

# Scope of the Winter and Shoulder Season Plan

## When?

The plan covers the portion of each year from the day after the last day of road lottery in mid to late September through May 14

## Where?

The winter and shoulder season plan will include the entire park area with the exception of the southern new park additions from Cantwell Creek to the Kahiltna Glacier. This includes, for example, the Tokositna River and park areas accessed from Parks Highway mile 131 and the Petersville Road.

## Why Omit Some Areas?

- Winter use patterns here are very different from other areas in the park
- There are emerging issues that need immediate attention in other areas of the park, and incorporating these southern areas would complicate and delay the plan
- Complex land ownership in the area
- No current visitor use data

The park intends to address winter use of these southern park additions in the near future after conducting more thorough study of winter visitation in these areas and will potentially conduct planning in coordination with the state and other area landowners.
