

## *Installation of Security Lighting at the Stonewall Jackson Shrine*

### **Photos**

The Stonewall Jackson Shrine

The first motion activated floodlight would be installed on the overhang of the restrooms building. It would illuminate the driveway and parking lot. It would be hard wired into the restrooms electrical system.

The second motion activated floodlight would be installed inside the well house. The back of the well house is open and the lights would illuminate both the eastern and northern façade. The solar panel would be mounted on top of the well house.

The third motion activated floodlight would be installed under the tree in the left middle ground. The lights would illuminate both the southern and western façades. The solar panel would be mounted in the tree.
