

Cuyahoga Valley National Park

Draft Trail Management Plan and Environmental Impact Statement

Corrections (posted 7/19/12)

Several map errors have been identified in the EIS document. In the map depicting Alternative 3B, the EIS figure shows an incorrect alignment for the East Rim mountain bike trail and had incorrectly classified some current uses in the legend. These errors have been corrected in the High Quality map set available for download. Corrections will be incorporated in the Final EIS.

Additionally, a small segment of the existing Buckeye Trail (i.e., the portion south of Bath Road that extends to the park boundary) is missing from all published maps. The segment will remain under all Alternatives. This will be corrected in the Final EIS.
