers who responded to the survey... 206 individuals were "not satisfied" or "slightly satisfied" with off-leash dog walking opportunities [at] their most frequently visited sites at the park." The SEIS says that 662 dog walkers responded, plus 20 professional dog walkers. This sentence seems to imply that roughly one-third of dog walkers are not satisfied with existing off-leash dog access.

I took the survey, as did many people that I know. The wording of the survey was confusing. Some people who took it thought the questions about how satisfied you are with off-leash access referred to existing access, while others thought it referred to the off-leash access contained in the DEIS Preferred Alternative. Personally, I was in the latter group, because the survey was described as trying to determine where people would go if the restrictions proposed in the DEIS Preferred Alternative were in effect. I responded that I was not satisfied with the restrictions proposed for Fort Funston, my most frequently visited site, in the DEIS. Yet the SEIS describes my response as being not satisfied with the existing off-leash conditions at Fort Funston. Many people I spoke with in 2011 who had taken the survey were confused as to what it was asking. Because of this confusion, in addition to the small numbers of non-randomly-determined responders, this surveys results are essentially meaningless.

An EIS requires baseline information on current usage, something all three studies were intended to answer but do not. All are so significantly flawed as to render them unable to contribute any meaningful information about current usage or the current visitor experience. Until such information is finally provided, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS DOES NOT ADEQUATELY ANALYZE IMPACTS ON NEARBY CITY PARKS

The GGNRA does not exist in a vacuum. It is located within and immediately adjacent to San Francisco, a city of some 800,000 people. Actions that it takes will impact neighboring cities. In 2011, the San Francisco Board of Supervisors adopted a resolution opposing the DEIS Preferred Alternative, and urging the GGNRA to delay taking action on its proposal until a thorough study was conducted of the effect the proposal would have on San Francisco city parks. Unfortunately, the SEIS does not provide the thorough study requested by the City.

The SEIS says, on p. 354, that: "It is very likely than an increase in the level of recreational use by private and commercial dog walking will occur at nearby dog walking areas outside of GGNRA as a result of this draft plan/SEIS. However it is speculative to precisely identify all potential impacts from redistribution related to the implementation of this draft plan/SEIS..." This claim of speculative impacts is ironic since the SEIS discussion of impacts on vegetation and wildlife contain repeated references to speculative impacts for dogs that "might", "could", or "may" occur.

In discussing impacts on nearby parks, the SEIS primarily identifies (or tries to identify) which parks people will visit if forced out of the GGNRA. The SEIS does contain a list of parks in San Francisco, Marin, and San Mateo Counties where people who want to walk their dogs off-leash might go if they could no longer walk in the GGNRA (pp. 343-349). The list describes basic physical conditions at these parks, e.g., vegetation present, parking, etc. But there is no mention of current usage at any of the parks. How many people currently walk in each park with their dog? The SEIS does not say. Without this information it is impossible to know whether the movement of tens or hundreds or thousands of people and their dogs from the GGNRA into each park would have a serious impact or not. A thorough analysis would have provided this information.

We know from Tsunami Friday, as reported in my DEIS comment, that when the GGNRA closed all of Fort Funston and Ocean Beach on March 11, 2011 after an earthquake in Japan, usage at Pine Lake/Stern Grove, the closest off-leash area in a nearby park to both GGNRA sites, increased tenfold. Parking was described as "chaotic." While the GGNRA's Preferred Alternative will not close all of Fort Funston and Ocean Beach to people with dogs, it will close approximately 75% of each area to all dogs, even those on-leash. The SEIS should have explored current usage at nearby parks, but it did not.

As shown in the section above, the GGNRA's attempts to establish visitor use at GGNRA sites were significantly flawed. The SEIS does not adequately address how many people who normally walk dogs in the GGNRA will be affected by the Preferred Alternative's proposed closures of off-leash space, a crucial point in any thorough study of impacts on nearby parks. For example, Table 10, p. 309 of the SEIS, lists the results of the two on-site visitor surveys about usage at six GGNRA sites. However the results are listed as percentages, e.g., what percent of visitors surveyed were there to walk dogs. There is no account of the total number of visitors, so there's no way to know how many people are actually walking dogs at each site. For example, Table 10 says 62.1% of visitors to Fort Funston were there to walk dogs. Setting aside the severe undercounting of this number as outlined in the section above, to understand impacts on nearby parks caused by the closure of large parts of Fort Funston, you need to know the actual number of people affected, not just a percentage. 62.1% of 1,000 people means closures will impact significantly fewer people than 62.1% of 10,000 people. Thus it is impossible to tell from the SEIS if the proposed closures of off-leash space at Fort Funston will move 62 people into nearby parks or 6,200.

Similarly, the question of whether or not the off-leash space that will remain at GGNRA sites like Fort Funston will be adequate to accommodate the number of people who walk there now cannot be answered from information provided in the SEIS. If it's 62 people, the severely reduced area likely would be okay, but if it's 6,200 people, then the remaining off-leash will not adequately serve the recreational needs of that many dog walkers. The issue of how many people will be affected at each site must be quantified before any analysis can be accepted, and the SEIS did not do that.

The SEIS also does not adequately address the fact that off-leash areas in nearby parks are significantly smaller than similar areas in the GGNRA now. The SEIS says that under the Preferred Alternative, off-leash areas at GGNRA sites would be reduced by approximately 107 acres (p. 373). This does not include the acreage included in the loss of 30.9 miles of off-leash access on trails, roads, and beaches. So the total acreage of off-leash areas closed by the Preferred Alternative will be much higher. Ironically, the acreage of off-leash areas closed by the Preferred Alternative is actually greater than the total legal off-leash acreage in San Francisco city parks. Table 5.1 of the Final Draft of the Significant Natural Resource Areas Management Plan (SNRAMP) of the San Francisco Recreation and Park Department (RPD) (p. 5-24) lists the total DPA (Dog Play Area, or legal off-leash area) acreage on RPD property as 117.5 acres. However, the Natural Areas Program, for which the SNRAMP is its management plan, proposes to close over 14 acres of DPA space to off-leash recreation. Therefore, the total acreage of off-leash space in San Francisco

city parks, after SN RAMP, is 103.24 acres, less than the non-beach-road-and-trails acreage lost because of restrictions in the GGNRA Preferred Alternative. This shows the scale of the loss of off-leash space in the GGNRA when compared to available off-leash space in San Francisco city parks. The SEIS should have included this information, but it did not.

The SEIS says, on p. 372, that: "Visitors who currently visit Fort Funston would likely continue to take their dogs to Fort Funston for off-leash dog walking, despite the decrease in the area available for off-leash dog walking, compared to Alternative A." Similar comments are made at every site under consideration - if there is any off-leash space still available at a site, no matter how small, people with dogs will continue to walk in the GGNRA, and not move to nearby parks. Similarly, the SEIS says (p. 373): "However, the movement of visitors under the preferred alternative is anticipated to be low, since five GGNRA sites would still provide off-leash dog walking in ROLAs, all the sites considered for dog walking would allow areas for on-leash dog walking, and none of the sites would prohibit dogs." Yet the SEIS offers no rationale for these statements.

Clearly, the GGNRA did not listen to comments from dog walkers in response to the DEIS. Dog walkers made it clear in their DEIS comments that there is a qualitative difference between walking with a dog on-leash and off-leash. To assume, as the SEIS does, that someone accustomed to walking off-leash at a site will continue to walk there because there is still on-leash access available is ridiculous. Dog walkers made it clear that they enjoy walking long distances with their dogs on trails in the GGNRA. To assume, as the SEIS does, that someone used to walking long distances with their dog will be content to walk much shorter distances in the significantly smaller off-leash areas at sites like Fort Funston is ridiculous. To assume, as the SEIS does, that people used to walking in one long loop, where they do not pass the same site twice, will be content to make repeated loops in much smaller off-leash areas, passing the same scenery over and over again, is ridiculous. Yet the SEIS makes those assumptions. Had they listened to the DEIS comments, the SEIS would not make statements that few visitors would move to nearby parks because there will still be small off-leash and/or on-leash areas available.

As flawed as the 2012 GGNRA Dog Walking Satisfaction Visitor Study was, it does say that nearly all dog walkers who responded (98%) would be only moderately or less than moderately satisfied if they were not able to walk their dogs off-leash at the sites they frequent now (p. 339 in the SEIS). It is reasonable to assume that people who are used to walking many miles throughout Fort Funston with their dog off-leash will not be satisfied to be restricted to the significantly smaller off-leash areas proposed in the Preferred Alternative. And people who are unsatisfied will go somewhere else. In other words they will move to nearby city parks.

Because the SEIS does not include an adequate analysis of impacts on nearby parks, as requested by the San Francisco Board of Supervisors and in many DEIS public comments, including mine, the SEIS and the Dog Management Plan it supports cannot be accepted.

**THE SEIS CREATES A NEW CLASS OF PARK VISITORS WITH  
GUARANTEED ACCESS TO ALL GGNRA SITES**

The SEIS and the proposed Dog Management Plan essentially sets up a new special class of park visitor - those who do not want to interact with a dog - and affords them the special privilege of guaranteed access at every single site in the GGNRA. In describing why the GGNRA cannot allow any off-leash at Muir Beach, for example, the SEIS says (p. 113): "Muir Beach is a small site and there is not sufficient space to allow multiple visitor use areas on the beach (i.e., a ROLA and a no-dog area)." There is no corresponding requirement that sites that do not now allow dogs, e.g., Stinson Beach, have an off-leash area in the future (or even an on-leash one). This double standard is blatantly unfair.

Similarly, at most sites, the SEIS analysis of Alternative A says that it will have "No impact for visitors who would prefer to walk dogs at the park" but "Long-term moderate to major adverse impacts for visitors who would prefer not to have dog walking at the park" (e.g., Ocean Beach Alternative A Conclusion Table for Visitor Use and Experience, p. 1160). However, if you look at the SEIS analysis of Alternative F, the Preferred Alternative, at most sites, it says that it will have "Long-term minor to moderate adverse impacts for visitors who would prefer to walk dogs at the park" but "Beneficial impacts for visitors who would prefer not to have dog walking at the park, assuming compliance" (e.g., Ocean Beach Alternative F Conclusion Table for Visitor Use and Experience, p. 1166).

Why was the Preferred Alternative F, considered to have a beneficial impact for people who do not want to walk with dogs, while the No Action Alternative A, was only rated as having "No impact" for people who want to walk with dogs. Why was Alternative A not rated as having a "Beneficial impact" for people who want to walk with dogs? Clearly, the DEIS public comments made clear that people enjoy being able to walk with their dogs in the GGNRA now, and would not enjoy it if the Preferred Alternative's proposed restrictions were put into place. Clearly it would be a benefit to be able to continue to walk in the GGNRA. The SEIS seems to be making a value judgment that negative impacts of Alternative A on people who don't want to walk with dogs are worse than the negative impacts of Alternative F on people who want to walk with dogs. The SEIS seems to be saying people who do not want to walk with dogs are somehow 'preferred.' That is not fair or balanced.

Because the SEIS insists that one class of people - those who do not want to interact with a dog - has the right to guaranteed access to every site in the GGNRA, and because the benefits on Visitor Use and Experience for people who want to walk with dogs are analyzed in an unfair manner, the SEIS and the Dog Management Plan that it supports cannot be accepted

#### THE SEIS DOES NOT ADEQUATELY ANALYZE THE NO ACTION ALTERNATIVE

The SEIS, like the DEIS before it, does not adequately analyze the No Action Alternative. There is little discussion of management strategies that could mitigate existing problems or tensions. There is no discussion of improved signage, or working with dog groups to resolve problems through training or other programs. SFDOG has conducted successful dog-horse socialization workshops modeled after workshops in the East Bay hills that reduced conflicts on trails between dogs and horses by over 90% (these workshops were mentioned in my DEIS comment). Crissy Field DOG has organized dog training workshops with the SF/SPCA at Crissy

Field. Yet the SEIS includes no mention of these and other kinds of programs that can help mitigate on-going problems. When hang gliders at Fort Funston complained about stepping in dog poop in their takeoff area, Fort Funston Dog Walkers and SFDOG produced signs, with our organizations' logos prominently displayed, asking dog walkers to keep their dogs out of the takeoff area. The signs showed dog walkers' peers asking them to stay out of the area, not the GGNRA demanding that they do so, and, as a result, the problem significantly improved. Yet there is no mention of this kind of cooperative approach to resolving issues.

There is no acknowledgement in the SEIS that it is already illegal to let dogs chase birds or jump on people. If the GGNRA enforced those rules, rather than focusing on the mere presence or absence of a leash, conflicts could be lessened. The SEIS mentions that a dog bit a police horse at Crissy Field in 2012 (p. 1228), but does not mention that a mechanism already exists to deal with aggressive dogs, and it was used in this case. The dog was referred to the San Francisco Police Departments Vicious and Dangerous Dog Unit for a hearing. The hearing officer ordered the dog to be euthanized, and, after a period of negotiation with the City, the owner finally surrendered ownership of the dog, who was then moved out of San Francisco in the care of a trainer for intense training. That dog will not cause any more problems at Crissy Field or anywhere else in the GGNRA. There is already a way to deal with aggressive dogs, as this case showed. Yet the only solution offered in the SEIS to any of these problems is to either ban dogs entirely or require leashes. Note that I made the same criticism in my DEIS comment, but the SEIS did not respond to it.

The SEIS says, on p. 97: "This project is unique in that adverse impacts to park resources and values are currently occurring as a result of alternative A and are therefore described as "continued" because they are occurring and will continue to occur without action." Yet, as has been described earlier, the SEIS says the GGNRA does not have any site-specific, peer-reviewed studies providing evidence of impacts from dogs on vegetation and soils or on wildlife. Dogs have been walked off-leash at GGNRA sites for over 40 years (at least as long as the GGNRA has been in existence). Negative impacts should be clear by now. But the GGNRA has not done the site specific studies that would prove they are actually there. They produced six years of literature searches, but did not produce any site-specific, peer-reviewed studies. Yet they say adverse impacts to park resources are now "continued." An EIS must base statements like that on solid evidence, but that is lacking in this case. Therefore, the analysis of the No Action Alternative that assumes these continued impacts is flawed.

In a similar vein, the SEIS says, on p. 1339: "Under Alternative A, an undefined policy never promulgated as an enforceable regulation governing dog activities within certain areas of the park..." The 1979 Pet Policy was not "undefined." It was the result of extensive public hearings and comments. It was quite clear where dogs could walk off-leash and where they could not. Again, the SEIS paints a negative and biased picture of the No Action Alternative.

The SEIS says of Alternative A on p. 1340: "Additionally, the dog management policy that would continue as a result of the no-action alternative would be inconsistent with NPS regulations..." The ostensible point of this whole exercise was to create a Dog Management Plan for the GGNRA that would allow some off-leash dog walking, even though dogs are not allowed off-leash (except when hunting and killing

wildlife!) in other units of the National Park Service. How can this be held against the No Action Alternative? It is circular reasoning at best.

Because the SEIS so inadequately and incorrectly analyzes the No Action Alternative, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS DOES NOT ADEQUATELY ANALYZE HUMAN HEALTH AND SAFETY ISSUES

The SEIS, like the DEIS, does not provide an honest evaluation of impacts of dogs on human health and safety. This is particularly true in the SEIS discussion of dog bites. On p. 35, the SEIS says: "Data collected by the Centers for Disease Control and Prevention show that approximately 4.5 million Americans are bitten by dogs each year, and one in five dog bites results in injuries that require medical attention." This statement is repeated on p. 336, followed by additional information that: "Small children are typically the most common victims of dog-related injuries because of their natural behaviors, such as running, yelling, grabbing, and hitting, which may threaten a dog. ... Elderly people are also considered at a higher risk of complications from dog-related injuries due to their increased susceptibility to bruising, lacerations, or broken/dislocated bones." On p. 1228, the SEIS adds to this expanded description of dog injuries that: "In general, children are the most common victims of serious dog bites in the United States, with 70 percent of fatal dog attacks and more than half of serious bite wounds involving children..." This is followed by an anecdotal quote from a DEIS comment from a parent whose small children were frightened by off-leash dogs.

The perception created by these statistics, and in particular the way they are presented, is that dogs in the GGNRA present a significant health risk for people, especially children and seniors. Children are likely to be seriously bitten and even killed by off-leash dogs in the GGNRA. The problem is that the SEIS presents only part of the story.

The reality is that few dog bites happen in park settings like the GGNRA. In one of the most comprehensive analyses of injuries due to dog bites, Canadian researchers searched a national database of all reports of injuries throughout Canada in 1996 (Canadian Hospitals Injury Reporting and Prevention Program, or CHIRPP; the study can be found at: [http://www.phac-aspc.gc.ca/injury-bles/chirpp/injrep\\_rapables/dogbit-eng.php](http://www.phac-aspc.gc.ca/injury-bles/chirpp/injrep_rapables/dogbit-eng.php)). Dog bites represented 1% of all injuries in the CHTRPP database.

The CHIRPP study found that children between 2 and 14 years old sustained over 70% of all bites. Most of the dogs involved in the bite incidents (65.2%) are either the victim's dog or the dog of a friend, acquaintance, neighbor, or relative. Only 12.2% were stray or unfamiliar dogs. The majority of the dog bites (64.5%) happened in someone's home (either the victim's or another person's home). Only 3.1% of dog bites in the CHIRPP study (a total of 38 incidents) occurred in a public park, in conditions like those in the GGNRA. A majority (50.3%) of the victims had been interacting with the dog before the bite - petting, handling, feeding, walking or playing with, hurting or provoking the dog, or disciplining the dog.

The CHIRPP results are similar to those reported in the United States. The Centers for

Disease Controls MMWR weekly from July 4, 2003 reported that 42% of all dog bites occurred among children under 14 years of age, and cites research that indicated that in children under 18 years old, 80% of bites were inflicted by the family's own dog (30%) or a neighbor's dog (50%). This report can be found at:

<http://www.cdc.gov/mmwr/preview/mmwrhtml/mm5226a1.htm>.

In other words, the chance of being bitten in a park like the GGNRA by a strange dog that you have not interacted with is pretty slim. Yet, that information is not included in the SEIS. Instead, the reports about dog bites are presented in a fairly alarming manner that gives the impression that dog bites are a significant safety issue in the GGNRA, when the reality is they are not.

I presented all of this information to the GGNRA as part of my comment at the final meeting of the Negotiated Rulemaking Committee. Clearly, they did not read it.

In testimony before the San Francisco Animal Control and Welfare Commission on February 8, 2007, Jean Donaldson, the founder and then-director of the SF/SPCA Dog Training Academy said:

Off-leash play has not proven to be a factor in dog bites. According to both the Centers for Disease Control and Prevention and the American Veterinarian Medical Association, the majority of bites take place on the guardians' property. The remaining incidents involve dogs that are either restrained, i.e., leashed, or dogs that are at large, [that is,] unsupervised dogs that have escaped confinement.

Consider for example, the three highest profile serious dog attacks in the history of San Francisco. Those are Diane Whipple in 2001, Sean Jones in 2001, and Nicholas Faibish in 2005. In the first, the dogs were on-leash. In the second, the dogs had escaped confinement in the backyard and were at large. And in the third, the dog was confined in the guardian's home. I would add that in all these instances, the dogs were un-neutered.

Interestingly, it could very well be that the safest dogs are those that attend off-leash dog parks. Shyan and cohorts published a research paper in 2003 in the Journal of Applied Animal Welfare Science which looked at the prevalence of interdog aggression in dog parks. Dog-dog problems turned out to be minimal and of a non-serious nature. While the paper did not consider the question of dog-to-human aggression, the obvious interpretation of this low incidence of aggression was interesting and I think very relevant. They suggested that self-selection operates strongly, i.e., people who take the time to get into their car or walk to a designated off-leash area to exercise their dog tend to not be the type who are derelict in other areas of dog guardianship, such as training, socialization or appropriate containment.

Note: The study she referred to is: "Bark Parks" - A Study on Interdog Aggression in a Limited-Control Environment, by Melissa R. Shyan, Kristina A. Fortune, and Christine King, Journal of Applied Animal Welfare Science, vol. 6, no. 1, 2003

Again, I gave the GGNRA this information as part of a DEIS comment (submitted as Chair of the Animal Control and Welfare Commission), yet it was ignored. Instead the SEIS chose to present information on dog bites in a sensational manner designed to convince readers of the need for restricting off-leash access to prevent dog bites.

The GGNRA's own data in the SEIS show that dog bites or attacks are not a significant safety issue in the GGNRA. On P. 336, the SEIS says: "There were a total of 95 dog bites/attacks at GGNRA sites from 2008 through 2011." That works out to an average of about 24 bites/attacks per year. When compared to the millions of dog visits in the GGNRA each year, it is clear that only a tiny fraction of dogs cause problems. Of course, even one bite is one too many. The question is what is the best way to deal with them? There is already a mechanism in place to deal with aggressive or problem dogs - the San Francisco Police Departments Vicious and Dangerous Dog Unit. As we saw with the dog that attacked a police horse at Crissy Field in 2012, the unit deals with aggressive dogs and can order corrective measures be taken by dog owners to ensure a bite does not happen again. These measures range from requiring a dog be muzzled in public, or requiring owners to take training classes with the dog, all the way up to euthanasia of the dog in the most extreme cases. It is not necessary to require that dogs be leashed or banned entirely from large parts of the GGNRA to deal with the very few aggressive dogs. This mitigation for dog bites in the No Action Alternative was not considered in the SEIS and it should have been.

On p. 6, the SEIS gives the following reason for why the GGNRA needs to develop a new Dog Management Plan: "Since the 1990s, the San Francisco Bay Area population and overall use of the GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks." The first sentence is disproved by the graph on p. 301 of the SEIS, "Figure 5. Recorded Annual Visitation to GGNRA, 1973 to 2011." The graph shows that since 1990, the annual visitation has remained fairly constant, hovering around 14 million visitors per year. There is no significant increase in yearly park visitors since 1990, unlike the claim made on p. 6.

So what about the second claim that conflicts between users have begun to rise? The SEIS offers no specific evidence to support this claim. However, it does discuss the total number of dog-related incidents, which is all we have available to consider. Table 5: Number and Types of Incident Reports Within GGNRA, 2001 -2011, on p. 253 of the SEIS shows a total of 4,932 dog-related incidents, out of total number of incidents reported of 45,700; that is, dog-related incidents make up 11 of the total number of incidents. The non-dog-related incidents range from Drug Offences, to Trespassing, with nearly one-third listed as "Other." "Other" clearly includes most violent crime in the GGNRA, from murder, to rape, to robbery, but the SEIS does not provide any information on how common such violent crime - the true safety risk for park visitors - is in the GGNRA. The first 11% throughout the ten year period (ranging from a low of 6% in 2006 to a high of 14% in 2004). This table does not show any significant increase in incidents, and by extension, in conflicts over the last ten years. There's no indication in this data that there have been increasing problems with dogs over at least the last ten years. This contradicts the SEIS' stated reason on p. 6 for a new Dog Management Plan.

A closer look at the data presented in Tables 11 through 28 (pp. 313 - 328) listing the number and type of dog-related incidents at various GGNRA sites shows that the vast majority of incidents at each site were for leash violations or merely being in a closed area, without any wildlife disturbance or resource degradation. Clearly, there is no safety crisis or wildlife disturbance crisis or resource degradation crisis caused by dogs in the GGNRA.

On pp. 253 and 254, the SEIS says: "In addition to obtaining the annual law enforcement incident databases from 2001 through 2011, paper copies of the dog-related law enforcement incident reports for the years 2008 through 2011 were obtained from GGNRA to conduct a more detailed analysis for each GGNRA site. ... The number of dog-related incidents in the 2008 through 2011 analysis does not match the number of incidents in the analysis of the overall law enforcement data in table 5 (which includes incidents not related to dogs) because incident reports may contain more than one violation. ... there were often multiple incident violations per incident report. This was not done for the overall law enforcement data analysis because incident reports not related to dogs did not generally include multiple violations and there was insufficient staff time available to review the approximately 40,000 incident reports not related to dogs."

Essentially, the SEIS assumes that non-dog-related incident reports will not contain multiple violations as the dog-related ones do. They don't know for sure, because the paragraph makes clear that they did not actually study the paper reports for non-dog related incidents. If the total number of non-dog violations is higher because of multiple violations per incident, then the percentage of dog-related incidents, compared to the total number of incidents might be even smaller than the 11% figure reported above. That the SEIS did not perform this analysis of paper copies of reports for both the dog-related and non-dog-related incidents, and instead did it for just one of them, is just sloppy science. The point to keep in mind is that 89% of the incident reports in the GGNRA had nothing to do with dogs, including violent people-on-people crime. It is people who are the safety threat, not dogs.

The SEIS analysis of impacts on Human Health and Safety at each site focuses on negative impacts (bites, diseases, aggression) while seeming to ignore positive benefits to human health and social community from dog walking. Thus Alternative A for Fort Funston is determined to have long-term moderate to major adverse impacts on Human Health and Safety (p. 1312) while Alternative F is determined to have long-term minor to moderate adverse impacts (p. 1318). Similar analyses are given for Ocean Beach and Crissy Field. This is a biased analysis of impacts.

On p. 338, the SEIS reports that a survey of guide dog handlers found that: "... a total of 83 percent of respondents had experienced interface by an aggressive dog. The majority of the attacks or interface occurred on a public-right-of-way including sidewalk and roadways. Results showed that 76 percent of dog attacks were from an off-leash dog..." An off-leash dog on a sidewalk or roadway is likely to be a dog guarding its home and property or a dog that has gotten out with no owner around to control it. These circumstances are not found in the GGNRA. The more appropriate statistic would be to report the number of incidents that happened in parks like the GGNRA. The SEIS contains no information on this. Therefore, this study is not particularly useful for determining risks to guide dogs in the GGNRA.

Because the SEIS presents information on dog bites in a more inflammatory manner than is warranted by the facts, and its own data show that dog-related incidents are a small fraction of the incidents reported in the GGNRA, and most of those are leash law violations with no disturbance of wildlife or resource degradation, the SEIS does not prove that dogs are a major problem in the GGNRA. Because it does not prove that, the SEIS and the Dog Management Plan it supports cannot be accepted.

February 16, 2014

Mr. Frank Dean,  
GGNRA Superintendent,  
Building 101, Fort Mason,  
San Francisco, CA 94123

Dear Mr. Dean,

I recently became aware of the Park Service's plans to restrict off-leash dog walking on Crissy Field and I am writing to object to this proposed policy. I have reviewed the GGRNR Dog Management Plan and its accompanying EIS and find that the arguments presented in the Plan fail to make a persuasive case for the need for a change from the status quo. Furthermore, the analysis presented in the EIS fails to present actual adverse impacts from off-leash dog use of Crissy Field, relying entirely on speculation as to what "may" happen, or what "might" be the case. On the other hand, the EIS entirely ignores the very real adverse impacts that would occur if off-leash dog walking were further restricted at Crissy Field.

My dog and I visit Crissy Field several days a week to run the promenade between the Crissy Field Center and Fort Point, and we know Crissy Field intimately. The location and views, the quality of the landscape design and the diversity of visitors from the Bay Area and around the world all make Crissy Field a local and national treasure. Restricting off-leash areas would significantly degrade this environment by eliminating an activity enjoyed by thousands of visitors every year.

This letter presents three separate comments to the EIS:

- 1) Law enforcement issues related to the presence of off-leash dogs are very minor in relation to the heavy use by dog owners at Crissy Field;
- 2) Conflicts between dogs and wildlife at Crissy Field are non-existent given the extent of currently fenced areas; and
- 3) Crissy Field is a unique urban park and regulations that apply to National Parks and Wilderness Areas elsewhere should not be applied at Crissy Field without consideration of the differences.

Law enforcement issues are minor. As the Park Service well knows, the

---

number of dog-related incidents is extremely low, with reports showing a total of six

dog bites throughout the entire GGNRA during 2013, among hundreds of thousands of visitors. While a dog bite is a serious matter regardless of how few occur, the Park Service currently has the authority to restrict dogs that do not respond to voice command. Furthermore, a leash is no guarantee that a dangerous dog will not bite a stranger. Restricting the freedom of all dog owners because of the actions of a very small number of irresponsible dog owners is fundamentally unfair.

All uses of Crissy Field present potential undesirable consequences: bicycles collide with pedestrians and other bikes, picnics create litter and packaging endangers wildlife, auto access generates air pollution and pedestrian and cycling hazards, surfers and sail boarders create risks to self and others, yet these activities are encouraged because they serve the GGNP.A's recreational mandate and enhance the diversity of visitors to the site. Off-leash dog walking is indistinguishable from these other uses.

Conflicts between dogs and wildlife on Crissy Field are non-existent. I have read the letters from the birding community and respect their opinions. My family and I have in the past been members of the Golden Gate Raptor Observatory and watching the birds at Crissy Field is a big part of the joy of being there. In twenty years of running on Crissy Field, I once, and only once, saw a dog chase a bird on the meadow. The dog was a puppy who did not know any better, and the bird simply flew away. Dogs are not predators like feral cats. The assertion that the off-leash dogs at Crissy Field endanger wildlife is unsupported by evidence and absurd on its face. I fully support the extensive fencing of sensitive areas to protect landscape and wildlife, including the Snowy Plover nesting area from humans and dogs, but the current policy of allowing off-leash dog walking cannot be shown to have any impact on the well-being of the avian population of Crissy Field.

On this point, I would also add that I am very sympathetic toward the goals of birders at other sites within the GGNRA where landscape and wildlife may not be well protected by fencing. Preservation of bird habitat should be a high priority within the GGNRA. I support fencing and limiting off-leash pets in such sensitive areas. Crissy Field, however, is a model of how sensitive habitat can be protected by fencing in such a way as to eliminate conflicts between birds, sensitive habitat, people and dogs. It needs no additional restrictions.

Crissy Field is Unique. Aristotle wrote: "There is nothing so unequal as the equal treatment of unequals" and that certainly describes the proposed GGNRA Dog Management Plan. When I started running on Crissy Field twenty years ago, the site was derelict and resembled a superfund site more than a park. Thanks to the efforts of the non-profit Golden Gate National Parks Conservancy and the generosity of the Haas family and other private donors, Crissy Field has become an urban paradise, but it is a man-made paradise. Crissy Field is a simulation of a natural shoreline, designed by Hargreaves Associates, to replace the industrialized wasteland the Army left behind.

Quoting Michael Boland in "Crissy Field: A New Model for Managing Urban Parkland," in the Design Observer: ([http://places.designobserver.com/media/pdf/Crissy\\_Field:\\_925.pdf](http://places.designobserver.com/media/pdf/Crissy_Field:_925.pdf))

Until the mid-nineteenth century Crissy Field was occupied by sand dunes and salt marshes. Filling began in the 1870s and was completed in time for the area to become part of the grounds on which the Panama Pacific Exhibition was staged in 1915. Then, when the exhibition came down, the site was transformed into the first military airfield on the West Coast. Thus it was that when the National Parks Service inherited the site in 1974, 70 of its acres were covered in asphalt and hard packed dirt while rubble lined much of its 6,000-foot shoreline.

Treating Crissy Field as a pristine wilderness area just because it looks like one today misses the mark. There may be other areas within the GGNRA that qualify as preservation sites but Crissy Field is not one of them. Crissy Field is an urban recreation area designed for local community uses and paid for by a local community with the clear goal of encouraging a rich and diverse range of human recreational activities. I share the belief that the National Park System is "America's Best Idea," but it is important not to conflate the National Park System, including its mandate to preserve our natural resources, with this "new model" of an urban park. Crissy Field was conceived through ten years of intense local community participation, designed with artistic imagination and ecological research, and constructed on a brownfield site formerly owned by the U.S. Army. Superimposing wilderness preservation restrictions on a man-made park in contradiction to the priorities set by the community that created the park, disrespects the community and is unjust on its face.

Throughout its history, Crissy Field has permitted use by off-leash dogs under voice command as part of a happy mix of uses that reflects the needs and desires of its local community. The conflicts between dogs and people, and dogs and wildlife, which have been asserted by the Dog Management Plan and analyzed by its EIS, do not occur at Crissy Field except on very rare occasions. Restricting off-leash dog walking at Crissy Field ignores Crissy Field's community legacy and degrades the richness and diversity of its environment.

Very truly yours,

Richard Springwater

Re: Crissy Field Dog Group on the Draft Dog Management Plan /  
Supplemental Environmental Impact Statement

---

Dear Superintendent Dean:

The Crissy Field Dog Group (CFDG) submits the follow comments on the Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan / Supplemental Environmental Impact Statement (SEIS), released in Fall, 2013. CFDG supports maintaining the existing status quo of dog recreational areas. In recognition that enforcement and/or compliance may always be improved, CFDG proposes additional solutions here which should be considered and incorporated into a modified preferred alternative that is based on Alternative A.

The detailed analysis of the SEIS completed by K&L Gates on behalf of CFDG is incorporated by this reference. Set forth below are additional comments of the CFDG. I have also enclosed my own detailed comments on SEIS which are also incorporated by this reference. Set forth below are additional comments of the CFDG.  
Monitoring-Based Management Strategy

The NPS in the SEIS modifies and renames the adaptive management program as a Monitoring-Based Management Strategy which is defined as:  
Monitoring-Based Management Strategy-A program designed to encourage compliance with sections of the Code of Federal Regulations (CFR) applicable to dog management, and ensure protection of park resources, visitors and staff. Tt provides the framework for monitoring and recording observed noncompliance with the applicable sections of the CFR, including the new 36 CFR Part 7 special regulation, and will guide use of park resources to address those violations. Noncompliance with federal regulations related to dog management will be met with a range of management responses. The program will also monitor for impacts to natural and cultural resources.

Despite these sensible goals, unfortunately, the SEIS does not provide clarity on exactly what and how the system will actually work. See SEIS p. 63-67. The entirety of the discussion of the Monitoring Based Management Strategy appears to take less than 7 pages of the SEIS. While understandably one size does not fit all, the monitoring-based management strategy is in essence a program that says the NPS will know when the program is not working when they see it and will do whatever they think makes sense without any public input so long as closures are for one year or less.

The SEIS fails to adequately analyze and take into account the recommendations contained in CFDG Appendix A to May 27, 2011 comments which is again incorporated as part of these comments as Ex. A. While the NPS says that the program will be peer reviewed and available for public comment, there is no description of how, when or under what circumstances those conditions will be met. See SEIS p. 66. The general description of If compliance rates or resource impacts are deemed unacceptable based on the previous 12 months monitoring data in one of the zones, in spite of the parks primary management actions, the park will evaluate secondary management responses, including short-term closures does not explain what is meant by deemed unacceptable by whom or by what standard. SEIS p. 66. Moreover, there is no description of how park users will be kept informed of the monitoring results at meaningful times to provide additional information to the NPS. Finally, the ultimate threat is that if the NPS decides that the administrative burden is too much, then the benefits in allowing the use is outweighed by the NPS administrative burden required to manage the use, draining

limited resources needed for other important park programs without any standards how that determination will be made. SEIS p. 67

NPS in the SEIS has failed to adequately analyze and respond to other comments of the CFDG.

Failure to Analyze Voice and Sight Control Results for Boulder, CO Tag Program

The NPS should consider a certification/tag program comparable to one implemented in Boulder, CO. Based on how much NPS is willing to spend on its preferred alternative, there appears to be funding available for a certification/tag program (the Green Tag Program). A Green Tag Program can also be developed through alternative funding mechanisms, including community-based models, use of the parks conservancy resources, and hybrid approaches (e.g., where some resources from the current proposed monitoring based management plan are reallocated to other strategies such as a Green Tag Program).

To promote public awareness within the dog walking community of the unique resources within the GGNRA where off leash dog recreation is permitted as well as to inform GGNRA visitors with dogs of their rights and responsibilities for voice and sight off leash dog recreation within the GGNRA, the National Park Service should implement a mandatory Green Tag Program. This proposal assumes that there is sufficient space for park visitors with dogs such that the program will be viable. CFDG, as noted, supports use of the status quo off leash dog walking areas.

All GGNRA visitors with dogs who wish to engage in off leash recreation with their dogs would be required to obtain a Green Tag that would have to be attached to the collar of each off leash dog. In order to obtain the Green Tag, each GGNRA visitor with a dog (including each member of their household who wishes to walk a dog off leash) would be required to participate in an instructional class given at a location determined by the GGNRA, and agree to abide by the Green Tag Program voice and sight rules and regulations.

The Green Tag is specific to the GGNRA visitor- not the dog. No off leash dog recreation would be possible in the GGNRA without a Green Tag. Violation of the Green Tag voice and sight rules and regulations will subject the GGNRA visitor with dogs off leash to fines which escalate. If a GGNRA Visitor with a dog off leash has 3 violations in 24 months, they lose their Green Tag rights. GGNRA visitors with dogs who lose their Green Tag rights must successfully complete a Green Tag Program approved certification course and agree to be bound by the Green Tag Program voice and sight rules and regulations in addition to paying a reinstatement fee before they can walk dogs off leash in the GGNRA again.

Advantages of a Green Tag Program are many, as it would allow enforcement to target problem users (the real cause of issues), not problem areas. A Green Tag Program is more fair and effective because responsible dog users are not punished and deprived of recreational resources as a result of a few problem users. Moreover, a Green Tag Program can provide a cross-cutting solution to address all impacts of concern including species of concern and other areas needing enforcement. Data from the Boulder program should be considered by NPS, given that that program obtained rates of tag carry compliance over 90% and in the initial year of implementation user conflict dropped by roughly 40%. Compliance rates for leash carry regulations were at almost 100% according to a Boulder representative, and there have been almost no incidents of wildlife harassment. Voice and sight control compliance is in the high 80% to low 90% range. This information did not receive analysis in the SEIS. The only reference to the Boulder program in the SEIS is in reference to waste removal - not voice and sight control performance. See SEIS p. 1231 and the list of references SEIS p. 1364. Relevant reports on the Boulder voice and sight control experience, including additional modifications to

the program being considered, are cited here and CFDG specifically requests that NPS review and strongly consider this information:

City of Boulder Open Space and Mountain Parks, Voice and Sight Tag Program Evaluation (Jan. 2013), available at <https://www-static.bouldercolorado.gov/docs/voice-and-sight-tag-program-evaluation-I-201306071558.pdf>

City of Boulder Voice and Sight Tag Program Monitoring Report (2011) available at <https://www-static.bouldercolorado.gov/docs/voice-sight-tag-propram-monitoring-reort-1-201304101211.pdf>

Failure to Analyze the Impact of the Proposed Alternatives on Recreation

As detailed in the K&L Gates comments made on behalf of CFDG, the SEIS fails to take into account recreation as part of the environment in the GGNRA and the impact on human recreational uses from the proposed preferred alternative. The SEIS does not analyze or respond adequately to the recommendation made as Exhibit B to the original CFDG comments which are attached here as part of Exhibit A.

As counsel for CFDG has pointed out in the past:

Conservation of recreation is an essential GGNRA value that should not be impaired (see SDEIS inadequate discussion of impairment on pages 42-43). Certainly conservation of GGNRA's ecological integrity is a paramount mandate under the NPS organic act, but omitting urban recreation as an objective and as a park value that should be maintained improperly biases the planning and alternatives evaluation process.

Instead, the SDEIS treats GGNRA as victim of lack of recreational space in Bay Area (pages 21-22). As noted, the need for urban recreation area is one of the main reasons GGNRA was established in the first place (see GGNRA organic act quoted above and on page 43 of the SDEIS). This need for urban recreation is not an impact on GGNRA - it is one of GGNRA's fundamental purposes. This basic error permeates the SDEIS.

Comment of Ken Weiner to SEIS dated February 14, 2014. The SEIS bias against recreation impacts park users and the members of CFDG disproportionately. CFDG recommends that NPS perform the evaluation originally recommend in Exhibit B to CFDG's original comments.

The Lack of Site Specific Impact Data Leads to Unwarranted Assumptions

In response to CFDG's original comments noting the defects in the scientific data and basis for its assumptions, NPS's response can fairly be summarized as:

In lieu of site specific data, research methods generally accepted in the scientific community and best professional judgment have been used to draw conclusions regarding expected impacts to resources, consistent with CEQ and DOT requirements. The available data provides sufficient information to allow the decision maker to make a reasoned choice among alternatives.

What is described as reasoned choice among alternatives does not explain the assumptions about what could or might happen in the future. These are sites where there has been active recreation for decades. While the research methods may be appropriate for the locations where the research was done, the SEIS fails to adequately take into account the different and unique circumstances of these sites. Without that detail, the leaps from other data to the conclusion that an impact could happen is insufficient to support the need for the preferred alternative. CFDG urges that there be site-specific data and analysis before the conclusions reached about what could happen are meaningful.

Recent Data and Experience Demonstrates that the Status Quo is Working

Based upon the most recent enforcement data that has been released, CFDG understands that during the past year there have been reported 6 people bitten by dogs, 5

dogs that were fighting, 2 dogs that were rescued from cliffs, 2 scared person reports, 1 reported gosling death and a horse bitten by a dog. CFDG takes each of these incidents very seriously and is working with the SPCA and the GGNRA to support responsible dog ownership. The SPCA has been offering Off Leash Open Space dog-training classes that are very popular and successful at the Crissy Field Center and Grassy Airfield. But given the high number of visitors with dogs that are in the park each and every day, these statistics do not support the proposed alternative. CFDG recommends that NPS take the most recent enforcement statistics into account and change the preferred alternative to A. Crissy Field Specific Issues

The Preferred Alternative proposes to dramatically reduce off leash recreation at Crissy Field. This is a complete reversal of direction from the original Crissy Field Environmental assessment where the plan proposed to increase the acreage available for off leash recreation from 38 acres to 70 acres. Crissy Field EA p.10. The purpose was to allow for anticipated increases in the need for off leash recreational activity. Children with and without dogs, families, and other park users have all coexisted on East Beach successfully. The SEIS has not analyzed the impact on those park users who currently use East Beach for off leash recreation as they have for decades.

The SEIS has also failed to adequately take into account the impact of reducing the available off leash recreation area for responsible commercial dog walkers and other park visitors with dogs because of the increased concentration of dogs in smaller off leash recreation areas. As identified in the K&L Gates comments submitted on behalf of CFDG, the shrinkage of off leash recreation areas impacts all of the regional and city parks by increasing the number of visitors with dogs to those locations. The SEIS fails to adequately evaluate the impacts on these park users and neighbors. Each of the governing bodies of Marin, San Francisco and San Mateo have raised their objections to the preferred alternative for precisely these reasons as documented in the K&L Gates comments.

CFDG recommends that NPS implement continued education and outreach - such as the SPCA Off Leash Open Space dog training course already offered at Crissy Field and to change the preferred alternative to A.

Other areas under consideration for off leash dog walking in the GGNRA

The preferred alternative is unreasonably restrictive of off-leash dog walking in the other areas of the GGNRA. No off leash resources are proposed for San Mateo County. This is plainly unacceptable. Off leash areas in San Francisco would be reduced from 5 to 3, with two of the remaining areas being further restricted. In Marin County, only 2 off-leash areas would remain of the current 5. These restrictions have not been justified based on sound site specific science. Moreover, these restrictions create substantial risk of dispersion of existing off-leash use to the few remaining areas, where impacts may be concentrated. Finally, these restrictions are simply impractical - - they will not reduce the demand for off-leash dog walking.

The SEIS fails to adequately identify or measure specific impacts on recreational users under the proposed alternative for restrictions on dogs under voice control at Upper Fort Mason, Crissy Field, Baker Beach, Ft. Miley, Lands End, Ocean Beach, and Fort Funston or the other areas under consideration in Marin and San Mateo counties. The SEIS assumes the possible impacts that dogs could have or might have are not supported by site-specific data. CFDG recommends that NPS change its preferred alternative to A for these areas.

Practical Solutions

In conclusion, we believe the following is a workable and reasonable solution for the dog management plan:

1) Maintain the status quo of recreational dog walking areas: the GGNRA 1979

Pet Policy plus designated off leash areas in San Mateo lands, with additional enforcement and mitigation measures identified here.

2) Implement a variation of the Boulder Green Tag Program for clear enforcement

3) Educational Outreach: partnering with the SF SPCA and Marin Humane Society in developing and expanding an Off Leash Open Space Training Program.

4) Mitigation Measures: Vegetative barriers, post and cable fencing to protect plant species, clear signage

5) Recreational Roundtable: Community stakeholders who are committed to resolving on-going issues within the GGNRA (public private partnership)

Thank you for the opportunity to comment on this important document.

Sincerely,

Martha Walters, Chair

Re: Draft GGNRA Supplemental Dog Management Plan/SEIS

Dear Superintendent Dean,

---

Thank you for the opportunity to comment on this important document, the Golden Gate National Recreation Areas (GGNRA) Draft Dog Management Plan/Supplemental Environmental Impact Statement (Draft DMP/SEIS).

I have lived with my dogs in Montara since 1999. We have always enjoyed walking in the area, particularly Rancho Corral de Tierra since it is not far from our home. Some of my dogs have been allowed off-leash (since they have a reliable recall) and some are only allowed on-leash, but all have gotten exercise, fresh air, and sensory stimulation with me by walking far and wide in Rancho. I am also a paraglider pilot, and enjoy spending time at Mon Point and areas of the GGNRA in San Francisco. Sometimes my dogs accompany me and sometimes I am there flying above. When POST purchased Rancho to protect it from development we were quite happy, and learning that the GGNRA would take over management seemed a good fit since weve enjoyed recreational activities on other GGNRA lands.

We were honestly a bit shocked to hear that the GGNRA was planning to dramatically restrict access to all lands for dog owners and their pets. These lands (in San Francisco and San Mateo County) have been a haven for our dogs for decades, and friends often join us on our walks - enjoying both the area and the joy of dogs romping alongside us. While there are always poorly behaved humans (who do not appropriately control their dogs), the vast majority we have encountered share our appreciation for the area and respect for others.

When our local paragliding club (Bay Area Paragliding Association) worked with the rangers at the GGNRA to establish permits to fly at the Stables (just south of Fort Funston) and Mon Point, we were treated with respect and consideration for our recreational use of the area, and established guidelines to support and respect other recreational uses (such as horseback riding). We would hope that similar respect and consideration would be afforded dogs and their humans, particularly in Rancho, where dogs and their humans are in the majority of users of this wonderful recreational area.

From Julie Spiegler (continued)

It is my understanding that aspects of the GGNRA Tsplan imply that the area should be treated like a national park, rather than a recreational area. As a frequent visitor to our federally managed and protected open spaces (US Forest Service lands, Bureau of Land Management lands, National Recreation Areas, and National Parks), there are definite differences in the management goals and therefore type of activities supported. Please consider all DMP/SEIS options in the light of our beloved National Recreation Area use - GGNRA land is not a National Park.

All actions to change, contrary to Congressional act, the GGNRA to a National Park (whether in name or in deed) with the associated restrictions are unlawful. The intention of a National Recreation Area clearly is to support recreation (to preserve for public use and enjoyment... areas... possessing outstanding natural, historic, scenic, and recreational values..., and to provide for the maintenance of needed recreational open space necessary to urban environment). Studies have shown that dog ownership increases recreational walking - supporting both recreational use of the area along with improved health benefits for the population. Another

study showed that 40% of those walking/hiking in at an urban site were dog walking. Use of GGNRA lands by dog walkers is clearly a primary recreational activity.

I am also a member of the Montara Dog Group, who I know have been very diligent in providing detailed feedback about the various plan options throughout this process. The preferred alternative for Rancho is Alternative A, the No Action alternative, with the addition of two off-leash dog walking areas: one near Montara and the other near El Granada (per Attachments provided by Bill Bechtell, President, Montara Dog Group, in his letter dated January 10, 2014). Dogs would be allowed on-leash throughout the remainder of Rancho as indicated in Alternative A in the SEIS. Note that part of my reasoning for modifications to this alternative is that the status quo for Rancho should be the historic use before the GGNRA took over management, since the original GGNRA rules were made without appropriate consideration and discussion. Further, the GGNRA covers Marin, San Francisco, and San Mateo Counties, however the proposed plan has off-leash dog walking areas in San Mateo County - this does not create a visitor experience consistent throughout all areas.

Thank you for your consideration.

Superintendent

United States Department of the Interior OFFICE  
National Park Service Golden Gate Recreational Area  
Fort Mason, San Francisco, Ca 94123

Dear Sir,

The above address brings me to a point of contention long resounding in the dog owners hearts! The area of Crissy Field is part of the GGNRA but is not a National Park. I feel strongly that this should be considered in the off leash issue.

If 7% of the detritus from dogs is all that has been reported how does this compare to the detritus from humans? Most of us pick up or carry to trash cans or what groups leave when using the area and we also pick up what is washed ashore and harmful to anyone using the area. Most of us pick up after our dogs and others as well and we make a concerted effort to remind offenders, too.  
I am enclosing a piece of rusted metal found today (2/15) at Crissy Field. When the 75 Celebration for the bridge was held an enormous tent was put up on the grass. Afterwards the removal by workers pulling the canvas up and the hooks shot out all over the grass and the central path. I know this as I collected 150 or so of these on the path and in the grass, and told staff about them. Here today I find yet another. What is this doing to the environment? Hopefully this won't happen again.

Instead of fining people unless there is a gross situation involving a dog why not post signs saying that we walkers are willing to leash on weekends and holidays after 9:30 a.m.? We have suggested this many times and enforcement would be costly at first but would taper off. Your park service will suffer from the city residents when dogs have to leave areas and go to local parks-who pays for the extra maintaining for this?

Sadly, areas in San Mateo which allowed dogs on leash have terminated this practice.

The Crissy Field

Dog group has tried in many areas to help: With help from the Park service we have provided a dog shower. We supply poop bags a cost of \$2,000 a year and volunteers fill the containers. It appears to many that you have not effectively reviewed our suggestions and have closed your interest in listening to us! With the number of animals and the limited space surely something can be made to work! It is a fragile area but we all need to share it!

Thank you,

Nancy Solari

Re: The input from the City Of Pacifica to the GGNRA

I was very distressed to see an article regarding the City of Pacifica and input to the GGNRA requesting more areas be available to on leash dogs. This does not represent my wishes or the wishes of many in Pacifica that I have discussed this with.

Let me point out that I am proud to say that I have 3 rescue dogs in my family. Unfortunately both my family and our dogs encounter off leash dogs all through the GGNRA, and at times problems with them. I, and I am sure many others agree with the current recommendations by the GGNRA, understanding the problems with enforcement and wildlife that the GGNRA has experienced to date.

While it would be great to have more access for dogs on leash, the owners who continue to take their dogs off leash in sensitive areas have caused and perpetuated the problems by making other dog owners feel that it is OK for them too. This is only common sense.

Some number of the owners who claim they have control do not, and others who claim their dogs are not a problem are. People deny chasing wildlife is a problem, when kids or even toddlers get knocked down by a rambunctious dog, the owners sometime cheerfully say "oh hey they are only playing!". I have experienced this and had many similar incidents recounted to me by many others.

I have no doubt the GGNRA rangers can report ridiculous first hand experiences as well.

The GGNRA is responsible for addressing a problem, protecting the wildlife and the public. The people that are the problem are what has necessitated this to be addressed with the dog management plan.

Reasonable people know and understand this.

I am disappointed that the city of Pacifica would take this position since the problem with off leash dogs is a well-known problem in "on leash areas" of Pacifica, with the city either unwilling to, or unable to address it.

\*I have included text which was "cut/paste" from just two letters to the editor of many similar one at the end of this letter. One from a few years ago, and another recently published that demonstrate the continuing frustration of people dealing with this issue.

In a well-publicized recent incident, a pregnant woman and her child/fetus were even killed by a dog here in the city. And yet the city continues to ignore the safety issue here.

This is why I am disappointed that the city asks the GGNRA to follow suit knowing the difficulties in "leash" enforcement, the problems with public safety and wildlife protections.

It is my belief that the request to the GGNRA from the city of Pacifica is at the behest of individuals and groups such as POOCH. The claim that bay area dog owners bring money to the vicinity for recreation is obviously a repeat of claims in an editorial in the Pacifica Tribune from POOCH president Beverly Kingsbury on March 18th, 2009. In that editorial she was also disputing wildlife management efforts.

The lack of understanding of wildlife management by the city is clearly demonstrated by 6 letters I have included that show how our city deals with wildlife management at Pacifica State Beach (PSB).

PSB is a CA State Park managed by the city of Pacifica, and was on the USFWS Western Snowy Plover recovery plan:

---

The first is a letter from the California Coastal Commission directing the city to CA State Parks for input/approval when the city applied for a permit for some "signage".

This was by the city in an effort to respond to the letters from residents and around 10 wildlife organizations/groups who asked the city to address the loose dogs and protections of the Western Snowy Plover at Pacifica State Beach (USFWS Plover site CA-48).

The second letter states (incorrectly) that the city wants to address Western Snowy Plover protections at Pacifica State Beach by following the general rules and regulations of State Parks.

\*I state "incorrectly" as when the general rules and regulations were provided to the city, the city challenged this and later tried to avoid/bury them along with other pertinent recommendations.

The third letter from the city claimed that CA State Parks was in error on points in the letter, and the city challenged State Parks on this.

The fourth letter was from State Parks re-iterating input regarding dogs (which happens to be the same measures that were listed on the USFWS recovery plan for that location, as well as other wildlife sources such as Point Reyes Bird Observatory for this location).

The fifth item here was a memo to create a "subcommittee to clear this up and provide recommendations including the dog owners group POOCH on the subcommittee. No biologists or experts were involved. Both myself and another bird observer were challenged and disputed when we presented studies, law, regulations etc... mostly by Beverly Kinsbury of POOCH.

Amusingly the bird counter/observer which was listed as a "resource" that the group used (Edwin Geer), was quite frustrated at the challenging of credible data and obvious weight POOCH was given by staff in the subcommittee. He did not feel that he was a resource, but that his name was used for credibility of the subcommittee..

The CA State Parks letter with unwanted recommendations was received on a Friday, it took 3 business days to come up with and announce this "subcommittee" the following Wednesday.

The resulting staff report and presentation had pertinent agencies and offices as "mentioned background and recommendations", with the "subcommittee" at the forefront.

At this point, the city council was approached by members of the public asking for USFWS input and an attorneys notification letting the city know in clear language with supporting documentation that they (the city of Pacifica) were in violation of federal law, the Endangered Species Act.

The city finally turned to get input from an appropriate resource that could not be dismissed by having the implication of a lawsuit.

Three years later, (USFWS response was in 2011) the city continues to negotiate down the recommendations with staff making claims of delays caused by "waiting for input/clarification from" USFWS after it has already been received.

This issue has been going on since 2008, and Pacifica's lack of ability to deal with wildlife management is another reason I would ask that the GGNRA to look at Pacifica's history and motivation when weighing the input from the City of Pacifica on the dog management plan.

I am also displeased that so many other municipalities and elected officials have responded in kind.

This is no doubt a response to the ridiculous number of emails I get from individuals and dog owners groups such as "San Francisco Dog Owners Group" that I get weekly.

I could understand how this massive mobilization by the vocal minority has convinced many that they are speaking for the silent majority. This is not the case.

Thank you for addressing these difficult issues with the dog management plan, and for all the GGNRA has done for our GGNRA lands.

Dyer Crouch

Re: park planning Golden Gate re dogs

Dear Sir,

I love at the above address and go jogging to the Golden Gate Bridge and sometimes over the bridge. I am for prohibiting dogs from being in the area. Just today 3 dogs came towards me (within a foot), not on leashes. I had to go under a chain fence; hide behind the NPS dog notice to get away. The dogs take away from the beauty of enjoying the wonderful scenery. A prior time last month the owner failed to clean up poop her dog left.

Sincerely

Helen Bunt Smith

Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco, CA 94123-0022  
Attn: SEIS

Dear Superintendent Dean,

I am a resident of southern Marin, and former longtime resident of San Francisco. I am a dog owner, and frequent visitor of the GGNRA together with my husband and two young children. We live adjacent to the Marin headlands, and a 12-mile drive to Muir Beach. We regularly walk out dog on Miwok Trail, Oakwood Trail, and at Muir Beach. We chose to live in this area in large part because of the access to the trails, the coast, and specifically to areas that provide dog access - both on and off-leash. We also visit Crissy Field and other areas of the GGNRA regularly. Having a dog providing him access to the outdoors is an important part of our family's quality of life.

I am an environmental planner by profession. I have a master's degree in marine policy and am passionate

---

about environmental protection. I have written, managed the writing of, and reviewed EIRs and EISs for more than 10 years.

My comments on the SEIS are as follows:

1. Comments provided on the DEIS have not been adequately responded to. The changes made to the DEIS were less than substantive considering the serious inadequacies noted.
2. The basis for the SEIS - the Purpose and Need for Action - needs to be completely revised to address two fundamental inadequacies"
  - i. The first part of the need statement asserts the resources/values could be impacted ("A draft plan/SEIS is needed because GGNRA resources and values, as defined by the park's enabling legislation with the NPS Organic Act, could be compromised to the extent that, without action, those resources and values in some areas of the park might not be available for enjoyment by future generations.") The document continues to describe possible impacts, biological and health-safety, that are not backed by credible studies, observations, or science in the GGNRA. The issues raised are conjecture rather than real issues based on solid data.
  - ii. The second part of the need statement implies that all NPS areas need to be regulated in a consistent manner ("Additionally, a dog management policy inconsistent with NPS regulations and increased public expectations for use of the park for dog recreation has resulted in controversy, litigation, and compromised visitor experience and resulting in resource degradation. The conflicts will likely escalate if not addressed in a comprehensive draft plan/SEIS." Parks have different values and resources and should be managed accordingly. Adaptive management is very much an accepted principle, and the Park Service should consider this in the management of its different resources. Recreation has long been an important value of the urban GGNRA. The "need" statement implies the NPS doesn't want the headache of inconsistent management - this is a woeful and un-compelling reason to remove dog access that so many people and dogs have come to depend on and enjoy for their quality of life. Sometimes our jobs are difficult, but worthwhile to uphold the values we set out for ourselves.
3. The SEIS lacks relevant scientific evidence to adequately substantiate claims of potential impacts. Where impacts cannot be appropriately substantiated, they should be removed from the document. This particularly pertains to assertions of biological and health/safety impacts.
4. The document still lacks appropriate analysis of recreational resources in the urban setting of the San Francisco Bay Area. NEPA requires that environmental impacts on the quality of the human environment be considered. They were not.
5. Based on my above points, I strongly support Alternative A, the No Action Alternative. I strongly oppose Alternative F, the preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA

Dogs are already off-limits on over 99% of the Golden Gate Recreation Area. There isn't any compelling reason to eliminate or further restrict the remaining 1%. You haven't conducted peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. The Golden Gate Recreation Area was established to provide recreational activities to local residents in a densely populated area. It requires a different management strategy than a National Park. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 Pet Policy. That policy still works today and should be retained. If specific issues/impacts do arise, substantiated by data, please, work with the community to find creative management solutions, rather than broad-brush, heavy-handed abolitions. Please honor the mission of the GGNRA, which is to promote not only natural but also recreational value of the park. My family, including my dog, and so many others depend on the continued enjoyment of our common resources for our quality of life.

Best,

Antonia Sivyver

Re; Draft Environmental Impact Statement / Draft Dog Management Plan

Dear Superintendent Dean,

My name is Tim Sinclair and I am fortunate to be a resident of San Francisco where I have owned a home for over 20 years now. I live in Potrero Hill with my partner, David, and our Weimaraner, Hunter. As a family, we use the GGNRA on a weekly basis. In fact, rain or shine, we take advantage of the wonderful off leash area at Crissy Field at least twice a week, more if we are able. Going to Crissy Field is a part of our regular routine and have built a community there that adds greatly to our quality of life. Like many of the dog owners that use the area, we support and encourage use of Crissy Field in an environmentally responsible manner. In fact, I have noticed that, as a group, those who bring their dogs tend to have higher standards in this regard and are very mindful of taking care of this very special place. I keep my dog under voice and sight control, clean up after him, and always keep him out of the fenced dunes and vegetative areas. As a responsible dog guardian, It is important for my dog walking friends and me that the area of Crissy Field that currently allows dogs to be off-leash remain open for off leash dog walking access.

I do not agree with the GGNRA's current preferred alternative as it significantly restricts and eliminates off leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

As presented in the DEIS, the proposed dog management plan eliminates dogwalking (on and off leash) access for all new lands (additions to the GGNRA sometime in the future) within San Mateo county lands. The GGNRA's mission applies equally to new lands as existing lands and it is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands.

I am concerned about the long-term preservation of the GGNRA's natural resources and want to protect these important natural areas, but other options (besides restricting dog- walking access) should be considered first. For example, it is not clear where dogs are allowed. (think the GGNRA should provide better signage and create environmental barriers, such as the vegetative barriers surrounding the tidal marsh at Crissy Field or the restored dunes at Fort Funston.

As a responsible dog guardian and advocate for animals, I know it is crucial that our dogs are well behaved and trained in order to peacefully co-exist in an urban environment and adequate exercise and socialization is essential for a well-behaved dog. Having places where I can take long walks with my dog allows me to get the exercise I need while also meeting my dog's needs. Without access to the small amount of land in the GGNRA we currently have, I am very concerned that many dog and dog guardians will not have sufficient opportunity to exercise and recreate.

Some areas within the GGNRA also serve as a place of solitude for me and provide me with a very important peace and safe outdoor space and experience within the San Francisco Bay Area, a large metropolitan area. Some specific problems with the DEIS include the following points. Please revise the DEIS to correct these errors.

This DEIS and Plan doesn't recognize that environmental values include both recreation and nature. In many places, the DEIS treats the environment and recreation as opposing values, i.e., that recreation only harms natural resources. The document doesn't acknowledge that people care about both and that people with dogs are often also good stewards of our environment. The draft plan has the effect of punishing many people because a very small number are uneducated, insensitive, or irresponsible and because the current signage of off leash areas is unclear. The reasonable response to this problem is to educate visitors, improve signage and help park visitors follow the rules and learn how to respect the environment, not to ban the rest of us with dogs from the GGNRA. I wish that the DEIS would include an alternative along these lines.

The proposed "compliance-based" approach should be modified to create a baseline of current conditions, and then measure impacts rather than compliance. It should include a robust public educational component and an objective, long-term monitoring program designed and carried out with the community. The GGNRA should develop partnerships with community, animal welfare, and conservation organizations to make this work. These partner groups could bring additional resources to limited federal resources. GGNRA should be a partner with the City of San Francisco and other communities, not an adversary.

The DEIS doesn't recognize that many areas of the GGNRA are located in or next to urban neighborhoods. The DEIS excludes the quality of the urban environment from its scope, saying it's not significant. The reality is that the GGNRA provides much needed open space in a major urban area. This omission is disconcerting because the fundamental purpose of creating the

GGNRA was to provide open space for recreation (including dog walking as a form of recreation) to serve the metropolitan Bay Area. The dynamic interrelationship between GGNRA and our neighborhoods is exactly the human environment that the EIS is required to study, but failed to do so. The DEIS notes some studies and general tendencies of dogs to harm natural resources, but with few exceptions, there is little documented site-specific impacts to support the restrictions of the preferred alternatives. Further, there is insufficient documentation that considers other impacts ' other park visitors that disturb and impair the natural resources, other wildlife, Mother Nature, boot camps, bicyclists, huge crowd attracting events such as Fleet Week, festivals and Walk-a-thons. The proposed broad limitations in the DEIS are without site-specific science that demonstrates that problems with the quality of GGNRA's natural resources are actually attributable to dogs and not to other factors.

The DEIS definitely needs to provide full disclosure to the public and decision makers. If dog- related disturbances are having a significant negative effect on wildlife, for example, the DEIS needs to provide site-specific scientific evidence as documentation and undertake a scientific evaluation as to whether people or other factors are also causing or contributing to the problem noted. [You could give examples where the DEIS says there are impacts in an area that you have not observed in that area or where the problem is does not seem to be caused by dog). If they are, GGNRA needs to provide an analysis that considers whether people should also be restricted from these areas. We need this documentation in order to comment meaningfully on the draft plan and DEIS. The science needs to be sound and the consequences need to be fully and fairly disclosed for everyone ' so that an informed decision can be made. And lastly, [this is where you state your own preferred alternative], after much consideration, I support Alternative A, the No Action alternative and would also include the "New Lands" areas (such as Cattle Hill, Sweeny Ridge, Mon Point, Pedro Point and Milagra Ridge and Rancho Corral de Tierra) in San Mateo county.

The DEIS is biased against and does not take a hard look at the No Action alternative or variations on that alternative. There are many areas in the GGNRA where the existing 1979 Pet Policy has been working, and where sensitive species are not present and visitor conflicts do not occur or are very infrequent. In addition, the DEIS does not provide site- specific information that these areas are inappropriate for continued dog walking.

Respectfully,

Timothy Sinclair MD  
344 Arkansas St.  
San Francisco, CA 94107

**Correspondence Type:** Letter  
**Correspondence:** February 11, 2014  
Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123-0022  
Attention: SEIS

Dear Superintendent:

I have heard from a few people that the GGNRA will hear all of our comments during this time period and will basically toss out all opinions and go ahead and do whatever it wants to do. I am still an optimist and believe (hopefully not foolishly) that we live in a democratic society and that our voices are heard and that we will be listened to.

I know that a lot of the Golden Gate National Recreation Area's land is secluded and away from large cities, but the areas in question (Fort Funston, Ocean Beach, Baker Beach, Crissy Field) are all part of a cosmopolitan area and need to be addressed as such. In San Francisco alone, it is estimated that there are nearly 200,000 dogs. My mother is a dog walker in San Francisco. During that time she has learned very much about training and working with animals. One of the conclusions that she has come to in all her years doing this is that the single most important thing you can do for your dog is to socialize them with other dogs, people, children, etc. But especially other dogs. Dogs are teachers. The elder dogs teach the young ones how to behave in a pack.

Currently less than 1 percent of the parkland is now available for off-leash activity, yet the proposal would not only reduce that space but could forbid even leashed dogs in some places people love to visit. Any new lands added to GGNRA, under this proposal, would prohibit dog walking (even leashed) by default, unless a specific exception was made.

Neighborliness works better than drawing up battle lines. It's not a question of pet owners vs. non-pet owners, hikers vs. walkers, or any other oversimplified interest group. Our shared space is exactly that: shared. There's room for everybody, within reason, and within balance.

Census data show that there are more dogs than children in San Francisco, but again, it's never either/or. This city has always recognized and embraced animal companionship. For many of our citizens, their pet companions are family. After all, this is the city of St. Francis.

The GGNRA Draft Dog Management Plan is a major departure from the established, balanced use of parklands that prevailed here for forty years. Vastly reducing the off-leash areas in GGNRA would harm the quality of life of tens of thousands of dog guardians and, of course, the behavioral health of their dogs.

Dogs get the same benefits as people from playing outside. Companionship and exercise shape both dogs and owners into healthier, better urbanites.

One of the things that makes San Francisco so great is all of the off-leash dog walking areas. If anything, dogs need more off-leash areas, not less. They can out-run and out-walk us 100 times over. They definitely need areas that are conducive to running, playing and getting all of their energy out. It makes for a much more well-adjusted dog.

Please, please reconsider your management strategy, and leave the off-leash areas just as they are.

Sincerely,

Govinda Sherwood

Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123-0022  
Attention: SEIS

Dear Superintendent:

I have heard from a few people that the GGNRA will hear all of our comments during this time period and will basically toss out all opinions and go ahead do whatever it wants to do. I am still an optimist and believe (hopefully not foolishly) that we live in a democratic society and that our voices are heard and that we will be listened to.

I know that a lot of the Golden Gate National Recreation Area's land is secluded and away from large cities, but the areas in question (Fort Funston, Ocean Beach, Baker Beach, Crissy Field) are all part of a cosmopolitan area and need to be addressed as such. In San Francisco alone, it is estimated that there are nearly 200,000 dogs. I have had the pleasure, for the last 16 years, of being able to care for dogs (and cats) in the city of San Francisco. During that time I have learned very much about training and working with animals. One of the conclusions that I have come to in all my years doing this is that the single most important thing you can do for your dog is to socialize them with other dogs, people, children, etc. But especially other dogs. Dogs are teachers. The elder dogs teach the young ones how to behave in a pack.

That's the problem with the preferred proposal by the Golden Gate National Recreation Area (GGNRA), which wants to drastically limit the areas where people can bring their dogs. Currently less than 1 percent of the parkland is now available for off-leash activity, yet the proposal would not only reduce that space but could forbid even leashed dogs in some places people love to visit. Any new lands added to GGNRA, under this proposal, would prohibit dog walking (even leashed) by default, unless a specific exception was made.

Neighborliness works better than drawing up battle lines. It's not a question of pet owners vs. non-pet owners, hikers vs. walkers, or any other oversimplified interest group. Our shared space is exactly that'shared. There's room for everybody, within reason, and within balance.

Census data show that there are more dogs than children in San Francisco, but again, it's never either/or. This city has always recognized and embraced animal companionship. For many of our citizens, their pet companions are family. After all, this is the city of St. Francis.

The GGNRA Draft Dog Management Plan is a major departure from the established, balanced use of parklands that's prevailed here for forty years. Vastly reducing the off-leash areas in GGNRA would harm the quality of life of tens of thousands of dog guardians and, of course, the behavioral health of their dogs.

Dogs get the same benefits as people from playing outside. Companionship and exercise shape both dogs and owners into healthier, better urbanites.

The San Francisco Board of Supervisors understood the need for dog guardians to enjoy the outdoors with their companions when they made land available to the GGNRA. and cited it specifically. So the Draft Plan's claim that the quality of urban areas is not a significant factor in determining a dog management plan" violates the spirit under which the GGNRA was created. I also fear that restricting dog-friendly spaces would discourage dog adoptions, not only subverting our animal-welfare goals but also threatening the ability of shelters such as the San Francisco SPCA to continue rescuing dogs.

One of my favorite areas to walk the dogs - of which I take only six or seven at a time - would be Fort Funston. This is one of the few areas in which the dogs are now allowed to run and play off leash.

One of the things that makes San Francisco so great is all of the off leash dog walking areas. If anything, dogs need more off leash areas, not less. They can out-run and out-walk us 100 times over. They definitely need areas that are conducive to running, playing and getting all of their energy out. It makes for a much more well adjusted dog..

Please, please reconsider your management strategy, and leave the off leash areas just as they are.

Linda Sherwood

I'm writing because I do not like the new law. Dogs need to exercise so do people. It public place because it very good for dogs to ran every where. Dogs and dog walkers keep parks safe for example they like raning and be touch by people love to get ball play around with people. It will be nice if you let dogs go out and play at the park and beach. Not all dogs owners are irresponsible.

Thank you for your time,

Shavanna

San Francisco, CA 94123

February 14, 2014

Dear Superintendent Dean,

My name is Sally Shapiro and I have been a resident of San Francisco 30 years. I run with my dogs on a daily basis at Baker Beach or Crissy Field. Running with my dogs improves both my dogs' and my physical and mental health. Access to the GGNRA for this activity is a critical aspect of the quality of my life in San Francisco.

I am writing today to express my opposition to the GGNRA's preferred alternative the proposed Dog Management Plan that would greatly limit where I would be able to recreate with my dog(s) in the near and longer term future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It is managed for financial sustainability and contains both residential and commercial activities as an extension of the urban area that surrounds it. As such, it should to be managed to different standards to achieve its fullest potential and provide maximum enjoyment by visitors to and residents of the Bay Area that recreate regularly on this land.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS permits further restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS strongly suggesting that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of historically granted and important dog walking recreation in the GGRNA for generations to come.

I understand that taking care of our sensitive wild lands is important. I have been a member of the Sierra Club for 25 years in order to further that goal. I also understand that supporting conservation and improvements in the GGNRA is important. I have supported the Golden Gate National Parks Conservancy at the William Kent Society level for many years. However, one of the reasons I support the Conservancy is because I am such an active user of the GGNRA. Unfortunately that active use, as well as the financial support it has engendered, would come to an end under the proposed dog management plan.

Sincerely,

Sally Shapiro

Dear Mr. Dean,

I have been a half time resident of San Francisco for the past 20 odd years, but I first moved to San Francisco ~1962 and continued on the Bay Area full time until 1990. Since it first opened up I, my family, and my family dog frequently visited areas of the GGNRA. The gradually increasing restrictions on dog walking - specifically off leash dog walking - have reached a point of unfairness. Please recognize that at least the few remaining areas - today I frequent Crissy Field - should remain open to off-leash dogs and responsible dog owners. I am aware that excellent suggestions for managing the open areas have been proposed.

ATTN: Dog Management

Out of respect for the "National Park Service" U.S. Dept. of Interior and years of accumulative research and documentation, Alternative F is sound and should be implemented.

There is, in fact, an immediate purpose and need for action!

Also, thanks to the availability of the hard-copy of the SEIS sent to me - there appears to be a general consensus justifying Alternative F.

Dear Superintendent, Golden Gate National Recreation Area;

I am urging you to consider the effect that not allowing unleashed pets on GGNRA areas would have.

I have a home at Stinson Beach that I go to regularly with my dog. There are many unleashed dogs that I see on this GGNRA beach and there has never been a problem in the 20 years I have been bringing my dog there. Owners are very diligent about cleaning up after their dogs, I have NEVER found dog feces left behind on that beach!

In fact, it is a ritual with most owners to carry a baggy and pick up ANY trash, of any kind found on the beach. Because we KNOW that it is a privilege to be able to let our pets off their leash in this most beautiful and spectacular beach. It is one of the reasons so many people who love natural beauty come to this beach. The dogs are part of the wonder and joy that everyone shares when they are out.

To not allow unleashed dogs in this area would be a huge disappointment to me and many others. Every dog I have encountered is under voice control and not allowed to roam beyond it's owner's control.

This is one of the few freedoms we have as pet owners. We are respectful and considerate of all who share these fantastic State Treasures with us.

Please reconsider.  
Brenda Leal DeLuca

Dear Mr Dean

I love Marin County and pay hundreds of thousands of dollars in taxes each year. As a tax payer, a long time resident of Marin County and a dog lover, I strongly OPPOSE Alternative F, your dog management plan.

I do SUPPORT Alternative A, No action Plan.

As it is dogs are restricted to much of the GGNRA. We live in an urban area, dogs are part of the urban environment, and as dog owners, we rely on our dogs using open space.

Thank you.

Susan Denny, M.D.

RE: Marin County Comments on  
SEIS - Proposed Dog Management Plan

Dear Frank,

Attached please find Resolution No. 2014-12, A Resolution of the Marin County Board of Supervisors Recommending Modifications to the Golden Gate National Recreation Areas Proposed Dog Management Plan to Accommodate Community Needs Related to Recreational Dog-Walking.

Please accept this as Marin County's official submission to Public Comments, due by February 18, 2014.

Sincerely,

Kathrin Sears  
Supervisor, District Three - Southern Marin  
President, Marin County Board of Supervisors

RESOLUTION NO. 2014-12

RESOLUTION OF THE MARIN COUNTY BOARD OF SUPERVISORS  
RECOMMENDING MODIFICATIONS TO  
THE GOLDEN GATE NATIONAL RECREATION AREAS  
PROPOSED DOG MANAGEMENT PLAN TO  
ACCOMMODATE COMMUNITY NEEDS RELATED TO RECREATIONAL DOG-WALKING

WHEREAS, the enabling legislation that established the Golden Gate National Recreation Area (GGNRA), Public Law 92-589, October 27, 1972, states, in part, "In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area is established"; and

WHEREAS, in other language, the GGNRA was established, among other things, "...to create an area that concentrates on serving the outdoor recreation needs of the people of the metropolitan area"; and

WHEREAS, these lands are intertwined with vibrant communities whose residents rely on the open space of the GGNRA every day for exercise and for the opportunity to experience the natural environment; and

WHEREAS, there is a long-standing respect for the wildlife-urban interface and a commitment in Marin County to preservation of open space and natural habitat, including the set-aside of 80% of Marin's lands in perpetuity as agricultural, open space and park land; and

WHEREAS, the County of Marin shares the objectives of the GGNRA to provide a variety of visitor experiences, preserve and protect natural and cultural resources and natural processes, maintain park resources and values for future generations, reduce user conflicts and improve visitor and employee safety; and

WHEREAS, the GGNRA adopted in practice the "Approved Guidelines for a Pet Policy" on February 24, 1979, with public input, that allows licensed dogs off-leash and under voice-control in the 18,000 terrestrial acres owned and managed by GGNRA; and

WHEREAS, changes in park usage over time require a review of management policies, and it is recognized that all parks and open space areas in the Bay Area have experienced an increase in use by all types of visitors, including families, seniors, cyclists, horseback riders, hikers and dog owners, necessitating a review and potential revision of policies; and

WHEREAS, there are estimated to be up to 100,000 dogs in Marin County, which has a population of approximately 250,000 people, and many have historically exercised their dogs and themselves on GGNRA trails and fire roads; and

WHEREAS, of the 52.7 miles of trails and fire roads in the Marin County portion of GGNRA, since 1972 dogs on-leash have been allowed on an estimated 24.2 miles of trails and fire roads, and dogs under voice control (off-leash) have been allowed on an estimated additional 16.1 miles of trails and fire roads; and

WHEREAS, a review of the policies governing the GGNRA was undertaken, which included a component covering the management of dogs in the GGNRA, and on June 28, 2005,

the Negotiated Rulemaking Advisory Committee for Dog Management at Golden Gate National Recreation Area was established; and

WHEREAS, the GGNRA released a Draft Environmental Impact Statement and Dog Management Plan on January 15, 2011, which proposed, via the Preferred Alternative 'F, to dramatically restrict dogs in all of the GGNRA, including Marin County, the City and County of San Francisco and San Mateo County; and

WHEREAS, in contrast to the intent of the 1972 enabling legislation to provide recreational open space and serve the outdoor recreation needs of the surrounding metropolitan areas, the 2011 Draft General Management Plan called for much of the GGNRA land to be managed as nature zones that provide backcountry types of visitor experiences, defined in the plan as a sense of remoteness and self-reliance, low visitor use, controlled access, with few amenities, where challenge, risk, and testing of outdoor skills would be important to most visitors; and

WHEREAS, in the Public Comment response to the Draft EIS, the National Park Service received over 4,700 responses, with the ratio in opposition to the Preferred Alternative F at 3:1, and the County of Mann Department of Parks and Open Space submitted a letter on May 27, 2011, expressing concerns that the proposed limitations to dog walking in GGNRA would move the displaced users to County open space and parklands and MMWDs watershed, each comprising approximately 20,000 acres, resulting in significant impacts to county parks by the displaced users; and

WHEREAS, the County's May 27, 2011, letter encouraged certain changes to the Draft, including continuing to allow dogs off-leash on most beach areas and on-leash while crossing sensitive habitat areas, that Alta Trail remain designated off-leash to serve the residents of Marin City and Sausalito, that some off-leash trail use be allowed in Oakwood Valley, which would also accommodate some off-leash trail use in Homestead Valley; and

WHEREAS, on September 6, 2013, the GGNRA released a Supplemental EIS for the Dog Management Plan, with a Preferred Alternative F which restricts dogs on-leash to approximately 8.8 miles of trails and fire roads and dogs off-leash to a half mile section of one fire road, thus reducing access for dog walking on-leash by approximately one third from current rules and down to one half mile for dogs under voice-control in the Marin Headlands, the only off-leash area remaining would be the north end of Rodeo Beach; and

WHEREAS, the SEIS does not adequately address the impacts on county parks and open space, or traffic in neighboring communities as a result of implementing Alternative F; and

WHEREAS, Muir Beach restrictions may result in significant displacement impacts on Marin County-owned Little Beach; and

WHEREAS, the Muir Beach Community Services District unanimously adopted a resolution on December 4, 2013, opposing the Preferred Alternative 'F, requesting that dog access be granted from Coyote Ridge Trail to Miwok Fire Road to allow hikers with dogs to cross from Muir Beach into Mill Valley, and expressing preference for Alternative A (no change - status quo); and

WHEREAS, the Marin GGNRA peripheral fire roads are on average twelve feet wide,

allowing for a variety of users, including those with dogs, to safely share the road, and are accessible from many neighborhoods and locations outside of the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park and open space lands.

NOW, THEREFORE, BE IT RESOLVED that the Marin County Board of Supervisors supports GGNRA efforts to protect sensitive habitat and enhance the visitor experience, recognizes the need to revise regulations to respond to changing patterns of use, and encourages the GGNRA to continue to manage the GGNRA as a metropolitan recreation area, distinct from all other National Parks, Wilderness Areas and Monuments; and

BE IT FURTHER RESOLVED, that the Board requests that continuous trail loops, instead of dead-end trail sections, be created that are accessible to dogs; that off-leash opportunities continue on Muir Beach; that educational signage and enforcement be used to change visitor behavior with respect to sensitive habitat, refuse and visitor and staff interaction; that fire roads, which are on average 12 wide and allow for multiple types of users, continue to be accessible to on-leash dogs, with off-leash being preferable; that continuous access be created that allows traversing of GGNRA lands with dogs from Muir Beach to the Golden Gate Bridge, and that the GGNRA accommodate access for dog owners in neighboring communities, including Tam Valley, Tennessee Valley, Marin City, Sausalito, Homestead Valley and Muir Beach; and

BE IT FURTHER RESOLVED, that the Board submits that the Preferred Alternative F is too restrictive, that access for dogs off-leash, and under voice-control be reinstated on fire roads, that dogs be restricted to on-leash near sensitive habitat areas as well as other trails that provide linkage access to fire road Loops and that the GGNRA consider time-of-use rules that would allow off-leash use of some areas, such as beaches, to early and late afternoon times on weekends; and

BE IT FURTHER RESOLVED, that the Marin County Board of Supervisors understands and supports the need for habitat restoration, especially of threatened and endangered species, but would encourage the restoration of sensitive habitat be planned in more remote areas of the park where possible, and away from heavily trafficked fire roads and connecting trails, and that fencing and educational signage be used when restoration is by necessity adjacent to roads and trails; and

BE IT FURTHER RESOLVED, that the Board requests that the GGNRA accept these comments as part of the Public Comment to the SEIS; and

BE IT FURTHER RESOLVED, that copies of this resolution be sent to GGNRA Superintendent Frank Dean; National Park Service Director Jon Jarvis; National Park Service Pacific-West Regional Director Christine Lehnertz; US Senator Dianne Feinstein; US Senator Barbara Boxer; US House Minority Leader Nancy Pelosi; US Congressman Jared Huffman; Secretary of the Interior Sally Jewel; Chairman of the US Subcommittee on National Parks, Forest, and Public Lands Rob Bishop; Ranking Minority Member of the US House Subcommittee on National Parks, Forests, and Public Lands Raul Grijalva; Chairman of the US House of Natural Resources Committee Doc Hastings; and Ranking Minority Member of the US House Natural Resources Committee Peter DeFazio.

PASSED AND ADOPTED at a regular meeting of the Board of Supervisors of the County of Marin held on this 11th day of February, 2014, by the following vote:

AYES: SUPERVISORS Judy Arnold, Susan L. Adams, Steve Kinsey, Katie Rice,

To: GGNRA

I'm writing this letter to oppose the proposed GGNRA Dog Management Plan. I have lived in the Bay Area all of my life and in San Francisco for 25 years. Every one of those years has been spent exploring and enjoying the public recreation areas near me with a four-legged friend.

I'm highly concerned about the proposed leash-only areas and am wondering what the ramifications will be? How many altercations will ensue? How crowded will the off-leash parks around me become? What about parking? How will my dog get her exercise? How will I get my exercise? The questions are endless. The reasons to pass the plan are few and unproven.

I strongly oppose this new plan.

Do not pass this plan!

Thank you for your time,

Pamela Schulting, Teacher, SFUSD  
28564 25th St, San Francisco, CA 94110

RE: Comments on Golden Gate National Recreation Area Draft Dog Management  
Plan/Supplemental Environmental Impact Statement

Dear Mr. Dean,

The Mann Audubon Society (MAS) appreciates the opportunity to comment on GGNRA's Draft Dog Management Plan Draft Supplemental Environmental Impact Statement (DSEIS). As noted in our comments on the Draft EIS, Mann Audubon has a long history of working to protect wildlife and wildlife habitat. We understand that the Park Service is under intense pressure to open more areas to on- and off-leash dogs. We applaud GGNRA's focus on protecting wildlife and habitat and we urge that that approach be sustained and strengthened, most importantly to protect endangered species, wildlife and habitat. Our specific questions and recommendations discussed below. Our comments address Marin County sites only, but we support protecting wildlife, habitat and endangered species throughout GGNRA.

It is a primary responsibility of the National Park Service (NPS) to ensure that natural resources, particularly endangered species and their habitats, are fully protected. This includes ensuring that endangered species are not harassed or otherwise adversely impacted by people, dogs and other stressors.

MAS continues to support Alternative D because it would provide more comprehensive and effective protections for the natural resources within the boundaries of GGNRA. It is clear to us, after reviewing the record, that protecting wildlife and habitat is the primary reason the NPS has restricted dogs use on Marin trails. MAS supports this criterion for guiding decisions. In our view, however, adequate protection will not be achieved because the proposed restrictions are not adequate, enforcement is unclear and compliance is far from certain. The Plan is weighted in favor of dogs and dog walkers and does not go far enough to protect habitat. The DSETS proposes to allow dogs on every Marin area and, since the DEIS, dog use has been expanded on a number of Marin sites, including Muir Beach, and Rodeo Beach.

According to our calculations from acreage figures in the DSEIS, 25.32 miles of trails and 54.32 acres of beach are open to dogs on GGNRA in Marin County. Considering this, it is hard to believe that dog walkers are not able to sufficiently exercise their pets on

GGNRA trails. We also note that the Mann has many dog parks, and more than 200 miles of public trails. Dogs are allowed on most, if not all, of the trails in Mann. It is unfortunate some dog owners can't rise above their own interests to support protecting habitat for endangered butterfly, owls, fish and other at-risk species, in the limited areas where these species need to live.

We appreciate the extensive research that went into the preparation of the Draft SEIS, especially the 24 peer reviewed studies that confirm the impact of dogs on wildlife and habitats. The findings of these studies are applicable to impacts of dogs everywhere and provide ample support for recommendations to limit dog use to protect wildlife in sensitive habitats.

We also appreciate that fire roads are not considered separately from trails because use of fire roads by dogs can be just as damaging to adjacent habitats and wildlife as dogs on trails. They may even be more damaging because they are wider and could encourage more heavy use.

Inadequacies of the DSEIS:

Precedent Setting Nature Not Addressed

The DSEIS reports that GGNRA is the only facility in the entire national park system that allows off leash dogs. "Dogs that are not controlled by caging or a leash no longer than six feet are currently prohibited across the entire national park system (36 CFR 2.(a)(2))...." The DSEIS should address the nationwide implications of opening areas to off-leash dogs at GGNRA. It is a significant concern that allowing off-leashed dogs at GGNRA could be used to justify and encourage opening other parks to off-leash dogs. This would significantly broaden the adverse impacts of off-leash dogs on wildlife and natural habitats. This is a major potential impact that should be addressed.

Monitoring Based Management Strategy Unclear

As explained in the Park Operations section: All sites would be regularly monitored. When the level of compliance is deemed unacceptable, based on violations and impacts to resources, primary management actions such as focused enforcement of regulations, education, time and use restrictions, establishment of buffer zones and SUP restrictions would be implemented. If non-compliance continues, secondary management actions including short-term closures would be implemented through the compendium. The schedule includes a 1-3 month period of public education followed by a 1-3 month period testing the monitoring based strategy.

With the above process, the NPS expects that impacts on wildlife and habitats would also decrease. How would those impacts be evaluated and what criteria would be used? What level of non-compliance would be tolerated? Would there be a plan for monitors to visit all sites at regular intervals over what period of time? We understand that monitors not be able to issue warrants but would have to communicate findings to enforcement staff. How would monitors communicate with enforcement personnel efficiently? How would such a communications system successfully identify violators in a timely manner and hold those violators accountable? By the time enforcement personnel appear, wouldn't it be likely the incident would be over?

## Enforcement not Adequately Addressed

Enforcement is key to successful implementation, to compliance and to protection of wildlife and habitats. Too many people seem to feel that they will never get caught, don't care, or feel that they are somehow different and entitled to behave as they wish. The description of the enforcement program or management activities is vague and leaves many components poorly defined.

There should be a more comprehensive description of the planned enforcement program. What are the anticipated threshold levels for implementing management actions and would they differ among sites? What thresholds or triggers would be used to decide when to take enforcement actions management actions such as to close a trail? What specific enforcement actions would be initiated, besides issuing warrants to violators and or closing trails, and for what non-compliance activities would they be initiated?

GGNRA is in the process of developing a warrant process. Information should be provided about the warrants: how they would be issued; for what infractions; how many times would offenses have to be repeated before warrants would be issued?

## Problems with Impacts Analyses

### - Compliance Not Accurately Evaluated

The cumulative impact analyses for virtually all trails, roads and park segments consistently cite park programs such as restorations by the Golden Gate Park Conservancy and "ecologically beneficial" restoration and management activities by others, including controlled burns and invasive plant removal. Impacts at each location and cumulatively are deemed negligible when compared and considered with the restoration and management activities and agency projects. We have several problems with this approach:

The impact analyses as well as the Environmentally Preferred Alternative rely on compliance to evaluate the impacts of the Plan as negligible. This is an unrealistic approach because many people will not comply. The Plan, therefore, would be ineffective in achieving impact levels that are negligible.

The DSEIS acknowledges that even with "assuming compliance" the preferred alternative would result in localized impacts but these would be considered minor based on the assumption that dog users will comply with the regulations. Repeated observations of dog users over time, however, clearly demonstrate that this is not the case. Dog's users throughout Mann County violate dog restriction, ignore signs and sometimes destroy or steal them, and disregard policies and regulations with impunity. While many people do obey the law, particularly if they understand why, many will not. This cannot be ignored in evaluating the significance of the impacts. In addition, even localized impacts could be major when endangered species and their habitats are involved.

Conclusions that the potential impacts will be negligible are unsubstantiated and invalid until and unless the NPS presents a dependable program that will ensure dog walkers will stay on trails and not harass wildlife or damage habitat. The only way this can be assured is through an effective monitoring and enforcement program. At minimum, there needs to be a strong enforcement program that ensures dogs are restricted from sensitive habitats.

It would also be helpful if dogs were restricted on more trails.

The DSEIS should acknowledge that non-compliance is a likely possibility and is highly probable. This impact should be addressed by identifying an enforcement program and actions that would mitigate this individual and cumulatively significant impact.

#### - Significance of Impacts Not Adequately Assessed

The DSEIS evaluates the significance of impacts in comparison with and consideration of beneficial activities that are being conducted in the GGNRA and even outside of GGNRA. The impacts of dogs are weighted and evaluated with activities being conducted by GGNRA, the Park Conservancy and others, including wetland and other habitat restoration and enhancement projects and management actions such as controlled burns. Offsite restoration projects and projects implemented by others than the federal government are also cited. This is a slippery slope.

These restorations/enhancements are not being implemented to mitigate for or justify dog impacts. Furthermore, most or none of the restorations would not in any way offset impacts from dog use. The argument can be made that restoring habitats would actually increase impacts because the habitat areas that dogs could disturb would be increased. Also most or all of those restoration/management activities within the park would be done anyway because it is GGNRA's responsibility to protect, enhance and restore habitat for endangered species.

Finally, the NPS must consider the consequences of claiming unrelated restoration activities as mitigation to offset or balance impacts of their project. What if shopping center or housing project developers were to claim their impacts are negligible because restoration projects of GGNRA and others created offsetting beneficial conditions? This is a real and potentially disastrous outcome, if perhaps unintended, of the approach taken in this document. MAS certainly doesn't want habitat restoration projects we have implemented to be used to offset damage to other habitats

The only effective mitigations for dog impacts are suitable protective restrictions and an education and enforcement program that works.

#### Impacts of Increased Visitor Use Not Considered

It should be recognized that, just as use of GGNRA lands has increased over the years, uses will undoubtedly continue to increase as our human population increases. Mitigation should be presented to address the increased impacts on habitat and wildlife that would accompany the anticipated increased uses of some or all of the trails.

#### Need for Environmental Review for New Trails

It appears that trails that are not presently in existence are being considered part of the Management Plan and evaluated in this DSEIS, such as new trails at Homestead Valley. It also appears that the trail locations may have not even been determined at this time.

This DSEIS should provide sufficient information about these and any other trails that are not currently in place. This is necessary to enable evaluation of the potential adverse impacts on adjacent habitats and wildlife of human and dog use and to evaluate whether

there is a less environmentally damaging alternative location. If this information is not provided in this DSEIS, a separate environmental review for these non-existent trails should be conducted.

Comments on specific sites:

#### Stinson Beach

We continue to support Alternative D which complies with federal regulation that dogs not be allowed on swimming beaches. We question whether it is the responsibility of GGNRA, or any jurisdiction for that matter, to provide access to property owned by others. Should GGNRA continue to allow their land to be used to reach Upton Beach, an effective barrier should be constructed. The nature of this barrier should be more thoroughly discussed in this DSEIS. Whatever kind of barrier is used, it must be designed to not impede wildlife movement.

#### Homestead Valley

GGNRA preferred Alternative would allow on-leash dogs on the Homestead Fire Road and on future neighborhood connector trails that are yet to be established. We are concerned about approving additional "neighborhood connecting" trails without knowing their location, so that their impacts can be adequately evaluated. Further, MAS has a long-standing position in opposition to the development of new trails because there already are ample trails in Mann County and in GGNRA. We recommend that any new trail construction be accompanied by decommissioning of an existing trail of the same length in the same area. In particular, because Homestead Valley habitats support the endangered Spotted Owl, it is essential that any new trails, as well as all existing trails, be carefully evaluated to avoid habitat for this endangered species. In this sensitive habitat, at minimum all dogs should be required to be on-leash.

The DSEIS speaks to actions that would benefit the Spotted Owl, but these are merely suggestions in the Main County Plan for Homestead Valley. This plan was recently out for public review and, at that time, the plan discussed the presence of Spotted Owl but did not include protective policy recommendations or policies that even recognized endangered species.

The DSEIS also mentions that the Barred Owl has more impact on the Spotted Owl than dogs. It is not a matter of "either-or". The impact analysis should consider the impacts of both dogs and Barred Owl cumulatively. Impacts from both sources increases the significance of the impacts of both.

#### Alta Trail/Orchard and Pacheco Fire Roads

The Preferred Alternative now would allow on-leash dog walking on various sections as well as walking more than three dogs with a permit. According to the DEIS, the areas that support Mission Blue Butterfly habitat are located "away" from the trails, which is beyond the 6-foot LOD corridors.

In this area, protection of endangered Mission Blue Butterfly would rely on compliance with leash restrictions. Dogs would no longer be allowed on social trails. Impacts from commercial dog walkers are expected to increase, but are considered insufficient to cause

a change in the threshold level. The "threshold level" is not defined.

The preferred approach would not provide effective protection for the endangered Spotted Owl and its habitat. Monitors and enforcement personnel would have to be present frequently or daily to ensure that no social trails are used.

#### Oakwood Valley Trail

The preferred alternative for this site has been modified to allow on-leash dog walking on the fire road and on a portion of the Oakwood Valley Trail to the junction with Alta Trail. Dogs would no longer be allowed on social trails that meander through Mission Blue habitat. We support on-leash dogs on the fire road only. People without dogs also should be restricted from the social trails to protect Mission Blue Butterfly habitat. We strongly support not including a ROLA because of its impact on wildlife movement.

As with the Alta Trails above, for this Alternative to be effective frequent monitoring and effective enforcement will be required to ensure people do not go off designated trails.

#### Muir Beach

The protective provisions of the previous preferred Alternative D, have been greatly modified, to allow dogs on the bridge, Muir Beach Trail and the beach. This site supports multiple endangered species including Red-legged Frog, Coho Salmon, Steelhead as well as shorebirds. This is also the location of a large habitat restoration project to benefit the endangered Red-legged Frog and other aquatic resources.

The discussion on page 113 states that fencing would be installed to protect the dunes and lagoon, would serve as visual barrier and would enable the NPS to manage the area to protect the natural resources. It is acknowledged that the fences would only be visual barriers, and would not actually "protect resources as off leash dogs would still be able to access resources." In apparent conflict the discussion on page 862 states that the preferred alternative would "provide protection of the habitat at the lagoon and Redwood Creek. ..."

It appears that the NPS is going out of their way to provide dog access in this sensitive location. We have little confidence that visitors will comply with leash regulations to ensure protection of the habitat and endangered species. The DSEIS acknowledges that the proposed fencing and leash provisions will not be effective in keeping dogs out of this sensitive habitat area.

The preferred alternative might protect the visitor experience for dog walkers, but would do little to protect wildlife and habitat. Its success is based on assumed compliance which, as discussed above, is unrealistic and not supported by observations. No information is presented to change our minds that on-leashed dogs should be allowed only in the parking lot and picnic areas.

#### Mann Headlands

Alternative F for this area was modified to expand on-leash dog-walking on the Rodeo Avenue and Morning Sun Trails, also on the Lower Rodeo Valley trail corridor, the North Lagoon Loop Trail, Old Bunker Fire Road and Batteries loop trail. Allowing dogs on perimeter trails only is intended to preserve the integrity of the interior habitat. The

DSEIS reports that Mission Blue Butterfly habitat is not located along the roads/trails therefore impacts would be negligible.

Again, this alternative relies on "assuming compliance" to evaluate potential impacts on Mission Blue Butterfly to be negligible. As discussed above, compliance cannot be assured. Various actions are mentioned to benefit Mission Blue Butterfly: protecting habitat outside the Headlands and Fort Baker; several past projects, and "Additional acreage of mission blue butterfly habitat that will be restored under an agreement with the USFWS." The success of the two completed projects (1984 and 2007) is not stated, nor is it clear how they would offset or render negligible impacts from dog use. They could simply be providing more habitat for dogs to impact. Also, it is not clear what additional acreage would be restored, where and when, and whether or how these projects would minimize or offset impacts from continued and increased dog use. It is not demonstrated that the projects described would offset or mitigate the impacts of dogs on the species, but at least the impacts would largely be confined to the perimeter.

#### Rodeo Beach and Lagoon

A ROLA is established on Rodeo Beach and dog use is expanded to the entire north beach, south to the sea stacks. A post and cable fence would be constructed along the west side of the lagoon. It is acknowledged that such a fence would discourage but not physically exclude dogs and people from the lagoon area. Dogs of certain breeds would find it most inviting to leap over or under a fence to fun and swim in the lagoon. Water quality and habitat degradation are noted as causes of the listing of Tidewater Goby, which inhabit the lagoon. The discussion reports water quality and habitat degradation, both of which would result from dogs swimming in the lagoon, are reasons this species is listed as federally endangered.

Protection of any birds that may land on the beach depends on off-leash dogs being under voice control. How will the NPS assure that dogs are actually under voice control and that their owners even are paying attention to their activities? The justification for allowing unleashed dogs here is that shorebird counts on this beach are low. It does not appear to have been considered that the numbers are likely low because of dog use.

Impacts are expected to increase from commercial dog walkers but are not expected to increase enough to change the "threshold level" although what that level would be is not defined. Again, the effectiveness of these restrictions will depend on compliance which in turn will depend on monitoring and enforcement. Assuming compliance is especially troublesome at this location because few, if any, dogs are actually under voice control.

#### Fort Baker

Leashed dogs would be allowed basically everywhere except the beach area. We think there should be some trails, other than the beach, in this area where dogs are not allowed. It is important that dogs not be allowed on the beach to better ensure protection of the lagoon waters for aquatic birds.

We continue to support our previous recommendation: to allow on Bay Trail and other paved roads/trails, but not on unpaved trails.

#### Conclusion

Thank you for considering our input. We very much appreciate the efforts of the NPS to protect the natural resources of the park and we urge that you continue and increase efforts to do so.

Sincerely,

Barbara Saltzman, Co-chair  
Conservation Committee

I am writing on my own behalf to protest the intention of the GGNRA to restrict dogs running freely on the San Francisco beaches, in particular: Baker Beach. I DO NOT HAVE A DOG! But I enjoy the dogs and their very fine owners enjoying, as I do, the wild and full ambience of the beach. they are not harming any living thing, and their owners are meticulous about cleaning up their poop, as well as, cleaning up other detrius on the beach! I think to leash these souls would be a crime! Hense I have written this letter.

Respectfully yours,

Sally Salaus  
(a Sea Cliff Resident)

Frank Dean, GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

Dear Superintendent Dean,

I am opposed to the plan by the GGNRA to shut down areas to residents, who for

years have enjoyed walking in those areas with their dogs, off-leash.

I believe most everyone who walks their dogs in those areas are responsible owners and for many, walking there is the highlight of their day.

Restricting off-leash areas will increase pressure on dogs which I believe it will be detrimental to safety similar to the impact that dog parks have when there are too many dogs.

I believe older owners who currently enjoy taking their dogs to these areas will have a more difficult time if the areas are restricted. The sense of community is important to those people as well.

I don't think it's reasonable to change the long-standing agreement and I hope this plan will be reconsidered.

Sincerely,

Alice Sakamoto

<b>Correspondence Type:</b>	Letter				

**Correspondence:** I am a dog owner in the bay area and I occasionally use the GGRA to exercise my dog. It seems to me that most of the dog owners that use these areas are responsible people who just want their dogs to be healthy and have a place to run in a city where that is not possible in most places. My dog as well as most of the dogs I see there are under voice control. Removing these wonderful off leash beach places will make more dog owners break the law so that their dogs can have some healthy exercise. Please leave these off leash beaches as they are. There are so many dogs in the area that need a place to go. Has there ever been a survey to see how many people and dogs use these areas? There are an awful lot of dog owners in the San Francisco Bay area. Thank you,  
Roberta Rovner  
Bay area dog owner

I am not usually a protestor but I feel strongly that dogs need a place to run where they are not caged in by a fence!

Roberta

Superintendent  
Golden Gate Recreation Area  
Ft, Mason, Bldg. 201  
San Francisco, CA 94123  
ATTN: SELS

Dear Superintendent Dean:

I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area.

I urge the National Park Service to adopt a Dog Management Plan that adheres to all National Park Service management policies and practices, protects park resources, and will provide the opportunity of a quality National Park experience for all visitors.

I think commercial dog walking is not an appropriate activity for National Park lands. Use of the GGNRA by the commercial dog walking industry constitutes an exploitation of park lands strictly for private financial gain.

Sincerely yours,

Nancy B. Ream

Re: Draft Dog Management Plan, Draft  
Environmental Impact Statement  
Dear Superintendent Dean,  
My name is Robert Dewey. I am 69 years old, a native Californian and a resident

---

of San Francisco since 1972. I am a writer and editor who lives on Eighth Avenue, just south of the Presidio. I have walked in the Presidio and Golden Gate National Recreation Area (GGNRA) with three successive dogs since 1978. I also walk with my dog in Mountain Lake Park where I have been active in efforts to restore the lake.

During walks in the Presidio my dogs and I have come to the aid of an owl caught in barbed wire fencing. We alerted to Presidio post veterinarian who freed the bird and saved its life. We have chased off vandals, reported broken water lines and participated in various activities to benefit the park.

GGNRA is an important resource for us for exercise, quiet contemplation, picnics and pleasure. We have submitted comments during the past several years that GGNRA management has been muddling about what to do about dogs in the park.

I'm appalled that after all of these many years, draft plans and redrafted plans and delays, GGNRA's proposed Dog Management Plan and Environmental Impact Statement pays so little attention to the public's input. In fact, with each iteration GGNRA's gets more restrictive and less responsive.

What's missing is recognition that GGNRA is an urban recreation area. Taking that stance is contrary to the GGNRA's founding principal. Why does GGNRA refuse to create a balanced plan for a recreation area that recognizes that people with dogs use and enjoy the park?

â€¢ Specifically I oppose the plan's "Preferred Alternative" because it is too restrictive.

â€¢ I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences may make for good neighbor relations out on the range - - not within the city. We don't need animal pens here.

â€¢ The Supplemental Environmental Impact Statement (SEIS) does not adequately consider comments to the Draft Environmental Impact Statement (DEIS) from dog walkers and appears to have dismissed nearly all of them. There is no information in the SEIS about why these comments (e.g., negative impacts on community and human health from off-leash restrictions) were dismissed and not considered in the development of the preferred alternative.

â€¢ The SEIS still lists impacts that "might," "can," or "could" happen, while providing no site-specific evidence that any of those impacts are occurring now or have ever occurred in the GGNRA.

â€¢ The SEIS says that, during the last six years, National Park Service (NPS) staff did extensive literature searches to look for reports of impacts from dogs in other parks. Why didn't they bother to study GGNRA and the Presidio? After all that's the subject at hand.

â€¢ The SEIS relies on anecdotal observations of impacts made by NPS staff. These comments have no context ' how frequent were they, how serious, etc.. How can these be used to set policy? NPS staff is recognized for its long stand bias against dogs and the people who walk them. That's all the more reason to discard any anecdotal observations.

â€¢ SEIS never gives results of public comment on the DEIS. It reports more than 4,700 comments were received, but says nothing about how many comments were in support or opposition. Shouldn't public sentiment be reported and considered?

â€¢ The SEIS still does not adequately analyze impacts on nearby parks of the Preferred Alternative. What little attention is paid to this is just an estimate.

Why wasn't the issue studied thoroughly as the San Francisco board of supervisors has requested?

a The SEIS data still do not support claims that there are major safety problems from dogs that require off-leash restrictions. Between 2008 to 2011 it reports 95 dog bites. That's a minuscule number considering the tens of thousands or even hundreds of thousands of dog walks that must have taken place within the GGNRA during those four years. I'm just guessing but I imaging there were thousands of more instances of vandalism in the park during those four years. That's a "serious" problem. It's caused by people, not dogs. I've seen no effort to close off substantial portions of the GGNRA to people as you are proposing to do with dogs.

Overall, I see little in the way of a response to the public interest in this latest Draft Dog Management Plan and Draft Environmental Impact Statement. Based on the response from dog-owner groups, local governments and various elected officials, I'm not alone in my view.

Why can't you either create a plan that responds to the public interest or quit wasting time and taxpayers' money and just maintain the status quo?

Sincerely,

Robert A. Dewey, Jr.

To: GGNRA

I'm writting this because people lie about dogs and their owners that they are irresponsible but some are and dogs just want to have fun with their lives. There is no proof to not let the dogs in areas. If you don't let dogs play they will trash their owner's house. Sometimes dogs protect their owner to keep them safe. There is no reason to blame dogs in areas when they didn't do any thing and you didn't see any proof of them being naughty; homeless; irresponsible people are causing problems for dogs.

Dear Mr. Dean,

I am writing to strongly encourage you to choose the no change option and continue to enforce the 1979 GGNRA Pet Policy. I think you know that the majority of responders to your ask for comment are against the proposed changes.

Before you try a different path, I feel that the GGNRA needs to consistently enforce the rules that are in place. Part of the reason for the issues that you cite in your study result from the lack of policing of the rules currently in place to preserve the resource.

I have lived in the Marina/Cow Hollow area since 1991 and have always enjoyed the unique natural/urban intermingling along the waterfront from the Marina to the Golden Gate Bridge. It was not that long ago when much of Crissy Field was a fenced off crumbling paved area. This area needs to be evaluated in its unique setting and the GGNRA should not use rules that were written for National Park settings far from cities to curtail dog access and off-leash walking.

Please reconsider your drive toward restricting dog access and off leash walking. Please listen to the many voices that are also asking you to reconsider. The public's view of the Recreation Area and your administration is at stake.

Sincerely,

Charles Dicke

Mr. Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco, CA 94123-0022  
Attn: SEIS

Dear Superintendent Dean,

As a frequent visitor to the Golden Gate National Recreation Area (GGNRA) at the Rancho Corral de Tierra (Rancho), Mon Point, Sweeney Ridge, Fort Funston, and Crissy Field, I am writing to comment on the Supplemental Dog Management Plan/SEIS. I am a Montara resident and a member of the Montara Dog Group. In the SEIS, the National Park Service (NPS) is advocating Preferred Alternatives for GGNRA sites that significantly reduce both on-leash and off-leash dog walking recreation opportunities.

This is contrary to the substantial number of comments in support of dog walking access by visitors and elected officials in the region surrounding the GGNRA. It is unfortunate that the NPS has decided to reduce access to one of the GGNRA's largest visitor groups and has lost sight of what should be an important mission for the GGNRA- to provide recreational opportunities.

In Montara, our community has a history of responsible off-leash dog walking in the Rancho. The Montara Dog Group has over 400 members on the San Mateo County Coastside, maintains dog waste bins to reduce the impact of dog walking in the Rancho, and advocates policies that promote responsible dog walking. Since the NPS provides no waste removal in the Rancho, visitors also deposit trash in the dog waste bins. Weekly, our members haul this trash for removal by our local trash service. Despite this stewardship of the land and the established off-leash history, the SEIS Preferred Alternative for the Rancho will reduce the trail miles available to dog walkers in the Rancho and eliminate off-leash dog walking. As it has taken control of the GGNRA Rancho site, I am disturbed that the NPS has chosen to alter the usage patterns of local residents.

The existing NPS policy is that dogs are allowed on-leash on all trails within the Rancho. As a minimum, I suggest that this policy be continued (SEIS Alternative A). In the Visitor Use Section pertaining to the Rancho, the SEIS cites an informal trail study that shows the primary use of the Rancho is dog walking. How does the NPS justify reducing access to the primary users of the Rancho?

As a dog owner training dogs hours every week for agility competitions, I agree that on-leash activity is an essential part of a dog training regime. However, it is also accepted that off-leash socialization with other dogs is critical for the development of a non-aggressive, well-balanced dog. I urge that an off-leash dog walking alternative be allowed within the Rancho in specific areas near Montara and El Granada. Without this allowance in the Rancho, the nearest off-leash dog walking opportunity will be at Fort Funston in San Francisco County (one hour round trip drive). In fact, the SEIS Preferred Alternative allows for no off-leash dog walking in San Mateo County. How does the NPS explain allowing access to off-leash dog walking in one county and denying it in an adjacent county?

Unfortunately, the Regulated Off-Leash Area (ROLA) suggested for Rancho (SEIS Alternative C) does

not support the off-leash usage patterns similar to other GGNRA sites (e.g., Fort Funston or Crissy Field). The SEIS proposes a ROLA between Tamarind and LeConte in Montara that is too small for an off-leash hike. Over 80% of the perimeter of this ROLA is adjacent to Montara land, instead of Rancho land. Rancho maps from the Montara Dog Group for proposed off-leash areas were delivered to the NPS at an open house meeting during the original EIS comment period. it is unfortunate that the NPS failed to work seriously with local groups when determining the location and composition of the Rancho ROLA analyzed in the SEIS.

Currently, dog walkers are allowed access on less than 1% of the GGNRA's 80,000 acres. The SEIS advocates reducing that access by 90% - denying people with dogs access to 99.9% of GGNRA lands. In closing, I ask that you reconsider this drastic reduction in GGNRA dog walking access being advocated in the SEIS.

Respectfully,

Russ Pritchett

February 17, 2014  
Frank Dean  
GGNRA Superintendant  
Building 201, Ft. Mason  
San Francisco, CA 94123

Dear Superintendant Dean,

I am a San Francisco native and have lived in this wonderful city for all but 5 of my nearly 50 years. Growing up in the Richmond district, I have happy memories of taking our two cocker spaniels for family outings at Baker Beach. They would run the beach, chase each other and play with their toys. These were some of the days we enjoyed most as a family and the dogs always came home tired and satisfied. If they had been forced to remain on a leash, or even not allowed on more than half of our wonderful Baker Beach, it would have been an exercise of frustration, similar to taking a kid to a candy store and not allowing them any candy.

Now with a husband, two children and two dogs of my own, we enjoy this resource so much, in fact, that we have been members of the William Kent Society for 10 years. Our daily walks with

our dogs are often the happiest part of my day. I take them for runs down to Crissy Beach where they get a welcome reward swimming in the Bay, retrieving balls just offshore on East Beach, where we rarely run into very many people (yes, even sometimes on warm weekend days). On the days when I am short on time and they are not able to swim, run and play on East Beach, they look at me with disappointment and we return home feeling largely unsatisfied, sad and even frustrated.

I write now, after having written a letter to the Draft EIS in 2011 which was ignored, in partner with the SF Board of Supervisors, Mayor Ed Lee, Congresswoman Speier, Congresswoman Pelosi, The Crissy Field Dog Group, Animal Care & Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax-paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact-based in its planning or findings. This proposal demonstrates a lack of understanding that the Bay Area GGNRA must serve an urban population.

When the GGNRA was created in 1972, dog walking was already a long-standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture ' and this use must continue indefinitely.

I strongly support preserving the GGNRA's 1979 Pet Policy. This plan works and if properly enforced, I believe it would strike a balance between many users of this great resource. The Bay Area GGNRA is a unique national recreation area in an urban environment ' not an isolated park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

With more than 120,000 dogs in San Francisco alone, and millions in the greater Bay Area. People who work, who have families like mine, and have dogs need access close to home that allows off-leash dog walking in the mornings, afternoons and evenings. The proposed preferred alternative will results in millions of people being unable to recreate with their dog(s) ' in the GGNRA lands these same families support with taxpayer dollars.

The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. The proposed restrictions in the current plan seriously restrict dog walking, only 7 of the 22 areas in the SEIS allow off-leash dog walking access on GGNRA lands in ALL three counties.

In Mann County, it will be disaster if there will only be one beach where all Mann's residents and visitors can recreate with their dogs off leash. The beach has extreme tides, forceful waves, and will be packed with thousands of dogs if this plan is enacted 'because it's the only off leash beach that will be preserved for all Mann County in the preferred alternative. Additionally, the SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on or off-leash).

The GGNRA's preferred alternative intentionally proposal sets up the proposed dog policy to fail ' by restricting a large dog and urban resident population to use such small areas that over crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And the fact that this will cost millions of dollars of our taxpayer money is inexcusable. You are spending our money on a plan that the majority does not want and that will not work.

I understand that part of the rationalization for this overly-restrictive policy is to protect the wildlife, particularly birds. In my many days at Crissy, I have never seen dogs chasing birds. They leave each other alone. There is a large group of geese that visit the big lawn regularly and this provides an environmental concern greater than the very rare and occasional dog (or even human!) poop. When our son was exposed to goose poop, he suffered serious diahrea that required antibiotic treatment.

Here are a few questions regarding my serious objections to this proposal:

- Why does the GGNRA rely on outdated studies and information for the latest environmental impact statement?
- Why hasn't the GGNRA updated its enforcement data since the last draft EIS was released?
- How is it that the SEIS has many assumptions that are not documented? How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?
- How is it possible for the GGNRA to simply ignore the voices of so many individuals, groups and elected representatives?
- How is it possible for the GGNRA to simply not consider or address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS?

These unanswered questions lead to the conclusion that the process is only for show and the GGNRA never intended to incorporate public or even elected representatives' views. I cherish the opportunity to walk with my dogs at Crissy Field, Baker Beach, Ocean Beach, Fort Funston, Land's End, Rodeo Beach, and Fort Mason. Please don't follow through with this seriously flawed plan. Putting an off-leash dog area next to busy Bay Street across from Safeway is only one of the terrible ideas incorporated in this plan.

Your consideration will be greatly appreciated for generations to come.

Sincerely,

Leslie B. Dicke

RE: GGNRA Dog Management Plan

I would like to voice my opinion in favor of allowing more areas of the GGNRA for use by people with dogs. This would include expanding areas where dogs are allowed both on and off leash. The present state is far too restrictive and results in a large concentration of dogs in a limited area.

After all, the GGNRA is a "Recreation Area". It is part of the Bay Area's wealth and it is to be enjoyed by all of its citizens and not for the exclusive recreation of those without pets.

Many of the negative comments come from people who have had a bad

experience with a dog. Though unfortunate, negative situations will occur but are almost always covered by specific regulations that are broken by careless dog owners. To apply a blanket restriction because of a few scofflaws is inappropriate. The vast majority of dog owners are responsible. Don't let the few that are not responsible restrict our rights.

I am a Marin County resident who frequently uses of the GGNRA.

Sincerely,

Dixon Power

Superintendent, GGNRA

Fort Mason, Bldg. 201

San Francisco, CA. 94123

Attn: SEIS

Subject: Dog Management Plan

To The Superintendent:

As a native of San Francisco, and a long-time resident who raised 3 children in this city, I have used the GGNRA, and before that, the beaches and the Presidio to play with my children, grandchildren and dogs for years. We are responsible people, parents and dog guardians. We clean up after ourselves, our children and our pets. We care for and about one of the last open space refuges in an urban environment. In 1979, the Department of the Interior entered into an agreement with the City of San Francisco, which included provisions to retain off-leash areas for dogs as they existed at the time. We ask that this arrangement be maintained.

Cities are urban environments for people. People require open space as it exists currently for recreation, as reflected in the name of GG National Recreation Area. We do not like being restricted to roped off trails and large areas being removed from access. Dogs also require the ability to roam freely under their guardians supervision. It makes no sense, to take away very limited freely open space along a few miles of urban shoreline when over a 1,000 miles of California coastline exists for other species of plants and animals.

I, for one, recoil from the intimidation of those people who think that access must be restricted for one reason or another, and I recall my children being yelled at and intimidated by one of these folks who told them that rolling down a sand hill at Baker Beach because it would cause a mature Monterey Pine to collapse because they would cause "erosion". That tree is still there.

If erosion is an issue, stop killing off the ice plants that for years have prevented erosion only to have it replaced with so-called "native species" that are not capable of retaining the sand.

Gophers cause more damage to plants than dogs do.

How many dogs climb cliffs to disturb cliff dwelling swallows. Scared by dog shadows? Give me a break!

Snowy Plovers? There is a lot of vacant coastline and how many dogs are dedicated bird chasers anyway? Fishing and crabbing from shore doesn't drive these birds away also.

Please stop trying to contain, limit and control us. Please maintain the original agreement as is.

Montara, CA 94037  
Mr. Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Bldg 201  
San Francisco, CA 94123-0022  
Attn: SEIS

Dear Superintendent Dean,  
I last wrote you in 2011, regarding the Rancho open space use. Thank you for hearing my further comments regarding dog walking in GGNRA.

My credentials are: BS in biological sciences from Stanford, practicing small animal veterinarian in the coastal Bay Area since 1996, active member of the Montara Dog Group, committed outdoor enthusiast who backpacks regularly, occasional member of Trails Day on Montara Mountain, and member of Friends of Fitzgerald Marine Reserve.

The new plan has increased restrictions on dog access to the recreation areas with no scientific rationale. I had hoped to be able to comment on substantive changes, but I will be reiterating my last 2 letters (attached) as I have the same concerns. Looking at the map on your web site, trails where dogs are allowed have been reduced and there is no provision for off leash dog walking. I have been hiking these hills almost daily with my dogs since 1996. With other members of the Montara Dog group, I met with Mr. Ken White at the Peninsula Humane Society to discuss potential environmental impacts of dogs in the Rancho. After consideration with his wildlife experts, they felt that allowing the status quo to remain would not do harm to the environment. Yet, the GGNRA does not have any science to back up its restrictive policy: just possible problems as evidence by choice of language. (see letter to Secretary Jewell from the Save Off Leash Dogs Coalition dated 1/14)

There have been years of successful mixed use on these trails. Please remember the mandate of the GGNRA: it is a recreation area and not a national park with pristine lands that need to be protected at all

costs. This property is robust and well adapted to the participants who care for it and recreate there. In 15 years of enjoying the Rancho, I have seen multiple users respectfully avoid problems whether with dogs, horses, bicycles, strollers or large groups. I urge you to work with the local groups to allow responsible dog walking in the entire open space as well as a designated off leash area selected with local input. In my first letter (2009) to Superintendent O'Neill, as well as in personal meetings at Open Houses with you, Howard Levitt, and George Durgerian I have encouraged creative solutions to continue to permit dogs but increase control. There are models for this in Santa Cruz and Boulder Colorado. Before implementing onerous rules that restrict my ability to enjoy all of the trails in the Rancho with my well controlled dogs please at least consider working with the local community in deriving a science based approach to on and off leash dog use.

Rep Jackie Speier encouraged the GGNRA to form a recreational committee of all users (surfers, equestrians, dog walkers, bicyclists, kite boarders, hikers) to inform policy. This group would see the recreational areas as dynamic and responsive to community needs. It would request and review science based studies on use of lands. The current plan is restrictive and does not allow for further areas to open as needed: it only allows for more area to be taken away from dog access. By severely restricting dogs to ever smaller areas, it becomes a self fulfilling prophecy that there will be problems. You put more pressure on the dogs to interact in smaller spaces. People who love their dogs will drive as far as they need to for off leash areas. By limiting people in Marin and San Francisco you force them to converge on areas where off leash use is allowed. More dogs in smaller spaces will lead to more conflict. Why not take the No Action Alternative (using existing off and on leash areas in the Rancho) and honor the 1979 pet policy while convening a recreational committee to consider all of GGNRA. This should be a living document, responsive to the needs of the urban community and using science to protect the lands we all love.

Thank you and I look forward to hearing from you.

Lisa Eshman, DVM

Dear Superintendent,

I just heard about the ban on dogs that you are proposing for the GGNRA, and I am absolutely in favor of it! Dogs are overrunning Fort Funston, and I used to love hiking there, but hiking there now is unpleasant experience. Other beach areas are impacted also, taking away some of the relaxation aspect of visiting the ocean. And of course, the shorebirds along the beaches are impacted the most by the loose running of dogs along the beaches, especially the snowy plovers. I see no reason for domestic animals to run loose in natural areas at all, and I feel that it degrades the experience of being there, as well as degrading the natural habitat. And because often people don't seem to care to take responsibility for their dogs, including how they harass other people or animals, or even cleaning up after them properly, I feel that dogs need to be nm only at parks designated for dogs. I just want to end by saying, I completely support the ban on dogs in the GGNRA, and if there is any other way I can help support this, please let me know.

Sincerely,

Heather Evergreen

Do you like dogs? I want dogs to be safe and behave. Dog walkers could be the best dogs in the world because they have lot of exerise they did. My dog could not be safe at the parks because thier were lot of jerks. going on over there. Dogs would never be irresponsible no more because you have to teach them to do exerise. I think dogs could be safe at GGNRA because don't just let them be alone. I likes to thank you for the dogs are safe.

Thank you for your time.

Nyarini Faavone.

In the parks without dogs or people bothering wildlife, I have seen a live wildcat, and a wild lion. Both were great to see.

I see them in our zoo, but it is not the same thrill.

I have seen lion tracks probably made by a young male at a gard pit area in San Carlos. Two of my great nephews were so thrilled just to measue the length of their strides and kow they have seen it.

No zoo or TV or documentary can replace this experience.

---

During my life I and my nephews have had pets - dogs - cats - fish - etc, but the a tue wild is the mearucble experience,

Dog Owner and Parent

January 29, 2014  
Congresswoman Jackie Speier  
Representative, 14th District  
211 Cannon House Office Building  
Washington, D.C. 20515

Dear Ms. Speier,

I support the National Park Service's plan to define dog access to public land. I am a dog owner, and my family enjoys walking with him on the beach. I also believe it is reasonable to define areas where dogs must be on leash, and where they are not permitted to wander freely to protect wildlife and provide safe space for people. There are wonderful places along our shoreline where unleashed dogs make it difficult to enjoy the waterfront, especially for children. There are more than 60,000 children age 14 and younger in our great city, and only 20,000 properly licensed dogs (SF Animal Care & Control). Please support the NPS dog walking plan for public land.

"Of all the questions which can come before this nation.. there is none which compares in importance with the great central task of leaving this land even a better land for our descendants than it is for us." ' Theodore Roosevelt

Sincerely yours,

Jim Pohl

Do people eat dogs at sf? Why can't dogs be free? Why can't dogs talk, I want them to?  
How do dogs keep the park or beach clean? can dog run faster then the horses? Can Dogs Die when they Don't eat food. Do dogs eat people because they like meat uh is we one of the meat are we? Why Do we have to have dog in SF so dog can eat people or be friend with them. can we take others dog from finding then in the street or in are house or in are backyard. Do dog realy have to do exercis to stay alive or not. And if I grow up and I will get a dog I will feel so happy.

Frank Dean  
General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94 123-0022

Comments: Supplemental Environmental Impact Statement

Dear Superintendent Dean:

I am a senior and a home owner in San Francisco. I was introduced to Fort Funston even before moving to San Francisco in 1998, and thus have had the pleasure of walking in the GGNRA both with and without dogs for nearly two decades. At present, I have no dog, but I still walk at Fort Funston and Crissy Field, because that is where the dogs are, and the shared community of dog owners and dog lovers which has grown up around the recreation of walking with ones best friend.

Why dont you listen?

You encourage us to "focus [our] comments on the changes in the draft planJSEIS that were made as a result of comments on the 2011 draft EIS" (1), but these changes are so minimal, compared to the extraordinary destruction of dog-walking access in both the draft and supplemental EIS, that one must focus on the fact that you have disregarded the overwhelming opposition to your "Preferred Alternative", reflected in thousands of responses to the DEIS.

It is instructive that the SEIS never explicitly states the numbers opposed to the DEIS or the reasons for that opposition in clear qualitative or quantitative form. One is given "sample comments", whether they are representative of many, few or one. From the data that are available, one may posit that you are disregarding the profound negative response to your "preferred alternative". For example, of the respondents who made what you consider "substantive" comments regarding Fort Funston, only 33 supported your plan. On the other hand, 522 substantive responses opposed the plan. Another 271 responses suggested other alternatives, or changes in proposed alternatives 2. These figures alone should have sent the GGNRA back to the drawing board for a rethink of the importance and value of dog walking in the GGNRA. but instead resulted in only minor changes to that same benighted and disastrous "preferred alternative".

I oppose the Preferred Alternative. It is too restrictive, it disregards the importance and expanding activity of dog walking as traditional recreation, and it runs contrary to the spirit and substance of the enabling legislation which created the GGNRA.

### The Enabling Legislation

The significance attached to recreation is stated in the title and intent of virtually every document related to the transfer and use of the lands which provide the basis of the GGNRA, and memorialized in the naming of the lands themselves, the Golden Gate National Recreation Area.

When Congress established the GGNRA, it was as a:

new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region [with the objective] to expand to the maximum extent possible the outdoor recreation opportunities available in this region. (emphasis added)

(HR. Rep. No. 1391, 92d Congress, 2d Session [1972])

The use of the GGNRA for off-leash recreation was addressed specifically during the hearings before the U.S. House of Representatives, and dog-walking was an enumerated activity in the US. House Report (H.R. Rep. No. 1391, p. 4854, cited in a letter from Edwin J. Sayers, President, SF/SPCA to Superintendent Brian O'Neill, GGNRA, Aug. 16, 2000). The importance and legitimacy of off-leash recreation was reconfirmed by the GGNRA Advisory Committee in 1979.

### Recreation and exercise

The importance of recreation has not lessened in the intervening years. Rather, it has increased. From the White House to local initiatives, improving health and fitness is a high priority in an increasingly obese and unfit population. The National Park Service itself has introduced the Healthy Parks, Healthy People program, which was the subject of a well-publicized conference in the GGNRA in April, 2011. Thus, the GGNRA should be and could be in the forefront of one of the most important initiatives to improve health in a national context, by highlighting and showcasing people exercising with their dogs in the GGNRA.

The people walking dogs in the GGNRA are engaging in a form of exercise now recognized as a compelling and effective route to better health. Research has shown that walking with a dog is likely to result in lengthier and more frequent walks than walking with another person or with a group (See, e.g., Marcus, 2008; and Brown and Rhodes, 2006.)<sup>(3)</sup> The health benefits of walking with one's dog in the GGNRA, widely noted by those who visit with their dogs, and those who come to see and walk with the dogs, are ignored by the Dog Management Plan.

The severe truncation of space and opportunity reflected in the GGNRA "preferred alternative" sends the wrong message regarding exercise, and regarding off-leash recreation.

The GGNRA is failing to capitalize on the opportunity to recognize and support the value of walking one's dog as a means of maintaining fitness and improving health in an incremental, continuous and positive manner. With its present Pet Policy, the GGNRA is on the cutting edge of demonstrating and providing a venue for lifelong recreation and a multi-generational healthy life style. The GGNRA should be a model for healthy exercise in an urban setting, positive treatment of pets, and the creation of community in an urban context. This is a model to be celebrated and replicated, not destroyed.

## Community and safety

As a senior and a woman, I thank the GGNRA for providing what is at present a safe place to walk with ones dog. The GGNRA abuts a city of 800,000 people, and yet walking in Fort Funston, for example, is walking among friends. Many others, both with dogs and without, walk in the off-leash areas, enjoying the neutral and very beautiful space (and often challenging weather conditions), and creating community in this urban recreation area. In a culturally diverse social environment, as varied as the urban setting around us, a shared enjoyment of dogs and of nature creates friendships and new acquaintances. In a time of increasing alienation and focus on individual pursuits and technology, areas such as Fort Funston and Crissy Field are a haven, a solace and a port in the urban storm.

Walking off-leash provides additional physical safety. It is also a safe place for the dogs to walk, because they have the space to meet or to avoid each other. And there is no issue of leash aggression because the dogs are off-leash.

However, the planned reduction of space which will corral the dogs and their owners into a tenth of the one percent of land now available, and the requirement to walk dogs only on-leash on trails will create a dangerous situation for both owners and dogs. (4) In a recreational use survey of Fort Funston carried out in 2000, it was noted that Fort Funston alone accommodates more than five percent of GGNRA visitors, but comprises less than 0.3 percent of GGNRA acreage. (5) The reduction of space and access proposed by the Dog Management Plan is unnecessary and untenable, will lay the foundation for negative behavior and territoriality, and will destroy what is now a viable, valuable, and beloved national recreational resource.

Site-specific, peer reviewed studies have not been carried out

It is unacceptable that the Dog Management Plan, already costing millions of dollars and purporting to justify major changes to traditional off-leash recreation, lacks the most rudimentary baseline data. For example, with regard to vegetation, the SEIS specifically states that "Site-specific, peer-reviewed studies have not been conducted at the GGNRA sites ... [regarding] impacts to vegetation or soils from dogs." (6) With regard to water, the SEIS states that "Although water quality monitoring currently occurs at GGNRA, no site-specific, peer-reviewed studies have been conducted at the GGNRA sites to document impacts to water quality specifically from dogs." (7) With regard to wildlife, "Very few site-specific, peer-reviewed studies have been conducted at GGNRA for the purpose of documenting impacts to wildlife as a result of dogs." (8) Yet that lack of data is simply used to create a series of hypotheticals to support the GGNRA position. Thus, dogs "can increase turbidity by stirring up sediments into the water column," (9) dogs "can potentially trample... vegetation..." (10) "dogs can be carriers of exotic plant seeds...." (11) etc. With regard to wildlife, lacking their own baseline data, the GGNRA discussed potential impacts of dogs by referring to other studies in other places, thus ignoring the specificities of the GGNRA urban environment. Without site-specific data, this plan, with its profound consequences to off-leash dog walking, is inappropriate, ill-advised, and unsubstantiated, for it is not predicated on even the most basic of scientific data.

Hypotheticals stand in for hard data

Access must not be removed on the series of hypothetical consequences run up the Dog Management Plan flagpole, to see who will salute them. Hypotheticals are not data, and dogs (and their owners) must not be blamed and exiled for "possible" or "potential" problems. This is unscientific and unfair. And it is disingenuous to roll out a list of every endangered or threatened species in the GGNRA, in order to slam off-leash exercise, which is presently permitted only in a minimal space and primarily in the most

urbanized and heavily used areas of the GGNRA. Fort Funston, with Nike silos in the parking lot and gun batteries on and fallen from the cliffs, is not pristine wilderness.

#### Conflict of interest

Throughout the SEIS, lacking the authority of site-specific, peer-reviewed studies, conclusions are reached on the basis of anecdote, hypotheticals, and the "best professional judgment of NPS staff." Yet this is the very staff which has been seeking to curtail off-leash dog walking for the past decade and more. This is the very staff who had the "stealth fences" put up overnight at Fort Funston, before being forced by the Federal Court to follow public process. And this is the very staff that has failed to maintain the lands they purport to protect by allowing trails, such as the Sunset Trail in Fort Funston, to fall into disrepair, and by not bothering even to put in a proper toilet at Fort Funston in all these years, although it is one of the most visited of all GGNRA sites. This is the very staff that stated that "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard". (12) GGNRA staff has shown a strong bias against dog walkers and dog walking, and cannot be used to support the conclusions of the SEIS. The use of "best professional judgment" of GGNRA employees represents a serious conflict of interest, and must be called into question.

#### Your bias is showing

The SEIS objectives do not reflect, mention, or otherwise show any positive value of off-leash dog walking in the GGNRA. (13) Rather, your emphasis throughout the SEIS is to portray people and their pooches in relation to problems, issues and impacts. It has been noted elsewhere that the very word "recreation" is absent from your objectives, and absent too from your index. (14) This is a telling omission, for the value of recreation, the lodestone and basis of the Golden Gate National Recreation Area, is only begrudgingly recognized in the SEIS. Recreation is a cultural resource, and is the most embedded, and indeed the eponymous park value in the GGNRA. Yet throughout the SEIS, recreation is posited as oppositional to environment, rather than being an integral component of environmental resources. Were you to embrace the values upon which the GGNRA was established, were you to work together with those for whom a walk in the GGNRA is the highlight of their day, then together we could ensure the thriving future of the GGNRA for all its visitors.

#### The SEIS requires peer reviewed site-specific data

According to the Final Information Quality Bulletin for Peer Review, from the Office of Management and Budget, "A scientific assessment is considered 'highly influential' if the agency or the OIRA Administrator determines ... that the dissemination is novel, controversial, or precedent-setting, or has significant interagency interest." (15) The ongoing machinations of the GGNRA to divest itself of the offleash recreational mandate which is part of its birthright is nothing less than controversial, and has already resulted in a number of court cases and decisions against the GGNRA. The changes that the GGNRA wants to put into effect with regard to the dog management plan are controversial, and yet the bases for those changes are not predicated on rigorous scientific assessment (peer-reviewed site specific data), according to the SEIS itself. Such assessment must be done as a basis for a document such as the SEIS, if the GGNRA is to maintain any credibility whatsoever.

In the Response to Comments document, many respondents pointed out that baseline data is not available, and that policy decisions cannot be made without scientific backing. The government response is jaw-dropping:

Additional data may help to refine the conclusions in the draft plan/SEIS and reduce uncertainty regarding the level of impact on the human environment; however, all NEPA

analysis is based on a prediction of potential future conditions and, as such, is always uncertain. In lieu of site-specific data, research methods generally accepted in the scientific community and best professional judgment have been used to draw conclusions regarding expected impacts to resources.... The available data provides sufficient information to allow the decision maker to make a reasoned choice among alternatives. (16)

The OMB Guidelines do not permit the disregard of site-specific data in the case of this controversial policy, controversial found data and controversial conclusions. The limitations of the data, taken from other sites and in many cases from disputed data (some of which were finally dropped from the SEIS, as the data had been challenged and shown to be false or fraudulent) do not provide a sound basis for future action. Astonishingly, the GGNRA administration is using the fact that the future is unpredictable, to make decisions based on what respondents demonstrated to be incorrect, biased, insufficient and/or irrelevant data. And again, that "best professional judgment" is necessarily suspect because of the GGNRA bias against dog walking. This is unconscionable.

Dogs arent the problem

The one place where the SEIS found some hard data was in relation to "dog incidents" in the GGNRA. In the four years from 2008 to 2011, with the hundreds of thousands of people and dog visits to the GGNRA, most of the dog incidents reported had to do with leash law violations. In this entire period, there were only 95 cases of dog bites or attacks. (17) In contrast to this, over that same period, 89% of the reported safety incidents had nothing to do with dogs, and they included murder, larceny, rape, robbery and drugs. The GGNRA should begin to realize that their safest areas are those where the dogs are, as is the case also in city areas where people walk with their dogs. It would be nice to know the number of people and dogs who walk in the GGNRA, but as the GGNRA is not monitored, this data is unavailable.

Impact on the city

Surprisingly, the SEIS states that, "potential impacts on social and economic conditions [in San Francisco] would be highly unlikely to exceed a negligible threshold, and are therefore eliminated from detailed consideration..." (18) This is wrong, and has already been proven wrong. The effect on city parks and on continued ability to recreate on the limited open space in the urban Bay Area will be both profound and deleterious.

This was already graphically demonstrated by the half-day closure of Fort Funston on March 11, 2011, the day of the expected tsunami from Japan. On that Friday morning, Stern Grove in San Francisco was overrun by cars and by hundreds of people and dogs, as dog owners and walkers sought other sites for their daily recreation. (19)

The GGNRA comprises a large part of the recreational land in San Francisco; any plan proposing change in off-leash access must recognize and reflect the impact of such change in San Francisco itself; and must be considered in conjunction with the City. The Board of Supervisors and the Mayor of San Francisco have formally opposed the GGNRA "preferred alternative", because they are well aware of the disastrous consequences of thousands of local residents suddenly seeking alternative accommodation for exercise for themselves and their pooches in the very limited spaces available in city parks. The enabling legislation is there for a reason: to keep traditional recreation, including off-leash recreation, in the GGNRA.

Dont fence me in!

After years of saying that fences are not the answer, the SEIS has now arbitrarily put fences into the mix

of appalling solutions to what the GGNRA still has not shown, on the base of any scientific data, is a problem! You have already fenced people and dogs out of many acres of the GGNRA, particularly at Fort Funston. Apparently, your new plan is to fence dogs in. Stop! Stop it! Is there no one on your entire staff who actually walks at Fort Funston or Crissy? Are you not aware that thousands upon thousands of people are, have been, and intend to continue to walk with their well-socialized dogs on the trails and open spaces of the GGNRA? And are you not aware, including from your own data, that these walks are overwhelmingly peaceful, enjoyable, invigorating and healthful? Will you have us all pacing from side to side or, as is often the case in circumscribed areas, standing still in the new Fort Funston pens you seem to be planning? Is this your new "visitor experience" - cages? How many new ways can you find to let dog walkers know that they are unwelcome in the GGNRA? And how does this fit in with the recreational mandate?

Remove the new poison pill

The Monitoring-based Compliance Strategy, which has replaced the "Compliance-based Management Strategy", is still a poison pill, designed to pennit increased curtailment and ultimate ending of off-leash recreation. This is unjust.

The emphasis is on leash violations. The SEIS states, "Noncompliance would include dog walking within restricted areas, dog walking under voice and sight control in designated on-leash dog walking areas, and dog walking under voice and sight control outside of established ROLAs." (20) Yet the GGNRA, in seeking to drastically curtail opportunities, trails, and areas to walk off-leash, and seeking to force the hundreds of thousands of dogs and their people to walk in ever-decreasing spaces, is setting up the definitive scenario in which almost everyone who does not have their dog on-leash almost everywhere in the few places in the GGNRA where dogs are permitted at all, would be more likely than not to do something unlawful, because the off-leash areas are so few and far between.

The GGNRA already has policies and penalties for those who break the laws. Using these penalties to reduce off-leash or any canine access still further is vindictive.

The solution

Retain the 1979 Pet Policy, with all the land included in the policy, and then expand these areas, particularly in Mann and San Mateo Counties. San Mateo has no off-leash GGNRA trails at all, and this should be rectified forthwith. Reinforce and retain the benefits - in exercise, in community, and in safe and healthy use of shared resources - of the authorized and mandated use of GGNRA land for traditional recreation.

In addition, given the demonstrated importance and value of off-leash recreation in the Bay Area, and the clear need for healthy exercise in the population in general, designate and create new off-leash areas and trails in the new lands being added to the GGNRA.

Increase education about off-leash etiquette; work with the many groups that have already proved their commitment to both the GGNRA and off-leash activity; and reap the harvest of enlightened administration, good stewardship, and demonstrated respect for both the history of the GGNRA and for its future. Off-leash dog-walking is an established activity. The active and devoted group of GGNRA visitors who walk with their dogs respect the land, value the resources, and cherish the experience of walking in these small corners of the GGNRA.

Sincerely,

Dr. Renee Ilene Pittin

**Correspondence Type:** Letter

**Correspondence:** To: Frank Dean

I do not agree with the GGNRA T5M current preferred alternative as it significantly restricts and eliminates off-leash dog walking in many areas within the GGNRA. The proposed changes to the existing conditions (1979 Pet Policy) and to the new lands in San Mateo County are not based upon sound science or long-term monitoring of site-specific conditions.

It is essential for the GGNRA to consider reasonable and balanced alternatives for dog walking on new lands and existing lands. While I am concerned about the long-term preservation of the GGNRA TMs natural resources and want to protect these important natural areas, I believe other options (besides restricting dog- walking access) should be considered first. I favor an approach that balances recreational use (including dog- walking access) with preservation. I think that a multi faceted approach that incorporates educationflmproved signage and physical/vegetative barriers is preferable to restriction as a first choice. It is imperative that the DEIS include such an alternative as a reasonable option.

The proposed cecompliance-based approach punishes many for the perceived transgressions of a few. It is a set up for failure and should be modified to create a baseline of current conditions and then measure impacts vs. compliance. The GGNRA should partner with the community to make the plan work, not assume an adversarial relationship with failure the goal.

The DEIS fails to consider that the GGNRA is the front/back yard for a large metropolitan area. The fundamental purpose of creating the GGNRA was to provide open space for recreation (including dog walking as a form of recreation) for residents of the Bay Area. NEPA requires evaluation of impacts on the cehuman environment , but the DEIS fails to do so by failing to adequately address how the proposal affects cerecreational values for these local residents.

After careful consideration, I support a modified Alternative A (the cNo Action alternative ) and would also include the cNew Lands areas in San Mateo County. The current plan should be modified to provide clearer rules, more signage, improved vegetative barriers, and education and outreach as part of the overall program.

Thank you for your consideration.

Sincerely,  
Francine Fillice  
710 Ashbury St  
SF 94117

P.S. I take my dog, who is well behaved, to Crissy Field, Fort Funston Ocean Beach to run. If he had to be leased neither of us would get people exercise. Please consider a balance for this issue. Thank you.

<b>Correspondence:</b>	SEIS Comments						

Dear Superintendent Dean:

---

Most of my comments pertain to the stated goal of NPS in developing a dog management policy: to "...minimize conflicts related to dog use by providing a variety of safe, high-quality visitor use experiences, including areas where dogs are allowed" (SEIS, p. 2). I do not believe that the SEIS has provided evidence that NPS can allow mixed use of an area where off-leash dogs are allowed while providing a variety of safe, high-quality visitor use experiences. I generally support the concept of compromise regarding protecting certain areas of the Park from off-leash activity, while allowing off-leash activity in other areas. However, I do not support the Park Services preferred alternative as presented in the SEIS, because it does not describe the true level of impacts of off-leash activity, and certainly does not provide a management framework that adequately addresses the impacts, stated and not-stated, caused by the presence of off-leash dogs in the GGNRA.

## VOICE CONTROL

Voice control should not be used as a concept in the EIS. NPS has not presented any evidence to indicate that voice control is a meaningful concept. The law enforcement incident reports indicate that dog owners routinely bring dogs to GGNRA, over which they cannot exercise voice control. Incident reports show that sometimes they cannot even recall their dog after a serious incident occurs. Superintendent Frank Dean admitted at a public forum on dog management on January 30, 2014 that voice control does not work as a policy for managing off-leash activity. GGNRA biologist William Merkle in an email of January 11, 2010 to Sarah Kosher, EA Engineering, Science, & Technology, appears to indicate that voice control is not effective in reducing the tendency of off-leash dogs to chase shorebirds.

The law enforcement incident reports are full of instances of owners of off-leash dogs not being able to recall their dogs or completely losing sight of their dogs leading to hazardous incidents. A few of the incident reports indicate that owners knowingly allow high risk dogs off-leash in GGNRA, including dogs with troubled histories that are being rehabilitated for adoption or known aggressive dogs. Since GGNRA does not monitor or issue permits for voice control, there is no way to control the risk to visitors caused by such dog owners who have the poor judgment to allow such high risk dogs to roam off-leash. There are only three meaningful classifications of Park space for dog management: 1) areas where dogs are prohibited; 2) off-leash areas; and 3) areas where all dogs must be on a leash. GGNRA further must recognize that off-leash areas are essentially single-use areas when crowded and are not safe or appropriate for all user groups.

## VISITOR SAFETY

Visitors with children who play along the water's edge or in the sand and are approached by dogs, either aggressively or not, may feel that their child's safety may be at an elevated risk for dog bites or other injuries. (SEIS, p. 22)

Visitors with children feel that their child's safety is threatened because in fact their child's safety is threatened. The issue with the safety of children is not just a perception of visitors, it is an established fact. This fact is almost completely ignored in the SEIS. It should be noted that although there is a considerable literature on the especial risks of dogs attacking children, there is little literature on other groups that may be similarly vulnerable, including the elderly, physically or emotionally disabled, and those engaging in sports or other physical activity that conflicts with off-leash dog activity. Although the SEIS does mention that children and the elderly have an increased likelihood of being the victims of attacks by dogs, the SEIS does not fully address the safety issue in an explicit manner and apply safety risk management to policy alternatives of dog management.

Public parks shared by running children and off-leash dogs are potentially unsafe for children (Kahn et al

2003 & De Keuster et al. 2006). Although in theory, it may be possible to somewhat reduce the risk to children exposed to off-leash dogs (Love & Overall 2001), in reality: Any dog is capable of biting, including those with no history of biting and those whose aggressive behavior has been treated, regardless of whether the dog has received obedience training (Reisner et al. 2007, Reisner 2003, Rohrich & Reagan 1999, referenced by Reisner & Shofer 2008, the source of the quotation). NPS must intervene to perform a risk analysis and protect visitors by segregating off-leash activity and explicitly warning visitors about the risks of entering areas where off-leash dogs are allowed.

Dog walkers cannot be relied upon to control the behavior of their dogs to reduce the safety risk of off-leash activity. One study found that dog owners had limited knowledge of dog behavior and were unaware of factors that increased the risk of dog bites to children (Reisner & Shofer 2008). Many dog owners surveyed in the study who indicated that they were comfortable taking their dogs to public areas were making unsafe assumptions about interactions between dogs and unfamiliar children. Reisner and Shofer reported that 41% of respondents surveyed thought that it would be OK to allow their dog off leash in an area where they saw children running.

The GGNRA visitor cannot control the risk to her/his safety where off leash dogs are permitted. Certain types of dogs, such as pit bulls, may be associated with a higher risk of serious bite injury (Bini et al. 2011) and older, active children are more often bitten by pit bulls (Reisner 2013). In one review of dog bite data, most older children bitten in an outdoor setting were unfamiliar with the attacking dog and were not interacting with the dog (Reisner et al. 2011). As stated above under Voice Control, some dog walkers bring high risk dogs to GGNRA and allow them to run off leash.

Complications of dog bites include cosmetic problems, pain, infection, and emotional consequences such as posttraumatic stress disorder. Dog bites are expensive, in terms of emergency, medical and surgical care, vaccinations and the physical and emotional consequences on children and families (Reisner 2013). As noted below under Comparison of Dog Management Policies & Regulations/Risk Assessment, a high proportion of owners of attacking dogs in GGNRA either abscond without providing contact information to the victim or provide bogus contact information, suggesting that in many cases attack victims could not recover payments necessary for medical and psychological treatment associated with injuries.

When an attack on a child does occur, there is a significant chance of a fatality. One study estimated that a risk of 2 fatalities per 1,000 reported dog bites exists nationwide (Wright 1985). Although most studies show that fatalities typically occur in residential settings, there is still a real possibility of a fatality in GGNRA because of the concentration of visitors with children and lack of control over the type of off-leash dogs present. GGNRA must fully and explicitly address this risk in the EIS.

## NEEDS OF URBAN RESIDENTS

Additionally, the adjacent city, county, and state public lands have fewer areas available for dogs and/or more restrictions on these areas, so potential use by urban dog owners is therefore pushed onto NPS lands. (SEIS, p. 22)

Under Needs of Urban Residents, the SEIS refers to the needs of urban Park visitors as if dog owners were the only urban visitor group. Although there does not appear to be a specific estimate of the proportion of visitors to GGNRA that are dog walkers, one of the surveys cited in the SEIS (Tierney et al. 2009) indicates that among the survey participants, only 13% of those interviewed listed walking a dog/pet as the primary reason for visiting GGNRA. Other survey results suggest proportions of dog-driven visits at around 10%. What about the needs of the other 90% of urban residents?

In San Francisco, leash laws are almost never enforced in any of the City parks, and many parks, such as

Pine Lake Park, are defacto dog parks. For San Francisco residents wishing to pursue an outdoor activity outside the presence of off-leash dogs, there are extremely limited possibilities for enjoying the outdoor environment. The EIS should discuss the limited options for outdoor space not just for dog walkers but for all visitor groups, especially visitor groups especially vulnerable to safety risk from off leash dogs, including: children; the elderly; the physically disabled; equestrians; hand gliders; joggers; etc.; and those who wish to have an outdoor experience without being harassed or disturbed by off leash dogs, such as hikers and naturalists.

## BACKGROUND INFORMATION OBTAINED FOR THE SEIS

During the past seven years the park staff has amassed as much information as could be found on dog management-related topics. (SEIS, p. 28 ff)

Although the park staff amassed information, critical information or analyses were overlooked. My review of FOIA requests for dog management documents by the Center for Biological Diversity in 2004 and Wild Equity in 2011 suggested that NPS staff actually did a poor job in collecting and reviewing relevant information in some areas. The literature reviews for disturbance issues related to shorebirds was initially poor, suggesting that GGNRA staff and EIS authors did not have a good understanding of the basic biology of shorebirds. NPS must realize that allow such a serious impact as offleash dogs into sensitive areas where visitors and resources are put at risk is not a management policy that has been generally allowed. There has been little need to study such a situation, and few specifically relevant studies have been done that address the degree of off-leash activity occurring in GGNRA. Relevant literature searches by non-specialists will often return little information. In order to prepare an adequate EIS, the study authors must have adequate understanding and knowledge of the basic biology and other relevant sciences pertaining to the resources, sociological knowledge of visitors, and knowledge of canine behavior. It will be difficult for Park staff and contractors who are most likely generalists to obtain the required knowledge without consulting with specialists

The following critical areas of knowledge for dog management seemed to be virtually non-existent in GGNRA records previously reviewed:

- Risk assessment of off-leash dog activity for visitor safety and experience.
- Research of the issues involved in dogs impacting the quality of visitor experience: why are people bothered by off leash dogs and what can be done to mitigate or eliminate the problem?
- Development of professional management techniques for reducing the impact of off-leash dogs on natural resources, visitor safety, and the quality of visitor experience. GGNRA relied on such tools as 'voice control' and 'visitor education' to improve compliance with dog management regulations. Such tools have proven to be ineffective over the years. GGNRA apparently had no information to suggest such tools would be effective yet relied on them in management documents. GGNRA seemed to make to no effort to understand why leash law compliance was poor and seemed to take no steps to improve compliance.
- Analysis of dog-related incident data to understand how and why dog-related incidents occur and to incorporate such knowledge into Park management.

## COMPARISON OF DOG MANAGEMENT POLICIES & REGULATIONS/RISK ASSESSMENT

(SEIS, p. 31 ff)

The SEIS mentions the dog policies of National Parks, California State Parks, and other parks or open spaces of counties, municipalities, or other local entities. This section would be much more useful: 1) if

there was some discussion about in what proportion of parks and other open space areas entities ban off-leash dog walking and what type of risk assessment led to those policies, and 2) if in those entities where off-leash activity is allowed, what warnings and rules for visitors entering off-leash areas are operative. Such a survey would provide a much better context to proposed dog management alternatives in relation to how the issue has been handled by other entities than by simply mentioning policies of those different entities.

My initial survey suggested that most parks that allow off-leash dogs have enclosed "dog parks". Most parks that allow off-leash dog play activity provide specific warnings to visitors about the risks involved in entering an off-leash dog zone. There is frequently mention that the park or other entity cannot guarantee the safety of visitors. Since GGNRA is proposing to allow off-leash dogs on some GGNRA beaches and in mixed use areas, the EIS needs to explain how and why NPS thinks it can overcome the problems of off-leash dog activity cited by the other entities while attaining its stated goal of minimizing conflicts related to dog use by providing a variety of safe, high quality visitor use experiences.

An example of some of the regulations and warnings to visitors provided by other entities include the following.

The City of Evanston Illinois provides a Dog Beach Information Packet. The 2011 edition of the document lists the following points among others under a section, Risk and Responsibility of dog Owners Using the Evanston Dog Beach:

- A dogs behavior or actions, no matter how well trained, if startled or frightened, can be unpredictable and potentially life-threatening.

- Even a well trained dog may attack a patron, another dog, park wildlife or a curious child without provocation or notice.

- Other risks include a dogs natural reactions, such as jumping, pulling , resisting and biting, and the negligence or irresponsibility of a dogs owner/handler.

- It must be recognized that it is impossible for the City of Evanston to guarantee absolute safety.

- Dog owners must understand they participate in Dog Beach activities at their own risk and the risk of their dogs.

The Clark County Nevada Parks & Recreation Dog Park Rules include the following warnings concerning visitor use of dog parks (<http://www.clarkcountynv.gov/Depts/parks/Pages/dog-parks.aspx>):

- All dogs have the potential to bite

- One adult to supervise several children or an infant and the family dog is not sufficient to ensure everyones safety and control.

- Not all dogs are child-friendly! Never allow your child to approach or pet a strange dog without the owners presence and approval.

- The Dog Park is Not a Place for Your Child!

- Never let your child have toys or food in the Dog Park. A friendly dog might knock down your child to

get at a bright ball or cookie.

- Canine and human visitors enter at their own risk.

- Owners are legally responsible for their dogs and any injury or loss caused by their dogs.

- Clark County will not be responsible for injuries to visiting dogs, their owners or others using the park.

The City of Centralia, WA makes the following statements about visitor use of a dog park

<http://www.cityofcentralia.com/Page.asp?NavID=449>:

- Entry to the Dog Park is at the risk of dog owners, handlers and guests. Small children must not be permitted to run loose within the off-leash area.

- To prevent fights, no food or toys allowed inside the off-leash area.

- Owners are legally responsible for their dogs and any injury or damage caused by their dogs.

- Maximum 2 dogs per adult allowed in the off-leash area at any time.

The Manatee County Florida Dog Park Rules include the following statement (<http://www.myanatee.org/home/government/departments/parks-andrecreation/parks/dog-parks/dog-park-rules.html>):

- Canine and human visitors enter at their own risk. Manatee County cannot be responsible for injuries to visiting dogs, their owners, or others using the park.

I noted that a dog behavior expert, Richard H. Polsky Ph.D (dogexpert.com), provides the following among a list of warnings to dog owners for reducing the risk of injury to others caused by their dog (<http://test.webzler.com/richard/dog-bite-prevention-safety-for-children-and-others/>):

Comply with local leash laws. Letting your dog run loose in an urban environment or residential area could be dangerous, and imposes substantial risk to the safety of others. For example:

- Your dog might approach a person and frighten that person, causing that person to fall;

- Your dog, albeit non-aggressive, might approach and try to interact with a dog-aggressive-dog (possibly being walked on leash), an altercation starts, and somebody gets injured;

- Your dog might run into the street in pursuit of a squirrel or cat and get hit by a car or possibly cause a traffic accident;

- Your dog could injure a person if it accidentally collided with a person while in pursuit of some object like a cat (or another dog), or while playing with another dog.

(I note that the GGNRA law enforcement incident reports contains specific examples of all of these types of incidents described by Dr. Polsky.)

The SEIS has failed to explicitly discuss the issue of risk to visitors. Although it is mentioned that there is literature on the risk of injury to some types of visitors, there is no attempt made to assess the fact that surveys suggest that a high proportion of visitors don't want to be around off-leash dogs and will probably avoid areas of the park where off-leash activity occurs.

The SEIS seems to have completely avoided explicit discussion of risk assessment of off-leash dog activity that other entities have performed in relation to their determinations about how to manage the risk of off-leash dog activity. The EIS should explicitly provide a risk assessment of off-leash dog activities in GGNRA and use such an assessment to determine how the risks can be eliminated. Where those risks cannot be eliminated, such as many parks have concluded cannot be done, then GGNRA should be explicit about which visitors and/or user groups cannot safely interact with off-leash dogs without risk to their visitor experience or safety.

Here are examples of how risk analysis could be useful.

I examined 29 incidents from the 2009 and 2010 incidents reports involving visitors being attacked by dogs. In 16 of 29 (55%) incidents reviewed, the owner of the attacking dog either absconded from the victim or law enforcement or provided contact information that was bogus. This result suggests that a high proportion of visitors walking off-leash dogs are scofflaws in terms of taking responsibility for the actions of their dogs and having consideration for the other visitors affected. Visitors must realize that if attacked by a dog, it is likely that the perpetrating owner will not be identified. Visitors may have to undergo rabies shots and may not have any possibility of recovering costs associated with a serious injury. Such scofflaw behavior needs to be taken into account by GGNRA in formulating dog management regulations. It suggests that GGNRA should require that all dogs wear collars with proof of vaccination and that off-leash activity should be strictly compartmentalized within the Park, so that visitors wishing to minimize the risk can go elsewhere.

I also examined 37 incidents from the 2009 and 2010 incident reports involving visitors or pets that were either bitten or harassed by off-leash dogs. The incidents were classified according to how many dogs the owner of the attacking dog had off-leash at the time of the incident. In seven cases, there did not appear to be information on how many off-leash dogs the owner had. In the other 30 incidents, 17 of 30 incidents (57%) involved owners who had three or more off-leash dogs at the time of the incident. (It should be noted that such a result is conservative in terms of my analysis, since from the incident report it could not always be verified that an owner with one dog did not have other dogs besides the attacking dog.) The EIS does not present data on the distribution of the average number of dogs for dog walking visitors, but the result of the NAU survey (NAU 2002b) indicated that 77% of survey participants owned only one dog. Therefore, it is likely that a highly disproportionate number of serious incidents are associated with visitors with three or more dogs. Even the proposed limit of three off-leash dogs may not limit the risk associated with visitors having more than one dog off-leash. Such a result suggests that GGNRA should take a careful look at the risks of allowing multiple dogs off-leash, and suggests that any area of the Park where this occurs may not be appropriate for vulnerable visitor groups, such as children.

GGNRA must fully address the risk issue. The best way to control the risk for visitors would be to enclose areas where off-leash dogs are allowed and/or to segregate off-leash activity into specific well-defined areas, outside of which visitors can be reasonably certain they will not encounter off-leash dogs. Based on the management policies of most or all other park or open space entities, GGNRA is going against the grain of management practices across the country by proposing to allow multiple use of space, where off-leash dogs are allowed. It is incumbent upon GGNRA to explain how they can control such risk that most or all other entities have chosen to avoid.

## COMMUNITY BENEFITS OF OFF LEASH DOG WALKING

Visitors with dogs, including elderly and handicapped visitors may experience beneficial effects of walking their dogs. Dog walking provides mental health benefits by providing a social community for many people."

Studies have shown that dog owners exercise more than people who do not own dogs. A study in Australia looked at how dog ownership influenced physical activity (Cutt et al. 2008).

(SEIS, p. 35)

These statements suggest that the SEIS is claiming that allowing more off-leash dog walking in GGNRA will somehow have health benefits for the community. These statements are presented in a suggestive manner that probably leads to false conclusions by the reader. The main policy issue of the SEIS and the underlying management decisions is how much off-leash dog walking to allow in the Park. There is no indication that on-leash as opposed to off-leash dog walking has any less of the health and recreation benefits to humans. The study referred to (Cutt et al. 2008) compares dog owners vs. non-dog owners in a housing tract in Perth, Australia. The study shows slight differences in the total weekly amount of self-reported physical activity of dog owners vs. non-dog owners in this housing tract. However, it is unclear what health benefits, if any, are associated with such differences. There was no statistical difference in vigorous leisure-time physical activity between the groups -possibly the most significant physical activity measured that would be associated with actual health benefits. The study may have just measured the fact that people who own dogs have to walk their dogs, so they walk more than people without dogs on average.

Any claim about the health or community benefits of off-leash dog walking should be given the context of the costs to others in the community who may be negatively impacted by off-leash dog activity in GGNRA. What about all the other types of activities in GGNRA that foster physical activity and social community: jogging, biking, fishing, horseback riding, picnicking, etc? Law enforcement data suggests that those engaging in physical activity in GGNRA, such as playing, jogging or biking, have an increased risk of being bitten by or attacked by off-leash dogs, and the presence of off-leash dogs probably reduces the access to GGNRA for people who want to engage in these activities. If Cutt et al. 2008 is cited, there should also be references to articles on the potential benefits of an increase in physical activity realized by providing safe and accessible places for other types of physical activities besides walking dogs, such as running, biking, nature observation, etc., and a discussion of the potential negative impact on these activities by off-leash dogs.

#### SHOREBIRDS / BEACH WATCH DATA

(EIS, pp. 119/259/261)

Data from Beach Watch surveys (Beach Watch 2006; 2009) is used in the SEIS. Although the data from this survey may be appropriate to use to mention the presence and general abundance of certain species of shorebirds, there are severe limitations to this data. This data is based on encounter rates as were the Snowy Plover surveys done by GGNRA, so the data on shorebirds cannot be considered as an accurate survey of shorebird populations. The surveys were done every two weeks and may not have been conducted during peak migration periods and may have completely missed the presence of some bird species during migration and the peak number of individuals of various species during migration. Although some aspects of the data may be useful, I do not think it should be used to draw conclusions about the relative species numbers or the habitat importance between different sites, such as on p. 260 of the EIS:

Muir Beach and Rodeo Beach sites had documented low shorebird abundance and diversity compared to other GGNRA coastal beaches that had high shorebird abundance and diversity such as Ocean Beach (Central and South) and Fort Funston (or Thornton Beach North) (Beach Watch 2006, 11)

Such a statement may or may not be true. Any use of the data must address the limitations of the survey methods and the fact that some species may have abandoned sites, especially smaller sites, due to off-leash dog activity over many years. The EIS needs to avoid such simplistic interpretations of the data.

#### VISITOR EXPERIENCE I SURVEYS (SEIS, p. 372 ff)

Although GGNRA has utilized various surveys to attempt to collect information on Park visitors and visitor experience related to dog management issues, the surveys have limited usefulness in understanding the impact of off-leash dogs on various visitor groups. The NAU (2002) survey was helpful in revealing that a majority of the surrounding community was in favor of enforcing restrictions on off-leash dogs. As I stated in my comments on the initial EIS draft, the NAU survey did not flesh out why people want restrictions on off-leash dogs and how off-leash dogs affect or would affect their safety and visitor experience. The NAU survey followed up with respondents supportive of off-leash dog walking, who were asked a series of questions probing specific preferences to gain a deeper understanding of the nature of the dog walkers use of resources, but there was no similar attempt made to gain insight into why, for example, 35% of respondents strongly opposed off-leash dog walking.

The subsequent surveys provided no real further insight into the visitor experience related to dog management. The other studies, including Tierney et al. 2009, relied on intercepting visitors at sites heavily used by off-leash dog walkers, where visitors not wanting contact with dogs had been excluded for many years, leading to extraordinarily biased samples of visitors. (For example, I live within a few miles of Fort Funston but have not been there in over seven or eight years because of the off-leash dog activity.) Nakagawa et al. (no date)s survey compared attitudes across ethnic, age, and income groups but not across various Park user groups. Respondents in this and other surveys were not asked questions specific enough to allow for probing specific preferences related to potential conflict with off-leash dogs. In the Tierney et al. (2009) study, respondents were evaluating their visitor experiencing concerning dogs along with factors outside of Park control, such as the weather or park and community infrastructure - essentially incommensurable factors.

Many casual or infrequent visitors to GGNRA do not know the extent of the problems caused by off-leash dog activity and would not be aware of those problems unless informed during the survey. On an average visit, a casual visitor may not see or recognize the significance of dogs chasing birds and may be lucky enough not to have any conflict with off-leash dogs. It should be noted that Tierney et al. (2009- Table 71) found that a visitor who had made 101 or more visits to GGNRA in the 12 months prior to the survey had a seven-fold increase in likelihood of mentioning restrictions on dogs as a factor that would improve the experience of visiting the Park compared with visitors who had made one or none previous visits. The NAU survey asked respondents for their opinions on enforcing restrictions on off-leash regulations before and after reading them a mission statement of the National Park Service. The same type of before and after polling could be done by providing respondents with a description of the nature and extent of problems caused by off-leash dogs, such as hazardous conditions and safety risks to vulnerable populations. The 35% category of respondents strongly in favor of enforcing restrictions on off-leash dogs would surely have increased.

The surveys have failed to elucidate the real problems faced by different user/visitor groups in the Park. I am stunned that the SEIS does not refer to the work of Vaske & Donnelly (2007), which provides some insight into why visitors to a park/open space have conflicts with off-leash dogs and to what degree their visitor experience was affected. To be effective in addressing the visitor experience issues at GGNRA related to dog management, a survey would have to involve stratified sampling and detailed probing of the impacts of off-leash dogs on various user groups and vulnerable

populations. However, I believe that NPS can make use of existing information if a conservative approach is taken towards addressing the visitor experience issues that are known or can be inferred related to off-leash dog activity in GGNRA.

Given the available information, including anecdotal information in NPS files, the inescapable conclusion is that off-leash dog activity in many cases leads to single-use user group dominance of a space by off-leash dog walkers. The SEIS has failed to connect the dots about the consequences of off-leash dog activity on Park visitors.

## VISITOR SAFETY INCIDENT REPORTS

From the years 2008 through 2011, a total of 2,775 dog-related incidents were recorded in GGNRA for leash-law violations, dog bites or attacks, hazardous conditions or pet rescues, having dogs in closed areas, and failure to pick up pet excrement (tables 11-28.). (SEIS, p. 337 ff)

The SEIS presents data on dog-related incidents but does not provide a discussion of the limitations of the data and the context needed to understand and interpret data. The raw data is presented in a way that might lead one to draw conclusions about the total number of dog-related violations per year in GGNRA or to compare the number of dog walking violations and hazards between specific areas of the Park. Without information on the effort on the part of law enforcement involved in patrolling each area and the normal behavior of off-leash dog walkers, the data is just a random collection of numbers that show nothing beyond the existence of certain types of violations by dog owners in the Park. In fact, the data represents such a small sliver of the actual violations occurring that without further data it is impossible to even estimate the number and type of violations actually occurring.

For Ocean Beach it does seem possible to make some estimate of the total number of annual leash law violations, since information on the rate of leash law compliance and the number of dogs observed on Ocean Beach (Hatch 1996), suggests that the number of citations for off-leash dog walking in an entire year could be exceeded by the number of off-leash violations occurring in a single day on the beach. Based on Figure 11 in Hatch (1996), it appears that the median number of dogs observed on Ocean Beach in the seasonal closure area during a two-hour weekday survey is approximately 35. Assuming a 40% rate of leash law compliance, in the high range of this rate based on field surveys at various times by GGNRA, there would be approximately 21 violations encountered by an observer walking the entire Beach over two hours. Over eight hours there would be a median number of approximately 88 violations encountered. The actual number of violations would be much higher, as an observer would not encounter all such violations on the Beach while walking a transect. 150 violations would be a conservative estimate for the median number of violations per day based on this data. Although additional assumptions would need to be made to reach an annual estimate, that estimate would probably be around 40,000 per year. The EIS should make a similar estimate and discuss it in relation to the actual incident report data. The numbers of leash law violations reported for Ocean Beach between 2008 and 2011 was between 131 and 345 - truly a minute window into the number of violations actually occurring there.

There is also no discussion about the lack of systematic enforcement of dog-related regulations in GGNRA and how the lack of systematic enforcement biases the dog related incident data. My review of documents obtained through a FOIA request by CBD in 2004 and Wild Equity in 2001 suggested that GGNRA never had a systematic professional management plan for enforcing dog-related regulations and protecting public safety, natural resources, and the quality of visitor experience. The GGNRA response to complaints about off-leash dog behavior in those documents and personally to me from former Supervisor O'Neill elicited this type of response: Call law enforcement when you see a violation! Yet, as I discussed in my comments to the first EIS draft, informing GGNRA dispatch about a dog-related incident rarely, if ever, results in mitigation of the incident or citation for a violation.

The annual number of off-leash violations issued at Baker Beach varied by a factor of 10 between 2008 and 2011 and was greatest in 2009. Why? Does the data reflect something that happened in 2009 or is this great variance symptomatic of the fact that the data does not reflect the reality of off-leash dog violations? In essence, the incident data we have appears to be some artifact of random and/or inconsistent enforcement activities that may vary from site to site, from year to year, or from individual ranger to individual ranger. The data do not allow any conclusions about the relative behavior of dog walkers compared between sites or to the actual behavior at a site or the trend over time.

On 1/17/2009 a Park Ranger patrolling Ocean Beach encountered 55 dog walkers with off-leash dogs in violation of the seasonal beach closure. Only two violations were issued. The conclusion, besides the fact that the overall risk of a leash law violator actually receiving a citation is low, is the fact that because there were few if any other days on which 50 warnings and/or citations were issued, apparently Ocean Beach was not being patrolled.

Another missing context for the data is a discussion of what proportion of the violations are associated with off-leash dogs vs. on-leash dogs. This result would provide some idea of to what degree different types of violations could be eliminated by limiting offleash activity.

I reviewed FOIA data obtained by the Center for Biological Diversity in 2004, including law enforcement data from GGNRA and from National Parks nationwide. My impression was that the number of serious dog-related incidents in GGNRA documented was in the same ball park if not greater than all incidents from the rest of the U.S. National Parks combined. The EIS should refer to dog incident data from other Parks in performing a risk assessment of off-leash dog activity and discuss this in the EIS to provide some context for the dog incident data from GGNRA presented in the SEIS.

## NONCOMPLIANCE MONITORING

SEIS, p. 64 if

One of the most troubling developments in the SEIS is the proposed monitoring-based management strategy, under which Park Service staff will monitor noncompliance and impacts to natural resources and propose mitigation measures at a later date, instead of using automatic triggers that were originally proposed. This development is clearly the result of lobbying and political pressure and does not have any factual relevance. The previous target for 75% compliance was itself far too low to have any meaningful impact on protecting visitor experience or natural resources. Such a compliance level would not change the type and degree of risks to visitors exposed to off-leash activity, as described above under Visitor Safety. Vaske & Donnelly (2007) found that even a single negative encounter with an off-leash dog by a park visitor can qualitatively change the quality of experience. Goss-Custard et al. (2006) have used models to estimate in their study area, the a species of shorebird is disturbed more than between 1.0 and 1.5 times per hour in good feeding conditions or 0.2 to 0.5 times per hour in poor feeding conditions a reduction in fitness would result. As I discussed in my previous comments on the initial draft EIS, just one or two aggressive dogs can cause serious disturbance over long stretches of Ocean Beach, which may be visited by dozens of dogs per hour.

NPS is simply hiding from reality regarding the enforcement issue. It is clear from law enforcement incident reports that dozens if not hundreds of dog walkers, who are aware of leash laws, purposefully violate the laws and are contemptuous towards NPS and any attempt to restrict off-leash activity. An estimate for the number of annual leash law violations at Ocean Beach of 40,000 should immediately indicate to NPS that a high level of enforcement is needed in that area. In discussing management

alternatives at various other sites, NPS admits that the level of leash law compliance at many other sites is low. Yet the impact of noncompliance on visitor experience and safety and on resources at those sites is not explored. It should not be necessary to re-evaluate compliance rates to establish enforcement targets, as proposed in the SEIS, which re-evaluation process would allow serious impacts to occur for several more years. It is obvious that as appropriate in the case of contempt for regulations that direct enforcement of rules is necessary (McCool & Christensen, 1996).

It is unsettling that NPS has not performed a full risk-assessment and resource analysis of the impact of off-leash dog activity in GGNRA in the SEIS. It is difficult for me to find NPS credible in the claim that they will monitor compliance and provide a realistic and effective solution to any problems encountered, given the lack of transparency in the SEIS concerning what criteria the NPS will use to evaluate acceptable levels of compliance.

## IMPACTS ON NEARBY DOG WALKING AREAS OUTSIDE OF GGNRA

(SEIS, p 360 if)

The section on the potential impacts of dog management policy alternatives on off-leash dog use of nearby dog walking areas outside of GGNRA is removed from the reality of off-leash dog activity in the Bay Area, specifically San Francisco. It is also another example of the EIS being written in places with blinders and not considering that there are many user groups of GGNRA besides dog walkers.

This section is written with apparently zero knowledge of the actual situation of off-leash dog use of San Francisco City Parks. Although official policy limits off-leash dog use to certain designated areas within specific parks, in actual fact there is almost no enforcement of this policy. For example, Pine Lake/Stern Grove is essentially a dog park. All of the negative consequences discussed in the SEIS in the event of dog management in GGNRA more restrictive to off-leash dog walking are already occurring in Pine Lake/Stern Grove, for example. The authors of the EIS need to be informed that most off-leash dog walkers in San Francisco ignore restrictions on off-leash dog walking in City parks.

In addition, this section also needs to cover the impact of various alternatives on other user groups, comprising approximately 90% of GGNRA visitors, who might need to seek alternative areas outside of GGNRA based on dog management alternatives that fail to protect their safety or visitor experience from off-leash dog activity.

## DISTURBANCE TO WILDLIFE

(SEIS, p. 376 ff)

Although the section on disturbance to wildlife has been improved since the initial EIS draft, something is missing. Although some relevant literature is discussed regarding disturbance, there is little discussion on the actual disturbance that is occurring at GGNRA that can be observed on a daily basis. A reader of the SEIS who had not observed disturbance by off-leash dogs at GGNRA might not realize the seriousness of the disturbance actually occurring. GGNRA scientific staff have decades of experience observing this disturbance, yet the only actual instances of disturbance mentioned are from law enforcement incident reports, which are random and non-systematic observations that only occur because of a violation documented by law enforcement staff, not scientific professionals. Observations from scientific staff would be much more useful. The SEIS needs to relax its focus on only using peer-reviewed sources. The Department of Interior guidelines for the use of science are concerned with the integrity of the use of science. Over reliance on peer-reviewed sources that may not be relevant lacks integrity compared with judicious use of peer reviewed and other sources. There is a sufficient body of literature to describe and

determine the probable level of impacts of off-leash dogs in much more detail than currently in the SEIS.

The impact of off-leash dogs on shorebirds in the beach environment at GGNRA is not subtle (<http://www.youtube.com/watch?v=r75OTvJdX8>). As I described in detail in my comments to the initial draft EIS, off-leash dogs frequently chase flocks of shorebirds for great distances along the tide line. This impact is so severe and obvious that there is little relevant scientific literature on a bird populations chronically affected by off-leash dogs to a similar degree, because off-leash dogs are usually banned in beach environments that have significant shorebird populations. It is not difficult for someone with knowledge of shorebird biology to discuss the degree of the disturbance and the potential impact on shorebirds of the disturbance observed at Ocean Beach. However, this is not done in the SEIS, probably leaving most readers questioning why it is important to prohibit off-leash activity where sensitive bird populations occur.

## ROLA ENCLOSURES

NPS stated that enclosures are undesirable because an enclosure would hinder or prevent wildlife movement. (SEIS pg. 95). This statement is not credible. There is a vast literature of how artificial wildlife corridors have been successful in mitigating the impact of natural or artificial enclosures or barriers to wildlife movement.

Sincerely,

Charles Pfister

Frank Dean, Superintendent

GGNRA

Building 201

Fort Mason Center

San Francisco, CA 94123-0022

Dear Frank Dean,

I am writing to oppose the seriously restrictive GGNRA Dog Management plan. It bears repeating to point out that the GGNRA is an urban recreational park and the land that it includes has always been so. It's not Yosemite, Bryce, Zion etc., for which the Park Service bureaucracy properly has different regulations, because the users of those parks are infinitely less diverse. The GGNRA's users include not only tourist-visitors but also residents of all descriptions: parents & little children, parents with bigger

children, cyclists, skaters, picnickers, walkers, runners, nature lovers, dog walkers both professional and dog owners (even cat & rabbit owners) and just about any other SF resident who feels like a brief stay in a beautiful park. Members of these groups are,,alas, at one time or another messy (drop trash) and destructive (cycling on grass, crushing plants, damaging structures etc.) A vast majority of dogs are well-behaved and their owners clean up after them and they don't drop candy wrappers, Saran wrap, aluminum foil, coffee cups and other human detritus that is o filthy, and ugly. (I have seen humans urinate & defecate at Crissy Field). Many people don't like children and elderly folks are scared of cyclists & rowdy ball/frisbee players, who probably also frighten wildlife.

Given these conditions it's not surprising that the GGNRA Dog Management Plan has aroused increasing opposition since it surfaced in 2010. Basically, so far as San Francisco is concerned (wild areas in Marin may merit different rules) the GGNRA is just another city park, where dogs along with all other users should be subject to urban requirements - not rules suitable to Grand Canyon etc., areas traditionally under the authority of the Park Service.

How about discriminating against children (must play only in fenced playgrounds), cyclists (can't cycle where pedestrians walk), frisbee players (can't play on grass areas), picnickers (can only eat at established picnic areas) - well, you get the picture. All these users must be accommodated according to their needs, and regulated in reasonable ways consistent therewith. The current GGNRA plan isn't practical or reasonable given the unique nature of the GGNRA. And finally, your limited staff must have more constructive things to do than cite dog owners.

Sincerely yours,

Louise Frankel

**Correspondence:** Frank Dean, GGNRA Superintendent

Building 201, Ft. Mason

San Francisco, CA 94123

February 11th, 2014

Dear Superintendent Dean,

My name is Claire Petitt and I have been a resident of San Francisco for 16 years. Everyday I walk on either Crissy Field, Baker Beach or Ft Funston with my 8 year old dog Django. Every day I bring extra waste removal bags (poop bags) to clean up the beach of trash that has been dropped or washed up along the shore. Please see the attached picture as an example of a typical day's haul. Being able to walk and frolic in these places with my dog is presicely the reason I feel the need to be a steward of these open spaces and do my bit to leave it cleaner then I found it. One of the reasons why my family has chosen to stay in the city is because the city offers these beautiful places located in an urban environment and that they are used by so many for casual and formal recreation. I am a member of Environment California and actively participate in trash clean ups

and fundraising for environmental protection and legislation lobbying in Sacramento.

I am writing today to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dog in the near future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, it seems that a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I am 66 years old, live in San Francisco and have been enjoying walking my dog in the GGNRA lands for 20 years. I have a serious back condition and cant go to the gym or run but I can and do walk every day. I cant tell you how important this regular exercise is to my health. Before I got my first dog 20 years ago I barely knew these GGNRA lands existed. I love nature and have become an avid hiker. The GGNRA lands are my favorites: the Oakwood Valley Trail in Mann, Mon Point in San Mateo County, Cnissy Field, Lands End and most of all Fort Funston in San Francisco. I would be devastated if access to these places were to be restricted.

I very much disagree with the GGNRAs current preferred alternative. It is far too restrictive. In some places  
Dog walking is totally eliminated. Your science regarding environmental impact is unsubstantiated. The 1979 Pet Policy adressed both environmental and recreational issues. We should continue to abide by it. We dog owners currently have access to less than 1% of the GGNRA lands. There should be no more restrictions!

When the GGNRA was created it was agreed that the recreation that existed would be continued and that the city would be consulted on future changes within the GGNRA. The GGNRA needs to be accountable to their promise to San Francisco. These lands are in a densely populated urban area and the recreational needs of the people of San Francisco and surrounding areas must be preserved.

I believe the GGNRA needs to carefully differentiate between recreational and professional dog walkers. I think the GGNRA should do as the City of San Francisco has done and issue permits that limit the number of dogs walked at one time. Perhaps they could even limit the number of permits issued.

And I am very upset that again we must take precious time to write supervisors and congressional representatives when the GGNRA ignored all the substantive comments supporting dogs and opposing the same plan two years ago. I dont understand why you wont work with the dog people to resolve any problems there may be.

These GGNRA parks mean the world to so many of us. Please consider other alternatives and continue to keep them accessible to responsible recreational users and our dogs.

Sincerely,

Andrea Patterson

9th February 2014

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Building 201, Fort Mason,  
San Francisco, CA 94123

Dear Superintendent Dean,

My name is Angela Osborne and my husband Dan and I live in Larkspur, Marin County. We have lived here for 14 years and for the past 6 years, have enjoyed walking our dog in areas around Marin and San Francisco including Rodeo Beach, the Marin Headlands, Stinson Beach, Muir Beach, Ocean Beach, Fort Funston, Baker Beach and Chrissy Field.

We exercise in these areas with our dog off leash and under voice control for both our own health as well as the health of our dog. We are also avid hikers and cyclists. Like many people who come to Marin County, my husband and I moved here to be close to nature and pursue a healthy, outdoor lifestyle. Our dog has played an instrumental part in getting us out into that wonderful Marin environment.

My husband and I are writing to let you know that we strongly oppose Alternative F, the Golden Gate National Recreation Area (GGNRA) preferred dog management plan to restrict off-leash and dog-friendly access to the GGRA. Instead, we support Alternative A, the No Action Alternative.

With its plan, the GGNRA appears to have lost sight of its original purpose. The GGNRA is not a national park. It was established to provide recreational activities to local residents in a densely populated urban area. It is not a wilderness area like Yellowstone or Yosemite and therefore requires a different management strategy than a National Park.

As Marin residents, my husband and I rely upon and enjoy its open space. Dogs are already off-limits on over 99% of the GGNRA. There isn't any compelling reason to eliminate or further restrict the remaining 1%. Local residents have fought hard for many decades to create and preserve the vast tracts of open space that contribute so much to the views and the outdoor lifestyle cherished by most who live here. Access for all users, including people and their dogs, was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained. It needs to be formalized and supported with off-leash areas in all three areas - San Francisco, Marin and San Mateo County - and on new lands that the GGNRA acquires in the future.

The GGNRA's plan would only allow for more restrictions and does not provide for opening up more areas for dog recreation. This is a fundamentally unfair process to set up and lacks justification. It is also extremely worrying, as it does not factor in any growth or change in the urban population. Marin has the most people it has ever had living in its borders and more than twice as many dogs as school children. This reflects the recently released U.S. Pet Ownership & Demographics Sourcebook from American Veterinary Medical Association (AVMA) that reveals that more than 50% of California households own a dog.

The GGNRA plan would seriously restrict dog walking in that less than half (7) of the 22 areas in the three counties would allow off-leash dog walking. There is no justification in the SEIS for major changes in any of the 22 areas affected. In fact, the SEIS did not adequately consider comments made to the DEIS by responsible dog guardians last time around, suggesting the will of the people is being ignored. A significant number of comments submitted in 2011 were not considered or addressed in the GGNRA's current dog plan. This is very worrying.

There is inadequate factual basis in the current plan for the proposed changes. The GGNRA claims it is responding to what it said were rising complaints from park visitors and park officers, yet it has failed to provide current data to back up that claim. We walk our dog in these areas and have rarely seen any altercations other than minor (and natural) dog-on-dog interactions.

The new plan does not adequately analyze the impact of the preferred alternative on nearby parks. The public and the San Francisco Board of Supervisors requested this analysis in 2011. The new plan claims that, because some off-leash space will still be available in the GGNRA, albeit much smaller, most people will continue to walk their dogs there and not move to nearby city parks. No evidence is given to support either assumption. The GGNRA has not adequately studied the dispersion effect of its plan on local communities, neighborhoods and residential areas. These include parking, traffic congestion, driving patterns and increased miles traveled to reach dog-friendly areas.

In addition, the monitoring-based management strategy needs to be re-worked because it primarily focuses on 100% compliance of leash laws and therefore allows the GGNRA to change the status if it deems park users are in non-compliance. It reserves the right to restrict further dog walking if there

are unspecified violations or impacts in the future. The plan makes inconsistent assumptions and is arbitrary.

My husband and I would like it on record that we adamantly reject the idea of constructing fences to delineate any off leash areas in the GGNRA. It is a bad and costly idea that will make all people, with or without dogs, feel penned in. In addition, any barriers put up will impede the natural movement of the very wildlife the GGNRA claims it seeks to protect.

There hasnt been a single peer-reviewed, site-specific study (as required by law) that supports the proposed drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are not only occurring now but that dogs are causing them. Dogs and their walkers are not going off trail so how many dogs are in fact leaving these trails and invading critical wildlife habitat? The GGNRA should take a balanced, fact-based approach to its environmental analysis, provide the data and stop speaking hypothetically. We would ask the GGNRA to conduct the necessary site specific peer-reviewed studies before making any changes to the uses of our recreational land. After 2-1/2 years in review, the new plan has not been modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan, opposing the original plan by a margin of 3:1.

Given 99% of the GGNRA is already off-limits to dogs, it is hugely discriminating to seek a plan that reduces that 1% any further. At a time when restaurants, shops and other local businesses are providing access, water and treats for dogs, the GGNRA's plan to restrict them shows how out of touch it is with both its mission, purpose and a significant segment of the society it was formed to serve.

What the people of the Bay Area need is a new plan that describes how the space will be managed as a recreation area, which is what the lands are mandated to be. A proper forum should be set up to review recreation management and should include dog walkers and other park users such as cyclists, equestrians, hikers, and surfers and sail boarders. This type of committee would be valuable for the GGNRA in order to hear directly from their users and to engender their support in maintaining the GGNRA lands through volunteer opportunities supporting collective access.

The restrictions in Marin County are extremely far-reaching to the point of leaving practically no areas for off-leash dog recreation and many areas off limits all together. Marin is the hardest hit by the GGNRA preferred alternative as it would eliminate off leash dog walking at Muir Beach, all trails at Homestead Valley, Marin Headlands and Oakwood Valley. There is no factual basis to support this. The only off leash area in Marin would be a remote stretch of Rodeo Beach. The closure of these areas will place a huge burden on other open space lands in Marin, causing overcrowding in what few dog parks remain.

In San Francisco County, the GGNRA's proposed alternative is extremely restrictive for off and on leash dog walking in areas that my husband and I currently enjoy walking with our dog including Ocean Beach, Fort Funston, Lands End, Baker Beach and Chnissy Field. Approximately 75% of dog walking access in San Francisco will be eliminated if the GGNRA preferred alternative is adopted. With the harsh restrictions in both Marin and San Francisco County, we will be forced to travel further and further to find outdoor recreational areas to enjoy with our dog. In short, the GGNRA preferred plan would severely impede our ability to enjoy the Marin and Bay Area lifestyle that originally brought us to the area. The GGNRA plan does not simply limit dogs. It limits all that is wonderful about the Marin County and Bay Area lifestyle, culture and community.

Sincerely,

---

Dear Superintendent Dean:

Though 13 years have elapsed, and Bob and Annie are in dog heaven, (replaced by Solly and Florrie), I would respectfully ask that my Letter to the Editor, December 3, attached, be made part of your record, ID 11759 and ID 55416. My comments then are certainly appropriate now.

I'm now 80 years old, still active, and walking my dogs off leash, as I have for the past 40 or so years. My health and mental well being are in your hands. I'm hoping justice will prevail.

Thank you,

Mort Gensberg

Letters to the Editor

San Francisco Chronicle

901 Mason Street

San Francisco, CA 94110

Gentlemen:

Dogs at Ft. Funston

For Arthur Feinstein of the Audubon Society to dismiss dogs as a "nuisance" is a disservice to dogs everywhere. Dogs are our companions; they comfort the infirmed, help the impaired, and in more recent tunes, assist in our national security.

Dogs, like birds, were meant to be free. Dogs need to socialize and exercise as we do. To prohibit their movement, when safety allows, is a form of abuse. Abused animals in turn become frightened and aggressive.

Lastly, the dogs have never been a threat to the bank swallows over these many years. I've been walking my dogs off leash at Ft. Funston for at least 20 years. I

ask why do the swallows return, year after year, despite the incursion of humans, dune buggies, horses, dogs, hang gliders, heavy equipment and attempts to alter their ecosystem.

As an aging veteran with two active, very friendly dogs, I think Bob, Annie and I are entitled to the same protections as our avian friends. I'd like to see a return to "RECREATION" at the GGRNA.

Thank you.  
Mort Gensberg

RE: GGNRA Dog Management Plan

Supplemental Environmental Impact Statement

"In this process, you haven't seen the same level of compassion  
extended to wildlife as to dogs."

Mike Lynes, GGAS

Greetings once again Superintendent Dean,

I've been actively involved in the general issue of dogs in parks and other wild lands for well over a decade and have submitted numerous written comments to the GGNRA ever since U.S. District Court Judge Alsup's 2005 decision to unleash dogs in the GGNRA. The entire process has been so disheartening that I almost decided to forgo this last ditch comment period because it's increasingly clear that support for pets has continued to relentlessly gnaw away at any semblance of wildlife protection in the GGNRA. There's no question that Mike Lynes' statement is absolutely accurate 'wildlife continues to be pushed aside by the alarmingly boisterous and well-organized dog booster groups, as well as most politicians and newspaper publishers who all seem to confuse affection for pets with concern for wildlife. You've heard all of the arguments so now it comes down to you as the only person that's actually charged with upholding the NPS mandate to "preserve and protect", the very essence and reason the GGNRA exists. Wildlife needs your voice!

Sincerely,

M. Bruce Grosjean

The Return of Common Sense

In General Common Sense:

Domesticated canine pet use of public land must be strictly controlled. Domination and bullying tactics, which have rendered all other uses secondary, has run its course and proven to be unfair,

---

unsafe, unsustainable, and never in the best interest of all other users ' including wildlife. Dog owners have proven that they cannot act in goodfaith in the interest of cooperation to assure any other uses of public play spaces other than their confused belief that pets are not "children" and do not have priority over other uses and natural wild plant and animal sustainability.

The idea trumpeted by dog owners that dogs should be a primary consideration in all future land management decisions because they claim in that there are more dogs than children (prove it) and that the dog population is only going to grow (crystal balls?) is FALSE and must be ignored. Ten thousand dogs does not replace the value of one human being, one bird, one native plant, the cleanliness of one grain of sand, the pleasure of one child's laughter at experiencing nature, or the quality of one drop of Ocean or Bay water.

Small dog ownership, which places a smaller demand on the size of spaces needed to adequately accommodate their exercising, should be encouraged over larger dog breeds.

The culture of dog ownership has been allowed to dominate the discussion and refocused political weight as an issue with priority in public park land management. The common sense principle must be strongly reinforced that dog owner public land domination by bullying and convenient ignorance of the Law is not the default practice and will be returned to a system of accountability for misuse and dismissal of the concerns and peaceful use of others.

Dog use is a privilege, not a right, allowable only under very controlled conditions. Misuse of this privilege is subject to withdrawal at any time when violations of this trust are dismissed. Dog owners will never be satisfied with pet restrictions. They have been allowed to masterful manipulate City officials and citizens alike by using tactics of creating their own packs and use people's reluctance at being subjected to bullying should they dare to express opposition to dog misuse of parks and pitting neighbor-against-neighbor to get what they want. This must stop NOW.

The idea that dogs will crowd interior parks when the GGNRA restricts off-leashes use is LUDICRIOUS! Dog's owners already dominate public parks, fields, courts, slopes; this practice will not change. Owners go to beaches and to parks with their dogs strictly at the CONVENIENCE to owners, not the preferences of dogs. Parks are convenient for the daily toileting of dogs... beaches are a nice but not necessary ventures. Parks have always and will always take the brunt of this misuse.

Do not make the same mistake as the SF Rec. & Park Dept. has made by fearing the misperception of dog owner political power and not enforce dog use. As it is now, RPD staff (gardeners, managers, recreation directors) is instructed to not confront dog owners when they violate Park Codes, yet welcome private residents to "self-police" and take the brunt of dog owner rage at being told they must stop bad behavior in local parks and playgrounds. The number of Park Ranger officers is very low and enforcing dog rules has deliberately been virtually ignored. Commercial dog walkers should prove easily visible training, licensing, and with proper personally supplied cleaning materials versus taxes paid for and supplied.

Voice Control: A very rare talent not mastered by hardly any owners and should never be criteria for where or when dogs are allowed in public spaces.

Even if a rare owner has managed to get a pet to respond to their voices in a controlled home setting, when put in an environment with many other not-tethered dogs, said dogs typically revert back to

instinctual pack behavior of domination and submission within the pack and ignore their owners. The result is that other users of public spaces become secondary and are subjected to unpredictable and dangerous behavior of animals which owners cannot stop.

Licensing: For Public Safety: No person shall be allowed to take dogs into public spaces unless there is a uniform and easily recognizable method of identifying the animal as licensed, with all necessary up-to-date vaccinations, and the owner as having received sufficient training in dog handling. No license ' no public land use.. .period. Dog owners must provide their own dog feces and urination cleaning supplies versus public paid for and stocked.

Enforcement: All established Dog Management Rules must be strictly and uniformly enforced at all times ' no more exceptions, no more "education," no more "warnings," no more excuses. Signage must reflect with words, maps, and other illustrations the consequences of non-compliance. Fines for violations of "POSTED RULES" holds more monetary weight than a fine for a dog "unleashed;" enforcement officers must opt for the highest possible monetary fine in order to solidify the overwhelming need to compel dog owners that the public demands their compliance versus continuing to all their perceived entitlement of being an exception to the Laws and certainty that officers will continue to not hold them accountable.

Unleashed Dog Areas: All designated areas which allow not-tethered dogs must be well defined with beginning and full-circle endings of impenetrable barriers where dogs cannot escape and where others do not have to deal with most owners' inability to restrain pets.

Unleashed areas must not span public paths-of-travel walkways, driveways or be open to any adjacent areas where not-tethered dogs are not allowed. Owners will claim ignorance, bully any other park user who dares to ask them to tether their pet, and ignore rules anyway if not strictly contained within an area.

Water Fronts: Unless completely remote and well defined by signage and where natural features illustrate a common-sense natural edge of a space, all beaches must be NO DOGS ALLOWED or DOGS ON LEASHES ONLY.

â€ Ocean Beach: NO dogs off leashes must be allowed anywhere on this most crowded of all San Francisco beaches. As shown in current proposed maps, dogs are suggested to roam free right with families, tourists, and all manner of unsuspecting humans gather ' including the only parking lot designed to access this beach. This difficult bullet must be bitten, and although dog owners will scream and threaten, loose dogs on this entire beach cannot be tolerated ' we cannot duplicate the mistakes the SF Rec. & Park Dept. made in this regard: see Dolores Park where at least three-quarters of this crowded park is for dogs off-leashes with no barriers or signage to inform unsuspecting humans who are currently, as we speak, sitting where dogs have more right to be than people. Safety to the Snowy Plover must be given precedence to all other uses ' dog and human. There is no map which illustrates the need that all dogs be leashed on all of Ocean Beach.

â€ Upper Fort Mason: Map 9- -F is the closest to an acceptable dogs off-leash spaces in that it is secluded to a furthestmost area that does not require others to cross; although the too large a space.

â€ Crissy Field: There is no map which is adequate. All examples are blatant examples of giving into the screaming of dog owners who currently believe that they own this prime location which is always crowded with residents and visitors.

Map 10 D can be adjusted. As currently shown...

â€ The designated dog area does not have hard barriers defining that space ' a mistake.  
The off-sand (inland) dog area crosses walkways and people must walk through the dogdominated area and become secondary to dog behavior ' a mistake.

â€ The sandy beach area where unleashed dog may access the water's edge makes a right-hand turn to allow dogs to run along the long stretch of water's edge in front of where people may access the water ' a very big mistake.

â€ If dogs are allowed to be at and in the Bay water, it must be only directly in front of and only as wide as the off-sand designated un-leashed dog area.

A dog space must not be anywhere close to the Tidal Marsh as the smell and barking of dogs is threatening to birds.

â€ This Dogs Off-Leashes Area is far too large. It must be reduced in size and situated between walkways so that others never have to walk through it or be forced to take longer walkway detours to go around it.

â€ IF any waterfront access is allowed, it must be DIRECTLY IN FRONT OF and NO WIDER or longer than the inland area. It must be apparent where dogs would naturally be confined and intuitive that people would not want to wander into it with the use of natural barriers and signs.

â€ Any dog space must always be away from picnic tables, food and grills, the Warming Hut, and where people are entering or exiting vehicles in parking areas.

â€ Remember: Dogs are NOT the primary users or interest in our public play spaces.

Ft. Funston and all other Headlands: This cliff and beach area is more remote and more suited to less disturbing waterfront recreation, it still presents...

trampling damage to native plants and chasing of bird life in fields and beaches,

â€ places hikers and equestrian recreation in constant unwelcome and often volatile surprises on trails from dogs allowed to get ahead complacent owners,

â€ expends too much public money to secure safety and rescue from falls off of cliffs,

â€ compromises sensitive cliffs from even more rapid erosion.

Off Leash dog use must be confined to the most common sense remote areas of Ft. Funston and all other Headlands regardless of size. All trails whose sides cannot be fenced must be for Dogs On Leashes Only. Enforcement of beach and trail use must be strictly enforced.

Map 16-C closes illustrates an acceptable compromise with the EXCEPTION that the inland off-leashes area and next to the parking lot MUST BE REMOVED and allow for dogs to be released ONLY when they get to the beach. More sensitive trails must be removed and ON-leashes until they arrive completely down the trails to the beach is acceptable.

Map 16-D is preferred, but it would be hell frozen over to enforce.

Ft. Point: There is no reason whatsoever for dogs to be in this area whose purpose if strictly for historical review by humans.

Baker Beach: Map 12-F seems to illustrate that this small beach with large crowd use and a dangerous rip-tide reputation is not suited for dogs anywhere off leashes and with a strong need for control over dogs at all times. Frankly, the same goes for small children who are often placed in the same dangers by hapless guardians.

Land's End- -Ft. Miley: Although these narrow trails would all be best suited to no dogs, limited use by Map 13-D closest illustrates a compromise.

Sutro Heights Park: Only the fewest of trails should be allowed for any dogs, however Map

14C is a compromise from 14D.

Back to Real Life...

We appreciate that this has been an extremely stressful process that even we with stronger stomachs have had to avoid from time to time for reasons of being targeted by dog owners who recognize us amongst those who will stand up and hold them accountable for their bullying and misinformation.

We Thank the National Park Service for withstanding this necessary process and encourage that whatever the final configuration of this Plan, that it be enforced and honored for the good of all concerned. We look at this as a Plan that must withstand the test of a very long millennial future after we are ourselves consumed into History.

RE: Comment on GGNRA draft Dog Management Plan / SEIS

Dear Sir,

Thank you for providing me the opportunity to comment on the Dog Management Plan. I just returned from Hawaii and had the great pleasure to enjoy Volcanoes National Park. We did a number of hikes in the park and something struck me while I was there. There were no dogs. I was able to enjoy the natural environment, it was peaceful and stress free. Over my lifetime I've spent a significant amount of times in our national parks and go there to appreciate the beauty of nature and the solitude it provides.

This brings me to the controversy at hand. I live across the street from what is essentially a National Dog Park. When I take hikes through the park I'm frequently accosted by dogs mostly off leash. It's not at all like the experience I had in Volcanoes NP. While on a recent hike, I was immediately pounced on, by a dog. It's owner assured me that it was a "friendly dog" but it pushed me off the trail and into the bushes. I kept walking and passed numerous dogs running loose some without an owner in sight. As a hiker I don't know which dog is friendly and which isn't. I've asked owners to "please leash their dog", and the response in general has been quite hostile. During this hike I observed two owners that had their dogs on leashes the rest of the dogs were running free. I find hiking in this park, not at all stress free and often is unpleasant.

I don't believe this is what John Muir had in mind when he lobbied for Yosemite to be preserved or Teddy Roosevelt when he created the initial parks. The National Parks should stand apart from local Parks, as more than a recreation area for dogs. They should provide sanctuary for their inhabitants, as well as a place humans, can experience the natural world in a non-intrusive way.

I further understand from the proposal that one option is to build a dog run across the street from my house. This would add insult to injury. I would like to see an outright ban on dogs in the park, but know that isn't going to happen. I think that the dog owners have organized themselves quite well. I would like to enjoy the parks natural environment. At a minimum, I strongly request that the current leash laws be enforced so that those who want to enjoy the park without harm, can do so.

Best regards,

John O'Hara

San Francisco, CA 94116

GGNRA Superintendent,

Bldg. 201, Fort Mason,

San Francisco, CA 94123

Dear Superintendent Dean,

My wife and I have regularly walked with our dogs in the GGNRA (principally Fort Funston) for the past thirty plus years. I am writing to express our strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. In our view, it is far too restrictive. It will prevent us from recreating with our dogs for our own health and that of our dogs as we have on GGNRA properties for many years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there has not been a single peer-reviewed, site-specific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

We oppose having fences surround or delineate off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions. Individuals who break the rules should be penalized, but the majority who do observe the rules and keep their dogs under control should be punished for the misdeeds of others.

The GGNRA has in our view lost sight of its purpose: it was not established in a remote wilderness area to preserve primeval nature intact. It was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy should be formalized

and supported with off-leash areas in San Mateo County and on future GGNRA acquisitions.

Sincerely,  
Randall Ham

**Correspondence:** To whom it may concern at the GGNRA,

I am writing to voice my concern about the latest draft of the Dog Management Plan for the GGNRA. I am a native San Franciscan, single mother of a preschooler and lifetime owner well mannered sporting dogs. I have exercised myself, my dogs and no my son virtually every day of my life in this city at Crissy Field of East Beach on the berm. My son plays in the sand while my dog retrieve in the water Quite often this is our best time of day. As a "lifer" at Crissy Field, I have walked when it was but a muddy parking lot, when it was an obstacle course of old austrip boulders, in rain or shine, every month of the year.

I greatly appreciate the beautiful setting, the improved parking and the maintenance of garbage which were greatly improved with the funds from the Haas Family. As a matter of fact I sat with the Haas Family on opening day in 2001, with our happy OFF leash dogs celebrate.

The success and high usage of this urban park surprises everyone. Visiting on weekends is now quite a challenge with hikers and joggers going about and not paying attention to the main path.

Do not blame off leash dogs and scapegoat my chosen form of recreation in my city. Packs of tourists riding bikes for the first time in a long while are not a valid reason to ban dogs East Beach.

We are here rain or shine enjoying the peace, the wildlife and the clean air. We clean up after our visits and insist the GGNRA continues its agreement of the 1970 policy allowing off-leash recreation. Leave off-leash policy alone on GGNRA lands in the Bay Area

My son and I attended the Open house meeting in Novermber at Ft. Mason. This was his first political demonstration for our family's recreation rights. He still chants "take it back". Out of the mouths of babes!

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Frank Dean, GGNRA Superintendent Building 201, Ft. Mason San Francisco, CA 94123				

Dear Superintendent Dean,

My name is Kathryn Nyrop and I have been a resident of San Francisco for over 35 years. I applauded the transformation of the former Army base to the beautiful Presidio. The Presidio is a tremendous national treasure precisely because it is located in an urban environment and is used by so many for casual and formal recreation.

I walk in the Presidio daily and often hear and see red-shouldered hawks and owls and even the coyote. I have shared these many hours in the Presidio with my dogs over the years.

I am writing today to express my opposition to the process the GGNRA has run to evaluate where dogs may be allowed in the GGNRA. Additionally, the conclusions reached are not fair and flawed.

Because the dog walking was specifically referred as a use for the newly created GGNRA, it should not be restricted by the Park Service. This is not a National Park with pristine wilderness, but rather a unique national recreation area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential. Restricting recreation use will decrease the use of the Park, which is a tragedy. The consequences of this decision regarding dogs is very similar to the decision to make Morton Street field in to riparian habitat. What a shame to deny thousands of San Francisco youth recreational access to Presidio? The same applies to on and off leash dog walking.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the supplemental EIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this management plan allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in the latest supplemental

environmental impact statement are outdated - it hasn't updated the enforcement data since the last EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGNRA for generations to come.

Sincerely,

Kathryn Nyrop

Mr. Frank Dean  
General Superintendent  
Golden Gate National Recreation Area  
Fort Mason Center, Building 201  
San Francisco, CA 94123

Subject: Comments on the Draft Dog GGNRA Management Plan! Supplemental EIS

Dear Superintendent Dean:

I am writing on behalf of the City of Pacificas City Council to provide comments on the Draft GGNRA Dog Management Plan/Supplemental EIS. The comments in this letter reflect a discussion held on January 29, 2014, among the Council members, members of the City's Open Space and Parkland Advisory Committee, City staff, a GGNRA representative as well as citizens who attended and provided comments.

The City of Pacifica had previously provided comments on the Draft Dog Management Plan/EIS in 2011 (copy attached). Thank you for modifying the preferred alternative for Mori Point by adding the Pollywog Trail as an on-leash trail. We also appreciate the modification of the preferred alternative for Sweeney Ridge/Cattle Hill to add on-leash dog walking at Sweeney Ridge on Sneath Lane and on the Baquiano Trail from Fassler Avenue to, and including, the Farallon View Trail.

At their regular meeting of February 10, 2014, we held a public meeting, reviewed and deliberated on the comments relating to the Supplemental Environmental Impact Statement for Dog Management in

GGNRA lands within the limits of the City of Pacifica, and voted unanimously to submit the following additional comments:

**Enforcement:**

We strongly feel that the protection of sensitive habitat is important. We encourage enforcement of park rules to limit the disturbance of wildlife, vegetation, and possible special-status species habitat. We encourage the GGNRA to work with the community with regard to prior outreach and education.

**Clear Signage at Enforcement Transition Zones:**

We would like to reiterate this comment that was previously made about signage. There are a number of locations where there is a transition between GGNRA and City-managed lands. Without clear and prominent signage a person walking a dog may suddenly find they are no longer on City property but GGNRA land and in violation of the new regulations. An example of such a transition zone is at the south end of the berm (owned by the City of San Francisco but managed and used by Pacificans) which transitions seamlessly into GGNRA Mon Point land. Therefore we encourage GGNRA to clearly post these transition zones.

**Site-Specific Comments**

The following are comments specific to the alternatives presented by the SEIS plan for lands in Pacifica. Our overall rationale for suggesting these changes include:

- 1) parklands were set-aside to protect important natural resources
- 2) the need for more recreational access on GGNRA lands for on-leash dog walkers in Pacifica. The current proposal is too limiting in the amount of on-leash dog access. Alternative F removes approximately 63% of the existing trails from recreational use with dogs; and
- 3) the belief that the current proposal may have unwanted economic impacts.

**Sweeney Ridge:**

We recommend allowing on-leash dog access on the Baquiano Trail and opening the trail from Sheldance Nursery to the Nike Missile site to on-leash dog access. Proper enforcement of the rules should ensure that few if any violations occur, in which case the environmental effects from site access on this parcel would be minimal.

**Milagra Ridge:**

No Comment.

**Mori Point:**

We suggest that the Mori Point Headlands Trail be modified to allow on-leash dog access. We also recommend connecting the Mori Point Bluff Trail to provide a loop. We believe the likelihood of either the redlegged frog or the San Francisco garter snake being harmed or negatively affected is extremely remote.

**Pedro Point:**

We suggest opening up the South Middle and Valley Ridge Trails to on-leash dog access. These Trails would connect to the Devils Slide Trail slated to open on March 22, 2014 to on-leash access making Pacifica a destination for multiple visitor experiences.

Lastly, as we mentioned in our May 2011 letter, we are concerned that a loss of on-leash dog access on lands within Pacifica might have unwanted economic consequences, as dog walkers will go elsewhere, effectively eliminating the possibility of patronizing Pacificas restaurants, hotels, or other retail outlets. While this cannot be readily quantified, we wish to express our concerns about this possibility, as it has

been the City's long-held desire to see just the opposite occur. Our partnership with the GGNRA has been premised on the mutual benefits that Pacifica and the National Park Service can have from expanded open space. We encourage you to consider these effects while making final evaluations of the proposed actions in the SEIS.

We thank you and your staff for your dedication and hard work. We continue to be grateful for all that you have done and continue to do for the advancement of park lands in and near Pacifica.

Sincerely

Mary Ann Nihart  
Mayor

February 15, 2014

Dear Superintendent Dean,

My name is Les Nagy and I live in San Francisco. I am writing today to express my opposition to the GGNRA's preferred alternative the proposed Dog Management Plan that would greatly limit where I would be able to recreate with my dogs in the near and longer term future.

I have lived here for 2 years. My family, including our three dogs, visit Crissy Field at least 3x per week. Our dog love to swim and play with the other dogs. We enjoy socializing with the other dog guardians and with non-dog walkers who are also enjoying the beach. These places offer a safe place where we can enjoy some open space in an urban environment. Access to the Golden Gate National Recreation Area (which is not a National Park, but a Recreation area) for this highly social activity is an important aspect of the quality of life in San Francisco. It is also important to me that my wife and children have a safe place to go when I am traveling. The presence of other dog owners and professional dog walkers adds a critical element of safety to these areas. People walking their dogs are alert to things that do not look right and are always quick to help others at

the park. Further, when my elder parents visit they enjoy walking with us and our dog, on and off leash. Access to these areas is critical for a safe walk.

The conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

In addition to finding the GGNRA preferred alternatives to be grossly ill considered and discriminatory, I strongly oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens, make the dogs feel trapped and visitors using them will feel segregated and discriminated against.

Because dog walking was specifically referred to as a long-standing use for the newly created Golden Gate National RECREATION Area in 1972, this specific recreational use should continue for years to come per GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It is managed for financial sustainability and contains both residential and commercial activities as an extension of the urban area that surrounds it. As such, it should be managed to different standards to achieve its fullest potential and provide maximum enjoyment by visitors to and residents of the Bay Area that recreate regularly on this land.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties. Additionally, this SEIS permits further restrictions in the future and on newly acquired lands, but won't allow for new areas to be opened up to dog walking (either on or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated ' it hasn't updated the enforcement data since the last draft EIS was released. Additionally, in reviewing the SEIS it appears that a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS. Such clear disregard for a large number of comments strongly suggests that this process is only for show and has no substance.

Specifically addressing Crissy Field, when Crissy Field was created, one of the purposes stated was to create more space for off leash recreation because of the anticipated growth in the number of visitors with dogs. This proposed reduction in off leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. This makes no sense and is setting the dog management plan up for failure.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of historically granted and important dog walking recreation in the GGNRA for generations to come. The SEIS seems to select dog walking as a single threat to the GGNRA. I note the negative impact of businesses in the

Presidio and the traffic and noise that they bring, the large charitable events that are held at Crissy Field, and special events such as the Americas Cup. There seems to be no mention of this in your report or any efforts to curtail these activities. The singly focus on visitors with dogs to environmental impact at Crissy Field and other GGNRA locations is flawed and deeply troubling.

Dog guardians, parents with children, older citizens, disabled citizens and large groups for special events should all have equal access to all GGNRA areas that are not historically designated as wildlife protected areas of the parks. Dogs and people are co-existing now and visits by both groups have grown in the recent years as improvements have been made to the GGNRA lands. Restrictions on dog owners make us a separate class of GGNRA visitors with restricted access.

The current preferred alternatives outlined in the SEIS are flawed, based on incomplete information and discriminate against a large population of visitors to the Golden Gate National Recreation Area. I urge you to consider alternatives that provide equal access to all families and visitors.

Sincerely,

Les Nagy  
3953 Washington Street  
San Francisco, CA 94118

<b>Correspondence:</b>	Frank Dean, General Superintendent Golden Gate National Recreation Area Fort Mason, Bldg. 201 San Francisco, CA 94123 Attn: SEIS Frank Dean:				

It has come to my attention that significant changes in use policy are being reviewed regarding the access of GGNRA to dogs and their humans. As you are certainly aware the number of dogs as family members, companions and as medical care givers has significantly increased over the past several decades since the GGNRA was founded. These dogs and their humans use GGNRA as was the original purpose for recreating, exercise and the enjoyment!

To ban humans with canines from use of GGNRA would be in the eyes of these people nearly the same as banning children with their parents from using the same trails and open spaces of GGNRA. Reasonableness must prevail in the use of GGNRA for all people, children and dog friends. Having areas designated for people & dogs just makes sense! Please consider designation of both on leash and off leash areas to responsible humans and their dogs. I walk nearly every day with other

---

humans and their dogs and am always impressed with how responsible people are with their dogs as we trek the hills and valleys of Northern California.

Just a few areas of GGNRA where humans & dogs cohabitate well are: Oak Wood Trail of Tennessee Valley, the Alta Trail, Muir Beach and Chrissy Field Beach. The loss of these areas to humans and their dogs would boarder on tragedy for these and all users of GGNRA.

I implore you to proceed with your deliberations with caring and reason!

Fellow lover of GGNRA,

Tom Harty

Mr. Frank Dean  
General Superintendent  
Golden Gate National Recreation Area  
Fort Mason  
Building 201 San Francisco, CA 94123

Re: Dog Walking

Dear Mr. Dean:

This is to advise you that in the interests of providing a proper National Park experience for all visitors, I support the National Park Service efforts to regulate recreational dog walking within the Golden Gate National Recreation Area. I also urge the National Park Service to adopt a Dog Management plan that adheres to all established NPS management policies and practices, and protects park resources.

This includes enforcing laws banning dogs from certain areas of the park. In my 7 years as an HRT volunteer in the Marin Headlands, I have seen, first hand, how the increasing number of illegal dogs, even on a leash can harm natural habitat, jumping at quail, relieving themselves on native plants, and barking at visitors.

However, I'm especially concerned about commercial dog walkers using the GGNRA for their commercial business. This activity is clearly not appropriate in any National Park. Use of the GGNRA for this purpose exploits park lands strictly for private financial profit.

Commercial dog walking provides absolutely no service or benefit to any park user. To the contrary, it will adversely impact park resources and values, and will serve only private enterprise at the expense of the american public. At Fort Funston, I've often seen dog walkers with several dogs, frequently off leash, disturbing, even frightening other visitors, and in two instances causing injury! This aside from environmental damage they are causing.

Thank you very much for your consideration of these comments.

Sincerely,

Jim Morrell  
HRT volunteer  
Marin Headlands

Frank Dean, General Superintendent

Golden Gate National Recreation Area

Building 201, Fort Mason

San Francisco, CA 94123-0022

Attn: SEIS

February 15, 2014

Dear Superintendent Dean,

As someone who walks regularly with my dog in the GGNRA, I am writing to express my strong opposition to the preferred alternative described in the GGNRA's new draft management plan. It is too restrictive and will prevent me from recreating with my dog for my own health and my dogs health the way I have on GGNRA properties for many years. My husband and I chose to buy a house in Montara because of the opportunity to hike and walk our dogs, off leash, in an open space such as Rancho and to live in an area with a large dog population which also serves as a social link that binds this community together. As it states in the SEIS, most of the current Rancho Corral de Tierra park users are local and dog walkers.

The communities of Montara, Moss Beach and El Granada have a long history of responsible off-leash dog walking in Rancho. The Montara Dog Group (MDG), which has over 400 members and represents over 600 dogs from Half Moon Bay to Pacifica, have been good stewards to the area, providing waste bins, promoting responsible dog guardianship and caring for an area the GGNRA, presently, does not have the infrastructure or resources to maintain. Despite this history of responsibility, GGNRA's preferred alternative does not provide any off-leash opportunities for dog walking in Rancho. San Mateo County is the only county where the GGNRA is proposing to completely ban off-leash dog walking

where it is needed most desperately. What is the rationale for this proposal?

I have been told it is because of endangered species habitat and mixed use considerations. Despite the long history of off leash dog walking in the area, there is still habitat for a number of endangered species that no studies have been done to link off leash dog walking to negative impacts on any endangered species. In fact, the one creek in question that is within the boundaries of the off-leash area proposed by the MDG, there are more often children in the creek catching frogs and tadpoles. Unless you plan to prohibit or leash children too, perhaps education, barriers near crossing and/or proper signage would be

a better alternative than shutting out users.

Historically, Rancho has been used by equestrians (many with off leash dogs), bikers and hikers along with off leash dog walkers. There are no facts, studies, or scientific data that support restricting the recreation of off-leash dog walking over the other types of recreation enjoyed by park visitors. We have all managed to successfully share the space for all of our preferred activities.

My husband and I strongly urge that you continue the policy of on leash in all spaces in Rancho with the additional provision that off-leash in areas in Montara, and El Granada, where the practice has been going on for decades as off-leash dog walking, is truly the baseline at Rancho. This area is defined in the map of off -

leash areas provided by the Montara Dog Group.

Overall the proposed management plan that will reduce dog access area by over 75% is too restrictive and is not taking into consideration the impacts on local dog parks, roads, additional air pollution and the limited space you are considering. Many of the proposed areas to continue off leash dog walking are less accessible and do not take into consideration the guardians that have limited mobility that need to exercise and enjoy their dogs. Fenced in off leash areas are too small, generally have surfaces that are either harmful to the paws of running dogs or muddy and do not allow us to hike and exercise with our dogs.

The new plan was not modified in any significant way to reflect the many substantive comments in response to the first plan. I

do not feel like you are listening and it seems that you are trying to take the

recreation out of GGNRA, in the proposed parameters for visitor use, signage and printed materials.

The effort to officially change the parks name did not pass legislation and the GGNRA must continue to be an urban outdoor space for millions of citizens to get out and get moving. This area is not the same as Yosemite or The Grand Tetons and every single National Park has anomalies in the rules to allow for considerations relevant to their users and locals. You have lost sight of the original purpose of the GGNRA. The trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

Regarding trails within Rancho please include in the trails maps the trail that runs directly behind and around Farallone View School and continues West parallel to 2nd street on the South side of the creek to connect at Kanoff Street. Also include where the same trail branches off at the Southwest corner behind the school, to connect with the end of 2nd and East Streets for residents access to Rancho across the drainage ditch.

**Correspondence:** Frank Dean, GGNRA Superintendent

Building 201, Ft. Mason  
San Francisco, CA 94123

Dear Sir,

I have lived in Sausalito for nearly 30 years.

I chose Sausalito as my residence, in large measure because of its dog friendly

---

policies and the extensive urban recreational access both locations afforded. I applaud the San Francisco Board of Supervisors, Congresswoman Speier, Congresswoman Pelosi, the Crissy Field Dog Group, Animal Care and Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact based in its planning or findings. I too believe the proposed policies are too restrictive and not based in fact. I am surprised the GGNRA is not responding to the comments of so many individuals, groups and elected representatives. Nor do I understand how the GGNRA chose not to address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS. This has lead me to question if process has been for appearances only and the GGNRA did not intend to incorporate public or even elected representative's views.

The key point missing is that the Bay Area GGNRA lands serve an urban population with millions of residents - not a wilderness.

When the GGNRA was created in 1972, Dog Walking was already a long standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture ' and this use must continue indefinitely.

There are millions of people with dogs in the Bay Area. The preferred alternative will result in thousands of people being unable to recreate with their dog(s) ' in the GGNRA lands these families support with their tax dollars. I firmly support preserving the GGNRA's 1979 Pet Policy. The Bay Area GGNRA is a unique national recreational area in an urban environment ' not an isolated untouched park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

It would appear the GGNRA's preferred alternative intentionally sets up the proposed dog policy to fail - by restricting a large dog and urban resident population to use such small areas that over crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And this will lead to even more restrictions - which is precisely what the GGNRA has apparently preferred all along.

The GGNRA relies on outdated studies and information for the latest supplemental environmental impact statement.

Further the GGNRA has not updated its enforcement data since the last draft EIS was released. This makes the conclusions and preferred alternative unfair and flawed as it is not fact based.

It leads to the appearance the GGNRA has gone through this process always intending the end result to be an overly restrictive dog policy that ignores the urban location of the recreation area, is unfair to tax paying residents, and is designed to fail before it is even released - ensuring the GGNRA can eventually simply do away with any dog access in the Bay Area GGNRA locations?

How is it that the SEIS has many assumptions that are not documented?

How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?

I join thousands of residents, elected representatives of California and San Francisco, and groups dedicated to animal safety and I ask the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to

come.  
Sincerely,  
Ken Horiszny  
Sausalito, CA

I want dogs to be free! There is no proof that dogs are causing damage. Dogs need exercise and if they are cooped up all the time it is possible that they could incessantly might misbehave. Dogs and dogwalkers keep parks safe and not all dog owners are irresponsible 50% of homes in San Francisco have dogs. There are almost more dogs then children is San Francisco.  
Thank you for your time,  
Jada

I'm writing because this new law is not fair, people need to walk their dogs! I'm a dog owner my self and I know for a fact if dogs say cooped up in a small place they will misbehave and not lisen to you. It's not many places allready so why make more less places dogs can't go. My teacher is a great teacher and shes Hawaiian and the beach is the only really place that she likes to go to walk her dog and it reminds her of home in Hawii. She said that if this law stands she will quit and move some were you can walk your on the beach but we don't want her to go!  
Thank you for your time

RE: dogs off leash in GGNRA  
Dear GGNRA Superintendent:

During the open period for public comments regarding the severe push back you are getting from dog owners, I wish to state that I feel the management of the GGNRA is on the correct path to not allow dogs off leash.

Two reasons will be put forth, but there are others. I want to be brief.

Just on 1/30 the news was that two pit bulls had to be either destroyed or captured because an irresponsible owner had left his dogs in the care of another, I believe in a San Francisco park. The dogs not only attacked the surrogate keeper, but also the owner of the dogs.

The park is for all the people's enjoyment first and foremost. Yes, the majority of owners of dogs are responsible, or so they think they are. But dogs off leash over time will lead to feral dogs. There will be dogs escaping and becoming feral and a threat to people.

Even family pets off leash are often intimidating to small children and even mature adults whose balance is still good, but could be easily knocked down by an over eager dog running into them or near them.

And any large dog running freely is intimidating to those who do not feel comfortable around large animals.

Sincerely,  
Barbara Jolliffe

10 February 2014

Dear Sirs:

RE: Dog Management Plan / EIS & ANPR

The 2,000 page Dog Management Plan for the Golden Gate National Recreation Area appears to be an attempt by the Park Service to restrict off leash dog walking. Please allow off leash dog walking to continue in designated areas of the Golden Gate Recreation Area (GGNRA), most especially Crissy Field/Beach. Areas for off leash dog walking are described in the 10 page July 8, 1996 compendium developed after careful study, by Superintendent Brian O'Neil. The total area designated for off leash dog

walking in Mr. O'Neil's 10 page compendium, is less than 1/2 of one percent of the 75,000 acres in the GGNRA. The Park Service has over thirty-six years of data to support the position already taken by its previous Superintendent, Mr. O'Neil. An on leash requirement would contradict promises made in 1979 and 1996 by the Park Service for the continuation off leash dog walking in specified areas of the GGNRA.

Off leash dog walking was one of the continuing use recreations contemplated when the Golden Gate National Recreation Area (GGNRA) was formed in 1972. The GGNRA's February 24, 1979 "Pet Policy" was formalized in the Compendium signed by Brian O'Neil on July 8, 1996.

The recreational value of the Golden Gate National Recreation Area was of the utmost importance to Congress when it established this great urban park. In its words, the GGNRA was to be a "new national urban recreation area that will concentrate on serving the outdoor recreation needs of the people of the metropolitan region. "Its objective was not to restrict but, "to expand to the maximum extent possible the outdoor recreation opportunities available in this region."

Sincerely

William R. Kales

Re: Draft Dog Management Plan/Draft Environmental Impact Statement

Dear Superintendent Dean,

I have lived in the San Francisco Fillmore District for nearly 40 years and have never had a yard. The public park lands have provided me with many recreational opportunities, and I strongly support the preservation of our environment and open spaces in this densely populated city. I typically spend several days a week at Crissy Field, walking and playing fetch with our dog. When I am unable to take him to the beach, I have dog walkers do so. Our dog Sam is a gentle black lab who loves to swim and play ball. He needs his exercise to stay healthy. Coincidentally, this regular exercise keeps me fit and healthy as well.

Given this background, I read your proposed Dog Management Plan with great interest. My experience is that dog owners are cleaning up after their dogs and respecting posted restricted areas. In the information from the GGNRA, the only data I was able to find showed that in the last year with hundreds of thousands of visits by people and dogs, only 6 dog bites were reported. The data also specified 5 dog fights, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite. These exceedingly low numbers hardly call for a drastic change in the 1979 Pet Policy.

When Crissy Field was created, one of the purposes stated was to create more space for off-leash recreation because of the anticipated growth in the number of visitors with dogs. The proposed dramatic reduction of off-leash space without any real factual basis, is totally unwarranted. Increasing the concentration of dogs in smaller

areas, is certainly not a plan for the good of the community.

Your preferred alternative will significantly alter the quality of my life and the life of my dog, Sam. Spending time at the beach with Sam provides me with an opportunity to get to know my neighbors. Many children want to pet and hug the dog, and some adults want to play fetch or just reminisce about dogs they grew up with. Surely, we need these kinds of interactions in the city. To disrupt this community experience, you need compelling data based specifically on the unique GGNRA lands. You clearly have not provided this data.

I cannot support your Draft Dog Management Plan; you have provided no sitespecific data to support a change in the current Pet Policy. Considering that now the GGNRA only allows off-leash dog walking on 1% of its land, further restricting offleash areas is both unnecessary and punitive to urban residents.

Respectfully,

Joan M. Kaplan

Superintendent, GGNRA

Fort Mason Bldg 201

San Francisco, CA 94123

Dear Superintendent:

Regardless of what the Pacifica City Council & Open Space Committee say, please do not change your off-leash & dog management proposals. I have enclosed clippings from our local paper, "The Pacifica Tribune" to show that most of us want more control over dogs in our town.

I love close to where Pacifica Police had to shoot a pit bull who killed his pregnant owner. The dog was allowed to sleep in his owners bed and was thought of as "one of the family". It was allowed to run off leash at Mori Pt and on the beach. It could have killed someone else as easily as it killed its owner. Children and everyone else deserve to be safe from clueless dog owners like this one. The Pacifica City Council has never taken any action to protect people (or other dogs) from any dangerous off-leash dogs and current laws are not enforced on leashing in the Quarry or anywhere else in Pacifica.

So, as a Pacifica resident with a family, I beg you to not listen to a City Council and Open Space Committee that does not care about safety from off-leash dogs. They also don't realize that many of us are afraid of our neighbors who own pitt bulls and other large, sometimes aggressive dogs and would be affraid to go to a public meeting and take them on. The City Council & Open Space Committee are probably afraid as well.

Thank you for your policy about dogs. Please don't change it!

Julia Thomas

**Correspondence:** Frank Dean, GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123  
February 3, 2014

Dear Superintendent Dean,  
I have lived in Sausalito and owned a business in San Francisco for 23 years. During that time I have loved and lost three golden retrievers - and I can honestly say the best moments of those 23 years were spent walking with my dog(s) off leash on beaches in the GGNRA that you now propose to restrict from dog walking.

I chose San Francisco as my place of business and Sausalito as my residence, precisely because of its dog friendly policies and the extensive urban recreational access both locations afforded.

I write now and I join the San Francisco Board of Supervisors, Congresswoman Speier, Congresswoman Pelosi, the Crissy Field Dog Group, Animal Care and

Control of SF, Peninsula Humane Society, Montara Dog Group, Save Off Leash, and thousands of tax paying individuals who strongly object to the proposed GGNRA preferred alternative dog plan as far too restrictive, far too limiting in where we can recreate with dog(s), unfair to dog owners, and not fact based in its planning or findings.

How is it possible for the GGNRA to simply ignore the voices of so many individuals, groups and elected representatives?

How is it possible for the GGNRA to simply not consider or address a significant number of comments submitted for the GGNRA's Draft EIS in 2011 in the GGNRA's Supplemental EIS?

These unanswered questions lead to the conclusion that the process has been only for show and the GGNRA never intended to incorporate public or even elected representative's views.

For 23 years I have walked at Crissy Field, East Beach, Ocean Beach, Baker Beach, Rodeo Beach and throughout the hills of Fort Cronkhite. I cherish these walks with my dog(s) and the opportunity to enjoy recreation with my dogs after work, and close to the places I live and work.

I located my business in San Francisco for the very reason that East Beach, Baker Beach and Fort Cronkhite provided easily accessible off leash dog walking on my way to and from work. I have paid California's high taxes on my home, my income, and San Francisco's additional city taxes on my small business - because San Francisco and Sausalito have provided such wonderful dog recreation access.

I'm shocked at the GGNRA's conclusions and preferred alternative which demonstrate a lack of understanding that the Bay Area GGNRA lands must serve an urban population.

When the GGNRA was created in 1972, Dog Walking was already a long standing use of the lands that were turned over to the park. Dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, and as such this specific recreational use and part of the San Francisco Bay culture - and this use must continue indefinitely.

There are millions of people with dogs in the Bay Area. People who work, who have families, and have dogs. Bay area residents need access to off leash dog recreation in the mornings and afternoons - access that is close enough to their homes and work to allow them to strike the balance between work, family, pets, and recreation. The preferred alternative will result in millions of people being unable to recreate with their dog(s) - in the GGNRA lands these families support with their tax dollars.

I firmly support preserving the GGNRA's 1979 Pet Policy. The Bay Area GGNRA is a unique national recreational area in an urban environment - not an isolated untouched park in the wilderness. It deserves to be managed to different standards to achieve its fullest potential.

Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties.

In Marin County there will be one beach where all of Marin's dogs can recreate off leash. This beach has extreme tides, forceful waves, and will be packed with thousands of dogs - because it's the only off leash beach that will be preserved for all of Marin County in the preferred alternative. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

It would appear the GGNRA's preferred alternative intentionally sets up the proposed dog policy to fail - by restricting a large dog and urban resident population to use such small areas that over crowding is inevitable. The overcrowding will result in friction between residents with and without dogs. And this will lead to even more restrictions - which is precisely what the GGNRA has preferred all along.

Why does the GGNRA rely on outdated studies and information for the latest supplemental environmental impact statement?

Why hasn't the GGNRA updated its enforcement data since the last draft EIS was released?

Is it possible the GGNRA has gone through this process always intending the end result to be an overly restrictive dog policy that ignores the urban location of the recreation area, is unfair to tax paying residents, and is designed to fail before it is even released - ensuring the GGNRA can eventually simply do away with any dog access in the Bay Area GGNRA locations?

How is it that the SEIS has many assumptions that are not documented?  
How is it the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis?

Again. I join thousands of residents, elected representatives of California and San Francisco, and groups dedicated to animal safety and I ask the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGRNA for generations to come.

Sincerely,  
Lynn Keller

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	January 29, 2014				

Dear Superintendent Dean,

I have been a resident of San Francisco for over 35 years. I applauded the transformation of the former Army base to the beautiful Presidio. The Presidio is of special value precisely because it is located in an urban environment and is used by so many for casual and formal recreation. It is, accordingly, an unusual asset for the Parks Service. I believe that the Parks Service must adopt goals for the GGNRA that reflect recreation values and a more intense use than might be appropriate in for its holdings in more remote settings.

I walk in the Presidio daily and often hear and see red-shouldered hawks and owls and even the occasional coyote. I have shared these many hours in the Presidio with my dogs over the years.

I am writing today to express my opposition to the process the GGNRA has run to evaluate where dogs may be allowed in the GGNRA. Additionally, the conclusions reached are not fair and flawed.

Because the dog walking was specifically referred to as a use for the newly created GGNRA, it should not be restricted by the Park Service. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential. Restricting recreational use will decrease the use of the Park, which is a tragedy. The consequence of this decision regarding dogs is very similar to the decision to make Morton Street field into a riparian habitat. What a shame to deny thousands of San Francisco youth recreational access to the Presidio. The same applies to on and off leash dog walking.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the supplemental EIS allow off leash dog walking access on GGNRA lands in ALL three counties.

Additionally, this management plan allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). The policy adopted for the GGNRA should allow for some flexibility in the regulations to reflect how the area is actually used and to respond to

issues and opportunities as they arise.

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

The SEIS, moreover, has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

I ask that the GGNRA to take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGNRA for generations to come.

Sincerely,

Stephen Koch

**Correspondence:** Dear Mr. Frank Dean,

I am a fourteen year old native San Franciscan. One of my favorite things to do on the weekends is play with our retrievers at Crissy Field on the East Beach. Our lab Zoe is a very good swimmer and a great retriever. We like to look at the pelicans and seagulls.

I am a girl scout and do beach cleanup at Ocean Beach - this year it was pouring rain. I picked up lots of people garbage but didn't see dog garbage. Why aren't there garbage cans on the beach? Why are you picking on dogs? We clean up after Zoe always and usually pick up extra garbage too!

My mom says she used to play in the dunes - now its all fenced. My mom doesn't have an answer and she usually does.

Our dog has no interest in dogs or birds only kids. Please let our family have our fun.

**Correspondence:** Superintendent Dean,

I want to report on a meeting I attended a few months ago where the Board of Supes held a hearing on the possible loss of the exercise. If that area is lost, those owners will bring their large dogs to the smaller city parks where there is more danger of overcrowding. Not only dog owners and their dogs will suffer, but small children or elderly or handicapped people may be crowded out.

Many of the dog owners who spoke at the meeting were very concerned about what may happen to their ability to follow their habitual recreation patterns. A wide variety of people spoke: young men and women who are accustomed to run with their dogs, older people who simply go to a park to stroll either with or without dogs and spend some time sitting and socializing, handicapped people who walk slowly using a cane or a walker. Some have dogs that may not be large and rambunctious, but who still need their little walks.

The total area of City parks comprises only about 25 percent of the acreage of the GGNRA lands within the city of San Francisco. If that area is off limits to dog walkers, it will mean that a large area of San Francisco will no longer be available to about 25 percent of its citizens.

I beg of you not to shrink our recreation space. We are all citizens who deserve a fair share of our city.

Sincerely,

Norma Miller  
246 Athens St.

**Correspondence:** I'm writing to support no action to current policy with regard to the dog management plan.

I've walked GGNRA trails for over twenty years with my dogs, without any negative incidents. The people I run into on these trails (Oakwood, Alta) almost all have dogs, and those that don't, are for the most part very friendly and supportive of allowing dogs on the trails. I understand certain people groups don't want dogs on the trails or to severally restrict access for the following reasons:

1) People are afraid of dogs and/or have been attacked by dogs, or just want to be in a dog-free environment ' As is already the case, almost all trails under GGNRA management are currently off-limits to dogs. There is a plethora of trails available for people who do not want any interaction with dogs to choose from; this is not the case for people who enjoy walking their dogs on the trails. Why make the currently limited number of dog-friendly trails even more restrictive?

The GGNRA's website notes the Golden Gate National Recreation Area was established in 1972 to be set aside and protected for everyone's enjoyment. Everyone is an allencompassing word. There will always be conflicts between the hikers, equestrians, mountain bikers, dog-lovers and those who don't want dogs. Access to the GGNRA land must be equitable, such that all vested parties can enjoy the trail systems. To extraordinarily and unfairly limit access to the people who want to walk their dogs to such a small portion of the trial system in relation to their numbers is not equitable.

2) There are environmentally sensitive areas that need to be protected from dogs. I imagine these same areas need to also be protected from people. We all know it's a difficult balance between protecting the environment and the realities of living in a densely populated urban area. I think those areas that are deemed most sensitive could be restricted to dogs on-leash, or fenced.

3) I understand there is discussion about commercial dog walkers, and their use of the lands. Limiting the access to just seven spots in Marin will make these seven areas much more congested, and any issues that people are noting now will intensify. I agree with the suggestions that commercial dog walkers should be limited to the number of dogs to walker ' whether the number is 3 to one, six to one, or something else, I can't speak to. I would suggest GGNRA look to what other states are doing with regard to this and what works. I do suggest that since these commercial endeavors are being operated on public lands, there should be a permitting fee like any other commercial business that conducts business on public land for private gain.

In my opinion, more trails and areas should be open to off-leash dogs; perhaps restricting these newly identified areas to dogs in the morning and evening hours; however, since that apparently is not an alternative being contemplated at this time, I strongly suggest no change to current policy.

Best Regards,

Scott Miller

Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Fort Mason, Building 201  
San Francisco, CA 94123-0022  
Attn: SEIS  
Dear Mr. Dean:

Re: Opposition to Golden Gate National Recreation Area Dog Management Plan / Draft Environmental Impact Statement

On behalf of the San Francisco SPCA, a local animal welfare organization founded in 1868, I am writing to convey our strong opposition to the Golden Gate National Recreation Area Supplemental Dog Management Plan (the "Plan"), which aims to drastically limit dog access in San Francisco, Marin and San Mateo counties. The SF SPCA strongly urges the National Park Service to modify the Plan to allow for greater access to urban recreational opportunities, including off-leash dog walking.

As you are likely aware, the GGNRA is a popular recreation destination located in a major urban area with minimal open space. For many local dog guardians, especially seniors and others who find it difficult exercise their pets while on-leash, the GGNRA is the only place where they can let their dogs

play and release a lot of energy. As the SF SPCA can attest, daily exercise is essential to a dog's proper health and well-being. Exercise affects a dog's behavior, trainability and aggression levels, which are important to properly maintaining public safety in crowded urban environments. Take away off-leash dog areas in the GGNRA, and dog guardians may be unable to meet the physical and mental needs of their pets (also at a detriment to their own healthy, active lifestyles).

Significantly reducing dog access in the GGNRA will adversely impact hundreds of thousands of Bay Area residents and visitors. In San Francisco alone, dogs outnumber children. Yet, the Plan allows only extremely confined areas permitting dogs in the GGNRA that will soon become severely overcrowded, which will result in serious congestion in nearby neighborhood dog parks. San Francisco's dog parks are already limited, and off-leash areas are particularly scarce. If guardians and their dogs are displaced from the GGNRA and forced to relocate to the city's dog parks, this overcrowding will become increasingly problematic and potentially dangerous. These negative impacts will be felt by individuals both with and without pets, as well as the already overburdened City of San Francisco Parks and Recreation Department.

The SF SPCA strongly urges the National Park Service to adopt a different approach to the current Plan - one that addresses the needs of all of the GGNRA's recreational users, including the countless Bay Area residents and visitors who have historically enjoyed access to the GGNRA with their dogs. Several viable alternatives to the current Plan exist, including, for example, a registration system that allows access suspension for irresponsible visitors. Responsible individuals, however, should be permitted to continue to enjoy outdoor visits to the GGNRA with their dogs while peacefully coexisting with wildlife and the environment, as they have done for decades.

In closing, the SF SPCA is strongly opposed to the current draft of the GGNRA Supplemental Dog Management Plan. The Plan should be significantly revised to meaningfully promote continued recreation for all visitors, including individuals who responsibly enjoy the GGNRA with their dogs.

Sincerely,  
Brandy Kuentzel  
Corporate Counsel & Director of Advocacy

Dear GGNRA,  
I am writing to you in response to your proposed regulations

---

for Fort Funston.

I frequently go to Fort Funston to let my dog play, run, and socialize off leash. It is a joy to see dogs and their owners enjoying each other in such a free environment.

I do understand your concerns about bikers and walkers having access and feeling safe. If you actually go there it is obviously not an ideal place for bikers because of the heavy foot traffic. The walkers seem to enjoy meeting and greeting the dogs around them. Also, bikers and walkers have hundreds of places in the Bay Area where they can bike and walk while dog owner's have very few places to let their dogs run free.

The environment is of concern to me as well. I always pick up after my dog and respect the native vegetation in the area. Ravens and Ice Plant are the major inhabitants at Fort Funston. Even so, I respect whatever is there.

Please, leave a space for dog owners and walkers to enjoy!

Sincerely,

Linda Kuntz

GGNRA, must immediately provide ADA access at Fort Funston. How is it that a Federal Organization cannot comply with federal law. I am a lifelong resident, native, disabled, dog owner. I believe that I am legally entitlad to recreate with my dogs off leash at the SF Beaches as I always have for 50 yrs.

In addition, there is an increasing frequency of violence towards the public, without fear of consequence.

Attn: Dog Management  
Re: GGNRA Dog Management-Supplemental EIS

To Whom It May Concern:

The Sierra Club submits the following comments in regard to the Draft Supplemental EIS for dog management in the Golden Gate National Recreation Area (GGNRA). The Sierra Club has participated as a party in the Negotiated Rule Making Process and filed comments to the original Draft EIS. It remains very concerned about the impacts of off leash dog activities both in terms of environmental effects and in terms of effects on other park users. The history of off leash dog use is that in areas where off leash dog use occurs it drives other park users from those areas because of biting incidents, the constant issue of dealing with dog feces that dog owners do not pick up, and the inability of other users to enjoy the park area without the presence of dogs.

The critical element for any successful regulation of off leash dog activity is active enforcement of the rules. Unfortunately, the National Park Service has shown an inability to enforce any rules about off leash dog use. The only effective program is a complete ban on off leash dog walking and in some areas an outright ban on any dogs even on leash because it is clear and enforceable.

The record of little to no enforcement in the past and the failure of the National Park Service to include adequate in its analysis the resources both financial and in terms of staffing for adequate policing of any Regulated Off-Leash Dog Area (ROLAs) in the GGNRA means that the DEIS is inadequate.

The DSEIS states that Alternative D is the Environmentally Preferred Alternative. It should be selected as the Preferred Alternative for the GGNRA because the purpose of the GGNRA is to protect the environment and to provide an environment where people can recreate with minimal adverse impacts to the environment. Thus, by definition this alternative should be preferred above any other.

The Preferred Alternative is inadequate because it clearly assumes that a program of vigorous enforcement of the rules when the record has shown that no such enforcement has occurred in the past and there is no evidence that the financial and staffing resources will be provided to ensure adequate enforcement. This impact analysis impacts from little to no enforcement is lacking in the SEIS, and thus the assumption of adequate enforcement cannot be made for purposes of basing a choice of alternative. It is utterly arbitrary and capricious.

Furthermore, the Draft SEIS does not provide any statement of overriding consideration for choosing the Preferred Alternative over the Environmentally Preferred Alternative. Indeed, there is no evidence or documentation to support a finding of a statement of overriding consideration, and thus the decision to choose the Preferred Alternative as the Preferred Alternative is arbitrary and capricious.

The Draft SEIS does not provide adequate delineation of the ROLAs. Some ROLAs are not fenced. All ROLAs should be fenced off so all park users know where they are and what they can expect.

The Draft SEIS also fails to include the triggers for enforcement actions, a system for analyzing how effective or ineffective different enforcement measures have been, and the effects on other park users from off leash dog walkers either not following the rules.

The Draft SEIS fails to include the only remedy that will ensure that off leash dog users comply with rules for a ROLA which is closure of a ROLA when it is shown that the rules are not followed and that enforcement has not significantly reduced non-compliance with the rules or has resulted in adverse environmental impacts.

The Draft SEIS fails to identify the mitigation measures that will be undertaken, including closure of ROLAs, from adverse environmental impacts. For example, if after a period of monitoring it is determined that off leash walking in a ROLA has caused damage to vegetation or to species in the ROLA, the plan should provide for closure of that ROLA and other measures to restore the habitat and species. The Draft SEIS is inadequate for failing to provide this simple and effective tool for dealing with environmental damage.

In sum, the Draft SEIS is inadequate and cannot be the basis for a decision to choose the Preferred Alternative over the Environmentally Preferred Alternative. The record strongly suggests that the decision to choose the Preferred Alternative was to assuage public opinion from the off leash dog walker advocates, a very vocal special interest group. Bowing to public comments is not a legal basis for choosing an alternative.

Sincerely yours,  
Norman La Force, Legal Chair  
San Francisco Bay Chapter

**Correspondence:** February 4, 2014

To Superintendent Dean;

My name is Linda Stark Litehiser and have lived in San Francisco for over 44 years. I am a wife, mother and grandmother as well as an active member of my community, serving a number of neighborhood boards and committees. My husband and I have raised 4 children in San Francisco. We now have 13 grandchildren. We are avid walkers, hikers and nature enthusiasts. We are both active in park volunteer work in the Bay Area and though Camp Mather in the Sierra's. But bar none, our favorite way to enjoy nature is with our dog. Our Emma is the one who gets us up and out of the house, who has such pure joy in nature that it is infectious. We feel the need to savor our off leash opportunities because they are so precious. Our favorite location of all is Fort Funston. The pleasure that this place has given us over the years cannot be measured and a big part of this joy is spending it with Emma and other dogs. We especially appreciate the off leash recreation, where Emma is able to socialize with other dogs, which has made her an even more perfect companion. The feeling we get in this wild place where we can feel the freedom of casual relaxation is such a joy. It has always made me proud that this is part of the San Francisco experience. Fort Funston is such an important place to us. This is where we bring the kids when they visit, where the grandkids can romp on the beach with the dog and drag themselves up and down sand dunes and commune with nature. As we get older we find that our walks with our dog are the moments we feel most connected to nature. We also bring out of town guests who marvel at the experience of being able to see and interact with such a large variety of dogs and their owners. No one else it seems has this type of environment. They love it!

I grew up in Michigan where people had "house" dogs that never interacted with another dog. They were in pens or on the end of a rope and were quite often sad and under exercised. Then there were the hunting dogs, always in pens, but children could not play with them. To see the sheer joy of a small child playing with a dog on the edge of the surf or running up and down a pathway in the park is such a normal and yet rare thing these days. I am so saddened to think this could all go away. Over the years have attended every rally and hearing can find to try to bring these points to the people who will make the final decisions.

strongly oppose the preferred alternative for Fort Funston, Ocean Beach and other areas of the GGNRA, because it is too restrictive. In addition, there hasn't been a single peer-reviewed, site specific study (as required by law) that supports such a drastic restriction of dog-friendly areas. Both the DEIS and SEIS fail to prove negative impacts are occurring now but that dogs are causing them. We want real science not anecdotes. My husband has spent his life as a working scientist and he is appalled at the conclusions to restrict dog use in the GGNRA. He has written his own letter to address these issues.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future. I was part of the original focus groups in the early 70's when the plans for GGNRA were being set up. We all agreed that this is a unique URBAN park it needs to address the needs of a crowded city where all types of recreation are going to be shared and enjoyed by as many as possible.

Much of what is now GGNRA was used by the military for decades. These uses did not take into account any appreciation of nature or stewardship of the land. It has come through this use unscathed'save some large rusting armaments- - which are now an interesting bit of history. Now we are treating this same land and beaches as if they were extremely fragile and unable to survive the playful behavior of dogs. I find no logic in this position.

I have spent most of my adult life advocating for our parks and recreation. As a member of many committees and boards, I have learned how shared use of property can work and compromise can allow more people to enjoy the same precious open space. Our city parks are constantly working on such solutions but they will be completely overloaded if the currently presented plan goes into effect.

I can't believe that we have to fight this battle again to hold on to such a small amount of off play area. My first letter to the GGNRA on this topic was two dogs ago. Please listen to the people of San Francisco, Mann and San Mateo...please listen to our public officials who are asking you to look at the big picture of urban recreation. We have something very special in the GGNRA but it is a park not like any other park in the federal system and as such needs to be treated in unique ways.

Best Regards,

Lind Stark Litehiser, 78 Havelock St. San Francisco, CA 94112 linda.litehi@gmail.com

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Mr. Frank Dean				

This letter is in regards to the dogwalking issue in the Rancho Corral de Tierra GGNRA area. I strongly protest, and find unreasonable, the restrictions that you and the Golden Gate National Recreation Area are planning to impose on this area. This new plan negatively affects the residents of Montara, Moss Beach and El Granada.

I am a former School Counselor and Spanish Teacher from the Hilisborough City School District. I have been a home owner on the Coast since 1976, and have owned three dogs in my life there. In my long experience of living on the Coast, I never experienced an incident of irresponsible dog-walking. I never heard or read about it in the local paper, The Half Moon Bay Review, which would be the first to print such story, and I never encountered anyone who was unruly or irresponsible. I walked my dogs in Moss Beach, Montara, and El Granada.

This activity served to bring together a wonderful community of neighbors, who support each other and have a friendly bond as they and their dogs enjoy the beautiful open space. It is a place for rest, relaxation, and comradship. There have been dogs walked, on and

off leash, and non dog-walkers who have co-existed for decades, and we all take care of each other and each others' dogs. We are happy that the space has remained open for us to enjoy, however we urge you to consider the "No Action Alternative" and let us continue to enjoy that which keeps us healthy and happy, which is so very important in our lives today in this stressful world.

Very sincerely,  
Sherry Lynes

Building 201, Ft.Mason

San Francisco, CA 94123

February 13, 2014

Dear Superintendent Dean,

My name is Arnanda Bryan and I have been a resident of San Francisco for 34 years. One of the highlights of my life is walking my dog daily in areas such as Crissy Field, the Presidio, and Baker Beach. I walk in these areas precisely because it is located near my home in an urban environment that is used by many for all types of recreation.

I have always been sensitive to preserving natural environments and have been on the board of or donated to many organizations including: NRDC, Sierra Club, League to Save Lake Tahoe (board), Friends of the River, Truckee-Donner Land Trust, Alpine Winter Foundation (board), and Greenbelt Alliance.

I am writing today to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dog in the near future. It is evident that the conclusions reached in the Supplemental Dog Management Plan/SEIS are not reasonable and deeply flawed.

Because dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years for come. And I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique national recreational area in an urban environment. It deserves to be managed to different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on GGNRA lands in ALL three counties.

Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash). Crissy Field is a perfect example. When Crissy field was created, one of the purposes stated was to create MORE space for off leash recreation because of anticipated growth in the number of visitors with dogs. The proposed reduction in off-leash recreation area at Crissy Field is a reversal of course without a basis especially where the impact on all park visitors will be increased concentration of dogs in smaller areas. THIS MAKES NO SENSE and is setting the dog management plan up for failure.

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated ' it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

The most recent data released by the Park Service shows that in the last year out of hundreds of thousands of visits by people with dogs there have only been: 6 dog bites, 5 dogs fighting, 2 cliff rescues, 2 complaints where people were scared, 1 wildlife killing and 1 horse bite incident. The data does not support the need for change!

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

It's notable, that the board of Supervisors in three counties, San Francisco, Marin and San Mateo have all voted AGAINST your Dog Management Plan.

I propose that the GGNRA institute a "green tag" system which certifies dogs and their owners to use the area. It is a VERY successful program in Boulder and FAIR to dog owners by penalizing only the offenders.

I'm horrified that the GGNRA's Preferred Alternative shows a lack of understanding that the GGNRA lands must serve an urban population. I pay a lot in California and Federal taxes to support the GGNRA lands and DEEPLY resent being unable to walk with my dog in the very land I financially support.

I ask that the GGNRA take a balanced, fact-based approach to its environmental analysis that will result in the preservation of important dog walking recreation in the GGNRA for generations to come.

Sincerely,  
Amanda Bryan

RE: 2013 SEIS, Draft Don Management Plan

Dear Superintendent Frank Dean,

I have been a resident of Muir Beach for over 14 years. Our house sits directly above the beach on which our off-leash and supervised dogs run or swim everyday. In addition, we regularly run or hike with our dogs on many of the Mann Headlands Trails mainly on the Coastal, Miwok, Homestead & 4-Corners trails as well as fire roads.

I am writing to share my comments for the 2013 SEIS specifically pertaining to Muir Beach and the Mann Headlands Trails (Coastal Trail/fire road to Hill 88). While I applaud the efforts to produce this plan I am deeply concerned that the preferred alternative F will have devastating impact on the residents of Muir Beach and my family as we rely on the open space of the GGNRA everyday for exercise in the natural environment as this is literally both our front and backyard! My comments to the 2011 DEIS were not adequately addressed and most criticisms and concerns expressed in all comments filed in 2011 ran 3:1 AGAINST the plan.

Our isolated Muir Beach community of some 150 houses is home to about 60 dogs, and is completely surrounded by the GGNRA with the nearest town a 20-minute drive on the twisty rural 2-lane coastal highway 1.

Muir Beach is listed on the GGNRA website as a a quiet cove, beach and lagoon favored by locals. Reviews on popular social networks, Trip Advisor and Yelp describe Muir Beach: Not usually crowded, low-key, folks playing fetch with their dogs and everyone just chills.

Love Muir Beach - Great for kids, kites, dogs BBQ 's.

I found it to be veiy dog friendly which is good because

I brought my doggie here and she loved it.

Its a dog beach (where the heck do I find a cat beach?) - So there are pets about - but generally its a very good crowd of people in this area, it is Mann after all, and I have yet to see any problems with loose dogs.

Nice beach. Dog friendly.

The beach was perfect and lovely! Its dog and beer friendly...

Great place to have a picnic and bring family and friends. Also a dog if you have one.

People watching is also fun with folks grilling, chilling, surfing, kite flying and romping with dogs.

#### OVERALL COMMENT

I strongly oppose the GGNRA's preferred alternative F for Muir Beach and The Mann Headlands. I support Alternative A, the no-action alternative, or a revision to provide more access to GGNRA for people with dogs in Mann County. The current plan alternatives are too restrictive on dog walking in the areas that affect our small community and it does not protect and preserve the fundamental values for which the GGNRA was established in terms of recreational values. This plan ought to be about stewardship of a park that is situated within an urban environment. The SEIS does not include any peer-reviewed, site-specific studies or vital monitoring as required by law to initiate such a dramatic change to the publics use of their public lands.

It is key note that the both the Mann County Board of Supervisors as well as our own Muir Beach Community Services District have passed resolutions opposing and recommending modifications to the GGNRA's SEIS, as they recognize that these lands are intertwined with vibrant communities such as Muir Beach.

#### SPECIFIC CONCERNS

Address the needs of communities whose backyard is the GGNRA

Page 1104, 'Limiting dog walking areas would reduce these (Muir Beach residents) visitors enjoyment of this site. Some visitors in this user group may prefer to find a different park in which

to exercise their dogs off leash.

The plan reduces Mann Headlands Trails by 14.73 miles, specifically it proposes to REMOVE ALL trails leading out of Muir Beach for dogs. This will force our community into their cars to drive a minimum of 20 minutes to access this experience. The highway to Muir Beach is already choked and congested on weekends, holidays and sunny days with traffic and tour buses to/from Muir Woods National Monument and the GGNRA. Since the new parking lot opened this year, a large portion of that traffic and user group is now descending upon Muir Beach. The plan further suggests that those who want an off-leash beach experience for their dog can go to Rodeo Beach. This change would force Muir Beach residents into cars to drive 45 minutes on the congested 2-lane highway, then the freeway and then another 2-lane rural road for an off-leash experience that currently exists literally steps in front of their homes. The 45 minute drive is assuming that there is no traffic congestion. On a crowded day when visitorship to Muir Woods tops 5,000 people, it takes residents nearly double the time to travel out of the community. It will be devastating to our community of 60 dogs and the environment!

On Page 114, the document calls out for visitors to use the adjacent small beach north of the GGNRA as an off-leash area. This is unacceptable, as there have been no studies as to how this would impact the environment on that beach, the wetlands, dunes, birds, tidal pools or the community. In addition, dogs and their owners would need to enter the off-limits creek to get to this beach. There is no parking on the roads. All roads are fire roads. There are no bathroom facilities or waste receptacles. In addition, this beach is tidal and seasonal.

#### Need to Substantiate Claims with Scientific Analysis

There are not any single peer-reviewed, site-specific studies (as required by law) included in the plan that support such a drastic restriction of dog-friendly areas. The GGNRA has the burden of proof to justify this drastic reduction in access to public land before making it legislation.

These trails and beaches have been set aside for dog walking since the original pet policy in 1979. The estimated 60,000 dogs will have to go somewhere - overcrowding the few dog parks available. That will create more dog-related problems than the GGNRA proposal allegedly solves - it passes the buck to towns, cities and the county.

The failure of the plan to distinguish between impacts on the GGNRA resources by people, or dogs, or by other causes is lacking in the document. Site specific observations such as 'high foot traffic (both people and dogs) needs to be analyzed to determine whether off-leash areas differ from other areas of high traffic: and, where people need to be prohibited from these areas to protect natural resources. Yet the very area the GGNRA is trying to protect in Muir Beach - dunes riparian forest, lagoon - is abused by people every day! In fact as I write this letter, there are 7 people wondering around the dunes!

Regarding Visitor Use and Experience, on pages 1090 -1091 it states that 'The practice by local residents of allowing their dogs to roam the beach unsupervised would be addressed by law enforcement staff, allowing a dog to be off-leash would be citable. Adverse impacts would be expected for visitors and local residents who enjoy seeing and playing with dogs off leash. Dog owners may also feel that their pets are not receiving adequate exercise when restrained on a 6-foot leash. In addition, it would be difficult for some visitors, particularly those that are disabled or elderly with mobility issues, to adequately control their dogs on-leash. Having dogs on-leash also limits the exercise dogs can obtain to the exercise abilities of their owners, which may not be sufficient. Some visitors in this user group may find a different park to exercise their dogs off leash.

This misleading paragraph implies that all local residents allow their dogs to roam the beach unsupervised. This is a false and unsupported statement. Residents legally allow their dogs offleash, and these dogs are supervised. Off-leash does not mean unsupervised.

In addition, we are home to several elderly residents, most of whom own dogs and walk them on the Beach. The requirement to have a dog on-leash may diminish their ability to adequately exercise their pets and themselves. This is unjust.

On page 113 there is discussion regarding the planned changes to Muir Beach including the new footpath to the beach and fencing along the dunes. These have been installed. It is interesting to note that the report states that "The fencing would act as a visible barrier, but would not completely exclude dogs from the area, as this type of fencing would be inappropriate at Muir Beach and not sustainable due to tidal action. Allowing on leash dog walking on the beach and installing visual barriers would enable the park to manage the area in order to restore, protect, and sustain the wetlands, creeks, dunes and lagoon. Allowing 'on-leash dog walking on the beach would protect visitor experience and enhance visitor safety.

The dune fences have been installed and block access to the dunes and wetland area for dogs, unless the dog enters the creek to cross to the county beach on the other side (as the SEIS directs dog owners to do (page 114), or an owner is in the area with their dog. On most days, I watch from my living room window as people without dogs disregard the fence and signage and enter the areas behind the fence anyway.

Regarding safety, the plan states that the cumulative impacts for Alternative A are the same as for Alternative F: Negligible. Page 315, Table 14 indicates a total of only 24 dog-related incidents in Muir Beach over a 4-year period from 2008 - 2011. We have hundreds of visitors visiting the beach each weekend. On holidays and warm days the beach is packed and cars park along the highway and along community roads. On page 1253, Muir Beach Alternative A, Conclusion Table the language states "Therefore, the cumulative impacts to the health and safety of park staff and visitors under this alternative are expected to be negligible.

To conclude, page 1085, "Muir Beach receives heavy visitation by beachgoers and walkers on the weekends and moderate to high use on the weekdays. Overall, the number of leash law violations is low for this site, with only nine occurring in 2008 through 2011; no dog bites or attacks were reported during this period (table 9).

So why the concern over safety?

I have concern over being on trails without my dogs and feeling unsafe due to predators, both animal and human.

#### SUGGESTIONS FOR CONSIDERATION

Educational signage and enforcement be used to change behavior with respect to sensitive habitat, refuse and visitor and staff interaction.

The plan calls out a budget to educate and enforce. Why not utilize this budget to educate and enforce the current rules and regulations that are currently not adequately enforced.

I watch each day as people traipse through the newly restored and fenced delicate dune and riparian areas. Children play in the lagoon and creek. Bonfires burn after hours. People camp in the dunes. Litter is strewn across the beach and left at the bridge entrance on the beach. I carry home an armful of trash each morning when I walk the dog. Where is the park maintenance staff to clean up the litter every day? The dispenser by the footbridge should have signage notifying owners and be filled with plastic bags, and in addition a disposal bin could be placed for pet waste.

Trail Fire road access from Muir Beach to nearest town

Residents and their dogs need access on foot out of Muir Beach to Mill Valley (the nearest town) for recreation and safety. Two trail suggestions:

A) Muir Beach - Coastal trail & Coastal Fire Road - Coyote Ridge  
Fire Road - Miwok Fire Road.

B) Muir Beach - Diaz Ridge - Miwok Fire Road.

Both would connect to Homestead trails and allow access to Mill Valley.

Create On-leash Loop Trail

Provide a loop trail as opposed to dead end trails to allow for a recreational experience for the user. We desperately need a loop from Muir Beach and a suggested loop is:

Muir Beach - Coastal - Coyote Ridge - Middle Green Gulch or  
Green Gulch Fire Road - Muir Beach

This loop is about 3 miles and would provide excellent exercise for both owner and dogs. Green Gulch fire road or middle Green Gulch trail would be the link required to make the loop.

#### Fire Road Access

The GGNRA fire roads are on average 12 feet wide allowing for a variety of users, including those with dogs, to safely share the road and are accessible from many neighborhoods and locations outside the GGNRA, encouraging people to walk directly into the recreation area instead of driving to the GGNRA or to other park spaces.

#### IN CONCLUSION

Dogs are already off-limits on over 99% of the GGNRA. There are many trails and areas that currently do not allow dogs. These are areas that users who would like a dog-free experience can access. There isn't any compelling reason to eliminate or further restrict the remaining 1%.

GGNRA SEIS does not include any peer-reviewed, site-specific studies that support such dramatic restrictions of the public's use of our public lands. To remove recreational access to these lands is not substantiated.

The GGNRA was established by involving communities, communities such as Muir Beach, to provide recreational activities for residents in the densely populated Bay area. This is not a pristine wilderness area like Yellowstone or Yosemite. It is a designed landscape with many constructed environments including the new parking lot in Muir Beach and the reconstructed wetlands. The GGNRA requires a different management strategy than a traditional National Park. While a keystone objective for the GGNRA is 'recreation, it does not appear at all in the plans objectives, nor is it referred to as one of the park's resources and values.

The GGNRA is unique. There is not other National Park quite like it. Its mandate states that the Park possesses 'outstanding natural, historic, scenic, and recreational values and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning. This dog plan should support these values and not diminish them.

Mann residents rely upon this open space to enjoy a balance in their lifestyle. It is the very essence of Mann. Access for all users, including people and their dogs was a cornerstone of the original charter as detailed in the 1979 pet policy. That policy still works today and should be retained.

As a Yelp reviewer described Muir Beach:

Muir Beach is surrounded by mountains, dogs are playing in the sand, and artists painting. It's a true sight to behold.

---

San Francisco, CA 94123-0022

Dear Superintendent Dean:

Having had the privilege starting in 2006 to serve as a member of the Rules Making Sub Committee on Dog Management as a resident representative of Muir Beach I had hoped that when the totality of circumstances were fairly viewed there would be no retraction of the already limited spaces in San Mateo, Mann and San Francisco counties for regulated off leash recreation for people and dogs. The GGNRA Supplemental Dog Management Plan and SEIS fails miserably the citizens ostensibly the GGNRA services.

Recreational activities including recreating off leash with one's dog was the spirit and letter of the law by which the referenced counties transferred these precious lands to the Federal Government. You know how small a percentage is used for regulated off leash recreation. If anything without any damage or harm more space could be allocated and is deeply needed. It is Superintendent not about Dog people versus Environmental people versus Children's Safety people etc.'this is the mask of great deception and a small group of highly selfish and misguided groups and individuals with irrational motives.

The facts, the science and legal arguments in honest opposition to the GGNRA's proposed rules are overwhelming and need not be restated in this letter. I do by enclosure hope you read again the powerful letter submitted to you by the Mann Humane Society.

As a native San Franciscan, a lawyer with my practice of over 35 years in San Mateo County and now a long time resident of Muir Beach I implore you and those you work with and for to reconsider in total your proposal(s) for all three counties where people and their dogs have recreated in harmony for decades. The alternative will be costly economically, legally and socially.

Respectfully yours,

Levon Sagatelyan

COMMENTS ON THE SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT FOR PET MANAGEMENT AT THE GOLDEN GATE NATIONAL RECREATION AREA

Dear Superintendent Dean:

We submit the following comments on the National Park Services (Pat-k Service) Supplemental Environmental Impact Statement (SEIS) for Pet Management at the Golden Gate National Recreation Area (GGNRA or Park).

We do not support the Park Services preferred alternative in the SEIS because it does not adequately address the cleat- environmental threats and visitor impacts caused by the presence of off-leash dogs in the GGNRA. The Park Service has presented several objectives, including providing a clear, enforceable dog management policy; preserving and protecting natural and cultural resources and natural processes; improving visitor safety; and reducing user conflicts.(1) However, the SEIS still does not achieve the level of management necessary for the Park Service to meet its stated objectives.

The evidence is clear that off-leash dogs must be heavily regulated in the Park, and that areas where off-leash dogs are allowed must be fully enclosed by a fence or natural boundary. This comment letter analyze the issues associated with off-leash dogs in the GGNRA, including wildlife disturbances, visitor impacts, and safety, and highlights areas where the SEIS is inadequate.

Unless the Pat-k Set-vice makes the necessary changes to the preferred alternative in the SEIS, it will fail to fulfill its fundamental purpose to conserve park resources and values, and will not be in compliance with its mandate prohibiting impairment of park resources and values.

#### SEIS Does Not Adequately Assess Impacts on Park Users.

It is well documented that off-leash dogs create problems for various park users including people with guide dogs, ethnic minority groups, children, picnickers, and on-leash dog walkers, among others. Over the last few years there have been numerous accounts of dogs negatively impacting visitor experiences. A woman visiting Crissy Field reported that her five year old son was attacked by a dog, which also gouged the leg of another child, and complained that other dogs were harassing small children in the area(2); a park visitor at Ocean Beach reported a dog being attacked by three off leash dogs(3); a hang glider at Fort Funston was bitten by an off-leash dog (4); and an offleash

dog harassed a guard on horse patrol to the point of having to be pepper sprayed(5). These are just a few examples of the conflicts that can occur with off-leash dogs.

Off-leash dogs pose a particularly significant challenge to individuals who rely on service animals to help them enjoy the GGNRA. As stated in previous comments to the Park Service on this issue, a 2003 survey conducted by a national guide dog user group indicated that 89% of individuals with service animals had their guide dogs interfered with by off-leash dogs, and 42% of graduates of the groups training programs had their guide dogs attacked by off-leash dogs(6).

Thus, the failure to enforce the leash law in the GGNRA has exposed those with service animals to a high-risk of interference or attack, and in most cases has precluded these individuals from enjoying the park altogether. This is a disproportionate impact on accessibility for individuals who rely on guide dogs to traverse the park: and since dog management and accessibility planning will impact many of the same locations within the GGNRA, if this disproportionate impact isnt addressed the GGNRA may unwittingly exclude guide dog users from the very places that it is trying to make accessible.

Off-leash dogs and dog waste also create barriers for ethnic minorities who want to use the park. There are already disproportionate rates of general park use between white and ethnic minority users, as GGNRA visitors are still much more likely to be white than city or state residents. 7In addition, recreational opportunities for those with lower incomes have become increasingly more difficult as income inequality rises and income gaps between White citizens and Black and Latino citizens have also continued to increase(8). These economic constraints create even further barriers for ethnic minorities to use public parkland. Although some have argued, as noted in the SEIS, that park use by ethnic minority populations would increase with more available off-leash areas, several reports and studies show the opposite is true. (SEIS pg. 330). A 2007 study conducted by Nina Roberts of San Francisco State University found that Asian and Latino park users consider uncontrolled dogs and dog waste to be a barrier to visiting the Park(9). The Park Service acknowledged those findings in the SEIS; however, the Park Service also cited to a 2002 Northern Arizona University study(10) in an apparent effort to discount or downplay those findings(11). But a review of the 2002 studys relevant data in fact confirms the concerns regarding off-leash dogs discussed in this letter, and the Final EIS must reflect this.

The Park Service stated that the 2002 study found that Hispanic and non-Hispanic populations supported off-leash dog walking by almost the same percentages; however, the fact remains that the Hispanic community is already underrepresented in the Park(12). Thus, it is inappropriate for the Park Service to compare the response rates of the two groups in light of the later 2007 findings, and importantly, in light of the fact that the 2002 survey was conducted only in English with no available Spanish translation(13). Moreover, the 2002 findings show overwhelmingly that ethnic minorities oppose off-leash dog walking in the Park, particularly in light of the Park Services mission, and support regulations that prohibit off-leash dog walking(14).

Three relevant questions that were asked in the 2002 survey include questions 11, 13, and 17.

Question 11 asked [c]urrent regulations allow for walking dogs on-leash at most GGNRA sites and

prohibit any off-leash dog walking. Do you support or oppose this current regulation? 70.5% of respondents of Hispanic origin, 69.3% of Asian Americans, and 71.8% of African Americans responded that they either strongly or somewhat supported current regulations(15). Question 13 asked [d]o you support or oppose allowing off-leash dog walking in GGNRA sites? 52% of respondents of Hispanic origin, 49.2% of Asian Americans, and 49.6% of African Americans responded that they either strongly or somewhat opposed allowing off-leash dog walking(16). Question 17 asked the same as question 13, but explained the mission of the GGNRA beforehand. Knowing the GGNRA's mission, 56.6% of respondents of Hispanic origin, 59.7% of Asian Americans, and 67.5% of African Americans responded that they either strongly or somewhat opposed allowing off-leash dog walking in the Park(17).

The SEIS does not provide enough consideration for the negative experiences park users have when confronted with an off-leash dog. Even on-leash dog walkers have expressed discomfort with off-leash dogs. In 2005, Congresswoman Jackie Speier stated, after having worked with dog owner organizations and GGNRA officials regarding off-leash behavior for years, that:

Off-leash activity should be in areas that do not involve interaction with leashed dogs, or a fragile environment; i.e., the area should be fenced and properly noticed as to its use. For example, according to dog park experts, canine dominance factors preclude the placement of tables in dog parks-dogs jump on tables to be dominant-and problems will arise when a leashed dog is confronted by a free dog(18).

Recently, at a meeting organized by Congresswoman Speier, she stated that her position on this issue had not changed(19). It is clear that in order to accommodate all park users, off-leash dogs must not be able to roam free and bother, harass, and even injure other visitors and their dogs. Enclosing all off-leash dog areas is the only way to sufficiently deal with this issue, as discussed below.

#### Wildlife Disturbance.

It has become abundantly clear throughout this environmental review process that the presence of dogs in the GGNRA negatively impacts wildlife, including federally protected species. Wild Equity and others have previously submitted substantive comments and provided evidence on the issue, and the Park Service has acknowledged this. Plovers and other birds are often disturbed by dogs, which they see as natural predators, and disturbance triggers reactions that can lead to death of these birds. Disturbance of wildlife by dogs has been recorded within the GGNRA and documented in several published studies and reports.

For instance, incident reports show that dogs often chase, and sometimes kill, birds and other wildlife. One incident report states that three different dogs chased shorebirds at Ocean, and in two cases dogs chased the federally protected Snowy Plover(20). At Crissy Field, a ranger witnessed a dog kill a western grebe(21). In another incident at the Mann Headlands, a ranger witnessed a dog chasing a herd of deer in a wildlife protection area(22).

These are just a few examples of the problems that occur for wildlife in the GGNRA. The Park Service has provided no evidence that off-leash dogs respond to voice control, and the difficulty of controlling a dog in the presence of wildlife is insurmountable. To account for this problem, off-leash dogs must only be allowed in an area that is fully enclosed, either by a fence or natural boundary.

#### Failure To Consider Alternative of Enclosing All Regulated Off-Leash Areas Is Arbitrary.

If off-leash dogs are to be allowed in the GGNRA at all, the Park Service must implement a plan that more adequately addresses the growing number of conflicts between off-leash dogs and wildlife or other park users. Such a plan necessitates that off-leash dog play areas be fully enclosed with a physical barrier-with all entry and exit points double-gated-to ensure the safety of park users and protect park resources(23). Fully enclosed dog parks are standard and even recommended by dog safety advocates(24). Wild Equity and other commenters provided valid arguments as to why all ROLAs should be enclosed by physical boundaries during the DEIS comment period. However, the

preferred alternative in the SEIS still does not propose to fully enclose all ROLAs. Enclosing ROLAs will not unreasonably restrict dog use in the GGNRA, but failing to enclose them will result in more user conflicts and will create more risk for off-leash dogs. If the Park Service feels that it is not appropriate for a

ROLA to be enclosed, then the ROLA should not be proposed for that particular area.

Hundreds of dogs have been lost, injured, or killed, while roaming the GGNRA off-leash. This is because voice control is not an effective means to protect pets from getting lost or hit by cars. Enclosed off-leash dog play areas ensure that our dogs do not fall off cliffs, run into traffic, or are lost while visiting the GGNRA and they ensure, when properly located, that wildlife will not be harmed or harassed by dogs.

Furthermore, enclosing ROLAs would empower park visitors, giving them the ability to choose if and when to have off-leash dog experiences by entering an enclosed area, rather than having the experience imposed upon them whenever they visit the GGNRA. The Park Service acknowledges in the SEIS that dog walking under voice control may be more of an 'exclusive than a shared use... [for reasons that include] visitor safety and experience. (SEIS pg. 19). Although the Park Service suggests this is a debatable point, it is clear that when dogs are allowed to roam free, other uses are severely limited as evidenced by visitor complaints of dogs interrupting picnics and other activities(25). In the minds of park visitors, off-leash areas are already characterized as exclusive use zones, and consequently an argument that incorporating physical boundaries creates an exclusive use zone on its own is unacceptable.

Enclosed ROLAs would also increase compliance of regulations, as visible fencing details clearly identifiable boundaries and reduces public confusion on where a ROLA begins and ends. This also benefits GGNRA operations, as the Park Service can reduce spending its limited staff and financial resources on addressing matters such as illegal off leash dog-walking and visitor conflicts caused by off leash dogs.

In addition, enclosed areas are solidly grounded in the non-impairment mandate that governs the National Park System. An enclosure, like seat belts, bicycle helmets, safety goggles, and other safety devices, allow us all to participate in activities that are inherently risky while reducing the probability that drastic consequences from those risks materialize. The Park Service promotes the goal of ensuring that todays activities do not degrade existing resources or future recreational opportunities, and, accordingly, it should not permit risky activities without adequate safeguards in place.

As Wild Equity and other commenters have stated previously, this design principle has been adopted by animal welfare organizations and park managers around the country. The American Society for the Prevention of Cruelty to Animals urged dog owners to [k]eep your dog on a leash when you are outside, unless you are in a secured, fenced-in area (26) and recommends fenced-in dog parks because even if your dog reliably comes when called, its safest to take her to a securely enclosed area to play off leash.(27) The State of California concluded during a dog management study in 2001 that off-leash dog parks should [b]e enclosed, unless located in areas where there is clear and functional topographical or other significant boundaries.(28) The San Francisco Recreation and Parks Departments [RPD] dog park policy states that off-leash dog parks require adequate delineation, natural or man-made, to protect dogs from vehicles, steep cliffs, and other hazards as well as to prevent conflicts with other park users.Z 9

The Park Service has stated that enclosures are undesirable because of aesthetic concerns and because an enclosure of sufficient construction would hinder or prevent wildlife movement. (SEIS pg. 95). The justification by the Park Service is arbitrary and should not preclude an alternative for enclosing all ROLAs from consideration under the SEIS alternatives section. Offleash dog parks can have a variety of physical barriers, including features from the natural environment. Many of these can be designed in such as way that allows the movement of small wildlife through those areas. In addition, the aesthetic issues can be addressed simply by being

creative. For example, a fully enclosed off-leash dog park proposal for Lake Merritt included butterfly garden draped around the enclosure. Furthermore, the San Francisco RPD dealt with aesthetic concerns over physical boundaries by promising that all barriers will strive to be aesthetically pleasing using landscape features such as shrubs and vines.<sup>30</sup>

If the Park Service still feels that physical barriers are not acceptable, then it should revert to the National Park Services leash law as the preferred alternative, because the Park Service has failed to demonstrate in the SEIS that voice control is sufficient to keep dogs from encountering dangerous situations and impacting wildlife and visitor experience.

**SEIS Does Not Have Adequate Enforcement Mechanisms.**

The SEIS incorporates a monitoring-based management strategy that allows Park Service staff to monitor noncompliance and impacts to natural resources, rather than the initial automatic triggers that were originally proposed. This strategy allows management actions to be implemented when the level of compliance is deemed unacceptable based on violations and/or impacts to resources.

However, this leaves the door open for limited enforcement by the Park Service. There must be some kind of demonstrable commitment of enforcement from the Park Service, rather than simply a wait-and-see approach. If the Park Service must use adaptive management, it still needs accountability mechanisms in place that guarantee effective management of the GGNRA.

One change that should be made is a lower percentage of compliance triggering further review for an area. The Park Service previously admitted that it was only striving for 75% compliance, and now it does not even have a specific threshold at all, only what will be deemed unacceptable.

Even if there are no measures that apply automatically, there should still be a clearly defined compliance rate in place that triggers further review. The SEIS states a 75 percent threshold could trigger restrictions in some areas by only one hundred violations, while other sites might require several thousand violations before a

change was implemented, despite greater impacts to resources and values in the latter case. (SEIS pg. 64).

The same amount of review that would be required to determine what is unacceptable for a site could be done during the current planning phase. This would promote transparency and allow for public review of the Park Services plan to address non-compliance in each area. The environmental review process is intended to be comprehensive and failing to set specific goals thresholds does nothing but further delay the inevitable.

**The SEIS Does Not Adequately Justify Commercial Dog Walking.**

One of the established objectives of the SEIS is to evaluate commercial dog walking (SEIS pg. 2).

Though the SEIS does provide some information pertaining to commercial dog walking, the evaluation is lacking and it is unclear how conclusions were drawn that justify the inclusion of commercial dog walking as a component of the Preferred Alternative.

Evaluation shortcomings include the following:

The SEIS fails to adequately describe the existing condition or reference point baseline condition for commercial dog walking within the GGNRA. While the SEIS states, Under current management, commercial dog walking occurs, but is not an authorized use (SEIS pg. 8), it fails to disclose that this unpermitted commercial activity is prohibited under 36 CFR 5.3.

The SEIS fails to make clear that the 1979 Pet Policy pertains to dogs that are being managed by their owners and makes no provision for commercial dog walking.

The SEIS fails to disclose that commercial dog walking does not meet the criteria to qualify for Commercial Use Authorization (16 USC 5966).

The SEIS fails to include 36 CFR 1.6 and 36 CFR 5.3 on the list of relevant sections of the Code of Federal Regulations. (SEIS pg. 47)

The SEIS fails to include Directors Order 4\*53 on the list of relevant National Park Service Directors Orders. (SEIS pg. 48)

The SEIS fails to evaluate the range and types of activities for which Special Use Permits are

typically issued throughout the National Park system.

The SEIS fails to evaluate the precedent setting potential of issuing Special Use Permits for commercial dog walking within the National Park system.

The SEIS fails to evaluate the impacts that are specific to commercial dog walking including: impacts to visitor experience, impacts to recreational activities, impacts to parking availability, impacts to management resources, impacts to aesthetic qualities, and impacts to Park Service values. These omissions of fact and failures of evaluation leave the SEIS lacking as a properly transparent and adequately informative document.

As a decision document, the SEIS fails to articulate a rational connection between the facts and the final decision. As commercial dog walking has never been legally permitted within the GGNRA, it must be clearly demonstrated that all Park Service criteria will be met prior to sanction as a valid activity. However, this is not the case.

The SEIS does not demonstrate that commercial dog walking is an appropriate activity for national parklands, meeting qualifications under the Organic Act. The Organic Act clearly indicates that the granting of use permits shall be for the accommodation of visitors. The SEIS proposes to grant use permits not for the accommodation of visitors, but rather for the accommodation of the commercial dog walking industry.

The SEIS does not demonstrate that commercial dog walking is an appropriate activity for the GGNRA, meeting qualifications under the GGNRA enabling legislation. The enabling legislation provides for public use of the Park for recreational and educational purposes and makes no provision for commercial uses that do not support or enhance the established park resources and values.

The SEIS does not demonstrate that commercial dog walking meets the criteria to qualify for Special Use Permitting under NPS Directors Order #53. Commercial dog walking will not support the mission of the Park Service, will not add to the public understanding and enjoyment of the GGNRA, will not promote a sense of ownership and stewardship for the Park and its resources, will not enhance the protection of park resources and values, and will not provide for an increased level of visitor safety. Furthermore, commercial dog walking is contrary to the purpose for which the park was established, may create impacts on park resources and values, may disrupt the atmosphere of peace and tranquility, may create an unsafe environment for other visitors, and may result in conflict with other existing uses.

These points of reason demonstrate how the SEIS has not achieved the objective of properly evaluating commercial dog walking, and therefore, commercial dog walking should not be included as a component of the Preferred Alternative.

Conclusion.

The preferred alternative for the Plan in the SEIS is more accommodating to dogs than any other park in the National Park system, offering extensive on- and off-leash dog recreation in the GGNRA. Moreover, San Francisco's city park system has ample space for off-leash dogs, with 28 off-leash dog parks in 47 square miles for over 800,000 residents.<sup>3</sup> There is no evidence that dog owners or dogs will lack for open space to recreate, yet off-leash advocates continue to push for more space. However, off-leash dogs should not be given precedence over safety, visitor experience, and environmental concerns.

For all the reasons stated above, we urge the National Park Service to revise the preferred alternative in the SEIS on the issues of ROLAs, enforcement, and commercial dog walking to better accommodate park visitors and protect natural resources in the GGNRA. In addition, we refer the Park Service to previous comments submitted by the undersigned groups during the DEIS process and by Charles Pfister for both the DEIS and the SEIS, and to comments submitted by the Wild Equity Institute and the Center for Biological Diversity during the ANPR process, the NEPA scoping process, and the numerous other hearings that have occurred on this issue over the past decade, and incorporates those documents here by reference.

Sincerely,

Laura Horton

TO: GGNRA

I'm writing because I don't like the new law because a dog that not exercise might misbehave. Dogs and dogwalkers keep parks safe. Not all dog owners are irresponsible. How do you know that it's the dogs? Their is no proof. It could be homeless. It's bad to blame dog's it's not their falt.

Thank you for your time,

Mariana

Dear Superintendent,

I live in San Francisco and I walk my dog at Fort Funston daily.

Please leave the off-leash area the way it is.

This is extremely important to me.

Sincerely

J. Malone

406 Myra Way  
SF 94127

Re: Draft Dog Management Plan / Supplemental EIS

Dear Superintendent Dean,

The following comments relate to the Supplemental EIS and Fort Funston.

1. I object to any change in the current 1979 Pet Policy as to Fort Funston.
2. The EIS and Supplemental EIS both failed to provide well documented, scientific based facts in support of the conclusions.
3. Dogs are an insignificant issue related to the Bank Swallows (page 276). Currently the crows/ravens are a menace to any small bird in the Fort Funston vicinity. The EIS/SEIS refers to a report by Black 1996 (page 325). Black's report predates the invasion of Fort Funston by the crows/ravens.
4. The EIS/SEIS fails to establish that Lessingia ever populated Fort Funston. In fact, the EIS/SEIS relates to Lessingia previously having been located in the Lake Merced area (page 986) but admits that there is no documentation that Lessingia ever populated Fort Funston. There are numerous differences in the natural conditions between Lake Merced and Fort Funston and the EIS/SEIS fails to establish any basis for Lessingia ever having been present at Fort Funston.
5. The EIS/SEIS both failed to establish the number of visitors to Fort Funston. As a result of the failure to establish the number of visitors per year to Fort Funston, the reports of problems with dogs (or people) cannot be evaluated. Per the SEIS, the GGNRA has between 13 million and 15 million visitors per year, yet the overall "dog related" incidents for the years 2008 through 2011 were only 2,775. 2,775 incidents versus a minimum of 52 million visitors (13 million multiplied by 4 years) is statistically insignificant. While I am sure the NPS knows the approximate number of yearly visitors to Fort Funston, it has conveniently chosen not to include this very important information in the SEIS which prevents an accurate discussion of the impact of dog walking at Fort Funston. The 172 "dog related" incidents between 2008-2011 at Fort Funston have not been evaluated in relationship to the number of visitors to Fort Funston between 2008-2011. Therefore, the conclusion on page 221 that there are a high number of dog related incidents and conflicts affecting Human Safety has not been established.
6. The proposed ROLO areas described in the SEIS are prejudicial to senior citizens and the disabled. It is very dangerous to attempt to navigate the paths to the beach

with a dog on a leash in the event the owner falls/slips. The proposed ROLO areas will deny disabled people the ability to have their dogs off leash as much of the proposed ROLO areas will not be accessible as the dogs will not be within visual range of persons who must stay on the paved paths due to disability.

7. Monitoring Based Management Strategy contains no identifiable standards upon which the NPS is to proceed in its power to close off any or all dog walking areas within the GGNRA as it will be implemented when "the level of compliance is deemed unacceptable based on violations". This provides the NPS with unchecked authority to close any and all parts fo the GGNRA to dogs without any public hearing or notice, and does not prevent arbitrary and capricious closures by the NPS.

8. 2012 NPS Dog Walking Survey - While I did respond to the survey, the survey was poorly constructed as it was set-up only to support the previous conclusions of the NPS.

The EIS/SEIS have not addressed the toxic conditions at Fort Funston; the ever changing erosion due to nature; the lack of any concerted effort by the GGNRA/NPS to preserve the fortifications from WW II; the lack of any attempt to remediate the conditions left by usage of the property as a Nike missile site; and also fails to address the damage done by people to Fort Funston (its not those dogs leaving graffitti and beer bottles); nor has either report addressed the contamination from waste water that flows beneath Fort Funston and the sewage discharges made in the vicinity by both Daly City and San Francisco.

Also, it should be noted that the GGNRA is a National Recreation Area, not a National Park. It is shameful that the NPS has established a policy to banish the long-time recreational users of Fort Funston.

Very truly yours,

Joanne Mahoney

Frank Dean, General Superintendent  
US National Park Service  
Golden Gate National Recreation Area  
Attn: SEIS  
Fort Mason Bldg. 201

San Francisco, CA 94123

Dear Superintendent Dean:

The following comments are in response to the supplementary dog plan for the GGNRA. My comments are largely duplicates of comments I have made earlier, but lack of response can easily be interpreted as a lack of Interest, so I will repeat them here. My comments focus on the Rancho Corral de Tierra in Montara and Moss Beach.

The basic problem is what constitutes a recreation area vs. a wildlife refuge, national park, or similar entity. I think the overall plan for the GGNRA does not emphasize its use for recreation nearly enough. As a Sierra Club member for over 40 years, I appreciate the need for wilderness and wildlife protection, but I also feel the area needs recreation areas. I feel off-leash dog walking is a valid use for such areas. We have responsibly used Rancho Corral de Tierra for offleash dog walking the last 30 years without serious incident. Only one proposal for Rancho Corral de Tierra allows for dogs at all, and then in only a restricted area. We want to walk dogs on the trails, off leash, as we have in the past. The SEIS provides no significant documentation that this will have any serious effect on the environment or wildlife. I find none of the proposed alternatives acceptable. "Alternative A" is the least offensive, but would need to have additional off-leash areas added.

Sincerely,

Michael Madden  
Member, Montara Dog Group

Mr. Frank Dean, General Superintendent  
Golden Gate National Recreation Area  
Building 201, Fort Mason  
San Francisco, CA 94123-0022

Dear Superintendent Dean,

On behalf of the Mann Humane Society we are writing to share our comments regarding the GGNRA Supplemental Dog Management Plan/Supplemental Environmental Impact Statement (SEIS). While we applaud the work in getting this plan out for comment, we regret that we remain deeply concerned with the overall restrictive nature of the suggested alternatives. Having been an active participant in this plan from the beginning of the negotiated rulemaking process, it appears clear that providing enough space to recreate off-leash with dogs in Mann County isn't a priority for the GGNRA. We believe that we represent many dog guardians throughout Mann, as well as the Bay Area who support our concerns.

As the enforcement entity for all animal services ordinances in Mann County and its cities, we feel

our expertise excels in the dynamics of gaining compliance in animal-friendly urban areas, such as the areas outlined in the current SEIS. In our experience successful compliance is only generated through working with users sharing standards of their community. Dog guardians in Mann are highly educated and endorse responsible guardianship standards throughout the areas they recreate. In fact, we find they routinely assist our agencies with a deeper sense of parkland stewardship, whether it is to contact us for wildlife that need assistance or picking up litter they come across on a trail. Their involvement in providing feedback on dog-friendly spaces should be valued and not ignored.

Our organization has had a long history not only as a local expert on animal issues, but we are often sought for our opinion on national animal issues as well. It is with this expertise we urge you to embrace our previous comments from the DEIS involving the Mann locations. Mann's limited areas for dog use in the GGNRA is a sad reminder of how many of our dog-loving members feel they are and continue to be, kicked out of areas that many generations have enjoyed. The other land use agencies in our county take pride in working with the public to find a balance which creates recreation to all users, including those with dogs.

Responsible off-leash controlled dogs should be continued to be permitted in as many areas of the GGNRA as possible. The GGNRA 1979 Pet Policy is a document we should all take great pride in as it was visionary in its sense of seeing the importance of the human-animal bond in ways which benefit our community and our park users. It is regrettable this same vision seems to have been lost along the way in order to fit the parameters of just another National Park. We feel strongly that after so much public comment, meetings, coalitions and groups incorporated just to save their abilities to recreate with dogs on public lands, the SEIS would extend the original scope of the Pet Policy and save the small remaining areas to not only be off-leash but to also be available to dogs and their guardians. The current document only further restricts the small remaining areas to dogs and we strongly support these areas be re-examined.

The areas identified by the SEIS for Mann include the following:

â€ Homestead Valley ' We recommend the current status of this site be maintained and we support Alternative A. There are adjoining neighborhoods in the surrounding borders that enjoy recreating with their dogs under voice control in this area. Most of the trails in this area are filled with dense vegetation, forcing most dogs and their guardians to stay on the trails.

â€ Alta Trail/Orchard Fire Road/Pacheco Fire Road- We recommend the current status of this site be maintained and we support Alternative A. This site continues to be a favorite area among many of the GGNRA sites for those seeking voice-control with their dog companions. This area is very popular as a hiking destination and is often utilized in conjunction with the Oakwood Valley Fire Rd. as a looping trail. There are areas of this trail that are very steep with lush thick vegetation. These conditions do not make it favorable for dogs (and their guardians) to go off of the designated trails. To see these areas now identified as leash-only areas is a definite step backwards, as fire roads are ideal for controlled off-leash use.

â€ Oakwood Valley- We continue to urge you to adopt the Alternative A and allow this area to be off-leash under voice control. This site is a popular area for local neighbors on the Mill Valley side as well as the Mann City side to recreate with their dogs under voice control. It is commonly used as a loop trail that joins the Alta Trail. We believe trail users at this site respect the dog control laws as well as keeping their dogs on the designated trail. The new plan completely removes the ability to use this area as an off-leash area and proposes to ban dogs entirely on the trail.

â€ Stinson Beach- We recommend the current status of this site be maintained and we support Alternative A. This area has a long history of being very dog-friendly and environmentally savvy. Many animal advocates in the neighboring community are very involved with providing their dogs with controlled off-leash recreation on the adjoining beach in unincorporated Mann County. It is rare for us to have enforcement issues on this beach.

â€ Muir Beach- We recommend the current status of this site be maintained and we strongly support Alternative A. This area has a long history of responsible off-leash dog users. It has been, and continues to be, a very popular area with local residents. Historically and politically, this is an area in which the local community has played a vital role in accepting a stewardship for the special lands and treasured species. While the plan goes into extensive detail about the negative impacts dogs "may" have on this site, we believe the evidence of proper coexistence has been demonstrated with the ability of this site to host special species, while providing responsible voice control dog recreation. Severe limitations to dogs in this area will be devastating to the local community and others.

â€ Rodeo Beach/South Rodeo Beach- We recommend the current status of this site be maintained and we support Alternative A. This site is heavily used by many dog guardians throughout the Bay Area and it offers a unique experience to its users. Further drastic limitations of this area to dogs will have a negative effect on our local users. In addition, the current plan now eliminates dog walking (even leashed) to other trails that border this area. We are concerned the small area (the only area in Mann) on this site doesn't begin to serve our population since all of the other areas are proposed to being removed for off-leash use.

â€ Mann Headlands Trail- We recommend the current status of this site be maintained and we support Alternative A. We would like to see on-leash access considered on the Tennessee Valley Trail.

â€ Fort Baker- We recommend the current status of this site be maintained and we support Alternative A. We would like to see segments of voice control on the northern section of East Road as well as a segment of the Drown Fire Road. Many residents of Sausalito can easily access this area on connecting trails. There is a need to be consistent with neighboring regulations in this area.

It seems very clear the GGNRA has no intention of making trail usage dog-friendly. As animal shelters across the country work to save animal lives and create homes for thousands of homeless animals, what a shame that now responsible dog guardians will be scrambling to find a proper place to spend off-leash time with their animal companions on our public land. Mann County residents are proud of their political leaders who understand this important factor in helping to address responsible dog guardianship beyond just a simple dog park. The GGNRA spaces in Mann aren't just places to congregate, they are places to be active by hiking, walking, enjoying the beauty of our natural spaces and spending quality time with our animal companions who share the same enjoyment when they are with us.

Our organization will continue to offer assistance to you, including the trends we see in dealing with animal guardians and the amazing recreational opportunities we advocate for people to participate in with their dogs. People who enjoy the company of dogs certainly aren't a dying fad, but a growing group getting a louder voice. Your ongoing attention to this very important issue is appreciated.

Sincerely,

Captain Cindy Machado, CAWA Nancy McKenney, MNPL, CAWA  
Director of Animal Services Chief Executive Officer

Frank Dean, GGNRA Superintendent  
Building 201, Ft. Mason  
San Francisco, CA 94123

Dear Superintendent Dean,

I have been a resident of San Francisco and Marin County all of my life. We now live in the city where we walk regularly on Crissy Field. We walk our two dogs on the hills and streets as well but their, (and our) favorite walks are at Crissy Field, by the beach with the Golden Gate Bridge and the Bay as the backdrop. Our kids both graduated from the Bay School of San Francisco so we have been using the Presidio for years as a recreational area. It is wonderful to get to Marin, but when we don't have the time, being able to enjoy the waterfront with our dogs is of utmost importance.

I am writing today to express my opposition to the GGNRA's preferred alternative that would greatly limit where I would be able to recreate with my dogs in the near future. Additionally, the conclusions reached in the Supplemental Dog Management Plan/SEIS are not fair and deeply flawed.

Because the dog walking was specifically referred to as a long-standing use for the newly created GGNRA in 1972, this specific recreational use should continue for years to come. I support preserving the GGNRA's 1979 Pet Policy. This is not a National Park with pristine wilderness, but rather a unique recreational area in an urban environment. It deserves to be managed by different standards to achieve its fullest potential.

The proposed restrictions in the current plan seriously restrict dog walking: only 7 of the 22 areas in the SEIS allow off leash dog walking access on the GGNRA lands in ALL three counties. Additionally, this SEIS allows even more restrictions in the future, but won't allow for new areas to be opened up to dog walking (either on- or off-leash).

Regarding the process, the studies and information the GGNRA is relying on in its latest supplemental environmental impact statement are outdated - it hasn't updated the enforcement data since the last draft EIS was released. Additionally, a significant number of comments submitted for the GGNRA's Draft EIS in 2011 were not considered or addressed in the GGNRA's Supplemental EIS leading the public to believe that this process is only for show and has no substance.

Additionally, the SEIS has many assumptions that are not documented, and the SEIS has failed to respond to all comments submitted by the US EPA, which found the last draft insufficient in its analysis.

Our family asks that the GGNRA to take a balanced, fact-based approach to its environmental analysis

that will result in the preservation of important dog walking recreation in the GGNRA for generations to come.

Sincerely,

Erin Tom Nowell & family

Introduction					

The legacy of Golden Gate National Recreation Area (GGNRA) management is one of duplicity, broken promises, and broken laws. This SEIS as a means to modify recreational usage is no exception. This SEIS is not a good faith effort by the NPS/GGNRA to resolve conflict, but a thinly veiled ploy to eliminate off-leash recreation from the GGNRA entirely. The conflict is actually one of legislative intent: the GGNRA/ NPS/DOI desire to manage this Golden Gate National Recreation Area as a National Park, while the enabling legislation and the will of the people assert the management should reflect the unique requirement we have for recreational access (as mandated by Congress) here in the GGNRA. To further document this conflict- -in the FAQs for the SEIS (<http://www.nps.gov/goga/upload/SEIS-FAQs.pdt>) is the following item:

#21: GGNRA is a national recreation area. Do national recreation areas have different management policies than national parks?

Answer: No. All units of the national park system are guided by the same NP S Management Policies, regardless of the park's designation as a national park, national recreation area, national historic site, national lakeshore or other (there are 35 types of national park units). Congress amended the 1916 NPS Organic Act in 1970 to make clear that the NPS must manage all units of the national park system to the same preservation standard.

Citizens who voted in 1972 to include SF City and County properties in the GGNRA or have studied the history of the GGNRA remember a very different explanation from the GGNRA/ NPS/DOI: "the transfer of these lands is a technical resolution allowing the City and County of San Francisco to transfer city lands to the Golden Gate National Recreation area...a national urban park established in 1972 by Congress to preserve 34,000 acres of land and water in San Francisco and Marin for recreational use by all citizens." Additionally, the first GGNRA Superintendent William J. Whalen made specific promises to San Francisco voters that the new NRA would retain historical recreational access (including off-leash recreation) should they vote to include SF park properties in the GGNRA.

In the SEIS, the GGNRA/ NPS/ DOI acknowledges the language in the agreement: The 1975 agreement for the lands transfer from the City of San Francisco to the NPS states that "The National Park Service, acting through the General Superintendent, agrees to utilize the resources of GGNRA in a manner that

will provide for recreational and educational opportunities consistent with sound principals of land use, planning and management, to preserve the GGNRA in its natural setting and protect it from development and uses which would destroy the scenic beauty and natural character of the area, and to maintain the transferred premises in a good and sightly condition." The GGNRA/ NPS/ DOI further assert in the SEIS: "There is no additional specificity as to what uses constituted "recreational opportunities." The deeds for the transferred lands state that: "To hold only so long as said real property is preserved and used for recreation and park purposes, "also with no additional specificity as to what uses constituted recreation." [emphasis added] The GGNRA/ NPS/DOI consider the conflict resolved.

This is a long-standing battle we have waged: the GGNRA takes away recreational access, and the citizens turn to the Federal Court to have access reinstated. It has been a colossal waste of time and money, and a hardship for the citizens because not only are we battling for our right to access, we are also paying for both sides of the debate. It was at the conclusion of the latest legal battle wherein Federal Judge William Alsup reinstated the 1979 Pet Policy, over the objections of the GGNRA/ NPS/ DOI, that a statement was made by the Judge that became the impetus for initiation of the planned changes in Dog Management in 2006. The June 2, 2005 decision by Judge Alsup cited in this SEIS noted that the court's action "in no way restricts the authority of the Superintendent to 'protect the resource,' including the protection of endangered and threatened species." There is no mention in the SEIS of the judge's additional admonition that "Congress has committed the proper balance of resource protections and recreation to the park professionals. Their judgments should be respected by the courts absent a violation of the law ." [emphasis added] The GGNRA/ NPS/ DOI asserts that the change in Dog Management Policy (DMP) in this SEIS is intended to protect the resources of the GGNRA. However they have violated the law by ignoring the fundamental legal underpinnings provided by the enabling legislation, NPS Laws, Rules, Regulations and Policy as well as additional Federal Law which prohibits agency actions which are arbitrary, capricious and an abuse of discretion. In this Comment we intend to review the objectives and content of this SEIS and the history of the management of the GGNRA. At its conclusion, we believe you will agree there are only four possible resolutions to this situation:

1. San Francisco City and County will be required to formally take back those properties they can legally revert.
2. Congress will be required to implement a Section Seven Special Regulation- -the 1979 Pet Policy with provisions for new lands (over the objections of DOI/ NPS/GGNRA) to ensure recreational access as was originally intended when this National Recreation Area was created. This option would also require subsequent strict oversight by Congress to ensure sound principles of land use planning and management are implemented permanently as they have not been implemented up until now.
3. Transfer the GGNRA to another Federal agency, such as the Forest Service (who manage the Rattlesnake National Recreation Area and Wilderness and Sawtooth National Recreation Area) where sound principles of land use and planning are actually implemented as a part of their management policy.
4. Citizens file suit in Federal Court to force the GGNRA/ NPS/DOI to withdraw this proposal entirely, and revert back to the Original 1979 Pet Policy as established by the Court in 2005.

This Agency Action Is Unlawful

Vital Monitoring

Before examining the contents of this DEIS/SEIS, we must make the fundamental point that the decision to proceed with this DEIS/SEIS itself is unlawful. The enabling legislation requires the GGNRA to utilize sound principles of land use planning and management. Accepted practice would be illustrated by the Rattlesnake National Recreation Area and Wilderness (RNRAW) which produces an annual monitoring report. The report assesses current recreation trends, needs, and impacts, and thereby serves as a tool for long-term management of the RNRWA. The following is taken from the Introduction of the Report for 2009:

"This is the seventeenth annual monitoring report for the Limits of Acceptable Change (LAC) based Management Direction for the Rattlesnake National Recreation Area (NRA) and Wilderness (RNRAW), which was approved in December 1992. Monitoring is the final step in the LAC planning system. It is an ongoing, continuous process and is instrumental for evaluating management effectiveness and sustainability of resource values and conditions.

The LAC process recognizes that wilderness conditions change. Wilderness areas are dynamic systems with many forces continually affecting the landscape. These forces of change include people and their impacts, fire, insects and disease, invasive species and many others. It defines what conditions are desirable and how to achieve or maintain those conditions. Based on citizen involvement, laws and regulation, it identifies what changes are acceptable rather than attempting to prevent change.

Monitoring is based upon the indicators and standards outlined in the LAC direction. The indicators and their specific standards provide methods of measurement to effectively monitor factors and area wide issues. Refer to the December, 1992 Limits of Acceptable Change Based Management Direction for the RNRAW for a more complete discussion of the LAC process.

The factors monitored during the 2009 field season include: education, use and users, trails and roads, Wilderness characteristics, vegetation, vandalism, wildlife, fire, goals and policies. Refer to Table 1 for a complete description of the factors, indicators and standards for each opportunity class (OC). "

In contrast, in 2006 when the plan to change the Dog Management Policy(DMP)/DEIS was announced on the Federal Register, Dr. Suzanne Valente made a Freedom of Information Act (FOIA) request to provide the data, documents, and/or Staff Report which substantiated the GGNRA's claim that there was controversy over the dog policy, compromised visitor and employee safety and resource degradation which warranted the change in DMP and DEIS. The GGNRA's response merely stated: "The Staff Report and other documents you seek do not exist at this time". [emphasis added] An appeal from Dr. Valente to the Department of the Interior regarding this FOIA request elicited the following response (after several correspondences from Dr. Valente): "Since the Department has not made a determination on your appeal within the time limits set in the FOIA, you may seek judicial review under 5 U.S.C. 552(a)(4)(B). However, we hope that you will delay filing the lawsuit so that the Department can thoroughly review the issues in your appeal and make a determination. We appreciate your patience to this point and the Department will make every effort to reach a decision on your appeal as soon as possible." This letter is dated August 8, 2006. A written response to the appeal was received by Dr. Valente almost five years from the date of the original request. The Department of Interior again confirmed there were no documents to substantiate the need for a change in the DMP and this DEIS/SEIS.

The lack of data or any documentation to support the assertions used as justification to proceed with this Environmental Review violates Federal Law as it renders this agency action arbitrary, capricious and an abuse of discretion. Accordingly, this agency action, findings and conclusions should be set aside as prescribed by the Administrative Procedure Act, 5 U.S.C. 706 (2)A.

Why is it significant that other Recreation Areas perform annual monitoring of resources and the GGNRA does not? Why is monitoring so important? As stated in an NPS publication, "Monitoring the Condition of Natural Resources in US National Parks" ([http://science.nature.nps.gov/im/monitor/docs/Monitoring\\_Park\\_Condition.pdf](http://science.nature.nps.gov/im/monitor/docs/Monitoring_Park_Condition.pdf)) the purpose of monitoring is as follows:

"The overall purpose of natural resource monitoring in parks is to develop scientifically sound information on the current status and long term trends in the composition, structure, and function of park

ecosystems, and to determine how well current management practices are sustaining those ecosystems. Use of monitoring information will increase confidence in manager's decisions and improve their ability to manage park resources, and will allow managers to confront and mitigate threats to the park and operate more effectively in legal and political arenas. "

Additionally, a review of NPS online resources reveals that there is an entire infrastructure set up to guide and facilitate NPS properties in their monitoring duties, "Vital Signs Monitoring" (<http://science.nature.nps.gov/im/monitor/index.cfm>)

A subsection of the aforementioned web site (Program Goals) discusses the goals of park monitoring:

"Natural resource monitoring provides site-specific information needed to understand and identify change in complex, variable, and imperfectly understood natural systems and to determine whether observed changes are within natural levels of variability or may be indicators of unwanted human influences. Thus, monitoring provides a basis for understanding and identifying meaningful change in natural systems characterized by complexity, variability, and surprises.

Monitoring data help to define the normal limits of natural variation in park resources and provide a basis for understanding observed changes; monitoring results may also be used to determine what constitutes impairment and to identify the need to initiate or change management practices. "[emphasis added]

Further exploration of the NPS "Vital Signs Monitoring" Resources Online (see <http://science.nature.nps.gov/im/monitor/ProgramGoals.cfm>) reveals that National Park managers are directed by federal law and National Park Service policies and guidance to know the status and trends in the condition of natural resources under their stewardship in order to fulfill the NPS mission of conserving parks unimpaired (see "Summary of Laws, Policies and Guidance" at <http://science.nature.nps.gov/im/monitor/LawsPolicy.cfm>).

More recently, the National Parks Omnibus Management Act of 1998 established the framework for fully integrating natural resource monitoring and other science activities into the management processes of the National Park System. The Act charges the Secretary of the Interior to "continually improve the ability of the National Park Service to provide state-of-the art management, protection, and interpretation of and research on the resources of the National Park System" , and to "assure the full and proper utilization of the results of scientific studies for park management decisions. " Section 5934 of the Act requires the Secretary of the Interior to develop a program of "inventory and monitoring of National Park System resources to establish baseline information and to provide information on the long -term trends in the condition of National Park System resources."

Clearly, the failure of GGNRA management to conduct any consistent monitoring of the resources of the GGNRA is a violation of Federal law. The more fundamental problem this SEIS highlights is the fact that GGNRA management is in persistent violation of the enabling legislation for this park property. GGNRA management can provide no monitoring report to substantiate visitor use patterns or conflicts, no documentation of degradation of the Recreation Area resources, as well as no documentation as to whether resource degradation is inevitable or under the control of management prior to proposing these management changes. It seems impossible that GGNRA management would undertake a Dog Management Policy change as proposed in this SEIS without any evidence of monitoring or site specific studies as a means to identify the alleged impairment.

Consider, for example, the issue of Water Quality. In the DEIS, it was asserted dog feces are a significant component in water bacterial contamination. The DEIS refers to a substudy of the San Francisco Sewage Master Plan which determined that bacterial contamination of waters off Ocean Beach was significant due to dog fecal matter deposited along the shoreline (NPS 1999, 21). The difficulty with this reference is that

it cannot be located. The cited study simply does not exist.

The Ocean Beach DOG comment on the DEIS pointed to a more relevant reference: the Annual Report by Heal the Bay. The 2011 report had just come out and Ocean Beach received an A ranking at Balboa Avenue year-round excepting a B ranking during wet weather. At Lincoln Way there was an A or A ranking year-round excepting a B ranking during wet weather. At Sloat Blvd., the ranking is an A or A all year-round in wet or dry weather. Our response opined dog feces are not creating a problem at Ocean Beach. Further, the 2010 Heal the Bay report acknowledged that in the summer nearly all beaches had a clean bill of health. But in the winter, when heavy rains cause untreated sewage to flow into the bay and ocean, bacteria hit perilous levels in some areas. Deb Self, Director of San Francisco Baykeeper stated, "We have a massive, rampant problem with human waste." [emphasis added] Among the worst offenders is Baker Beach, where raw sewage leaking from old pipes and overflowing storm drains flows into Lobos Creek and forms a pool at the south end of the beach.

Our conclusion was that most dog guardians are picking up their dogs' feces, and the relatively few instances where people fail to pick up after their dog, while not excused, do not constitute a threat to our water quality.

The salient point here is that the assertions that dogs negatively affect water quality in the GGNRA have been omitted in the SEIS with the following explanation on page 28:

"Although water quality monitoring currently occurs at GGNRA, no site-specific, peer-reviewed studies have been conducted at the GGNRA sites to document impacts to water quality specifically from dogs. It is also difficult to discern what is causing an impact to water quality, especially in a large metropolitan area where water quality may already be degraded. The literature review found very few investigations or peer-reviewed, scientific studies that document the isolated effects dogs have on water quality in recreational settings. Water quality has therefore been dismissed as a resource topic in this document due to lack of literature."

Further, the SEIS on pages 373 and 376, admits the following:

"Site-specific, peer-reviewed studies have not been conducted at the GGNRA sites for the sole purpose of documenting impacts to vegetation or soils from dogs.... Very few site-specific, peer-reviewed studies have been conducted at GGNRA for the purpose of documenting impacts to wildlife as a result of dogs."

Absent the existence of any peer reviewed, site specific studies regarding dogs and vegetation, soil, or wildlife, the GGNRA is left to discuss potential disturbance to the resources. Absent reliable site-specific data, or peer review of that data, by law the SEIS should have also dismissed soils, vegetation, and wildlife as resource topics- as they did with water quality. Clearly the SEIS did not do so as it would have left the GGNRA/ NPS/DOI no legitimate basis to pursue a change in the DMP. Consequently, in the current SEIS, site-specific allegations of user conflict or resource degradation are generally supported by anecdotal comments submitted to the GGNRA in response to the DEIS.

This is a wholesale violation of Federal law; the mismanagement so sweeping and the lawlessness so brazen that it rises to a level which demands accountability. We will explore in the "Peer Review" section of this Comment the vast legal framework requiring peer review as a means to ensure the public that the Code of Scientific and Scholarly Conduct has been adhered to. Further, this DMP flirts with violation of the Federal Policy on Research Misconduct, as well as the fundamental requirement to base decisions on fact, not opinion.

As a practical matter, the GGNRA has failed to monitor the resources; consequently, there have been no

mitigations to address problems as they arise. In truth, were the GGNRA's claims of degradation of resources even valid (we contend they are not), a case could be made that any degradation of the GGNRA property is due to GGNRA management's failure to adhere to accepted practice regarding land use planning and management. How is it equitable for the GGNRA to abolish recreational access as a remedy to a problem they cannot document and when they have demonstrably violated the principles of sound land use planning and management as well as numerous Federal laws designed to ensure the reliability of scientific evidence utilized to make management decisions?

The law requires findings or conclusions that represent the official position of one or more agencies of the Federal government with regards to scientific matters shall be peer-reviewed before dissemination.

On December 16, 2004, Joshua Bolten, Director of the Executive Office of the President of the Office of Management and Budget (OMB) in Washington, D.C., published and circulated a "Memorandum for Heads of Departments and Agencies" about the issuance of the OMB's "Final Information Quality Bulletin for Peer Review". This bulletin was subsequently published in the Federal Register (2664 Federal Register / Vol. 70, No. 10/ Friday, January 14,2005 / Notices; see [http:// www.nrc.gov/public-involve/zofr2664.pdf](http://www.nrc.gov/public-involve/zofr2664.pdf))

Following are direct excerpts from the aforementioned memorandum and bulletin which are applicable to our situation here in the GGNRA:

AGENCY: Office of Management and Budget, Executive Office of the President

SUMMARY: On December 16, 2004, the Office of Management and Budget (OMB), in consultation with the Office of Science and Technology Policy (OSTP), issued its Final Information Quality Bulletin for Peer Review to the heads of departments and agencies (available at <http://www.whitehouse.gov/omb/memoranda/fy2005/m003.htm> . This new guidance is designed to realize the benefits of meaningful peer review of the most important science disseminated by the Federal Government. It is part of an ongoing effort to improve the quality, objectivity, utility, and integrity of information disseminated by the Federal Government to the public.

This Bulletin establishes that important scientific information shall be peer reviewed by qualified specialists before it is disseminated by the Federal government. The term "influential scientific information" means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions. To the extent permitted by law, each agency shall conduct a peer review on all influential scientific information that the agency intends to disseminate. [Emphasis added]

This Bulletin addresses peer review of scientific information disseminations that contain findings or conclusions that represent the official position of one or more agencies of the Federal government.

DATES: The requirements of this Bulletin, with the exception of those in Section V (Peer Review Planning), apply to information disseminated on or after June 16, 2005. -

Peer review is one of the important procedures used to ensure that the quality of published information meets the standards of the scientific and technical community....Peer review is the review of a draft product for quality by specialists in the field who were not involved in producing the draft.

---

The peer reviewer's report is an evaluation or critique that is used by the authors of the draft to improve the product. Peer review typically evaluates the clarity of hypotheses, the validity of the research design, the quality of data collection procedures, the robustness of the methods employed, the appropriateness of the methods for the hypotheses being tested, the extent to which the conclusions follow from the analysis, and the strengths and limitations of the overall product.

In some cases, reviewers might recommend major changes to the draft, such as refinement of hypotheses, reconsideration of research design, modifications of data collection or analysis methods, or alternative conclusions.

This Bulletin establishes minimum standards for when peer review is required for scientific information and the types of peer review that should be considered by agencies in different circumstances. It also establishes a transparent process for public disclosure of peer review planning, including a web-accessible description of the peer review plan that the agency has developed for each of its forthcoming influential scientific disseminations. <http://www.nps.gov/policy/peerreview.htm>

Regardless of the peer review mechanism chosen, agencies should strive to ensure that their peer review practices are characterized by both scientific integrity and process integrity. "Scientific integrity," in the context of peer review, refers to such issues as "expertise and balance of the panel members; the identification of the scientific issues and clarity of the charge to the panel; the quality, focus and depth of the discussion of the issues by the panel; the rationale and supportability of the panel's findings; and the accuracy and clarity of the panel report." "Process integrity" includes such issues as "transparency and openness, avoidance of real or perceived conflicts of interest, a workable process for public comment and involvement," and adherence to defined procedures.

When an information product is a critical component of rule-making, it is important to obtain peer review before the agency announces its regulatory options so that any technical corrections can be made before the agency becomes invested in a specific approach or the positions of interest groups have hardened. If review occurs too late, it is unlikely to contribute to the course of a rulemaking. Furthermore, investing in a more rigorous peer review early in the process "may provide net benefit by reducing the prospect of challenges to a regulation that later may trigger time consuming and resource-draining litigation." The peer review report shall be discussed in the preamble to any related rulemaking and included in the administrative record for any related agency action. [Emphasis added]

Peer review should not be confused with public comment and other stakeholder processes. The selection of participants in a peer review is based on expertise, with due consideration of independence and conflict of interest.

Furthermore, notice-and-comment procedures for agency rulemaking do not provide an adequate substitute for peer review, as some experts - - especially those most knowledgeable in a field - - may not file public comments with federal agencies.

#### Legal Authority for the Bulletin

This Bulletin is issued under the Information Quality Act and OMB's general authorities to oversee the quality of agency information, analyses, and regulatory actions. In the Information Quality Act, Congress directed OMB to issue guidelines to "provide policy and procedural guidance to Federal agencies for ensuring and maximizing the quality, objectivity, utility and integrity of information" disseminated by Federal agencies. Public Law No. 106-554,

515(a). The Information Quality Act was developed as a supplement to the Paperwork Reduction Act, 44 U.S.C. 3501 et seq., which requires OMB, among other things, to "develop and oversee the implementation of policies, principles, standards, and guidelines to . . . apply to Federal agency dissemination of public information." In addition, Executive Order 12866, 58 Fed. Reg. 51,735 (Oct. 4, 1993), establishes that CIRA is "the repository of expertise concerning regulatory issues," and it directs OMB to provide guidance to the agencies on regulatory planning. E.O. 12866, 2(b). The Order also requires that "[e]ach agency shall base its decisions on the best reasonably obtainable scientific, technical, economic, or other information." E.O. 12866, 1(b)(7). Finally, OMB has authority in certain circumstances to manage the agencies under the purview of the President's Constitutional authority to supervise the unitary Executive Branch. All of these authorities support this Bulletin.

In response to the Bulletin, on January 31, 2008 Herbert C. Frost, as Acting Associate Director of Natural Resource Stewardship and Science for the NPS, published the "Interim Guidance Document Governing Code of Conduct, Peer Review, and Information Quality Correction for National Park Service Cultural and Natural Resource Disciplines". Following are excerpts from this document:

Sound management and interpretation of National Park System resources and National Park Service technical assistance programs depend on authoritative information from scientific and scholarly activities. Peer review provides the appropriate process for ensuring technical quality and accuracy of these activities, which include inventory, monitoring, research, assessment, and management projects. This peer review must be applied appropriately at all stages, which may include proposals at the funding decision point, detailed proposals or plans of action at the point of initiating an activity, progress of an activity at key points during its duration, and results and draft reports of accomplishments of the activity.

The scientific and scholarly guidance presented in this document ensures that the review requirement is met using a consistent, conscientious, and appropriate level of effort. Such technical peer review is essential to demonstrate the professional stature and ensure the accountability of the National Park Service's acquisition and application of scientific and scholarly information. Such scientific peer review complements, and is part of, administrative review.

#### I.b. Purpose

NPS issues this guidance to ensure that NPS scientific and scholarly activities comply with the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664-2677), the Department of the Interior draft 305 DM 4 Peer Review, NPS Director's Order 11B: Ensuring Quality of Information Disseminated by the National Park Service, and the Secretary of the Interior's December 21, 2007 memorandum "Ensuring Integrity in Scientific Activities". This guidance is expected to:

A. Enhance the quality, objectivity, utility, and integrity of scientific and scholarly information generated or supported by the NPS;

B. Increase the credibility of decisions to which these and other scientific information contributes; and

C. Extend application of the concepts of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664- 2677), henceforth referred to as the OMB Peer Review Bulletin, to information disseminated by the Service that is neither a highly influential scientific assessment nor influential scientific information.

The NPS shall ensure appropriate peer review of all scientific and scholarly information prior to use in decision making, regulatory processes, or dissemination to the public and regardless of media (i.e., print, digital, audiovisual, or Web). Any information that the NPS determines to be either "influential scientific information" and/or "highly influential scientific assessment" will require more specific, independent peer review consistent with the OMB Peer Review Bulletin. NPS will place these guidelines, its peer review agendas for influential scientific information and highly influential scientific assessment (as defined by the OMB Peer Review Bulletin), and its information quality correction site on a publicly available webpage. These guidelines become effective on an interim basis February 1, 2008.

These guidelines apply to all scientific and scholarly information and assessments produced, used, or sponsored by the NPS. The guidelines identify the ethical standards within which employees and volunteers will conduct NPS sponsored scientific and scholarly activities. The peer review component of these guidelines applies to scientific and scholarly activities. It does not apply to policy or management decisions, although it does apply to the underlying scientific and scholarly information that, along with other factors, informs a decision maker.

## II. AUTHORITY TO ISSUE THIS REFERENCE MANUAL

### II.a. Guidance for Science, Peer Review, and Information Quality

" 305 OM 2 requires that science must be integrated into and used in setting regulatory and management policies in the Department and its bureaus;

DOI Information Quality Guidelines establish policy to ensure and maximize the objectivity, utility, and integrity of information disseminated to the public by the Department. These guidelines implement the Information Quality Act (P.L. 106-554 Section 515) and associated OMB Guidelines (67 FR 8452-8460);

E.O. 12866 establishes a government-wide policy that each agency shall base its regulatory decisions on the best reasonably obtainable scientific, technical, economic and other information; and

OMB Final Information Quality Bulletin for Peer Review (70 FR 2664-2677) establishes government-wide requirements for the peer review of "influential scientific information" and "highly influential scientific assessments." It also establishes requirements for posting peer review plans on a website and annual reporting of associated peer review activities to the OMB.

#### II.b. Guidance for Scientific Code of Conduct

5 U.S.C. 301 allows the head of an executive department to prescribe regulations for the conduct of its employees;

43 CFR 20.501 requires employees of the Department to comply with all Federal statutes; Executive Orders; and Office of Government Ethics, Office of Personnel Management, and Departmental regulations;

43 CFR 20.502 states that employees are required to carry out the announced policies and programs of the Department;

43 CFR 20.502(a) states that an employee is subject to appropriate disciplinary action if he or she fails to comply with any lawful regulations, orders, or policies;

Federal Policy on Research Misconduct, 65 FR 76260-76264, December 6, 2000; and Standards of Ethical Conduct for Employees of the Executive Branch, 5 CFR 2635.

#### II.c. General Authority

16 U.S.C. 1 through 4 (the National Park Service Organic Act).

#### II.d. Other Relevant Policy and Guidance

NPS Management Policies 2006

Chapter 1, The Foundation, Sections 1.8 (Managing Excellence); 1.9.4 (Public Information and Media Relations);

Chapter 2, Park System Planning, Sections 2.1.2 (Scientific, Technical, and Scholarly Analysis), 2.1.3 (Public Participation); 2.3.1.4 (Science and Scholarship);

Chapter 4, Natural Resource Management, Sections 4.1.2 (Natural Resource Information); 4.2 (Studies and Collection); 4.8.2.1 (Paleontological Resources and Their Contexts); 4.8.2.2 (Caves);

Chapter 5, Cultural Resource Management, Sections 5.1.1 (National Park Service Research); 5.2.3 (Confidentiality); 5.3.5.3.2 (Sacred Sites); 5.3.5.5.4 (Acquisition, Management, Disposition, and Use); 5.3.5.5.6 (Archives and Manuscripts);

Chapter 7, Requirements for All Interpretive and Educational Services, Section 7.5.4 (Research and Scholarship); Chapter 8, Use of the Parks, Sections 8.5 (Use by American Indians and Other Traditionally Associated Groups);

8.11 (Social Science Studies);

Chapter 10, Commercial Visitor Services, Section 10.2.4.9 (Natural and Cultural Resource Management Requirements).

DO #11 B Ensuring Quality of Information Disseminated by the National Park Service;

DO #12 Environmental Impact Analysis;

DO #19 Records Management; and

DO #78 Social Science, Section III.I (Peer Review).

### V. THRESHHOLDS FOR PEER REVIEW

#### V.a. When is Peer Review Required?

Although peer review generally benefits all scientific and scholarly activities, existing workloads do not permit conducting the same intensity of peer review in every case. As a result, supervisors apply professional judgment to each activity to determine what level of peer review is required at any step in the implementation process. In general the need for peer review should be decided by a supervisor or program leader at least one level above the person who conducts the work. The following factors are examples of considerations used in making this professional judgment:

the probable degree of controversy likely to be associated with the activity or the management, regulatory, or policy decision that it informs;

the potential for societal and resource impacts associated with management, regulatory, or policy decisions that the information might influence;

(Note: We would point out that Federal Judge Alsup, in reinstating the original 1979 GGNRA Pet Policy on June 2, 2005 concluded as follows:

"In 1983, the NPS revamped its regulations and added a new provision to require notice and -comment procedures before any "highly controversial" closure or opening of NPS land or before any such action that would have a major impact on visitor use patterns...Judge Laporte was correct that the 2002 closures were "highly controversial" and the government's appellate brief herein did not argue otherwise." Clearly precedent and the government's decision to utilize the notice and comment process here confirm this proposed change to the DMP is both highly controversial and will have a major impact upon visitor use patterns in the GGNRA. Peer review is required in this circumstance, and the SEIS acknowledges such.)

The last document we see in the chain of regulations following the initial Bulletin regarding Peer Review is Chapter 3 "Integrity of Scientific and Scholarly Activities" of the official Department of Interior Departmental Manual, effective 1/28/11.

Following are excerpts taken directly from the aforementioned document:

This chapter establishes Departmental policy on the integrity of scientific and scholarly activities the Department conducts and science and scholarship it uses to inform management and public policy decisions. Scientific and scholarly information considered in Departmental decision making must be robust, of the highest quality, and the result of as rigorous scientific and scholarly processes as can be achieved. Most importantly, it must be trustworthy. It is essential that the Department establish and maintain integrity in its scientific and scholarly activities because information from such activities is a critical factor that informs decision making on public policies. [Emphasis added]

This chapter establishes requirements for the professional conduct and management of scientific and scholarly activities, and the use of scientific and scholarly information, by and on behalf of the Department.

The Department is dedicated to preserving the integrity of the scientific and scholarly activities it conducts, and activities that are conducted on its behalf. It will not tolerate loss of integrity in the performance of scientific and scholarly activities or in the application of science and scholarship in decision making.

Code of Scientific and Scholarly Conduct includes provisions requiring:

avoidance of conflict of interest (real or perceived)

adherence to scientific standards including the Scientific Method

" publication of data along with study conclusions

(Note: this comment contains review of "studies" proffered by the GGNRA to substantiate restrictions designed to protect the Western snowy plover. These "studies" fail to adhere to the Code of Scientific and Scholarly conduct with respect to all three provisions listed above. We should point out that upon receiving these allegations in written form by way of our Comment on the DEIS, the NPS did not modify their planned restrictions but did remove the studies from the SEIS. Compliance with the law would have required withdrawal of the entire DMP. The same flaws are found in the 2006 Daphne Hatch "study" utilized by the GGNRA in 2008 to abolish off leash recreation on the southern 2.4 miles of Ocean Beach. We raised, in our written comment opposing the closure, the same objections to the Hatch "study" however our objections were ignored by the GGNRA.)

Allegations of scientific and scholarly misconduct with respect to DOI employees, volunteers, contractors, cooperators, partners, permittees, leasees, and grantees must be submitted in writing. The Department will consider allegations submitted within 60 days of discovery of alleged misconduct.

Allegations may be submitted by individuals or entities, internal or external to the Department.

Three criteria are necessary to establish research misconduct (Federal Policy on Research Misconduct):

(1) There is a significant departure from accepted practices of the relevant research community, and

(2) The misconduct is committed intentionally or knowingly or recklessly, and

(3) The allegation is proven by a majority of evidence.

43 CFR 20.501 requires employees of the Department to comply with all Federal statutes, Executive Orders, Office of Government Ethics and Office of Personnel Management regulations, and Departmental

regulations.

43 CFR 20.502 states that employees are required to carry out the announced policies and programs of the Department.

18 U.S.C. 208 and 5 CFR 2635 Subparts D and E state that department scientists and scholars are subject to requirements pertaining to conflict of interest and appearance of a lack of impartiality.

(Note: We would point out that a good case can be made that the Code of Scientific and Scholarly Conduct and Federal Policy on Research Misconduct have been violated repeatedly by GGNRA personnel since the 2005 reinstatement of the 1979 GGNRA Pet Policy. Evidence of the misconduct has been submitted by OBD OG by way of public comment when "studies" were revealed to support closures. It is unconscionable that GGNRA/ NPS/DOI personnel who reviewed comments prior to these closures never made any attempt to rectify the shortcomings, and apparently condoned them. Certainly, comments regarding the 2006 Daphne Hatch "study" out at Ocean Beach confirmed scientific and research misconduct based upon Federal policy guidelines. The GGNRA/ NPS/DOI ignored the scientific policy violations, and actually implemented the closure this discredited "study" was submitted to support! Clearly, there is no scientific accountability within the GGNRA/ NPS/DOI and, in fact, scientific misconduct is authorized and supported by management all the way up to the highest levels of the Department of the Interior.)

We at Ocean Beach Dog Owners Group (OBD OG) have called for the withdrawal of the proposed use changes for recreation with dogs in the Golden Gate National Recreation Area (GGNRA) and the reinstatement of the original 1979 GGNRA Pet Policy. This may appear on its face to be a radical position, but in actuality it is the only action the GGNRA can take in order to comply with current law. In the Draft Environmental Impact Statement (DEIS) the GGNRA promulgated several "studies/scientific claims" that clearly were not peer-reviewed and OBD OG discredited these "studies/scientific claims" quite effectively in our document "Comments on the GGNRA Draft Environmental Impact Statement" (dated May 26, 2011). The Supplemental Environmental Impact Statement (SEIS) no longer contains the "studies/scientific claims" that we discredited. Further, in the current SEIS the GGNRA acknowledges that they have no peer reviewed, site-specific studies to support their claims that dogs adversely affect water quality, vegetation, soils, or wildlife in the GGNRA. Rather than dropping these claims the SEIS relies upon possible outcomes, potential for degradation, and so on. In fact, there has been no peer review of the faux science the GGNRA has used for any closures since the original 1979 GGNRA Pet Policy was reinstated by Judge Alsup in 2005 (see United States of America v. Barley, Sayad and Kieselhorst; June 2, 2005)

The fact is the National Park Service has had a shift in ideology, and this new ideology is in direct conflict with the promises the NPS made to citizens to persuade them and their governing bodies to turn over the properties that make up the GGNRA. Had the GGNRA monitored this property conscientiously and peer reviewed their findings, the GGNRA would not have initiated this change to the Dog Management Policy in the first place.

This Agency's Management Is The Source Of Controversy And Conflict

It is the GGNRA's refusal to abide by the enabling legislation for this recreation area that has created controversy and user conflict. I am obligated to go through a chronological history of the GGNRA because the history provided in the DEIS/SEIS is inaccurate in many respects.

**Correspondence Type:** Letter  
**Correspondence:** History

The historical backdrop presented in this DEIS/SEIS could be politely classified as "revisionist". A more accurate description is as follows:

In March 1963, the President's Recreational Advisory Council released "Policy Circular No. 1." In it, the council laid out a new outdoor recreation policy for all agencies, with the key stipulation that all National Recreation sites be accessible at all times for "all-purpose recreational use." To make the point even clearer, it asserted that agency management of National Recreation Areas should be more responsive to recreational demands than to other such considerations as "preserving unique natural or historical resources." (Administrative History of Point Reyes National Seashore) The NPS was left with little choice but to heed these stipulations.

In response, the NPS advisory board decided to create three separate operating units and management goals for traditional NPS natural or Wilderness areas, Historical Monuments, and for the broad category of Recreation Areas. Secretary of the Interior Udall made official the new categories in his July 10, 1964, memorandum to new NPS director George B. Hartzog, Jr. Udall outlined the prescribed management policies for the recreational area category: "Outdoor recreation shall be recognized as the dominant or primary resource management objective." Resource use would emphasize "active participation in outdoor recreation in a pleasing environment." (Administrative History of Point Reyes National Seashore)

In 1970 Secretary of Interior Walter Hickel moved to create the GGNRA "to bring parks to the people", (U.S. Department of Interior News Release, September 14, 1970.) Congress established the GGNRA on October 27, 1972, stating:

"In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural, historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. In carrying out the provisions of this subchapter, the Secretary shall preserve the recreation area, as far as possible, in its natural setting, and protect it from development and uses which would destroy the scenic beauty and natural character of the area..." (16 U.S.C. Sec. 460bb.)

In addition to a generic statement of purpose as appears in most national park statutes, it is important to note that Congress included two "specific provisions" unique to the GGNRA.

First, the park was established "to provide for the maintenance of needed recreational open space necessary to urban environment and planning."

Second, the GGNRA statute imposes a unique limitation on NPS's discretionary power for "management of the recreation area" by providing that the "Secretary of Interior ...shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management."

While composing a list of enumerated recreational activities contemplated for the new urban park would be virtually impossible, legislative history reveals what Congress meant by "needed recreational open

space necessary to urban environment." "It is a well-recognized principle of statutory construction that contemporaneous interpretations of dated legislation are ordinarily given considerable deference when its meaning is later questioned." (National Rifle Association of America v. Potter 628 F. Supp. 903, 911 (D.C. Dist. Col. 1986).) In addition to sun bathing, picnicking, horse riding, swimming, hiking, and fishing, offleash dog walking was specifically addressed during Congressional hearings. For example, a letter by a seven year old child from San Francisco petitioned the Chairman for a dog park where she could play and socialize

her dog: "Dear Congressman Roy Taylor: I want a park so I can play in the park and my sister wants a park too and so my dog can play with another dogs and my Mom wants a park so she could take my dog out to play. I hope you will make a park. Elizabeth Linke." (Hearings Before the Subcommittee on Interior and Insular Affairs, House of Representatives, p. 414.)

Consistent with the trend at the time, Congress explicitly stated the GGNRA was to be a "new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan region." The GGNRA's mandate was to "expand to the maximum extent possible the outdoor recreation opportunities available in this region." (1-1. R. Rep. No. 1391, 92nd Cong., 2nd Session (1972).)

At the time, all municipal beaches and adjacent city parks considered for inclusion in the park were dedicated to off-leash recreation. (It has been the law of the State of California since its inception in 1850 that the State holds the tidelands in trust for its citizens. In decisions from both the United States and California Supreme Courts, the uses encompassed by the public trust doctrine have been held to include "general recreational" activities.)

When voting for Charter Section 7-403-l(a) authorizing the transfer of the City parks, the citizens of San Francisco were told that "the transfer of these lands is a technical resolution allowing the City and County of San Francisco to transfer city lands to the Golden Gate National Recreation area ...a national urban park established in 1972 by Congress to preserve 34,000 acres of land and water in San Francisco and Marin for recreational use by all citizens. " The first GGNRA Superintendent William J. Whalen made specific promises to San Francisco voters that the new NRA would retain historical recreational access (including off leash recreation) should they vote to include SF park properties in the GGNRA.

Although the city was interested in having its parks included in the new urban park, it wanted to retain jurisdiction over them; surrendering total control to the federal government was not part of the original deal. San Francisco Mayor Joseph Alioto told the United States House Hearings that the city parks proposed for inclusion in the GGNRA "should remain under the jurisdiction of the San Francisco Recreation and Park Commission" (April 6, 1972). The Department of Interior clearly understood that the "taxpayers of San Francisco had the foresight to preserve these recreational areas and the willingness to pay for their support" and "naturally wish to retain some voice in their operations and administration consistent again with an overall master plan. " (February 14, 1972). The San Francisco Recreation and Park Commission adopted Resolution No. 9030 which provides, "[t]hat this Commission, believing that inclusion of these properties is vital to the success of the concept of bringing parks to the people, recommends that they remain under the jurisdiction of the Recreation and Park Commission of the City and County of San Francisco." (May 30, 1972).

Aware that certain unique restrictions were included in the enabling statute requiring the NPS to maintain "recreational open space necessary for urban environment and planning", San Francisco adopted the "technical resolution" authorizing the transfer of City parks for "recreational use by all citizens."

The Board of Supervisors adopted Resolution No. 364-72, which provides:

1. "the City and County of San Francisco desires to maintain and improve the recreation facilities available to the residents of San Francisco on the aforementioned property owned by the City and County

of San Francisco located within the Golden Gate National Recreation Area;"

2. "The City and County of San Francisco desires to participate in the planning, administration and operation of the Golden Gate National Recreation Area"" and

3. "this Board of Supervisors endorse a policy of cooperation and administration and management of the Golden Gate National Recreation Area including the property owned by the City and County of San Francisco located within the Recreation Area. (June 9, 1972)".

Before the transfer occurred, an Agreement/Memorandum of Understanding (MOU) between San Francisco and the Federal Government gave the City Planning Department jurisdiction to review NPS plans within formally owned City lands after their incorporation into the GGNRA. Department of City Planning memos from the 1970s confirm that the MOU requires that all NPS proposals be submitted to the Department for review.

As minutes of the San Francisco City Planning Commission, dated December 5, 1974 confirm, the resolution to transfer the property was approved on that day because the Commission was told: "the deed transferring jurisdiction over the parcel to the Federal Government would specify that the property should be used for Open Space and Recreational purposes only."

Even as the properties were being secured, the National Park Service was moving in the direction of abolishing the National Recreation, Historical Monuments, and Wilderness Management categories. The General Authorities Act of 1970 began the legal unraveling of the three management categories. Officials in Washington assured field operations that these changes were administrative and "not intended to create significant changes in the management of parks." (Administrative History of Point Reyes National Seashore)

But in reality, the move was being made to reverse the priority of recreation. We shall now track the progression of this move to place "preservation/restoration" over recreation.

Considering his representations to SF voters and elected officials, it seems duplicitous at best that in 1977 the same William J. Whalen (recently promoted to Director status in the NPS) officially dismantled the three-category distinctions which provided different management for National Recreation Area category properties (which included the GGNRA). To answer the obvious question as to how the priority of recreation was still to be honored, it was said the promulgation of new regulations were developed to reflect "the actual Management practices which have become established in park areas, either through legislative requirements or policy decision." (Memo from Associate Director, Management and Operations to Directorate and Field Directorate, 12/22/77).

Congress bolstered NPS Director Whalen's decision to further de-emphasize the Recreational preference in the Redwoods Act of 1978, which included an amendment to the 1970 General Authorities Act declaring the "regulation of the various areas of the National Park System, . . . shall be consistent with and founded in the purpose established by the [Organic Act] to the common benefit of all the people of the United States." (Administrative History of Point Reyes National Seashore)

Acting on the promise to the city and the mandate to manage park resources "consistent with sound principles of land use planning and management" for the "maintenance of needed recreational open space necessary to urban environment and planning", NPS developed the 1979 Pet Policy through the auspices of the Citizens Advisory Commission which designated certain areas for voice control in San Francisco and Marin counties. The development of this policy was initiated "because the ordinary guidelines outlined in the Code of Federal Regulations do not really apply in an urban area. People and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy."

Documents relating to development of the policy leave no question that NPS and not the Citizens Advisory Commission developed the off-leash policy for GGNRA. In October, 1977, Rolf Diamant, GGNRA "Environmental Coordinator" prepared a memo proposing a "Draft Dog Policy for San Francisco Unit." His memo enumerated the following guidelines:

1. "No regulation, verbal or written, should be attempted that cannot be reasonably and consistently administered."
2. "Dog regulations should be different for different areas of the park reflecting public needs and attitudes as well as urban geography and our capabilities."
3. "When we discourage or restrict dogs in any area, whenever possible, an alternative site where dogs are allowed should be suggested."

Each precept is consistent with "sound principles of land use management". To facilitate public review of the proposed policy, the Citizens Advisory Commission established a Pet Policy Committee to conduct hearings on the proposed policy. A briefing memo for the record prepared by the Staff Assistant to General Superintendent dated April 3, 1978 acknowledged that 36 CFR 2.8 leash law was "applicable to all properties of GGNRA". NPS realized a special regulation would have to be prepared. "A deviation from this regulation will require the writing of a special regulation specific to GGNRA". The leash law was not enforced while the new policy was being developed: "Enforcement of the CFR has been non-existent until a dog policy and possibly a special regulation is established."

The 1979 Pet Policy was established as the official off-leash recreation policy for the GGNRA as required by the enabling statute and the promise made to the city. NPS issued press releases of the official off-leash policy (Lynn Thompson memo to Coalition For San Francisco Neighborhoods, 10/17/78). Again, NPS told San Francisco this policy was developed because the "[e]xisting federal regulations' were not "a viable situation in an urban area".

By summer of 1979, GGNRA had initiated the process to bring federal regulations into compliance with the enabling legislation and the off-leash policy. A draft special regulation 7.97(b) was submitted to the Western Regional Director NPS for approval. Department of Interior Solicitor Ralph Mihan reviewed the draft proposed regulation and found "the proposed regulation to be legally acceptable", but advised the formal request should include a "authorship statement or a statement of significance" which "must be included within the rulemaking package before its transmittal to Washington." (Ralph Mihan, Solicitor to Western Regional Director, Re: Proposed Rulemaking Golden Gate National Recreation Area (Pets), 7/23/79).

The draft proposed regulation in fact contained a statement of significance, the Section Seven Amendment was being proposed "because large portions of land formerly used as pet exercise areas have been included with Golden Gate National Recreation Area." (1/9/80 Regional Director memo to Superintendent GGNRA: Re: Proposed Special Regulation - Pets USPROD00386-8). The proposed regulation also called for public comment "within 30 days of the publication of this notice in the Federal Register."

Although this 1979 Pet Policy was consistent with the statutory mandate for the GGNRA to provide "needed recreational open space necessary for urban environment" and required by the promise made to San Francisco when city property was donated to the park, officials in Washington D.C. did not finalize the Section Seven Special Regulation to bring their regulations into compliance with the enabling statute. Subsequently the 1979 Pet Policy guidelines were incorporated into the 1982 Natural Resources Management Plan as Appendix C. The duplicity lay in the GGNRA's intentional failure to designate the 1979 Pet Policy as a Section Seven Special Regulation-the type of regulation referred to in the Memo dated 12/22/77 referenced above.

The significance of this will be apparent in 2001.

Finally, Director William J. Whalen's 1980 NPS Management Policies produced a systemwide change in overall policy and management. The clear directive was preservation first, recreation second."  
(Administrative History of Point Reyes National Seashore)

If you look at some of the GGNRA's management activities, you have cause to wonder if the GGNRA really wants us in "their park". For example, in 1989 the GGNRA, under the supervision of Brian O'Neill, signed on to a biosphere habitat program entitled "Man and Biosphere Habitat Programme" ("MAB" or "MAP"). One would be hard pressed to find a philosophy in greater conflict with the recreational priority of the GGNRA than that of Peter Bridgewater, Secretary of the MAB/MAP Programme, who has said, "Earth would be a better place if we had no people." The year of 1989, when the Biosphere program began, saw visitors drop by over 5 million in this Recreation Area that otherwise had shown steady growth in recreation visitors since they started tracking visitors in 1973.

In 1992 Bill Clinton's newly appointed Secretary of the Interior, Bruce Babitt, had a different vision for the National Parks System. A new anti-recreation ideology pervaded Park Service policy. Despite the legislative mandate that sound land use principles be applied "to maintain needed recreational open space necessary for urban environment", NPS summarily closed off in August of 1996:

over 15 miles off-leash recreational space in San Francisco

11 miles of trail in Presidio

2.2 miles at Ocean Beach

Lands End

Fort Miley

The aforementioned Diamont memo confirms that all closures affected areas used for this recreational activity before the park was established: Ocean Beach, Fort Funston, Sutro Heights Park, Phelan Beach, Lands End, and Baker Beach. Diamont's comments concerning Ocean Beach explain why that closure has been unsuccessful:

"Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try. Also lifestyles are such on Ocean Beach, that an inflexible NPS here could hurt our improving relations with visitors."

The DEIS states: "Since the 1990s, the San Francisco Bay Area population and overall use of GGNRA park sites have increased, as have the number of private and commercial dog walkers. At the same time, the number of conflicts between park users with and without dogs began to rise, as did the fear of dogs and dog bites or attacks."

With respect to the claim in the DEIS that use of the Recreation Area had increased, two points can be made. First, increased usage over time was anticipated when this National Recreation Area was created. The House Report No 92-1391 made clear that the GGNRA would be confronted with problems in San Francisco that would require careful planning because of the high volume year-round visitation:

"As a national urban recreation area, this new component of the national park system will be confronted with problems which do not frequently occur at other national park and recreation areas. Great numbers of people can be expected to use the area particularly those portions located in San Francisco County."  
(pg. 11)

There is no surprise here. Therefore, abandonment of the principles outlined in the enabling legislation, in an absence of appropriate monitoring of resources, as proposed in this DEIS/SEIS is not an acceptable management reaction to increased usage of the GGNRA by citizens.

Second, the number of park visitors has NOT increased dramatically over the past 20 years. In fact, in 1987 the GGNRA experienced its greatest number of visitors, coming in at 21,767,176 recreational visitors. According to NPS statistics, in 2010, the total number of recreational visitors was 14,271,503, down about 34% from 1988. The SEIS attempts to attribute the decrease in visitors to a change in statistical methods, eliminating the visitors to the San Francisco Maritime National Historical Park from the GGNRA count. However, the SEIS ultimately concludes annual visitation to the GGNRA is shown to have reached a capacity of 13 to 15 million visitors as the following graph shows. (The graph was a part of our DEIS Comment).

Consider also that in the past 20 years the GGNRA acreage has almost doubled in size, and expanded into San Mateo County. This puts a far larger population in direct proximity to the Recreation Area, yet the visitor numbers are down dramatically. Users of the GGNRA will tell you that this SEIS is just a reflection of the management priorities that Brian O'Neill started with his Biosphere commitment that have systematically denied and discouraged access for the public to this Golden Gate National Recreation Area.

Evidence the issue was really a new ideology is the fact that the GGNRA experimented with changing its name to Golden Gate National Parks (GGNP) in an effort to convince citizens of the Bay Area that the paramount mission of the NPS is to bring the wilderness to the City. On August 28, 2001, the GGNRA Advisory Commission meeting was opened by Chair Rich Bartke as a regular meeting of the Advisory Commission to the National Parks in the Golden Gate Area. Mr. Bartke was asked to correct that reference by a concerned citizen, Michael Goldstein. Mr. Goldstein stated publicly in his comments to the Commission that this was not the first time he had addressed the Commission on this topic and that this practice of omitting the word "recreation" from the Park's name had become a matter of public concern. This runs counter to the intentions of the City of San Francisco and its citizens who had been promised that the GGNRA will remain an urban recreation area.

The DEIS further states: During this period (2001), it was clarified by the Department of Justice, U.S. Attorney, and the Department of the Interior Solicitor Offices that the voice-control policy then in effect at Fort Funston and other locations in the park was contrary to NPS regulations. In a public meeting in January 2001, the Commission acknowledged that the voice control policy was contrary to 36 CFR 2.15(a)(2), prohibiting off-leash dogs in national parks, and therefore illegal and unenforceable.

Now we see the significance of the GGNRA/ NPS decision to refrain from making the 1979 Pet Policy a Section Seven Special Regulation. By doing so, they were able to exercise "plausible deniability". In reality, this is just one more example of how the GGNRA has dealt in bad faith with the public whom they, in theory, serve.

The public and elected officials were incensed at the GGNRA change in policy. Indeed, in 2001, a Resolution was approved by the San Francisco Board of Supervisors, detailing the history of the relationship between the City, the public and the GGNRA. The Resolution (and its findings) is so significant that it is quoted in full below:

RESOLUTION for S.F. Board of Supervisors Vote [Urging GGNRA to delay leash enforcement - Passed on December 10, 2001]

Resolution requesting the National Park Service to delay enforcing, in the San Francisco parks situated in the GGNRA, 36 C.F.R. 2.15, requiring pets to be on leash in national parks, until the ANPR process has been completed.

WHEREAS, In 1975, the City and County of San Francisco transferred Fort Funston and other City-owned park lands to the federal government to be included in the Golden Gate National Recreation Area (GGNRA), to be administered by the National Park Service (NPS); and,

WHEREAS, The statute creating the GGNRA (16 U.S.C. Section 460bb) specifically states that the GGNRA was established to provide for the maintenance of needed recreational open space necessary to the urban environment and planning and requires that the Secretary of the Interior "utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management;" and,

WHEREAS, Former Charter section 7.403-1(a), as approved by the voters, required that the deed transferring any City-owned park lands to the NPS include the restriction that said lands were to be reserved by the Park Service "in perpetuity for recreation or park purposes with a right of reversion upon breach of said restriction;" and,

WHEREAS, When Fort Funston and other City-owned parks were transferred to the federal government, a federal regulation existed requiring all pets to be on leash in federal parks, yet the NPS chose not to enforce this regulation in the San Francisco City parks; and,

WHEREAS, In April 1978, the GGNRA stated its position that "the ordinary guidelines outlined in the Code of Federal regulations do not really apply in an urban area," and that "people and their animals have been visiting the park for too long to apply an all-inclusive arbitrary policy;" and,

WHEREAS, The Superintendent of the GGNRA in the spirit of this statement developed a draft pet policy and submitted it to the GGNRA Advisory Committee for further review and public hearings; and,

WHEREAS, In September of 1978, after extensive public hearings and public surveys, the Advisory Commission proposed guidelines for a pet policy for the San Francisco Unit of the GGNRA, designating Fort Funston, Lands End, Ocean Beach, Fort Miley, Baker Beach, and Crissy Field for continued off-leash recreation; and,

WHEREAS, On October 6, 1978, GGNRA General Superintendent Lynn Thompson accepted these designations with the following comment: "As you know, the Advisory Commission approved the proposed guidelines for a pet policy in the San Francisco Unit of the GGNRA at their September 27 meeting," and she continued, "We are accepting in total the Commission's recommendations for each of these areas;" and,

WHEREAS, On February 24, 1979, the GGNRA finalized the pet policy for both San Francisco and Marin County, establishing areas where pets could be exercised off-leash; and,

WHEREAS, In 1982, the 1979 Pet Policy was incorporated into the GGNRA Natural Resources Management Plan as Appendix C; and,

WHEREAS, On July 8, 1992, NPS Western Regional Director Stanley Albright assured U.S. Senator John Seymour that "there is no change in the 1979 Pet Policy which provides the visitor of walking one's dog off leash"; and,

WHEREAS, By letter dated July 8, 1992, Western Regional Director Stanley Albright also assured U.S. Senator Cranston that there would be no change in the 1979 Pet Policy; and,

WHEREAS, On February 5, 1999, Pacific Western Regional Director John Reynolds assured U.S. Senator Dianne Feinstein that the "GGNRA has adopted a pet policy that is more liberal than the regulations enforced at other national park sites throughout the United States, where pets are required to be leashed at all times and are, for the most part, excluded from all but developed areas," and the letter continued, "[The] GGNRA has, with the assistance of the park's Advisory Commission, established a pet policy that allows some opportunity for visitors to enjoy a few designated areas as voice control areas where pets are allowed off leash;" and,

WHEREAS, On March 19, 1999, GGNRA Superintendent Brian O'Neill stated to U.S. Congresswoman Nancy Pelosi, the "GGNRA has adopted a pet policy that is more liberal than pet regulations at other national park sites throughout the country... certain areas of the park have been designated as voice control areas where pets are permitted off-leash;" and,

WHEREAS, In November of 2000, the GGNRA Advisory Committee attempted to revoke the 1979 Pet Policy, but failed due to a point of order; and,

WHEREAS, On January 23, 2001, over 1,500 people attended the GGNRA Advisory Committee meeting to protest revocation of the 1979 Pet Policy, nine San Francisco supervisors spoke, and both Senator Speier and Assemblyman Shelley sent letters to be read by their representatives; and,

WHEREAS, The Advisory Committee recommended that the GGNRA hold meetings with stakeholder groups within the next 120 days to resolve the issue, and to not change leash enforcement for this period; and,

WHEREAS, The Advisory Committee at this meeting did not vote on the Pet Policy; and,

WHEREAS, Rather than hold stakeholder meetings, the GGNRA received permission from Washington for a more formal process called Advance Notice of Proposed Rulemaking (ANPR), but this process has not begun; and,

WHEREAS, In November, 2001, the GGNRA began to aggressively enforce the leash requirement at Fort Funston, sending teams of law enforcement rangers for 2 to 3 hour segments, and issuing tickets for walking dogs off-leash without initiating the ANPR process in good faith with the public; and,

WHEREAS, Off-leash recreational users believe that off-leash recreation is legal at Fort Funston, and they agreed to go through the ANPR process and further rulemaking in order to obtain a special rule for the GGNRA that specifically recognizes that off-leash dog-walking is permissible in certain GGNRA parks; and,

WHEREAS, The Board of Supervisors of the City and County of San Francisco finds that the recent enforcement of 36 C.F.R. 2.15 is in contravention to the representations made to the public at the Citizens Advisory Committee meeting on January 23, 2001; now, therefore, be it

RESOLVED, That the Board of Supervisors of the City and County of San Francisco hereby requests the National Park Service not to enforce, in the GGNRA parks which were donated to the federal government by the City and County of San Francisco, 36 C.F.R. 2.15, which requires that all pets be on leash in federal parks, until the ANPR process has been satisfactorily completed; and, be it

FURTHER RESOLVED, That the Board of Supervisors of the City and County of San Francisco hereby requests the NPS to advise the Board as to the status of the ANPR process; and, be it

FURTHER RESOLVED, That the Clerk of the Board of Supervisors shall send copies of this resolution to the offices of United States Senator Dianne Feinstein, United States Senator Barbara Boxer, Congresswoman Nancy Pelosi, Congressman Tom Lantos, State Senator John Burton, State Senator Jackie Speier, Assemblywoman Carole Migden, Assemblyman Kevin Shelley, GGNRA Superintendent Brian O'Neill and the National Park Service.

Unfortunately, the GGNRA ignored the Resolution, and in 2002 instituted a ban on off-leash recreation and began ticketing dog guardians for recreating with their dogs off-leash. As mentioned in the Resolution, pressure from the City of San Francisco to take back the management of these properties in the courts, as well as the Federal court confirming other violations of law the GGNRA had been guilty of, caused the GGNRA to invite the public to petition the Federal government for the ability to create a Section Seven Special Regulation for off-leash recreation in the GGNRA (ANPR).

The public submitted thousands upon thousands of requests to the Federal government, and a Federal Panel reviewed the history and legal agreements for the GGNRA. The Federal Panel that reviewed the applicable authorities, policies, planning guidelines, and information on Park setting, natural and cultural resources, and public safety developed the following observation (among others):

"GGNRA parkland is immediately adjacent to San Francisco, one of the most densely populated urban centers in the United States of America, and manages a significant portion of recreational open space in the city. Most residents do not have 'backyards' or access to private open space to exercise their pets off-leash. Residents rely on the close proximity of GGNRA open space for this purpose." (ANPR Decision Documents; Federal Panel Recommendations, *supra*, Section 3, emphasis added.)

"... [the GGNRA should] clearly distinguish between on-leash, off-leash, and no pet areas to avoid management and public confusion. " (Federal Panel Recommendation to the General Superintendent on Proposed Rulemaking for Pet Management at Golden Gate National Recreation Area, Section 4 ("Federal Panel Recommendations"). p. 11 (Revised November 7, 2002). [See [http://www.nps.gov/goga/pets/anpr/pdf/federal\\_panel\\_recommendation.pdf](http://www.nps.gov/goga/pets/anpr/pdf/federal_panel_recommendation.pdf).]

The Federal Panel concluded in its November 2002 recommendation to the GGNRA it would be appropriate to create a Section Seven Special Regulation to allow off-leash recreation in the GGNRA.

At that time, the GGNRA could have instituted the 1979 Pet Policy as the Section Seven Special Regulation for the GGNRA. Instead, they decided to institute Negotiated Rulemaking (NR) to create a new pet management policy for the GGNRA.

Prior to NR starting, in 2004, a Federal magistrate reviewing tickets issued to dog guardians determined that the 1979 Pet Policy had been illegally rescinded, and re-instated the 1979 Pet Policy as the controlling law for off-leash recreation in the GGNRA

Again, even with the legal protection of a court order, the GGNRA chose not to institute the 1979 Pet Policy as the new Section Seven Special Regulation. Instead, the GGNRA appealed the Federal Court's decision. In 2005 the GGNRA lost their appeal. The 1979 Pet Policy was affirmed as the controlling pet policy in the GGNRA.

Judge Alsup of the Federal Court noted in his decision affirming reinstatement of the 1979 Pet Policy in the GGNRA, his findings regarding the history of pet management in the GGNRA:

"In sum, for more than twenty years, the GGNRA officially designated at least seven sites for off-leash

use. This was not accidental. It was a carefully articulated, often studied, promulgation. The responsible GGNRA officials in 1978 and thereafter presumably believed they were acting lawfully. Even now, the government concedes that the GGNRA had full authority at all times to relax the general leash rule at the GGNRA but argues it could have done so, at least after 1983, only via a "special regulation." In other words, the agency allegedly used the "wrong" procedure back in 1978 (and thereafter) even though a "right" procedure to reach the desired result was available and could have been used. The government has not revealed its internal justification for following the "wrong" process.

Whatever it was, the justification was abandoned in 2002 with the two-word explanation that it had been "in error." With this ipse dixit, the NPS wiped away two decades of policy, practice, promulgations, and promises to the public." (United States v. Barley, Order Of Affirmance, supra, p. 5.)

The GGNRA continued to flout both recommendations that it solicited from the Federal Panel and the Court decision to reinstate the 1979 Pet Policy as the law governing pet management in the GGNRA. In 2007, Daphne Hatch, Chief of Natural Resources Management and Science for the GGNRA was quoted in the San Francisco Chronicle as saying: "Ocean Beach without the people is an incredible habitat. But people think of it as a sand box or their backyard."

While Superintendent O'Neill gratuitously stated that the Court "effectively reinstated the 1979 Pet Policy", the GGNRA refused to acknowledge the reinstatement of the 1979 Pet Policy in the manner prescribed by law, 36 C.F.R. Section i.7(b). There was no written designation of the reinstated off-leash properties; indeed, the GGNRA used this murky situation to continue to harass and ticket off-leash dog-walkers in areas that were off-leash pursuant to the 1979 Pet Policy and amendments thereto. In addition, the GGNRA, in violation of 36 C.F.R. Section 1.7(a)(4), persisted in ignoring the Court's ruling and misinforming the public. For example, on the NPS website, under the heading, "Dogwalking Information and Regulations", a statement dated June 8, 2005, proclaims: "Due to the recent court ruling, this information is under review and will be revised shortly." A brochure found online at the NPS website entitled, "Enjoying the Park with your Dog", advises readers that, "Where dogs are permitted, Federal law requires that they be on a leash, not to exceed six feet in length, in all units of the National Park System."

In addition, for over a year, GGNRA management refused to change the signage in the Park to reflect the Court's ruling in derogation of 36 C.F.R. Section i.7(a)(1)(4). For photo documentation of the illegal signage (see <http://oceanbeachdog.home.mindspring.com/id8.html>). This illegal and confusing signage clearly created user conflict and was detrimental to the safety and enjoyment of those visiting the GGNRA.

We would add as an aside at this point, objectives listed in this DEIS/SEIS were the desire to enhance Visitor experience and Safety, enhanced compliance with Dog Rules, and Park Operations. It should be evident from this point in GGNRA history, that the greatest obstacle to fulfilling these objectives was and still is GGNRA Management itself.

Despite the fact that GGNRA management had been given permission to create a Section Seven Special Regulation for off-leash recreation in the GGNRA by the Federal Panel and by the Court when the Court reinstated the 1979 Pet Policy, the Superintendent refused to make the 1979 Pet Policy a Section Seven Special Regulation. He instead instituted a Negotiated Rulemaking (NR) process that was conducted in bad faith, was unlawful and did not reach consensus. The GGNRA refused to acknowledge the 1979 Pet Policy as the logical starting point for NR. In fact, the 1979 Pet Policy was not listed as a document the NR Committee would be able to refer to within the NR process. The GGNRA continued to cling to their view that the 1979 Pet Policy was an illegitimate document which NEVER had the power of law despite the contrary findings of the Court.

NR required consensus among participants. If consensus was not reached for a Section Seven Special Regulation, the GGNRA was allowed to create a Rule arbitrarily, as it did when they rescinded the 1979 Pet Policy. In fact, even if the NR did reach consensus, the GGNRA maintained that they were still free to ignore the findings of the NR process and subsequently create its own rule.

The GGNRA selected the participating groups and their representatives. Six of the nineteen groups that participated had submitted a petition to the Federal government asking that ALL off-leash recreation in the GGNRA be banned. These same groups had both publicly and privately stated they saw NR as a means to eliminate off-leash recreation from the GGNRA entirely. Despite protests, they remained on the NR Committee.

Dr. Valente was initially slated to participate in NR as a representative for Ocean Beach DOG (OBDOG). When she discovered the flawed manner in which this process was to be conducted, she complained. Instead of resolving our legitimate complaints about the process, the GGNRA/ NPS/DOI threw her off the NR Committee. NR predictably came to an end without consensus, and was a colossal waste of taxpayer money to the tune of over five hundred thousand dollars.

Subsequently, the initiation of the DEIS was announced. The explanation for this might be found in a quote from then Western Regional Director (now NPS Director) Jon Jarvis. At the NPS Centennial Initiative Listening Session (Presidio Officer's Club, San Francisco, Calif., March 22, 2007) Director Jarvis said to Dr. Suzanne Valente and Stephen Golub (and we quote), "I would rather give up those [the GGNRA] properties than have dogs running loose on them."

In 2008, the GGNRA supported an attempt by Congresswoman Nancy Pelosi to surreptitiously slip a name change (and therefore a change in the governing mandates) from National Recreation Area to National Park through bill H.R. 6305. This action can be construed as an admission that the NPS/GGNRA is aware their actions do not conform to the enabling legislation. Public outcry upon the discovery of this section in HR 6305 forced Congresswoman Pelosi to withdraw her blatant attempt to circumvent the will of the people and the Federal Court.

In 2011, we were presented with a 2400 page DEIS. In 2013, we are now presented with a 1500 page SEIS.

#### Evaluation Of The Actual DEIS/SEIS

The enabling legislation of the GGNRA requires that the GGNRA "utilize sound principles of land use planning and management". National Park managers are directed by federal law and National Park Service policies and guidance to know the status and trends in the condition of natural resources under their stewardship. NPS describes this process as "monitoring of the vital signs".

There is absolutely no legitimate "monitoring of the vital signs" of the GGNRA to support the premise of this DEIS/SEIS. The failure to complete vital signs monitoring in a competent manner violates the enabling legislation as well as the following list of laws enumerated in the NPS resource "Vital Signs Monitoring" (see <http://science.nature.nps.gov/im/monitor/LawsPolicy.cfm>):

- " National Park Service Organic Act
- " General Authorities Act of 1970
- " Redwood National Park Act
- " National Environmental Policy Act of 1969
- " Clean Water Act

" Clean Air Act  
" Endangered Species Act of 1973  
" Environmental Quality Improvement Act of 1970  
" Coastal Zone Management Act of 1972  
" Marine Protection, Research, and Sanctuaries Act of 1972  
" National Parks Omnibus Management Act

The failure to complete competent "vital monitoring" results in the following fatal flaws in this DEIS/SEIS:

- 1) The Draft Plan/DEIS/SEIS provides no site specific peer-reviewed studies to substantiate the claims of resource degradation or destruction. Instead, the SEIS attempts to substitute a review of the "literature" regarding studies in other locations to establish potential harm to the Recreation Area. It is upon this premise of potential harm that they base their proposed restrictions upon the access of humans and their dogs to the Recreation Area.
- 2) The Draft Plan/ DEIS/SEIS assumes but does not provide the required rigorous analysis that resource conditions result solely from dog use of the sites, discounting the contribution from other visitors and recreational users. The Draft Plan/DEIS/SEIS does not address the contribution of other impactful activities, including special events, to the resource conditions and existing impacts at each of the GGNRA sites.
- 3) In many places, the Draft Plan/DEIS/SEIS does not provide any data on actual impacts by dogs in areas being proposed for new dog walking restrictions. The words can, may, and could are everywhere in place of hard facts which would have been in evidence had the required "vital monitoring" been done. In places where data are provided, the Draft Plan/ DEIS/SEIS makes undocumented assumptions of unacceptable impacts and that dogs are the culprits.
- 4) The Draft Plan/ DEIS/SEIS assumes species are present in areas where there is no record of their presence. In other places, there is inconsistent information about the presence of species.
- 5) Many of the findings in the Draft Plan/ DEIS/SEIS are founded on a reference included in these documents as Appendix G, "Law Enforcement Data" (NPS 2008c). In the DEIS there was no tangible data. For example, an entry is as follows: "observed a black dog chasing a flock of 14 snowy plovers. I observed the dog chasing the birds from the water to the dunes and up and down the beach for several hundred meters north and south. The dog would charge at the birds and the Plovers would fly away from the dog. Each time the Plovers would attempt to land, the dog would charge directly at them and cause them to take flight again. I watched this happen for continually for eight minutes timed by my watch from 1150 to 1158 hours. Then the dog stopped chasing the Plovers and wandered in the hilly dunes to the north/or several minutes. The dog then returned to chasing the Snowy Plovers for a few minutes more... After the dog ceased chasing the Plovers, they stopped taking flight and started feeding at the water line." Clearly, if this dog was chasing plovers, they would not have returned to feeding at the water line after the chase was over. Plovers feed at the high tide line when the water has already retreated. These were sanderlings, birds that appear almost identical to the plover, are plentiful at Ocean Beach (not threatened or endangered) and can be differentiated by different feeding patterns and different resting patterns. However, in the Appendix G for the SEIS, we have a plethora of graphs outlining the number of violations by area of the GGNRA and year. However, because we have no idea about the level of visitation at each area, there is no context. For 2001-2006, they merely show the number of violations within all of the GGNRA per year. We can see that for 2006, there are 3943 violations, and dog related violations are about 6% of the total. The information we really need, and the GGNRA fails to provide, is that dogs were involved in approximately 227 violations when 13.5 million visitors (many with dogs) came to the GGNRA in 2006. Does this level of infractions justify a decision at that time to radically change the Dog Management policy?
- 6) If you read the Affected Environment section carefully, you will learn that there are no plant species which are endangered or threatened on Federal or State registers that have designated "critical habitat" in

the GGNRA. If we look at the ESA and the enabling legislation for the GGNRA, there is no reason to displace recreation to enhance the growth of any of these listed plants in the GGNRA. However, we see that GGNRA management has displaced recreational access to plant these plants with regularity, the most egregious location being Fort Funston.

7) The Draft Plan/DEIS/SEIS assumes, but fails to demonstrate, the "cause and effect" relationship that where dogs are present within GGNRA sites, there is a disturbance of natural resources or demonstrate that the disturbance of resources is attributable to dogs (versus other factors).

8) Because the SEIS does not recognize recreational resources as an environmental resource, the analysis of the environmentally preferable alternative is flawed. Recreation is identified in the GGNRA enabling legislation as one of the four outstanding values to be maintained and protected. In doing so, the enabling legislation recognizes that the achievement of these outstanding values is not mutually exclusive.

9) When new lands become part of GGNRA, the recreational uses existing at the time of acquisition should be allowed to continue unless GGNRA determines, through the public land planning (vital monitoring), peer review of their findings, and NEPA process that unacceptable impairment would occur.

10) The Draft Plan/DEIS/SEIS not only fails to disclose and evaluate the impacts of the alternatives on recreational resources in the context of an urban environment, it dismisses the quality of the urban environment entirely on page 24 where it states, "the quality of urban areas is not a significant factor in determining a dog management plan." As recognized in its enabling legislation, one of the most important aspects of the GGNRA is the sharp contrast between its undeveloped open spaces and the adjacent developed urban environment. The GGNRA's open space and recreational opportunities are intended to provide refuge and relief for nearby urban dwellers. According to NEPA, An EIS is required to analyze the human environment. The federal NEPA rules define the human environment and its scope in an EIS as follows: "Human environment shall be interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment." When an EIS is prepared and human and natural/ physical environmental effects are interrelated, the EIS should discuss all of these effects on the human environment.

The flaws listed above will be highlighted by further analysis of the Western Snowy Plover at Ocean Beach and Crissy Field, the Bank Swallow at Fort Funston, Sweeney Ridge, Mori Point, Muir Beach and review of trails in Marin County. We would point out that flawed studies without peer review have been utilized in the interim between the Federal Court's reinstatement of the 1979 Pet Policy and this DEIS/SEIS to implement access restrictions at Ocean Beach, Crissy Field and other sites. All of these closures were unlawful which is why we insist the original 1979 Pet Policy be reinstated and codified as a Section Seven Special Regulation at this time. Additionally, new sites added since 1979 must have appropriate studies and peer review before historical usage is modified.

The failure to peer review scientific information before release to the public or inclusion into this DEIS/SEIS violates the following laws:

**Correspondence:** Alleged Protection For The Western Snowy Plover

This DEIS/SEIS proposes to further restrict dogs at Ocean Beach and Crissy Field based upon an alleged necessity to protect the Western Snowy Plover. The language of the Endangered Species Act contemplates and supports the position that any loss of these recreational areas for such purpose be balanced by scientific proof that such sacrifice will indeed help save the plover from extinction.

The requisite monitoring of the plover (as dictated by NPS regulations) in the GGNRA has not been completed in a manner that would provide scientific proof of a need for restrictions. In fact, even the GGNRA admitted in 1996 that the "scientific evidence" showed that restriction of off-leash recreation will not increase the number of plovers at Ocean Beach. It is more likely that the restriction of off-leash recreation in these areas will negatively impact the plover population. Studies in other areas fail to substantiate the GGNRA's plan to limit access in the GGNRA to benefit the plover.

Monitoring in areas like Surf Beach at Vandenburg AFB has confirmed there was an increase in plover breeding pairs and viability before restrictions were instituted. In 2011, it was confirmed there has been no increase in breeding pairs since 1995 when restrictions were instituted, and only 39% of the fledglings survived due to predation. It is generally presumed the presence of dogs and humans discourages the presence of predators such as the fox.

Twenty-five years after Massachusetts started shutting down entire beaches to protect the piping plover, they're still struggling to survive. But crowded places like Revere Beach, with its 2.5 million annual visitors, have been forcing environmentalists to reconsider their assumptions. Even on raucous Sandwich beaches in 2008, when bonfires and fireworks weren't uncommon, 41 plover pairs fledged 87 chicks. Maybe the best way to help the plover is to stop worrying so much.

There was a "study" at Ocean Beach in 1996 by Daphne Hatch, GGNRA Wildlife Biologist, which was more of an inventory assessment, and its conclusions are fatally flawed. I will review that "study" in detail later in this document. The next "study" the GGNRA performed with respect to this "threatened" resource at Ocean Beach was in 2006. Hardly an example of vital signs monitoring that meets the standards described in NPS documents. Restrictions were implemented at both Ocean Beach and Crissy Field based upon this "study", although the "study" was only conducted at Ocean Beach. Further, without mitigation measures implemented over this 10 year time span, and without coordination of intermittent monitoring, it is impossible to draw any conclusions as to the benefit of restricting or eliminating dogs within these respective ecosystems. U.C. Berkeley Environmental Sciences study presented on May 7, 2007 a peer reviewed study that concludes within the GGNRA that the feeding of the Western Snowy Plover does not appear to be negatively affected by human and pet recreation. This study has been ignored by the GGNRA, even though the study was conducted with GGNRA cooperation. The last

"study" of the plover in the DEIS was performed in 2008, and is at Crissy Field only. That "study" was reviewed and discredited in our Comment on the DEIS. Our analysis is contained within this document even though the "study" was omitted in the SEIS.

#### Is The Western Snowy Plover In Danger Of Extinction?

The best scientific data currently available establishes that the Western Snowy Plover is not threatened or endangered (at risk for extinction) at all. Significantly, a study commissioned by the US Fish and Wildlife Service (USFWS) and the US Geological Service (USGS) in June of 2000 noted: "Coastal and inland populations of Snow y Plovers in the western United States are currently being managed separately; coastal populations are protected as a Distinct Population Segment under the U.S. Endangered Species Act, while inland populations are not listed. Our stud y provides no evidence of genetic differentiation between coastal and inland populations." [emphasis added] These findings demonstrate that the Western Snowy Plover population is far greater than previously believed, and so large as to no longer qualify the Western Snowy Plover as either threatened or endangered.

#### Why Is The Western Snowy Plover Still Considered Threatened With Extinction?

The latest decision by the USFWS to continue to keep the Western Snowy Plover (WSP) on the Endangered Species List (ESL) is a clear example of the violation of the Endangered Species' Act's requirement that decisions be "based upon the best scientific and commercial data available ". Traditional tenets of science (the scientific method) have been ignored to justify this conclusion.

The scientific method is the process by which scientists, collectively and over time, endeavor to construct an accurate (that is, reliable, consistent and non-arbitrary) representation of the world. In summary, the scientific method attempts to minimize the influence of bias or prejudice in the experimenter when testing a hypothesis or a theory.

The scientific method has four steps

1. Observation and description of a phenomenon or group of phenomena. Based upon monitoring of the movements of the plovers on the west coast (the WSP) and inland plovers, and the perceived decline of the WSP, the USFWS became concerned as they believed the WSP was a species distinct from the large inland population of plovers, and as such required protection from extinction. The Western Snowy Plover was first listed as a threatened species in 1993. Quoting the USFWS (all of their quotes will be italicized):

"The 1993 listing rule stated that the Pacific Coast WSP is "genetically isolated" from the interior breeding populations (58 FR 12864). We based this conclusion on banding and monitoring data, not genetic data. At the time of listing, we assumed the reproductive separation indicated by the banding data, over time, could lead to genetic differentiation. Genetic data for the western snowy plover was not available in 1993."

2. Formulation of a hypothesis to explain the phenomena. The hypothesis, as stated above, was: Because there was little or no breeding observed between the WSP and the inland population of plovers, the WSP was genetically different than the large population of plovers living inland, and being in decline, the WSP required protection.

3. Use of the hypothesis to predict the existence of other phenomena, or to predict quantitatively the results of new observations. Should genetic testing be performed, the USFWS expected to see genetic differences between the coastal WSP population and the large inland population, which would confirm the need for protection of the WSP. The USFWS had no genetic data to confirm their hypothesis. However, apparently the ESA allows the USFWS to move to protect a species first, and investigate to be sure, later. There are timelines specified by law as to how long the USFWS has to test their hypothesis, and it does seem they were abused. In the meantime, measures were taken to protect the WSP, which

included most notably for the public, restriction of beach access.

4. Performance of experimental tests of the predictions by several independent experimenters and properly performed experiments. In fact, a study was done many years later funded and approved by the USFWS and the USGS to test the USFWS hypothesis.

"...a master's thesis (Gorman 2000) that did not find evidence of genetic differentiation between the Pacific Coast WSP and western interior snowy plover populations using mitochondrial DNA (mt DNA). "

The Scientific method concludes: If the experiments bear out the hypothesis it may come to be regarded as a theory or law of nature.... If the experiments do not bear out the hypothesis, it must be rejected or modified.

So, now that the USFWS hypothesis had been disproved, and the WSP could not be distinguished genetically from the very large inland plover population did the USFWS move to delist the WSP? NO. In fact, they continued to proceed to implement management policies to protect the WSP, further restricting the public's access to beaches on the Western coast. Several entities (City of Morro Bay and Surf Ocean Beach Commission) who were suffering due to those management policies decided to sue the USFWS to force them to re-evaluate this situation.

The announcement to retain the WSP's listing as a threatened species on April 21, 2006 is the USFWS response to this lawsuit. It appears that the USFWS, not wishing to delist the plover, refused to reject their hypothesis or modify their hypothesis that the WSP was genetically different, even though it had been reliably disproved. It is not revealed in the announcement how this came about, but it appears that the USFWS authorized another study in an attempt to refute this first study that disproved their hypothesis. USFWS stalled the court proceedings, possibly because they were counting upon the results of this second study using another method of DNA testing to substantiate their original hypothesis that the WSP was genetically different from the large inland population. The second study confirmed the results of the first.

"...a more recent study by Funk et al. (2006) includes analysis of microsatellite DNA markers. Funk et al. (2006) found no statistically significant genetic differentiation between Pacific Coast WSP and western interior snowy plover populations using mtDNA and microsatellite DNA markers. "

Did the USFWS at this point acknowledge their hypothesis was incorrect and move to delist the WSP because it is the same creature as the large population of plovers who live inland and whose numbers require no protection from extinction? NO.

Perhaps most telling is the general opinion of Daniel Funk who provided the second DNA study, and whom the USFWS certainly chose to rely upon: "... it is important to use data from a wide range of criteria-interbreeding, nuclear DNA, behavior, morphology, ecology, etc.-not just mtDNA, when delimiting species boundaries."

This is indeed a disturbing concept, because this indicates Mr. Funk and the USFWS are quite comfortable setting public policy that restricts public access to thousands of miles of beach property based upon their personal definition of a species which may ignore verifiable hard DNA data in deference to intangible and/or incomplete data which is subject to bias. The USFWS chose to rely upon outdated, observational data regarding the lack of interbreeding of the WSP and the larger inland population to conclude that these two populations are separate and distinct and that the WSP should therefore, still be protected.

"In this finding, we rely primarily on the banding and resighting efforts conducted during the period of

1984 through 1993, as this is the period when banding efforts were underway at several areas on the Pacific coast and in the western interior, and nest monitoring studies and breeding season surveys were underway at many locations when banded birds could be detected. Interior populations have not been banded since 1993 (L. Stenzel, in litt. 2005)."

Furthermore, the USFWS ignored yet another fundamental of the Scientific Method in the interpretation of this outdated data. The USFWS recruited four heavily biased researchers in favor of protection of the snowy plover to examine the banding data. All four are associated closely with the Audubon Society or Point Reyes Bird Observatory (PRBO). The Audubon Society formally opposed the delisting of the plover and officials at PRBO are in large part responsible for the initial listing of the plover as threatened. Not surprisingly, their conclusions were as follows:

"...we conclude that the Pacific Coast WSP is markedly separate from other populations of the subspecies due to behavioral differences and that it, therefore, meets the requirements of our DPS policy for discreteness. Banding studies and resighting efforts demonstrate that during breeding, the Pacific Coast WSP segregates geographically from other members of the subspecies, even those that also winter on the Pacific coast. Although not absolute, this segregation is marked and significant. "... This behavioral difference tends to set Pacific Coast WSP individuals apart from the interior birds with which they may mix during the winter."

The USFWS has chosen to deviate from established scientific method, ignore incontrovertible, tangible, and specific data such as the two DNA studies, and rely instead upon clearly biased assumptions regarding the behavior and breeding of the WSP to justify their decision. The decision requires the USFWS to assume that there is little or no interbreeding between the populations. The decision requires the USFWS to assume that should the coastal plover population be lost, the inland population could not recolonize the coast. Neither of these assumptions has the benefit of reliable, incontrovertible data.

Therefore, since 20% of the plovers have decided they prefer to "hang out" on west coast beaches rather than with the rest of the genetically identical plovers inland, the general public will not be allowed that privilege.

For those unfamiliar with the genetic lexicon, consider how it is the Courts and the medical community determine the father of a child when it is in doubt. DNA tests are the standard test utilized, to the exclusion of all others. It would be a gross injustice for the Court to disregard DNA evidence that confirms the child's father is Mr. A, and instead conclude the child's father is Mr. B simply because the child behaved more like Mr. B.

Decisions made based upon intangibles, and without deference to hard, reliable scientific data are subject to abuse of discretion; and are the antithesis of the established "scientific method" which goes to great lengths to minimize the influence of bias or prejudice in the experimenter when testing an hypothesis or a theory. The Endangered Species Act requires decisions to be based upon science's best evidence, not ideology nor politics as it has been in the case of the Western Snowy Plover.

While I and others understand that the GGNRA cannot choose to ignore management of the Western Snowy Plover unless and until the USFWS formally delists the plover, we believe this evidence should temper the decision making when it will result in depriving the public of valuable recreational resources, as expressed in the language of the ESA.

Will Banning Dogs At Ocean Beach Help Protect The Plover From Extinction?

Putting aside the controversy as to whether the Western Snowy Plover is threatened with extinction or not, the United States Fish and Wildlife Service ("USFWS") Draft Recovery Plan for the Western Snowy

Plover can answer this question. The Recovery Plan states that the Western Snowy Plover does not nest or breed at the Ocean Beach location. The Draft Recovery Plan also indicates that despite implementation of best management practices, this location (Ocean Beach) holds NO promise for the plover to nest or breed there in the future. (Table B-1, p. B-11.) Conversations with Gary Page of the Point Reyes Bird Observatory (a central contributor to the USFWS Draft Recovery Plan) reveal that this conclusion was drawn primarily because the level of human activity is too high on some California beaches to ever support a breeding population of the plover. This is consistent with the conclusions of a UK study (specifically identified in the new studies section of this comment) which states, "Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size". Thus, the state of the evidence is that the survival/extinction of the Western Snowy Plover population will not be impacted by the management of Ocean Beach.

And in fact, the GGNRA is well aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. Indeed, the first Hatch Report regarding the WSP and dogs at Ocean Beach concluded: "Factors other than number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach." (1996 Hatch Report, p. 10, emphasis added.) Further, Daphne Hatch's 1996 study for the GGNRA documented that since the off-leash policy was officially sanctioned in 1979, there has been an increase of more than 100 percent in the number of snowy plovers frequenting Ocean Beach. Even dog "rush hours" don't seem to faze the plovers- at least, GGNRA observers and analysts couldn't find any negative relationship between the number of dogs on the beach at any given time and the number of plovers on the beach at the same time (pg. 10, 13). Faced with this evidence, GGNRA officials twice acknowledged, at a December 16, 1996 "informational meeting" for San Francisco beachgoers, that banning off-leash recreation or banning dogs entirely at Ocean Beach would have NO effect on the number of plovers on Ocean Beach. Despite this finding, the 2006 Hatch report, the DEIS and SEIS still recommend the restriction of off-leash recreation at Ocean Beach.

#### The USFWS Declines To List Ocean Beach Or Crissy Field As Critical Habitat For The Western Snowy Plover

As stated before, the fate of the purportedly threatened Western Snowy Plover ("WSP") at Ocean Beach and Crissy Field will have no impact upon the overall survival of the species. Consider that the language of the Endangered Species Act ("ESA") itself states:

"The Secretary (of the Interior) may exclude any area from critical habitat if he determines that the benefits of such exclusion outweigh the benefits of specifying that area as critical habitat, unless he determines, based upon the best scientific and commercial data available, that the failure to designate such area as critical habitat will result in extinction of the species concerned."

In concurrence, effective October 31, 2005 and again in 2011, the United States Fish and Wildlife Service ("USFWS") excluded all areas in the City and County of San Francisco as critical habitat for the WSP. In the text of the explanation of their decision in 2005, USFWS made the following findings:

"Our current designation of critical habitat is different from the 1999 rule in two primary ways. In this designation, we utilized a different methodology for determining essential areas, and we relied upon additional scientific information which was not available in 1999. Thus, this rule, while similar in many respects to that in 1999, is a new designation, and does not designate the same areas. "

With respect to Ocean Beach, the following is stated:

"We have decided not to include the suggested additional areas because they do not meet our three criteria from the Methods section: They do not support either sizeable nesting populations or wintering populations, nor do they provide unique habitat or facilitate genetic exchange between otherwise widely separated units. Although we do not consider these areas essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect WSP as required by

sections 7 and 10 of the Act. "

Allowing humans and off-leash dogs to enjoy Ocean Beach is not a new project; it is an activity that has persisted on Ocean Beach for well over 50 years. The language of the ESA contemplates and supports the position that any loss of these recreational areas be balanced by scientific proof that such sacrifice will indeed help save the WSP from extinction. Clearly, the decision not to include Ocean Beach or Crissy Field as critical habitat demonstrates that such scientific evidence cannot be provided.

#### Daphne Hatch's 1996 Study Is Fatally Flawed

Because the data do not support a conclusion that restricting off-leash recreation or banning dogs at Ocean Beach will increase the number of plovers, Daphne Hatch chooses to instead focus on the "disturbance" of the plover at Ocean Beach. However, no published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species (Birdlife International 2000). Not surprisingly, it is postulated by Ms. Hatch that the energy expended by the plovers to avoid the disturbing dog is detrimental to their overall health and ability to breed, and as expected, no evidence is cited for such a conclusion. It is merely stated in the study, "little research has been conducted on the energetic effects of disturbance and whether individuals can compensate for this lost energy intake and the increased energy expenditure" (p.13). The NPS/GGNRA must consider the fact that the plover is known to annually migrate over 1,000 kilometers. In proportion to their size, this is the equivalent of a 6-foot human running 290 marathons. Does the energy expended when a plover moves 20 or 30 yards to avoid a roaming dog amount to anything significant? Common sense would indicate that the "disturbance" issue has been substantially overblown, and no scientific study exists to contradict such common sense.

Out of 5,692 dogs observed during the one-and-a-half year study by Ms. Hatch, less than one third of one-percent chased plovers, and none ever caught or harmed one. An even smaller number "inadvertently" disturbed plovers, causing them to walk, run or sometimes fly out of reach. (Id., at 11-13.) See Figure 1 below.

On the other hand, Ms. Hatch did not document the more significant matter of the deaths and disturbances of plovers perpetrated by predators such as the gull, raven, and crow. The gull, raven, and crow are documented predators of the plover, while dogs are not. Ravens are black, cousins of the crow, and larger than crows - generally about two feet long. Federal officials, who attribute the soaring numbers of ravens to sharp increases in road-kill and garbage from fast food restaurants, admit that the population explosion is troubling, given the bird's intelligence.

The Hatch Report is an excellent example as to why scientific studies vary in reliability. Based upon the standards set forth in the scientific community, Ms. Hatch's study qualifies as "junk science", that is, "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility." Further, this study does not meet the minimum requirements for legitimate "vital monitoring" within the NPS.

The Hatch study is at best an inventory assessment for the Western Snowy Plover. When viewed in the context of universally accepted scientific study guidelines, I find there are several reasons for relegating the Hatch Report to "junk science". First, it is merely an observational study. This means its conclusions are not based upon specific, quantifiable measurements, but instead upon observations. Observations alone allow for the participant's natural biases and subjectivity to influence the results. A credible scientific study to determine the success of, for example, a hair growth product, would dictate that the same person would observe the patients at the beginning and end of the treatment to assess the patients' baseline and subsequent hair growth (or lack thereof). This would eliminate the differences inherent in the observations of different people. The evaluator should have no affiliation with any of the manufacturers

of the different products tested, and would not know which patient used which product. This is necessary to eliminate an evaluator's desire (even if it is subconscious) to favor a particular product. In contrast, the evaluators in the Hatch study consisted of several different volunteers; accordingly, there was no consistency as to the observations. Some evaluators may have characterized plover movement as a disturbance; others might have believed the plover moved on its own. Moreover, the volunteers were all bird enthusiasts, and the specific focus of their study was humans and dogs. As a result, the very premise of the study would lead the volunteers to subjectively and/or subconsciously expect and desire to document disturbance of the plover by dogs and their owners.

The effects of other wildlife and other possible interferences with the plover's daily activities were given but brief mention and not factored into the study in any meaningful way. These issues include the following: beach cleaning, off-road vehicles driven at night, activity of specific predators, non-native vegetation, shoreline erosion control projects (bulldozers), the actual width of the beach available to the plover, weather, helicopters, airplanes, bicycles, vehicles used during the day by Park staff, kites, and an oil spill. An evaluator cannot distinguish the reason or reasons why a plover flies away to another spot given the presence of a dog 40 feet away, a raven 50 feet away, and a plane flying overhead. Yet in the Hatch study, it seems clear the dog would be identified as the factor that disturbed the plover. The Hatch study is one that does not compensate for participant bias, and is not able to effectively associate cause and effect because too many variables are unaccounted for. Hence the study is indeed "junk science". Daphne Hatch's conclusions are without merit, and perhaps worse, led to action which may have harmed the plover at Ocean Beach.

These facts raise the other problem with the operative hypothesis in a study concluding that off leash dogs are detrimental to plovers. Because the Hatch study at Ocean Beach ignores gulls, ravens and crows entirely, there is no data to determine whether the presence of dogs protects the plover from birds of prey. The statistics in Daphne Hatch's own study indicate that during the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8). See Figure 2 below.

We believe that it is mischaracterizing the problem to attribute the "disturbance" of the plover exclusively (or even significantly) to off-leash dogs. The data do not support this conclusion. It follows, therefore, that addressing off-leash dogs only will not effectively protect the plover. We maintain, based upon the data, that proper protection of the plover would encompass the effect of humans, predators, and other wildlife as well.

The SEIS discusses the aforementioned "study" by GGNRA employee Daphne Hatch as follows: "During Western Snowy Plover monitoring surveys conducted at Ocean Beach from December 1994 to May 1996, 362 dogs were observed chasing birds; 19 dogs were observed chasing at least 62 western snowy plovers; and roaming dogs inadvertently disturbed at least 100 additional western snowy plovers." (Hatch 1996)

In the SEIS the GGNRA has now chosen to describe their "study" as monitoring (because it was never peer reviewed?), presenting numbers with no context. 19 dogs chasing plovers sounds bad, until you realize it was 19 dogs out of 5,692 which were observed. If the SEIS included the materials and methods of Ms. Hatch's "study" you would see that disturbances due to other factors are not even mentioned. You would know that the people cataloguing the interactions between dogs and plovers were biased in that they held a personal belief that the dogs were dangerous to the plovers. It seems information was deliberately presented in this SEIS so as to mislead the reader into believing the GGNRA's assertion that radical measures to ban the activities of dogs and humans in the Southern portion of Ocean Beach could be justified.

### The GGNRA Refuses To Implement Other Logical Measures To Protect The Plover

Banning dogs and most forms of human recreation as well on a 2.9 mile stretch of Ocean Beach is not a rational, measured response to the plover's seasonal presence on approximately 0.4 miles of Ocean Beach, and it does not address the hazards that both humans and predators present.

Peter Baye (U.S. Fish and Wildlife Service Biologist) noted the presence of the Snowy Plover, which roosts, but does not nest, on Ocean Beach, and made recommendations to the GGNRA for its protection. The plovers are present seasonally and relocate from year to year. Mr. Baye recommended: "Exclosures, in concert with educational signage, have been very effective in areas of concentrated usage where beaches are large (e.g. Cape Cod National Seashore). There are no unique impediments inherent at San Francisco's Ocean Beach which would render these measures infeasible here. They should be implemented at least on an experimental full-scale basis." (Memo to USFWS, 15 March 1995). Rather than establishing these flexible, seasonally rotated exclosures to protect plovers against humans, pets, and wild predators, the NPS chose the fixed and narrow measure of (illegally) banishing off-leash recreation, and now has chosen to ban dogs entirely, and limit human recreation severely as well. Mr. Baye's recommendation of a temporary, seasonal fence to be removed when the plovers leave the area and repositioned when they return could still be adopted. This solution would allow off-leash dogs on Ocean Beach but keep dogs out of the roosting area. Better yet, Mr. Baye's solution would protect the plovers from the predators, campers, runners, children, kite-flyers, etc. Mr. Baye's recommendation clearly shows that off-leash recreation on Ocean Beach is compatible with protection of the Snowy Plover. The GGNRA has refused to consider the option of constructing a fence to protect the Ocean Beach plovers. This might be because there are no dry sand dunes to be fenced off- -see photos which follow in the section entitled "The GGNRA Condone other Disturbances to the Plover".

The GGNRA has made no concerted effort to alleviate the activities that are currently prohibited by law, pose a hazard to the plover, and occur in the vicinity of the plover's roosting. Table A, below, summarizes the current GGNRA record of citations for fireworks, littering, camping, and beach fires on the portion of the beach where the snowy plover may roost. On an average Saturday or Sunday morning in the area the plovers roost you will find (by personal report):

"5 beach fires (3 unattended)

"7 campsites (2 had fires)

Extrapolating, if only weekend offenders were cited, there should have been 520 citations/year for fires, and 720 citations/year for camping. The GGNRA's dismal record of enforcement is reflected below in Table A. Moreover, it should be pointed out that litter is generally left at camp sites and the sites of beach fires. This litter attracts ravens and other predators to the area where the plovers are potentially roosting. The number of citations for littering is grossly inadequate(1).

If the GGNRA is unable to utilize enforcement to protect the plover from the public and their activities, it would make a great deal of sense to provide the exclosures as a refuge for the plover as suggested by Mr. Baye.

In addition, dead wildlife such as seals, sea lions and birds are not being promptly removed from the beach. The rotting carcasses of these dead creatures are left indefinitely on the beach to attract ravens and other plover predators. Recently, a carcass of a cow washed up on Ocean Beach where it sat for almost a week before officials removed it. The dead body was literally covered with ravens, ripping and eating the dead animal's flesh.

### The GGNRA Has No Protocol For The Rescue Of Injured Or Sick Birds Or Mammals In The Park

The response of Federal officials to the oiling of wildlife after the Cosco Busan oil spill was slow and inadequate in the eyes of the citizens who live in the communities affected. However, to those of us who

frequently utilize GGNRA properties for recreation, the poor response came as no surprise. Below are personal notes from our conversation with a GGNRA Wildlife Ecologist regarding our attempted rescue of a bird that morning-sent by email to OBDOG members Thursday September 13, 2007:

Bill Merkle Dispatch # 415-561-5505

Acknowledges it is unfortunate there are no signs for the public to be advised as to whom to call if a bird, marine mammal or other wildlife is injured or requires assistance. GGNRA will not necessarily make every attempt to help an injured bird should you bring it to their attention. It will depend upon three factors: 1) type of bird 2) type of injury 3) location of bird

If it is a shorebird (a common bird), they are much less likely to help. He was noncommittal as to what injuries they would address. As to location, if I bring the bird to their personnel, what is that all about? It was explained to me that if the injury occurred in an undeveloped area, then they would be unlikely to rescue the animal or bird. When asked whether Ocean Beach was developed or undeveloped, he said the parking lot would be developed, but the beach would be undeveloped. He went on to explain that in undeveloped (natural) areas, they allow nature to take its course. Disease is a natural process, and predation is a natural process. As for letting nature take its course, what about dogs chasing birds is not natural? I asked how the GGNRA rationalizes that a dog chasing a common shorebird warrants a ticket (we must protect park resources), yet if the same shorebird is brought to them because it is injured, they are satisfied to let it die? I asked then why is it that since they choose (and I believe erroneously) to define dogs as predators of birds, why are they then not considered part of the natural process at the beach and ignored just like every other predator?

He responded that if they received a report that a dog was attacking an injured bird they would most certainly respond. He advised me the GGNRA considers dogs to be an unnatural part of the park as they are associated with human use of the park (which is also by inference an unnatural intrusion into the park areas). Those of us who thought this park was created for our recreational use had better get used to the idea that the Park Service regards us as unwelcome intruders into their "wildlife protection area".

I went on to point out to him that I did not want to hear him defining dogs as predators or complaining about dogs attacking birds as my dog helped me rescue this bird this morning and has done the same numerous other times. My dog has alerted me to hypothermic birds that are still alive, and he won't leave until I pick them up and take them to safety. My dog will chase off ravens that are attacking an injured bird who is unable to effectively defend itself and actively chase those ravens away while I pick up the injured bird. Earlier this year we rescued a grebe, today it was a common shorebird. I told him I cannot just run by when an injured bird is actively being attacked by ravens and is screaming for help. He didn't have a lot to say in this regard.

The GGNRA claims the purpose of limiting the activities of dogs and their guardians is to "protect the resources" of the park. What resources exactly is the GGNRA protecting? The same resources you are content to let die because you don't care to make the effort to transport injured birds to WildCare in San Rafael? When I asked why they would not transport every injured bird brought to them for care, Mr. Merkle indicated the GGNRA preferred to "manage habitats and work on population levels". I am afraid to contemplate exactly what that means, except that the fallow deer in Marin probably have a pretty good idea. Or perhaps it means they want to work on limiting our human population levels in the Park. Or both.

I am disgusted by the hypocrisy of the GGNRA yet again. Their record of park management policy is abysmal. They neglect to assist injured birds even when they are brought to them, they are slaughtering over a thousand deer in Marin merely because they are non-native.

The proposed rule which sacrifices recreational access to protect the plover cannot be justified when GGNRA management has failed to implement the most basic of plans to ensure their well being.

In this DEIS/SEIS the GGNRA mentions their concern for wildlife including marine mammals, especially when they beach themselves to rest or when they are injured and on the beach. The GGNRA seems to be able to count the number of reports of beached mammals they receive, however what they fail to mention is that they have no protocol for the visitor to the GGNRA to follow should they come across a marine mammal on the beach. We personally have made numerous requests to GGNRA management for signs to be placed at the beach which would instruct visitors not to approach the beached mammal and where to call to request assistance for the animal. Many visitors to the GGNRA are not local, some have never been to a beach before, and they require instruction so that they can assist the animal effectively. Oddly enough, the GGNRA has managed to post signs up and down the beach to advise us of recreational restrictions regarding fires, camping and the plover, but they cannot post educational signs to benefit marine mammals.

#### The GGNRA Condonates Other Disturbances To The Plover

To further compromise the GGNRA's argument that the restriction of off-leash recreation is necessary to protect the plover, the GGNRA has taken the plover's alleged summer hiatus as an opportunity to begin bulldozing of the "Plover Protection Area". In October of 2005, when United States Fish and Wildlife Service (USFWS) declined to designate Ocean Beach as critical habitat for the plover they stated the following:

"Although we do not consider these areas [Ocean Beach and Crissy Field] essential for recovery, we do consider them important, and will continue to review projects in these areas that might affect WSP as required by sections 7 and 10 of the Act. " The USFWS is previously on the record as stating, "Activities that may adversely affect plovers include sand deposition or spreading, beach cleaning, construction of breakwaters and jetties, dune stabilization/restoration using native and nonnative vegetation fencing, beach leveling and off-road vehicles driven in nesting areas or at night."

The picture above was taken during the period when dogs are restricted at Ocean Beach due to the presence of the plover. When OBDog principals first observed the bulldozers in the Plover Protection Area below, we made a Freedom of Information Act Request of the GGNRA, to determine the purpose of the bulldozing, as well as determine whether USFWS had approved this drastic action. The GGNRA responded to our request, but failed to answer our questions about the bulldozing. We were later advised verbally that there was no correspondence with USFWS to obtain approval for bulldozing, as the plover was not then present. Internal GGNRA records show the GGNRA bargained with USFWS in 1996, sacrificing our off-leash recreational opportunities in order to get USFWS to agree to allow bulldozing in this same area of Ocean Beach. The ESA is very clear that it is not permissible to modify the habitat of an endangered or threatened species when they are not present, but expected to return. One example would be the prohibition of the removal of trees that hold an eagle's nest, even when the eagle is not present or utilizing the nest.

We understand the GGNRA is modifying the beach in this area to minimize the effects of erosion and the drifting of sand on to the Promenade and Great Highway. The GGNRA has refused to acknowledge in any significant fashion that erosion and the progressive collapse of the shoreline limits the areas where the plover can roost and forage, as well as the quality of foodsource for the plover at Ocean Beach. The narrowing beach puts the plover in closer and closer proximity to all users of the beach, thereby increasing the disturbance to the plovers. These conditions will progress despite the GGNRA's move to ban dogs entirely.

We agree the GGNRA needs to deal with erosion at Ocean Beach. However, it seems unlikely that the GGNRA will admit the obvious: the erosion itself and the GGNRA activities designed to deal with erosion adversely affect the plover to a much greater degree than four dogs who allegedly

"disturbed" plovers in the last six years. The restriction of off-leash recreation or the banning of dogs entirely and the limitation of human activity to purportedly protect the plover is a complete ruse.

The photos above were taken during the time period when the dogs are restricted because the GGNRA claims the plover is present. We see the condition of the plover habitat after the GGNRA has bulldozed to minimize the effects of drifting sand and erosion. The dunes that remain are there because they do have a little beach grass to help hold them together. The tides have run up and behind the dunes that the GGNRA claims the plover inhabits. Note the excessive debris, the graffiti and the remnants of a Christmas tree in this so-called "habitat".

Considering the plover resides on elevated dunes of dry sand, preferably without vegetation, it is quite apparent as to why Ocean Beach is not suitable plover habitat. The SEIS states: "In GGNRA [sic], the western snow y plover uses areas with wide, sandy, dunebacked beaches for roosting and foraging during the nonbreeding season. This species forages above and below the mean high waterline, typically gathering food from the surface of the sand, wrack line, or low foredune vegetation." The pictures above depict a severely narrowed beach with a high tide line that is at the base of a seawall- -it hardly matches the GGNRA's description of plover habitat. The photos also underscore the absurdity of the claim in the DEIS that dogs digging have some responsibility for the undermining of sand dunes at Ocean Beach.

GGNRA personnel routinely drive off-road vehicles through the plover habitat in order to enforce the leash law at Ocean Beach. Certainly the GGNRA's "solution" is far more dangerous to the plover than the perceived "problem" (pictures of this activity on file).

In 2006, the Fourth Annual Ocean Beach Turkey Trot was an event sanctioned by the GGNRA (and SFRPD) for 1000 participants. Certainly the GGNRA recognized there would be additional participants who had not officially registered. Members of Ocean Beach DOG who witnessed the race estimated 1500 participants. The course for the race was charted directly through the Snowy Plover Protection Area. This was also during a time period where the GGNRA declared an "emergency" warranting the restriction of off-leash recreation in this same area in order to minimize "disturbance" to the plover. The GGNRA, by granting permits for the Ocean Beach Turkey Trot, established that their ban of off-leash recreation is arbitrary, capricious and discriminatory-therefore unlawful.

#### The 2006 GGNR A Status Report For The Western Snowy Plover Is Fatally Flawed

This is the second report Daphne Hatch (now Chief of Natural Resource Management and Science for the Golden Gate National Recreation Area) has produced for the GGNRA to justify the closure of most of Ocean Beach to off-leash recreation due to the transient presence of the Western Snowy Plover (WSP). The first was produced in 1996. The second report, dated November 2, 2006, is the subject of this analysis. Reading Ms. Hatch's report brings to mind an article Dr. Valente recently read from the Journal of the American Dental Association October 2006 Special Supplement. The article was entitled, "Challenges in Interpreting Study Results The conflict between appearance and reality" . It seems that the GGNRA and Ms. Hatch have endeavored to manipulate the data so as to reach a predetermined outcome. Their conclusions falsely give the reader the appearance that the threat to the WSP from off-leash dogs is great. The reality is there is no credible threat to the WSP from off-leash dogs within the GGNRA.

Bias: The 2006 Hatch report presents itself as an "observational study". Observational studies have the least reliability of any type of scientific study because their results can be distorted by many factors. The first of those factors is bias. Bias generally stated is a "systematic error in the design, conduct, or analysis of a study that results in a mistaken estimate of an exposure's effect on the risk a subject faces". Bias is the basis of our skepticism of research to determine the efficacy of a medication when the research is conducted by a clinician who stands to gain financially if the medication is shown to be effective.

Ms. Hatch clearly has an ideological bias against people and their dogs recreating in any manner at Ocean

Beach. She was quoted on September 7, 2005 in the S.F. Chronicle as saying, "Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard". This is an incredible admission from a high ranking GGNRA official considering the enabling legislation of the GGNRA.

**Design:** Daphne Hatch's bias is apparent in the design of this study. The objective of this study is to prove her assumption that the present management which allows off-leash dog use of Ocean Beach and Crissy Field is inadequate to protect the WSP from harassment/ disturbance and other detrimental effects of chasing by dogs. We learn nothing about the relative harassment/ disturbance of the plover from any other source in this study. If plovers are harassed/disturbed 50 times in 5.5 hours by ravens, and one time in that same time period by a dog, is the harassment/disturbance by the dog even relevant? A comparative study model would have been more informative with respect to actually determining what management actions, if any, should be taken to protect the plover from harassment/ disturbance in general. Frankly, this comparative study should have been undertaken in 1993 when the WSP was first listed as a threatened species, before the decision was made (and later reversed by the Federal Court) to require the leashing of dogs to protect the plover. However, it could have been undertaken at any time. A comparative study is designed to remove one variable in a situation at a time, and observe the change, if any. An initial period of observation would document the presence of predators (ravens) and their numbers, as well as the frequency of harassment/disturbance from all sources absent any management action. Next, the predators (ravens) being the most serious source of potential disturbance/harassment are removed as much as possible. Rather than killing all the ravens, the GGNRA could have begun a campaign to reduce and remove litter at the beach as a conservative method to reduce the number of ravens. This would entail aggressive ticketing of those who are observed leaving litter at the beach, and resources would be deployed to clear the beach of litter and dead wildlife daily. No one would be adversely affected, and in fact most beachgoers would welcome a cleaner, safer beach. Indirectly, the lack of litter/foodstuff for the ravens would have been expected to reduce their numbers. After the new management practice has been implemented for a reasonable period of time, a second period of observation is conducted. In this second data collection period, we could assess whether the litter reduction has reduced the number of ravens, and has the reduction in ravens reduced the frequency of harassment/ disturbance to the WSP. If the ravens are not reduced, or the frequency of harassment/ disturbance is still unacceptable, the next management measure is implemented. Exclosure fencing could have been placed in the areas where the WSP is observed roosting. This would serve to provide some protection for the WSP from the ravens and any other predators, as well as humans and dogs. Education of the public to give the exclosure fencing a wide berth would be appropriate. After a reasonable period of implementation, a third period of observation would be conducted to determine what effect, if any, this latest management method had upon the frequency of harassment/disturbance of the WSP. There also should be the implementation of an aggressive ticketing policy for all dog owners whose dogs were observed chasing plovers at some point within this process. All of these management measures should have been implemented and assessed for their effectiveness in reducing the frequency of WSP harassment/ disturbances before a leash restriction or banning dogs was even considered. This would have been consistent with the mandate to maintain recreational opportunities in the GGNRA.

**Conduct:** This study exhibits bias in its conduct as well. Clearly, the participants who performed the surveys either had a pre-existing bias to construe the activity of dogs as harassment, or the training provided by Daphne Hatch and her staff created that bias in the participants. Most likely it is a combination of both, as those individuals who volunteered to do these surveys are identified as Golden Gate Audubon Society members. (We should point out that the Golden Gate Audubon Society is on the record as opposing any off-leash recreation in the GGNRA). Ms. Hatch, in her introduction, spells out the definition of harassment per the Endangered Species Act (ESA). Harassment is "an intentional or negligent act or omission which creates the likelihood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding or sheltering". Ms. Hatch seems to use the terms harassment and disturbance

interchangeably in this report, so we will generally refer to it as harassment/disturbance. Harassment/disturbances are not well defined in the portion of the study where they are enumerated for Ocean Beach. However, in the Crissy Field portion, there is more description provided for the harassment/ disturbances observed. In one case, harassment/ disturbance of a plover by a dog was described as "alert posture -stood up and increased vigilance" (in other words, the plover lifted his head up and looked around). Compare this "disturbance" that was classified by a volunteer and the authors of this study as an incident of harassment to the definition of harassment as provided by the ESA. They are clearly inconsistent. In this study, the authors and participants classified activity as harassment/ disturbance that does NOT meet the definition of harassment provided by the ESA. This is a classic example of examiner bias in the conduct of this study. This is more precisely identified as "misclassification" and serves to invalidate the data collected and conclusions drawn in this study.

Analysis: Analysis of this data is compromised because the data itself is in question. Another factor that makes analysis of this data practically impossible is "confounding" in the design of this study. In this case, "confounding" refers to the fact that this study is not designed to isolate the effect of each component of the beach environment that can affect the plover adversely. For example, an off-leash dog is running at the waterline with its owner and they are some 20 feet from a plover. There is additionally a raven 30 feet and closing from the plover. The plover flushes, and it is recorded as a "disturbance". How is it apparent to the observer whether the dog, the owner or the raven was the source of the disturbance? Practically, it could be any combination of all three. Based upon the premise of this study, it is reasonable to assume the disturbance/harassment would be attributed to the off-leash dog. Is that legitimate? There does not appear to be any attempt made to isolate all other activities within the Park that may adversely affect the plover-they are merely given mention. These would include: Beach patrols in vehicles on the beach, equestrian use of the beach, people walking or jogging, kite flying, littering which attracts predators, the predators (usually ravens) themselves, and removal of kelp or driftwood which are sources of food. No mention is even made of bonfires, camping, litter such as cigarette butts, or the shadows surfboards cast.

Perhaps the most egregious omission in this report is that there is no mention made of beach width. The SEIS acknowledges, "In GGNRA, the western snowy plover uses areas with wide, sandy, dunebacked beaches for roosting and foraging during the nonbreeding season. This species forages above and below the mean high waterline, typically gathering food from the surface of the sand, wrack line, or low foredune vegetation. There is no documentation of western snowy plovers nesting in GGNRA." The beach width at Ocean Beach has been decreasing due to erosion. Daphne Hatch's 1996 report concluded on page 10: "Factors other than the number of people or dogs, possibly beach slope and width, appear to exert greater influence over Snowy Plover numbers on Ocean Beach". The GGNRA is quite aware that the number of plovers on Ocean Beach is not directly related to the number of people or dogs present on the beach. However, in this 2006 Daphne Hatch report there is some discussion on page 8 that the plover numbers have leveled off since 2003, and have never matched the level they reached of 85 in 1994. Concurrently, this report discusses repeatedly that since the reinstatement of off-leash recreation, the number of dogs at Ocean Beach has increased dramatically. The report directly asserts the increase in dogs at Ocean Beach is responsible for a greater number of plover disturbances and it is inferred indirectly responsible for the diminished number of plovers. Had Daphne Hatch been intellectually honest, she might have drawn the following conclusion from this data and a study she cites in this report, "Disturbance to wintering western snowy plovers", by K.D. Lafferty. This Lafferty report states "The distance between human activity and the roost peaked at about 30 meters and relatively few people or dogs beyond this distance disturbed plovers" ...presumably because a narrow beach increased the potential overlap between beach users and snowy plovers". Ocean Beach suffers from serious erosion, and hence the beach width has narrowed dramatically, especially during high tides. It could more reasonably be concluded that the narrowed beach width is directly responsible for both the lower plover numbers and the increased frequency of perceived

harassment/disturbance of the plover, not the greater number of dogs or their activities on or off of a leash. The narrowed beach width has both eliminated much of the potential habitat for the WSP at Ocean Beach (this is consistent with USFWS critical habitat designation in 2005), and forced all occupants of the beach into closer proximity to the plover, thereby perhaps causing greater harassment/ disturbance levels (especially if you construe lifting your head and looking around as a disturbance).

How great are the harassment/ disturbance levels really? The way the data is presented in this report is misleading. To put the data in its' simplest form, in 2004 when dogs were required to be on-leash at Ocean Beach, one dog was observed harassing/disturbing a plover in 5.5 hours of observation on weekdays, and one dog was observed harassing/ disturbing a plover every 2.5 hours on the weekends. In 2005, when dogs were legally allowed off-leash on Ocean Beach, (and there were many more dogs present) 1 dog harassed/disturbed a plover in 24 hours of observation on weekdays, and fewer than 2 dogs harassed/ disturbed a plover every hour on weekends. Is this really significant? This report gives us no data regarding the rate of disturbance from any other source, however, the number of ravens far exceeds the number of dogs out at Ocean Beach, and it can easily be postulated the harassment/ disturbances due to dogs are dwarfed by the number of harassment/ disturbances from the plover's natural predator, the raven.

It is difficult to do further analysis of the data, because the GGNRA has illegally withheld the raw data from us. In April of 2006, Dr. Valente requested, by means of a Freedom of Information Act request, all of the data/ reports/Environmental Assessments the GGNRA had to substantiate their claim that there were resources in the Park that required protection. The GGNRA responded in writing that such data did not exist. Based upon the representations made in the November 2, 2006 Memorandum from Daphne Hatch and GGNRA Head Ranger Yvette Ruan, the last of the data for this report was collected in February and March of 2006. The data could and legally should have been provided to Dr. Valente in April of 2006. Dr. Valente subsequently appealed this FOIA request to the DOI, and finally received a note 5 years later from the DOI confirming there was NO data available to support any aspect of the changes proposed in the new Dog Management Plan.

Conclusion: Rational analysis of the situation would suggest that the GGNRA is really not trying to solve a problem. The GGNRA is merely interested in restricting dogs to leashes or banning dogs entirely throughout the GGNRA. Additionally, when taking into account Ms. Batch's above comments to the S.F. Chronicle in 2005, one must question the future of both humans and dogs in the GGNRA. Taking into account the data regarding the numbers of dogs chasing either shorebirds or plovers in context of the frequency of the behavior over time, it seems ticketing of the miniscule number of offenders would be appropriate rather than punishing all for the transgressions of a very few. It is a bit like forcing all cyclists in the GGNRA to ride with training wheels because a very few speed through the park.

If GGNRA management complains that they do not have the resources to adequately police Ocean Beach then it provides an appropriate reason to move for reversion of this property. We remind you again of Rolf Diamont's (GGNRA Environmental Coordinator circa 1975) conclusions when the GGNRA had just accepted possession of Ocean Beach from the City of San Francisco-"Ocean Beach: no rules should be enforced here. Ocean Beach is too large and too accessible to control dogs. It would be a logistical nightmare for the Park Service to try" .

The Hatch report does not meet the criteria for a valid scientific study. It is more appropriately classified as "junk science" - "a publication that has the tone and trappings of science, but is so fundamentally and demonstrably flawed as to lack any serious claim to credibility". Junk science should never be used as the basis for establishing public policy, and in fact it is unlawful to present "junk science" as the basis for a policy decision. Surely had the GGNRA followed the legal requirement for peer review prior to relying upon or releasing this "study" there would have been no restrictions imposed on dogs and their guardians

at Ocean Beach or Crissy Field.

#### The GGNRA Ignores Scientific Studies That Do Not Serve Their Purposes

Our first example would be a site-specific, peer reviewed U.C. Berkeley Environmental Sciences study presented by Megan Warren on May 7, 2007 that concludes within the GGNRA that the feeding of the Western Snowy Plover does not appear to be negatively affected by human and pet recreation. This is highly significant. Because the WSP does not breed at Ocean Beach or Crissy Field, its primary essential activity is foraging and feeding. And, in fact, this study observed that the habitat at Crissy Field is not appropriate as a feeding site and consequently no plovers were ever seen feeding at Crissy Field. If human and pet recreation does not negatively affect these activities, there is no need to restrict recreation in these areas. The abstract is as follows:

#### Recreation Disturbance Does Not Change Feeding Behavior of the Western Snowy Plover

**Abstract** The Western Snowy Plover (*Charadrius alexandrinus nivosus*) is a small shorebird that has many scattered wintering populations along the Pacific Coast of the United States, including several in the Bay Area. This species has been listed as threatened since 1993 under the federal Endangered Species Act of 1973. For this study I measured disturbance rates, types, plover responses and feeding time in three different sites in the San Francisco Bay Area to explore the link between recreation disturbance and feeding behavior. I predicted that as frequency of disturbance increased, the birds would spend less time actively foraging and more time alert. However, data showed no significant relationship between feeding behavior and direct disturbance by human recreators. Instead, I now predict that recreation has a more indirect effect on the western snowy plover feeding behavior. Future research should focus on indirect effects of recreation, such as habitat disturbance and food source quality.

Our second example is a study, "Predicting the population consequences of human disturbance for Ringed Plovers *Charadrius hiaticula*: a game theory approach" by Durwyn Liley and William J. Sutherland. This study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR4 7TJ, UK. This study clarifies the following three pertinent facts:

" Sites that are highly disturbed are not used by breeding birds, and therefore any increase in disturbance levels on these sites will not alter population size

" No published study of a breeding bird quantifies the population consequences of disturbance. This is despite the fact that disturbance has been implied as a factor causing population decline for a wide range of species.

" We think of individuals [birds] as deciding not to breed rather than being prevented from doing so. Such individuals 'queue' for good quality territories rather than adopting a poor quality territory (such as Ocean Beach).

#### FOOTNOTE:

1 In an article published in The San Francisco Examiner; September 26, 2005; by Marisa Lagos; entitled Residents Irked by Ocean Beach Parties (please refer to the original online version located at:

[http://www.sfexaminer.com/articles/2005/09/27/news/20050927\\_ne01\\_fires.tex](http://www.sfexaminer.com/articles/2005/09/27/news/20050927_ne01_fires.tex)) or an online, printable copy located at:

[http://OceanBeachDOG.home.mindspring.com/GGNRA\\_Ocean\\_Beach\\_NonEnforcement.htm](http://OceanBeachDOG.home.mindspring.com/GGNRA_Ocean_Beach_NonEnforcement.htm)) it is confirmed that the GGNRA's failure to enforce fire and litter policies has led to untold damage in the GGNRA's arbitrarily designated snowy plover habitat at Ocean Beach.

**Affiliation:****Received:** Feb,14,2014 00:00:00**Correspondence Type:** Letter**Correspondence:** The third study originates from the School of Biological Sciences, University of East Anglia, Norwich, Norfolk NR4 1fJ, UK., and was authored by Jennifer A. Gill, published in *Ibis* (2007) 149(Suppl. 1), 9-14. It is entitled, "Approaches to measuring the effects of human disturbance on birds".

This study clarifies a concept that helps to explain the apparent inconsistency of plover behavior at Ocean Beach and Crissy Field. On one hand, Ocean Beach is a highly disturbed, poor quality beach area (in large part due to erosion). Crissy Field is another highly disturbed beach environment at which the plover does NOT feed or breed (per the first study listed here). The GGNRA maintains that the plover is highly susceptible to disturbance by humans and off-leash dogs. This is why the proposed Rule has been promulgated. However, one must ask the question: if the plover is highly disturbed by human and canine off-leash recreation, and the plover does not feed at Crissy Field, why are any plovers there at all? Likewise, although the food source may be a bit better at Ocean Beach, why would the plover choose to roost there and endure the disturbance?

This study opines, The principal way in which human presence can impact upon wildlife is by altering the ability of animals to exploit important resources. This can operate either through directly restricting access to resources such as food supplies, nesting sites or roosting sites, or by altering the actual or perceived quality of these sites. Direct restriction of access to resources can occur through animals avoiding areas where humans are present. Changes in the quality of sites as a result of human presence could occur, for example, if predators were attracted to areas with humans, or if the presence of humans reduced the presence of prey species.

For the plovers observed roosting at Ocean Beach and Crissy Field, humans and off-leash dogs are not restricting their access to resources because the plovers are indeed there. The second alternative is that humans and off-leash dogs are altering the actual or perceived quality of these sites. The most logical conclusion is the presence of humans and their off-leash dogs reduces the presence and/or activity of prey species. This theory has been brought up by others such as the SF SPCA (Objections to the Federal Governments Ban on Off-leash Dogs at Ocean Beach- Jan. 9, 1997, page 4), but was summarily dismissed by the GGNRA wildlife biologists. It is disturbing that the subsequent 2006 Hatch study at Ocean Beach intentionally ignores gulls, ravens and crows entirely, so there is no data available that might confirm the presence of offleash dogs may protect the plover from birds of prey.

However, the statistics in Daphne Hatch's own 1996 study support this theory. During the period prior to this study, the number of plovers at Ocean Beach was increasing, even though there was no requirement for dogs to be on-leash. The maximum Snowy Plover counts for the 1979 to 1985 period ranged from 4 to 16, compared to maximum counts (since 1988) of from 38 to 85 birds (Hatch Report, p. 8).

This UK study also evaluates the methodology of studies like the 2006 Hatch study, which attempt to assess the distribution or behaviour of animals in the presence or absence of disturbance. A limitation of these types of approaches is that the numbers of animals that would use these sites in the absence of disturbance is generally not known. For example, if the sites with higher levels of disturbance also have lower levels of resource availability (e.g. food or nest-sites) or higher risk of predation, then removing the source of disturbance may have no effect on the numbers of animals in the area.

In actuality, because it is acknowledged by the GGNRA that removal of off-leash dogs or banning will not increase the number of plovers at Ocean Beach, the question becomes, will the restriction of dogs decrease the number of plovers at Ocean Beach? There is evidence to confirm this is probable, as a

similar scenario which involved the Bank Swallow has already occurred in the GGNRA- - in an area directly adjacent to Ocean Beach, i.e., Fort Funston. This will be discussed in a subsequent section devoted to Fort Funston.

The fourth study was peer-reviewed and accepted on November 12, 1999, and published in *Biological Conservation* 97 (2001) 265-268. The authors are Jennifer A. Gill, Ken Norris and William J. Sutherland. The study is entitled Why behavioural responses may not reflect the population consequences of human disturbance.

The authors contend, The effect of human disturbance on animals is frequently measured in terms of changes in behaviour response to human presence. The magnitude of these changes in behavior is then often used as a measure of the relative susceptibility of species to disturbance; for example, species that show strong avoidance of human presence are often considered to be in greater need of protection from disturbance than those which do not.. By contrast, species which do not avoid disturbed areas are often considered as requiring little or no protection from disturbance.. From a conservation perspective, human disturbance of wildlife is important only if it affects survival or fecundity and hence causes a population to decline.

What becomes clear after reading this study is that in the GGNRA, Daphne Hatch is defining avoidance behavior and what constitutes a disturbance in a very different manner than do other researchers. (This is consistent with my criticism of the 2006 Hatch study). According to this study, avoidance behavior or moving constitutes an activity where the plover actually leaves the site. The 5, 10 or 20 foot flight Daphne Hatch is utilizing as her most severe evidence of disturbance may be relevant in breeding/nesting areas, where movement of that scale can take a plover away from its nest and eggs. In the circumstance where plovers are roosting in an area, this is not classified by other researchers as a disturbance. From the perspective of these authors, the plovers roosting at Ocean Beach and Crissy Field require little or no protection from disturbance because they stay at these sites.

#### The Western Snowy Plover Study In The DEIS Is Fatally Flawed and Omitted In the SEIS

The DEIS relies in large part upon a study by Matthew Zlatunich and Michael Lynes of the Golden Gate Audubon Society (see [http://naprap2.home.mindspring.com/GGNRA\\_100819-GGA-Crissy-Field-WPA-SNPL-Report-2009-2010-final11.pdf](http://naprap2.home.mindspring.com/GGNRA_100819-GGA-Crissy-Field-WPA-SNPL-Report-2009-2010-final11.pdf)). This 2010 study, like the Warren study, was conducted in cooperation with the GGNRA. As noted previously, the 2011 DEIS and the current SEIS again fail to mention a 2007 study by Warren (see [http://oceanbeachdog2.home.mindspring.com/WSP\\_Recreation\\_Warren.pdf](http://oceanbeachdog2.home.mindspring.com/WSP_Recreation_Warren.pdf)) that found plovers' feeding was not negatively impacted by recreational activities of humans and dogs. This is critically important because the plover does not nest or breed at Ocean Beach or Crissy Field; its' primary activity here is feeding and foraging for food. Instead of acknowledging the Warren study, the Zlatunich-Lynes study was conducted in 2009/2010 at Crissy Field in San Francisco. We have included this segment in the SEIS Comment to emphasize the failure of the GGNRA/ NPS/DOI to provide credible scientific data/site-specific studies to support their proposed changes to the DMP. The study by Zlatunich-Lynes exhibits many of the scientific shortcomings noted in previous studies:

- This study was merely an observational study
- The observational collection of data was performed by Audubon volunteers who had a bias-the GGAS has publicly advocated the banning of dogs to protect the plover
- This study made no attempt to ascertain comparative effects on the plover. There is no discussion of the disturbance level perpetrated by other sources, even though they tell us that data was collected
- Raw data is not provided to the reader
- The analysis appears to be biased because it is based upon incomplete data. For example, the level of disturbance is not categorized in the analysis even though we are told they were categorized in their

collection.

-Assumptions are made in this analysis without supporting explanation. For example, they decided to assign the disturbance to an on-leash dog if he was closer to the plover than his guardian. This ignores the possibility the disturbance was due to the number of bodies- -e.g. two people walking would disturb a plover to the same extent as a leashed dog and a person.

To clarify the issue of comparative disturbance, it seems odd that although known predators of the plover are acknowledged to be at Crissy Field, no attempt is made to analyze the disturbance they create for the plover. The Common Raven and American Crow are present, yet ignored in the analysis. Beyond this, the California Gull is noted as being present. This is of interest because a recent study using surveillance cameras at plover nesting sites in San Francisco Bay documented California Gulls as being responsible for 25% of all predation of plover nests . (Robinson-Nilsen, Caitlin<sup>1</sup>, Jill Bluso Demers<sup>1</sup>, Cheryl Strong<sup>2</sup>, and Scott Demers<sup>3</sup>; <sup>1</sup>San Francisco Bay Bird Observatory, [crobison@sfbbo.org](mailto:crobison@sfbbo.org); <sup>2</sup>U. S. Fish and Wildlife Service, Don Edwards San Francisco Bay National Wildlife Refuge; <sup>3</sup>HT Harvey and Associates DETERMINING THE EFFECTS OF HABITAT ENHANCEMENTS AND PREDATORS FOR WESTERN SNOWY PLOVER). California Gulls are new to some of these areas-could the decline in the number of plovers at Crissy Field be related to an increase in the presence of California Gulls? This study makes no attempt to ascertain if there is any such correlation.

The Zlatunich-Lynes study notes the number of plovers has been steadily declining since 2005/2006 records. They choose to rely upon previous conclusions that the greatest disturbance impact to wildlife within the Wildlife Protection Area at Crissy Field is caused by dogs, joggers and walkers. The data from this study showed the number of dogs and humans in the plover area spiked in 2008/2009, and declined dramatically in 2009/ 2010. The number of plovers continued to decline, despite the reduction in recreational disturbance in 2009/2010. This could lead one to conclude that there is no correlation between the number of dogs and people and the number of plovers present. There is no discussion of this possibility in the data analysis of this study.

The Zlatunich-Lynes study is without merit because it deliberately misleads the reader about the GGNRA's legal obligations to protect the plover. Ocean Beach and Crissy Field are not designated as critical habitat by the USFWS. Therefore, the GGNRA is obligated only to prevent the harassment or taking of the plover within its boundaries. Appendix B contains the legal definition of a disturbance which would constitute harassment and be a violation of the law: "If the observer witnesses a blatant violation of the law, such as a dog owner knowingly and without regard allowing his dog to harass wildlife, the observer shall make note on the comment sheet and shall, upon completion of the survey, file a wildlife harassment report at the park police station..." There is no indication in this study analysis that any observer EVER witnessed this type of harassment of a plover during their observations.

Alternatively, the Zlatunich-Lynes study records "disturbances" which they define as minor, moderate and major-none of which rise to the level of the legal and accepted definition of harassment that is utilized by USFWS and other studies. For example, the Zlatunich-Lynes study states: "a minor disturbance will cause a resting bird to stand". A clear thinking individual can conclude that a minor "disturbance" as defined by this study is really no disturbance at all.

Worse yet, when analyzing the number of "disturbances" observed, there is no acknowledgement as to how many of these "disturbances" are actually minor, moderate or major based upon these authors' criteria. It is entirely possible (and I believe probable) that each of the disturbances recorded and utilized to justify the restriction of recreation were merely minor "disturbances".

This would be consistent with the conclusions of other studies including the following which states: "...snowy plovers in other areas have become habituated to relatively constant and non threatening human trail use." (Trulio, Lynne! , Caitlin Robinson-Nilsen<sup>2</sup>, Jana Sokale<sup>3</sup> and Kevin Lafferty<sup>4</sup> <sup>1</sup>San Jose State University; [Lynne.Trulio@sjsu.edu](mailto:Lynne.Trulio@sjsu.edu) ; <sup>2</sup>San Francisco Bay Bird Observatory; <sup>3</sup> Sokale Environmental Planning; <sup>4</sup> Western Ecological Research Center, US Geological Survey NESTING SNOWY PLOVER

#### RESPONSE TO NEW TRAIL USE.)

In summary, the Zlatunich-Lynes study and its recommendations are flawed, dishonest and biased. This "study" would never have passed peer review, and it was unlawful for the GGNRA to promulgate and rely upon this "study" in the DEIS. The DEIS advocates recreational restrictions based upon this study. Even though this "study" had bias against dogs and their guardians, they still failed to find any violation of the law that constituted harassment of the plover- -the actual criteria that is legally significant with respect to the protection of the plover. The omission of studies that contradict the need for recreational restrictions and the failure to obtain peer review render this aspect of the DEIS invalid. This "study" is omitted in the SEIS, however the GGNRA still maintains in the SEIS that recreational restrictions must be implemented to protect the plover in the GGNRA.

#### The Western Snowy Plover At Crissy Field

This DEIS/SEIS proposes to ban dogs from large areas of Crissy Field to protect the Western Snowy Plover. It is especially disturbing to note the lack of "vital signs monitoring" in this location because there was a full evaluation of the potential environmental impacts of canine recreation when the renovation/restoration of Crissy Field was first proposed. This was a perfect opportunity to obtain a baseline monitoring survey and follow through annually to monitor the effects of the originally permitted levels of recreational activity. Instead, you will see that the citizens were advised the recreational interests would be compatible with the renovation/restoration just until the renovation/restoration was completed. Then off-leash recreation was banned without environmental study. The recent study relied upon within this DEIS has been reviewed in the Ocean Beach section, but it fails entirely to meet standards the NPS sets forth for "vital signs monitoring", and was not peer reviewed. It was unlawful to include the study or its conclusions in the DEIS or SEIS.

"The 1988 Crissy Field Site Improvement Assessment evolved from concepts present in the 1980 General Management Plan. The Crissy Field plan recommends native planting, preservation and enhancement of the site's natural qualities, and preservation of views of the bay while recognizing the needs of existing and future visitors." (Final General Management Plan, Amended Environmental Impact Statement, Presidio of San Francisco, July 1994, p. 5.)

Public concern over the impact of the plan on recreation surfaced in 1994. Wind surfers and dog-walkers were concerned that the new Crissy Field proposals did not address future use of the area for these recreational activities. On November 28, 1994, the Crissy Field project team met with representatives of boardsailors and Rich Avanzino, then President of the SF SPCA, to discuss "the direction [they] were going." (USPROD00684.)

Meanwhile, the GGNPA encountered problems obtaining donations for the project because of these concerns. Toby Rosenblatt was responsible for raising funds on behalf of the GGNPA for the restoration project. He became alarmed in 1994 upon discovering that NPS officials were not honoring the "voice control" 1979 Pet Policy established when the City donated Park lands to the GGNRA. In December 1994, Mr. Rosenblatt wrote a letter to Superintendent O'Neill and Presidio Manager Robert Chandler, protesting reports that Rangers and Park Police were approaching people in the Presidio, Crissy Field, Upper Fort Mason and Ocean Beach "telling them about a leash law and enforcing the law." Mr. Rosenblatt disagreed with the change in enforcement and warned "[i]t will raise a very major reaction, as you know, in the community and will seriously impact relations with lots of people". He also noted that the enforcement was impacting fund raising efforts for Crissy Field: "I know that a change which implements such a law will hurt our fund raising efforts for Crissy and elsewhere - in fact that is beginning to happen already." Copies of the letter were sent to Greg Moore, Executive Director GGNPA, and Amy Meyer of the GGNRA Citizens Advisory Committee. (USPROD00694.)

Nevertheless, the NPS refused to include off-leash recreation in official plans for Crissy Field. In February 1995, Richard Avanzino met with Superintendent O'Neill, Presidio Manager Chandler and GGNPA Director Moore in order to address concerns "about the continued lack of official acknowledgment and recognition for this vital recreational activity." In a letter summarizing these discussions, Mr. Avanzino noted that the NPS was refusing to provide official recognition because federal regulations require dogs to be leashed, and many NPS staff and powerful environmental groups who want a wetlands established at Crissy Field are opposed to off-leash dogs. NPS also threatened to retaliate if dogwalkers pushed for official recognition during the planning process: "[I]f we advocate publicly for official recognition and status, our efforts will be frowned on and may well be greeted with retaliatory action." The SF SPCA responded by demanding official recognition: "We want the National Park Service to officially acknowledge and preserve off leash dog walking as it exists today at Crissy Field. We want this acknowledgment to be reflected in the legal and other documents pertaining to Crissy Field, as well as in the official design plans for the site." Copies of the letter were sent to Senators Feinstein and Boxer and Representatives Pelosi and Lantos. (USPROD00666-7.)

Public pressure continued to build. On March 28, 1995, a public debate over the issue of a wetlands and its potential impact on off-leash dog-walking was held at the Commonwealth Club. A flyer for the lecture, entitled "Wetlands at Crissy Field - Is this a Good Idea?" identified the speaker as James F. Kirkham, Advisory Partner, Pillsbury Madison & Sutro, Native San Franciscan and Outdoorsman." Summarizing the issue up for debate, the flyer noted: "this habitat could include up to half of the entire acreage of Crissy Field, which could drastically reduce the amount of space left for recreational activities, including off-leash dog exercise." (USPROD0068i.) A few days later, on April 1, 1995, a massive Presidio "dog-in" was held to show support for off-leash dog walking at Crissy Field. (USPROD00679-80.)

In April 1995, Mr. Avanzino met with Superintendent O'Neill and Citizens Advisory Commission members Amy Meyer, Jacqueline Young, and Trent Orr to discuss the status of the 1979 Pet Policy and the issue of inclusion of officially designated off-leash areas in the Crissy Field Plans. A letter memorializing the meeting indicates the following issues were resolved:

1. The "NPS will again honor the Pet Policy";
2. "Legal counsel for the NPS has advised" that the Superintendent has "discretionary authority to reinforce through the Compendium mechanism the principles expressed in the Pet Policy";
3. "This is permitted even though there is some conflict with the Code of Federal Regulations";
4. The NPS agreed to include "site-specific plan that clearly delineates off-leash dog walking areas";
5. The NPS agreed "to public review and participation at the level of the Golden Gate National Recreation Area Advisory Commission of any future changes to the agreed upon off-leash dog walking areas." (Richard Avanzino letter to Brian O'Neill, April 27, 1995.)

To bolster fundraising for wetlands restoration at Crissy Field, the NPS announced (in the San Francisco Chronicle) that it "has no intent to forbid off-leash, even if a large wetlands area is restored along the northern waterfront...all plans either maintain or expand off-leash dog walking. Under any future scenario, more generous areas of the Presidio's northern waterfront will be available to dogs." [emphasis added]

On October 2, 1996, the GGNRA Issued a "Finding of No Significant Impact" ("FONSI") for the Crissy Field project. Included in this document were notes about the comments and concerns voiced during the Comment period for the Environmental Assessment ("EA"). The FONSI addressed these concerns as

follows: "The Crissy Field Plan ...includes expanded opportunities for off leash dog walking, and the marsh design, as noted in the EA, incorporates features to avoid conflict between other recreational activities, such as off leash dog walking, and wildlife. Section 2.1.2.10 ("Dog Use Areas") provides: "Dog walking is a popular activity at Crissy Field, and both alternatives provide for the continued enjoyment of that activity. An approximately 70 acre area would be available for dog activities. Walking dogs off leash under voice control would be permitted on the Promenade and beach east of the U.S. Coast Guard station, on the restored airfield, and in the East Beach area." Indeed, the Crissy Field Plan Summary confirmed that the proposed plan includes 70 acres for "off-leash dog walking." (Id., p. 10) With respect to protected species, the issue of vegetation was also addressed in the FONSI as follows: "The decision to avoid the introduction of special status species in the restoration was made recognizing the high level of recreational use at Crissy Field anticipated to continue in the future and the concern expressed by many individuals that special status species could cause a change in management of the site that would restrict recreational uses." NPS did in fact replant the federally endangered California sea-blite (*Suaeda californica*) that drowned out during the prolonged inlet closures/non-tidal lagoon flooding phases, and some transplants are thriving."

Thereafter, the \$35 million in funds were raised, the restoration completed, and subsequently, off-leash recreation was illegally banned at all GGNRA properties, and massive ticketing and harassment of dog walkers commenced. This directly violated the following agreements between the GGNRA and San Francisco: 1975 Memorandum of Understanding; 1979 Pet Policy; 1980 General Plan; 1982 GGNRA Natural Resources Plan; 1995 EIR for the Crissy Field Plan, and the 1996 Compendium Amendment. The only redress for these actions by the GGNRA was for three citizens to spend ten of thousands of dollars of their own funds to defend themselves in a criminal proceeding challenging the tickets they were illegally issued. The GGNRA was found to have acted illegally when it rescinded the 1979 Pet Policy and began ticketing citizens for engaging in legal activity.

In the DEIS/SEIS, the presence of these plantings as well as the Western Snowy Plover are utilized to justify the restriction of recreation in the area. The GGNRA has, yet again, violated the mandate under which this Park was created, violated its promises to the City, reneged on the promises made in the FONSI, and made clear that this DEIS/SEIS had a predetermined outcome to cutback off-leash recreation or ban dogs in areas used for this purpose before the Park ever existed. The failure of this DEIS/SEIS to present any credible evidence which would support the restriction of recreation due to the presence of the plover has been discussed in detail in the Ocean Beach section of this comment.

Fort Funston (aka Doggie Disneyland)

Post WWII History of Fort Funston

After WWII, Fort Funston (FF) was pretty much abandoned. It could be best described as acres of sand dunes partially covered in iceplant that the Army Corp of Engineers had planted to stabilize the sand. In the 50's and early 60's, FF was a fabulous habitat - but not for wildlife or native plants. Rather, FF became a favorite hangout for seedy S.F. and Daly City gangs, drug dealers and users, sexual predators, off road recreation vehicle enthusiasts and a few off-leash dog walkers. Parents in nearby neighborhoods forbade their children from playing at FF due to its reputation for being unsafe. Tired of being harassed/harangued at other city parks, the dog community soon recognized the value in FF. It was clear that FF provided them an opportunity to recreate with their dogs off-leash in a beautiful seascape without any of the hassles presented at the other parks. No longer would they have to be inundated by the claims that they were infringing on the enjoyment of the city parks by adults and children who were afraid of dogs and complaints about dog waste.

Soon the word got out in the dog community and in the mid-late 60's FF realized a huge spike in the

number of dogs and their human companions. It was these people who became the true custodians of FF. They were the ones who turned it into a real park. They took pride in their park. They kept it clean and safe. In fact, because of the significant presence of dogs and their humans, the criminal element soon left FF in search of a new refuge where they had control and would remain unchallenged. Many went to Golden Gate Park. Truth be told, the criminals were afraid of the dogs. And the dogs, being the good judge of people that they are, didn't like the criminals. Yes, it was because of the dogs, and only because of the dogs, that FF was now a VERY desirable park. This did not go unnoticed by the National Park Service.

When SF deeded FF in 1972 to the NPS/GGNRA, they inherited a spectacular park that was safe and well taken care of by its true custodians - the dog community. In return, the GGNRA promised via its enabling legislation to respect the historical usage of FF which consisted almost entirely of off-leash dog walking. This promise was codified in the GGNRA 1979 Pet Policy (see <http://oceanbeachdog2.home.mindspring.com/id11.html>) which officially designated FF as an off-leash dog park. In the early 1990's a new management philosophy permeated the GGNRA where conservation would now trump everything else in this national recreation area. Most notably, it would trump recreation. In 2000, after several illegal closures at FF, Fort Funston Dog Walkers sued the GGNRA and won. In 2001 the GGNRA arbitrarily and capriciously wiped out 30 years of promises and promulgations and voided the 1979 Pet Policy (see <http://www.fortfunstonforum.com> for details). This action was reversed in 2004 in Federal Court and then again in 2005 in Federal Appellate Court. The 1979 Pet Policy was reinstated as the law of the land and remains that way today (also see <http://oceanbeachdog2.home.mindspring.com/id6.html>). Presently, we are embroiled in a process, i.e., the 2013 GGNRA Pet Management Policy SEIS (see <http://oceanbeachdog2.home.mindspring.com/index.html>), which assures us that the GGNRA will once again remove off-leash dog walking from all of its recreation/park spaces. The areas left for off leash recreation in the GGNRA's Preferred Alternative will soon be eliminated by virtue of the poison pill- -the Monitoring Based Management Strategy (discussed in detail on page 64 of this document). In short, this proposed compliance strategy has a measure of compliance that is totally subjective, with the GGNRA making all the decisions. Further, short or long term (permanent) closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which we have no ability to influence by our actions. The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon the language of the Monitoring Based Management Strategy.

#### The Bank Swallow At Fort Funston

Beginning in 1991, the GGNRA/ NPS began destroying the Fort Funston ecosystem with the premise being protection of the California state-threatened Bank Swallow. The GGNRA/ NPS maintained that that recreational activity and "exotic" plants were having a profound negative impact on the Bank Swallow. The GGNRA/ NPS never conducted an environmental impact analysis or vital monitoring as required by Federal law before beginning this ecological destruction.

For decades, the Bank Swallow population had been thriving at Fort Funston, with their population increasing steadily even as off-leash dog walking was legally permitted and visitor use increased. In 1982, there were 229 burrows, 417 in 1987, and 550 in 1989- providing anecdotal evidence that dogs and Bank Swallows co-exist and thrive.

In October 1991, the GGNRA/ NPS closed approximately seven acres at Fort Funston by moving fences designed to protect the Bank Swallow 75 to 100 feet away from the cliffs in order to construct native plant habitats. (Milestone, J. "Just a Swallow Habitat Restoration Project".) By early 1992, almost four acres were converted to coastal dune and chaparral. At that time, NPS staff began chain sawing twenty-

four (24) Monterey Cypress trees lining a trail leading to the beach, and volunteers pulled up erosion-preventing ice plant. Bulldozers were used to level hillocks and bury concrete slabs. In the course of only a few months, volunteers replaced ice plant with 5,000 native plants in the four acre area. The entire seven acre project was designed to take five years to complete with only 75% coverage of plants. The goal of the project was to increase "natural" erosion and create "moving sand" ecology. With the closures at Fort Funston, the GGNRA/ NPS embarked on a unilateral course that was illegal under its own management policies, the MOU Agreement with the City, and the GGNRA enabling statute.

At Fort Funston, the GGNRA/ NPS pursued a strategy of repressing dog-walking each time it expanded its closures. Concomitant with the native plant expansion, Park Rangers began telling dog-walkers, in late 1991 and 1992, to leash their dogs. In May 1992, Mark Scott Hamilton, Chairperson for San Francisco Commission of Animal Control and Welfare, sent a letter to Superintendent O'Neill expressing concern over "NPS Ranger announcements that GGNRA's longstanding 'voice control' policy at Fort Funston was to be changed effective May 1." Mr. Hamilton pointed out that such action would have serious impact on "overall dog-walking policies within San Francisco's geographic boundaries" and questioned how it could be done without public hearings: "It seems inconsistent with GGNRA's past policies (and perhaps violative of applicable regulatory law) that this change would even be contemplated until after public input hearings."

Public outcry over this action was overwhelming. In response, Western District Director Stanley Albright reassured both U.S. Senator Cranston and Senator Seymour that the GGNRA would continue to abide by the 1979 Pet Policy: "At this time, there is no change in the 1979 Pet Policy which [currently] provides the visitor the privilege of walking one's dog off leash."

Addressing public concern over the closures at a meeting that summer, Head Ranger Jim Milestone, in July 1992, assured citizens that the fences would be in place only one year and the native plants would be compatible with recreational use of the area. (Meeting Minutes of Fort Funston Dog Walkers Association, July 9, 1992.) The next year, GGNRA/ NPS expanded the native plant habit an additional three acres beyond the initial seven acre project, again without public review or project approval.

In June 1994, an additional expansion/closure of fifteen acres was proposed without analysis or public hearings. The GGNRA report confirmed that the project was already "expanding into areas beyond our previously agreed to perimeter. Project originally called for removal of all ice plant (a noxious exotic species) from the ten acre Bank Swallow habitat area. This is now complete and new areas outside of Bank Swallow habitat area are now within our grasp ." (Project Review Form, Ice Plant Removal, North Tip of Fort Funston, June 1994, emphasis added.) The project goal was to destroy 15 acres of ice plant, using chainsaws to destroy all "exotic" trees and bushes, and using bulldozers where possible. The map attached to this project limited the expansion to the asphalt coastal trail. In fact, this project also was "expanded beyond agreed perimeters" to encompass areas east of the trail, covering the entire Boy Scout Bowl.

In 1995, Rangers began warning dog-walkers at Fort Funston, Crissy Field, and Ocean Beach that they were going to start enforcing the general leash regulation, 36 C.F.R. Section 2.15(a)(2). At the same time, GGNRA/NPS announced plans to close ten acres adjacent to Battery Davis under the pretext of erosion control. Ranger Jim Milestone admitted to the public at a meeting in March 1995 protesting the proposed closures that this area was very popular with children for playing Lawrence of Arabia on the steep slope. Dogs loved to chase balls and frisbees at the bottom of slope.

Following these closures, by letter dated March 14, 1995, Superintendent O'Neill promised Richard Avanzino, then-President of the San Francisco SPCA, that the habitat was nearing completion and would not expand south. The GGNRA/ NPS also promised that the Battery Davis closure was an approximately

5-year closure during which time it would be revegetated. Signs indicating both areas were closed for native plant revegetation were subsequently placed along the affected areas.

After four years of closures of areas adjacent to the Bank Swallow burrows to off-leash recreation and vegetation revision, in 1995 the number of Bank Swallow burrows plummeted from 924 to 713. A simple review of the scientific literature confirms that Bank Swallows are very tolerant of "human disturbance" at nest sites. Indeed, "many colonies are in human-made sites...such as sand and gravel quarries and road cuts." (Garrison, B., "Bank Swallow," *The Birds of North America*, No. 414 (1999), at p. 6.) Mr. Garrison is a California Department of Fish and Game Biologist and an expert on the Bank Swallow. In fact, the only GGNRA/ NPS study to evaluate the dramatic drop in numbers of the Bank Swallow concluded that increased predation, not recreational activity, was negatively affecting the birds. (Chow, N., "1994-95 Bank Swallow Annual Report", US04906-32.)

In 1996, the GGNRA/ NPS failed to document the colony size, and claims to have lost all data for 1997. In 1998, the number of burrows had dropped to 140, and the GGNRA/ NPS closed off the entire slope of coastal bluffs below the hang gliders.

The SEIS misrepresents the activities of the GGNRA during the time frame of 1994-1998 as follows: "The total number of bank swallow burrows observed at the site from 1993 to 2006 through the NPS monitoring program has ranged from a high of 924 burrows in 1994 (Chow 1996, 2) to a low of 140 burrows observed in 1998 (NPS 2007c, 3). The number of burrows was high for the years 1993 through 1996, with total counts above 500 burrows (NPS 2007c, 3). Storm events associated with El Nino conditions during the winter of 1997 into 1998 wiped out all the burrows through heavy erosion at the site (NPS 2007c, 3). The cliffs are subject to rapid erosion from storm events outside the breeding season (NPS 2007c, 1)." We would point out, again, that the native plant restorations were designed to increase "natural" erosion and create "moving sand" ecology. It seems rather self-evident that these native plant "restorations" contributed greatly to the demise of the FF Bank Swallows in the specified time frame.

In 1998, the Bank Swallow colony fled the "Bank Swallow Protection Area," to the "exotic" ecology and recreational activity along the south cliffs of Fort Funston. As a general rule of survival, birds leave areas where they are under stress. Despite the obvious devastation to the Bank Swallow colony, the GGNRA/ NPS failed to analyze the impact of unleashed dogs on controlling predators of the Bank Swallow. (Hatch Report, p. 85, lines 10-16.) NPS Head Ranger J. Milestone indicated the dogs might have protected the Bank Swallows by impacting the weasel population. (US03944.) Additionally, observations indicate that the very habitat the GGNRA/ NPS was destroying was the habitat most suitable for the Fort Funston Bank Swallow. Such observations confirm that ice plant rootlets are used by Bank Swallows to construct nests. (US04062-3.)

In January 2001, the NPS closed twelve additional acres to public use and the Bank Swallow colony again fled further south away from the new closure.

The SEIS characterizes the aforementioned movements of the Bank Swallows as follows: The cliffs are subject to rapid erosion from storm events outside the breeding season (NPS 2007c, 1). This erosion removes burrows from the previous season. The bank swallows respond by digging new burrows in the soft cliffs each year. Years without large storm events often result in burrows remaining from previous years, and these are recounted in the monitoring, though these burrows are not always active with swallows.

Because of a total failure to study causal effects of various activities on the Bank Swallow, the GGNRA/ NPS has no evidence linking recreational activity with the Bank Swallow decline at Fort Funston. Indeed, the best evidence that recreational activity does not impact the Bank Swallow negatively is the swallows'

departure from the fenced off northern cliffs to their present location

- - an area of continuous recreational activity. The overwhelming evidence indicates that the GGNRA/ NPS native plant projects and the erosion they have caused have negatively impacted the Bank Swallow colony.

In fact, NPS documents confirm that Bank Swallow experts do not agree with the NPS/GGNRA contention that the creation of native plant "flyover" habitat is necessary for the Bank Swallows. Notes of a March 16, 2000 phone conversation with Barry Garrison from the California Fish & Game Department, one of the nation's foremost experts on California Bank Swallows, confirm that he "doesn't feel need flyover" (USPR001625)....."doesn't necessarily agree that they need a flyover to persist." (USPROD01624). William Shields, Professor of Biology at SUNY, elected fellow of American Ornithologist's Union, leader of SUNY's Conservation Biology concentration (in letter to GGNRA re: closures at Fort Funston, October 2000), reiterates the Bank Swallows tolerance of human and pet presence and their lack of appreciation for "native plants." "The poor arguments presented in their (GGNRA) plans make little sense to me. The Bank Swallow like other swallows is quite suited to live with humans and their pets" and "... I do not understand or condone what I believe are their misrepresentations about the needs and safety of the Bank Swallows breeding in the cliffs. ... the notion that the swallows would do better by having more species of insects or even more insects on the short flyway between their breeding burrows and their main foraging sites at the nearby lake is a major stretch and smacks of special pleading to me."

The GGNRA's dune conversion destroyed the Bank Swallow colony nesting site that the birds had used since 1905.

GGNRA/ NPS officials have consistently maintained that after some five years, these "habitat" areas would be reopened for public use. Five years have passed for many of these closures, yet to date, no fences have been removed.

This DEIS/ SEIS contains no "monitoring of vital signs" that could possibly justify the actions taken previously or the actions proposed in the Preferred Alternative at Fort Funston to limit recreation of people and their dogs. The science, limited as it is, would indicate the Bank Swallow would benefit from the entirety of Fort Funston again being accessible for off-leash recreation as it was in the 1979 Pet Policy. Instead, this DEIS/SEIS moves to further restrict recreation of people and dogs to presumably "protect" the Bank Swallow.

A legitimate safety mitigation would be planting a bramble-type shrubbery barrier along the cliffs, so as to deter dogs and small children (neither of whom can read warning signage) from the cliff edge and preclude accidental falls off the cliffs for all park users.

**The DEIS/SEIS Promotes The GGNRA Practice Of Perverting The Endangered Species Act To Restrict Recreation**

Historically, one avenue for eliminating access to the public-the recovery of endangered and threatened species-has been extensively utilized by GGNRA management. This explains the GGNRA's repeated treatment of any habitat, no matter how deficient, as critical habitat. An example of this would be the "plover protection areas" at Ocean Beach and Crissy Field. This DEIS/SEIS proposes to ban dogs at these areas which is a management restriction more severe than is often employed in "critical habitat". Although for a time the GGNRA attempted to mislead the public by calling this area "crucial habitat", the fact of the matter is that term that has no legal significance. What is significant is that these areas are NOT critical habitat, therefore management measures are legally limited to preventing "harassment" of the plover at that location. Banning dogs is a restriction that is not commensurate with the observed

activities in these areas with respect to the plovers.

Additionally, in the DEIS/SEIS, the NPS designates areas as "potential habitat". The NPS treats "potential habitat" (build it and they will come) as if it were "critical habitat" and embraces all legal restrictions that would enure from that status. An example of this would be at Mori Point in Pacifica. At Mori Point the GGNRA chose to remove 2/3 of the property from recreational access in order to create potential habitat for the red-legged frog and San Francisco garter snake. The GGNRA treats this "potential" habitat as if it were "critical" habitat (which it is not) with respect to recreational restrictions.

The GGNRA has also embarked on a mission to create native plant habitats where no habitat previously existed. GGNRA management alleges this is a part of their obligation to "preserve" the park for future enjoyment, however, this is NOT what they are doing. When you read the overview for Fort Funston, it is abundantly clear that they are creating these native plant habitats, and in doing so they are destroying parts of the park that existed long before the GGNRA took control. This process is not preserving anything. Additionally, this is in violation of their authorizing directive, as they insist establishment of native plant areas requires the exclusion of humans from the site, eliminating all recreational activity in the area.

Specifically, let us consider the San Francisco lessingia. From the SEIS:

"the San Francisco lessingia is listed as federally endangered and state endangered and is a low-growing, slender-stemmed annual herb of the sunflower family (Asteraceae). Populations of this species occur primarily in small, local remnants of dune scrub in the Presidio. Dune scrub is found on the sand terrace slopes above Baker Beach and in the Lobos Creek Dunes, and San Francisco lessingia is found in association with this community at Baker Beach. Both Fort Funston and Baker Beach have been designated as San Francisco lessingia recovery and enhancement sites (USFWS 2003, 128, 141). Although dune scrub habitat occurs at Fort Funston, the San Francisco lessingia does not currently occur there. Reintroduction of the species is precluded by the current unmanaged (or unrestricted) dog use at Fort Funston. "

We have just detailed the closure of some 35 acres at Fort Funston for the purpose of reintroducing native plants, presumably including lessingia. Clearly the GGNRA's native plant "experiment" has encompassed 35 acres and been ongoing since 1991. When will they admit failure? The plants they intend to reintroduce such as lessingia became extirpated in the area and there has been no documentation to show dogs came to Fort Funston and selectively dug up all the lessingia and left only the iceplant the Army Corp of Engineers planted to prosper. Perhaps the soils, weather, or other forces of nature have modified the environment at Fort Funston such that lessingia are unsuited to survival there.

In fact, there would be highly respected ecologists such as Katherine Suding of UC Berkeley and Richard Hobbs of the University of West Australia whose writings would suggest the GGNRA managers are going about their "restorations" in an outdated, ineffective manner. The failure to monitor areas as required by Federal law, is also a failure of good ecologic practices. The taking of parcel after parcel of property such as at Fort Funston without learning from your "experimental design" before moving to the next parcel is inexcusable. What results is an illegitimate taking of recreational space with nothing to show for it, except the demise of the Bank Swallow, a protected species.

Consider the article entitled "Management of Novel Ecosystems: are novel approaches required?" authored by Timothy R Seastedt, Richard J Hobbs and Katharine N Suding, and published in *Front Ecol Environ* 2008; 6, doi:10.1890/070046. The conclusions of the article in short are as follows: "Most ecosystems are now sufficiently altered in structure and function to qualify as novel systems, and

this recognition should be the starting point for ecosystem management efforts...Novel ecosystems composed of new combinations of species under new abiotic conditions are increasingly common, and adaptive ecosystem management approaches must explicitly acknowledge the current status and predict the future conditions of these systems ...Old styles of management, which focused on removing undesirable species or conditions from ecosystems to return them to a prior condition, may no longer be sufficient... In addition to enhanced monitoring, attention to a rigorous "experimental" design, including reference areas wherever possible, is appropriate if not essential to a defensible, informative, and publicly acceptable management program for novel systems. Awareness among stakeholders, policy makers, and managers of the realities of current and future ecosystem changes is essential to generate management strategies that have positive rather than neutral or negative outcomes. "

This SEIS proposes to drastically reduce recreational access to Fort Funston and further expand their unscientific native plant "experiment" rather than fulfill their mandated obligation to expand and enhance recreational opportunities at Fort Funston and elsewhere in the GGNRA.

Further, Closures at Fort Funston were conducted without a NEPA required environmental impact analysis with regards to recreation or the Bank Swallows, without proper project approval, without peer review, and without public hearings in violation of NPS regulations, U. S. Department of Interior management policies, and federal law. The GGNRA has implemented similar closures at Baker Beach, Lobos Creek, and in the Presidio. Concerned citizens were unable to obtain specific vegetative plans for the Presidio. Eventually plans to cut down approximately 4,000 trees in order to plant a native "vinegarweed" (*lessingia*) came to light and were opposed vigorously.

Lastly, the GGNRA has utilized this DEIS/SEIS to ambush recreation in areas where the public agreed to "restoration" to enhance the environment for "sensitive" species with the promise that recreation would be able to co-exist with these species when the project was complete. Several examples come to mind; one would be Crissy Field (described in a previous section of this document) and another would be Muir Beach. The conclusion in the Environmental Review for the Redwood Creek/Muir Beach "restoration" stated:

"The preferred alternative will have short-term minor adverse impacts on visitor and resident access to Muir Beach by contributing to traffic congestion. With the implementation of the mitigation measures, the intensity of these adverse effects will be reduced to a minor level. In addition, the overall effect of the project is beneficial and will improve resident/visitor access and recreation opportunities. Implementation of the Preferred Alternative would not impair park visitors or residents. "

The project has been completed, and this DEIS/SEIS now fences dogs out from areas of Muir Beach and requires leashes where they were allowed off-leash before. Residents/visitors do not see the proposed outcome as an "improvement of recreation opportunities as previously promised".

#### GGNRA Usurps Authority Of The State Of California In This DEIS/SE/S

The GGNRA intends to ban the recreational activities of dogs and their guardians upon the tidelands that are adjacent to GGNRA beaches. These tidelands remain subject to State "public trust" uses and may not have their longstanding recreational usage turned into purely conservation areas without violating State law and the terms of the permit under which the GGNRA manages some of these tidelands. The GGNRA's position that the public trust doctrine goes into "dormancy" while it manages these tidelands is without any legal support. The 1987 permit specifically allows for enforcement of federal regulations on these State-owned tidelands only to the extent they are not inconsistent with State law. The "public trust" doctrine has been significant State law since California's admission into the Union in 1850. The general recreational uses of these tidelands are not subject to federal rulemaking of any type.

## Compliance Based Management Strategy morphs into Monitoring Based Management Strategy - A Distinction Without a Difference

The 2,400 plus page GGRNA Draft Environmental Impact Statement (DEIS) purports to offer its proposed alternative (almost everywhere on leash or no dogs at all) and then several alternatives. However, buried deep within the document is the GGNRA's Compliance-based management Strategy-a poison pill, which itself demonstrates that the alternatives are illusory  
- nothing more than a default to the GGNRA's desired change:

"In order to ensure protection of resources from dog walking activities, the dog walking regulations defined in action alternatives B, C, D, and E would be regularly enforced by park law enforcement, and compliance monitored by park staff. A compliance-based management strategy would be implemented to address noncompliance and would apply to all action alternatives. Noncompliance would include dog walking within restricted areas, dog walking under voice and sight control in designated on-leash dog walking areas, and dog walking under voice and sight control outside of established ROLAs.

If noncompliance occurs, impacts to resources have the potential to increase and become short term minor to major adverse. To prevent these impacts from increasing or occurring outside of the designated dog walking areas the NPS would regularly monitor all sites. When noncompliance is observed in an area, park staff would focus on enforcing the regulations, educating dog walkers, and establishing buffer zones, time and use restrictions, and SUP restrictions. If compliance falls below 75 percent ( measured as the Executive Summary xiv Golden Gate National Recreation Area percentage of total dogs I dog walkers observed during the previous 12 months not in compliance with the regulations) the area 's management would be changed to the next more restrictive level of dog management. In this case ROLAs would be changed to on-leash dog walking areas and on leash dog walking areas would be changed to no dog walking areas. This change would be permanent. Impacts from noncompliance could reach short-term minor to major adverse, but the compliance-based management strategy is designed to return impacts to a level that assumes compliance as described in the overall impacts analysis, or provide beneficial impacts where dog walking is reduced or eliminated."

The SEIS presents a "new and improved" Management Strategy which they euphemistically call "Monitoring Based Management Strategy". This new scheme purportedly addresses the comments/concerns of the public regarding the DEIS. The DEIS plan is in italics above. The SEIS plan is essentially the same except that it modifies the portion of the Management Strategy in blue above, substituting the following:

"Secondary management response: If compliance rates are deemed unacceptable based on the previous 12 months' monitoring data in one of the zones, in spite of the park's primary management actions, the park will evaluate secondary management responses and institute short term measures, including but not limited to short-term closures and/or establishment of buffer zones, and will evaluate whether to propose long-term closures. Note that primary management responses may continue to apply. A short-term closure is a closure contained in the GGNRA Compendium, typically one year or less in length. A long-term closure is typically longer than one year in length, and would likely require a special regulation. Examples of buffer zones or short term closures being triggered include a change in resource conditions requiring resource protection, such as sensitive species moving into an area, creek channel migration, beach erosion, habitat expansion or habitat restoration ( such as allowing vegetation within a ROLA to recuperate), or re-establishment of a baseline level of compliance."

First, the discussion of compliance rates has changed from 75% to "deemed unacceptable". Respectfully, this is even worse! We now have a measure of compliance that is totally subjective, with the GGNRA

making all the decisions. This is unacceptable.

Under this SEIS, the GGNRA may decide to impose a short-term closure. This would be handled by Compendium. Let us point out, a portion of Ocean Beach was closed to off-leash recreation some years ago by Compendium. We had public comment, and we commented in opposition. We enclosed the same scientific information in our Compendium Comment as we did in our DEIS Comment regarding Ocean Beach. We provided enough information to discredit the "study" the GGNRA relied upon to create their access restrictions. We now know the GGNRA was legally obligated to have the Hatch "study" peer reviewed before they ever released it. The requirement for peer review was ignored, as were our comments, and our analysis of the science. The GGNRA proceeded to unlawfully impose their restrictions in the Snowy Plover Protection Area by way of Compendium. It was a complete ruse. The GGNRA utilized the same "science" about the plover in the DEIS. We once again challenged that "plover science" within our Comment on the DEIS. This time, in the SEIS, someone within the GGNRA/NPS/DOI chose to omit the "plover science" we challenged from the SEIS. Clearly, we were correct about the "science", and we all know it was unlawful for the GGNRA to include or rely upon their "science" without prior peer review (which would have concluded the "science" should have been thrown out). Now the GGNRA intends to use this SEIS to double down and actually ban dogs and some human activities in that same Snowy Plover Protection Area, even as their omission of their "plover science" is tacit admission they have no scientific or legal basis to do so.

Further, these short or long term closures could be triggered by any number of conditions totally under the purview of the GGNRA, all of which we have no ability to influence by our actions.

The GGNRA could decide they want to make Fort Funston in its entirety a native plant restoration/habitat; and they can do so, based upon this language. More erosion at Ocean Beach or the beach below Fort Funston, and surprise- -dogs are now banned.

Worse, the language indicates a long term closure would likely require a special regulation. We have waited since 1979 for a special regulation codifying the 1979 Pet Policy. Despite prevailing in court, elected officials applying pressure, and public outcry over all these years the GGNRA has refused to make the 1979 Pet Policy a Section Seven Special Regulation as they should have had they been honest (check the history section of this comment). Why did they refuse?

Because they recognized how difficult it would be for them to achieve their goal of removing off leash recreation from the GGNRA if it was instituted as a Section Seven Special Regulation. But now, at their whim, under this Management Strategy they can initiate a long term closure and codify it as a special regulation- -never to be reversed by the public.

The entire concept of "compliance based management strategy" is one that has never before been utilized in any other National Park or National Recreation Area by the NPS. The Draft Plan/DEIS states (page 1725) that "the compliance-based management strategy is an important and effective tool to manage uncertainty when proposing new action" and "has been created" to assure successful implementation and long-term sustainability. We argued this policy attempts to allow the implementation of future restrictions without public notice and comment. This is unlawful and should never have been included in the DEIS. We were correct - - so they changed the Management Strategy to include public notice and comment, but their intent has not changed. Because history has shown the GGNRA has their own agenda and cares little about the science or public comment, this SEIS version of a Management Strategy is every bit as much of a poison pill as the original version in the DEIS.

It is clear that regardless of whatever alternative is finally selected by the GGNRA, the end game for the GGNRA is the complete removal of off-leash recreation throughout the GGNRA as well as the banning of dogs entirely from most, if not all, of the GGNRA. At this point we are once again reminded of the revealing statement made by now NPS Director Jon Jarvis: "I would rather give up those [the GGNRA]

properties than have dogs running loose on them."

In summary, in recent interviews GGNRA representatives have stated that they are forced to ban dogs entirely in many of the former GGNRA off-leash areas provided by the 1979 Pet Policy because, "We do not have the resources to enforce voice control or on-leash compliance...". However, it seems to be no problem for them whatsoever to fund staffing resources, expensive surveillance cameras, and muster up a Compendium or special regulation when it comes to dispensing their "poison pill".

#### This DEIS/SEIS (and GGNRA Policy in General) Punishes The Disabled

The disabled are given no special consideration by the GGNRA/NPS. As stated by San Francisco City Attorney Louise Renne (in a letter dated December 19, 2000):

"In addition to receiving numerous complaints regarding the closures at Fort Funston, members of the Board of Supervisors have been contacted by members of the public protesting the removal of pavement from the Sunset Trail, which was closed in November 1999 and reopened in March, 2000. Organizations such as the Golden Gate Senior Services have complained that a major portion of the trail is no longer paved and is therefore inaccessible to persons with limited mobility. We are writing to request a written response from the GGNRA explaining how this diminution of recreational opportunities is consistent with the GGNRA's responsibilities under the Section 504 of the Rehabilitation Act of 1973 (9 U.S.C. 794). Please include in your response a description of the GGNRA's plan to make its programs accessible to persons with disabilities, including those with mobility impairments".

The Sunset Trail is still closed to the public (including those with disabilities), and the Preferred Alternative would restrict more of the trails the disabled might possibly access at Fort Funston to recreate with their dogs.

At Sweeney Ridge in Pacifica stands the Portola Monument, considered to be the most historic site in the GGNRA. When the GGNRA took control of this property, it closed the access road off to cars, thereby preventing the disabled or mobility impaired from accessing this site. The hike from the current parking spot is 2.5 miles to the Monument, with an elevation rise of some 1,000 feet. The GGNRA has made no legitimate effort to remedy this situation, despite complaints from the City Council in Pacifica, and groups representing senior citizens. This DEIS/SEIS further restricts access to this portion of the GGNRA.

Perhaps the best indicator as to how badly the GGNRA treats the disabled in this National Recreation Area is the lawsuit brought by Disability Rights Advocates against the GGNRA in 2008. The lawsuit seeks to resolve GGNRA's discriminatory practices and conditions which prevent people with mobility and vision disabilities from fully accessing its parks system. The suit alleges people with disabilities are systematically excluded from restrooms, visitor centers, historic sites, trails and pathways. One of the plaintiff's attorneys explained that at the Marin Headlands, the visitor center has a ramp, "but to a third-party evaluator, it was so steep as to be inaccessible and dangerous. Alcatraz offers a tram, but it only holds two wheelchairs - they just don't have the capacity. At Muir Woods, one of our plaintiffs has had problems with paved trails. GGNRA hasn't kept the paved trails in a condition that allowed her to use them."

Federal laws since 1973 have obligated Golden Gate National Recreation Area to provide reasonable accommodations for persons with disabilities. Having to hike 2.5 miles to see Portola's Monument may be inconvenient for the average citizen, but it is impossible for an individual with a physical disability. The Sweeney Ridge/Portola Monument situation is a representative example of how when making decisions regarding access the GGNRA always chooses less access. The judge in this litigation sent both parties out

to mediation, yet after a time the parties were sent back to the court as there was a complete failure to come to any workable conclusion. Therefore, it cannot be asserted the GGNRA did not recognize the problem-the reality is that the GGNRA has no intention of remedying the problem, unless forced to by the Court. This DEIS/SEIS is consistent with this pattern of practice.

Instead of addressing their obvious discriminatory policies with respect to the disabled community, this SEIS attempts to divert attention by claiming their desire to limit off-leash access in the Recreation Area is in part to protect the guide dogs and their handlers from injury or duress from said off-leash dogs. This is patently disingenuous, considering guide dog teams have 99% of the GGNRA's 80,000 plus acres where they can travel without interference by off leash dogs.

I love my dog and I vote.

I oppose the GGNRA Draft Dog Management Plan

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

-Dogs need some freedom to run be dogs. They are our family.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

-Racoons cyotes do more damage than dogs!

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

-GGNRA was formed in an urban area. We're lucky to have it but it should be compatable with urban living!

I oppose the GGNRA Draft Dog Management Plan

I oppose the Preferred Alternative because it is too restrictive. There is no justification in the dog management plan for major changes. I support formalization of the 1979 Pet Policy PLUS off-leash access in San Mateo County and on new lands that the GGNRA acquires in the future.

I oppose fences to surround or delineate any off-leash area in the GGNRA. Fences will make off-leash areas feel like pens and visitors using them will feel unwelcome.

The GGNRA should not be allowed to change the leash status in particular GGNRA areas just because it deems that not enough people are complying with the leash restrictions.

-Not fair to people who are complying

<b>Correspondence:</b>	Environmental Justice				

The issue of Environmental Justice, as it is postulated in the DEIS/SEIS is offensive at best. To claim that ethnic minorities are dissuaded from visiting the park because dogs are present is a perversion of the data. None of the 20 or more recommendations in the study about what the GGNRA could do to increase accessibility by minorities includes banning or restricting dogs.

The study was flawed in that it was a small sample of non-randomly selected people who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). This creates

a situation where opinions about the GGNRA are obtained from people who have not experienced the GGNRA to any significant degree. It is more likely that the measurements only reflect their perception of the GGNRA, not what actually occurs there. The responses obtained from this study might be well suited to establishing a public relations campaign for the GGNRA, but not establishing park policy. If the GGNRA had complied with their legal requirement to have this "study" peer reviewed, maybe it would have been modified so as to actually produce results that could have been informative.

The study itself says the goal of the study is to "realize the park goals of understanding how to improve 'connecting people to the parks' and how best to engage under-represented communities in plans and programs"-it was a public relations survey. What the study overlooks is that dog walking connects all different kinds of people to the parks. Had the subjects in this survey been to Fort Funston or Crissy Field recently they would have seen a wide diversity of people - - seniors, kids, disabled people, Asian-Americans, African-Americans, Latinos, Pacific Islanders, all there with dogs. Compare that mix to any other GGNRA park activity (with nowhere near the diversity) and the "we have to restrict dogs to protect ethnic minorities" argument appears misguided and somewhat condescending.

Respondents who did visit the GGNRA express no apparent problem with dogs recreating with people. A quote from P-42 of the SF State study: "I go to the beach ... When I look at the ocean I could totally relax and let my imagination run wild. I feel that life in America is truly wonderful when I watch people fishing, jogging, playing and walking their dogs."

An interesting observation: the GGNRA talks about protecting access for ethnic minorities who don't come to the GGNRA, but hypothetically might come to the park if there were changes. Who will protect access for the ethnic minorities who DO come to the park to enjoy off-leash recreation?

Suffice it to say that Environmental Justice would appear to be a specious argument at best for restricting the access of people with their dogs in the GGNRA.

#### Protection Of The Cultural Resources

The idea that cultural resources such as buried missile silos at Fort Funston require protection from dogs trampling, digging or urinating is far-fetched at best. I would point out that the larger size and weight of humans would be a greater threat to trample notable sites than would dogs.

With respect to missile silos at Fort Funston I would not assume all urine deposited would be that of the canine visitors. The GGNRA still has not installed any permanent bathrooms for the many human visitors at Fort Funston. In fact, it seems the GGNRA has little regard for the enjoyment of these resources.

I would also point out the GGNRA has failed miserably in their restoration efforts for facilities such as the Cliff House which are within the Recreation Area's boundaries. The new facility is quite unaesthetic, and popular restaurants within have been altered and have lost their popularity. I have talked to many visitors who are familiar with the previous incarnations of the Cliff House. They always express their disappointment and/or outrage as to its boxy appearance with the service entrances in the most visible area. There used to be a line down the hill for the Sunday brunch at the Cliff House, now it is empty. Our cultural resources are in far greater danger from GGNRA management and their "restoration" plans than they are from dogs.

#### Safety In The GGNRA

The actual Law Enforcement incident reports/citations were withheld when Dr. Valente made her initial FOIA request in 2006 for all data utilized by the GGNRA to conclude there was a need for a change in the DMP. When the DEIS was released, it included this conclusion: "Most of the issues related to the

health and safety of park visitors are related to their encounters with unruly/ aggressive dogs". No data was included in the DEIS to substantiate that claim.

Subsequent to the release of the DEIS, after several requests, Law Enforcement data was obtained by FOIA from the GGNRA/ NPS/DOI. The data was catalogued by interested dog guardians and the chart below is the result of their careful analysis.

The chart below specifically relies upon the incident/offense data for 2001-2006. As you can see, the incidents involving unruly or aggressive dogs comprise only 2 percent of the total incidents Law Enforcement reported in the GGNRA. Remarkably, these bite/attack incidents only occurred once in every 1.36 million park visits. 93 percent of the time, Law Enforcement was dealing with human-specific incidents. Clearly, the data regarding this issue of park safety for visitors and staff being compromised because dogs are present had been omitted from the DEIS because it does not justify the radical recreation restrictions the GGNRA was promoting in the DEIS and now in the SEIS.

In the SEIS, although the GGNRA maintains specific data is still not available for the years 2001-2006, they do create graphs of dog-related incidents as well as other incidents for those years. The SEIS graphs in Appendix G provide no visibility with respect to the number of overall park visits, which is misleading in and of itself. Despite this, the SEIS graphs for 2001-2006 do not substantiate the decision in 2006 to change the DMP. In 2001 and 2002, the dog related incidents are about 9% of the total number of incidents. In 2003-2004 the dog related incidents rise to 14% of the total. However, in 2005-2006, dog related incidents drop to 6% of the total. It would appear things are moving in the right direction, not getting worse so as to justify a DMP change. And, in fact, if we utilize their data as to the total number of incidents each graph represents, the number of dog incidents would be as follows: [see table in attachments]

This omission of pertinent law enforcement data in the DEIS was no accident. The data does not support the GGNRA's aforementioned assertion: Most of the issues related to the health and safety of park visitors are related to their encounters with unruly/aggressive dogs.

In the SEIS, the GGNRA attempts to emphasize data collected in 2007-2011 - data not available to the GGNRA when they decided to initiate the change in the DMP. This data's inclusion is disingenuous at best. At worst, this is evidence of a GGNRA/NPS/DOI attempt to justify their decision to change the DMP by skewing the data for the following years. The graphs in the SEIS for 2007-2011 are of very limited value, as they specify the proportion of incidents and total incidents at selected areas of the GGNRA for each year, with no indication of the number of public visits at each site. Further, had they been engaged in vital resource monitoring as they are required by law to do, we would have data that outlined the problems experienced by location and nature.

There has been no effort by the GGNRA to monitor vital resources or mitigate problems that monitoring could expose. 'Vital Resource Monitoring is a method by which effective land managers identify specific problems in specific areas and try to solve those problems. Take for example, picking up dog feces. It's the law, and the vast majority of dog guardians in the GGNRA follow it. For those who do not, we self-enforce. Additionally, most of us pick up one extra pile of poo in addition to that of our own dogs every time we are out recreating in the GGNRA. At Fort Funston, there are monthly clean-ups to ensure feces are not a problem. What is the GGNRA's response? In this SEIS they complain people do not pick up their dogs feces. In another section of the SEIS, GGNRA management complains about the weight and mass of dog feces in trash receptacles at Fort Funston. What are dog guardians supposed to do with that complaint? Why is that even a complaint?

Just to be clear, the GGNRA's Management has never met cooperatively with dog guardians to try to keep the 1979 Pet Policy working successfully as it did for many years. Had the GGNRA spent a fraction of

the time or money spent trying to justify and implement a predetermined outcome (e.g., expensive litigation, Negotiated Rulemaking, producing massive 2400 page documents under the guise of codifying policy) truly making an honest effort to work with the dog community, the GGNRA would be a shining example of how urban National Recreation Areas can work- -beautifully. However, if you read the history section of this Comment you understand that the GGNRA/NPS/DOI does not want dogs recreating with their guardians anywhere in the National Park system- -regardless of the designation as a Recreation Area or the enabling legislation. The GGNRA/NPS/DOI certainly does not want us setting a precedent for other NPS units such as the one in New York or Washington DC. The GGNRA/NPS/DOI does not want to identify or solve problems pertaining to dogs - -they simply want dogs and their guardians excluded from the GGNRA. Jon Jarvis said it himself- - I would rather give up those fthe GGNRAJ properties than have dogs running loose on them. (Presidio Officers Club, San Francisco, Calif., March 22, 2007) Clearly, we cannot do anything to please the GGNRA except stay out of this Recreation Area.

Maybe San Francisco should take Jon Jarvis up on his offer to give up the off-leash GGNRA properties like Ocean Beach and Fort Funston. We would like to remind the GGNRA/NPS/ DOT that the 1975 agreement for the lands transfer from the City of San Francisco to the NPS states that The National Park Service, acting through the General Superintendent, agrees to utilize the resources of GGNRA in a manner that will provide for recreational and educational opportunities consistent with sound principals of land use, planning and management, to preserve the GGNRA in its natural setting and protect it from development and uses which would destroy the scenic beauty and natural character of the area, and to maintain the transferred premises in a good and sightly condition. Judge for yourself whether the following photos of Ocean Beach (taken in June, 2012) appear to fulfill that promise [SEE PHOTOS IN ATTACHMENTS]:

These conditions are present for months on end. The sand overflows from the beach on to and across the promenade path. Imagine a disabled person trying to make their way through mounds of sand on the walkway. And the planters on the left were stripped of their ice plant and native plants were planted, surrounded by red pea gravel. The plants died, the pea gravel became dislodged and flows on to the walkway to provide yet another hazard for the walker. The one photo where there appears to be a ridge running through the sand is actually the seawall. On the beach side the sand is up to the top of the seawall, and on the promenade side the sand has piled up so high the walkway has been obliterated. Yet in this SEIS the GGNRA complains about spending 1.5 hours a day picking up trash at Ocean Beach which is over 3 miles long. From these photos it does not appear 1.5 hours a day is enough, and it also appears that people are bringing their trash up off the beach and often placing it next to overflowing trash receptacles. You cannot put the responsibility for this mess on dogs. The GGNRA's poor performance in maintenance of Ocean Beach should preclude them from holding the property- - it certainly does not meet the requirements as stated above in the documents of transfer.

In reality, the safety issue with respect to dogs is a disingenuous argument at best. GGNRA management has sacrificed safety of the public repeatedly when safety comes into conflict with their restoration agenda. For example, the GGNRA was happy to spend over a million dollars at Mon Point to construct a bridge so that frogs could migrate from their current habitat on property outside the GGNRA to the potential habitat the GGNRA had spent another million dollars to create at Mon Point. Previous to the construction of the bridge, the frogs would have been required to cross the emergency access road for Sharp Park and Mon Point. In building this bridge, the GGNRA destroyed the original access road. Consequently, there is no direct way for emergency vehicles to get out to these popular public properties should there be an emergency. Further, the GGNRA's potential habitat included ponds which are mosquito breeding grounds, only a few hundred feet from a residential neighborhood. Insecticides are sprayed routinely on and around these ponds, and the neighbors were never advised of the risk of mosquitoes carrying West Nile virus and/or the risks of the insecticides sprayed to kill them in the environmental review the GGNRA promulgated before building the ponds.

With respect to management in the GGNRA, their high cost discretionary projects (e.g., the \$12 million spent by the GGNRA to create the new Giacomini Wetlands in Mann, the aforementioned bridge to nowhere at Mon Point always take precedence over everything else - - most notably public safety. Budget cuts enforced by the GGNRA in spring 2008 cost nearby Presidio Fire Station No. 2 the use of their ambulance, and could have made the difference between life and death for a woman found hypothermic at Rodeo Beach by a maintenance worker. The woman died before the ambulance dispatched from much further away was able to get her to a hospital.

### Water Quality In The GGNRA

It was interesting to review the water quality findings in the DEIS. Although it is asserted dog feces are a significant component in water bacterial contamination, once again the DEIS is short on facts and misleading as well. The DEIS refers to a substudy of the San Francisco Sewage Master Plan which determined that bacterial contamination of waters off Ocean Beach was significant due to dog fecal matter deposited along the shoreline (NPS 1999, 21). The difficulty with this reference is that it cannot be located. It does not exist.

What we find much more relevant is the Annual Report by Heal the Bay. The 2011 report gives Ocean Beach an A ranking at Balboa Avenue year-round excepting a B ranking during wet weather. At Lincoln Avenue there is an A or A ranking year-round excepting a B ranking during wet weather. At Sloat, the ranking is an A or A all year-round in wet or dry weather. Clearly dog feces are not creating a problem at Ocean Beach. Further, the 2010 Heal the Bay report acknowledged that in the summer nearly all beaches had a clean bill of health. But in the winter, when heavy rains cause untreated sewage to flow into the bay and ocean, bacteria hit perilous levels in some areas. Deb Self Director of San Francisco Baykeeper said, We have a massive, rampant problem with human waste. Among the worst offenders is Baker Beach, where raw sewage leaking from old pipes and overflowing storm drains flows into Lobos Creek and forms a pool at the south end of the beach.

Clearly, most dog guardians are picking up their dogs feces, and the relatively few instances where people fail to pick up after their dog, while not excused, do not constitute a threat to our water quality.

The assertions that dogs negatively affect water quality in the GGNRA have been omitted in the SEIS with the following explanation: 'Although water quality monitoring currently occurs at GGNRA, no site-specific, peer-reviewed studies have been conducted at the GGNRA sites to document impacts to water quality specifically from dogs. It is also difficult to discern what is causing an impact to water quality, especially in a large metropolitan area where water quality may already be degraded. The literature review found very few investigations or peer reviewed, scientific studies that document the isolated effects dogs have on water quality in recreational settings. Water quality has therefore been dismissed as a resource topic in this document due to lack of literature. We suspect that the data provided above by Heal the Bay and Baykeeper (as a part of our Comment on the DEIS) had something to do with the GGNRA's decision to omit water quality from consideration.

What was included in the SEIS was again anecdotal evidence gleaned from Comments on the DEIS, placed into the record to draw inferences but contradicted by data/science we provided in our comment on the DEIS. As taken from the SEIS: Wherever dogs swim and run, their feces introduce pathogens into the water, soils, and sand, and also onto vegetation and paved surfaces, possibly elevating the risk of human disease... During the public comment period for the draft plan/EIS, some comments noted the amount of dog waste at GGNRA sites, especially within the beach areas. One commenter stated, Just yesterday while coming out of the water from surfing I witnessed a woman watch her dog defecate in the shallow water and then just walk away. It happens all the time, virtually every day. I personally have seen dogs

run up and pee on innocent bystanders - children even - who just happen to be sitting on the beach (NPS 2011a, Correspondence 1169).

### Effect Upon Surrounding Parks

The DEIS failed to meet NEPA requirements by omitting an analysis of the effects of the proposed change on park properties in the cities and counties where the GGNRA now owns large swaths of recreational resources. However, when reading the DEIS, it seems pretty clear what the effect would be. From the DEIS itself: High numbers of incidents occur because of the large number of people that use the site at one time, and the high number of dogs off-leash at the site.. Certainly the GGNRA would acknowledge that this is precisely what will happen to parks outside the GGNRA should they close down 90% of the GGNRA's off-leash acreage as the Preferred Alternative would do. This is an unacceptable outcome. A phone or written survey and the addition of some analysis in the new SEIS does not change the numbers of users or the size of the properties they will be forced to utilize. The outcome is still unacceptable.

The City and County of San Francisco's Board of Supervisors passed Resolution No. 386-13 on October 29, 2013 opposing the GGNRA's DMP. The Mayor signed it on November 8, 2013. The text of the Resolution is as follows:

### FILE NO. 131002 RESOLUTION NO. 386-13

Opposing Golden Gate National Recreation Areas Draft Dog Walking Access Policy Resolution opposing the Golden Gate National Recreation Areas (GGNRA) currently proposed preferred alternative for dog management; and urging the GGNRA to adopt a different approach.

WHEREAS, Approximately 110,000 households in San Francisco own dogs that require regular exercise; and

WHEREAS, San Franciscans and their dogs have traditionally enjoyed access for generations to various properties under the present oversight of the Golden Gate National Recreation Area (GGNRA), such as Crissy Field, Ocean Beach, Ft. Funston, Lands End, Ft. Baker, Ft. Mason, Baker Beach and Sutro Heights Park; and

WHEREAS, The GGNRA was established, among other things, to create an area that concentrates on serving the outdoor recreation needs of the people of the metropolitan area; and

WHEREAS, In 1975, the City and County of San Francisco transferred Fort Funston, Ocean Beach, and other city-owned lands to the federal government to be included in the GGNRA and administered by the National Park Service after being given assurances that recreational access and usage would be continued and protected; and

WHEREAS, The voters required that the deed transferring any City-owned park lands to the National Park Service include the restriction that said lands were to be reserved by the Park Service in perpetuity for recreation or park purposes with a right of reversion upon breach of said restriction; and

WHEREAS, In 1979, after an extensive period of public comment including public hearings, the GGNRA determined that voice-controlled dog walking would have no negative impact on the natural environment or on other park visitors when conducted on one percent of the GGNRA land, and the GGNRA therefore determined that dogs could be walked under voice control on that one percent of its land; and

WHEREAS, People, dogs, birds, plants and other species have been co-existing in the GGNRA for decades, consistent with the recreational purposes of the GGNRA; and

WHEREAS, On January 15, 2011, the GGNRA released a Dog Management Plan that would severely restrict off-leash, voice-controlled dog walking and create large areas

where dogs would not be allowed at all in areas that currently allow off-leash, voice-controlled dog walking at Fort Funston, Crissy Field, Ocean Beach, Lands End, and Baker Beach; and WHEREAS, On April 26, 2011, the San Francisco Board of Supervisors adopted Resolution No. 183-11, putting the City and County of San Francisco on record as opposing the GGNRA's proposed preferred alternative for a Dog Management Plan, calling for a thorough study of the GGNRA proposals' impact on San Francisco and particularly on neighborhood parks if severe restrictions on off-leash dog access in GGNRA result in an increase of off-leash dog activity in City parks, and opposing the plans' compliance-based management strategy; and

WHEREAS, Public comment on the 2011 GGNRA Dog Management Plan was overwhelmingly opposed to the GGNRA plan, and, in response, the GGNRA announced that it would release a revised version of the Dog Management Plan; and

WHEREAS, On September 6, 2013, the GGNRA released a Supplemental Dog Management Plan that included only minor changes to the original plan, and that still would severely restrict off-leash, voice-controlled dog walking and create large areas where dogs would not be allowed at all, including restrictions in areas where off-leash, voice-controlled dog walking is currently allowed; and

WHEREAS, The Supplemental Dog Management Plan would still significantly reduce in the GGNRA a main group of recreational park users - people who recreate in the GGNRA with their dogs; and

WHEREAS, The Supplemental Dog Management Plan still does not include any consideration of the benefits of off-leash, voice-controlled dog walking, including providing needed exercise for people and dogs, nor does it include any consideration of the benefits of the social communities that have developed and flourished at GGNRA units such as Fort Funston, and all other locations where dogs are currently walked off-leash and under voice control; and

WHEREAS, A significant reduction in dog access at GGNRA will have negative impacts on many residents of San Francisco; and

WHEREAS, The Supplemental Dog Management Plan in its preferred alternative proposes restrictions on off-leash, voice-controlled dog walking access at GGNRA that are inconsistent with the purposes of the GGNRA to promote urban, recreational uses by San Franciscans; and

WHEREAS, The Supplemental Dog Management Plan does not contain a thorough analysis of impacts of the plan on San Francisco neighborhood parks as requested in Resolution No. 183-11; and

WHEREAS, The Supplemental Dog Management Plan still contains a compliance-based management strategy that, even though no longer automatic, nevertheless creates a process that penalizes all dog owners and walkers through progressive diminution of access to the already limited recreational space available, rather than citing and penalizing individual offenders; and

WHEREAS, By severely reducing access to places where people can recreate with their dogs in the GGNRA, the Supplemental Dog Management Plan does not reflect or support the National Park Service's Healthy Parks, Healthy People initiative, introduced in 2011, which was designed to improve the health and fitness of an increasingly obese and unfit population by encouraging people to recreate in their local parks and recreation areas; and

WHEREAS, The GGNRA Draft General Management Plan, released in September 2011, calls for the vast majority of its land, including the southern two-thirds of Ocean Beach and most of Fort Funston, to be managed as nature zones that provide backcountry types of visitor experiences, defined in the plan as a sense of remoteness and self-reliance, low visitor use, controlled access, few amenities, where challenge, risk, and testing of outdoor skills would be important to most visitors; and

WHEREAS, A backcountry types of visitor experience is not appropriate as the dominant use for a national recreation area located in a highly urban area such as the GGNRA; now, therefore, be it

RESOLVED, That the City and County of San Francisco opposes the GGNRAs proposed preferred alternative for a Supplemental Dog Management Plan and urges the GGNRA to modify the Plan to allow for greater access to recreational opportunities such as dog walking, or alternatively to adopt the No Action alternative that would continue the current usage for off-leash, voice-controlled dog walking in: (i) those places where it was allowed in the 1979 Pet Policy, and (ii) on GONRA lands (San Mateo County properties) acquired after 1979;and,be it

FURTHER RESOLVED, That the City and County of San Francisco reiterates its belief that the GGNRA is an urban recreation area and not a remote national park and that the GGNRA should be managed with the needs of recreational users very much in mind; and, be it

FURTHER RESOLVED, That given the complexity and length of the Plan, additional time for comment and analysis (until early 2014) should be allowed before the GGNRA takes action on the Plan; and, be it

FURTHER RESOLVED, That the GGNRA should create a regular recreation roundtable through a private public partnership, where different user groups can address and resolve visitor concerns; and, be it

FURTHER RESOLVED, That copies of this legislation be sent to GGNRA Superintendent Frank Dean, National Park Service Director Jon Jarvis, National Park Service Pacific-West Regional Director Christine Lehnertz, San Francisco Recreation and Park Director Phil Ginsburg, the San Francisco Recreation and Parks Commission, U.S. Senator Dianne Feinstein, U.S. Senator Barbara Boxer, U.S. House Minority Leader Nancy Pelosi, Congresswoman Jackie Speier, Secretary of the Interior Sally Jewell, Chairman of the U.S. House Subcommittee on National Parks, Forests, and Public Lands Rob Bishop, Ranking Minority Member of the U.S. House Subcommittee on National Parks, Forests, and Public Lands Raul Grijalva, Chairman of the U.S. House Natural Resources Committee Doc Hastings, and Ranking Minority Member of the U.S. House Natural Resources Committee Peter DeFazio.

It should be noted that the City and County of San Francisco has an ordinance (San Francisco City and County Health Code; Article I; Section 41.12; Paragraph (c); Subparagraph 5) that, among other things, requires dog guardians to provide their dogs with adequate exercise to maintain muscle mass and appropriate weight. Therefore, the issue of whether or not to exercise dogs when access has become severely restricted is not optional. Dog guardians will be forced to do what they have to in order to comply with San Francisco health code law.

#### This Agency Action Will Not Resolve Litigation

In recent history, litigation has been the only recourse the taxpayers have had to combat this abuse of power by the GGNRA/NPS/DOI. And, in fact, the GGNRA/NPS/DOI was forced to reinstate off-leash recreation in the GGNRA following a Federal Court order in 2005. Should the GGNRA/NPS/DOI proceed with any of the alternatives proffered in this DEIS/SEIS, litigation to have this DEIS/SEIS declared unlawful or litigation by San Francisco to take back some of these properties will become a necessity.

#### Duty To Preserve - This Agency Is Responsible For Resource Degradation

The greatest threat to the long term health of the GGNRA properties is the failure of GGNRA

management to implement and use effectively a Vital Signs Monitoring program. Ecosystem changes GGNRA management has made until now to preserve the resources of the Park would not have been approved had a Vital Signs Monitoring program been utilized. The GGNRA has destroyed large areas of the Park in an attempt to remake the Park environment in the vision of a nativist ideology. These actions are in direct violation of the enabling legislation for this National Recreation Area. The SEIS Preferred Alternative proposes additional changes purported to protect wildlife from harassment. The data indicates the unintended consequences of ecological changes GGNRA management has implemented without the benefit of Vital Signs Monitoring have proven to be a far greater danger to wildlife than dogs. The scientific data presented in this DEIS/SEIS has not been peer reviewed and does not adequately support the dog management changes GGNRA management has made subsequent to the 1979 Pet Policy, or the changes they seek to make in any alternative proposed.

## Conclusion

On one hand, we have Congress, a Federal Panel and the voters and government officials of San Francisco City and County, all participating in the establishment of precious open space in this large, densely populated urban area as a key recreational area, necessary for both the health and well-being of its populace. On the other hand, we have a high ranking official from the government agency charged with managing that area quoted as saying: Ocean Beach without the people is an incredible habitat. But people think of it as a sandbox or their backyard. (Daphne Hatch, Chief of Natural Resources Management, GGNRA, SF Chronicle, 2007) Clearly, we have a problem.

No single action better exemplifies the GGNRA's commitment to distance themselves from their enabling legislation and any connection whatsoever to the concept of recreation than the GGNRA's failed attempt to rename and repurpose this National Recreation Area. In 2008, the GGNRA joined forces with Congresswoman Nancy Pelosi to surreptitiously slip a name change (and a stated change in the governing mandates) from National Recreation Area to National Park through bill H.R. 6305, a bill devoted to some management issues for the Presidio. Had this bill successfully passed, all references to the term recreation would have been removed from the laws, rules, regulations, documentation, signage, web sites, etc. surrounding this newly christened National Park. Even as this action, on its own merits, can be construed as an admission that the NPS/GGNRA is aware their actions do not conform to the enabling legislation; the GGNRA in the SEIS FAQ #21 tells the public National Parks and National Recreation Areas are legally bound to be managed to the same preservation standard.

Upon examining all of the available evidence, a reasonable person must conclude that this DEIS/SEIS, along with its preferred alternatives and the deliberately deceptive Monitoring- Based Management Strategy, are not based upon science or data but rather are the product of a predetermined outcome. This DEIS/SEIS is exactly what we have come to expect from an agency whose top authority, Director Jon Jarvis, is on the record as stating, 'I would rather give up those [the GGNRA] properties than have dogs running loose on them.

Upon review by knowledgeable legal resources, it is their professional conclusion that this DEIS/SEIS is arbitrary, capricious and an abuse of discretion. In simple terms, it is unlawful and must be thrown out. The GGNRA still has the authority, the ability and the moral responsibility to codify the original 1979 Pet Policy as a Section Seven Special Regulation. Post 1979 Pet Policy acquired lands should maintain their historical use upon inclusion into the GGNRA and vital signs monitoring should be implemented to determine whether subsequent changes must be made to protect resources. Since the GGNRA to date has refused to follow the law, we would ask Congress to intervene and establish the 1979 Pet Policy as a Section Seven Special Regulation with an Addendum to include in the Section Seven Special Regulation newly added GGNRA lands with historic recreational use by dogs and their guardians.

Should the GGNRA fail to heed these recommendations, San Francisco City and County could remedy their issues by formally taking back their affected properties through enforcement of their contractual reversionary clause. Unfortunately, this would be of little assistance to Mann and San Mateo counties. Therefore, it would be likely that those counties would pursue Congress to implement a Section Seven Special Regulation to ensure recreational access as was originally intended when this National Recreation Area was created. Should properties remain under the management of NPS/GGNRA, there must be strict oversight by Congress in order to ensure the GGNRA lives up to its Congressional mandates, including, but not limited to adherence to the sound principles of land use planning and management on a permanent basis.

There is a third option which might very well be appropriate in this situation. Considering the GGNRA's long, jaded history of ignoring their enabling legislation, violating numerous laws, rules and regulations and unilaterally implementing their own self-styled, self-serving management policies, perhaps its time to turn the GGNRA over to someone better suited to manage this recreational area. We would like Congress to consider the transfer of GGNRA properties to another Federal agency, e.g., the Forest Service or Bureau of Land Management, where recreation is not a bad/foreign word and the sound principles of land use and planning are a major component of their routine management policies.

**Correspondence:** I have lived and worked in the city of San Francisco for the last 20 years and have enjoyed everything this city has to offer: cultural events, variety of ethnic restaurants, short commutes to work by bicycle, wonderful parks and plentiful outdoor areas for my dog, Lola, to run. Off-leash. Health and social benefits of owning a dog are many and are well-documented in numerous scientific studies. My dog and I run along Crissy Field, in Fort Funston or hike in Mann Headlands on a regular basis. Being able to run with my dog off-leash, keeps us both healthy and safe. My dog is extremely well trained and socialized. She is under my voice control at all times and will return to me without a moment's hesitation. We're enrolled in K9 Good Citizen program and will volunteer and local hospitals as part of Therapy Dogs Program and libraries (Tail Wagging Tutors). Dogs that are well-exercised and well-socialized among other dogs and people make better neighbors, too. After Lola's daily off-leash hike with a dog walker who is a certified dog trainer, the only noise that comes out of her is a snore. Ask my neighbors and they'll tell you how much they appreciate a dog that has no energy to bark. Studies have shown that there is no public risk in having dogs off-leash in "neutral territories" such as public parks or beaches. Triggers for dog attacks don't exist in wide open areas but are rather more frequent in homes or fenced off areas where one dominant or protective dog is not properly supervised. Leashes, too, may limit the dog's natural movement and cause them to become territorial. Hence, I oppose any fences surrounding off-leash areas. It will not only limit my dog but make me feel caged in. I pay high property taxes to live in San Francisco for the space and freedom the city affords me. There are other alternatives that must first be tried. Whether it's requiring an "off-leash" license which is granted to dog owners after passing a series of courses available at the SPCA or cite irresponsible owners, off-leash dog areas must stay untouched and unfenced. I request a written response or acknowledgment of receipt of this letter within 3 (three) weeks.

**Correspondence:** To whom it may concern,

I am a San Francisco resident and a responsible dog owner who strongly opposes the GGNRA restrictions for off leash in the recreational areas of San Francisco. I am a taxpayer and a voter. I walk Crissy field every morning and evening with my dog and have seen no incidents of what is being brought up as concerns. It is the human beings that seem to be wreaking havoc on the grounds. Without these areas for my 701b poodle to run I will not be able to give her the exercise she deserves.

Dogs need to be socialized and can not do that well on leash. Being on leash in recreational area or confined only raises issues between the animals as they feel threatened and restricted when another dog approaches them. I very much support the alternative proposed by the Crissy Field dog group. We need to come to an agreement that will support both sides. Fort Funston has had no issues with habitat destruction. These are responsible dog owners making this stance. With the proposed plan we will have over crowding in the assigned gated areas for the dogs,

Please as a citizen of San Francisco who uses these parks, as a voter, taxpayer, and volunteer for park cleanups and SPCA. I urge you to reconsider this.

**Correspondence:** As someone who walks several times per day with my dog in the GGNRA, I'm writing to

express my strong opposition to the preferred alternative described in the GGNRA's new draft dog management plan. It is far too restrictive and will prevent me from recreating with my dog for my own health and my dog's health the way I have on GGNRA properties for over five years.

The new plan was not modified in any significant way to reflect the many substantive concerns and objections of the thousands of people who submitted comments in response to the first plan. In addition, there hasn't been a single peer-reviewed, sitespecific study (as required by law) that supports such a drastic restriction of dog-friendly areas.

The GGNRA has lost sight of its purpose: it was set up to be a RECREATION AREA for a densely populated, urban area. These trails and beaches have been set aside for dog walking since the original pet policy in 1979. That policy needs to be formalized and supported with off-leash areas in San Mateo County and on new lands that the GGNRA acquires in the future.

**Correspondence:** I know you have many more important national issues to address, and our fight with GGNRA is way down on your list of priorities. To us it is a quality of life issue. GGNRA is ruining a major component, which is off-leash recreation on less than 1% of the land GGNRA supervises, for thousands of people in the Bay Area. I am a life-long Democrat, and believe in a strong federal government. But this federal agency, GGNRA, is out of control. It feels like some outsiders have come in to change what has been a traditionally off-leash pastime for generations for those of us in San Francisco. It would be different if they could produce one shred of evidence that off-leash walking and hiking is causing any damage at all. Their reasoning is, they are the professionals and its their opinion things must change. Well, I disagree. I know you are aware of this issue. I am begging you to rein GGNRA in, to have them follow the rules established in the 1979 Pet Policy, or give us the land back. This affects dog walking businesses, pet supply businesses, veterinary businesses, the health and well-being of dog owners in San Francisco and the BayArea, and the quality of every city park if GGNRA restricts so severely dog walking on the land they oversee. Thank you for looking into this. You would restore my faith in government if you would step in.

**Correspondence:** I would like to submit a comment about the GGNRA Dog Management Plan. My comment

is, it is pointless to make a comment since you clearly are ignoring all past comments of 2011, which I diligently and painstakingly researched. In a letter to me, Nancy Pelosi asked me to trust the process. Unfortunately, after reading your non-response to the comments previously made, I cannot. You don't really care what we citizens of the Bay Area think or need, do you? So why should we waste our breath and precious ink commenting, when you are going to do what you planned to all along. Bottom line, I reject the entire Dog Management Plan, the concept of a Dog Management Plan, and suggest the only answer is for you to give all the land back to the cities and counties they are in. Give back Alcatraz too, while you're at it. What we really need is a GGNRA Management Plan if the thousands of taxpayer dollars you spent on this fiasco is any indication. You should focus your attention on Yellowstone and Yosemite, true wildernesses where a tazered errant bear might be more appropriate than a tazered hiking citizen exercising his beloved canine companions. Trust? I think not,

**Correspondence:** THE SEIS DOES NOT CORRECTLY ADDRESS THE VALUE OF RECREATION IN THE GGNRA

The SEIS contains a distinct bias against recreation in the GGNRA. The first two sentences in the legislation that created the GGNRA are:

In order to preserve for public use and enjoyment certain areas of Marin and San Francisco Counties, California, possessing outstanding natural historic, scenic, and recreational values, and in order to provide for the maintenance of needed recreational open space necessary to urban environment and planning, the Golden Gate National Recreation Area (hereinafter referred to as the "recreation area") is hereby established. In the management of the recreation area, the Secretary of the Interior (hereinafter referred to as the "Secretary") shall utilize the resources in a manner which will provide for recreation and educational opportunities consistent with sound principles of land use planning and management. (PL-92-589) (emphasis added)

The legislative history of the creation of the GGNRA (H.R. Rep. No. 1391, 92nd Congress, 2nd Session, 1972) provided the following additional guidelines for the GGNRA (emphasis added):

"This legislation will ... [establish] a new national urban recreation area which will concentrate on serving the outdoor recreation needs of the people of the metropolitan area."

"Action is required if ... the relatively natural areas within the city are to be available to satisfy the growing need for outdoor recreational opportunities."

"The objective of H.R. 16444 is to assure the preservation of open spaces presently prevailing within the proposed recreation area, to provide public access along the waterfront, and to expand to the maximum extent possible the outdoor recreation opportunities available to the region."

The enabling legislation lists recreation as one of the four values to be protected and maintained in the GGNRA, along with natural, historic, and scenic values. Yet, "recreation" does not appear at all in the SEIS/Draft Plan's Objectives on p. 2. The SEIS' frequent references to "park resources and values" do not include recreation as one of them, even though the GGNRA's enabling legislation indicates it should be.

NEPA Attorney Ken Weiner, in his comment on the SEIS says: "Conservation of recreation is an essential GGNRA value that should not be impaired. Certainly conservation of GGNRA's ecological integrity is a paramount mandate under the NPS organic act, but omitting urban recreation as an object and as a park value that should be maintained improperly biases the planning and alternatives evaluation process."

Weiner also notes that the SEIS does not mention the central role of recreation in the GGNRA until 43 pages into the document, where it is presented as a historical footnote rather than a founding principle.

Even if recreation was not so critical to the GGNRA's founding, NEPA rules require that agencies consider impacts of alternatives on recreation. This is especially crucial in the GGNRA because its location in the middle of an urban setting means that GGNRA lands serve as residents' backyards. Most of us who live in San Francisco do not have yards, and we rely on park open space for our recreational needs. The GGNRA is where people in San Francisco, and indeed in the entire Bay Area, come to play. For example, the only

beaches available to the people in San Francisco are controlled by the GGNRA. Removing recreation from the GGNRA will have a significant negative impact on the quality of life of the people of the Bay Area, and that impact should have been included in the SEIS.

Because the SEIS shows so much bias against in its description and analysis of recreation, it and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS MISREPRESENTS THE HISTORY OF DOG WALKING IN THE GGNRA

On p. iii of the Executive Summary, the SEIS says: "Underscoring the increasing conflict over off-leash dog use, dog walking groups filed a lawsuit against the NPS in March 2000." The lawsuit was filed because the GGNRA did not take public comment before closing a section of Fort Funston to all users, not just dog walkers. The lawsuit had nothing to do with increasing conflicts over off-leash dog use.

GGNRA staffer Chris Powell gave a brief history of dog walking in the GGNRA at the first meeting of the Negotiated Rulemaking Committee in 2006. She said that after dog walkers sued the GGNRA, they realized they had to do something about the "dog problem." That is the point at which the GGNRA decided to begin the process of rescinding the 1979 Pet Policy that had worked so well for decades. In essence all this time, energy, and money that has been spent over the past 15 years in an attempt to change the 1979 Pet Policy and create a new Dog Management Plan amount to little more than spite and revenge by the GGNRA against a group that dared to sue them and win.

On p. 5, the SEIS says: "... for more than 20 years the park erroneously implemented the 1979 Pet Policy in contravention of Service-wide regulation." As I said in my DEIS comments, Judge William Alsup, in his June 2, 2005 ruling in an appeal of a challenge to tickets received by three dog walkers for having dogs off-leash at Crissy Field, said:

In sum, for more than twenty years, the GGNRA officially designated at least seven sites for off-leash use. This was not accidental. It was a carefully articulated, often studied, promulgation. The responsible GGNRA officials in 1978 and thereafter presumably believed they were acting lawfully. Even now, the government concedes that the GGNRA had full authority at all times to relax the general leash rule at the GGNRA but argues it could have done so, at least after 1983, only via a "special regulation." In other words, the agency allegedly used the "wrong" procedure back in 1978 (and thereafter) even though a "right" procedure to reach the desired result was available and could have been used. The government has not revealed its internal justification for following the "wrong" process. Whatever it was, the justification was abandoned in 2002 with the two word explanation that it had been "in error." With this ipse dixit, the NPS wiped away two decades of policy, practice, promulgations, and promises to the public. (Case Number: CR04-00408 WHA, p. 5)

True enough, the procedural requirements for a special regulation were not followed in 1978. Trouble is, when the off-leash areas were designated in 1978, a different and earlier set of NPS regulations applied, not the later revamped rules. See 26 C.F.R. Parts 1-7 (1978) Although the earlier regime still prohibited off-leash dogs as a general matter, there was nothing then that restricted the local authority of each superintendent to make activity designations on a park-by-park basis contradicting the national regulations. That restriction came later in 1983- when Section 1.5 (Closures and Public Use Limits) itself

was introduced, among other changes. The 1983 change cautioned that, going forward, the use-designation provision of the new Section 1.5 should not be invoked to circumvent a general regulation. 48 Fed. Reg. at 30262 (col 1). In the period leading up to the 1983 amendment, therefore, we must presume that the GGNRA designations were lawful. (The government has not shown otherwise.) Nothing in the 1983 regulations set aside then-extant use designations. (Case Number: CR04-00408 WHA, p.7) (emphasis added)

Based on Judge Alsup's decision, the statement that the GGNRA erroneously implemented the 1979 Pet Policy is wrong and should be changed.

Similarly, the SEIS says on p. 6, that: "In a public meeting on January 2001, the GGNRA Citizens' Advisory Commission acknowledged that the voice control policy was contrary to 36 CFR 2.15(a)(2), prohibiting off-leash dogs in national parks, and therefore illegal and unenforceable." As I said in my DEIS comment, the official transcript of the GGNRA Citizens' Advisory Commission January 23, 2001 meeting makes it clear that while CAC Chairman Richard Bartke did say this, the Commission itself took no position on the matter, and indeed took no action on the issue. The description of the meeting in the SEIS on page 6 should be changed to reflect the truth.

Because of these misrepresentations of the history of dog walking in the GGNRA, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS CONTINUES TO MISREPRESENT A SF STATE STUDY ABOUT ENVIRONMENTAL JUSTICE

In my DEIS comment, I criticized the way a SF State report (Roberts 2007) of results from focus groups of non-randomly-selected ethnic minority groups was presented in the DEIS. The description has been changed in the DEIS, but it is still misleading. On p. 330, the SEIS says about the Roberts 2007 study: "While not all participants were familiar with the GGNR, a common theme was identified, as related to dog management in the park: dogs were a problem mentioned by Hispanic/Latino and Asian/Pacific Islander groups. Hispanic/Latino people expressed the most concern with dog owners' lack of concern or control over their dogs. For example, participants in the survey noted that dog owners assume that other people will like the owners' dogs as much as they do; dog owners let their dogs approach other people without first asking their permission; and owners do not react to their dogs begging for other people's food. One participant stated, "Every time we go to picnic the dogs come and eat our food, they wander around, and the owners don't do anything. The same with their bowel movements! The owners don't clean after them." Research found that Hispanic/Latino people and Asian/Pacific Islanders mentioned dogs, especially dog waste, as a barrier to park visitation and a constraint to enjoyment of the park."

My criticism of the Roberts study still applies. The Roberts study was a series of focus groups of a small group of non-randomly selected members of various minority groups intended to "realize the park goals of understanding how to improve 'connecting people to the parks' and how best to engage under-represented communities in plans and programs." The focus groups totaled less than 100 people, who were largely unfamiliar with the GGNRA (only 1/3 had visited at least one GGNRA site in the past year). There is nothing in the report to indicate how common a comment was - did only one person say it, or was it mentioned repeatedly. Thus the focus groups' opinions reflect only the opinions of the people who participated and cannot be extended to indicate opinions

shared by all members of the minority groups represented. Yet that is what the DEIS does with the Roberts study.

While dogs were mentioned, it is a misrepresentation of the study to claim dogs were a major factor keeping minorities out of the GGNRA. A major concern expressed was that there are not enough minorities represented in NPS staff. Common barriers to coming to the GGNRA included the lack of mass transit to get to the GGNRA, and fear of unknown plants and wildlife behavior. When asked to describe why they think San Francisco parks have become less safe, African Americans in the focus groups expressed concerns about finding used drug paraphernalia on the beaches, the danger of pedophiles/sexual predators at the park, and aggressive panhandling. Asians and Hispanics expressed concerns about cleanliness, defined as unclean bathrooms and dog feces. While Hispanics in the focus group did mention dogs as a constraint to park enjoyment, they also mentioned concern for personal safety, lack of mass transit, and fear of crime (fear of being raped, witnessing drug use, the presence of homeless people, and observing fights - "it is only safe if enough people are around"). Asians similarly mentioned dirty bathrooms and dog feces in the same context as a barrier for access to parks. Two focus groups of Asians reported dislike for "dog owners [who] do not clean up after their pets," but also for trails not being well kept.

Out of the more than 30 recommendations at the end of the study, there is no mention of dogs. While dogs were mentioned in the focus groups, it is by no means the indictment of dogs - if only there were no dogs, Asians and Latinos would visit the GGNRA - that is implied in the SEIS. It is at best anecdotal accounts of a few people's opinions of parks in general, not necessarily the GGNRA, since most had never been to the GGNRA. Because the SEIS contains this misrepresentation of the study on environmental justice, it and the Dog Management Plan it supports cannot be accepted.

## OTHER BIAS IN THE SEIS

On p. 262, the SEIS says: "Stranded marine mammals and marine mammals that have hauled-out on GGNRA lands often attract the attention of dogs and people. The Marine Mammal Center data indicate that marine mammals are often harassed by dogs." This statement implies the Marine Mammal Center supports restrictions on off-leash dog walking on beaches in the GGNRA and is clearly intended to put dog walking in a poor light. However, during Negotiated Rulemaking, the representative from the Marine Mammal Center on the NR Committee read a statement opposing restrictions on off-leash dog walking on beaches because people walking dogs in the early morning were frequently the first ones to find the mammals and call the Center to come help the animals. They worried that restricting off-leash would cut down on the calls and mean it would take longer for the animals to get the help they might need. The statement in the SEIS should be either removed or qualified with the Negotiated Rulemaking letter.

On p. 1233, while discussing conflicts between visitors/dog owners and law enforcement personnel, the SEIS says "Conflicts typically involve verbal abuse, though physical assaults on the staff have occurred." Note that "assaults" is plural. However, on p. 337, the SEIS says: "There has been one reported physical assault of a federal law enforcement officer by a dog owner (no injuries reported)." One, singular, "assault", not plural "assaults". This inconsistency should be corrected as the notion that there have been multiple assaults on law enforcement personnel by dog walkers can only serve to bias the SEIS against dog walkers.

On p. 16, the SEIS says: "Soils and vegetation can be affected by dogs through defecation and urination, but although mentioned in reviewed studies, this has not been specifically documented in peer-reviewed studies." The rest of the paragraph goes on to list ways that dog urine and feces "could" affect soils and vegetation, despite the previous statement of no proof. Once again, claims of impacts without solid evidence that they are occurring should not be used in an EIS.

On p. 1345, the SEIS says: "Portions of Fort Funston have been heavily impacted by intense dog use, particularly where there is accelerated erosion from natural forces of the geologic resources, At this site, the impacts of dog walking are exacerbating the ongoing erosion that is caused by the weather and natural coastal processes." However, the SEIS includes no site-specific evidence to back up this claim.

On p. 352, the SEIS says: "While GGNRA cannot provide an exact number of incidents that go unreported, even if law enforcement data undercounts incidents, the data substantiates a need to regulate dog walking to protect resources, diverse visitor experiences, and health and safety." No, actually, the incident reports data show few dog-related incidents that involve wildlife disturbances, resource degradation, visitor safety, or anything other than the fact the dog is off-leash.

#### Errors of Fact:

On p. 361, discussing dogs at the McLauren Park DPA, the SEIS says: "... (although dogs are not allowed in the waterbody)..." referring to the reservoir in the DPA. Actually dogs are allowed in the reservoir. The parenthetical phrase should be removed.

On p. 390, the SEIS says: "The SNRAMP, authored by the SF Planning Department, will guide natural resource protection and habitat restoration..." Actually, SNRAMP was written by SF Recreation and Park Department staff, not people from Planning. This should be corrected.

Throughout the SEIS, extensive quotes from people who view dogs as a problem or who do not want dogs in GGNRA are included. Comparatively fewer quotes from dog walkers are included, giving the impression of serious problems with dogs in the GGNRA. Comments where people report a single disturbance or problem with dogs are considered illustrative of those larger problems, while comments from dog walkers that they have not seen those same problems in decades-long experiences in the GGNRA are dismissed and not included. There continues to be an underlying assumption throughout the SEIS that dogs are bad that they have negative impacts on nearly everything - plants, wildlife, safety, other visitors, etc. - even though the SEIS has no site-specific studies showing any of those negative impacts are actually occurring in the GGNRA.

Because of these cases of bias, along with other instances recounted throughout this comment, the SEIS and Dog Management Plan it supports cannot be accepted.

#### THE GGNRA IS NOT FOLLOWING INTERIOR SECRETARY SALLY JEWELL'S LEAD ON WORKING WITH NEIGHBORING COMMUNITIES

As San Francisco Supervisor Scott Weiner noted at a Town Hall Forum on the GGNRA's Dog Management Plan sponsored by U.S. Representative Jackie Speier on January 30, 2014, "The entire political leadership of San Francisco is expressing concerns" with the GGNRA Preferred Alternative for a Dog Management Plan. Since the SEIS was released, the San Francisco Board of Supervisors, San Francisco Mayor Ed Lee, US Representatives Jackie Speier and Nancy Pelosi, the Marin County Board of Supervisors, and then-President of the San Mateo County Board of Supervisors Don Horsley have all passed resolutions or written letters to the GGNRA expressing concerns about the proposed Dog Management Plan.

At a November 7, 2013 appearance before the Commonwealth Club in San Francisco, Interior Secretary Sally Jewell said that the National Park Service should work closely with neighboring cities like San Francisco. Unfortunately, as evidenced by the previous paragraph, the GGNRA is not working with the surrounding communities on a Dog management plan, and, instead is pushing ahead with a highly unpopular plan no matter what the neighbors say.

Secretary Jewell also talked about the need for the National Park Service to "welcome young people on our public lands." Ironically, many young people who currently walk their dogs in the GGNRA will no longer be welcome to enjoy this recreation on GGNRA land if the Preferred Alternative is adopted. Because it goes against what the Secretary of the Interior has said should be goals of the National Park Service, the SEIS and the Dog Management Plan it supports cannot be accepted.

#### THE SEIS INCLUDES FENCES AS A MANAGEMENT STRATEGY WITHOUT ADEQUATELY CONSIDERING THEIR IMPACTS

The SEIS suggests fences be erected around off-leash areas to clearly delineate where dogs can be let off leash so that people who don't want to interact with a dog can know where not to go. During Negotiated Rulemaking, GGNRA staff, including then-Superintendent Brian O'Neill, consistently and adamantly refused to consider fences, despite pressure to do so by those who do not want dog walking in the GGNRA. At the time, GGNRA staff argued that fences were ugly and no one wants to see fences in the park. Fences were not included in the DEIS, and there is no adequate explanation for why they were added to the SEIS. Fences are ugly, and serve to make those penned inside feel unwanted. Fences secure enough to keep small dogs inside will hinder movement of wildlife. Fences secure enough to keep small dogs inside will hinder movement of wildlife. Fences are a bad idea. There is no analysis of impacts of fences on the visitor experience in the SEIS, especially the visitor experience of people who walk with dogs. This analysis should have been included in the SEIS. Because of this inadequate analysis of fences, the SEIS and the Dog management Plan it supports cannot be accepted.

#### THE MONITORING-BASED MANAGEMENT STRATEGY IS STILL COMPLIANCE BASED

The Monitoring-Based Management Strategy (MBMS) in the SEIS is marginally better than the Compliance-Based Management Strategy in the DEIS. It will no longer include an automatic change in status from off-leash to on-leash or no-dog if the GGNRA claims there is not enough compliance with new restrictions on access, and that is an improvement. However, the plan remains primarily based on compliance alone, rather than on impacts that result from non-compliance, and, as such, is not acceptable as an adaptive management strategy. There is no requirement that non-compliance cause measureable impacts on resources before changes in status happen. In addition, because the MBMS only goes one way - toward more restrictions - with no provision for increasing off-leash areas if no impacts are found, it is not acceptable. Because the SEIS includes the MBMS, it and the Dog Management Plan it supports cannot be accepted.

#### THE PREFERRED ALTERNATIVE IS JUST TOO EXPENSIVE

The SEIS quotes the cost of the No Action Alternative as \$470,317 (p.1209). It quotes the cost of the Preferred Alternative as \$2,587,194 (p.1219). On p. 1053, the SEIS says: "If funding is available, the park would explore options that would allow improved access for disabled and elderly visitors to ROLAs, such as beach mats or improved trail surfaces." The GGNRA has budgeted \$2.5 million to deny people dogs access to 90% of the places where they can go now with their dog, but it cannot promise that there will be any money to allow elderly and disabled dog walkers to access what little off-leash space is left.

A January 2014 report by Environment California, titled "Death by a Thousand Cuts," describes how

budget cuts in the GGNRA has led to significant downgrades in services, including closures of visitor centers, delays in repairs to buildings, roads, and trails. The GGNRA has cut back on garbage collection in recent months. Yet they plan to budget an additional \$2.5 million to hire little more than glorified dogcatchers. The GGNRA's priorities are skewed. Because the SEIS endorses this costly and misguided spending plan, it and the Dog Management Plan it supports cannot be accepted.

## CONCLUSION

Taken individually, each of these problems with the SEIS is damning. But when taken together, it is clear that the SEIS is so deeply flawed that it cannot be fixed. The analysis essentially needs to be thrown out and done over in an unbiased, science-based way. I made the same statement about the DEIS, yet no significant changes were made in the SEIS. Given the lack of evidence of impacts from dogs in the GGNRA in the SEIS, along with the apparent inability of the GGNRA to produce an unbiased, science-based EIS, it is clear that the SEIS and the Dog management Plan it supports should be thrown out.

The GGNRA should choose the 1979 Pet Policy (including returning off-leash access in the plover protection areas at Ocean Beach and Crissy Field since the SEIS does not represent any solid evidence that the presence of dogs in these areas has any impact on snowy plover populations or survival rates, and indications the presence of dogs may actually protect the plovers from their "real" predators, especially ravens and crows) as its Preferred Alternative. Both on- and off-leash recreation should be allowed at sites in San Mateo County that have been added to the GGNRA since the 1979 Pet Policy was adopted and in any future land added to the GGNRA, especially those sites where off-leash dog walking has traditionally occurred. You can think of this as the A+ Alternative.

To quote from Ken Weiner, a NEPA attorney, in his comment on the SEIS:  
GGNRA is unique. There is no other urban national parkland like it. No unit of the National Park System - from Santa Monica to New York harbor - has the identical mandate. The Superintendent has the administrative discretion to adopt rules that will further conservation of all of the values for which this national recreation area was established.

GGNRA is San Francisco's and the Bay Area's backyard. GGNRA serves an extraordinary population with a similarly unique culture. Its residents love nature and the outdoors, love their dogs, and love their communities, urban neighborhoods and shorelines perhaps as no other region in the US. These are complementary - not conflicting - values to the vast majority of GGNRA users. San Francisco and the Bay Area residents have a distinct culture that places high value on both community and individual choice, on both freedom and responsibility. Out-of-town visitors, like many of us, expect and appreciate this culture as well. The Dog Management Plan can and should support, not diminish these values.

The A+ Alternative, along with a renewed commitment of GGNRA staff to work with dog groups, rather than against them, can create and nurture this unique park experience.

Sincerely,

Sally Stephens  
Chair, San Francisco Dog Owners Group

Re: Comments on behalf of the Crissy Field Dog Group on the GGNRA 2013 Draft Dog Management Plan I Supplemental Environmental Impact Statement

Dear Superintendent Dean:

We represent the Crissy Field Dog Group (CFDG) and we write to comment on its behalf on the Golden Gate National Recreation Area (GGNRA) Draft Dog Management Plan I Supplemental Environmental Impact Statement (DSEIS), released in Fall, 2013. CFDG is also submitting an additional comment letter, and this letter is intended to supplement those comments.

#### Introduction

Regrettably, CFDG believes that the DSEIS remains inadequate as a legal matter and fails to comply with the requirements of the National Environmental Policy Act (NEPA) and NEPA implementing regulations from the Council on Environmental Quality (CEQ), and fails to comport with relevant NEPA guidance. These concerns are detailed further below .

But legal insufficiency is only one level of concern here. Perhaps more important is that the NEPA process should result in better plans , better alternatives, and better projects, not just better environmental impact statements. Unfortunately, CFDG believes that the DSEIS also fails this crucial test by once again proposing a management plan that is unduly restrictive of dog walking recreation and fails to protect this important urban recreation activity from impairment in a manner consistent with the legislative purposes of the

GGNRA, and the National Park Service's mandates. The DSEIS continues to treat recreational uses as being opposed to natural resources - - and fails to preserve recreational dog walking resources as part of the inherent value of the GGNRA.

#### Need for Enhanced Dialogue and Collaboration

CEQ guidance strongly encourages meaningful dialogue and collaboration consistent with NEPA's goal of facilitating a meaningful opportunity for dialogue between interested citizens and federal agencies (1). To realize that goal, the Council on Environmental Quality has identified that federal agencies should collaborate with interested parties throughout the NEPA process beyond the basic requirement to call for public comment. Collaborating with all groups, especially those with conflicting interests, allows federal agencies to "improve the quality of decision-making and increase public trust and confidence in agency decisions (2)." Indeed, the CEQ pointed to the GGNRA negotiated rulemaking process as a notable example of collaboration that worked (3).

Unfortunately, constructive dialogue has not occurred in recent years. As stated in its May 24, 2011 comment letter, now almost two years ago, CFDG feels strongly that a meaningful dialogue among all relevant stakeholders must occur in order to improve the Dog Management Plan. A supplemental DSEIS is a potential first step toward real dialogue, but if recent years have proven anything, it is that written environmental analysis, written comments, and further written response to comments - - all spaced over the course of several years - - have failed to achieve any meaningful movement in shaping a workable dog management plan that has stakeholder buy-in among GGNRA visitors. Without a workable plan based upon sound policy, legitimate science, and practical enforcement policies that can be understood and agreed upon by the dog walking community and the community at large, there is, unfortunately, a significant risk that there could be continuing political controversy, an exacerbation of lack of a trust in GGNRA management, and the potential for widespread noncompliance, resulting in increased costs of GGNRA enforcement without impact reduction benefits. CFDG makes this observation as a good faith participant in this process who wishes to achieve meaningful results that bring value to members of the community. CFDG feels strongly that such results must be founded on realistic dog management policies.

Even if compliance is achieved, other problems may likely emerge, the scope of which have not been analyzed in the DSEIS. The current proposed plan would concentrate off-leash dogwalking in only 5 GGNRA units - - four of them subject to greater restrictions than existing conditions - - which presents a drastic reduction from the 18 historic off leash use areas within the GGNRA (4). The impacts of funneling this off-leash use into these few remaining areas have not been analyzed in any meaningful way (nor has the impact on nearby city and county parks), but there is plainly a real potential for increased user conflict in these areas or other impacts if only these areas remain for off-leash access. In this way the current plan has the real potential to make things worse, but how much worse, the community does not know, because the NEPA analysis - - despite thousands of pages - - has not looked at this question.

To date, GGNRA and NPS have failed to achieve stakeholder buy-in. The City of San Francisco, Marin County have each adopted resolutions opposing the NPS's preferred alternative and pointing out significant deficiencies in the DSEIS, and San Mateo County Board of Supervisors President Don Horsley has expressed concern on behalf of his constituents in a letter to the GGNRA about the restrictions on dog recreation (5). We understand that Representative Jackie Speier has expressed significant concerns regarding the

preferred alternative in San Mateo County, including the lack of off-leash dog walking throughout the GGNRA's San Mateo lands. Democratic Leader Nancy Pelosi has urged that "comments from the community should not only be reviewed, but carefully considered and incorporated into the final dog management rules (6)." In addition, the San Francisco SPCA and the Marin Humane Society have clearly stated their concerns about the DSEIS. Regrettably, it appears at this time that the process is currently not headed in the right direction, largely due to the failure of the DSEIS to adequately incorporate to community comment, and the continued adherence to an unduly restrictive preferred alternative. However, it is not too late - - all parties have a strong interest in a plan that actually works on the ground, and CFDG therefore urges the NPS to reconsider its current unduly restrictive approach to enable true give-and-take that will let a workable plan emerge.

Despite the difficulties of the past several years, CFDG remains committed to constructively working toward meaningful solutions in this process. CFDG proposes here a set of working guidelines and management alternatives which we believe would allay concerns identified in the DSEIS, improve the NEPA analysis, while increasing clarity, compliance, and achieving real-world impact reduction on the ground.

#### Polarizing Assumptions Reflected in the Purpose and Need Statement

The DSEIS continues to treat recreation as inimical to natural resource preservation, and still fails to recognize that recreation is a core element of the GGNRA's mission, deserving of protection as a resource unto itself. Unfortunately, the DSEIS still fails to internalize the fact that the GGNRA is an urban recreation area - - not a "national park" in the commonly understood sense. Congress recognized dog walking as an appropriate recreational activity when it created the GGNRA and identified recreation, natural, scenic and cultural resources as deserving of protection in the GGNRA (7).

In this regard, the purpose and need statement of the DSEIS retains its fundamental bias when it omits dog walking recreation as deserving of protection - - indeed the statement of purpose and need appears to be verbatim unchanged from the 2011 draft. Instead, dog walking recreation is treated as something needing "management" - - i.e., restriction - - while other GGNRA values are singled out for "protection (8)." This approach fails to implement the GGNRA enabling legislation and results in a fundamental bias in the document. Moreover, it represents a basic failure on the GGNRA's part to meaningfully change its approach in light of CFDG's prior comments. The purpose and need statement should be revised to acknowledge that dog recreation is a core value of the GGNRA deserving of protection in its own right.

The purpose and need statement also continues to reflect the NPS's unsupported determination that the mere presence of dogs has negative water quality impacts. Due to a lack of reliable information, the NPS eliminated its analysis of water quality impacts (9). These considerations therefore should not form the basis of NPS's decision with respect to dog management in the GGNRA. Nevertheless, the "Objectives" continue to describe the purpose of the Plan as "[m]inimiz[ing] degradation of vegetation, soil and water resources by dog use." DSEIS at 2. The NPS should revise the purpose and need statement and all relevant alternatives accordingly.

#### Failure to Respond to Prior CFDG Comments

CFDG reiterates and incorporates by reference in full the concerns expressed in its May 27, 2011 and

May 30, 2011 comments on the 2011 draft Dog Management Plan and Environmental Impact Statement and comments submitted by K&L Gates for CFDG on May

23, 2011. (For convenience, see also the text of these comment letters as attachments E and F, hereto.)

(10) While CFDG appreciates the steps taken to incorporate additional data and re-evaluate the scientific underpinnings of the impacts analyses, we continue to see gaps in the impacts analysis.

CFDG submitted lengthy appendices with specific comments on enforcement data, biological resources, water quality, soil, vegetation, and recreational resources. The NPS's Response to Comments does not provide a substantive response to any of these specific points or clearly indicate that the NPS has incorporated the substance of CFDG's technical comments into the DSEIS or otherwise responded in a substantive manner to these comments consistent with 40 CFR 1503.4. We attach these comments again here as Attachment G for an adequate response.

CFDG also identified increases in special events and other recreational activities (e.g., bicycling) in its comments on the 2011 DEIS. Many of these special events are recurring, such as Fleet Week, and many events occur regularly, such as corporate receptions or fundraisers. The DSEIS, however, still fails to analyze the impact of an increasing number of special events, some of which may result in greater impacts on natural resources than a year's worth of off-leash dog walking. For instance, CFDG and other dog walkers from Baker Beach picked up massive amounts of trash and fireworks casing debris after celebration of

the Golden Gate Bridge's 75th anniversary. Ultimately, while the DSEIS acknowledges that dogs are only a "contributing factor" with respect to wildlife, (11) soil and vegetation impacts, the DSEIS does not address the relative share of dog-related impacts compared to impacts related to human impacts such as special events and other recreational activities (e.g., bicycling) (12).

This is pertinent to the NEPA and administrative decision-making process because the current analysis may be confusing to the public and legislators. NPS claims there will be "beneficial impacts" to resources from reducing off-leash dog recreation within the GGNRA, but no environmental benefits will materialize if the anticipated benefits do not accrue due to incorrect compliance assumptions in the DSEIS or benefits are offset by increases in other recreation activities.

Finally, the NPS also continues to dismiss urban quality from consideration in the EIS. The GGNRA is an urban recreation area and its purpose is not to provide a remote wilderness experience but to serve as open space for the citizens of the San Francisco metropolitan area. *Trinity Episcopal School Corp. v. Romney*, 523 F.2d 88, 93-94 (2d Cir. 1975) (13). Analysis of urban quality and the design of the built environment must be undertaken to comply with NEPA here.

As discussed further below, many of the gaps that have survived in the 2013 DSEIS also reflect serious deficiencies in the DSEIS's impacts analysis.

#### Illogical Conclusions in Impacts Analysis with Respect to Wildlife Without Evidentiary Basis

When defining the scope of an action's environmental impacts, NEPA requires a "reasonably close causal relationship." *Metropolitan Edison Co. v. People Against Nuclear Energy*, 460 U.S. 766 (1983). Like the 2011 DEIS, the 2013 DSEIS continues to brush past the causation issue of how the presence of dogs actually harms special status species occurring within the GGNRA, as pointed out in CFDG's prior comments with respect to Western Snowy Plovers. Instead, where there is uncertainty as to the mechanism for impacts, the DSEIS construes this uncertainty against dogs and concludes that because impacts "could" occur, that continuing with the status quo "would" result in adverse impacts.

â€ The DSEIS notes that "there is no published documentation that dogs have either directly or indirectly affected [California Red-Legged Frogs]" at Muir Beach, but, based on the ways in which the presence of dogs "could" affect these frogs, the DSEIS nevertheless anticipates that the status quo would result in "negligible to

long-term minor adverse impacts (14)."

â€ The DSEIS documents the occasional presence of humans and dogs on the cliffs at Fort Funston, but acknowledges that bank swallows are "somewhat resilient to disturbance" and that "effects from human/dog presence on the nesting success of the bank swallow at Fort Funston have not been adequately studied." The DSEIS nevertheless concludes that impacts on the bank swallow under the no action alternative will be "long-term minor adverse impacts (15)."

â€ For Muir Beach, the DSEIS acknowledges there is "no documentation that dogs have directly or indirectly affected" coho and steelhead (16). Yet the conclusion of this section is that dogs may have "minor and adverse" impacts on coho and steelhead.

The NPS lacks information relevant to a reasoned choice, but nevertheless appears to consistently conclude that despite the lack of evidence, dogs are likely to impact wildlife solely by their presence. These analyses should be revised to acknowledge that causation has not been demonstrated.

#### Unfairly Skewed Impacts Analysis with Respect to Visitor Use Experience

The purpose of NEPA is to enable informed decision-making and public participation. *Robertson v. Methow Valley Citizens*, 490 U.S. 332 (1980). The effects analysis extends to social and economic impacts where such impacts are interrelated with natural and physical effects. 40 C.F.R. Â§ 1508.14; see also *Trinity Episcopal*, 523 F.2d 8at 93-94 (noting that NEPA "must be construed to include protection of the quality of life of city residents").

Unfortunately, the DSEIS fails to inform members of the public to the Preferred Alternative's negative impacts on the GGNRA's recreation resources. The DSEIS applies inconsistent methodologies and assumptions in evaluating impacts of various alternatives to park user experience when compared to existing conditions, revealing an implicit bias against dog walking. For example - - under the "no action" alternative for Crissy Field, the DSEIS concludes that there would be no recreational benefit to dog walkers - - stating instead that there would be "no impact (17)." This conclusion disregards the enormous benefits that accrue (and would continue to accrue under the No Action Alternative) to recreational visitors who have regularly used Crissy Field for responsible off-leash use for generations. By contrast, the DSEIS states there would be "long-term, moderate adverse impacts" to visitors who prefer no dogs if the NPS selected the no action alternative (18). Thus the DSEIS acknowledges impacts to non-dog walkers, but not benefits to dog walkers.

These conclusions are internally inconsistent - - if there is no change to existing conditions, the analysis must consider both benefits and burdens accruing to all relevant user groups. Benefits would accrue to dog walkers, and these should be accounted for in the analysis, but are not. By disregarding benefits to dog users, the analysis is therefore weighted against dog users from the outset because the benefit to dog users has been discounted or ignored - - i.e., the analysis is based on the use of an incorrect baseline assessment of impacts.

Visitors who do not prefer dogs appear to receive the benefit of the doubt in the analysis. For example, under the preferred alternative, and Alternative E (the most dog-friendly of the alternatives), non-dog walkers supposedly experience "beneficial" impacts -Â presumably

measured over existing conditions (19). But the same treatment is not afforded to dog walkers as described above. The baseline for dog walkers is analyzed improperly because benefits of off leash dog walking are disregarded, and therefore, the severity of impacts to dog walkers from restrictions is underestimated. As a result, the analysis is flawed and apparently biased against dog users.

In addition, the NPS has apparently chosen a more restrictive alternative for Crissy Field than even its own analysis indicates is necessary. For instance, Alternative E - - which would allow on-leash use at East Beach and West Beach - - would have "beneficial" impacts even for visitors who prefer no dogs and only "minor" impacts on park visitors who prefer dogs (20). However, the preferred alternative would impose moderate impacts on dog users by the DSEIS's description (21).

Elimination of off-leash dog use at these locations would have more severe impacts than acknowledged in the EIS, because of the incorrect baseline described above and the elimination of substantial benefits of dog walking, which are ignored in the analysis.

Therefore, rather than "minor to moderate" impacts to dog users, the preferred alternative may be more likely to have "moderate to major" adverse impacts to these recreational users. When weighing these moderate to major adverse impacts against a benefit to non-dog users which would accrue under Alternative E or the preferred alternative, there is no compelling reason to reject Alternative E, or even more dog-friendly alternatives based on visitor experience, as the NPS has done.

Without evenhanded assumptions, baseline measurements, and analysis of impacts of each alternative as to all visitor groups and impacted resources, the DSEIS cannot assist in quality decision making and policy setting. These issues should be subject to public comment and corrected in the final EIS.

#### Unreasonable and Inconsistent Assumption of Compliance

The DSEIS is also internally inconsistent regarding enforcement and compliance assumptions. The NPS characterizes user conflict under the No Action Alternative based on incidents that are not currently acceptable or lawful behavior - - harassment or assault by a dog is already prohibited under the current rules. The DSEIS enforcement data, which is the basis for user conflict analysis, has not been updated since the 2011 DEIS. The Final EIS should either update its analysis or explain why the information is unavailable. 40 C.F.R. 1502.22.

But for the NPS preferred alternative (and all other action alternatives), the DSEIS assumes compliance. Given the NPS's position that compliance is impossible under the status quo (22) and its recognition that nearby dogwalking areas experience "major" noncompliance, (23) compliance is not a reasonable assumption for the action alternatives. This is especially true for an agency with such patently inadequate enforcement resources. No agency, especially not one with only nine enforcement personnel to cover 80,000 acres, (24) can guarantee perfect compliance. This assumption is unrealistic and inconsistent with baseline conditions, and ultimately skews the analysis by overestimating the benefits of requiring leashes or banning dogs. A realistic assessment should consider impacts from alternatives where noncompliance is comparable to current or reasonably anticipated rates of noncompliance.

While the NPS's objective is to improve compliance, more strict restrictions may increase noncompliance if visitors are not aware of new regulations or committed to achieving compliance. The DSEIS should undertake a realistic assessment of community buy-in to its proposed plans, including more deference to commonly accepted policies resulting from the negotiated rulemaking process, which had achieved a greater degree of stakeholder support than any other management plan proposed to date.

## Incomplete Analysis of Impacts to "Nearby Dog Walking Areas"

NEPA requires agencies to consider indirect effects, which are "caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable." 40

C.F.R. Â§ 1508.8(a), (b). EPA submitted a comment letter on the GGNRA's 2011 draft Dog Management Plan requesting that the GGNRA examine how its dog recreation restrictions would change patterns of dog use at other recreational areas in and around the GGNRA -Â also known as indirect impacts from dispersion or induced visitation. Simply put, by eliminating many off-leash areas, this activity may be concentrated in the remaining areas within and without the GGNRA, but the EIS had not done this analysis.

CFDG is deeply concerned that the Preferred Alternative may likely concentrate off-Â leash dog use in a much smaller area than under the status quo. The GGNRA encompasses 80,000 acres that includes nearly the entire Pacific coast in Marin, San Francisco, and San Mateo counties (25). The DSEIS estimates that the Preferred Alternative will decrease access to off-leash dog walking by 30.9 miles of trail and 107 acres of other areas (26). NPS's Preferred Alternative would increase dog restrictions (e.g., from "voice control" to "on-leash only") in 13 of the 18 units covered by this Plan. Of the most popular GGNRA units for off-leash dog walking, the Preferred Alternative eliminates off-leash dog walking at three and substantially reduces the total area available in the remaining four GGNRA units.

Of greatest concern is the DSEIS's failure to analyze the concentration of dog-related impacts - - which it claims require strict management - - within the five GGNRA units that will still allow off-leash dog walking under the Preferred Alternative. Indeed, the EPA specifically requested that NPS study dispersion-related impacts to the tidewater goby - - an endangered fish species found in Rodeo Lagoon - - but the DSEIS fails to address the possibility that shutting down most of the GGNRA to off-leash dog walking will cause dog walkers to congregate in the few GGNRA locations left to them, let alone the indirect impacts of the increased dog traffic.

The DSEIS also provides an incomplete picture with respect to nearby (non-GGNRA) dog walking areas. As a starting point, the DSEIS analyzes impacts to only a small subset of potential nearby dog walking areas and does not explain its narrow selection. The 2011

DEIS identified 142 nearby dog walking areas, but the 2013 DSEIS omits 88% of these areas from the impacts analysis (27). NPS selected the 18 sites that were discussed in DSEIS (only 12% of the sites originally identified) based on a GGNRA survey with a response rate (13%) that even the NPS characterizes as "extremely low (28)." This is an unreliable methodology, and an insufficient analysis. Because NPS did not otherwise articulate any rationale for eliminating these 124 areas from further analysis in the DSEIS, the FEIS should undertake a complete analysis, and to the extent information is unavailable, fulfill the requirements of 40 C.F.R. 1502.22 with respect to unavailable or insufficient information.

NPS's approach results in strange anomalies, and suggests that the agency failed to identify areas that are likely to receive significant dispersion. NPS fails to mention Point Isabel Regional Shoreline - - one of the most heavily used dog parks in the nation (29) - - despite its proximity to many Marin County cities. Similarly, although NPS identified the 17-acre Pulgas Ridge Reserve off-leash area in the 2011 DEIS, it inexplicably omitted what appears to be the only significant off-leash area in San Mateo County from its analysis.

Further, the DSEIS also fails to provide sufficient information to calculate the acreage and miles of trail within nearby dog walking areas, let alone the portions that are available for on-leash or off-leash dog walking. Available data suggests that only a very small portion of these nearby dog walking areas is open to dogs at all, let alone off-leash dogs. For instance, dogs are only

allowed in picnic areas and campgrounds at the 6,300-acre Mt.

Tamalpais State Park - but even these areas are on-leash only so do not provide comparable recreational experiences to existing condition in the GGNRA (30). Even from NPS's analysis, it is clear that the nearby dog walking areas identified in the EIS do not provide a reasonable substitute for the GGNRA lands closed under the Preferred Alternative and that impacts will be concentrated within a small area. NPS must analyze these questions based on actual data.

The gaps in the DSEIS analysis are not limited to geographical scope, but also extend to the substantive impacts analysis. As a result of these gaps, the EPA rated the 2011 Draft EIS as containing "insufficient information" on areas of analysis required by NEPA. The EPA mentioned the following types of impacts that NPS should "thoroughly" investigate: water quality, vegetation, wildlife, visitor experience, human health and safety, park maintenance needs, changes in vehicle miles traveled to access recreational sites, dog waste management, and increased or concentrated erosion.

The DSEIS fails to examine most areas, and most impacts, that were the topic of EPA's comment. For 76% of the topics at each relevant location, the DSEIS fails to even mention the type of impacts identified by EPA. For certain locations, sources of dispersion were not identified. The GGNRA has not articulated a basis for not conducting this analysis. The attached chart (Attachment H) summarizes the GGNRA's lack of response to approximately 3/4 of the areas and topics identified.

GGNRA has proposed severe restrictions on off-leash dog walking which have a very real potential to concentrate this use in the few remaining areas that allow off-leash. The solution is to ease the restrictions on off-leash dog walking, which would ease the burden on the remaining areas. The NPS should ease these restrictions, in order to both preserve the valuable recreational resources of the GGNRA and avert a potential violation of NEPA and potential environmental impacts that have yet to be studied.

#### Use of an Improper Baseline for Rancho Corral de Tierra and Other New Lands in San Mateo County

The NPS also failed to respond to CFDG's comment (in both the Response to Comments and the DSEIS) that its definition of the No Action Alternative for Rancho Corral de Tierra and other "new lands" in San Mateo County did not accurately reflect pre-existing off leash use conditions.

NEPA expressly requires the inclusion of a No Action alternative in order to compare the impacts of the action alternatives to the status quo ante so that "agencies [can] compare the potential impacts of the proposed major federal action to the known impacts of maintaining the status quo." *Custer County Action Ass'n v. Garvey*, 256 F.3d 1024, 1040 (10th Cir. 2001). In defining the No Action alternative, the focus is on whether the No Action alternative realistically captures preexisting conditions as a baseline for comparison.

*Id.* (explaining that for purposes of the No Action alternative, the preexisting "level of activity is used as a benchmark" and rejecting the argument that "a 'true' no action alternative may only reflect the impacts of lawful activity"); 46 Fed. Reg. 18026, 18027 (1981) (requiring agencies to "analyze a no action alternative 'even if the agency is under a court order or legislative command to act,' i.e., where the No Action alternative would be legally impermissible).

The practical importance of this NEPA deficiency is that the resulting analysis underestimates the miles of trail and acreage lost to off-leash dog walking and thereby understates minimizes the impacts to recreation. CFDG believes that the NPS's inaccurate baseline for Rancho Corral de Tierra and other "new lands" in San Mateo county (Such as Mori Point, Pedro Point, Sweeny Ridge, Cattle Hill and Milagra Ridge) all have no accurate baselines that will leave the final EIS vulnerable to a legal challenge that

would undermine the cooperative efforts of many parties, including CFDG, to develop a workable dog management plan.

### Monitoring Based Management Plan Continues to Be Vague and Unreasonable

CFDG appreciates the NPS's efforts to provide further explanation of its monitoring based management plan. The DSEIS's revised adaptive management plan, however, continues to function as a "one way street" - i.e., it only allows for further restrictions on dog walking and does not contemplate lessening restrictions in any area should adverse impacts be deemed less intense than anticipated. This approach is internally inconsistent and fails to treat dog walking and other recreational uses in an evenhanded manner. The

GGNRA has acknowledged that its assessment of future impacts is to some degree uncertain - if impacts are more severe than expected, it will implement additional restrictions. However, the same assumptions do not apply to the benefit of dog recreational use; if it turns out that dog use causes fewer impacts than expected, there is no mechanism allowed for to permit greater dog walking in the future. This "one way street" is fundamentally unfair and has no reasonable basis.

Further, the DSEIS's revised triggers for additional compliance measures are now unclear. The DSEIS refers to "measurable" or "unacceptable" impacts that may cause GGNRA to implement additional compliance measures, including educational programs and closure of areas to dog use. While CFDG appreciates the NPS's efforts to recognize that the relevant inquiry should include impacts to resources, apparently it is now entirely within the GGNRA's discretion to determine when impacts are unacceptable (e.g., exceed an unspecified threshold), without having to show any violation of a regulation, plan, policy or other law or that off-leash dog walking caused the observed impacts. This system could inject a great deal of uncertainty in day-to-day use of recreational resources, and would give potentially unfettered discretion to the GGNRA, without justification based on significant impacts or regulatory violation.

In developing its monitoring-based management plan, GGNRA should define and allow for public input on criteria for triggering additional restrictions. CFDG also requests that if the Plan relies on inspectors to evaluate impacts, that the NPS ensure proper training and the existence of quality control measures including third-party monitoring to ensure objectivity. Further, the monitoring-based management plan should provide mechanisms for distinguishing impacts caused by dog walking and impacts traceable to other non-dog-related recreation. Since recreation (including dog walking) is a core use and purpose of the GGNRA, the adaptive management should include a mechanism to scale back other uses that conflict with or impinge on dog walking recreation, not just dog walking.

Even with the deficiencies in the NEPA analysis, the conclusion of the DSEIS is consistently that Alternative A (the status quo) results in only "negligible" or "minor" impacts to nearly all types of resources in nearly all GGNRA units analyzed in the DSEIS (31).

In fact, with closer analysis, the NPS has determined that there is insufficient scientific data to establish that off-leash dog recreation impacts water quality and many of the special status species. Indeed, as described above, the DSEIS's own discussion of compliance suggest that the benefits predicted from implementation of the Preferred Alternative are unlikely to materialize.

Indeed, the only resource that is consistently impacted in a "major" way in the DSEIS is the park operations budget,(32) and even then only for the action alternatives (B-F) because of increased enforcement costs. The DSEIS estimates that it will cost an additional \$2 million more per year to implement Alternative F than the status quo (33). While NEPA does not explicitly require a cost-benefit analysis, the value of imposing additional dog management regulations at

the GGNRA should certainly be a concern for the public and legislators who must fund this venture and suffer the associated burdens. GGNRA should allocate its resources to conserving existing off-leash dog walking recreational resources, and improving upon existing management and compliance measures.

The NPS Should Consider Other Solutions for the GGNRA.

CFDG supports maintaining the existing status quo of dog recreational areas. In recognition that enforcement and/or compliance may always be improved, CFDG proposes additional solutions here which should be considered and incorporated into a modified preferred alternative that is based on Alternative A.

The NPS should consider a certification/tag program comparable to one implemented in Boulder, CO. Based on how much NPS is willing to spend on its preferred alternative, there appears to be funding available for a certification/tag program. A certification/tag program can also be developed through alternative funding mechanisms, including community-based models, use of the parks conservancy resources, and hybrid approaches (e.g., where some resources from the current proposed monitoring based management plan are reallocated to other strategies such as certification/tag program). Advantages of a green tag program are many, as it allows enforcement to target problem users (the real cause of issues), not problem areas. A tag program is more fair and effective because responsible dog users are not punished and deprived of recreational resources as a result of a few problem users. Moreover, a tag program can provide a cross-cutting solution to address all impacts of concern including species of concern and other areas needing enforcement. Data from the Boulder program should be considered by NPS, given that that program obtained rates of tag carry compliance over 90% and in the initial year of implementation user conflict dropped by roughly 40%. Compliance rates for leash carry regulations were at almost 100% according to a Boulder representative, and there have been almost no incidents of wildlife harassment. Voice and sight control compliance is in the high 80% to low 90% range. This information did not receive analysis in the DSEIS. Relevant reports on the Boulder experience, including additional modifications to the program being considered, are cited here and CFDG specifically requests that NPS review and consider this information (34).

The NPS should also modify alternatives to incorporate additional design and construction solutions. Crissy Field should serve as a positive model in this regard. Unfortunately, such innovative structural solutions were dismissed from the DSEIS entirely for Fort Funston (e.g., vegetative barrier, post and cable fencing).

The NPS should assemble a "Recreational Roundtable" - a stakeholder group of recreational users. This body would not need to be an official federally regulated advisory committee; the NPS should consider other forms of organization that are legally feasible such as a public-private partnership. This roundtable should represent a broad variety of stakeholders to provide feedback and suggestions to the NPS and solicit continued public input and stakeholder buy-in, which will ultimately lead to increased compliance with the final Plan. Increased public education should be implemented through expansion of the existing work of the San Francisco SPCA and Marin Humane Society to create and expand an Off Leash Open Space Training Program.

Listening to the relevant stakeholders may lead the NPS back to alternatives that are more consistent with the negotiated rulemaking findings released in 2007, including the status quo. Dog management in the GGNRA has been controversial for many years. Of all the management alternatives on the table, more stakeholders (24 of 26) have supported the negotiated rulemaking than any other proposal. With both the 201 1 and the 201 3 versions of the Dog Management Plan, the NPS missed out on the opportunity to develop a workable solution for dog management in the GGNRA.

CFDG appreciates the opportunity to comment on the DSEIS. CFDG hopes that NPS will carefully consider CFDG's concerns regarding the substance of the DSEIS analysis , the choice of preferred alternative, and the opportunity for greater collaboration with community partners. CFDG looks forward to constructive dialogue to craft a practical plan for dog management that will be enforceable, and achieve meaningful preservation of the GGNRA's important recreational dog walking resources.

Thank you.

Very truly yours ,

Ashley S. Miller

(20) The worst impacts allegedly caused by Alternative E would supposedly be "minor" adverse impacts for dogs lunging, chasing or barking while on-leash near a wildlife protection area for the western snowy plover. DSEIS at 184. However, the analysis fails to credit that these "minor" adverse impacts would be an improvement over existing off-leash conditions. Again, the document fails to measure beneficial impacts when measured over existing conditions in an evenhanded manner.
