Subject: NEPA and NHPA Clearance: 2012-002 El Capitan and Bridalveil Meadow Conifer Removal (40279)

The Executive Leadership Team has reviewed the proposed project/action and completed its environmental assessment documentation, and we have determined that there:

- Will not be any effect on threatened, endangered, or rare species and/or their critical habitat.
- Will not be any effect on historical, cultural, or archeological resources.
- Will not be serious or long-term undesirable environmental or visual effects.

The subject proposed project, therefore, is now cleared for all NEPA and NHPA compliance requirements as presented above. Project plans and specifications are approved and construction and/or project implementation can commence.

For the proposed project actions to be within compliance requirements during construction and/or project implementation, the following mitigations must be adhered to:

- No mitigations identified.

Project: 2012-002 El Capitan and Bridalveil Meadow Conifer Removal

PEPC Project Number: 40279

Project Description:

This project proposes to re-establish native vegetation, improve meadow habitat, and maintain the cultural landscape in El Capitan and Bridalveil Meadows by removing conifer seedlings from meadow borders. It has been estimated that 50-60% of meadow area in Yosemite has been lost since the arrival of European Americans. Scientists hypothesize that this rapid conversion from meadow to forest in Yosemite Valley stems from several origins including fire suppression, impacts to natural hydrologic flows (lowered water tables), and past agricultural practices that disturbed land and created conditions favorable for conifer germination. This encroachment has changed the essential character of Yosemite's cultural landscape by forcing out or reducing the types and patterns of vegetation, as well as affecting overall biological diversity and meadow integrity in the Valley. The 1994 Yosemite Valley Cultural Landscape Report states that the Park will "retain and maintain current meadow areas." Research also indicates that meadow soils rapidly assume forest soil characteristics as trees establish, which can favor continued conifer establishment (Griffith et al. 2005).

This project will mitigate this rapid conifer encroachment and reduce fuel loads, similar to the conifer removal that occurs annually in other parts of the Valley as part of fuels reduction in the Wildland Urban Interface. Utilizing volunteers from the Upper Merced Watershed Council, Yosemite Conservancy, NatureBridge, Boy Scouts, Girl Scouts, and other groups, small ponderosa pines & incense cedars (up to 10 inches dbh) will be manually removed using hand saws. Material will be staged in no more than three parking spaces, loaded into pickup trucks and hauled throughout each work day to the Yosemite Valley woodlot. If material remains at the end of a work day, it will be removed in less than 48 hours and not left over a weekend. Work will be coordinated by the Vegetation & Ecological Restoration Branch and the Resources Management and Science, Volunteer Office. Placement of material in the woodlot will be coordinated with park Fire and Forestry staff.

Project Locations:

Mariposa County, CA

Mitigations:

- No mitigations identified.

Describe the category used to exclude action from further NEPA analysis and indicate the number of the category (see Section 3-4 of DO-12):

E.2 Restoration of noncontroversial native species into suitable habitats within their historic range and elimination of exotic species.

On the basis of the environmental impact information in the statutory compliance file, with which I am familiar, I am categorically excluding the described project from further NEPA analysis. No exceptional circumstances (e.g. all boxes in the ESF are marked "no") or conditions in Section 3-6 apply, and the action is fully described in Section 3-4 of DO-12.
