to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** concerning the horseback riding in the park.....below eminence we have witnessed a huge amount of disrespect by the "CROSS COUNTRY TRAIL RIDERS" towards the river and the other users. illegal trails and river crossings as well as equestrians lingering in the river is epidemic in the park as well as above it. for years the park and the mdc has posted signs and distributed literature in the try to encourage trail etiquette to no avail. they need to be permitted to ride in the park with visible permit numbers (on their saddles) so they can be held accountable for their actions. the same for atv's and utv's. Other users should be encouraged to take pictures of the violators when they see them where they should not be. The precedence has already been set for this with the jet boats and rental canoes and other boats. An over night camping area for equestrians would only add to the horse problems on the rivers with even more enforcement needed in an already troubled area. in eminence during a summer weekend when their is a trail ride the canoe rental's are down and the room vacancies are up because of this dirty and unruly crowd. most people here don't get in the jacks fork river when there is a trail ride.....

**Correspondence:** As an active rock climber and supporter of the National Parks Service, I wanted to comment

how the language in this proposal effectively bans rock climbing in this area. This is a wonderful climbing spot in Missouri, and I would hate to see it shut down and made off limits to climbers. Climbing is one of the major attractions for me to travel around the state of Missouri and explore the natural preserves, nature areas and state parks. I believe it is completely in line with the goals of the park service.

One of the stated reasons for this in the plan seems to be the danger that falling rocks might in danger guests below. This is the opposite of my experience, most of the time Rock climbers do not pull down rock, and in properly maintained climbing area's if a rock were to begin coming loose, climbers (or maintenance personnel) could remove it when there are not visitors or guests below. In fact, if the rock face is not maintained and used regularly, I believe the risk increases for falling rock. Allowing an area open to climbing effectively maintains that area to be free of falling rock, because when a rock were to begin to come loose, the climbers would be the first to be aware of it, rather than have one unknowingly come loose and hit someone unsuspecting below.

In general, Rock climbers are respectful of the land and the earth, and strive to go the extra mile to care for the spaces that we use to climb.

I encourage you to reconsider adding those restrictions to the final plan.

Thank you.

**Correspondence:** Here in Randolph County, five beautiful rivers flow out of the Ozarks providing our drinking water, agricultural water, and a vital tourism industry. Their survival as clean, available streams is very significant to us.

We urge you to protect these watersheds to ensure that life here is possible. Particular concerns are lead mining, sewage treatment, agricultural and industrial runoff, construction of vacation homes along the rivers, and construction of earthen dams along the river tributaries.

Please keep these concerns in mind when enforcing and preparing laws for river protection in our region.

Growing up on Current River, I've seen how things are changing. Motorboats with large motors are not only endangering the ecology of the river but also endangering human lives. In recent years I've observed several fiberglass racing boats, 400 horsepower shoal runners, and boats with outboard motors exceeding 150 horse power on the stretch of current river that passes my family's farm. Boats of these size do not belong on a river like the Current. They are damaging shore lines and muddying the river. My grandfather, who has lived on this farm his entire life, tells me of how the river was full of fish and you could see the river bottom even in sections of the river that were more than 15ft deep. That is no longer the case.

I know that this specific area is out of the protected area but I believe that the motor restriction should be extended to the remaining portion of the river. This would not only assist in the overall health of the river but also help protect rivergoers from boats that are to large for this river.

I am opposed to the NPS imposing more regulations on our rivers! (WE THE PEOPLE, we are guaranteed by the constitution to have a say in our government policies). We locals live here and want to keep our rivers for ALL to use not just the tourist. We enjoy it daily and they only on weekends and vacation. But with more restrictions tourist won't even want to come, thus we loose tourist money for our small towns. Tourists like it as is, and not cluttered

with more regulations. There is not much water in the rivers any more as I can remember years ago. We want them left alone so they can run free so we can enjoy their pure clear water, and have a nice place to take a swim in the summer months and have a family picnic on the gravel bars!

**Correspondence:** I am not going to speak to each specific detail, but am going to give my support to the overall plan to more tightly manage the Ozark National Scenic Riverways. As a user of these natural resources, I want to make sure that they are properly managed so that I will be able to use and enjoy these beautiful rivers for many years to come. In addition, I want to leave this park in excellent condition for future generations.

I understand that achieving this goal might change or restrict my access. I am also aware that this might change or restrict the way other people access these rivers. If we want to be able to use these rivers and pass them along to our children, these changes are necessary, even if it is at our own inconvenience. As an angler I am aware every time I wade out into the water to fish that I have a responsibility to myself and others to respect the resources, abide by the rules, and do everything within my power to leave the river as I found it, or in better condition. These resources were not put here solely for my personal convenience. Access is not license.

Although I am a Missouri resident, I know that these resources belong to the entire nation. To think that I have a special right to abuse these resources because they are in my backyard would be arrogant, selfish, and misguided.

Degrading water quality, eroding banks, and destroying stream beds are unacceptable. Those behaviors are not recreation - they are vandalism. Responsibility comes with access. These rivers are precious, fragile treasures that deserve our protection. Please ensure that the new management plan is implemented and strictly enforced.

**Correspondence:** I support the adoption of Plan A. To close down non-official road access will do a lot to reduce the trash that is left behind by day users going to party. These day users come with load music, food and drink waste and ATVs. I would go further to require horse riding groups to put diapers on their horses. This would greatly reduce to spiking pollution levels that are directly linked to horse manure.

**Correspondence:** The Scenic Rivers is a National Park, thus it is for the benefit of all citizens and not only the wishes of the local citizens. In Missouri we have many streams that can be and are used for activities such as ATV usage that are not compatable to a healthy stream. Thus, as the Current and Jack's Fork are unique in their character, I recommend that the National Park Service protect these unique areas with the least amount of human intrusion. Thus, I opt for Option A for the plans for the park.

**Correspondence:** In the 1960's I worked at Big Spring on the Current River, as Park Naturalist, from 1964 into 1968 before it became apart of the NPS. I have over the years, came to be very concerned about the way the general public has not paid respect to the river and the area around the river. From damage I have seen from either too many horses or horsemen who just don't care, to atv people who really don't care either and at times too many people floating and getting drunk and making a mess for other foaters. It is time for stronger regulations to be in place with higher punishments for those who violate those regulations and now is the time to act as things are not getting better very fast.

**Correspondence:** I would like to give my support to option A. I would cite as evidence in favor of this option the ways development has affected Lake of The Ozarks. It is most certainly no longer a child or family friendly place, judged by the number of citations for drinking and power boating. It is no longer clean because of all the traffic on the lake and around it. Finally, having boated there once recently, because of the motorized traffic, it is not safe. Parts of the Ozark National Scenic River already resemble it. I think that from a perspective of family-friendliness, safety, and stewardship of our already stressed natural resources, option A is the preferred option.

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

As a visitor to the area (I took my family here years ago for vacation), I appreciate the beauty of the wildlife and the rivers and waterways. Please take steps to preserve this for future generations.

Thank you.

Sincerely,

Jeffrey Courter

**Correspondence:** Dear Sir or Madam,

I have loved the Current River for fifty years. It was my family vacation spot for a decade. We camped, floated, fished and swan (even skinny dipped!!) in its pristine waters.

I know that there are people that live closer to it than I do (those lucky ones) and they feel more ownership than I. And do not let that deter you from preserving this wonder for my children.

Please do not allow motorized vehicles on the banks besides the established boat ramps. Please do not allow horses to foul the water from trail rides. Provide the horses water at a distance from the river that will not cause unsafe bacterial levels. Please do not allow floaters to endanger themselves or others through the excess use of drugs or alcohol, just as the state patrol would not allow an impaired driver.

I know also that the pressure to allow these things is strong. Hold fast for the generations to come.

<b>Correspondence:</b>	I'll never forget the night on a float trip when I was camped on the bank above the Jack's Fork River when a swarm of four wheel vehicles came roaring through the campsite. What a shock that this pristine, natural environment would be violated by mechanical madness. It is important that the State of Missouri provide adequate areas, such as St. Joe State Park, where people who want to enjoy the thrill of riding four wheelers can do so without disturbing the natural tranquility of pristine Ozark woodlands and fragile river and stream ecosystems. Let's keep the two groups separate so that we can all enjoy what we like best about Missouri.				

Over the years I have had the opportunity to enjoy many of the environments protected by the National Park Service, from kayaking in the San Juan Island National Historical Park to the Apostle Islands National Lakeshore to exploring Acadia National Park. What strikes me about all of the lands in our National Park system is how well we protect them from encroachment and abuse. The fact that only one of the Apostle Islands allows motor vehicles and the others are restricted to low impact camping, in the midst of high impact sport fishing, is an example how two different interests - - kayakers and power boaters - - can both enjoy this rich environment without jeopardizing the interests of either group.

I would strongly urge you to adopt Alternative A to provide maximum protection to this rare gem of a natural resource in the heart of our country.

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP)

Dear Superintendent:

Please accept these, my comments, on the Riverways Draft GMP. The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants.

For me, the Riverways is the most valuable place on earth. Nowhere else have I ever seen springs as deep and blue, rivers as clear and clean, or fresh waters as alive with fish. It is where I know everyone will fall in love with the Ozarks. I have seen less of the Riverways than I want, too. So far Big Springs and the Upper Current have been the extent of my exploration. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value.

Therefore, I urge the NPS to adopt an updated General Management Plan that addresses new pressures on the park since 1984. I prefer Alternative B, in general, however I oppose the proposal for a horse camp (put that on private land instead) and I oppose year-round restrictions on boat use. I question pursuit of a management plan that aims to deliver solitude to floaters on Saturdays in July. To me that seems very unrealistic. For visitors seeking solitude, their options include weekday floats, or late afternoon floats. I've seen no evidence of a need for a wholesale restriction on boating. The overcrowding that occurs can be managed with enforcement and by extremely narrow restrictions. As long as evidence of damage from boats is lacking, restrictions should be minimal.

I experienced one of the most amazing floats ever from Cedar Grove to Akers on a Saturday in the summer when we began the float late in the day - after 3 p.m. At that time, after the flush of rowdy parties had long since gone, we saw eagles, beavers, turtles, fish, and ducks, and a handful of quiet anglers. We experienced the solitude. It contrasted sharply with a previous float that departed at 10 a.m. and we found ourselves behind a bachelorette party and some rowdy fraternity brothers the entire trip. And yet, I am sure the bachelorette and the fraternity brothers now have a warm place in their hearts for the Current River and its scenery and later, when they have children, they will teach them to love the river too. However people are introduced to the Rivers, they are destined to fall in love, which is the first step to becoming good stewards of this very special landscape. The key to preventing damage is education and enforcement.

The NPS should increase its partnerships and projects that focus on the history and heritage of the region. It should aim to develop a curatorial role. In addition, it should work more closely with local landowners, residents, and governments to identify and solve problems.

I'm concerned to that the Riverways lacks enough toilets to prevent unhealthy impacts on the aquatic organisms that depend on the specific habitat of the spring-fed, clear, cold waters. How can the waste from users be better contained and managed than 'using the river'? How can the Park Service design bathroom facilities that require minimal infrastructure and maintenance with maximum user appeal and environmental value? Can composting toilets work? Under what circumstances? What must users know about their good use? Where should facilities be located? How can users be educated and enticed to use them? Can well designed facilities extend the recreation season with different types of visitors? These are challenges that can and must be met, in partnership with concessionaires and with community members. I did not see that toilet facilities were addressed in the GMP and I feel that it cannot be overlooked.

The new and expanded camp grounds proposed in Alternative B should only be approved if the need is documented and if resources are available for construction and for operation and maintenance. Congress should commit more resources to operation of our National Parks, in general.

As the NPS considers incorporating the cycling trail from Van Buren to Big Springs (a great idea!) I caution the NPS to carefully consider its plan to create mountain biking trails. The route of such trails must be very carefully designed to minimize environmental impacts. Anywhere they go there will be some impact and the NPS should soberly consider how it has lost control of trails in the past, leading to numerous illegal roads, trails and traces. How would mountain biking not repeat that pattern? What additional tools and staff are available for enforcement? That said, mountain biking is a lot of fun and its adherents tend to love the outdoor landscapes they use. Responsible outdoor recreationalists must be taught in every endeavor.

As research emerges about the Ozark Hellbender, I urge the NPS to consider what steps can be taken to ensure these aquatic salamanders have a place in the Riverways where they too can live in peace and thrive. If this requires restrictions on use, these restrictions must be developed in partnership with local landowners and river visitors. It would be ideal if people and Hellbenders could thrive in the rivers simultaneously, however, that may not be possible. If not, then I want the NPS to try and find a place somewhere in the Riverways where we humans step aside to allow the Hellbender to live in peace. First, I want NPS to help us learn to respect Hellbender habitat. Obviously I do not want visitors barred from the Rivers. Finding the opportunities is the challenge. I hope it is not insurmountable. It would be a tragedy if people came to think of the Riverways as an either/or instead of a both/and when it comes to aquatic creatures and visiting humans. It would be sad to lose the last of the hellbender population because we cannot govern our behavior.

I think rehabilitating the CCC era buildings at Big Springs is long overdue. The structures are suffering from neglect and need to be upgraded. Problems with mold, aging, and inadequate equipment need to be addressed. That said, I oppose any efforts to put wifi service into our National Parks. Wifi is for luxury hotels, not for national landscapes. Having a few places on the planet that are not wifi accessible is important to many of us - and our National Parks should be those places. Visiting our National Parks should always be a place to unplug. Period. McDonald's restaurants in nearby towns have wifi. The Parks don't need it.

I also encourage the NPS to examine the trout issue. Should we stock Rainbow Trout in a legendary smallmouth bass river? What are the drivers of that decision? Is it economics? Do trout anglers contribute more to the local economy? If so, that should be documented to justify it.

Overall, Missourians love the Riverways, as do all of its visitors. Returning to it year after year is a particular gift, noting its changes, and its constancy. I am grateful for the Riverways, for the stewardship of the NPS and the citizens in the area, and for the opportunity to comment on this Plan.

Thank you.

Yours Truly,

Charlotte L. Smith, St. Louis, MO

To whom it may concern:

I am writing to express my support of the Draft General Management Plan for the Ozark National Scenic Riverways. I have been enjoying the ONSR for over 30 years and have been very disappointed in the things Ive seen happening in recent years.

We (myself, my children, my family, and friends) have enjoyed the peace and serenity of a float down the river and the quiet of camping beside the river. We look forward to spending time on the Current and Jacks Fork each summer, even if the drive of 4-5 hours makes it a challenge at times. We have always made every attempt to come on the days when there are the fewest people on the river, so we can enjoy the beauty, the nature, and the peacefulness that spending time on the river affords us. But, in recent years we have noticed that sometimes even on those days when there is less traffic, there is still a lack of the peacefulness and serenity. One of the things that distresses me is the allowance of the giant rafts that hold 6 people. It is my opinion that these should not be allowed. The people who use these rafts are not there to enjoy a natural outing, but usually a party on the water. I believe these rafts are more appropriate for a lake, a river that has not been designated as a national park, or some location where the preservation and enjoyment of nature is not the primary consideration. With the noise level of 6 or more

people there for the party atmosphere, enjoying the quiet of nature is impossible. You miss the birds, wildlife and even the sound of water rushing over the rocks.

I believe that it would be a positive step to adopt Alternative B, but it would be my preference to go with Alternative A, which would offer more protection for the river. There are many rivers in Missouri and surrounding states where people who wish to ride recreational vehicles, horses, and use boats with motors, can go. The purpose of the designation of a national park to the Current and Jacks Fork rivers is to protect them. That should be the primary purpose. I hope that we can remember the purpose establishing the national parks was to leave the land better for our descendants than it is for us. Every change that is made, every activity that is allowed, should have this as the primary consideration.

The preservation of the pristine rivers of Missouri for generations to come is something very important to me. The enjoyment I have experienced on these rivers is something I hope my great-great grandchildren will experience.

Please adopt the plan than will afford this opportunity for future generations.

Sincerely,

Katharine Spigarelli

<b>Correspondence:</b>	I have been following the Draft Mgmt plan for sometime now and I know that there are a lot of opinions and the debate has become very heated. Since you have asked for opinions I will give mine.				

As it is now the Current and the Jacks Fork are supposed to be "scenic" and "protected" but I don't see that the regulations that are already in place being enforced. I think there are several reasons for this, the first and biggest being that there isn't enough agents to patrol the rivers/parks and the second is agents "looking the other way". I have been paddling these rivers for 12 years and I have never been stopped by an agent.

The other issues I see is the high powered motor/jet boats; we have enough erosion as it is from flooding but to have these boats running up and down the river as fast as they can only creates waves that cause additional erosion. Then you have the horses; all I can say is E. coli, I think the Jack's has already shown us how horses affect the river and the quality of the water.

I think that we all should be able to use the rivers but in a manner that still protects them. I think the hp of the boats should be restricted to 10 hp. I don't think we need to add additional horse trails or crossings, no matter what they will continue to use what they are using now and if that is illegal then it should be stopped. The drugs and drinking problem on the river really needs to be reigned in; how can a family with kids be on the river with that going on?

I will admit I haven't personally read the document but have seen enough of the highlights to be concerned. I also have seen comments from elected officials that concern me as well. Just because you live in the 8th district doesn't mean you "own" the rivers. As an "outsider" I spend plenty of money in Shannon County and don't think that locals should have the only say on this issue. Also, let us not forget that this is the Ozark NATIONAL SCENIC Riverways and in my book it is there for all to use but within the regulations set forth.

If you told me I had to pick from the options already presented with no changes I would have to say option A because it protects the land/rivers the most. But I know from what I have read that option B is the option that the NPS is leaning towards and if that is what would be decide on then I could live with that. If you go with option C then you might as well realize that the park as we know it is gone, I am appualed that this is even an option.

I appreciate you giving the public the opportunity to comment and I along with a lot of other people will wait to see what the outcome of all of this is. But let me finish by saying that no matter what is decided that if it isn't enforced then this 15 year study will be for naught.

Regards,  
Pam Huddleston  
Florissant, MO

**Received:** Feb,03,2014 20:55:51  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "... preservation of ... the Current River and Jacks Fork River ... its free-flowing streams ... springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, which represents 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways.

Sincerely,

---

**Correspondence:** The rivers and other waterways in Arkansas are a part of the attractions that brings tourist dollars to this state, why ruin it and send those much needed dollars to another state? I have lived in this state now for nearly 17 years and it is a beautiful state and I would hate to see it ruined by mis-management by people who couldn't care less, only wanting a paycheck and not do their responsibilities they are being paid for. It is bad enough that some of the local state run areas have been closed and left to go to heck, so some fat cat can line his pockets

with the money instead of preserving what God gave us to enjoy. I prefer also to drink clean water, not stagnant, polluted water that cannot be filtered clean.

**Correspondence:** I am a retired children's camp director who has spent my professional life teaching children from all over the U.S the "Leave No Trace" philosophy of wilderness camping. Our campers backpack, canoe and kayak in back country areas all over our country.

I spent my childhood canoeing ,fishing and camping all over Missouri, but particularly on the Current and once on the Jacks Fork River. When my own children were old enough, I took them to the same areas in Missouri that I loved and gave them experiences that I remembered from my family trips. The rivers had just been designated Ozark National Scenic Waterways when my children were growing up. It was less travelled with no motorized vehicles, no motorboats, no horses and generally, very peaceful and restorative. I realize it is a different environment today, some

of which needs to be changed in order to protect the waterway which will also mean ecologically restoring the land surrounding the rivers.

I definitely approve of Plan A, but after talking to so many of the locals at one of the public hearings, I believe that Plan B may be a better compromise. I think there should be year round non motorized boat use with motor free zones and zones for motorized boat use. I also think a permit system for horse use is a good idea with a designated trail system, closing the unofficial trails and restoring ones that are appropriate for the park. I do not think there should be a horse campground in the park (and I am a horse person). Perhaps one could be built outside the park. Hiking trails and new concessions for the Park is also a good idea, because guided float trips and/or backcountry backpacking trips would give the opportunity to educate people and teach appreciation of our natural resources. A big part of the problem

with the abuse of the rivers and parkland is due to ignorance. Interpretive visitor centers can also help to educate, so I am glad to see that and the new campgrounds in the plan. I don't agree with motorized vehicles in the park, much less on gravel bars. They are too damaging and cause noise pollution. Plan B also addresses closing off and restoring unauthorized access to the rivers, but redistributing those drop off and pick up areas so there isn't the overcrowding we have now. That makes sense. I also support the recommendation on Plan B to have 3,430 acres for wilderness management.

I believe that part of the current problem, is lack of personnel for enforcement of Park rules and regulations. It is very difficult to manage a Park of this size and more staff for that purpose is crucial in this new management plan. Immediate enforcement is so important. I hope that funds for this new plan are available for both the work that needs to be done as well as the new enforcement personnel.

I am a strong supporter of the National Park Service and Wilderness designated areas in our country. I have confidence in the NPS's management experience to restore the ONSR so that future generations can continue to appreciate and learn from this beautiful natural resource.

**Correspondence:** I would just like the commission to remember this is a National Park. While concerns over local profit making businesses are important, their welfare does not compare to the welfare of the river and surrounding eco system. The quality of the water, the damage caused by improper use, waste run off etc. all threaten the long term survival of one of the Nations finest natural resources. STRONG controls need to be put in place to halt the run off from all the horse stables, the ATV's tearing up the the areas around the rivers, including the noise which affects the wildlife in the area. The heavy partying which I have personally seen greatly detracts from the enjoyability of the river for the rest of citizens of the United States. Perhaps making the canoe liveries responsible for the persons using their canoes, more patrols during the summer. STIFF penalties for violations, etc.

**Correspondence:** Horses are the biggest problem here by far, they come to take over the town, trails and river and leaving it all a total mess with their few dollars going to mainly one place :( this gives us all a bad reputation including as well as the state and federal gov. Do the job you should have done years ago and limit the amount of riders that can enter the park with visible numbers on display for identification. this is paramount because notorious for running and hiding without consequence. Catch them in the river and crossing where the should't and give them citations with heavy fines for damaging the delicate river and the endangered hellbender habitat. It will be a lot easier to patrol a few permitted horses than thousands of outlaws running amuck.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** Leave the Rivers and Streams alone. We enjoy them now as they are. It is a waste of taxpayer money and just another freedom taken from us. Let the big city folks take care of their parks and recreation areas and let us take care of ours. Many people depend on the rivers for their livelihood, many of us depend on them for recreation. Our local economy is tied to the river in many areas. We do not need more government in our lives. Soon the only employed will be government employees. How much of our money do you have to waste? You want to lock us out of our land and hire new police to enforce it. Government is too intrusive now. Every aspect of our lives is becoming controlled. Just back off and leave us alone. We are just fine down here in the hills and back woods without anymore rules for our lives.

**Correspondence:** I have read most of the Draft Management plan & am impressed by the thoroughness of the study. I particularly enjoyed reading about the history of the area. I remember the first time I floated the Current River in the late 60's. I was amazed at the beauty and peacefulness. I was very happy when our country created the Ozark National Riverway to protect the Current & Jack's Fork River, the springs feeding them & the surrounding area. I have been disappointed in the degradation of the area.

I think the Park Service should adopt Alternative A to protect this park from further degradation. There are plenty of other streams in Missouri where people can canoe, run their destructive ATV's and have their drunken parties.

This park needs to be preserved as naturally as possible.

The people who make money off the park will continue to do so, but I am unimpressed by their claims to the land.

The land belongs to the citizens of the United States.

Please take care of these rivers & land that has been entrusted to the National Park Service. Please adopt Alternative A

**Correspondence:** I support plan B. We have a beautiful park that deserves care and protection. At the same time I urge NPS to consider its tactics in dealing with the public and its fellow residents in the area. Requiring permits for baptism services at the river is an example of stupid heavy handed tactics that are typical of the Federal government and the other world of Washington DC that have helped create so much distrust. The condition and preservation of the beautiful wild land and rivers while accommodating and growing the tourism economy are important and that is why I support plan B.

**Correspondence:** Dear Superintendent Black:

Over the years our family has enjoyed weekend canoe trips to the Current and other Ozark rivers. We have found that rivers and streams within Ozark National Scenic Riverways are among the most beautiful and best for canoeing in the Midwest.

We believe that redirecting some recreational activities to areas where damage is minimized, establishing levels of use that keep the rivers cleaner, and allowing damaged areas to heal are the keys to stewardship of the Ozark Riverways. And this can be done while adding to the local economy.

We want the Ozark Riverways managed for natural and recreational values.

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

We support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved

into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

**Correspondence:** I used to work for DNR in Missouri as a young college student. I explored as much as I could of the area as I could manage while I was there and continue to return for new adventures with my family that remain there. From beneath the ground in one of the many caverns to cruising the waterways at the surface to climbing it's highest reaches, I have truly beheld the natural wonders that Missouri has to offer. While it's nice to stand in "awe" of natural wonder, Missouri is also where I learned that if you really do care about it staying pristine, then you have to do something about it because the population is riddled with too many that don't care, and they even blatantly litter before you as if the whole place is a receptacle. I joined the Missouri River Relief, literally picked up after these types along the river, and realized how bad it was in this regard. Still, these efforts every year after year, have amazingly brought a restored beauty to an industrial river and many more are now able to find refuge in it's riverbanks and even join in keeping it clean. Missouri's rich scenic tapestry provided for me a pivotal growth as a human being recognizing that we share this world and actions have consequence. I live in the desert along a river now and the regions inhabitants know all too well how important that river is. There would be no life without it. Please, preserve the abundant natural landscape Missouri has to offer all the next generations of human beings who will need to find connection to the natural world.

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points

restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** As a frequent user of the Riverways I have a great appreciation for the over site and direction offered by the NPS. I believe that recent comments by some politicians about Missouri taking over management are totally misguided and are political grandstanding.

In my opinion slightly greater restrictions would enhance the Park but that wholesale change in either direction would create problems.

I would be willing to pay a daily or annual usage fee to help support improvements to the Riverways.

**Correspondence:** Dear Superintendent Black:

My family and I have enjoyed canoeing, kayaking, fishing and camping in the Ozark Scenic Riverways for several decades. I wish to express my support for Alternative B. Stewardship of this magnificent natural treasure requires greater regulation of its usage.

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesiganted

trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. **Correspondence:** The preservation of the Ozarks is a very important issue for the economy and ecological systems in southern Missouri, as well as the long stretch of waterways the natural springs in that area provide life to. I believe education of the beautiful and extremely diverse scenic lands of the Ozark national waterways is

fundamental if we plan to preserve the natural resources for generations. In an economy where revenue seems to trump keeping natural habitats pure, alive and unpolluted; i believe choosing an alternative action plan is a way to take a stand against abusing the 200 million plus gallons of unpolluted fresh water provided daily by the springs, and preserve these resources that have supported for over 12,000 years. I support alternative plan B. I believe this plan offers a good balance of recreation and education. I am very supportive of restoring some areas to their natural habitat while also expanding educational outposts in the area. I also support keeping recreational uses at a more traditional and unmotorized status. I believe taking no action to be unacceptable. As times change, populations and economies grow, it is of up most importance that we keep up with the efforts of past generations to preserve and protect Missouri's beautifully unique karst landscape and resources. This is why I support alternative action plan B.

**Correspondence:** I prefer Alternative A for the GMP of the ONSR.

I oppose the use of motorized boats & equestrian use on & in the rivers in the park. This park's problems have included the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements.

I feel Plan A will decrease the number of access points and close illegally developed roads/trails. It will limit the horse power of motorboats above Two Rivers. Plan A provides better usage of the rivers by horses and motorizes boats. It limits access to the rivers by motorized vehicles except on official roads. It eliminates illegal horse trails and reduces river crossings. These changes reduce E Coli contamination and make the rivers safer for swimming. Plan A proposes reasonable gravel bar usage and stops the damage and contamination by horses. This will have the potential to restore gravel bars to their natural state.

Plan A has the best chance of reversing the harmful effects on the rivers and returning them to the condition they were in when the Scenic Riverways was established.

**Correspondence:** Dear Superintendent:

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways in the following recreational uses: Camping, floating & hiking.

These uses are important to me because I absolutely love clean water, the biodiversity of this unique ecosystem, wildflowers and a pristine natural environment I can escape to such as the National Scenic Riverways.

In addition, I appreciate the conservation and preservation functions of the National Park because it's just a really special gem of our state, the great rivers state!

The primary area(s) I use are Round Spring & Akers access. I've also spent time in Montauk, and I really love the Jack's Fork float from Buck's Hollow too. I am an avid Stream Teamer and have also participated in 2 clean-ups on the Current River, as well as a trail build with the Ozark Trail group.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways:

â€ Vehicle use on unauthorized roads & vehicles on gravel bars should be restricted which would help reduce ecosystem damage and protect public safety;

â€ Address concession (floaters) drop off and pick up location overcrowding in certain areas by redistributing them to include 20 new designated access points while keeping the total designated access points constant. (Alternative C also does this.)

â€ No horse campgrounds in the Riverways (25 sites are proposed for Alternatives B and C). We do not agree that the ONSR needs a designated horse camp in the park, preferring that this opportunity be developed by the private sector, on private land in proximity to the park. Instead of a new development of this magnitude, we ask that NPS work with existing local businesses to provide a concession horse camping operation outside the park that would have less impact on park resources within the narrow river corridor.

â€ Motorized boats should have some restrictions; I have found it very unnerving to be floating in a canoe or swimming when a jet boat rounds a corner going at a fast rate of speed. I agree with MO Coalition for the Environment on minimal boat restrictions in opposing year-round prohibitions on boats in certain stretches of the Riverways because such restrictions would eliminate opportunities for area residents to enjoy the Riverways. We think any restrictions on boats should be minimal and driven by evidence of a problem that only restrictions will solve. If better enforcement will solve the problem we prefer that to prohibitions.

â€ The restoration of impaired riverbanks that avoids developed facilities along the rivers, which are screened from view from the river in any case, and low impact. We suggest that heavily engineered solutions be avoided (e.g. Rock and weirs) and instead NPS talent and experience be employed to bring natural landscape design and sustainable structures appropriate to the site.

â€ Prioritization of solutions for problem areas that focuses on low-impacts in riparian zones. For example, the area across from Welch Spring should be restored where heavily rutted unauthorized roads mar an undeveloped bank. Damaged areas should not serve as opportunity to add new 'hardened' development where it does not belong and instead should receive restoration.

The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation.

The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of

natural ecosystems-should rival that of our nation's most pristine and unique public lands.

Yours truly,

Melanie Cheney  
10450 S. Route N, Columbia, MO 65203

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** The National Park Service's reasoning for changing the horse power limits is based on flawed premises. The idea that forcing floaters south of Van Buren will cause an increase in tourist floating is an assumption that has no validity. The inference that the boats on the rivers cause bank erosion must be forwarded by people that have never seen a 30 foot flood or a mouth long flood averaging 10 to 20 feet flood. After these mud, gravel, and sand moving events the river is able to return to it's (to barrow a term) Pristine ecosystem. Rather than remove boats maybe floods should be done away with. At a minimum, leave the boat horse power limits where they are and allow boats with greater than 60/40 launch at Van Buren and travel south of Big Springs Boat Launch. The Current and the Jacks Fork rivers are not delicate and deteriorating but are robust and self healing. The belief that the boats are endangering the floaters please show me the reports of floaters physically injured by boats. The reality is that more floaters are saved by privately owned boats than by all the Park service boats.

**Correspondence:** I have enjoyed many of the different rivers in the Ozarks. They are some of the most breathtaking rivers in the world. Some of them small/intimate rivers that are a source of joy to my heart and soul. They are all a reminder of the incredible wealth of wildlife and the value of uncontaminated free flowing waterways. I was never afraid to swim in these rivers when canoeing, and believed them to be pretty pristine. It would be a huge loss to the Natural world and to mankind to allow anything to damage/harm these rivers. I hope everything possible will be done to maintain their integrity and BEAUTY !

**Correspondence:** I support alternative B. I have done many things in the ONSR since before 1964. Proper management is important to its sustainable future use by everyone and the prservation of its unique species and qualities. It belongs to all of us and not just local residents. The residents would lose what we all value but also

many risk their livelihoods if the rivers no longer offer the quality experience all visitors treasure.

I agree broadly also with the following statements.

Thank you,

Larry Nolan

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** I am a handy capped senior and use my ATV not only for hunting but to avail myself of the wonders of the Ozark hills. I have been riding trails in the National Scenic Riverways for well over 40 years. In that time I have yet to experience the environmental issues that the Park Service has claimed to exist. What I have seen is a ever increasing shutting out access to a park that was originally to guaranty access to the public for recreational preposess. Don't shutdown trails, open them up!

**Correspondence:** MISSOURI PARKS ASSOCIATION COMMENTS ON DRAFT GENERAL MANAGEMENT PLAN,  
OZARK NATIONAL SCENIC RIVERWAYS -

The Missouri Parks Association, a statewide citizens organization of more than 3,000 members dedicated to the protection, enhancement and interpretation of Missouri state parks and historic sites, appreciates the opportunity to comment on the Draft GMP for the ONSR. We have long been interested in securing stronger management of ONSR because of its state park roots and its important role in the history, ecology and economy of this region of the Ozarks as well as its national significance. We salute the National Parks Service for addressing many of the problems that have grown and festered at ONSR in recent decades.

**WE AGREE WITH NPS THAT ALTERNATIVE B PROVIDES THE BEST BALANCE AMONG THE THREE ALTERNATIVES WHILE STILL ADDRESSING OUR PRINCIPAL CONCERNS.** Due to changes and increase pressure on the ONSR the No Action Alternative or status quo is neither feasible nor adaptive and is 25 years old.

WE appreciate the NPS emphasis on protection and interpretation of the extraordinary resources of the Riverways, both natural and cultural, and its commitment to deal with unauthorized roads, horse trails, proliferation of river access and crossings, and ATV use; to restore degraded land and riverbanks, especially in the riparian corridor; and to use zoning and other systems to better distribute visitor use and avoid conflicts. All of this should contribute to a healthier river, enhanced regional economy, and increased visitor satisfaction.

We do have some specific concerns connected with aspects of Alternative B, as follows:

**STAFFING LEVELS:** WE are mystified regarding proposed staffing levels as reflected in Table 10, page 1124 of the GMP, as compared with A and C, and urge your careful attention to properly adjusting these levels in the final draft. Especially troubling is the lack of any proposed new staff in resource management and science, when staffing in this area is more than doubled in Alternatives A and C and these are the staff who will have responsibility for restoration of degraded lands in the riparian corridor. There are also four times as many new interpretations and education staff proposed for A and C as for B. If this is simply a slip in the final stages of plan preparation and the total staffing level for Alternative B cannot be increased beyond the 98 total staff in the table, we would urge that restoration of degraded lands in the riparian corridor receive priority over construction of new infrastructure and facilities.

**RESTORATION OF PROBLEM AREAS:** Seriously degraded areas, such as the river bottom land across from Welch Spring that has been marred by a maze of unauthorized, heavily rutted roads and traces, should be restored to natural river bottom forest, not hardened for continued motorized use. This side of the river should be maintained in a natural state as a scenic asset for visitors to the developed area across the River at Welch Spring and for floaters passing on the River.

**HORSE TRAILS AND CAMPING:** WE strongly believe it is critical to close and restore the random maze of unauthorized horse trails and river crossings and to develop better designed trails that avoid sensitive riparian areas. There is not a city, county, state or national park anywhere in the United States that would allow such a chaotic maze of equestrian use. WE support consideration of an equestrian permit system to manage the burgeoning horse use. Further, we believe that a private horse camp ground outside the park would contribute more to the local economy and conserve limited park lands for less damaging uses.

**PRIMITIVE AND GRAVEL BAR CAMPING:** WE strongly urge the closing of the unauthorized maze of roads to primitive campsites and gravel bars, and the clear designation of unauthorized primitive sites and gravel bar camps, some accessible by motor vehicles and some walk-in. **WE ASK THAT ALL DESIGNATED PRIMITIVE AND GRAVEL BAR CAMPS ACCESSIBLE BY MOTOR VEHICLE BE SCREENED FROM VIEW FROM THE RIVER,** just as developed campgrounds are. Gravel bars and primitive camps should of course continue to be freely available for camping and day use from the River.

**HORSEPOWER ZONES:** WE support the proposed horsepower limits for river zones, though we recognize gigging with motors as a traditional use and are willing to consider an exception to the non-motorized zones in the upper reaches of the Current and Jack's Fork Rivers for such use in the non-peak season.

**NATURAL AND CULTURAL RESOURCE RESTORATION:** WE strongly support both natural and cultural resource restoration, but believe that in riparian areas there should be no new conversion of bottomland forests to

open fields. Forested riparian corridors are critical to stabilize riverbanks, especially in view of the likely impacts of climate change and severe weather events. All restoration should be accomplished using native species.

**SCENIC EASEMENTS:** Although not discussed in the GMP, there are more than 9,000 acres of private riverine lands under scenic easements to the NPS and these easements need to be effectively monitored, enforced, and corrected to avoid the sorts of violations that have occurred in recent decades.

**WILDERNESS:** WE commend the NPS for its management of the /big Spring backcountry for its wildland values, just as it was managed by state park officials since the 1920's, and we ask that management of this 3,430 acre de facto wilderness continue into the future, as proposed in Alternative B, in order to provide continued opportunity for wilderness type recreation and to maintain the area's availability for possible eventual designation by Congress.

**HIKING TRAILS:** WE support the proposed increase in of hiking trails and especially urge NPS to partner with other federal and state agencies and non-governmental organizations to develop interconnected long-distance hiking trails across multiple ownerships.

**FINANCIAL SUPPORT OF THE OZARK NATIONAL SCENIC RIVERWAYS:** The Riverways has seen a 30 percent reduction in staff during the last decade and many times are blamed by local and state citizens for ineffective management. The NPS simply cannot fulfill their stewardship and citizen engagement mission with this severe cut in staff which compounds problems within the ONSR. We believe these cuts are ill advised and have ben proportionally greater than at many other NPS units. **FINANCIAL AND ADMINISTRATIVE SUPPORT OF ENHANCED FUNDING LEVELS BY THE REGIONAL AND NATIONAL OFFICES OF NPS IS ABSOLUTELY CRITICAL IF THE NEW MANAGEMENT PLAN IS TO BE SUCCESSFUL IN REVERSING DEGRADATION OF RESOURCES AND ENHANCING VISITOR EXPERIENCES FOR THE LONG TERM.**

Finally, the Missouri Parks Association pledge to continue to work with ONSR and to encourage other organizations, citizens, and public officials to do so as well in order to solve and rectify these problems, enhance visitor experiences, contribute more to the local economy, and to make this park and natural river system one which we can all be proud. We ask ONSR to utilize stakeholder processes, properly balanced between local and non-local users, to work out these critical management issues remaining after adoption of a new and updated General Management Plan in a continued adaptive approach.

STEVE NAGLE, President, Missouri Parks Association

**Correspondence:** Several years ago a pine forest fire occurred on the northern Carter County border. Due to the cabling off the fire trails by the Park Service and the tree growth, due to lack of use of the fire trails, the fire trucks could not get more than a few feet after cutting the cables. Three homes burned down that night and one of the fire trucks and crew where almost burned to death trying to turn around in an overgrown fire trail. The cabling was done to protect unidentified endangered species. The study that was to identify them was to be done in ten years. That was well over fifteen years ago and it still has not been done. Open the fire trails back up and clear the trees out of the trails. The next fire may do more than just take homes.

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will completely destroy my family tradition of fish gigging above Pulltite on the Current River. Gigging season runs from September 15 to January 31 annually. It has been a family tradition in my family for SEVEN (7) generations and the park service is going to take this away. Part of the Park Service Mission is to preserve the culture of the local area. This part of the plan will destroy a large part of the local culture. Not only is gigging above Pulltite a cultural and family tradition, it is a time for families like mine to build memories that will last a lifetime. I strongly oppose any Park Service Plan to restrict motor boats above Pulltite during Peak Season (March 15- Sept. 15) or Off Peak Season (Sept. 16-March14). We as locals from this area deserve the right to enjoy the Current River above Pulltite all year long. We also run motor boats above Pulltite during the summer (Peak Season) for recreational enjoyment and the Alternative B will take this away as well. I may add that running a motor boat above Pulltite is also a cultural and family tradition. I have an abundant amount of relatives that owned or still own land above Pulltite and we would no longer be able to enjoy the swimming holes, gravel bars, and shade trees that my family has enjoyed for over one hundred years.

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation ofâ€the Current River and Jacks Fork Riverâ€its free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will completely destroy my family tradition of motor boating above Round Springs. As a boy I grew up in Eminence MO but my family either owned farms bordering the Park Service land at Round Springs or leased land near Round Springs. My family also has two cabins on the river near Round Springs. So I would like to point out that even though I live in Eminence my heart and soul belong near Round Springs. I spend vacation days at my family's cabins at Round Springs, hunt near Round Springs, gig above and below Round Springs, motor boat above and below Round Springs, as well as many other outdoor activities. The thought of losing the right to run my motor boat above Round Springs actually brings tears to my eyes. As a young boy with an adventurous personality I would put my father's boat in the Current River at the Round Springs lower landing and run his 25 hp boat and motor up to Sinking Creek and back to Round Springs. During the summer, I would fish that stretch of river above Round Springs, swim in my favorite swimming holes, lie on the gravel bar next to my favorite swimming holes, and have family picnics. I also have a handicapped brother (that cannot walk) that I lift into my father's motor boat and take him for boat rides because a motor boat is more stable than a canoe. If you implement this Alternative B you will also take one of the few enjoyments he gets from life. I hope you realize how much devastation you will actually cause by taking away our rights to use Current River above Round Springs. With the preferred plan B of the Park Service this cultural and family tradition will be stripped from me and my family FOREVER. Again this is so dear to my heart it actually bring tears to my eyes to think about a bunch of Park Service Employees from Colorado and Omaha, and extreme environmentalists getting to make the call on where I can enjoy the river that I have used for the last 27 years. NOT MENTION THAT I HAVE A SON THAT IS ALMOST THREE YEARS OLD AND HE IS NOT GOING TO BE ABLE TO ENJOY THE SAME PART OF THE RIVER THAT I WAS ABLE TO GROWING UP. The holes of water that I fished as a young boy, swam in as a young boy, motor boated as a young boy, and had family picnics as a young boy will not be passed on to my son due to this new general management plan you are trying implement. It is not right for the Park Service to adopt a plan that only benefits the extreme environmentalists, there is not one section in the (NPS preferred) Alternative B that benefits the locals in the Ozark National Scenic Riverways. Park of the Parks mission is to preserve the cultural traditions, NOT DESTROY THE CULTURAL TRADITIONS!!!

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will restrict motor boats above West Eminence on the Jacks Fork River from March 15-September 15 as well as restrict motor boats above Bay Creek all year long. I grew up in Eminence and I have run my motor boat above Eminence regularly. Not only is it a family tradition to run my motor boat above Eminence, but I have helped tourists during floods on many occasions. If the Park Service restricts motor boat use above Eminence and the Jacks Fork River floods I will not be able to run my motor boat from Eminence to Alley Spring and rescue people and their belongings during floods. For example, one summer I actually rescued four tourist's canoes and all of their belongings. I even refused to take any compensation for my time and costs. See what the Park Service does not understand is that we locals help the tourists that float the Jack Fork and Current Rivers and do not expect anything in return. I have helped several other floaters on different occasions and do not expect anything in return. The locals are from these small surrounding towns and we have a desire to help people. All we ask is that we get to keep our rights to these rivers!! I have also talked to many other motor boat users and they have similar stories of rescuing and helping floaters in emergencies. The Park needs to understand that the Park Rangers cannot be everywhere and it takes the help of the locals to keep everyone safe on these beautiful rivers. If the Park Service wants more deaths and more people to be hurt on the rivers without any help nearby then they are choosing the right plan. I feel that the Park Service needs to completely rethink their ideas on how this will affect everyone involved. I will hurt and probably even kill people on both the Jacks Fork and Current Rivers without the presence of the local motor boaters.

**Correspondence:** Dear Superintendent:  
I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

In my opinion, there is only one thing that needs to change- enforcement. As with most issues in this country, if we would support and fund the enforcement of current laws/rules/regulations these problems would not exist. If the

current rules had been consistently enforced, we wouldn't be having this fight.

It doesn't matter who is in charge. It doesn't even matter what the rules are. Enforcement and education are the only way to successfully protect our natural resources. Educate so that everyone knows what the rules (and consequences) are; and, enforce the rules consistently and equally.

Thank you for your time,  
Tony Pierce

**Correspondence:** We need Alternative D Give all land back to DNR,or the state of Mo. It seems like the Fed park Service can't take care of what land they do own. Look at ALLEY SPRING, Akers ferry, and Big Springs in Van Buren, Mo. Fed gov. needs to work only on parks, an leave the river issues to LOCAL, or State enforment. I've floated these river 40 years, and never see a park ranger on the rivers. Sell the land back to the public... This is prime agricultural land, all up and down Current Jacks fork. Take out 40 miles of trail rides, an you have just stripped the tourist season in half..Than Eminence will just fold up.... Schools will fail, no tax base on tourist money. Maybe this is what the park wants, my kids and grandkids may want more out of life, than to call the park service for a permit to go to public rivers. This land has can be used by local and tourist. Boats,trappers,canoes,tubes,horses,hikers,cavers { which are all locked up }, bikes,4wheeles,trucks, public use. Leave our rivers alone.

**Correspondence:** There are way too many canoes being rented by outfitters. There are ATV's everywhere and they use them to cart in all their refreshments, leaving the cans and trash. It's my guess that a lot of those car tires you see laying there along side the river come in on ATV's. I love our National Parks! It's what my family does on vacation, we go to National Parks. Since I am a canoeist and I am only 4hrs away from ONSR I have been there more than any other unit. And it's so depressing! It seems like ONSR is the National Park Service's UNWANTED STEPCHILD. It is understaffed, underfunded and appears to be unloved. The Rangers who like every Ranger I ever met are extremely helpful, especially Ranger Austin, but they don't seem to be entitled to wear campaign hats. There are a lot of young people from KC and St. Louis coming to canoe and mostly party and I thing it would be a good thing for them to see that distinctive hat to remind them of where they are at.

**Correspondence:** I trust NPS planning process and support Alternative B, the preferred plan as it seems to have been reached logically and to benefit the majority of citizens. I understand there is a movement to transfer management of the Ozark National Scenic Riverways to the state. I do not support that proposal. I believe that movement is driven by unfounded fear cultivated by local and national special interests and attempts through organized intimidation and misinformation to gain control of the area as a statement of anti government sentiment and to weaken environmental protection initiatives.

**Correspondence:** I support the NPS Alternate B plan which is supported by the Missouri Coalition for the Environment and Friends of the Ozark Riverways, along with their concerns and suggested improvements. Foremost in my mind is that the NPS provide accessible hiking and walking trails for senior citizens that may be prohibited to other users on bikes or motorize vehicles. With all the useful projects the NPS is proposing in the Riverways, the more they can keep the natural beauty intact in constructing their projects, the more all users will benefit from its beauty.

**Correspondence:** I do not favor any of the new regulations under the proposed plans, the ONSR should choose the No-Action alternative.

By prohibiting vehicle access to the gravel bars, you will likely cause them to erode away when flooding occurs. I began running the river in 1967. I have spent as many hours as anyone on the river, mainly from Pin Oak to Big Springs. Over the past 5 decades I have observed the changes to channels, river-banks, and gravel bars that occurred with each flood. I've likely seen every gravel bar that the floods created in that strip of river over the last 50 years. The newly formed gravel bars would stay for a while, sometimes for years or maybe decades, then they were washed away downstream to form new ones. Holes of water that used to be deep are now shallow, narrows are wider, wide holes are narrower, and places that used to be shallow are now deep. The river is constantly changing, always has, and always will, despite concrete, rip-rap, and regulations. In that cycle I can only think of very few gravel bars that have remained basically the same throughout all the years. The only gravel bars that have not at some point washed away are the gravel bars that received a lot of public use and accessed by vehicles; for instance, under the Van Buren bridge (it remained the same until they destroyed the usability by placing rock on the banks), and the Deer Run Gravel bars. It's a no-brainer that air inflated rubber tired vehicles, along with the foot traffic and day use, compacts the gravel and helps to hold it in place when flooding occurs.

Gravel Bar access for families is currently over restricted in the Van Buren section.

Already, in the Van Buren section of river no place exists for parents to take kids for a family day at the river, to enjoy swimming, fishing, and picnicking, on public owned lands. The ONSR already has the access points shut down or has changed the use to fee-camping or tube concession put-in and take-out. Several times, at both Raft Yard and Waymeyer, I have had gun toting people wearing badges tell me "that I had to hurry it on up and get my tubes and stuff unpacked in order to keep traffic flowing smoothly for the tube rentals." It seems the new regulations would regulate a way of life for the local people out of existence while promoting the tube concession and tourists' interests.

Studies do not show actual harm, or that possible future harm, will be prevented by the proposed regulations. Time, effort, energy, and the public's money should be spent to prevent the possibility of actual future harm occurring to the river.

Apparently, the management plans are in accordance with environmentalist's fantasy wishes to eradicate or limit all use of the Current River except those things important to the floating tourist. In a typical media slam of bald assertions and emotional appeal, Fay Augustyn, conservation associate for American Rivers, summed up their beliefs of what is important when she stated "everything that makes [the rivers] special - - their clean water and value to paddlers and anglers,"[1] which just like the management plans, does not include the local families' way of use. To those self-proclaimed conservationists, everything is only about the "value to the paddlers," in other words, "the floaters," and so are your management plans.

Actually, I believe the USGS Biological Science Report of 2005 shows that no harm is occurring due to current use,[2] so the ONSR should choose the no-action plan. However, addressing the "clean water" issue, it is a constant, underground fresh water supply that travels from many different unknown sources that feeds the river. Today's water will be in the muddy waters of Arkansas in a couple of days. Our waters are replaced daily with fresh spring-water. To prevent harm, locating possible risks of contamination to that underground water system makes sense; but shutting down some old trails and preventing a few local families enjoying a day along the river bank is absolute nonsense.

Also, the ONSR shows 1.3 million visitors come to the area. The amount of local people using gravel bars accessed by an old river-road is miniscule in relation to those 1.3 million "paddlers." Contrasting the possible harm between the two groups, the "paddlers" deposit tons of their human feces and urine directly into our river's water, and along our riverbanks, every summertime weekend. Those "paddlers" grind their feet into the river's gravel bottom hundreds of millions of times in a day, stirring up sediment (bad for the hellbenders), displacing gravel, and making the water dirty, not to mention the noise pollution, vulgarity, and drunken obscene lewdness they bring to the river, and is observed by the children.

<b>Correspondence:</b>	Dear Park Supervisor Black,
------------------------	-----------------------------

I grew up in Missouri and spent countless hours on the Current, Black and Jacks Fork Rivers camping and canoeing. The time spent in quiet and peace and playing in the water was priceless.

I can tell you the first time my husband and I encountered all terrain vehicles churning up the river beds on the Current was possibly the worst day of our lives. Not only were these yahoos destroying the river and banks, but they purposely tried to sink our canoe. On the Current River you do not want to tip over and be in the water for any length of time due to the very cold spring fed pools. Not only were these idiots churning up the water but drunk to boot.

Small estuaries and fish habitat was ruined in less than a minute due to "their"Fun. I am not opposed to people having a good time, but I am opposed to being subjected to bullies on the river.

As years went by, my husband and I decided after a barrage of 4-wheelers we would no longer canoe on summer

weekends. We began canoeing during the week in the autumn, but unless we were willing to take vacation days, our time in the peace and quiet in the wild was extremely limited.

If canoeists pay fees to canoe, then its high time all terrain vehicles pay fees too and their intoxicated state should be a factor. There is nothing worse than a drunk on the river, in a 4-wheeler or canoe.

Please do not rescind National status to State status. Right now Missouri is bordering on extremists, not conservationists. It makes me ashamed that my home state that home rule no longer respects and cares for wildlife and wild river ways.

I worked for the Missouri Conservation Department 18 years ago for the STL Urban Biologist and was exposed to much beauty in Missouri, I would hate that our time of preservation will be lost if the federal government repeals the protection to our National waterways.

Sincerely,

Robin Howard

**Correspondence:** I want to go on record in support of Alternative A concerning the proposed Jacks Fork and Current river management plan. First , I need to explain that I am a native of the Ozarks having grown up paddling john boats on the Eleven Point river and then navigating it and the Current and Jacks Fork both by motorized john boat and canoe. I currently am on the rivers 30 or more days each year.

My concerns for protecting the resources we are blessed with are that they are still there in the pristene conditions that I have enjoyed for my children and grandchildren. I see the extensive unmanaged horse trails, vehicular access to gravel bars, and fewer restrictions on motors to be serious threats to maintaining water quality and the wilderness experience that should be preserved on the Riverways. The number of horses even allowed under Alternative A still presents possible serious erosion problems and fecal contamination. Of concern also is the number of unauthorized roads accessing the Riverways creating a number of problems from erosion to aesthetically degrading ones experience on the rivers. The use of motors above Akers can present dangerous situations in the more narrow corridor. There is plenty of river downstream for those wishing to use motorized boats.

Clearly, the rivers are subject to the effects of use by a larger number of people every year and to fulfill the Park Services goal of "preservation of the areas natural and wilderness qualities" restrictions on use must be enforced. I certainly realize that certain activities will be restricted but it is necessary for the future generations opportunity to enjoy what we have.

I also am in support of the Park Service working cooperatively with the Forest Service in protecting the area around Big Springs and recommend that it be designated Wilderness.

I recall the local feelings of distrust when the Eleven Point was designated a National Wild and Scenic River and had family and friends who were directly impacted. I also remember my father who had lived his entire life along the river stating his opinion that it was necessary to protect it from those who would destroy it simply for greed and profit.

**Correspondence:** Comment from a Senior Citizen

I worked my way thru college as a Staffer for KCMO Parks & Recreation at the resident camps in the 1960s. Every summer we took a staff canoe trip down the Current River - we paid our own way and it was terrific! I supported the Current River becoming part of the Ozark Waterways because I could see what was happening to it in later years. Dick Dawson and John Banghart (Parks & Rec) focused the KC resident camps (& the day camps) on an appreciation of nature and the joy that we could get by enjoying the state Parks. You don't need a lot of money to enjoy the MO park system.

The commercial recreational areas, such as the Lake of the Ozarks or Table Rock are nice, but can be replaced. We can build lakes. Look at Kansas - they have lakes all over the place, ... but no Current River! The peace that the Current River provides, especially for those of us who live in large urban areas, cannot be found on large lakes.

We need to keep the Current River (& therefore Ozark Waterways) protected from the impact of commercial needs. I would suggest the locals look at how commercial growth (& therefore money for them) can be made OUTSIDE the park. Their thinking is too narrow. They are not seeing the big opportunity for them. BUT, if they ruin the Park & the River, they have nothing!

I made a good living in the business world. Making money is great, but the Current River and the Ozark Waterways are there for everyone to enjoy not for the profit of a few, I don't care how long they have lived there. Living there does not give them the right to kill a MO treasure for their shortsighted advantage.

Please work to EXTEND this type of park.

Thanks for your work.

Pat Frost  
Webster Groves, MO

**Correspondence:** As a frequent and long time visitor of Roaring River, I have seen damage done to the land areas and river beds close to the river from horseback riders and all terrain vehicles. Most favorable to me with be Alternative A, but I would be somewhat satisfied with Alternative B. This would close the river crossings and horse trails in the immediate vicinity of the waterways and establish a permit system for horses. Opening a new learning and contact station, resuming the oral history of the area, and enhancing museum collections would be nice also. I do not favor a horse camp along the Jack Forks, as I feel this would lead to more pollution of the waterways and erosion of shore areas.

Pleas consider the pristine scenery and solitude of this area, without opening it to more visitors that would continue

to hurt the surrounding natural resources.

Thanks you for consideration of my thoughts. Judith Walker

**Correspondence:** The National Park Service must act upon their responsibility to preserve the natural character of the Current and Jacks Fork watersheds. As a frequent volunteer in the Ozark National Scenic Riverways working under the auspices of the Cave Research Foundation I implore you to take this opportunity to create a management plan which will assure the continued protection of this spectacular place.

Currently water quality is threatened by overuse of horses. The National Park Service should close all unapproved trails and improve upon existing trails to limit stream crossings. In addition the number of horses allowed on park lands should be limited to prevent overuse and horses should be kept off of trails designed for human use.

Access points to the Current and Jacks Fork Rivers should also be limited which should include closing some access points currently used, oftentimes by myself. Vehicle access points contribute to erosion problems, take away from the wild character of the river, take away from the cultural heritage of the river, and allow individuals to abuse and trash areas with greater ease.

The National Park Service must also curb the use of motorboats on the rivers. The region is surrounded by both lakes and rivers for boaters to use their motorboats. There is no place in Missouri where one can experience the quiet of a river within a canoe and not feel intimidated by fast moving motorboats. You have the opportunity to create such a place on the Current and Jacks Fork Rivers. Jet boats are damaging to the aquatic environment, which you are charged with protecting. I am supportive of a ban on all motorboats with motors larger than were commonly used when the park was created, within park boundaries.

The National Park Service should also encourage the creation of more hiking trails and also encourage the use of mountain bikes. The local economy could also benefit by supporting an area which shows concern for a natural environment where users to go for recreation which does not threaten the natural and wild character this spectacular place. As we move into the 21 century I want to know that there are places here in Missouri for my son to appreciate when he grows older which will not have been degraded by horses, roadways and high power motorboats.

**Correspondence:** I am in favor of no new regulations, restrictions, or designations within the Ozark National Scenic Riverways. As a local and a native of the area, I can assure you from experience that the people of this area have the best interest of the riverways at heart. There is a love, respect, and ownership interest in the rivers and surrounding areas that cannot be duplicated. I do see that the rivers can be overcrowded during the summer months, but that speaks to the beauty and attractiveness of the area. Locals will for the most part avoid busy summer weekends in favor of a more secluded setting during week days or off peak seasons. More regulation is not always better, which seems to be the mind set of our government these days. Let the people continue to hunt, fish, canoe, jet boat, hike, camp, site see, etc. without more rules and restrictions that we already have. Please listen to the people that live, work, and play here and do not cave in to special interest groups or even park service studies that think there is a better way. Thank you for considering my views.

**Correspondence:**

Thank you to the NPS for your thorough study of the Management Plan options for the ONSR.

As a recreational canoeist of these rivers for over 30 years, I've become increasingly appalled as the natural area has been degraded by misuse and overuse. Overzealous local users and their abuse of current rules including unauthorized vehicle access, as well as the obnoxious Greek house party crowd have simply spoiled the experience for those seeking a quiet simple commune with the area's natural beauty and abundant wildlife and fisheries.

I am strongly in favor of option A. Option B would be a major improvement, but just isn't protective enough.

Thank you for your consideration of my comments in your decision-making process.

**Correspondence:** I prefer Alternative A. Once an area has been developed, there is no going back. I used to live near this area, and spent time canoeing the Current, Jack's Fork, and Eleven Point Rivers, among others, and also hiking in the woods.

Motorized watercraft and ATV's disturb the quiet for both wildlife and canoeists. Horses and ATV's pollute the rivers and degrade the trails. These distractions from the solitude of this natural area should be allocated to already disturbed areas.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

Missouri's riverways are a vital part to the ecosystems of the surrounding areas and are home to a vast variety of wildlife. I support Alternative B because it allows both, people and wild life to coexist. Alternative B allows both to benefit.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:**  
Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

Sincerely,  
Jerre Miller

**Correspondence:** I have read the Draft General Management Plan in its entirety and attended the public meeting in St. Louis. I have the following comments:

1. You give us three alternatives: A, B or C. However, there are no specifics as to what trails you plan to close but you mention that you know how many miles of trails will be closed. So you do know what you plan to do. It is impossible to give an opinion when you do not know the specifics. The plan seems to give the Park Service carte blanche. When I asked questions at the meeting, I was given the answer "we may or may not" with no definitive response as to trail closings. They stated it just gave the Park Service the powers to close off trails if they thought it was needed and we would have not input on those closings. My choice would be the No-Action alternative and continue as is with no changes. My reasons are listed below.

2. The regulations that are in effect today give the Park Service the ability to control the lands; and in my opinion, they do not need to further regulate the recreational use of the area. Instead the Park Service should utilize the regulations they currently have in effect and allow everyone to enjoy the park. It was designated as a park for all Americans to enjoy and our tax dollars are paying for it. I do not think you can close off portions of the Park to some and not allow them to enjoy its beauty. I have travelled to this area for recreation (i.e. trail riding, canoeing, camping, swimming, tubing, hiking) since 1963. I will tell you that I do not see that much difference in the Rivers since that time. They complain that the horse trails are damaging the environment. This is the tactic that is continually used to try and keep all horses out of the area.

3. My further concern, if you go ahead with any of these alternatives, is the effect it will have on the small businesses and towns located in the area. For instance, the citizens of Eminence survive on the canoeing, camping and CCTR trailriders. Without that income, the locals will not be able to survive and will wind up on welfare. Your report already shows there is a high percentage of the locals on welfare. I have seen the economy take a downturn and businesses in the area close their doors. More regulations and control on the Park will destroy these towns and families.

4. Water quality is one of the big issues raised by some groups. However, contrary to what the Sierra Club puts out, the horses are not causing the e-coli issue. As I have said before in the public meetings, they need to look at the leaching of septic systems in the area.

5. There is a concern on how this will be funded. The government has already cut spending and funding to the Park Service. You have less manpower in the Park. Why do we continue to pay for additional plans when that money could be better spent on correcting some of the erosion issues and general welfare of the Park.

6. The Park was initially designated as a "Federal recreation area". This plan wants to limit the recreation use. I do not feel that the original Committee would agree to the Alternatives in your Plan and straying away from its original use. To designate areas as "primitive" and limit their access does not comply with the Park's original use.

I attended the meetings when they tried to change things several years ago and the general consensus was to leave things alone. Why does the Park Service continue to spend our tax dollars on new plans when everyone agreed back then that it should stay the same?

Maybe you should attend one of the CCTR rides in June or October and talk to the people and get their input. I doubt that most people know about this Plan since they attend from all over the United States. This is not a Missouri issue. Requiring permits to utilize the Parks is very limiting. When you start controlling numbers and timeframes that the Park can be accessed, it limits the Park's use and original intent.

I love this area and hope that the government does not try to overregulate its use and destroy the enjoyment of its citizens with too much bureaucracy. As I said earlier, I have been travelling to this area since 1963 for recreational purposes several times a year, the Park is still pristine and the current regulations seem to be working.

My hope is that the Park Service will not be influenced by the lobbying efforts of the Sierra Club and will consider the comments from other recreational users and the locals before closing off this area to our use.

**Correspondence:** As an avid hiker and nature photographer, I have been blessed to visit all 48 continental states and 2/3 of Canada. Our wonderful state has so much to offer the outdoors person and those who are being introduced to nature. Missouri State Parks are second to none and I applaud those who do such a great job of managing these parks and historical areas on a shoestring budget. Unfortunately, it has been my experience that many of the scars and much of the abuse in and around these areas is the result of locals, not visitors. The latter group may be more environmental conscious and do not take these gifts from nature for granted. With these thoughts and concerns in mind, I support the MPA's support for "B" and funding the efforts outlined in this proposition at the same level "A" and "C" are designed to receive. Thank you.

**Correspondence:** As a former resident of Missouri, the Ozark National Scenic Riverways is a national treasure that deserves to be enhanced and maintained for future generations to enjoy. While all should have access to this resource, it is imperative to maintain and improve the environmental quality that makes it attractive and valuable. My interest and that of my family when we visit Missouri is to see the natural wildlife and flora that can only flourish if the habitat is protected. Thus we support Alternative A as the preferred management plan for this area, although we would be willing to accept Alternative B as a reasonable compromise. Alternative C is not acceptable, nor is any attempts by local interests to allow unlimited access by environmentally destructive practices. It is critical to protect the shoreline of the riverway from erosion and to give this area a chance to be protected for many years to come.

**Correspondence:** I'm very disappointed to here what you are trying to do with our trails along the Current River. I remember about 14 years ago riding with my 2 year old granddaughter in front of me in the saddle. The things she said to me like grandma I didn't know horses could walk on water. She would touch the leaves as we where riding and she'd tell me what she felt. Some of the best times of my life and my granddaughters. I remember picking berry with her and one of the other granddaughter. These where good memory for them and me. I would like this to be there for there children also. This is clean and educational times for these children, it help them learn about nature and wild life. I've always taught them that what we go out with on the trails comes back with us, we never throw anything on the ground. Even candy wrappers. Please thing of what you are doing to our children and us trail riders. We trully enjoy the trails.

I believe you are missing out on a good opportunity at Cedar Grove you have a well there for water now. The state on Kansas has camping for horses there and have charges for this, which brings money into there state to help with maintence on there trails and there parks. I thing you need to check this out.

**Correspondence:** I am very concerned about the issue of permits for trail riding mentioned in the general management plan. As a current CUA holder, the plan does make it clear whether our guests will be required to buy a permit in addition to the permit we are required to have. I feel that this would be charging our guests double and that it would be unfair to both them and our business.

In regard to the trail closures, I understand the need to close trails that are in need of maintenance due to erosion or other issues. However, the plan is very broad which is very concerning since we are given a different superintendent

about every year and a half. This leaves a lot of space for changes depending on the current superintendent and gives very little hope of any consistency in decision making. I would like to encourage the park to seriously consider making additions to the trail system to offset any closures they may make.

Although the suggested zoning for motor boats will not impact our business directly, it will have a personal impact. I feel that the limits and zones proposed in the plan are already enforced by the river itself. The water level in the river takes care of most of the zoning proposed. The zoning would limit some areas that are traditionally used during gigging season. Motor boats are rarely in these areas due to low water levels, which seems to make the regulation unneeded. I would like the zoning areas to be reviewed and possibly revised to allow the local people to continue gigging as has been done for 100 years.

Thank you very much for your time. I appreciate the opportunity to express my views.

**Correspondence:** In regards to TABLE 4. MOTORBOAT HORSEPOWER (HP) LIMITS BY ALTERNATIVE, most individuals that live just South of the Southern most Scenic River Way Border, currently own and operate motors larger than 60/40. I typically launch my boat at the end of Junction E in Carter County or at Bay Nothing in Ripley County. My Wife, Father-in-law, and myself, do most of our fishing North up the river toward Big Springs. Downsizing motor limits would prevent many Residents from having the opportunity to enjoy the Scenic River Ways without causing financial strains on buying new boats and outboards and selling current boats and outboards. Although we have a larger motor, we primarily fish and provide relatives with site seeing tours up the river. Horsepower limits between these points will cause more hardship than good for county residents and businesses.

I request not to have a Horsepower limit from Big Springs down to the Southern Border and that the vote goes for the No-action Alternative.

Much appreciation for your time,

Michael Cambron

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** Since 1970 I have been a canoeist and have enjoyed the beauty of many rivers, especially, the Current River. Times and people have changed, but I fear for the worst for our rivers if we do not take a stand on the proposed General Management Plan

I have noticed the gravel bars are becoming more crowded and people are camping closer to the river as they can get to the gravel bars with 4 wheel drive vehicles. I am especially disturbed by the horses that are allowed in the river and so close to it. The power boats are also a disruption in my search for quiet nature. They do not seem to slow down or be concerned with others in sharing the river.

So much over use and we will not have a scenic waterway.

I am asking you to support Plan A as this seems to protect and preserve the river in a state that more resembles wild and scenic.

Thank you for your consideration.

**Correspondence:** We have been enjoying the scenic river ways of current river and white river for many many years. We have pulled campers and rented cabins at both locations and have enjoyed with our family the peace and tranquility and the natural beauty of the areas around the rivers. We currently own property on both river ways and have been dishearten to hear of the termoil the federal government has brought to these areas. In my opinion the federal government should leave matters to the state government. Tourism in these areas are very important to the survival of the communities that surround the river ways. We are middle class people and use these locations as our vacation spots and hope we can continue to enjoy with our family and friends these areas that are close to home.

**Correspondence:** I would like to voice my support for management plan alternative B. I would like to see an increase in designated wilderness areas within the park boundaries. I would also like to see a reduction of motorized traffic within park boundaries, both terrestrial and on the waterways. I am also concerned about the effects of the increased equestrian use and suggest that a permit system be used to set limits.

The lack of sanitary facilities is contributing to water quality degradation by canoeists. I would like to see canoe outfitters be required to supply temporary, seasonal, portable outhouses at put-ins and take-outs and improved signage for existing facilities. The addition of educational postings to inform river users of the importance of proper sanitation methods would be helpful. I support closure of illegal roads and barring vehicle access to gravel bars to limit destruction of fragile river ecosystems.

I supported the National Park Service when it was establishing the Ozark National Scenic Riverway and think they have done an excellent job managing the riverways over the past 20 years. I believe that the National Park Service's suggested alternative B, developed by professional wildlife managers is the best choice.

**Correspondence:** It is very, very important that we have plenty of designated horseback riding trails in our beautiful State. My husband and I have spent many, many hours over the last 25 years riding horses. We got our two children involved in riding and now have our grandchildren riding and camping with us. There is no better way to teach our children the importance of being responsible for the animal you are riding and the land upon which you are riding that horse. EACH AND EVERY TIME we ride we pick up trash and clip the trails. The kids know this and still love the idea of riding along the trails, verses riding dirt roads, etc. God has created so much beauty for us to see. It's important that we experience all of God's creation and not so much man-made things. Please, consider all of the above, I beg you.

**Correspondence Type:** Web Form

**Correspondence:** I have been struggling with how to express my views about the proposed ONSR General Management Plan because I have friends who have strong opinions on both sides of the issue. I think that both sides have more in common than they realize: we all want to enjoy the natural beauty that makes up the Current and Jacks Fork Rivers. These rivers are very special, and they deserve to be protected: we don't want to "love" them to death. Both sides need to find a middle ground where they can meet. While the local users certainly have rights to enjoy "their" river, it is ALSO a national treasure and a national park, and belongs to all.

In general, I support the Park preferred alternative B plan, but with some adjustment. I understand why many local folks object to it. No one wants to see their favorite access to the river closed down, but the reality is that we don't need access roads to every gravel bar along every mile of the river. There should be some gravel bars in any given

stretch that are accessible only by boat, as well as some gravel bars that are accessible for vehicle camping. I do not believe that folks should be able to drive ATV's to any gravel bar they wish, nor do I want to see ATV's in the river.

Alternative B closes a portion of both rivers to motorized boats. While I agree that it would be nice to have a section reserved for a quieter experience, I see no reason to restrict those motorized boats in the winter months, when many locals like to use their motorboats for gigging fish. I don't think there are many folks canoeing or kayaking from November to mid March, and I see no reason to keep motorboats out during those winter months. I have kayaked the popular Two Rivers to Powder Mill section in November, January and in February, and each time I have seen very few boats of any type.

Many folks who come from the city to enjoy the riverways are looking for a quiet escape from urban and suburban life. Those of us who are lucky enough to live in Shannon County are blessed to be able to experience this quiet natural beauty on a daily basis, and we should understand that others deserve the chance to experience it even if only briefly. When they come to the riverways to experience this, the jet boat that zooms up and down the river destroys the quiet they are seeking.

Some visitors to our riverways are not seeking quiet, but instead are seeking a party atmosphere: they want to drink and/or do drugs and listen to loud music as they float in a tube or a canoe. As they get drunker, they get louder, and may yell obscenities. Neither the local users nor the visitors seeking quiet natural beauty benefit from such behavior. There are party-type rivers in private ownership, and I would suggest that party goers should go to those rivers for their recreation. That sort of behavior doesn't belong in our national park. Our rangers need to enforce current regulations against this behavior. I also support the proposed change from a restriction on the number of canoes in any given stretch to a restriction on the number of ALL vessels (tubes, canoes, kayaks, motorboats, etc). Congestion on the river is unsafe, takes away from the quality river experience, and threatens the natural resource.

I've heard locals express their concern that the Park Service is only asking for comments because it is required as part of the planning process. They believe that NPS will do what it wants to do, regardless of what the comments might say. There certainly is precedence for this belief: the use of eminent domain to obtain the land for the park eroded much of the trust of local people. I would suggest that NPS would be well served to establish a working group that includes key players within each of the major constituent groups. The group should be small (for most effective operation), but should include people with differing viewpoints who are willing to roll up their sleeves and work together to achieve a plan that will be as fair as it can be to all the constituents while still protecting the resource. Such a group would go a long way toward constituent "buy-in" and ownership of the resulting plan. For example, if trail riders are involved in deciding which horse trails are damaging to the resource (and should thus be closed or improved), they will be more likely to understand and abide by these decisions.

One concern is that NPS funding has been uncertain of late. Although it sounds good to close down undesignated horse trails and build well designed horse trails instead, where will the funds to construct these new trails come from? I would propose that NPS wait to close down all but the worst of the undesignated trails until they have funding in place to construct replacement trails. When it IS time to build or improve trails, it would be best to work closely both with trail riders themselves as well as ecologists dedicated to protecting the resource. A successful trail will be one that riders can safely enjoy, yet does minimal damage to the resource. Trail riding is a large economic driver for the area. We need to find the best compromise to both encourage tourism while also working to protect the fragile river resource. Canoeists and kayakers also contribute greatly to the economy of the region, but too many of them can also cause problems for the resource.

In closing, I'd like to make a plea for us all to think about what we all have in common, rather than falling in to an "us against them" stance. We all love these rivers, and we ALL own them, from local residents to St. Louis or Kansas City residents to someone in Wyoming who might come to visit for a week. The rivers need to be managed in such a way that we can all enjoy them without endangering the special resource that we all love so much.

<b>Correspondence ID:</b>	2043	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,04,2014 20:04:44				
<b>Correspondence Type:</b>	Web Form				

**Correspondence:** I am an equestrian user (trail rider) that rides horses and loves the ONSR. I also float, hike, and sight see with my family. I have been riding horses along the Jacks Fork and Current Rivers since 1976. I am a

conservationist and am interested in preserving the history of the area and the quality of the water in the rivers and streams. I offer this introduction to inform the reader that this is not a one-sided comment to the draft plan.

The Options A, B, and C are a nice gesture. Given the size of the national park and the many different users of the area, it is hard to have a one size, fits all aproach.

My initial comment is that, as a trail rider, there should be many trails designated for equestrian use in the National Park. Having just a handful of linear trails will concentrate equestrians and foster frustration that leads to those few users that will "create their own" trails, which is a current problem in the ONSR (and many other areas), not endorsed by most trailriders, and is part of a big problem. The same issue does exist with the hiking and mountain biking community, but is an acknowledged problem with a few trailriders that tends to give the whole a bad appearance. Having many equestrian designated trails and looping trails will help this problem. Also, having multiple accesses to stream and river crossings will prevent those aforementioned "do it yourselfer trailblazers" from making their own way to water. Horses and pack stock need water, and a lot of it, especially in the spring and summer months. It is not recreational, it is a necessity. Again, only having one river/stream access every 5 miles is going to cause problems because we are watering animals, not looking for a recreational swimming hole.

Finally, the Show Me Missouri Backcountry Horsemen can be a really useful asset for the NPS to draw advice from for equestrian user trails and information. They not a local saddle club... they are a trail ethics group and knowledgable for issues that are unforeseen by nontrailriders. A nationwide organization recognized by the Forest Service, BLM, NPS, MDNR, and MDC, the SMMBCH organization stands for quality trails for all users, not only equestrians.

In conclusion, individual items from Options A, B, and C are great. Please consider many trails designated for equestrian use with numerous access sites to fresh water. Trailhead access capable of multiple vehicles and trailers, and looping trails to prevent a few users who don't abide by most laws from making their own trails.

Thank you for your time concerning this sensative issue.

**Correspondence:** Sirs:

It is important that we have multiple trails with several trailheads to enable several horseback riders on the trails without causing erosion and not be riding on top of each other. Also it is important that the trails have access to water as the horses will need to have water available for drinking. These trails should allow the riding to have multiple options verses the one way in, turn around and ride the same way back out. As a park service owned by the public the trails should be available for public use.

Thank you for your consideration.

**Received:** Feb,04,2014 20:12:52  
**Correspondence Type:** Web Form  
**Correspondence:** 1. The information gathering 3-4 years ago was flawed from the beginning. At the meeting in Salem, the rangers from the ONSR were not availabe for discussion regarding the information to be discussed and provided for input into the management plan alternatives. The NPS had rangers from other districts in attendance.

Those rangers knew very little about the ONSR.

2. The perceptions need to be based on facts, not perceptions. If there is an excess of access points, then the present ones need to be identified, marked and reviewed for closure with the notations where and how the remaining access points will be maintained.

3. The alternatives note that "historical significance" of the area is to be a part of the plan. How does NPS expect to provide this when NPS already pulled those services from regular programs offered by NPS? Will Congress suddenly fund programs specifically because they are in the management plan?

4. ONSR tends to get a superintendent who is scheduled to retire in a year or two from the time of his/her appointment. Would be nice to have a Superintenden for 6-7 years who is looking forward to a long career as a Ranger rather than looking forward to retirement.

5. If District offices are going to dictate what happens in ONSR, then those persons should be made to visit more frequently so they get a full understanding of the ONSR activity.

6. The ONSR was created as a recreational park, not a natural or historic park. With that in mind, the park needs to be managed as such.

**Correspondence:** I have several questions and would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.

"Alternative B" is the plan recommended by the National Park Service. Can you tell me why we will need 26 new full-time park rangers and a \$6.7 million, one-time cost, new facility to house the additional park rangers? If we are closing all the river access points and closing all the roads and trails, why do we need more park rangers? Are they needed to enforce all the new regulations on us local folks? On second thought, maybe the National Park Service underestimated the size of the new facility they will need.

For generations, the folks in this area have been good stewards of these rivers and we have taken good care of them. These rivers were originally given to the federal government to create the Ozark National Scenic Riverways, so that everyone would have access to the rivers. I would like to see the Ozark National Scenic Riverways be returned to the Missouri Department of Conservation and our Missouri Department of Natural Resources. Our Missouri State Park Division is in a much better position to maintain and operate the Scenic Riverways as they were intended. They are in a much better position to consider the needs of the local people.

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan and work to bring our rivers back under state control.

Thank you

**Correspondence:** The most desirable aspect of Alternative A, is the limitation of motorized boats on the riverways.

While I appreciate the limits put on horsepower, the advent of jet-drive propulsion permits boats to travel in shallow waters previously off limits to prop driven boats. Further, once in these shallower waters, the captain of jet-propelled vessels must maintain a high rate of speed to reduce the draft of the boat and thus keep it from being grounded on the gravel bar. This situation happened to me as a 16 foot boat raced by me within 4 feet of my Kayak. He was not about to ground his boat. I couldn't paddle out of the way fast enough.

Jet propelled boats and slower moving tubes, rafts, kayaks and swimmers do not belong in the same area especially during peak season.

For this reason I support Alternative A.

Thanks,  
Bob

**Correspondence:** I support the plan preferred by the NPS. I am a native of Shannon County and a current property owner in Dent County about 5 miles from the National Scenic Riverways. The Current River requires greater NPS involvement and support. The number of summer tourists floating the river on Saturdays makes floating very unpleasant for locals like my family. In addition, many horseback riders cross the river causing lots of horse manure to pollute the river. Better planning and horseback trails which do not involve crossing the river would be

great! I often pass "Flying W" when canoes are stopped there to swim in great numbers. There are often horseback riders there as well. I am very glad when I see a NPS officer there. It seems like a high risk situation for fights when so many swimmers who have often consumed too much alcohol see horses pooping in their swimming hole. I appreciate the NPS protecting this river which I have loved my entire life. I applaud the NPS efforts to improve their control over the National Scenic Riverways and preserve this wonderful area for generations to come.

**Correspondence:** Alternative B (NPS Preferred) seems to be (from trying to analyze the exhausting data provided) the choice we most likely could see some benefit from as we spend many hours and thousands of dollars to come enjoy and volunteer to help preserve the beauty of the Ozark National Riverways Areas on horseback. I grew up camping and floating the riverways and it was on one of our family float-trips I discovered a horse camp and soon I was hauling horses to the area also. After I married; my husband (we met on a trail ride in the ONSR) we have brought our children and grandchildren to the ONSR on numerous combination volunteer trail maintenance/vacations. We have spent over 20 years riding in this area and have been members of Show-Me-Missouri Back Country Horsemen members since its formation. I have read and not understood the comments some have posted on wanting to keep horses from crossing the river. If horses are prohibited from crossing and drinking and cooling themselves at the river's edge I promise you a HUGE economic impact will result from that decision as the river is the draw for horsemen as ourselves. We might as well go ride in Arizona if the riverways are made into a desert and the refreshing waters of the ONSR are inaccessible from horseback. It has been our observation from many hours spent collecting trash on the trails from horseback that we find the trash is predominately on the trails that are accessible by motorized vehicles. We do find some on the river's edge also which we assume most is deposited there accidentally from canoes that have capsized and the contents of the canoe were washed downriver and lost. Rarely we do find large amounts left intentionally and what we do find we attribute to the open container laws and underage drinking. One more thing I would like to add is horses are used for people who would otherwise be unable to enjoy the beauty of the riverways by a physical handicap. I myself am limited physically by an artificial joint replacement and if it was not for my horse would no longer be able to enjoy the beauty of God's creation by my own power. As I have been very physically active in outdoor activities all of my life the ability to ride my horse and still enjoy the trails and riverways is very important to my health mentally and keeps me actively engaged in enjoying outdoor recreational activities. Thank you in advance for your time and I hope my comments help to preserve, protect, and advance opportunities for all to enjoy the Ozark National Scenic Riverways. Sincerely and with much thought, Anna Patton

**Received:** Feb,04,2014 20:49:22  
**Correspondence Type:** Web Form  
**Correspondence:** No Change. I feel this for the following 4 reasons:

1. When I started to hear about the proposed management plans, my number one concern was that hunting, trapping and fishing would continue as it has for decades on the current and Jack's Fork rivers. Those sports are shown as continuing in table 5, page 49, of the summary of key excerpts, but the plan also talks about plans to close roads and prevent motor boats on the river. If roads are closed and motor boat restrictions are put in place, this will deny access of the public and take away something that many people have used for decades and generations. Closures will interfere with those individuals' rights to hunt, trap and fish.

2. The language of the plan is very ambiguous and vague. As an example, when talking about the road closures, NPS know how many miles of roads they plan to close, but will not say which roads are targeted to be closed. This vague language makes me suspicious that a hidden agenda is being covered up. Vague language is a way special interest groups can deceive their true agenda. Closing roads would tend to effect the local people probably more than those who drive 150 miles to rent a canoe for a float trip. By closing certain roads, I fear that river access may only be through NPS fee based entrances.

3. I attended the Jan 23 meeting at Powder Valley. At one of the stops there was a discussion about Pothole Rd. An individual mentioned how he had used it for many years and now there were all kinds of vehicles on that road and new trails by ATV's at many locations along the road. Those are the illegal roads I suppose mentioned by NPS they

want to close. I think this person was in favor of alternative B.

The other side of the discussion stemmed from the fact that Pothole Rd had been maintained by NPS for many years. Several years ago, NPS stopped maintaining it and even rejected the local county's offer to maintain it. Had NPS maintained that road, and probably others like it, there would have been no need to look for other routes to the river. Above all, had that road been maintained, then NPS should have enforced the off road activity. Lack of enforcement of destructive ATV use on sand bars, or excessive use on unmaintained roads, does not warrant a whole new plan, but should require the NPS to enforce the existing laws.

I hear people complain about the boats on the river and how they often interfere with floaters. How the boat is operated has nothing to do with the size of the motor, but has everything to do with the operator at the controls. If a boat is going too fast and conflicting with floaters that operator needs to be ticketed. In the same light, if a lot of floaters are blocking the river, such that a motor boat cannot pass, they should be told to disperse so the boat can pass.

4. Demographics: As I listened to the comments on Jan 23 in Kirkwood, there were distinct opposites of opinion. I was surprized how many people attended from the area around the Current and Jack Fork rivers and the counties around them. I think everyone who identified themselves as being from that area, including elected officials, recommended "no change." I think all but two speakers that said they were from St Louis, or the suburbs, were in favor of the alternative A or B.

As I drove home, it became obvious that the NPS plan has separated the locals wanting no change and the urban people in favor of an alternative. My concern is that it appears to be a local vs. urban issue. I use these numbers strictly as an example; if 500 local people send in no change comments and 1000 urban people comment in favor of alternative B, the 500 are a lot larger percent of the local population and the 1000 are a lot smaller percent of the urban population. I hope the NPS realizes this and takes this into consideration. If the NPS said we had more support for alternative B and that is what we will go with, even though it is a smaller percent of the population that would not be fair or right to the local people.

#### Summary:

I think the "No change" alternative should be adopted and the NPS plan put on hold. I beleive a good plan is one that has more concensus from all sides than I currently see in any of the proposed alternatives. I think both sides agree with the enabling legislation of recreation, conservation and preservation. I would like to see the NPS develop an educational program that addresses these three areas and how they interact. Education should also focus on which practices are - and are not - allowed; eg: ATV use areas, river etiquette, motorized limits, appropriate trail usage, leave no trace principles, etc. Follow education with stronger enforcement and further legislation should not be necessary.

**Correspondence:** We need prop.D for no changes...When there's an accident on the river, who saves them {boaters} who takes the tourist to the closest access point {LOCALS} in there 40/60 boats.. If the park rangers, or conservation agents are on the rivers, they are {hiding in the bushes} trying to get pictures of tourist using the facilities. There are old grave yard all up and down these rivers, we need to keep these open for public access. What about handicap parking for elderly and wheel chairs. What about discovery ministries, why can't they place canoes on the weekends on the rivers? They pay Fed Taxes too. They only have 12 canoes. DISCRIMINATION IS WHAT WE CALL IT. What about Baptisms in the river, who do we have to call on GOD above? Now they say the park quit reading the upper Jacks Fork River for flood control? Is this true? Because of the cost of an upper river flood control reader, hire a high school person! Where did the 1969 park bylaws go? Maybe we need to bring those back out in the new General Management Plan, this new one sucks.. This G M P plan has no place in Shannon, Dent, Carter. We choose a new state park, or D N R Park.. These are just setup to kill out our little towns. Why don't you count the amount of tubes floating the lower current river.. How many times a day do they rent those tubes every Saturday? What happened to the high school work programs, they fixed spring branches, hiking trails, cut grass, paint, stain bridges.

**Correspondence:** As a Missouri resident and longtime floater on the Ozark Scenic Waterways I urge the department to protect this precious jewel with the most conservative management system possible. After reviewing the options, I most certainly endorse Option A as the most desirable option in keeping the rivers and surrounding area pristine and natural for generations to come. However, I also understand that folks in the local areas rely on the income from tourism to make a living. Therefore, I would also accept option B as a compromise to allow for more staff to supervise the land use and manage this beautiful resource for generations to come. I urge the department to drop option C, which, on the face of it, would have disastrous and irreversible consequences for the rivers we so love, and are protecting for our children's children.

**Correspondence:** I was just 5 years old on my first trip to the Current River. That would have been in 1963! I remember it well because I got in trouble. My parents let me go down to the river on my own while they finished getting my brothers ready for a swim, but I had to promise not to get in the water until they got there. I remember they had just told me what the word "current" meant, and I was curious to see what they were talking about. I barely stuck my toe in the river, and wouldn't you know, I lost my flip flop to the current in a flash. I was busted, and I knew it.

I have had the pleasure to camp along side and float the Current River and the Jack's Fork on several occasions over the intervening fifty years. I have lived in Missouri my entire life, and I love to spend time in this part of our state. I am sad to say I have seen many abuses that come with popularity of these two streams. I think the new policy restricting alcohol on the river was a great move, and seems to be helping.

The work of the National Park Service to study the issues of overuse and abuse, and to develop alternate

management plans is admirable, and it is essential to protect these jewels for future generations. I appreciate the opportunity to make comment on the various plans.

The agency's preferred plan, Alternate B, would certainly lead to an improvement in several areas, and I see it is an attempt to balance some of the competing interests that must be considered. However, in my opinion, Alternate A is more likely to truly save a threaten wilderness.

Thanks again for the work that you do, and thanks for considering my view.

Sincerely,  
Mark Zacher

<b>Correspondence ID:</b>	2061	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,05,2014 00:00:00				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Dear Superintendent Black:				

The Ozark National Scenic Riverway was created by Congress for: "...preservation ofâ€the Current River and Jacks Fork Riverâ€its free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Sincerely,

E M Knight

**Correspondence:** I do not favor futhur regulations and restrictions on the watershed surrounding the Riverway. Those people who live there are already burdened with the demands of actually living in remote areas, and desire only to be left alone to care for their property as they see fit. Our mountians are a DYNAMIC environment with abundant rain, low population, temperate climate, native forrests,and a karst topography that filters water resources.

The last thing our environment needs is more Federal regulations which may be based on real science or just politically inspired pseudo-environmentalism.

My input is for the Park Service to do nothing for now, and take no action to restrict land owners from developing their property as they see fit ot to place more restrictions on occasional users that serve no real purpose.

Sincerely,

William Albert Pierce, Eldridge, MO

**Correspondence:** I am writing to voice my support for management plan alternative B. I support a reduction of motorized traffic within park boundaries, both motor vehicles and motor boats. There is a lot of illegal access to the river and I personally have been subjected to harassment from ATV riders driving through my campsite at high speeds deliberately antagonizing campers and canoers. I have watched trucks and ATVs drive through the river on illegal cut throughs with no concern for destruction of the river, banks or gravel bars. I have canoed alongside very responsible, respectful motorboaters as well as others traveling at unsafe high speeds with no regard for other boaters or swimmers.

Me, my family and friends have canoed, camped and hiked on the Jack's Fork and Current Rivers for generations. We support the canoe liveries, restaurants and other local businesses. We have owned property in the Salem area and paid taxes for decades.

Missouri is blessed with these pristine, natural gems, the Jacks and the Current are world class rivers. This is a source of pride and income for citizens of Missouri, it should be protected and treasured not exploited and destroyed by ignorant, uncaring citizens who put personal pleasure over a future of continued beauty and wildlife.

I support plan B because it is apparent that increased regulation is required to care for our natural resources in a way that benefits everyone.

**Correspondence:** I recommend that the NPS adopt Alternative A. This alternative does the most to protect this unique resource. I camp and canoe on rivers with a few friends, and we seek out the places and times where fewer people go. We enjoy a quiet experience with clear water, wildlife, and peace. I think the National Scenic Riverways areas should be preserved as untrammelled wilderness space to the highest degree possible. There are other locations where people can ride horses or take their motorized vehicles. Horses and motors and excessive trails are just too destructive for sensitive riparian environments like this. These heavy uses harm what these people are there to see.

Alternative B seems like a second best choice. But I think Alternative B would still have negative impacts on this beautiful, rare place because of horses and trails and heavier impacts than Alternative A.

Alternative C is unacceptable. It would lead to the deterioration of the environmental qualities that make the scenic river environment attractive, beautiful, and unique.

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of...the Current River and Jacks Fork Riverâ€s free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

As an Illinois resident who has enjoyed many many hours floating on Missouri rivers, I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors such as myself for generations to come.

Sincerely,  
Cindy McMullan

**Correspondence:** I am the President of the Ozark Trail Association. I support Alternative B to be carried forward under the General Management Plan. I support the restriction of horsepower limits on some parts of the river; I support the addition of hiking trail access and the removal of 10 miles of primitive road; and I support the consideration of mountain bike use on designated trails. I also support the reduction of access to gravel bars for vehicles. And I support more learning opportunities in the Riverways, for both natural and cultural resource interpretation.

I feel that it is important to showcase the Riverways by enhancing existing trails and developing new ones to give people an opportunity to explore and experience the Riverways up close. With an expanded trail network, it leaves open the opportunity for hike/float trips along these rivers; that is, one can park a car at a trailhead, hike upstream along a trail to a canoe outfitter and then float back to their car at the trailhead.

I feel it is very important for the Park Service to continue to foster relationships with volunteer organizations such as the Ozark Trail Association. These types of public-private partnerships are going to be necessary to keep these natural areas open accessible and enjoyable for all.

I do not support doing nothing at all. The Riverways is in need of attention and support and patrolling. Doing nothing at all would not be an appropriate course of action for the future of the Riverways. Alternative A seems too restrictive to me and Alternative C seems too heavy. The preferred alternative, B, seems to me to be the best fit.

**Correspondence:** I like Plan B. I trust the NPS to manage the rivers and streams in a way that protects them while granting access to all. We must remember that property rights should be protected, but is not the most important thing to be considered. The waters themselves must be maintained for future generations use. This is the most important. Controlling runoff and uses which harm the channels has to be managed to keep the waters safe,

clean and habitable for wildlife and people.

**Correspondence:** SAMPLE COMMENTS

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

<b>Correspondence:</b>					

I have lived in the Eminence area my whole life and I have deep roots as my fathers family was some of the first settlers to the area. My fathers family moved to the area because of the beauty of the area as well as the many freedoms the area offered. They where farmers, carpenters, teachers, mechanics and business owners. They where community leaders who donated land for schools, churches and cemeteries. They where conservationist and took great pride in conservation practices on their farms. In 1971 their was legislation signed to protect my heritage, the natural beauty of the riverways as well as preserving those freedoms my ancestors choice such as hunting, fishing, camping, trapping, motor boating and etc. I chose to live in the area for those same reasons and was promised by the enabling legislation to protect the beauty of the area as well as my heritage. As a child I grew up on Mahan's Creek and Jacks Fork River, in the summer months I enjoyed swimming, horseback riding and caving on a daily basis. As a child our family had picnics at Alley frequently and we had family that would come for visits and camp at Alley Springs right by the spring branch for months at a time. We had a wooden john boat that my father had built and we would go on camping during the summer months. My family also enjoyed hunting trips. My husband and I enjoyed these same things as we raised our family and our children have raised their families enjoying the same activities. Now that my husband and I are older we no longer go camping, fishing or motor boat riding. We enjoy back roading in our four wheel drive truck. We often go on a daily basis on road trips to visit old home places, cemeteries, favorite camping spots, springs, caves, river roads, to see the wild horses, to see wildlife, the fall foliage, the winter snows and the many wonders of the area. I am also one of many photographers who enjoy taking photos of the area. Please keep all roads and trails open as the enabling legislation was intended to do.

**Correspondence:** I have been enjoying the recreational uses of the Jacks Fork and Current Rivers for over 30 years. I camp, fish, ride horses and canoe. This is very important to me not only for my personal enjoyment but I've been taking my children with me for over 25 years and now my grandchildren. Both my grandchildren have been coming since they were under 4 months old. We have all learned much about nature, the culture of the area it has also helped with family bonding. I have floated the river, camped, and ridden horses on trails with my children and grandchildren for years. They have learned much to respect nature and we have all grown as a family because of this. My late husband loved the area so much he came back for his last trip there and even died, as he wished, in the area. We all went to bluegrass festivals and many local craft shows. We have made close friends with local people, most of whom welcome outsiders with open arms

It would be a shame if this were to change. It is very important to keep these areas open for people and their families to enjoy as they always have. I know so many people that count the days from one year to the next until they can come back. I happen to live in a rural area but there are so many people that visit this area that have no access to nature and it's very important that they continue to be able to get away to an area they can rest, relax, and renew their spirit.

As for taking care of the natural resources I'm sure there is a very small portion of the population that doesn't respect the natural resources but do not think there are enough people abusing the area for it to unnecessarily restrict the recreational areas. On this note I think the ONSR would be better served by the state, which has a better record of keeping up their areas, than the federal government which does not have its finger on the pulse of the community. Why would you want to restrict so much enjoyment? It's there for all of us to enjoy not just for the chosen few and the chosen places. I think the GMP is overstepping boundaries by trying to regulate policy and visitor standards, as well as limiting future decisions by local government and people. By doing this you are adversely disturbing their livelihoods and indeed their future. Please turn the ONSR over to the state and leave it alone for the public's future use and pleasure.

**Correspondence:** Thank you for caring about the Ozark National Scenic Riverways. However, you have some mistakes in your information. The first National River was and is the Buffalo River in Arkansas. Its pristine beauty

is now being threatened by the establishment of a corporate hog farm near a creek that flows into the river. This travesty is being fought here in Arkansas but seems to be unheard of in other places. It seems the EPA quietly approved the establishment of the hog farm without public notice for comment.

**Correspondence:** Dear National Parks Servic:  
Thank you for putting together a well done and thoughtful analysis of the Ozark National Scenic Riverways Draft General Management Plan and Wilderness Study. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.  
However, I recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:  
1) Closes illegal roads and restores natural conditions to 50 miles of these roads;  
2) Closes 65 miles of undesigned horse trails and adds no new stream crossings; and  
3) Bars vehicle access to gravel bars.

Also, I strongly request that you advocate for wilderness status designation for Big Spring.

My family and I have enjoyed many summers of recreational activity such as hiking, floats and camping along the Current and Jacks Fork Rivers and other areas of the Ozark Scenic Riverways-we cherish this natural resource and would like to see it preserved and strengthened for generations to come.

thank you for your time and consideration,  
Renee Duenow  
St. Louis, Missouri

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

Sincerely,  
Brian T. Skubic

p.s. I am a young man who travels to this wonderful Riverway park as often as I can. I want it to be pristine and beautiful for not only for my kids, but for my grandkids and their children as well. I am for horseback riding on designated trails that allow it. I would not support ATVing inside the park because of the way ATV damage the land. The sound unnecessary boat motors is an unwelcoming sound that echos through the river valleys. When I go to a national park I want there to be a peaceful experience. I hope you will consider what I have just written and help this preserve this park.

**Correspondence:** I am in support of the NO ACTION PLAN for several reasons. The first being the promise

made to us in the beginning that it we could use it as always. The second is the major negative economic impact closing some of the trails and roads would cause in this area. I also believe that there is safety issues in closing roads and trails. I attended 3 meetings and actually could not get any information from anyone on what roads and trails would be closed or where new trails would be. It all seemed so vague so how can anyone make a choice other than NO ACTION PLAN. People coming to our area spend alot of money just getting here and also while they are here. Closing horse trails will be very bad for the horse camps located in the area and to the towns located nearby. I ride several places each year and find the areas with designated trails are usally in bad repair, far worse than some in the riverway. I do not think that the park service has the funds or manpower to maintain the trails. The park service has not been able to keep trash picked up even on the river as several groups are doing it all year long. I think the horse people add a lot to the river way as several children get to pet or sit on a horse for the first time. Most people like seeing the horses and visit with us. I am 65 years old and ride anytime I can and have never seen or heard about a lot of conflicts. We live in a world that some people complain about everything do not let them ruin it for all of the rest of us, horseback riders, canoe people, motor boat people, and atv people that are respectful of this great area that is beatiful.

**Correspondence:** First of all - as a life-long Missourian and as someone who has enjoyed all aspects of our natural resources - THANK YOU! Thank you for continued interests and involvement in the preservation and protection of the Ozark National Scenic Riverways. It's my belief that these watersheds rank with the greatest of parks in your charge and are a true national treasure. It's my hope that your renewed efforts take every effort to protect, preserve and restore these fragile and irreplaceable environments - putting long-term viability over short-term gain or recreational convenience.

It's my understanding that the organizations that I support are supporter of your Plan B. With the following additions. Thank you for your time and efforts.

More hiking trails (each alternative offers 15 miles or fewer)

No horse campgrounds in the Riverways (25 sites are proposed for Alternatives B and C). We do not agree that the ONSR needs a designated horse camp in the park, preferring that this opportunity be developed by the private sector, on private land in proximity to the park. Instead of a new development of this magnitude, we ask that NPS work with existing local businesses to provide a concession horse camping operation outside the park that would have less impact on park resources within the narrow river corridor.

Minimal restrictions on motorized boats. We oppose year-round prohibitions on boats in certain stretches of the Riverways because such restrictions would eliminate opportunities for area residents to enjoy the Riverways. We think any restrictions on boats should be minimal and driven by evidence of a problem that only restrictions will solve. If better enforcement will solve the problem we prefer that to prohibitions.

Sensitive natural and cultural resource management that avoids new conversions of bottomland riparian forests to open fields, or artificial pasture for elk and other animals and focuses on restoration of upland meadows, woodlands, and glades with native vegetation.

The restoration of impaired riverbanks that avoids developed facilities along the rivers, which are screened from view from the river in any case, and low impact. We suggest that heavily engineered solutions be avoided (e.g. Rock and weirs) and instead NPS talent and experience be employed to bring natural landscape design and sustainable structures appropriate to the site.

Prioritization of solutions for problem areas that focuses on low-impacts in riparian zones. For example, the area across from Welch Spring should be restored where heavily rutted unauthorized roads mar an undeveloped bank. Damaged areas should not serve as opportunity to add new 'hardened' development where it does not belong and instead should receive restoration.

Additional Thoughts

MCE urges the National Park Service to approach the designation of mountain bike trails with care for the vulnerabilities of the landscape so that erosion, impacts to biodiversity and water quality are minimized.

<b>Correspondence:</b>	I feel that if there are changes made to the Ozark National Scenic Riverways that our heritage here as locals will be damaged. I feel like we will no longer be able to visit old grave sites of our family that are				

along the banks of the current river because of the roads that will be closed. I won't be able to take my kids to the places where my grandparents grew up. The Ozark National Scenic Riverways has taken enough from my family in the past, I do not want them to take any more in the future. As locals, we love and cherish the rivers here and we want no more than for them to stay as they are and to be regulated the ways they are now. We have enough regulations. Please consider my thoughts.

- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I remember fondly the first time my parents took me to the CROSS COUNTRY TRAIL RIDE. At the time it was located in Alley Springs, Mo. It was 1979 and I was 11 years old. It was a long time ago, but, every year, sometimes 2 or 3 times a year, I am that little girl again...riding with my dad in the woods in Emmenince..up the mountains and back down...through the river and down the roads...butterflies fluttering by...my dad pointing out the wild horses. He always asks me if I remember riding this trail or if I know where I am. I have been riding those trails with him for 30 years and when I am not there with him, I am the trail head for my friends and my own children and grandchildren, but I always respond back to my dad that I am lost. He is almost 78 years old and a cowboy finding out things that he can't do anymore...but he can ride his horse and be a man, be my strong daddy on them trails down there. It is the only place where we both step back in time. And after my dad is gone, I want to be out there riding with my children and their children and feeling my dad's presense with us. Those trails are a part of my life, who I am. I am that little girl with my dad.

**Correspondence:** I would like to comment on the GMP and say that the water of the Current and Jacks Fork Rivers is beautiful. I have visited the area several times in the last several years and have always loved the kindness of the local boaters and campers. They take such care of their rivers. I have floated the Jacks Fork and Current, as well as boated the Current. I have yet to see the trash in which I have heard the environmentalists speak of. And when I have seen trash, it was being picked up by a local boater. The water is beautiful and no tests have proved any pollution. The water is as crystal clear as it was 100 years ago and it is well managed. Until this is not the case, I will disagree with the any new regulations to the Ozark National Scenic Riverways.

**Correspondence:** I am a resident of southeast Missouri; I live about 45 minutes away from the Big Spring area, and my family frequently visits the park to canoe, hike, picnic, etc. Before I dive into my arguments for my position, let me state my premise: I support management alternative B.

As you know, the National Park Service has two primary duties: to preserve natural and historic resources, and to allow for the responsible use and enjoyment of these resources. The National Park Service Organic Act of 1916 orders the NPS "to promote and regulate the use of the...national parks...which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." Alternative B will effectively balance ecological/preservation concerns with the need to allow citizens to visit and enjoy their national park. I am convinced that the current operations of ONSR are not sustainable. Alternative A would create an ecologically sustainable management system, but it would greatly reduce the ability of visitors to explore and enjoy their park. This would cause devastating harm to the local communities and economies that depend on the park. Alternative C would allow easy access but would cause further harm to the ecosystems, historical preservation, and natural resources of the park. If the National Park Services takes no action to protect our natural resources, these resources will not be available for the enjoyment of future generations. Our enjoyment of our national park lands has a serious impact on the ecosystems, waterways, and landscapes that make up these lands. If we want to preserve lands for the enjoyment of our children and grandchildren, then we need to make sure that we manage them in a wise, sustainable way.

I am very troubled by the political responses to the draft management plan. For several weeks, many local leaders and legislators have been talking about how the park belongs to the people of the communities that surround it, and so they should be the ones to decide how it is managed. This position is simply wrong. As a national park and a national resource, ONSR belongs to the people of the entire United States, not just to the people of southern Missouri. The NPS must consider how changes in management will affect the local communities that surround the park, but it must also represent and act in the best interests of the entire nation. It is in the national interest to have parks that are clean, sustainable, and beautiful. They are part of our national heritage.

Recently, both Missouri Lieutenant Governor Peter Kinder and state Senator Doug Libla have written op/ed pieces calling for ONSR to be transferred from federal to state control. If such a move were to occur, I assume that the Missouri Department of Natural Resources would take control of the property as a state park. I am strongly opposed to the idea of transferring control of the Riverways from the National Park Service to the Missouri state park system. Missouri does, of course, have one of the premier state park systems in the nation. I have visited state parks all over the country, and I have found none that are better preserved, more wisely managed, or more accessible than Missouri's however. However, one statement in one of the op/ed pieces forms the starting point for my argument against the transfer proposal. In a February 4 opinion article in Poplar Bluff's Daily American Republic newspaper,

Senator Doug Libla wrote, "Thousands of out-of-state as well as in-state hikers, campers, boaters, hunters, fishermen and horseback riders visit this area annually and bring many irreplaceable dollars when they come." The thousands of out-of-state visitors point to the main reason why the Riverways should remain a national park and not a state park. National parks belong to the entire country and not simply to citizens of one state, region, or municipality. The national park system is a source of pride for all Americans. As proud as I am of our Missouri state parks, national park status confers a national prestige that state park status does not. Senator Libla went on to say that "we need to be promoting this beautiful and wonderful resource, not restricting access to it!" Please understand that allowing the Riverways to remain in federal control is the best way to promote the park. State parks - with the possible exceptions of Niagara Falls State Park in New York and Custer State Park in South Dakota - do not have the same draw as national parks. National parks belong to all Americans, so all Americans have the opportunity and privilege of visiting them, promoting them, and preserving them.

I appreciate that the NPS is seeking and listening to citizen input in this process. I thank you for your time and consideration.

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you  
MHB

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I am 100% iavor of the NPS preferred plan and would actually rather see a more restrictive one. I am a 5th generation Carter County girl, whose family was one of the first to settle this area. We must protect this incredible place! The so called voice of the locals are not correct in saying we have protected this for generations on our own, and do not need the NPS. This is not true. Our earliest ancestors simply lived and farmed this area. They did not have 4x4 vehicles, jet boats, horses for entertainment, there were a handful of them, not millions. They were indeed gentle on the resources. Without the NPS to continue to protect, there will be nothing here to protect. At some point we all must realize how blessed we are to live in such a place and to realize it is a National Park that belongs to everyone!

Again, 100% iavor of the most restrictive plan the NPS has.

**Correspondence:** Heard about this via text message from a friend that I have canoed theses rivers and many other Ozark rivers with. I am in favor of The most restrictive Alternative A, knowing that the result will probably be closer to Alternative B. One sensitive issue I know would be contentious would be the local trails piece of A. I'm sure there are many locals that know and use these and that it is a bit of a local tradition, although illegal. It reminds me a little of the loss of traditional hunting permission happening in Kansas due to outsiders coming in and buying the land or offering rental money to landowners for exclusive rights. Of course the landowners can turn it down, but it is a case of negative outside influence impacting a traditional land use practice.

I am all for a more peaceful experience on the river with an emphasis on being in tune with the river and understanding the ecosystem. Too many individuals want to float the river and know nothing about it. They just want another 'party cove.' I was appalled to be on the North Fork of the White with co-workers from Great Britain and Spain as well as a Kansas City co-worker and his family with three small girls. I was appalled at the behavior of some floaters as well as the sheer numbers.

I am a 52 yr old male who grew up in St. Louis floating Ozark streams. I have taken my kids to the rivers as much as possible from my home in Kansas City and recently since I have moved across the state line to Kansas. Ozark

waterways are a true national gem and restricting the use is no problem for me. If I fail to plan ahead I may not find an outfitter when I want. The upside is the area stays in better shape for those who are able to spend time there.

I am appreciative for the opportunity to comment. Thank you.

**Correspondence:** I find Alternative A preferable to the others. It's important to preserve the natural character of the rivers in as unspoiled a state as possible lest we love the ONSR to death. I have floated the Current and Jacks Fork going back to 1973, and have seen the degradation caused by overuse and inappropriate activities.

Alternative A would eliminate vehicular access to gravel bars. This is extremely important in preventing disturbance of the water and sediment. Horses pollute the water with dangerous bacteria like E. coli, and A would do more than the other plans to restrict horse traffic in the streams, while still offering equestrian access to the park. Alternative A would close more miles of roads and add more hiking trails. Hiking is the kind of low-impact recreation that best fits these areas. Alternative A would also allow the least access to motorboats. While I understand that local people value this kind of recreation, I believe motorboats belong on lakes and big rivers, not on these Ozark streams.

**Received:** Feb,05,2014 12:35:35

**Correspondence Type:** Web Form

**Correspondence:** I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan.

Economic Impact: A very important point to consider by NPS in the planning process is the significant negative impact that Alternatives A, B and C will have on the local 6 county area. With tourism being the largest economic contributor in this area (especially Carter and Shannon counties), businesses will suffer and many jobs lost. This geographic area where ONSR is located is considered the most depressed economic area of Missouri, more jobs need to be created, not lost. Park Management needs to, through better relations and cooperation with congressional delegations, obtain an increase in base funding to better maintain Park assets and provide better quality visitor services.

Cultural and natural landscapes: As per the 1964 enabling legislation, Park Management is mandated to preserve, protect and manage the natural and cultural resources to the existing mid-1960's appearance and conditions. The Park should make it a priority to better maintain the historical structures, old farmsteads, scenic viewpoints and overall viewsheds. In the 1980's, the Park (for a few years) had an "Open Fields Management Plan" where fields were brushhogged, disced and native grasses sown. With prescribed burning and mechanical means, the traditionally open fields could be returned to the condition and appearance mandated in the legislation.

Roads: All Park roads, traces and accesses, whether Park-owned, county-owned or public roads, should remain open and unimpeded for all park visitor usage. This should include both motorized and non-motorized use. All secondary (non-paved gravel) roads should be maintained on a regular basis with a minimum once-per-year grading of cemetery roads, traditionally prior to Memorial Day each year. With adequate (two-wheel drive) road access, families and cemetery associations will continue to maintain the graves and cemetery grounds. When access roads are not maintained to minimum (regular grading and brush removal) standards, deteriorated conditions severely affects elderly and physically limited visitors from driving to fishing/swimming holes, hunting areas, former family farms and/or other recreation uses.

Trails: Current hiking and horse trails should remain in present locations with more emphasis by NPS and trail users on maintaining trail surfaces and erosion control. The Park should foster better relations with trail users (cooperative maintenance) and involve all users in any future planning processes. All current and traditional river crossings should remain as presently being used.

Outboard Motors: Current regulations and motor size restrictions are presently more stringent than necessary. River depth and natural obstructions have always been the self-limiting factors as to motorized watercraft. Recommend no change to present.

Cultural Interpretive Demonstrations: In addition to current cultural demonstrations, the Park should strive to re-implement the previous demonstrations of whiskey making, blacksmithing and sorghum making. These traditional native activities were extremely popular with the visiting public and very educational for area school groups.

Water Quality: Park management should be more pro-active in preventing the loss of stream banks, especially in developed areas of the Park. Large amounts of taxpayer monies have been invested in facilities within the river floodplain. One example (there are many) is the loss of stream bank and campsites at the Alley Springs campground, due to neglect and lack of stream bank stabilization. No doubt, one medium (4 to 8 foot rise) flood event per year (usually several) causes more erosion and river sedimentation than all public uses combined, each year.

I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan.

The Park should foster better relations with trail users (cooperative maintenance) and involve all users in any future planning processes. All current and traditional river crossings should remain as presently being used.

Cultural Interpretive Demonstrations: In addition to current cultural demonstrations, the Park should strive to re-implement the previous demonstrations of whiskey making, blacksmithing and sorghum making. These traditional native activities were extremely popular with the visiting public and very educational for area school groups.

I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan.

<b>Correspondence:</b>	I have several wonderful memories of float trips down the Current River and plenty of miraculous observances on Jack's Fork. We are so fortunate to have these national treasures so close to us. I am concerned for the continued health of these watersheds when too much alcohol is consumed by its visitors. Surely, we can do better than that when we visit responsibly. When we're sober enough to clean up after ourselves. When we consider the fragility of the stream banks. We've had a long history depending upon our own conscience to be responsible for common stewardship. It's not proving enough, is it?

<b>Correspondence:</b>	We are a lucky human race to have such a hospitable place as the Earth as our planet. Let's				

treat it like we would if we were to be invited into someone's home. We might take our boots and shoes off and leave them in the foyer so as not to muddy the carpet. We would appreciate our host's décor, the wall paper, the color scheme, the flooring, the lighting, the paintings and sculpture, and the inviting furniture. We wouldn't think of setting our glass down on the mahogany end table and leaving an indelible ring. Or we wouldn't throw our crumbs or wrappers on the floor but ask where can we put the refuse. We wouldn't use the restroom and leave without flushing the toilet or tidying up so that we left it as we found it. And most of all, we would enjoy the hospitality of our hosts and respect their home.

Make those ATVers and horse riders wipe their feet before crossing one of our Ozark streams. If we adopt alternative A to the Draft Management Plan for the Ozark National Scenic Riverways the Earth might welcome us back.

**Correspondence Type:** Web Form

**Correspondence:** To Whom It May Concern,

Please listen to the voice crying in the wilderness, which Webster defines as - 1 an uncultivated, uninhabited region; wild 2 any barren, empty or open area, as of ocean 3 a large, confused mass or tangle of persons or things 4 a wild condition or quality.

This wilderness has almost all of the above, with the exceptions being 'uninhabited' and 'ocean.' The Ozarks, having been settled for some time now, still has it's share of uncultivation, emptiness, confusion, tangles and yes - people. Many of which are admittedly confused and wild, but most of which are quite civilized. This wilderness even has Masses, now that the Catholics have 'mission' churches in Eminence and Van Buren.

There is also another voice or voices, coming mostly from non-wilderness areas, crying for more wilderness. They want to make some or all of the Ozark National Scenic Riverways a "wilderness" area. When the federal government acquired this gem of Ozark beauty, it was with a promise and a challenge - "...to preserve the free-flowing Current and Jacks Fork Rivers, the surrounding natural resources, and the unique cultural heritage of the Ozark people." To turn it into "wilderness" areas would not only be breaking that promise, it would entail further elimination of, not preservation of, the unique cultural heritage of the Ozark people.

Ozark people have a long heritage of using, enjoying and having access to the rivers. Boating, horseback riding, swimming, camping, fishing, gigging and hunting are all a part of that long heritage and culture. A wilderness is what was here before those historic and cultural uses of the rivers began to evolve. The promise and challenge was to make it a park, for enjoyment and recreation, while preserving it's unique natural beauty. Has that not been done? Webster's New World Dictionary has eight definitions of the word 'park' and that may be why so many are confused about what the Riverways is or should be. However, if one substitutes the words "Park Service" for "King" - here's how the first definition would read - "an enclosed area of land, held by authority of the (Park Service) or by prescription, stocked and preserved for hunting." While no one is suggesting enclosing the park or that a park ranger be addressed as "Your Majesty," going back to the basics of that old English definition just might be a good rule of thumb to consider.

In Shannon and Carter Counties, the two counties most impacted by the Ozark National Scenic Riverways, there are already thousands of acres given to wilderness, or near wilderness, areas. Besides the timbered acres of the Riverways, there is the Mark Twain National Forest, the Missouri Department of Conservation's forests and Peck Ranch game preserve, the Nature Conservancy lands, Pioneer Forest and the Roger Prior Backwoods preserve, the Ozark Trail, Missouri Department of Natural Resources' State Parks and much private land that remains undeveloped. With what must be the highest percentage of wilderness in all of Missouri, many are asking when is enough, enough?

The voice in this wilderness is crying because of proposals that would deny people access. Access that many local families and tourists alike have enjoyed for generations. Access to the 'resource' as it is referred to in Park Service manuals. Access that due to the unique topography of these ancient hills, has always been difficult, but has never been denied. At least not at the levels now being proposed.

Please consider too, the wildfires that have recently destroyed vast tracts of this nation's wooded preserves on unprecedented levels. These wildfires raise a red flag that shouts "access to the resource," especially one that involves widespread woodlands, is not only necessary, it is imperative. Firefighters need roads to control wildfires. Plus the elderly and physically challenged need roads and motorized vehicles to have access to areas that a "wilderness" designation will deny.

The voice in the wilderness is crying that old Ozark adage, "If something ain't broke - don't fix it." It may not be

good English, but it is good sense. Whoever included the "Do Nothing" option in the draft ONSR General Management Plan, must have done so for a reason, if not many. That option is the one that makes the most sense. There is already an encyclopedia full of rules and regulations by which the Scenic Riverways is to be governed. If those are enforced properly, with dash of common sense, which is surely enough of a challenge for the Park Service already, will that not ensure that the Rivers and the unique culture of the Ozark people are kept at a level upon which almost all reasonable voices can agree? The voice in the wilderness is crying out words of wisdom: Let it be. All things considered - No Action is the best option.

**Correspondence:** I favor alternate A except that all 3 alternates say that "Camping would be allowed only on designated gravel bars and away from the river". If the intent is to prohibit all camping on gravel bars I am very much against this. I was told at the Kirkwood public meeting that this was meant to apply to camping from motorized terrestrial vehicles, which sounds fine. If that is the intent, I would advise rewording this. I have been camping on gravel bars from canoeing nearly my whole life (I am 60) and would be terribly upset if this is outlawed.

**Correspondence Type:** Web Form  
**Correspondence:** What a treasure we have close by in the great state of Missouri! I believe the Ozark National Scenic Riverways comprises one of the most beautiful areas in America. For the past 35 years I've been blessed with the privilege of spending many days on the Current and Jack's Fork Rivers. Whether it has been floating, camping, and trout fishing with family and friends from the beginning of the National Park above Tan Vat's to Cedargrove....or floating the Jack's Fork in winter with my brother when canyon bluffs are covered with ice flows and iciclesâ€or the almost annual extended "family campout" and float trip where part of what happens is introducing and sharing with the next generation the beauty of our Riverwaysâ€or going with "the guys" who I've fished with most of my adult life to either one of these rivers for a smallmouth fishing/floating/camping

tripâ€almost all of my time spent in the Ozark National Scenic Riverways remain some of the best times I've had.

The National Park Service is to be commended for coming forth (finally) with this new Draft General Management Plan and giving us a chance again to have some input and voice our opinion about the future management of the Riverways. I also commend the Park Service for hearing the concerns expressed in the past about the rude, rowdy, drunken, disorderly behavior by some users of the Riverways and taking action to address these concerns. I confess that I do not know what all you did to cause a decrease in this behavior, but please keep doing it! I have personally noticed the difference in recent years and only wish you could do even more. But I guess considering the present state of humanity, there will always be some rude and crude drunks wherever you go.

But the real work for the Park Service and all who love these Rivers remains ahead. So many people now visit that constant work and diligence and scientific study needs to be done in order to avoid devastating harm being done to our Park. I just don't see how we can afford NOT to do more to reduce the amount of vehicular access to gravel bars and unauthorized roads, or reduce the proliferation of horse trails that cross the river and run through other fragile areas of the watershed. Surely the Park Service and horsemen and women can work together to come up with plans for trails that meet both the recreational pleasures and the ecological scrutiny necessary to preserve the quality of this national treasure.

Your work is cut out for you (or is it "Our work is cut out for us"). Since the release of this plan, I have taken the opportunity to read the entire document and re-read parts repeatedly, attend the public meeting in Salem, visit the park, and read about everything I could find by searching the internet for information (and mis-information). And while Plan Alternatives A, B, and C each have many positive points, if I have to choose one I would go with Alternative B. Because of what I personally like, and how I have personally experienced the Riverways, my first preference would actually be "A". However, it is critical that a plan be implemented that also addresses the desires of a broader group of people and their preferences, and I think "B" does this best.

Unfortunately, from what I observed and heard at the Salem meeting, have read, and discussed, I think it will be difficult for the Park Service to really move forward. Being a government agency, you are a victim of the mistrust that so many have of any government agency, especially a federal agency. And it appears obvious that our Representative, Jason Smith, will fight and obstruct any effort you make to move forward. And while I compliment you on some of the positive steps you have taken (for example, taking steps to control rowdy behavior and putting forth this draft management plan), I would also be critical of you for being negligent in allowing some of the activities that negatively impact this National Park to occur. Examples include the proliferation of unauthorized horse trails and roads that reach the rivers, as well as scenic easement violations. The Park Services negligence in the past will only make it more difficult to curtail these activities in the future. (It is hard to put the Genie back in the bottle once you've let it out). Is there another National Park that would ever allow this sort of activity to go on? I have visited many, and I have never seen it.

What is called for now, I believe, is true leadership on the part of the National Park Service. In my opinion, your draft management plan demonstrates that the Park Service is well aware of challenges facing the park and the need to take constructive steps to protect this national treasure. And even in this climate of mistrust of the federal government and doubt about any proposal that any agency puts forth, I'm optimistic that you can do more to move forward with the vision that was put forth in some of the founding principles that were written when the Park was first established.

Again, congratulations on finally coming forth with proposals that seek to address many of the issues currently facing the Riverways and with a vision for the future. I certainly haven't begun to go down the list of items in my preferred "Plan B" and make comments on each one (like proposed wildernessâ€I'm for it), but I've rambled enough! Please move forward with bold steps and leadership to insure that this wonderful resource will also be available for my grandchildren and their grandchildren to enjoy.

Thank you for the opportunity to comment.

---

**Correspondence ID:** 2127    **Project:** 15793    **Document:** 56208  
**Received:** Feb,05,2014 00:00:00  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of...the Current River and Jacks Fork Riverâ€s free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come

**Correspondence:** Alternative A offers the most protection for the Ozark Riverways, which should be protected. This alternative is preferred but you prefer Alternative B, so here are some of the things I want to point out.

- Alternative B lacks primitive zones. In particular in the Upper Jacks Fork River from the western boundary to Bay Creek is a special area and needs the zoning designation of primitive and not natural.

- The large amount of rare and endangered plants and plants of concern that have been found in the upper section of the Jacks Fork River need protection.

- The area in the Upper Jacks Fork between the western boundary and Bay Creek is important because of the water flow in the area and should be closed to motor boating.

- There needs to be a Horse Trail Study/Working Group for the Current River as well. There are a lot of horse trails in the Current River that are not designated trails and they need to be either designated or closed.

Horse trails need to be moved out of the flood plain and other sensitive areas.

- Horse Camps in the Upper Jacks Fork are NOT healthy for the river. Large groups of campers and horses destroy vegetation, create hoards of flies, and cause manure to flow into the river when it rains. There should NOT be a 25 horse campground in the area because of the sensitive plant life and highly developed Karst. Hay brought in to feed horses has introduced invasive plant species. There should be a controlled use/permitting system for the use of

horses in the park.

- What is an "access point." Why 20?
- It would be good to free the flow of the river as long as a correctly built bridge would replace any low-water bridge that is removed.
- ATV's should never be allowed on the gravel bars or trails, ATV riders should have to comply with the state law for helmets, permits, and flagging.
- Non motorized mountain biking is a good idea and would expand the recreational use with a low impact on the Riverways - as long as the trails were properly maintained and patrolled by the rangers.
- The roads and trails study was done in 1990- 24 years ago. How many roads have not been closed that the 1990 study say's should be?
- More hiking trails are needed.
- There is a lack of funding to patrol the trails and the ATV users are continuing to use the old and new trails; this issue needs to be addressed before there is any expansion of the trail systems in the Park.
- Motor vehicles do not belong on gravel bars, except in cases of access for the disabled. And then a motor vehicle should be used only to drop off the person and then leave to a designated area. Motor vehicles leak oil on the gravel bar and it works its way into the river.
- It would be great to have a facility that could properly store some of the Museum collections of the Park Service, and be able to display parts of the Museum collection so that the history of the area can be shared with visitors.
- The cultural history of the area should not be lost.
- The Powder Mill camp ground is in the flood plain. This would limit the amount of development that can/should be done. It is highly questionable if the flood plain should be developed at all.
- The Park Service needs to provide better training & feedback for those that volunteer for the Park. Perhaps a designated/dedicated staff/contact position could be made?
- Park boundary issues between the Park Service and DNR need to be worked on and networking expanded. There are developments with poorly planned roads and even some illegal dumps next to the river.
- It would be important to establishing a partnership between the Park Service and the Stream Team Program to provide educational schools/camps for Missouri children, perhaps at the old Welsh Lodge. A facility along the pristine Current River would be of great benefit to people who have never seen a healthy river.
- The Hellbenders and bats within the Park must be protected! Some caves have not been gated but should be. The Hellbender is dying off. Its habitat needs to be identified and a definite designation of protection for such habitat. Hellbenders have been found in the Upper Jacks Fork. Horse camps and more development would put them at increased risk. Bats are major pollinators and eat millions of pounds of insects and are being decimated by the white nose fungus. The ONSR needs to fully protect its bats. These rare and beautiful creatures are why some people come to Park. And they are an essential part of the larger ecosystem.
- Finally, I must comment on the political situation in which people have shown up at the various Park Plan Comment meetings to say they demand that the Park revert to state control. In this politically polarized era and environment, many people operate outside the realm of facts, and fail to recognize the bounty, beauty and preciousness of this area, and the duty to protect it for all generations to come. Many just hate government, especially federal government.

Such a move would be a disaster for this vital resource! The Missouri legislature has historically denied adequate funding to Missouri State Parks. The state legislature would most likely have difficulty even finding and appropriating money for the purchase of such a large parcel of land, and certainly would be unable or unwilling to supply adequate operational funding, making it seem logical or at least tempting that parts or perhaps the entire ONSR be put up for sale to private owners. Such a scenario would leave the rivers, springs and adjacent lands open for abuse from ORV/ATVs, pollution, erosion, overuse and industries such as mining, which could easily destroy the entire river and ecosystem. A half century of federal management has preserved these magnificent rivers and springs for ALL Americans to enjoy. The ONSR brings in millions of dollars of revenue and employment to local counties. Decommissioning this National Park would be a physical and fiscal disaster. It would in no way serve the common good of Missourians or US citizens. Alternative A offers the most protection for the Ozark Riverways. Again, I prefer that aAlternative A. Please give my comments your deepest consideration - preserve this once-only natural resource.

**Correspondence Type:** Web Form

**Correspondence:** Please take care to consider the long term future of the National Park and protect the rivers and surrounding areas. From my reading of the situation, I feel Alternative B makes the most sense. I have spent hundreds of hours on the Jacks Fork River, and quite a few hours on the Current River-mostly the upper Current. Things have deteriorated on both rivers in the 50 or so years I have been going there, even with the establishment of the National Park. Let's do better!

**Correspondence ID:** 2131 **Project:** 15793 **Document:** 56208

**Received:** Feb,05,2014 15:02:38

**Correspondence Type:** Web Form

**Correspondence:** I would like to strongly support most of the items mentioned in Alternative B and to pursue wilderness designation for the entire Big Springs tract. I have been visiting the Current/Jacks Fork area multiple times per year going back to 1975. I agree with the goal of increasing the educational efforts mentioned in Alternative B.

I believe that requiring the horse riders to get a permit, even if free, will be almost impossible to administer as most rides start on private property. This would only serve to anger the horse people further against the park. When you refer to backcountry campsites where a fee would be charged, I assume you mean ones that you can drive to with a car and not gravel bar camping along the river. If you are going to charge a fee then I would hope you provide a place to park cars, trash pickup, fire rings, and maybe a primitive toilet in high use areas.

The Current/Jacks Fork Rivers already have some of the nicest, well spaced access points with floater parking of any river in Missouri. I don't see the crowding issue except maybe above Van Buren which is outside the park for the most part. If you must, you could have the outfitters only put on so many boats per hour at the busy points on weekends on the upper river. I have a big problem with tearing down a perfectly good access and then destroying the trees and viewshed just downstream to put in a new one. I would hope you would not reduce the number of established official putin points. (I agree that Cedargrove access needs to be improved and also the road into Roberts Field should have a culvert or bridge over the creek.)

Putting in a developed campground at Akers (where there was one before) would be nice. If you want to put in a "developed campground" on the upper Jacks Fork, I would not put it in the Blue Springs area as the terrain is very steep when you get near the river and the area is subject to flooding. (There is a small primitive camping area there now.) A better place with more level ground near the river would be Buck Hollow or Rymers.

I hope that all the input and feedback that you got in 2009 is fully considered and not thrown away. I also wonder why it took 4 1/2 years to get from there to where we are now during which the park was managed under the "no action alternative".

Finally, I hope that the voice of one local state politician does not overshadow the views of the many visitors to your park who contribute to the local economy while we are there.

**Correspondence:** I do not want any restrictions on the boat motors. The river belongs to the people. The gravel bars belong to the people. God put them there for us to use. I do not want the motor boats taken off the upper Current River/Jacks Fork. I do not want restrictions on motor size at Van Buren. The river has so much heritage that we are passing on to our children and grandchildren. Their great-grandparents lived and farmed along the river. They ran a commissary boat on the river, delivering goods to the people in the small communities along the river, way before the Park Service started taking it over. The towns close to the river - Ellington, Eminence, Van Buren,

Winona - just to name a few, the gas sold to people from the gas stations for there boats, the grocery stores that sell the soda & picnic items, and don't forget about the taxes that are paid for boat license and sales tax. Just leave the river alone and let the people take care of it.

**Correspondence ID:** 2135    **Project:** 15793    **Document:** 56208  
**Received:** Feb,05,2014 15:07:23  
**Correspondence Type:** Web Form  
**Correspondence:** I submit the following comments on the draft General Management Plan ("GMP") for the Ozark National Scenic Riverways ("ONSR") on behalf of the Center for Biological Diversity (the "Center"). The Center is a national, nonprofit conservation organization with more than 625,000 members and online activists dedicated to the protection of endangered species and wild places. The Center and its members are concerned with the conservation of imperiled species, including the endangered Ozark hellbender.

For the reasons explained below, the Center recommends that the National Park Service ("NPS") adopt the environmentally preferred alternative, Alternative A, to guide management of the ONSR. Alternative A is most protective of the ONSR's water quality, which is critical to the survival and recovery of the Ozark hellbender.

#### ONSR's Prime Recreational Waters

The Ozark National Scenic Riverways was established in 1964 as the nation's first federally-protected national river. The park extends along 134 miles (approximately 80,000 acres) of the free-flowing Current River and one of its tributaries, the Jacks Fork, in the Ozark Highlands of southeastern Missouri.

The Current River and Jacks Fork are prime recreational waters attracting approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than 55 million dollars with nearly 90 percent of spending from non-local visitors. Because of this spending and employment by the NPS, the ONSR has generated 845 jobs, which is approximately 15 percent of the total employment in Shannon and Carter counties. Accordingly, maintaining water quality is important for the local economy that depends on these waterways for recreational uses, such as boating, fishing, and floating.

As a unit of the National Park System, management of the ONSR must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value.

#### Status of Ozark Hellbenders in the ONSR

Ozark Hellbenders are endemic to the White River drainage in northern Arkansas and southern Missouri. Hellbenders are habitat specialists that depend on consistent levels of dissolved oxygen, temperature, and flow. See U.S. Fish and Wildlife Service, Endangered Status for the Ozark Hellbender Salamander, 76 Fed. Reg. 61956, 61,957 (Oct. 6, 2011).

Evidence indicates Ozark Hellbenders are declining throughout their range, and no populations appear to be stable (76 Fed. Reg. at 61,958). Likely less than 600 Ozark hellbenders remain, and the U.S. Fish and Wildlife Service listed the Ozark hellbender as endangered in October of 2011. 76 Fed. Reg. 61956 (Oct. 6, 2011).

Historically, Ozark hellbenders could be found in portions of the Spring, White, Black, Eleven Point, and Current Rivers and their tributaries (North Fork White River, Bryant Creek, and Jacks Fork) (76 Fed. Reg. at 61,958). Currently, Ozark Hellbender populations are known to occur in Bryant Creek, North Fork of the White River, Eleven Point River, and Current River, with some individuals possibly still present in the White River, Spring River, and Jacks Fork (USFWS 2012).

In the Current River, which flows through the ONSR, it has been estimated that 80 hellbenders remain (76 Fed. Reg. at 61,960). Scientists documented Ozark hellbenders in Jacks Fork, a tributary of the Current River that flows through the ONSR, in 1992. But no hellbenders were found during investigations of Jacks Fork in 2003 nor were any found in 2006 during 7 person-hours of searching (76 Fed. Reg. at 61,960).

#### Planning Documents for Park Management

Every park in the national park system is required by law to have a current general management plan. The ONSR's last plan was done more than 25 years ago, in 1984. The 1984 General Management Plan authorizes numerous activities on the ONSR (NPS 1984). The plan called for a more detailed study of river access sites and of other roads, traces, and horse trails in the riparian corridor (Flader 2011). These studies resulted in a river management plan issued in 1989 (NPS 1989) and a roads and trails study issued in 1991 (NPS 1991). Along with the annually issued Supervisor's Compendium, these documents authorize ongoing activities on the ONSR, for example, by setting maximum use limits for canoe use, setting horsepower limits for motorboats in some areas, identifying areas on the Current River and Jacks Fork where boats can be launched, and designating which roads are open for travel.

In 2006, the NPS began the process of developing a new plan for the ONSR. On March 8, 2013, the NPS provided the FWS with the draft revised GMP and Draft Environmental Impact Statement ("EIS"). As a result of this analysis, the NPS initially concluded that the revised GMP "may affect, but not likely to adversely affect" the Ozark hellbender, Indian bat and gray bat. See Memorandum dated March 18, 2013 from Bill Black, Superintendent, Ozark National Scenic Riverways, to Amy Salveter, Field Supervisor, U.S. Fish and Wildlife Service.

In a letter dated April 25, 2013, the FWS explained that it could not concur with the NPS's determination. The FWS recommended that NPS conduct "a programmatic consultation in which effects from all actions occurring within the park are evaluated." See Memorandum dated April 25, 2013 from Amy Salveter, Field Supervisor, U.S. Fish and Wildlife Service to Bill Black, Superintendent, Ozark National Scenic Riverways.

On November 8, 2013, the NPS released the draft GMP, which is open for public comment until February 7, 2014.

#### Management of ONSR Affects the Endangered Ozark Hellbender

The Ozark hellbender is primarily affected by water quality, including sedimentation and nutrient loads. As such, any activities on the ONSR that impact water quality may in turn impact the salamander and its habitats. Ongoing activities near or on the riverways of the ONSR that deposit sediment or nutrient loads in waterways include: use of the road and trail system and recreational activities (such as boating, ATV use, and horseback riding). 76 Fed. Reg. 61,966. These activities in the rivers may also directly harm or disturb hellbenders or their cover rocks.

Studies conducted by the USGS (Barks 1978), NPS and the Missouri Department of Natural Resources (1998) have suggested that "heavy recreation use is causing adverse impacts on the water quality of the Jacks Fork River, including elevated fecal coliform bacteria densities that exceed the standard for whole body contact recreation" (Vana-Miller 2007). Indeed, in May 2011, ONSR was identified as one of America's ten most endangered rivers due to inadequate management by the NPS (American Rivers 2011).

Dirt and gravel roads within the Ozarks in general are the largest source of sediments to streams, outweighing the combined impacts of pasture erosion, logging, and natural erosion (Vana-Miller 2007, citing USDA 1986). Heavily used gravel roads can contribute 100 times more sediment than paved or abandoned roads (Reid and Dunne 1984). Roads can cause marginally stable slopes to fail, and they can capture surface runoff and channel it directly into streams resulting in increased sediment

deposition (Allan 1995). The 1991 NPS study of roads and trails found that the existing system of roads results in "substantial sediment loading to small creeks that empty into the Jacks Fork and Current Rivers," which reduces water quality and adversely impacts riparian vegetation (NPS 1991).

Over 130 motorized vehicular river-access points exist on the ONSR, according to a 2007 analysis (Friends of the Ozark Riverways 2010). Virtually all gravel bars (used for canoe and boat camping) are accessed by all-terrain vehicles (ATVs) and other motorized vehicles (American Rivers 2011). ORV activity also increases erosion and sedimentation by exposing bare erodible soils in areas with frequent activity. ORVs frequently cross rivers inhabited by hellbenders and are driven in riverbeds where the water is shallow enough to enable this form of recreation. ORV use in the riverways could also directly impact hellbenders, as well as displace cover rocks (76 Fed. Reg. 61,967). Horseback riding near or in the riverways can also increase sedimentation and nutrient loads and reduce available dissolved oxygen, as explained in detail below.

The practice of removing large rocks and boulders to reduce damage to canoes is common on many hellbender streams (76 Fed. Reg. 61,967). The areas under these large rocks are important habitat for cover and nest sites; therefore, overturning or removing these rocks can diminish available cover and nest sites for hellbenders. The force delivered by a boat hitting a rock could easily injure or kill a hellbender, in addition to displacing or disrupting cover rocks (76 Fed. Reg. 61,967). Indeed, hellbenders encountered with gashes in their heads suggest that watercraft traffic likely impacts these animals (76 Fed. Reg. 61,966). The NPS has found that "increased use of jet boats has created a more constant level of disturbance to aquatic and riparian animals as well as physical disturbance to bank and bottom substrates" (Vana-Miller 2007).

#### Horseback Riding Near and in Rivers Causes Adverse Impacts to the Ozark Hellbender

Impacts of horseback riding on the ONSR must be considered in the context of other horseback riding that contributes nutrients or sediments to the Current River and its tributaries, including illegal horseback riding in the ONSR and horseback riding outside the ONSR. As explained below, pressure from horseback riding in and near streams inhabited by Ozark hellbenders has increased substantially and may affect the amphibians by degrading the water quality of the riverways (76 Fed. Reg. at 61,967). It is also possible that horseback riding in the rivers may also directly harm or disturb hellbenders or their cover rocks.

#### Extent of Horseback Riding

Horseback riding in and near the ONSR is extensive. Currently, through an annually issued Supervisor's Compendium, NPS authorizes horseback riding by the public on unpaved state and county roads and four designated horse trails with designated river crossings. Within the ONSR, there are five designated river crossings on the Current River and two designated river crossings on Jacks Fork. The 2013 Supervisor's Compendium was approved on May 20, 2013, and is effective for one year. Supervisor's Compendium, [http://www.nps.gov/ozar/parkmgmt/upload/OZAR-Supt-Comp\\_051613\\_final-2013.pdf](http://www.nps.gov/ozar/parkmgmt/upload/OZAR-Supt-Comp_051613_final-2013.pdf) (last visited Sept. 27, 2013).

The four designated horse trails in the ONSR total approximately 23 miles (<http://www.nps.gov/ozar/planyourvisit/loader.cfm?csModule=security/getfile&PageID=164559>). Even just considering the four designated horse trails on the ONSR, there are several miles of trail where the proximity to the riverways would allow runoff of nutrients from horse waste or sedimentation through soil erosion.

Yet this only accounts for a fraction of miles of the available horseback riding routes because the NPS allows unlimited horse use of unpaved state and county roads. A 2000 analysis led by NPS found that within the 56-mile stretch of the Current from the upstream boundary to Goose Bay, there were 51 miles of horse trail running parallel to the river and on the flood plain, 83 percent of which were used exclusively for horse riding (Fenders 2011). There were nearly 30 miles of additional flood plain trail in other sections, in addition to numerous trails on higher ground (Fenders 2011). These trails include more than 80 places where horses cross the rivers and harm water quality with erosion and fecal coliform pollution (Fenders 2011). Moreover, when the water is low, many people use the river as a trail, riding along the river's edge.

In addition, the NPS authorizes commercial horseback riding operations through annual issuance of Commercial Use Authorizations ("CUAs"). For example, on July 26, 2012, the NPS authorized Trail Ride Guides LLC (aka

Cross Country Trail Rides) to use the Two Rivers confluence area of ONSR from Jerktail to below Two Rivers and up the Jacks Fork to the Alley Mill area. This essentially amounts to the entire designated horse trail system on the ONSR. On November 2, 2012, Trail Ride Guides LLC reported that it served approximately 10,000 clients and took about 20 trips in the ONSR that year, utilizing three designated horse trails: Broadfoot Loop, Jerktail Loop, and Shawnee Loop. Although the Commercial Use Authorizations limit group size for guided rides to 25, it is not uncommon to observe groups with several dozens of horses on unpaved roads and trails near and on the ONSR.

To illustrate the demand for horseback riding in the area, consider that Trail Ride Guides LLC, which is located on the banks of Jacks Fork, boasts over 3000 horse stalls (<http://crosscountrytrailrides.com/general-info/>). At one study site on the Jacks Fork, observers documented up to 500 horses crossing per hour (Davis and Richards 2002).

A 1991 NPS study of roads and trails found that about 95 percent of horse use in the ONSR is attributable to the large organized multi-day trail rides, such as those held by Trail Ride Guides LLC (NPS 1991). That study suggested that the NPS consider restricting the total number of horse riders by utilizing a permit system (NPS 1991).

### Impacts from Horseback Riding

The adverse impacts to the hellbender from horseback riding are caused primarily by erosion and sedimentation along the river and at river crossings, and manure being deposited into the river (76 Fed. Reg. at 61,966). Increased siltation may affect hellbenders in a variety of ways, such as suffocating eggs, eliminating suitable habitat for all life stages, reducing dissolved oxygen levels, increasing contaminants (that bind to sediments), raising water temperatures, impeding movements, and reducing prey populations. (76 Fed. Reg. at 61,966-67). Undoubtedly, sedimentation is a major threat to hellbenders (Quinn et al. 2013; Lawson 2012). Moreover, hellbenders require consistent levels of dissolved oxygen, which can be reduced when organic wastes like horse manure are deposited into waterways (76 Fed. Reg. at 61,957). Because hellbenders require high levels of water quality (e.g. Briggler et al. 2007), even minor alterations to stream habitat are likely to be detrimental to hellbender populations (76 Fed. Reg. at 61,964).

### Erosion and Sedimentation

Horseback riding can lead to erosion and sedimentation when horses' hooves dig into the soil, especially when descending steep banks at river crossings. Impacts caused by horses generally occur to a much greater degree than other trail users because the large weight of the horse is transferred to the ground at the hooves, which are relatively sharp points that easily dig into and loosen soils (Wilson and Seney 1994; DeLuca et al. 1998; Newsome et al. 2004). The hooves loosen soil particles that are mobilized and transported into waterways (Newsome et al. 2004).

The movement of soils from the trails often results in trail proliferation and widening as users seek to avoid deeply incised or wet areas of trail. Prolonged sedimentation can eventually decrease the water depth and cause changes in the water flow and temperature, which also may affect hellbenders.

Widespread erosion problems may also undermine the soil-rooting zone of nearby vegetation, causing localized loss of individual plants and an extension of the erosion problem, as the protective function of plant cover continues to be lost (Newsome et al. 2004). The destruction of this vegetative cover can result in excessive solar heating of the water. Increased temperature regimes can affect oxygen levels in the waterways and affect respiration of aquatic animals.

### Horse Wastes

Waste produced by horses ridden in and near waterways also affects Ozark hellbenders by increasing nutrient loads and reducing available dissolved oxygen. As a 2007 NPS report on water resources in the ONSR explains, "bodily wastes from animals is a major contamination threat to the park as well as a human health risk" (Vana-Miller 2007). For example, increased levels of nitrates (that reach waterways as surface runoff or leachate from horse manure) can affect amphibians by inhibiting growth, decreasing survivability, and impairing their immune systems (76 Fed. Reg. 61,966-67). Fecal coliform bacteria are present in horse manure and are indicative of potential viruses and pathogens that cause swimmer-associated sickness in water bodies. Also, when horses walk in the river, they stir up sediment. Bacteria tied up in the sediments can be released whenever the streambed sediment is disturbed (Missouri Dept. of

Natural Resources 2004; Marino and Gannon 1991). These water contaminants not only pose a threat directly to the Ozark Hellbender but also to the larger aquatic ecosystem and humans (see 76 Fed. Reg. 61,967).

There is evidence that horseback riding operations have degraded water quality in the ONSR (see, e.g., Emrie 1986; Vana-Miller 2007; Missouri Department of Natural Resources 2004). In 1998, a five-mile stretch of the Jacks Fork River from the town of Eminence to its confluence with the Current River was included on Missouri's list of impaired waters as required by Section 303(d) of the federal Clean Water Act. The identified pollutant on the Jacks Fork was fecal coliform bacteria, whose presence in large numbers indicated contamination by fecal wastes of warm-blooded animals (Davis and Richards 2001). The length of the impaired reach was increased to seven miles in 2002 because of data indicating the fecal coliform bacteria problem existed over a broader area (Davis and Barr 2006). From 2003 to 2008 the Missouri Department of Natural Resources again expanded the impaired stretch of the Jacks Fork, to eight miles (76 Fed. Reg. at 61,966). In 2002 at river mile 4.5 the annual coliform geometric mean was 26, and in 2009 it was 116 (Friends of the Ozark Riverways 2010).

The USGS conducted a three-phase study to better understand the extent and sources of microbiological contamination in the impaired reach. Davis and Richards (2001) found fecal coliform densities were generally larger in that reach and that the standard was exceeded at some sites. Data from Phase II (Davis and Richards 2002) indicated that, after accounting for wet-weather flow, the largest densities were during horse trail rides - this occurred in both water and streambed sediment samples. That study did not positively identify sources of contaminants but runoff from a commercial horse trail ride outfitter and horse stream crossings were identified as likely sources (76 Fed. Reg. at 61,966, citing Davis and Richards 2002, pp. 1, 3, and 36).

Phase III (Davis and Barr 2006) was an attempt to determine the causes and sources. The scientists found that increases in fecal coliform bacteria densities in the Jacks Fork are associated with cross-country horseback trail-riding events (Davis and Barr 2006). A total of 501 fecal coliform bacteria isolates were analyzed via a methodology that identifies presumptive sources of fecal bacteria in the Jacks Fork River - 70 isolates were from sewage, 132 to horses, 118 to cattle, and 181 unknown. In short, recreational users (including boaters and swimmers) are not the primary source of fecal coliform bacteria in the Jacks Fork; rather, the presence of fecal coliform bacteria is associated with other animals, of which horses are the primary sources (Davis and Barr 2006).

### Analysis of Alternatives

The "No Action" alternative is a description of current park management to serve as a baseline for comparison. Existing conditions include expanding presence of motorized vehicles, explosive growth of equestrian use, proliferation of undesignated trails and river access, overcrowding resulting in conflicts among user groups, and inadequate monitoring and enforcement of existing regulations. This alternative is unacceptable because it would result in further degradation of natural resources and the visitor experience.

Each of the action alternatives would provide some important benefits over the existing conditions. In particular, all of the action alternatives include: engaging in ecological restoration projects, such as closure of some undesignated roads, trails, and river access points; increasing law enforcement for compliance; maintaining Big Spring's primitive character; providing for non-motorized zones; preparing a recreational horse use and trail management plan; and establishing a permitting system, as necessary, to manage impacts of horse use. We are extremely supportive of these proposals. In particular, increases in law enforcement for compliance is important to stop illegal ORV activity, which increases erosion and sedimentation as explained above. Also, creation of non-motorized zones would result in less disturbance to the aquatic environment and would likely benefit the hellbender.

Yet the action alternatives vary in the extent to which they emphasize protection of natural resources. The NPS identified Alternative A as the environmentally preferred alternative, and the Center encourages the NPS to adopt Alternative A for the reasons explained below.

### Alternative A is More Protective of Water Quality than the NPS's Preferred Alternative B

Because undesignated roads and trails can contribute to water quality degradation through erosion and sedimentation, we support the NPS's proposals to close undesignated and illegal routes. Alternative A would restore 50 miles of such routes and Alternative B would restore 45 miles. In addition, Alternative A would replace 15 miles

of undesignated roads with hiking trails and Alternative B would replace 10 miles. Although both of these alternatives are a big improvement over the existing condition, Alternative A is more aggressive at addressing illegal and undesignated routes and should be adopted.

Equestrian overuse is a significant threat to water quality and the Ozark hellbender. As such, the Center is very pleased that all action alternatives will establish a permitting system, as necessary, to manage impacts of horse use. We believe that current impacts from horses, including river closures due to high bacteria levels, show that such a permitting system is absolutely necessary. Unlike Alternative B and Alternative C, Alternative A would not allow horse camping. We are extremely concerned that a large developed horse campground along Jacks Fork would have adverse impacts to water quality. We believe that adequate opportunities for horse camping already exist outside of the ONSR. In addition, a horse campground would attract additional use of the horse trail system, which is already strained from overuse.

Although we are pleased that all action alternatives would close and restore 65 miles of unauthorized horse trails and river crossings, all action alternatives would significantly expand the designated horse trail system, with Alternative A adding 25 miles and Alternative B adding 35 miles with new stream crossings. The NPS must use great caution when planning any additional stream crossings to ensure no adverse impacts to the hellbender. Plus, we strongly believe that such an expansion of the horse trail system cannot occur unless the impacts are fully analyzed, and we support preparing a recreational horse use and trail management plan under all action alternatives. In addition, the NPS must consult with the U.S. Fish and Wildlife Service under the Endangered Species Act on how such horse management would impact the Ozark hellbender.

#### Suggested Changes to Action Alternatives

To reduce erosion and sedimentation, the NPS should emphasize restoring and stabilizing the riparian corridor. There should be no new conversions of bottomland riparian forests to open fields, and impaired and eroded riverbanks should be restored with native vegetation.

We appreciate that Alternative A prohibits motorized access to gravel bars, which could help reduce problems of erosion and aquatic disturbance at these sites. Under Alternative B, the NPS would designate which gravel bars are accessible by motor vehicle. If that alternative is selected, the NPS should be sure to locate these sites away from areas occupied by Ozark hellbenders. In addition, any new developed facilities along rivers should be considered only after analyzing impacts on water quality and Ozark hellbenders.

Some of the impacts to Ozark hellbenders are the result of unintentional but harmful human activities that could be modified with public education. For example, some canoeists move boulders to avoid collisions without realizing that they are destroying potential hellbender habitat. And some anglers kill hellbenders based on myths that they are poisonous and damage the sport fishery. We recommend that the NPS promote public education about the importance of hellbenders with various forms of outreach, such as signs and displays.

We are very concerned that the NPS lacks the funding and personnel to implement the expanded recreational use and new developments that are proposed under Alternatives B and C. The ONSR has seen a 30 percent reduction in staff in the last decade due to funding decreases, and NPS should hesitate to make changes to park management that would require increases in staff to monitor resources and provide enforcement to respond to increases in use.

We understand that the U.S. Fish and Wildlife Service will be preparing an Endangered Species Act Section 7 biological opinion on the effects of the GMP on endangered wildlife within the ONSR, including the Ozark hellbender, Indiana bat, and gray bat. We are pleased that the NPS is consulting with the Service and recommend that the NPS adopt any mitigation measures recommended during consultation.

\*\*\*

For the above stated reasons, the Center recommends that NPS adopt Alternative A, which is the environmentally preferred alternative. We support the NPS's commitment to dealing with the serious problems from overuse that have developed on the ONSR. If you have any questions or would like to discuss these comments, please contact me.

Sincerely,

Collette Adkins Giese

**Correspondence:** I am in full support of the no action plan. The riverways brings much needed revenue to our area and to restrict its use will reduce that revenue. Closing horse trails and roads will not good to the nearby towns. I have business owners tell me that they can tell when a trail ride is in the area as their sales go up. I have lived in this area all my life and see how it helps our economy. People plan whole family vacations around ridding these trails.

**Correspondence:** I am in favor of plan A. The Current River and Jacks Fork are two of the best float streams in the nation. People deserve a place to paddle canoes, kayaks, rafts, and tubes without having to worry about jet boats whizzing by in close proximity. I have nothing against motor boats on other rivers; however, the Ozark National Scenic Riverways should be a place to go where motor boats are not allowed or are very restricted. I have paddled in groups with children on Current River and have seen them frightened by motor boats going too fast or too close to them. No motor boats at all (or at least a 10hp limit) above Van Buren would be better than plan A.

If plan A is not selected, plan B would be better than doing nothing at all.

**Correspondence:** The River is such a wonderful resource. My family and friends have been enjoying the River for many years, spending alot of money on food, lodging and area activities.

We need to protect the water from pollutants. Run-off from the horse facilities located too close to the river need to be restricted. Excessive motor boat noise and water pollution needs to be restricted, especially on the upper areas of the Current River. I support the option C. Please work to preserve our National Scenic Riverway.

Thanks you for your wonderful work and the opportunity to provide feedback. I would appreciate if my address was not made available to the public. Thank you!

**Correspondence:** I live in St. Louis. I also own property on the river in the gap in Van Buren. I see both sides of the issues. This comment reflects my opinion.

I support ANY plan as long as current horsepower on boats is not effected. I think it was a mistake to bring HP into the discussion when presenting the plans.

If we are going to talk about the plans presented, I like ALT-A with no hp restrictions. However the real problem is that there are just too many people using the rivers on the weekend. There are too many boaters, too many floaters, too much noise. I can't even enjoy my own property in Van Buren on the weekends and I refuse to be there on a Saturday or Sunday afternoon in the summer....

I wouldn't mind paying a yearly expensive permit if it meant limiting the number of people on the river - even if it's up to a 1000 dollars a year. I believe that river is being raped by just too many people - period. And it is very sad to see. The noise pollution, the drunkenness, and the lack of appreciation for the beauty that surrounds us is disconcerting. People don't come for the beauty - but for a party. This has to stop. And I support anything that will help change this. Changing HP limits on boats won't do that.

My favorite thing to do on the river is to get in my 60/40 jet boat, and take it to a part of the river that is very quiet. I love to shut it down and float and just listen to the nature that surrounds me. I like to explore the backwaters and relax all day on the river. I love the peace and quiet.. That's what I want. Right now I'm not getting it unless I come on a weekday. Last year I didn't come to the park on a Saturday until after Labor Day. Does it really matter what HP I'm using in the middle of October with nobody on the river? Changing the HP limit just changes the size of my boat and what I can carry with me. It won't change my wake or the noise.

Find a way to eliminate the hoards of partiers on the weekend. Saturdays is when the river is over used. Don't let it keep happening. Stop the partying and alcohol abuse. Ban all alcohol. Stop the unnecessary noise. Limit the numbers of tubes. Limit the number of boats on the river at any one time (permits). Ban radios in boats and tubes and on gravel bars (except for emergency use). Preserve the freedom to travel the park by jet boat. As it stands, I support Alt-A WITHOUT any change to current HP limitations. Thanks for all you do. I know you have a tough job ahead of you with this GM plan.

**Correspondence:** I am a person who was born and raised on Current River! I am NOT somebody just giving a opinion that has never been on the rivers of this area! I have through out the years used the area involved in a way that has not destroyed it! I am known as a "LOCAL" We use it year around not just a weekend out of the year! Some people comment just because of an organization they belong to and have never been to our Beautiful area! I am a boating person but I have canoed also, and I am planning to do a trail ride this summer, so I think the boat H.P. should be left 40hp at the pump, the way it has been the last few years and everybody (with maybe a few extreme environmentalist) will continue to be able to use the area without a lot of new ONSR rules and regulations! I repeat NO NEW REGULATIONS NEEDED!!!!

**Correspondence:** I appreciate the extensive analysis of the Ozark National Scenic Riverways and the detailed management options prepared by the National Park Service. I also thank you for this opportunity to comment. On weekends and summer trips our family enjoyed floating the clear waters of the Current and Jacks Fork in our aluminum canoe, swimming, exploring caves, picnicing on the gravel bars, photographing the scenic beauty. Our son also enjoyed float trips on the Current River with his Boy Scout Troop. Years later we shared the same experiences and joy with our grandchildren. In recent years we have been dismayed to learn, through pictures and letters, that up and down the river illegal roads and construction, a proliferation of ATVs, horse trails and powerful boat motors, have damaged gravel bars and riverbanks, caused severe erosion and degraded water quality - in essence spoiling the serenity, beauty, wildness and natural environment that people visit the Riverways for. I am concerned that the rivers are being loved to death.

There must be adequate regulation and adequate staff and funding to enforce those regulations.

I have studied the land and river management options, particularly Alternative B recommended by the NPS. While Alternative B would be an improvement over the status quo, I vote for Alternative A because it would provide the most protection and preservation of this national treasure for future generations. Specific reasons include:

- illegal roads will be closed and restored to natural conditions
- motor vehicles will be prohibited access to gravel bars
- reduces the number of horse trails and adds no new stream crossings
- 51% of the river will be non-motorized

In addition, I urge the Park Service to recommend that Congress designate Big Spring Wilderness. The area is primitive and wild, one of the few such areas remaining in the Ozarks. Its proximity to beautiful Big Spring, one of the largest in the world, makes it attractive for visitors to the Spring and Riverways. Protected as Wilderness, its wild character would be retained while being available to the public for hiking and other activities that "leave no footprint".

**Correspondence:** People from the Summersville have reported several concerns about the impact of the General Management Plan:

Churches which have previously had free access to the river for Baptisms will now be required to have a permit and pay a \$50.00 fee.

There will be a \$50.00 fee required of anyone taking photos within the park boundaries.

No private float craft will be allowed, only rental canoes and kayaks from federally licensed outfitters will be allowed on the river, (or parts of the river).

I have looked at the proposed plan and could see no specific mention of any of these things, yet people have claimed that NPS is already ticketing people for violations. Is there are truth whatsoever to these allegations?

**Correspondence:** To Whom It May Concern,

I put my personal information on this so feel free to contact me if you would like to discuss my comments. For the past five years I have worked at the Cross Country Trail Ride. I have met folks from all walks of life, they come from as far away as Colorado and some maybe further, to enjoy camping, horseback riding, canoeing, and tubing on the Jack's Fork River, and that is family entertainment at its finest. These folks don't sit at home using a computer, or playing video games like the rest of America. They enjoy getting out and enjoying the original social networking from years past. What you are planning to do is going to seriously impact a lot more folks than you realize. This from what I understand would basically put an end to this place. You do realize that your decisions affect not only local residents, but also folks from other parts of the country, have you made all of this information available to them as well? I imagine you have not contacted those Americans in other states to let them know what you are planning to do with their vacation spot. They will hear about it after the fact. As it states on "<http://www.nps.gov/ozar/parkmgmt/general-management-plan-information.htm>" and I quote, "The public has had many questions concerning park operations in the interim until the new General Management Plan is approved." That pretty much lets me know that you have already made your decision, and no matter what people, residents, or otherwise have to say, your plan will be approved. But I also think it was nice of you to put up a website to let us voice our opinions. It will be much appreciated after your plan is approved, no matter what the people have to say about it. This decision needs to be left up to the state, who would have a much better track record of keeping up with

things in its own back yard. Why does the Federal Government need to be involved in yet something else that takes away the peoples' rights to enjoy their own little piece of happiness. You are making decisions about this based on what you see on a piece of paper. I invite you to come and see for yourselves, just what your decision will be impacting. Meet the people face to face and if you have a conscience, you will not do this. Your decisions will be affecting livelihoods of the people that have built their lives in this area. I personally know some of these folks. They have been coming here for years, some up to 30 to 50 years, making a lifelong family tradition of coming from other states to enjoy this area of Missouri. Why anyone would want to ruin this tradition of family values is beyond me. I sincerely hope that you will reconsider what you are planning to do to this area. These are the folks I believe should decide, the ones that live there, and others that visit there on a regular basis, not you, you neither live there or visit there ever, so why do you get to decide what is done with their land? This isn't right. That's just my two cents on the matter. This is just another opinion that either won't be read, or will be discarded as soon as it is read. I thank you for the opportunity to voice my opinion nonetheless.

John Colbert

**Correspondence:** I have seen where the House of Rep. in Mo. HCR8 is being submitted to encourage the park service to use the no action plan. Every elected official I have talked to is for the no action plan. I have thought a lot about this and missed a lot of sleep trying to make some sense of the various plans and I can not. If I could never ride a horse again I would still be for the no action plan. As far as the permit system and user fee I think I already pay for it in taxes. I have rode the existing trails looking for damage and manure and I find very little. Whispering Pines horse camp will go out of business if trails are closed. Not only do we camp at horse camps but also always canoe. I am a Viet Nam veteran and am sad to see where the park service does not want me to be on a so called social trail and visit with friends and make new ones. The word social trails is thrown around very loosely in the report. I also believe that closing roads would create safety concerns for all users. This riverway is for all of us to use. I am very happy to see canoes and boats on the river because life is short and we should all enjoy. Special interest groups always stir the pot but we locals as we are called do not try and force our way on them in their back yard.

**Correspondence:** To all whom it may concern:

As a life long resident of the great state of Missouri I myself, my family as well as many of my friends regularly enjoy the Beauty and freedom that is The Ozark National Scenic Riverways. We regularly enjoy Camping, riding horses, and Jet Boating on and near the Jacks Fork and the Current Rivers. I strongly oppose the proposal of an additional unnecessary Management plan and view it as another bureaucratic intrusion of a God Given Heritage that would further limit the traditional forms of recreation that the local residents of this region have enjoyed for generations.

There for I would like to register my opinion that the Management plan for the Ozark National Scenic Riverways should be at least left as it is.

Sincerely,

Lonnie Scott  
Sullivan MO.

**Correspondence:** Thank you, in advance, for considering my comments. I support Alternative A of the Draft EIS.

In light of increasing population, ever-encroaching development, competition for resources, expanding noise levels, and diminishing integrity of natural values generally, it is essential to protect and restore the outstanding characteristics of the Ozark National Scenic Riverways. Alternative A provides our citizens with a place of refuge and respite from the pressures of modern life without compromising the resource itself. The State contains many other resources and locations that allow ample access to a broad range of commercial uses and recreational activities. Alternative A offers the best hope that successive generations will be able to enjoy the tranquility and beauty of this natural resource.

Sincerely submitted.

<b>Correspondence ID:</b>	2149	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,05,2014 16:23:31				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	My family business is located on Current River in Van Buren, Missouri and we operate the following National Park Concessions on the Lower Current River section:				

The Landing Canoe Rental - OZAR024  
Hawthorne Canoe Rental - OZAR023  
Big Spring Canoe Rental - OZAR025  
Current River Outfitters - OZAR010  
Current River Outfitters (Tubes) - OZAR049

These five concessions are responsible for approximately 95% onon-motorized watercraft rentals for the Lower Current River each year since the only other concession for the Lower Current River is a 75 Tube only concession. This proposed General Management Plan will have a profound effect on these concessions as it is currently written. Below are the statements and positions of this proposed GMP that are of great concern to this concessioner as to the management direction for the Lower Current River. This concessioners comments follow each numbered statement.

1. The 1989 plan developed standards for the maximum number of canoes by river section and provided for monitoring and review of concession operations in order to achieve canoe standards. PAGE 96

Concessioner Comment: This statement is specifically limited to canoes and review of concession operations regarding canoes.

2. To better reflect changing watercraft use patterns on the riverways, particularly the greater diversity of watercraft, this general management plan applies the standards set in the 1989 plan for canoes to include all watercraft (motorized and non-motorized) PAGE 96

Concessioner Comment: It is agreed that there are different watercraft use patterns now than there were prior to the 1989 plan implementation, however I take issue of applying the 1989 standards for canoes to all watercraft. I think that this is a great leap to conclusion without further studies of watercraft other than canoes. This plan would be better served to set forth additional studies in the future for watercraft other than canoes, and to establish individual standards for motorized and non-motorized watercraft instead of arbitrarily placing them within the 1989 canoe standards.

3. Visitor counts and interviews were conducted at five river access points in 1998 and 2001. These points included Watercress, Van Buren Bridge, Big Spring canoe access, Big Spring boat access, and Cataract Landing. BROWN AND CHILMAN 1998 AND 2001 STUDIES PAGE 204

Concessioner Comment: The 1998 and 2001 studies did not assess Chilton Creek (Waymeyer) access and two of the accesses studied (Watercress and Van Buren Bridge) are not located within the park service boundaries. Following my comment for number two above in regard to further studies in the future, better results would surely be obtained if the Chilton Creek access would be placed in the study if density guidelines are to be set for this access down to

Big Spring. Also it is apparent to this concessioner that studies conducted at points outside the NPS boundaries should not be used to draw conclusions that would lead to density guidelines.

4. The areas of the greatest activity for non-motorized river users included Akers Ferry, Cedargrove, and Pulltite. Waymeyer is also a busy location for non-motorized watercraft users, but this is not reflected in table 20 because visitors who launched at Waymeyer ended their trip in the gap outside the NPS Riverways boundary, typically in the Town of Van Buren (Park 2011). PARK STUDIES IN 2010 PAGE 204

Concessioner Comment: This study by Park in 2010 is indicated in this plan to be a study that substantiated the 1998 and 2001 studies and thereby concludes that the Chilton Creek to Big Spring river section use levels have dramatically increased. This study not only indicates that Akers Ferry, Cedargrove and Pulltite access points have the greatest activity for non-motorized river users, but again does not include Chilton Creek (Waymeyer) in the study. How can this study that eliminates the Chilton Creek (Waymeyer) access for study substantiate the 1998 and 2001 studies that also eliminated the Chilton Creek access in their study? I have a great deal of trouble in accepting a study that specifically states that three other access points on the river have greater activity of river users than Chilton Creek (Waymeyer) and the three unsubstantiated studies taken together leads to the conclusion in number five below.

5. Use patterns at the NPS Riverways have changed over the past 30 years, but overall use levels have not varied dramatically, with the exception of the section of river from Chilton Creek to park unit boundary north of Watercress. Most of the current watercraft use levels (such as for canoes, kayaks, motorboats, and tubes) for the majority of river sections are within the use levels established by the 1989 plan (Park 2011). The Chilton Creek to Watercress section (within park unit boundaries) is above the use levels established in the 1989 plan. Other exceptions exist along the riverways, but are few and occur only on weekends during peak season. PAGE 97

Concessioner Comment: This statement totally excludes all river sections except the Chilton Creek to park unit boundary north of Watercress. I cannot accept that the 1998, 2001 and 2010 studies conclude that this section of the river is above the use levels established in the 1989 plan when the CHILTON CREEK ACCESS IS NOT INCLUDED IN ANY OF THE STUDIES. This statement also includes an admission that Other exceptions exist along the riverways, but are few and occur only on weekends during peak season. This admission excludes any other section of the river with the excuse that the crowding only occurs on weekends during peak season. This is a contradictory statement when anyone who is at all familiar with the Chilton Creek to Watercress river section knows that any crowding that occurs will be on weekends during peak season.

Concessioners are required to submit Monthly Visitation Reports on the 25th day of each month based on daily river counts of non-motorized vessels that are rented by the concessioner. In order to submit these reports in an accurate and timely fashion, this concessioner keeps an excel spreadsheet that reflects actual daily rentals taken from the concessioners individual rental agreements. For the past four years the daily use averages for fourteen weeks are as follows:

SATURDAYS - 1,123 VESSELS PER SATURDAY RENTED FOR CHILTON CREEK TO VAN BUREN BRIDGE.

SUNDAYS THROUGH FRIDAYS - 133 VESSELS PER DAY RENTED FOR THESE SIX DAYS.

The concessioners actual physical rental agreement cards that are in the possession of OSNR concession officials can verify this data. I maintain from this actual data that any crowding issues for the Chilton Creek to NPS boundary north of Watercress would be strictly limited to Saturdays in Peak Season. Currently and in the past this concessioner has offered weekday discounts in order to try to lessen the weekend impact, as well as other incentives. The most important question then follows:

Why is this management plan not using actual concessioner statistics reported to the Park Service on a regular basis that are available to the people formulating the plan instead of making assumptions based on suspect studies and interviews?

6. The only changes in application of the standards set in the 1989 use management plan is to apply the standards to

all watercraft and to amend the direction for the river section from Chilton Creek to the park unit boundary north of Watercress. PAGE 97

Concessioner Comment: So from a combination of the above mentioned studies and the inclusion of all watercraft into the 1989 canoe use standards the only changes that are specifically implied in this plan is in number six above. As stated before I believe this to be a great leap to a conclusion based on no established substantive information. Instead of making that statement part of this plan, I believe further studies of specific watercraft at specific times on this section of the river are needed. It is apparent in this plan that the Chilton Creek to Big Spring river section has been specified for guidelines based on conclusions with no substantive facts established from suspect study results.

Again: Why is this management plan not using actual concessioner statistics reported to the Park Service on a regular basis that are available to the people formulating the plan instead of making assumptions based on suspect studies and interviews?

7. The 1989 plan identified this section (referring to Chilton Creek to Watercress) as medium use. This general management plan would reassign this section of river from a medium use to high use section, as defined in the 1989 plan. That plan defined high use zones as social park settings with moderate to high development and visitation and allowed up to 70 canoes per mile. Converting this section of river to a high use zone is more consistent with the desired conditions established for this area in the general management plan. This standard will apply to all watercraft and will allow for a higher level of use than the 1989 plan, but is below current use levels in this section of river. This reduction in use&&&&. PAGE 97

Concessioner Comment: It is evident that this plan based on unsubstantiated data is singling out Chilton Creek to Big Spring river section for use reassignment.

In doing so it is actually reducing river use even though it is reassigning this section to a high use zone. I maintain that there can be no conclusions for action regarding this section of the river without further study and deliberation as to specific watercraft use and timing of this river section use. This brings us to number eight below, which outlines reduction possibilities.

8. The following watercraft reduction possibilities are further outlined on PAGE 97 to include:

Assigning a percentage to the amount of time the river section will need to be within standard.

An education outreach program to encourage voluntary dispersal of use on the rivers to reduce the number of watercraft in certain popular areas.

If needed watercraft permits may also be required.

Also current concessioner contracts or operating plans may be evaluated and modified to better distribute and manage the number of watercraft, both across times of day and by physical location.

Concessioner Comment: I question the legality of modifying concession contracts. These are 10-year contracts between concessioners and the National Park Service. The contracts are based on specific watercraft allotments and the use of these watercraft. Any modification of that would severely impact a concessioners day-to-day operation and cause severe economic hardship on that concessioners business, and would be construed as tortuous interference of a contract. That possibility for watercraft reduction should absolutely not be implemented into this plan, and that wording should be entirely removed from the final plan.

9. Most visitors to the NPS Riverways rent their non-motorized watercraft from NPS Riverways-approved concessioners and then return them at the end of their trip. However, over the past 20 years, the number of non-motorized river users bringing their own equipment has steadily increased. If the number of private non-motorized users on the river continues to increase at a similar rate, issues related to crowding and conflicts would also likely increase. PAGE 96

Many of the visitors to the NPS Riverways use concessioner services to access the river. However, there appears to be an increase in the number of river users who are bypassing the concessioners. PAGE 202

Concessioner Comment: As stated before, concession contracts are based on specific watercraft allotments and the use of these watercraft. These watercraft allotments have not changed since the establishment of the concessions in Ozark National Scenic Riverways, ie, the watercraft allotments for the five concessions that we operate have not changed since the inception of these contracts. Concessioners are bound by the allotments and the use thereof, so it follows that a concessioner cannot exceed these allotments of watercraft to be rented for river use. This would be a significant violation of the contracts. One would have to conclude from the above statements that if concession users of watercraft cannot increase, then if there is crowding on weekends during peak floating season it would have to be a result of outside equipment being brought in for river use by private individuals. The two statements above specifically verify this.

10. Concession drop-off and pickup locations for river users utilizing non-motorized watercraft would be redistributed to reduce peak-season crowding. This would require closure and restoration of about 20 access points and the careful design and opening of 20 new designated access points. PAGE 69

Concessioner Comment: A concessioner use only launch access could be constructed above the Waymeyer access and would not only relieve the access point crowding but would also spread the density of floaters over a larger section of the river. This concessioner business has been operating a floating operation on Current River since 1979 and became an NPS Concessioner in 1984. This concessioner business has a sound understanding of watercraft river use on the Lower Current River due to the 34 years of float business operations. This concession has had a good working relationship with Ozark National Scenic Riverways and has always maintained satisfactory annual evaluations for all of the years as a concessioner. Since we are responsible for approximately 95% of the watercraft rental business in the Chilton Creek to Big Spring river section, it would only make sense that in regard to non-motorized river use this concessioner should have a great deal of input as to how better reach the river use goals of Ozark National Scenic Riverways in this section of Current River. I stand ready to work with current and future park administration to reach these river use goals. Because of our experience in this float business on this section of Current River I believe we can be exceptionally helpful to park administration if they will consider some of our proposals for river use disbursement on this river section for the future.

CONCLUSION: Operating five of the six concession contracts on the Lower Current River and being constrained to the specific use of the Waymeyer to Big Spring river section, it is apparent that this plan will have a profound impact to our concession operations in this area. With this section of the river being singled out in this plan for guidelines, we believe that further studies using actual data of specific non-motorized watercraft use should be undertaken. Our 35 years of experience in providing floating opportunities on this river section make us very qualified to partner with the administration of Ozark National Scenic Riverways to better establish non-motorized watercraft use guidelines. This plan should allow for that partnership to prosper and provide an avenue for discussions and implementation of guidelines that would be beneficial to both NPS and the Lower Current River concessioners.

Again for Emphasis: Why is this management plan not using actual concessioner statistics reported to the Park Service on a regular basis that are available to the people formulating the plan instead of making assumptions based on suspect studies and interviews?

**Correspondence:** I am 86 years old. I was raised two and a half miles from the upper Jacks Fork river. My Dad and I would walk to the river and spend the day or night fishing. We would clean and wrap the fish in a wet gunny sack and carry them home for a great meal. Sometimes the family would take the team and wagon to the Granny Hole on the North Prong to spend the night camping and fishing.

My Dad went from door to door asking people to write their congressman to support the creation of the Riverways back in the 1960's.

I started floating on the lower Jacks Fork and on the Current river in the late fifties. There were few canoes, mostly john boats. Some had small motors. It was beautiful and so quiet.

I am pleased that people can hunt and gig fish. I enjoy watching the gigging when we are camped on the river. It takes me many years back.

I have been retired for thirty years. My wife, friends and I go floating several times each year. We particularly enjoy going before Memorial day and after Labor day.

I do not like the jet boats running full speed up and down the river. They are too loud and waves erode the banks and are destroying invertebrate habitat when they leave marks in the shallows.

The Riverways was created by compromising on many points. I believe Plan B does this and although it does not cover all the things that I would like done it is a (fair for all plan).

Thank you for your good work.

Jack ( John ) Toll

**Correspondence:** The plan that I like the most is Alternative B (the NPS preferred), although I do not agree with making a learning center at Powder Mill. The learning center should be somewhere like Round Spring or Alley - a place that gets more visitation. Powder Mill is a ways out of the way for most visitors and the visitor contact station/ranger station at Powder Mill has been closed for a while because it didn't get enough use. Opening a learning center there won't change the visitation at that site all that much.

I do not like Alternative A - the change nothing alternative. I grew up in the Ozarks and very much appreciate the park and don't want the park to be damaged because nothing was done to rehabilitate areas of high impact. That is also why I don't really like Alternative C either. I don't think it's right that some areas are going to be 'written off' because they have higher use than other areas.

I believe the Alternative B is the best choice because it best falls in line with the Organic Act and with the Park Service's goals of making park sites open for the enjoyment of the public while protecting and preserving those sites for the enjoyment and education of future generations.

**Correspondence:** After looking at all the plans I feel that I must support the no action plan. Any other plan could have adverse effect our local economy. I have spent several dollars over many years enjoying the river. The area involved in the plans have very low income and if you reduce where canoes can be put in or where people can camp you are inviting trouble and also people will not come back. The horse trails are very nice and I see very limited damage. Closure could also make for reduced income to the surrounding towns.

**Correspondence:** Take no action on any of the plans. The Rivers are a major economic boost for the tourism of Missouri. Out of state interests are behind changing the management plan to exclude or limit the use of said rivers and their banks, including camping, boating, fishing, hiking, horse trails, etc. The Current River Basin and Jacks Fork Rivers of Missouri are not in danger like some extremist environmental groups would lead you to believe. The current use of the river for recreation is already a good balance. So take no action on any new plans. Thank you!

**Correspondence:** I would be in favor of the NPS favored "Alternative B'. I have spent time in the Riverways for more than 30 years. I have had the pleasure of getting to know both locals and people from across the country who serve with the NPS. I have become disheartened in recent years with the attitude of some local groups who see the NPS as the enemy and see the park as a resource to be strip mined. I'm afraid a lot of these folks don't care what happens to or in the park as long as they can make a buck until there is nothing left. The park was set aside for all Americans, not as the personal money making resource of a few. I think "Alternative B' is a good compromise and addresses concerns held by all.

**Correspondence:** I appreciate the opportunity to comment on the ONSR draft General Management Plan. I have been a resident of the Ozarks for 34 years and have met with every ONSR manager since 1979. At one time the Eleven Point River was part of my responsibility and many of the issues facing the ONSR were common concerns.

I firmly believe Alternative B would go a long way toward correcting many of the things that have befallen the Riverways. I think every park service employee and manager I have talked with through the years would also express this position, although many could not take the required actions. Alternative B would take the actions needed to protect the resources and have minimum impact on the local citizens.

**Correspondence:** It was my pleasure, as a young man, to fish both the Current and Jacks Fork rivers. I moved to the Ozarks over 40 years ago and took a job on Pioneer Forest, now owned by the LAD Foundation. I have spent many enjoyable days on the Riverways. During that time I have been disturbed by the gradual but steady increase in inappropriate use. There has been a substantial increase of vehicular traffic on unauthorized roads and horse riding on undesignated trails, both of which have caused steady degradation of the lands in the river corridor. There has also been a continual loss of funding and reduction of staff, which makes it difficult to properly manage the Riverways.

I firmly believe that these problems can best be addressed with Alternative B, together with support for additional funding by the regional and national NPS offices.

**Correspondence:** I appreciate the thought that has gone into developing this plan. As an avid user of National Parks all around the country, I prefer Alternative A.

This park is unique in protecting a river. I have canoed the river and visited the springs, and found them to be among the most beautiful that I've seen in this country. Like other beautiful areas, we need to plan for centuries of use. Alternative A seeks to stop illegal trails and use of the parks (which should be non-controversial) and make the best effort to preserve the natural beauty for the benefit of every U.S. citizen, for whom this park was created. Any steps not taken now will require more and harder work later. Let's not create bigger hurdles down the road; we should do the right thing now.

**Correspondence:** The proposed Alternative B plan is a concern to us personally. In our opinion the plan would create a hardship to the economy and citizens of our area. Due to the harsh restrictions in Alternative B, some implications we perceive include the impact on local businesses such as grocery stores, restaurants, gas stations, tire repair shops, tourist attractions such as canoe rentals, fishing supply shops, hotels, motels, trail rides, and camp grounds due to the lack of tourists being drawn to our area. Our area is limited due to lower populations and the amount of land owned by the State of Missouri and timber companies.

First of all, our business, Big Creek Trail Ride, is a four generation family owned and operated establishment. A major impact to our personal business is the concern of eliminating some of the horse trails on Current River. Not knowing where the 65 miles of horse trails will be eliminated is a concern to our financial welfare and stability. We have invested 16 years in building a business to accomodate tourists in and around the state of Missouri to come and ride their horses in the beauty of the Ozarks. Our business generates a considerable amount of sales tax for the state of Missouri. In addition, local businesses benefit from our customers by serving their needs during the week long stay at Big Creek Trail Ride.

Secondly, our family heritage and traditions of fishing, gigging, and boating will be ceased by the restrictions of no motorboats from Cedar Grove to Pulltite. We would be comfortable with a seasonal usage of allowing motorboats on Current River from Labor Day Weekend to Memorial Day. This would allow a season for canoeists and floaters to be on the river in the absence of motorboats.

Thirdly, we foresee a problem of limiting the number of accesses on Current River. The limitation will create more congestion in the access areas. We propose that the current accesses be patrolled more closely by law enforcement and stiff fines.

Lastly, it is our wish that the NPS work more closely with area groups, citizens, & businesses. Businesses and local individuals are eager to donate personal time to work with the NPS on projects such as building & maintaining trails, hitching rails, trash and river cleanup, and the restoration of historical sites just to name a few.

In closing, it is our wish that this ordeal can be rectified to benefit Current River, the local citizens and local business owners in this area.

**Correspondence:** I am in favor of no change on the Current River. I have spent countless time up and down the banks of the Current River in all seasons by all means of transportation. The areas in the proposed change do not need any more regulation. In my 25 years of experience on the river, the local residents have dedicated their time to keep the river clean and useable for others to enjoy. Residents in the proposed area of change would find benefits from harming the river with pollutants and destruction of its banks. Instead residents spend time picking up litter and cleaning up the river from pieces left behind by the many visitors Current River encounters so future generations can continue to enjoy the river. My self, along with many other boaters and local river-goers, have used our means to help rescue visitors from drowning while floating on the Current River on a weekly basis. If research shows that local residents are harming the river I would recommend taking a look at the harm that comes from the thousands of tourist that float the river on a weekend. The majority of tourist are careless in what effect they have on the river that they visit once a year. Regulating river access points and turning driving trails into hiking only areas is taking away from local residents who have enjoyed this land for generations. I am young and able to hike today but I do plan on spending my lifetime in Carter County. There will come a day when my parents, me, my future generations will not be physically able to access the river by any other form than boat or vehicle. I find it hard to believe that it is possible that my hometown could soon be an area that takes away from those who have spent their years contributing to the area finically and physically. I hope to see many more local generations enjoy the Current River with the freedom that I have been able to enjoy it with in my lifetime. I believe in no further change in regulations on the Current River.

**Correspondence:** I have been kayaking on the Current and Jacks Fork rivers over the last few years, and it is the stunning beauty, the clean water, and chance to camp in this environment that brings me back. However, I have seen signs of overuse and degradation. Last year I saw a deeply incised trail that had been caused by horses using a trail near the river. I have often seen horses crossing the river as well. Horses are heavy animals with sharp destructive hooves and they can't help the destruction they cause. And of course there is the e. coli pollution they leave behind as well. Although I have not seen ATVs, I have heard them and it totally destroys one of the best reasons for frequenting these parks - PEACE. There's no way to feel peaceful with the racket they create.

It's a good thing you are planning to improve management of these parks. I hope you will go for the most protective option - Alternative A. If you allow continued overuse and abuse, the very reasons these areas are so attractive will be lost.

Thanks,  
Susan

**Correspondence:** Greetings,

We would like to express our support for Alternative B. Over the past 25 years, my wife and I, along with friends have spent many days canoeing on the Current and Jacks Fork rivers and we are familiar with these areas and the

typical use patterns. We have been on the river during all seasons and have spent many nights camped on gravel bars enjoying the solitude and natural beauty. Some of our fondest trips occur when we are fortunate enough to find ourselves alone on the river and we treasure these moments. Many times we plan our trips to avoid crowds and active boaters so that we can have a more relaxing experience. It would be a shame to allow these unique and fragile resources to become overused and thus degraded; at some point they would become nothing like the beautiful, natural wonders they currently are.

Some trips have been among numerous other boaters including canoes and motorboats and when each of these groups treats each other with respect, the experience can be pleasant. Other times the number of boaters or their raucous behavior distracts from our enjoyment. This is true of those canoeists that treat the river like a party zone and also motorboaters whose driving habits can be dangerous. We have witnessed motorboat users driving past canoeists without lowering their wakes causing canoes to become unstable. I am aware that in some places in the river the boats must maintain enough speed to stay 'on plane' to avoid engine damage. If a motorboat suddenly encounters a canoeist on a curve, this could lead to a very dangerous collision. I would suggest that areas of the river that are not deep enough for a motorboat to safely navigate at low speed should be areas that are off limits to those kinds of boats. I am not suggesting a total ban on motorized boats, just a responsible recognition that there are some reaches where they should not be driven.

We support the wise stewardship of this area and feel that limiting some types of use is important to maintain the pristine character of the resource. ONSR is a resource that should be preserved for continued use and managed to ensure that detrimental practices do not occur. Thank you for undertaking this effort and presenting the results of your study to the public. We hope that this process is successful in finding a balance that will be acceptable to all concerned.

Regards,

Bill and Barbara Winston

**Correspondence:** I would like to let you know that as a horse owner and rider I find that many parks are squeezing out the horseback rider. I understand managing trails is a difficult thing and closing some trails have to happen from time to time. I really would like to see the new alternate trails opened before closing any existing trails. I want to continue riding in the wonderful state of Missouri for many years to come. Please consider my proposal of adding trails before you take away any.  
Thank you for your time.  
Cheryl

**Correspondence:** I am supportive of your Alternative B for the Ozark National Scenic Riverways. I think it will be a good balance and will improve the park in many ways. It's been a few years since I've been in that area, but I had an opportunity to study there for one week. We toured many of the amazing features of area around the Current River. This is an amazing treasure that we have in our state, in our country, and it needs to be managed well. I'm happy to see that more opportunities for people to learn about the features is planned, as well as cutting back on so many roads, and providing better access points. Anything that can be done to minimize the impact of the horse traffic will also be an improvement.

Thank you for your part in putting the options together for better stewardship for our ONSR gem.

Sincerely,  
Karen B. Meyer

**Correspondence:** I recently traveled from Orlando, FL to see the Jacks Fork and Current Rivers. It was my first visit to the Rivers, and immediately I recognized the importance and benefit of their protection. I have never seen rivers as clear and clean as the Jacks Fork and Current. In my opinion, the quality of the water and surrounding environment is the most important feature of the Ozark National Scenic Riverways. Ten minutes after I arrived to Big Spring, I sighted three bald eagles and multiple deer. My expectations were met when I visited the Riverways, and I want to ensure the area is protected for generations to come.

I support Alternative A, because it provides greater opportunities for traditional, nonmechanized forms of recreation and visitor experiences that are quieter, less crowded, and slower paced. (Executive Summary of Alternative A.) I value preservation and setting aside a significant portion of the land as primitive zone and zoning a significant section of the river as nonmotorized can achieve it. Alternative A provides that [v]isitors would have opportunities to float secluded stretches of the river where they would not have to experience the sights and sounds of motorized boats or vehicles. The seclusion and quiet are the aspects of floating a river that I value and are the aspects that would encourage me to return. Motorboats on the river are disruptive as they interfere with my aesthetic enjoyment of the river. I understand they are a method of recreation that many enjoy, but I think the approved motorized zoning should be limited. Alternative A limits motors to 40 horsepower (and enforces existing regulations), but my primary concern is the percentage of the river that is designated as nonmotorized. Having 51% of the river-based zone set aside as nonmotorized provides the experience I seek out when choosing a park to visit.

Additionally, I prefer Alternative A because it sets aside 26.8% of the land as primitive. In Alternative A, the location of primitive and natural zoning would increase the amount of hiking trails. Nearly 15 miles of roads in the primitive zone would be removed and replaced with hiking trails. Setting aside additional land as primitive, restoring natural conditions of roads, and adding hiking trails increases the likelihood that many visitors will experience the quiet and solitude they seek when visiting the Riverways.

In regards to the NPS roads and river access points, I think it is important at the NPS seek[s] to establish a partnership with the counties regarding road management, including closures. Creating opportunities for local counties to participate in this management process will likely increase the probability of compliance of accessing the river at designated sites. I was disappointed when I saw tracks from off-road vehicles near the banks of the river and in flood-plain areas. Although the tracks may have been caused by recreational off-roading, they also may have been caused from launching a boat from the banks. It is important that there are enough access points to the river to ensure that visitors have the ability to access the river without damaging the surrounding environment. I prefer Alternative B in this regard, because it provides additional official access sites. I believe this will limit unauthorized access and continue to protect the Rivers.

I will travel from Florida to the Ozark National Scenic Riverways, because the water is pristine and it provides the opportunity to canoe in a peaceful setting. Just as important as the quality of the water is the protection of the surrounding environment. There are many parks and places of recreation, but few are protected in the manner such as the Ozark National Scenic Riverways. This is a precious resource protected for the public. When I return to the Riverways, I hope to find it in even better condition than when I visited it this January. Thank you for all you do to protect the Ozark National Scenic Riverways. It is a gift to all!

Samantha Spencer

**Correspondence:** Hello,

I am a long time user of the Missouri Rivers. I do not feel that the word user is a bad term either. I take care of the rivers I float and believe that is the Norm for most that are on them. They were put there by a higher form, or at least not by any person who might feel that putting restrictions on them is there job. So I am writing to say that I do not believe anyone has the right nor the reason to take away any freedom that has to do with them and that, that just makes sense.

The rivers of Missouri are one of the only resources it has to offer. There is absolutely nothing that the Government can do that we, the collectively smart and intelligent PEOPLE can't do in order to preserve them. When I was a little girl I didn't get to spend time with my father because he and my mother were divorced, but prior to the divorce he constantly kept us occupied on the lakes and streams in the area. Those are the best memories most young people share around this area. I took to the streams and have enjoyed sharing my love for them with friends from that point forward. I actively kayak them on a regular basis to this day and get everyone I know on them with me.

There are plenty of ways to reinforce taking care of them and as far as "Regulations" in order to do that, I as any responsible party am a willing participator and promoter of those Regulations. However, that being said, I am NOT in agreement with any " RESTRICTIONS " or taking away of freedoms that have to do with the Rivers, the way we use them or the Trails and they lack thereof and the way they are used. This land is the land that it has been for years, and it has been fine the way it is and continues to be just fine.

Plainly put there is NO reason to take away trails or the ability to use the river the way it has been used for years. If there are certain Regulations that can be put into place to preserve the Rivers and Trails in the area then those should be studied and then used accordingly. However, there is NO REASON for absolute control of these areas to be handed over to the NATIONAL GOVERNMENT.

Kimberly Raney

**Correspondence:** Thank you for the opportunity to give feedback on the Ozark National Scenic Riverways. Alternative B seems like the best compromise for the protection of the land and water and allowing for uses by citizens. In general, I am concerned about the use of motorized boats, and also of motorized vehicles on the land. Motorized vehicles and horses are very hard on the streambanks and other sensitive areas, which need to be protected if we are to be able to share the beauty of natural Missouri with future generations. I was glad to see more opportunities for visitors to learn about the park's natural and cultural resources.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our

citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** The proposals limit recreational horse trails based on the fallacy that horses are bad for the environment. ATVs in the forest are worse for the environment. Horse back groups contribute more to the maintenance and clean up of trails than many other groups. The USFS is already trying to limit use of trails for horse back riders, citing lack of funds and the erosion they supposedly cause. Yet they won't accept volunteer labor for maintenance.

There is an attitude in the USFS (at least in the Ozarks) that the public is destructive and doesn't know how to take care of the forests. This is not correct-it is the USFS that has no idea how to take care of the forests. Many of the rangers don't even know the trails that they are responsible for and have to ask locals for information on them.

Limiting horse back riding to a smaller area and fewer trails is detrimental to those trails due to the higher use they will have. With the lack of maintenance, they become erosion-sensitive and often trenched. This is not only detrimental to the land, it is also detrimental to the horses and hikers. Many of the designated trails do not even meet the standards of the Trail Management Plan, while undesignated trails exceed them. Those trails are often old roadways that have better footing and are wider, which decreases the sensitivity to erosion.

Caving in to pressure from environmental groups is unjustified and unjustifiable. They do not believe that anyone "loves the forest as much as we do" and arrogantly try to demand restrictions and limitations. They are about as wrong as they can get! They aren't out here picking up the trash along the trails, or trying to repair an eroded piece of trail.

Please do not make any changes that limit or restrict trails for horse back use. If anything, start designating more trails to take the pressure off those commonly used.

**Received:** Feb,06,2014 00:00:00  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and

enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:** On behalf of the Board of Directors and the membership of Ozark Greenways Inc., I wish to acknowledge the efforts of the National Park Service for their openness and initiative in reviewing the current conditions within the Ozark National Scenic Riverways. A review and course change in the present General Management Plan is long overdue.

Having reviewed the options put fourth it is our conclusion that actions within the proposed "Plan B" would appear to best serve the rivers and their resources at this time. Plan-B appears to strike a balance for most the present concerns raised.

We however encourage the National Park Service to continue their programs of environmental and stewardship education within the Riverways. Additionally we encourage the National Park Service to continue pursuing the original intent of the ONSR of protecting the resources as an opportunity to explore, participate in and experience a true wilderness environment thus gaining appreciation or our country's natural resources.

**Correspondence:** I disagree with the proposed changes and believe the No-Action Plan is the best for the local economy. Tourism as it relates to these rivers, floating and fishing, have been a major source of income for the local economy since long before the Park Service has managed portions of the riverways. These rivers are cherished and cared for by our communities.

**Correspondence:** Thank you for the opportunity to make a comment regarding the Ozark National Scenic Riverways. I have been an environmental science educator for 30 years and a paddler of the Ozarks for nearly 40 years, so I've observed changes in the Park. The number one goal of any management plan should be resource protection; this does not seem to be the case with illegal ATV use, the huge growth in equestrian use along the river corridor (especially near Eminence), and the number of illegal vehicle accesses along the river. I'm aware that the NPS is not getting the resources it needs to address these problems. I think Plan B is the best plan for the future of the Park as it attempts to balance all users concerns and addresses protection of the natural resources. Thank you.

**Correspondence:** Please consider choosing option B. This is a wonderful area, and needs to be protected. If the jet boats need water, they should go to the lakes that were made for power boat recreation. Or they could stay on rivers big enough to handle barge traffic, such as the Mississippi or the Missouri Rivers. Thank you.

**Correspondence:** These rivers and the lands adjoining have been cherished and cared for since the first settlers came to the Ozarks. The rivers were pristine before NPS started acquiring and managing lands surrounding the rivers. The residents depend on these resources for a major part of the local economy and for that reason I believe the NO-ACTION PLAN is appropriate.

**Correspondence:** On Behalf of the Board of Directors and the membership of the James River Basin Partnership, I commend the efforts of the National Park Service in providing a transparent and open review of the proposed changes in the General Management Plan for the Ozark National Scenic Riverway. This update is needed to insure National Park Service protection of this invaluable resource now and in the future.

After review of the proposed plan options we recommend the NPS implement Plan "B". Plan "B" provides a compromise approach to management of the park and offers a balanced approach to constituent concerns.

We do however, encourage the National Park Service to commit the personnel and funds needed to fully implement the revised plan. This will insure that this national treasure is available for this and future generations.

Respectfully,

Joe Pitts  
Executive Director  
James River Basin Partnership

**Correspondence:** I appreciate the National Park Service's thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless I believe Alternative B does not go far enough. After all this is a part of our National Park system and should be managed in the same nearly-pristine condition as our other National Parks. Bowing to pressure from locals because they have traditionally abused the river is not a NPS standard, nor in the interest of visitors. I recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A to close illegal roads and restore natural conditions to 50 miles of these roads; Close 65 miles of non-designated horse trails and add no new stream crossings; and disallowing vehicle access to gravel bars. I also recommend wilderness status designation for Big Spring.

Thank you for your consideration.

**Correspondence Type:** Web Form

**Correspondence:** Cultural and natural landscapes: As per the 1964 enabling legislation, Park Management is mandated to preserve, protect and manage the natural and cultural resources to the existing mid-1960's appearance and conditions. The Park should make it a priority to better maintain the historical structures, old farmsteads, scenic viewpoints and overall viewsheds. In the 1980's, the Park (for a few years) had an "Open Fields Management Plan" where fields were brushhogged, disced and native grasses sown. With prescribed burning and mechanical means, the traditionally open fields could be returned to the condition and appearance mandated in the legislation.

Roads: All Park roads, traces and accesses, whether Park-owned, county-owned or public roads, should remain open and unimpeded for all park visitor usage. This should include both motorized and non-motorized use. All secondary (non-paved gravel) roads should be maintained on a regular basis with a minimum once-per-year grading of cemetery roads, traditionally prior to Memorial Day each year. With adequate (two-wheel drive) road access, families and cemetery associations will continue to maintain the graves and cemetery grounds. When access roads are not maintained to minimum (regular grading and brush removal) standards, deteriorated conditions severely affects elderly and physically limited visitors from driving to fishing/swimming holes, hunting areas, former family farms and/or other recreation uses.

Trails: Current hiking and horse trails should remain in present locations with more emphasis by NPS and trail users on maintaining trail surfaces and erosion control. The Park should foster better relations with trail users (cooperative maintenance) and involve all users in any future planning processes. All current and traditional river crossings should remain as presently being used.

Outboard Motors: Current regulations and motor size restrictions are presently more stringent than necessary. River depth and natural obstructions have always been the self-limiting factors as to motorized watercraft. Recommend no change to present.

Cultural Interpretive Demonstrations: In addition to current cultural demonstrations, the Park should strive to re-implement the previous demonstrations of whisky making, blacksmithing and sorghum making. These traditional native activities were extremely popular with the visiting public and very educational for area school groups.

â€

Water Quality: Park management should be more pro-active in preventing the loss of streambanks, especially in developed areas of the Park. Large amounts of taxpayer monies have been invested in facilities within the river floodplain. One example (there are many) is the loss of streambank and campsites at the Alley Springs campground, due to neglect and lack of streambank stabilization. No doubt, one medium (4 to 8 foot rise) flood event per year (usually several) causes more erosion and river sedimentation than all public uses combined, each year.

Economic Impact: A very important point to consider by NPS in the planning process is the significant negative impact that Alternatives A, B and C will have on the local 6 county area. With tourism being the largest economic contributor in this area (especially Carter and Shannon counties), businesses will suffer and many jobs lost. This geographic area where ONSR is located is considered the most depressed economic area of Missouri, more jobs need to be created, not lost. Park Management needs to, through better relations and cooperation with congressional delegations, obtain an increase in base funding to better maintain Park assets and provide better quality visitor services.

I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan.

**Correspondence:** I support the No Change Option.

It is good to, once every 20 years, review our park plans to see if our plan is working. I believe what we need is greater diligence in enforcement and education concerning the existing regulations and expectations of behavior from our visitors. Your report states that overall usage of the river is about the same, that 60/40 outboard motors are legal where they now run. I see no need for new regulations or changes in the current plan. However, based on concerns voiced by the public, I see a great need for enforcement of existing fishing regulations on the Current and Jacks Fork rivers. Canoeists need to be educated about where to canoe if they want peace and quiet. People need to be educated about how to safely share these waterways whether they are in a motorized vessel or not. Each needs to respect the maneuvering limitations of the other. Most importantly, these public, recreational waterways must be a place where we can bring our children without fear of them being emotionally assaulted by drunkenness and leud behavior. These are all issues of enforcement and education and do not require new regulations.

I support the No Change Option.

Respectfully submitted by Laura Wemhoener

**Correspondence:** I'm very concerned with the management plan they are proposing to do with Current River. My Family and I have enjoyed the river for over 15 years and I can't stand the thought of that being taking away from us. I know you think and taking away the boats is going to be the best thing for the river but, I can't/won't do tubes for my kids and I because they scare me they are so dangerous with all the root wades, snakes, and all the drama that comes with floating it very unsafe. My husband and I were boating last summer and had to rescue a lady that was floating and got stuck in the root wade (over turned tree in the river) that was so big if we wouldn't have hopped out of our boat to save her she probably would not be here today there was no way she would have been able to get out alone. My children love to go on the river and go for boat ride and there is no way a family of four with coolers and all of our gear you need for boating that a 40 horse power motor would be able to get over the shoals and the shallow areas. I know that the environmentalist think that it will be ok it the best thing to do but, they must not know the river and how is works or they would not be proposing this idea. I would like to know that the people proposing this idea truly have been on this river enjoying the river with their family and not just people with nothing to do/ angry land owners that don't like to noise of the boats, but people that actually Love the river as much as the people that live in the area.

Another area of concern about this proposal is how the economy would fall apart in all the small towns surrounding the river I know between Ellington and all the way to Arkansas along the river there is so much revenue that comes from everything from gas, charcoal, tube rentals, food, ice, ect. the list is end less I know for a fact the bigger boat motors take a lot more fuel than a truck or a small motor we boat 20-25 weekends a year and we spend 200-300 dollars every weekend Just on Fuel that's A lot of revenue/ taxes that are getting funded and that's only One Family could you really imagine what's going to happen when you take ALL of that AWAY. I sure hope whoever is proposing this General Management Plan is Prepared and knows ALL the facts!!!! Please Don't take the wholesome fun that me and my family so desire after a long week WE Truly LOVE the River and we don't want to have that taken from us!

**Correspondence:** I was informed of your plan via the internet.

Since I live far from any city and have a mega-slow connection, I am unable to bring up your 10MB 534 pages.

All I want to say is that I hope, if you must allow gas-powered motors in this hallowed watershed, that you limit them to 10 Hp....and perhaps outlaw them altogether in the future.

I would be Ok with silent battery-powered motors on a small scale.

The inspirational scenic riverways experience is all about everything BUT the sound and smell of man-made gas-burning engines.

Also I'd think you could better spend your money on the park any other way than paying salaries of enforcement officials spending the day and our tax money hiding in the bushes looking for cannabis smokers. Really.

Thank you.

**Correspondence:** In reference to the General Management Plan, especially the horse trails issue, I hope the planning and development of the designated trail system will take into consideration the need of multiple trails going to the different sights and scenes contained within the park's boundaries. A major part of the equestrian experience is to be a part of the beauty and serenity of nature and not be crammed into single file lines like subways and grocery store lines. Please consider the need of several trails to make the experience more enjoyable and to make conflict less likely. Also, the impact of fewer horses on several trails will be less than all the horses on a single trail. No one wants to travel hundreds of miles to ride a white chat hard tread trail. We can stay at home and ride the roads and have that experience. To be able to have access to the river is also a big part of the Scenic Riverways experience. To put the designated trails up and away from the river defeats the whole purpose of traveling to the park in the first place. Besides, the horses need to be watered and crossing the river to reach destinations is part of the fun. There are many horse riding groups that are anxious to help maintain and keep horse trails open and the more trails available the merrier.

**Correspondence:** The proposed plan to eliminate the boat motor from the upper parts of the Current River is unnecessary and overkill. The conflict between boat operators and canoeists on the upper part of the river isn't such to justify eliminating the use of motorized boating. The horsepower restrictions already in place restrict the use of the oversized motors and the size and depth of the river itself prevents the big boats with their big motors from the upper part of the river anyway. As I get older, I don't savor the idea of trying to stay upright in a canoe, much less paddling the distance between pickup points. A leisurely ride in a john boat is a much better way to enjoy the sights along the river including the upper part. Please drop the option of eliminating all motors from the upper Current.

**Correspondence:** I support the no action plan. We should not restrict access anymore than it currently is. These water ways are an important part of Missouri's economy. I fear further restrictions will negatively effect that. I also feel all Missourians should have unrestricted access to our States water ways. What we need IMO is better enforcement of our current laws and regulations. Not more laws and regulations! I respect your concerns for the well being of our natural resources. I worry about them too and often wonder if others will enjoy them as I have in the future. I see the abuse by others, the trash and damage done by vehicles, etc... It concerns me greatly in terms of preservation. However again restricting access is not the answer to these issues. The answer lies in better law enforcement of current laws and regulation. Not in restricting access to the public from what I believe is rightfully theirs to access at free will. No one IMO should be able to tell others where they can swim, camp, float, fish, etc...

on Missouri's rivers. We should however oversee these things and enforce any laws pertaining to them such as littering, dumping, glass containers, etc... Again more law enforcement is what we need!

**Correspondence Type:** Web Form  
**Correspondence:** I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan and list several reasons and impacts below:

**Cultural and natural landscapes:** The 1964 enabling legislation for OZAR mandated and stipulated that the natural and cultural resources should be preserved, protected and managed to the existing mid-1960's appearance and conditions FOR the enjoyment of the public. The Park should make it a priority to better maintain the historical structures, old farmsteads, scenic and overall views. For several years during the 1980's, the Park had an "Open Fields Management Plan" where fields were brushhogged, disced and native grasses sown. With prescribed burning and mechanical means, the traditionally open fields could be returned to the condition and appearance mandated in the legislation. This would mitigate many negative effects done by annual river flooding as well. OZAR management has allowed overgrowth at Alley campground, historic swimming areas, picnic areas, and Alley Mill vista that do not comply with historic views and that limit visitor access and enjoyment. Tree and vegetation overgrowth has also adversely impacted visitor access at Big Spring and Round Spring developed areas within OZAR.

**Roads:** All roads, traces and accesses within OZAR should open for all park visitor usage. This should include both motorized and non-motorized use. All non-paved gravel roads should be maintained on a regular basis to allow unimpeded motorized and foot access to cemeteries, historic homesteads, fishing/swimming areas, and off-park hunting areas. OZAR was not designated as a wilderness area and there should be no efforts to change that.

**Trails:** The Park should foster better relations through cooperative maintenance with hiking and horse trail users and involve all users in any future planning processes. All current and traditional river crossings should remain open and accessible for visitor use.

**Outboard Motors:** Current regulations and motor size restrictions are presently more stringent than necessary. River depth and natural obstructions have always been the self-limiting factors as to motorized watercraft. Recommend no change to present.

**Cultural Interpretive Demonstrations:** In addition to current cultural demonstrations, the Park should strive to restore the previous extremely popular and educational native interpretive demonstrations of quilting, whiskey making, blacksmithing and sorghum making.

**Water Quality:** Park management should be more pro-active stream bank stabilization to prevent erosion and maintain pristine water quality, especially in developed areas of the Park. Large amounts of taxpayer monies have been invested in facilities within the Current and Jacks Fork rivers' floodplains. One example among many is the loss of stream bank and campsites at the Alley Springs campground, due to neglect and lack of stream bank stabilization. No doubt one medium flood event per year, and there are normally several of varying magnitudes, causes more erosion and river sedimentation than all public uses combined each year. Erosion sediment and silt have adverse effects on the wildlife in and adjacent to the rivers and contribute to negative changes in the rivers' courses.

**Economic Impact:** A very important point to consider by NPS in the planning process is the significant negative financial impact that Alternatives A, B and C will have on the local 6 county area. With tourism being the largest economic contributor in this area, specifically Carter and Shannon counties, businesses and families will suffer from loss of income and jobs. This geographic area where ONSR is located is considered the most economically depressed in Missouri. More jobs need to be created, not lost. Park Management needs to, through better relations and cooperation with congressional delegations, obtain an increase in base funding to better maintain Park assets and provide better quality visitor services.

OZAR park management must listen to and heed local residents and visitors for these individuals have the most to gain or lose by NPS decisions. External input is too often based on hearsay or quasi-environmental groups' agendas which have no basis in actual local knowledge or usage.

**Correspondence:** Take into consideration the unemployment rate in these areas and that these good country folk just as myself need the fish and game from these rivers and surrounding areas to subsidize the meat from the stores that they can no longer afford to purchase. All too often we forget that not all fishing and gigging, as well as hunting, is done for sport only. It's not always about relaxing and family outings sometimes it is all about putting food on the table to feed your family. How ironic is it that for many generations we have passed down such "knowledge nuggets" as "give a man a fish you feed him for today, teach a man to fish you feed him and his for life". Unless you close the fishing holes! Don't do that.

**Correspondence:**  
Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams, springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

**Correspondence ID:** 2223    **Project:** 15793    **Document:** 56208  
**Received:** Feb,06,2014 10:00:24

**Correspondence Type:** Web Form

**Correspondence:** Having read only the four possible management options (not the entire document), I would like to see a combination of Alternatives A and B(NPS preferred) adopted. My family and I have had the pleasure and privilege of visiting many national parks, which entails following rules and regulations to protect the park and ensure the safety of all visitors. The status quo is not acceptable for the Ozark National Scenic Riverway. Policy and management changes are needed.

While attending Wash U and for some years thereafter during the 1970's, I had the pleasure of spending countless hours floating Missouri's exceptional Ozark waterways in my spare time. As life's busy-ness took over, I had to abandon such blissful recreation for a number of years. When I was able to return - this time with my young twin sons in the mid-80's - the culture had changed measurably: large, noisy crowds of canoeists toting inner-tube shrouded coolers of beer were often clogging the way, monopolizing sand bars and typically leaving trash along the banks and in the river. In response, my family and I basically quit floating Missouri's streams - Current, Eleven Point, Jack's Fork, Huzzah, etc.

My suggestion would be to ban the use of alcohol and guns on the rivers. Enforcement will be costly; opposition to such bans will be loud and strong. As seen from the recent attempts to monopolize the parking lots at Powder Valley with trailered boats towed by pickups, opposition may be over the top in attempts to prevent changes to the unacceptable, unsustainable and unsafe status quo. Problems include: users on ATVs and horses polluting the water and disturbing the nests of fish and amphibians, and the fear of encountering property-owners or other canoeists carrying guns, but I see the primary problem as being the over-consumption of alcohol by users, which seems to have become ingrained in the floating culture.

Our NPS natural waterways are also local Missouri treasures, that should and must be preserved for environmental and legacy reasons. They must be protected from being "loved to death". In addition, we must take steps to ensure the safety of all users, particularly families with children. Individuals who live in the area likely derive a decent living from recreational opportunities along these waterways. That must be taken into account. However, in no way does it entitle them to dictate policy solely for their own enrichment.

I'd love to feel comfortable and safe enough to get back into a canoe down there again. I really miss it.

**Correspondence Type:** Web Form

**Correspondence:** I maintain a residence in Shannon County near the Upper Current River. I recreate on the river more than 100 days a year. I have seen many changes to river use over the past 30 years but ONSR management, for the most part, has tried to maintain the values and high standards expected of a national park.

I prefer Alternative B. Its focus on education and traditional recreation is a good fit for ONSR. There is a rich cultural tradition to be shared with visitors to the Riverways but it is often lost in overcrowding and commercialism.

To enhance educational and cultural opportunities, I encourage greater emphasis on nature and historic interpretation, preservation of historic structures and an investment in personnel to conduct these activities. (I also suggest that the lodge at Welch Spring either be finished or demolished, as it is an eyesore in its current condition.)

I support closure of illegally developed roads and trails. Vehicles can access the river almost everywhere, detracting from the scenic nature of the river and degrading the riparian corridor. Closure should be enforced and the landscape returned to its natural condition.

I support limiting gravel bar camping to walk-in or boat-in. Motor vehicles should be banned from gravel bars.

Horseback riding is causing severe erosion in areas such as Flying W on the Upper Current. Horseback riders should be required to stay on designated trails, and the trails should be monitored and re-routed when necessary to avoid erosion. Commercial horse operations should be regulated like canoe operations to limit overuse.

Erosion at Flying W needs to be addressed. Gravel was brought in three years ago, presumably to fix the ruts and harden the access to prevent further damage. The gravel still sits in a pile.

It is of utmost importance to monitor the fish, flora and fauna of ONSR. I support investing in positions such as water quality experts, biologists and archaeologists who can use their expertise to ensure the riverways are not irreparably damaged by development and overuse.

In the past few years, new rules and stepped-up enforcement regarding floaters' behavior on the river have vastly improved safety and visitor experiences at ONSR. Please allocate sufficient resources to continue enforcement.

Finally, I support the National Park Service's role in resource protection in the face of local political opposition. We depend on the NPS to resist calls for more development and unregulated use.

**Correspondence:** I strongly support increasing restrictions on horse use of the river valleys, especially crossings, and ORV use must be restricted to certain trails with penalties for mis-use (confiscation?) . perhaps also concessioners should be limited to some certain maximum outings per day in heavy use season to avoid the river looking and acting like a mob scene.

NPS is doing a pretty good job at managing the river otherwise.

make sure it stays pretty and clean as can be.

**Correspondence:** I would like to thank everyone involved with the very hard work it had to take to put these studies and plans together. These areas are an incredible natural resource. As a frequent visitor of these areas I see a definite need to reduce human impact as it relates to motorized anything. If you have ever floated down any of these rivers and had a john boat with a 150 hp jet fly by you going up river you will know what I am talking about ( DEA and MO dept of Conservation are some of the boats)

More managed trails, and increased facilities to handle the crowds during the peak season. I like alternate B. I think it's a good start. I feel more could be done, but it's impossible to please everyone, and this plan gets the ball rolling.

**Correspondence:** As a year round paddler of kayaks and canoes, I've paddled above the Arctic Circle in Alaska, on the Atlantic and Pacific coasts, on the waters of the Great Lakes and on many rivers and lakes across the country. I know of no river system more beautiful and unique than the Ozark National Scenic Riverways. I was introduced to it over 60 years ago as a youngster and it has made an indelible impression on me and my love for the outdoors.

As a paddler I'm interested in maintaining the very best paddling experience, outdoor experience, and river camping experience possible. I also recognize the rich land based recreation and cultural heritage this area has to offer to anyone interested in the outdoors and, in particular, this region.

I believe that, if properly implemented, Alternative B can best provide all of the above and at the same time provide an economic boost to the region.

Above all other actions, the abuse, degradation, and overuse of the riverways must be stopped. This includes

- \* removing ATV and other motorized traffic from all gravel bars and undesignated access areas,
- \* restricting horse traffic to designated trails and river crossings,
- \* restricting high performance power boat usage,
- \* and managing the sheer number of people that concessionaires place in the same sections of the river for recreation.

I commend the efforts of the National Park Service in creating this plan and look forward to its implementation.

---

**Correspondence:** I am writing as an individual citizen who has enjoyed the many benefits of the ONSR with my friends and family since visiting them as a child the year after the park was established. I enjoy camping, hiking, fishing, hunting, wildlife viewing, scenic driving, visiting historical sites, and especially canoeing and river camping on the two magnificent rivers that make up the core of the area. I have visited the ONSR scores, if not hundreds of times over the last fifty years.

I favor alternative B as my first choice because it strikes a good balance between local recreational interests and the broader state and national public and it still aims at protecting those qualities and resources that make this area so special. I would also approve alternative A if that is the direction that is finally selected, since that alternative is best in line with my personal views on how the Riverways should be managed. I strongly oppose alternative C, which takes us further away from the very qualities that make this area a national treasure.

One specific point that I would like clarified in the final document is that all gravel bars should remain open to camping for those accessing them from the river itself, or on foot via a trail. This is not made clear in the document. I am in favor of restricting vehicular access to specific gravel bars.

Thank you for the opportunity to comment.

Rick Thom

**Correspondence:** The closing of gravel bars that have been traditional camping areas, just to hide vehicles and trailers from the eyes of passing floaters, is absurd and arrogant. These areas have been used by the local population and tourist long before the park existed and the use should be promoted not restricted. Mostly these are people who live in the area that have been using the gravel bars such as "The Log Yard" for generations. Closing the gravel bars for the sensitivity of a few people is abhorrent and the closures should not be permitted.

**Correspondence:** Closing of any trails that cross the park was not the intention of the original National Scenic Riverways Easement Plan. Horse trails, ATV trails, and hiking trails can and should coexist together. Leave we the people who use these trails alone! All the horror stories of erosion, littering, and environmental damage are trumped up and not validated by proper research. The Park Service should enhance the trail systems and invite more use, instead of reducing and closing trails.

**Correspondence ID:** 2232    **Project:** 15793    **Document:** 56208  
**Received:** Feb,06,2014 00:00:00  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks

Fork Riverâ€s free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.
- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.
- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.
- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.
- Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan

Dear Superintendent Black:

It is distressing that it is necessary for me to provide comment on actions and events that should have never been allowed to occur to begin with. The Mission of the Riverways is to provide conservation, preservation and recreation of the resource in that order. I have written in the past regarding what I consider to be lax administration of the Riverways and the accompanying environmental degradation. In addition, the recreational experience has been affected by horses and powerboats to the degree where I no longer take my children to the Riverways.

I am certain that the local public outcry that there should be any kind of regulation of this public resource is uncomfortable. That park administration officials and parties interested in restoring the Riverways should be vilified in meetings by belligerent locals and opportunist politicians as has been reported by conservation organizations is unfortunate. As a national resource, it is also unfortunate that public meeting of the GMP review were limited to the local area and St. Louis; thus depriving those outside Southeast Missouri with the opportunity to contribute to the review.

My first canoe trip was on the Current River at Round Spring in the early 1960s. I was mesmerized by the experience and returned many times. Canoeing became a lifelong pursuit with family members currently owning 9

canoes and six kayaks. When my son was about 13, he was nearly run down by a powerboat above Two Rivers. As we were in a large group of boats, this had to be deliberate. Subsequently, we only paddled the upper reaches of the Current above Pulltite. On a more recent adult trip from Round Spring to Two Rivers, our party was threatened by wild horses and our campsite at Bee Bluff was made nearly unbearable by the constant drone of jet pump boats at full throttle. Nearly every gravel bar had an unattended camping trailer parked nearby (during the week before Memorial Day).

It is for these reasons that I favor Option A to return the Riverways to a state closer to that I believe was intended in the enabling legislation. No individual should be allowed convert a public resource for their private exclusive use. Unauthorized roads should be eliminated and park boundaries identified and secured. As budget cuts are a reality, these activities should take precedence over capital expenditures for Park Visitor Centers (Powder Mill was bad idea 40 years ago) or other additional development.

When I first commented on the upcoming revisions to the GMP several years ago, I read a compilation of the public input online. While there were some well-reasoned comments, there were many more "cut and paste" entries opposed to any regulation from narrow interests...particularly horse and off-road vehicle groups. I would urge that identical comments be considered as a single comment for purposes of evaluating public input. Those who lack sufficient knowledge of the issue to make an independent comment should not receive the same consideration of those who do.

Failing to take action on the GMP would be as negligent as the previous management that allowed these abuses to occur. In addition, failing to take action would be a violation of environmental law and the Park Service's own policies and procedures.

I am not without concern for the impacts of implementation on local landowners, businesses and other individuals. One source has stated that 88% of the dollars spent in and around the Riverways come from outside the area. Local claims of economic ruin if the locals aren't allowed to do exactly as they please would not seem to be in the interest of the local economy if former regular visitors fail to return as I have elected to do.

I urge you as Superintendant, and the National Park Service to restore the beautiful rivers I visited in my youth and provide a safe and environmentally sound resource for my children and grandchildren.

Sincerely,

Martin Burke  
Lawrence, Kansas

**Correspondence:** Hello my name is Max Ball and I live within minutes of this river and own land within feet of its banks. I strongly support the no action alternative. Why? Because I care about this river and land and its well being. I happen to have firsthand experience of growing up on this river and knowing every bend, hole, shoal, hollow, ridge and trail on this land. I don not understand why more restriction is being pushed so hard when the restrictions we currently have are not properly enforced. Why not start with enforcement of the current regulations and see how big of an impact that makes? Further restriction will do nothing at all to this river and land. Furthermore where is the empirical data other than from a biased ill informed source from a city with no firsthand experience showing that the way we currently use this river and land is detrimental to its ecological being? Leave the river, land, and its people alone and let it remain the beautiful natural area that it currently is.

**Correspondence:** I first started visiting the ONSR about 40 years.

Some the best days of my life were spent floating the ONSR enjoying the wildlife and the peace of nature.

Some of the worst days of my life were also spent on the ONSR while enduring noise from ATVs, boats, and trucks on gravel bars. On our last trip our gravel bar campsite had to be cleared of piles of horse manure and litter before we could begin preparing our meal.

The most important actions you can take are eliminating unauthorized access roads and gasoline powered motorboats. (Electric motors for fishing are OK.) However, increased enforcement is the key to getting results.

I support Alternative B.

David Bedan

**Correspondence:**

Comments on the ONSR Draft General Management Plan/Wilderness Study/EIS

River-based recreation:

Access points: Relocation of existing accesses is good. Less than 20 is preferable.

Motorized Boating: How about 25 HP max from Round Spring to Southern Big Spring instead of 60/40?...

Also, how about no HP at all on the Jacks Fork from the Western boundary to West Eminence?... Remember that any motorized travel on the Jacks would be difficult and very disruptive/destructive to a sensitive Ozark aquatic system!

Land-based recreation:

Hiking trails: Any road conversions to hiking trails is good. Any additional trail construction is good.

Access via hiking trail to gravel bar camping in remote areas anywhere along the riverways would be a welcome addition to existing amenities. (Contact me for particular suggestions!)

Mountain biking in non-primitive zones is good.

Horse trails: Closure of undesignated horse trails is good.

Creation of new river crossings is not good and should be avoided. Tributary horse stream crossings would be acceptable.

Note - There are thousand of acres of public lands nearby the Riverways available for equestrian usage where damage would not be as significant.

River access: Please consider no additional development along the upper Jacks Fork above Rymers. The mean peak-season discharge is only 143 cfs (for Jun-Aug 1993-2013 at Alley Springs, per USGS). For comparison, the mean peak-season discharge for Current River at Van Buren is 1500 cfs, or 10 times more water flow...

Gravel bar camping via foot or boat is good, having relatively minimum negative impact.

Wilderness: The Alternative B wilderness proposal is good and important.

Final Note: By congressional action the ONSR is a national park, a small piece of which belongs to all Americans. The above comments do not undermine the rights of local citizens, of which I am one(residing in nearby Ripley County). It is my strong suspicion that a lightly modified Alternative B plan implementation would provide for greater economic opportunities for local businesses and residents.

**Correspondence:** Missouri really needs to protect its great rivers. We are a huge (maybe the biggest) rivers, springs and caves state. (Most Missourians possibly don't know that). Except for Lake Superior, we might have some of the cleanest clearest water in the country, except for all the horses and ATV's that cross and contaminate them - as well as all the canoe/raft floaters (which is great if they behave themselves and protect the rivers.) And, the Ozark National Scenic Riverways is the best of all, surrounded by national forests and wilderness. We might have to supply other parts of the country with water some day with Lake Mead and even the Colorado River (Las Vegas, Nev., Arizona, New Mexico)drying up and the serious draught of southern California.

**Correspondence:** As a horse loving person I would like to ask that you not close any horse trails. So many hard working people would be devastated! The small town of eminence mo and surrounding towns would be terribly effected by closing equine trails. These towns count on trail-riding, floaters, and hikers to make their living . So many people would lose. Horse lovers do take very good care not to harm any nature while riding. We are very conscious of preserving nature so that we may continue to use these beautiful trails all over Missouri . Please take into consideration that peoples lively hood comes from these small towns ! And that people will go other places to ride and that money they would spend will go to other towns . Horse people will not stop riding, they would just go elsewhere. The town of eminence would pay the price for closing trails. We all love the small towns and rivers and look forward to going to these places. Thanks!

**Correspondence:** Regarding the Ozark National Scenic Riverways Draft General Management Plan, I strongly encourage choosing Alternative A, or at the very least, Alternative B.

The outlook on protecting this natural asset should be for the long term, as in decades and centuries. The pressures on this area are great at the present time, and over time, the pressures will only increase as natural areas diminish and population grows. Everyone in the area complaining about protecting this natural asset to the fullest degree will be long gone some day, and future generations will thank you for protecting this area for the long term to the fullest degree.

So please, when making your decision, THINK LONG TERM for what is best for this area, and remember that the complaints of too much conservation from a few is a short term issue.

Thank you for the opportunity to comment.

**Correspondence:** I support the plan that will most effectively protect the natural wonders of the Scenic Riverways. I am an avid user of the rivers, for canoeing and camping. I canoe yearly and yearly the group I canoe with spends a good portion of out time cleaning up the garbage left behind by careless people. We bring snorkling gear and actually dive for as much garbage as we can reasonably get to. I realize that the impact of a few beer cans is nothing compared to the damage done by the four wheelers, horse manure and the illegal dumping of harmful chemicals into the water. I can appreciate how the local population feels about the river, however, I feel that their ignorance is only hurting themselves and if they had their way the rivers would soon look no better than the dirt roads. I want to preserve the pristine quality of the water and the wild life.

I am unhappy to report that some years ago my friend discovered the remnants of a meth lab, near one of the drainage areas into Jam Up cave. He reported this to the authorities and it was cleaned up. I do not think that people living in this area are aware of the geohydrology of karst topography and how easily it could happen that all of the aquifers in this area could be contaminated. Everything goes somewhere as they say, and it would certainly not help the local economies if the water is so contaminated that no one can use it.

I urge you to pick the most protective plan, although I am sure that the local population will continue to misuse and abuse the rivers, but anything we can do to protect these treasures is of the utmost importance.

Thank you for your hard work in managing our national parks,

Juli von zur Muehlen

RE: Comments on the Ozark National Scenic Riverways  
Draft General Management Plan (GMP)

Dear Superintendent:

I am writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP). I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement. Specifically, my Riverways experience includes extensive canoeing, camping, fishing, photography and hiking along both the Current and Jacks Fork Rivers for several decades. :

These uses are important to me because of the high quality opportunities to recreation and participate in nature while appreciating Missouri's heritage. :The primary areas I visit include the Jacks Fork from Highway 17 to Alley Springs and the Current River from the headwaters to Two Rivers.:

I value the ecosystem values of the Riverways area including opportunities to protect native hellbenders and restore elk to their original habitat.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways: The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of natural ecosystems-should rival that of our nation's most pristine and unique public lands.

Yours truly,

Robert Roth  
18683 Joyce Ct.

**Correspondence:** I will make this brief. The Missouri Rivers, namely, the Current and Jacks Fork Rivers have been a part of my family's natural heritage for nearly two centuries. By no means do we want interference or regulations on our right to use our waterways. We do enjoy swimming, camping, floating, and canoeing on the river ways tremendously. I have my own grandchildren with to share the rivers and they all relish it, as I have and do. The only thing wrong, that I can see, is that the NPS have involved themselves in the people of Missouri's recreation. It has brought tourists from everywhere. This isn't always a bad thing. But, there are too many tourists who do not care about the condition they leave the area, unlike the people that live here.

**Correspondence:** I think that Alternative B makes the most sense. Our waterways need to be protected!

In addition, I agree with the MO Coalition for the Environment's recommendations:

More hiking trails  
No horse campgrounds in the Riverways  
Minimal restrictions on motorized boats.  
Sensitive natural and cultural resource management that avoids new conversions of bottomland riparian forests to open fields, or artificial pasture for elk and other animals and focuses on restoration of upland meadows, woodlands, and glades with native vegetation.  
The restoration of impaired riverbanks that avoids developed facilities along the rivers, which are screened from view from the river in any case, and low impact.  
Prioritization of solutions for problem areas that focuses on low-impacts in riparian zones.

Thank you, Lisa

Subject: I support healthy Ozark Riverways - - Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS

Dear Superintendent Bill Black and NPS Director Jonathon Jarvis,

I strongly support the National Park Service's Preferred Alternative B for the Ozark National Scenic Riverways Draft General Management Plan, which provides for redistribution of uses to minimize conflict, restoration of degraded areas, and more staff for maintenance, monitoring, and enforcement, while substantially enhancing visitor experience of park resources.

"In permitting the sacrifice of anything that would be of the slightest value to future visitors to the convenience, bad taste, playfulness, carelessness, or wanton destructiveness of present visitors, we probably yield in each case the interest of uncounted millions to the selfishness of a few individuals."  
- - Frederick Law Olmstead

In the Ozark National Scenic Riverways, unauthorized roads, overuse by all-terrain vehicles, and excessive equestrian use in sensitive areas have contributed to degradation, including increased bank erosion, more sediment in the water, reduced habitat quality, and unsafe bacteria levels in certain river stretches.

"Every man who appreciates the majesty and beauty of the wilderness and of wild life, should strike hands with the farsighted men who wish to preserve our material resources, in the effort to keep our forests and our game beasts, game-birds, and game-fish- -indeed, all the living creatures of prairie and woodland and seashore- -from wanton destruction. Above all, we should realize that the effort toward this end is essentially a democratic movement."  
- - Theodore Roosevelt

Re-directing high impact activities to areas where damage is minimized, allowing damaged areas to heal, establishing levels of use that enable the rivers to maintain quality, and organizing activities with respect for the natural and cultural resources are the keys to stewardship of the Ozark National Scenic Riverways.

"A thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise."  
- - Aldo Leopold

Please select the Preferred Alternative B for the Ozark National Scenic Riverways Draft General Management Plan,

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,  
Christopher Lish  
Olema, CA

**Correspondence:** To Whom It May Concern:

I am for Alternative A and hope that the National Park Service will be also. There are so many reasons why we need to protect our wild spaces and have a safe place for everyone to enjoy and spend time replenishing the important energy that only nature can offer. I often go to the national parks in order to have peace and solitude without the effects that machines and domesticated animals have. It is true that all people should be able to enjoy the space, but not to the detriment of others enjoyment, and to the destruction of the very space that we need to protect so that it will be there undisturbed for next time. I implore you to make sure that this wilderness is protected and stays in the most natural state as possible so that our society doesn't lose one of the most important sources of connection with nature. Thank you.

Sincerely,  
Lev Guter

**Correspondence Type:** Web Form

**Correspondence:** Thank you for putting together a thoughtful analysis on the various alternative plans for the Ozark National Scenic Riverways. I agree that adopting Alternative B would be a big positive step forward. However, I do not believe Alternative B goes far enough to protect the rivers, and therefore I urge NPS to adopt Alternative A. The benefits of Alternative A include closing illegal roads and restoring natural conditions to 50 miles of the roads, closing 65 miles of undesignated horse trails and adds no new stream crossings, barring vehicular access to gravel bars, and giving wilderness status designation for Big Spring.

I spent 4 years as an undergraduate trip leader for Washington University and know these sections of the Ozark Trail and Current River very well. Big Spring is one of my favorite places I have visited in my travels throughout the country, and I feel it should be treasured in a way that protects it from development and desecration. Further, I thoroughly enjoy the peace of mind that comes with hiking in nature, and I find it unfortunate that there have been many times my groups and I have been disrupted by ATVs on trail. When I come out to this area in groups ranging in size from 8 to 60 people, we always are careful to uphold principles of Leave No Trace. I hope that the NPS will help ensure that others will continue to treat these lands with such respect.

Thank you,

Maddy

**Correspondence:** To Whome It May Concern:

We have taken friends and students to the Ozark National Scenic Riverways areas for over 40 years through our canoeing experiences. This national treasure is something that equals any protected natural area in the world.

The monies we have spent on lodging, food, canoe rentals, buying things at local stores, and buying gasoline have contributed to jobs and the economy of the region. We have estimated that our groups of students and groups of friends have spent over \$1000 per year totalling \$40,000 over 4 decades. That is just one groups contributions to the economy. We know that some of the students are now taking their families and friends canoeing (a neighbor couple, former students taking groups of 10 each year) as well.

We have heard about the consideration to broaden the types of visitors to these areas. ATV, camping, and similar activities can do great harm to the beauty of the river through erosion, pollution, and ill treatment. We are strongly encouraging the Park Service to KEEP THE SAME DESIGNATION to protect these national treasures.

Jan and Lyle Alderson

**Correspondence:** I grew up in southwest Missouri, near Springfield; my wife grew up near Birch Tree. We began canoeing on the Jacks Fork in 1962, before the ONSR park was established. Although we have lived in Kentucky since 1969, we still get back periodically to the Riverways for canoe/camping trips. Since we never use a powerboat, our preference is to keep the Riverways as primitive as possible. We do appreciate concessionaires to rent canoes, to provide canoe put-ins and takeouts, and to provide camping supplies. If we were to cast a vote, it would be for Alternative A.

**Correspondence:** Please strongly consider every action that can be taken to reduce the amount of motorized vehicles from ruining the most pristine and natural area that our state has to offer. I have been fishing the Jack's Fork river for over 20 years and now taking my son and daughter there to bask in the beauty of what this beautiful place has to offer. We always support the local communities surrounding Alley Springs and want to continue enjoying this area for generations to come.

**Correspondence:** I personally do not like the idea of losing anymore horseback riding trails. It is immaterial if we are supposed to gain other trails. It usually ends up that there are a lot less riding accessable trails in the end. Additionally the loss of access for emergency services does not sound like a good idea to me. In the backcountry, you need all the access you can get if something bad happens.

I understand that many people are upset over horse waste in the river. I get that, but what about when a large group of people are together in the river????

I have a feeling that there are many times more people in the river than there are horses.

Just my humble opinion.

**Correspondence:** NO action should be taken on the management of the Ozark Scenic Riverways along the Current and Jacks Fork rivers. More legislation and more restrictions are not a proper alternative to current management and should not be considered. As usual, it appears the federal government has made plans to regulate from a distance without becoming locally connected. The aesthetic and ecological beauty of these waterways is without a doubt the best found any where in the country and it must be preserved, but it must be preserved by those who use the area and not by regulation which would limit or even restrict the availability of such a vital resource. I strongly support Jason Smith's stand on this issue.

**Correspondence:** I support Alternative A. This is based upon my study of the plan and my experience as a floater and camper of the upper Jack's Fork and Current Rivers for over forty years.

It is the unspoiled wilderness of these areas that brings me to these sections of the river. If you destroy this, you destroy the reason why many visitors come.

I believe that conservation of the resource is the best long-term policy.

**Correspondence:** Establish and enforce a "seasonal only" motor boat ban on portions of the upper rivers. Boaters would still be able to trap and gig out of their boats (late fall and winter activities) and, because there are very few floaters or boaters during cold weather, conflicts between these user groups would be minimal.

Establish and enforce a "seasonal only" horse power limit south of Big Spring.

Establish and enforce parking limits at accesses and other parking areas.

Designate river use zones and establish and enforce river use limits by zone.

Establish designated campsites and parking areas at drive-in gravel bars and enforce existing regulations.

**Correspondence:** I sent this yesterday but have not received confirmation it was sent-Please reply so I do not send again

I have been enjoying the recreational uses of the Jacks Fork and Current Rivers for over 30 years. I camp, fish, ride horses and canoe. This is very important to me not only for my personal enjoyment but I've been taking my children with me for over 25 years and now my grandchildren. Both my grandchildren have been coming since they were under 4 months old. We have all learned much about nature, the culture of the area it has also helped with family bonding. I have floated the river, camped, and ridden horses on trails with my children and grandchildren for years. They have learned much to respect nature and we have all grown as a family because of this. My late husband loved the area so much he came back for his last trip there and even died, as he wished, in the area. We all went to bluegrass festivals and many local craft shows. We have made close friends with local people, most of whom welcome outsiders with open arms

It would be a shame if this were to change. It is very important to keep these areas open for people and their families to enjoy as they always have. I know so many people that count the days from one year to the next until they can come back. I happen to live in a rural area but there are so many people that visit this area that have no access to nature and it's very important that they continue to be able to get away to an area they can rest, relax, and renew their spirit.

As for taking care of the natural resources I'm sure there is a very small portion of the population that doesn't respect the natural resources but do not think there are enough people abusing the area for it to unnecessarily restrict the recreational areas. On this note I think the ONSR would be better served by the state, which has a better record of keeping up their areas, than the federal government which does not have its finger on the pulse of the community. Why would you want to restrict so much enjoyment? It's there for all of us to enjoy not just for the chosen few and the chosen places. I think the GMP is overstepping boundaries by trying to regulate policy and visitor standards, as well as limiting future decisions by local government and people. By doing this you are adversely disturbing their livelihoods and indeed their future. Please turn the ONSR over to the state and leave it alone for the public's future use and pleasure.

**Correspondence:** Dear Superintendent:  
I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways is in the following recreational uses:  
Canoeing the Upper Current and camping at Round Spring, as well as visiting/using all the springs accessible to the public along the Current and Jacks Fork Rivers.

These uses are important to me because: I grew up in southern Missouri, and have been spending some parts of my summers on the Current my whole life. Connecting with the natural beauty of these areas AND the history is an important part of a cultural identity I want to pass on to my children.

In addition, I appreciate the conservation and preservation functions of the National Park because: When I floated the river with my dad as a child, there were areas covered with beer cans and diapers, and it was difficult to know what you'd find on the next gravel bar. There are other rivers in Missouri that have been treated this way, and desecrated really. I am grateful that designation of the ONSR has helped protect the length of both riverways.

Sincerely,  
Dana S. Lashly

**Correspondence:** OZARK NATIONAL SCENIC RIVERWAYS

I have carefully read the Draft Proposal and offer this as my comment:

First, I would like to address the document. It is an amazing example of double talk. The language is perhaps appropriate for a paper presented at a training seminar. The language is not appropriate for a public comment document. The ideas could be presented more clearly and accurately with clear, concise, non-technical language.

Second, I was struck by the various snippets of what appeared to be contradictions. For example, in a couple of places I noticed that the option compared was that "cemeteries would continue to be maintained" versus "approximately five additional cemeteries would be maintained". I guess it all comes down to the definition of "maintained". OZAR certainly does not currently, nor has it ever, attempted to provide helpful signage, maintained roads to family cemeteries within its boundaries, mowed, maintained or preserved headstones or enclosures around these locations. This language makes me sort of curious as to what the plan was for these five additional cemeteries for which presumably, using your definition, some maintenance has been on-going. But it sounds good!

Third, I noticed that for various subjects, one option would include studies as to the efficacy and need for a particular thing or activity while another option would impliedly assume that it was wanted, needed, and appropriate, e.g. mountain biking.

Fourth, I noticed various instances of standards being implemented (see page 95) or considered without any explanation of how OZAR came up with the data to support such numbers of no more than 6 within 50 feet, other than comments like "{T}he indicator for human impacts to cultural resources and sites is based on this existing monitoring protocol." I also found phrasing such as "the NPS approach to zoning has changed". We are not made privy to how and why such changes occurred nor how they might affect this matter.

Fifth, the proposal did not include any breakdown of the type of visitors who came to OZAR historically, currently or as anticipated, in terms of their reasons for coming. Specifically how many of the park visitors came to blow off steam on the river, how many came for that Muir experience in the woods and how many came to sit along the riverbank and watch the river go by from their camper. Many of the park visitors come to the park one time per year while many others come weekly. Are you planning for that one time per year visitor or the one visiting more frequently? Have you done any type of monitoring and by that I mean monitoring that has been tested and determined to be statistically accurate as a basis for the presumptions included here not a jumble of park registrations and other data that do not include visitor hours as opposed to visits? The reference is made to "traditional family oriented" experiences but what are you talking about. How many visitors consist of "traditional family units"?

Sixth, at some point, with each of these options, reference is made to the three and apparently only three options OZAR staff have been able to identify in terms of correction of whatever the problem might be, e.g. off road travel, whatever, as visitor education, increased enforcement or closure of that opportunity.

How does that work? Are you going to require each visitor to complete a visitor education module before being allowed out and about? Is closing these options meeting the park mandate? How do you get a law enforcement person where the action is every time there is a need, particularly as few as there are?

Many of us have gone through this planning process a number of times over the years. While planning is necessary and commendable, the bottom line for the planning process is that any plan given serious consideration must be feasible. There are a number of sub-elements to that concept but in summary form it must be capable of being done.

Your information indicates that as of 2011, 23 of the 80 FTE positions remained unfilled due to financial or budget constraints. Each of the options A, B, and C are more expensive than the "no action" option you indicate you are operating under now. Looking at the general economy how realistic is it that you would receive a boatload of funding? If you do not receive the funding for the entire option, which parts of the options are to be implemented,

how is that decided and what impact does that have on the overall plan? I submit that your preferred option and options A and C are not financially feasible and that therefore each is essentially a no option and a giving of an illusory option in that picking and choosing elements within a plan, is not adopting a specified plan.

In addition, you characterize the "no action" plan as a baseline while appearing to offer this as an option. You have an existing plan. What you have said is that that plan is "not always an accurate reflection of adaptive management approaches taken by NPS staff to address unforeseen or emerging issues". In clearer phrasing it might be said that you will comply with a General Management Plan so long as it is "appropriate" to do so.

Ultimately I believe that NO ACTION is the best and only choice.

When this park came into being we had broad open fields and pastures. Those open areas are, for the most part, overgrown by locust, multiflora rose and other noxious and impenetrable vegetation. Much of the land was fenced and people were not accustomed to traveling at will across fields or other such areas but remained in the roads or traces used for many years by their fathers and fathers' fathers.

The rivers had gravel bars but the landowners managed the river by maintaining a channel (not by channeling) but by keeping the river somewhat concentrated into a main channel and back sloughs. It was a light touch, not a hands off and not a channel everything.

The local communities were the starting point for visitors to the river who then were often directed to locations where information centers existed. When the Powder Mill area was purchased a visitor center was constructed with a plan to develop the Lesch place into a destination. Look at the amount of deterioration it has been allowed to suffer in the hands of NPS. Now you are suggesting moving out of the CCC buildings in one of your options. The next step of course we can see.

You have one of the best state conservation programs in the country. You appear to be unwilling to take advantage of the resources on hand to assist in making management decisions for bank stabilization, wildlife management and protection and land stewardship.

You have local entities both public and private willing and ABLE to provide knowledge and leadership having to do with roads, public contact, and other related disciplines, yet you have not met them with any degree of interest but you talk of a "friends" program.

Management of OZAR has in its grasp the plan it should be implementing, the current plan. You have not managed to do that yet. You have a top heavy agency. You do lots of research, you have no public contact in Eminence which is in the heart of the park. You have no interpretive method of supplying the results of your research to park visitors. You have a relay service through Buffalo which is not even known to most people who would have need of it. You use internet and information out of Van Buren for a park where finding a signal is pretty iffy at best. Your signage program is not helpful. You have too few law enforcement and too little overall support of law enforcement because it is not used as a deterrent nor as a learning tool.

You have the tools, you have the resources. Use the tools to manage, protect, and interpret the resources. If one use is intrusive, limit it for that specific event or locale. Manage the park pursuant to the implementing legislation.

**Correspondence:** I support implementation of alternatives A or B when it comes to future management of the Ozark National Scenic Riverways.

The proliferation of unauthorized river accesses not only compromises the quality experience of park visitors, it threatens the persistence of native species. Illegal collection for the pet trade is often cited as contributing to hellbender population declines. Unauthorized accesses allow poachers to harvest these animals, and confound Park efforts at enforcement.

As an avid angler, I appreciate that vegetated gravel bars store rock, reducing sedimentation and creating important habitat for sport fish and their prey. Unauthorized accesses, ATV and horse trails, coupled with horse crossings and vehicles on gravel bars, increase erosion and the instability of gravel bar habitats. Allowing these activities to continue would go against the stated purpose of the Ozark Scenic Riverways, to protect the natural and cultural heritage of the tract.

To me, restriction of motor craft in the upper reaches of the Current and Jacks Fork makes total sense. These are the narrowest stretches of river, least suited to motorboat traffic, where boat traffic would have the most environmental damage to the stream bed and banks, and where conflict between motor boats and paddling enthusiasts would be most frequent. While I understand motor craft are occasionally used to provide aid to other park users, any recreational activity is going to come with inherent risks, and we cannot ignore the dangers posed by the misuse of motor boats to the boaters as well as other park users. The more restrictive A and B proposals would still allow the use of motor boats in the Riverways, in downstream portions of the river which are most suitable for their operation. In the case of giggers, I would happily support a seasonal restriction on motorboat use on the upper Current River, allowing them to be used from October to April of each year.

I support the idea of redistributing authorized river accesses throughout the property, in order to alleviate crowding on popular stretches during the summer months. I would support strengthening the canoe concessionaire system, and potentially restricting the number of watercraft which can be launched from various accesses. I don't want to paint the horse, ATV, and motor boat crowd as the only negative activities occurring on the Riverways, and I am well aware of the litter, environmental damage, and reduced visitor experience which results from excessive float traffic.

Although I don't have the privilege of living near the Current and Jacks Fork Rivers, my family has been visiting the Riverways for four generations, and I believe that ought to count for something. Experiencing the Current and Jacks Fork played a fundamental role in my childhood, and on some level helped clarify my career path. I graduated from the University of Missouri with a Bachelor's degree in Fisheries and Wildlife Management, I have worked for the Missouri Department of Conservation and the US Geological Survey, and I am currently obtaining a Masters Degree in biology, with full intent on spending my professional career protecting native biodiversity and the integrity of aquatic ecosystems.

**Correspondence:** As I consider the needs of my descendants a hundred years from now, I am in favor of Alternative "A" because it maintains the maximum level of primitive land. I understand the desire of local residents to maintain their traditional lifestyle, but as the country as a whole continues to grow in future years the need for remote wilderness will grow in importance.

It is important that maximum effort be made to limit the use of motorized boats, ATVs, and other vehicles, thereby leaving as much of the park as possible in as near a natural state as possible.

It is also important to improve enforcement of existing regulations and to reduce the level of obscene and disgusting "Jersey Shore"-like behavior by a limited number of individuals who can ruin the experience for everyone else. At some times nowadays it is just not pleasant to take a family there. Opening the park to more motorized vehicles and additional concessionaire activity will likely lead to that kind of behavior becoming even more common.

**Correspondence:** I am a retired business owner, land owner, and employee of a large international company covering the Ozark National Riverways system for 40 years, including Arkansas. I belong to no particular political party and have served on numerous boards and committees in my days on this great planet.

Something needs to be done and it needs to be done SOON to protect this incredible asset we love. My mothers family owned propety in the OSNR corridor for 4 generations and my fathers family was granted property by Spanish Land Grants. You cannot and will not ever be able to duplicate what we have here.

I have not been on any of the streams nor visited the parks in this area for 5 years. They disgust me too often. And not spent more than a day there in 9 years. It seems now that our government and high dollar political contributors wish to turn this ecosystem into another Las Vegas. The jet-boaters, incredible caricatures of the backwoods, uneducated sloths, people think of when discussing Ozark Life, along with the pot smoking, beer can throwing revelers and worst of all, the ATV morons, have absolutely taken control of this park. Speaking with law enforcement officers of all types will tell you that the situation is out of control. ATV riders thumb their noses at any attempt by law enforcement to quell their antics that have ruined the aquatic life in numerous areas of the streams. Land owners have attempted to stop the trashing of the stream banks that have resulted in senseless loss of human life. But have a candid conversation with those locals who love the riverways for all that they CAN BE and you will find the sentiment to feel sorry for the landowner and not the beligerent dope who invaded his property, believe me....

I am thought of as a very conservative person, politically. But I believe that we need regulations that will turn this senseless evolution of this watershed around. NOW... If you need to raise my rather hefty taxes to do so, do it... Stop the wrist slapping on the law breakers and pass regulations where the ATV's and Jet Boats can be confiscated. You must increase the law enforcement count on the water, NOW. If we do nothing, or worse, do something that is so inadequate, but done to show we did something at least, this will be lost.

This waterway was not granted special regulations so that Neanderthal ATV riders can scare and terrorize kindergarten children. Which happened to me in 2003. The county officer told me later that it was our word against theirs and a dozen children from 75 miles away would not make a good witness. It was not granted its special status so that canoe livery operators could profit from their delivery of drunken party goers to this resource. No, it was not granted special status so that law breaking jet boaters could speed thru areas of the river at break-neck speeds with no consideration for others.

I have met Park service people and had long conversations all over this great country with them in the last 40 years. I have found them to be real caretakers of our environment and they actually care about long term considerations. Just last month while visiting my home at Fort Morgan, Alabama I spoke with an employee of the Park Service while my wife and I were hiking one of the trails by our beach home. When told of our home area she immediately told me how lucky I must be to live close to such a beautiful area and spoke glowingly of the Mo Conservation Commission and their incredible mission and how successful they were at preserving our areas and how it is under fire from the profiteers for less regulation at any cost.

There is a small but vocal group of people in this area that believe that if something is theirs, they can do with it as they like. And it reminds me of a very close friend, who after college, became a caseworker for the Div of Family services. He was based in Salem, Mo. A couple of years later we were fishing together and he told me of this "if it's mine, I can do what I want" attitude. His attempting to visit children in remote areas of southern Missouri and finding children who had never been to a school (this was in 1974) and there were children having children. Young

girls impregnated by close relatives as young as 13. It was sickening to hear. But this is the same attitude that is shown in the same area concerning land rights.

I beg of you to do the right thing. You don't see this type of carnage on the White River in Arkansas, nor the Red River. The Spring, Strawberry and Black Rivers in Arkansas are so gorgeous. Why can't you do something?

If you are afraid of Representative Smith, let those of us who help people get elected deal with this. Afterall, his parents have been chronic law breakers in this State for decades with their animal abuse crimes.

For decades one of my great enjoyments has been the winter float trips my son and I have enjoyed. It is the best time of the year to see what God has bestowed on us. Wildlife is abundant and the fishing is incredible in December and February. Before I pass on thru my life I hope to be able to take my grandchildren on this incredible journey. Don't let them take this away.

Feel free to quote me on any of this letter and PLEASE support the 'A' proposition for the future of my children and their children.

William Michael Pashia (and family)

**Correspondence:** Dear NPS,

Please do whatever you can to preserve Missouri's national park! I have travelled all over the country and lived near and visited several of our National Parks.....but I am confused at how little enforcement I see at my home park. More structure and PERMITS only makes sense and again, I see this kind of regulation at other parks, so what is the problem with doing it here at home? I am sure you know that the long term care and protection of a natural resource like this is bigger than the personal needs of individuals and we all need to keep that as our focus. What will preserve the rivers for future generations is truly all that matters! If the rivers are clean, safe and pristine all of the local folks stand to benefit greatly from that, not the opposite. Let folks that want to park their cars on gravel bars and litter and listen to loud music simply visit another one of our many rivers. Let our National Park be a National Park!

**Correspondence:** Having read the plan, I am in favor of Alternate A. I have been floating the Current and Jacks Fork Rivers since 1978 and have seen these rivers gradually deteriorating. The use of motorized vehicles, motorized boats and horses have left lasting damage to the ecosystem. This has also led to over crowding and misuse of the rivers. These rivers need to be returned to their pristine beauty and that can only be accomplished by allowing only non-motorized boats and walk in camping. The fact that motorized vehicles can drive up to gravel bars is ruining the wilderness experience for everyone. The fact that Missouri can have a wilderness area is wonderful-but it has to be kept that way. We have plenty of lakes for motorized boating!!! Please help restore this area to a unique experience that makes visitors want to come to the rivers.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

RE: Draft General Management Plan/Wilderness Study/Environmental Impact Statement Dear Mr. Reynolds,

Thank you for the opportunity to provide input on the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS. This letter contains the formal comments of the International Mountain Bicycling Association (IMBA). We at IMBA, urge you to give increased consideration for mountain biking for this and future plans. We oppose the noÂ action plan, which will continue the prohibition of mountain biking on all trails within the Scenic Riverways. With mountain biking currently disallowed on all existing trails and bicycling on the roads

discouraged by the Scenic Riverways web page, it does not allow visitors the full range of recreational options available from other state and national areas.

Missouri was named "Best Trail State" of 2013 which has a large and active mountain bike population with IMBA chapter affiliations that if given the opportunity, would use, enhance, and help maintain public access for these trails including all user groups.

Founded in 1988, IMBA leads the national and worldwide mountain bicycling communities through a network of 80,000 individual supporters, 750 affiliate clubs, and 600 dealer members. IMBA teaches sustainable trail building techniques and has become a leader in trail design, construction, and maintenance; encourages responsible riding, volunteer trail work, and cooperation among trail user groups and land managers. Each year, IMBA members, chapters and supporting organizations conduct more than 750,000 hours of volunteer trail stewardship on America's public lands and are some of the best assistants to federal, state, and local land managers.

Bicycling is low impact, active recreation that enhances the visitor experience

Mountain Bicycling is Low Impact: Numerous scientific studies exist regarding the natural resource impacts of mountain biking showing that mountain bicycles do not disturb the environment any more than hiking, and significantly less than equestrian and motorized uses.\*

Active Recreation: Bicycling broadens the recreational offerings and helps Americans get exercise. It connects people with the natural world and is fun. Fun, active recreation directly contributes to the physical and mental well being of the people of the United States.

Relevancy for Youth: Many parks lack relevance with today's youth - bicycling is a great way to help kids fall in love with parks and become future stewards. According to the Outdoor Industry Foundation, bicycling is the number one gateway activity that gets kids outside and ultimately interested in other activities such as hiking, camping, and fishing. Kids don't fall in love with the outdoors at a visitor center or

IMBA.com • PO Box 7578 • Boulder • CO • 303.545.9011 • 303.545.9026

1/4

information kiosk, they want to explore and have fun.

Improves Visitation and Visitor Experience: Visitation numbers are down at many NPS units. Improving opportunities for bicycling and promoting trails tourism could benefit economic conditions for nearby communities. Once inside the Park, visitors on trails traveling by foot or bicycle can immerse themselves in the natural experience rather than simply observing it from roads inside cars and RVs.

Mountain Bikers Volunteer: Many NPS trails are in disrepair. Annually, mountain bicyclists conduct almost one million hours of trail work on public lands. Volunteers from the mountain bike community can help build environmentally sound, sustainable trails.

Thank you for your time and careful consideration of our comments. We look forward to a productive relationship in the future. Please feel free to call us (303) 545-9011 (Boulder Office) or email ([steve.schneider@imba.com](mailto:steve.schneider@imba.com)), If we can be of further assistance.

Respectfully Submitted,

Steve Schneider  
South Central Regional Director  
International Mountain Bicycling Association

\*See Jeffrey L. Marion, Assessing and Understanding Trail Degradation: Results from Big South Fork National River and Recreational Areas, United States Department of Interior (2006) (finding that bicycle trails were the least eroded, narrowest, and least muddy of the trails studied, including hiking, equestrian, ATV, and mixed-use trails; Luke Chiu & Lorne Kriwoken, Managing Recreational Mountain Biking in Wellington Park, Tasmania, Australia, Annals of Leisure Research, Vol. 6, No. 4, 339-361 (2004) (finding no significant difference in the surface wear on a control plot by hikers and mountain bicyclers); and John Wilson & Joseph P. Seney, Erosional Impacts of Hikers, Horses, Motorcycles and Off-Road Bicycles on Mountain Trails in Montana, Mountain Research and Development, Vol. 14, No. 1, 77-88 (1994) (finding no difference between the erosional

impacts of hikers and mountain bicyclers in a controlled study, and noting that horses cause the most erosion as does motorcycle riding on wet trails).

**Correspondence:** William N. Black  
Superintendent - ONSR

Dear Mr. Black,

In an ideal world, Plan A would be beneficial, but a compromise such as Plan B might be more practical.

The ONSR/GMP needs to strongly support a plan that provides natural resource protection along the Current and Jacks Fork rivers. The management plan should protect clean water, natural habitat and wildlife by providing non-motorized recreation on most of the rivers and limiting the horsepower limits to 60/40 to other segments.

When the NPS closes all undesignated roads and trails, keeps motorized recreation off gravel bars, and limits the amount of horseback riding as needed to protect water quality, then the NPS needs to hire more security personnel to enforce the new rules.

We were glad to see the planned designation of the Big Spring primitive area to be a protected wilderness area.

We have many happy memories of the ONSR: caving trips, canoe trips, and combo caving-canoe trips as well as visiting all the beautiful springs. But as we get older, some trips are a bit too difficult, but we appreciate access points to the river, springs and caves.

The NPS closed cave policy needs to be reviewed. You have many NPS cave experts, e.g. Scott House, Dan Drees, who can provide input. There are many volunteer cavers who are working in the Pioneer Forest area who also can provide input.

A big thanks goes to the NPS for all their work on developing this GMP.

Sincerely,  
Lois and Joe Walsh

**Correspondence:** I don't think any action should be taken. In their current state, the Rivers are still being cared for. Throughout the summer I enjoy spending time camping and boating with friends. Since we don't live in the same area anymore the Log Yard has become our meeting place through the summer. It would be devastating to have our rights limited or taken away to where we are no longer able to enjoy the river together. I thought areas like this were made for enjoyment and this type of recreational use!

**Correspondence:** There are a few experiences in life that not everyone gets to enjoy. The beauty of the Ozark National Scenic Riverways is one of those things. I grew up a few hours from the area and was not familiarized with it until I met a family that now treats me as their own. To them, and their town, the rivers mean everything. It's a sense of heritage, recreation, and home. Why is it that they should be restricted from enjoying the rivers? These people clean the rivers and treat them with respect. Creating limits and restrictions takes the rivers away from these people, what are they left with after that? It has been a huge part of their lives since they have been living. No actions should be taken to restrict or limit any use.

**Correspondence:** I am a landowner within the park, with about 100 acres upriver from Cedargrove subject to a scenic easement. My family purchased the property, which includes a small old farmhouse, in 1956. I feel I have a unique perspective on the issues affecting the park, but I will address only two:

1. When my parents sold the scenic easement when the park was established, we received a document containing explicit rules and restrictions on the use of our land as private owners within the park. These include such things as the prohibition of running cattle, harvesting timber, operating a commercial enterprise, erecting new buildings, etc. My family understood and accepted these conditions, and in fact welcomed the policies which would tend to protect and preserve the wild nature of the park. Through all these years we have scrupulously upheld our responsibilities to use our land carefully, causing little or no impact on the environment. We have trusted the park authorities to take these restrictions and duties seriously also.

I have heard by the grapevine that some private landowners have been granted variances to build unsuitable, large dwellings and possibly to utilize unofficial river access points. I find it very disappointing, assuming these stories are true, that the park has abandoned its duty to enforce the provisions of the scenic easements. A concern I have is that the park has not communicated with us at all, over the last fifty years. Perhaps the park needs to stay in touch with landowners and remind them of the policies which are applicable. This topic has not been addressed in the new proposed management plan, which I believe is a serious oversight.

2. In the proposed management plan (all three options), it is recommended that a high-water bridge be built at Cedargrove to replace the low-water bridge. This seems to me to be a huge, unnecessary boondoggle unless someone is trying to provide work for a local construction company. I am intimately familiar with the Cedargrove bridge and realize that the river rushes over it after heavy rains, about once or twice a year. The road crossing the bridge is not an important thoroughfare for anyone that I can think of. The park authorities must provide serious, logical, scientific data to support this planned construction, which seems totally unnecessary and wasteful. Surely the park's money can be spent on something more important to the citizens, such as more salaries for park rangers who will help enforce the new policies.

In conclusion, without going into detail about horses, trails, and horsepower, I will say that I support Alternative A but could live with Alternative B. Thank you for taking my comments into account.

**Correspondence:** As a Missouri citizen who frequently enjoys the natural wonder of the Ozark National Scenic River-ways, I support the most aggressively preservationist course of action. Given that the public will not make the best decisions for itself regarding natural resources, it is the duty of government organizations to impose rules that will force them to. Those rules should put environmental preservation and protection above public recreation. If I personally have to forfeit my rights to certain uses of Missouri's natural resources to ensure that they are kept safe, then I will do so gladly.

**Correspondence:** Dear National Park Service:

Thank you for letting me comment regarding your General Management Plan for the Ozark National Scenic Riverways.

I have been losing a little sleep over how I can effectively comment in order to convince you to go with Alternative B.

I first became familiar with the area in the 1970's while being a youth counselor for my church. For several summers we enjoyed canoe trips on the Current and the Jack's Fork Rivers.

More recently, we visited Eminence and the nearby spring last summer while our daughter participated in a MO. Dept of Conservastion/ Lincoln Univsersity internship there in the National Forest. It was then that I learned of the severe damage done to the beautiful natural features by overuse, abuse, and lack of regulation. In particular, the hiking trails are difficult to walk due to damage from horses hooves. Invasive plants are smothering out the natural habitat. Motorized vehicles are causing erosion.

I do value freedom, but there are many individuals who through ignorance or self-centered lack of concern need the guidance of rules and regulations in order to protect the environment and preserve the rights of others to enjoy nature.

I definitely urge you to proceed in the path of more protection and less development and hope that you are granted the staff needed to provide it.

Thank you for the work you have done drafting these plans. It is obvious that they have been well thought through.

Please go with Alternative B.

Sincerely,

Charlotte Skornia

**Correspondence:** As a former Commissioner of the Missouri Department of Conservation, 2001 - 2007, I know how special and valuable are the Ozark streams, especially those of the Current River watershed, both for their rare biodiversity itself and for their recreational, psychological, and spiritual benefit to mankind. I also know how damaged and severely threatened they are by horse, vehicle, and intense boating activity.

No one, no matter where they live, has the right to abuse the "Ozark National Scenic Riverways". They belong to all of us, present and future.

"We abuse land because we see it as a commodity belonging to us. When we see land as a community to which we belong, we may begin to use it with love and respect."

â€” Aldo Leopold

I favor the plan, I believe A, that will allow people to experience the streams and land, but that will halt the destruction, not just slow it down. We are proverbially "killing the goose that laid the golden egg".

Thank you for your consideration.

**Correspondence:** I am a horseback rider and camper and have been riding and camping in and near the OSNR for 10 years now, ever since we moved to Missouri. It is my favorite place in the Ozarks. I am in favor of Alternative C.

We need additional designated trails and stream crossings, especially in the upper Current River area. We camp at Big Creek Trail Rides and ride there every spring and fall. We need many miles of trails - this keeps us from riding on crowded trails and is easier on the environment. Also, horses need access to water - and lots of it. They can drink 20 gallons or more a day when it is warm and must have access to water.

Why are you closing 65 miles of trails and only replacing them with trails with less mileage? We need more trails and more miles, not fewer. Those of us with gaited horses can cover many miles a day in comfort (15 - 20 miles) and love to ride in the OSNR because it is so beautiful. We need to have many designated equestrian trails with access to water. There should be plenty of trailhead parking, parking areas and camping areas.

Horses are a major economic force in Missouri and bring many dollars (thousands and thousands, if not more) to this area. It would not be a good thing if the area horse camps are forced out of business. People come here from all over the US to ride in the OSNR. We had friends come last fall from Arizona - we took them to Big Creek. We spend six weeks every year riding in the Ozarks - this is my favorite place to ride!!!

I should add that nearly all of my riding in the OSNR is in the upper Current River area - I have ridden in the Eminence area only once.

I am also a member of Show Me Back Country Horseman (SMMBCH) and Secretary/Treasurer of Southwest Missouri Trail Riders (although I am not speaking for either one). SMMBCH has a clean-up ride in the upper Current River area in the spring. We are always picking up trash. As a horseman, I take an interest in preserving trails for future generations.

In 10 years of riding in the OSNR - upper Current River - I have never seen a hiker on the trail. I see floaters and fishermen and people playing along the rivers - but not out on the trails.

**Correspondence:** I live in the 8th district represented by Hon. Jason Smith, and he has asked for public comments on proposed changes to policies affecting the Ozark National Scenic Riverways. Rep. Smith has been a strong supporter of commercial and private development of the two rivers involved. Of course, all the boat operators in this region give Rep. Smith huge political donations - -which is by far a more important consideration to him than than the idea of preserving the quality of these rivers for future generations to visit and see. In some of his reports to local newspapers, he said that the original purpose of the Riverways legislation passed by Congress was "to insure unlimited access." These comments are not true. In 1963-4, I worked as a student employee at the office of Senator Symington while attending graduate school at George Washington University. And I well remember that virtually the entire Missouri delegation supported this legislation as a way to protect for future generations to be able to see these pristine rivers - - some of the few remaining ones in the nation. At the time, these Missouri lawmakers said the last thing they wanted to see was what they call "a Bagnell Dam atmosphere" at these rivers. If these lawmakers were here today, they would be shocked to see how these two Missouri rivers are being abused by thousands of boaters and others who have no concern about how they are damaging the fragile ecosystems of these two rare natural rivers.

**Correspondence Type:** Web Form  
**Correspondence:** I support Alternative A. All of the illegal access roads to the Jacks Fork and Current Rivers that have appeared over the years need to be closed, the closures enforced, and the damaged areas restored. All motorized vehicles, particularly ATVs, should be banned from gravel bars and all Park land. The Buffalo River in Arkansas can serve as a model of how the rivers can be managed.

The horse trails along and through the rivers and streams need to be closed or rerouted elsewhere.

Wilderness designation for the area around Big Spring should be actively pursued, and concurrently managed as if they were already designated wilderness.

Boat horsepower limits on the rivers need to be decreased, but most importantly, enforced.

Thank you for allowing comment on the plan. The Ozark National Scenic Riverways are a wonderful resource and deserving of every protection that can be given them.

Jim Young

### Draft Management Plan of the Ozark National Scenic Riverways

I am grateful to personally suggest concerns and recommendations to the NPS regarding the Management Plan for the Ozark National Scenic Riverways. Superintendent Bill Black stated "Because this is a "Draft" plan, we recognize that there are going to be details we need to adjust or clarify. This is the intent of public review- to help us identify where we need to make those adjustments." Although recreation and public use are important issues for any national park; The citizen volunteer group Greenway Network's mission is to "conserve natural resources, encourage sound management of the watersheds and protect the quality of life for the residences." underlies our prior comments. Greenway's Comment which I gave to the NPS during the public meeting in St. Louis (attached) stated that we preferred Alternate A to best protects the natural resources and watershed. The NPS agreed with that conclusion.

This comment from myself alone. I should first say that Alternative A is also my recommendation. I felt that I should also address some specific concerns under your preferred Alternative B. These comments are not comments from Greenway Network as it would be difficult to get consensus on so many issues presented in the short time remaining for public comment. But, the board may still decide to send a second comment If we are able to have consensus.

Present damage to the fragile ecosystem is directly resulting from public use and recreation. I now includes some recommendations regarding management practice which need to be adjusted in the NPS recommended Alternate B.

As you are well aware, the fragile, karst ozark uplands require stringent guidelines for public use to both improve and to maintain the watershed's pristine character and its national significance guaranteed for our children's children and beyond. Without such guarantees in place there will be no "public use or recreation" because the watershed will have been degraded to the extent that both tourists will not come and the local related economy will fail.

As you are aware during the public meetings, Politicians and some local residence have pushed for the NPS lands to return to Missouri State control. I am grateful for the NPS presence and are sorry for that insult. The Missouri Legislature has denied funding for the present state parks and would not be able to staff, fund, maintain and operate the properties. We need you! So does this Ozark watershed. The NPS has a history of finding, conserving, preserving, and managing of the lands the late Pete Seeger immortalized; "This land is your land!" I understands and recommends heartily the establishment of a new "Wilderness Designation" it would benefit the very ones who reject it the most. It would bring both regional, national and international tourism and respect for the oldest mountains, most caves and springs and the only free flowing, still healthy stream watershed of the union I might add in jest which is not "blessed" with a dam. My involvement in conservation started with the most amazing and successful push to not build a dam on the Meramec River.

NPS mentioned in the draft plan a desire for increased outreach and networking. I would like to see that some road access points to the Jacks Fork and Current Rivers be used as locations for portable rest room and sinks if required by the health department to reduce nitrate and solid waste loading in the streams and to help the local economy. Perhaps this could be partly or wholly paid for by the NPS to a local provider? Included in this Public Comment is a letter sent prior to Superintendent Mr. Bill Black which outlined this suggestions. Also mentioned was a suggestion to Network with NPS in the design of a laminate, self sticking notice to be placed on the back of the bus chairs of all

the canoe outfitters using the park. This could be something that Greenway Network printed and set up with the outfitters using the park. It could also include a map showing the locations of these portable toilets and give any additional information which NPS may desire. For instance, "no glass bottles permitted or trash removal using the provided mesh bags". Please feel free to call me, Dr. Michael Garvey about these suggestions at your convenience at 636 441 2777.

Below find some personal suggestions to help maintain and improve the water quality and health of the park:

\* The Upper Jacks Fork River from the western boundary to Bay Creek is a most fragile, karst, headstream upland watershed and should be preserved with a zoning designation of "primitive" and not "natural". Many rare and endangered species are found in the upper section of the Jacks Fork River, including:

1. *Campanula rotundifolia* Bluebells of Scotland
2. *Galium boreale* Northern bedstraw
3. *Plantago cordata* Heartleaf plantain
4. *Cheilanthes lanosa* Hairy lip fern
5. *Goodyera pubescens* Rattlesnake plantain
6. *Cypripedium calceolus* tall yellow ladyslipper
7. *Cypripedium parviflorum* small flowered ladyslipper
8. *Silene regia* Royal catchfly
9. *Aster furcatus* forked aster
10. *Delphinium exaltatum* tall larkspur
11. *Sedum ternatum* Stonecrop
12. *Zigadenus elegans* Mountain deathcamas
13. *Gratiola viscidula* Hedge hyssop
14. *Helenium virginianum* Virginia sneezeweed
15. *Viola pallens* Small white violet
16. *Phlox bifida* Sandphlox
17. *Amsonia ciliata* Ciliate bluestar
18. *Ribes odoratum* Golden current
19. *Berberis Canadensis* American barberry
20. *Matalea oblique* climbing milkweed
21. *Waldsteinia fragarioides* Barren strawberry
22. *Hamamelis virginiana* Eastern witch hazel
23. *Liparis loeselii* Loessel's twayblade
24. *Trillium pusillum* Ozark trillium
25. *Tradescantia longipes* Ozark spiderwort
26. *Trautvetteria caroliniensis* Carolina bugbane
27. *Sullivantia sullivantii* Sullivant's coolwort
28. *Athyrium pycnocarpon* Glade fern
29. *Spiranthes odorata* Ladies tresses

\* The NPS should not expand or upgrade the "Blue Spring Campground" and it should be not be "developed". This karst area with a pristine spring and sinks also contains many rare plant species. This natural resource needs the protection supplied with a designated "resource-based recreation" not "developed".

\* The Upper Jacks Fork between the western boundary and Bay Creek especially during low flow cannot support any motor boats without damage to the aquatic invertebrates in the gravel substrate and motor oil and gas contamination. The Current River should limit the HP to 40 HP including even jet type motors. These boats disturb the gravels and the oils impairs the streams. A permitting system for the less than 40 HP flat bottom John Boats on the Current River is needed.

\* Horse trails should be relocated wherever possible out of the flood plain areas within the entire Ozark National Scenic Riverways because of the loading, which harms the water quality. There are many miles of "Undesignated Horse Trails" which all need to be "Designated" or removed. All river crossing points of "designated" horse trails

needs clearly mapped and reduced in number.

- \* The Horse Camps in the Upper Jacks Fork are point source pollution and should be removed especially from the flood plains which are sensitive. There should not be a 25 horse campground at Blue Spring. This is a very bad idea because of the wastes in the flood plain and invasive plants resulting from the hay.

- \* A permitting system for the horses on the river is needed.

- \* Increased use of non-motorized mountain bikes would both expand the recreational use and not impact the water quality of the rivers. It is a great idea! The users could help NPS to properly maintain the bike trails under NPS oversight. This is done in St. Charles with our County Parks systems.

- \* Archery Ranges could be included. Local archery clubs could help set up and maintain them.

- \* Disc Golf ranges could be included. Disc golf users or clubs could help set them up and maintain them,

- \* Hiking trails are also a great expansion of public use with minimal negative impacts to the watershed. They should be promoted but need patrol and maintenance by the NPS. They should not coincide with the "Designated" horse trails. Local users could help design and maintain them.

- \* ATV's are not allowed in the Park grounds. They should not be on the gravel bars, flood plains, horse, hiking or mountain biking trails. They cause excessive erosion.

- \* The ATV users now use all trails and horse trails, this issue needs to be addressed with enforcement before any expansion of any possible additional trails or trail systems in the Park are considered. This was a source of many public comments at the public hearings.

- \* Motor vehicles and ATV 's do not belong on gravel bars. The oil and gas lowers the water quality and the stream disturbance kills the aquatic invertebrates in the gravel substrate.

- \* NPS should be stewards to resist the persistent pressures for mineral prospecting which always then leads to mining and the potential for major degradation of the upland topography and the entire watershed. In the past lead mining tailings has found it's way to springs with disastrous impacts.and adjacent lands within the watersheds

- \* Pressure for local gravel mining and use for roads should also be resisted, as it results in a complete change in hydrogeology and alteration of the pristine free flowing, fragile nature of the ozark uplands.

- \* Local non-professional archeologists could display their collection "on loan" along with NPS collections at a NPS museum or park office to help educate and network with the public and address the cultural history of the region. All to often these private collection are dispersed after the collector dies and the cultural value of these artifacts and the historic locations they were found are lost.

- \* A village archeological site might be researched, documented and possibly the village site could be rebuilt based upon the found remains. It could be done using local residence, students or non professional archeologists under the direct supervision of trained archeologists on staff at NPS.

- \* The powder mill needs major protection from flooding damage and the grounds in the flood plain need to be off limits to development. Is there a consideration to use the Mill again for public and cultural benefits?

- \* The upland watersheds which feed the water resources of the streams are under the jurisdiction of the MoDNR. There needs to be a point person to work with NPS to address point source pollution and how to address it with the local residence so the stream is not degraded.

- \* All failing septic systems need to be repaired on the flood plain.

\* NPS could network with local Government agencies and the local Stream Teams to paint warnings on all Storm Water Sewers Covers in the developed areas of Eminence and Van Buren. Greenway Network is presently working with local governments in a similar way to paint 6000 sewer covers in St. Charles using local scout groups, residence and students.

\* Perhaps the NPS could work with the local Univ. of Mo. Extension Centers or local garden clubs to discuss ways to address point source contamination reduction using wetlands, native prairies, rain gardens or vegetative swales near loosing streams or sinks.

\* NPS employees and rangers could take the stream Team introductory level testing in Van Buren and set up their own Stream Team to network with the children and public about the importance of issues related to the degradation of the watershed. What a bonding experience for the NPS! Also they could educate the rest of the NPS about the potential to incorporate the Mo. Stream Team concept nation wide.

\* NPS could network with the Stream Team Program and turn the old fishing lodge (Welsh Lodge) into an educational school/camp for the children of Missouri. The Stream Teams locally and the NPS Ozark Stream Team, if created, could use this area as an outdoor educational classroom to teach both the public and the employees of the NPS about the importance of the aquatic invertebrate balance of healthy rivers and water testing to show point source pollution.

\* NPS could network with the St. Louis Zoo to stage areas to incorporate the Hellbender population back to healthy stream sections of the park. Hellbender habitat areas need both protection and new areas need to be added and there needs to be a definite designation of protection for such habitat. The scientific, biologic reason for the species loss needs to be detailed.

\* NPS could consult with the U.S. Fish and Wildlife and Mo DOC to consider stocking of other aquatic species I.e. Rainbow or Brook Trout if reasonable

\* Bat species are under attack by pesticides, habitat loss and white nose fungus. Many cave openings need protection and possibly gates maintained or installed.

\* Bees also are having stress from pesticide use and loss of diversity of flower types. Local bee keepers could be allowed to place hives on park grounds. Both bees and bats are major pollinators.

\* Locate possible site for a native prairie and possibly work with the Missouri Prairie Foundation or Shaw Garden in St. Louis to recreate a native wetland with wetland plants or native prairie with native grasses and forbs.

Below find the e mail of Jan 24th described above sent to Superintendent Bill Black:

William N. Black  
Superintendent  
Ozark National Scenic Riverways  
P. O. Box 490  
404 Watercrest Drive  
Van Buren, Mo. 63965

Bill,

I had a nice discussed with you at the public meeting in St. Louis about a desire to perhaps obtain a speaker to

present a talk at a forum at the Missouri History museum titled "Weather Extremes, or the New Norm, Risk Assessment". As mentioned, the section of the draft report was an excellent overview of the crazy weather and it's impact on free flowing healthy streams in a Karst environment.

I am a board member of Greenway Network and I have attached below a copy of a Letter to the editor sent to the River Hills Traveler and the local paper which I felt actually might help inform the local public that the NPS is really out to help them with life quality and financially in the long haul. I hope it helps.

While talking to your agents, the one dealing with the maintenance, forgot his name mentioned a possible project which after a nights sleep seemed great. Namely to place a paper or laminate with a sticky back on the back of the busses which take the canoe travelers up or down stream about the tendency to urinate in the stream and use the portable units and perhaps other issues that might come from NPS? Even urination in the riparian area would be better but Agents using Bino's and property rights nuts with 44' s may be a negative to accomplish the concept.

I am hoping to convince our board that it would be a reasonable outreach for public education. I might even convince them to foot the bill? Also I was thinking another reasonable idea might be to obtain funding for the local economy to place portable johns' at road crossings.

Perhaps NPS might consider this idea in the budget, to work with the local public? Also our Stream Team is placing notices on the local sewer covers about water quality perhaps NPS may help the local stream teams down there? I also feel that it would be a good educational benefit to consider requiring the Agents to take the stream team level one certification and perhaps form a NPS Ozark Stream Team of Agents. The Stream Team program in Missouri is a wonderful outreach to the local public and they adopt local streams as their own and take on a mental idea of ownership which might help property rights conflicts. The Draft plan asked for educational outreach and Greenway is a Stream Team Association has that as a mission, we also network with agencies about River conservation. In the past we worked with NPS after the 93' Flood with some conferences with the USACE.

Please get back to me about these suggestions so I can keep the board aware, I cannot speak for the board but will need approval at our next meeting for these projects, I think they will be positive.

Dr. Michael V. Garvey  
Charlene Waggoner Pres. Greenway Network

Letter to the editor

Daddy, what happened to all the crawdads!

I am a 20 year board member of Greenway Network, a all volunteer, river conservation group in St. Charles. I am not representing them in this letter, but rather myself as a Missouri citizen, who dearly loves your Ozark Rivers. Oh here we go, you may think, another city, crazy environmental nut, more big government wanting to take our land; please do read on. Many Park Rangers at the public meeting for the management plan of National Ozark Scenic Waterways last night in St. Louis told me that the local stream team who commented on Tuesday night in Van Buren were treated with disrespect and in a very un christian manner. Rather, they were impressed with the mutual respect which was shown at the meeting in St. Louis.

Both Van Buren and Eminence can boast about the beautiful Jacks Fork and Current Rivers at their doorstep. That is why your pristine rivers gets the many economic benefits of a federal national park, run and managed directly from your federal tax dollars, the state DNR certainly cannot be expected to manage it because they are too strapped for funds. Local business thrive, you surely know some high school neighbor who works the canoes or campgrounds for the summer, or one who drives the bus, keeps them running, serves breakfast, or sells beer and bait, Wilderness areas and clean floating streams bring not only St. Louis, but even international tourists to visit, camp, spend money, float and watch their kids catch crawdads. I sincerely thank you for sharing your springs and rivers; for 54 years I have floated your crystal clear waters. I have enjoyed catching crawdads as a kid in your back yard and now my 23 and 21 year old children still catch them and I use them for bait. But I have noticed a decline.

In my early days as a kid, I spent most of my time in the local healthy small creek catching crawdads, it really

impacted my entire life. My best friend's dad felt he could kill all the mosquitoes by pouring used oil in the creek, subdivisions came, lawn treatment chemicals and road salt entered the once clear water, now the crawdads are long gone and it is a cement lined, oily, dead, dirty ditch. If I were to ask you what do you love about your home, I bet it would be the crystal clear water and the ability to fish, gig, hunt and see your kids perhaps also enjoy catching crawdads. Over the years, while floating, I have noticed your stream areas just past the cattle or failing septic fields on the flood plains and immediately see the algae. You see it also; harder to gig, rocks seem dirtier, slippery and you can't see the fish. That is why the head waters are so valued and fragile.

Greenway Network is a Stream Team Association. We teach kids to dig their feet in the currents and gravel and net and inventory the creepy crawly invertebrates that live in your back yard streams. That data is used by the MoDNR. We also clean your streams yearly during the "Mission Clean Stream". My families stream team is named "The Garvey Crawdads." The kids in your schools and your local teachers, who sign up and become stream team leaders, instill a deep, lasting appreciation in the children for really what makes up a healthy stream. Those small invertebrates and crawdads are the backbone of the food chain. They are very quick to suffocate when the oxygen level drops from excessive fertilizer, cattle, horse or human wastes, failing septic systems, oil and gas from motor boats. Like the canaries in the coal mine, they cry out, suffocate and die.

With freedom and land rights comes responsibility. I love horses and wish we lived in the days before cars, but do we really need a horse campground on the flood plain near the beautiful Blue Springs, if It adds e-coli which pollutes your drinking water and takes away your economic driver. Can we live with one less shooting range if the lead pollutes Big Springs? Do we need to expect that we should be able to use our jet props to go up stream when we know the water is too shallow and one drop of oil or gas as you well know coats the surface of a considerable amount of water depriving the aquatic life of air.

The limestone cracks and caves under your thin surface soils, rapidly moves everything after a rain which is on the surface of the ground directly to these streams using the springs, even the uplands have sinks and caves which connect directly to the springs. That is why it is called a watershed! That also includes the fertilizer or pesticides you place on your hay field or lawns and salts now covering our roads.

Those springs use to be used by the Native Americans and early settlers as drinking water. No more! Please do not suffocate the crawdads for your children and their children to enjoy through irresponsible management practices! Let the National Parks Service do their job and maintain your quality of life and property values. They really have your best interest at heart, and so do I.

**Correspondence:** I fully support the no action plan. I enjoy taking a canoe down the river and swimming, plus I also camp and horseback ride and I find this to be a wonderful place to enjoy these activities. I take a look a my home town Salem and see how much they need the tourism dollar. I think closing different river access points will

make people mad and they will not come back. People want a choice where they want to put their canoe in and also where to camp. Abiding by rules that make no sense is foolish. The horse trails are in better shape than many places I ride. Many many organizations and all elected officials state and federal say the only way to go is no action plan. Listen to these people and make some good will that the park service badly needs.

I take a look at my home town Salem and see how much they need the tourism dollar. I think closing different river access points will make people mad and they will not come back. I have seen how the park service hides and tries to catch people doing something wrong instead of trying to help them. The trash cans were pulled and we have picked trash up all year. The trash will be worse than alittle erosion in the river. I am a young man and am afraid that the park service is trying to take stop about everything.

**Correspondence:** I support alternative C. In fact, I support no more restrictions, and loosening of the restrictions in place. There obviously is no funding to take care of resources. Nearly all the historic structures entrusted to Ozark National Scenic Riverways have been allowed to rot down. You have done everything possible to restrict access to the river. It is supposed to be used and enjoyed along with being preserved. I believe this was not the intent of the establishment of this National Park.

I can't remember when I last saw a motor boat on the upper river. There certainly isn't enough noise to cause a float trip to be ruined. I think this is just an excuse to take away more rights.

**Correspondence:** RE: Ozark ScenicWaterway System

Please don't close trails around Eminence to trailriders. Trail riders and canoeing sustain the local economy. Shannon County is characterized by poverty and unemployment and it will worsen if trails become limited. As an Illinoisan who vacations 8 weeks per year in the Eminence area, I fearfor the local economy should trail riders stay in our home state due to trail closures in MO.

**Correspondence:** It was unfortunate that many national park reps. seemed to have the idea that this was just a mere "formality" that they were required to do and had little if anything at all to do with the eventual outcome. This is NOT how it is supposed to work is it? Can you explain just how the input from these meetings is addressed? I heard they are sorted through and read. Good that is a great first step. But then I would like to know by what process the input is considered. Are they read and thrown in the trash? Are they read and recorded and addressed personally? Are they read and just discussed in higher level meetings?

**Correspondence:** These meetings did not appear to me to be effective in informing the general public as to what changes were being considered. Even the heartiest diehard would be put off by the CD. Even the summary was a huge amount of information to digest. I realize this is typical, however that doesn't make it right. I'm forced to conclude that if you really wanted to have the average person actively participating in this you would have approached conveying the information in a completely different manner.

Did you seek input on what an average individual would understand from this summary before you issued it?

Were you honestly confident they would grasp the "choices"? Or were you fulfilling your red tape obligation and didn't care whether or not it was an effective method/approach?

**Correspondence:** Thank you for allowing me to comment on your draft general management plan. There are a few things that cause me some concern. As a current CUA holder I am very interested in the suggestion of a permit system for horse trails. I currently purchase a CUA on an annual basis to allow my customers access to the few trails that are available within the park. I question whether my customers will also have to purchase a permit in the event this system is instituted? I feel this would be a double charge to visitors and not a very fair situation; I would like to suggest that serious consideration be given to this issue in the event that the permit system is instituted. I would also question whether the permit system would apply to all users of the trail system or just a specific user group i.e. hikers, bikers, horseback riders. It would seem to be discriminatory of the park to force one user group to buy a permit, but exclude everyone else from this regulation.

I am also concerned with the vagueness or lack of specificity within the plan i.e. 65 miles of horse trails will be closed, but no mention of which trails, etc. While I understand the reason behind the vagueness it also concerns me since we are given a new superintendent about every 2 years. There is very little consistency in leadership and this vagueness in the management will only add to the inconsistency. I would urge the park to reconsider this in finalizing the plan, keeping in mind the effects of new leadership every 2 years to the local people and to the park itself.

Another concern is the proposed zoning of the rivers for motorized boats. While I partially understand the need for zoning in certain areas, I don't understand the need on upper Jacks Fork and upper Current Rivers. Both of these areas are controlled by water level very effectively at the current time. The only outcome of eliminating motor boats in these areas would be to completely eliminate gigging in these zones, which I don't understand. There is very little motorized boat traffic on the upper end of either of these rivers due to water level and that isn't going to change. But, there are a lot of local folks who like to gig and trap those upper sections in the fall and winter and making this a non-motorized zone would certainly limit their user experience. I think it would be more appropriate to address the areas where a problem really exists instead of making a blanket regulation where it is not needed further alienating the local people and creating a problem where none currently exists.

Finally, I would like to address the actual legitimacy of the entire plan. The plan calls for a lot of changes that are going to require a lot of money to institute and enforce. Given that the park is currently under staffed and doesn't have a large enough budget at the current time I'm not sure the plan is even a valid proposal to the public. How much of it will actually be able to be accomplished? I think we all really need to take stock of priorities and eliminate items that are just filler. Let's stop spending millions of dollars on paper and meetings and put that money into our park! We have been 4 or 5 years getting to this point to the tune of several million dollars. Have you thought about what that money could have done for our park? This park is as important to the people who live here as it is to those who visit in the summer. It is a major component of the economy in Eminence. Without tourism Eminence would not be here and the park is a big part of the tourism here. We, the local people and park staff and administration, should be promoting visitors to the park and surrounding areas not providing deterrents to visitors. More regulation is not the answer, visibility of park staff is.

Thank you very much for allowing me to comment. I hope that you will find my point of view helpful.

<b>Correspondence:</b>	As you might have gathered, I am very interested in seeing the local area people fully participating in this. I do know you have intimidated most of them - probably unknowingly. This is a shame. In doing so, you have also spawned a good deal of resentment hopefully through unclear thinking in many people in the area. I imagine you would like to clear this up. I would be very disheartened to hear that you were just going through the motions and don't really care.				

Local sentiment may not seem to directly effect you. But I assure you it has a myriad of small consequences that definitely add up. How the local population represents you care of this area to incoming tourists is all many of them will hear. And I don't think it will be a favorable tale they tell unfortunately.

You provided a great Environmental Impact Statement on the surface. I also think it is equally important to provide a "Cultural Impact Statement". After all many, if not most people in the area are going to be profoundly effected by this.

Have you considered providing a statement like this? If so what did you conclude? If not, why did you decide not to?

**Correspondence:** I live the Jacks Fork river in Shannon County. My use of the river is limited to two or three kayak river floats per year and occasional swimming in the late summers.

I'm concerned with pollution of various natures impacting the quality of the river and surrounding forest in the area. Not limited to pollution from noise, traffic, litter, off-road vehicles, animal runoff and droppings, etc.

The parks generally are under increasing pressure from visitor attendance and participation, in my opinion.

Now, a specific observation about excessive vehicle and boat trailers impacting parking availability to public meetings may be construed to a similar negative impact in the use of motorized water craft, and for this matter, the use of horses for trail rides in the river.

I'm a conservative in this matter, I guess. Please consider limiting public access for these harmful practices and continue working to maintaining and improving the good quality of the rivers and forest in southeast Missouri.

**Correspondence:** Having lived in this area many years, I've noticed that the local population is quite comfortable with town hall type meetings and this seems to be their method of choice. I understand it may not be your method of choice but your duty is to do what works, not just waste time/money. The goal here is to get the public informed and to gather honest feedback. I've studied what goes on in townhall type of meetings and while not always pleasant, it does definitely accomplish the above two goals, much more effectively than handing them a pile of paper and funneling them through a maze of tables that all look alike.

Honestly, I couldn't sense any organization to the layout at all. Nor was anything easily visible since the crowd obscured the tables.

So I would ask who made the choice to have these meetings in the mill around style and not the town hall style and why?

**Correspondence:** I would like to see the "no change" option implemented in your 20 year plan. We already are suffering from too much government in all we do. The people along the river ways are accused of not taking care of the river when in fact they clean up after the city people who come by in canoes leaving all sorts of trash behind.

When the Sierra Club talks about coming down here to clean the river they must do it in secret.

As a members of the SHOW ME MISSOURI BACK COUNTRY HORSEMEN, we work with the park service to ensure that the trails will remain open for another generation. Many members are retirees (and veterans) who maintain the trails on a VOLUNTEER basis. The family businesses in the Big Creek area will be destroyed if the trails in that area are closed. We spend one week-end each spring maintaining trails in that area alone.

Shannon county is a poor county and its towns are plagued with empty buildings due to businesses not surviving this bad economy. Now our government is making a plan to limit the numbers of people allowed on the rivers and in the forests. Tourism is important to Shannon County.

While the environmentalists are trying to preserve things that are natural, they should consider the way of life of generations of country people living in the Ozarks. Remember the Indians? "NO CHANGE" Please.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;

- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** To the Management of the Ozark National Scenic Waterways, I have been visiting the River ways for nearly 40 years. My family and I have enjoyed the Jack Forks and the Current explicitly. We have camped at the CCTR when it was at the old campgrounds and ever since it moved to it's current place. We have enjoyed all the seasons, canoeing, swimming, horseback riding and camping. We have brought many of our friends from all over the country here, and they loved it and almost all still come back.

Last year we bought a little lot of ground, beside the Big Shawnee Creek, 1 mile from the Jack Forks. With hopes to move there in a year or two when we retire. We love to ride our horses and we were ecstatic when we were able to buy land there.

Now that dream of riding and enjoying the Rivers the way we have in the past may turn into a nightmare. We love the area, and don't want any harm to come to it, but we also want the privilege to enjoy it like we have in the past. Please don't take our trails and River crossings away. Please leave the Management as it is, or with as little change as possible. Please.

**Correspondence:** Dear Superintendent,  
I've lived in Shannon County for about thirty years. I have taught school for twenty nine years and am now a retired school teacher. Over the years I have witnessed a gradual increase of rules and regulations in the National Scenic Riverways. It has reached a point that I rarely venture into the park for a fear of breaking one of the many regulations that are now in existence. The park rangers seem to be very aggressive in enforcing these rules and regulations. They foster a climate of fear and intimidation.

One of my favorite pastimes is to camp on one of the many gravel bars on the Current and the Jacks fork rivers in my small camper. It is my understanding that access to these local campsites and access points may be curtailed in the new proposals. I know that I never do anything that would damage the park environmentally. I always pick up my trash as well as anything that anyone else has left behind.

I also enjoy riding my four-wheeler on back roads. Due to the geographic nature of the park it is almost impossible to go from point A to point B without venturing into park lands. Again I am always afraid of breaking one of the many regulations.

As a school teacher, I learned over the years that I achieved better results by having fewer rules and concentrating on the few rules that were very important. It was also a very bad idea to punish everyone for the bad behavior of a few. I feel that the Park Service would like to limit everyone's enjoyment of the park because, of the behavior of a very few people. Surely there are enough rules and regulations in existence to take care of bad behavior.

I hope that the park service will reconsider all of the new proposals and not adopt any new rules and regulations.

There are enough rules in the park now. It is a shame to live only a mile from such a wonderful national treasure and be afraid to enjoy it.

Sincerely,  
Phil Greer

**Correspondence:** I would like to know why so much information was chosen to be given at once? Can these plans be changed or staggered so that there is not so much to consider at once? I understand that is how it was probably how it was originally set up or considered most efficient in terms of bureaucracy - but it certainly doesn't yield good results. It seems that there are nice logical divisions in terms of land/river/boat/rec. Why not make it easy for all concerned? Each one of the mentioned changes deserves some real discussion.

**Correspondence:** I have a small place near the Jack's Fork River west of Eminence in Shannon County, MO and I am requesting that you chose the "no change" option in your proposed plan. There are so many families in this small community that depend on the tourism brought each summer by the Current and Jack's Fork rivers.

In the twelve years that I've been here, I have seen many changes- -all intended to limit use by the public to government lands. Campgrounds have been closed and restrooms removed from areas where the common man was once welcomed. Who after all owned these lands if not the people? Government is getting to big and forgetting why it was formed.

There is room for all of us in our public lands: ATVers, hikers, boaters, horseback riders and hunters- -what would we do without the hunters to help control the deer population? The majority of people using the lands are respectful of them. It is easy for environmental groups to spout deterioration of our rivers etc. while visiting on a busy summer week-end. What they refuse to see is the locals cleaning up after the city people leave. We ARE good stewards of the forests and rivers. We don't try to keep environmental groups from our area, why can't they afford us the same courtesy. Please do not limit our access to OUR public lands- -vote "no change".

**Correspondence:** I am Judy Maggard Stewart from Eminence, MO. I grew up at Akers, MO on the Current River. My roots go back to the Civil War in Shannon County. I have a deep love for the Current and Jack's Fork Rivers.

The intent of the enabling legislation of 1964 had three major provisions that were of equal import, none taking president over the other. They were each on equal footing (one was not any more important than the other.) These provisions were :

1. Recreation
2. Conservation
3. Preservation

This was clearly the intent of the enabling legislation due to the fact that the National Monument failed to pass in legislation because it did not preserve traditional recreation activities such as hunting, trapping, gigging, etc. When recreation was added, the bill passed which was the Ozark National Scenic Riverways.

The general management plan with the rest of the options A, B, C conflict with the intent of the enabling legislation. The plan for a wilderness area doesn't fit anywhere in this puzzle.

I propose they go back the square 1 and follow the enabling legislation. If that fails then give it back to the State of Missouri.

Thank You,  
Judy Maggard Stewart

**Correspondence:** I CAN HEAR CURRENT RIVER CRY

Growing up on the Current River where the river ran through my back yard at Akers, MO makes me feel very, very fortunate to have had the opportunity to grow up in such a beautiful area and has left me with wonderful memories. The river is where I go to meditate and enjoy God's beautiful creation of nature and the beauty around it and celebrate the happiest and heal the saddest moments of my life. I absolutely enjoy swimming, canoeing, kayaking, inner tubing or just sitting in the river. I feel deprived if I don't get enough of it. I have always cried in the river when I have been terribly frustrated or devastated at whatever has occurred in my life (the loss of a loved one or some other disappointment in my life.) The river has a healing and energizing effect on me.

My love for the river and land at Akers runs very deep. The land had been passed down through my family for generations since the Civil War in my mother's family (Loreen Purcell Maggard.) Akers was the trade center for the community for miles around. Members of the Purcell family lived up and down the river from Akers. Beanie Purcell lived down the river across from Cave Springs. They farmed, trapped, fished, logged, and raised hogs and cattle to make a living. My grandfather, George C. Purcell owned the country store (on the hill above the Junction K and KK.) He owned seven sawmills and much of the land surrounding Akers. Some family members were even moonshiners. They also ran the ferryboat. Members of his family (Frank Purcell, Marion Purcell, George Purcell and finally my mother, Loreen), were the postmasters at the Akers Post Office which was inside their country store. The country store met the needs of all the community. Shoppers could shop for food, dry goods and even get a haircut. It had a potbellied stove so many hours were spent socializing and telling hunting stories and whatever was on one's mind at the time. The upstairs of the store housed the Oddfellow's Lodge. They had an initiation chair that they would have the fellow sit on and the legs would collapse. I have fond memories of tricking my friends with that chair (The lodge had disbanded before I was born.) The telephone office was there also. A member of the family had to be stationed at the phone and connect all the neighbors who received calls.

Mt. Zion Church sat at the top of the hill above Akers. The land where the church house sits was donated by my grandparents and built by the community. My father was very proud of his part in building the church. I remember riding horseback in front of Robert Crosswhite to church on most Sundays while Mt. Zion Church was operating. My family attended many baptisms at the river below the ferryboat. Revivals, singings, community dinners and

gatherings were held at Mt. Zion. It is a beautiful rock building. After the park service took over, they gave everything away that was in the building and wanted to tear it down. The Missouri State Historical Society got involved with the community members and thank God the building was saved. It is sitting there empty when it could be used as an inspiration point, museum, and be used for community events. I would like to see it restored to its original state. Rev. Yount and later Rev. Wobus preached there.

The Akers School sat on the east side of Gladden Valley Creek. In her early years, my mother taught there. My sister, Omaleta, had her for a teacher. Unfortunately, the park service tore the school building down years ago. I spent many hours playing in that building. Mom also taught for a period of time at Bluff school. The Bluff school house still stands but is in dire need of some tender loving care. Schools up and down the river have been destroyed or painted park service colors and used for storage instead of being preserved for historical purposes.

The Akers Cemetery sits on the hill overlooking Gladden Creek north of where the school sat. Both sets of my grandparents are buried there as well as aunts and cousins. My great- great grandparents on the Purcell side are also buried there. Several graves are marked with cave rock. My parents are not buried there because my mother feared the Park service would let it grow up and be destroyed. Before the national park, she and Dad and other community members took very good care of the cemetery. My brother Gene and I sit on the Akers Cemetery Board. He is the president; Richard Purcell, vice president; Jim Purcell treasurer and I am secretary at present. I never want the Akers cemetery to grow up and be destroyed like many cemeteries up and down the river. For example, the pre-Civil War Purcell family cemetery located on what was the Beanie Purcell place across from Cave Springs is grown up, grave markers lost, and cannot be found unless if you know exactly where you are going. Veterans are buried there. I never want the Akers cemetery to suffer the same fate.

After my parents were married, they built the store where it stands today. Half of the building was our home and the other half was the store. The store had a post office built in one corner of the building just like my grandparents store. My mother was the Post Master there as well as my father being the barber. It was the hub bub of the community. People gathered around the wood stove and told stories. People still traded for most everything they needed. Salesmen and traders would come through the area selling their goods and would repair what needed repairing.

Traditions and the Ozark Mountain People culture continued. The neighbors would take turns having square dancing in their homes. My father (Buck Maggard) was the fiddler on most evenings and my uncle Doc would market their moonshine. (My parents met each other at one of these dances.) Life at Akers was good.

My parents, Buck and Loreen Maggard, bought a couple of canoes from Sears and Roebuck catalog to rent to people who might want to float, fish or just enjoy the Current River. He also built a campground on both sides of the river for campers to use. My dad would use his red 1950 model one and half ton cattle truck to haul floaters to and from the put in and take out points on the river. The people would ride in the back with the cattle panels protecting them. I remember some people enjoyed the ride in the truck almost as much and their boat ride. Canoeing really became popular. He bought Grumman aluminum canoes, Osage canoes, and various brands over the years. My parents never turned anyone away on reserving a canoe. They went and bought more until they had around 300 canoes before the Ozark National Scenic Riverways bought their land by eminent domain and reduced the amount of canoes they could rent. I will never forget the devastating news that the government was taking our property for recreation, the land that was so dear to us. It felt like we had a death in the family. I will never forget when the federal marshal came to serve papers on my father. My brothers (Eugene and Dwight) and I were instructed that we could not accept the papers so we turned the marshal away three or four times because dad was not present.

Well, one evening when everyone was sitting around the stove telling stories, the marshal came in and joined us. After a while he asked if anyone knew Buck Maggard and one of the local drunks spoke up and said, "There he is!" So the papers were served!!! After the park service came in, I will never forget that feeling of emptiness that I felt when I floated the river and all the neighbors were gone. There was not any one to stop and visit or share goodies like watermelon and pastries as you floated down the river.

Currently, my brother Eugene and family have the concession at Akers. They have a canoe rental and store where things that you might need on the river can be purchased. Eighteen years ago the park service closed the campground at Akers which had really hurt the economy. It cuts to the core that land that even the Indians loved years ago and tourist once enjoyed camping upon was closed by the government so that the sounds, smells and beauty of the river at that point can't be enjoyed as it had been for years.

The beautiful farm up the river that belonged to my grandparents and later my uncle Dee and Aunt Pearlle across from Welch's Cave was also purchased by the government. It had a huge barn that housed all the animals from the chickens, sheep, horses and cows. The park service tore it down. The house (Maggard Cabin) was torn down to the log frame and is about half way restored. My aunt Pearlle and I loved fishing at the family's favorite fishing hole where she helped me catch my biggest trout.

I can hear Current River cry because all the people who grew up, loved and respected the river have had to move away. There is not anyone left to care for the land, the traditions, the culture and the structures (school houses and churches). It is the Ozark National Scenic Riverways responsibility to preserve the history and culture of the area. So far they have shirked their responsibility. It has always left a sour taste in my mouth when park service personnel have asked what a building or place looked like when it was the park service that tore it down. Rules and regulations are being implemented to govern the park and limit the amount of tourists/users. It appears that the park service does not have the funds or manpower to manage all the acreage they took from all the people. Consequently, they need to come up with a plan that will protect and take care of the river and preserve the culture and traditions of the Ozark Mountain People. Everyone needs to be able to enjoy the river, not a select few and never ever shut it down again!

**Correspondence:** The title "Environmental Impact Statement" puzzles me. In the summary it doesn't seem to be about environmental impact at all. I would expect such a document to tell me just how this is actually going to effect the environment and how you reached your conclusion to the effect.

Instead it simply appeared to be a "this is what we want to do and in our minds there will be a great outcome." Uh... yeah.....didn't they say that about Obamacare? Sorry couldn't resist.

I understand the goal of this paper was to be a summary and to adequately examine all the impacts would take way too many pages, but it didn't seem like a good job was done in summarizing the impacts, just a good job in summarizing the great ideas to be implemented.

Do you not agree this could be better titled? Am I nit picking? No, I don't think so. This paper/the plan was incredibly encompassing and sets the course for the next 20 years for pity sakes. Yet there were no real details. There were a lot of empty "maybe"s. It was way too nebulous to be of any use. was asking myself over and over - what do they really mean here? It certainly didn't wet my appetite to wade into the larger document.

Surely this was recognized before it was distributed. Why was it done?

**Correspondence:** I am very concerned and disappointed in a few of the options in the General Management Plan that you are proposing for the Current River.

I live in S. W. Missouri but travel over to the Van Buren area to enjoy the Current River about 20-25 weekends a year. I have been enjoying that river for over 40 years since I was a young boy with my parents and now with my children, a weekend on the river is a wonderful and wholesome way to unwind from a stressful week, spend Quality time with family and friends and reflect on memories of previous times on the river some of those times you reflect on are times you had with loved ones that have now passed away (memories like that are priceless and I cherish them all, how would you like it if someone was considering taking away your access to the place that brings up so many of those memories). I was just about to make preparations to buy a house on the river over there and eventually retire there, but if one of the drastic plans are put into effect eliminating the use of anything over a 40 horse power motor (which won't even get a family of four over the shoals) or even boating at all, I have no desire to be in that area at all. I know dozens of people and have talked with at least 100 other people who feel the same way! I really don't know how many thousands of dollars a year I spend on goods and services in that area, but I suspect that you put one of the "Very Drastic Plans" into place the local economy in that area may never recover from the volume of business They Will Lose.

I can honestly say in all my years of boating and enjoying the river, I see no evidence of the water quality deteriorating, and with these newer Outboard Motors producing even less emissions than ever before, I have no reason to believe it will in the future either, as for what very little litter there is in the river it is created by floaters that have over turned or when the river floods, and 99.9% o it is picked up by us many boaters who take pride in the appearance and water quality of the Current River. I find it Very Sad that a group or two very over Zealous Environmentalists (who probably have never been on the river or even the desire to) have the amount of pull they seem to have. It must be because they have taken the time to go around to nursing homes and or assisted living facilities guilting older folks into taking what might be their last chance to do something positive for the world by signing the save the Current River Petition, making it look like they have a lot more support for their agenda than they genuinely have. I believe this because I met an employee at one of those facilities in the ST. Louis area who witnessed something to that affect. I'm sure you can feel my genuine love for and for the wellbeing of the Current River. Please Don't take away mine and many, many more families good quality wholesome fun now and for generations to come by implementing one of those drastic options. Of the three options, the only one I believe is user friendly is the "No Action" option and I truly believe the proper course of action.

Sincerely and Respectfully

Bill Reed and Family

**Correspondence:** To Whom it may Concern:

I have enjoyed visits to the Ozark National Scenic Riverways for more than 30 years. This is a unique and incredibly beautiful area that warrants strong protection from overuse and environmental degradation, while allowing access to the public.

I hope the National Parks Service will take action to protect this portion of our common heritage by strengthening the management of the Ozark National Scenic Riverways through completion of a new General Management Plan.

One of the key issues that must be addressed is the expanding presence of motorized vehicles in the park. These should be kept to a minimum, as their presence in environmentally sensitive areas is doing serious harm.

Likewise, we need to restrict the areas that equestrians and their horses can utilize, not to keep horses out of the park entirely, but to minimize the harm they are doing currently.

I would also request that in developing a new management plan that the use of motorized boats be kept to a minimum and that the Parks Service will maintain existing motor-free zones and restrict, to the greatest extent possible, the horsepower of boats in areas where motorized craft are allowed.

I believe there should be a great emphasis on hiking in the park and that the existing system of hiking trails should be maintained and strengthened. I also support the designation of wilderness area to those locations where this is feasible, including the 3,430 acres near Big Spring recommended to be wilderness in Alternative B.

I would also be very supportive of programs to educate park visitors as to how they can enjoy their outdoor experience in nature while causing as little harm as possible to the web of life in this beautiful area.

Thank you for taking my concerns into account.

Sincerely,  
Mark Haim

**Correspondence:** Ok, I think I'm finally done w/form. On to substance.....I've read through comment summaries from the local area. I noticed they were very pragmatic. It seems this area cares very much about the river. They aren't just grubbers trying to make a buck and it is wrong to characterize them that way. They seem to be just as concerned as you are about "environmental impact". And they seem to be very knowledgeable about specific things that need addressing.

They enumerated concerns that are easily addressed. I suggest rather than asking about a 20 year plan you start w/solving the very real problems in the areas they mentioned. There is some good local wisdom coming at you. I think if you would show yourselves interested in fixing some of this mess now, you would find open supportive ears on your 20 year plan.

Can you do this before you try and draft something so far reaching?

**Correspondence:** I have camped, floated and fished on the Jacks Fork and Current Rivers since the year I was born - 1954. My parents first took me camping when I was less than one year old. Back then we camped on property owned by people my parents knew. You see my parents grew up in Eminence and graduated from Eminence High School. My grandfather Steve Hughes owned a sawmill in Eminence back in the 20's. The uncontrolled logging that took place one hundred years ago that fed his sawmill should remind us what can happen to the rivers if we don't keep strict controls in place. It was a travesty how the hills of Shannon County were stripped of all the trees without regard for the environment. My mother's maiden name Akers is still prominent on the Current River at Aker's Ferry. My point is that not everyone from Shannon County is in favor of Alternative C. I believe we need tighter controls on the number of canoes on the rivers, the size of the boat motors and limited access by ATVs and horses. For this reason I endorse Alternative A as the approach to manage the Ozark National Scenic Riverways.

Thank you for this opportunity to comment on this very important topic.

**Correspondence:** The first and foremost plan of action should be to restore/create your reputation in the

community as genuine care-takers of the rivers not just plan makers and rule makers. I think trying to move forward in this without that, is not wise.

You are developing the reputation of being out of touch because you are not fixing any of the real problems we see every day. You are also seen as an entity wanting to drive local residents off by endlessly increasing regulations. This isn't a local small town rumor....this is what state representatives also perceive.

You must be doing something real world present tense to get this rap. Can you tell me what that might be?

**Correspondence:** As a long-time resident of Missouri I have great pride in our rivers and streams. One of my favorite laws in the state has been keeping the float streams open with the Navigable Riverways legislation. As a recreational whitewater kayaker and class II canoer, I have seen the downside of rivers that have seen the neglect and short-sightedness that is unfortunately characteristic of privately-owned land. Off the top of my head, the Ocoee and Pigeon Rivers in Tennessee and the Willamette River in Oregon represent classic cases of dead rivers that have been turned around through common-sense usage policies.

In regards to the Ocoee, I am sure the landowners threw fits about government intrusion when clean-up efforts were implemented years ago, but now the river is clean(er) and thriving and life is slowly return to the waters. And the same locals have reaped a lot of money from the paddling and tourist communities since the river has been better-managed. I seriously doubt that the area would have the influx of visitors if the Ocoee was still as dead as it used to be.

For the Ozark Scenic Riverways, I would hate to see the loss of regulations and returning the waters to an unregulated free-market. If those rivers were as unregulated as many other rivers (the lower Meramec in St. Louis, for example), the economy around those rivers would surely suffer as the water quality dropped lower and lower.

On the other hand, I do not think that Jet Boats and horse riders should be shut out completely. But then again, allowing unlimited free usage would have detrimental effects as well.

I've been cleaning sections of the Meramec for over 10 years with my local Clean Stream team and I've seen a remarkable difference in the amount of trash over the years. I attribute this to a combination of no-glass laws, stricter litter patrol, and public adduction and awareness. I think the same should hold true for the Scenic Rivers. Common-sense regulation and education does wonders for our society and the economies around the affected rivers. I don't think Eminence, Missouri, would fare so well if the Current and Jack's Fork rivers became trashed-out ditches.

**Correspondence:** Dear Park Service,

I have been visiting the Ozark National Scenic Riverways for nearly twenty years for camping, floating, and hiking. As a student, I spent two weeks on the Current River, floating from Mauntauk to Doniphan. As a volunteer, I helped construct the first trail from Cave Spring to Devil's Well. As an advocate for the Ozarks, I campaigned against the expansion of lead mining to the ONSR region. Through those visits and efforts I have learned about the Ozarks cultural history and ecology, appreciated the solitude of nature and escape from modern life, and developed skills for survival in the wilderness.

I appreciate the effort of the Park Service for putting together a thorough and well crafted management plan, something that has been sorely needed since I first started visiting the Ozarks. I believe both Alternative A and Alternative B will help solve some of the longstanding problems on the ONSR.

Of the alternatives, Alternative A is my preference. With urbanization, population growth, and global warming set to continue, the Riverways is vulnerable to further degradation. In order to preserve the Ozark Riverways for the future, they should be handled with the lightest human touch. Specifically, The Park Service's creation of the Big Spring Wilderness is commendable. Also, the added efforts of Alternative A to close horse trails, roads, and vehicle access to gravel bars will give the ONSR the protection it needs to continue to be a national treasure and pride of

Missouri.

I believe some of the potential uses presented in Alternative B and C are best suited for private land. I would rather see the private sector step forward to provide the more intensive and commercially oriented tourist opportunities. Again, thank you for your efforts.

Sarah Bantz

**Correspondence:** I was a little girl when the Park Service took my parent's land. So over the last fifty years I have watched how the park service has managed the Current River and Jack's Fork Rivers. Cemeteries and buildings that are important to the people who lived here for years have been allowed to torn down or rot down and not had any upkeep. Cemeteries have grown up and tomb stones knocked over. Those buildings that are still standing should be repaired so people can enjoy them. Some example are the cabins at Pulltite Springs, Maggard cabin across at Welch's Spring, lodge at Welch's Spring, and Akers Church( Mt. Zion) I am sure there must be more down the river. People who have roots in this part of the country want to come back and enjoy ruminates of their past. The only Alternative, "No Action," is clearly the choice while stepping up to the plate to preserve the culture, traditions and heritage of the area.

**Correspondence:** I feel that the government took too much land along the Current and Jacks Fork Rivers. They don't have the man power or funds to take care of what they have. As a result they shutdown campgrounds, roads and river accesses, trails and caves. Examples are the campgrounds at Akers, and Powder mill, Jerk tail landing, Sinking creek, Cedar grove, and Round Spring Caverns. Alternative "NO Action" with reinstating of previous camp grounds is the only viable alternative and reinstates the infrastructure from the previous legislature.

**Correspondence:** Thank you for the opportunity to comment on the Draft General Management Plan.

---

I have canoed both the Current and Jack's Fork numerous times over the past 15 or so years, mainly camping overnight on gravel bars.

In general, I support Alternative A for the more primitive experience it would allow.

Some more specific comments about the plan are:

- The plan should be more clear that gravel bar camping by river travellers would be unrestricted.
- The plan needs to specify that scenic easements will be protected. If not, under what circumstances would they not be protected?
- All three alternatives allow for the possibility of bike trails. If bike trails are to be built, they should be kept separate from existing hiking trails.
- All three plans talk about completing a "cultural affiliation landscape plan" that would increase areas managed as meadows and agricultural sites. If this entails clearing areas that have become reforested, it sounds like a bad idea. There are plenty of float streams in Missouri where one can pass through pastures. There are numerous bird species that require a continuous canopy of trees. Would more agricultural sites cause more siltation of the river? What possible purpose could this serve?

**Correspondence:** There are many beautiful places along the rivers where walking trails can be made so people can visit and enjoy the springs. Some places where walking trails can be built are, Welch's Spring, Cave Spring, Arlie Lewis place (a beautiful spring is on this property) It was an ancient Indian campground. Any other springs on the rivers that this would be feasible can be added to this list. Walking trails need to be established and maintained. Alternatives need to be written to provide walking trails so the public can enjoy the crown jewels of Shannon County and Carter County.

**Correspondence:** Thank you for the incredible depth and breadth of this draft plan. Alternatives are clearly spelled out and underlying information and impacts presented in extraordinary detail.

#### ALTERNATIVE A

As a non-motorized watercraft user (canoe and kayak) I favor ALTERNATIVE A that provides the greatest scope for this activity on the river. The sound of motorboats and the level of their disturbance of wildlife materially decreases my enjoyment of the relatively unspoiled river environment. Limitation of unauthorized horse trails & crossings is another valuable feature of Alternative A as it will help preserve water clarity, permitting observation of aquatic species and also reduce microbial contamination that limits swimming/snorkeling activity. I would like to see less restriction of camping on gravel bars not directly accessible from the land by road or trail. Alternative A's reduction of overall river traffic during peak season & weekends is also very desirable. While I recognize that implementation of the relatively more restrictive requirements of Alternative A will require an increased enforcement presence for some period of time, I hope that it will not be heavy-handed and will focus only on behaviors that either directly violate new management regulations, or are abusive or disruptive to river users whose goal is a pleasant natural experience. Thank you. ALTERNATIVE A

**Correspondence:** I want to thank the National Park Service for their efforts to protect the Current and Jacks for Rivers. I support Alternative A because I strongly believe in putting the environmental concerns first, it would not only benefit the rivers but the communities around it.

The Current and Jacks Fork Rivers were chosen to become part of the national park system fifty years ago, and because it was, families like mine have been making a connections to nature, history, culture, each other and our country ever since. Personally I attribute, the rivers, to whom my brother Mark and I have become. Visiting the rivers since early childhood has given us a respect for nature and a desire to travel.

Pulltite Spring is no doubt one of our favorite places, and we have spent a lot of my time looking for something better, visiting national parks all over the country. It has always concerned me that we don't get the same feeling in the Ozark National Scenic Riverways, as we do in other national parks; a true wild experience, a super welcoming atmosphere, and the feeling that the number one priority is protecting the specific national treasure.

If the park service is forced into a No Action plan, I hope the park service will still enforce the original rules of the park, by closing illegal access points and keeping horses and motorized vehicles where they belong.

**Correspondence:** I had a local say to me the following: The NPS isn't about maintaining the parks they do not do that. They simply sit around and make up rules and plans that restrict park usage in numerous ways....closing roads/trails/restricting motors etc. All they want to do is limit the use of the parks period. They don't enforce laws. They don't maintain waterways. They are not good stewards of the timber. They say they have no money/no staff they are able to spare to do that.

This characterization seems to me to present a problem. No wonder the perception is the govt. just wants to buy land and then run people off it. They have no interest in making it a good place to recreate because they have no money to implement anything like that. I really didn't have any good answer for him being told myself "sorry we don't have the manpower" to do this or that.

It doesn't cost much (except time and paper and yes that cost a whole lot more than I'd like to imagine...it seems we pay a good deal to people for them to just sit around and make regulations/rules/laws) to make rules restricting usage. Make the rules, write up and post the rules, make the barricades and signs and you are done. A lot easier than mowing, dealing w/gravel, drunken boaters etc.

What would you say to this person to change their perception? I ask this question because most people are viewing this plan in the same way....nothing but a bunch of new restrictions, who needs that? I have to admit in thumbing through that looked about to be the size of it.

**Correspondence:** I would request the new management plan restrict motorized boating to the greatest extent possible. Missouri has numerous lakes and rivers for motor boating, so I see no need for them in this otherwise wild and scenic stretch of riverways in a national park. Their presense destroys the natural ambiance, and the motors are often so loud that you can even here them a ways away from the rivers - for example when hiking to Blue Spring. If motor boats are to be permitted within the parks at all, please impose strict limits on the areas they're permitted and their speed and horse power so as to minimize their impact.

---

**Correspondence ID:** 2366    **Project:** 15793    **Document:** 56208

**Correspondence:** After a brief review of the extensive documents presented I am overwhelmed with the amount of information available for the review process. Because of the extent of scientific data and broad range of social implications I must admit that I am not qualified to make any definitive observations regarding which if any of the plans might be the best route for the future of our Riverways.

As a longtime lover of the river however, I believe I am very qualified and obligated to express my concerns and in doing so urge you as our chosen representatives to do what is best. Best for the rivers, and best for those who love and respect it most. Not what is best for those who abuse, plunder or ignore the responsibility that comes with such a gift in our midst.

It seems to me that after watching how a pristine waterway can be abused in the interest of commercialization and how families, fisherman, equestrians and other lovers of natural things can be pushed to the side by men's quest for selfish causes, it's time that we stand up for what is right.

The party crowd will loudly push themselves into every corner of every beautiful place we have because their "rights" allow them to do so. To our shame, places like "party cove" on the Lake of the Ozarks and the drug traffic on the Elk river in SW Missouri are near comparisons to what has occurred on our very own Current and Jack's Fork rivers under the NPS watch. Shame on the leadership of the NPS for sitting on their hands while families found themselves without a park because it had been taken over by drunkenness and vulgar behavior. The power to correct these problems is already in the hands of those in charge.

Now it seems like the answer being promoted isn't to enforce laws and guidelines that are already on the books, but rather to restrict the use of roads and gravel bars by limiting access through a heavy hand.

I would urge you, clean up the problems by enforcing the laws. If overuse is scientifically damaging our river, then it is the NPS responsibility to limit use in order to maintain the quality of the waterway and the visitors experience. But first, correct the problems of drugs, alcohol and nudity that make the river unusable to our families. The basic indicator for the success of a great park system is whether or not an average American family can go and enjoy the best experience possible in a natural, safe environment and then go home safely with great memories that will keep them wanting to return. We have failed in our obligation to families, but this is an opportunity to correct that mistake. Let's not get sidetracked into political battles of wilderness designations or closing all access thinking that we are helping their cause. To do so would be simply taking public land and building a wall around it to keep everyone out so no one can misuse-or even lay eyes on-some of the most beautiful places that make our park special.

**Correspondence:** We favor Plan A as the best approach to preventing the degradation of this precious resource. What should be a concern to everyone who values these rivers is that they are suffering from overuse in the warm months of the year. Eventually this is going to cause the decline of tourism in the watersheds, which will certainly affect the local populations who depend on the income from tourism. Locals who complain about federal interference are ignoring the many benefits that the National Scenic Riverways program has created for their section of the state.

**Correspondence:** I am strongly in favor of plan A to preserve this magnificent piece of nature for our future. The number of people that have "discovered" this river for recreation has exploded in the past 20 years or so, which underscores the dire need to protect it. If it is not protected this area will be lost to us all, depriving everyone of it's irreplaceable beauty and economic benefits. Every pristine piece of nature needs protection. This boosts the local

economy as evidenced by our great national parks where rules governing driving, camping, etc are strictly enforced. We all accept and understand the need for these rules, and the Ozark National Scenic Riverways deserves no less from us.

**Correspondence Type:** Web Form  
**Correspondence:** Of the plans, I support the no action plan. I am opposed to the other plans as they do very little to improve the park overall. Basically, the primary component of all of those plans is restricting access to the park, not a tangible plan for better management.

The management style I would prefer would be for the decisions and plans for park management be left in the hands of the local people as they have an inherently more accurate understanding of what needs to be done because they live there and observe it often, not for just a study for a new management plan. They also have a vested interest in proper management because they use it on a daily basis and in some cases depend on it for their livelihood something which the NPS does not have.

The biggest problem on the riverways is the reprobate activity. In order to improve visitor experience in the park, rather than enforcing a wide breadth of regulations, NPS needs to spend their time enforcing common laws such as no littering, no public intoxication etc. - laws that you would find in any town or city or where people gather. The NPS needs to be dealing with genuine criminal behavior before it takes on minor infractions such as horsepower of motors etc.

**Correspondence:** I support Alternative B.

It is crucial to protect and restore important ecosystem features in the ONSR while providing a balance of diverse

recreational opportunities, restore miles of undesignated roads to natural conditions and reduce gravel bars designated for vehicle access, provide a balanced approach to horse trail usage within the park, and strengthen monitoring, research, and preservation projects.

The ONSR is a natural treasure for Missouri and the nation. It should be protected and managed for current and future generations to experience. Thank you

**Correspondence:** I was born and raised near the Jacks Fork and Current River, my family has lived here over one hundred and fifty years. We have seen many changes through the years, and very few of them have been for the better. My great grandfather provided a living for his family for many years hauling gravel out of the Jacks Fork River. Now the river is so filled in with gravel you can walk across in several places that were once good fishing holes. I have countless fond memories of time spent with family and friends swimming, floating, fishing, and gigging on the Jacks Fork and Current River. My family and I have enjoyed numerous fish fries from fish taken by the aid of boats and motors that, depending on the location on the river, would be greatly restricted and/or made impossible under this new proposal. It greatly angers me that the new management proposal options given by the NPS cater to special interest groups and place great restrictions on the way we have enjoyed our natural resources through the years. In twenty years, I want to be able to enjoy spending time on the river with my children and family the same way I have done. I do not want to see the river accesses and places our family has had the liberty and freedom to use and enjoy for the last century closed, limited, or restricted in any further manner. I support the "no new action" management plan to preserve our way of life, liberty, and pursuit of happiness.

**Correspondence:** I oppose the changes to change primitive roads to hiking trails. Removing 10 miles of roads in primitive zones and replacing them with hiking trails. There is no reason hiking cannot occur on primitive roads without denying access to those who are not able to hike. The park belongs to all Americans, well, ill, old and young. This place has a lot of history and it is wrong to prevent the elderly and disabled from access to the places they are used to accessing and sharing with their grandchildren. Please do not close down any additional roads.

**Correspondence:** I am opposed to closure of any horse trails in the park. Requiring a permit is unreasonable. The impact of horse riding has been exaggerated. The Alternative B is very vague in intent to what improvements it will have but specific about the limitations. Manure is fertilizer, not pollution. In addition the horse riding is a viable necessary source of income to one of the poorest counties in Missouri. This source of income is essential to the needs of local ferries, grocery stores, various shops, gas stations, restaurants, motels, etc. There is little alternative options for this long standing way of life.

**Correspondence:** Thank you for considering the protection of the Current River. Among the many, many rivers I have paddled in my life, the Current River is one of my all-time favorites for its diverse flora and fauna and the spectacular quality of the water from the spring discharge.

I naturally want to encourage limits on motor boat horsepower and favor plan A. The motor boats affect the

ecosystem and adversely affect the enjoyment of the non-motorboat visitor. The boats cause significant noise pollution and a wake that erodes the shoreline plus exhaust that lingers above the water long after the boat is out of sight. There are so many other places in Missouri to take a motor boat so as to not sacrifice this very special natural resource.

Again, thank you for offering this opportunity for my comments.

**Correspondence:** I oppose the regulation of horse trails and requirement for use of permits. Horse back riding is what Eminence is known for all over the state. People travel from all over the country to participate in horseback riding activities in our area. It provides increased tax income and local jobs in perhaps the poorest county in Missouri. There are already limited opportunities in this area. More restrictions will drive away tourism and limit our source of revenue.

**Correspondence:** I am from Iowa and canoe the OSNR at least twice a year. Because of the drunk and rowdy crowd on the Current River during summer weekends I now mostly limit my visits to the OSNR to before Memorial Day and after Labor Day. I canoe both the Current and Jacks Fork rivers, but have not paddled the Jacks Fork below Eminence for years because of the pollution caused by e coli from horses. I would also point out that it takes me about eight hours each way to get to the OSNR, and that I spend a considerable amount of money on each trip for food, supplies, restaurants, and motels both in Eminence and Salem. I am also a frequent user of the campground at Pulltite and camp on Current River gravel bars on multi-day down river canoe trips.

I am writing in support of Alternative A of the Draft GMP. I believe Alternative A provides the best compromise between multiple use of the OSNR and the Park Service's duty under the OSNR enabling statute:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States " PUBLIC LAW 88-492-AUG. 27, 1964

I believe that Alternative A is better at meeting "the purpose of conserving and interpreting unique scenic and other natural values including preservation of portions of the Current River and Jacks Fork River " I would also point out that this refers to the condition of the rivers as they existed upon enactment of the legislation, not to the currently existing conditions after years of extensive overuse as a result of inadequate enforcement. This is especially true as relates to destruction of the riverways resulting from unauthorized roads, horse trails, ATV usage, (including, but not limited to unauthorized river crossings by horses, vehicles, and ATV's) and vehicle and RV camping along the rivers' gravel bars.

At a minimum I also support Alternative A regarding motor boat and motorboat horsepower limits, especially on the upper stretches of the Current and Jacks Fork rivers as explained in table 4. I would also strongly recommend that the plan not allow motorboats above Two River either in peak season or off-peak season. If motorboats are to be allowed between Round Spring and Two River during the off-peak season, I recommend that their horsepower be limited to no greater than 10hp. I have personally experienced dangerous encounters with higher horsepower motorboats on the Current River between Round Spring and Two Rivers. At least three of these incidents occurred in October between Bee Bluff and Two Rivers. In one of these incidents the motor boat barely avoided crashing into one of our canoes as we were heading downriver through a narrow channel.

While my wife and I own two horses and participate in trail rides, I strongly support Alternative A regarding horse usage as described in table 13 provided that restricting horses to only designated trails is strictly enforced. The

overuse of the OSNR by horseback riders has caused at least as much, if not more, degradation of the riverways and river water quality as has vehicle use. The stream bank erosion and e coli infestation (especially on the Jacks Fork below Eminence) are prime examples of this problem that is best addressed by Alternative A.

I would also like the new GMP to make it clear that gravel bar camping by people using canoes, kayaks, or other paddle craft not be further restricted. I agree with the statement on gravel bar access in alternative A as stated in table 13: "Vehicular access to all gravel bars would be eliminated. Gravel bar access would be by boat or walk-in only."

However I am deeply opposed to the statement on gravel bar camping in table 13: "Camping on gravel bars would be allowed in designated campsites only." In discussions I have seen in the press and on the web, this statement is not being interpreted by Park Service staff as restricting gravel bar camping by canoeists, kayakers, other paddle craft users, or hikers. I would like the GMP to clearly state it will not restrict gravel bar camping by canoeists, kayakers, other paddle craft users, or hikers, but that it will also prohibit gravel bar camping by horseback riders, vehicle, RV, and ATV users.

Finally I would like to point out that Park Service is to manage the OSNR for the "use and enjoyment of the outdoor recreation resources thereof by the people of the United States." (PUBLIC LAW 88-492-AUG. 27, 1964). This means ALL the people of the United States, and not only, or primarily, those who live within proximity to the OSNR. The people of the United States, including its elected officials in Congress and the President recognized this when the legislation creating the OSNR was enacted in to law. That is just, if not more so, true today than it was then; despite what some "locals" and local Members of Congress would like people to believe.

Thank you for considering this citizen's comments. I trust you will see the wisdom of incorporating them in the new OSNR General Management Plan.

Victor Elias

**Correspondence:** I am in favor of option A. Most important to me is restoring and then conserving the natural and cultural resources for future generations, and not just park users. I think the long term economic health of the community depends on developing a more diverse mix of uses, for example, higher quality back country experiences, while maintaining a resource that continues to be appealing to visitors.

While the local community may have a strong sense of ownership of the park lands, they have not paid property taxes on it, or paid for improvements that make the natural and cultural amenities easily accessible. They have enjoyed this property, as I have, for free, thanks to the taxes paid by people in other parts of the nation as well as by them.

I heard about this document from multiple sources, including but not limited to the NPS.

**Correspondence:** I've been following the ONSR management plan chatter for quite a while, having read most of the articles available on line as well the follow-up comments. I also read most of the Draft General Management Plan, and I submit the following in reaction.

But first, I'd like to mention that while I live in St. Louis, I have a unique perspective concerning the Current and Jacks Fork Rivers. One of my grandmothers was from Arcadia Valley, one grandfather was a long time property owner just off Highway 19 south of Salem, we own property along Ottery Creek not far from the OSNR, and I spent many days of my youth canoeing the Current River.

Additionally in the past year alone, I canoed parts of the Gasconade, Little Piney, Black, Huzzah, Courtios, Meramec, Current, and Jacks Fork Rivers. As a matter of fact, I spent five days on the Jacks Fork and six days on the Current. I also hiked near the Current on the Ozark Trail from Peck Ranch Mill, and did a trail maintenance weekend on the Big Creek, which flows immediately into the Current.

I have always considered this region and these two rivers very special. This area of Missouri is very wild and scenic, and we owe it to ourselves and to our children to keep it as pristine as possible.

But there's no doubt in my mind that our love for these two rivers has caused problems due to over use. In my lifetime alone, starting in the late 1960's until now, I have seen all of the following:

â€ ATV's and trucks in the riverbeds.

â€ Trucks parked and camping on the gravel bars.

â€ Dozens of illegal access points.

â€ An ever increasing number of power lines over the rivers.

â€ MODot's absurdly excessive Highway 17 Bridge over the Jacks Fork.

â€ Way too many canoes on the river at one time (summer weekends).

â€ People using chainsaws along the river (that they unloaded from their canoe).

â€ Excessive trash.

â€ People driving right into our canoe campsite at night from one of the aforementioned illegal access points.

â€ Jet boats excessively driving up and down the rivers (one actually fished a long rapid by driving their boat to the top of the rapid and drift fishing on the way back down...over and over again).

None of these I would consider scenic, which was the original purpose of protecting these rivers in the first place. It really saddens me when people seemingly want to ignore common courtesy (and sometimes the law), and do as they please, wherever they please.

The Current and Jacks Fork Rivers are truly gems, and along with the Eleven Point, are the only protected rivers in the state. I've seen firsthand, what happens when the rivers aren't protected. All of those items listed above plus development along the rivers are commonplace. (Speaking of the Eleven Point, we haven't canoed that river in years because of all the boat traffic below Highway 19. This was a regular destination all through the '80's and '90's until the boat traffic got out of control.)

Several opinions have been offered that those people who live along the rivers are the true guardians of the rivers, that the lands used to create this park were 'taken' by the government, and some feel it's their right use the rivers anyway they see fit. I can sympathize a little, but it's been 50 years since the park was created, so quite frankly, it's time everyone realize that this is national park, to be protected and used by all the people of the United States.

Therefore, in an effort to keep these rivers as scenic as possible, I would to offer Alternative A as the best option. There is no doubt in my mind that this option would be best for these rivers.

**Correspondence:** It is important for everyone who values the Current River work together. Lack of any management has meant the River is beginning to rapidly decline. That degradation will continue if no one allows change to occur. Option B is an approach that incorporates use of the river not only for protection but also allows all those who use the river to become better stewards of a unique river system. It will require accountability and cooperation by everyone, elements that are currently absence. Option B for management of the Current River could become a model for other states to use as they plan management plans for their river systems.

**Correspondence:** My first float trip was on the Current River when a teenager about 1980. I loved it and like to go floating whenever I can which for the last 30 some years has been once a year with only a few exceptions. For several years, my adult brothers and our children camped and floated a river together each summer. We floated several different rivers in Missouri's Ozarks. In 2011 and 2012, my son (aged 17 and 18) and I rented kayaks and floated the upper section of the Current River. I was pleasantly surprised that it was the best experience I have ever had floating a river. The reasons were: A) There were very few other people floating which contributed to us seeing wildlife and being able to truly relax and go at our own slow pace. We saw several birds, including a black crowned night heron (and got to sneak up for a close view). While I am not an avid birder, I really enjoyed that experience of seeing this rare species of bird for the first time and watching it for a matter of several minutes. The visitors we did see were using the river appropriately - not just drinking and partying like on some rivers. B) Not to be taken for granted - the crystal clear cool water is very important to enjoying the river. We don't just float on top, we like to stop and swim. My favorite thing to do is: park the kayak, lie in the water on my stomach with my life jacket and goggles on, float a section with my head in the water (holding my breath) and watching the color and movements of the fish. C) We enjoy the challenge of negotiating the curves which is why we prefer the upper sections of rivers. I vote for management option B and want to emphasize that I think your top priority is to protect the ecology and water quality of the rivers and lands of the Ozark National Scenic Riverway. Doing so will also protect the quality of experience of floating the river. Concerns in regard to water quality include: protecting the land where the water (and potential pollution) comes from and impacts of people riding horseback or driving ATVs. Another ecological concern is control of invasive species. I would suggest placing a port potty at strategic locations along the river and let users know of those locations so that a significant amount of the human waste can be collected rather than deposited in close proximity to the river.

In 2011, we visited Devil's Well and thoroughly enjoyed being at the base of the sinkhole with the lights on which enabled us to see just how far down the water was falling before landing in the underground lake. It was very impressive, cool on a hot summer's day and relaxing to watch and listen to. I was disappointed in 2012 to find that it was closed. I hope that by now you have opened it again with the opportunity for an experience similar to what we experienced in 2011.

We hope to visit Devil's Well again and kayak the upper stretch of the Current River again this summer. I look forward to it all year long. Thank you for your management of the ONSR. Oh, and I think management of the ONSR should continue to be by the National Park Service.

**Correspondence:** I oppose reducing the number of gravel bars accessible to vehicles. My granny is 86 and has lived in Shannon county all her life. It is not fair to limit her access to the river because she is not able to hike or travel in a boat. This is discrimination against the ill, elderly, families with young children and babies, limiting the number of gravel bars or eliminating them will impose a hardship or impossibility for access for them. I oppose any rule that would limit our access to the gravel bars by vehicle access.

**Received:** Feb,06,2014 21:44:08

**Correspondence Type:** Web Form

**Correspondence:** I am a citizen of Texas County in Missouri concerned about the effects of the Draft General Management Plan on the Current and Jacks Fork Rivers area. Closing access points to the rivers will seriously impact the tourism industry in the area. The people of Missouri have maintained the health of the rivers and surrounding areas for a long time. I understand why people from other parts of the country enjoy our Ozark scenery and culture but I deeply resent them trying to make changes to our part of the country. I strongly urge the National Park Service to take the no action alternative to prevent more restrictions on public lands, protect private property rights and protect our local tourism industry and economy. I believe an even better action would be to transfer ownership of the land to the State of Missouri.

I believe my comments are substantive and I would appreciate a response. If you think they are not, please tell me why not and how you can ignore them.

Respectfully,  
Bill R. Reece

**Correspondence:** Dear Superintendent:

I would like to comment on the proposed GMP for the Ozarks National Scenic Riverways. I appreciate your efforts to come up with a plan that takes into account many styles of recreation while showing serious concern for improving environmental protection.

I believe that Alternative B is the most realistic and beneficial at this time. I very much like the idea of the protecting our fragile Ozarks by your proposal of several actions: 1) closing undesignated horse trails and restoring them to natural condition while designating legal ones for equestrians to use. Likewise, 2) closing undesignated roads while adding or keeping limited others. And 3) limiting access points and stream crossings.

Human beings tend to overuse, abuse, leave trash behind, etc. The abuse of our fragile ecosystems are proof of this as shown by the degradation of our gravel bars, access points, and erosion which harms native plants and animals and open our lands up even more to invasive plants which then causes a vicious and sad spiraling down of our natural ecosystems.

I would definitely support including the 3,400 acres near Big Spring to be managed as wilderness. Wildlife needs a safe place to live and raise their young. How much better is a wilderness area for some of our shy birds and animals - plus, for young people to experience a true wilderness!

The proposed visitor and learning center at Powder Mill will be beneficial. Our young people, who will be the future stewards of our lands, can only really learn what they are taught and, best of all, can learn firsthand. They will love expanded museum and archival experiences as well as enjoying the natural treasures of our rivers, springs, and woodlands. Experiences without motorboat noise, ugly erosion from horses and vehicles outside their designated areas, etc., will be invaluable to give our young people peaceful, exciting times that may spark a love of nature and scientific curiosity for a lifetime. I hope many grow up to love our native fish and flowers and birds and animals as much as I do.

The extra staff positions that will be required can only be beneficial for education and oversight.

Thank you for attempting to take another big step forward in managing for generations to come our beautiful national lands.

**Correspondence:** I oppose the alternative B limitation on motor boats northern boundary to Pulltite during off peak season. What reason is there to stop the long standing culture of gigging in this community? People have been gigging in the current river for longer than I have lived here. When I moved here 23 years ago I fell in love with the culture and rich history of the area. I have no intentions of changing this culture just because I did not grow up that way. There have been enough changes and restrictions to the way of life here in the past 23 years I have lived here. Motor boats especially off season should continue to be allowed and motorboats during peak season should be allowed from Pulltite to Round Spring. There is a small community left in the area that depends on these activities to make a living here. The activities is why we live here. There is limited alternative financial resources, limited money

for gas to travel down river to locate another spot for gigging etc as well. I find it very hard to believe motorboats are causing any significant problem to change the culture and traditions of the local communities.

**Correspondence:** Thank you for your work on the revised alternatives for the General Management Plan for Ozark National Scenic Riverways.

I am a native Missourian and have enjoyed the Current and Jacks Forks rivers since the 1960s. My experiences exploring and enjoying the river and area communities were important in development of my overall appreciation of our natural world and our place in it.

The ONSR is a beautiful area appreciated by many. To continue to enjoy it and preserve the area for future generations, we do need to consider some limitations on our own activities. I think the NPS draft management plan has done a good job of presenting alternatives which consider variations on how to manage to enjoy and preserve the ONSR.

I recommend that that alternative A would provide the best protection, balanced with many opportunities to recreate in the park.

Of most concern to me are the many unauthorized access points to the river and motorized access to gravel bars. Also there are many unauthorized trails and old roads which aggravate unauthorized ATV traffic. Also of concern is the excessive number of trail riders and unauthorized horse riding trails. I support horseback riding in ONSR but think the current amount of unauthorized trails and large number of riders are putting unacceptable pressure on water quality and other natural resources in the park.

I also support the recommendation of a Wilderness area in the Big Springs tract.

Thank you for consideration of my comments.

**Correspondence:** I oppose restricting the motorboat use on the Jacks Fork river. There is already extremely limited amounts of time when the river levels are high enough to run a motor boat above West Eminence. However it is unfair to restrict access to the river by boat. You should be able to make a round trip boat ride up and down the river when it is deep enough to travel. Paddling up the river is not a likely options for most people I know. Please do not change the motorboat limits currently in place.

**Received:** Feb,06,2014 22:08:41  
**Correspondence Type:** Web Form  
**Correspondence:** Dear NPS,

I have been on this river since before I could walk. I have swam, fished, hunted, drove my boat, and camped on this river since I can remember. My family has been here doing these activities before I can remember. My wives grandmother grew up on the river and had to move from the river when the park was created. The reason for these people to be moved away from the river was to protect the river from over exploitation and to protect the resources. As a result, my wife's family and my family were raised at the headwaters of this beautiful river, specifically big creek. The reason for the national park service to designate these rivers as a national park was for preservation of resources and to allow access to the rivers. I have a few issues I would like to address about the proposed

management plans and my experience with the current management plan.

First to give a little background on myself, I grew up on a tributary of the Current River, Big Creek that flows into the current above Brushy Creek and Bee Bluff. After graduating from Bunker High School I went to Missouri State University and received a B.S. in Wildlife Conservation and Management with a minor in Agronomy. I now work for a state natural management agency. I can say that growing up on this river and then being educated on habitat sustainability and ecology that I can see degradation. I can also say that the degradation I have witnessed isn't from boat traffic, "illegal access" use, or atv abuse. The degradation I see is from uninterrupted floater "tourist" traffic. The people who use the river every week take care of the river every week as they use it. As part of my job I float the upper current from Cedar Grover to Akers and the amount of beer cans and trash in the river is 4:1 compared to below Round Springs where my group of users take care of pollution whether it is theirs or not. The amount of trash on the upper river that is comprised of tourist and "environmentalists" and pails in comparison to the amount on the lower river where local heritage takes care of its grandparents back yard!

One of the key proponents of all the management plans is that the river is over used and abused. Superintendent Bill Black said in an interview after one of the public hearings that it is hard for the people that are here all the time to see the damage caused by use of the river. That is a paraphrased quote but I would have to disagree with Mr. Black's quote. Mr. Black is like a lot of park users who come in once a year, or in his case get out of their office every 6 months and think they see something different. To restrict the smallest group of river users with boaters and horse riders and leave unrestricted numbers of canoes throughout the river system makes little common sense unless the national park services seeks money from tourists and concessionaires. If the problem with them river is over use then why target the smallest group of users to fix the problem? Common sense should answer this question, but the proposed management plans exhibit little common sense! This river has cared for its self for hundreds of years through floods and natural ecosystem interactions. The wake from a boat, or the tracks of a truck pulling a camper onto a gravel bar 100 yards from the river will do no damage to the ecosystem and a flood event will wash the river whatever way it is naturally going to. Natural ecology that is stated in the establishment of the ONSR cites overharvest of timber, the effects of that are just now being shown, not the effects of current river users!

The proposed management plans other than the "NO CHANGE" alternative will do no better at managing or preserving the river than the current plan. The rules that are already in place are not enforced and I place sole responsibility on the National Park Service to enforce the rules and regulations they already have in place, before placing more regulations and excluding responsible users from the river because of the National Park Service's negligence of the rules you all have empowered previously. Enforcement of the current park rules are more than sufficient to preserve and allow access to this national treasure.

While the park is a national treasure and is open to everyone, I believe that the current management plan is more than sufficient to preserve the park's visitors and local constituents. If the current rules were enforced with concessionaires numbers, horse numbers, river rules, and access rules, the current management plan would be more than sufficient to meet the needs of all park users. Excluding certain groups from certain areas with designated camp sites, horsepower limits, road closures, and access closures does nothing but showcase the National Park Service's unworthiness to enforce its own rules and regulations within NPS boundaries. If the NPS would enforce its own rules and do its job set forth by the National Scenic Riverways act through congress there would be no need for a discussion on new rules and regulations to discriminate against its constituents, their visitation rights, and their heritage rights. Regularly placed park rangers every weekend within every 5 river miles would pay volumes to the current river management. In my 20 remembering years on the river I have only saw ONSR rangers 10 times on the river, and that is in about 100 times on this river. Enforcement would pay volumes and if these rangers enforced the rules set by the CFR Title..... that gives them authority, 99% of park problems would be curtailed before the environmentalist pressure that is pushing this current management plan would be null and void!

If the NPS feels necessary to enforce new rules and regulations look at the enforcement of the current rules and regulations, local economy affected, local heritage that will be killed by new regulations, and the outright slap in the face to the people that live and work around the ONSR borders with the newly proposed regulations. If the NPS would do their job in protecting our grandparents home places there would be no angst towards the NPS but rather an embrace from a next generation that will enjoy our heritage left by our forefathers. Instead, embrace the local heritage, work with local groups and government, and enforce the rules you have empowered upon us instead of catering to environmental non local groups that want to not be disturbed by locals on their weekend get aways. We

embrace tourism, we want people to come here,... but we don't want people to call for us to be kicked out of our back yard and the NPS to cater to these groups from big city and big money lobby groups to enforce their will over our local heritage and our back yards.

A few suggestion I will give for a new management plan besides the NO ACTION plan I support is No concessionaires floatables below pulltite, and no boats above year round. A clear list of "unauthorized or illegal" roads and reasons of why these roads should be closed, both political and scientific! Just because it takes forever and a day to get there doesn't mean they should be closed, a federal budget is large and gas is no big deal for enforcement! And a reasonable option to vote and show local voice on these options that affect us most. For no reason should Kirkwood and St. Louis determine the course of our back yard for their once a year enjoyment. We live with a national treasure in our back yard but the fact that it was our grandparents front yard should hold some clout in the decision that we get to use it with something besides camping in a commercialized campground, canoeing in a concessionaires canoe, and hiking on a designated trail lighted and concreted! The National Park Service has done a poor at best job of managing the land and the fact that the NPS should cater to both local heritage and tourists who are lucky enough to experience our back yard by striking an educated and informed balance instead of a government iron hand approach. In my opinion the NPS should turn over the ONSR to the state control which manage the resources with better oversight than the NPS.

My plea is choose a NO ACTION alternative and give the plan 20 years enforcing the rules the way the NPS is supposed to instead of catering to liberal environmentalist groups from hours away that with to hamper local way of life and way of making a living. If you are a low paid intern reading this to make a recommendation to the staffer who pays you, think about where you played as a kid and someone taking that away instead of some dumb redneck making a plea to take a boat ride :). Thank You and have a good day and hope to see you some day on the river.

**Correspondence:** I have floated the Current River several times with my family over the last thirty years, and in the early years I have greatly valued this experience. I have been distressed to read of the pollution of the waters by horse-back riding and all-terrain-vehicles. I appreciate the work that the NPS has done in analyzing the need for improvements in its management plan. Alternative B would be an improvement over the present situation, but I urge that Alternative A should be adopted, including closing illegal roads and restoring natural conditions, closing undesignated horse trails and limiting stream crossings, and barring vehicle access to gravel bars. I also advocate that Big Spring be designated for wilderness status.

In the coming decades of drought and more extreme weather variations that climate disruption is bringing, our ecosystems and scenic areas will be severely stressed. We will continue to need services from our ecosystems like water filtration and carbon regulation. Our Midwest culture will be better inspired to respect and maintain our ecosystems if our citizens can experience a healthy, non-degraded ecosystem like ONSR's. It's important to preserve the full ecological diversity of our treasured areas like the Current and Jacks Fork Rivers, to keep them robust, capable of survival, and influential. All of this requires that our national park tracts like the ONSR must be protected from human use that degrades their soil integrity, water purity, and scenic integrity.

**Correspondence:** I prefer Alternative Plan A because it promotes the most natural, scenic and peaceful experience of the Ozark National Scenic Riverways. I like Plan A for its reduction of motorized boat traffic, management of horse trails, elimination of vehicle access to gravel bars and recommendation of the majority of the Big Spring Wilderness Study Area to have Wilderness status. However if Plan A was not possible, I would consider

Plan B to be the next best alternative.

**Correspondence:** This plan must have taken a long time and much money to prepare. It is over 500 pages long. I think the public should have more time to hear about this and comment. It affects many people, who may not have had the opportunity to hear about it. Many of these people use these areas for recreation or for their livelihood. There should have been more time than 3 winter months to comment. There were only about 3 meeting dates also. This was too small a number, because many people use these areas but do not live there. The rivers should belong to the people not the government. I only heard about this plan tonight. February 6, 2014 and have not had time to read it. It is also not in a convenient form to read. PDF is too hard to read. I think that, if it is a good plan, then there should be a fair amount of time for the people to know and comment.

**Correspondence:** Comment on the draft GMP

Having been told that Alternative B is a 'done deal', I would like to request these tweaks:

That the NPS come up with a procedure of permits or exceptions to allow persons who, by reason of age, or physical impairment must use motorized forms of transportation to access the river, historic or natural sites of interest, old roads going to family homesteads and cemeteries and other places on a case by case basis, using the least intrusive means of transportation possible. No more than one permit for one individual (and caregivers if needed) shall be issued in any 6 month period, and the party needs to pick up the permit in person from one of the park offices or one of the concessioner's stores, so that their impairment, or age can be verified by sight or by the same means as one obtains handicapped vehicle plates. Misuse of such permit or falsification of impairment will be grounds for no more permits being issued to that party.

That the wording of permitted gravel bar camping be made more clear that it includes people floating the river, or hiking in, and that barriers erected against vehicular traffic be constructed in such a way to allow passage of wheelchairs.

In regards to motorized use of the Jacks Fork above Bay Creek and the Current River above Pulltite:

That the Plan be amended to allow motorized access to these rivers from September 15 to January 31st inclusive during gigging season, as long as the individuals, or one adult family member of a group putting in has a valid Missouri fishing licenses and are engaged in that activity under current motor horsepower limits. I would further permit motorized fishing from January 31st until September 15 with current motor hp limits from 4 p.m. Sunday to 10 a.m. Thursday of all weeks, excluding Memorial Day, 4th of July when it falls within that range of days, and

Labor Day. On those holidays motorized boats would be excluded from the rivers from 9:30 a.m. until 3:30 p.m.

While occasional use of a motorized boat on plane would be permitted, "joyriding" or repeated racing on those sections would be prohibited.

That the Park Service continue to cooperate with Stream Teams, other paddling groups, equestrian companies and trail rider groups, an environmental groups, and others to promote joint stewardship opportunities, stream cleanups, volunteer labor projects and encourage such groups to adopt sections of stream, acreage, trails, caves, campgrounds, springs and other places of natural or historic significance, working together with NPS to keep the park in good condition.

That the park take advantage of August 25-26-27, the birthdays of the Park Service and Riverways, and National Public Lands Day a month later, to foster publicity and public service to the park resources.

That the management of the park look closely at the next twenty years through the glasses of balanced carrying capacity of the areas and activities so that everyone may experience all the park has to offer over their lifetime, but perhaps not everything all at the same time,

That the park be instructed to establish a Citizens Advisory Committee, consisting of park stakeholder groups and at least three ordinary citizens, one from within the park counties, one from at least 100 miles from the park, and one non-Missouri resident to offer ongoing comment and oversight of park operations. The Committee would be non-voting, but the park would be instructed to pay heed to the opinions of this committee. Such committee would meet in person once a year and conduct most business via email and telephone. The Committee would be charged with representing the varied interests of the public to the park. No member of the committee could be a public office-holder at the time of service, no one could serve for more than 4 years, and terms of service should be staggered.

The very first sentence of the enabling legislation says, in part: "...For the purpose of conserving and interpreting unique scenic and cultural values—including preservation of springs and caves—and provisions for the use and enjoyment of the outdoor recreation resources thereof by the people of the United States"

The park, in my opinion, has been derelict in this by increasingly putting the springs and caves off-limits to the people. At this time, all the park caves are closed to human recreational visitation, to minimize the spread of a fungal disease which has never been shown to have been spread cave to cave by humans, but which HAS BEEN SHOWN to spread PRIMARILY BAT TO BAT, and notwithstanding the US Fish and Wildlife Service has established guidelines for human visitation to caves to mitigate even the accidental spread of this fungus.

I would like the park to make Powder Mill Spring accessible again. This is NOT the cave—the spring which has grown up in swamp near the old building.

That was such a cool place until about 15 years ago. Why did you guys let it go? I'd like to get around to more of the 50 backcountry springs— Giving them a higher profile would help increase adventure in the park. Maybe tie it to geocaching. The park is plenty big. You need to spread the people out more thinly and give them access to more than just the river. That would help solve the river's problems, too.

I'm still not happy with the non-access at Round Spring basin. If you can't touch the water, it's not a visit. Astonishingly enough, with traffic directed to the outlet of the tunnel, lots of people get to the tunnel area, and never continue up and around to see the real wonder. What a shame.

I call on the NPS to re-establish wild and show cave visitation in the park, under the US Fish and Wildlife guidelines of their decontamination protocol, with human access restored from April 15 to October 15 as soon as a practically possible. While bats are most certainly interesting creatures, the primary directive of the enabling legislation also means to preserve and research the subterranean rock and water ecosystems; this cannot happen due to the current management practices. Letting people into the caves during spring summer and fall will have absolutely no deleterious effects on the bats. I want back into the caves before I'm too old to go!

I also call on the park to re-open Round Spring Cave for educational tours to the general public during the same time

period. We've got to keep inspiring the kids to follow after us, and if they have no caves to visit, it becomes more and more difficult.

Finally the park is tasked with preserving the culture of the Ozark people, but for 50 years, it has done a pretty poor job in doing so. It has never recreated the success of first few years (1972-75), when the park was run by NPS staff, and the summer programs were presented by locals who merely had to be themselves to entertain and instruct the public. We realize that Ozark and NPS culture clashes, but there is something lost when someone down from Chicago for the summer tries to interpret hill culture that they barely have been exposed to. At one time, fifty years ago, there might have been something to the fact that locals weren't the most educated; but that's not entirely true; many of those local seasonals for the summer of 1973 were schoolteachers from the area. There are plenty of local people who are much better suited to interpreting the local culture. If you must hire seasonals, let them do science, and geography and direct the visitors with maps and to the bathrooms and leave locals tell about the local history and culture, and why living in the hills is different than in the city.

The Haunting in the Hills is a good step in the cultural direction, but even there professional interpreters outnumber people who still do the crafts for fun and leisure. Get folks from the Christianson craft camp to help out. You really ought to not pay them to demo, but do allow them to sell what they make. Last year's Haunting, a make-do affair that was on and off, was more authentic than the one put on by the park. Use people from the local history museums for programs. Talk with Melanie Carden-Jessen at Twin Pines—she's always got some local history thing going—making stuff not just listening. Let people try things at the haunting. You do such a good job with kids, but adults are just big kids, too. I think last fall's haunting had two good storytellers, two that were awful (you couldn't hear them) and one that was irrelevant (not Ozark) You need more locals telling more of the local history...how about Libby Sanders? How about a series of locals as evening programs or a history weekend?

There really needs to be a concerted effort to work with the townsfolk to get more authentic cultural interpretation at the park. My most precious memories are of Art Patterson, and Edna Staples, and Swiney Rayfield—these people were the real deal, as are the local musicians. Mitch Jayne was down there so long he went native, There likely are people yet living that can help out, and not charge \$200 a day to be an Ozarker. They are some of the people who commented to turn the park back to the state. Let them tell their family stories about what the coming of the park did to their lives...too many of them will be gone too soon.

No mountain bikes. Those things make worse ruts than horses. Continue to permit rock climbing and bouldering. Let people get out there at their own risk and not get arrested. Work out and sell a short, more lay oriented "Homeland and a Hinterland" park book. Figure out a way to sell the park as 7 days a week, not just a drunken Saturday experience.

An entrance fee won't work at this park, but you need some way for the people who come there to make money donations that will stay at the park for improvements, for program materials, for all the niceties that a little spare cash could arrange. Not donations to the federal government in DC. If it goes to the park and stays with the park and they know it, a lot of people would make donations.

Continue to permit everything, but no excesses on anything. That is your best road to go. Get a handle on actually how many horses and how many private boats use the park in a year. If it takes a \$5/year bridle clip or sticker for a boat, like they do in the boundary waters, so be it.

Anyway, those are my suggestions and rants. Carry on.

**Correspondence:** Take no action on the proposed Plan!

Stop closing the old roads and trails. The Great American Outdoors initiative should mandate that all roads should be opened back up to access the National Park Service Ozark National Scenic Riverways at their original access points.

This would open the river up so all its beauty and splendor can be accessed and enjoyed as it was in the 1950s as stated in the original NPS plan, where the county roads would be maintained and the upper Current would get a primitive campsite. We are still waiting!

Upper Current - the river of my heritage:

Interpretation needs to be done along and marked about the Civil War trail in and alongside the Current River from Chilton Mill in Shannon County to TanVat to almost the head of Current River at Montauk State Park. Panels should be along the river telling about the troop movement in the Civil War. Also, interpretation panels placed at the parking area where the troops left Current River and headed North on a creek bed three miles where the Union troops encountered Confederate Soldiers who were camped at Inman Hollow where 11 Confederate Soldiers were killed in the Skirmish at Inman Hollow in August 1882, within a mile of my and my Dad's birth. The Union troops returned to the road and headed on north toward Salem where a Skirmish at Salem had taken a few days before in July 1862, not to be mistaken for the Battle of Salem that took place December 3, 1861.

This is a cultural resource location, in the Current River at this location at TanVat many local people were baptized in the river years, from churches that I attended as a child, the Upper Parker Community Church located four (4) miles east of TanVat and Mount Olive Baptist Church, located four (4) miles west of TanVat that I have attended the past 20 years. Other cultural locations where I have witnessed baptisms as a child and a young person were at TanVat, up-river from Cedar Grove and at Cedar Grove, Akers, and Sinking Creek at Current River.

The Hickman Mill was the earliest Mill in the Upper Current, dating as far back as 1835 that developed Montauk as a community. Other mills followed, one mill was owned by my Mother's great uncle.

Tan Vat and its importance to the development of Montauk, MO. (Mother was born four miles West of Montauk and it was the Post Office of her birth and Dad and I were born almost four miles East.)

The Historic trail - the road in and out of the river was where my Dad drove in our 1937 log truck from lower Parker down to Cedar Grove that overlaps the Civil War Trail in the river.

Commerce and Industry: The timber and lumber industry was active along the river. The timber men who were tie-hackers floated railroad ties and logs down the river. My dad and his dad were tie hackers.

Agriculture has also been lost on the river starting with the Eli Cook, the Cooks farm at Lower Parker, 'Aunt' Susie Nichols farm. I hear it has had some improvements but like all the other hoses along the river if you wait long enough it too will be lost to the NPS irresponsibility in the Upper Current.

When I was very small, In the summertime on weekends we would go to places like Lower Parker or Parker Ford and picnic in the afternoon putting in a watermelon in the river to cool. Mom would make lemonade and cool it in the river water. We would taste the water cress and fry the fish. I would catch minnows using a gallon jug, screen wire and soda crackers. My dad and brother would be fishing.

Dad would take me gigging for eel in the Current River in what is now called Baptist. That was not my favorite sport.

In the Thirties, Dad went to the Lower Parker School House and there people would make mattresses.

There was a tomato canning factory in the Jadwin, Cedar Grove area in the Thirties and two of my Dad's sisters worked at the cannery.

My Family along the river: My Mother's Great Uncle owned the Eli Cook farm and sold it to buy land and develop the hamlet at Cedar Grove where at one time there were three doctors. My great aunt worked for one of the doctor. Just before Eli Cook's farm and across the river, my Dad's grandfather owned the farm near Allred rural school.

My Dad's cousin owned a farm near the Lower Parker rural school.

My dad great Uncle owned Schafer Spring area. My Dad's, Dad, married a Prince, a Cherokee Indian, who was a descendent of the owners of Prince Spring.

I have no family at Akers, but I road the school bus with two Maggard boys who family owned and operated the ferry. I crossed the ferry many times on my way to see my Dad's cousin who was a Prince descendent.

My Dad and my three brothers built the upper dam at Alton Box Board.

I worked at the original Camp Zoe, when it was a children camp to pay my way to the university. We would walk up the confluence of the creek and river to cool off in the Current in the hot summer time.

My Mother's grandparents and two daughters lived near the Current River at Eminence.

William Ashley, Missouri's first Lt. Governor, played a role in developing Montauk and the TanVat area. He had a

trading post at Beaver Creek about 35 miles West of TanVat and was told he had another one at TanVat where they tanned hides and established a tannery. He mined the saltpeter out of Ashley Cave about four miles up-creek from Montauk State Park on land that my Mother's grandfather and grandmother owned where she was a fortune teller. Ashley hauled the saltpeter back through this area to his munitions plant in Potosi in the early 1800.

**Correspondence:** Thank you for taking the time to analyze and research this issue so carefully. Your recommendation of Alternative B is very much welcome, but I feel we could go further with Alternative A. Within 50 ft. of roads should be restored to a natural state. Horse traffic should be limited, as well as stream crossings. Also, RV access to the gravel bars should be hindered.

If this plan is instituted, Americans will enjoy this land for years to come through preservation of the ecosystem.

**Correspondence:** In my life I have canoed and kayaked many times summer and winter on the Current River. I have also swam and canoed the Jacks Fork River several times. These rivers have a unique quality and special beauty. Especially the Current River is so clear or was in the past before it was degraded. After a weekend it becomes more cloudy. But in later years it was degraded by misuse and abuse.

It is not respectful to allow human trafficking of horses and dogs on all the roads and gravel bars on the river. Human traffic with horses causes a manure problem. It also detracts from the beauty and solitude of the river experience.

These rivers belong to everyone because of their special qualities and therefore should not be squandered to use as any one group to take for their own. Instead, the rivers should be protected for everyone to enjoy in a respectful way. Respectful means to respect all life in and around the rivers. Respect the fish, the frogs the Ozark Hellbender salamanders, respect the springs fragile beauty and ecosystems- -all the springs should be protected with wilderness status including Big Springs. It has been my special experience to have healed my frozen shoulder by swimming in the water by and sunning on Pulltite Gravel Bar. I have spent many quiet and thoughtful moments in the summer and winter at the Current River. It is my hope that all the wildlife in the area will be protected and not hunted. The beaver should not be trapped or shot. The rivers should be left in their wild state for all to enjoy. Please choose Alternative A or at least B to protect the rivers.

Please close illegal roads and restores natural conditions to 50 miles of these roads, please close 65 miles of undesignated horse trails and add no new stream crossings.

I think it is unsightly to allow vehicle access to most gravel bars. However there is one gravel bar beneath a bridge which has been used as long as i have been to the river as a camping area. It has park toilets on site. This gravel bar should be maintained as in the past years and allow camping on site. The rest however, should be barred from traffic other than boaters or hikers.

Please protect the rivers for all of us to enjoy and for all life to breath and live.

**Correspondence:** As a former Missouri resident, I strongly support Alternative B as the model for the management plan covering the Ozark Scenic National Riverways. This river system is simply too beautiful and important to risk further degradation by the overuse in localized areas. It needs to be well managed in a balanced manner. The National Parks system certainly has the historical track record to prove that they can adequately handle the task. Also, the proposals to turn this management over to the state need to be carefully considered. Although local control may sound attractive, state management would undoubtedly be more vulnerable to and responsive to big-money commercial interests. It is really not a reasonable option on which to risk the state's most wonderful natural asset.

I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Allowing Mountain biking on the trails within the Ozark National Scenic Riverways. Mountain biking would bring tourism and needed tourism money to the area. Mountain biking advocacy groups would also provide better trail maintenance as well as modern sustainable trail techniques to the trail system.

**Correspondence:** The Current and Jacks Fork Rivers of the Ozark National Scenic Riverways are amongst the most pristine riverways in the world. Being from the St. Louis area, I've always driven past multiple Ozark streams to get to the Current and Jacks Fork. This has never bothered me but actually, without a doubt, been completely worth it. Watching cars pull off I-44, heading toward the Meramec, Huzzah, and Big Piney always puts a smile on

my face, knowing I'm only about half way to our little gem. Putting in on the Current makes you feel like you are in nature.... Even in peak season, there are only a few others floating, most of whom are like minded to myself...making it feel so wild. Fishing for Trout and Smallmouth Bass while gazing up at towering bluffs, listening to the chatter of the Kingfisher as it swoops past our canoe. At night pulling onto a beach knowing we're in the wilderness. Dark, quiet, a seemingly perfect campsite. Pitching our tent under a giant sycamore that seems to be reaching for the stars. This is where I feel the most at home.

In the past few years these quiet, dark, wild experiences are becoming harder to come by. In picking out a beach camp on these multi-day floats the criteria used to be simple - high enough over the water to keep from being flooded out and checking the map to ensure we are far from roads giving us that quiet seclusion we are looking for. But in the past few years that has changed. Now we simply look for a beach that's not covered with tire tracks. Even on beaches far from roads I've recently had four wheelers pull into my camp in the middle of the night.

Although I've backpacked all over the world, visited numerous National Parks and climbed some of the highest peaks in America, the Ozark National Scenic Riverways is still my favorite place on earth. I look forward to exploring the new trail system and have high hopes that we can do something about the illegal roads being created in the park, keeping it the wild place I grew up in. We all want this place to remain special so let's all work together to make sure this happens.

I support plan A and B. More importantly I think whatever plan goes to action IT NEEDS TO BE BETTER ENFORCED. Like previously mentioned it almost been run over in the middle of the night by a pack of four wheel drive vehicles deep in the backcountry on the current river and that completely unacceptable.

**Correspondence:** As a 35 year employee of Ozark National Scenic Riverways I feel the need to express my opinions regarding the GMP. I have worked as a reservation clerk, a fee collector, a park technician, and as a L.E. Ranger. I have seen Superintendent Art Sullivan's "management by neglect" style when rangers were asking for guidance and got none. And I have seen few managers who would make a decision. I have seen lack of direction and an increasing lack of communication with not only the community but also with staff. I have seen articles in the paper about the park and complaint letters to the editor that were far from accurate and I saw no response from the park what so ever. It has always frustrated me that inaccurate information that was reported and not challenged by the park. When this happens, the public that reads it, feels it must be true. If every complaint I have heard against the park were accurate, I too would truly believe that Ozark National Scenic Riverways was a disgrace.

May times I have wanted to stand up to the mud slingers and challenge the press to print the truth. I, however, am not the public information officer, and I know my place. So I work quietly, kindly, doing my job and only speak individually to people who question me about issues. I seek to educate anyone with an interest in "my" park. There have been many complaints over the years. Drug and alcohol use contribute to, or caused most of them. I was pleased to see press releases about our "crack down on bad behavior" being issued 5 or 6 years ago. Putting that in the papers had the desired effect, for a while. Ranger continued to do the same job that we had always been trying to do, but people were more aware that bad behavior would have negative consequences. The "bus greeters" contacting the park visitors at the put in points, reminded them that rangers would be watching for "bad behavior". Then reports of bad behavior began to drop.

Still, few park visitors know that public intoxication is a crime. Because we deal with thousands of visitors on any given Saturday, rangers must choose to contact only the drunks who are creating a disturbance, or endangering themselves or others. We cannot remove every drunk. Where would we take them and how would we get them there? There is no holding facility big enough, nor are there enough access points along the river to bus out all of the

drunks. It would require a road paralleling the river and a ranger shuttle bus to pick up and remove drunks before they spoil the day of other visitors.

An issue that I would like to discuss is ROADS. The shuttle bus removal was a joke many of us shared over the years, but the road paralleling the river was a true need. On the upper part of the Current River from Parker Ford to Akers Ferry they used to be a "river road" that rangers used to patrol on. It was the way the land owners accessed the river and forded the river to reach their farms. These roads were generally not open to the public until after the park took over ownership. When the land was in private ownership, only landowners and their friends used the roads.

Almost all of them had gates that were kept closed. These friends had a rare treat to be allowed private access to various backcountry parts of the river for hunting, fishing, boating and camping.

Then, Rangers used the road to patrol the river and to contact floaters in case of emergency. Early rangers continued the idea of a "river road" by blazing a trail between Akers Ferry and Round Spring that they patrolled on horseback. Former park ranger Darrell Blackwell told me about cutting out the brush along the trail in the spring before canoe season really got going each year. This allowed the ranger to watch groups and perhaps follow a suspect group down the river. More importantly it allowed the ranger to be seen often by floaters. This was important because the upper river is not always easily patrolled by boat due to shallow water. The Lower Current rangers had the "tram road" that they used in the same way.

I said that there used to be a "river road" because this became a problem

1. The road was never maintained and became a 4 wheel drive road only.
2. More people began driving 4 wheel drive trucks which increased the use to these areas
3. The road got worse
4. The road then attracted "mudder trucks" looking for Off-road experience. Large numbers of trucks, jeeps, etc. began fording the river and driving the river road as their recreation
5. As the road got worse, good people made bypasses around the worst-deepest mud holes in order to get to their favorite fishing hole. ATVs and mudder trucks then used those mud holes as play grounds.
6. People who saw the mess of mud holes and bypasses spread, thought that we did not care about our park if we let that happen. If we don't care about the land, why should they?
7. The Big Creek crossing into the Ozro Riley tract was closed to keep the ATVs and mudder trucks in check.
8. Vehicle traveling the river road between Parker Ford and Cedargrove often damage their undercarriage, running boards, etc. because the road is in such horrible condition.
9. Emergency vehicles (ambulance & fire) including rangers, can no longer get to most of the backcountry areas accessed by the river road, except on foot.

Rangers reported a large increase in use of the river road by visitors with 4 wheel drive trucks. These people asked if they could ford the river like they had seen the rangers do. When asked for guidance on this issue we were told that if it was an established crossing then it would be ok. Rangers did not want to see so many vehicles in the water, but did not want the river road closed for patrolling purposes. We requested that the river road be occasionally graded and parking provided at the access points. We also asked that the river crossings should remain open for ranger use only.

When the park's roads were mapped and the Roads and Trails plan published in 1990 it did not designate the crossings as "Service road". Management had not listened to their own staff. Instead the plan listed the river road and many others simply as "unmaintained" with the hope that they would fade away. Some did, but not many.

In 1990 the Shannon County commissioners objected to the designation of 3 or 4 of the roads in the Roads and Trail Plan. I do not recall Dent or Texas County commissioners objecting to any road designations. I do not work in Carter County so I did not pay attention to any objections that they might have had. A few people told me that old logging traces were roads, because they wanted to use them when hunting. I noted that there were other roads that had either been missed when the mapping was done, or had already been in such bad shape that they were not getting much use, and thus not counted. 15 years ago, ranger Bill McKinney and I submitted a proposal to revise the Roads & Trail management by closing the fords to the public (gate to create service roads) upgrade the river road conditions and create parking areas at the river access points. This would satisfy the complaints of the new generation that wanted more access (since they had been using the backcountry for fishing and hunting) and would protect the river from indiscriminate vehicle use.

I began educating people about the damage a vehicle can do to the river such as multiple pollutants (transmission & brake fluid, oil, antifreeze from the engine compartment), and macroinvertebrate compaction by tires. I used a stream

table to demonstrate.

As the years passed the amount of jeep and ATV use grew. Jeep users will go where ever they see an old skidder path left over from logging, an ATV trail, or a road in disrepair. Since ATVs are supposed to be Off-road vehicles, many riders feel free to make their own paths. Rangers had to get ATVs in order to intercept ATV riders. The state of Missouri passed ATV regulations allowing ATVs on county roads, and the park had many county roads inside our boundary. We asked for guidance about ATVs operating in the park. We got none. I felt that they were not a licensed vehicle and thus not allow on park roads. I began telling ATV operator that the only place they could legally be was a county road, and that most roads in the park were NOT county roads. I printed up a copy of the regulations and began educating the public about the state regulations. Now the county commissioners began claiming almost all the roads in the park as county roads. Former District Ranger Bill Terry told ATV operators that as long as they had all the required safety equipment, they could ride in the park.

The road issue will not go away. Not maintaining a road does not end the road. But it ends respect for the road and the road's owner. If you want a road closed, have the spine enough to close it right. Otherwise maintain the road. I know we do not have enough grader operators to keep all the roads up annually, but once every 3 or 4 years would have made a big difference in the river road. I occasionally patrol the river road between Cedargrove and Parker Ford and it has not been maintained for 50 years or more.

Another issue that I would like to comment on is the HORSEPOWER limitations and no motor zones. I met and married a local man after coming to the Ozarks. My father in-law ran the Dairy Isle in Eminence. Prior to purchasing the restaurant he worked for Bales Boating as a river guide and commissary cook. He told me that everyone used to run 25 hp motor (with a lift) on their boats. With the advent of jet units and later jet motors he bought a 40 hp motor. It was much easier on his arthritic shoulders that operating the lift. Because the restaurant was open 7 days a week, my husband used his dad's boat more than he did. We kept it at our house most of the time. It got used for fishing trip and boat rides, but by Labor Day each year it was equipped with a hand rail and lights. Opening day of gigging season was the social event of the year. Everyone would gather at their favorite river access point and build a bonfire. Multiple boats would launch and beach. Chairs and buckets would hold friends reconnecting in a thanksgiving like pilgrimage. Some would day gig like my father in-law and husband, but most would wait for dark and begin gigging for everyone's supper. Potatoes, hushpuppies, biscuits, and onions would be fried on the gravel bar. Coleslaw and beans would be brought out and served along with the fish.

As a ranger I worked the gigging season rather than recreated. I would observe that the 5 or 6 regular boats I would see in the summer at Akers area would be replaced by up to 30 different boats from Salem, Houston, Bunker, Licking and Rolla. They didn't all come at once. Usually 2 or 3 boats at a time. Sometimes a lone boat would be seen. The further down the river you go the more boats you see, because it take skill to operate a boat on the upper reaches of the river. The first two weeks of gigging season would be the most active, but gigging light can be seen most fall and winter evenings on the river.

Sometimes groups go on fishing trips, but usually a fishing trip is one or two people in a boat or canoe. This is reminiscent of the original settlers of the Ozarks fishing for their supper. Because of the swift current it is difficult to paddle up stream, therefore the need for the motor on a stable flat bottomed fishing boat. These are not speed boats for lake riding, but some speed is necessary to get the boat up on plane in order to get over the shallow water shoals.

The 1984 GMP made at 25 HP limit above Round Spring and a seasonal 10 hp limit above Akers Ferry. Because we did not enjoy the river much below Round Spring, we returned my father in-laws boat to Eminence and bought a small boat and 9.8 hp motor to fish near Akers. The motor would not go upstream. In the end we sold the boat/motor because we could not use it to go upstream. If we were just going to float, we could use our canoe. Because of the motor restrictions, we found ourselves going fishing only once per year or less after the 1984 GMP.

The current GMP mentions the 60/40 motor controversy. It also has zones with no motors. I believe that the ideal hp ratings would be everywhere above Round Spring as a 25hp jet, and everything below Round Spring listed as the 60/40 motor. The river will limit the use above Pulltite to those who can run a boat well. If you need a motor free zone, use Cedargrove as the boundary. Gigging is not allowed there by the state already so it is not much to blame the park for. Besides few boats operate there now.

Instead of no motor zones, I would like to see, or rather hear a noise level restriction on the motors. My parent home was on Boone Lake in East Tennessee. Until the TVA instituted noise restriction on motors, the boats disturbed us at all hours of the day and night. Noise restriction helped tremendously.

I know that there are people (including me) who do not like to hear a motor boat when they are trying to get away for solitude on the river. I never liked operating the park's Jon boat because of the noise. But there is no solitude on Saturdays anyway. Rather than a motor free zone, I would like to see set days that are motor free. I enjoy kayaking on Tuesdays when there is no crowd. I raised my children on the river those days. Even then we could not escape the noise of airplanes since we are in the major flyway for the airliners. And many places you can here vehicle traffic on a highway. That is the nature of a linear park.

Those people who want solitude should not come on the weekend and expect to find it. And those people should remember that the Jon boats were here on the rivers first. It is not fair to punish the few boaters who live and recreate on the upper parts of the rivers just because it is easier to make that stretch motor free. To make motor free zone in the headwater may affect less people than down river, but we recreate where we do because we prefer those areas. I could have taken our boat and fished at Two Rivers, but I don't like that part of the river. I like the headwaters. And so do the 2 dozen boats that I see on the river above Pulltite regularly. But you will hear from the 100 rare boat operators who still want the option to go above Pulltite. This is just going to feed the anti-government sentiment that already exists in Dent and Shannon counties. Perhaps this is a remnant of the Highlander whiskey rebellion since these are the ancestors of the Ozark settlers. Many moonshiners lived and plied their craft in these hills and still do.

I would also like to comment about the proposed Powdermill Education /Visitor Center. If the plan is to use the old Owls Bend School to develop an educational center to bring school students to for field trips I fully support it. MDC does similar things at Twin Pines and WE should be doing this. If however, the plan is to revise the visitor center at Powdermill that the cave researcher are currently using, I would like to respectfully say "Been there. Done that. Didn't work" A couple of lovely local ladies used to work that visitor center for us and had very few visitors to talk too. The building floods. The location is wrong. It did not work the last time we thought, build it and they will come. Put resources into the areas when people are. We used to have a wonderful blacksmith at Powdermill who could also tell a good story, and even he had limited success and drawing visitors.

This park needs to cater to the type of visitor that we want. Families & seniors, not the party crown 18-30 year old. We need more electric sites. We need more educational programs. We need more hiking/biking trails. We need more frequent campfire programs, with real campfires. We need more sing alongs around the fires. We need more approachable rangers (le and interp) on foot in the campgrounds. We need more adventures for families. Fishing clinics, archery, night hikes, Scavenger hunts, and competitions. Bass pro type stuff - outdoor cooking class. We need to have a booth space at all the RV shows in the state.

Another issue is horses. This is easy. Designate trails that are not on ARPA sites or eroding sensitive area. Close duplicate trails. Limit river crossings and get the horse rider involved in policing the trash. There are horse groups that specialize in trail construction. Get them to help. I would also suggest an annual horseback rider permit that hangs on a lanyard. This (suggested \$20.00-25.00)user fee would help sign and print maps of the designated trails. It might also fund a mounted ranger program. We don't need horse camps since there are several already in the Eminence & Cedargrove areas. Maybe lower Current??

We also need more, and regular press releases and press ride longs. Communication is the key. I used to teach DARE and found that if you reach the kids you will eventually win the parents. Still -try to reach everyone including the party groups. Tell them that National Parks are Family Friendly. Plant the idea of standards of behavior in National Parks. The bus greeter should be brought back on Saturdays. We need to restore the canoe season to the old April thru October. Press releases may help here. Invite the reporters to come to the park. We used to have a VIP cabin and used it for congressional delegates. I would suggest that it needs to be for Magazine and new paper reporters, state and nationwide. In addition, we need to leave our electric loops open all year and charge all year for them, even if it is strictly honor system picked up once a week.

I am pleased to report that the current superintendent Bill Black, far exceeds his predecessors in his efforts to communicate with the park employees and the surrounding communities. Others have made attempts with the communities such as attending relevant area meetings, but most sent powerless representatives. For example, I was asked to attend both LEPC (Local Emergency Planning Committee) and Stream Team meeting in place of a

manager. I continue to work with these groups as an individual, but the park doesn't support them in any way. When we play nice with people they see us as humans rather than the unapproachable "government" that wants to l "take" more from the locals (their land, their road to their favorite spot, their boating privilege). We have done a poor job of educating them since they don't yet see that this is a national treasure.

And lastly, the Upper Current is more than Round Spring Cave. Cave tours are almost all the interpretation that we get up here. We had history too and should have history interpreted to the visitors. I know that the park tore down the town of Cedargrove that was supposed to have been our historic depression era setting for interpretation. We can recreate in order to teach. We could use the Pulltite Hunting Club cabin as the setting for a historic actor. We could run a stream table in the Pulltite Visitor Center. Just a few thought.

**Correspondence:** I submitted a comment earlier, but this is so important, I feel the need to submit more. I am 71 years old, am disabled, can't walk very far at all without the need to rest, have copd, have bad painful arthritis, I am an honorably discharged, MARINE CORPS veteran. I vote, pay my taxes, and try to live a wholesome life. Of the very few enjoyments left for me, is the camping and fishing I do on the current river. There are a few places that I can drive to and camp, and fish, and enjoy the peace and tranquility of our great outdoors, without the crowding and annoyance of a lot of people. I don't drink, and or party. I take care of the area I'm in, and always pick up any trash that might be in the vicinity of my camp site, as most locals do. The only evidence of me camping would be the remains of my campfire. It doesn't cost much money to do so, and it's a good thing, because I live on a very limited income. I cannot afford to pay fees, so I have to do the best I can, on what I have. I am sure I am not the only one in this situation. And now, the NPS, wants to close all of these areas off, close the accesses to these areas under the guise of preserving it for future generations. BULLCRAP, what about our generation? If you close it for the future, simply means, that it will be closed forever, and under the control of a bunch of people that will never use and enjoy it. You talk about hiring another 25 or so Rangers to police it. You talk about spending up to 8.9 million dollars to do so. WHAT A TOTAL WASTE OF TAXPAYER DOLLARS! At a time when the economy is hurting so bad, you want to kill off what little freedom we still have left. What we have now is working just fine. WE DON'T NEED OR WANT YOUR CHANGES! THEY ARE NOT NESSESARY! All I see this as, is the communistic takeover of our god given free lands, that were donated or bought with tax payer dollars, for the tax payers and citizens to use and enjoy! This is NOT the old Berlin or Russia! The next thing I can see you wanting to do, is build a wall or fence around the whole area! YOU ALREADY HAVE ENOUGH CONTROL! LEAVE US ALONE! TAKE CARE OF YOUR CITIES, THEY NEED ALL THE HELP THEY CAN GET! GET OUT OF OUR LIVES!

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Cycling has a low environmental impact. Creating cycling opportunities in the area will help make the park more appealing to visitors.

The mountain biking community traditionally demonstrates excellent stewardship of land, often voluntarily maintaining and improving trails, and self-policing those who use trails at times when the trails themselves are most vulnerable.

**Correspondence:** I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- -for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that at normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

The Ozark Trail Association has built and maintained with volunteer labor nearly 400 miles of single track trail in Missouri. This makes for a perfect bike packing trail with the exception that the Current River Section that passes through the ONSR NPS land is closed to Mountain Biking. What a shame to close 20 miles of trail in the middle of 227 miles of contiguous backcountry trail. Please consider adding mountain biking access to the Ozark Trail through the NPS lands.

**Correspondence:** The river does not belong to the National Park service. It belongs to the people. Leave the river alone. God put the river there for us to enjoy and take care of. Which is what we are doing. Leave the horsepower limits alone, or raise them. Do not take close any part of the river to the boats. Leave the horseback riders alone. Leave the atv riders alone. We pick up the trash and take home that the tourist from St. Louis bring with them and scatter about. Instead of you hiring more people why don't you take them out of the offices and put them out working - hauling off trash, patrolling the river, cleaning the bathrooms. Let them earn their money.

**Correspondence:** Thank you for accepting my comments. I strongly support allowing mountain biking on trails with the Ozark National Scenic Riverways and oppose the no-action option which will continue the prohibition of mountain biking on all trails within the Scenic Riverway.

Mountain biking has low environmental impact, and mountain bikers generally have shown themselves to be responsible users of outdoor recreational facilities, respective of the environment and other visitors.

In fact, strong partnerships formed by mountain bike groups in the St. Louis area with St. Louis County Parks, the Missouri Department of Conservation, St. Charles County Parks, and other government agencies have resulted in positive relationships, good communication, self-policing of users, partnerships in trail-building and other projects and in general a positive promotion of these terrific outdoor resources with which Missouri has been blessed.

I love to travel to different parts of Missouri and allowing mountain biking in these areas is important to me as a potential visitor and I know would draw others to the area as well who enjoy exploring the outdoors on their bikes.

**Correspondence:** 1. Leave the horsepower alone or raise it.

2. Do not close any of the river to the boats.

3. Leave the trail riders alone. They didn't make all the trails, the wild horses made most of them. Are you going to tell them to not make any more trails

4. The gravel bars were meant to be used. Put trash cans around for the trash.

5. The access's need to be improved so handicap people can get to the river easily.

6. Put more rangers on the water patrolling the river.

I'm on the gravel bar every weekend & don't see trash, we take it back with us.

Being on the river is a part of our life. We go to relax, fish and visit with friends and family. The kids swim and play in the sand. During the winter, we gig and have fish fries. Our grandparents and great-grandparents lived next to the river before their land was taken away.

Just leave the river alone & let us take care of it. We will do a better job than you.

**Correspondence:** I support allowing mountain biking on the trails in and around Ozarks National Scenic Riverways. Mountain biking is very low impact to the environment and would attract tourists from all across the country. Plus mountain bikers are passionate about giving back to the trails they ride, so you would gain scores of volunteers and donations for trail maintenance. Please consider this as you make your decision.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking is a low environmental impact activity that connects people to the land and can be a huge boon to local economies via tourism. I hope the National Park Service does not miss this opportunity to create another great reason to come to southern Missouri.

**Correspondence:** I support alternative A of the Draft Management Plan.

Please recommend federal wilderness designation for the Big Springs Area. There are few undisturbed areas in the

region and this will best protect this acreage. This will enable you to manage it as wilderness. In 1963, the Assistant Director of the NPS said that preservation of the natural and wilderness qualities should be a major consideration. A wilderness recommendation is consistent with that.

Illegal roads should be closed. As of 2007 there were 131 motorized vehicle access points along the river. This is far more than enough. Some of the pictures by Friends of Ozark Scenic Riverways speak for themselves.

Undesignated horse trails should also be closed and no new trail crossings should be added.

I have not been to the area in recent years, but many years ago I floated the Eleven Point River nearby. It was a nice float and I am considering a trip on the Current River. The Sierra Club runs national outings on the Current River most years and I'd like to have a pleasant experience. The Ozark Scenic Riverways are a National resource, not just of local importance.

Please keep me informed of this process.

February 7, 2014

Mr. Black,

Thank you for the opportunity to comment on the Draft General Management Plan/Environmental Impact Statement for the Ozark National Scenic Riverways (Plan). The Nature Conservancy (the Conservancy) is a non-profit organization committed to working with multiple partners to advance conservation of the unique biodiversity present in the Current and Jacks Fork River basins. We appreciate the opportunity to provide comment on the National Park Service's (Park) proposal and look forward to working with you on its implementation.

The Conservancy strongly supports the Park's Alternative B. We believe, if fully implemented, it will best balance resource protection and visitor access necessary for the longevity of the unique natural resources and the economies of local communities in the Ozarks. The Conservancy sees the goals of protecting the rivers and the vibrancy of the local economy as mutually beneficial. The Ozarks, particularly the Current and Jacks Fork rivers, contain karst, aquatic, and terrestrial biodiversity that is globally unique and provides habitat for numerous endemic species. The natural beauty of the Ozarks attracts valuable tourism dollars from both local residents and distant visitors. Visitors come to the region for the scenery and high-quality water resources. Local residents rely on the river for daily recreation and it is part of their family heritage. Management decisions and future planning processes should be based upon maintaining the integrity of the biological resources, as this will ensure the long-term viability of the tourism industry and local economies. It is critical the Park has sufficient resources to ensure complete implementation of the plan to successfully strike a balance between resource protection and visitor use.

Detailed below are specific comments on topics addressed in the Plan.

#### HISTORICAL PASTURES AND MEADOWS

The National Park Service should strive to maintain the integrity and viability of the native landscape while providing an opportunity for visitors to experience the cultural heritage of the Ozarks. The Conservancy urges the

Park to amend Alternative B to reduce the number of acres maintained under the agricultural lease program, only retaining selected sites that are beyond a minimum 200-foot riparian buffer zone.[1] Such areas for illustrating the pastoral heritage in the Ozarks should correspond with other key sites for visitors (e.g., old farmsteads with structures or other interpretative qualities).

General Land Office (GLO) data document the contiguous woodland character of the natural landscape in the riparian corridor. These accounts indicate the woodlands had more widely-spaced trees, a mixture of shortleaf pine and oak, and a rich herbaceous understory maintained by fire.[2] Increasing the native woodland cover would provide herbaceous habitat for wildlife and migratory birds without the need for removing forested cover in bottomlands. According to United States Geological Survey (USGS), the trend of land conversion in the Ozark Highlands Ecoregion resulted from the conversion of native forested cover to agriculture uses. Between 1973 and 2000, the percentage increase in agricultural acres is almost equivalent to the decrease in forested cover.[3] We feel it is important to stress the critical nature of maintaining the native forested cover in the riparian zone and floodplain.

Please consider the following as the basis for this recommendation:

#### Bank Stability

Forested riparian zones and floodplains provide stability to alluvial soils. The large root diameter and physical structure of tree roots in combination with the dense, deeply rooted systems of native grasses help streambanks resist erosional forces. A diversity of woody and herbaceous vegetation in alluvial soils in the Ozarks can provide a matrix of rooted support, thereby preventing rapid erosion and habitat degradation from excessive sediment and nutrients in the river. It is also important to maintain forested cover in the floodplain beyond the current riparian zone because river channels naturally migrate over time. In addition, with the predicted impacts of climate change on storm severity and peak flows, it is critical to ensure the maintenance of a stable riparian zone.

Aerial imagery from the past fifteen years reveals several places where the river is changing course adjacent to areas with open pastures. In Examples 1 and 2 below, the width of the forested riparian area has decreased over time as the river has migrated across its floodplain. While these changes have occurred slowly over the course of ten or more years, if the trend continues the river will eventually intersect the agricultural/meadow areas (as can be seen in Example 3). When this occurs, the rate of bank erosion is likely to increase due to the bank's decreased ability to resist erosional forces. Each example has a series of three aerial images (circa 1996, circa 2009, and 2012) with a yellow bracket that represents the same spatial location. The bracket provides a stationary reference for viewing the channel and bank changes within each example.

[Please refer to the hard copy of our comments for the figures.]

Example 1: Downstream of where Highway 106 crosses the Jacks Fork River near Alley Spring.

Example 2: Near Horse Camp on the Jacks Fork River

Example 3: Downstream of Shawnee Creek (the forested riparian area has already been lost at this location)

While examining aerial imagery, we noted several historical pastoral areas that appear to have decreased in extent, thus expanding the forested riparian buffer. We support efforts the Park is taking to prevent erosion and encourage additional measures to restore agricultural areas to cover types more reflective of the native vegetation, prioritizing those sites most at risk of losing the forested riparian area. In addition, we encourage the Park to work with neighboring state and private landowners to encourage land management practices in the floodplain that maintain riparian buffers.

#### Impacts on Wildlife and Unauthorized Vehicle Use

The Plan does not address the environmental consequences of expanding the managed pastoral areas on soils, water quality, wildlife, and long-term viability of intact habitats. Rivers provide travel corridors for wildlife, and multiple openings scattered along this corridor can have adverse effects. Research indicates that edge habitat, as would be created around the perimeters of those maintained open areas, attracts predators and can decrease success of nesting migratory birds.[4] There are several locations where maintained fields have invited unauthorized vehicular/ATV

use that can lead to erosion and disturbs wildlife. These areas can also be vectors for introduction and proliferation of invasive species.

For these reasons, the Conservancy recommends replacing the language that refers to increasing "areas managed as meadows and agricultural sites" (pages 59, 65, 72, and 79) with the following: "The cultural affiliation landscape plan will assess those historical agricultural areas that are outside the 200-foot riparian buffer zone (minimum width) for possible restoration. The Park will evaluate the potential impacts of channel migration and bank erosion on the width of forested riparian areas to determine sites appropriate for continued maintenance as agricultural areas. Forest restoration will be considered as part of the suite of management actions for the existing agricultural sites."

## HORSEPOWER

### Zoning

A review of available literature indicates motor boat use can impact water quality (e.g., increased turbidity, resuspension of nutrients, and release of chemical pollutants), degrade aquatic habitat, and accelerate bank erosion. For example, a series of studies on the upper Mississippi River found recreational boating to be a significant cause of shoreline erosion, localized water quality degradation, and loss of bank stability.[5,6] There are numerous scientific articles evaluating boating impacts, but the subjects are not as well researched on smaller riverine systems like the Current and Jacks Fork rivers.[7]

Given the uncertainty and lack of information about the impact of increased horsepower and higher intensity use on river conditions, the Conservancy recommends a conservative approach. We support Alternative B because it includes new seasonal limitations in certain zones of the Park, retains the 60/40 interpretation of the regulatory maximum, and does not relax existing zonal restrictions on horsepower maximums. This approach could reduce negative impacts of motorboat use in those zones with stricter seasonal limits while preventing an expanded use that might otherwise exacerbate adverse effects motorboats have on water quality and aquatic habitat. Alternative B continues to allow motorboat use on the larger portions of the Current and Jacks Fork rivers where habitat impact would be expected to be minimal. To better inform future management decisions and ensure the resource is adequately protected, the Park should assess the potential impacts from motorboat use and implement a long-term monitoring strategy.

### Recreation Season

The Plan defines the peak recreation season for purposes of limiting motor boat use as March 15 through Labor Day. The Conservancy supports this definition, as this will not only limit user conflicts in the upper portions of the rivers, but could also reduce disturbance in shallow water habitats during fish spawning seasons.

## UNDESIGNATED ROADS AND TRAILS

The Conservancy supports a well-managed system of designated trails, crossings, and access points. Along with the maintenance of a designated system, the Conservancy supports the Park's intent to continue closure and restoration of undesignated, degraded sites. Undesignated travel corridors are unmanaged and can cause erosion, water quality degradation, and damage to terrestrial and aquatic habitats. Given the extent of use in some areas on undesignated trails, we believe it is important to provide a well-managed alternative to discourage use of the unmanaged/closed areas. We support the Park's balance of adding new opportunities for hiking, biking and trail riding, which is important to community and visitor enjoyment, while eliminating the unmanaged sites and enforcing closures.

The Conservancy understands that the Plan is intended to provide a framework, rather than specifics, for management. We look forward to working with the Park to develop a more effective and sustainable road and trail strategy that meets visitor needs while sustaining habitat integrity. One particular area of clarification needed is how the Park intends to define "undesignated" roads, trails, and access points. While the plan states that there are approximately 90 designated and undesignated river access points (page 216), it does not enumerate how many are undesignated, or explain how the Park intends to define an undesignated site for the purposes of closure. To illustrate our concern with the lack of definition, please consider the case of the Flying W access between Cedar Grove and Akers Ferry:

Flying W is not recognized on the NPS visitor map as a river access point, yet the Park proposed and approved improvement to the area in 2007. None of the alternatives for Flying W evaluated closing the access point completely, despite the intention expressed in the current draft Plan to close undesignated locations. The experience

at Flying W suggests that users can define access points through continued unauthorized use. In this case, the Park proposed (in 2007) granting direct access to a natural feature that is commonly used for cliff jumping, despite the legal documentation of injury at this site[8] and the Park's expressly stated prohibition of cliff jumping in Park rules.

Setting aside the argument of whether or not Flying W is an acceptable location to designate access, the case of Flying W provides an opportunity to reiterate the need for the Park to have sufficient resources to fully implement and enforce the plan. The Park obviously invested significant resources to evaluate, propose alternatives, and seek public comment for Flying W. An August 30, 2007 press release (<http://www.nps.gov/ozar/parknews/flying-w.htm>) indicates the project was approved, but it appears that nothing has been implemented to date. In addition, the site is continuing to degrade the river due to soil erosion, gully formation, and undesignated road use. While in support of Alternative B, the Conservancy stresses the importance of full implementation to ensure the desired balance between resource protection and user access is achieved.

## WILDERNESS

The Conservancy does not support wilderness designation for the Big Springs tract. However, we strongly support maintaining this area in its current primitive condition. Given historical resource constraints and the potential added cost of doing management under the "minimum requirements analysis," we are concerned a wilderness designation could limit the Park's ability to implement good forest management (e.g., prescribed fire) and respond to threats of a changing climate (e.g., invasive species, forest pests).

## FACILITIES AND ROADS

The Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding outlines the federal government's commitment to the design, construction, and maintenance of energy efficient, sustainable facilities.[9] The Plan references sustainable design in several locations and cites the NPS 2006 Management Policies as the guiding document. The Conservancy supports the Park's ongoing efforts to incorporate sustainable design principles when expanding or upgrading existing facilities (e.g., LEED design, permeable surfaces, low impact design for stormwater flows, updated sanitary sewer systems). Construction activities should embrace state-of-the-art standards for design and construction, both protecting the resource and serving as a compelling demonstration of best practices that can be adopted elsewhere.

The Conservancy recommends environmentally sensitive maintenance (ESM) techniques for improvements and maintenance of culverts and gravel roads.[10,11] ESM approaches construction and maintenance of gravel roads with consideration of downstream water quality impacts as central to the design. The practices are promoted by the U.S. Forest Service (USFS), Environmental Protection Agency, Natural Resource Conservation Service (NRCS), American Association of State Highway and Transportation Officials, and many states across the country. Studies show that these techniques better withstand severe weather events, reduce erosion and sedimentation, and have lower life-cycle costs than traditional methods.[12,13] These techniques could reduce the demand on the Park's limited budget, help the infrastructure withstand future changes in climate, improve water quality, and reconnect aquatic habitats. The Conservancy recommends incorporating a reference to ESM techniques on page 90 under the Sustainable Development heading and by revising the second bulleted statement under Factor 5 on page 41 to: "Establish a partnership with the counties regarding road management, including closures, and promote the use of environmentally sensitive maintenance techniques on all roads within the Park boundaries."

## RESTORATION

The Conservancy strongly encourages the Park to incorporate natural channel design principles in stream restoration rather than traditional, engineered solutions for bank restoration (e.g., using toe wood and floodplain reconnection rather than armoring banks with rip-rap). Doing so would provide a showcase for other resource managers and national parks while protecting the resource in a way that preserves the aesthetics of the region. Federal agencies, such as the U.S. Fish and Wildlife Service, NRCS, and USFS, are among the nationwide leaders in teaching and implementing these techniques for stream restoration and stabilization, which has proven to effectively recover and stabilize degraded streams while maximizing ecological benefit and long-term system viability.[14]

The Plan (page 174) notes implementing erosion and sediment control to protect hellbender habitat, and avoiding riparian corridor and channel alterations. The disturbance in the system may be a result of unnatural rates of change in the channel geomorphology that, without proper restoration, will continue unabated. To the extent that existing Park regulations will permit, the Conservancy recommends adding language that would allow the Park to implement

restoration projects in the riparian corridors or channels if it is (1) based on natural channel design principles, (2) necessary to restore the reach to a balanced state, and (3) necessary to prevent further degradation of downstream habitat.

The Conservancy supports the Park's proposal to replace the Cedar Grove bridge crossing. The existing crossing impedes the river's ability to transmit water and sediment downstream. The bridge essentially functions as a check dam, holding gravel upstream and scouring the bed and banks downstream. Incorporating natural channel design into the restoration of this site will be critical for returning the river to its natural gradient, providing flood capacity, preventing degradation, and protecting the streambanks from further erosion after the bridge is replaced. One resource that may be helpful for the Park is the Natural Channel Design Review Checklist developed by the U.S. Fish and Wildlife Service and the Environmental Protection Agency.[15]

## DATA GAPS AND RESEARCH NEEDS

### Gravel Mining

The discussion on gravel mining may have excluded available information. Chapter 4 of the plan notes four permitted gravel mining operations in the Jacks Fork River sub-basin, and cites a report by the Missouri Department of Conservation (MDC) that identified 41 observed gravel mining sites within the Current River basin. MDC watershed assessments identified 52 active gravel mines along the Current River[16] and 13 gravel mines or limestone quarries along the Jacks Fork River.[17] This suggests there may be data the Park overlooked in examining the extent of operations in the watershed.

Although the discussion of affected environment (Chapter 4) seems to recognize the presence of unpermitted sites, they are not included in the environmental consequences and cumulative impacts in Chapter 5 (pages 238, 241, and 254). Missouri state regulations allow unpermitted surface mining by any "1. Individual for personal use only; and 2. Political subdivision including, but not limited to, county, city, state, or branch of the military which uses its own personnel and equipment to obtain minerals for its own use." [18] These numerous, legal, unpermitted gravel operations could be adversely affecting aquatic habitat and water quality in the Jacks Fork and Current rivers, and should be considered in the discussion of cumulative impacts.

### Sediment and Nutrients

The Environmental Protection Agency identified excessive sediment and nutrients as two critical threats to water quality nationwide.[19] These two pollutants are difficult to manage because they are naturally occurring, and sources are often diffuse and dispersed across the landscape. They are especially important in the Ozark National Scenic Riverways because the basin is minimally impacted by industry, mining, urban runoff and point source wastewater discharges as compared with other watersheds in Missouri.

Research by the USGS on sediment transport in the basin indicates historical land use changes and clearing along the riparian corridor have resulted in increased bedload sediment and decreased bank stability, respectively.[20] As the bedload is transported through the system, reaches become wider and shallow, degrading aquatic habitat. Habitat degradation resulting from increased sediment loading may be critical in addressing the needs of the endangered hellbender populations, and as such, should be monitored closely.

The Plan (page 165) discusses the naturally low nutrient levels in the river, as measured by long-term monitoring data. The Conservancy encourages the Park to work with the State of Missouri to ensure regulatory protection of those naturally low levels of nutrients. Unlike the fecal contamination that resulted in the listing of the Jacks Fork River as impaired, there are no analogous numeric criteria in the state of Missouri to ensure water quality is maintained in the rivers. Given the unique character of the Ozark National Scenic Riverways, statewide or regional criteria may not be protective. The Park should continue to monitor nutrient trends in the rivers to ensure a solid foundational dataset is available should the state pursue criteria. In addition, should levels begin to exceed natural background concentrations and visual forms of impairment are observed (e.g., increased algal growth), the Park and State would have data for helping determine impairment.

For these reasons, continued monitoring of sediment and nutrient levels are critically important for determining future impairment and impacts of land management activities on in-stream water quality and habitat.

## ITEMS FOR CLARIFICATION

## Easements

The Conservancy requests clarification on the management of Park easements. The Plan outlines the location and general role of easements within the Park and notes (page 16) that "any request to modify existing easement restrictions that would affect either the land or structures must be evaluated by the National Park Service before approval." It further explains (page 238) that "improperly managed scenic easements can result in negative effects on viewsheds along the river corridors over time." It would be helpful if the Plan included the following:

- General overview of the Park's easement monitoring activities,
- Staffing needs for monitoring, enforcement, and compliance, and
- Description of the review process for requests to modify easement restrictions.

## Definitions and Maps

It would be helpful if the plan included a glossary or illustrative maps to better define the following terms and subjects:

- Backcountry camps,
- Primitive camps,
- Designated trail/road/access points, and
- Undesignated trail/road/access points.

At present, the plan identifies certain miles of designated trails and refers to designated access points. A map would be helpful for understanding what the Park considers to be the current extent of designated roads, trails, and access points, and the extent of the undesignated network.

## References

A 2006 study by Davis and Barr is referenced in the text discussing bacteria levels in the Jacks Fork; however, the full citation for this report is missing in the Reference section.

The plan references guidance provided in a 1991 roads and trails study for the Ozark National Scenic Riverways, as well as other National Park Service reports. If these reports are available online, it would be helpful if a link was included as part of the citation for those interested in reviewing the referenced guidance material.

## CONCLUSION

The Nature Conservancy appreciates the opportunity to comment on this Draft General Management Plan/Environmental Impact Statement for the Ozark National Scenic Riverways. We look forward to working closely with Park staff and stakeholders to develop further details for implementing the plan. We believe ongoing monitoring, assessment, and effective enforcement of regulations are an integral part of future management to sustain the Park's irreplaceable resources for the benefit of present and future generations. We reiterate our support of the Park's preferred Alternative B. The Conservancy supports this option because we believe, if fully implemented, it will best balance resource protection and user access necessary for the longevity of the unique natural resources and communities of the Ozarks.

Sincerely,

Todd Sampsell  
State Director  
The Nature Conservancy in Missouri

Steve McMillan  
Owner, McMillan Construction  
Chair, Missouri Board of Trustees

**Correspondence:** I'm firmly FOR opening up the Ozark National Scenic Riverways to Mtn bikes! I've seen in so many cases where opening up trails to mtn bikers has led to greater visitors to the target areas. Mountain biking is a low impact environmental way to get more people to the area to enjoy the great landscapes and get out into nature. Personally I have not been to the area yet but with mtn bike trails added it would be on my list and probably replace some of the many trips I make to Arkansas I take to ride my bike. I also think that adding better access to Road biking would also be beneficial to the area. These small steps would bring in a diverse and nature loving crowd to the Riverways.

**Correspondence:** I am a new resident of Missouri and haven't had a chance to go to the Ozark rivers yet. Years ago, I enjoyed canoeing in the little rivers of the Pine Barrens in NJ.

There need to be more protections so that the part of nature that we are going out to enjoy isn't destroyed. Yes, there need to be limits on the size of motors on boats and certain designated trails for horse back riding.

It is time to look carefully at the management of this area.

Sincerely,  
Margie Richards

**Correspondence:** I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that at normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

This is a great idea thanks

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Most mountain bikers I know are very active in trail building and maintenance, and know what it takes to maintain trails. Therefore will leave a trail in better shape than when they started.

I would like to visit this beautiful park more often, but opt for places I can ride my bike instead.

**Correspondence:** I am concerned about the National Park Service plans which will violate property rights of landowners and businesses along the Current and Jacks Fork Rivers in Southern Missouri. This area is highly dependent on tourism for the livelihood of many of its residents. I request a "no action" alternative due to interference with property/business owners by Non-Governmental Organizations through the National Park Service. I also request a return of this area to the State of Missouri for management.

This action is reminiscent of the White River Watershed National Blueway designation from 2013. In the "Blueway" situation, Non-Governmental Organizations (NGOs), some with ties to United Nations Secretariat on the Convention of Wetlands, (aka, the Ramsar Convention), were given undue influence over 1 million residents and their private property.

Through the Department of Interior, Agriculture, and Army, these NGO "Partners" were able to hide their excessive influence from public view and were even writing the proposed restrictions which were to be place on private landowners. Private owners of millions of acres of land and water were at risk of losing their property rights when this illegal action was taken WITHOUT NOTIFICATION of the land/water owners OR their elected officials.

The National Park Service is now giving undue influence of NGOs and their members over the Constitutional Rights of landowners along the Current and Jacks Fork Rivers. Those who 'think' they know best how to manage the private property along these rivers, must Cease & Desist their overt usurpation of the land and water rights of the legal owners of this land and water access!

NO ACTION should be taken in this matter which further erodes the legal rights of private landowners, and any active management of this area SHOULD BE RETURNED TO THE STATE OF MISSOURI.

**Correspondence:** February 7, 2014

To the National Park Service:

I fully support the implementation of either Alternative A or Alternative B by the Ozark National Scenic Riverways.

Growing up nearby the rivers, on a headwater tributary of the Jack's Fork near Willow Springs, my fondest childhood memories are all on the Jack's Fork River. In the 1990's, the river was relatively under-used, with ATV and horse seemingly less than it was today. My family could camp near Blue Spring for Bee Bluff and see very few people.

Today, the National Park has become overrun with rampant ATV use. I cannot think of a single other National Park in the United States that has become so degraded by the illegal use of motor vehicles. Every single gravel bar, no matter how remote, is covered with ATV tracks, and their crossings of the river are obvious. The ATV tracks and noise spoil the wilderness character of the river.

While the upper Jack's Fork still has some wilderness quality remaining, the Upper Current is extremely impaired. I have not floated the Upper Current in years, solely due to the extreme level of overuse and impairment. The last times I have floated it; there have been hundreds of people exhibiting lewd and indecent behavior that would have them arrested in any other national park. Numerous vehicles drive to the river on illegal roads, park on the gravel bars, and blare loud music. The infamous "Flying W" spot downriver from Cedar Grove is a prime example of what is wrong with this river.

On the Current south of Two Rivers, jet boats race along the river, narrowly missing canoeists and tubers, eroding river banks, and breaking the silence of the wilderness.

Although the rivers are a National Park, designated by Congress, they are not treated as such by the visitors, nor have they ever been treated as such. The Park Service's lack of enforcement over the past 50 years, where people have been able to get away with anything, is the prime reason for this, along with the proliferation of illegal access trails.

I applaud either the Alternative A or B plans. The rivers are a treasure to Missouri and must be protected at all costs. They are a natural treasure of scenic beauty and biodiversity, not an amusement park.

Sincerely,

Lucas P. Carr

Farmington, MO

**Correspondence:** Hi, I appreciate the opportunity to submit comments on this proposal. I am an avid outdoorsmen, including mountain biking. I would like to see the trails in the Ozark region opened to mountain bikes. Opening up trails to mountain bikes allows a much larger segment of the population to enjoy the trails and the beauty that the area offers. Due to the remoteness of the region and no significant population centers closeby, I wouldn't anticipate overuse or any real problems that can sometimes be associated with overuse. My friends and I often drive two hours to northern regions of the Ozark trail to enjoy the challenging terrain and beauty of the Ozarks, and of course, every time we go we provide a very small boost to the local economy there, often filling up with gas, buying a few items at the local stores, maybe renting campsites, and having lunch or dinner at a local caf  . These otherwise economically depressed areas could certainly use more tourism as it is the lifeblood of their economy, and I think approving bikes to the trails would provide another small boost.

Thank you!  
Bryan Greaser

**Correspondence:** The Ozark National Scenic Riverways is near and dear to my heart. I am in support of Plan B. It is important to educate others on the value of our natural resources. I support limiting motorized boat and ATV

usage, but would prefer to dispense with the allowance of it altogether. Trail maintenance is of the utmost importance to encourage future visitors. As a researcher myself, I advocate the upkeep of the research facilities- --especially that of Powder Mill Research Center- --in order to accommodate the great amount of valuable research that foundations are doing for the Park, asking nothing in return.

**Correspondence:** This letter is in support of allowing / facilitating Mt Biking along and within the boundaries of the Ozark National Scenic Riverways.

Because Mt. Biking includes "Back Country" to "Extreme" it is important to recognize that this area has a great deal of appeal to "Back Country" bikers - individuals such as my wife and I in our 60s who enjoy the places a Mt. Bike can take you - and that the extreme / aggressive Mt. Bikers who - for those activities - would find other locations accessible and more appealing.

However, even considering the entire range of mountain biker's skill sets, interests and styles....we have (in the last seven years) never had a negative experience while either hiking or biking where Mt. Bikes are allowed.

One, you can hear them coming. Two, it is very simple to let them know you are sharing the trail. Following this simple premise it has been refreshing to encounter young people who - while enthusiastic about their sport - have always been courteous and acted in a manner that demonstrated they were concerned about our safety.

If trail damage is a concern; know that a torn up trail means a poor Mt. Bike experience so you are more likely to find a Mt. Biker repairing or grooming a trail than you are finding one tearing it up. (In our area of SW Missouri we often find ourselves repairing the damage to the trails done by horses; but, even in this arena, there is a certain amount of harmony because of a shared love the outdoors.)

If shared use is a concern; this would be easy to test by allowing Mt. Biking on odd number days of the month or specific days during the week. One could also "test" by granting permission to an emerging class of Mt. Bikes referred to as a "fat bike" (which, because of a much wider tire, is pretty much incapable of damaging a trail).

Bottom line; there is some testing that can be done and - at the minimum - I encourage you to do it as opposed to just saying no.

**Correspondence:** I support Alternative A. I am in favor of this because of my experiences as a canoeist. The last few years, I have planned my times on being on the Current River to avoid the power boats. That means trying to avoid the weekends. Powerboats are a nuisance because they speed by canoes, sometimes causing quite a wake. Plus their engine fuels stink! I am also concerned about the number of trailers I've seen at access points seemingly parked there for an entire season. These "camps" often start to look like shanty towns. My suggestions follow:

1. Lower horsepower limits for power boats.
2. Limit power boat access.
3. Patrol the river.
4. Allow camper trailers at only designated camp sites.
5. Keep horse trails separate from hiking trails.

**Correspondence:** Dear committee, planners, reviewers:

I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Whenever I plan a family or solo trip anywhere for vacation, I always consider bringing my bike with me - especially my mountain bike. My family and I often base our decision on where to visit, where to spend money, and what to do based on bicycling accessibility. We believe bicycling is a healthy, environmentally friendly activity that should be greatly expanded and encouraged. The mountain biking community is, you will find, one of the greatest groups of conservationists you will find.

**Correspondence:** Thank you for the opportunity to comment on the proposed "riverways" plan for the Ozark National Scenic Riverways. As the options proposed are well documented, I will be brief. I strongly oppose modification to the existing rules as proposed, and support the "No-Action Alternative".

I have spent time on the Current River since I was a young man, and have enjoyed canoing, fishing, and camping on the gravel bars with friends and family. Camping and turkey hunting near the Log Yard access is an annual event that I look forward to every year. During those outings we gather on the gravel bar and set up our camper. We hunt during the morning and then launch our boat and fish in the afternoons. These events provide us with experiences that have been shared with our children and have built appreciation for the Missouri outdoors that crosses multiple generations.

Being able to pick a camp site while floating on the river provides the element of wilderness that is difficult to find. The vast majority of those who use the river in this way are responsible and abuse is uncommon.

I strongly encourage decision makers to respect the traditions that I have outlined above and to make no changes in access to the river and the surrounding forests for camping, hunting, fishing, floating and boating.

Respectfully,

Steve Marler (Lifetime Permit Conservation Partner)  
807 W Columbia  
Farmington, MO 63640

**Correspondence:** Thank you for the opportunity to comment. I'm a mountain bike rider and it is worth commending Missouri for having some of the best riding in the Midwest. I live south of St. Louis but have ridden as far away as St. Charles and Potosi (Berryman Trail) as part of my yearly travels to different trails. I've traveled to Northern Arkansas to ride trails there. It would be wonderful to have even more options and new scenery to enjoy in South Central Missouri as it would be much closer than the Buffalo River, AR area.

I used to live in Colorado where my bike travels often ran into wilderness areas where bikes are prohibited - and on one such trip my friends and I carried our bikes across 8 miles of wilderness trail just so that we could see it on our 50 mile bike ride along the Colorado Trail. We broke down the bikes, slung them on our backs, and started hiking. We, like most avid mountain bikers - and most people who enjoy time outdoors - follow the rules.

I'd respectfully request you open what trails you can for mountain bikers. I think you will find our group a vibrant ally with many clubs dedicated to making our state's trails some of the best in the nation.

Thank you for your time,

Brian King  
Imperial, MO 63052

**Correspondence:** I prefer alternative A as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways, hiking and canoeing in designated areas are a wonderful way to experience the beauty.

These uses are important to me because I find serenity in the unmarred areas of our state. In addition, I appreciate the conservation and preservation functions of the National Park because motorized vehicle traffic on gravel bars is causing problems for the watershed. The primary area(s) I use are the Current and Jacks Fork river areas. The 'No Action alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways including the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements. However, the Riverways has seen a 30% reduction in staff in the last decade, owing to decreases in funding, and there is no guarantee that funds will be enhanced to the levels anticipated by the plan alternatives. That is one reason to approach with caution higher cost alternatives that feature increased development and more intensive use like those presented in Alternative C. We favor maintaining visitation at approximately the current level while emphasizing improvements that are less demanding in terms of staff and more conducive to family recreation. The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River. The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation. The management of ONSR in terms of resource preservation, sustainable use management, and restoration of natural ecosystems should rival that of our nation's most pristine and unique public lands.

**Correspondence:** I prefer Alternative \_\_\_\_A\_\_\_\_ as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways in the following recreational uses:  
 Canoeing, hiking, photography, cave monitoring, cave mapping.  
 These uses are important to me because:

In an ever increasing urbanization, continued removal of irreplaceable natural resources, Missouri needs the Ozark National Scenic Riverways to remain uncorrupted by short-term gains by the few. It is a national treasure that must be sustained. There are other lakes and rivers for power boats and other activities that would corrupt the ONSR-let's ensure that the Jacks Fork and Current River be reserved for those who appreciate nature in its natural state.

**Correspondence:** Opening up select trails to Mountain Biking makes sense. It will promote tourism and help to bring revenue to many local businesses. I was raised in Western Missouri and still spend the bulk of my vacation/leisure time in the State.

Opening up more trails to Mountain Biking encourages fitness, encourages people to explore parts of the state not previously explored and as such will promote many return trips for many people, with family and friends bringing with them revenue for local businesses and revenue for the state with Sales Tax dollars. Please allow the development of trails for Mountain Biking in many of the parks in Missouri. It will be a good decision for locals and those that travel into the area.

**Correspondence:** My family and friends spent many wonderful times on the Jacks Fork. We spent family vacations there and we had two weekends a year with friends from all over the State for nearly 20 years. I'm not conversant with the details of the plans, but I can tell you what I don't like to see happen to the scenic river ways.

I appreciate the locals need to use motor boats to continue their tradional use of the rivers. I don't think they need to use high powered boats. I don't think visitors should be able to use motor boats, 4-wheelers or motorcycles.

I loved to paddle down the river and hear a banjo tuning up for a Blue Grass festival. That's not possible with motorized recreational gear roaring up, down, thru and around the river.

I have no problem with the horses. They add to the ambience unless their riders are not respectful of the canoes.

I think extending the protection to Big Springs is a good thing.

**Correspondence:** The Ozark National Scenic Riverways is a cherished national treasure. I support further expanding its recreational use and accessibility by opening the trails to mountain biking. The environmental impact of trail biking is minimal, and the riders are sensitive to preservation policies.

Organizations like the Gateway Off Road Cyclists(GORC), Ozark Trail Association and MoBikeFed work hard to educate trail users about trail preservation, etiquette and sustainable design. With access to the Ozark Scenic Riverways, trail cyclists will enjoy the natural beauty and heritage of this great region. The local economies of the region will also benefit.

Thank you.

**Correspondence:** I am a landowner in Shannon county, Mo on Sinking Creek, one of the tributaries of the Current river. I have been watching and listening to the debate around the Park Service management plan for ONSR with great interest and concern. As a guest of the park for the last 40 years, I've seen a level of environmental impact that has degraded my enjoyment of this special natural resource. The roads that bring vehicles and people with their stereo systems and campers now allow access to almost every gravel bar. The last time I floated the Current river, we had trouble finding a place to take out and camp because every gravel bar was full of vehicles. The floating experience is also compromised because of the overuse fostered by so much motor vehicle traffic. No longer is the river a peaceful place to get away from modern life. It is an extension of it, including the trappings of electronic entertainment and fossil fueled noise. Please protect this special place. I strongly encourage the Park Service to adopt either plan A or plan B or a combination of the two.

**Correspondence:** Leave the existing rules in place and MAKE NO CHANGES.

The changes proposed will harm the economic vitality of the region. For one example, restrictions on horseback trails will directly hurt local businesses who rely on that tourism.

Many of us here in Missouri want the Ozark Scenic Riverways removed from the jurisdiction of the National Park Service and instead returned to the State of Missouri. I have more faith and trust in our fiscally-responsible State managing the Park than our Federal government who recklessly overspends and is on the road to bankruptcy. Look at what happened to the National Parks and Monuments during the recent sequester. Is it possible that assets such as a park could be seized later by an international creditor? How can anyone put trust in a landlord who is trillions in debt?

**Correspondence:** To whomever it may concern,

I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in central Missouri to improve access for road bicycling where possible.

I strongly oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

The Mountain biking community, in general, is very conscious of the preservation of the environment and works tirelessly to build sustainable trail systems and to educate mountain bikers regarding the environment in which they practice their sport (for example the GORC organization in the St Louis area). Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

This part of Missouri is largely unexplored by a large population - providing bicycle access will open it up to exploration and enjoyment by a significant, and influential population.

Respectfully submitted,

William Cahill

**Correspondence:** Hello,

I was really excited to read the draft plan for the Ozark National Scenic Riverways - in particular the possibility of opening up the area to mountain biking. My friends and I are avid mountain bikers and would definitely take trips to enjoy the beauty of this area if it were opened up to mountain bikes. We are very appreciative of the opportunity presented us to enjoy our parks and trail systems. We take time during our trips to move or cut downed trees after storms pass (I carry a small folding tree saw) and if we ever come across anything foreign we pick it up and dispose of it properly. When we travel to destinations like this we also spend money in support of the local economies by purchasing food, drinks, and gas.

So please put me down (and my buddies) as a resounding "yes" in support of allowing mountain biking on trails

within the Ozark National Scenic Riverways.

We also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible since we do that also!

Thanks!

Bob

**Correspondence:** I strongly recommend that you use plan A. I am fed up with smelly noisy atv's driven by city folk who bring their pollutions with them when they come. I want less hunting because I live in the forest where these week-end warriors come to prove there virility. We need canoes on the river but lets limit it to only the current canoe companies to have canoes on the river. Lets keep private canoes off the river and never allow motors on the river or in the forest..

**Correspondence:** I am associated with other groups that have submitted comments. This is my position so I will make this short and sweet.

The Ozark National Scenic Riverways (ONSR) is one of Missouri's greatest national treasures and I am in support "Alternate B" of the proposed General Plan and the designation of the 3340-acres of wilderness near the Big Springs area of the park.

I encourage the NPS to stand firm in planning for the protection the natural resources of the ONSR and enhancing the visitor experience.

There will be cost associated with the new plan and the NPS must also address the fiscal demands to ensure that all anticipated programs can effectively be implemented by appropriating the necessary funds to sustain the park and associated natural resources in the future.

We enjoy the benefit of having one of the finest National Parks Systems in the world today and I commend National Parks Service (NPS) in its goal to further improve the design and management of the ONSR.

Thank you for the opportunity to comment.....RC

**Correspondence:** These are my personal comments, not representing any organization, but rather a user of the rivers for 50 years.

I personally favor Alternative A but support Alternative B only as a compromise. Otherwise I would call for lower horsepower limits on the Current River below Two Rivers. The upper Current River and Jacks Fork should be motor free (excepting emergencies). When I first floated the rivers nearly 50 years ago, motorboats were excessively rare

and restricted to the lower Current. I can well remember floating from Powder Mill to Big Spring in 1968 and seeing one powerboat (3.5 hp Mercury) in use. Otherwise, jon boats (wooden mostly) were propelled by paddle and pole. It is not true that motorboating is a traditional use on the rivers.

No motors above Two Rivers would mean that there would be 52 miles of motor-free Current River. That would leave 54 miles to the bottom end of the park with motors. Plus the section below the park to the Arkansas border would provide another 32 miles of motorized river. Keeping 52 miles of our first national river motor-free would be desirable.

The motorized boats and excessive vehicle access areas has nearly ruined the Riverways as a family camping experience. Relatively few people now camp along the rivers in the kind of passive recreation that went on for generations. It is rare, when camping, to get any kind of wilderness or quiet experience with jet boats and trucks visiting the area of your camp for a good part of the day and night.

Fewer motors in the Riverways would be a very good step toward re-establishing the qualities that made this area a national park in the first place.

**Correspondence:** Dear Park Service,

As a long time user of the ONSR, I urge you to improve your management of this special place. The NPS's management of the ONSR in recent times has frankly been a major blemish on the reputation of your otherwise esteemed agency.

I urge you to enforce the scenic easements that exist on thousands of acres along the rivers. The NPS's failure to do so over the past 10 years has been a major embarrassment that has left permanent blemishes on the land.

I urge you to close all illegal roads in the ONSR and closely monitor the area to prevent any further incursions.

I urge you to work toward more responsible management of equestrian uses that balances their use with the need to protect natural resources and the experience of other park users.

I urge you to seek appropriations for continued acquisition of key parcels of land from willing sellers within the ONSR boundary.

Finally, I urge you to recommend designation of the Big Spring area as a formal Wilderness Area.

Thank you for considering my comments.

Edward J. Heisel

**Correspondence:** The Current river is not just a natural resource, but a way of life for most people that live near it. Most of the people that live near the river work very hot, physical jobs and use the river as a way to relax. We spend thousands of dollars over the course of the summer going to the river. We pick up trash that is floating down the river. We make sure to leave things as we found it. We love OUR river. Please just leave things the way they are.

**Correspondence:** I strongly support Option A. I believe that this option is the best one to preserve the wilderness aspects of these beautiful rivers.

My ability to canoe in peace, safely, is jeopardized by high horsepower PWC and boats creating large wakes and loud noise. I believe there are plenty of locations for these loud, invasive activities and that a National Park is not one of those.

I believe the NPS must get a better handle on the horse activities. Horses destroy trails. Limiting horses to sanctioned trails will help all of us.

Thank you.

gwd

**Correspondence:** It has been my experience that multi use trails that allow Mountain Bike access are maintained better and offer the most enjoyment when I go hiking with the family. As a conservation minded citizen I appreciate the efforts by all the local outdoor cycling groups. Without there involvement many of the trails that we hike as a family would be overgrown and inaccessible. Please consider my opinion, and the needs of the trails when making your decision on whether to permit access to these trails.

National Park Service  
Ozark National Scenic Riverways  
Superintendent Bill Black

Dear Superintendent Black:

I write in response to the ONSR Draft Management Plan. These remarks are personal, though I also endorse the comments offered by L-A-D Foundation and Pioneer Forest, Missouri Parks Association, and the Missouri Wilderness Coalition.

It has been deeply distressing to observe the deterioration of the Riverways since it was initially established by Congress in 1964. A leader of the citizen campaign that led to that legislation was Leonard Hall, of Caledonia, who was a personal friend of mine. His level of disappointment and distress become more and more severe, until his death some years ago. I offer these observations in memory and in honor of Len Hall. I also offer them in memory and honor of the Missourians whose lands were acquired, sometimes unwillingly, in order to create the Riverways. Their sacrifice cannot be forgotten, and must be respected.

There are many explanations for the deterioration of the Riverways, but it is apparent to me that the principal agent of that deterioration has been the increasing domination of the rivers and their valleys by motorized vehicles and watercraft. That domination has intruded into almost every area, onto virtually every gravel bar, and along every linear mile of the entire Riverways. There is now almost no secure escape anywhere on the entire Riverways from the sight of motorized vehicles and the sounds of loud motors. This is not what the Riverways was intended to provide, and no matter what is claimed by some, it is also not the traditional usage of the Rivers by local residents. These intrusions come at the expense of the peace and quiet of all non-motorized users, and also at the expense of the integrity of the natural resources the Riverways is supposed to protect.

Whatever the explanations for the failure to defend the Riverways, the long, sad pattern of assault and decline must at last be halted and reversed. This is clear from any reasonable interpretation of Public Law 88-492, and its subsequent amendments.

The best opportunity to address this is the Draft General Management Plan.

Although a case could be made for much stronger protection than is offered by any of the offered alternatives, it seems clear that Alternative B has been developed with an intention to provide a reasonable balance between resource protection and public access. Recognizing this intention, we endorse Alternative B as a minimal acceptable compromise that will address conflicting points of view in a responsible manner.

The vision of the founders of the Riverways, including Leonard Hall, and also the sacrifices of those whose farms and homes were taken to create the Riverways, demand that this exceptional resource be managed with the respect that it deserves.

Sincerely,

John Karel

**Correspondence:** Superintendent Bill Black:

I have been a life long user of the Current River, and surrounding areas.  
I truly believe that continued use of motors on the river will ruin the  
beauty of this area for all generations to come.

I have floated this river from Top to Bottom, and believe that the  
people who use motors to patrol, and party these rivers are just plain  
lazy. Our forefathers had no other way up or down these rivers without  
the use of poles or paddles. If you are going to enjoy the beauty of the  
area,take the time to listen and learn what God has created.

Years ago, they limited the number of canoes that each livery could rent.  
That was a hog wash, more liveries were established. Which meant more  
crowds and over use of the area.

Ranger Bill Terry deserves a lot of credit for keeping the area protected  
from people who miss use the area, but he can't do it alone. Keep the motors  
off the river, and put more dedicated people in place. Real Simple

**Correspondence:** I support allowing mountain biking on trails in the National Ozark Scenic Riverways area.  
Mountain biking is low impact but brings environmentally conscious, nature loving, active lifestyle people to the  
area to experience and utilize the resources respectfully. Furthermore, mountain bikers in Missouri are by far the  
most active group in trail maintenance and building, which benefits all users. The Ozark Trail Association and  
GORC (Gateway Off Road Cyclists) have done more in the past 10 years to maintain and build sustainable trails in  
Missouri than had been previously done by any group, in any time frame since the CCC in FRDs administration.

I do not support the "no action" option which will maintain banning mountain bike access.

Thank you for all you do to preserve, protect, and provide low impact access to the natural land treasures in our  
state.

**Correspondence Type:** Web Form  
**Correspondence:** On behalf of Missouri Farm Bureau, the state's largest general farm organization, I submit the  
following comments regarding the Draft General Management Plan for the Ozark National Scenic Riverways

(ONSR). Based on concerns raised by many Farm Bureau members who live and work in the vicinity of the park, we support the No Action alternative.

Although many of our members participated in the recent public meetings and have submitted written comments, our organization was not among those notified by the National Park Service (NPS) of these meetings and other opportunities to provide input during the development of the draft plan. The notification mailing list provided by NPS pursuant to our request includes the Missouri Coalition for the Environment, Sierra Club, L.A.D. Foundation, Missouri Parks Association, American Rivers and The Nature Conservancy, but no organizations of comparable stature representing landowner interests. On a regulatory proposal with potentially significant ramifications for land use policy, we believe this was a serious oversight. At this point, we strongly urge the NPS to "level the playing field" by according proportionately more weight to views expressed by local residents.

We believe the No Action alternative is the least intrusive option in terms of property rights. We oppose the proposed wilderness designation and further restrictions on the use of park property as well as any restrictions that might affect the use of surrounding private property.

As suggested by numerous commenters, we urge the NPS to improve management under the existing general management plan in two ways. First, involve local citizens in seeking solutions to management problems and ongoing planning efforts. One commenter suggested reactivating a local advisory board. Second, focus enforcement resources where needed rather than adding new regulations that impose blanket restrictions. Budget constraints are likely to keep enforcement staffing shorthanded. Enforcement action that targets disruptive behavior rather than blanket restrictions that penalize more visitors makes sense not only from the standpoint of limited staffing but also fairness.

Compared to parks in more remote locations, further restricting access to this park would impact more park visitors. Reduced access would be especially adverse for those whose physical condition makes motorized access for hunting, fishing and other activities necessary. Such individuals would include a significant number of military service veterans and others locally for whom these activities are a cultural tradition and part of their lives since childhood. Furthermore, an aging population is likely to increase demand for motorized access.

The existing management plan can accommodate diverse uses of the park and at the same time provide for a positive experience for all. We urge the NPS to adopt the No Action alternative and work within its framework by targeting resources to address priorities identified with local input. Thank you for the opportunity to comment.

Blake Hurst

President, Missouri Farm Bureau

**Correspondence:** appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- -for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that are normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area

**Correspondence:** I went on a self-guided float along the Current River a couple of years ago. It was simply amazing. The pristine natural environment with it's clean water, dramatic views, and diverse wildlife energized me for months, as it was the only trip I was able to take for a year! I look forward to a return trip this summer.

This river is a cultural and environmental icon in our state and should absolutely be protected and preserved with all resources - local, state, and federal, private, and public - available.

I support the Missouri Coalition For the Environment's efforts to protect and preserve this iconic, clean, and uplifting natural resource. Please use your power to keep this watershed a safe, clean, and protected area.

Thank you for your time,

Andy Heaslet

**Correspondence:** I support allowing mountain biking on all trails within the Ozark National Scenic Riverways and I oppose the no-action option which will continue the prohibition of mountain biking on all trails within the Ozark National Scenic Riverways.

Mountain biking has a low environmental impact, comparable to the impact from hiking and much less than that with equestrian use. Many times our family vacations are based around where we can enjoy mountain biking. We frequent trails in Missouri as well as in Colorado, Utah, North Carolina, Arkansas, Georgia, and numerous others. The mountain biking community cares deeply about the conditions of our trails and strives to keep them sustainable and pristine. There are few conflicts between riders and hikers- riders know to always give the right of way to any other trail users, as is always posted at trail heads. Creating mountain biking opportunities in the area will help make the park more appealing to visitors as well as to have a positive impact on the area economy. Many mountain bikers will travel several hours to ride a "good" trail and in turn will choose to spend the weekend in the area frequenting hotels, restaurants, campgrounds, etc. Many communities have benefited from this type of economic boost including Mountain View, AR (Syllamo Trail system), Warsaw, Mo, Bryson City, NC (Tsali Recreation Area/Trail system), as well as many others.

Your consideration is greatly appreciated.

**Correspondence:** Hi - I'm wting to express my support to allowing mountain biking on trails within the Ozark National Scenic Riverways. I would also support improvements to roads that would make them more friendly to road biking and bike transportation.

Cycling, including mountain biking, is of the most popular participation sports in our nation, and has a low

environmental impact. In fact I would argue that mountain biking has a positive enviromental impact because most mountain bikers I know are aware of issues that affect the sustainability of trails and try to avoid any negative impact to the trails. Also, from my experience mountain bikers tend to be one of the most, if not the most, active, knowledgeable, and skilled volunteer groups in building and mantaining sustainable trails.

I hope we as a people will say yes to expand cycling in the Ozark National Scenic Riverways, which I believe is a yes to public health, happiness, and low-impact economic development.

Thank you,  
Ross Blanton, P.E.

**Correspondence:** Alternative B is a sound choice that balances sensitive ecological concerns with continued recreational access in the Ozark National Scenic Riverways. Designating almost all of the Big Springs Wilderness Study area as primitive will help to maintain upper-watershed quality, critical for downstream uses.

Protection of historic and Civilian Conservation Corps structures should be of priority as well, with access being of utmost importance, whether by road or trail.

Green infrastructure, like vegetated swales and wetlands to improve water quality and groundwater recharge, should be a part of any ecological restoration performed. Commercial forestry activities should be limited to minimal impact, with post-extraction necessary reforestation and comprehensive restoration part of any commercial contract.

Allocation of mountain biking on certain trails will increase the number of park visitors, with land impact equal or less than that of hikers and horseback riders and virtually zero water quality impact. At minimum, the Ozark Trail should be reassigned as multi-use in order to create a critical link for riders and hikers alike so that they may traverse the entire natural trail without detour.

**Correspondence:** I strongly support plan or proposition B mainly because i don't think plan A would have a chance of passing. The park service has done a wonderful job putting the plans together. My understanding is that if the original plans years ago had been implemented and enforced in the first place we wouldn't be in this position of trying to save our beautiful stream now. With the over abundance of river accesses and motorized vehicles and horses and bacteria in the water the pleasure of a safe natural experience is threatened to say the least. Help! Plan B seems to be a well thought out compromised. If it passes I hope it will be strongly enforced.

**Correspondence:** I think that the No Action Plan is what should be put in place. If the Park Service would enforce the rules, regulations, and laws that are already in place the problems on the riverways would be controlled. Even though ONSR is a National Park, the local residents should have rights. We don't have any say about National Parks across the country. Why should citizens from afar have so much pull when making decisions about our heritage and way of life. The local people DO take care of the river. For the small number of people who lack respect for the river enforcing the current rules, regulations, and laws would take care of the problem. We use the river regularly from May until September and will generally only see a Ranger in a watercraft twice a year. Again, the No Action Plan along with enforcement of current rules, regulations, and laws would be the best option for everyone.

**Correspondence:** I believe the park service is doing a good job considering the physical layout of the park, though I have some concerns regarding the future of this biologically diverse area. After reading the GMP and considering the options, I'm leaning towards option A, but I can see Option B being an improvement as well. The protestations of locals have been interesting to say the least and seem to reflect our current political climate. That's not to say it does not reflect the unique history of this area and it's people - they do have some historical grounds for a mistrust of federal government. As a long time visitor to the park and a property owner in Shannon County, I feel I have a balanced view of the situation. Yet and still, the preservation of the rivers for the future should be the ultimate goal here, regardless of who might get their pride bruised. We, as humans - with all our inherit flaws - need to think long term, rather than just for tomorrow. The human impact in this region has been profound, the logging around the turn of the century in particular. That brings into perspective just how short of a time period humans have even been in this area and just how much damage can be done in that short amount of time. Of course, now we have many scientific tools to analyze all aspects of the environment and quantify the results. The analysis all points to human activity as the leading detriment. The GMP contains quite a bit of this analysis, and the park service should be highly commended on these detailed studies. These, as well as the American Rivers assessment of a few years ago, starkly illustrate just how fragile this environment is. Quite literally, this is a national treasure in nearly every sense of the term. That said, recreation should be our least concern in our long range planning, though it IS a concern. People need to be able to enjoy it. From what I've seen on the rivers in recent years, they enjoy it a little too much...as in all out party time. Enforcement on the river is a challenge, I understand, but it's crucial. I cannot even begin to count the number of cans, trash, and other debris I've picked up in and along the rivers over the years. Of course I either recycled or properly disposed of these items. Having seen the sheer disregard by human visitors, it's no wonder some people have vastly differing opinions about these options, though I cannot imagine their thought process in leaving trash in such a place.

Ultimately this is about the rivers, not about the people currently living near them. Humans will come and go over generations, but the rivers and their unique biodiversity must be preserved, and hopefully improved, for the responsible enjoyment of many generations to come.

**Correspondence:** Dear Director Jarvis,

I join with American Rivers and Friends of Ozark Riverways in supporting the National Park Service's Preferred Alternative B for the Ozark National Scenic Riverways Draft General Management Plan, which provides for redistribution of uses to minimize conflict, restoration of degraded areas, and more staff for maintenance, monitoring, and enforcement, while substantially enhancing visitor experience of park resources.

In the Riverways, unauthorized roads, overuse by all-terrain vehicles, and excessive equestrian use in sensitive areas have contributed to degradation, including increased bank erosion, more sediment in the water, reduced habitat quality, and unsafe bacteria levels in certain river stretches. Re-directing high impact activities to areas where damage is minimized, allowing damaged areas to heal, establishing levels of use that enable the rivers to maintain quality, and organizing activities with respect for the natural and cultural resources are the keys to stewardship of the Ozark National Scenic Riverways.

**Received:** Feb,07,2014 09:55:44  
**Correspondence Type:** Web Form  
**Correspondence:** No Action Plan.

Enforce the laws.

Leave the local culture alone.

---

**Correspondence ID:** 2548    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 09:57:22  
**Correspondence Type:** Web Form  
**Correspondence:** In general, I support allowing mountain biking on all trails within the Ozark National Scenic Riverways and I oppose the no-action option which will continue the prohibition of mountain biking on all trails within the Scenic Riverways.

Mountain biking has a low environmental impact, comparable to the impact from hiking and much less than that with equestrian use. The trails I frequent here in Missouri (as well as in Colorado, Utah, North Carolina, Arkansas, Georgia, and numerous others) that are multi-use are always better maintained than single use trails. The mountainbiking community cares deeply about the conditions of our trails and strive to keep them sustainable and pristine. There are few conflicts between riders and hikers- riders know to always give the right of way to any other

trail users, as is always posted at our trail heads. Multi-use trails provide the most good for the most people, a main goal of the Ozark Riverways.

Also of note is the huge economic impact communities see when trail systems are opened to mountain biking. Areas like the Syllamo trail system in Mountain View, AR, the Tsali Recreation Area near Bryson City, NC, trails in Bentonville, AR, Moab, UT, and Fruita, CO to name a few- all have seen an enormous influx of tourism dollars due to mountain biking. Creating these opportunities in the area will make our parks more appealing to visitors and the mountain biking community has a great advocate with the International Mountain Biking Association (IMBA) to ensure it's done correctly.

Please consider this and thank you for your time.

**Correspondence ID:** 2549    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 10:00:17  
**Correspondence Type:** Web Form  
**Correspondence:** No Action Plan.

Leave the locals alone!

City people should have so much control over our culture and heritage. We don't bother them.

---

**Correspondence ID:** 2550    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 10:01:58  
**Correspondence Type:** Web Form  
**Correspondence:** I support opening the trails of the Ozark Scenic Waterways Area to mountain bikers.

Thanks!

---

**Correspondence ID:** 2551    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 10:02:59  
**Correspondence Type:** Web Form  
**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Allowing mountain biking and/or bicycling in general in these areas is important to me as a potential visitor to the area, to area tourism, enjoy the scenery, and just get away from it all for a few days.

---

**Correspondence ID:** 2552    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 10:07:45  
**Correspondence Type:** Web Form  
**Correspondence:** I go to a lot of places to ride and always end up spending money near the destination.

Going to trails without a bike isn't an option, those places never get on my list of places to visit.

---

**Correspondence ID:** 2553    **Project:** 15793    **Document:** 56208  
**Received:** Feb,07,2014 10:09:19  
**Correspondence Type:** Web Form  
**Correspondence:** I encourage the opening of the trails of the Ozark Scenic Waterways Area to mountain bikers.

THANK YOU!

**Correspondence:** I would consider myself an occasional visitor to the park (3-4 visits per year). I canoe every visit, and gravel bar camp most visits. The bluffs, trees, and wildlife are definitely quality attributes of the park, but in my opinion, the quality of the water is the number one aspect to be concerned about.

To me, it seems as if Alternative A would go the farthest in maintaining and improving the quality of the river water. As I stated above, my primary use of the park is canoeing, so I favor that kind of activity, but I accept that it is a public park and all users should have access. However, the noise, fumes, oil, waves, and sediment churning caused by the motor boats does significantly affect conditions in the park, and of the water quality. Alternative A, does not prohibit motor boats on the river, just moves them downstream where the river is wider and we can avoid their wake and fumes (but not noise).

With that said though, maintaining the quality of the water in the rivers is the responsibility of all users of the park. Non-motorized users of the rivers also need to take responsibility for the water. Users should be educated, aware, and accountable for their actions that degrade the quality of the water.

Superintendent

Ozark National Scenic Riverways

Van Buren MO 63965

Re: Draft General Management Plan

Dear Superintendent Black:

This constitutes the response of the Cave Research Foundation (CRF) to the proposed Ozark Riverways Draft General Management Plan.

CRF believes that usage patterns that have developed over the last thirty years have had a degrading impact on the natural resources of the park. Specifically:

- Excessive canoe usage on certain stretches has caused problems of bank erosion, trash, and vandalism.
- Excessive power boat usage has caused erosion issues, negative effects on the habitat of the Ozark hellbender, high noise levels, water quality issues, and a general degradation of the visitor experience.
- A poor trail system limits alternative forms of non-motorized recreation.
- Unrestricted horse usage has had many negative impacts on soils, erosion, visitor experience, and water quality.
- The tremendous growth of off-road vehicular use has also negatively affected many of the values of the park. In our experience, for example, the Jam-Up Cave area (a designated natural area) has been greatly affected. Rough trails which were rarely used in, say, 1980 have become roads and, to a certain extent, institutionalized.
- Increased numbers of maintained roads has not resulted in higher levels of visitor enjoyment. Traditional family usage has dropped during the years we have been involved with the park.
- Scenic easements have been widely violated without enforcement.
- Traditional usage of the rivers, the intent of the park enabling legislation, has been replaced by too much high-volume and disruptive usage patterns.

Wilderness

We favor wilderness designation for the Big Spring primitive area. The present usage patterns would not change much but designation would provide an accessible wilderness for families in a safe environment. Such a designation, along with attendant trailheads, would stimulate visitation to the area and provide an economic stimulus to the area.

Alternatives to General Management

The no-action "alternative" should not be considered because, basically, it would continue practices that are currently illegal and against NPS policy. This would result in degraded visitor experience which eventually would have a severe impact on the economic base of the surrounding communities.

We favor Alternative B with some important modifications.

-Because high usage and large numbers of access points have caused considerable problems, we do not support keeping the present number of access points. We favor reducing these to a manageable level. Many of these access points were not usable thirty years ago, and a return to that status is needed. For example, on the upper Jacks Fork, concession-available access points are only needed at a very few sites: Buck Hollow, Bay Creek, and Alley Spring.

-We support the creation of new concession opportunities for non-motorized activities. The potential exists for shuttle service for backpackers as trails continue to be built in the river corridor.

-Horse trails should be limited to old road beds where degradation can be minimized. However, a joint backpacking and horse trail should be considered utilizing old roads on the upper Current River. Such a trail could go from Round Spring all the way to Cedargrove.

-We do not support the creation of new horse camps unless they are remote camps, utilized for overnight trips, or unless they replace current, unauthorized, unmaintained social camps. Otherwise off-park facilities would be beneficial to the local community. Horse camps are not a low-maintenance item and a proliferation of them will likely degrade natural resources.

-We support the creation of a learning center at Powder Mill, provided that does not reduce the usage of the present research center, which is not mentioned. CRF occasionally keeps the present center open as a visitor contact point, with good results. The research center has enabled thousands of hours to be volunteered in the interest of park natural resource management. The wording of the GMP alternative says that "some living quarters" "might" be provided. This should be reworded if the intent is to keep the research center element. If the intent would be to remove the research center, then we would certainly be in opposition to that.

-Wording should be added that addresses partnering with "volunteers and others" to accomplish natural resource stewardship projects; that language was used for "cultural" resource projects but no mention was made of natural resource partnerships, which are ongoing at this time. The ongoing partnership with CRF and others has provided for effective management of cave resources within the park. Not mentioning this type of natural resource partnership is an oversight, one that could potentially be interpreted as unauthorized.

-We do not favor the horsepower limits as delineated in Alternative B. Specifically, we believe that horsepower limits be lowered on the Current River between Pulltite and Two Rivers. We suggest 25 horsepower limits between Two Rivers and Round Spring, and no motors allowed at all above Round Spring. If high-horsepower usage is reduced on these stretches then canoe traffic can be redistributed to these sections, as was the case in the 1970's. Family camping on the stretch of river between Round Spring and Two Rivers has just about vanished due to the high usage by powerboats, day and night.

-Depending on the spread and disposition of White Nose Syndrome, CRF supports the opening of such caves as can handle traffic. However, visitation of caves should never be considered to be of high recreational value. Most OZAR caves are either: too small to be of recreational interest, too geologically or biologically sensitive, or are technical in nature requiring specialized equipment or skills.

-Under Alternative B it is said that no FTE increase in Resource Management and Science will be needed despite additional responsibilities and duties. We cannot agree with this statement. For example, Ozark Riverways has the largest karst springs of any national park unit, and yet there is no physical science or hydrologist or geologist position. This should be changed in the final plan and a goal made to create a physical science position through the addition of one FTE in natural resources.

Thank you for this opportunity to comment.

Sincerely,

**Correspondence:** I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement. As a National Scenic Riverway and the largest national park in Missouri I would love to see the integrity of the Ozark Riverway preserved beyond my lifetime and the lifetime of my children. I specifically value the riverway for its recreational boating and for the exploration of natural beauty through hiking and education. Preservation and restoration enables the remote natural beauty of this riverway to exist far into the future. I have specifically made use of the Ozark Riverway through hiking and floating on both the Current and Jacks Fork Rivers. As a frequent visitor to national and state parks, especially those in more remote areas, I understand maintaining the balance of recreation and preservation is a difficult task. I think both can be done and the Ozark Riverways GMP can pave the way for an example of how other national parks can hold this balance. Although our modern tendency is to develop & commercialize beautiful areas such as the Ozark Riverways, that tendency leads to overuse, whether intentional or unintentionally. This riverway, like any of our national parks, is too beautiful, too rare, too important to the habitat of many rare species of birds, fish, plants, and amphibians, to be ruined by overuse or careless use that unintentionally leads to the slow demise of the area. The pristine springs and caves that millions have come to love through visiting this area will be ruined if the National Park Service does not continue to manage this riverway. I appreciate the conservation and preservation functions of the National Park because it ensures that a consistent plan of preservation, restoration, education, and prudent recreational use will be carried out. I can appreciate the desire of many, especially those who live closest to the Ozark Riverways, to have as much access to the riverways as they would like. And it is also no small factor that the Ozark Riverways is an economical asset to this area of Missouri. To me this is exactly why I support Alternative B because the National Park Service will be able to continue to support the economical and local needs that come from this great riverway while at the same time preserving it for those who benefit from it beyond Missouri and beyond this generation or the next. The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address the critical problems in the Riverways such as eroded tracks in riparian areas and on gravel bars from motorized vehicles, explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, and inadequate monitoring and enforcement of scenic easements. I have personally seen some these areas that have been effected by erosion from human use, especially motorized vehicle use. This riverway will not be able to be enjoyed by all with the unmonitored use of motorized vehicles and horses. These uses of the riverways are simply too harsh on the local ecology to go unrestricted, and unmonitored. The Alternative Plan B will address these issues and ensure the Ozark Riverway can be enjoyed by all, both local and national, and for years to come.

Sincerely,  
Troy Woytek & Emma Harty

**Correspondence:** Suggested comment:

I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make

the park more appealing to visitors.

Many areas of the country are recognizing the positive economic impact that mountain biking can bring to an area. Mountain bikers need gas, food, drinks, lodging, etc. These purchases can bring a tremendous economic boom to an area and should not be discounted.

Doug Smith

**Correspondence:** To whom it may concern:

For 65 years I have visited the lands that are now in and adjoining the park; I nearly flunked out of MU because I spent so much time writing letters and persuading people to support the establishment of the park. So I have some serious skin in its preservation.

I commend the NPS for making the effort to update the management plan. In general I support Proposal B, with more beefing up on protection of riparian areas, removal of nonnative vegetation, and managing the area next to Big Spring to preserve its wilderness qualities. Staffing and enforcement are critical concerns and the NPS has got to drop the attitude that it can please all the high-impact recreationists and the Congressional delegation by letting the Park resources be consumed, not protected for today and tomorrow.

In particular, no horse campground should be set aside in the park. Private lands and concessionaires can supply that need and add to the economic benefits the park brings to local economies. Motorboats need to be confined to certain areas and motorized access limited. Lately when I've gone to the park some areas were being "loved" to death by too many people, machines, and horses. Adding more quiet hiking areas would be low impact and welcome.

Respectfully submitted,

Carolyn Johnson

**Correspondence:** After reviewing the proposed alternatives I feel that alternative C "No Action" is the best course of action for the ONSR. This gives the opportunity for citizens to enjoy the park in a variety of different ways. Also, as a frequent visitor of the park for the past 7 years and based on the environmental impact studies, I do not believe there is an ecological reason to further restrict access to the ONSR. We enjoy camping at Current River and hope to raise our children continuing to boat ride and have fun on a beautiful river as we have in the past. We always respect the rules and guidelines set forth by the park services and hope access to the river will not change.

**Correspondence:** I was born and raised within a mile of the current river (log yard powder mill area) In my 40 years here I've seen many changes in regulations and usage. I support the NO CHANGE OPTION because we

already have more than enough regulations. We have very little patrol from the NPS. There are occasionally issues that arise, but they would be less if there was a presence of law enforcement. As for the question of motor size, give us a speedlimit. A boat rigged for fishing (extra weight) can hardly run on plane with a 60/40 if you put a family (4) in the boat, as the jet pump is very sensitive to weight. I hunt and fish the current river alot in the off-season. In the winter I use some of the (so called over used areas) you can't distinguish them from any other area when the people are not present. If you can't tell a difference in the winter,there obviously is no harm being done in the summer. The river access points need to be altered as the river changes. Cavdiriva landing has been eroded away over the years to the point you can hardly launch a boat. While a half a mile away LogYard has a great spot and access road to it, yet the NPS won,t call it a access point. Actually they are wanting to close it permently. I am not a business owner, but I understand the impact that the boats have on this community. Ellington is where I call home, unlike Salem,Eminence, and Van Buren we do not have canoe rentals or any other consessions. Ellington relies on boat sales,fuel sales, snacks and money spent by people that enjoy the river by boat.

**Correspondence:** My family and I request you to give increased consideration for mountain biking in the current and future General Management Plans. My family and I oppose the no-action option which continues the prohibition to mountain biking. We urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- -for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that are normally available at similar state and national parks across the nation.

Missouri and its surrounding states have a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

Thank You,

---

**Correspondence:** I am in favor of the National Park Service adopting Alternative B as its plan for managing the Ozark National Scenic Riverways, the Jacks Fork and Current rivers. I do not live in the affected area but am a monthly visitor to Reynolds County and have developed such an appreciation for the unique treasure the Ozark rivers and springs are for Missouri. Visiting these areas of natural wonder makes me feel proud of all that Missouri has to offer that many other states do not have available to them. But like all the special natural wonders, on a local, state, and national level, these assets are too vulnerable not to be protected. How often, at all levels, has the battle for preservation been required in order to maintain what is most worthy to save. Too many people think Nature is their's to enjoy or profit from in any way they choose and see regulation as challenge to their personal freedom rather than a tool for protecting what they want to enjoy and profit from. Keeping what is best about the Ozark National Scenic Riverways, for now and for future generations, ensures its value for all. Thank you for providing a means for people to give input.

RE: Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS

Dear Superintendent Black:

On behalf of the Missouri Coalition for the Environment (the Coalition), we submit these comments in response to Ozark National Scenic Riverways' Draft General Management Plan/Wilderness Study, dated October 2013.

The National Park Services (NPS) submitted a Draft General Management Plan (DGMP) for Ozark National Scenic Riverways (ONSR) dated October 2013. The DGMP contains three "action alternatives" to address park management issues since the ONSR's last comprehensive planning effort completed in 1984. The DGMP also contains a "No Action" alternative that would leave the NPS' management of ONSR as is and would leave many management issues unaddressed. At the NPS' various hearings on the proposed DGMP, and in the popular press, a number of people and entities have suggested that the NPS simply take no action and continue to operate under the earlier management plan. Taking no action deviates from the NPS' statutory and regulatory directives and is not in accordance with the NPS' own guidance. A new General Management Plan (GMP) is needed and the NPS should move forward with its plans to issue one.

Federal law requires the NPS to file a GMP in a "timely manner" to address changes and provide guidelines for future management of ONSR. See 16 U.S.C. Â§ 1a-7(b). Because the NPS' 1984 planning and management effort for ONSR is outdated, a new GMP must be developed in order to comply with the statutory mandate.

According to section 1a-7(b), a GMP provides guidelines for park management and development- including desired resource conditions, user capacity standards, visitor use management, and changes to boundary modifications- and has an expected life of fifteen to twenty years. ONSR's last management effort was conducted over 29 years ago. ONSR's natural conditions and the park's usage have significantly transformed since the 1984 planning effort. Visitor intensity changes, increased recreational activity, new illegal access points, uses of neighboring property changes, and unresolved legal compliance issues require new management directives that should be addressed by issuance of a new GMP. A new GMP is required to address the current conditions and to provide guidelines for future management of ONSR.

Since the early 1980s, the park has experienced a significant increase in the number of visitors. This requires NPS to revisit the methods by which it achieves its purposes: conservation and interpretation of the unique scenic values as well as the provisions for use and enjoyment of these resources. See 16 U.S.C. Â§ 460-m. Increased visitor traffic means more stress on the park. These changes must be addressed through a new GMP.

In addition to the increased number of visitors, the ONSR has faced a significant increase in certain types of recreational activity. Since the early 1980s, ATV usage and river activity such as canoeing, floating, tubing, boating, rafting fishing and horseback riding have increased. These recreational activities have brought an increased use of illegal park and river access points, along with overcrowding from an increase in the number and size of motorboats used on its waters. It is the NPS' task to account for these changes in recreational patterns and balance them against the need to conserve the environment. Management cannot rely on an old, outdated planning effort, which was developed before these significant changes, and still accomplish this balancing act. The NPS must take action and adopt a new general management plan as its October 2013 draft envisions.

Moreover, the ONSR has seen an increase in motorboat usage with retrofitted motors in excess of forty horsepower. See 56 FR 30694, July 5, 1991. The regulations to which the ONSR is currently subject do not allow motorboats with more than forty horsepower. See 36 CFR Â§ 7.83(a)(2). The Department of Interior Regional Solicitor's Office has advised the NPS regarding this issue and has determined that retrofitted 60/40 motorboats violate the federal regulation. Despite this known violation, the NPS continues to allow 60/40 motorboat usage on ONSR's waters. A new GMP is needed to address these issues. Continuing management under the "No Action" plan- essentially keeping the earlier management guidelines in place- would continue to violate existing regulations. Id. The NPS must either enforce the regulation or make changes to the regulation to accommodate the use of 60/40 horsepower motorboats through an updated management plan.

Thank you for the opportunity to present these comments. If you have any questions about the above or if you would like to discuss the Coalition's comments, please let me know. My contact information is below.

**Correspondence:** I believe mountain biking should be allowed on trails in the Ozarks. Mountain biking is a sustainable activity with a large user base and a large volunteer base that has shown in other areas around the nation and in Missouri that multiuse trails are successful and attracts more users to view the natural beauty that Missouri has to offer.

**Correspondence:** As a representative radio show host that has an audience of thousands of local folks within the ONSR area, I can provide feedback of the communications, calls, emails and contact I receive regarding this project and the proposed changes.

My listeners are adamant about their position on this issue. First, we would like the NPS to return the land to the State of Missouri.

Second, since you will not willingly relinquish that which you have taken, we seek the NPS to leave the existing rules in place that are current and MAKE NO ADDITIONAL CHANGES.

What you are proposing will cause immeasurable harm to the economy of our region from a number of perspectives. The limits on access will reduce visitation from both locals and outside visitors, the limits on horseback trails and 'unauthorized' river crossings will harm the horseback business(es) in the area and they bring in far greater revenue to the GDP of the region than almost any other visitor traffic.

In short, Leave the existing rules alone and make no changes.

**Correspondence:** Thank you for seeing feedback on this plan. Firstly, I would like to oppose the "No-Action" option. Furthermore, I support the NPS Preferred option - Alternative B.

Any option that opens trails and encourages more mountain biking opportunities would receive my support. Missouri and neighboring states have many people who could more fully enjoy the recreation provided by Ozark National Scenic Riverways area if mountain biking were an available activity. Since mountain biking is a low impact activity and, often, people who ride mountain bikes help to maintain the trails, this could be a win-win opportunity.

Please continue to seek feedback on additional Nation Park operations and I also encourage park officials to involve bicycling and mountain biking groups when making decisions on allowed park recreational activities.

Thanks

**Correspondence:** I am very concerned with the impact of usage on public parks, whether regional, state or

national. But I also want to make such areas accessible to as many users as is feasible, safe and responsible. That said, I support allowing mountain biking on designated trails within the Ozark National Scenic Riverways. I feel it is a way to interact in a meaningful way with the natural area. It can be one of several ways to encourage our national populace to value the natural world. And through park fees (and associated spending in area businesses) it can help to fund the upkeep of these natural areas.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. Mountain biking has a low environmental impact. River floating can have a negative impact through litter, etc. To make legislation based on the sins of a small minority of users is irresponsible and unfair.

Making an area multi-use in a responsible manner is the best plan. Thank you.

**Correspondence:** As an avid bicycle rider and mountain biking enthusiast, I fully support opening the Ozark National Scenic Riverways to mountain biking. The access granted to mountain bikes on the Ozark Trail has always been appreciated and has personally afforded me some wonderful experiences. I can only hope for more of the same in the Riverways. My only concern therein is with the 'Primitive' designation. If mountain bikes are to be excluded from from primitive sections, why then allow the horses. Unquestionably, a bicycle tire is far lower impact than horse hooves and cyclists do not often evacuate their bowels on the trail.

Thank you for your consideration,

David Dye

**Correspondence Type:** Web Form  
**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors. It helps generate revenue for the state with races and events being held in the parks. I am a race promoter, and I fight to use MY parks. I have dealt with the MO DNR the past 16 months to come up with an agreement on park use/fee structure for the state of Missouri that is now in place. Mountain biking should be allowed as well as mountain bike related events. All those around these events can benefit from the trails we build/maintain and the revenue we generate attending these events.

RE: Comments of the Missouri Coalition for the Environment on the Ozark National Scenic Riverways Draft General Management Plan (GMP)

Dear Superintendent:

The Ozark National Scenic Riverways ('Riverways'), established by PL #88-492 on August 17, 1964, called for protecting the Current and Jacks Fork Rivers (originally, the Eleven Point was also included). The Riverways showcase several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants.

The Current and Jacks Fork Rivers are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. Local businesses that cater to visitors include outfitters (fishing, canoe rental, inner tube rental, kayak rental and horse trail riding), lodging providers, and restaurants. Because of visitor spending and employment by the National Park Service, the Riverways has generated 845 jobs, which is approximately 15 percent of the total employment in Shannon and Carter counties. In addition, the local population enjoys a river-centric culture that includes gigging, fishing, boating, camping, canoeing, and trail riding. Accordingly, maintaining water quality is important for the local economy and culture that depend on these waterways for recreational uses.

The Ozark National Scenic Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As a unit of the National Park System (NPS), management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. The Missouri Coalition for the Environment, a state-based environmental and conservation organization, urges the NPS to adopt, in general, Alternative B, with some modifications from Alternative A, and a minimally restrictive policy on boating.

The National Park Service prefers Alternative 'B', among the approaches offered to managing the Ozark National Scenic Riverways. In general, we support Alternative B as well, with a few key modifications that provide an approach that balances recreation with conservation and preservation so that the Riverways can be enjoyed by people today and generations to come.

The three purposes of the Riverways which support a healthy national park - conservation, preservation, and recreation - are interdependent components. The park attracts people because of the quality of the resource. People have come to love and rely on the quality of the water, the fishing, the camping, the wildlife, the education, the history, and the scenery.

We know that ignoring standards and regulations does not protect waters. In places where people, local and state governments have done as they pleased to their local spring-fed, Ozark streams, the streams are filled with pollutants, scummy algae, and disease-causing bacteria. The variety of native fish has vanished leaving worms and leeches surviving amid sewage and trash. Typically these streams are contaminated with bacteria and sediment and, in urban areas, with chloride. Saint Louis County once had its own spring-fed streams and locals remember fishing for smallmouth bass in their clear waters. In rural areas across the state Missourians lament the loss of their traditional 'swimming holes' at the creek where they cooled down in hot summers and where congregations baptized their congregants. And today so many will not go near the now-degraded lakes, creeks, and streams they once frequented.

Some Missouri waters are not even fit for watering livestock because of contamination. A laissez-faire management policy has destroyed the quality of many of Missouri's waters which, in urban areas, were rendered little more than storm sewers. It was not one decision that destroyed these waters. It was thousands of them - death by a thousand cuts. They are now sources of extreme erosion, flash flooding, and pollution. They cost public and private entities millions as they flood and undercut public works. Restoring their health is an expensive process that will require decades, though, in urban areas, they will never achieve their original quality. Prevention of damage is much less costly and more effective. We urge the NPS to remember these lessons as it moves forward.

Clearly, allowing people free rein over streams leads to degradation of the resource. Recognition of this reality has

prompted people who love the land to seek preservation and conservation of our natural resources through designating certain areas to be handled with exceptional care and extraordinary consideration. The Ozark National Scenic Riverways is one of those places, like Yellowstone, the Grand Canyon, the Buffalo National River, and Bryce Canyon.

#### A New General Management Plan Is Needed

Action is desperately needed to address the following key issues:

1. Unauthorized roads that allow vehicles to impact sensitive riparian zones or even the river itself. Studies have revealed that dirt and gravel roads within the Ozarks in general are the largest source of sediments to streams, outweighing the combined impacts of pasture erosion, logging, and natural erosion. Researchers found that heavily used gravel roads can contribute 100 times more sediment than paved or abandoned roads. Roads can cause marginally stable slopes to fail, and they can capture surface runoff and channel it directly into streams resulting in increased sediment deposition. The 1991 NPS study of roads and trails found that the existing system of roads results in "substantial sediment loading to small creeks that empty into the Jacks Fork and Current Rivers," which reduces water quality and adversely impacts riparian vegetation.

Over 130 motorized vehicular river-access points exist on the Riverways, according to a 2007 Friends of the Ozark Riverways' analysis. Virtually all gravel bars (used for canoe and boat camping) are accessed by all-terrain vehicles (ATVs) and other motorized vehicles (American Rivers 2011). ORV (Off-Road Vehicle) activity also increases erosion and sedimentation by exposing bare erodible soils in areas with frequent activity.

2. Unauthorized horse trails in riparian zones or sensitive areas prone to erosion and degradation. Studies conducted by the USGS, NPS and the Missouri Department of Natural Resources have suggested that "heavy recreation use is causing adverse impacts on the water quality of the Jacks Fork River, including elevated fecal coliform bacteria densities that exceed the standard for whole body contact recreation." Indeed, in May 2011, the Riverways were identified as one of America's ten most endangered rivers due to inadequate management by the NPS (American Rivers 2011). Horseback riding near or in the Riverways can also increase sedimentation and nutrient loads and reduce available dissolved oxygen.

3. Overcrowding at certain access points during peak times. Better accommodating crowds at some locations and redistributing load points across the Riverways as proposed in the Alternatives can help ensure access to the Rivers while minimizing damage.

4. Discourteous, irresponsible, rowdy, or drunken behavior that endangers public safety, fuels conflict, and risks damage to the resource.

5. The importance of the Riverways as habitat for the Ozark Hellbender and other sensitive species.

6. Vehicles on gravel bars. Vehicles can contribute to increased erosion in riparian zones. Where evidence demonstrates a negative impact from gravel bar travel, vehicle access should be minimized or even eliminated and accommodated elsewhere. In addition, floaters camping on gravel bars should not need to worry about being run over by vehicles plowing through camp sites. Limiting vehicle access to designated gravel bars will increase public safety for boaters and floaters who will still access gravel bars by water. Vehicle drivers can take comfort that they will not be in danger of running over campers if the areas are clearly designated. However, if data show adverse impact to the Riverways from gravel bar camping (like trash left behind, human waste impacts) then gravel bar camping may need additional restrictions.

The Riverways need a strong management plan. We recommend a Management Plan that:

1. Explores NPS participation in watershed scale activities because the Riverways' health is impacted by actions throughout its catchment area that feed surface and subsurface water (and their contaminants) to the Rivers. State and federal partners for this watershed level work include the Missouri Dept. of Conservation, the Dept. of Natural Resources, and USDA.

2. Keeps the horse camp out of the Riverways and, instead, encourages such development on adjacent private land so that the opportunities a horse camp provides accrue to the private sector. The NPS does not need to be in the horse camp business and compete with those who are. Equestrian overuse is a significant threat to water quality and the Ozark Hellbender. As such, we are pleased that all action alternatives will establish a permitting system, as necessary, to manage impacts of horse use. Unlike Alternative B and Alternative C, Alternative A would not allow horse camping. We are opposed to a developed horse campground along the Jacks Fork. We instead encourage private landowners outside the Jacks Fork watershed to pursue a horse camp outside the Riverways, where the impacts would be minimized and yet trail riders would have access to enjoy the beauty of the Rivers. In any case, any horse campground would attract additional use of the horse trail system, which is already strained from overuse. Solutions involving private landowners and land outside the Riverways must be found. Nevertheless, making such a project a business as well as a Park success story will require much collaboration, planning and partnership. In any case, the horse camp need not be in the Riverways to be a benefit to all.

3. Expands environmental education to all users. For example, educating visitors with boats that they should be maintained in good condition to prevent gasoline from getting into the water. Boaters should know the benefits of engine maintenance and be aware of where they can obtain engine care. Local dealers and service providers may be able to help educate their clients on key issues like this. Education can also help the Hellbender. Some of the impacts to Ozark Hellbenders are the result of unintentional but harmful human activities that could be modified with public education. For example, some canoeists move boulders to avoid collisions without realizing that they are destroying potential hellbender habitat. And some anglers kill hellbenders based on myths that they are poisonous and damage the sport fishery. We recommend that the NPS promote public education about the importance of hellbenders with various forms of outreach, such as signs and displays.

4. Expands outdoor skills development & fitness. Forty years ago, a need was identified to help visitors to the Riverways learn the skills to enjoy it, navigate it, and care for it. When Dennis Drabelle (then Special Assistant to the Asst. Secretary for Fish & Wildlife & Parks with the Dept. of Interior) wrote in 1976, "I would like to see the Park Service help people learn to canoe on the river, rather than slam from log to rock all the way down," he described a situation that is little improved today. From canoeing skills, to hiking, equestrian, camping, orienteering, swimming, survival, and foraging, the need for these skills is even greater today as youth are more and more disconnected from the outdoors. The NPS should expand its partnerships to help foster local businesses, state agencies, and NGO's that can provide these services while employing local residents who already know the land and love the Rivers. Canoeing and kayaking are also more active fitness options than "tubing" down the river and learning these skills can impact a person's individual fitness as well as safety on the Rivers.

The partnerships in the Riverways should include institutions of higher learning to apply STEM (Science, Technology, Engineering and Mathematics) education and job training to the Riverways as a living laboratory, as well as a broader understanding of ecosystems, history, art, and culture. The NPS should develop a complete curriculum that ensures that its staff knows the Riverways- and that showcases local history, community engagement, and highlights visitor education. An NGO dedicated to the Riverways could fill part of this gap with on-line resources, community partnerships, and funding assistance.

5. Develops broader and more effective partnerships and systems to foster dialogue among park users, park neighbors and park staff to work cooperatively to identify, evaluate, and solve problems.

6. Restores the NPS commitment to preserving cultural features of the Riverways, including expanding curatorial capacity, artifact restoration, education activities, and repair and maintenance of historical buildings. Strengthening partnerships with local individuals and organizations to preserve cemeteries and historic sites, and to engage visitors in educational activities should be a key component of the new General Management Plan. Such activities help reinforce the sense of place of the Riverways in the context of the Ozarks which is the home of the people whose sacrifices and commitment have helped preserve the Riverways. The long-term health of the watershed depends upon them.

7. Adopts the approach in Alternative A for roads and trails. Because undesignated roads and trails can contribute to water quality degradation through erosion and sedimentation, we support the NPS's proposals to close undesignated and illegal routes. Alternative A would restore 50 miles of such routes and Alternative B would restore 45 miles. In addition, Alternative A would replace 15 miles of undesignated roads with hiking trails and Alternative B would

replace 10 miles. Although both of these alternatives are a big improvement over the existing condition, Alternative A is more aggressive at addressing illegal and undesignated routes and should be adopted if the NPS has sufficient funding and other resources to make these needed improvements. If the resources are unavailable for restoring these roads, the commitment must be made to enforcement.

8. Restores the riparian corridor. To reduce erosion and sedimentation, the NPS should emphasize restoring and stabilizing the riparian corridor. There should be no new conversions of bottomland riparian forests to open fields, and impaired and eroded riverbanks should be restored with native vegetation.

9. Funds the plan. We are very concerned that the NPS lacks the funding and personnel to implement the expanded recreational use and new developments that are proposed under Alternatives B and C. The Riverways has seen a 30 percent reduction in staff in the last decade due to funding decreases, and NPS should hesitate to make changes to park management that would require increases in staff to monitor resources and provide enforcement to respond to increases in use. With common complaints about the need for existing management to better enforce existing standards and regulations, resources should be targeted to this need above new activities.

10. Expands waste management. With 1.5 million visitors, the need for expanded, manageable and sustainable sewage treatment and restroom facilities is critical. Responsible waste management needs to be a priority in the GMP, with careful attention to users, the environment and operating budgets. Modern composting toilets, improved siting and signage, and user education are likely part of the solution.

We recognize that there has been a lot of attention on the use and limitations of boats on the Riverways. Decisions about limitations, including speed limits or horsepower limits, should be driven by data that documents actual benefits to be gained from prohibitions. Local residents that enjoy their boats on the river year round should still be able to use the river year round. Motorized boats play an important role in rescuing floaters, as well as keeping local residents in touch with river conditions. We recommend a thorough study of the impact of motorized vehicles in the Riverways, especially the impacts on habitat for species such as the Ozark Hellbender and species of concern. In the interim, if excessive use or irresponsible behavior endangers the resource or public safety, then NPS can act as needed through enforcement.

Further, it is laudable to attempt to manage the Riverways in order to achieve an experience of solitude and contemplation on the Rivers on a Saturday in July, however, it is perhaps misguided. Weekends in the summer are going to draw thousands to the clear, cold water of the Riverways and the crowds are a by-product of appeal. If solitude is sought, people can adjust the time of their float or the day and achieve it without a wholesale NPS policy change. Floaters beginning their trip in the late afternoon will likely enjoy a less crowded river than those leaving at 10 a.m. on a weekend. Those visiting the Rivers on a weekday are more likely to enjoy solitude. And solitude is almost assured for those visiting the Riverways in the fall, winter, or spring.

It is heartening to see that the Alternatives each propose new NPS management facilities which helps reaffirm NPS's commitment to the Riverways. Further, it is good to hear that Big Springs Lodge and Cabins, all Civilian Conservation Corps era buildings, are going to get much needed maintenance and upgrading. The Lodge facility is in desperate need of maintenance, especially the restrooms which last summer seemed to be impacted by mold.

#### Concern and consideration for the Ozark Hellbender

We have particular concerns about the Ozark Hellbender, the largest salamander in North America. It is primarily affected by water quality, including sedimentation and nutrient loads. Increased siltation may affect hellbenders in a variety of ways, such as suffocating eggs, eliminating suitable habitat for all life stages, reducing dissolved oxygen levels, increasing contaminants (that bind to sediments), raising water temperatures, impeding movements, and reducing prey populations.

As such, any activities on the Riverways that impact water quality may in turn impact the salamander and its habitats. Ongoing activities near or on the Riverways that deposit sediment or nutrient loads in waterways include use of the road and trail system and recreational activities (such as boating, ATV use, and horseback riding). These activities in the rivers may also directly harm or disturb Ozark Hellbenders or their cover rocks. We share the concerns of the Center for Biological Diversity about the endangered Ozark Hellbender and encourage the NPS to

find ways to help educate stakeholders about the threats the Hellbender faces, as well as to protect its habitat.

We understand that the U.S. Fish and Wildlife Service will be preparing an Endangered Species Act Section 7 biological opinion on the effects of the GMP on endangered wildlife within the OSNR, including the Ozark hellbender, Indiana bat, and gray bat. We are pleased that the NPS is consulting with the Service and recommend that the NPS adopt any mitigation measures recommended during consultation. We hope that the Riverways can support all of its native inhabitants- humans and amphibians.

#### Horse Use

With regard to horses, the capacity of the land to support the enormous demand for trail rides (for example, 3,000 horse stalls at Eminence) needs to be assessed to determine how horse use can best be accommodated. Solutions may include re-routing trails from sensitive areas, improving permitting, improving trails, better signage, better enforcement, encouraging off-park trails, route disclosure by riders with commitments to adhere to marked trails, and coordinating incentives to achieve temporal distribution of horse users at peak times (to prevent overloading on peak weekends). One researcher identified horse trails that include more than 80 places where horses cross the rivers. These areas can harm water quality with erosion and fecal coliform pollution. A 1991 NPS study suggested that the NPS consider restricting the total number of horse riders by utilizing a permit system (NPS 1991). At the time, the majority of riders in the Riverways were guided rides. This situation may have changed, which might require another solution. Alternatively, encouraging the development of horse trails outside the RIVERWAYS may help redistribute the impacts to a manageable level. In any case, the solutions must be developed in cooperation with all stakeholders who can help devise creative solutions.

#### The Need for a New GMP

A new plan is needed because again and again local citizens have made it clear their firm belief that the NPS should exercise more enforcement of existing rules and standards to curb abusive, disruptive, and dangerous behavior from the handful of 'bad actors' that foment conflict and damage. They believe that if enforcement were swift, decisive, and even-handed, the 'bad actors' would be discouraged, behavior would improve, and conflicts on the Riverways would be reduced. Most agree that discourteous, drunken, rowdy, or damaging behavior should be discouraged and punished in the Riverways. We agree. All alternatives proposed except the "No Action" one in the Draft General Management Plan would increase enforcement and compliance activities of the NPS.

At the same time enforcement has lagged on existing standards, conditions have changed as uses of the park have evolved since the last plan in 1984. Today inner tubes and horse trail riding use are substantially increased, compared to the past decades when canoes were the predominant visitor use. New highways have reduced travel times from the population centers to the Riverways and have facilitated increased access by all users, which contributes to overcrowding in some areas at peak times. Overcrowding can fuel user conflicts or resource damage. Conditions have also changed in the Rivers themselves. Key aquatic species in the Riverways have declined precipitously in population, with the Ozark Hellbender salamander now making the endangered species list.

Accommodating increased use rates of activities while protecting the water quality and scenic integrity of the Riverways is a critical need. Managing waste, sewage and erosion impacts from users is important for keeping the waters clean, and may be a factor in the health of the Ozark Hellbender, an endangered species, as well. "No Action" fails to address growing issues of overcrowding in some high use areas where concentrations of users during peak times contribute to resource damage and user conflict. "No Action" is the opposite of what is needed to re-distribute access points to reduce congestion and prevent damage to the Riverways. Informed action is needed.

It is also clear that the relationship of the NPS to the residents in the region needs more routine dialogue, more joint problem solving, and more effective communication. The status quo must change. Thus, "No Action" is not an option.

For the above stated reasons, MCE recommends that NPS adopt Alternative B with noted improvements from Alternative A, which is the environmentally preferred alternative.

We support the NPS's commitment to dealing with the problems that have developed on the Riverways. If you have

any questions or would like to discuss these comments, please contact us.

Sincerely,

Kathleen Logan Smith  
Missouri Coalition for the Environment  
Director of Environmental Policy

<b>Correspondence:</b>	February 6, 2014				

Bill Black, Superintendent  
Ozark National Scenic Riverways  
P.O. Box 490  
Van Buren, MO 63965

Dear Mr. Black:

The following are comments on behalf of the St. Louis Audubon Society regarding the alternatives for the Ozark National Scenic Riverways in Missouri. The St. Louis Audubon Society has over 3,000 members in the greater St. Louis area. We are a local affiliate of the National Audubon Society whose mission is to conserve and restore natural ecosystems, primarily birds and other wildlife and their habitats, for the benefit of humanity and the earth's biological diversity.

We commend the Ozark National Scenic Riverways for its decision to review its management practices. The increased pressure of horses, mechanized vehicles, easement issues and lack of funding for enforcement is threatening the water quality and overall integrity of this superbly featured region. Many of our Missouri natural areas have been studied for bird habitat and conservation recommendations. The Riverways is within the Current and Jacks Fork Watershed Important Bird Area (IBA). This is one of 47 IBA's in the state, and is exceptional because it is one of the largest IBA's and overlaps with two of Missouri Department of Conservation's designated Conservation Opportunity Areas (COA). Since IBA's are important for migrating and breeding birds, the St. Louis Audubon Society and other Audubon affiliates hope to assure that conservation goals for these areas are met.

Of the general management proposals for ONSR, the St. Louis Audubon Society recommends Alternative B, opposing Alternatives A and C. Because the conflicting nature of many of the current activities are degrading the stream banks and water quality, we support stronger management and control with regard to access enforcement and habitat restoration. We agree with policies that restrict access by all-terrain vehicles, decrease horse volumes, and increase enforcement efforts at unauthorized access points. Plan B also supports resource monitoring, research and preservation projects that are critical to inform both future NPS management plans as well as provide the most accurate information to area visitors. We also support the proposal for wilderness designation of the Big Spring section.

In addition, we feel that the NPS has the deepest knowledge of its own capabilities and which management plan is most likely to be realistically and successfully implemented in the ONSR. Our support of Plan B reflects our vote of confidence in the NPS preferred plan.

The enjoyment, beauty and benefit of the Ozark National Scenic Riverways will be dependent on it remaining as natural and wildlife-diverse as possible while continuing to provide well-managed recreational and educational opportunities for visitors.

Sincerely,  
Jean P. Favara  
Vice President of Conservation  
St. Louis Audubon Society  
jpouf1@swbell.net

**Correspondence Type:** Web Form

**Correspondence:** I believe that at this time the best choice would be the no action plan. The actions in the alternative plans would not be the best option for this area. More laws and restrictions will take away from the enjoyment of this beautiful area. The park service should work on following the current rules before trying to add more.

**Correspondence Type:** Web Form

**Correspondence:** I would like to start of by saying I'm a say as a fourth generation Shannon County resident. Having grown up being able to enjoy the Current and Jacks Fork Rivers, and also taking my own children to enjoy them, I cant imagine not being able to continue these pleasures. My family enjoys camping, boat riding and campfire stories in the summer, as well as gigging and campfires in the winter.

Now that is just my family's personal enjoyment. Looking at it a whole picture, I also worry about what will happen to our community if these changes are made. I'm sure we will loses many of our local business, Canoe vendors, campground and even local stores as well as gas station will feel this financially. I have seen first hand all my life the locals as well as the tourist that use our rivers. People bring their families to camp, float , ride horse just to enjoy a little bit of nature.

I would ask that you consider the no action plan.

Sincerely,  
Sherrie Keeling

**Correspondence Type:** Web Form

**Correspondence:** I am a locally concerned citizen. I Would like to STRONGLY recommend the NO ACTION ALTERNATIVE. Here is my opinion: This area -land and river- is what I have grown up with. I use both and take care of it as well. I clean -not only what I take but what others leave behind. This is valuable heritage from my prior ansestors that took care of the land/river and I want it to be the same for my children. I have been here my whole life (38 years) and the river is one of the most important things to me. I don't want to vacation in other areas. I camp, swim, boat ride, picnic, hike all right HERE! Boating limits do not need to be changed. Boats save alot of people each year. A small size horse power wouldn't be able to handle some areas of the river. I also pay taxes that are used for this National Park to be used. It is "WE THE PEOPLES" land. I live right here and shouldn't have to fight what is out my back door. People in other areas shouldn't have an influence on something that they don't see or use every day. I want my childern, grandchildren and future generations to have the same wonderful memories that I have from being raised using this beautiful area the same way I do.

**Correspondence:** I support the NPS preferred alternative - B. It strikes a balance between future improvement while protecting the resource and providing recreation and income to the region. It will help restore the area by closing a good amount of unauthorized roads and trails that are impacting the watershed and just the natural beauty of the landscape.

Some folks say the NPS has not been able to enforce the rules so why set new ones and they support the "No change alternative". Enforcement could be improved under all the alternatives. But past performance should not shut out a plan to move forward and improve the resource. The facts support that the resource is degrading. Supporting "no change" means supporting continued damage.

Let's work together to move forward to save this treasure and not let it slide into further peril by not changing how it is managed.

**Correspondence:** I have been frequenting the Current River since 1988. I canoe and trail ride horses in the area. Since that time, I feel that the trash in the river has vastly improved. The only problems I see when visiting that area is rude, obnoxious, drunken people canoeing. There is also some erosion where horse and 4-wheelers use the trails. I am all for officials working with the Back Woods Trail Rider groups to help maintain the trails. We tried to start a group like that last fall, but met with a landowner who opposed it and threatened to shut down trails on private lands which are used by many trail riders. I oppose closing any horseback trails. I also believe fish gigging and trapping should continue. I do not participate in these activities, but know many people who do and it is a tradition that has gone on for decades for these families. I do not see how this keeps others from enjoying the river as well. I do not support any new Wilderness Areas being established for any reason whatsoever. This is not needed or wanted. In my opinion, things should stay as they have been. There are several thriving canoeing and horse back riding businesses that greatly benefit people having access and enjoying the area. They need to be protected at all costs in my opinion. I know many of these individuals and they do a lot to protect the river and make it a fun place to visit.

**Correspondence:** Mountain Biking has become a very popular sport in recent years. It is a sport enjoyed by people of all ages, but primarily those of middle age with money. Mountain Biking could generate a lot of revenue for the area. These folks are invested in their equipment and the sport and willing to travel for great trails. Mountain Bikers do not shy away from hard work. The bike clubs and other individuals could be used to help maintain the trails. Our local bike club, Greenhills Trail Association is solely responsible for building and maintaining the local 10 mile single track in Indian Creek Conservation Area. These trails can also be easily shared with hikers. Mountain Biking is a relatively safe sport.

**Correspondence:** Please consider my below comments as sincere and genuine.

I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that are normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

Mountain biking, and biking in general, is a family event for my family and many other families we know. It's a fantastic way to enjoy what nature provides us while also being healthy.

**Correspondence:** I am a retired Ecologist with 40 years of professional experience with state and federal land management agencies. This background has provided me with an understanding of the frequent separation of statutory direction and cultural/societal induced legislation that creates management issues for such agencies. In my view, the Ozark Scenic Riverways is no exception.

The enabling Federal Legislation establishing the Park was, at best, a compromise between competing interests that had initially worked in concert to defeat the Corps plans for impoundment, but held different values and views following deauthorization. The current Park environment has been a consequence of such divergent views, a divergence which will likely be seen in the comments provided on this draft.

It seems that the initial management efforts of the NPS were directed toward ameliorating local distrust and anger while providing the recreational experience sought by people largely from other areas. The result, as I have observed from my experiences in trying to "have it both ways" while employed by both federal and state management agencies is that the steady creep toward ever increasing public use causes an increase in cumulative and long term degradation of the very resources the agency was established to protect.

In my view, the NPS is now at the cusp of realizing this trend. Your selection of a Management Plan for the near term will determine the fate of the resources under your mandate well into the latter half of this century.

In this respect, I view the draft plan efforts as being extremely myopic in both the scope of discussion of matters beyond the direct control of the NPS and in matters of unintended consequences of the array of planning alternatives.

With respect for the external matters beyond NPS control: (1) In many respects the resource features of the Park are of a riverbasin or landscape scale. Water quality for example is not the product of the management efforts within the Park, but of topographic features that make up the watersheds above the Park and for aquifer recharge areas outside Park boundaries. What prerogatives does the Park Management have for inducing positive future outcomes for these important inputs to Park conditions? (2) A review of negative cumulative impacts to natural resources as a consequence from past and present Park management over and about recreational values would aid in assessing the anticipated recovery under any proposed plan option.

In view of my concerns expressed briefly in this paragraph, would the Park view the potential for a National River Basin designation of Heritage Basin as a potential win-win over the long term for both internal and external Park interests. In other words, would thinking "outside the present box" be a viable alternative to discuss with stakeholders during the Plan life?

My own professional view of Park problems stems from an assignment I had while on the staff of the Missouri Department of Conservation. In the early 1980's. I had been assigned to coordinate Department concerns with the

Department of Natural Resources' effort to revise the Clean Water Plan. A desire to include "recreational values" into the new plan presented the problem of how to determine existing and future values. I formed a sub-committee of myself, Daniel Witter and Jay Martindale and together we conducted a Delphi opinion poll of Natural Resource Agency staffers within the State who would have local views on the subject based on their observations. The result was published in 1982 by the MDC as :Ranking the recreational values and associated problems of Missouri's major watersheds. That report listed the Current and Jacks Fork River as very high if not top ranked for the early 1980's, but projected a considerable drop in value 20 years hence due to overuse. This I offer as the views of professionals in the field as opposed to conventional stakeholders.

In summary, I see the no action plan as not an option as well as plan C. The NPS's desired plan present a least "discomfort" option for the agency professionals, but in reality does little to ameliorate the unaddressed problems I see appearing in the near future; increased population growth and climate impacts.

Option A would most like please many Park advocates and users, but is also apt to create political ramifications beyond the Parks control. I therefore suggest a hybrid option that features transitory management strategies over a near term range.

Maintaining the Park lands and water as a living museum or as a area literally "loved to death" are not options. Therefore reformulating a flexible plan between the extremes would be my preferred option.

**Correspondence:** I am a Saint Louis, MO resident and Salem, MO native that has spent many hours in the ONSR. I have participated in many different recreation activities, from canoeing, boating, and fishing to camping, riding atvs, biking, and hiking. I spent almost every Saturday and some Sunday afternoons on the Current River while in high school and college. I am also a civil engineer that works in the chemical industry and understands the importance of efforts made to maintain the river and ensure that the resource is protected. What I do not understand is the decisions that are being made without any substantive data to back them up. The NPS has done this in the past,

such as the efforts to ban bluff jumping which were ill conceived, backed up by reasons that were completely based on emotional perceptions of a certain set of park visitors, and completely unenforceable and unrealistic. The statement of purpose for the ONSR is as follows:

The "Ozark National Scenic Riverways was created through congressional legislation on August 24, 1964 (by Public Law 88-492) to conserve and interpret the scenic, natural, scientific, ecological, and historic values and resources within the National Riverways, and to provide for public outdoor recreational use and enjoyment of those resources."

To me, this means that the park should be maintained in a way that allows the majority of users to use the park for recreation in the method of their choosing while ensuring that none of these methods do irreparable harm to the resource itself. This means that any attempt to limit a recreation activity should be backed up by data that shows a correlation between a particular type of recreation and how it contributes to degrading the resource in an unsustainable manner. While some may argue that data is included in the draft management plans, I would argue that the plans insert passages that claim to be scientific fact, but that are not backed up by any type of graphic showing correlations or by engineering formulae. This type of justification would not be considered in any professional circumstance as the basis for a large decision such as choosing the park management plan. The approach that is used in the plans uses generalizations and clichés about saving resources, wildlife etc. to entice readers to make decisions based on emotions and not based on evidence, because little to no real evidence is provided.

"It is a capital mistake to theorize before one has data. Insensibly one begins to twist facts to suit theories, instead of theories to suit facts."

— Arthur Conan Doyle, Sherlock Holmes

Without data there is no way anyone could make an informed decision about the future of the ONSR.

One question that I have is why the NPS chose to even call one plan the "preferred plan"? This gives the NPS a strong incentive to twist facts and user input to support their preferred alternative instead of choosing the plan based on user input that was guided by factual information. Now it will look like the NPS lost a battle if the preferred plan is not chosen, which will cause many involved with the plan's creation to feel as if they are losing face, when in fact it should be a victory for the NPS because it is representing the will of the people while conserving a resource. To call one plan preferred was completely disingenuous and is not the democratic approach that should have been taken by the NPS.

After reviewing the NPS GMP draft plans, I feel compelled to say that I do not support any of the plans they have proposed as they are currently constructed. I want to give them my support in protecting that resource, but I do not feel that their preferred alternative (Alternative B) from their draft plan will succeed in that. Generally speaking, all the alternatives are too vague to really establish a strong path forward for the ONSR. They focus more on the zoning of areas within the park rather than specific measures on how they propose to make the park better.

## GEOMORPHOLOGY

I was sorely disappointed to see that the draft General Management Plan did not cover the geomorphology of the Riverways. All that I could find in the document concerning geomorphology is reference to the karst geomorphology that provides the area with so many unique springs. While the karst features are an important aspect of the park that needs to be preserved there is more that should have been covered.

It is impossible for the National Park Service to make educated and informed decisions on what impacts the Riverways, the gravel bars, and the adjacent floodplains without first understanding the geomorphology that drives this system. Historical accounts of the river state that there used to be very few gravel bars within the system and that the channel contained more of a bedrock bottom. I see no evidence that shows the park understands what has caused this change, how it is continuing to change, and how the Riverways should be managed in an environment that is actively changing. I have my obvious opinions on this; however, they are just opinions. The park should solicit research from professional geologists and engineers to study this dynamic process of geomorphology in this region so that they can make informed decisions on how activities (such as canoeing, motor boating, off road vehicle use, etc.) along the river are impacting the resource. If recreational activities are adversely impacting the

geomorphologic processes along the Riverways, then those activities should see some form of restriction from the park service.

## FLOATING

Without question, canoeing is the chief recreational activity within the ONSR. People flock to the Riverways from all across the nation to float the beautiful Current & Jacks Fork River.

Some people think that certain sections of the Riverways face many issues from overcrowding of the floaters. From my personal perspective, I think there are times during the summer when the Riverways are "overcrowded" from the canoers, kayakers, rafters, and tubers. I hate to see large crowds of people coming down the river when I choose to spend my time down there. However, all people have a right to come recreate on the Riverways. It was preserved for everyone's use. Just because I don't like seeing large crowds of people down there doesn't necessarily mean that those large crowds negatively impact the resource.

Obviously, the more people that are in a natural environment, the more opportunities you have to impact the environment. The question that the park should seek to answer is the following questions about this user group:

â€¢ Does this user group impacting the Riverways?

â€¢ How can this user group impact the Riverways?

â€¢ What is a suitable number of floaters, at any given time, on a scenic river set aside for recreation?

â€¢ Does this user group impact water quality beyond a safe standard?

â€¢ Does this user group negatively impact the geomorphology?

I don't have these specific answers. Sadly, I'm afraid the park doesn't either. I feel that since this park was designated as a national recreational area that as many floaters as possible should be allowed to recreate within the boundaries of the park at any given time, until the point where they negatively impact the resource. It's on the parks shoulders to clearly articulate what constitutes a negative impact to the resource from floaters.

## MOTORIZED BOATS

The use of motorized boats within the boundaries of the ONSR is a very popular activity amongst people who live near the Riverways.

All of the proposed alternatives wish to restrict motorized boats within the boundaries of the ONSR. Specifically, the NPS preferred alternative (Alternative B) seeks to completely eliminate the use of motorized boats on Current River above the Pulltite Access. Why does the NPS seek to restrict the use of motorized boats along the Riverways? Is there some sort of evidence that motorized boats are negatively impacting the resource? With the ONSR being designated as a national recreation area, the park should not seek to restrict activities where there is no evidence that they are impacting the resource. If the park has evidence that motorized boats cause damage to the resource then it should have been specifically and concisely presented in their draft GMP.

The only real justification by the NPS to restrict motorized boats I can find in the draft GMP is the following statement:

The restriction of motorized boats "would help reduce motorboat disturbances to aquatic habitat (such as displaced aquatic vegetation, fish spawning impacts, and petroleum-based water pollution) and motorboat noise disturbance to riparian habitat and wildlife behavior (such as bird nesting and bird communication)."

In all the pages of the draft GMP, I see no data to support this statement made by the NPS. Furthermore, if these are true concerns, how do other Riverways users (canoes, kayakers, hikers, horse riders, etc.) affect them? If the NPS feels so strongly that motorized boats impact the resource in this manner, maybe they should lead the way in not utilizing them for their day-to-day functions within the park.

If there is not data that shows motorized boats impact the river, why did the NPS seek to restrict the usage of them? I assume it is because they received comments during the GMP process where individuals voiced opinions opposed to motorized boats within the park. I again revert back to my statement that decisions should be based on data and not how one set of users wants to define the resource.

## ROADS AND TRAILS WITHIN THE PARK BOUNDARIES

The Code of Federal Regulation does allow for some off-road vehicle use within parks that are deemed national recreation areas (36 CFR - Section 4.10 b). Many responsible individuals use vehicles to access their favorite areas within the park boundaries in a responsible manner that does not impact the resource.

The ONSR has done a terrible job at identifying the official roads and trails within the park boundaries. Nowhere in the draft GMP or the official website for the ONSR can I find where the NPS identifies what are and are not the official roads within the boundaries on the park. In this technological age it requires minimal effort to develop maps to display this information and disseminate to the public.

## RIVER ACCESS POINTS

River accesses are an important topic to many individuals. There are many different views on how many access points there should be along the river and what areas should be access points. In the draft GMP the NPS would seek the following with their preferred alternative (Alternative B):

"Concession dropoff and pickup locations for river users utilizing nonmotorized watercraft would be redistributed to reduce peak-season crowding effects and to protect river resources in response to potential changes in river flow conditions. This would require closure and restoration of about 20 access points and the careful design and opening of 20 new designated access points. Total designated access points would remain constant or decrease."

There are many problems I have with the above statement primarily revolving around its ambiguity. What access points would you look to "decrease" or close? What do you mean by "restoration" of access points? Which 20 access points with the ONSR have been identified for this?

It is impossible for individuals to know how you plan to manage the Riverways Access points with the above information. Access points along the Riverways should be built-up to support the recreational needs of the park visitors. By that I do not mean that every access point needs to be paved with concrete or have a boat ramp put in.

I do not believe that the cost to change access points along the river, whether it is to close or open them will be justified by the results of doing so, and see little reason to believe otherwise.

## HORSES AND TRAIL RIDES

Possibly the second largest user group, behind floaters, in the ONSR are horse riders. Unfortunately due to the expanse of this user group, they have collectively begun to degrade the water quality of the Riverways. Particularly the Jacks Fork River between Eminence and its confluence with the Current River has seen the most damage

I believe that this is something that needs to be brought under control. In my opinion the way to do that is to control horse crossing points and develop rules that prohibit horses from loitering in the river so they have less opportunity to defecate in the water. If the problem persists, the number of horses allowed in the park might have to be limited.

**Correspondence:** My family has lived in Shannon County since the early 1800 and I have deep roots to the area. I feel like the new proposed General Management Plan for the Ozark National Scenic Riverways does not reflect our

Heritage or the local comments that was made by over 5000 people in 2009. In 1971 when the enabling legislation was signed into law we initially had approximately three million visitors to the riverways in the late seventy's and eighty's. The latest figures that I was told that our visitors are down to a little over one million each year due to different poor management and excessive regulation. Today people are mobile and are able to choose where they can receive the best visitor experience. It is important that our visitors receive the best visitors experience possible. Shannon County is one of the lowest income per capita and one of the most severely impacted by the amount of government and absentee landowners in the United States. I believe that it is the desire of the local residents as well as the majority of the United States that the economy and job creation are our number one priority and I do not believe this plan shows any evidence that that has been addressed. Please keep our roads and trails open and well maintained, keep all campgrounds open with services provided and well maintained and no more regulations on motor craft than is already in place. We need more local employment for our residents so they will not have to drive outside the area or relocate. We need a plan that specifically addresses these issues and concerns, that has made the local economy a top priority.

**Correspondence:** Please realize that the loud, 'squeaking wheel' of outcry against the Nation Park Service and Ozark National Scenic Riverways is NOT the opinion of everyone who lives near and enjoys the Riverways. While some think the Jack's Fork and Current Rivers belong solely to those who reside in the immediate area, the area is a NATIONAL park and belongs to everyone, whether local or visitor. Sometimes it seems to be the local, not the visitor who takes the rivers for granted since they've 'always been there.'

Some adjusting in the preferred option would be nice- -such as the motor boat limits on the upper Current. Just because a trail has been used for many seasons, does not make it a recognized trail or a well-maintained trail that will not wash in heavy rains. If some trails are closed, it's because they are illegally built; there are other trails for horse back riding.

The reason the original plan did not address the use of ATVs and other off-road vehicles, is that they weren't common or even existed when the original plan was written. Times change, new things are developed, and management plans need to change and be adjusted to accommodate these changes.

**Correspondence Type:** Web Form  
**Correspondence:** Previous to my retirement, I worked for the National Park Service for twenty years as a Landscape Architect. During my tenure (1990-2010) I spent eleven years at Ozark National Scenic Riverways in Southeast Missouri.

Our nation's National Parks, all of them, are managed under the dichotomous mission to protect and preserve those natural features and cultural/historical legacies deemed to be of 'exceptional value' for the benefit and enjoyment of all its citizens- --while simultaneously insuring that these exceptional values will not be compromised, will remain intact for generations to come. Critical to ensuring that what was originally set aside (be it a Civil War battlefield, a grand canyon, an ancient virgin forest, or a scenic river) a park's management plan must set the parameters for how this interface- --between 'public use' and the 'valued resource' (natural, historic, or cultural) will occur. It implies limits. And it implies an assessment of resource conditions and a commitment to monitoring such impacts to that resource due to 'use'. But above all it implies that the core values of 'that place' (a place that was originally 'set aside' as a National Park) are retained.

The existing Management Plan (1989) for Ozark National Scenic Riverways (presented in the current Draft Management Plan as the 'No-Action Alternative') specifically states the need for an additional inventory and assessment of park roads/trails (including horse trails and hiking trails). A Roads and Trails 'Study' was done in 1994, but by the time I joined the management staff at Ozark National Scenic Riverways in 1999, this study was obsolete and inaccurate. Incremental expansion and proliferation of 'unplanned' road access to numerous points along both the Jacks Fork and Current Rivers had already occurred, and continues to occur. In addition, miles of ad hoc horse trails crisscrossed the narrow park. 'Use'- --undefined and in the absence of resource assessment was the norm. At last, a new General Management Plan is about to be signed and implemented. It cannot be too soon!

If 'use' is to be a viable component of preserving and conserving a treasured place of value (now and in the future)- -if indeed we intend to allow that this 'place' will be there, intact, 'cared-for'- --then discreet limits of use are not constraints- --they are undertaken by the 'user' as a necessary and beneficial part of his/her experience. This is NOT to say that I, as an individual, might not after all really enjoy activities that could cause a little erosion or disturb a bit of habitat. On a very small scale- --I could justify that- --couldn't I?

Perhaps I have a desire to saddle up and ride my horse to the river, to cross the river (even though the bank may be steep, even though a spring fed stream enters the river at that point). Perhaps I have a desire to hop on my ATV and ride the riffles a mile or two upstream mid-river if the water is shallow enough. Perhaps I have a desire to roll my vehicle out to a gravel bar in the middle of the river to set up camp and fish. Perhaps I know where I can back my trailer up to the river bank to launch my boat at a place where it is less crowded. Perhaps I desire to run my motor boat at top speed- --feel the wind in my face- --wild and free. Its OK to want to do any of these things isn't it? Why shouldn't I be 'free' to do what I might enjoy? After all- --enjoyment is a 'right'- -- -isn't it? I have 'rights' don't I? If its public land- --its my land (as a citizen) to do what I enjoy- --and its my 'right'. Right? It is NOT wrong that a person would find such activities 'enjoyable'. But there is a problem.

The relationship to a 'valued place' - --to a forest, a river, a mountain, a quiet cove, a gravel bar, a cave, a homestead- --is only minimally about 'rights'. If you care ABOUT something- --then you care FOR it. If you value a place, it is not about rights it's about RESPONSIBILITY. And responsibility requires respect, it is aided by knowledge- --and it fosters constraint (a word that implies self-limits and considered caution).

I am but one individual. I care very very much about Ozark National Scenic Riverways National Park. I lived there, I worked there. I care very much for the people of the southeast Missouri Ozarks, for those whose family 'homeplace' has been along the length of the Jacks Fork and Current Rivers for many generations. I care very much about this 'special place', though I now live very far away.

I am in support and prefer the selection of Alternative A.

If not Alternative A- -- -then Alternative B. I note, further, that whichever Alternative (A,B,or C) if signed and approved will ONLY be as viable as a consequent commitment to allocate adequate staffing and project/research funding. Any General Management Plan that is not adequately funded will be little more than an exercise in stating good intentions. As a citizen and as a tax payer- --I request that sufficient tax dollars should go towards adequately funding the recommendations set forth in the new General Management Plan (be it A, B, or C). Further, the No-Action Alternative is, without a doubt, a base-line from which the other three options may be measured. The No-Action Alternative (i.e. the existing General Management Plan) is NOT a sufficient instrument to carry conscientious management of this remarkable park on into the 21st century.

<b>Correspondence Type:</b>	Web Form
-----------------------------	----------

<b>Correspondence:</b>	I write this in support of the NPS' management plan which appears to be the most viable and fair compromise between local business entities and the need to protect the Ozark National Scenic Riverways and this beautiful but neglected national park.
------------------------	---

I have been using the Current and Jacks Fork rivers all of my life ( I am 49 years old). I have watched them be decimated by those who do not respect the beauty and fragile ecosystems and watershed. I have spent many hours cleaning up waste left behind by those who drive in with their trucks and leave behind their trash.

I have been intentionally "swamped" by apparent "locals" who enjoy tipping non-motorized boats (canoes/kayaks) as they speed by in John boats, often with a beer (clearly not their first or only of the day) in hand.

I have had to choose other destinations because of e-coil dangers in the Jacks Fork river created by too many horses on the trails.

There is a saying, "if you always do what you always did, you always get what you always got." It is time to change the way of doing things in that Park. If it left to the locals, there would be no management and consequently, I believe, there would be no park. Clearly, the local businesses have not monitored themselves which to a large degree has led us to this place in time.

This Park belongs to all Americans, not just to those who live around the park. I strongly urge the passage of the management plan supported by the National Park Service.

It is incumbent upon our representatives to promote the care of this beautiful property.

Sincerely,  
Nancy J. Higgins

**Correspondence:** Alternative B will effectively balance ecological/preservation concerns with the need to allow citizens to visit and enjoy their national park. I am convinced that the current operations of ONSR are not sustainable. Alternative A would create an ecologically sustainable management system, but it would greatly reduce the ability of visitors to explore and enjoy their park. This would cause devastating harm to the local communities and economies that depend on the park. Alternative C would allow easy access but would cause further harm to the ecosystems, historical preservation, and natural resources of the park. If the National Park Services takes no action to protect our natural resources, these resources will not be available for the enjoyment of future generations. Our enjoyment of our national park lands has a serious impact on the ecosystems, waterways, and landscapes that make up these lands. If we want to preserve lands for the enjoyment of our children and grandchildren, then we need to make sure that we manage them in a wise, sustainable way.

<b>Correspondence:</b>	February 7, 2014				

To whom it may concern:

I am writing to express my support of the Draft General Management Plan for the Ozark National Scenic Riverways. I have been enjoying the ONSR for my entire life around 32 years and have been very discouraged by the things I've seen happening in recent years.

It can take me anywhere from 3-4 hours to get to the National Scenic Riverways and it is very frustrating to make that trip and spend it hoards of people who are riding in rafts build for white water rafting that they use as boats they do not have to paddle so they can drink and party all the while disrupting the serenity of nature and peacefulness others are trying to enjoy. I am not advocating to ban liquor just finding a reasonable way to prevent people coming to the river with no intentions of enjoying nature and our beautiful park. The constant mess left by people who drive their vehicles and ATVs right down to the water is frustrating as well. Lastly I do not wish to outlaw horses but please limit the number of trails and locations meant for horses. Their river crossings and waste can also pose issues for our beautiful riverways.

I currently support the option for Alternative A but would find Alternative B acceptable as well for future management of our beautiful riverways. There are plenty of additional rivers for people to enjoy utilizing the above

mentioned issues without being within the confines of a National Park area.

I truly want to be able to teach and offer my son and grandkids the things I was afforded growing up on the National Scenic Riverways. Please consider tightening the rules/regulations to protect our great treasure.

Sincerely,

Zach McDonald

**Correspondence:** FRIENDS OF OZARK RIVERWAYS COMMENTS ON  
THE OZARK NATIONAL SCENIC RIVERWAYS (ONSR)  
DRAFT GENERAL MANAGEMENT PLAN/ENVIRONMENTAL IMPACT STATEMENT

Friends of Ozark Riverways has reviewed the draft General Management Plan (GMP) and considered its various management alternatives. We applaud the National Park Service for addressing many of the issues that have been festering at ONSR for years.

WHAT IS FRIENDS OF OZARK RIVERWAYS (FOR)? FOR formed in 2003 to promote respectful management of Ozark National Scenic Riverways. FOR is a coalition of conservation, outdoor, and recreation-based organizations and businesses, along with thousands of individuals who share the mission to protect the outstanding natural beauty, ecological vitality, and rich cultural history of the Riverways so that visitors are rewarded with high quality experiences and future generations will have the same opportunity.

We encourage the strengthening of this park's operation. If well cared for, the Riverways will not only protect priceless natural and cultural resources but also provide substantial economic contributions to the region from jobs, visitor spending, added sales tax revenue, and national park expenditures and thus sustain small communities along the river.

This park's problems have included the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements. Doing nothing would result in further degradation of resources and conflict among uses, and diminish the economic potential that a well-managed national park, its scenic landscapes, and clean streams and rivers can provide.

**PREFERRED ALTERNATIVE:** FOR agrees with NPS that alternative B provides the most balance among the three alternatives. Alternative B would provide more staff for maintenance, monitoring, and enforcement while substantially enhancing visitor experience of park resources. We believe that several improvements could strengthen the plan:

• **SCENIC EASEMENTS.** Although there are no changes to scenic easements proposed in this plan there are 9,257 acres of scenic easements that are intended to maintain the natural environment and scenery for the benefit of the visiting public. These easements are critical to the quality of the Riverways. They were acquired to add public value to the national park and need to be effectively monitored in a timely manner. Easement violations must be corrected promptly.

• **WILDERNESS.** The GMP review includes one small, undeveloped backcountry/wildland area of approximately 3400 acres near Big Spring. The area, which was acquired as a state park in the 1920s and later became part of the ONSR, has been continually managed as an undeveloped wild area and we support that approach. We also support the use of prescribed fire to manage wildland quality. The NPS is proposing in each alternative to recommend some portion of the Big Spring area as qualified for federal wilderness protection. Management would continue largely

unchanged as it has been but with the recognition that it can provide a true wilderness experience, which would be an addition to riverways offerings. We support the NPS-preferred Alternative B, which recommends 3430 acres for wilderness management, while recognizing that official designation as federal wilderness is beyond the scope of the ONSR plan.

â€HORSEPOWER LIMIT: Zoning for horsepower limits has been part of existing regulations since the River Use Management Plan of 1989. Some members of FOR support the proposed non-motorized section on the upper stretches of the Current and Jacks Fork year-round. Others support seasonal use of motors for traditional activities such as fishing and gigging and believe this is appropriate in these sections during fall and winter. (NPS recognizes that the present and proposed 60/40 horsepower limit is in violation of the Code of Federal Regulations and is proposing a rule-change process in order to continue allowing it.)

â€HIKING TRAILS. There are so few hiking trails in this park and the additional miles provided in alternative B are so small that we urge ONSR to partner with other agencies and organizations to develop hiking trails across multiple ownerships.

â€HORSE CAMPGROUND. Instead of the new 25-site horse campground proposed for alternative B, we ask that NPS work with existing local businesses to provide a concession horse camping operation on private land outside the park that would have less impact on park resources within the narrow river corridor and contribute more to the local economy.

â€NATURAL AND CULTURAL RESOURCE MANAGEMENT. FOR strongly supports the protection, restoration and interpretation of natural landscapes, archaeological sites, historic structures, and cultural landscapes as discussed in this plan. However, our support for cultural landscape restoration is limited to the immediate viewshed of historic sites. Restoring and stabilizing the forested riparian corridor should be emphasized, especially in view of the likely impact of climate change and severe weather events on the rivers and floodplains. There should be no new conversions of bottomland riparian forests to open fields, and artificial pasture for elk and other wildlife should be eschewed; restoration of upland meadows, woodlands, and glades should be with native vegetation.

â€RIVERBANK ISSUES. Impaired riverbanks should be restored. Developed facilities along the rivers should be carefully considered, screened from view from the river wherever possible, and low impact. We suggest that heavily engineered solutions be avoided (e.g., rock and weirs) but that NPS use its talent and experience to bring to this park natural landscape design and sustainable structures appropriate to the site.

â€PRIORITIZE SOLUTIONS FOR PROBLEM AREAS. One such problem area is across from Welch Spring. Park development has been concentrated on the left bank descending from Cedar Grove to Akers Ferry. The sizeable river bottom along the right bank is remote and undeveloped but has been overrun and severely degraded by motor vehicles on a maze of unauthorized, heavily rutted roads and traces. This area should remain undeveloped and its seriously impaired places restored. Damaged areas such as these should not serve as opportunity to add new 'hardened' development where it does not belong. This sizable area should serve as a high quality visual resource for floaters and for other users viewing it from the developed area long established at Welch Spring.

â€ANNUAL VISITATION AND ECONOMIC INFLUENCE. Visitation is about 1.3-1.5 million each year. A 2011 study estimated visitor spending at \$55,445,000, more than 88 percent of which is by non-local visitors. This spending combined with NPS employment accounted for 845 jobs, or 16 percent of total employment in Shannon and Carter counties. We support this high-value investment in the Ozark region of south-central Missouri, understanding that a well-managed park and the visitors it attracts may be the most important contributors to the long-term economic health of local communities.

SUMMARY COMMENTS. Though people will differ in their views of which alternative is best, we believe that the National Park Service has provided a very reasonable range of alternatives in this plan and deserves support for its commitment to dealing with serious problems that have developed over the years. However, the Riverways has seen a 30 percent reduction in staff in the last decade, owing to decreases in funding, and there is no guarantee that funds will be enhanced to the levels anticipated by the plan alternatives. That is one reason for cautioning against the increased development and more intense recreational use in Alternative C that would require more increases in staffing to monitor resources and provide enforcement. We favor maintaining visitation at approximately the current

level while emphasizing improvements that are less staff-intensive and more conducive to family recreation.

Respectfully submitted by the Steering Committee of Friends of Ozark Riverways

**Correspondence:** I believe that the Open Fields Management should still be in effect. This is not addressed in the GMP. It was an agreement that the park had with MDC. I also believe that roads should be maintained with parking areas so that you could get in there to fish and hunt. There needs to be a full staff of maintenance in the winter time so that campgrounds and facilities can be repairs/rehabbed without people using them. I do not agree with the no motor zones. The whole river should be the 60/40 motors and let the river itself limit the boats. People have always fished and gigged in the areas that are labeled no boat zones. It is another way in which the park is trying to take our traditions away. There needs to be electric campsites at Pulltite and many more in the Round spring area, in a better location (in the shade, more level, less concrete).  
I am a 10 year seasonal employee with the park and I see lots of room for improvement. Rumors abound when the park does not communicate well with its employees and local people.  
Park employees with good evaluations should be given preference over new hires for jobs. I know that other parks use local hire authority rather than nation wide announcements. The reason that people want the state parks to take back the river is because they have much better facilities that we do. They are preparing to build a new campground and cabins at the Zoe property. The park should have take the Presley Center for an educational center when MDC offered it to the park. We need a lot more staff in the field, maintenance, le and interp rangers, and fewer jobs at HQ. Headquarters staff has doubled and the field staff shrunk over the years. I see that all the options call for more staff, but is there funding for any improvements? Unkept promises makes the park look bad.

**Correspondence:** I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- -for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that at normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

Also, many Mountain Bikers throughout the state are members of local organizations that meet to build, maintain, and promote proper use of trails statewide in conjunction with state, local and private land management organizations.

**Correspondence:** I encourage that the Proposed General Management Plan, in any of the three presented alternatives, not restrict the use of ATVs within the Ozark National Scenic Riverways. This mode of transportation enables individuals access to the beauty and wonders of the Riverways. I have enjoyed the Ozarks for many years by this means and have not witnessed abuse of the environment for which this form of recreation should be restricted. The vigor and strength of the Ozark environment along the Current and Jack Fork Rivers overshadow any negative environmental impact of these vehicles. Do not shut off access to God's wonder of the Ozarks by ATVs to citizens who no longer have the physical strength and stamina to enjoy them on their own means.

**Correspondence:** I am pleased that the NPS is considering public comments for the GMP. Though I agree mostly with Alternative C, a few points should be highlighted:

- Inappropriate visitor use should not be tolerated. The park needs more/better law enforcement officers.
- The Park needs a public liaison that will provide transparent information about actions and processes.

- The Park needs to actively engage in more community based organizations and events.
- Concession permits for canoe rentals need to be evenly distributed among a number of contracts and those contracts need to be open for bid more frequently.
- The Park headquarters should be owned by the Park and built in a more natural setting.
- Illegal use of vehicles should be prosecuted the same as if on private property.
- The Park should engage national concessionaires to determine the feasibility of a "grand lodge" and tourist district.
- The Park needs to be renamed "Ozark Highlands National Park" for branding purposes.

**Correspondence:** Definition of Peak Season

I have enjoyed the Ozark National Scenic Riverways for decades during all seasons, and in many ways. To define "peak season" as March 15 through Labor Day does not reflect with any accuracy what actually transpires in terms of use within the riverways. One Park Ranger explained that as early as mid March, floaters begin using the upper Jacks Fork, because that when there is enough water in that section of river to float. I have floated that section of the river, on Saturdays in June. Even at that temperate time of year, the group I float with saw very few other floaters on that section of the river. While I know that people do float there in the spring (I know some who do), to say that use constitutes a "peak" is a stretch of the term.

I now live near the Current River and use it often in the middle of the week and sometimes on weekends through the spring, summer and fall- -occasionally in the winter as well. On most days of the year, use of the Current River and also the Jacks Fork is minimal. To use the term "peak" should be limited to weekends from mid June through mid August, the week of July 4 and Memorial and Labor Day weekends. Spring rains extending into June, flooding and the early start of classes for most Missouri school districts better dictates what is "peak season" in the ONSR than the calendar.

I encourage the National Park Service to not proclaim a "peak season" but rather determine restrictions by projected use bases on bookings of reservations in campgrounds, local motels, and projections by local meteorologists.

**Correspondence Type:** Web Form

**Correspondence:** Dear Bill and Russ:

I hope this correspondence finds you both doing well in the new year. I am submitting this letter as my first comment on the newly released draft General Management Plan (GMP). I trust you will give the same due consideration.

I. Regulation of the Waterway Surface

Public use of a particular waterways surface is generally linked to the ownership of the waterways bed. The determination of bed ownership, and corresponding rights over the waterways surface, involves complicated interplays between navigability for title, the equal footing doctrine, public servitudes, prescriptive easements and the property clause.

Specific to the Ozark National Scenic Riverway (ONSR), if waterway segments are determined navigable for title, the State of Missouri is likely vested with title to the bed by virtue of equal footing. Conversely, if waterway segments are determined non-navigable for title, then the bed is likely vested in the federal government by virtue of title acquisition of adjacent land during ONSRs formation.

In those segments navigable for title, I suggest the federal government regulation of the waterway surface violates sovereignty principles not contemplated under the property clause. Additionally, those segments non-navigable for title, remain subject to those restrictions encumbering title. One such encumbrance is a general servitude in favor of public use of the waterway surface. I suggest restricting this general servitude remains outside of the property clause, or at a minimum, is constrained to only those restrictions which are narrowly tailored to correct  
Page 1 of 7

activity injurious to federal property interest.

As the above relates to the draft GMP, the National Park Service (NPS) makes a base assumption that it has the authority to regulate the entire waterway surface within its geographic boundaries. This assumption is made without discussion as to riparian rights, Missouri's

sovereignty and constitutional constraints of federal jurisdiction. For that reason, I respectfully request that the NPS address the following:

" Identify those waterway segments which are navigable for title;

" In those segments determined navigable for title, please explain NPSs regulatory authority over the waterways surface;

" Identify those areas of the waterways which are non-navigable for title;

" In those segments determined non-navigable for title, please explain NPSs regulatory authority to restrict the general servitude in favor of public access, and;

" Finally, in those segments determined non-navigable for title where regulatory measures are planned, please address the anticipated costs of the public servitudes diminution and future potential takings litigation.

Finally, if after exploring the above comments NPS believes regulatory authority exists, I next ask for specific detailed facts justifying each waterway surface regulatory measure to be implemented. I do not believe the justifications stated in the draft GMP are sufficient to meet the heightened review standard necessitated by the riparian rights in play.

## II. Similar Issues with Land Restrictions.

I further question the propriety of certain road and gravel bar closures due to vested public interests prior to ONSRs ownership. While certain roads, trails, gravel bar crossings and/or gravel bar uses were not in existence prior to ONSR acquisition, several were. This past continuous hostile use predating federal title arguably renders that title subject to the same.

I suggest closures - or regulations restricting use beyond those uses common at title vestiture - of those areas in public use at ONSRs formation will operate as a taking. For that reason, I request that the NPS address the following:

" For those areas subject to closure or restrictions, what efforts were made to evaluate the prior public use and potential prescriptive rights, and;

" Please address the anticipated costs of future takings litigation.

Finally, I again request specific detailed facts justifying each regulatory land measure that restricts these prescriptive interests. I do not believe the justifications stated in the draft GMP are sufficient to meet the heightened review necessitated by the prescriptive rights in play.

## III. Sacrifice of the Recreational Purpose

Recreational use was a material consideration during ONSRs creation. The initial proposal for the establishment of an Ozark National Monument was defeated due to concerns it went too

Page 2 of 7

far in restricting recreational use. Subsequently, a compromise was reached in a proposal to create the Ozark Scenic Riverways.

It the initial report by the Interior and Insular Affairs Committee, the committee noted the geographic location of the riverways lends itself to the creation of a federal recreation area. The committee emphasized the importance of creating Federal recreational areas through establishing the Ozark Scenic Riverways. And, the then secretary of the interior, Stewart L. Udall, wrote in correspondence to the committee that he wanted to make clear that recreation is a purpose of the proposal to create the Ozark Scenic Riverways.

The final bill creating the ONSR reflects this compromise. Specifically the stated purpose of the ONSR follows:

For the purpose of conservation and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States. . .

Finally, in creating the ONSR, the drafters noted the Secretarys authority for conservation and management of natural resources could be utilized only to the extent it furthers ONSRs stated purposes. 16 U.S.C. 460m-5 Again, one such purpose is recreation.

The congressional intent is clear that recreational use stood on equal footing with the remaining stated purposes. However, this footing has continually eroded since ONSRs formation I request that the NPS address the following:

" Why is recreational use subordinated junior to conservation and preservation?

Examples of this subordination are found in multiple ONSR park policy statements, as follows:

" Provide the widest range and highest quality of recreational activities which are consistent with the purpose of the Riverways and which can be accommodated without undue impact. 1989 River Use Management Plan (emphasis added).

" Conditioning recreational use to only those [opportunities] consistent with the preservation of the park units resources. GMP October 2013 draft, pg. 12

" If a conflict occurs between visitor use and protection of resources, the intent of Congress is to favor resource protection. GMP October 2013 draft, pg. 18.

" In making these policy statements, what consideration was given of 16 U.S.C. 1a-1 directive that requires authority to be exercised so as to prevent degradation of the values and purposes [e.g. recreational use] for which a park has been created. As to the specific proposed regulation of recreational uses, I ask you to address the following:

Page 3 of 7

" What are the overriding governmental interest supporting the following restrictions/eliminations of recreational use:

" banning vehicular traffic on non-designated gravelbars;

" banning motorized watercraft on the Riverways through permanent and seasonal closures;

" implementing caps for the number of users undertaking certain recreational activities, e.g. watercraft, camper camping, etc. . . ;

" closing 55 miles of vehicular road and trails;

" closing approximately 20 unidentified river access points;

" closing 65 miles of equestrian trails;

" implementing a permit system for equestrian users;

" developing potential permit systems for watercraft users, and

" imposing new horsepower restrictions below Big Springs.

" What alternatives were considered by the ONSR for protecting these interests, and why were these alternatives not chosen?

" Are there any more narrowly tailored alternatives for protecting these interests, and if so, why were these alternatives not chosen?

" How do these restrictions further ONSRs recreational purpose?

" How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S.C. 1a-1?

#### IV. Waterway Restrictions

The draft GMP proposes three waterway zones: mixed use, seasonal mixed use and nonmotorized.

The later two zones limit motorized watercraft use only. I ask for the NPS to comment on the following:

" What are the overriding governmental interests necessitating motorized watercraft elimination in certain areas of the waterways?

" If that interest was to create differing user experiences?

" What considerations, if any, were given to the river levels seasonal fluctuations preventing motorized watercraft?

" What considerations, if any, were given to differing volumes of motorized watercraft during seasonal weather changes?

" If seasonal weather and river level fluctuations were considered, why were they determined insufficient to adequately create differing user experiences?

" How does eliminating motorized watercraft further ONSRs recreational purpose?

" How does eliminating motorized watercraft degrade the recreational purpose, and is such degradation permissible under 16 U.S.C. 1a-1?

" Is the elimination of motorized watercraft in violation of the general servitude in favor of public use? If so, what are the anticipated takings cost.

" Is the elimination of motorized watercraft in violation of prescriptive rights predating ONSRs title? If so, what are the anticipated takings cost.  
I suggest eliminating motorized watercraft is unnecessary, overbroad, and outside of regulatory authority. The NPS should shift its focus to provide users information concerning the best  
Page 4 of 7

times and locations to obtain their desired experience.

#### V. Land Based Restrictions

The draft GMP land based management zones are separated into four categories: Developed, Resource-based recreation; Natural, and; Primitive. I ask for the NPS to address the following:

" What are the overriding governmental interests that supports 72% ntural land zoning?

" How is that interest furthered through limiting recreation to only those lowimpact uses where evidence of human use would be limited

" How does this zoning concept further ONSRs recreational purpose?

" How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S.C. 1a-1?

" What are the overriding governmental interests that supports 16.4% pimitive land zoning?

" How does this zoning concept further ONSRs recreational purpose?

" How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S.C. 1a-1?

If zoning is utilized, I suggest the zone consistent with all stated purposes is Resources-based recreation. With modifications to allow amenities which are minimally detractive from aesthetic values, the Resource-based recreation concept can properly balance recreational use with conservation and resource preservation. Has this been considered by the NPS? If so, and if a determination was made that conservation and resource preservation could not be accommodated within Resource-based recreation zones, please provide the reasons said conclusion was reached.

#### VI Visitor Use Management

To address perceived congestion, the draft GMP implements Visitor Experience Indicators and Standards. The NPS states these standards are an attempt to limit excessive users, or disruptive uses, inconsistent with the desired river zone. As it relates to the standards, I ask the NPS to address the following:

" Why are the watercraft caps based on historic watercraft users instead of capacity?

" What reasons support your decision to exclude tubes from the definition of watercraft?

" The 6 camper restriction is ambiguous. Please provide clarification as to its intended meaning?

" In implementing designated gravel bar campsites, did the NPS conduct studies to compare congestion on holiday vs. non-holiday weekends?

" If congestion is not present on non-holiday weekends, did the NPS consider more narrowly tailored management approaches to correct the specific holiday congestion in lieu of a blanket management strategy?

" If a narrowly tailored solution was considered, please advise what solutions were considered, and why the same were rejected.

" Please explain why the disorderly conduct standard is not river segment specific.

Page 5 of 7

As the same relates to corrective measures, I ask the NPS to address the following:

" Did the NPS consider that the stated corrective measures may prevent future management discretion to consider changing uses and recreational technology?

" If disruptive behavior problems occur in specific river segments, does the NPS intend to implement corrective measures throughout the entire riverways, even non-problem areas?

" Please explain the logic of requiring quieter boats as a corrective measure for excessive watercraft users.

" This corrective measure has nothing to do with overcrowding, the stated purpose for implementing the standards.

" Please provide greater detail to the potential water craft permit system

While regulating by numbers is logical to counter congestion, it is illogical to regulate disruptive uses. In so far as the visitor standards purpose is to regulate disruptive uses, planning by numbers should be abandoned. Rather the NPS should implement a management strategy that squarely addresses the perceived problem.

#### VII Primary Objective and Favored Use

The preferred alternatives seeks to convert the vast majority of the park to a natural area where evidence of human use is minimal. Similarly, the favored user experience is the ability to observe native wildlife, explore a cave, or ponder the size of a spring flow in solitude.

While the concept of a natural area may be desired by some, others favor recreation based improvements and amenities. Additionally, while pondering the size of a spring flow in solitude is an important user experience, equally important are those social experiences realized between friends and family.

No one use should predominate to the exclusion of another use, and policy formulated to accomplish the same is unnecessary. Seasonal river conditions provide both experiences. Social recreational uses predominately occur on summer weekends, the avid spring ponderers will find solitude during the week, winter, spring and fall.

#### VIII. Horsepower Restrictions

I commend the NPS for recognizing the need for larger horsepower motors to safely navigate jon boats with family sized loads. At present, the 60/40hp motors minimally accommodate the same.

That stated, why are horsepower restrictions necessary? If the intended purpose is to reduce excessive speeds, why not implement speed limits? If the intended purpose is to control wake, why not implement wake restrictions or boat weight restrictions?

Whatever the claimed justifications for limiting horsepower, I ask the NPS to consider if an alternative narrowly tailored regulatory measure exists to accomplish the desire objective.

Page 6 of 7

#### IX. Closure

I appreciate your time in reviewing over and considering my first comment. I anticipate submitting additional comments as time permits.

As always, if I can be of any assistance in the process moving forward, I welcome the same.

**Correspondence Type:** Web Form

**Correspondence:** Motorboat Use

The Current River is a navigable by motor powered boats. People who invest in these boats are careful in protecting their investments. They are alert, aware of their surroundings and enjoy the recreation their boats allow them. They also are respectful of others who enjoy the rivers through other means. However, I have witnessed boater being treated rudely verbally and been given obscene gestures by non-boating people.

Boaters don't hesitate to come to the rescue of floaters in dangerous situations, floaters who are in situations that put their lives at risk and floaters who are experiencing medical emergencies. Boaters pick up trash and other debris when canoes or other floats are turned over. Boater help collect return supplies to floaters and help them get back on track with their form of enjoying the river. Boaters take panicked floaters who find that the river is not for them back to their camps, motels or cars. Boaters clean up gravel bars after other floaters leave their trash. Boaters pick up trash in the river that has been released by other floaters. Boaters love, respect and take care of the rivers. Why do boaters do all these things for strangers? That is what decent people do.

Also, law enforcement officers for the National Park Service are rarely around to do these things. They are on stakeouts, watching from a distance where they are not visible to the floaters. This lack of visibility of law enforcement tends to lower the moral and sensible behaviors of people who are drinking alcohol and are in a situation that has often been deadly. When I asked high school students if they behaved the same when the teacher was out of the room as they do when the teacher is in the room, they said no- -there is a difference in behavior when supervision is present and in plain sight. Law enforcement officers for the National Park Service need to be in their boats, floating with the people- -not hiding.

Most boaters do not want to be in the way of floaters, and they don't want to give up access to the areas of the river that other floaters don't use. Most boaters go to a section of the river with their families and stay there until floating

traffic passes through. Many boaters choose to use the river south of Van Buren, where floating in other means is less popular or desired.

If floaters in canoes, rafts or tubs are concerned about boater behaviors, perhaps having a visible law enforcement presence on the river would ease their fears or concerns. Perhaps the few boaters who are rude would be more incline to slow down, idle through floaters and ease the fears of those who are afraid of the river if a stronger law enforcement presence were visible.

Don't change the horsepower regulations for boaters- -more horsepower has been a factor that has saved lives. Don't change where the boaters can go- -they save people, clean up the river and take care of the river environment. If boater behavior is bad, perhaps law enforcement should be visible.

I understand that some believe that motorboats have a negative effect on the river. If you compare the river where tubes and canoes are heavy float areas with the segments where mainly boats travel, you will see that the banks with less tube and canoe use are lush, fishing is vibrant and natural animal life is abundant. The impact of boats on the river ecology is nothing compared to the floods that the river sustains.

**Correspondence Type:** Web Form

**Correspondence:** I am strongly opposed to alternatives A, B, and C, because all the proposals call for an increased restrictions on motor boat uses that would severely handicap gigging and trapping on these rivers. I'm also against them because A, B, and C has plans to eliminate several miles of roads, trails and access to the river ways. This would only be a handicap to the local people for recreation.

I would also like to comment on the Wilderness Area Designation. Dent County has plenty of wilderness areas set aside without setting aside any more. To develop this area just so a few city people can get away from the crowds, would be a slap in the face to the local people that live and rely on this area.

To sum it all up I would like to say that it's obvious that the park service has totally ignored local input and as far as the alternates A, B, or C, I think that the no action alternate is what needs to stay in place.

When I and fellow commissioners talked to Bill Black, he said that the alternate they picked could be tweaked. My feelings on this, let's don't pick an alternative until we have it tweaked to what it needs to say.

We need rules and regulations however when you're not enforcing what's already in place what good do new regulations do.

Sincerely,

Gary Larson

**Correspondence Type:** Web Form

**Correspondence:** I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan, and urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways. I urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options- -for instance, equestrian trails.

I feel that the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that at normally available at similar state and national parks across the nation. I am from Northwest Arkansas, and we often would travel to Devil's Den State Park to ride. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

Thanks,

Chris Oxford

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP)

Dear Superintendent Black:

My dad introduced me to the rivers and natural areas of the Ozark National Scenic Riverways when I was a kid, and our family used to visit the Jack's Fork and Current River to canoe, kayak, hike, and camp frequently. Now, as an adult, these outdoor activities are a passion of mine, and fuel my concern for the area where my appreciation and respect for natural spaces began.

The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. Preservation and conservation must come first to ensure that recreation opportunities in the future occur in the same beautiful environment that we enjoy today. The National Park System has a responsibility to maintain the Ozark Riverways in their original state and protect them from harm. Under the current management plan, those objectives are unmet. Unregulated trails and roads have created erosion and other damages to the surrounding environment. Heavy equestrian activity, motorized boating, and overcrowding have led to contamination and declining water quality to the point that rivers are sometimes unsafe for recreation.

In addition, powerboats and vehicle access create noise pollution that affects the recreation experience for others. Some of these activities have even created safety concerns. Powerboaters often behave recklessly and endanger non-motorized boaters. Large, rowdy crowds around gravel bars and in the parks have made me feel unsafe at times. The Riverways belong to the public. Behavior by some should not be allowed to negatively affect the safety or recreation experience of others.

For these reasons, I prefer plan A as outlined in the Draft General Management Plan Environmental Impact Statement. Distribution of resources in the General Management Plan must put emphasis on preservation and restoration of the area first, so there is still a beautiful space for recreation now and in the future.

The Ozark Riverways have stakeholders outside of the local population. One source stated that the Jack's Fork and Current River attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. Outside visitors contribute heavily to the Ozark economy and are stakeholders in this issue. These stakeholders have a right to share their opinion and those opinions should be considered alongside the input of the local population in the creation of the new GMP.

Yours truly,

Allison Burke  
Leawood, KS

<b>Correspondence:</b>	Public Comment for Ozark National Scenic Riverways Wilderness Designation				

On January 20, 2014, I traveled to Missouri from Indiana to observe both the area suggested for wilderness designation and the public hearing and comment process. During my visit, I was astonished by how beautiful the proposed wilderness designation area is. Never before had I seen, with my own eyes, water as crystal clear as the water in the Jacks Fork and Current Rivers. As a result of my visit I am submitting this comment, which proposes an adoption of a mixture of Alternatives A and B (hereinafter referred to as Alternative B )

As a resident of Indiana since birth I have lived by either the Ohio River or the White River my entire life. I speak from personal experience when I say I know what happens when rivers are not adequately protected. It is because of the current state of my local rivers, and my desire to visit the Jacks Fork and Current Rivers again, that I am writing this comment.

All Alternatives cover thirty-four topics (not including the concept topic). Of those thirty-four topics, Alternatives A and B propose the same action for fifteen topics. For the remaining topics, Alternative B proposes a mixture of Alternatives A and B. Specific topics addressed in this comment are: (1) zoning, (2) concession floating, (3) hiking trails, (4) horse riding and camping, (5) gravel bar access, (6) primitive camping, (7) visitor services and facilities, (8) interpretation and education, (9) natural resource management, (10) cultural resource management, (11) wilderness, and (12) park operations. Alternative B considers both the local desire to use the wilderness area for recreational purposes as well as the need to minimize human impact on the area. For these reasons, Alternative B consists of:

(1) Zoning:

Alternative B incorporates both Alternative A and Bs land-based zoning:

" Developed: 2.8%

Resource-based recreation: 8.8%

Natural: 61.6%

Primitive: 26.8%

ut includes only Alternative As river-based zoning:

" Mixed-use river: 36%

Seasonal mixed-use river: 13%

Non-motorized river: 51%

This mixture allows visitors to have both the opportunity to float secluded stretches of the river away from the sights and sounds of motorized vessels while still allowing for a manageable mix of land recreational activities. This helps visitors discover both the natural and cultural resource-based opportunities available. I believe this mixture of Alternatives balances the local want for recreational activities while minimizing damage to the surrounding area. Because Alternative B wholly adopts Alternative As river-based zoning, Alternative B also adopts Alternative As regulation prohibiting the use of motor vehicles rated higher than 40 horsepower.

(2) Concession Floating:

Alternative B wholly adopts Alternative As Concession Floating in that total designated access points would decrease.

(3) Hiking Trails:

Alternative B adopts Alternative Bs proposal providing 10 miles of primitive zone hiking trails as well as developing access to some discovery sites.

(4) Horse Riding and Camping:

Because the impact of horse riding and camping has proved to be particularly detrimental to the riverways, Alternative B adopts Alternative As approach to horse riding and camping.

(5) With regard to gravel bar access, (6) primitive camping, and (7) visitor services and facilities, vehicular access to ALL gravel bars would be eliminated, roads to primitive campsites would be removed, and all illegally developed trails would be closed.

Alternative B mostly adopts Alternative Bs approach to (8) interpretation and education, (9) natural resource management, and (10) cultural resource management. This approach not only enhances visitor awareness of cultural connections to the area but also allows for greater management of the area to protect and preserve archeological resources, historical structures, and cultural landscapes. This approach also reinstates the oral history program as well as enhances the archives collection program. Such a hands on approach from management would not only help keep a close eye on the area but also strive to educate more people on the unique history of the surrounding area.

Lastly, Alternative B , like Alternative B, designates 3,430 acres of wilderness (topic 11), but adopts Alternative As approach to park operations (topic 12). This way, the largest amount of acres would be designated, but three multi-operational facilities for the enhanced management districts, along with four new housing duplex units (for additional need for seasonal or term staff) would also be constructed.

Alternative B utilizes the best parts of Alternative A and B in that it protects the riverways to the highest degree while allowing for the most managed and protected access to the land. This encourages people to enjoy the space while also providing more educational and management opportunities to ensure that peoples interactions remain low impact. It is for this reason that I encourage the National Park Service to adopt Alternative B

Very respectfully,  
Hannah Belleau

<b>Correspondence:</b>	Hello,				

As a frequent user of the Ozark national scenic riverways, I am personally in line with Alternative A, however, that is probably the least unreasonable to the folks already established in the area, so I am in full support of Alternative Plan B and wish the NPS the best of luck in getting this alternative plan implemented. Thank you for your time.

**Correspondence:** To NPS;

I am in favor of Alternative A of the Management Plan for The Ozark Waterways. The Current and Jack's Fork rivers are national treasures. They are one of a kind natural wonders that need to be preserved for now and the future. These rivers need to be kept in their natural and pristine conditions. This is not now happening. Overuse by horse, four wheel drive vehicles, and motorized boats are wrecking the fragile ecosystem. To insure the area ecology is not further degraded these uses need to be curtailed. Alternative A is way to keep the Ozark National Scenic Waterways in the natural condition that was intended when it was first established. Thanks for considering my views.

Steven King

**Correspondence:** I was very disappointed in the fact that all of the meetings you had, nobody was allowed to speak, except for the St. Louis meeting. It's pretty clear your concerns for the local people aren't that great.

I don't feel there is any need for the new regulations, you just need to enforce those already in place.

My family and I run out-board jets on the Current River every weekend and last year I didn't see any park service officials enforcing what is already in place.

I grew up on the upper Current River camping every weekend. It would be a shame to not be able to use the lower part of the river anymore. To put more restrictions would be a handicap for our family.

To sum it all up, I support the no-action plan.

Sincerely,

Jacob Sanders

**Received:** Feb,07,2014 13:54:13

**Correspondence Type:** Web Form

**Correspondence:** Thirty-five years ago I was offered a position as a biologist in Missouri. The first thing I did after landing in St. Louis on my job interview was to drive to the Current River. Once I was convinced that it was as wonderful as I had been told, everything else fell into place. I have since been blessed with the responsibility of studying the ecology of this unique ecological treasure. Since my arrival I have had the pleasure of spending considerable time as a scientist, an angler, and as a father, on family camping trips on the Jacks Fork and Current rivers. It is certainly a jewel, the most unique and beautiful river area in Missouri. Unfortunately, it is the only one left in Missouri. It is also a national treasure. Whether appreciated or not, the Riverways belong to all Americans, and the National Park Service has the responsibility of protecting its basic natural features.

Opinions differ greatly on the present condition and future use of the Riverways. However the conclusions from reputable scientists are consistent. All long-term scientific studies conclude the Riverways are in trouble from numerous causes. Stream habitat destruction and water quality degradation lead the list of problems. The proposed management plan actively addresses these problems. Either Plan A or Plan B will address the situation of unauthorized access (increasing runoff and erosion) and unbridled horse access, limiting water quality problems. The NPS needs the support of all Missouri citizens, including those local citizens, who can see the long-term benefits of a pristine Ozark National Scenic Riverways - for our economy as well as our grandchildren.

**Received:** Feb,07,2014 13:55:52

**Correspondence Type:** Web Form

**Correspondence:** Dear National Park Service,

I would like to submit the following comments in the hope that they will help you in your decision making process for the Ozark National Scenic Riverways. I am submitting these comments as a citizen and a life-long resident of Missouri. I am also the Clean Water Program Director at the Missouri Coalition for the Environment and we will be submitting organizational comments as well.

I have spent many of my best days on Ozark Rivers and streams. I feel very blessed to live in an area that offers so many lovely waters for floating and dramatic natural landscapes for outdoor enjoyment. The rivers of Missouri are incredibly valuable, and will only become more so in the coming years which will be fraught with water shortages and extreme drought in many many parts of the country. We are one of the few places in the country with a serious clean water factory in the form of the Ozarks. This is why I think that the NPS should extend the scope of planning further out into the watershed and the groundwater source zones for the Current River. The park service has the opportunity to create a stewardship economy and build community relationships by bringing together watershed stakeholders and all of the public and private conservation interests in the watershed. There needs to be a concerted effort to restore watershed function holistically, especially in terms of the forests, which must be protected and increased to continue to restore and preserve the health of the Current River. Bringing together stakeholders to have a bigger discussion about watershed based goals is the key to protecting the ONSR. Anyone can see that there is great potential to increase the economic utilization of the natural beauty and quality of the area by investing in the natural beauty and quality of the area. I believe that the NPS is well situated to host good watershed discussions and a coalition of partners could commit to certain stewardship principles and set some goals to make the area even better. With the National Forests, Pioneer Forest, MDC, MDNR, and many others invested in serious conservation in the watershed, it seems like there ought to be a watershed plan to guide an overall strategy and find a path forward that will make sure this resource is truly protected as a river system and not falsely protected by a simple and arbitrary park boundary.

I believe in fostering native ecosystems wherever possible, so I am opposed to the introduction of non-native species, especially when they may be responsible for significant impacts to native species that are threatened or endangered. I understand that both elk and trout have been introduced to the watershed, and that in both cases there may be serious repercussions to the native ecosystem and overall river health. The Current River is a smallmouth river, trout are not native to this ecosystem and the impact they may be having on species such as the Hellbender may not be understood well enough to justify the risk of having them stocked in the Current River. The NPS should protect endangered species by asking the Missouri Department of Conservation to stop this practice until they can prove conclusively that the trout are not a threat to the Hellbenders. According to the 2012 Fish and Wildlife Service's April 2012 Recovery Outline for the Ozark Hellbender this must be done to protect this species.

When it comes to Elk, and Horses for that matter, I am not inherently opposed to having non-native large mammals in the watershed, but their impacts must be monitored, moderated and mitigated. I do not think it is good for the watershed to convert any forested landscape to a non-native grassland/grazing area to foster a non-native species. Furthermore this should never happen in a sensitive riparian zone or alluvial floodplain, at least not if we want to protect and preserve the river. I believe that the gravel mining in the river, which is known to be very detrimental to the ecosystem, is being fostered by inappropriate land management. These land mismanagement practices are in turn leading to erosion, as is almost always the case, and this is a cycle that must be broken to protect the river.

Horse trails and usage should follow a long-term strategy for sustainable equestrian recreation in the ONSR, this should be developed in partnership with local and regional stakeholders and conservation interests. There should also be an effort to clean up the horse waste at least below the bankfull height of the river, at least within the park, if not more broadly throughout the watershed. If there were a small horse fee, plus some sort of federal contribution, it is easy to see the potential for creating a few seasonal jobs cleaning up the waste and potentially using the composted waste as a beneficial soil amendment in areas that have lost all topsoil from historic (or recent) logging and land mismanagement. This seems like a win-win-win and I cant understand why it hasnt happened yet? I have experienced the Jacks Fork during and after a big weekend of trail riding, and I was absolutely disgusted by the amount of horse waste on literally all of the gravel bars. We had lunch late in the afternoon, we had continued down the river for miles looking for a clean spot to eat, finally we gave up and tried to cope with the flies and the smell. I couldnt help but be grossed out by the thought that the fly that had just landed on my sandwich, was only a moment before standing and gorging himself on horse shit. This is totally unacceptable on any river, and I would gladly chip in to help clean up the mess, even though I am not responsible for any of it. This was the worst recreational experience I have ever had on any river and I dont understand how it got so far out of hand, and I am unclear on

what the park service has done to mitigate this. Needless to say, I don't visit the Jacks Fork much since that experience, and I don't go to the Current on or after big weekends. I would imagine that the horse riders might be willing to pitch in, the folks in canoes would probably be willing to kick in a little bit to protect their experience, and I'm sure there are some folks from the area who would welcome a job opportunity working to protect water quality in the river. But the size of the trail rides needs to be limited and some kind of strategy to avoid this disgusting situation through planning is in order.

I feel like boat motor horsepower limitations on the river have come in direct conflict with the whole 60/40 jet boat crowd in way that has already caused, and will continue to cause great rifts between the local community and the National Park Service. There is an entire branch of the local economy based on this activity, and the park service has neither enforced the existing horsepower limitations nor changed the law to allow these boats. This must be resolved, and unless there is a strong connection to ecosystem degradation, I would say that the boats should be allowed with specific regulations on boater stewardship of the resource and geared toward avoiding conflicts with other activities. In the end the community is a big part of the watershed, and with good relationships the NPS could truly protect the Current River. By allowing issues that may not be that important in the big picture come between the NPS and the community, we miss out on the opportunity to cooperate towards a better, more sustainable river overall.

Illegal access points and roads in the park connecting to the river should be evaluated based on impacts to the riparian zone, then these impacts should be published so that everyone can see and discuss why specific access points are problematic. Projects should be undertaken to restore the impact areas and there should be a discussion about alternate access for local residents looking to avoid the crowds that flood the park during peak season. I think it would be a good practice to focus on the stretches of road closest to the river or cutting across tributary flows, and focus on getting these roads in sensitive areas removed. More important than these access points, is the occurrence of roads crossing tributaries in the park and the watershed. Low-water crossings and other types of road crossings can be very detrimental to the migration of species up and downstream, cutting off some species from key reproductive zones. There should be a concerted effort to analyze these impacts and work with partners to defragment the watershed ecosystem.

There needs to be a better way to manage canoes, tubes, and kayaks on the river. If there are quotas in place, it is hard to tell. Just as much as tons of horses can ruin a day on the river, so can the massive numbers of floaters. Floaters may also be a significant source of bacteria in the river, and the rowdy drunken behavior is something that should not be allowed. I would like to see the park service put more effort into reigning in the concessioners gone wild, and develop new quotas to account for all of the floatation devices being deployed on the river.

I have witnessed a surprisingly aggressive effort to catch people using marijuana on or around the river and I think this is a HUGE WASTE OF TIME AND TAXPAYER DOLLARS. I do not support my tax dollars going to enforce laws that are barbaric, ruin lives, and restrict personal choice when it has no effect on others. On the same day that I couldn't find a gravel bar to have lunch on, I saw an officer hiding in the bushes of a bend in the river, just waiting to catch someone smoking pot. This was a perfect example to me of why people generally do not trust the government - obvious problems are ignored, while non-issues see excessive enforcement. The NPS needs to get its priorities straight and focus on managing the use of the river and improving the resource, not throwing people innocent of harming others or the resource, in jail. Hopefully these laws will be changed soon anyways, and the NPS won't be obligated to enforce them. But the NPS is obligated to enforce a lot of laws that apparently aren't, so I have a hard time understanding why there seems to be such a priority on catching people smoking pot. With such limited resources and so many real issues in the park, it seems like there would be a lot of ways that same allocation of park management resources could go towards dealing with real issues not hurting tax paying citizens.

I don't understand which version of the gravel bar camping is the final version, but I don't think there should be limitations for those approaching by boat, canoe, kayak or raft. I can see how vehicular access should be limited, I have had the experience of people showing up on a gravel bar I was camping on, late at night with lots of lights and trucks and ORVs. It was not a great experience and I think that it makes sense to limit this user conflict by designating certain gravel bars as vehicle friendly and putting a sign so canoe campers can know where to avoid. Trying to completely ban access seems like another rule that will be nearly impossible to enforce, so it won't be.

In general the plan published by the NPS is very long, and appears to largely be a sort of current version of some

kind of boiler plate document. It is mostly unreadable, it doesn't do a good job of summarizing the information, and much of it seems like government fluff than actual salient information on the river and the justification on the decisions being made. I have noted numerous errors in the plan, both big and small and I have to wonder if it was reviewed by the NPS or other agencies like the USFWS, before it was released. The most glaring error I found was that the Ozark Hellbender is not listed as an endangered species. This is an astounding failure to document one of the most important reasons to improve management of the park. The plan largely ignores the rest of the watershed and it seems like much of the plan may have been written by someone hundreds of miles away in Denver. I don't know if all park national park plans look this muddled and are so fraught with errors, but there needs to be a very intensive review, and re-release of this document. There needs to be about 150 less pages and 150% more information on the actual watershed.

Thank you for your time,

Lorin Crandall

**Correspondence:** I am pleased with the attention and consideration given to mountain biking within the General Management Plan, and urge you to give increased emphasis to this subject in your future plans. I am opposed to the no-action option, which will continue to ban mountain biking on all trails within the Ozark National Scenic Riverways. Instead, I urge you to permit mountain biking on trails within the Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed cross-country mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed. The environmental impact of mountain biking is often far lower than that of other trail use options, such as, for instance, equestrian use.

I strongly feel that the current situation, with mountain biking prohibited on all existing trails and bicycling on area roads discouraged by the Scenic Riverways web page, does not allow visitors the full range of recreation options that are normally available at similar state and national parks across the nation. Allowing mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri and the Midwest region has a large and active mountain biking population that will certainly use and appreciate these trails and access to this beautiful area, if it is provided. I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

In addition, I would like to emphasize the positive economic impact that mountain biking oriented tourism would bring to the Scenic Riverways area, while making negligible environmental impacts, if any. For example, this study published in the Journal of Leisure Research applied the travel cost method to a popular mountain biking destination:

<http://trove.nla.gov.au/work/56688066?q&versionId=69670962>

Other economic studies have found positive benefits to mountain biking, and cycling in general, which, I again emphasize, has very little environmental impacts:

<http://www.linfield.edu/linfield-news/photo-gallery-2/mountain-biking-events/comment-page-1/>

<http://www.dot.state.mn.us/research/TRS/2013/TRS1309.pdf>

These economic benefit will accrue to the surrounding communities and increase visits to the Scenic Riverways if mountain biking access is permitted to trails where appropriate. Missouri and the Midwest region has active volunteer groups involved in trail building and maintenance, such as Gateway Off-Road Cyclists and the Ozark Trail Association in the Saint Louis area. It is likely that much of the trail building and maintenance in the Scenic Riverways would be undertaken by volunteers in cooperation with the NPS and other stakeholders. I urge you to devote some attention and consideration to the Missouri mountain biking community in addition to other trail users when making decisions regarding this and other National Park Service lands.

**Correspondence:** I'm writing as a teacher who has led service trips, adventure canoe trips and other school programs in the ONSR for nearly 25 years. I also own land that has been in our family for over forty years with extensive frontage on the Meramec River in Crawford County. I am familiar with the devastating effects of excessive traffic on the rivers. As someone who could once lead trips to the ONSR without fear of ATV traffic roaring through our campsite or of reckless motor boat traffic, I can testify to sad decline of this treasured place.

I attended the forum at Powder Mill Valley. At the forum, I was accosted by jet boaters who made the preposterous claim that jet boats were necessary to provide safety on the rivers. Given my experience on the Meramec River, I would say that jet boaters pose, if anything, a significant risk to our safety. In any case, as a guide and ACA certified whitewater instructor who routinely provides rescue on rivers, I would say that a competent paddler can reach anyone who needs assistance on these rivers. I encourage you to perceive the claims made by the jet boaters as a disingenuous attempt to cast a selfish recreation as a public service.

I subsequently spoke at the forum at Powder Mill Valley and had a letter published in the St. Louis Post-Dispatch, Wednesday, January 29, 2014. I wrote the following:

"When I spoke to opponents of the management proposals for the Ozark National Scenic Riverways at Powder Valley, they objected in principle to the federal government managing property in their backyard and to any limitations imposed on their access to the river. They did not mention all those elements of federal assistance that they apparently accept freely: interstate highways, national security, rural electrification, just to name a few. And while we all stood to acknowledge those who defended our country in the armed services, there was no consideration given to what we are defending when we defend our country. I imagine we would all include the treasures of our landscape and the rule of law as two items in the list of things worth defending. We routinely impose limits on access in order to protect common areas: no one is proposing elevators and paved paths for wheelchair access to the Grand Canyon for the simple reason that these measures to provide access for all would actually deface the qualities that make the Grand Canyon magnificent in the first place. What makes our country worth defending is that we recognize the value of protecting places like the Ozark National Scenic Riverways from practices that may degrade them, just as we recognize the importance of providing electricity to those who cannot afford to create their own grid. The funds and the policies for both come from a collective greater than one community. This is how government works, and it may cost something."

I ask that you please endorse alternative A for managing the Current and Jacks Fork Rivers. We have precious few rivers that are free of motorized traffic. As I wrote in my letter to the St. Louis Post-Dispatch, we need our government to protect our natural resources from the degrading effects of excessive traffic and pollution; if we leave management decisions to the whims and excesses of individual appetites, those appetites will destroy what made the ONSR appealing in the first place.

Here's a story you'll never hear from those who celebrate local management:

Before Leo Drey created the LAD Foundation, he was the largest landowner in the area. He began purchasing property in the 50's for as little as \$4 per acre; legend has it he never spent more than \$25 per acre. By the time he finished purchasing land, he owned over 100 square miles, naming it the Pioneer Forest. The story of the foreclosures and so on that enabled this purchase is complicated, but no one will debate the following facts: the land was clear cut in the early part of the century, by the 30's there was no game as a consequence of unregulated hunting, and by the 50's, ten years before the designation of the park, Leo could buy land for a song because what was left was overgrazed by free ranging hogs, cattle and horses. By mid-century, as a consequence of local and corporate management, the land was rendered worthless to all but those sentimentally attached to it and a patient logger with deep pockets.

Opponents of state or federal management might point to the River Des Peres as an example of what happens when city folk control resources, and they'd be right. The difference is we learned something about water management since we paved the River Des Peres, and we still have time to apply what we've learned to the management of the ONSR.

Sincerely,

Michael Dee

**Correspondence:** I want to keep access to the Current and Jacks Fork Rivers open to all Americans as it is now. Of course I want to protect the water quality. I am unaware of any research which indicates that has deteriorated. I want the gravel bars to be open to camping and picnicking as it always has been. The property owners along the rivers should be allowed to have access to the river and allowed to farm, log and raise animals as they always have. Trail rides should be allowed as well as canoeing. The use of motorized boats should not be further restricted. The use of motorized vehicles should not be restricted. The use of beaches and sandbars for baptisms should not be outlawed. Hunting and fishing should not be restricted. Landowners should be allowed have camp grounds and motels and B and B's. Residents of this isolated and lovely region should be allowed to have access to the rivers to make a living and hold cultural and religious events as they always have. In my opinion the bait of Federal money is being used in an attempt to grab this regional park and transform it into a National Park and eventually run it as Yellowstone National Park is run. PLEASE DON'T DO THIS. DO NOT IMPLIMENT ANY OF THESE PLANS!

Comments on the Draft General Management Plan / Environmental Impact Statement

Submitted by Bruce A. Cox, P.O. Box 475, Eminence, MO 65466

Thank you for the the opportunity to comment on the Draft General Management Plan for the Ozark National Scenic Riverways (ONSR). My wife and I live on a farm in the Eminence area with frontage on the Jacks Fork River. We love the beauty of Ozarks and know there is nowhere else we would rather live.

I enjoy floating / canoeing the rivers of the ONSR, camping on gravel bars when I go on overnight floats, riding ATVs and horseback riding which sometimes include riding in the ONSR. A wake of environmental destruction has not followed in the path of these activities. Needless to say, Alternative B will negatively impact the activities many have historically enjoyed in the ONSR.

About 5 years ago, when public comments were sought on the first draft of the ONSR General Management Plan, about 3,000 local residents formally commented. Most of the comments, including my own advocated the No-Action Alternative as their preferred option. It was very disappointing that this voice was not heard as the National Park Service's (NPS's) selected Alternative B as the preferred option. Is it possible that local residents are not considered important stakeholders by the NPS?

#### Negative Impacts of Alternative B

I am opposed to an ONSR management plan that would negatively impact local heritage and culture. It is my concern that Alternative B will do just that. Closing river accesses, designating only certain gravel bars for camping, no use of ATVs in the ONSR, and horseback riding only on designated trails are a few of the restrictions in Alternative B that would negatively impact local heritage.

I am also opposed to a management plan that has great potential to harm the local economies of counties bordering the ONSR. The economic impact analysis presented in Draft General Management Plan failed to analyze the potential economic impacts to local economies for the management alternatives considered. This should be done before final actions are taken. I am particularly concerned for the negative impacts to horse trail ride businesses (Cross Country Trail Ride [CCTR], Big Creek Trail Ride, etc.). Horse trail riding businesses bring in considerable commerce and revenues to counties where they are located. It is no secrete that many counties bordering the ONSR are poor and can ill-afford actions by NPS which would further harm their already fragile economies.

<b>Correspondence:</b>	Mr. Bill Black,				

There is no place on this physical earth that I love more than the hills, hollers, and waters within the Ozark National Scenic Riverways (OSNR). It was where I was raised, where I recreate, and where I will always call home. The vast majority of my fondest memories come from times I've spent within the park. It's where I harvested my first spring gobbler, where I caught my first smallmouth bass, and where I took my first canoe trip. At the age of 12 (or 28 for that matter), I thought heaven was a cabin overlooking the Jacks Fork River with a rope swing and a swimming hole below. I do not believe that anyone could possibly care more about the Riverways as what I do.

I believe I look at the ONSR from a unique perspective that not many others can. Growing up, my father was a ranger with the ONSR for over 30 years. That experience gave me an understanding of the challenges that the National Park Service (NPS) faces in managing the Riverways. I've also worked many summers for a canoe rental concessionaire on the upper Current River. I have an understanding of the importance these concessionaires are to the local economies, the tourists who frequent the park, and some of the challenges they face trying to operate. Finally, I'm a register Professional Engineer specializing in water resource issues and designs. I have an understanding of the physical processes that govern the geomorphology that drives the current shape of our beloved rivers.

Now the National Park Service (NPS) has gone through a solicitation process to receive comments from the public to develop a General Management Plan (GMP) for the ONSR. After reviewing their draft plan, I feel compelled to say that I do not support any of the alternatives they have proposed as they are currently constructed. While there might be things within each individual alternative that I could support, the way they have been compartmentalized makes little sense to me. Rather than broadly lumping all of the issues that concern the park into three alternatives

the park should have dealt directly with individual issues and mapped out specific paths forward.

I want to begin to address what the issues facing the ONSR that are closest to my heart. I intend to address those issues with the following in mind:

The "Ozark National Scenic Riverways was created through congressional legislation on August 24, 1964 (by Public Law 88-492) to conserve and interpret the scenic, natural, scientific, ecological, and historic values and resources within the National Riverways, and to provide for public outdoor recreational use and enjoyment of those resources."

So much hinges on this statement, but what does it mean? To me it means the following:

The ONSR was created as a recreational area for all the public to enjoy, specifically for water based recreation (as this park was established because of the Current and Jacks Fork Rivers). If any form of recreation begins to harm or impact the resource in an adverse manner, then it should be restricted (or eliminated from) within the park boundaries.

If individuals wish to define the park as something other than this; then the NPS should seek a reauthorization from Congress.

### GEOMORPHOLOGY

I was sorely disappointed to see that the draft GMP did not cover the geomorphology of the Riverways. All that I could find in the document concerning geomorphology is reference to the karst geomorphology that provides the area with so many unique springs. While the karst features are an important aspect of the park and need to be preserved, there is more that should have been covered.

It is impossible for the National Park Service to make educated and informed decisions on what impacts the Riverways, the gravel bars, and the adjacent floodplains without first understanding the geomorphology that drives this system. Historical accounts of the river state that there used to be very few gravel bars within the system and that the channel contained more of a bedrock bottom. I see no evidence that shows the park understands what has caused this change, how it is continuing to change, and how the Riverways should be managed in an environment that is so dynamic. I have my opinions on this; however, they are just opinions. There should be official research done by professional geologists and engineers to study this dynamic process of geomorphology in this region so that they can make informed decisions on how activities (such as canoeing, motor boating, off road vehicle use, etc.) along the river are impacting the resource. If recreational activities are adversely impacting the geomorphologic processes along the Riverways, then the NPS has a legitimate reason to restrict those activities.

### WATER QUALITY

The draft GMP references the importance of water quality for the ONSR. The NPS should strive to have some of the most pristine waters in the nation along the Riverways. Any activities that are detrimental to the water quality within the Riverways should be given a hard look at from the NPS. This area was established as a national park in order to protect the water quality of the rivers and springs located within the park boundaries and the NPS should actively enforce the laws that are already in place to protect this pristine resource.

### WILDLIFE

The ONSR should be strongly concerned about the wildlife that dwells within its boundaries. In the draft GMP there is lots of discussion concerning wildlife, both on the land and in the waters. Going forward, the NPS should promote habitat improvements and restoration of all native species that have historically dwelled in the ONSR. The park should not support the introduction of non-native or invasive species. Any activities that are negatively impacting native wildlife populations should be of great concern to the NPS.

### FLOATING

Without question, canoeing is the chief recreational activity within the ONSR. People flock to the Riverways from all across the nation to float the beautiful Current or Jacks Fork River. I have personally floated the Current River from Baptist camp to Powder Mill and the Jacks Fork River from Bay Creek down to the confluence with the Current. I can't even begin to speculate how many hours I've spent floating down the Riverways in a 17' square-stern canoe.

Some people think that certain sections of the Riverways face many issues from overcrowding of the floaters. From my personal perspective, I think there are times during the summer when the Riverways are "overcrowded" from the canoers, kayakers, rafters, and tubers. I hate to see large crowds of people coming down the river when I choose to spend my precious time down there. However, all people have a right to come recreate on the Riverways. It was preserved for everyone's use. Just because I don't like seeing large crowds of people down there doesn't necessarily mean that those large crowds negatively impact the resource.

Obviously, the more people that are in a natural environment, the more opportunities you have to impact the environment. The park should seek to answer the following questions about this user group:

• How does this user group impact the Riverways?

• At what volume of users does this group begin to impact water quality beyond a safe standard?

• Does this user group negatively impact the geomorphology?

I don't have these specific answers. Sadly, I'm afraid the NPS doesn't either since I could not find them in the GMP. I feel that since this park was designated as a nation recreational area that as many floaters as possible should be allowed to recreate within the boundaries of the park at any given time, until the point where they negatively impact the resource. It's on the park's shoulders to clearly articulate what constitutes a negative impact to the resource from floaters and regulate accordingly.

#### MOTORIZED BOATS

The use of motorized boats within the boundaries of the ONSR is a very popular activity amongst people who live near the Riverways. It is an activity that I enjoy within the park as I specifically love to fish for smallmouth bass out of these vessels. I have many memories involving motorized boats such as gigging my first sucker above the Pulltite Access or trapping with my father below the Welch Spring put-in.

All of the proposed alternatives wish to restrict motorized boats within the boundaries of the ONSR. Specifically, the NPS preferred alternative (Alternative B) seeks to completely eliminate the use of motorized boats on Current River above the Pulltite Access, an area that I enjoy using in a motorized boat. Why does the NPS seek to restrict the use of motorized boats along the Riverways? Is there some sort of evidence or empirical data that shows motorized boats are negatively impacting the resource? With the ONSR being designated as a national recreation area, the park should not seek to restrict activities where there is no evidence that they are impacting the resource. If the park has evidence that motorized boats cause damage to the resource then it should have been specifically and concisely presented in their draft GMP.

The only real justification by the NPS to restrict motorized boats I can find in the draft GMP is the following statement:

The restriction of motorized boats "would help reduce motorboat disturbances to aquatic habitat (such as displaced aquatic vegetation, fish spawning impacts, and petroleum-based water pollution) and motorboat noise disturbance to riparian habitat and wildlife behavior (such as bird nesting and bird communication)."

In all the pages of the draft GMP, I see no data to support this statement made by the NPS. Furthermore, if these are true concerns, how do other Riverways users (canoes, kayakers, hikers, horse riders, etc.) affect them? If the NPS feels so strongly that motorized boats impact the resource in this manner, maybe they should lead the way in not utilizing them for their day-to-day functions within the park. As for myself, I feel that these claims are unfounded and that motorized boats do not impact the environment in a negative manner.

If there is not data that shows motorized boats impact the river, why did the NPS seek to restrict the usage of them? I assume it is because they received comments during the GMP process where individuals voiced opinions opposed to motorized boats within the park. While I don't believe that motorized boats pose any threat to the resource, I feel that boat operators who are impaired by the effects of alcohol pose a threat to the resource and others recreating with it. I would rather suspect that many of these comments come from people who have negative encounters with individuals who are operating motorized boats under the influence of alcohol.

I have personally encountered many individuals operating motorized boats obviously impaired by the effects of

alcohol. This should not be tolerated within the ONSR. These individuals taint the image of all motorized boat users. The NPS has guidelines established in the government's Code of Federal Regulation (CFR) pertaining to the abuse of alcohol while operating a motorized boat within park boundaries (36 CFR - Section 3.10). The NPS should look to enforce the established laws and protect responsible users of motorized boats.

#### RIVER CROSSINGS BY OFF-ROAD & ALL TERRAIN VEHICLES

In my lifetime I believe that I have crossed the upper Current River at every conceivable spot with either a 4-wheel drive truck or an ATV. This is an inappropriate use of the Riverways, and displays great negligence on my part. I believe that these actions negatively impact the resource and should not be allowed within the ONSR. According to the Water Resources Foundation

Report (April 2007 - [http://www.nature.nps.gov/water/planning/foundation\\_reports/Reports/OZARWRFRfinal.pdf](http://www.nature.nps.gov/water/planning/foundation_reports/Reports/OZARWRFRfinal.pdf)) these river crossings within the ONSR are very detrimental to the environment. It states:

"Roads are a great threat to streams because of sediment loading. Heavily used gravel roads can contribute 100 times more sediment than paved or abandoned roads. Dirt and gravel roads within the Ozarks in general are the largest source of sediments to streams, outweighing the combined impacts of pasture erosion, logging, and natural erosion."

I think it is obvious that roads fording the river generate the more impacts than those that are maintained up on the ridges as they provide a direct source for sediment contamination.

Let's look at a specific case on the upper Current River. Many people cross the river at the Flying-W Bluff hole. I frequently hear that this is a "county road." While many people might consider it a "county road" now, I don't think that it has always been considered one. Before the NPS bought the area known as Flying "W," the Weissman family owned and farmed the area. At that point in time, the gravel road that takes you from Highway K down into the area had a gate located on it before you reach the fields that are adjacent to the river. The area was private property and you did not go past the gate without the consent of the Weissman family. Additionally, there would have been a river crossing there below the Flying "W" Bluff before the NPS would have bought the land. This crossing would have been used by the Weissman family to access their neighbors, Carter Riley and family, across the river and vice versa. These families farmed together along the Current River and had a legitimate reason to ford the river in order to help one another. Once the NPS bought these farms, they had the authority and power to control access to this area and the river crossing.

Let's contrast the river crossing at Flying-W to the one at Akers Ferry. Currently there is a ferry boat at Akers that is used to connect Highway K across Current River. Due to insufficient maintenance from the NPS this ferry is often inoperable. As a result people have a legitimate need (and right) to ford the river at this location as it is part of the state highway system. The NPS should seek a solution to have the ferry operated on a more consistent basis (i.e. keeping the area clear of gravel to allow the ferry boat to cross) or some other measures to maintain a balance between traffic needs and environmental concerns.

The only reason that people cross the Current River in off-road vehicles at Flying-W is because of recreation. There is not a legitimate case that would support it as a viable roadway with economic benefit. With evidence that it degrades the environment the NPS should look to enforce laws that are already in place by the State of Missouri. The Missouri Revised Statutes, Chapter 304, Section 304.013 states that:

"No person shall operate an off-road vehicle within any stream or river in this state... All law enforcement officials or peace officers of this state and its political subdivisions or department of conservation agents or department of natural resources park rangers shall enforce the provisions of this subsection within the geographic area of their jurisdiction."

This problem persists due to a lack of leadership within the Park Service's management. They have the authority to make a change without any sort of development of a GMP and choose to do nothing. Past and present managers of the ONSR should be held accountable for not taking action on this front.

#### RIVER ACCESS POINTS

River accesses are an important topic to many individuals. There are many different views on how many access

points there should be along the river and what areas should be access points. In the draft GMP the NPS would seek the following with their preferred alternative (Alternative B):

"Concession dropoff and pickup locations for river users utilizing nonmotorized watercraft would be redistributed to reduce peak-season crowding effects and to protect river resources in response to potential changes in river flow conditions. This would require closure and restoration of about 20 access points and the careful design and opening of 20 new designated access points. Total designated access points would remain constant or decrease."

There are many problems I have with the above statement primarily revolving around its ambiguity. What access points would you look to "decrease" or close? What do you mean by "restoration" of access points? Which 20 access points with the ONSR have been identified for this? Why are you not more specific in your plan and articulate a specific path forward?

It is impossible for individuals to know how you plan to manage the Riverways Access points with the above information. Access points along the Riverways should be built-up to support the recreational needs of the park visitors. By that I do not mean that every access point needs to be paved with concrete or have a boat ramp put in, but they should be accessible and "user-friendly" to the public. It should also be considered that not all floaters wish to do a 15 or 20-mile float trip. Personally, I like to float no more than 3 or 4 miles at a time. For me, floating and fishing go hand-in-hand. I like to spend all day fishing, wading, drifting, and floating a small section of river. If you are looking to have just 20 access points in the whole ONSR then you will be eliminating the vast majority of the short float trips I like to embark on.

Let's look at access points from the perspective of the quality that they should be in. I'll discuss a specific access point, Pulltite Landing. I have spent many Saturday afternoons working at Pulltite Landing loading canoes, kayaks, and rafts for one of the canoe rental concessionaires. That access area is inadequate in size to support the number of watercraft that float into there on a summer afternoon. Due to its small size it is difficult for the various concessionaires to load all the vessels in a non-chaotic manner. If there was a larger access area it would ease the job of the concessionaires and provide a better recreational experience to the visitors of the park.

The NPS could facilitate a larger access gravel bar at that landing. In the 70's and 80's the NPS maintenance staff would pull gravel from the opposite side of the river and bring it over to the existing landing to "build it up." This plan has been abandoned in recent years. Many people feel that any movement of gravel within the river channel negatively impacts the environment. I would contend that in a controlled and limited manner this practice would be a beneficial and cost efficient tool in managing some of the rivers access points without any significant impacts to the environment. The NPS has a responsibility to provide the public with suitable access points on the ONSR and I feel that they are falling short on this matter.

#### HORSES AND TRAIL RIDES

Possibly the second largest user group, behind floaters, in the ONSR are horse riders. Unfortunately due to the expanse of this user group, they have collectively begun to degrade the water quality of the Riverways. The Jacks Fork River between Eminence and its confluence with the Current River has seen the most damage.

The U. S. Geological Survey, in conjunction with the NPS, conducted multiple studies on the Jack River to monitor its water quality. A study completed in 2006 titled the Assessment of Possible Sources of Microbiological Contamination in the Water Column and Streambed Sediment of the Jacks Fork, Ozark National Scenic Riverways, Missouri-Phase III states the following:

"The largest fecal coliform bacteria densities in the water column and streambed sediment generally were detected in samples collected at the three main-stem sites with the most intense cross-country horseback trail-riding activity. Exceedences of the whole-body-contact recreation standard occurred at these sites during trail rides."

"Recreational users (including boaters and swimmers) are not the primary source of fecal coliform bacteria in the Jacks Fork; rather, the presence of fecal coliform bacteria is associated with other animals, of which horses are the primary source. Increases in fecal coliform bacteria densities in the Jacks Fork are associated with cross-country horseback trail-riding events."

What this means is that the NPS has seen clear evidence that a user group is directly impacting the water quality of the Riverways. What has the NPS done in response to this?

Nothing, absolutely nothing...

The NPS has done absolutely nothing to correct this wrong and does not address specific measures in their draft GMP of how they will right this wrong. There is direct evidence that showing fecal coliform levels from horse manure in the Jacks Fork River have been measured at levels unsuitable for humans to be in contact with. Why does the NPS refuse to act on this? You do not have to wait for your GMP to be completed. You could have acted on this in 2006, but you didn't. How is it possible that the management of the Ozark National Scenic Riverways can bat a blind eye towards this outrageous offense? The managers of the NPS have been entrusted to protect the resources here in the ONSR but have chose the convenient path to not make hard decisions and neglect their duties. How long will you let this continue?

The solution is rather simple if you would just seek it out. The reason fecal coliform skyrockets during trail rides is because when riders cross the Riverways with their horses they generally stop them to allow the horse to take a drink and when stopped the horses tend to then defecate in the water. To quickly resolve this issue you could do one of the following:

- (a) Eliminate horses crossings along the Riverways
- (b) Require all horses to wear some sort of bag that collects their fecies

Trail riders are a valid user group within the park and deserve to have a presence in the ONSR, but when their form of recreation degrades the resource to a point that it becomes harmful to others then they should be subject to losing some of their privileges. If the NPS continues to do nothing on this issue; then we will continue to see issues with fecal coliform.

\* \* \* \* \*

Mr. Black, the National Park Service does not need a new General Management Plan to govern the park; the original guidance Congress gave them should still suffice:

"To conserve and interpret the scenic, natural, scientific, ecological, and historic values and resources within the National Riverways, and to provide for public outdoor recreational use and enjoyment of those resources."

I hope that you understand that my critical response to the GMP does not mean I support that the NPS take a "No Action" stance. I think the NPS should take action to preserve this resource. They should develop specific management strategies on how they are going to handle the diverse array of user groups within the boundaries of the ONSR. They shouldn't seek to restrict any who wish to recreate inside the park, unless those users become detrimental to the resource.

I greatly appreciate you taking the time to read through my concerns with the draft General Management Plan and the Riverways as a whole. I would relish an opportunity to further discuss these issues in person or over the phone if you ever felt compelled. My contact information is listed below. You have been entrusted with a great responsibility over the place on this earth that I love above all others and call home. I hope that you live up to that responsibility and do what is right for the Riverways.

Sincerely,

William C. Terry Jr., P.E.

RE: Draft General Management Plan, Ozark National Scenic Riverways

Dear Superintendent Black:

We appreciate this opportunity to comment on the draft General Management Plan for the Ozark Riverways. The L-A-D Foundation owns Pioneer Forest which Leo Drey established in 1951 to demonstrate how to improve forest quality by selecting individual trees for harvest. Much of Pioneer Forest joins the national park, providing a significant and compatible buffer and protecting a large part of the Current River watershed. The foundation also owns nearly 1000 acres of land under NPS scenic easement, including more than 35 miles of riverfront along the Jacks Fork and Current rivers.

The L-A-D Foundation feels that a much improved management plan for ONSR is long overdue, and endorses your Alternative B. Issues of special concern are detailed below. Pioneer Forest LLC is separately organized, and its staff located in Salem is submitting specific comments on your draft General Management Plan as well.

The L-A-D Foundation owns nearly 1000 acres under scenic easement by the National Park Service. These easements, and others on privately-owned land within the park, were acquired with taxpayer money. The intention was to limit further development in order to protect the scenic natural river corridor. The ONSR has only sporadically monitored or enforced these legal protections, and thus has failed to prevent abuse. These easements constitute a public property interest and must be more vigorously and consistently managed.

The 3400-acre backcountry portion of the old Big Spring State Park has been undeveloped ever since it was purchased in the 1920s by the State of Missouri, and then since the 1960s when it was transferred to become part of the ONSR. This wildland resource has been managed for 90 years as a backcountry, providing long-distance hiking opportunities and other outdoor activities. The L-A-D Foundation agrees with citizen conservation and outdoor organizations that this area of the park, along with adjacent lands of the Mark Twain National Forest, should be permanently protected as part of the National Wilderness Preservation System. Such official designation will depend upon an Act of Congress, but the NPS should continue to manage the area as it has, providing a quiet and alternative recreation option for visitors.

Management within wilderness is often misunderstood. One example is the use of prescribed fire to maintain natural communities. In other parks, prescribed fire is successfully conducted without the use of motorized equipment inside wilderness boundaries. Such management for the Big Spring area may be useful to maintain natural landscapes, and we encourage the National Park Service to explore various options for doing so that do not diminish the area's wildland character.

Cultural resources, such as old schools, archaeological sites, buildings, and landscapes should be protected. One natural resource of especially high value is riparian forest. These are greatly diminished in the Ozarks, and opportunities to restore such forests on the Riverways should be taken whenever possible. The park should allow reverting bottomland fields to restore themselves naturally, over time, to riparian forests, rather than reconverting them to open fields or pasture.

The upper Current between Cedar Grove and Akers Ferry is relatively narrow, receives a high level of use, and already includes many points of access. Further development of the Flying W area and a new development directly across from Welch Spring should be placed on hold, in favor of restoring river-based experiences in this section of

the river.

The outstanding resources of the Current River deserve a higher standard of protection, and this plan promises to move the park in that direction. Thank you for the opportunity to comment.

Sincerely,

Greg F. Iffrig, Liaison to the Board  
L-A-D Foundation

**Correspondence:** I am in support of plan A & B. I have been floating the Current and Jacks Fork for 50 years. I hope that we can put a stop to all illegal roads keeping it as wild as iv always rememberd. I also hope whatever plan is placed into action it is better enforced better than the recent manigment program.

Comments on the Draft General Management Plan / Environmental Impact Statement

Submitted by Bruce A. Cox, P.O. Box 475, Eminence, MO 65466

Thank you for the the opportunity to comment on the Draft General Management Plan for the Ozark National Scenic Riverways (ONSR). My wife and I live on a farm in the Eminence area with frontage on the Jacks Fork River. We love the beauty of Ozarks and know there is nowhere else we would rather live.

I enjoy floating / canoeing the rivers of the ONSR, camping on gravel bars when I go on overnight floats, riding ATVs and horseback riding which sometimes include riding in the ONSR. A wake of environmental destruction has not followed in the path of these activities. Needless to say, Alternative B will negatively impact the activities many have historically enjoyed in the ONSR.

About 5 years ago, when public comments were sought on the first draft of the ONSR General Management Plan, about 3,000 local residents formally commented. Most of the comments, including my own advocated the No-Action Alternative as their preferred option. It was very disappointing that this voice was not heard as the National Park Services (NPSs) selected Alternative B as the preferred option. Is it possible that local residents are not considered important stakeholders by the NPS?

Environmental Quality of ONSR

I am an environmental scientist with a Ph.D. in environmental toxicology. Most of my professional career has been spent designing and conducting studies to measure ecosystem health. My doctoral research at Texas A&M University involved determining the fate and effect of petroleum hydrocarbons on marine invertebrates and their habitats. After graduate school, I worked for many years in the private sector where I continued to work in the areas of marine, freshwater and terrestrial environmental quality. Based on my knowledge and professional experience, the ONSR represents a very healthy ecosystem. Species diversity and abundance are high in the ONSR and surrounding public lands. In my professional opinion, current uses of the ONSR are not causing significant environmental harm and I reject the notion that the ONSR is a degrading natural resource which needs fixing given current uses.

Most of the natural resources in the Ozarks moved to an all-time low when vast acres of forest in the region were clear cut in the early 1900s. As the forests resources rebounded over the past 100 years after clear cutting stopped, so did overall terrestrial and water quality. Environmental quality of lands making up the ONSR has continued to improve since the start of the ONSR in the 1960s. This improvement is due mainly because commercial and residential development has not been allowed within ONSR boundaries. In other words, the resource continues to

repair itself mainly by passive management. The main active management applied to Ozark ecosystems relates to continuing terrestrial and water quality protection by Missouri Department of Natural Resources (MDNR) and wildlife management (e.g. the building of turkey, deer and river otter populations) by Missouri Department of Conservation (MDC). It should be noted that horseback and ATV riding, and accessing the river in many areas, including camping on gravel bars, were activities occurring during all the years of NPS management. Yet overall environmental quality was not significantly altered by these activities.

Prior to clear-cutting in the early 1900s many creeks and long stretches of the Current and Jacks Fork Rivers had bedrock bottom. After clear-cutting, considerable gravel eroded into the streams and rivers leaving the gravel bottomed streams we have today. The gravel that is already in the rivers is slowly moving downstream, but it will take years for the streams to return to their pre-clear-cut condition. Today, throughout the Ozarks, there is enough healthy vegetative cover (trees, grasses, etc.) that gravel and soil erosion to our rivers is insignificant even given historic horseback and ATV riding in the ONSR.

Horseback riding is blamed for occasional exceedance of total coliform bacteria standards in the Jacks Fork River. Missouri Department of Natural Resources (MDNR) sampled extensively to assess the coliform problem in the Jacks Fork River for about 10 years starting in the 1990s. Reports of those sampling programs are likely on file in at ONSR headquarters. They are also available from MDNR. Over 95% of samples taken did not exceed water quality standard for total coliform. Exceedances of the total coliform standards in place in the 1990s were occasionally found when water samples were taken immediately downstream of areas where horses were actively crossing the Jacks Fork River. Higher coliform levels were also sometimes found near the Eminence wastewater treatment plant outfall. Another area of exceedance was at the mouth of Shawnee Creek. The source of coliform bacteria in Shawnee Creek water is attributable to land use up the creek (beyond the ONSR). Data from these MDNR studies certainly indicate the coliform problem is minor, and not always related to horseback riding.

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Kansas City has a very active Earth riders chapter that is making kc a destination for mountain biking. Missouri has so much to offer the next generation and mountain biking is a great sport to combine a love for the outdoors and physical activity.

**Correspondence:** I hope the National Park Service will adopt Alternative A or Alternative B as its management plan for the Ozark National Scenic Riverways. I have visited this park many times during the past 30 years for canoeing and camping. During my most recent visits, I was deeply saddened by the degradation of this beautiful area. I hope that with better management it will again become a source of pride for our state and nation.

I appreciate the fact the park is an economic engine in the region. I appreciate the desire of local residents- -and hundreds of thousands of other visitors- -to enjoy these rivers. But if this park is not better managed, and if this beautiful area is not restored and better protected, the economic engine will grind to a halt.

I have visited many other national parks, including the most popular ones. Managers of these parks are dealing with a variety of serious problems, but I left each one with excellent experiences and memories of a beautiful place. I

hope I can say that about the Ozark National Scenic Riverways again soon.

Is it possible that local residents are not considered important stakeholders by the NPS?

Suggested Alternative Management Strategies For Horseback and ATV/UTV Riders

Avoiding user conflicts seems to be the greatest challenge facing the NPS when it comes to ONSR management planning. How can the NPS manage separate experiences for the floaters who desire to float the rivers in solitude, from those who desire to access the rivers by pickup truck or ATV or ride their horse in the ONSR? Provided one user group (i.e., quiet floating users) does not want to impose their will on all other users for the entire ONSR, lengths of rivers could be designated quiet float areas where ATVs and vehicle accesses are denied or curtailed. This would be a far more reasonable management strategy, than a ban of all ATVs and UTVs throughout the entire ONSR and a limit of horseback riding to designated trails only.

Regarding horseback riding and uses of ATVs and UTVs, it seems more reasonable to allow these activities in remote areas of the ONSR where few visitors go and where there is also limited horseback and ATV riding on a yearly basis. ONSR areas upstream of Bay Creek on the Jacks Fork River are an example where unrestricted riding could be allowed without user conflict. Areas on the Current River where unrestricted horseback and ATV / UTV riding might be considered are the river stretches between Prairie Hollow (below Two Rivers) and Little Bloom Creek (upstream of Hwy 106) and Well Hollow to Paint Rock. There may be other river stretches of ONSR which are seldom floated and therefore qualify for horseback and ATV riding. This management strategy for horseback and ATV/ UTV riding would seldom cause user conflicts since very few visitors (floaters and hikers) and horseback and ATV / UTV riders frequent these areas.

If the NPS is insistent on banning ATV riding in the ONSR and also restricting horseback riders to designated trails, how will the ATV and horseback riders know when they are in the ONSR? Naturally, if a rider is along the river or can see the river, one could assume they may be in the ONSR. But, if a person is riding well off the rivers there are no boundary markers to indicate whether that person has entered the ONSR or is outside the boundary. I'm not sure how many miles of ONSR boundary there are, but it is probably 300 to 500 miles. Does the NPS have a plan for marking their outer boundaries so that horseback and ATV riders will know when they have entered the ONSR?

**Correspondence:** I am writing as a concerned citizen regarding the effects of the Draft General Management Plan will have on the Current and Jacks Fork Rivers. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and their surrounding areas. We the local folks are more that capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve. I recommend that the National Park Service take a NO-Action Alternative to prevent unnecessary restrictions on public lands, preserve private landowner property rights and protect our local tourism industry. My husband and I own land that adjoins the Current River. My family actively uses this land year round. My husband gigs in season. We boat and camp with our family. We float and swim with our grandchildren. We the locals feel we are the stewards of the River. The River is a large part of our lives and our hearts. It breaks my heart to think people that don't even live here or understand our connection with the River want to restrict our use of the River.

There are enough restrictions on the River already. Take your Park Rangers out of the bushes, and make them patrol the River. Enforce the laws that are already there, but please, take no other actions to restrict our use of the River.

Powder Mill Educational Center Proposal

I like the idea of building an educational center; however, I question whether Powder Mill is the best location. It is my opinion that Powder Mill is too far away from those areas of the ONSR that attract the greatest number of visitors. Most visitors to the lower ONSR, camp or stay in the Eminence and Van Buren areas. I question whether individuals would travel 15 to 50 miles to attend an educational event. It would be disappointing if the NPS built an educational center that attracted only small audiences.

**Correspondence:** In the Draft General Management Plan, Table 9 on page 114 provides cost estimates for the alternatives. First, the questions of whether the estimates for A, B, C are understated and how was the no action number determined? Is the no action number the budget or actual for the current fiscal year or something else? Assuming that all the numbers are accurate, alternative B represents an increase of 26 FTEs and an increase of \$2,239,000 (34%) n annual operating costs over the no action alternative. Alternative B also shows one- time facility costs of \$6,703,000. Alternatives A and C are even more costly.How would alternatives A, B, or C be received if they were advanced by a private business, a state or local government entity? Wouldnt one of the first questions be

Where is the money going to come from? I did see somewhere in the plan that it was not funded. I know this is a 20 year plan but based on what Ive been reading regarding NPS budgets and todays environment I am thinking that there is little if any chance that any of alternatives A, B, C would be fully funded anytime in the foreseeable future. Are A, B, C really viable alternatives in todays times when the Federal government is having a hard time funding the current No Action alternative? Should the Park Service either: 1) accept the no action alternative and do the best they can with the funding they have or 2) go back and come up with some realistic viable alternatives? Are you thinking of a piecemeal implementation? That will no doubt end in a costly convoluted mess.

**Correspondence:** My husband Leon and I oppose this plan. These waterways have been used by citizens for years. They were always for the people for our recreation and enjoyment. Many local businesses depend on revenue from recreation activities and gas money, food, etc. that comes with tourist activity. How can our state be known as "vacation land" if the waterways are not available to the public? Do you think Chambers of Commerces in all affected areas will go for this?

Please do not take this public recreation away from citizens from all over Missouri and the world!

It was very disappointing that this voice was not heard as the National Park Service's (NPS's) selected Alternative B as the preferred option. Is it possible that local residents are not considered important stakeholders by the NPS?

Proposal For Full Facilities Campground at Blue Springs ( on Jacks Fork River)

Alternative B would develop a full facilities camping area at Blue Springs on the Jacks Fork River. The Blue Springs area of Jacks Fork is not a heavily used section of the river. Water depths in this area are shallow, and therefore few float the stream in these upper reaches of the Jacks Fork River. I question whether there would be great utilization of a campground in this area. Furthermore, if the NPS is intent on protecting remote areas of the ONSR (which includes many areas above Bay Creek on the Jacks Fork River), why would NPS want to develop a major, full facility campground in this area?

**Correspondence:** NPS needs to change their attitude and strategies with respect to law enforcement within ONSR. I know law enforcement officers are sometimes faced with very difficult people and situations - but they should always be professional and exercise some common sense. Over the years, through my personal experiences and reliable sources , I know of several instances where this has not been the case. With no provocation, NPS officers have been arrogant and condescending . Officers have bragged of going hunting as they are on their way to a shift of patrolling the river. At times when they have questioned an individual and found no violation relative to a suspected activity, they have been intent on finding some other violation no matter how small. Rather than making themselves visible and interacting positively with the public, they are more often found hiding in the bushes. And then there was the incident several years ago on the river near Ellington. NPS officers swooped in on a group of people and there was some trouble. Felony charges were filed against members of the group. After an investigation and other independent witnesses came forward , these charges were dropped . I'm not saying that there aren't times when officers need to assert their authority and use physical force, I'm saying that they don't need to display this stance all the time. I'm not characterizing all NPS officers this way but have seen it and heard of it too many times to write them off as isolated experiences. Relative to the draft plan, I see where the number of citations issued may be used as a measure of whether a standard is being met with the potential of temporarily or permanently closing an area of concern. The number of citations issued could be easily manipulated thereby giving managers carte blanche power to close areas if they want to. Closing an area rather than dealing with a few bad apples says that NPS law enforcement either can't or chooses not to deal with these situations.

**Correspondence:** Users visiting our web site for information about the General Management Plan left these comments in support of including mountain bike access in the plan and in the area wherever possible. These comments are typical of those we have heard from bicyclists across Missouri in discussing this issue with them:

Terry Jones on Fri, 02/07/2014 - 10:46am:

People and bikes will come to the area to ride with friends and family. Mountain bikers care about the area and the environment. We want the area to stay clean and maintained. Most of the maintenance is done by us free of charge.

Christian on Fri, 02/07/2014 - 9:30am:

As someone that travels to bike quite a bit and enjoys the many bike trails in Mark Twain forest, I encourage you to allow further biking in our great parks. MTBers bring revenue and traffic to our great parks and most importantly, are active in volunteering to create and maintain multiple use trails.

**Correspondence:** The development of this draft plan has taken many years. There have been many comment periods and many comments. Many people believe that NPS officials have drawn this out, haven't considered past comments, and are going to do what they want to do. There is the feeling by many that there is no use wasting time submitting comments once again. If NPS officials sincerely want take public input into account, they need to consider comments not just from this last comment period but the comments from all the comment periods leading up to this point. Although some do not, a lot of those past comments are relevant to this draft of the general managerial plan.

**Correspondence:** As someone who has been going to the Current since before it was a Scenic Riverway I have many canoeing miles on the river - from Montauk to Big Spring, several jonboat trips below Big Spring, and one cataraft (yes, cataraft) trip from Big Spring to Gooseneck as a shakedown for gear before rafting the Colorado through the Grand Canyon in 2007. I have canoed the Jacks Fork from the Prongs to the Current. I also have many miles on the Buffalo from Ponca to Buffalo City. The point is, I have seen NPS management of rivers in multiple units over many years. And I have to say that the management of the Current and Jacks Fork has been the most lamentable excuse for management of a national river that I have yet to observe. Now you propose to codify this mismanagement in the so-called "preferred" Alternative B.

The NPS has already provided too much access for too many drunken boaters - in canoes, rafts, and screaming jet boats. I no longer visit the Riverways except in cold weather when the drunks have no stomach for getting wet. The NPS "preferred" alternative Executive Summary first paragraph says "management will provide enhanced opportunities for visitors to discover and learn about the natural wonders and Ozark heritage of the National Riverways...Emphasis would be placed on increasing opportunities for visitor education and connections to natural resources and cultural landscapes." This high-sounding goal has no audience for its "emphasis". And, it will do little to redress the abuse that has occurred under NPS mismanagement. The DGMP says: "Alternative B and alternative C would include potential opportunities for new concessions for new campgrounds and shuttle services for river users utilizing non-motorized watercraft. These and higher concentrations of visitors in developed zones may create the need for an additional camp store." So, more drunken canoeists on more parts of the river.

The DGMP also says: "Alternative B and alternative C would share three actions:

1. Increase law enforcement.
2. Provide two additional developed campgrounds.
3. Pursue a rule-making to change the existing regulation to allow 60/40 horsepower motors on certain portions of

the Current and Jacks Fork rivers." In my opinion, the only desirable of these three actions is "Increase law enforcement" - but pardon me if I am skeptical about the reality of that actually happening even if B or C is adopted. NPS has not enforced the rules for the Riverway to date. Credibility, once lost, is very difficult to regain. The change to the existing regulation in point three is a perfect example. A 60 horsepower jet boat has no place on the Scenic Riverways part of the Current, much less anywhere on the smaller Jacks Fork. Yet these boats regularly scream up and down the Current at unsafe speeds, creating large wakes, and endangering non-motorized craft and swimmers. By contrast, the Buffalo, another NPS unit that has many similarities to the Jacks Fork, has a 9.9 hp limit. (Not 99, but 9 point 9.) That leaves the second item of the three. More development in terms of canoe liveries and campgrounds is precisely the wrong direction to take. The Riverway was established to revert its being overrun by development and misuse. To preserve this natural resource for future generations, it needs to be rationed carefully not developed even more fully. The Colorado through the Grand Canyon and many other western rivers have a lottery system. It's time for the NPS to manage the Ozark National Scenic Riverways in a similar way.

While there are laudable goals in the DGMP when it comes to repairing damage that has already been done by ATV's on gravel bars and reducing vehicle access to gravel bars, even if accomplished, they will not truly preserve the natural resource. They will only address the lack of good management demonstrated in the past for this NPS unit.

Therefore, I support reducing access to the rivers by a lottery system for boaters of all kinds. Horse use must be curtailed - not expanded - for water quality and gravel bar aesthetics. No motorized watercraft should be allowed above Round Spring on the Current and above Eminence on the Jacks Fork. A 9.9 horsepower limit on motorized watercraft should be applied to the remainder of the Riverways. Money should be allocated for enforcement of these and existing regulations. I note that the latter is only a provision of Alternatives B and C - which unfortunately also increase the (ab)use of the resource. Alternative A lacks this, a serious oversight on the part of those who drafted it. In many ways a "No Action" alternative has advantages over any of the proposed alternatives - PROVIDED that existing rules are enforced as was envisioned at the establishment of the unit. Sadly, "No Action" has been the rule of the day when it comes to enforcing rules. In the DGMP, the NPS appears to have "sold out" to those local interests who do not want any management of a resource they consider their exclusive property, and, to concessionaires who view it as a means to making money - now.

**Correspondence Type:** Web Form

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking is a great way to increase public enjoyment of the space. Compared to many other recreational activities, mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors. I, along with many others, would love to have more space to enjoy the great MO outdoors with both in- and out-of-town friends.

Bill Black, Superintendent Ozark National Scenic Riverways 404 Watercress Drive P.O. Box 490 Van Buren, MO 63965

RE: Draft General Management Plan, Ozark National Scenic Riverways

Dear Superintendent Black:

As staff for Pioneer Forest LLC, owned by the L-A-D Foundation, we prefer your recommended Alternative B, and offer the following comments as they relate to your future management for the park.

Some Pioneer Forest lands are located within the legislated boundary of the park, and many of our other lands join the park's fee title boundaries. Our sustainable forest management is clearly compatible with your mission, and our staffs often work together to advance mutual interests.

Hiking trails are a traditional recreation activity in America's national parks, yet trail development has been extremely limited at Ozark National Scenic Riverways. We support the provisions of your preferred alternative which will further develop these recreational opportunities for visitors. Pioneer Forest staff and volunteers have worked together with the park service on development of the Cave Spring Trail and now on the new Current River Trail. Other Pioneer Forest trails are in the nearby area, including our Virgin Pine Walk, Pioneer Forest Interpretive Drive, Brushy Creek Trail, Laxton Hollow Trail, and the Ozark Trail. We will be happy to cooperate with ONSR on similar efforts.

We have watched the horse trails multiply, up and down the rivers, seemingly without direction or planning. The result is that riders often cross onto private land, including ours, without permission. Resolving this issue should be one of your top priorities. We stand ready to assist with improving the equestrian trails where it will result in removing redundant and overlapping routes with better signing and a sustained enforcement effort.

We have several joint projects, such as those for tall larkspur populations at Devil's Well and Akers, and coordinated management at Jerktail Mountain, that provide positive benefits for natural resources. We intend to continue such cooperation.

We hope that as a result of the new General Management Plan the national park will be better managed and that the quality of its river resources will be improved for the future.

Sincerely  
Jason Green, Forest Manager  
Pioneer Forest

**Correspondence:** Thank you for the opportunity to comment on the Ozark National Scenic Riverways General Management Plan (GMP) and Wilderness Study EIS.

We agree that these rivers are national treasures, and applaud your efforts to balance their use and protection, and appreciate the difficulties of maintaining that balance.

We recognize, and want to emphasize, that our shared boundaries, shared missions and shared clientele will require some additional coordination between our organizations as you complete your GMP and EIS and move into follow-up planning and implementation phases for us to effectively meet our objectives. For example, if new horsepower limitations put into effect, there may be increased use or unknown effects downstream on the river outside NPS jurisdiction on the Forest Service section of the Current River. Likewise, some of the trails that are proposed will require coordination with us where recreationists may cross the unit boundaries, and because expansions and restrictions on use within the Riverways may affect levels and types of use that occur on the National Forest. Coordinated public messages addressing restrictions on the river will reduce public confusion. Please keep us informed of your progress in planning and implementation, and who to work with to coordinate planning and actions.

While the Big Spring Wilderness Study Area is located entirely within lands managed by the National Park Service, your study recognizes the proximity to National Forest lands that are managed to protect primitive and natural qualities. History has shown that Congressional actions on agency recommendations for establishment of Wilderness don't always result in wilderness boundaries that match the ones envisioned by the agency. Recommendations for establishment of a Wilderness from lands in the wilderness study area could have an impact on management of adjacent National Forest lands, and this needs to be fully considered in future planning and

discussions.

Also, on page 187, the document erroneously states that by 1935 the Mark Twain National Forest included more than 3 million acres. Even today, the Mark Twain only has 3,060,162 total acres within its boundaries, made up of 1,493,565 acres managed by the National Forest, and 1,566,597 acres of other lands. While I don't have ready access to the exact Forest acres in 1935, in 1947 the Mark Twain National Forest (headquartered in Springfield) only had 1,349,618 gross acres, and 440,250 acres under Forest Service administration, and the Clark National Forest (headquartered in Rolla) had 1,971,895 gross acres, and 882,441 acres under Forest Service administration. If you need other information about our lands records, be sure to contact us.

Feel free to contact me if you need clarification on any of my input.  
Nancy Feakes, Mark Twain National Forest Recreation Manager

**Correspondence:** I have been living in this part of the country full time since 1978. My parents were born and raised in the Carrs Creek area that is in close proximity to a portion of the river that me and my family visit quite regularly.

My family and I spend at least one day if not all weekend enjoying the Cardareva Gravel Bar. I've been there and witnessed the acts of nature and the acts of humans in this particular area.

To say that the gravel bar is being destroyed and the ecosystem is being disturbed is absolutely nonsense.

I've witnessed floods, holiday weekends where there seems to be an overcrowding of people on the gravel bar enjoying themselves, horses drinking from the river and vehicular traffic driving over the gravel bar and all I have to say is that usually the flooding does more harm and makes more changes to the gravel bar area than anything else.

The locals that visit this area are better stewards of the area in terms of policing it and keeping it clean for others to visit than any resource that the Park Service or anyone else realizes.

I feel that these locals want to see this valuable resource left alone without any participation made by the Park Service to make any changes. Usually when the Park Service gets involved they create more hate and discontent and do more harm to these types of issues than they help.

For once the Park Service needs to listen to the locals that will be directly affected by such decisions and take this into consideration rather than listening to others that only visit these areas once or twice a year. The locals want to keep these waters clean and pristine for "ALL" others to visit and enjoy what nature has provided.

THIS IS OUR BACK YARD AND MY VOTE IS FOR THE PARK SERVICE TO "MAKE NO CHANGE".

**Correspondence Type:** Web Form  
**Correspondence:** I have been employed by Ozark National Scenic Riverways for the last twenty years as a law enforcement ranger. Im not only an employee, but a local who has lived in Van Buren, Missouri my entire life. My comments regarding the General Management Plan draft reflect not only an opinion from someone who has grown up utilizing the river but it gives a perspective based on experiences and knowledge from someone who has dealt with the parks ongoing issues, visitor use patterns and behaviors for the last several decades.

HP Regulation Proposals:

(Non-motorized zones)

I was assigned to attend all four of the GMP public meetings in January of 2014. Almost 95% of the individuals I spoke with during these meetings were not in favor of any changes to the current horse power regulations. I am not in favor of the proposed changes under Alternative B. It is difficult as a law enforcement officer to defend a proposed regulation that you do not believe is necessary or justified. None of the law enforcement officers who work at OZAR are in favor of the non-motorized zones. The upper zones of both the Current and Jacks Fork rivers self regulate. There are currently and have not been any recorded user conflicts with motor boats and non-motorized vessels on those stretches of the river. I should know as I review every case incident report that is submitted. There is also no documented evidence of environmental impacts from boat motors. The water level is too low to run a power boat during the summer when floaters are present. I've worked those stretches of the river during the summer and I've never seen a motor boat during May-August. The proposed changes would prevent locals from hunting, fishing, trapping and boating on the river during the non-tourist season when there isn't anyone floating. Don't restrict the use unless there is a justified reason for doing so. I don't even think these zones should be seasonal. There is enough water to run a boat or there isn't. It all comes down to the fact that when the boats are operating on the river there aren't any canoes or tubes to complain otherwise. The HP could be 60/40 and it still wouldn't affect the non-motorized user groups. The current seasonal zone from 10 HP in the peak season to 25 HP during the winter doesn't make any sense. It should be opened year around to 25 HP or 60/40.

(Changes to the current regulation to accommodate the 60/40)

I am in favor of changing the current language under 36 CFR 7.83 to allow the 60/40 motors. There is a huge percentage of boat owners who own and operate 60/40 motors, including myself.

(South of Van Buren boundary to Big Spring)

This stretch of the river is currently opened to 60/40 HP. Due to the over flow parking issues at Big Spring, I think this zone should be consistent with the HP that is allowed below Big Spring. If larger sized motors are allowed below Big Spring then the regulation should be consistent and allow them in this half mile stretch so boat owners can launch in the Van Buren area. I would propose a limit of 200 HP from the park boundary south of Van Buren to Gooseneck.

(Big Springs to the southern park boundary to Gooseneck)

After spending many years patrolling this section of the river, I think there should be a HP motor limit. However, I don't necessarily think it should be 60/40. I do believe that there should be a zone for local boat owners to operate a larger size motor. With that being said I don't think the river is wide or deep enough for 300 ( ) HP size motors. The extremely large motors can be a safety hazard to other boat operators and non-motorized vessels. In my opinion the HP should be restricted to a 200 HP motor. This would allow a zone for larger motors, yet, not too large. There are some larger boat operators who traditionally motor up from Doniphan, Missouri to eat lunch at the Lodge. This would allow those user groups to continue. There are no environmental impact studies to show that the larger motors are causing damage to the rivers corridor.

Non-motorized Vessels:

The number of permits that are issued to concessionaires should be lowered. The river is over crowded due to the number of canoes, tubes, rafts and kayaks being put on the river at the specific access points

(Waymeyer/Akers/Alley Springs/Cedar Grove). Permits should be lowered or they should be disseminated to other stretches of the river to prevent overcrowding.

In the last two years the number of private vessels floating has strappingly increased. This has caused an abundant of problems at access points where there is limited parking; such as Waymeyer and the Chilton Boat Access on the lower current. Sooner or later the park will have to consider charging a parking fee at fee owned access and launch points. The revenue collected would help provide additional funds for the park to hire seasonal law enforcement rangers. The protection division is not staffed adequately to monitor these parking areas on busy Saturday and Sundays throughout the summer.

Wilderness Area Designation:

I am not in favor of designating the Big Springs section to Wilderness. The designation restricts employees from conducting control burns and patrolling the non-hunting area for wildlife violations. The US Forest Service borders the back side of the proposed area. ATVs currently enter the park boundary from USFS property to illegally hunt.

Prohibiting motor vehicles will handicap the protection staff from protecting resources. This area is already a natural area and managed as such. I see no benefit to the public or the park by creating this designation.

#### Horse Trails and Use:

##### (Upper Current)

The Upper Current is a spider web of illegal horse trails and river crossings. These trails need to be shut down immediately and the park should undergo an environmental assessment to designate trails within this district. The park has failed to manage horse-back riding activity and address the concern that this user group has continued to grow. Had the park created a horse trail and camping system decades ago we would have been proactive verses the now reactive mode. The abuse and damage caused by this illegal activity has to be corrected. I agree with the proposed actions in Alternative B.

##### (Lower Current)

There are currently no designated horse trails in the lower current (Van Buren area). I dont believe its fair to have designated trails in the other two districts and not in the lower one. I would propose that at least two horse trails and possibly one horse camp be erected in this district as well. Back in the late 90s I submitted a request to park management for a horse camp at Beaver Pond, which is located on the Tram Road; South of Big Spring. This area would be perfect for a horse camp as it is not right on the river and does not usually attract many traditional campers. The Tram Road is currently used by some riders in the Van Buren area and would be suitable as a designated horse trail. The horse camp would then be an option for those riding on this trail.

#### Roads & Trail Management:

I agree with the proposed actions in Alternative B. The park needs to close illegal traces and roads to prevent erosion and resource damage. This includes restricting access to agriculture fields that are leased out to farmers who have an interest in their crop. All agriculture fields throughout the park should be gated.

The park has to address the ongoing visitor use patterns at Log Yard and similar gravel bars that allow motor vehicle use. A designated parking area must be established to separate the boat trailers and campers. Campsites should be designated instead of allowing a free for all throughout the gravel bar.

#### Enforcement of Regulations/Laws:

While attending the GMP meetings I heard numerous attendees state that the park doesnt need to create more regulations; that we need to enforce the ones we have on the books. What the public doesnt understand is that our protection staff is stretched out very thin. The Rangers can only be at one place at one time. In 2004, OZAR had 21 fulltime protection rangers and several seasonal rangers. The average number of citations issued was 1,500. In 2013, the permanent staff has dwindled to 15, with no seasonal rangers. The annual number of tickets issued was 422. A decrease in LE staff will affect how many violations are detected and how many suspects are apprehended. In addition, it increases the chances of an officer safety incident occurring due to the lack of back-up arriving to assist. The protection division needs more officers to effectively provide protection for the parks resources and visitors. Any new regulations or changes to how the park is managed under the new GMP will create the need for additional law enforcement personnel. In reality, for any changes to be effective; whether its enforcement of off road travel or horse power limitations, there has to be a strong front of law enforcement officers on the ground to deal with the situation at hand.

**Correspondence:** Dear Superintendent,

Although I have not spent much time on the Current and Jacks Fork Rivers, I commend the national park Service for your efforts to manage this national treasure. I always enjoyed my travels through the Mark Twain National Forest and my brief stops along the Current and Jacks Fork Rivers during my work with the state of Missouri in Poplar Bluff, Missouri. I have read only parts of the Draft General Management Plan and found it to be quite the extensive document and a monumental task is before you. I applaud your hard work to protect the outstanding natural beauty, ecological vitality, and spiritual qualities of these lands. I was also amazed and pleased to see that you involved several American Indian Tribes in the planning process. As a member of the Missouri Conservation Federation of Missouri, Missouri Coalition for the Environment, and the Missouri chapter of the Sierra Club, I stand with them in supporting your preferred Alternative B in the future management of the Ozark National Scenic Riverways. The ONSR is truly a local, state, and national treasure. In addition to supporting Alternative B, I would recommend and advocate for wilderness status designation for the Big Spring area. It would be ideal if the NPS could reduce motorized intrusion via unauthorized roads and river access points along with reducing equestrian overuse and damage to the natural resources. I support the closing 65 miles of undesignated horse trails and other unauthorized roads. I support the motor-free zones on the upper reaches of the Current and Jacks Fork Rivers and encourage promotion of even lower horsepower limits on other stretches of the rivers. Scenic easements should be restored to maintain the natural environments and scenery for the public. Impaired riverbanks should be restored but not with heavily engineered solutions. I would like to see the National Park Service avoid increased development and reduce intense recreational use in general. Ecological restoration where necessary and appropriate, should be provided. Again, I appreciate your efforts to protect this beautiful exquisite treasure and the opportunity to be involved in the planning process. You all do wonderful work and I wish you well as you continue your mission of the management of this treasure.

Sincerely,  
Patrick Dwyer

**Correspondence:** I grew up splitting time between Black River and Current River. My family and I use Current River year around - floating, boating, camping and swimming during the summer months..... boating, gigging, and camping during the colder months. My young children enjoy doing these recreational activities with me and my wife year around.

Alternative B restricts my recreational use of the area beyond what is acceptable. Motorized boats have been running on these rivers since the inception of the outboard motor. Families and generations have been able to enjoy large sections of the river because of the use of john boats. Fishing, swimming, and boat riding are a part of our heritage. My children and their children should be allowed to have these experiences.

Current River should be shared by all - from the urban visitor that comes to the river once or twice a year, to the local families that love the river more than can be imagined.

Additional restrictions to river access and/or boats & motors are not required.

**Correspondence:** I'm writing on behalf of myself and my parents to share our comments on the Ozark National

## Scenic Riverways Draft General Management Plan (GMP).

We prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement, with some additions and qualifications:

- No horse campgrounds.
- More hiking trails.
- Sensitive natural and cultural resource management that avoids new conversions of bottomland riparian forests to open fields, or artificial pasture for elk and other animals and focuses on restoration of upland meadows, woodlands, and glades with native vegetation.
- The restoration of impaired riverbanks that avoids developed facilities along the rivers, which are screened from view from the river in any case, and low impact. Heavily engineered solutions should be avoided (e.g. Rock and weirs) and instead NPS talent and experience should be employed to bring natural landscape design and sustainable structures appropriate to the site.
- Prioritization of solutions for problem areas that focuses on low-impacts in riparian zones.
- Approach the designation of mountain bike trails with care for the vulnerabilities of the landscape so that erosion, impacts to biodiversity and water quality are minimized.

Specifically, my experience in the Riverways is the following recreational uses: my friends and I bring our kayaks to enjoy a beautiful, peaceful getaway from the Saint Louis metropolitan area, thus enhancing the economy of the Riverways area. My father is a lifelong MO resident, and my mother has lived here more than 50 years. They both enjoy nature and walking through the forests and along the rivers.

We appreciate the conservation and preservation functions of the National Park because the Ozark National Scenic Riverways are Missouri's largest national park and the country's first national park developed around a river. It sickens me that the park is in worse shape today than it was in 1964, therefore 'no action' is unacceptable. This Park's problems have included the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements.

Despite what some vocal locals think, bringing this into National Park protection was the right thing to do. Let's do the right thing again. The people who live along the ONSR did not build them, so the NPS must protect the Riverways for wildlife, the environment, and the future.

Thank you.

-Sara in St Charles (and her parents, Fred and Karen)

<b>Correspondence ID:</b>	2675	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,07,2014 15:00:51				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Thank you for this opportunity to comment on the Ozark National Scenic Riverways Draft Management Plan.				

The Missouri Wilderness Coalition is an informal alliance of individuals and organizations dedicated to protecting the remaining wilderness and wild areas on the public lands in Missouri. We seek the broadest possible partnerships, and focus only on issues that are directly related to the protection of wildness and wilderness.

As an organization with a clearly defined scope, please understand that our comments are limited to the Wilderness Evaluation/Study area near Big Spring; we are not commenting on the overall ONSR Draft Management Plan.

As regards the Wilderness Evaluation/Study area near Big Spring:

Missouri Wilderness Coalition (MWC) supports National Park Service (NPS) actions identified under Alternative B.

Alternative B does not significantly change the long-standing backcountry management of the area.

Alternative B does not change public access to the area in any way.

Alternative B does not change or restrict any currently allowed recreational uses of the area.

MWC agrees with the acreage and boundaries identified by the NPS.

The underground utility line found in the area serves no public purpose and MWC supports its removal.

The NPS training range is only open to NPS employees and not the general public, and could be situated elsewhere. MWC supports moving it.

MWC supports private property rights, and we are pleased that no private properties are affected by the Big Spring proposal, nor are any accesses to private property impacted.

MWC supports appropriate access to cemeteries and traditional religious activity sites. There are no such sites within the area.

MWC supports responsible equestrian use, which is currently allowed and would continue under Alternative B.

The study area has been, and will continue to be, a valuable optional use for visitors to the Ozark National Scenic Riverways that expands opportunities for local outfitters and other commercial enterprises.

The study area has and will continue to provide economic benefit to the surrounding area, specifically the town of Van

Buren and businesses within Carter County.

1/4 1/4

Missouri Wilderness Coalition supports continuing to manage the area just as it has been for nearly a century. It is the

logical and scenically attractive complement to the visitor facilities available at the Big Spring park area.

Thank you,

Greg Iffrig

John Karel

Scott Merritt

**Correspondence Type:** Web Form

**Correspondence:** Dear Superintendent:

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative A as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways in the following recreational uses: Floating and hiking.

These uses are important to me because:

I feel strongly about the long-term health conservation and protection of our natural Missouri landscape and waterways.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways:

The issues related to horses, and overuse by extreme numbers of boats, canoes and other floatation devices.

The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation.

The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of natural ecosystems-should rival that of our nation's most pristine and unique public lands.

Thank you. Joyce Gorrell

<b>Correspondence:</b>	I support Alternative A, the most environmentally preferable of the Alternatives.				

On my visits to the upper reaches of the Current, the experience has been somewhat degraded by motorboats. Hopefully future management will work to reduce this conflict.

In more than 30 years of visiting the Park, I've been surprised at the small number of hiking trails, so I particularly support development of hiking trails.

There are opportunities to collaborate on hiking trails with adjacent (and willing) land owners.

I encourage management work to continue restoring woodlands and riparian areas, including the use of prescribed fire where appropriate.

I very much enjoy visiting the Park.

Sincerely,  
Hank Dorst

**Correspondence:** Hello,

I writing in support of option A for the Ozark National Scenic Riverways Strategic plan. This makes the most sense to preserve the biological integrity of this sensitive ecosystem. It is very clear that this area is very fragile and very prone to disruption by anthropogenic activities such as horseback riding, ATV, motorboat, and motor vehicle usage. By heavily restricting motor vehicle and horseback activities (which have been shown to be VERY damaging to sensitive ecosystems) you will be promoting a more acceptable use and opening up the park to more users. This is a natural area, lets treat it as such. It also makes sense from a economic standpoint too. Many users of the river are people that come from the Greater St. Louis area and float the river in canoes and kayaks. These activities are directly affected by motorboating activites which are harmful to the river and have no place in an area that is pristine such as the Current River and Jacks fork. Do the right thing for the environment and the economic viability of the area and select Option A to protect endangered species like the hellbender so that they can have a chance to recolonize the area.

Thanks,

Jeffrey Hillis

**Correspondence:** First, thank you National Park Service for seeking input regarding ONSR. As a neighboring land owner, I treasure this park and surrounding areas.

I support Plan B.

I have followed comments on Facebook, read the management draft plans for all proposals, read news articles and have extensively witnessed how the Current River portion of the ONSR has been used for the past 20 years. Not only do I own land on Sinking Creek, a tributary to the Current River, but I float the Upper and Lower Current multiple times per year. I utilize a licensed floating service, Running River Canoe Rental, for many of my float trips with family and visiting friends.

I support Plan B because over the last 20 years, I have witnessed more and more campers, trucks, ATV vehicles (and the like) parked on (our in) the Current. I have come around too many bends to the sound of blaring music from a camper or truck on a gravel bar. I have had to maneuver my kids' canoes around large groups of partiers that are just hanging out in the middle of the river drinking. And, just last year, a family members' canoe was tipped over by a group standing in the river from one of these groups of vehicles parked on a gravel bar.

While most of the floaters enjoying the ONSR are extremely polite and, like us, are there to enjoy the wild beauty of the Current, the beligerant party groups are increasing year after year.

As a National Park, the ONSR should be enjoyed by all who come to its gravel bars, not just those that abuse the responsibilites that come with local access.

I also feel strongly that our corner of the Ozarks is a National treasure and should be protected as such.

Thank you,  
Nancy Dwyer

**Correspondence:** Instead of taking things away from the visitors is not what we need. We need to be giving more. Years past, they were more things to do and see in all areas. Now it is limited to a few chosen areas. That is not right. For example look at Powder Mill. It use to be a nice place to take your family to and now just look. They were several things to go view and observe back then.

The park would have more visitors if they supplied more. For instance, electric and water in more than a few areas. It is needed for people with disabilities and small children. I hear it more and more. So they go elsewhere.

Also the issues with the boats. Why do they need to be removed or told where they can run them. Boat owners had to sell and buy smaller ones the last time the park did the 25 year GMP. I'm sure you have already heard from several people on this matter of helping out floaters in distress. Removing boats would be a very wrong move for the park to make. Lives matter to boat owners, so think about what will happen, when no help will be available for a hour or more. But when people with boats are available, they will respond to people in distress. Minutes counts in times of an emergencies. So please think this matter over more careful.

**Correspondence:** Thank you for the opportunity to comment on the ONSR draft General Management Plan. Since 1968 I have been canoeing Ozark streams, including the Current, Jacks Fork, Eleven Point, and Buffalo as well as other rivers in Missouri and in several other states and countries. Like many others, I simply stopped coming to the ONSR for a time as a result of steady deterioration of riverbank lands and of the floating and camping experience. More recently I have returned, though typically in the late fall or early spring, and have come to appreciate that these rivers, in spite of the churning in my stomach at the abuse and degradation they suffer, are still the most beautiful streams I know. They are world-class treasures, and they deserve the best management the National Park Service can provide.

The new draft management plan shows NPS recognition of problems that have developed over the years and a determination to address them. Issues that have particularly concerned me are the unchecked proliferation of unauthorized roads and river accesses that have turned the riverbanks into a maze of eroded ruts and degraded vegetation; the unrestricted access of motor vehicles to gravel bars that creates such a jarring sight for those floating the river and makes finding a gravel bar campsite such a risky prospect; the exponential increase in horse riding on undesignated trails crisscrossing the rivers and their floodplains, destroying banks and causing sedimentation and pollution; and the steadily increasing numbers of jet boats that compete with floaters in the rapids, scare off wildlife, and intrude on a peaceful evening. All these activities are fine in places and in moderation, and the new plan proposes to zone and redistribute the uses to avoid conflict, improve visitor satisfaction, and protect the resource base while maintaining or increasing the total number of visitors and the positive economic impact of the park.

Though I personally prefer certain aspects of alternative A, I believe alternative B is the most realistic compromise among the many uses that have developed over the years, and I strongly support it. The emphasis on restoration of areas degraded by unauthorized roads, horse trails, and access points is very welcome, and the provisions for new and better located trails and accesses, designated campsites for gravel bars accessed by motor vehicles, consideration of a horse permit system, and motor-free zones in stretches of the rivers most popular with floaters seem appropriate

and fair.

The staffing levels for alternative B (Table 10), however, especially with no additional staff proposed for resource management and science, seem grossly inadequate for the amount of resource protection, restoration and monitoring required by this alternative (alternatives A and C, with similar requirements, provide 8 and 10 additional staff respectively). Please reconsider and provide adequate staff for these vital functions.

Finally, I urge you to stand up for your eminently reasonable plan in the face of the highly distorted and intemperate political grandstanding by some elected officials. Though they claim to be speaking for their constituents, they are representing only those with a strongly anti-government political agenda that will end up hurting many people in the Riverways region. It already has, for the ONSR budget and staff have been cut out of proportion to other national parks, likely owing to the unremitting negativity of local political leaders.

From my discussions with people in the region, there are many who want to see better NPS management and think many aspects of the plan are quite reasonable, but they are reluctant to speak out. I believe that properly constituted stakeholder workshops called to address issues that will remain to be worked out after adoption of a new plan would find many areas of agreement.

**Correspondence:** We run a small business just below Van Buren and have been a NPS concessioner for several years. Some statements, analyses, and conclusions in the draft plan raise economic concerns not only for our small business, but other concessions as well as other businesses in the Van Buren area.

First, we see a problem in drawing conclusions on what is happening within the Park based on data that was collected outside the Park. Data collection points for the studies cited included Watercress and the Van Buren boat ramp. These locations are well below the Park boundary up river from Van Buren. No data was gathered at Waymeyer nor Raftyard, within the Park.

Second, we certainly don't claim to have expertise in the field of statistics but we question whether the frequency and sample sizes up and down the river are too small to yield reliable results

Third, in Table 13, for nonmotorized watercraft, Alternatives A, B, and C indicate concession dropoff and pickup locations would be redistributed to reduce peak season crowding effects. At this point we are not sure what this means. For example, if it means establishing separate but comparable put in and take out points for concessioners

which are separate from public put in points it could be positive. If in entails delegating concessioners to less opportune put in and take out points in it could have a devastating economic impact on our float business and our companion camping business.

Fourth, also in Table 13, for concessions, Alternatives B and C indicate potential opportunities for new concessions for shuttle services for visitors using nonmotorized watercraft. Would this not be in direct competition with existing concession contracts?

Fifth, we have some concerns related to Table 4. We are opposed to Alternative A's 40 hp limit from Two Rivers to the southern boundary of the Park. We believe the existing 60/40 hp limit from Two Rivers to Big Spring and the no hp limit below Big Spring should be continued. We are opposed to Alternative B's 60/40 hp limit below Big Spring. This would make the Van Buren gap the only place to run motors larger than 60/40 hp in the area. This has the potential to transfer some of the traffic of boats with large motors that currently go down below Big Spring into the gap. This would have a negative safety impact relative to the existing mixed uses in the gap. For the same safety reasons , we are opposed Alternative C's no hp limit from Van Buren to Big Spring.

Finally, there are several statements in the Plan, including those referenced above, as to possible NPS actions to reduce crowding effects. Implementation of an action in one area can quickly cause a change in use patterns in adjacent areas. For example, a change in the Van Buren area can certainly cause a change in use patterns in the Eminence area - - only a 40 minute drive away. To maintain economic fairness, we would think that the Park Service would need to implement ongoing monitoring up and down the Rivers and make adjustments as necessary if they implement actions to change visitor patterns.

<b>Correspondence:</b>	Mr. Bill Black, Superintendent Ozark National Scenic Riverways P.O. Box 490 Van Buren, MO 63965				

Dear Mr. Black:

RE: Review of Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways, Missouri

The U.S. Environmental Protection Agency has reviewed the Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways. Our review is provided pursuant to the National Environmental Policy Act 42 U.S.C. 4231, Council on Environmental Quality regulations 40 C.F.R. Parts 1500-1508, and Section 309 of the Clean Air Act. The DEIS was assigned the Council on Environmental Quality number 20130325.

Based on our overall review and the level of our comments, the EPA has rated the DEIS for this project LO (Lack of Objections). A copy of EPA's rating descriptions is provided as an enclosure to this letter.

The DEIS adequately outlines the purpose, need, and general management plan for this project. The preferred Alternative (B) seems to address and provide a good balance of the various uses and resources of ONSR. We commend your coordination efforts with various other agencies and entities throughout the development of this project. We would encourage continued coordination with local, state, and federal agencies to ensure that all laws, ordinances, and regulations are followed and all necessary permits acquired. We also would like to thank you for prominently addressing the direct, indirect, and cumulative effects of each potential environmental consequence.

Though environmental impacts included in the DEIS were overall minimal, EPA offers the following comments for additional considerations of potential environmental impacts and a focus on minimization and mitigation of these impacts and provide additional information related to the project.

While it is understood that the proposed management process would allow for site-dependent flexibility in management and mitigation practices, it would be useful in instances such as these to include at least a few specific examples of practices and procedures that may be used to meet these directives and how health and condition will be measured. EPA continues to support avoiding and minimizing adverse impacts to air, land, and water quality, including wildlife and their habitat. We would like to suggest that any potential effects or disturbance of fish and wildlife species be minimized to the extent possible through the use of BMPs for such activity.

In the event that there are jurisdictional wetlands impacted by the proposed action, we recommend that any mitigation should occur in the same HUC 8 or smaller watershed as the location of the project impacts. If changes occur in the project purpose, need, alternatives, or impacts between now and the time of issuance of Public Notice, EPA's 404 program reserves the ability to comment further on this project. Information may be generated through the 404 public interest review process that was not documented during the EIS process and should be considered in the final decision. This could include changes in regulation or processes, advances in the knowledge of the resources to be impacted, discovery of populations of threatened or endangered species, new best management practices, and/or improvement in stream or wetland restoration science.

Thank you for the opportunity to provide our comments regarding this project. If you have any questions, please contact Amber Tucker, NEPA Reviewer, at 913-551-7565 or via email at [tucker.amber@epa.gov](mailto:tucker.amber@epa.gov).

Sincerely,

Jeffery Robichaud  
Deputy Director  
Environmental Services Division

**Correspondence:** The Ozark Area Hiking Team is concerned about the delicate ecosystem of Ozark National Scenic River Park sustaining preventable damage from rampant ATV use, motorized boats, trash, horse tracks in moist trail and manure, and the indiscriminate use of firearms and loud music. The Ozark Area Hiking Team has reached consensus on suggested guidelines and favors the strictest plan: Plan A. Below is a list of detailed suggestions provided by a nature group that prides itself on leaving no trace. Thank you, for your consideration.

1. Firearm use inside the park boundaries should be prohibited and strictly enforced.
2. ATV use inside park boundaries should be prohibited and strictly enforced.
3. Motorized boats on any waterway within park boundaries should be prohibited.
4. Access to waterways by public should be from only authorized points established by park officials.
5. Horseback riding should be separate from hiking trails.
6. Horseback riding on trails should require manure bag catcher attachments on rear of animal with areas near equestrian trail heads for proper manure disposal in order to protect the water system from being polluted by animal waste.
7. Motorized vehicles should be strictly prohibited access to riverbank.
8. Motorized vehicles should be strictly prohibited from parking or camping on or near river bank unless in authorized area.

9. Playing of loud music of any kind especially with electronic devices should be prohibited.

**Correspondence:** I support the B Alternative.

I lived fulltime near Akers for ten years beginning in the mid-1970s and continue to spend a major amount of my time raising a big garden at what my kids consider their home place, enjoying the river, the trails, the visitors, my neighbors, the rangers, the outfitters, and most everything else.

ONSR is unique among parks because it combines a beautiful natural setting with a community that's called it home for almost 200 years. I'm glad that the natural beauty has been protected from development, but I'm sad that so many families were displaced. Some families were satisfied to sell for the prices they were offered, but more families should have been persuaded to accept scenic easements and continue with their lives.

I believe the rivers were plagued by excessive numbers of floaters in the 1970s and 1980s, when ONSR was unable to control concessions.

The rivers were plagued by unruly behavior which probably reached a peak in the 1990s until ONSR and state agencies began stricter enforcement.

Currently, the rivers are damaged by too much drive-up access. Floaters and other users would have a better experience of the rivers if they could travel greater distances without the sight of an RV. There are more than enough existing access points: for instance, on the upper Current, Tan Vat, Baptist Camp, Cedar Grove, Medlock Cave/Flying W, Welch Cave and Akers.

Medlock Cave and Flying W are a good example of the problem and a solution. I see no problem with allowing vehicles on the existing road, but there's no reason for them to get within sight of the river. Walking two or three hundred yards isn't too much to expect people to put out in order to enjoy a day free of modern transportation.

Medlock Cave is a special treat reserved for those willing to leave their canoes.

I suppose the fields away from the river at Medlock could be a place for RV camping, but it seems to me Cedar Grove and Pulltite provide enough of this sort of opportunity.

Bluff School and the Maggard Cabin are interesting counter examples. They can be reached by vehicle from the west side, but they are better left as glimpses into the past that are reserved for those on foot, just as Welch Cave requires at least a walk or a float.

Part of the legacy of 200 years of human occupation is that there are signs of old houses, cemeteries, roads and so on everywhere. We should be preserving what's left of the homes, honoring the graves and closing the roads, except for the few we decide we really need.

It cheers my heart to see horseback riders. They fit with the period when the rivers were settled. A horse is still the best way to deal with an Ozark stream. But numbers could become a problem on the upper Current, as they have become on the Jacks Fork. Too much of a good thing is bad. ONSR must have a way to control numbers and/or disperse concentrations.

Cooperating with horse liverys to develop more trails would be a good approach. The trails should go to interesting spots away from the rivers, and only come to the rivers for opportunities to refresh. The trails should especially avoid crossing the river.

In all cases, ONSR must accept responsibility for being the final arbiter of how much use the rivers can stand. Work with all interested parties, of course, but in the end Congress gave the USPS responsibility for protecting the

resource.

I would like to see more hikers and bicyclists. Well, not hordes of them. But they generally have less of an impact than other users. They would no doubt appreciate some horse-free trails.

I would like to see much more cultural interpretation. I would like to see much more interaction between long-time residents whose lives have been shaped by the rivers and the day trippers who know nothing but city life.

Over all, Alternative B comes closest to reflecting these concerns.

**Correspondence:** Hello,

I have visited ONSR every year for most of my life. My family has land near the Current river and our extended family gathers there every year to enjoy the beauty and wilderness of the Ozarks. We will usually float the Current river once or twice each year.

I support Plan B. I have read the proposed management plan. Over the past 10 years, specifically, I have noticed a change to the "feel" of floating the Current. I have come to expect, and dread, the numerous encounters with trucks and campers yelling at passer bys and making me and my family feel as though we have accidentally stumbled upon their party. I don't believe this was the intent of the ONSR at its inception. This is not how I remember the river growing up.

Stronger management should be given. Actually, it should have been happening from the start. I'm not sure why this behavior has been tolerated for so long. Please adopt Plan B to protect this National Park and preserve it for our future.

Thank you,  
Joseph Dwyer

**Correspondence:** I am writing on behalf of Audubon Missouri, the state operation of the National Audubon Society, in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe

that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although we in Audubon Missouri feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, we mainly prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

Although we support Alternative B, we are hopeful that some adjustments to this plan would be considered. This would include the addition of motor free zones on the rivers, more hiking trails, and a decrease in the number of legal access points proposed in Alternative B- -we believe there are sufficient legal access points.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. We are grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Sincerely,  
Patricia Hagen, PhD  
Executive Director, Audubon Missouri  
Vice President, National Audubon Society

**Correspondence:** Wow, quite a document. It shows careful and hard work and thought. The study is quite overwhelming to an ordinary citizen such as me, but after devoting as much time to reading it as I could, I have a few comments.

As I see it the ultimate purpose of the Ozark National Scenic Riverways is to protect the river so that people from all over the country can enjoy and appreciate its special, if not unique, features. There is a great paradox, because many of those features, its clear water, natural conditions, including wildlife and fauna, sounds and silence and ability to commune with nature and natural and cultural history are immediately impacted and to an extent degraded by the mere presence of the visitors for whose benefit the river is protected.

The trick is to provide the best experience possible for those visitors with the least impact on the preservation of the river and the quality of the visit. To me this means minimum impact visits as much as possible.

With the above in mind, I find that Alternative A comes closest to ideal. I truly believe in limiting the use of motors and their horsepower as much as possible. Alternative A is outstanding in that respect.

I see the argument that allowing greater reaches available to motors than Alternative A allows conforms to historic practices. I don't agree. I have floated on these rivers since the late 1930's. In the early days the typical river trip was truly a "float." We would ride down the river as the current would take us in a 21' long John Boat. Motors were not a part of it. Why not respect that practice and make the river trips true "floats." Of course the more floaters there are the more interference with the experience of the preserved river, but it is a price that must be paid to open the experience to visitors. But, motors are a different matter. Their noise, speed and even smell interfere with the floaters experience too much and the motors are not necessary

to enjoying the experience of the preserved rivers.

The silence on one hand and sounds of nature on the other are an important part of the rare experience that a visit to the Riverways. Accordingly sounds from motors, cars, radios, etc. should be limited as much as possible. I can remember more than one float when we would be passed by boats with radios blaring or we would pass groups on gravel bars with radios blaring. The result is a huge interference with everyone else's proper enjoyment of benefits that preserving the Riverways are supposed gain.

I agree that there should be no parking of vehicles at visitor created crossings. There should be no vehicles allowed on the gravel bars. There is not reason people can't reach the gravel bars on foot or by boat. The sight of vehicles on the gravel bars greatly diminishes the experience the Riverways is designed to provide.

I am all for closing as many roads as possible and creating new trails.

Rerouting horse trails and closing visitor created trails is a good idea. I also question the addition of mountain bike trails, but could live with them.

I favor a significant improvement in interpretation and more and better visitor centers could be good.

The wilderness preservation proposed in Alternative A is the best.

I served a good many years as a local elected official. I can understand the pressure by local interests and I can understand the political need to compromise, but as I see it all alternatives are compromises, but in general Alternative A is the best for the country as a whole and fits the purposes of the Ozark National Riverways in the most beneficial way.

Thanks for your hard work.

<b>Correspondence:</b>	To whom it may concern:				

Our family of four has visited the park many times. We have taken our girls since they were babies out to canoe on the Current River and hike along the trails. In recent years, we have been saddened to see the degraded condition of a river and landscape that has been overcrowded and poorly managed.

Regardless, the spring-fed Current River is a beautiful float and a wonderful and cold swim even in the middle of summer. That is, if you stay away from the crowds on the weekend. We travel frequently and float other rivers, and even in its current condition, this river and this park rank at the very top of our list. But it needs a solid management plan to continue to be a resource the state of Missouri, and indeed, the nation can be proud of.

The National Park Service should recognize the high quality of the river resource at ONSR. We have reviewed the alternatives, we prefer Alternative B. We hope this time there will be a change to improve conditions at the park and on the river. We want our children, and our children's children to have an opportunity to experience the river as we have for these many years. It is our duty to make comment and commitment to restoring and preserving this national treasure for future generations.

With concern,

Katie Belisle-Iffrig

**Correspondence:** Thank you for considering mountain bike use in your planning.

Well designed mountain bike trail have been shown over and over in Missouri to be sustainable and without adverse environmental impact. The various advocacy groups, including the Gateway Off Road Cyclists have a long history of working with Missouri Conservation and local county park administrations to construct and maintain trails that are open not only to mountain bikes but hikers as well. These partnerships are a model for the community involvement that our parks and conservation areas.

I urge you to consider cycling and mountain biking groups in your planning for access to Scenic Riverways planning, and to give more consideration to mountain biking access.

**Correspondence:** I hope you give strong attention to the mountain bike access.

As former Parks and Recreation Director of Warsaw Mo I can tell you I have seen it at the front lines, how access(opportunities) can change a community.

Our area did not have mountain biking access when I first moved to Warsaw Mo.

A movement started and life started to change. The City planner had a Trails plan, we had ideas and implemented the plan. It was Mountain bike access that gave the first opportunities to cyclist. People are using this system year round. Tourism up, healthier living up. This is covering all ages.

17 year old Warsaw kid is the State champion because of opportunity,

63 year old kid finishes The tour Divide 3100 miles in 31 day he trained in Warsaw.

3 races a year, and home of the 2012 and 2014 Missouri State Championship Race, opportunity.

And now a volunteer movement with the Osage Lakes Greenway Corp.

We need to be able to keep people in touch with nature, because of opportunity I get to have some of my best family times touring Missouri in search out new places to ride.

Warsaw is a great example of good plans, good city council, and opening up the trails to cyclist/ families just invite us and people will come to explore.

Mac

**Correspondence:** No no no!

Do NOT allow people to trample all over our precious pristine wilderness in boats, RVs, horses, whatever. Keep the wilderness wild! It makes me ill to think that what so many of us cherish, others see only as a way to increase the bottom line. NO. Mark my words, I and many others are watching this closely, and those who try to promote this will not be voted for. We already have issues with hiking trails being ruined by mountain bikes. If people want to go into wild places, they need to hike in. If they want to ride rides...then go to Disneyland, and stay out of the

wilderness!

**Correspondence:** The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife ..." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected.

I support the following:

-Strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and year-round provisions for motors on other river portions as proposed in Alternative A.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative A.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

Our wilderness areas are fragile. Once damaged, they are slow to heal. Therefore, I strongly support Alternative A.

Thank-you for considering my comments.

**Correspondence:** As a mountain biker, I implore you add more mountain bike access to our trails in the General Management plan. I am opposed to the no-action option, which effectively shuts out our trail user group on many of our trails in the Ozark National Scenic Riverways.

Mountain biking as a sport as spawned countless trail stewards. We are responsible for the construction and maintenance of many trails that all user groups have enjoyed due to the fact that they are well-built and cared for. Over the years, mountain bikers really do self-police in terms of avoiding damaging trail use and education. We put our blood sweat and tears into creation and maintenance and because of that, mountain bikers really try to minimize their impact in sensitive areas, as we care very deeply about and are incredibly proud of our states beautiful trail system.

Missouri has a large and growing population of mountain bike enthusiasts. The net result of mountain biking in the areas that allow access is an increase in trail quality as well as influx of tourism dollars to local economies.

Thanks for your consideration.

**Correspondence:** Thank you for this opportunity to comment on the Ozark National Scenic Riverways' Draft Management Plan.

I support Alternative A, with the exception of the Wilderness Evaluation/Study Area in which case I support Alternative B.

I have spent a lot of time in the Current/Jacks For area my entire life, in large part because of my family's farm in Dent county which was purchased by my great-great grandfather in 1866, and is currently owned by me.

My family and I spend our time hiking, backpacking, camping, floating, swimming, sight-seeing, studying, fishing, gigging, and simply enjoying the area in mostly low impact ways. We visit different areas many times every year, and whenever we want to show off the best of the Missouri Ozarks to visitors, we take them to ONSR.

We enjoy the developed areas such as Alley Spring and Big Spring as well as the primitive, undeveloped areas. I would have to say that our single favorite developed area is Alley Spring, and our single favorite primitive area is Bee Bluff on the upper Jacks Fork, at the end of the road past Bay Creek campground. Aside from that, the multitude of awesome places on both rivers, and especially the entire length of the upper Jacks Fork from the Prongs down to Bay Creek, make ONSR and the surrounding lands truly the jewel of the Missouri Ozarks.

In summer we try to limit our use to weekdays and harder to reach places. We almost never float in the summer. As a family we enjoy floating mostly in fall and secondly in spring. By myself, I float year-round and have spent some awesome cold and even snowy days on the Jacks Fork. Most of our floating is done as multiple day trips, where we sleep on the gravel bars and for the most part used to have quiet, dark, wilderness-type experiences.

I say "for the most part" because the rivers have become increasingly difficult to tolerate, due to the massive use of 4-wheelers and 4-wheel drive vehicles accessing seemingly EVERYWHERE these days. It is impossible to find gravel bars anymore where there are not tracks from vehicles and illegal roads coming out of the forest at every turn. I have watched 4-wheel drive trucks trying to cross the rivers (both rivers) get bogged down, tear the hell out of the gravel, and churn up the water. I have been camping on the upper Current in October and nearly got ran over by a jeep that came crashing out of the woods, saw me, drove across the river to look for someplace else to camp, and then drove back across the river to presumably move on to find somewhere else. I have been on the upper Current in fall when 3 boats gigged a pool next to my gravel bar campsite for about 45 minutes. The constant noise of the engines, the smell of the gas, and finally the massive halogen lights that were mounted on the boats ruined my night. When I gig at night we use flashlights and are much less intrusive. I have been picnicking with my family at Round Spring and unable to talk because of boats on the river being so loud it sounded more like a race car track than a National Park Service area.

It has become a gamble anymore. I never know if I am going to have a good experience or be subjected to this kind of stuff. I feel about 1 billion times more sure of what is going to happen on the 11 Point or the Buffalo in Arkansas. I would like to see ONSR ran more like these areas, where those of us who truly enjoy the outdoors can do so. I used to float the Jacks Fork right before deer rifle season every year. That used to be a sure bet.....now I don't even know about that. Even there, every year more and more gravel bars show signs of vehicle (illegal) use.

ONSR needs to change. There is room for multiple uses of the rivers and surrounding lands. Alternative A, and Alternative B for the Wilderness Study Area, provide the best chance for positive change, and the best chance for everyone to enjoy the area on their own terms.

I do not advocate for shutting down motorized use on the entire river, but I absolutely think it is fair to have some portions such as the upper Jacks Fork and upper Current closed to motorized use, and by that I mean year-round.

I think horses are great, but they need to be controlled better. There are way too many at once on the rivers, and their makeshift trail network is massive and eroding land terribly. I agree with the NPS approach to handle this as

outlined in both Alt A and B.

All of the illegal roads and illegal accesses should be closed, without question.

Better hiking trails should be developed in cooperation with adjoining landowners.

Easements within ONSR should be much more strictly managed. The building of clubhouses, land clearing, and even dynamiting on these properties has gone so far as to be absurd.

NPS is failing to properly manage, preserve, and interpret the historical and cultural resources of the area and should remedy this. Alt A appears to address this shortcoming.

Better management of natural areas, wild areas, and primitive areas should be of the upmost importance.

If Alternative A is not truly an option, which I know it isn't because there is no way NPS will actually do it, I would at least find Alt B to be a minor improvement from current conditions.

Thank you

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	Thank you for this opportunity to comment on the Ozark National Scenic Riverways Draft Management Plan.				

The Missouri Wilderness Coalition is an informal alliance of individuals and organizations dedicated to protecting the remaining wilderness and wild areas on the public lands in Missouri. We seek the broadest possible partnerships, and focus only on issues that are directly related to the protection of wildness and wilderness.

As an organization with a clearly defined scope, please understand that our comments are limited to the Wilderness Evaluation/Study area near Big Spring; we are not commenting on the overall ONSR Draft Management Plan.

As regards the Wilderness Evaluation/Study area near Big Spring, Missouri Wilderness Coalition (MWC) supports National Park Service (NPS) actions identified under Alternative B.

Alternative B does not significantly change the long-standing backcountry management of the area.

Alternative B does not change public access to the area in any way.

Alternative B does not change or restrict any currently allowed recreational uses of the area.

MWC agrees with the acreage and boundaries identified by the NPS.

The underground utility line found in the area serves no public purpose and MWC supports its removal.

The NPS training range is only open to NPS employees and not the general public, and could be situated elsewhere. MWC supports moving it.

MWC supports private property rights, and we are pleased that no private properties are affected by the Big Spring proposal, nor are any accesses to private property impacted.

MWC supports appropriate access to cemeteries and traditional religious activity sites. There are no such sites within the area.

MWC supports responsible equestrian use, which is currently allowed and would continue under Alternative B.

The study area has been, and will continue to be, a valuable optional use for visitors to the Ozark National Scenic Riverways that expands opportunities for local outfitters and other commercial enterprises.

The study area has and will continue to provide economic benefit to the surrounding area, specifically the town of Van Buren and businesses within Carter County.

1/4

Missouri Wilderness Coalition supports continuing to manage the area just as it has been for nearly a century. It is the logical and scenically attractive complement to the visitor facilities available at the Big Spring park area.

Thank you,

Greg Iffrig

John Karel

Scott Merritt

on behalf of The Missouri Wilderness Coalition

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP)

Dear Superintendent:

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

While aspects of Alternative A have many positive points, I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement. The 'No Action' alternative is highly objectionable because it fails to address the need for better enforcement of existing laws and standards, improved management of increased overcrowding, and to increase communication and partnership with local landowners and communities.

My experience in the Ozark National Scenic Riverways includes fishing, swimming, canoeing, and camping with family and friends on both of the Rivers, and utilizing a family owned home on the Current River above Van Buren. My grandparents and I spent many days on the Current River during my childhood. I support the conservation and preservation functions of the National Park, because I hope that my child and future generations can enjoy the area as it was intended when it became a National Park. The primary areas that we use are: The Current River near Van Buren, and The Jacks Fork.

These issues are important to me because I grew up on the Current River, and have seen a sharp decline over the past decades as human use has heavily impacted the river and the surrounding ecosystem. I fully support increased protection of the area in order to preserve the natural integrity of these systems. As a member of a family that has owned land on the Current River for 3 generations, I have witnessed a steady decline in the ecological integrity of the area, and support protective measures in order to preserve these unique habitats for future generations. I went into the field of Natural Resource protection primarily because of the experiences that I had growing up on the Current River, and I understand that we must take protective measures now to ensure that successive generations can

have the same experiences.

The current strain on the rivers caused by overcrowding, excessive litter, raw human waste, unauthorized horse trails, ATV's, and vehicular traffic is no longer at sustainable levels for these sensitive areas. While I wholeheartedly support responsible enjoyment of the Ozark Riverways, I truly believe that we can no longer continue to overuse the resource and expect it to remain healthy. We have the responsibility to both protect and preserve the quality of the park for our children and future generations.

In addition to the my concern over the health of the ecosystem, I am also troubled that I cannot take my own child out on the parts of the Current River on summer weekends, simply because of the environment created by floaters. It is no longer an place where I can take my son and nephew to go for a swim or catch a few fish from a gravel bar. I have repeatedly had to direct their attention away from obscene language, women showing their bare chests, illegal drug use, etc. I am mortified every time I attempt to introduce a visitor to the river, simply because of the obnoxious crowds that dominate the entire river from bank to bank every weekend. We have had countless incidents with tourists trespassing on our property to utilize it as a toilet, trash can, or bedroom. I do not believe that the intended use of this National Scenic Riverways is what it has now become. I expect that as a citizen and taxpayer, I have the right to enjoy the area with my family. We have had to stop using the area near our property, and have to spend extra time and money to travel below Big Spring where the crowds are fewer. My son cannot enjoy the area where I grew up, simply because of the conditions caused by the floaters there. These visitors do not demonstrate any respect for either the natural resource that they came to enjoy or the other visitors. I realize that recent efforts have been made to curtail this type of behavior, and I support continued efforts by law enforcement to restore a family friendly atmosphere. I do not view proposed regulations as a hindrance to local growth and economies; in fact I feel that it would increase tourism as a result of a more positive environment for everyone to enjoy; not just a small selection of folks who want to use it for partying.

I hope that management of the Riverways will continue to ensure protection and preservation of these unique resources in an ecologically sustainable way for continued enjoyment of the Park by all, both local citizens and the general public. I believe that Alternative B has the best balance of these considerations.

Thank you,

Karel Edgar  
Cape Girardeau, Missouri

**Correspondence:** I reviewed the Draft Management Plan and attended the open house at Powder Valley on January 22, 2014. I commend the National Park Service for a thorough and impartial analysis and presentation. With that said, I feel even more compelled to stand in support of Alternative A. No doubt the NPS feels they must find the common ground to gain public acceptance of the proposed management plan. However, I urge the NPS to take a strong stand and protect this most precious asset. Having visited many of the public lands in MO, including the few Wilderness Areas; I realize there are few areas that can be managed to keep them in a natural state. Now is the opportune time to turn around the ongoing degradation of the Ozark National Scenic Riverways by selecting a management plan that protects the river and land, returning it closer to its natural pristine state for the enjoyment of future generations.

I have floated, camped and hiked the ONSR since it was made a national park in the late 60's. Pushing the canoe through a riffle on the Prongs or backpacking to the Falls of Rocky Creek on the Ozark Trail are times not to be forgotten. I have not yet visited Alaska, but the wide hills and shallows of the Current below Logyard make me think I'm in another state.

I have also backpacked and floated throughout Missouri's Ozarks and National Forests, Missouri's Department of Conservation Areas and many NP's around the US. Although the ONSR is still a preferred park to visit with most of the land owned by the Park, the signs of being loved to death and over used have grown steadily. We no longer consider floating most MO rivers, particularly the ONSR, between Memorial Day and Labor Day; instead preferring the spring and fall to avoid the boisterous party crowds and the busy and expanding accesses with the countless vehicles and car campers. However, the price paid in the off season on the river is the roar and smell of the jet boats. I cannot tell you how many times the giggers have decided the river by our nighttime October campsite must hold the biggest suckers! More subtle intrusions to be seen are the boat wakes, waves and motor pollution. And I imagine the impact to fish and fauna under the water and along the banks may not be so subtle. Other excessive uses I've experienced and noted in the plan are the ever increasing horse traffic, leaving their mark on many a gravel bar and along the banks, and the "expansion" of car camping access points. A gravel bar float camp is out of the question if near an access for fear someone will drive through your campsite.

Like me, I'm sure the park service understands the rights of others to use the river, but I cannot agree everyone can use the river for everything. It may not be as convenient for some, but jet boats, which are permitted on most other float rivers in the state, should be regulated at least to align with Alternative A. Additionally, horseback riding should be limited to a well thought out designated network of trails, while canoe liveries should be limited to numbers where visitors are able to enjoy the ONSR in its true wilderness state. People and businesses have no right to turn the ONSR into a water park.

The Ozark National Scenic Riverways is the only National Park in Missouri with the characteristics and expansiveness of a wilderness. It is truly a national treasure. Given its NP status, a rare opportunity exists to RETURN the PARK close to its natural state. I urge the NPS to take a strong and bold step by adopting Alternative A, thereby protecting the natural resources of the Riverways and the future Big Spring Wilderness.

Thank you for the opportunity to comment.

Regards,

David H. Freeburg Jr.

As a footnote I have one suggestion that may help the general public. Noting the distance or mileage of the major access on the Tables and Charts would provide a better understanding of what percent of the river is being set aside for particular uses. A good example being the actual distance from Montauk to Two Rivers is only 50 miles, while on the tables it looks to be 2/3's of the park.

**Correspondence:** Ozark National Scenic Riverways is the most beautiful river systems I have ever seen. Being able to kayak, canoe, and swim in the clear clean waters of the Jacks Fork and Current River is an amazing opportunity. I have been able to enjoy the river is all four seasons and each is beautiful. From the endangered plants that grow on the rocky cliffs to the protected animals that live in the water and along the banks, the whole ecosystem is incredible. However, this system is threatened by overuse by concessionaires and visitors. I have paddled and camping along many miles of river and far prefer the more remote sections that do not have private homes along the

banks, thousands of folks floating in tubes on summer weekends, and jet boats roaring by. I am in favor of the plan to limit jet boat access, drop jet boat speeds and limit concessionaire access by capping daily usage or limiting take in and take outs. I am also in favor of increased Park Law Enforcement presence on the river to deal with drunk visitors, littering, illegal river access, and fighting.

The National Park Service is tasked with protecting and managing ecosystems for the future enjoyment of visitors to come. I expect Ozark National Scenic Riverways to do just that- manage the Rivers for the health of the whole ecosystem for the enjoyment of future generations.

**Received:** Feb,07,2014 16:53:01  
**Correspondence Type:** Web Form

**Correspondence:** My comments are based on living near the Jacks Fork River near Jam Up Cave in the Greenwood Forest Land Trust. My wife and I spent three years there, but recently moved to Springfield tho still maintain a cabin near the river.

I generally prefer Alternative A, but haven't examined thoroughly Alt. B. My feeling is that the increased protection called for in A is best for the long-term protection of the natural resources of the Riverways. One of the main threats I have seen to the park is ATV and other motorized traffic on or near the streams.

However I believe that the problems w/ ATVs can best be solved in the long term by more education and better law enforcement. I think the rangers do an excellent job and more enforcement should be encouraged.

I support limiting access to the river by vehicles of any kind. I think it's fine to have campgrounds & picnic areas near gravel bars so that local people and visitors can use the gravel bars, but trucks and vehicles should be kept off gravel bars. I think that the number of access points should not be more limited than they are now in general. I think local residents have traditional places which they have used for decades, and I feel it's important to provide access for local folks that does not allow for any vehicles to get into the river or onto gravel bars except for launching boats.

In this regard I hope the NPS can rebuild and slightly expand the access at Buck Hollow/ Highway 17 on the Jacks Fork, it gets a fair amount of local use and needs to accommodate this use.

An official wilderness designation for part of the Big Springs area might be a good idea, but I do not get over that way very often and know little about this proposal. In general I feel the NPS could do more to encourage hiking within the park. More trails might be a good idea.

Also I have read in the local press about use of motors on gigging boats. I feel fish gigging is a fair way to use and enjoy the river, but I think some of kind horsepower limitation would be advisable during the gigging season. I don't really know enough about this issue to comment further.

About boats on the river, I know certain stretches get almost overuse, other streams especially the Jacks Fork, get hardly any use. It would be ideal if commercial outfitters to direct traffic away from heavily used sections of the river during the busiest season. Maybe some limitations of commercial boat access will be necessary in the near future.

I have also read that overuse of certain areas by trail rides is common. I have not witnessed this, but believe that horse use is a great resource for the park that should not be overused.

There are many more issues I could comment on and have earlier in the scoping process several years ago. In general I feel the Park Service is doing a good job managing this park. There could be more done in educating visitors via more interpretative efforts, supporting scientific research in the park, increasing law enforcement, supporting historic and archaeological preservation.

Does the NPS have much support for volunteers groups and individuals in protecting and interpreting the park? I think more public outreach programs are needed to educate folks about issues such as endangered species, local

history, the values of timber to the public, protecting clean water and air. The park can be a real benefit to this part of the Ozarks and encouraging appreciation for its wild and historic qualities will benefit all in the long run. Thank you all for your efforts in planning for the future.

**Correspondence:** A Carter County native in support of Alternative B

First let me say that I have found the process of participating in the General Management Plan very discouraging. I attended the two DGMP meetings in Van Buren and can honestly say I have never been more embarrassed to be from this area or more disappointed in the NPS. While I'm sure there are reasons for an open house format, I found it woefully inadequate in giving me the information I needed to make an informed comment. I also think it is reasonable to assume that very few have the time or inclination to read all 500 pages of the Draft General Management Plan. Surely a presentation or video outlining the different plans would not be that difficult to produce. The most distressing thing though was the free for all and apparent Tea Party rally that occurred the night of the hearing on the wilderness designation for the Big Spring area. Let me assure you that many people from this area do not agree with the politicians that purport to represent our views as how to best manage the ONSR. As is to be expected many are afraid to speak up in the presence of such a misinformed, irreverent mob.

While none of the plans presented address all of my concerns, I have reluctantly chosen to support Alternative B as the most viable of the three. The No Action option as it has been implemented to this point is not viable for the long term survival of these rivers as we know them. Perhaps if the original intent and purpose of the park were adhered to this would not be the case. Though I have been to much of the park the majority of my comments come from observations of the area between Big Spring and Logyard.

I have spent much of my life in the ONSR area, as have many ancestors and family members. My grandfather, John Edgar Sloan was granted a scenic easement just below Beale Landing. My great-uncle, Russell Lesh lost his farm, his life's dream at Powder Mill to the NPS. I have heard much about how the river has changed from my family and others as well as seen it for myself. One thing that I have heard over and over at the DGMP meetings is, We don't want change. But change is exactly what we are seeing with the currently implemented management plan. I have run a boat on the Current River since I was about nine years old (1970). At that time most of the wooden, motorized boats from Van Buren were docked at Watercress Park. I doubt there were more than a dozen at any given time and you knew who owned each one of them. Tubing was something locals did to cool off, and canoes were usually paddled by sportsmen looking to land a nice smallmouth or those there to enjoy the scenery. People were respectful of the river and to each other. It was a great place for family fun. Back then a crayfish could be found under almost any rock, mussels and eels, while not abundant were not unusual to be seen. Suckers were plentiful most of the gigging season and fishermen were able to enjoy their sport in relative peace on almost any part of the river. Unfortunately the river of my childhood is hardly recognizable now on a summer weekend and increasingly at other times of the year too.

To my knowledge the ONSR is the only National Park in the State of Missouri that is actually a wilderness-type park where visitors can float or camp, that should be something to be proud of. Missouri is known as the show-me state, but what is seen here in the Van Buren area, on summer weekends is certainly nothing most Missourians should want to show anyone. I have heard visitors say more than once... Well never come back. and I won't expose my kids to that. I have been fortunate to have visited a number of our wonderful National Parks. I can say without a doubt that I have never been to any other National Park that permits the type of behavior that can be witnessed in the ONSR. If further elaboration is needed to explain this then I am most certainly wasting my time writing these comments.

One does not have to be an ecologist to see what is happening to the river ecosystem too. Ever increasing growth in recreational use of the ONSR, both commercially and private if left unabated will surely lead to its loss of species if not eventual collapse. What happens if the crayfish disappear completely, will the smallmouth and rock bass be far behind? The endangered Ozark hellbender is only a harbinger of what is surely to come.

There are no shortages of places in our area where one can shoot firearms, run boats, ride ATVs, or enjoy other motorized means of recreation. But it IS becoming more difficult to find quiet places of solitude away from cell phones and other contrivances of man. The ONSR does provide opportunities for this, but for how long? An out-of-town friend of mine, headed to visit the river, will say hes coming to go to church. Anyone whos ever seen the night sky from the foot of Paint Rock Bluff or heard a turkey gobbler call out in the morning fog should know what he means. I would find it hard to believe that anyone having had these experiences would not be moved to think that others should be given the opportunity to experience them in solitude as well. No one likes having restrictions put on activities that they are accustomed to. I hope implementation of whatever plan is approved will use an approach that tries to achieve the desired results with as few additional regulations as possible. One controversial aspect of the proposed management plans is the closing of certain river accesses. I believe the result of not closing accesses will be the eventual increase of motorized boat traffic to the point that the NPS will require day permits to launch a boat. As a frequent boater I would hate to see that. But I dislike the thought of having the rest of the river look like the Van Buren gap even more. An example of what should not be done was the addition of the Chilton Creek boat access. Im sure the thinking was that it would alleviate crowding and problems between boaters and floaters. I know many local boaters were in favor of this, and probably thought only locals would use it. There is an old saying, build it and they will come. And that is just what is happening. Boats that used to run from Van Buren to Paint Rock are now going from Chilton Creek to Logyard. These are not just local people either. This stretch of the river used to be one of the quietest you could find, and regulation wasnt required to achieve it. That is changing. My guess is that the boaters who no longer run the gap have already been replaced by others, and if not, it wont be long. So what was gained? ... Another soon to be overcrowded stretch of river.

The rest of my comments will be directed at addressing the positions of the majority of my elected representatives and those who seem to feel that the main purpose of the NPS is to provide for economic opportunity.

The stated purpose of the ONSR as enacted by congress:

& conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resource thereof by the people of the United States &

Nowhere does it say that economic development/business opportunities is part of that stated purpose.

Certainly money brought into our area by visitors to the park has become an important aspect of the ONSR in relation to our local economies.

But is it the most important aspect?

Maybe our representatives should ask their constituents these questions:

Do you live in this area because of economic opportunities created by tourism?

Would you like to see our area developed into another Branson?

Do you think we are currently headed in the right direction regarding the use/management of our rivers?

Whether or not anyone agrees with my assessment of the current state of the ONSR or what changes might need to be made, Im pretty sure that I am not in the minority in saying, We are not headed in the right direction, and that most dont live in the area for its well paying tourism jobs. It is an affront to the all of those and their families who gave up or had their lands taken to form this park to continue to see it used in a manner that benefits a few who care little for the river environment or the heritage of those who live here. In recent years our rivers have gained a reputation as a party spot where anything goes. From my observations this is well deserved. People of this area are selling themselves and our rivers short in respect to the economic potential of the ONSR. These rivers deserve better and are far more valuable in being kept in a pristine state that encourages conservation and visitors seeking a family friendly atmosphere. A key to preserving our rivers is to encourage a better type of visitor, one who respects the river, others, and whose primary budget concerns are not related to alcohol. Some things should not be about making money. The Ozark National Scenic Riverways most certainly is one of them.

Should Alternative B not be chosen, the NPS should respect the stated purpose for which this park was created and fully enforce the existing General Management Plan of 1984.

Thank you to whoever has taken the time to read these comments.

**Correspondence:** (Forgive me for accidentally submitting a comment before I was finished. Consider this the continuation of my previous comment)

As I said, I have seen the many recreational uses in this park, and so many of them have undeniable negative impacts on the health of the river. One thing that I have NOT seen is an Ozark Hellbender, a candidate species for the Endangered Species Act. I realize they are rather elusive animals, but my friends and neighbors who grew up here, tell me "I used to see them years ago, before it got so busy here." I am very worried that NPS is not managing this rare resource (an undammed river in an extremely valuable watershed!) for its natural health. Is it so hard to understand the part of the NPS Mission statement that says "preserving unimpaired the natural and cultural resources" that ONSR Management can easily overlook the perils of human and horse wastes, and the causes of erosion/sedimentation, which is the number one threat to these riverways?

I believe that Managers of ONSR have turned a blind eye to their responsibilities of maintaining this resource for many years. I believe they have kowtowed to state and local politicians, as well as greedy concessionaires for too many years; years that have left this river in worse shape than it was, and ever-worsening shape as years pass.

Which is why I fully support Alternative A.

To the powers that be, to those of you compiling comments and helping make this decision for the National Park Service: Please remember that almost everywhere else in this country, commerce and industry win battles against nature on a daily basis. You can take this opportunity to defend our natural resources. NPS has many park units across the country, but protects a relatively tiny portion of US land, inside which reside some of our country's finest natural treasures. Once these treasures are degraded by poor management decisions, they will never be the same for future generations of people or the rest of the natural world. Please, do the RIGHT THING.

**Correspondence:** My husband and I are local residents from Eminence. We have lived elsewhere and have moved back, and during our time away had plenty of time to see and visit streams and rivers that were bordered with private property. They are dirty and unattractive, because each individual resident can dictate what type of junk they choose to build, park, or dump on their property.

We are in support of NPS management of ONSR because it is abundantly clear that private citizens left unregulated are not the best "stewards" of the land, no matter how many Facebook pages they create bestowing themselves with this title. If you look at other local residents' Facebook pages you will find pictures of rowdy behavior on the river being participated in by locals, large 4-wheel drive rides with proud pictures of "slides" caused by 4-wheel drives on public land, pictures of masses of trailers and vehicles clogging gravel bars, etc. Any private land in the gaps of NPS management shows precisely the care and "preservation" that is given to land that is unregulated. In addition, as a year-round local resident it is very apparent upon traveling any "back road" during the "off-season" that the beer cans littering these areas were not left by the "tourists" from the summer before. In fact, most of these back roads are never even known to our summer visitors, yet are frequented by the many local "stewards" who are now so loudly crying about their abilities to be the best managers of the resources in the area. Left unchecked and without government regulation by the FEDERAL government, these special resources would eventually be diminished to the point that they are no longer national treasures or even state treasures. The tourists who spend millions of dollars would be less drawn to visit here, and the local economies would indeed be impacted negatively. The state does not have the money to manage ONSR. The state parks seem to barely be able to function in the "black". The Missouri Department of Conservation is not an agency that even has a compatible mission to preserve the wonderful cultural

resources that are a huge part of this national park.

We are in support of Alt. B with a couple of modifications. Even though we do not use the upper Jacks Fork or Current personally with our jet boat, we know that those areas are near and dear to the hearts of many, particularly during the gigging season. This is a cultural activity that has a strong tradition in all the communities surrounding ONSR. I feel that it would be a very wise compromise, in the interest of local good will, to make a modification to the preferred alternative that would allow the use of jet boats in those areas during the off-season, either full time or at least with a range of hours daily that allow for gigging and trapping. It doesn't seem that jet boats would have much conflict with nonmotorized users during these times, and making that concession would go a long way toward easing local tensions and animosity at the NPS. We feel the NPS has a very challenging mission to carry out, but it will become very difficult for NPS relations with the local residents if there isn't some adjustment on the point in particular. We want the NPS to be able to successfully manage this area that we love and feel that having a better relationship with locals could be a huge advantage in achieving a successful mission.

We agree that unauthorized roads should not be tolerated. Thirty years ago, every local resident didn't have an ATV or a UTV (or 2 or 3 of them) that they could use to take themselves right up to water's edge and across it, or to blaze new trails so they don't have to physically walk anywhere on God's green earth. These vehicles are useful and have a purpose, but that is not to travel unchecked down any new trail they can blaze across NPS land (or MDC land or Pioneer Forest). A small unauthorized ATV trail will eventually become a full-blown 4WD road. And contrary to popular "reaching for straws" tactics by some locals, every old road bed does not end at a historic family cemetery and most were not the original trails of the Native Americans and early Europeans, and therefore not culturally and historically significant "routes of travel" that have to be preserved.

We completely support the removal of the "unlimited" horsepower zone on the lower Current. We feel unlimited horsepower could eventually be a very dangerous thing as boat motors get larger.

We also fully support "reining" in the length of unauthorized horse trails in the park, and establishing another network of authorized trails. Well-managed horse trails could draw additional recreational users and be a big economic boost for the local communities, such as the impact of the trail riders that visit Cross Country Trail Ride in Eminence.

Even though the numbers of non-motorized crafts are not addressed in this plan, we do hope the NPS will look at re-evaluating the limits on these in some areas that have become very congested. The concessioner in the Van Buren area should not be able to dump unlimited numbers of tubes into the river on any given weekend. These hordes of tubes could be a safety hazard for jet boats and other users, as they clog the river and flail about like rudderless boats.

Thank you for the opportunity to comment.

**Correspondence:** To Whom It May Concern,

My name is Rebekah (Hampton) Embree, and I have been going with my family to the Current River, every summer, for as long as I can remember. As we drove over and got closer to the gravel road, which turned off of the black top, we would recite a special saying that my dad did when he was young. We still say it to this day. We always looked for the leaning tree and the gravel road that followed to tell us we were almost in paradise! We could not wait to get to the Cardeourea Campground, meet our other family members, get our campsites set, put the boat in the water, and settle in for the next two weeks. During our days, we would get up, put our swimsuits on, because it was too hot to wear anything else, make sugar bears around the campfire, rub on our SPF and hit the water! My daddy, Dale Hampton, taught me how to bait a hook, drop a line, set the hook, and pull in a keeper! We had a special chant for when we would catch a nice keeper bass! When we got too hot fishing, we would jump in and float for a while. I always enjoyed watching my mom and dad watching out for the canoers, or helping them find their way if they weren't sure how much further their float had till they made it to Log Yard, Two Rivers, Powder Mill, Van Buren, etc. My favorite was when we would motor up past Blue Springs and float back by trolling and fishing. This would take about all day, and if I asked, dad would pull over to let me walk up to Blue Springs to see its amazing features. I always thought that I could see the bottom when I looked in! Through the years, I have seen several of my family members get married at Blue Springs and the lasting memories are beautiful!

After returning back to our camp for the evening, we would stay down by the water as long as there was daylight, because camp was always too hot, until after the sun went behind the bluffs.

Then came my favorite part of our time at the river, and still is till this very day. My dad would cook up the days catch, and if we were lucky, the eggs that might have still been in some, of which my brother and I always fought over. After we had ate all the fish we could possibly eat, the friends and extended family would start rolling in, because they knew it was about time for the annual, nightly, log yard jam session, which was provided by my dad, my brothers, my grandpa, my uncle, my cousins, and many others that have become known simply as "Friends Pickin". They would set up in a big circle around the campfire and take turns singing songs about memories of favorite past times. We would play and sing till most everyone was gone, and we still do. It is the memory that I cherish and hold onto each and every year as we get ready to leave our favorite vacation spot, that gets me through to the next summer.

We do this same routine for the next 10 days or so, and it is the best vacation that I can still always remember above anything else. Some people are all about cruises, going to the Bahamas, Jamaica, Mexico, or even Florida, but for me, it will always be Cardeourea Campground on the Current River!

I have seen a lot of my family and friends come and go through the years to our annual camp outs, but as long as we still come together, we know their presence is still with us.

I met and fell in love with Wes Embree, and we got married in October 2012. I knew before we were married, I had to see if he could appreciate the same joy I did for our annual summer camp out. He, being a northern Missouri boy, grew up on the Mark Twain Lake, so it didn't take him any time to fall in love with the Current River the same way I had all those years ago when my family first started taking me. We have been together for over three years now, and married for almost two, and he has came every year to our annual family camp out. We can't wait to start a family of our own, buy a boat and camper, and begin our own family traditions of coming to be with those we love on the River.

Now, I said all of that to give you a detailed description of what my favorite summer time vacation has been, since I was a small child, and for what has continued to be throughout my teen and young adult years. I can only hope and pray that it will be a future option for my children to enjoy as I always have.

Did I comment with technical terms, and sections of the plan that I read, no! I thought I would take the more heartfelt approach and speak to you about my experiences with Current River and that if you take the chance to keep experiencing these things away, what a huge void you would be creating not only in my life, my family's life, but countless others who call this place a little glimpse of heaven on earth.

We have always and forever will continue to abide by all hunting and fishing regulations, and have always treated the Park land with respect. We always clean up after ourselves once our time on the gravel bar is done, which I can only imagine how much worse it will feel, this year, if we can no longer come and enjoy as we have always done.

Please take these things into consideration as you are making your final decisions on this plan. Do not make the decision to take the memories I have made, and stop them here, but rather let me keep making memories that will last a lifetime. Please decide to do the right thing by making no changes to the laws that are already in place for the Park.

Thank You For Your Time and Consideration.

Rebekah Embree,  
Concerned Citizen

**Correspondence:** The past few weeks it seems that each time I pick up a St. Louis Post Dispatch or check out the internet I run across an article that has to do with the Ozark National Scenic Riverways. One I read told how the Jacksfork and Current River got turned into a National Park. Seemed to be political. But that is all history. We are now to the point where it is down to the environmentalist and the local community. Many of the local community are environmentalist also. We want to keep the river and surroundings in good condition so that many generations to come may enjoy it also. Some may like to motor and fish instead of float and fish. Both like to camp along the river, some in tents, some in campers, and some under the stars. Can we not just get along. According to plan B some areas will be changed. It is said that roads into the river will be cut out. Camping areas reduced. My husband named off 5 areas that are no longer available for camping because the roads have not been kept up or closed off. Motor size is also an issue, this was changed already in previous years. I think you can see where I'm going. If the National Park Service continues to cut back these things then we won't have access at all. I'm wondering if the environmentalist have thought about how they will get into the area to float if there are no roads to unload and pickup. I hope you will consider the local people, we really do care about the Current River and its surrounding area. Our family has been camping at Log Yard for 35 years, plus our parents and grandparents before have enjoyed the Current River. I hope you will limit the changes so we can continue to enjoy the Ozark National Scenic Way that we call Current River for many generations.

**Correspondence Type:** Web Form  
**Correspondence:** I support Plan B. It is a fair and reasonable approach to protecting our national treasure while keeping it open to local residents and visitors from other parts of Missouri, the nation, and the world.

I grew up in Pike County, Missouri, and family float trips were memorable day trips for us. They were major summer outings for us. We couldn't afford cross-country vacations, but we could go to the river. My husband grew up in St. Louis, and he also has fond memories of floating the rivers. We look forward to taking our young sons this summer for the first time.

Unfortunately, where I live in St. Louis, my 7 and 11 year old sons cannot play in the local creeks the way people who are their grandfather's age could when they were boys. The creeks are polluted due to poor urban planning and residents like myself who were uninformed about what was slowly happening over time.

I understand the importance of preserving these sacred lands and waters. We must be vigilant and forward thinking for future generations. We must think of our kinship to the larger community of people and other living things on this planet.

Thank you for considering my comments. I trust you will do what is best for the Ozark National Scenic Riverways.

**Correspondence:** To Whom it may concern,

My name is Wes Embree and I have been camping, fishing, and swimming on the Current river since the summer of 2011. I started going there the year my wife and I started dating along with her family and I have enjoyed every minute of it. It is a place you can go to have fun or just to relax. It has been a family tradition for her extended family to camp together for many years. It is nice to be able to take in the beautiful scenery while fishing or taking a boat ride on the river. It is refreshing to go for a swim in the cool spring fed water on a hot summer day. We always try to leave the river and gravel bars in as good or better shape than we found them. We always throw away our trash and keep the camp site area picked up. It would truly be a shame to no longer be able to camp at the Cardeourea campground. I feel that the laws and regulations for the Ozark scenic riverway should stay the same as they have been in the past and not be changed. It would be pointless to have the resources of the riverway and not let people enjoy them. I know that there would be many people who would be extremely sad and upset if they were no longer able to camp and fish on the river. That includes my family and I. I want my children to be able to grow up and experience summers at the river. It would also impact the local economy with lost tourism money. A lot of these smaller communities need all the help they can get for businesses to be able to stay alive. In conclusion I would just like to say that I hope you leave the laws the same as they have been in the past so that many generations to come can enjoy the riverway. Thank you for your time and consideration.

**Correspondence:** I have always felt that by making the Jacks Fork and Current Rivers into a federal park riverways our rivers were saved for all. Unpleasant things which were happening to other Missouri rivers whose banks were privately owned was not happening to our two rivers. However, I favor no more harsh government regulations be put on the riverway system at this time as it takes away my right as a U.S. citizen to enjoy the rivers. I thought that in 1965, when this act went into play, all people were going to be able to enjoy the rivers not just a select few.

First, we enjoy taking a day to ride, going on country roads to and along the river I don't want to walk or bicycle and my husband can't do either. Thus, if the roads are shut off, we are left out in the cold as far as being able to enjoy the river. This doesn't seem fair when it was designated for all people. Why can't the road problems be worked out in a different fashion instead of shutting them all down.

Secondly, we like to camp along the river and have done so for many years. We pay our camp fee and always leave the camp better than we found it. What is the point in shutting these places down?

Thirdly, we like to take our boat to the river. We go overboard to be courteous to other floaters. I would like to see no more regulations put on boats and moters than we have. Remember- -These rivers should be for all to enjoy.

**Correspondence:** I favor Alternative A first and B second. I feel the wilderness experience is best served by

protecting the rivers and watershed from noise and introduced animal pollution.

If it is determined that Alternative A is too restrictive, Alternative B does strike something of a balance between preservation and development and would be acceptable.

I'd like to point out that Representative Jason Smith does not represent all the people of Missouri. The rivers "belong" to ALL the people of Missouri, as well as the United States, not just to residents of Eminence, Van Buren and Salem. His suggestion to relegate control of the ONSR to the state is ridiculous and should be ignored.

To do nothing and allow unrestricted use of the rivers is out of the question.

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors. I mountain bike within several state parks in Missouri and can personally vouch for their pristine condition and impact. Horseback riding has a much more significant impact on natural lands and has been supported for decades in national parks.

As a resident of Missouri, and a user of our national park system throughout the country, it is great to be able to access and experience our natural environment. Because a mountain bike promotes personal health and is friendly to the environment, I can't think of a more sustainable way to marry the two together.

**Correspondence:** I support alternative A as the management practice best suited for maintaining the Ozark Scenic riverways now and in the future. Though I live far from the Ozarks, I've made it a point to make my way to their waterways several times a year for the past 10 years or so. The natural beauty of the rivers in the ozarks is unparalleled in the midwest and is a national treasure. Recently its become a challenge to continue these trips due to the overuse of the rivers for weekend recreational activity. The rivers are overloaded with drunk floaters and giant rafts block the canoes from properly travelling the waterways. Beer cans and other trash litter the river bottoms and banks. Continued overuse will destroy this incredible natural resource for future generations. I feel alternative A is best suited to protecting the rivers so that future generations can enjoy them as much as I've been able to.

**Correspondence:** Dear Mr.Black

I appreciate the opportunity to contact you, and thank you for the CD.

My parents are Orlan and Imogene Hardgrave, We own one of the cabins located at the Log yard gravel bar.

As you may know we have been there since the establishment of the Ozark National Scenic Riverways and have seen many changes in and around the park.

We have enjoyed the river and it's surroundings throughout that time,however

there are a couple of things that have become an issue that I feel must be addressed. First,I know we are located in a very high use area, but we really don't like people using what we consider to be our front yard as a toilet.

During the summer months we cannot walk down the bank from our yard to the gravel bar with out walking past the smell and seeing where someone has, or on occasion is relieving themselves. We have unfortunately witnessed this more than once, from our front porch. A "no camping here" sign might be too much to ask for but,it couldn't hurt.

Second,again it is an high use area. The vigorous enforcement of quiet time regulations would be greatly appreciated. We sorely miss hearing the sounds of the river(Owls,whippoorwills,frogs,) at night. A droning generator is so annoying,especially when it's 90ft. from your front door. I know with the lack of funds and personnel this is tough. "maybe a sign"

There is an erosion problem we would like to discuss further with you,at your convenience. These are our most concerning issues.

I have no problem with the powerboats other than the overwhelming numbers of them on the river. I don't think horsepower is as big a problem,(although no doubt it could be) as the jetpump itself. Running in the shallow water over shoals has to be devastating to the food chain. And bank degradation from the convoys of boaters on the weekends is quite noticeable. I also run a 25hp jet but try to stay in deeper water,and don't run with the pack.

Again I thank your time, and would like to make an appointment to meet with you in the near future. I have looked over and red through the options proposed and tend to agree that plan B is the best alternative.

I do not envy you. Management of such a huge resource is a daunting task.

I look forward to meeting you. Good luck.

Sincerely,

Roy Hardgrave

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways.

I also strongly support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible. I suffered a crash several years ago because there was not a bike lane or paved shoulder and I had a traumatic brain injury and lost my job as a result. So, the safer rods can be made the better.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

**Correspondence:**

I grew up in Missouri and have spent many magical days and nights on these waterways and the surrounding hills. I would like to see these lands and waterways preserved and managed in a way which will allow my grandchildren to experience them as I have! I enjoyed camping, canoeing, fishing and swimming with my parents and brother and sisters, and, as I grew, with friends and then with my own family. The giant flotillas of rowdy and drunk floaters was not a problem when I was a child, but when I brought my family for a weekend camp and canoe trip, the crowds on the river were loud and disrespectful of others, and of the river and land. I have had the best times on the Riverways when I have been able to come for a stay during the week - it is much more serene! I support Alternative B, with the additional recommendations of the Friends of Ozark Riverways and the Missouri Coalition for the Environment. I feel it wisest to implement a balanced approach, and if we are to err, let us err on the side of "over protecting" these resources for future generations!

Thank you,

Pamela Martinez

**Correspondence:** I have lived in Carter County all my life. Growing up, my parents took us to the river all the time- fishing , swimming, and boating. My family was big on gigging and cook-outs. My husband and I raised our kids on the river doing the same things-swimming,boating,camping,gigging,cook-outs with friends.

Comment on the Wilderness Area Designation: I am against the proposed designation of the Big Spring Wilderness Area. The designation will not change how that area is currently being managed with the exception that the fire division will no longer be able to complete control burns. If the area was ever opened to hunting, the law enforcement rangers would have no methods of patrolling the area for violations, other than on foot.

Comment on Horsepower Proposed Restrictions: I am against the proposed changes to Alternative B regarding HP limits. My suggestions and comments are a combination from Alternative B & C.

Alternate B proposed "no motor" zones on the Upper Current and Upper Jacks Fork Rivers. There are no environmental studies that show impact to these sections of the rivers and there are no documented user conflicts on file. During the summer when canoes and tubes are floating these stretches of the river, the water level is too low for boats to operate. these sections of the rivers self regulate themselves. So what the park is really doing is preventing locals from using the river during the off season, when there are no tourists present. Individuals who live in this immediate area and use the river would not be able to hunt, fish or boat during the off season. It seems the park is attempting to restrict boats from these sections of river with no valid reason or justification. These sections should remain the same as in the No Action Alternate.

The mixed seasonal zones that are on the chart show dates from March 15 - Labor Day as a no motor season. The current seasonal zones are from May 15 - Sept. 15. What is the justification for making the no motor season two months shorter? Is there that many tourists floating the river in March and April? I don't see many canoes and tubes on the river at that time. Those seasonal dates should remain from May 15 - Sept. 15. It's confusing to the public to constantly change regulations. I would keep the same seasonal zones that are already in effect in the No Action Alternative.

The plan proposes for 60/40 HP in the unlimited HP section from Big Spring to Gooseneck (southern park boundary). This is the stretch of the river that I spend almost 80% of my time boating on. I do think that there should be a limit on HP in this section, however, not the 60/40. There should be a section or zone of river open to boat operators who have larger size motors and fish on lakes. A limit of 150 HP would be sufficient. Motors with 300 HP have no place on the river of this size. I would be in favor of limiting the HP size to 150.

I am in favor of opening the 1/2 mile stretch of river between Van Buren and Big Spring to the same HP size limit that is implemented below Big Spring. Closing that stretch created numerous parking problems at Big Spring and made it impossible for those who use larger motors in bass tournaments to fish that section of the river. If it was opened, those owning the larger sized motors could launch at Van Buren and motor downstream. This option was proposed in Alternative C.

Comments on Horse Use: I think the Lower Current section of Current River should have at least one designated horse trail for those who live in this immediate area. The middle section has 23 designated trails and it's proposed for the upper section to have 25. I think at least one trail around the Van Buren area would be appropriate and fair.

We who live in this part of the state pay higher taxes to compensate for all the land owned by government. Most of our jobs also pay on the lower scale of wages. We choose to live here because we love the river and the opportunities we have to teach our children how to enjoy the outdoors and nature. As the taxpayers for this area we feel we should have a big input in the rules and regulations for this park that pertains to us. Quite frankly, I don't feel that groups, such as the Sierra Club, should decide that boats should be kept off the river because it interferes with the tourist that wants to float on a tube or canoe. Let them make opinions that effect their own area. Tourism is an important income for a lot of the business's here during the summer, but we like to feel that the river is ours to use the rest of the year. As a rule, the locals are courteous to others on the river, while a lot of the tourists act rude and obnoxious. That's just a gripe of mine that I wanted to share with you.

Thank you for reading the comments I have made and I hope they will be considered in the final decision.

**Correspondence:** It is with disdain and distrust for the management by the National Park Service of the Ozark National Scenic Riverways. It is apparent the bureaucracy and red-tape, the streamlining of budgets from conservatives and the increase of overly-protective environmental practices and policies have caused the National Park Service to truly lose sight of their job at hand. This job, this purpose, more so, the reason for the existence of the National Park Service was not to make every Federally owned property a cookie cutter project. Same management, same policies, same companies to manage and profit from government services. It is shameful the task presented to the National Park Service has been so grievously handled, specifically in the case of the Ozark National Scenic Riverways.

It is not through the entitlement of the rich, the powerful, those with resources, that this park should provide management strategies pandering to groups with little real interest in the stakes of the what really happens to the area in and around the Current and Jacks Fork Rivers. It is also because of the investments of many of those people that our area encounters the pollution which degrades the Hellbender, not because of standards and practices handled within nor near the riverways. It is gravel, that is choking the fish and water habitat that our people have used as a livelihood, both through tourism and for food at the dinner table, this gravel is not because of roads we use to access the rivers. This is a cyclical process which should be managed.

The key word here is managed. It is not the duty of the Federal government to shut off access to make it easy to manage fewer acres and fewer people so that it costs less money to operate. It is not the purpose of the National Park Service to make everything a wilderness area.

Each property was established with a certain credo, manifesto, if you will. A belief about why it should be managed by the government and what gains should come of this. Each set of founding documents, each proof of federal regulations in the CFR, every legislative action about a federally established National Park Service managed property does not contain the collective memory, the idea for what should truly guide the park service to properly manage the resource. Nor do the selective memories of those with purely preservationist sentiment, purely economic sentiment, nor purely recreational sentiment, nor those with any sort of purely selfish sentiment contain what it takes to properly manage the Ozark National Scenic Riverways.

Apparently, nor does the National Park Service administration in Washington, D.C., Omaha, Denver, nor Van Buren who were involved in drafting the present set of General Management Plan Alternatives. The elitist, preservationist lingo slanted with college rhetoric of urban and park planning listed in the General Management Plan Alternatives are purely sickening to those who were involved in the founding, the establishment of, and the true protection of the resources, both natural and recreational, contained within the Ozark National Scenic Riverways.

This is why the General Management Plan Drafting process for the Ozark National Scenic Riverways should halt. It is apparent the displacement and destruction of a people and of a culture is at the heart of those wishing to close off access to this region's recreationists.

The National Park Service is designed to be the "middle-man" in the process of managing the Ozark National Scenic Riverways. But it is not possible to do this without collective memory, continual reflection on founding purposes, nor without the guidance of people who are actually involved and hold a real concern for this matter.

The Park Service Superintendents, since Art Sullivan, have been transplants for a few years, designed to allow further trespass against the culture and practices through the use of falsehoods and misinformation citing environmental damage and degradation. This, too, should be curtailed.

The lack of real understanding among certain segments of the administration of the National Park Service is evident. There are no, or very few, local employees at the Van Buren office in the higher positions. The people who manage our lands are not truly interested in what is best for the land and for it's visitors. The management has moved away from real life, day to day management, and shifted to the management of guidelines, regulations, citations, and fines.

Regulations and rules are necessary for any society to prosper, for any National Park Service managed land and waterways to prosper, for any individual to perform well within our society, but it is also necessary for a group to know when to reform to prevent a loss of freedom, heritage, and culture, and cause a real obliteration of natural resources. The current management of this ONSR will not be sustainable. Nor will the plans as presented be sustainable.

It is time for reform. It is time to limit not the people who visit, but to truly understand what the real issues are.

This calls for a management commission, an oversight committee, and an advisory board to be established. If the officials of the National Park Service are desiring to comply with government cutbacks, this would be a first and foremost step to curtail a waste of government funds and employee and public time. The commission should be established exactly like it was in the founding legislation, but given more power to direct management policies. This commission should review data and information just as a legislative body would receive testimony and data when making recommendations.

This Ozark National Scenic Riverways needs to be protected, but not from those that wish the gravel to choke up the springs, the trash to lay because no one can access the streams, and the place to be untouchable. In that case, it would have been better to have a lake here. Then you could not tease the people with beautiful resources and continually limit the safe and secure access and access points and use activities that do no environmental damage to the resources.

It is apparent the behemoth of an government organization such as the National Park Service plans to go over the sentiment of the locals, regionals, people who actually use the resources and our local, regional, and state elected officials like a steamroller. Something different must be done. It must be done now. It must be stopped.

If this will not happen internally from the National Park Service, recognizing mistakes, from all our state and federally elected officials, regardless of party affiliation, nor from the people who really are involved in this area, then all hope is lost. Access to this resource should be limited, but by a lake rather than by the limitation guided by the misinformation and distorted pieces of opinion.

This last day of the comment period, this sad, sad day, should be marked by something more than just goodbye to our beautiful roads, our spectacular jet boat trips, amazing horseback riding adventures, traditional hunting experiences, our fishing floats, and other activities. It should be marked by a movement of the people to make the government and the park service do our bidding. It is Our resource. They say it is everyone's, yes. But it was ours first, and it was because we took care of our land and waterways that the ONSR was created.

This should be stopped, not just for my father's sake so he can visit his old homeplace, not just so the tourist can have a good experience here, not just because we don't want to be starved out and forced to move, not just because we deserve a say in this management where we have more stake in this matter than others, but for the sake of the future of the ONSR and for the sake of our children and their future. The Current and Jacks Fork Rivers should not be a picture they look at on their desk from their grandparents' canoe trips on the river where no one can visit and experience- -it should be an experience now and forever. An experience of the freedom from the confines of the urban area, a connection with the experiences with the rivers and bluffs, and an experience one can have at any time they so choose.

So now, the choice is yours, do you destroy a culture, a heritage, history for the sake of misinformed and misguided preservation, or do you listen to the real stakeholders of the situation? So far you have ignored us. Hopefully that stops today.

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways. I also support improving roads and adding shoulders to roads in the area to improve access for road bicycling where possible.

I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways.

Mountain biking has a low environmental impact. Creating mountain biking opportunities in the area will help make the park more appealing to visitors.

Local mountain biking groups are an integral part of building and maintaining sustainable multi-use trails.

**Correspondence:** Gravel bar camping is one of the oldest traditions in Missouri. Management of the scenic rivers should allow this tradition to continue. Camping on gravel bars is low impact, much more so than developing camp sites. Further, requiring canoers to camp in improved sites eliminates the wilderness experience of the scenic riverways.

**Correspondence:** If the Park Service chooses the Alternative B (NPS Preferred) and closes 20 access points it will negatively affect the economy of the surrounding communities. Closing access points will harm the surrounding canoe rentals, motels, convenience stores, restaurants, and all other local businesses. The plan does not go into detail and say what 20 access points will be closed. This means that the Park Service will close any access points that they feel like. The Park Service has already shown the local communities that the extreme environmentalists like the sierra club, Missouri Coalition for the environment, etc. are more important than the local economies. For example if the Park Service chooses to close Williams Landing and/or Jerktail Landing it will completely ruin the upper Current River between Round Springs and Two Rivers for canoeist, tubers, motor boaters, kayakers, and any other

type of vessel. Without these access points there is no place to launch any type of vessel on the stretch of Current River between Round Springs and Two Rivers. Anyone with any sort of knowledge about economics knows that the closing of access points along the Jacks Fork and Current River will hurt the local economies. In fact there is a section in the Alternative B plan that states the economies of the area will be affected. You and I both know that it will not be in a positive way. When you take the rights away from both the locals who live along these rivers as well as the visitors that come and spend money in the area what are you really trying to do except harm everyone involved? Furthermore, people that are handicapped will not be able to access the Jacks Fork and Current River in the same stretches of river like someone that can physically motor boat or float extreme long distances. Now I know you might be thinking that you cannot make everyone happy, but does the Park Service want to be legally responsible for preventing disabled people from enjoying what is supposed to be a National Park available to all citizens of the United States. **THINK ABOUT THAT FOR A MINUTE!** I think this could get some attention because I believe we have a lot of disabled veterans who will fight for their right to enjoy these two magnificent rivers like any other human being.

**Correspondence:** If the Park Service chooses the Alternative B (NPS Preferred) and closes 65 miles of horse trails it will negatively affect the economy of the surrounding communities. The horse trails around these surrounding towns bring outside money into the communities. The Park Service does not show a map of the 65 miles of horse trails that they want to close, so how would anyone make an informed decision on whether or not this is a good plan. Oh yeah let me answer that we do not trust the Park Service and will not go along with any plan that does not spell out actually what is going to take place. People come and ride their horses during trail rides as well as several other times of during the year. Now you do not have to be an economist to realize that when you close a large amount of horse trails like 65 miles it is going to upset anyone who used those 65 miles of horse trails. Now you might make the argument that the horseback riders will still come back. However, I completely disagree when you take the horseback riders rights away to ride on the trails that they have ridden on for generations and become family traditions, they will find another place to start new family traditions. Just look at it like this, horse trails in the ONSR are not the only trails in Missouri or the United States. Many people will simply stop coming and therefore stop spending their money in the local economies **AND YOU GUESSED IT MAJORLY HURT THE LOCAL COMMUNITIES.** I would like to think the Park Service cares about the local communities since part of the mission is to preserve the cultural resources and traditions of the area. Do I need to remind you that part of the cultural tradition is horseback riding? Another point is that not only do visitors ride those 65 miles of horse trails, but the locals ride them as well. The local people have ridden these horse trails for generations and it is a cultural and family tradition of many people that live in the local area. May I remind you the part of the Park Service mission is to preserve the cultural resources and traditions. You are again violating your own mission. **DOES THIS MAKE ANY SENSE BECAUSE IT DOES NOT TO ME!!**

**Correspondence:** William Black  
Superintendent  
Ozark National Scenic Riverways  
P.O.Box 490  
Van Buren, MO 63965

February 6, 2014

Dear Superintendent Black,

On behalf of our more than 800,000 members and supporters, the National Parks Conservation Association (NPCA) submits these comments on the Ozark National Scenic Riverways (ONSR) Draft General Management Plan (GMP) and Environmental Impact Statement (EIS).

The decisions made in this GMP are critical to the long-term health of the Ozark National Scenic Riverways. It is

not a stretch to call this a national park in peril. Since 1984, the year the last General Management Plan was completed, lax National Park Service (NPS) management of natural resources and enforcement of laws and regulations, combined with a drastic increase in recreational use on the rivers has caused highly degraded water and destruction of plant life and wildlife habitat.

Congress valued our treasured lands enough to create the National Park Service to manage the national parks on behalf of the American people. When the Organic Act passed in 1916 - legislation that was championed by a Republican from Utah and an Independent from California - the NPS became responsible for conserving the "scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." (emphasis added) This Act clearly points out the responsibility of the National Park Service to conserve the natural resources and maintain balance of conservation with recreation in our national parks.

A series of bills to designate the Riverways were introduced in the early 1960s, but Congressional differences of opinion about the way the rivers should be managed led to the bills' defeat. A united Missouri congressional delegation rewrote the bill with provisions for hunting and fishing, and property owner rights and the bill to establish the Ozark National Scenic Riverways passed. The park's enabling legislation reflects a mandate for balance of preservation and recreation: "...preservation of portions of the Current River and the Jacks Fork Riverâ€preservation of springs and cavesâ€and provisions for use and enjoyment of the outdoor recreation resources."

A park unit's purpose statement focuses the NPS' management role at a particular park and at OZAR that statement calls on the NPS to "preserve and protect in an unimpaired conditionâ€the clean, freeflowing Current and Jacks Fork rivers, springs, caves, and their karst origins" and to "provide for uses and enjoyment of the outdoor recreation opportunities consistent with the preservation of the park unit's resources." (emphasis added) The Ozark purpose statement again reflects the need for balance of preservation and recreation.

The Organic Act remains the strongest mandate for managing national parks, the enabling legislation is the legally binding mandate of the NPS at OZAR and the park's purpose statement is in effect to guide management. But at OZAR, the balance between protecting the natural resources and providing enjoyment through recreation has tipped, jeopardizing the ability of the park to survive for the enjoyment of future generations. Resource preservation and recreational use can be balanced without degrading resources, sacrificing the quality of the visitor experience or negatively impacting the local economy. And it must be balanced at Ozark for the park to survive.

Most of the provisions in the Preferred Alternative B could provide that much-needed balance, but without increased staffing and enforcement of park regulations, the park's natural resources - resources important to people and wildlife alike - will continue to degrade.

## WATER RESOURCES

NPS acknowledgement of managing for clean water:

Ozark National Scenic Riverways contains 134 miles of clear, free-flowing, spring-fed rivers - the Current and Jacks Fork Rivers. Protecting the cleanliness of these rivers is central to the mission of the NPS and there is significant evidence in the GMP that underscores that importance. The following four excerpts illustrate that the NPS understands that good water quality is a critical part of their stewardship at OZAR:

â€ Exceptionally high water quality and clarity of the free-flowing Current and Jacks Fork rivers has led to designation of these rivers as two of only three Outstanding National Resource Waters in Missouri. This designation has national, recreational, and ecological significance. (emphasis added)

â€ Both rivers are also classified as Tier Three Waters by the State of Missouri. These stringent federal and state standards are designed to protect against any degradation in the water quality of these rivers. (emphasis added)

â€ The National Riverways' water resources are of exceptional quality; however, they are also highly susceptible to pollution. This is because karst terrain does not allow for effective filtration and absorption of pollutants from surface water as it travels into the groundwater systemâ€ (emphasis added)

Recreation activities also have the potential to threaten the water quality of the Ozark National Scenic Riverways if they are not managed properly. For example, manure from horses and petroleum byproducts from gas-powered motorboats can contaminate river water. In their 2006 study, Davis and Barr reported elevated bacteria levels within the lower Jacks Fork River that exceeded the existing Missouri single sample standard, and was attributed to horses and other land uses (emphasis added)

Collectively, these excerpts reinforce that management practices at the park must be designed to ensure that the Current and Jacks Fork Rivers are clean and clear in order to satisfy state and federal standards. The excerpts also reflect the acknowledgement of the NPS that it is the role of a General Management Plan to provide the path to manage park waters responsibly. These water quality standards are in place to protect human health as well as the well-being of wildlife and plant life. Some actions in the Preferred Alternative B, and certainly the practices currently underway as referenced in the No Action Alternative, are at odds with federal and state standards for clean water:

Proposed equestrian management would result in new river crossings that would disturb the water, increase erosion and sediment and introduce manure deposits to new areas of the rivers. Although these new crossings would cause pollution in new parts of the river, the net effect of proposed changes to equestrian crossings in the plan may provide overall benefit to water quality. The Preferred Alternative B also says that "Unauthorized crossings would be closed and restored." NPCA supports a limited number of new equestrian crossings in the context of closing and strictly enforcing currently used unauthorized river crossings.

Establishing a new 25-campsite for horses along the Jacks Fork, as recommended in the Preferred Alternative B, will also introduce new negative impacts to water quality. NPCA recommends locating this campground outside of the national park, which could also provide the added benefit of providing local small business growth for an owner/operator of the campground.

The Preferred Alternative B will reduce the number of gravel bars accessible by cars and trucks, which will in turn reduce riverbed erosion, sedimentation and turbidity. The No Action Alternative results in far too many cars and trucks parked in the river during peak visitor use. The reduction of gravel bars is critical to implement and enforce as current conditions are not only detrimental to water quality, but also to visitor safety.

The Preferred Alternative B calls for managing vehicle access points to the river through zoning combined with an increase in law enforcement. This action should halt rather than "reduce the creation and continuation of undesignated roads in the park unit." (emphasis added) There are already dozens of unauthorized roads and access points to the rivers creating negative impacts to water quality, including to rivers, wetlands, streams, and floodplains. NPCA urges the NPS to halt development of new access points, systematically close and restore the unauthorized access points, and enforce the use of authorized access points in order to restore water quality.

#### NPS Management Policies and the Clean Water Act:

NPS's Management Policies set forth specific rules designed to ensure that NPS will manage and perpetuate surface waters and groundwaters as integral components of park ecosystems and these Policies call for compliance with the Clean Water Act. Specifically, the NPS Management Policies say:

The Service will determine the quality of park surface and groundwater resources and avoid, whenever possible, the pollution of park waters by human activities occurring within and outside the parks. The Service will:

- work with appropriate governmental bodies to obtain the highest possible standards available under the Clean Water Act for the protection of park waters;

- take all necessary actions to maintain or restore the quality of surface waters and groundwaters within the parks consistent with the Clean Water Act and all other applicable federal, state, and local laws and regulations; and

- enter into agreements with other agencies and governing bodies, as appropriate, to secure their cooperation in maintaining or restoring the quality of park water resources. (emphasis added)

Importantly, Section 313 of the Clean Water Act requires NPS, in implementing its park management activities, to "...comply with all federal, state, interstate, and local requirements, administrative authority, and process and

sanctions respecting the control and abatement of water pollution in the same manner and to the same extent as any non-governmental entity including the payment of reasonable service charges." (emphasis added)

According to the GMP bacteria in the rivers often exceed standards set by the U.S. Environmental Protection Agency (EPA), creating an obvious threat to human health. In conversations with staff at OZAR, there are times the levels of *Escherichia coli* (*E. coli*) are very high during peak season in portions of the river with a large number of recreational tubers or floaters. Additionally, according to NPS staff, there are *E. coli* spikes in areas with high horse traffic. Although the GMP does not specify the number of times annually that the *E. coli* count in the rivers falls above EPA standards, from conversations and as evidenced by the GMP, it appears to be fairly often: "In locations of high recreational use, bacterial counts can be elevated."

The NPS suggests that to "ensure that this standard [to control *E. coli*] is not violated, the NPS Riverways managers might consider increasing educational efforts to raise awareness of the impacts that river users can have on water quality." (emphasis added)

Since the state of Missouri is responsible for water testing in the rivers at OZAR, NPCA strongly urges the NPS, in cooperation with the state, to develop a communication system to notify people on the rivers that the *E. coli* count is high enough to risk human health. In the Great Lakes, when *E. coli* levels are above a set number of colony forming units (cfu) per 100mL, the public beaches are closed and warnings are posted. The EPA has developed a Beach Action Value (BAV) as a tool for notifying beach goers that levels are high. At minimum, the NPS should implement a system for notifying visitors when these levels are high. In addition, the NPS should consider closing portions of the river until levels are within a healthy range. Finally, the NPS should adopt an aggressive education campaign through local outfitters and at authorized river access points to educate visitors about how human body waste must be disposed of while in the park.

Just last year, a Superintendent's Compendium, issued May 20, 2013, reinforces the regulations for disposing of human waste while in national parks:

"Where a toilet facility is not available human waste must be buried at least 6 inches underground and a minimum of 100 feet from any water source" (emphasis added)

The laws and regulations governing water quality and disposal of human waste must be enforced because given current conditions, and in the No Action Alternative, visitors are either uneducated about the dangers of *E. coli* infection or they are content to recreate in a river with high levels of human feces. Either way, if floating the rivers continues to increase, as it has since visitor capacity monitoring was outlined in 1989 the NPS will need to address this health risk with education and potential closing of some portions of the river.

As a final note, there is no correspondence in the Appendix indicating that NPS consulted with the EPA regarding impacts on water quality that any of the Alternatives presented in the GMP will have.

NPS, EPA and State of Missouri consultation on plan:

NPS's Natural Resource Reference Manual #77 sets forth a comprehensive set of policy objectives related to water resources management within the National Park System. NPS recognizes that "[m]aintaining water in its natural condition, free of pollutants generated by human activity, is an important goal of NPS managers."

As the Manual observes, states have developed best management practices for a variety of activities that may be conducted inside or outside of park boundaries and that may contribute nonpoint source pollution, including, among other things, animal waste management and grazing by wildlife and domestic livestock. Specifically, this Manual notes that "[a]ll parks that permit, manage, and/or conduct the above activities, or if any of the activities occur in watersheds that contribute to park water bodies, are encouraged and advised to obtain their respective state's nonpoint source program management plans and incorporate appropriate Best Management Practice into their resource management plans or individual project plans." (emphasis added)

There is no correspondence in the Appendix to indicate that the NPS has consulted with the State of Missouri regarding impacts on water quality that any of the Alternatives presented in the GMP will have. Record of this communication is important because OZAR has Tier Three Outstanding National Resource Waters as defined by the

EPA and voluntarily designated by the State of Missouri. Under the Clean Water Act, once the existing uses of a water body have been established-by evaluating the water's quality relative to uses already attained-the State must maintain the level of water quality that has been identified as being necessary to support those existing uses. In the case of the Current and Jacks Fork, the State of Missouri has committed to the highest (Tier 3) level of anti-degradation for the rivers. Cooperation between the State and the NPS is critical in order to carry out these provisions.

#### NPS and the Federal Pollution Control Standard:

The Federal Compliance With Pollution Control Standards signed by President Jimmy Carter on October 13, 1978, requires the head of each Executive agency to ensure that all necessary actions are taken to prevent, control, and abate environmental pollution with respect to Federal facilities and Federal activities, and that such agencies comply with all Federal environmental pollution control laws, including, among others, the Clean Water Act.

Among other things, each Executive agency shall cooperate and consult with the EPA Administrator and with State, interstate, and local agencies concerning the best techniques and methods for the prevention, control, and abatement of environmental pollution.

The GMP is not clear to what extent the NPS has consulted with EPA, the State of Missouri, and local governmental units on the impacts that the Preferred Alternative B will have on the rivers' Tier 3 Outstanding National Resource Waters status. The degraded water quality, especially during peak season and especially with the addition of numerous unauthorized river access points and horse trails and crossings, illustrates that there are few measures in place to ensure these regulations and laws governing water quality are enforced. And the GMP in general is very weak in specifying what changes in management need to occur to comply with those laws and regulations.

#### Water quality and the Endangered Species Act:

Anticipated potential impacts to federally and state-list threatened and endangered aquatic species have been covered in Preferred Alternative B and in the consulting correspondence between NPS and U.S. Fish & Wildlife Service (USFWS) regarding the Ozark hellbender (and two other non-aquatic species). This consultation is done to pursue required compliance with section 7 of the Endangered Species Act.

The park is known for providing one of the few U.S. habitats for the Ozark hellbender. The GMP acknowledges that not much research exists to assess how NPS management of the rivers affect hellbender habitat, however the GMP cites research from the USFWS and the U.S. Forest Service (USFS) that says "â€œdegradation of water quality can have considerable negative impacts n hellbender habitat given the hellbender's dependence on clean, clear, and cool river water."

In current practice, and in the No Action Alternative, there are several instances cited above of recreational river uses combined with a history of lax NPS management and enforcement that cause degraded water quality. Equestrian and vehicle access to the river and the pollutants that each introduce are currently causing and would continue to cause adverse impacts to the Ozark hellbender.

The NPS has analyzed that the Preferred Alternative B would likely provide for an improvement to hellbender habitat, mainly because of changes in resource management strategies. The NPS must continue to consult actively with the USFWS on the health of this fragile and unique wildlife.

#### MOTORBOAT AND NON-MOTORIZED USE:

Generally, NPCA supports the provisions in the Preferred Alternative B for motorized and non-motorized use of the rivers as described in Table 4 of the Draft GMP/EIS (page 48).

NPCA reinforces that current regulations are mentioned in the GMP: "On waters situated within the boundaries of Ozark National Scenic Riverways, the use of a motorized vessel is limited to a vessel equipped with an outboard motor only." On some portions of the rivers, this is limited to 25 hp and in others it is limited to 40 hp.

In practice, the NPS has not been enforcing the 40 hp for some time, but allowing boats of 60 hp on the river. NPCA understands this allowance - mainly because of powerboat industry changes - and supports the necessary rule-

making to allow the 60 hp boats to legally operate in the park.

In addition, NPCA supports the balanced approach to non-motorized zones in the northern Current and Jacks Fork Rivers and seasonal mixed-use. The increase in non-motorized zones provides a beneficial impact to visitors and wildlife alike. The resulting quiet in non-motorized areas will allow the park birds and wildlife to settle. And with nearly 18 million Americans participated in canoeing, kayaking and rafting last year it is important to provide a safe and quality visitor experience for those who want to see the park in a slow and quiet atmosphere.

#### HORSES:

Most negative impacts caused by equestrian traffic that are of concern to NPCA are covered in the comments on Water Resources, but a few provisions in the Preferred Alternative B also bear mentioning.

Critics of the action alternatives have pointed to the reduction of equestrian trail miles and a proposed permitting system for horses as unacceptable. The Preferred Alternative B proposes a system that includes "nearly 60 miles of designated equestrian trails" (emphasis added) and includes about 35 miles of newly designated trails. Because of profound overuse, existing trails will be closed and restored, which is a significant benefit to area equestrian concessioners who rely on a good trail system for their livelihood.

The proposed permitting system would help manage horse levels and impacts on the trail system and park's resources. This permitting system must be implemented or simply put, the park will not exist - even in the condition it is today - for much longer. It is hard to imagine people wanting to pay for a horseback experience along severely rutted trails, crossing a polluted river.

In implementing the permit system and in closing trails for restoration, the NPS must work with local small businesses in order to cause the least disruption in their enterprises. There are many national parks in which trail restoration occurs and in which there are permitting systems that control the numbers of horses on trails at any given time. The NPS may find models within the National Park System on which to base changes at OZAR.

#### LAND-BASED RECREATION:

The Preferred Alternative B calls for mountain biking as a new, allowable use, but only on designated trails. NPCA understands that mountain biking is an increasingly popular activity - especially by an age group that is younger than the typical national park visitor. And although providing this activity is a worthy goal, NPCA fears that there are already a number of management changes in the Preferred Alternative B - horse riding and motor boat use in particular - that will require extra enforcement. This need for extra enforcement on currently allowed activities could preclude adequate enforcement of mountain biking on designated trails.

The NPS has analyzed potential negative impacts and disturbances to wildlife and plant life as a result of developing trails where there currently are no trails. This potential negative impact could increase if mountain bikes begin forging unauthorized trails through the park.

More importantly, if mountain biking trails are located close to the riverbanks, erosion could degrade water quality further. Finally, without adequate enforcement, unauthorized trails are certain to emerge as well as potential new unauthorized crossings of the river by mountain bikes. For these reasons, NPCA is not supportive of this new use at the park.

#### STAFFING:

The NPS anticipates an additional 26 new Full Time Equivalent (FTE) positions to implement the provisions of the plan, but none of these additional staff members are dedicated to Resource Management.

"The proposed management strategies are not about doing substantially more; but rather are more about managing differently, in a more proactive way that is in accordance with the purpose of the park. Strategies would (also) help restore environmentally degraded park unit lands and facilities."

NPS envisions 8.5 FTEs in the area of Law Enforcement, Safety, and Emergency Services to "help improve protection and monitoring of cultural and natural resources in key areas of the NPS Riverways."

The balance of new FTEs would be primarily for Maintenance and Engineering Division to upgrade visitor facilities projects referenced in the Preferred Alternative B.

NPCA is very sensitive to the underfunded state of our national parks, but additional staff at OZAR is critical. The Ozark National Scenic Riverways is a very difficult park to manage and patrol because its boundary runs on either side of 134 river miles. For the last 30 years, management and enforcement of regulations and laws governing water quality and recreation have been lax and none of the Alternatives will be successful without additional staff and new training programs and a system of accountability to ensure that regulations are enforced. Even the No Action Alternative presumes that existing regulations - again, which are currently not being enforced - will be in place. NPCA supports an immediate increase in the staff of Law Enforcement combined with a staff-wide training and accountability program in order to ensure that laws from the Organic Act to the Clean Water Act, and park-specific regulations, are enforced.

#### ECONOMIC OPPORTUNITIES:

With about 1.3 to 1.5 million visitors each year, the Ozark National Scenic Riverways provides significant economic impact for local communities around the park. Visitor spending is estimated at \$55.5 million with nearly 90 percent of that spent by non-local visitors. The park directly employs more than 125 staff members and leverages 845 jobs outside the park.

The NPS has identified potential opportunities for new concessions based on the action alternatives. The Preferred Alternative B is projected to create new business opportunity for "shuttle services for river users with non-motorized watercraft and overnight river activities such as guided float trips and guided (hike in) back country trips in the natural and primitive zones." There are likely others.

National parks are tremendous economic generators, leveraging at least one dollar in economic activity for every federal dollar invested and the Ozark National Scenic Riverways is no exception. But it will take open minds and entrepreneurial spirits to find those opportunities created by the action in the General Management Plan.

#### END NOTE:

The NPS calls their charge out clearly throughout the Draft GMP/EIS:

"Congress had charged the National Park Service with managing lands under its stewardship 'in such a means as will leave them unimpaired for the enjoyment of future generations.' (NPS Organic Act, 16 USC 1)"

NPCA urges the NPS to take their charge to heart because the Ozark National Scenic Riverways is an imperiled national park and will not survive for the enjoyment of future generations without strong NPS management and enforcement of the law.

**Correspondence:** I support proposed Alternative B as I feel that it represents the best compromise and integration of all user groups. I also echo Missouri Governor Jay Nixon's sentiment... "NPS must incorporating flexibility into any plan it implements." I'm glad that the National Park Service manages the lands and waters in the Ozark National Scenic Riverways and helps to protect the Current River Watershed, along with many other private, state and local organizations and individuals. The protection of the biological and scenic integrity is paramount in this National gem that is the Current and Jack's Fork rivers.

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will completely destroy my family tradition of fish gigging above Pulltite on the Current River. Gigging season runs from September 15 to January 31 annually. It has been a family tradition in my family for SEVEN (7) generations and the park service is going to take this away. Part of the Park Service Mission is to preserve the culture of the local area. This part of the plan will destroy a large part of the local culture. Not only is gigging above Pulltite a cultural and family tradition, it is a time for families like mine to build memories that will last a lifetime. I strongly oppose any Park Service Plan to restrict motor boats above Pulltite during Peak Season (March 15- Sept. 15) or Off Peak Season (Sept. 16-March14). We as locals from this area deserve the right to enjoy the Current River above Pulltite all year long. We also run motor boats above Pulltite during the summer (Peak Season) for recreational enjoyment and the Alternative B will take this away as well. I may add that running a motor boat above Pulltite is also a cultural and family tradition. I have an abundant amount of relatives that owned or still own land above Pulltite and we would no longer be able to enjoy the swimming holes, gravel bars, and shade trees that my family has enjoyed for over one hundred years.

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will completely destroy my family tradition of motor boating above Round Springs. As a boy I grew up in Eminence MO but my family either owned farms bordering the Park Service land at Round Springs or leased land near Round Springs. My family also has two cabins on the river near Round Springs. So I would like to point out that even though I live in Eminence my heart and soul belong near Round Springs. I spend vacation days at my family's cabins at Round Springs, hunt near Round Springs, gig above and below Round Springs, motor boat above and below Round Springs, as well as many other outdoor activities. The thought of losing the right to run my motor boat above Round Springs actually brings tears to my eyes. As a young boy with an adventurous personality I would put my father's boat in the Current River at the Round Springs lower landing and run his 25 hp boat and motor up to Sinking Creek and back to Round Springs. During the summer, I would fish that stretch of river above Round Springs, swim in my favorite swimming holes, lie on the gravel bar next to my favorite swimming holes, and have family picnics. I also have a handicapped brother (that cannot walk) that I lift into my father's motor boat and take him for boat rides because a motor boat is more stable than a canoe. If you implement this Alternative B you will also take one of the few enjoyments he gets from life. I hope you realize how much devastation you will actually cause by taking away our rights to use Current River above Round Springs. With the preferred plan B of the Park Service this cultural and family tradition will be stripped from me and my family FOREVER. Again this is so dear to my heart it actually bring tears to my eyes to think about a bunch of Park Service Employees from Colorado and Omaha, and extreme environmentalists getting to make the call on where I can enjoy the river that I have used for the last 27 years. NOT MENTION THAT I HAVE A SON THAT IS ALMOST THREE YEARS OLD AND HE IS NOT GOING TO BE ABLE TO ENJOY THE SAME PART OF THE RIVER THAT I WAS ABLE TO GROWING UP. The holes of water that I fished as a young boy, swam in as a young boy, motor boated as a young boy, and had family picnics as a young boy will not be passed on to my son due to this new general management plan you are trying implement. It is not right for the Park Service to adopt a plan that only benefits the extreme environmentalists, there is not one section in the (NPS preferred) Alternative B that benefits the locals in the Ozark National Scenic Riverways. Park of the Parks mission is to preserve the cultural traditions, NOT DESTROY THE CULTURAL TRADITIONS!!!

**Correspondence:** If the Park Service chooses the Alternative B (NPS preferred) it will restrict motor boats above West Eminence on the Jacks Fork River from March 15-September 15 as well as restrict motor boats above Bay Creek all year long. I grew up in Eminence and I have run my motor boat above Eminence regularly. Not only is it a family tradition to run my motor boat above Eminence, but I have helped tourists during floods on many occasions. If the Park Service restricts motor boat use above Eminence and the Jacks Fork River floods I will not be able to run my motor boat from Eminence to Alley Spring and rescue people and their belongings during floods. For example, one summer I actually rescued four tourist's canoes and all of their belongings. I even refused to take any compensation for my time and costs. See what the Park Service does not understand is that we locals help the tourists that float the Jack Fork and Current Rivers and do not expect anything in return. I have helped several other floaters on different occasions and do not expect anything in return. The locals are from these small surrounding towns and we have a desire to help people. All we ask is that we get to keep our rights to these rivers!! I have also

talked to many other motor boat users and they have similar stories of rescuing and helping floaters in emergencies. The Park needs to understand that the Park Rangers cannot be everywhere and it takes the help of the locals to keep everyone safe on these beautiful rivers. If the Park Service wants more deaths and more people to be hurt on the rivers without any help nearby then they are choosing the right plan. I feel that the Park Service needs to completely rethink their ideas on how this will affect everyone involved. It will hurt and probably even kill people on both the Jacks Fork and Current Rivers without the presence of the local motor

**Correspondence:** If the Park Service chooses the Alternative B (NPS Preferred) and closes 20 access points it will negatively affect the economy of the surrounding communities. Closing access points will harm the surrounding canoe rentals, motels, convenience stores, restaurants, and all other local businesses. The plan does not go into detail and say what 20 access points will be closed. This means that the Park Service will close any access points that they feel like. The Park Service has already shown the local communities that the extreme environmentalists like the sierra club, Missouri Coalition for the environment, etc. are more important than the local economies. For example if the Park Service chooses to close Williams Landing and/or Jerktail Landing it will completely ruin the upper Current River between Round Springs and Two Rivers for canoeist, tubers, motor boaters, kayakers, and any other type of vessel. Without these access points there is no place to launch any type of vessel on the stretch of Current River between Round Springs and Two Rivers. Anyone with any sort of knowledge about economics knows that the closing of access points along the Jacks Fork and Current River will hurt the local economies. In fact there is a section in the Alternative B plan that states the economies of the area will be affected. You and I both know that it will not be in a positive way. When you take the rights away from both the locals who live along these rivers as well as the visitors that come and spend money in the area what are you really trying to do except harm everyone involved? Furthermore, people that are handicapped will not be able to access the Jacks Fork and Current River in the same stretches of river like someone that can physically motor boat or float extreme long distances. Now I know you might be thinking that you cannot make everyone happy, but does the Park Service want to be legally responsible for preventing disabled people from enjoying what is supposed to be a National Park available to all citizens of the United States. THINK ABOUT THAT FOR A MINUTE! I think this could get some attention because I believe we have a lot of disables veterans who will fight for their right to enjoy these two magnificent rivers like any other human being.

**Received:** Feb,07,2014 20:06:18  
**Correspondence Type:** Web Form  
**Correspondence:** If the Park Service chooses the Alternative B (NPS Preferred) and closes 65 miles of horse trails it will negatively affect the economy of the surrounding communities. The horse trails around these surrounding towns bring outside money into the communities. The Park Service does not show a map of the 65 miles of horse trails that they want to close, so how would anyone make an informed decision on whether or not this is a good plan. Oh yeah let me answer that we do not trust the Park Service and will not go along with any plan that does not spell out actually what is going to take place. People come and ride their horses during trail rides as well as several other times of during the year. Now you do not have to be an economist to realize that when you close a large amount of horse trails like 65 miles it is going to upset anyone who used those 65 miles of horse trails. Now you might make the argument that the horseback riders will still come back. However, I completely disagree when you take the horseback riders rights away to ride on the trails that they have ridden on for generations and become

family traditions, they will find another place to start new family traditions. Just look at it like this, horse trails in the ONSR are not the only trails in Missouri or the United States. Many people will simply stop coming and therefore stop spending their money in the local economies AND YOU GUESSED IT MAJORLY HURT THE LOCAL COMMUNITIES. I would like to think the Park Service cares about the local communities since part of the mission is to preserve the cultural resources and traditions of the area. Do I need to remind you that part of the cultural tradition is horseback riding? Another point is that not only do visitors ride those 65 miles of horse trails, but the locals ride them as well. The local people have ridden these horse trails for generations and it is a cultural and family tradition of many people that live in the local area. May I remind you the part of the Park Service mission is to preserve the cultural resources and traditions. You are again violating your own mission. DOES THIS MAKE ANY SENSE BECAUSE IT DOES NOT TO ME!!

**Correspondence:** I would like to provide my comments on the proposed Draft General Management Plan for the ONSR NP.

I have been visiting the ONSR for the last two decades to enjoy the beauty of the river. In 2012 I was fortunate enough to be able to relocate to within a few miles of the current river and park headquarters. I attended the public meeting at Van Buren and received the copy of DGMP.

I brought my young children floating on this beautiful river over a decade ago and want them to be able to bring their children to the same quality of water in the future. I am very concerned with the water quality of the river and I believe this should outweigh all other concerns. We enjoy kayaking, canoeing, tubing, camping, fishing, hiking and atving in this area.

After reviewing all the alternatives I stand by Southeast Missouri Congressman Jason Smith in defending the 'No Action' Plan.

The 'Action' should be to enforce the current rules to keep these rivers safe and clean.

The people that visit these waterways do not want more regulation. I do not support any form of permit system, nor do I support banning camping on gravel bars except if accessed by the river. I do not support any encroachment on primitive camping.

Southeast Missouri Congressman Jason Smith said in a released statement that the Ozark National Scenic Riverways are "already over-managed."

"The Riverways support a vibrant and growing tourism industry that is critical to our region," Smith said. "I support the 'no-action' proposal that would make no changes to the current operating system and I will strongly advocate against further encroachment by the Park Service on our public lands."

**Correspondence:** As a frequent visitor to the Scenic Riverways, I have seen the damage done by ATVs, unauthorized roads and horse trails, and extensive jetboat use. When floating the upper Jacks Fork, something I do every summer when the river is too low for most people to float it, I see ATV trails coming down to many of the gravel bars and ATV tracks on the bars and crossing the stream, and have even seen campers pulled up onto gravel bars below Bay Creek.

In floating and fishing the Current between Round Spring and Logyard, I have noted the widening and shallowing of riffles and pools. I've floated this river for more than 40 years, and in that time most of the narrow, difficult to navigate "chutes" have disappeared, and some of the deep pools have widened and shallowed. Some believe this to

be the result of too much gravel, and decry the lack of gravel dredging, but I know the science refutes this notion- - gravel dredging is almost never beneficial and usually very harmful. No, the widening and shallowing is due to bank erosion, especially of those alluvial banks that have a layer of topsoil over a thick bed of gravel. I and many other long time floaters believe this to be largely the result of the incessant jet boat wakes pounding the banks, loosening and damaging that narrow zone at water's edge, giving floods an area to attack and wash away. So even though I own a jetboat and use it on Current River in the fall and winter, I am all for any kind of restrictions on jetboats.

For those reasons, I prefer the most restrictive alternative of the management plans. I could live with the middle alternative, which is apparently the preferred one, but I am unalterably opposed to leaving things as they are. I believe many of the unauthorized access roads should be closed, and jet boat use restricted above Two Rivers.

Please do not let the vocal minority of local residents that apparently care only about their own pleasure and the ability to sell jetboats and ATVs sway the Park Service from doing what it best for the resource.

**Correspondence:** This comment is submitted in support of the National Park Service's (NPS) Alternative B from its Draft General Management Plan (GMP) for the Ozark National Scenic Riverways (ONSR).

Though I am not a resident of Missouri, I have had the opportunity to visit the ONSR and I plan to return. The clarity of the Jacks Fork and Current Rivers is stunning, and the two springs I had the good fortune to see, Alley and Big Springs, are true forces of nature. The karst hydrogeological system is a national treasure, and I would like to see it preserved for all Americans.

The enabling legislation for the ONSR, passed by Congress in 1964 and providing the blueprint for the National Wild and Scenic Rivers System, notes several values protected by the ONSR. Of particular importance to Alternative B to the GMP are the values of "preservation of springs and caves" and "provisions for use and enjoyment" of recreational resources "by the people of the United States." The ONSR is currently managed under a management plan approved in 1984.

The choice of the word "preservation" shows clear intent by Congress to keep the springs and caves of the protected area of the Ozarks pristine. In 2011, American Rivers, a private corporation dedicated to the protection of the nation's waterways, named the ONSR among the top ten most endangered waterways based in part on poor planning. Now is the time to enact an updated plan to ensure Congress' intent in establishing the ONSR, and Alternative B balances preservation with the uses that visitors from around the country have become accustomed to. Congress also plainly intended the ONSR to have recreational value. During the recent open houses hosted by the National Park Service, I witnessed a number of local citizens voicing concerns over what they perceived as a loss of these values under Alternative B, particularly with respect to motorboating on the rivers. However, Alternative B only prohibits motorboats on two stretches where they are currently allowed, and have been since 1984. Even Alternative C, which is designed to give the most latitude to recreational values, closes portions of the very same stretches to motorboats. The NPS' expertise in managing national parks should be given significant deference, and this action will allow the agency to update the management of the rivers for current and expected future recreational use while working to prevent degradation of the waters.

While a number of complaints about restrictions on motorboats have been voiced, Alternative B advances the "use and enjoyment" of visitors by continuing to allow widespread non-motored boating, of particular historical value to these "float" rivers. Furthermore, Alternative B will attempt to continue the 60/40 hp rule as it has been understood in the ONSR, which may result in further rulemaking. Other alternatives would have instituted greater restrictions, so Alternative B takes these interests into account as well.

In order to continue to work in good faith with locals, NPS should consider reinstating the commission of Section 7 of the Enabling Act for the ONSR. The ONSR is preserved for "the people of the United States," but Missourians, particularly those who live near the protected rivers, acutely feel the effects of any proposed change. Giving local men and women the opportunity to serve as members of a committee to the NPS would go a long way towards engendering good faith and comity within the community.

Finally, the Wilderness Plan should be pursued. Most of the pushback during the NPS open houses appeared to be based on misinformation, so increased public education opportunities should be explored. The area slated for wilderness designation under Alternative B is already being managed as a wilderness area for all intents and purposes, and the closure of a single road that is currently NPS-use only will have essentially zero impact on the community. Though it appears that local lawmakers are not prepared to support the plan, moving now at least plants

the seeds for the area to be granted wilderness designation in the near future. Of historical note, the ONSR plans began to be proposed to Congress in 1960, but the ONSR Act was not passed until 1964. This wilderness area may experience a similar delay, but it is a worthwhile endeavor.

The ONSR is a national treasure, and Alternative B to the GMP provides a roadmap to protecting this treasure for future generations while allowing for appropriate and adequate levels of contemporary recreational use. It was a pleasure to visit the community and take part in the NPS' open houses and hearings, and I look forward to returning.

**Correspondence:** I support the Federal Government designing and implementing a management plan. I have witnessed too many instances of heedless people behaving as to degrade the conditions that make the National Scenic Riverways a national treasure. I understand there is much resentment from some local people to the Federal Government based on past practices. Their concerns should certainly be considered, but their level of outrage should not be correlated with the reasonableness of their demands. Much of their complaints are not based on correct facts. It may be difficult to reduce their complaints through education, but that should not be a reason to give in to their unwarranted complaints. The traditional methods of gigging can be practiced on much of the river without degrading the Riverways, but the upper parts of the river should be protected from motors. The negative impacts, both visual and ecological, of unapproved access points are clear. These access points should be closed. There are many places to enjoy motorized watercraft. There are few places to enjoy a near wilderness float.

I appreciated your efforts to reach out to all stake holders.

**Correspondence:** As I understand, Ozark National Scenic Riverways is scenic riverway and not a full National Park. As the name is not 'Ozark National Scenic Riverways National Park'. The National Park Service oversees and assists in the management of the Riverways. Ozark is special in our enabling enactment to allow or not allow all of the same things as a National Park. I feel that some of the employees as well as special interest groups get confused because of this.

#### Motor Boats and HP limits:

I feel the 40/60 hp should be allowed on both the Current and Jacks Fork Rivers. Why put limits on parts of the river that is self limiting due to the water levels and heavier canoe use. Responsible boaters will avoid these situations. Educating and setting standards of behavior on the rivers could reduce problems. Having boats in these areas provide rescue potential for canoeist. Motor boaters have assisted in recovering canoes from under root wads and transported ill and injured individuals to safety or a landing for further medical attention. The majority of the boaters are responsible and courteous just enjoying the river. Although, there are the few whose behavior is neither responsible nor courteous. By limiting motor boating in certain areas of the river is discriminating against the elderly, disabled and handicapped that are unable to canoe or kayak. The boat is the safest way for these folks to see and enjoy these areas.

#### Camping:

Instead of limiting the amount of primitive camping accessible by land, add more areas for RV camping. Not everyone that enjoys camping wants to canoe or sleep in a tent, but like to be near the water and or near their motor boat. Boaters enjoy the camping experience and many have RV's. With adding more campsites, the sites will be less crowded and the wear and tear would be spread out and not as concentrated in a few areas. This in return would increase access points to the river. Primitive RV camping for the handicapped and disabled would enhance the experience and add safety. More camping for horse riders should be provided. Not all riders like to go home at the end of the day. They enjoy the experience of on-the-trail camping.

#### Recreation:

My understanding is that the state of Missouri wanted to enhance recreation in the lands obtained by the National Park Service. Adding more horse trails, like adding camp areas, would spread use and each trail would sustain less abuse. By limiting the trails, all the usage is on a few trails causing extensive damage instead of spreading out the usage and limiting the damage. To enjoy the horse ride experience, one likes to be on a trail not a ditch or feel like they are on a street.

Permit concessioners to provide John boat tours. This would be an excellent educational opportunity on the history of the river. This would provide another avenue for non-canoeist to enjoy the river.

#### History:

To preserve and conserve the historical culture of this area, some of the former landmarks such as the Welch hospital and the Round Spring Lodge should be restored. Not as familiar with the other areas, other restorations can be made to enhance their history as well. These sites should be accessible for the elderly, disabled and handicapped. To further preserve the culture of this area, I feel that old farm lands be restored to the way they were in 1968. The roads should be opened and maintained as they were in 1968. As mandated in the enactment, the present park does not reflect the culture of the area. The CCC era has gained a lot of attention and it was a government project. The local culture has been lost of how the people lived and survived here in this part of the Ozarks. Farms were burned down and eliminated. Fields were allowed to grow up in brush, hiding the cultivated and farmed fields carved out with work horses or by hand. The buildings that were deemed good enough to keep has been since became ruins or barely stabilized. Many have now been completely destroyed and removed. What is left to reflect the historical culture of this area?

#### Road to recovery:

In the beginning of Ozark National Scenic Riverways, a commission of individuals appointed by the NPS, Communities and the State Governor to help shape and direct the NPS. My suggestion would be to bring a similar

group back to provide recommendations, guidance and input to general operations of the park.

In closing, I feel that Ozark National Scenic Riverways has a lot of potential to fulfill the preservation of local culture, conservation of resource and provide recreation as mandated. Instead of limiting activities, enhance the opportunities to do all. I, along with many others that have grown up here, love this area. Most do not want to destroy it.

Thank you for your time and consideration.

Re: DRAFT GENERAL MANAGEMENT PLAN for the OZARK NATIONAL SCENIC RIVERWAYS  
From: Diana L. Gray, private citizen of Missouri, naturalist

First, I wish to thank you for inviting public comment on your proposed management plans for the Ozark National Scenic Riverways.

My husband and I moved to St. Louis from northern IL in 1982. I come to train in my chosen medical field at Washington University/Barnes-Jewish Medical Center. My husband first worked for the Missouri Pacific Railroad when we arrived. He now is a professor of business at St. Louis University. We have always loved the natural world and have thus enjoyed wilderness areas for hiking, camping, skiing (both cross-country & alpine) and reflection.

I first learned of the Ozark National Scenic Riverways from my husband's PhD advisor at the University of Illinois who had taken his 4 children on a 7 day float trip on the Current River around 1980. I was surprised that they would come to Missouri for such a vacation experience. I was surprised to learn there was such a National Park in Missouri. My experience with Midwestern rivers was that they were murky with muddy bottoms and dangerous currents. With that vision in mind, I couldn't imagine the attraction to canoe a Missouri stream for a week, therefore. Was I in for a pleasant surprise!

The first summer we lived in Missouri, we decided we had best check out this Ozark "floating" experience that so many of our new acquaintances seemed to enjoy. We arrived at Akers Ferry and rented a canoe for the upper Current. I was overwhelmed with the beauty of the area, and in particular the clarity of the cold spring-fed stream. There were few people on the Current the first time we canoed it. It was a most memorable experience. We returned time and again and eventually took our extended families on long weekend float trips and camped in the state parks. We fell in love with the Ozark National Scenic Riverways - -- so different from my imagined vision of the Missouri "Ozarks" with friends' descriptions of the Lake of the Ozarks as my past reference point.

We have so enjoyed the Current and Jacks Fork Rivers (mainly the Current) over our 30 years of living in Missouri, but we have become concerned with degradation of the environment in and around the rivers in the last 15 years or so. We are very concerned about the overuse of the area by people, motorized boats & vehicular traffic and particularly ATV and horse use in and around the streams.

I support the NPS option which best protects the natural scenic beauty and water quality while allowing low-impact recreation on the rivers. If some of the Ozark National Scenic Riverways could be designated as Wilderness while allowing low-impact recreation...so much the better. It seems Option B (2) may be the option which best protects the natural environment and water quality while allowing for low-impact recreational use.

Please protect this scenic treasure as a natural resource for reflective recreation for generations to come. I don't believe we can continue to allow ATV's, horses, and overuse by humans if we are going to preserve these free-flowing, clean streams. Once degraded, these streams may never be returned to their natural pristine states.

I wish you the best for wise decision making.

**Correspondence:** I feel that the changes the Park Services is trying make is taking away the heritage and culture that has been passed on for years in the Ozarks. They are taking away the rights of the people that live here and directing the park in a way that will destroy the lives of the people and businesses of the Ozarks National Scenic Riverways.

**Correspondence:** Trails: Current hiking and horse trails should remain in present locations with more emphasis by NPS and trail users on maintaining trail surfaces and erosion control. Trail users should be held responsible for doing their part and be fined for littering. The Park should foster better relations with trail users (cooperative maintenance) and involve all users in any future planning processes. All current and traditional river crossings should remain as presently being used. Outboard Motors: Current regulations and motor size restrictions are presently more stringent than necessary. River depth and natural obstructions have always been the self-limiting factors as to motorized watercraft. I would recommend no change to present policy. Cultural Interpretive Demonstrations: In addition to current cultural demonstrations, the Park should strive to re-implement the previous demonstrations of whiskey making, blacksmithing and sorghum making. These traditional native activities were extremely popular with the visiting public and very educational for area school groups. This would also great more jobs. Water Quality: Park management should be more pro-active in preventing the loss of stream banks, especially in developed areas of the Park. Large amounts of taxpayer monies have been invested in facilities within the river floodplain. One example (there are many) is the loss of stream bank and campsites at the Alley Springs campground, due to neglect and lack of stream bank stabilization. No doubt, one medium (4 to 8 foot rise) flood event per year (usually several) causes more erosion and river sedimentation than all public uses combined, each year.

---

**Correspondence:** Water Quality: Park management should be more pro-active in preventing the loss of stream banks, especially in developed areas of the Park. Large amounts of taxpayer monies have been invested in facilities within the river floodplain. One example (there are many) is the loss of stream bank and campsites at the Alley Springs campground, due to neglect and lack of stream bank stabilization. No doubt, one medium (4 to 8 foot rise) flood event per year (usually several) causes more erosion and river sedimentation than all public uses combined, each year.

Economic Impact: A very important point to consider by NPS in the planning process is the significant negative impact that Alternatives A, B and C will have on the local 6 county area. With tourism being the largest economic contributor in this area (especially Carter and Shannon counties), businesses will suffer and many jobs lost. This geographic area where ONSR is located is considered the most depressed economic area of Missouri, more jobs need to be created, not lost. Park Management needs to, through better relations and cooperation with congressional delegations, obtain an increase in base funding to better maintain Park assets and provide better quality visitor services. Cultural and natural landscapes: As per the 1964 enabling legislation, Park Management is mandated to preserve, protect and manage the natural and cultural resources to the existing mid-1960's appearance and conditions. The Park should make it a priority to better maintain the historical structures, old farmsteads, scenic viewpoints and overall viewsheds. In the 1980's, the Park (for a few years) had an "Open Fields Management Plan" where fields were brushhogged, disced and native grasses sown. With prescribed burning and mechanical means, the traditionally open fields could be returned to the condition and appearance mandated in the legislation.

Roads: All Park roads, traces and accesses, whether Park-owned, county-owned or public roads, should remain open and unimpeded for all park visitor usage. This should include both motorized and non-motorized use. All secondary (non-paved gravel) roads should be maintained on a regular basis with a minimum once-per-year grading of cemetery roads, traditionally prior to Memorial Day each year. With adequate (two-wheel drive) road access, families and cemetery associations will continue to maintain the graves and cemetery grounds. When access roads are not maintained to minimum (regular grading and brush removal) standards, deteriorated conditions severely affects elderly and physically limited visitors from driving to fishing/swimming holes, hunting areas, former family farms and/or other recreation uses.

Trails: Current hiking and horse trails should remain in present locations with more emphasis by NPS and trail users

on maintaining trail surfaces and erosion control. Trail users should be held responsible for doing their part and be fined for littering. The Park should foster better relations with trail users (cooperative maintenance) and involve all users in any future planning processes. All current and traditional river crossings should remain as presently being used.

Outboard Motors: Current regulations and motor size restrictions are presently more stringent than necessary. River depth (shoals) and natural obstructions (root wads) have always been the self-limiting factors as to motorized watercraft. I would recommend no change to present policy.

Cultural Interpretive Demonstrations: In addition to current cultural demonstrations, the Park should strive to re-implement the previous demonstrations of whiskey making, blacksmithing and sorghum making. These traditional native activities were extremely popular with the visiting public and very educational for area school groups. In turn, this would create more jobs.

I strongly favor the "No Action Alternative" to the Ozark National Scenic Riverways General Management Plan.

**Correspondence:** Thank you for considering opening the trails of the Ozark National Scenic Riverways to mountain biking. During the nicer months of the year I make a trip to Missouri to mountain bike 2-3 weekends each month. I have hiked several trails in the Ozark Riverways and they are some of the most scenic in the region. By currently not allowing mountain biking on the trails, you are alienating a large group of environmentally conscious outdoor enthusiasts. Opening these trails to mountain biking and making roadways within the park cycling friendly would be an amazing gift to the cyclists in the region. Please open the trails to mountain biking.

Thank you,  
Eli Molloy

**Correspondence:** My father dreamed of taking me and my brothers to float on the Current River. He died before he could do that, but I've enjoyed these rivers for 40 years and have introduced my sons and daughter to the beauty of this area.

As Americans, what we do better than anybody is to protect our natural resources. The scenic riverways are in danger and changes are needed if my kids are to be able to do what my father wanted to do and what I have done. My wife was born and raised in these Ozark watersheds and I have great love and respect for the people living in this area and the river activities that are part of the local culture.

Alternative B is a well reasoned plan that protects the riverways and considers diverse use of this incredible gift.

**Correspondence:** Please take the action necessary to keep our Ozark National Scenic Riverways clean and safe for everyone to enjoy in the manner that is appropriate to maintain and safeguard it's fragile, natural qualities! I have very fond memories of floating and camping those Riverways - enjoying the beauty and quiet, serene environment - back in the day when folks had respect for and showed common courtesies to their fellow humans as well as the flora and fauna. While enjoying and appreciating the Current and Jacks Fork Rivers we had a sense of responsibility to leave it as we found it so that those that followed could also enjoy the pristine qualities of that treasure the ONSR. And we also understood the responsibility of taking care of the environment so that it would remain intact and even flourish in it's natural state - 'leave no trace'. We have so very few 'Places' where we can go and make the connection with our natural environment - refreshing our spirits! I believe we were issued a Divine Directive to oversee and

take care of the earth, flora, fauna and each other - NOT to dishonor, degrade and pillage our earthly home that supports and provides for us and our fellow living beings! I was born and grew up, living many years near the ONSR and it is still home in my heart!

Comments on the proposed:  
General Management Plan & Wilderness Study

First I would like to thank the NPS for the tremendous amount of work required in preparation of the submitted plans. The Parks choice of plan "B" has some worthy aspects but I would prefer a more protective choice as in plan "A".

The following is a brief list of what I would like the Park Service to consider.

- 1) Close old access roads and old logging roads which lead to gravel bars or parallel the river. These roads make access to the river easy for users of ATV's, dirt bikes, & 4-wheel drive vehicles.
  - 2) Keep horse trails to a minimum within the park boundary and allow only one or two river crossings. River water quality needs to be maintained to keep e-coli contamination from horse waste (as well as humans) to a minimum.
  - 3) Only allow gravel bar camping by those groups and individuals who access the gravel bars by canoe or boat. Trailer and car/tent camping should be restricted to only Park Service designated "camping only" areas along and within the park boundary.
  - 4) Motor boats sizes and river usage should be limited in both motor size (keep it to a small horsepower) and restrict usage above the Two Rivers area.
- As a personal note, there is nothing more less natural than to hear the high pitch sound of motor boats running up and down the river.
- 5) Establish the area around Big Springs as a Wilderness Area to be enjoyed by all those who choose to go beyond the beaten path.

I have canoe floated both the Current and Jack's Fork Rivers since in early part of the 1960's. Over that time period, I have had many great trip floating these two rivers in both Spring and Summer. Unfortunately I have witnessed the river's misuse such as ATV's on gravel bars and in the river itself, to mention just one. As well as, others who chosen not to respect what a truly natural wonder these two rivers provide to both Missourians and all other visitors to this natural area. It is my hope that we can keep this gem as close to it natural state as possible for all of us to enjoy as well as future generations.

Sincerely your,  
Gary R. Baldwin

**Correspondence:** Thank you for analyzing problems being experienced by visitors to the Ozark National Scenic Riverways and suggesting improvements.

Our family has been visiting, floating and swimming in the Jacks Fork and Current Rivers since the late 1950s. Since the 1980s, and especially in more recent years, we have noticed a marked deterioration in the beauty and natural conditions of the Park. We are glad to find that the Park Service now seems willing to adopt a new management plan that would greatly improve on these conditions.

Adoption and enforcement of Alternative B would significantly improve the experience of visitors who want to enjoy nature in the Park. However, I urge you to adopt Alternative A, because it would best achieve the goals of the legislation that established ONSR and which would best protect the enjoyment of nature within the Park.

For example, Alternative A would:

- close gravel bars to vehicles, thus protecting water quality and reducing erosion;
- remove 50 miles of illegal roads, allowing these illegal roads to return to natural conditions;
- close 65 miles of horse trails that were never part of the Park's official plan; and
- prevent the legalization of new crossings of streams by horses, thus again protecting water quality.

In deliberating on which alternative would best serve both the original purpose of the ONSR and the current visitors to the Park, I would ask you to consider the following principles:

- There should be no motorized traffic (including ATVs) inside the Park except on designated paved roads, because off-road they damage vegetation, scare or destroy wildlife, and ruin quiet enjoyment of nature.
- Speed limits for motorized traffic on designated paved roads should be strictly enforced.
- If ATV owners want a publicly supported riding range (which our family would support), state or local governments should provide an alternative driving range far enough away from any public or private parks or nature reserves that noise from the ATVs isn't audible at the boundary of any existing park or nature reserve. An appropriate location for an ATV range might be an industrial park or next to a highway.
- We believe horses should be allowed within ONSR, because they are quieter, do not scare wildlife and have far less negative impact on vegetation than motorized vehicles. However, because horses can cause turbidity in streams and greatly increase e coli levels, they can adversely affect aquatic and human health. Therefore, horses should be kept at all times far enough away from the Current and Jacks Fork Rivers and their major tributaries that no measurable negative impact on water quality is found. Thus, horse trails should be designated within the Park, but they should be designed NOT to go through either of the 2 rivers or a major tributary, nor so close along the banks of any of these as to cause erosion or allow run-off to contaminate the rivers or major tributaries.
- ONSR is a federal park funded by the citizens of the United States. ONSR is a nature destination for citizens of the United States. It is not a local park whose purpose is to exclusively serve the recreational desires of the local community. Therefore, although nearby residents may be able to enjoy the benefits of the Park more often than citizens living farther away, the nearby residents should have no greater influence over the Park's management decisions than other citizens of the United States.

Finally, we urge the National Park Service to act as quickly as possible to designate Big Spring for wilderness status, so that its current condition can be preserved.

Thank you for the opportunity to comment on the alternatives presented in the new Management Plan.

Sincerely,  
Virginia, Charles, Garnet and Fred Blake and Mark Blum  
9932 Litzsinger Road  
St. Louis, Missouri 63124

**Correspondence:** I prefer the "no changes to access" proposal. Local people love and treasure both the Current and Jack's Fork Rivers and have maintained them for generations.

The biggest tragedy in the whole situation is that the federal government has been allowed to acquire any authority. Local control is preferable and more logical.

**Correspondence:**

There's little choice give except for alternative B.

You only have to go to the Buffalo River or Jacks Fork to see

what no oversight and money can do and has done to the Current Rive,

at some point the pendulum has got to start it's journey

back to some symbolism of control over the masses every want.

The river has it's limits, do we have to go storming past them

to know what they were and it be too late to make a difference?

**Correspondence:** I support the no action alternative. I support this option, not because I believe nothing should be done but, because I do not support any of the alternatives presented. I live near the headwaters of the Current River and have enjoyed the river my entire life. I recreate on and around both the Current and Jacks Fork rivers. I enjoy many forms of recreation including floating (canoeing), hiking, horseback riding, and riding in motorized boats. I see all these forms of recreation as a valid parts of historic and current Ozarks culture. All of the alternatives completely restrict jet boats on the upper portions of both rivers. I understand the desire to keep these areas pristine but I do not think that never allowing boats in these areas is the answer. The upper regions of these rivers have relatively low flows that do not allow motorized boats most of the season and when it is possible to take jet boats in these areas it is often difficult if not impossible to enjoy these areas in other ways. If there is enough water to run a jet boat above Cedar Grove next to no one is going to be out floating and as few people will be out hiking. Therefore I think that there should not be further restriction on jet boats on the upper regions of the rivers because the use of jet boats in these areas does not affect other users of the park. I also enjoy floating on the clear, blue waters of the Current and Jacks Fork rivers. But, if I go floating on a Saturday in the summer I do not expect a quiet and peaceful float. I expect other floaters will be out, making noise and having fun, and others will be along the riverbank to swim and enjoy the river. If I want a nice peaceful trip I will go on a weekday during the summer or during the spring or fall. This is a reality of the river that cannot reasonably be

changed. The river is a relatively inexpensive place to recreate and people will enjoy it as they would like to which will continue to involve alcohol and music. I do not wish to take away a type of recreation another enjoys in order to make my particular choice for recreating possible more frequently. Nice calm peaceful days on the river far out weigh rowdy ones but not if your sample size is every Saturday from June through August. I say all that about floating to say that although it is seen as a less obtrusive form of recreation, it is not always unobtrusive. And, I don't believe the NPS has plans to restrict floating.

Hiking is another recreation I enjoy and I completely support the addition of more hiking trails in the ONSR. I believe this is an area that definitely needs development but I do not believe that it should come at the expense of other forms of recreation. I enjoy, jet boating, canoeing, horseback riding, and hiking. I do not want the ONSR to be turned into a hiking and floating park because some believe that those are higher forms of recreation. I also do not believe that an occasional jet boat is any more disruptive than a rowdy group of floaters. And, as previously stated, those rowdy floaters have a right to recreate as they wish and those habits will not be changed.

Finally the form of recreation I'm most passionate about is horseback riding. I love to gather with a small group of friends and explore forgotten paths of the ONSR. I often ride with my father and he tells me stories of his experiences on the trails we ride, the past landowners, and my relatives that once lived along the river. I am able to connect with the past by traveling the paths that used to be frequented by Ozarkians but are now scarcely used because they are not accessible. I love to come upon old house sites and imagine what the area might have looked like to my great grandfather when he delivered the mail, or what the route traveled looked like to my great grandmother who traveled by horseback to teach school. I know many others do not have the same attachments I do but I believe this point of view is still interesting to many people.

Some may say that hiking can provide the same experiences as horseback riding with less negative impact, but I challenge that person to cover twenty miles in one day on foot. Horseback riding provides its own unique perspective and experience and I do not think it is one that should be excluded from any part of the ONSR. I understand the negative impact that has been measured in the form of elevated e. coli levels in the river. I do not think that large groups of riders should allow their horses to stand and defecate in the river. But, I think that improved management could easily eliminate this problem.

I agree that trails and crossings for horse use should be designated but I do not trust the park to form and designate these trails without restricting access to important areas. I enjoy traveling down the old roads used by locals for years and see no reason why they could not be designated as trails. But in many instances the where an old road existed the park has decided to close them off and instead cut out a path through brush. So while I agree that trails and crossings need to be designated I would like to see a multidisciplinary team comprised of scientists, park officials, and riders work together to determine where these trails should be and the path they should follow. Of course I will not agree with all the choices made by even the best possible team but I understand that compromises must be made and I believe decisions made by a team would lead to better compromises.

In summary, I appreciate and enjoy many forms of recreation in the ONSR and wish to continue to enjoy these activities in the future. I understand that to continue to enjoy these things some management changes need to be made, but I do not agree with the proposed plans provided. I do not think there is any benefit to banning motorized boats in the upper regions of the river. I do not think that motorized boats cause any more disturbance than a typical group of floaters on a Saturday in the summer. I do think more trails should be formed and developed for hiking and horseback riding in the ONSR. I do not want the NPS to determine what trails and crossings will be used without input from trail users and other experts. Overall I think people are entitled to recreate in the manner they choose within reason. No one should encroach upon another's rights but those that wish for a quiet untouched river way should understand they are encroaching on another's right when they lobby to outlaw their form of recreation. My hope is that the park service will seriously consider the comments given and do a thorough revision of whatever alternative they choose before forming a new General Management Plan.

**Correspondence:** I believe that there should be more regulation. I enjoy the streams and believe more action needs to take place in protecting them. I'm also willing to accept the regulations myself. If that means hiking more from a point away from many of the abused access points, than so be it. It is sad to hear that pollution in the streams has reached dangerous levels. There are consequences when introducing great numbers of non native animals into a concentrated area of the stream all at once. If it were up to me, I would completely outlaw all atv's on the ONSR property. The days of free for all family atv gatherings on the rivers should end.

A friend and I had an unnerving experience while floating the Current River. Three guys on horseback decided to go

right through our camp within minutes of us setting up for our overnight float. It made absolutely no sense to us. There was plenty of room for them to get around us elsewhere. They went into the woods and turned back around and stomped right through our camp again! They didn't say anything and stared us down the whole time. We would have said something but they were all holstered with guns! I definitely think there is some sort of resentment from some of the horseback riders.

My vote would be for proposal B. The video from the "Friends of the Riverways" site opened my eyes to how much people have impacted the Riverways. The river doesn't need that many access points. I personally feel that there are bigger bodies of water better suited for John Boats. Not the Riverways.

I've witnessed many creeks degrade while growing up. Creeks that were doomed because of how land was zoned within their watersheds. The urban sprawl reaching out of St. Louis made this happen rapidly. There is hope for the riverways. The ONSR needs to keep the rivers in better check for future generations to enjoy. I feel like examples of clean flowing streams in beautiful areas are dwindling and the implementation of what's better for conservation is key. If this proposal goes through, and does reach many of its goals, a possible example can be made for other struggling rivers worth more protection.

<b>Correspondence:</b>	Dear Sir,
------------------------	-----------

I really appreciate the National Park Service work to save a bit of the natural History of Missouri for myself and our future generations of Americans.

I am 65 years old and currently am employed as a Fire Captain for the Jefferson City Fire Department. I have lived my life in Missouri.

I would prefer that our use and appreciation of the Ozark National Scenic Riverways would not change the nature of what we are trying to save for our use and appreciation.

I would be in favor of restricting the use of this park that would cause damage to it. I know that the use of 4-wheelers causes physical damage to the parks structure. These vehicles also bring in invasive species. These invasives like Scericia Lespadesa, Japanese Honeysuckle, Autumn Olive, Bush Honeysuckle, Winter Creeper, etc., will eventually displace our natural flora. Also driving these vehicle through waterways also causes damage to the aquatic life.

I have seen that some woodlands in the Jefferson City have been completely taken over by invasives, because of nearby ornamental plantings. This will eventually happen to our Ozarks.

The use of horses in the park may be less damaging, but they will still bring in some invasive seeds and cuttings.

I also don't believe that firearms should be used in the Park.

I appreciate your consideration of my comments.

Charles Skornia

**Correspondence:** Ozark National Scenic Riverways, Comments on final draft General Management plan Feb 7 2014

Thank you for the opportunity to comment on the General Management Plan for the ONSR. These comments are on behalf of the Missouri Chapter of the Sierra Club representing over 8300 members in the state of Missouri. Our members are committed to the enjoyment, protection and exploration of our natural heritage. The ONSR is a treasured resource for the whole county, and a very special place for Missourians.

Our members have enjoyed and explored the ONSR as children, as adults, as parents with children and in our senior years. Our membership includes those live in the ONSR area, some are landowners. But like the state population itself, many of our members live farther away. We cherish our opportunities to visit and refresh our lives with a float, hike or horseback ride in ONSR.

The ONSR needs a revised GMP and we appreciate the work the NPS has put into preparing the final draft alternatives. The agency has done a good job of presenting alternatives with a range of approaches to balancing the need for preservation and protection with the desire for varied recreation now. That balance is at the heart of the park's mission, but with an eye towards the fundamental mission of the park and future generations, protection and preservation should be foremost. That perspective also ensures a quality environment for current users. Without this view we would not have the resource valued today. Users count on the Current and Jacks Fork rivers to provide clean and clear recreational waters.

We support Alternative A, which we view as providing the best protection for natural and cultural resources while offering varied recreational opportunities. A summary of some points of value are:

1.Closing unauthorized trails/roads and access points. Unauthorized river access points increase erosion and sediment load, enable motorized access to gravel bars which is harmful to other users and the environment, mar the view from land and water, and may increase user numbers in times and areas where restraint is needed Unauthorized trails and roads do much the same and in addition enable illegal motorized and horse use . We support the commitment in A to closing such access points, roads and trails.

2.Relocating trails and crossings, adding trails. We support the plan to look at existing planned trails and assess their impacts with a promise to relocate trails in more environmentally appropriate routes. This is especially important for horse riding trails. We also encourage development of more hiking trails. The park's 1991 road assessment clearly pointed out the need to address the proliferation of unauthorized trails/roads with closures and the benefit of updating the planned trail system.

3.Horseback riding: We support horseback riding in the ONSR. But in addition to considering horse trail mileage and location, the issues of numbers of riders and stream crossing require special consideration. Clean water is one of the most outstanding resources visitors will appreciate in ONSR. We encounter so many polluted and compromised waters that freely enjoying clean streams is a special encounter. Eroded areas, humans, vehicles and horses all contribute some pollution risk. But horses and poorly placed horse trails and stream crossings are the greatest risk. Part of this issue is pure numbers. We recommend the agency take action as needed to limit numbers based on resource conditions and limitations. Horse camping within the ONSR would strain the resource and be difficult to manage. Options for horse camping outside the park could be an option for the local economy.

4.Motorized river use. We support the park's plan to accommodate the plan with current motorboat 60/40 requirements and standards. The character of the rivers historically have made some of the reaches difficult if not inaccessible to motorized crafts. But changes in technology have enabled motorized crafts to travel further. It is appropriate that the agency assess this new capability and evaluate natural resource impacts, user patterns and the overall park mission in that light. But for rivers like the Current and Jacks Fork which are so highly used by non-motorized crafts, it makes sense to dedicate some segments off limits to motorized crafts.

5.Cultural resources: Appreciation of the history and culture of human activity in the ONSR is an important part any park experience. We support educational efforts with restoration and protection of historic sites. We caution that restoration of fields/pasture like landscapes be closely kept to the immediate viewshed of any restored homestead

etc. Bottomlands forests are an important but relatively rare part of the ONSR area ecology. These forests should not be transitioned to open areas except in rare circumstances, such as restoration of a limited landscape homestead site.

6.Wilderness: A Wilderness area would provide an attractive addition to the ONSR. We understand that the recommendation in the GMP is not a legislative determination of Wilderness. But the agency's recognition of wilderness characteristics of the Big Spring tract will ensure managing the area as wild and rustic and thus provide visitors with a unique experience. We support the agency's assessment of a potential wilderness area as found in alternative A or B.

7.Scenic Easements: Although not mentioned directly in the GMP alternatives, proficient management of scenic and conservation easements are important to enhancing the ONSR user experience. Such easements are a legal contract and we are pleased to hear of the agency's intent to work with landowners to keep compliance up to date.

8.Species protection: As the agency carries out whatever alternative is implemented we support careful attention to the needs of flora and fauna of the park. The park is an important riparian corridor providing habitat, refuge and migration routes for many Missouri species. Given the unknown specific stresses on species due to climate change this corridor will gain greater value

9.Local community and economy: The ONSR is a national park of value to and supported through taxes by all citizens. It provides economic value to the local economy and brings in money from outside the area. The natural resource protections and recreational opportunities evaluated and balanced in the plan alternatives are needed to keep the quality of the park attractive to visitors from afar and nearby. Another variable is park staffing and the ability to manage and monitor the park. More intensive recreation that risks resource impairment requires more staff to try to avoid damage, if that is even possible. We view alternative C especially as overreaching in keeping that balance between protection and use.

The park and local communities will benefit if the ONSR keeps a solid, deserved reputation as a well managed park with clean waters and natural surroundings inviting a variety of low impact recreation. Nearby communities will also benefit as they offer the amenities the park itself cannot provide.

Again, we are impressed with the work and detail that went into the development of the GMP draft. Since the ONSR has not had a plan revision since 1984 this has been a daunting task. We look forward to the NPS's decision on the GMP. And we look forward to continuing to enjoy, explore and help protect the Current and Jacks Fork river area.

Thank you for consideration of our comments.  
Sierra Club, Missouri chapter,  
7164 Manchester Ave., Maplewood, MO 63143

**Correspondence:** Alternative A seems like the optimal care-taking of the Current and Jacks Fork waterways. As I reflect back on my youth upon these rivers, when my parents took us canoeing every year from 1986, continuing on, we observed a great deal. Never underestimate the destructiveness of inebriated young people is one big lesson. Any experience of wildlife, serenity, or family bonding can be shattered by screaming drunks with loud music, vehicles, and copious trash containers spilling everywhere unattended. Such people are having a great time- -and disregarding \*everything\* of laws, courtesy, or well-being of others, wildlife, etc. Stop the illegal roads and the gravel-bar access- -it only opens up more territory to the sense of unfettered lawlessness and irresponsibility that makes everyone else pay a higher price for the experience of the exploitative few. Big Spring needs to be a wilderness designation. The human traffic is already an intense burden upon the place, let alone opening it up to other angles of use. Please keep as much motor-boat traffic OFF the rivers as possible; the disturbance level of every aspect- -to canoeists, wildlife, campers, etc.- -is simply not worth indulging the few who would wish to use such. Please do all you can to reduce erosion, to protect water quality, to defend the distinctive wildlife and scenic character of these magical and unique riverways. As the population continues to rise, treasures like these feel ever-greater pressure, and deserve ever-vigilant care. Thank you.

**Correspondence:** Comments and Recommendations regarding the  
Draft General Management Plan / Environmental Impact Statement for  
Ozark National Scenic Riverways, Missouri, dated October 2013

Submitted by Eric Dannenmaier  
Professor of Law  
Director, Environmental and Natural Resources Law  
Indiana University Robert H. McKinney School of Law  
February 7, 2014

## BACKGROUND AND BASIS OF COMMENTS AND RECOMMENDATIONS

I am a Missouri native and a lifelong visitor to and recreational user of the Jacks Fork and Current Rivers. My personal connection to and interest in the Ozark National Scenic Riverways (ONSR) extends back to a time before Congress voted to create the ONSR. My parents honeymooned along the Jacks Fork River, in what is now the ONSR, at a retreat operated by the Missouri State Teachers Association about 14 miles Northeast of Mountain View, Missouri. I keep in my home a black and white snapshot of my mother, a new bride, standing in front of a cabin overlooking the Jacks Fork in the 1950s.

I grew up visiting the Jacks Fork, the Current, the Eleven Point, and other Southern Missouri rivers from our home in St. Louis, and later Springfield, Missouri. As a child, and later a high school and college student, I swam and waded in - and camped, canoed, and fished along the banks of - these unique rivers. I also hiked the woods of the Mark Twain National Forest and other protected, scenic, conservation, and wilderness areas managed by the federal and state governments throughout the region. I left Missouri after college, and my work has not allowed me to return as a resident. But my love for the region, and for the rivers and landscape that comprise the Ozark National Scenic Riverways, has made me a frequent visitor.

A few years ago I did manage to return to the region to become a property owner. I purchased about six acres of forested land on a bluff overlooking the Jacks Fork. The land is at the Eastern edge of the Eminence gap, where private property remains outside the direct protection of the legal framework for the Riverways, but where the value of the land is increased and sustained by the existence of the ONSR and the protection that its conservation affords.

I am also a law professor who researches and teaches environmental, natural resources, and water law. As part of my work, I have spent over two decades analyzing and teaching legal frameworks for water resources protection, and advising governments and stakeholders on strengthening rules for the conservation of those resources. My work focuses both on the substance of conservation law, and on the process of stakeholder access to natural resource decision-making and the resources that are protected by conservation regimes.

Through my work and my own volition, I have been fortunate to travel in all 48 states of the lower continental United States, and in over 50 countries around the world. These travels have revealed many incredible landscapes and exceptional rivers, but I have found no river that surpasses the natural beauty or intrinsic value of the Jacks Fork or the Current. A well-known American Supreme Court Justice, Oliver Wendell Holmes, once wrote that A river is more than an amenity - it is a treasure that offers a necessity of life that must be rationed among those who have the power over it. (New Jersey v. New York, 283 U.S. 336, 342 (1931)). For me, and for many who have experienced them, the Current and the Jacks Fork are national treasures. I understand why Congress decided, on voice votes in both houses for which I have found no recorded opposition, to establish the Ozark National Scenic Riverways. (The authorizing legislation (S 16) was passed by voice votes of the Senate Oct. 22, 1963, and of the House Aug. 11, 1964. The Senate Aug. 14 agreed to the House amendments, and the President signed S 16 into law Aug. 27 (PL 88-492). See Congressional Quarterly Almanac 1964, available at <http://firststreet.cqpress.com/cqalmanac/document.php?id=cqal64-1303164&type=toc&num=9>)

I am grateful that the National Park Service (NPS) is updating its blueprint for conserving the ONSR, and I

recognize the time and painstaking effort that produced the Draft General Management Plan / Environmental Impact Statement for Ozark National Scenic Riverways (draft GMP). I have reviewed the draft GMP in detail, and I was attended the January 2014 Open Houses and Wilderness Hearings in Van Buren and Kirkwood, Missouri. I have also spoken with many of the residents and business owners in the region about the proposal, and NPS preferred Alternative B, and had time to consider the positions of those who would prefer both more, and less, protection for the ONSR.

It is from this perspective - as a Missouri native; a lifelong visitor to the Jacks Fork and the Current; a riparian property owner along the Jacks Fork; an expert in natural resources and water law and policy; and a person who has taken the time to become familiar with the draft GMP and to consider local residents responses to the draft - that I respectfully offer the following two comments and three recommendations regarding the Draft GMP.

I note at the outset that I understand the NPS preference for Alternative B. I would have sought a greater measure of protection (Alternative A, or perhaps a B ) but I recognize the insights and compromises that would lead to the choice of a plan that seeks to accommodate the demand for access for recreational use within a broader conservation plan. So I support Alternative B, but that support is driven by my respect for the expertise of the NPS and qualified by my belief that any lesser degree of protection would be legally indefensible.

COMMENT ONE: The implementation of the draft GMP (preferred Alternative B) would be facilitated by increased public outreach and greater public engagement in the future management of the ONSR

The process of outreach to members of the public - at least that part I observed at the meetings in Van Buren and Kirkwood, and learned about from others who attended the Open House in Eminence - demonstrated a strong local interest in the ONSR and its management. My discussions with local residents who chose not to comment on the plan in public suggest that local concern about the draft GMP preferred Alternative B may be exaggerated. I believe that these silent or reticent stakeholders raise questions about whether the character of local interest is fairly represented by public feedback on the draft plan. But the fact of strong local interest cannot be denied.

Of course the ONSR is a national resource that must be managed pursuant to the values established by Congress on behalf of the whole American people. It should not, and cannot legally, be managed to satisfy the interests of any one faction of local residents. Yet a management plan that considers local interests, and engages local stakeholders as stewards of the ONSR, is more likely to succeed in its goals. In addition, local residents experience the landscape of a conservation area more immediately and regularly than those, such as me, who are not privileged to live nearby. So engaging local stakeholders is both a practical management advantage and an equitable consideration.

Greater stakeholder participation could, at the very least, educate the local public about conservation needs and practices. Exposure to the facts, and a better working relationship with NPS professionals, could also dispel fundamental misunderstandings about the management of the ONSR and the Draft GMP (many of which were expressed during the public meetings that I attended). Examples of these misunderstandings include an expressed belief that all river baptisms require a federal permit; a perception (fueled in part by claims from an elected representative) that the NPS plans to close dozens of traditional access points and thus cut off access to the rivers for local residents; a belief that the millions of tourist dollars flowing annually into the ONSR and surrounding communities will be lost if NPS implements its preferred management alternative. These easily-disproven claims, and many others, would be less likely to be repeated and become a sort of lingering local mythology if stakeholders had greater and more regular access to information about management choices and to the managers charged with making those choices.

Greater local stakeholder engagement could also encourage a stronger local commitment to support and comply with new rules and restrictions that emerge from a new management plan. There is a wealth of research showing that compliance rates increase among populations that buy in to rules or feel a greater ownership of the regulations that govern their conduct. NPS cannot be in all places at once - no agency can - and the enforcement of rules designed to protect and conserve will very often rely on voluntary compliance or local reporting of violations. Thus, any measure that will strengthen voluntary compliance at a relatively low transaction cost will increase the potential success of a new management plan.

In addition, greater public engagement could help NPS adapt to local concerns that emerge and evolve over time.

Policies can then be tailored to best achieve the goals of the management plan and the ONSR enabling legislation.

So the learning that comes from public engagement can go both directions.

Thomas Jefferson once said (in words chiseled into the wall of the Jefferson Memorial in Washington, DC) I know no safe depository of the ultimate powers of the society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them but to inform their discretion by education. Finding a way to engage the public more fully in the management and stewardship of the ONSR would respond to Jeffersons admonition to educate the public rather than withdraw the power that comes from a greater understanding of, and participation in, conservation goals.

In order to increase public engagement, I offer the three recommendations that follow.

#### RECOMMENDATION ONE: Create an ONSR Citizen Advisory Group

I recommend that the NPS, or the ONSR Superintendent acting under his authority as the manager of the ONSR, create an ONSR Citizen Advisory Group comprised of local residents who are opinion leaders (such as chambers of commerce heads, prominent business owners, high school teachers or administrators, etc) along those who visit the ONSR for recreation and are concerned with its management but do not live locally (such as representatives of public interest environmental groups or tourist agencies).

At the time the ONSR was established, the enabling act also created the Ozark National Rivers Commission, which included seven members recommended by state and county leaders. It was to be consulted from time to time by the Secretary of the Interior or his designee relative to the establishment, development, and administration of the ONSR. But the Commission ceased to exist by the terms of the enabling act 10 years after the ONSR was created.

My proposal is not to recreate that Commission, but to establish a less formal advisory body that can work directly and as needed with the ONSR Superintendent or his designees on matters that arise concerning the implementation and administration of the management plan. This would not supplant NPS authority as a steward of ONSR, but simply engage key stakeholders as advisers, and hopefully as stewards themselves, thus strengthening NPS authority.

There are many models and examples that exist, and I would be happy to provide research to the NPS regarding options and their potential suitability for the ONSR. The emphasis should be on convening a group of a manageable size with sufficiently diverse backgrounds to represent a range of constituent interests (including local residents, property owners, and frequent visitors) and to identify participants capable of communicating their own ideas and those of persons similarly situated. Participants should also be capable of communicating what they learn, informally, within the communities where they live and work. Again, the learning goes both ways.

It is possible that there could be several smaller advisory groups focused on different management issues (like fishing, trail riding, etc) but having a diversity of opinions and interests represented in the group (whether one or several) would be a key to assuring that some of the learning and support for managing the ONSR according to the new management plan would emanate from the group itself.

#### RECOMMENDATION TWO: Establish local ONSR Public Information Offices

I recommend that the NPS Establish local ONSR Public Information Offices on the main streets of the two communities most closely connected to the rivers, Eminence and Van Buren. This could be as simple and inexpensive as an information kiosk within local businesses and/or a small office that is staffed by an existing public information officer or park ranger during peak tourist season or on weekends. The offices could provide information and interpretation for tourists and could also serve as a point of contact with the local community.

The offices would draw tourists to the town centers for information and thus support local business interests that might also benefit from foot traffic. Staff from the offices could also engage local residents informally as ambassadors for the NPS. The offices could also support periodic programming of interest to local residents - such as cultural events or presentations about the natural features or history of the region.

If this approach is successful it could be replicated in other local population centers such as the county seats of Dent County and Texas County, and/or smaller nearby communities such as Summersville and Winona. Staff could be rotated among these more distant communities to save costs and increase the access of local residents to a range of NPS personnel.

The point of this recommendation is that resources devoted to engaging local residents in a constructive and informal way are resources that will help promote a better understanding of ONSR, greater compliance with rules promulgated under any new management plan, and greater acceptance of the ONSR and NPS stewardship as part of the local fabric.

**RECOMMENDATION THREE:** Increase publicly-available data regarding the ecological harms to the ONSR from high-impact use and regarding the economic benefits of the ONSR that are realized through ecologically-oriented use

I recommend that the NPS respond to some of the widespread misinformation among local residents concerning the ONSR and its benefits as a conservation area - as well as the costs of overuse and high-impact use - by (a) using remote sensing technology to document the impact of visitor-created roads (informal trails and river crossings) on the ONSR; and (b) gathering data regarding the economic contribution of visitation to the local economy in a manner that allows the disaggregation of ecotourism benefits from other tourism benefits. The ideas are described in more detail as follows.

(a) Using remote sensing technology to document the impact of visitor-created roads (informal trails and river crossings) as a resource indicator and part of long-term monitoring plans. A periodic effort to document erosion and downstream impacts of informal (and potentially illegal under a new management plan) river crossings will provide tangible proof to support some of the concerns that led to proposals to reduce those crossings. It may eventually be helpful in litigation should individuals or groups sue to reverse rules issued under a new management plan, and it will also help show local residents the harm that these crossings are doing to the rivers. It would be a relatively simple matter to target known informal crossings at times known to be high traffic for horseback riders or all-terrain vehicles and to compare those images to the same reaches of the river at times when fewer or no crossings are made.

(b) Gathering data regarding the economic contribution of visitation to the local economy in a manner that allows the disaggregation of ecotourism benefits from other tourism benefits. By ecotourism I mean tourism activities that have low environmental impact and that are enhanced by more natural, less noisy and mechanized, surroundings. This would require some definitional clarity to assure data integrity, but putting a meaningful number on the clear economic benefit from those who float, hike, and bike in and around the ONSR as distinct from a total number for all visitors would help dispel the misimpression that a conservation-oriented management plan is bad for business. It might also help support the decision by some conservation-oriented businesses to invest in the ONSR and surrounding communities, and thus have a reinforcing effect.

**COMMENT TWO:** The claimed recreational value of high-impact uses must be subordinate to conservation values, and balanced with the value of low-impact recreational uses

It is generally understood that three values drove the creation of the ONSR and must govern its management: conservation, preservation, and outdoor recreation. In fact, the ONSR enabling statute is structured to emphasize conservation first, and it identifies preservation and outdoor recreation as interests that are subsumed as aspects of conservation. ONSR was created:

for the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States. & (Public Law 88-492, August 27, 1964, 78 Stat.608-610) (emphasis added).

The enabling act also provides that the ONSR:

shall be administered in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535) [the National

Park Service Act] which provides that The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

This non-impairment standard also militates in favor of a management plan that places conservation values above recreation values, and would favor preservation over recreation, because conservation and preservation are consistent with non-impairment, whereas recreation - particularly high-impact recreation - always carries a threat of diminishing a natural resource.

Many members of the public who attended the public meetings and commented on the Draft GMP emphasized only recreational values - and only a narrow category of high-impact recreational values at that. The chief concerns that seemed to emerge from these commenters relate to a desire to continue having unrestricted access for power boats, unrestricted access for motor vehicles, and unrestricted access for horseback riders. They opposed Alternative B because it limits and manages access, and some argued that this limitation is inconsistent with the values that led to the designation of the ONSR. But this argument fails for several reasons.

First, the statutory structure (above) shows that recreation is actually a value that competes with preservation as a sub-category of the primary value of conservation. The law is plainly written. So recreational interests must be balanced with preservation interests in service of the more foundational Congressional concern that the ONSR be conserved.

Second, even when balancing recreation and preservation as a subcategory - in service of - conservation, the statute does not treat all types of recreation as equal. It calls for provisions for use and enjoyment of the outdoor recreation resources. This distinction is critical because the emphasis is on the natural, outdoor, resources in which recreation occurs - not on recreation as a distinct value. Indeed, recreation that does not depend upon natural resources is not a concern of the ONSR enabling legislation at all. Movie theatres, dance halls, and any number of ancient or traditional recreational activities would have no place in a legislative plan emphasizing outdoor recreation. In addition, any form of recreation that is detrimental to natural resources is anathema to the purpose of the statute and should be prohibited or strictly controlled - certainly not privileged. If, as another example, local residents historically captured fish by using dynamite to shock and kill them (a practice known to be traditional in some parts of the world) that practice, no matter how traditional, could and should be banned from a place where conserving the place itself is the dominant Congressional concern. Similarly, using speedboats to gig fish (claimed by some to be a traditional practice in the area - although the tenure of such a tradition is suspect) can and should be limited, if not banned outright, where the use of the boats is shown to be harmful to the underlying resource. This may seem to be an instinctively correct approach to managing the ONSR - but it is also legally mandated by the organic act creating the ONSR. In this respect, the provisions of preferred Alternative B restricting motorized boats altogether from the Jacks Fork and some stretches of the Current should be maintained because it is an approach most consistent with the statutes mandate.

Finally, even looking at recreation values in isolation (and before any required balancing occurs) it is important to note that some of the recreation proponents (and, certainly, those who spoke the loudest and most frequently at the public meeting in Van Buren) are advocating specific types of recreation that disrupt other types of recreation. Power boats, motor vehicles, and horses (at least in large organized groups such as those sometimes assembled by trail riders) create noise, cause erosion, and introduce organic and inorganic pollutants that impair non-motorized and more natural recreational uses.

I hike along the Jacks Fork and Current Rivers, and I swim and wade in them, fish in them, canoe on them, and camp next to them. I have personally experienced the detriment and nuisance caused by powerboats which can be heard from miles away, and which can be life threatening when they careen around the bends of a river and close in rapidly upon unsuspecting swimmers and waders. I have also seen many examples of riverbank erosion at the access points of informal, unmarked, horse trails used by trail riders. And I have seen the feces from crossing horses left along the river banks and floating downriver from some upstream crossing. I have also seen the sheen of motor oil on the water, and the excess foam caused by the churning of excess nutrients introduced into the rivers from motor boats, automobiles, and horses. So even when balancing these high-impact recreational uses against preservation

concerns (and subordinate to conservation values), high-impact recreation must still be balanced against the many low-impact public uses for which the ONSR must also, by law, be managed.

**Correspondence:** Dear National Park Service,

I believe that Alternative B would be the preferred alternative for the Ozark National Scenic Riverways General Management Plan.

I was privileged to have spent the last summer living in Eminence, Missouri as a part of a botany internship with Lincoln University of Missouri and the Missouri Department of Conservation. During that time, I was able to experience the magnificent beauty of the Ozark National Scenic Riverways on a daily basis helping with endangered plant monitoring and invasive plant species removal. I was also able to witness damage to these precious lands by lack of appropriate management. These included invasive plant species spread by ATV's, damage to streams by lack of marked watering locations for horses, and massive erosion on trails that need more gravel for equestrian use.

I believe that Alternative B would improve the use of trails for equestrian riders, reduce the spread of invasive species and enable our visitors to have a more enriching experience of our beautiful, unique habitat. Our equestrian riders from other states are a great asset to the local economy and should be able to have quality trails. Our diverse plant species in Missouri should be maintained for future generations to view and to maintain the strength of our ecosystems to support our game species.

Thank you for listening to my feedback, and I hope that you will make an informed decision that will benefit our Missouri economy by keeping our ecosystem strong.

Sincerely,  
Erin E. Skornia

**Correspondence Type:** Web Form  
**Correspondence:** I appreciate the opportunity to submit comments on the Draft General Management Plan and Environmental Impact Statement for the Ozark National Scenic Riverways (ONSR).

I am one of the many who frequently visit the ONSR, appreciating the beauty of the rivers (particularly the upper Current, in my case) and finding release from the pace of modern life in the quieter, slower rhythms of the natural surroundings- -at least on weekdays. On weekends, and some other times, one experiences the dark side of the Riverways- -excessive drinking, boorish behavior, loud music, flotillas of canoes and tubes, horses, ATVs, and motorized boats where they should not be. And even on weekdays, one finds at least the residue of this wretched Bacchanalia: polluted water, degraded streambanks, illegal road and horse trail crossings, and garbage, all topped off, literally, by structures constructed in violation of scenic easements. Saddest of all is the absence of the wildlife that should be filling the Riverways with life, scared away from the ecosystems that should be their home and sanctuary.

This is not what was intended by Congress for the very first national river park. The purpose of the ONSR was "to conserve and interpret the scenic, natural, scientific, ecological, and historic values within the National Riverways" (quoted from the Draft Plan), not to degrade them. The continuing damage to the Riverways, which is apparent to all with eyes and brains, is not so much a function of overuse as misuse- -misuse that has been allowed and even enabled over the years by a timid Park Service anxious not to aggravate a minority of loud, aggressive local residents (and concessionaires) who are ideologically opposed to government control of area resources, despite the evident economic benefits to the region. By now, the Park Service should be aware that that minor, if belligerent, segment of the local populace, and their political representatives, will never be appeased- -but only emboldened- -by weak management.

This plan has been very long in the making. It is time for the Park Service to reaffirm the original mandate for the Riverways and make abundantly clear that the ONSR will be managed as a national park and that the highest priority will go toward the protection of the natural values, including wildlife, that made it worthy of that designation in the first place. While Alternative B would be a significant improvement over current management direction, I believe Alternative A, with its greater focus on ecosystem protection and low-impact recreation, would be more consistent with the vision that created the Riverways and mark a clearer break from the dysfunction that has long characterized the ONSR. I ask that the Park Service select Alternative A, including the recommendation for wilderness designation for the Big Spring Wilderness Study Area, while significantly increasing the extent of hiking trails beyond the 15 miles proposed.

Whatever direction the Park Service takes, the keys to its success will be the willingness to commit to that direction in the face of the opposition that will inevitably materialize and, particularly, to enforce the regulations consistent with that direction against those who will most certainly violate them. Among those violations, not addressed by any alternative, are those that ignore scenic easements. The Park Service should take quick action against new and existing structures to protect the scenic value of the Riverways.

Thank you for the opportunity to comment on the draft plan.

Sincerely,  
Dan Sherburne

**Correspondence:** Dear Mr. Black  
Van Buren Missouri

I have heard that Mr. Jay Nixon has recommended the Plan B. How can this be so when many people have sent comments that we do not want A, B, or C. Would it be possible to have a meeting with key government people where we can have a verbal conversation to explain what the general public in the vicinity that actually live, use and take great pride in our heritage of generations that have been born & raised on the Current & Jacks Fork Rivers. Our Congressman Mr. Jason Smith has stated that he agrees with his constituents. The new "GMP" is not what is needed for this area! I noticed that there are a lot of words in the plan like (maybe, possible, might, could be, not a lot of definite answers to the GMP)

Right now I feel as if I am living in a Communist Country! I feel so helpless and I know that I am not the only person that feels this way. I can also relate to how the American Indian felt! They were assured the government would provide for them! (The Government Didn't)

You can rest assured that I am only one person BUT there a lot of people that agree with me. I will be contacting every politician, no matter what the office if the ONSR draft GMP tries to restricts the Current & Jacks Fork to where my children, grand children, & great-grand children cannot enjoy the heritage of the area where my parents, grand parents and great-grand parents were raised!

Mr. Black Please e-mail me when & where this meeting can take place!

Yours Truly Charlotte Moss, P.O. Box 151 Ellington, Missouri 63638

Ozark National Scenic Riverways  
404 Watercress Dr.  
P.O. Box 490  
Van Buren, MO 63965

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan

Dear Superintendent William N. Black,

The Ozark National Scenic Riverways (ONSR), enabled by PL #88-492, was established in 1964 for the protection of the Current and Jacks Fork Rivers, as they are of scenic, environmental, and cultural significance. The ONSR is characterized by its clear streams, karst springs and caves, dolomite bluffs, and significant populations of important Ozark plants, macro-invertebrates, fish, amphibians, birds, mammals. This environmental community is unique to the world, and is an extremely valuable natural resource of the United States.

To protect and preserve the ONSR for future generations, I urge the NPS to generally adopt General Management Plan (GMP) Alternative A, with some modifications in consideration of the need for meaningful engagement with local citizenry in their stewardship of and livelihood with their environment-dependent community.

While in many ways I support the National Park Service's preference for GMP Alternative B, it is wanting in a) the lack of understanding the potential impact of motorized watercraft use on the environment and human experience, and b) the failure to effectively plan for the protection of the Ozark hellbender, a key species in the Ozark environment. Therefore, Alternative A appears to more readily address these needs, as it strongly defends the natural environmental conditions. However, Alternative B, if modified to comprehensively protect the hellbender habitat and provide meaningful analysis of the impacts of motorized river vehicles, and allowing for their potential additional restrictions, could be a viable plan.

Having served for more than two decades in the service of environmental and public history, I have come to appreciate the repeated degradation of the natural biotic communities in Missouri, brought about by resource exploitation for short term profit, comforts, and recreation. The interrelation of settlement and exploitation near and around these Current and Jacks Fork Rivers, with activities and interests of the metropolitan region centered on St. Louis, has evolved over the centuries and is complex in nature. Interestingly, the use of what is now the ONSR is of great economic and cultural value both to locals and to those in the nearby urban area, with people of both regions having great passion and connection to these great Ozark rivers. Conservation requires responsible stewardship of our nation's remaining natural resources, and the network of biological communities that support and define these resources. The ONSR is one of the essentially, vitally defining, resources of our region, and must be protected from the tremendously impactful human population numbers and forcefulness of technology.

Motorized watercraft in the ONSR is one of the most difficult aspects of management and resource protection to predict, and the aspect with perhaps the greatest potential impact. For this reason, the NPS must incorporate proactive analysis of this factor into its GMP. Considerate, ongoing, coupled hydraulic-ecological studies of motorized watercraft use, designed to determine effects on the health and sustainability of the biotic community, must be undertaken. This accounting of effects on the region's biotic community (clean water, diversity of native fish, amphibians, macro-invertebrates, aquatic plants, their relationship with birds, mammals, and people, etc.) is necessary to understand this powerful human impact factor on the health and sustainability of the ONSR. Negative impacts of motorized watercraft elsewhere have included their contribution to increased water turbidity, riverbed disturbance, bank erosion, fuel leakages and exhausts, invasive species migration (on motor housings, hulls, etc.), and sound disturbance. Such factors having shown negative impact on wildlife viability, specifically effecting ability to reproduce, maintain shelter, and obtain nourishment. Without understanding the dynamic impact of these vehicles, the consequent long-term effect on the human experience in the ONSR cannot be understood. Increased use of ONSR will undoubtedly translate into greater use of these vehicles. Frequency of use and speeds of some kinds of these vehicles are also likely to increase. Engineering of these vehicles (hull shape and size, engine capacity, fuel use, speed, etc.) will change, as it has over the last 50 years. Motorized watercraft, their evolving technology, and incidence of use should be subject to ongoing analysis in the GMP's regulation of these vehicles.

With 51 species of concern within the ONSR watershed, 4 of which are mussels (out of 19 species of mussels total), 1 is a crayfish, 5 are fish, and 2 are amphibians, the integrity of water quality and the condition of streambeds and banks is of particular concern to a GMP. The Ozark hellbender, like other aquatic species, is affected by many factors of water quality and habitat pressures. Evidence has shown that not only are turbidity and fecal coliform levels a problem for these animals, but so too are endocrine disruptors of unidentified origin, probably from agricultural chemicals and pharmaceuticals contaminants. All such additional burdens push reproduction and survival toward a tipping point for such organisms. A U.S. Fish and Wildlife Service opinion on endangered and threatened wildlife should be of paramount concern to a successful GMP.

The GMP must also address equestrian trails and unauthorized vehicle access that impact sensitive riparian zones, including gravel bars; overcrowding of access points; and rowdy, irresponsible behavior by ONSR users. The GMP must be strongly enforced, as lack of enforcement over many years has led to an uncertain direction for the ONSR. Likewise, identification of cultural and natural features, and clear boundaries and information systems for the ONSR, will enhance users' experience and assist the local community in identifying its asset and value.

Neither the "No Action" plan nor Alternative C are viable for the ONSR. The former does indeed describe current management conditions, wherein ONSR management consists of minimal interpretation and no appropriate enforcement and resource protection. This essentially amounts to a plan not to manage, and contradicts the charge of the NPS. Alternative C sacrifices the environmental conditions on which the ONSR's scenic nature is based, providing short-term gain and financial benefit to very few individuals. The consequent degradation of the riparian environment in this "playground scenario" cannot be substantiated as being for the benefit of American citizens since their common natural heritage, and claim to the indigenous beauty and redemptive pleasures, would be irrevocably denuded.

As NPS is the agency which facilitates stewardship of our National Parks, its staff has my strong support in its ONSR analysis and management efforts, and I urge it to adopt and enforce a GMP that protects and preserves this riverway system as a natural environment that is the foundation of culture for both people who live within it and those citizens of the United States to which it belongs. That plan is Alternative A, with recommended amendments to enable local citizens to substantially take part in the care and stewardship of the natural culture of which we are all a part. This requires an all-out inter-agency/multi-level governmental effort to support local schools and community groups in education about the natural biological systems that support life; significantly promotes local economic benefit from business concessions, services and programs, and renewable resources that participate in the ONSR's use and welfare; and support of cultural stewardship, engendering ethical care of the environment, rather than extractive exploitation, of this region.

Sincerely Yours,

David Lobbig

<b>Correspondence:</b>	February 7, 2014				

ONSR Superintendent Bill Black  
Ozark National Scenic Riverways  
P.O. Box 490  
Van Buren, MO 63965

Superintendent Black,

As we have discussed on multiple occasions in-person, I am opposed (individually, and speaking for the overwhelming majority of the 37,000 constituents that I represent) to the National Park Service's (NPS) preferred "Alternative B," and to the further restriction of enjoyment/access for all users. Adoption of the "No Action Alternative," with a priority placed upon enforcement of existing regulations, would continue to protect the natural features of the area, while being the least disruptive to the local culture and economy. I consider the following comments to be separate and substantive, and should you disagree, I would appreciate a detailed explanation which outlines your reasoning.

When the Ozarks National Scenic Riverways (ONSR) was formed in the late 1960's, land was purchased, donated by the State of Missouri, and also taken from private landowners through eminent domain for the purpose of conserving/protecting the Current and Jack's Fork Rivers, natural features, and recreational opportunities for "future generations." Alternative B (NPS Preferred) of the Draft General Management Plan (GMP) directly contradicts the goals set forth when the ONSR was created; through increased restrictions on access and the outright elimination of recreational activities in vast portions along the riverways. Allowing users to responsibly experience this area that we agree is special was the central idea shared by property owners, the State of Missouri, and the NPS when the

ONSR was created; rather than to create restrictions so that fewer individuals will be able to enjoy this treasure. It also bears mentioning that the comment/regulation process being used in this instance is severely flawed. Users should not have to comment/advocate to prevent further restrictions from being implemented. Conversely, the burden should fall upon the NPS to justify your proposals to the users; with the final decision resting in the desire and interest of the people we serve.

1. Ironically, the GMP is not "General." Alternative B is very specific in the restrictions that are proposed.
2. When this area was identified as a special area that was worthy of management by a governmental agency, the very river accesses and roads which you now seek to close (or limit to hiking trails) in Alternative B were in existence, and are currently utilized by patrons, park staff, and law enforcement.
3. Current regulations exist to curtail lewd/obscene behavior, horse/vehicle traffic in the river, unsafe/discourteous motorized boat/floater traffic, and littering. Alternative B does not resolve these issues. A visible presence and enforcement of existing regulations is a solution currently at your disposal. At current funding levels, if you are financially unable to enforce current regulations, why would you seek to expand restrictions further? Maintaining a "family friendly" atmosphere should be a priority of any future plans.
4. Closing 2/3 (65 miles) of "undesignated" horse trails will be detrimental to a vital area of our local economy by further limiting the amount of our beautiful scenery that can be enjoyed via horseback.
5. Eliminating motorized use on the upper stretches of the Jack's Fork and Current Rivers is unacceptable. These areas are generally "self limiting" due to the amount of water available, but should remain accessible to users within the current limitations. The use of motorized boats in these areas is not prolific, but is a very important alternative for those with mobility challenges to be able to enjoy the scenery that the upper stretches afford. The use of small john-boats for fishing and gigging is a very significant part of the local culture. The most common use of motorized boats on the upper parts of the rivers are for "river clean-ups," when many tons of trash are hauled out of the rivers by local volunteers (Not NPS employees). I personally know of a number of individuals, that while enjoying the upper stretches, have come to the rescue of someone in a medical emergency. The benefits of motorized use (within the current limitations) far outweigh any problems, and should not be further restricted.
6. Camping along the river on gravel bars should not be limited to "designated areas." Part of the enjoyment of floating/boating is being able to camp at a convenient time and location along your route. Attempting to regulate this is nearly laughable. While the NPS has focused on closing camping areas in recent years, there should be a renewed effort to attract families to visit, camp, and enjoy their stay; rather than to say, "You can't camp here, because it's not designated."

Your consideration of my comments is appreciated. Should you wish to work together for the betterment of the Jack's Fork and Current Rivers, while jointly preserving the recreational opportunities that many enjoy and numerous families rely upon, I would be happy and willing to assist. This entire situation/discussion revolves around stewardship. The individuals in this area (who live, work and recreate here) have been responsible stewards for generations, in ensuring that the Jack's Fork and Current Rivers are maintained in a pristine state and available for all to visit and enjoy; which is incidentally the same reason that some wanted to designate this as a Scenic Riverway roughly 50 years ago. The question which logically follows: "Is the NPS maintaining the balance of stewardship given to them, through the proposal of the GMP Alternative B?" Sadly, I would say not. If the GMP Alternative B is implemented despite the concerns that have been expressed and the detrimental effects (culturally/economically) which will ensue, I will again state my commitment of "returning the Jack's Fork and Current Rivers to State management," so that the original intent of the founders of the ONSR may be fulfilled; "For the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jack's Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States...."

Yours in Service,

Representative Robert Ross  
Proudly Serving the 142nd House District  
Texas, Howell, Phelps, & Pulaski Counties  
Missouri House of Representatives

**Received:** Feb,07,2014 22:57:31

**Correspondence Type:** Web Form

**Correspondence:** I appreciate the thorough research that clearly went into the management plan and support the National Park Service decision to favor Alternative B. Within that framework, I would prefer as little impact on the natural resources as is possible and an emphasis on education for visitors, potential visitors, surrounding communities, and those with economic interests in the area about the uniqueness of the habitat and its plants and animals and the effects of recreation on them.

**Correspondence Type:** Web Form

**Correspondence:** Comments on Draft GMP, Ozark National Scenic Riverways

I thank the National Park Service for addressing many of the problems that have grown and festered at ONSR in recent decades. I have enjoyed the Current and Jacks Fork Rivers since the 1960's in all seasons, canoeing and camping, bird watching, and enjoying the beauty and serenity of the area. The former State Parks at Round Spring, Alley Spring and Big Spring have thrived under NPS management.

I believe Alternative B provides the best balance among the three alternatives while still addressing many concerns: protection and interpretation of the natural and cultural resources of the Riverways; commitment to deal with unauthorized roads, horse trails, river accesses and crossings, and ATV use; restoration of degraded land and riverbanks, especially in the riparian corridor; and use of zoning and other systems to better distribute visitor use and avoid conflicts should contribute to a healthier river, enhanced regional economy, and increased visitor satisfaction.

Specific comments regarding Alternative B:

**Staffing levels:** Staffing levels need careful attention in the final draft. New staff in resource management and science are needed since these are the staff who will have responsibility for restoration of degraded lands in the riparian corridor. Restoration of degraded lands in the riparian corridor should receive priority over construction of new infrastructure and facilities if resources for adequate staffing levels cannot be made available.

**Restoration of problem areas:** Seriously degraded areas, such as the riverbottom land across from Welch spring that has been critically marred by a maze of unauthorized, heavily rutted roads and traces, should be restored to natural river bottom forest, not hardened for continued motorized use. This side of the river should be maintained in a natural state as a scenic asset for visitors to the developed area across the river at Welch Spring and for floaters passing on the river.

**Horse trails and camping:** It is critical to close and restore the maze of unauthorized horse trails and river crossings and to develop some better designed trails that avoid sensitive riparian areas. I support consideration of a horse permit system to control horse use and believe that a private horse campground outside the park would contribute more to the local economy and conserve limited park lands for less damaging, higher priority uses.

**Primitive and gravel bar camping:** I strongly support the closing of the unauthorized maze of roads to primitive campsites and gravel bars, and the clear designation of authorized primitive sites and gravel bar camps, some accessible by motor vehicles and some walk-in. All designated primitive and gravel bar camps accessible by motor vehicle should be screened from view from the river, just as developed campgrounds are. Gravel bars and primitive camps should of course continue to be freely available for camping and day use from the river.

**Horsepower zones:** I support horsepower limits for river zones, though gigging with motors are a traditional use may be considered an exception to the non-motorized zones in the upper reaches of the Current and Jack's Fork for such use in the non-peak season.

**Natural and Cultural Resource Restoration:** I strongly support both natural and cultural resource restoration, but believe that in riparian areas there should be no new conversion of bottomland forests to open fields. Forested riparian corridors are critical to stabilize riverbanks, especially in view of the likely impacts of climate change and

severe weather events. All restoration should be with native species.

Scenic Easements. The more than 9,000 acres of private riverine land under scenic easement to NPS need to be effectively monitored, enforced, and corrected to avoid the sorts of violations that have occurred in recent decades.

Wilderness: I ask that management of the 3430-acre de facto wilderness at Big Spring continue into the future, as proposed in Alternative B, in order to provide continued opportunity for wilderness-type recreation and to maintain the area's availability for possible eventual designation by Congress.

Hiking trails: I support the proposed increase of hiking trails and especially urge NPS to partner with other federal and state agencies and non-governmental organizations to develop interconnected long-distance hiking trails across multiple ownerships.

Financial support of ONSR: Financial and administrative support of enhanced funding levels by the regional and national offices of NPS is absolutely critical if the new management plan is to be successful in reversing degradation of resources and enhancing visitor experiences for the long term.

**Correspondence:** I support the NO CHANGE alternative to the draft management plan. The National Park Service (NPS) has done a poor job of enforcing the rules set by the current management plan. If the NPS would enforce the current rules that are set by the current management plan then there would be no need for a new management plan. There are a few issues I would like to address with the current management plan alternatives.

The first problem I have with the current, preferred alternative the proposal to close x number of roads and x number of accesses. If the NPS would list the proposed accesses to be closed, and both scientific and political reasons to close said accesses, then give a reasonable period and engaging conversation to talk about why these accesses should be closed, there would be more understanding of the closure of these accesses. This would be a better alternative than just closing accesses with a pen stroke.

Horsepower limits being used to close boat access above Pultite, during off peak season many people use a boat to gig and to fish for trout,during the peak season these groups of users are off the river before floater traffic becomes prevalent. So, to discriminate against these users only degrades the river system. Some common sense has to be exercised with setting river use limits.

The concessionaires should be held responsible and should educate their clientele on the various groups of users they will encounter on the river. An educational speech or brochure would help to curtail differences.

I am out of time for submitting my comments but I ask for a common sense approach to a new plan and pray that the NPS will preserve equal river use and sustained access the the riverways. The funneling of mass ammounts of river users to a few points will only create more problems.

**Correspondence:** Superintendent Bill Black  
Ozark National Scenic Riverways  
National Park Service

Dear Superintendent Black:

I write in response to the ONSR Draft Management Plan.

My husband, Holly, and I own four brick-and-mortar outdoor specialty retail stores in the St. Louis, Missouri

metropolitan area and in Columbia, Missouri, and we sell on line at alpineshop.com.

Our personal as well as our business vision is "Generations transformed by discovery outdoors". Through our classes and community outreach programs, we encourage people to get outside. We see firsthand the health benefits of spending time outdoors.

Our business was started by Bob Mooers as Mooers Alpine in Webster Groves, Missouri, in 1973, selling canoes and rock climbing and backpacking gear. Holly bought the Shop in 1978 and changed the name to Alpine Shop.

From the beginning Holly sent his family and his friends to the beautiful spring-fed streams of the Ozarks. Over the years we have sent countless people from around the world to enjoy our rivers and streams.

Among ourselves and our customers we have hikers, trail runners, bikers and equestrians as well as people doing watersports of all types. Everyone wants to share the same special places.

Now it's clear that in the ONSR we are loving our rivers to death! We know we users are part of the problem. We are lucky to have a world class resource that supports our local economy and is sustainable long term. It should be given the same level of attention and protection as our other National Parks.

In 2010 the non-profit organization American Rivers named our precious Current and Jack's Fork Rivers to the Top 10 Most Endangered List due to failure to enforce the existing Management Plan. Now we have a new Forest Supervisor who pledges to enforce the rules as they stand. We need to make sure there's enough funding for enforcement.

The new Management Plan, which will govern management of our National Park for the next 20 years, is the perfect opportunity to write down "how it looks when it's right".

We believe that Option B is a reasonable compromise, as the minimum of protection for our ONSR. Please help us to assure its pristine condition for future generations.

Respectfully submitted,

Lisa and Russell ("Holly") Hollenbeck  
Alpine Shop

**Correspondence:** I had many misgivings days earlier, prior to reading a portion of the D-GMP, most of which have been quelled now. This report appears to me to be well thought out and very comprehensive, considering every possible factor and the expected outcome of every possible choice. My two biggest concerns were (1) Fear of irreparable damage to some facets of this irreplaceable treasure we know as the Ozark National Scenic Riverways, if measures are not strong enough to protect it from overuse, and (2) Fear that the very peoples whose culture and traditions we are striving to preserve will be unfairly infringed upon in our efforts to sustain it. Now, I feel that consideration is at least being given to every issue. I wish every person had had an opportunity to read it, as I feel many with objections have unfortunately been misinformed about what this plan really says. This grieves me, because I think almost all parties (except maybe some self-serving politicians) care deeply for the Riverways and have only to come to some kind of agreement as to how its preservation and enjoyment is to be accomplished. That being said, I think Alternative B, the NPS-preferred plan, is the most desirable. The one thing I would be even more restrictive on is reducing horsepower limits more than in Alternative B, but not as much as Alternative A. There are dozens of places nearby for motorboats, but only one place like this that is the closest thing to a wilderness

as you are ever going to have around here; where minimal noise and effects on streambank erosion, water turbidity, and the effects of these parameters on sensitive foundation microflora and fauna, invertebrates, etc. are things that most people never think about.

And I think the Wilderness proposal deserves further study and is not ready to be decided at this time.

**Correspondence:** Re: Comment Period Extension, ONSR GMP

Dear Michael,

First and foremost, I want to thank you and your staff for releasing a General Management Plan that offers substantial

improvements in protections for the Ozark National Scenic Riverways. I just submitted our organization's official comment on the plan and I'm looking forward to the public hearings in early January.

I'm writing today as the official representative of Environment Missouri and Environment Missouri Research and Policy

Center to request that you do not extend the public comment period for the draft GMP past February 7th , 2014.

We agree that pushing the public hearings into January was a prudent move given the weather in Southeastern Missouri

earlier this month, and we think it entirely reasonable that the comment period be extended for a month after the public

hearings to give individuals and groups the chance to thoroughly develop and articulate their thoughts on the GMP.

However, it has come to our attention that organizations and individuals, all of whom appear to be in complete opposition

to a management plan of any sort, are agitating for a further extension in the comment period.

We believe that this is just a stalling tactic and that those who are asking for the extension are merely seeking more time

in which to figure out how to delay, hinder or derail the GMP process. This is a blatant subversion of the rationale behind

public comment periods and shows complete disrespect and disregard of the National Park Service's mission to protect

and preserve the places that make America so special. For the sake of the park, and all Americans who believe in the great work that you do, please refuse any requests for further extensions of the comment period.

**Correspondence:** Dear Mr. Reynolds:

We, the Commission of Shannon County, would like to ask you to consider going with a

No Action Plan on the basis of the economic impact study completed for our area. Our

county is one of the poorest counties in the state of Missouri and we are very

economically deprived. The tourism industry is our major source of income for our

county government and the citizens of this county. The above mentioned plan would add

to the difficult situation the county government is currently experiencing in trying to

provide necessary services for our citizens. Our county does not have the resources

available to supplement a loss of revenues in the tourism industry that we rely upon. The

county real estate property taxes are very limited due to the ownership of over fifty

percent of our land by the state and federal government. We feel this General

Management Plan would greatly reduce the tourism industry as well as be a financial

hardship to the local concessionaires, citizens and area businesses of Shannon County.

The Ozark National Scenic Riverways was originally designated for recreational

purposes. According to the Alternative B, there will only be 8.8 percent of the land the

park owns as resource based recreation and 72 percent of it designated as natural, out of

88 thousand total acres. When the recreational area is greatly reduced, there is no way

that will not have a significant impact on the economy of Shannon County. We feel this

will also affect all tourists across the United States from being able to come and enjoy our parks.

We feel the Alternative C would have been a lesser impact on the economy of Shannon County, as it has 59.6 percent being resources based recreation and only 28.2 percent natural. We respectfully urge you to reconsider any plan that has the potential to erode our tourism industry and economic base of the county.

Sincerely,

Jeff Cowen, Presiding Commissioner

Dale Counts, Northern Commissioner

Herman Kelly, Southern Commissioner

Re: ONSR GMP comment period extension

Dear Mr. Reynolds,

Dec 24, 2013

I am writing on behalf of the Missouri chapter of the Sierra Club regarding the comment period for the Ozark National Scenic Riverways General Management Plan revision process. The comment period is scheduled to end February 7, 2014 and we recommend that it not be further extended.

Our 8000 plus members in Missouri cherish the ONSR as an invaluable local and national resource. We began engagement in the GMP public participation process in 2006.

In the intervening years various events have conspired to lengthen the process. We value the NPS' perseverance and hard work in developing meaningful alternatives aimed at protection of the riverways and enhanced recreational opportunities. NPS also included a public input component at each step.

Most recently dangerous winter weather compelled the NPS to reschedule public meetings and extend the comment period. That was a prudent and appropriate decision. We understand that some requests for even further extension have been presented to the NPS. However, barring any similar weather event, we urge the NPS to carry this process forward without delay. The ONSR has contemporary problems which are not met by the current, outdated plan. The public deserves to see the GMP process completed and the park managed under an updated plan.

Sincerely,

Caroline Pufalt, conservation chair

**Correspondence:** In the opinion of my local people as a whole, I believe that the draft management plan that the National Park Service has selected will have no effect or changes to the riverways that will benefit anyone. What I

mean is that horsepower has nothing to do with problems to my knowledge of the riverways. If it's boats that the tourists dislike while canoeing or tubing, changing the horsepower will do nothing. I know for a fact that there is a review of our riverways that takes effect every 20 years. Those words came straight from Bill Odonell's mouth. I own the local barber shop in Winona, MO. Mr Odonell is a customer of mine, he came in on the 14th of January 2014, and I quote, "The Park Service is required to review the management plan every 20 years, they are not required to make changes. I personally believe that would be best, No Change". On top of that Mr Odonell's statement, he also said and I quote, "It's all about revenue." He continued with, "It's not the money that is already in the Ozarks it's the "New Money" meaning the tourist. If that is the case, I guess all the taxes we pay and money we spend year round does not matter. That is an important statement. We the people were here long before it was park service. I agree the canoes have all the right in the world to be anywhere on the river they want. In the same token, so the do the local people with motorized boats. We already have restrictions on where we can go, and everyone has adapted, and accepted it. If you think this is going to solve problems I think you are badly mistaken. This will not only cause more negative attention to the tourist. I personally hear a lot of people in my shup probably 100 people a week and they all say they have adapted once they want again. There will be more problems because of grudges held against the tourist and the Park Service. If you want to cause the biggest uproar between folks in the Ozarks. Go ahead with the plan. I personally do not have any intentions on doing any harm or causing problems with tourist or the Park Service. But mark my word if things change you will start a local civil war, and there will be consequences. I strongly believe that no change is the best scenario for the locals, the tourists and the park service. I hope this is reviewed and reconsidered, because if not my son, 8 months old, could eventually never enjoy the riverways like I did if more and more regulations are put on them all the time.

**Correspondence:** I feel that the outboard motors should be left as is. The most of the motor traffic is during gigging season at which time there is very little or no canoe traffic. I think the local people should be able to use the river at this time as they would not be interfering with anyone wanting to use the rivers. The use of outboards will be eliminated by the flow of the river especially above Alley due to the fact the river is too low to run with a jet. I think the HP limit is sufficient at this time on all parts of the river.

Subject: I'll stand up for the rivers I love

Dear Jonathan Jarvis,

The Current and Jacks Fork Rivers are iconic to our state. Their beauty and ecological value cannot be overstated.

I hope that you give these rivers the protections they need by implementing the strongest possible management plan.

Out of the three options, I hope you use Alternative A as the basis of your new plan.

We can't afford to wait to begin protecting and restoring our beloved rivers. Please act quickly to finalize the plan and begin implementing a better management plan for the Current and Jacks Fork.

Sincerely,

Emily Maltby

**Correspondence:** NPS-

As a lifelong visitor to the region's wilderness areas and natural places, and as someone who has often wished to be able to live full-time in these wonderful places, I would like to offer my support for Alternative A. This alternative, in my opinion, offers the truest adherence to what was described as "traditional" use when the riverways were founded. For generations prior to the advent of motorized recreational river travel, the Current and Jack's Fork River offered quiet solitude. It was a rightful vision for those involved in the protest of the destruction of this area with high dams to have the foresight that this area should be preserved and returned to a more natural state. Prior to this, the riverways were decimated by logging. This decimation was, in my opinion, something that led to the proposal for high dams. if we do not do all that we can to protect the little remaining wilderness we have then we are doomed for a future in which my children and grandchildren cannot enjoy these wonderful areas. There are plenty of places in the area to play with expensive and loud toys (RV's, loud motors, ATVs). There are few quiet places for reflection. Perhaps if those who were feeling as though their rights are being infringed upon would put up their loud toys for a short time then they too, could see and hear that they could also benefit from the silence and solitude.

**Correspondence:** Dear Sir:

The founding fathers of this nation that wrote the constitution wanted to be sure that the Federal Government would be limited in its powers over the people and the states so they would be free from Federal Government intervention in their lives. It is being shown that "Big Government" is overstepping its boundaries by wanting to control everything which is both inefficient and harmful to the American people. In this case, of which there are many, I'm referring to the natural resources that are present within the boundaries in 16 state of Missouri. I therefore respectfully request that the Federal Government give back to Missouri the right to manage its own natural resources that it could be free of existing and future Federal regulations.

I have land that floods on a regular basis because of a huge gravel bar that has vegetation on it thereby backing up the natural flow of the river which causes the water to overflow onto my land. I'm told by the DNR that I can do nothing to prevent this from happening. It would be best for the river and my land to remove this gravel bar. But because of non-sense Federal regulations I have no right to remove it. So I vote for less regulation with the no action alternative.

I have a big problem with restricting people more and more. I pay my taxes here, live here, and plan to stay here for the rest of my life. But this is still a free country last I knew. The river will restrict itself, the Park Service does not need to. I strongly appose plans A-B-C. I feel this is going to be the straw that broke the camel's back.

Thanks,

**Correspondence:** I would support Alt B. I agree the Riverways has areas where large motorized boats should not be allowed. I also support limited canoes put in along the Riverways. Current usage is way too heavy in the summer. I do not support spying techniques to try and catch violators whatever they are doing.

I believe that all the old roads should not be closed. Locals have used river access where ever. Why should the NPS tell them where they can access the Riverways? Problems on the river are by over usage from floaters, more than people using old logging roads.

Primitive areas in Alt B should still be able to access without a canoe. All canoe camping should be open along the entire Riverways.

Sincerely

Gary Buchanan

President of Shannon County Hunting and Fishing Club

We are open to being good neighbors and partners with the NPS

**Correspondence:** I think the #1 priority should be ENFORCEMENT of any existing rules There is no enforcement of rules with horses. Or illegal access points. I float and camp along the rivers I find it almost impossible to find a camp spot on a gravel bar that doesn't have a road leading to it. I've been invaded by horseback riders many times riding along the rivers right down all the gravel bars. People are partying in their vehicles right on the gravel bars. I'm afraid to camp at all on the Currant any where prom Cedar Grove down stream. There are numerous areas open to horse back riders all around the area. Let them ride elsewhere. A riparian habitat is no where for horses.

Of the alternative offered. I like plan A the best but it doesn't go far enough to get rid of horses.

You really need to close the illegal accesses!

**Correspondence:** Proposal A comes closest to what I would like to see going forward, that said I have outlined my feelings below.

I have been an avid user of the Current and Jack's Fork Rivers and tributaries since the 1960's. I support any proposal that helps to maintain this watershed's natural state. We have less and less access to primitive nature experience as our countryside is increasingly urban and suburbanized. The purity of our air and water has decreased and is threatened further by overuse of what is left of our heritage. Motor sports should be discouraged. The pollution from ATV's and increasing powerboat traffic is removing the value from our public lands. The costs of cleanup are where the focus should be. It is far cheaper to prevent loss than repair it.

I feel that while there is a tradition of horseback trail riding in the area, I would like to oppose any expansion as the horse waste is a hazard to the water quality in the watershed and thus maintaining diversity of species is made more difficult.

I support the proposal to create a wilderness designation near Big Spring and protect more land from thoughtless exploitative development.

If management of our heritage is destined to change then let's save what we have and do a better job of protection, not moving backwards.

**Correspondence:** GREENWAY NETWORK, INC. PUBLIC COMMENTS  
NPS DRAFT MANAGEMENT PLAN FOR THE OZARK NATIONAL SCENIC WATERWAYS  
Greenway Network is very happy that the NPS understands the national treasure of the fragile Ozark Scenic River Ways. Our Mission is "to conserve natural resources, encourage sound management of the watersheds". We also are a Missouri Stream Team Association and have a strong desire to both educate the public and network with agencies, schools and others about river conservation issues. Greenway is celebrating 20 years as an all-volunteer conservation group!  
Greenway Network has reviewed the Draft General Management Plan/Wilderness Study/Environmental Impact Statement, and we appreciate the attention to visitor education and connections to natural resources and cultural landscapes as provided in Alternatives A and B. We were especially impressed with the attention to detail regarding the impacts that climate change is having on the fragile Karst watershed.  
However, Greenway Network does not agree with the conclusion that Alternative B should be the preferable alternative. As the preferred environmental alternative, "Alternative A would best protect the biological and physical environment" and should be selected as the preferable alternative for management of the Ozark Scenic Riverways.  
Greenway Network feels that the upper reaches of the valued Ozark streams are pristine and should be conserved and protected. Although the MoDNR is the lead agency of the watershed above the parks, we request that NPS network closely with them to reduce contaminant loading before entering the parks and in the gap property line. The upper section of the Jacks Fork River should be zoned "primitive" to retain the "wild, natural character and maintain natural conditions and ecological integrity." The highly porous nature of the karst geology in the Current and Jacks Fork River "can create direct pathways for surface contaminants to quickly enter the groundwater system where remediation is difficult." For this reason, nonpoint source pollution discharges from recreation land uses (e.g. designated and undesignated horse trails) and agricultural land uses (e.g. cattle grazing in the floodplain, riparian zones and streams) should be eliminated or managed in such a way to significantly reduce runoff and infiltration and minimize impacts to ecological habitat. NPS should consider increased funding through grants or other means that will expand E. coli

testing making the tests accessible to local Stream Teams. Utilization of local water quality monitors will greatly leverage limited resources to expand testing. Greenway would like to request the NPS monitoring plan, locations, frequencies and data collected. Greenway Network stands ready to assist In the efforts to improve water quality in all Missouri rivers and streams through our local monitoring activities as well as through our educational programs and events. Our annual Race for the Rivers Is a great opportunity to work with the NPS and the paddling community to increase educational opportunities targeted directly at recreational users of Missouri rivers. We also extend an open invitation to the NPS to participate In our River Soundings Symposium, the Big Muddy Speaker Series and to have booth space at Mission: Clean Stream/GM Earth Day.

Greenway Network wishes to thank the NPS for the opportunity for this Public Comment and to also thank NPS for hosting the local meeting here in St. Louis.

Submitted and presented at the Public Meeting at Powder Valley in St. Louis on 1-22-2014

**Correspondence:** Dear NPS friends

Thank you for your thoughtful study and recommendations. We appreciate this opportunity for input. I support Alternative A. I am a retired teacher who loves to hike, backpack, tent camp and canoe. I was very alarmed on my last week long canoe float on the Current River as almost every gravel bar had road access (mostly unauthorized). I found that the people using the roads were men with motorized boats and 4 wheel drive vehicles. They were drinking alcohol. The combination of motors, men, and drinking made me feel unsafe as a woman who was doing overnight gravel bar camping. There needs to be a deterrent to road access to the river. I support making our wilderness accessible to a lot of people but there also need to be areas set aside for those of us what to experience the wilderness without the roads.

Sincerely

Kathy Peterson

**Received:** Jan,22,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** I've been alarmed by the degradation of the Current River for the last 10 years. I've seen trash and human feces littering gravel bars, eroding and rutted out trails and roads leading away from almost every gravel bar, ATV and pickup truck tracks on every gravel bar, night gigging fisherman coming by campsites after we have gone to bed.

The management plan is very necessary. I prefer Plan A because without it, there are very limited locations where a wilderness experience away from people and motors and noise are possible. We need restrictions for some parts of our natural area because all other rivers are not part of the National Scenic Riverways.

**Correspondence:** To whom it may concern,

I have been fortunate to explore a number of our nation's finest national parks and forest service wilderness areas. Yellowstone, Acadia, Grand Teton, the Smoky Mountains, the Wind Rivers in Wyoming, and the San Juans in Colorado are some of the magnificent places that I've experienced alone and in the company of others.

While a walk along the Current or a float down the Jacks Fork will not include a panorama of alpine peaks or a sunrise over the Atlantic, close inspection reveals beauty no less sublime. Water, transparent as air, dances down riffles and into the aquamarine depths along an ancient bluff line. Delicate fronds of ferns cascade from a shady alcove, while just across the river, the bold blossoms of prairie dock glow in defiance of the scorching sun. People I've taken here, people with whom I have stood atop the Continental Divide deep in the heart of Wyoming, are as moved by subtleties of Blue Spring as they are by impossible heights of the Rockies. The rivers, as you know, are a national treasure.

Yet, we allow this treasure to be diminished. Quiet enjoyment is displaced by the almost constant drone of jet-boats. The woods, the fields, the gravel bars, and the river itself are all scarred with ATV tracks. There are no jet-boats screaming up and down the Snake River at the base of the Tetons and no fleet of ATVs tearing up any beach at Acadia. Float the Current or Jacks Fork and you'll see this in spades.

Just this past spring, my wife, my two young sons, and I rounded a bend near Lewis Hollow below Akers only to be greeted by gunfire on one side of the river and a school bus, two RVs, and five other vehicles on the opposite gravel bar. Years ago, there was no road to this spot. Now there is a 10 foot wide, eroded gash through the forest, all the way to the river. There are frequently RVs parked along the river bank at Twin Rocks. An old forest track at the "jumping rock" above Pulltite now serves as a full blown jet-boat launch site. And the list goes on. The river is commandeered by the few to the detriment not only of the many who come to experience the rivers as they were meant to be, but to the obvious detriment of the rivers themselves. We permit abuses in the Riverways that would not be countenanced in any vaguely comparable location. There is no excuse for this.

It is for these reasons that I write in strong support of most of the Park Service's draft management plan. The Park Service's preferred alternative forges a workable compromise among the competing demands on the rivers. If the rivers are to remain relatively pristine in perpetuity, you simply cannot permit the continued proliferation of unauthorized roads along the rivers. The Park Service's preferred alternative addresses this issue.

The preferred alternative falls short, however, of adequately addressing the use of jet-boats, particularly on the Current River between Round Spring and Two Rivers. This stretch, along with the upper Jacks Fork, represents perhaps the finest stretch of float stream in the state. If motorized boats are to be permitted for the sake of motorized access, such access can be achieved, as it is on the Buffalo River, by boats equipped with low horsepower motors. Some say that further limits will end a long-standing tradition of jon-boating the rivers. This is absurd. The famed wooden jon-boats of the Ozark rivers were never equipped with modern jets that allowed

them to virtually fly up and down the river. The only discernible reason for allowing jet-boats on this stretch of the river is to satisfy the demands of a miniscule minority of river users who desire not only access, but access via a high speed joyride.

Limiting the use of jet-boats above Two Rivers is no more a limitation on access than requiring people to walk down the sidewalk rather than drive. The Riverways were not set aside to ensure some imaginary "right" to an aquatic superhighway; but on most days from May through September, that is precisely what it has become.

Throughout this process, the park service has gathered and received loads of data demonstrating the exponential increase in motorized use of the rivers. Those who dispute these facts rely on hyperbole rather than reality. This is because the

facts are irrefutable and demonstrate conclusively the need for reasonable limits on motorized use of the Riverways.

There is, however, a more fundamental issue than the facts and data demonstrating the wisdom of reasonable limits, and it is this: in the long run, it is our shared experience of the rivers that will dictate how we choose to treat the rivers. The decision you face is not one that can be made solely on the basis of numerical reduction. To do so would relegate the rivers to the status of a mathematical abstraction; a set of extrapolated data, a point on a graph, a simple resource to be used according to popular whim. To make the wisest decision, you must account for not only the numbers, but the reason why so much time and toil has been expended on gathering those numbers. The reason is the rivers themselves and the unique, increasingly scarce opportunity they provide for potentially world class outdoor experience. The legislation establishing the Riverways recognized these values and must be re-affirmed. When the rivers become, as they have in many places on many days, nothing but an outdoor amusement park, people come to see them and treat them as such. One need not spend much time on the rivers to see this. If this continues, the time is not far off when most people have no recollection of a peaceful day on the river; no deep, personal conviction that the rivers are a treasure at all. If that happens, degradation will continue and the Riverways will become a national park in name only.

There is an easy way to avoid this. Adopt the preferred alternative, with a slight modification to limit jet boat use on the Current above Two Rivers. There are hundreds of thousands of acres of reservoirs in the Ozarks that are open to power boating. There are hundreds of miles of Ozark rivers to run jet-boats as one sees fit. , Conversely, there are precious few miles set aside for the overwhelming majority who seek a quieter experience. Please, take this opportunity to do what is right both for the rivers and the vast majority of river users. Limit the use of jet-boats above Two Rivers.

Sincerely  
Eric Peterson

**Correspondence:** I understand this has to review every 20 years so that said I would prefer that the only thing that be done is to ban or prohibit any alcohol on the river. That alone will limit who wants to come. At the very least put a limit on beer only 2 per person but that is the only problem.  
Possibly require that whatever goes in has to come out. But that is all that I want to see changed.  
Please don't try and do anything else. People who float the river have been on the date I have seen (post-dispatch).  
If you follow through on any of the other plans it will greatly limit my ability to use the area. I am disabled and need 4x4s. I can't walk that far and can't ride a horse. I have enjoyed the river as is and don't want it changed. I go to the area at a minimum of 3 weeks a year.  
Leave any further regulations to the State of MO.  
Special Interest groups should not rail road this area to something that I can't use.  
Please, please, please don't change the river

**Correspondence:** To: The National Park Service and all Concerned Citizens  
My love affair with the Ozark National Scenic Riverways goes back more than 50 years. I got my first taste of what Shannon County has to offer when my parents gave me the treat of a lifetime in the eyes of any outdoors-oriented preteen - a two-week stint at Camp Zoe on Sinkin' Creek.  
On a hot summer's day, we couldn't wait for our cabin's turn

to plunge into that clear, cool, refreshing stream. And then the highlight of the camp session was a float trip on the Current River down to Carr's General Store. We took in all the sites along the way with eager eyes: the fishes, the crawdads and the river bottom; the ferns, the birds, the rock outcroppings and the high, craggy bluffs; the springs, and the current of the river as it carried a fallen leaf to an unknown destination. We were always curious about what might be around the next bend and we anticipated the thrill of tackling the next set of riffles. To an eleven-year old youngster, these waves looked like ominous Class III rapids. Ah, the wonder of it all!

Fast forward to 1969. Picture yourself as a 21-year old newly-wed. The Viet Nam war is in full swing and your military husband has limited time off before continuing his training to go overseas. You want a honeymoon on a budget in a place of incomparable beauty. Where would you choose to go? We chose Round Springs. At that time, I believe it was a state park and from there we could take in the beauty of the area's springs, caves, rivers, trails and towns.

We have continued to enjoy the Ozark National Scenic Riverways over the past thirty years. We have shared this magnificent gem with friends, family and neighbors; with scout troops, church groups and adventure groups. We've enjoyed blacksmith demonstrations at Powder Mill Ferry, grist mill operations at Alley Springs, cave tours at Round Springs, hikes and trail maintenance on the Ozark Trail and the Laxton Hollow trail, rock climbing and swimming at Rocky Falls and the best part of all, floating on the Current and the Jacks Fork rivers. The eleven-year old inside of me still shouts out, "Ah, the wonder of it all!"

I hope I have conveyed my deep, passionate feeling for the ONSR. I believe it is a treasure well worth preserving for future generations. In order to achieve that goal, I believe it is critical that we collaborate to develop a workable management plan. My hope is that the final plan be a consensus plan, that is, one that all parties can accept - even though it may not fully solve each party's needs and desires. According to Superintendent Bill Black as quoted in a Nov. 7, 2013 on-line article of the Reynolds County Courier, the "Preferred" Alternative plan "represents a balance among the wide range of interests people have in Ozark National Scenic Riverways".

This sounds like a good starting point for developing a final plan for the long-term benefit of all. As a citizen of the "Show Me" state, I want to show off and be proud of what we have to offer to the rest of the country - a unique, recreational gift. I want others to come explore and discover what I have. I hope they too, will enthusiastically say, "Ah, the wonder of it all!" Let's do what we can to keep that wonder alive!

**Correspondence:** I would prefer alternative A I think all horses should be banned! No horse allowed any where within 1 mile of the river area.

I think whatever plan is adapted you must enforce it. KEEP THE 4WD vehicles off the illegal accesses.

**Correspondence Type:** Letter

**Correspondence:** This is to address some of the comments made by Jason Smith in his Capitol Report in the Nov 20 Current Wave. I am not a spokesman for the Park Service and in fact was opposed to the park when it was established, mainly because I didn't think it was right to take the land along the rivers from those who owned it. I grew up in Eminence and have been an observer of the park since it was proposed.

Rep. Smith starts with a wrong statement and builds on that inaccurate foundation. His second paragraph starts with "In 1964 the National Park Service included the Jacks Fork and Current Rivers in the Ozark National Scenic Riverways with the goal of preserving access to the Rivers."

I don't recall that that was ever a goal of the ONSR. There was never a problem with access to the rivers. The ONSR was created with a dual purpose, to preserve the natural beauty of the area and to provide recreational opportunities. Those purposes are often in opposition and it has been a continual conflict for managing the park. Should the park be a wilderness experience where people can enjoy unspoiled nature with minimal modern intrusions or should it be an amusement park with unlimited numbers of canoes, high powered boats, ATVs, and horseback riders. I believe the park service has tried to strike a balance.

I think most people would agree that the thing we love about the area and what attracts most visitors (on which local businesses depend), is its natural beauty. Would you rather come around the bend in the river and see a deer taking a drink or would you rather see someone's pickup backed out into the river with the radio blaring so everyone within sight can hear it (I've seen this by the way)? Would you rather see a heron fishing in shallow water next to a gravel bar or see tents and cars on what you expected to be an isolated area? The natural beauty is what we have to enjoy and what we have to sell to visitors and we need to be careful not to destroy that. Demanding that we be able to drive to the river wherever we want (especially considering that with modern 4 wheel drives we can go about anywhere), and to camp anywhere we want might be personally satisfying but it may well have a negative effect for the area.

Back to Rep. Smith, does anyone else see the hypocrisy in his report where he states that the park service policies "will damage local economy" and "When bureaucrats in Washington try to restrict land and river usage for families and businesses our district suffers." This is coming from a man who voted to shut down the government and then voted to keep it closed even after most of the other representatives voted to re-open it. Standard and Poor's estimated the cost of the shutdown to be \$24 Billion and said "The bottom line is the shutdown has hurt the U.S. economy." The National Park Service reports that about 700,000 people visit parks every day in a typical October and communities surrounding the nation's 401 national parks see about \$76 million a day in visitor spending that was lost during the shutdown. In Shannon County how many motel rooms and canoes went unrented, how many restaurant meals and how much gasoline went unsold, etc. Representative Smith's policies damaged the local economy.

I would urge people to consider that the park service is not the enemy of local people or businesses. They have no reason to implement policies just to irritate us. Think of how many of your friends and relatives have worked for the park service and how many millions of dollars the park has brought into the local economy. If you want an example of what the river ways would be like without the park service look at Button Rock, which was a primary swimming hole for Eminence people for over 100 years and now has a cabin setting on top of it.

My father was raised in Cedar Grove in the 1940's. I spent numerous days at Big Creek swimming. I have a family now that enjoy the river near medlock cave. We do not make any irreparable damage to the access roads and the minimal damage that can be seen on the access roads is altered every flood season.

I know several 'old timers' that still use and access the roads. If these roads are closed, the public will lose! If the roads are not traveled by the locals, law enforcement and emergency personal will not be able to access these roads for over time the roads will become overgrown and impassible.

Everyone that I know cares for and helps to clean the river. If you shut the locals out, the park service will have more responsibilities placed upon itself.

Do the right thing,  
Jason

**Correspondence Type:** Letter  
**Correspondence:** The people of the City of Eminence have some concerns regarding Ozark National Scenic Riverway's (ONSR) Draft General Management Plan Alternative B. We are concerned about the effect it may have upon our economy. Tourist revenues in Eminence have remained flat for about 10 years. With ever increasing costs of doing business, our local economy is suffering at this point in time. Any attempt to further limit the number of visitors will have a damaging effect upon our economy. In a documentary filmed in the late 1970's and released for viewing circa 1980, "Shannon County: Hearts of the Children", Windy Smith of Windy's Canoe Rental in Eminence proclaims that we can put 2,500 canoes in the river on a Saturday". In 1987, local adventurers stacked 767 rental canoes to claim the Guinness Book of World Record's largest canoe tower record. Currently, there are only 700 canoe permits in the Eminence area. During peak season weekend demand, about 500 of these canoe permits are used on the Jacks Fork River, and 200 are used on the Current River. Any further limitation to the total number of floater\$ would have a negative effect upon our economy. There are two statements in the Draft General Management Plan that suggest this may happen. 1) the redesign of access points to alleviate "overcrowding" issues, and 2) a suggestion of 40 canoes per mile of river. A subsection of the DGMP pertains to "overcrowding". Vet, an ONSR visitor survey from 1996 showed that 84 percent of respondents did not believe that overcrowding was an issue. Although we agree that there are a lot of people on the river approximately 25 days/year- twelve weekend Saturdays three 3-day weekend Sundays ten June and August trail-ride weekdays - there are 340 other days in the year, and we do not believe that this constitutes "overcrowding". Instead of fewer canoes, we plead for an incremental increase in canoe permits in the Eminence area. Alternative B proposes a horse permitting system which would further limit the number of visitors to the Eminence area. Instead, we would suggest a well-designed horse trail system that disperses riders away from the rivers. Missouri Department of Conservation's Lick Log trail system does just that, and additional trails will alleviate many concerns without resorting to a horse permitting system. We suggest that you coordinate with MDC to extend our Eminence-area horse trail system. Instead of fewer horseback riders, we need more. We are concerned about the closure of 45 miles of roadways inside the ONSR. We plead for the ONSR to honor the 1989/90 Roads and Trails Agreement, and we ask that ONSR leave open any previously NPS maintained roads. We ask that ONSR not close roads to historical family homesteads and family cemeteries. If closed, elderly residents and handicapped citizens will not be able to access them. And, it is our belief that the ONSR must maintain current roadways for emergency services and forest fire incidents. We support motorized 60/40 boat horsepower limits along much of the Jacks Fork and Current Rivers. However, we want to see traditional motorized boat usage on the upper reaches of both rivers; We are of the belief that low summertime river flow rates are sufficient to regulate motorized boats during peak tourist season.

We insist that a visible presence of law enforcement personnel would positively impact many of the current "problems" that exist in the ONSR. It has been said that 90 percent of law enforcement is simply being seen, so we suggest Park Rangers be more visible to the public. They can offer assistance and advice, and write tickets where warranted.

The City of Eminence completed an extensive water system upgrade in 2013, and we are pleased to announce that we are in the process of upgrading our sewer system. We will replace two sewer main trunk lines, and we will be adding a sewer line into a residential neighborhood. We have completed the sewer works preliminary engineering survey, and our system upgrade plan is in committee at MSWWA. We anticipate start of construction in 2015. Any financial assistance from the National Park Service would be greatly appreciated.

We anxiously await the final General Management Plan, and we plead that you give consideration to our requests.

Signed,

Jim Anderson, Mayor

Mike Atchison, Alderman and Chairman

Ernest Middleton, Alderman

**Correspondence Type:** E-mail

**Correspondence:** The Eminence Area Arts Council is requesting that serious consideration be given to extending the

comment period for the Ozark National Scenic Riverways General Management Plan Draft. Due to the comment period falling during the same period of time as the holiday season, hunting season, gigging season, and the current inclement weather conditions, specifically concerning road travel, the comment period should be extended to fully accommodate interest parties in this region. In order to best accommodate interested parties, the comment period needs to be extended beyond the 90 days an additional 90 days to allow for proper response from our organization's economic interests and stakeholder interests in the Ozark National Scenic Riverways. The expansive over five hundred page document does not allow for a proper study of the effects that we should be aware of in our comments.

The Ozark National Scenic Riverways not only provides respite for travelers, vacationing experiences, recreational activities, for locals and tourists, alike, but it also provides a much needed income to the local economy of Eminence and Shannon County, Missouri. Because the government ownership of such a massive amount of land in Shannon County, the residents experience lesser quality in social services, road maintenance and construction, and in property tax payments for the schools, not only based on the lack of taxes paid by the government but also because there are very few residences on such lands.

The impact of the ONSR on this region is significant. The Current and Jacks Fork watersheds has provided many jobs, income avenues, and recreational opportunities for generations of the traditional residents of this area. This area is economically depressed and Shannon County is one of the poorest per-capita counties of the United States. It is the lowest income per-capita in the State of Missouri.

It is evident the income derived from the tourist industry is important to the economy. Not only are tourists responsible for a significant portion of our donated dollars, but businesses in the tourist industry are those that support our organization. These funds help support projects for residents, regional residents, and tourists alike. These funds we have allow for us to provide arts projects for the public in this poverty stricken county.

Another aspect of our organization is to promote and protect the culture of the region. This is exemplified in our project through the Civil War 150 program. This program not only allows us to educate people about our culture, but also to educate people about our culture in relation to events in, along, and near the Ozark National Scenic Riverways. The access points discussed in the plan are very important to our group, because photographers, artists, anthropologists, historians, and others with humanities interests should have access to points discussed in the plan whether they

are disabled, young and healthy, or elderly. Access to use and to reinterpret nature's beauty into art and humanities should not be limited to those with particular resources nor capabilities. This is why we need further time and discussion on this very important topic of the ONSR GMP.

In the last ten years employment has decreased, residents must travel outside of the county to find substantial work, and residents experience increasing regulations on their recreational activities, forcing some to relocate. The US government is not intended to limit liberty, freedom, nor the right to pursue happiness. These words directly apply to any negative impacts the current ONSR Management Plan Draft contains.

The Draft Plan Comment Period should also accommodate Shannon County residents with a public information and comment meeting similar to those held in Van Buren, Kirkwood, and Salem. The residents of this county should not be discriminated against by not having a meeting conveniently located in relation to their residences. The ONSR manages a significant portion of lands in this county and should take this into consideration when planning a meeting. Information and comment meetings should not only be held conveniently for those with money and resources but should be allowed for those without. We request this meeting to be held within the next month.

There has not been time to allow for the public, nor for the business people, nor the educated and professionals with interest and abilities to research this matter to understand what the draft plan actually means because of the length, breadth, and scope of the ideas located in the document. It is our belief that because of such impact this plan can have on our communities in this area, the economic ventures of business people, and the recreational activities of both locals and tourists, we formally and officially request a further extension of the comment period for this draft.

Please call us upon receipt and acknowledgement of this letter so that we may discuss this matter further.

**Correspondence:** To Whom It May Concern:

The Shannon County Democrat Club is requesting that serious consideration be given to extending the comment period for the Ozark National Scenic Riverways General Management Plan Draft. Due to the comment period falling during the same period of time as the holiday season, hunting season, gigging season, and the current inclement weather conditions, specifically concerning road travel, the comment period should be extended to fully accommodate interest parties in this region. In order to best accommodate interested parties, the comment period needs to be extended beyond the 90 days an additional 90 days to allow for proper response from our organization's member interests and stakeholder interests in the Ozark National Scenic Riverways. The expansive over five hundred page document does not allow for a proper study of the effects that we should be aware of in our comments.

The Democrat Club in our Shannon County represents a wide spectrum of people, as does the Democrat Party. At the root of the Democrat Party is the basic concept to protect and provide for the middle and lower classes as concerns the government. In this case, it is evident the bureaucrats have chosen to deny those in the middle and lower classes the opportunity to enjoy traditional recreation practices in a Recreational Park, known better as the Ozark National Scenic Riverways. It was the Democrat Party of years ago that helped to pass the legislation which made this ONSR a park for the people to enjoy the natural beauty on a personal and recreational level, one that does not discriminate against the elderly, the handicapped, the poor, nor the underprivileged.

Through our initial review of this draft, we feel as though this could have significant impact on the rights of the public to access and to use the ONSR and its waterways, which has prompted us to ask for further time for review of this expansive document. This matter concerns not only travelling to one's ancestral home place, to the graves of friends and family members at the end of every road and trail, but also the legality of denying access to those whom are not able to readily access the public natural beauty on foot. These are all legal matters that should be

given time for the public to review and to properly comment. Considering how long this took the NPS to create the document draft at hand, it should be no monstrosity of an ordeal to extend the time to review this draft and follow proper comment procedures, as requested by the NPS.

It is with this consideration in mind for the elderly, disabled, the poor, and the working class of people, that we also request a location be added to the meeting locations as offered by the National Park Service, similar to those happening in Van Buren, Salem, and Kirkwood, Missouri. People whom are under-represented should not be denied access to the information and to the resources the NPS has at these meetings to better explain and to allow for better, more appropriate commentary. This is why we are getting involved.

Please contact us upon receipt and acknowledgement of this letter.

**Correspondence:** The "Draft Management Plan" mentions:

'Approximately 25 miles of additional designated horse trails would be provided, including some new stream crossings. Approximately 65 miles of undesignated horse trails and unauthorized crossings would be closed and restored. Design of designated, approximately 23-mile-long horse trail system would be improved to...'

The only trail I see on any of the maps is the 'Ozark Trail' - where would the 25 miles of additional trails be located and what are the locations of the 65 miles of undesignated horse trails that would be closed??

Eminence provides a great opportunity for outdoor enthusiasts of all types. I understand the reasoning behind management; however, if the levels of danger are only during the peak use periods perhaps stringent rules/regulations are not required. To limit the number of people on the river, close trails that have been used for years, and other restrictions would damage the economy horribly in the little town of Eminence not to mention ruin the recreational enjoyment everyone returns to every year.

Enforcing stricter use of the environment and beauty God created would be like displaying fine china that is never to be used and therefore not enjoyed and used to its full potential.

Please reconsider - with the many years of use, the trails are in great shape and should be available to the public to enjoy for years to come along with the rivers.

Thank you for your time,  
Robin

While the new plan does close some undesignated trails that are damaging the local ecosystem, it also authorizes 35 miles of new horse trails with additional river crossings, as well as a new horse campground along Jacks Fork (which the Park Service itself admits would increase the likelihood for water quality degradation). This plan is supposed to revise an outdated 1984 version that has resulted in misuse and water pollution... but will it really do the trick? The hellbender, for one - - an amazing, ancient 2-foot-long salamander, the largest in North America - - deserves more

**Correspondence Type:** Letter

**Correspondence:** It is the belief of the Eminence Area Chamber of Commerce, our members, our associates, and our

community (based on facts by people who actually use the riverways), the Ozark National Scenic Riverways management does need change, but the vague, often-contradicting alternatives as presented are not the solution needed. The "No Action" Alternative use, as it currently applies to the ONSR management, should be extended until it is clear more of the advice, information, and commentary from the local and regional population are used in the plan alternatives. It is our opinion that rather than request "No Action" because we do not want experiences within the beautiful boundaries of the ONSR limited, that we, in-fact, propose changes to further the visitor experience one may have in the Ozark National Scenic Riverways, in and along the Current and Jacks Fork Rivers, and throughout the south central Missouri region, some contained in the proposed plans and others not.

The basic idea behind any of the necessity of implementing any of the suggestions for change to the management of the ONSR is to create an experience akin to the core concept entailed with the inception and design of the Ozark National Scenic Riverways. The thought processes behind these suggestions propose a set of changes not harking back to a time of better management, as when the Missouri State Parks managed the major springs in the area, nor to a time when the Federal Government owned no land in this region, but to offer a glimpse at what an experience in this region of unparalleled natural beauty should really be.

There are preservationists whom want to limit access to this area whether because of strict beliefs, jealousy of accessibility, or because of a particular movement to make the ecology, environment, and life systems exist as they did before European explorers encountered this unique locale. This is based on a belief that humans had no interaction with the environment in this region, which is a falsehood. Land and water throughout the entire planet have had living inhabitants which have made some sort of impact on the environment. In this region, Native Americans lived here, both prior to and during the westward expansion of the Americas. So to restrict access and use of this place because humans never impacted the land, simply put, just does not make sense.

Understanding the land and making sound decisions in regards to its management is the best method to follow. Just as the Ozark National Scenic Riverways was founded in such a unique manner, so should it be managed.

Flagship NPS managed property. The Ozark National Scenic Riverways should be managed as a National Park Service flagship riverways. Rather than forcing a relatively small park such as the ONSR to comply with federal standards for parks and riverways and monuments with very different purposes, needs, and resources, this Scenic Riverways should be managed as a flagship program-one that is a leader and innovator in programs for the Federal government. Changes include tailoring staff, resource use and management, cultural and heritage programs, visitor experience enhancement, as well as recreational opportunities to those actual visitors to the ONSR need and desire. The desires and needs of people who actually visit the Current and Jacks Fork Rivers is what was used to establish the Ozark National Scenic Riverways and these concepts should still be used in the management of it.

Stars Upstream and its author, why he argued for a recreational park. Although Leonard Hall was not a resident of the Eminence area, nor was he originally from this area, Leonard visited the Current and the Jacks Fork River watersheds quite often. It was documented through the local boat and canoe liveries that he came quite often and had a sincere interest in providing for the recreational experience of such a beautiful place as this. His book did argue through propaganda the area needed to be purchased by the government rather than owned by locals, using a few stock photos from area farms not near the rivers, but he used this propaganda for the reason that this area should be open to the public to enjoy, not shut off by a few, whether by mismanagement of the resource, by shutting down the public access by the wealthy elite, nor by placing a lake over this Ozark terrain.

The Ozark National Scenic Riverways, in the arguments of proponents of a park, as opposed to the proponents of a lake, was to be an open recreational adventure, ready for the taking of anyone whom might choose to use it. It is not the purpose of the government nor those making rules to discriminate against any group when deciding public policy.

In an excerpt from attorney, Chris Yarbrow, the following fairly describes the creation of the ONSR:

Recreational use was a material consideration during the creation of the Ozark National Scenic Riverways (ONSR). The broad coalition that formed to preserve the Riverways from damming, split due to concerns surrounding intended uses of the Riverways. The initial proposal, the "Ozark National Monument", was unsuccessful in part for want of protection for recreational users. After its defeat, a second proposal, the "Ozark Scenic Riverways" proposal, was given consideration.

In the Interior and Insular Affairs Committee's initial report on the Ozark Scenic Riverways proposal, the committee emphasized the "importance of creating Federal recreational areas" and noted the Riverways' geographic location was uniquely situated for the same. Additionally, the Secretary of the Interior, Stewart L. Udall, reassured the committee and federal law makers that "recreation is a purpose" of the Ozark Scenic Riverways proposal.

With the committee's support, and Secretary Udall's reassurance, the Ozark Scenic Riverways was passed into law with the new title "Ozark National Scenic Riverways."

The stated purpose of the newly created ONSR was:

For the purpose of conservation and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United

States ...

Significantly, the ONSR's enabling act places recreational use on equal footing with the other stated purposes.

ONSR enabling legislation. The enabling legislation establishing the Ozark National Scenic Riverways, rather than simply the Ozark National Monument or a lake in this region, plans for a park which allows the public to enjoy the beautiful natural wonders near and along the Jacks Fork and Current Rivers.

Each sentence of the enabling legislation describes a venture between the Federal, State, County, and City Governments as well as organizations from the region near the Ozark National Scenic Riverways. It in fact states such a fact so clearly that the blatant ignorance for opinions for the local and regional populace in the current plans for the ONSR makes such a process for drafting plans one-sided and should be reconsidered. It is the intent of the enabling legislation to give the population residing in and around the Ozark National Scenic Riverways input in the management of such an integral part of the economy and lifestyle of the south central Missouri Ozarks. Preservation for the sake of preservation and the ideal of a select few should not dictate what the visitors in the ONSR encounter when pursuing recreational activities.

Advisory Commission. An advisory commission, such as the one that was created for the Ozark National Scenic Riverways during the formative years of the park, should be reinstated to provide much-needed oversight for the National Park Service's management of the ONSR.

It is the belief that we should have an advisory board of people in similar fashion as the one for the Ozark National Scenic Riverways that was set up in the enabling legislation of the ONSR in 88-492, which also expired 10 years after the formation of the park, that has been prevalent for many years. It is not unusual for a Federal government agency or entity to have an oversight committee and it is very apparent, especially with the federal tax dollars spent on the General Management Plan draft process, that the ONSR needs exactly that, an advisory and oversight committee. The advisory and oversight committee should be set up in similar fashion to the original advisory committee that was created with the ONSR enabling legislation, but it should have the capabilities to carry out and suggest implementation of policies regardless of the request of the Secretary of the Interior. This should be an ongoing and continuing committee of people to aid in the management of the National Park System management of the Ozark National Scenic Riverways-in so doing, the management process would already take into consideration the opinion of the stakeholders for the Current and Jacks Fork River watersheds. This would not only be a time saver, but would save immeasurable dollars spent on the GMP drafting process.

As formed during the creation of the Ozark National Scenic Riverways, there was one member appointed from each of the county commissions in which the ONSR is located, Shannon, Dent, Carter, and Texas, as well as two appointed by the Governor of Missouri and one appointee from the Secretary of the Interior. The one issue with the legislation forming this advisory committee was the Secretary of the Interior was allowed to use them at his or her discretion and really an oversight committee should not be used at the leisure of the agency, it should be the oversight committee that reviews policy, practices, and management procedures of such an agency as the NPS and ONSR continually and regularly. It is also our understanding that other agencies of the US government have oversight and advisory committees with real power to suggest policies and help enforce them in the management of the agency.

Campsite Reservation System. Campsite reservations are a common complaint and factor requiring the chamber to make a statement specifically about the disorganization of the present system. It is understood that the NPS presumably pursued using the current campsite reservation system to save money and resources for other ventures within the park. However, the current campsite reservation system saves no money, in fact the current system, shuns away visitors. Since there are no way to make reservations locally nor to track reservations on a local level, campsites remain vacant and are not filled. For example, if a visitor reserves a campsite and does not arrive at the agreed-upon time to maintain the reservation, that campsite is not filled and that campsite is not able to be filled because the system does not account for such actions. When one arrives at a campsite where there are no cell phone towers, no public telephones, nor access to the internet, the local ranger station cannot even help with this venture because the Omaha office must be called and directed through a prompt system that not only confuses, but deters visitors. This is a prime example of visitor deterrent policies.

In fact, some services for the smaller campgrounds have been removed, yet fees are still charged, despite the lack of a trash pick-up service. If it is necessary to raise fees for camping to provide services

for the campsites and to maintain the unique visitor experience, then fees should be raised to accommodate visitors for the campsites they wish to use rather than simply eliminating the services for the campsite and eventually closing that particular campground. This is a general trend for the National Park Service management of the Ozark National Scenic Riverways and this management style should cease and desist as it currently exists.

In fact, the campsite reservation system should not be held by a Canadian company for the ONSR, specifically, and move to a local position in order to fund a job, and use the \$9.00 surcharge for making a camping reservation to fund that position. Last minute reservations should be allowed for every campsite, without respect to any 7 day advance reservation policy. Campsites should be allowed to be in place for more than 2 weeks at a time, due to the nature of traditional camping activities. In fact, the ONSR camping system should be modelled after the system at some of Missouri's State Parks, where reservations abound throughout the year and tourists and locals alike are waiting in line for reservations. By creating a system similar to that of the one at some of Missouri's State Parks, the reservation position within the ONSR will pay for itself. The campsite system should be tailored to the Ozark National Scenic Riverways, rather than tailoring the needs and wants of a much smaller park to those of the giant parks like Yellowstone. The size of this comparatively smaller riverways park system is one that prompts a camping plan which allows for the type of camping that visitors desire and need, rather than complying with and adhering to the policies of larger parks.

Large Boulders and other pieces of obstructive objects. Boulders and travel-restrictive objects placed in and along stream beds, creeks, and riverways are actually detrimental to the ecosystem of the rivers and encourage erosion. Such environmentally detrimental obstructions change the flow of the rivers and streams around which they are placed worse than the supposed activities which they were meant to prohibit. The best plan possible would be to partner with other agencies (ie. the Army Corps of Engineers) to secure river banks and stream banks with protective materials and native plants so that erosion is minimized. This would protect not only the visitor experience, but also the wildlife and plants from erosive effects.

Gravel bar camping. An activity which is a traditional use pattern with no substantiated claims of environmental degradation is vehicular accessed gravel bar camping. This form of camping also helps to alleviate camping at less primitive campsites with more services. In fact, to increase some of the drive-in camping spots at current locations and to improve those sites would enhance the visitor experience and provide for more and different forms of camping that have very little impact on the environment. Basically, drive-in camping is a local and regional resident tradition for many families for generations. Prior to the establishment of the ONSR, extended friends and relatives would come visit this area and stay for weeks at a time to enjoy the pleasures of vacationing in and along the Current and Jacks Fork Rivers. Prior to European settlement, even the Osage used various spots along what is now the ONSR as hunting camps to refuel and recharge while gathering food for their tribe. Although the Osage did not drive-in to camping locations, it would be assumed that not every one of them arrived to their spot by watercraft.

Canoes, Tubes, Rafts, Horseback Riding, and Jet Boats. It is integral to the economy of the area that access is kept for our canoe outfitters, our horseback riders, and our outboard motor visitors. The experience the groups have should be enhanced, improved, and considered when drafting the management plan, rather than placing limits and restrictions on the recreation they enjoy. It is illegal to double charge horseback trailriders to use the horse trails. Campsites and services for our campers, who prefer public campgrounds, whether large or small, should be improved. Today, people are mobile. Everyone has access to vehicular transportation, so if a tourist does not have a good experience here in the ONSR, they can choose to go elsewhere.

Position on "zoning" of rivers and lands. In the enabling legislation, it is cited that zoning is allowed for the management of wildlife and hunting, in relation to the enjoyment of visitors, public safety, administration and must consult the Missouri Conservation Commission for such topics of discussion. Zoning for the sake of copying urban-planning models is not described in the parks founding documents. Conservation Commission's comment from 2009. There are a few basic concepts that will be exemplified by excerpts from this letter. First, in paragraph 3, page 1, "The Department recommends hunting, fishing, and trapping continue to be allowed throughout the ONSR". This statement clearly should alert the National Park Service to the necessity of keeping access available to the public for the purpose of wildlife management-in fact, this might be a good reason to expand upon the current access points, campsites, and roads along the riverways for that express purpose.

On page 2, in paragraph 1, they state, "Any discussion of boat motor horsepower limits would be incomplete without consideration of the impacts of proposed changes on angler access and fish communities. Zoning based on horsepower dictates where certain boats can gig or fish. Some areas of the river will receive more or less harvest pressure and a corresponding shift in fish community". The thought that there will be fish not every touched or encountered by a jet boat or even by a fisherman is a nice thought to some who wish for no one to enjoy the Ozark National Scenic Riverways, but from a practical standpoint of Resource Management, the rivers should be fished and gilled to help maintain proper fish populations. It is the express concern of the Missouri Department of Conservation to manage the state's wildlife, fish, and forest resources, so their experience and professional opinion should be used for management purposes. As far as the fishing and gilling are concerned with completely zoning out jet-boat transportation along the riverways, this same management tactic would apply. The river needs to have fishing and gilling in order to manage fish species. Further in the letter the Commission states to, "upgrade the existing camping facilities and day-use facilities to attract and encourage families and children to experience nature in the great outdoors." This coincides with the notion the NPS should improve current accesses, campsites, and facilities to enhance the visitor experience, rather than shut-down, close, and block access to resources. In the letter they also state they support the "No Action" plan with a few minor provisions- it is quite evident the National Park Service has ignored official comment from the Missouri Department of Conservation in the current draft plan (an agency to which the ONSR is bound to cooperate with by the enabling legislation) as well as local comments.

Access for the purpose of Wildfire management. It is imperative that because the National Park Service makes no attempts at forest management that every road, trail, and transportation avenue be left open within the Ozark National Scenic Riverways for wildfire prevention and management. Although we have not had wildfires in this region for a number of years, that is thanks in part to the preventative efforts of management agencies such as the Missouri Department of Conservation and the US Forest Service. The roads as they presently exist represent years of travel as established presumably by some of the Native Americans and later travelled by the European settlers and pioneers. Eventually the roads and trails that are left today represent a cultural and historical lesson to the student and to the visitor, however, the important lesson to be learned is to allow for proper wildfire management so the entire stand of forest does not burn down. Additionally, such libelous behavior endangers the residents of the region with the likelihood of a wildfire reaching homes and more populated areas due to the unmanaged forest. Roads and trails provide more than leisure activity, they provide a lifeline to wildfire management.

Access for Emergency personnel and management. Closing access points along the riverways is a counterproductive notion when considering the needs of emergency management. If people are injured, have an accident, encounter an issue and need help, it is very important that emergency management personnel are able to access the creeks, rivers, and lands in and along the ONSR.

Access for elderly, the very young, and the disabled. It is a common theme among the federal government at this time that access to federally owned properties (ie. Courthouses, agency offices, public works buildings, public monuments in urban areas, property held in trust for public use), no matter what a person's age, creed, nationality, sex, color, ability, disability, and other descriptive devices used to categorize people and prevent them from accessing what should be available to all people. It is a basic ideal that is embedded in policy, legislation, regulations, and practices carried out by the Federal government-the idea that discrimination toward a segment of society, especially if that segment of society is underprivileged, under-represented, and lacks resources.

It should be noted that by limiting access to campsites only to those who can travel on the river is discriminating against those who cannot ride in a watercraft. Access to gravel bar camping should be allowable by those who can travel by a land operated vehicle-which allows access to the elderly, the very young, and the disabled.

By limiting motorized boat access on certain points of the river, it is not only a discriminatory act against the above-mentioned groups, it is also a self-regulating zoning conversation. Jet boats will not travel on stretches of water where there is insufficient water to travel. During seasons when there is sufficient water in the river to allow jet boat travel, there should be no restrictions. There should be no restrictions in order to allow for the travel of the elderly, the very young, and the disabled to spots of historic, cultural, and natural beauty interest just like anyone else who wants to visit the spot that can travel by foot or a method that is non-restrictive to those in the minority groups aforementioned.

Additionally, the National Park Service has questionable jurisdiction over navigable rivers, no matter whether they fall onto the lands owned by the Federal government. So any limitations placed on jet boats or watercrafts have an equally questionable ability to be enforced.

Access for graveyards and cemeteries. This issue pertains to that of road and trail closures. In a group meeting held in Rolla, Missouri, the Missouri Coalition for the Environment proposed that 64 "illegal" roads and trails be closed due to the fact that these roads and trails contribute to the presence of gravel, through environmental erosion, in the Current and Jacks Fork Rivers, which lie within the ONSR. There are three arguments which discount this claim which cites these roads and trails should be closed. First, these roads and trails are not illegal, nor are they new; every road and trail that exists that is claimed to be illegal is a road or trail based from use patterns that exist since European settlement of this area. This information is based on a road and trail study performed in the 1980s which stated these roads and trails are illegal because the National Park Service did not account for them when the ONSR was being formed. This is in fact a fallacy. The NPS, simply put, did not desire for these roads and trails to be accounted for, so they left them out of the original documents describing county roads. This was furthered by the roads and trails study performed in the 1980s. Once this was created, the roads and trails that are now being said to be illegal, some of which are slated to be closed, have actually been in existence prior to the formation of the ONSR.

Additionally, the Missouri Coalition for the Environment and the National Park Service are basing the decisions to close roads and trails on data gathered from studies which is skewed, and non-existent in some cases. There is no proven point of entry into the water system for the gravel which appears in the riverbeds today. There are many theories about this subject, however, none are accepted as being the authoritative theory for where the gravel in the rivers originate. The roads and trails are desired to be closed simply because there is a belief among some environmental groups that access to natural resources such as those that exist in the ONSR should be closed off, exclusive only to use patterns approved by them- -a privilege, in a sense. This is why they push to close these roads and trails. Furthermore, they wish to close off access at the ends of county roads which allow the public to access the river, which is problematic for many reasons, including access for the handicapped, the very young, and the elderly, in addition to emergency management, wildfire management, traditional use patterns, and access to the cultural, natural, and historic locations as set forth in the enabling legislation.

Another point to be considered for the argument to keep the roads open is access to cemeteries, graveyards, and gravesites. Most of the roads and trails within the ONSR lead to a burial site of a local family which resided at that location prior to the establishment of the ONSR. It is very important to the residents of our communities that they be able to access and to visit their family burial plots located at their old homeplaces along the Jacks Fork and Current Rivers. It is cited in the "Management Policies 2006: The Guide to Managing the National Park System" (produced by the National Park Service) in section 8.6.10, that burials will be allowed to be visited by family members or designees. It is important to not cut off the heritage and culture of people from visiting their ancestors at their old homeplaces. Graveyards and grave sites should be given the respect to allow descendants to visit the resting places of loved ones and ancestors, regardless of policy or regulations.

Timber management. Simply stated, a timber management policy of selective cutting, even highly selective cutting would be a wildfire-prevention method, a stimulus to the local and regional economy, as well as provide for safety management for visitors. The NPS could partner with government agency, for example the Missouri Department of Conservation, to actively manage the timber and wildlife resources. Just as it is important to have existing and long-standing forests for animal habitat, it is equally as important to have different stages of the forest to encourage various wildlife populations to flourish and inhabit these managed forests. We do not desire to have visitors of the ONSR to encounter stages of the forest which are cleared or unattractive, which was the sentiment of ONSR proponents and congressional officials at the time of inception and is why the original purchase of land included a corridor of land nestled only next to the Current and Jacks Fork Rivers in most places. This was to control the visitor experience and allow them to see natural beauty from their trip on the rivers. But it is imperative to have forest and resource management for the purpose of wildfire prevention, wildlife proliferation, stable environment conditions, and an enhanced visitor experience.

The basic concepts behind timber management include wildfire prevention, traditional fire patterns the Native Americans applied to the region (which was the environment documented by Henry Rowe Schoolcraft), ecological (meaning ecosystem degradation and regeneration is part of the natural forest

and fauna life cycle), as well as economic.

Gravel removal. According to the plan on page 241, "Gravel mining operations can adversely affect the geology of adjacent tributaries by altering flow patterns, changing channel structure, increasing stream gradient, relocating channels, and causing scouring and bank erosion." This notation does not take into account the necessity for the gravel to be removed as part of a cyclical process. There are no reports, studies, tests, nor hypotheses which prove where the gravel in the river comes from. Frank Hughes, a local scientist and resident, once stated, "that it is very likely the gravel is a cyclical trend and in order to manage it, the gravel must be mined to protect the wildlife and fish, so the streams do not fill up and choke out all the wildlife." Although this alters what the present state is of the rivers, it is a process which the local residents have operated since settlement. These patterns help protect the fish and wildlife to ensure there is a future for them, as opposed to a dry creek bed filled with gravel.

It is very clear, the management of this park should be proactive, rather than laissez faire. The lack of interest by the NPS management of the ONSR extends beyond the gravel, but encompasses tourist information, assistance, and general visitor experiences. Meaning, the NPS does very little to assist the tourist or visitor, except in the form of inspecting and writing tickets.

System of computerized paperwork for park rangers so they may be visible, rather than combative toward visitors. Combative and harassing park rangers is the number one deterrent to recreational experiences in the ONSR, second only to the negative publicity from the ONSR. It is integral in management of this riverways system to have park service employees and rangers to be visible for assistance, information, and to provide a positive presence within the system as far as visitor experiences is concerned. It is not intended for the National Park Service to employ more rangers, more employees, nor additional staff in any form to provide these services, but it is intended to shift the NPS from spying activities on visitors and trying to "catch them in the act" of performing illegal or citationworthy activities. It is meant to provide a regulatory presence. The purpose of NPS staff is to provide help to visitors within the riverways and to enhance the visitor experience. In so-doing, the employees will not prohibit activities by citations, but encourage good behavior of visitors by appearing in uniform throughout the system in a capacity design to assist visitors.

Local cultural and heritage aspects-discrimination and degradation. When the United States government purchased our river frontage, springs, and significant cultural structures, which is the most valuable land and resources in the immediate area, they promised to protect the history, heritage and culture of our river communities. Through a process that negated that promise, the Ozark National Scenic Riverways destroyed homes, barns, outbuildings and other structures of highly significant value, both worthy to keep for posterity and for the sake of our culture and heritage. Fields, most of which were promised to be cared for in the same manner they were left, in order to show what working farms were of the current time and those of the past, to grow over. The experience of people to view life as it was in river communities of the day was severely altered and detrimentally impacted. These concepts were as much a part of the visitor experience as the purely natural beauty in and along the Current and Jacks Fork Rivers.

It is peculiar that once again the National Park Service seeks to protect our culture and heritage, interpret and catalog the society that once was and further push our culture to the break of collapse. This form of discrimination is the ultimate detriment to the Ozark National Scenic Riverways. It is one that, under the guise of protecting the environment, they close off access, further discourage people to visit their ancestral homelands, and limit the ability of all people, regardless of race, creed, color, culture, access to resources, and ability to fight this cultural slaughter, to truly enjoy what the unique experience is of going to and becoming one with the waters and lands in and along the Ozark National Scenic Riverways.

Necessity of management during government shutdown. It became glaringly apparent during the government shutdown of 2013, the Ozark National Scenic Riverways needs to have legislation passed to protect the resource and to protect the rights of the people to access public property, which is owned by the people. There should be no citations issued, no scary signs prohibiting access place- the park should have legislation in place to allow people to access and to use the resource, if not managed by the Federal government employees during the shutdown, then most certainly managed by employees of the State of Missouri, whether by the Missouri Department of Conservation, the Missouri Department of Natural Resources, or by a joint venture between the two. There are examples of similar legislation to keep the park open such as the Washington monument in Washington, DC, and examples from the State of Utah where state employees managed federally owned lands during the shutdown. Similar legislation

should be passed, not only to protect the rights of the people, but so that the economy of our region is not further diminished by the actions of the Federal government.

Legislation to protect activities in and along the ONSR. If it were the intention of those who lobbied to create the Ozark National Scenic Riverways to establish a park where there are no recreational activities allowed, then it would have been set forth to create a park designed to limit visitor activities, focus only on wildlife and fish and plants and other living inhabitants of the ONSR, besides humans, and create a park for the knowledge that someone in St. Louis can strong-arm the National Park Service into shutting down access to this region so they feel comfort in the solitude of the plants and animals here. However, they did not. It was meant, by Secretary Udall, Congressman Ichord, and author Leonard Hall, to have a recreational area-one where people can enjoy the resources, both historical from human habitation as well as natural.

Wild and Scenic Rivers Act of 1968. In accordance with the following statement taken directly from [rivers.gov](http://rivers.gov), the government interpretation encourages use of input from the visitors and resource users from the area near the ONSR and encourages the general management plan to more greatly consider the enabling legislation:

Regardless of classification, each river in the National System is administered with the goal of protecting and enhancing the values that caused it to be designated. Designation neither prohibits development nor gives the federal government control over private property. Recreation, agricultural practices, residential development, and other uses may continue. Protection of the river is provided through voluntary stewardship by landowners and river users and through regulation and programs of federal, state, local, or tribal governments.

Points from the Plan Draft:

Management of "degradation of water resources in the National Riverways from land-based recreation would continue to be managed on a site-by-site, case-by-case basis."

It is clearly stated on page 242 of the GMP, "When the likely effects of the no-action alternative are added to the effects of the past, present, and reasonably foreseeable future actions, there would be a long-term, moderate, adverse, regional cumulative impact on soils and geologic resources. The no-action alternative would contribute to an appreciable, long-term, adverse increment to the cumulative effect." In summary, by managing in the present status, the natural resources would be detrimentally affected, which could impact the region for a fairly long time. This statement is based on skewed data, used only by the NPS to shut-off access and use of the resource to make the management of this park closer to the idea of preservationist propaganda. Based on the fact that data gathered and used for the park service studies and results are skewed, thus, null and void, the premise that these resources need to be shut-off is also null and void.

Equestrian pursuits mentioned on pages 252, 253. Studies that have tried to prove adverse effects to the environment from equestrian pursuits have been both skewed and shown to be invalid.

Municipal wastewater discharges on page 253. The City of Eminence is currently in compliance with State and Federal agencies. They have recently completed a community public water project. The city is proactively pursuing keeping the river clean through proper management of the city water and sewer system. "Keeping our rivers clean" is part of the motto of the city water projects.

Vegetation on page 263-264. Vegetation along undesignated roads and trails is not trampled in such a manner as to disturb the plant life in any significant way. It is clear by visiting a road or a trail to see these recreational activities taking place on them do not, in any way, shape, or form, disturb the ecology nor cause detrimental environmental impact so as to substantiate placing it in this document.

Wildlife & Fish on page 276. Some claims are made in this section which related river crossings, jet boats, undesignated roads and trails, and "motorboat-based petroleum pollutants" as causing "water quality degradation and having adverse effects on aquatic habitat. As discussed earlier, studies and data related to pollution have been proven to be skewed and incorrect as far as land-based recreation is concerned. In relation to jet boats "California Standards" apply to the jet boats, which places minute parts per million of pollutants into the water. There were no studies proving that the jet boats had a detrimental effect on the rivers nor the fish nor wildlife. Erosion does not happen from boats, but from the floods that occur naturally. So if it were proven that detrimental effects to the water quality does not happen due to these activities, it should be safe to say that recreational activities within the ONSR do not degrade the aquatic habitat.

Ozark Hellbender. As discussed by a National Geographic study recently published online through the

Smithsonian Institute, "Snot Otters Slipping Away", ambient temperature of the water affects reproductive cycle of the Hellbender. This should be attributed to the increase in the ambient temperature of the air and the importance of environmental factors from other parts of the country, as the water and lands in this part of the Ozarks are well cared for. Another attributable factor is the increased number of bass in the river eating the young Hellbenders, which substantiates furthering the unregulated use of jet boat on the riverways, which would allow continued traditional fishing patterns. 280 1st paragraph, discussion on human interaction with plants and animals. The impact of humans to the ONSR is negligible in this discussion as humans have, for at least a few thousand years, been involved in the environment of the Current and Jacks Fork Rivers, and should continue to be allowed to be a part of the resources here.

Cultural Resources discussion on page 307. Interestingly enough, cultural resources, as it relates to those with long-time connections to the land and water, in addition to those whom have acquired a connection to the land and water through their interest in History, Anthropology, the Sciences, or SocioEnvironmental

studies, refer to any number of old home places, remnants of structures, former community hubs, schoolhouses, campsites, name-places on the rivers and streams-even when someone has a unique experience at one of these locations without a prior knowledge of the location can inspire this connection-and natural wonders associated with the culture. It is tradition through Native American and European cultures to visit ancestrally connected locations, in fact it appears in several cultures besides the two mention (but these two are relevant for this discussion). The simplest notion of visiting the location where a baby in the family died and was buried on an old farm can represent this connection to the land.

It has been said that this dirt and these waters run through the veins of the people with this connection to the water and land, and so it is impossible to truly separate them from this area. Which, in the process of limiting access and use to any point through the Ozark National Scenic Riverways, it is in fact degrading, discounting, and providing a detrimental effect to the local and regional culture. Although it may also be said that people come from every state in the United States to visit their ancestral homelands here in the ONSR.

To select areas to shut off access and use, to limit regardless of handicap, ability, age, socio-economic level, or connection to influential public officials, is to commit the highest form of an act of discrimination-essentially, this is denial of access to one's heritage and culture.

Historic Buildings and Structures discussion on pages 313-316. It should be the duty of the National Park Service to maintain, catalog, interpret, and provide public information about the culture, history, historic structures, and other parts of life in the past and present in the Ozark National Scenic Riverways. Historic structures should not be limited to those whom are not disabled, very young, or elderly. Present accommodations for travel to historic structures and locations should, in fact, be increased and accessibility be better maintained. It is impossible to consider making changes to the current management patterns of the historic structures as it is proposed in the General Management Plan when it is purported by ONSR staff that there is not sufficient funding to sustain the existing structures, interpretive programs, and cultural activities that are currently needed.

Ethnographic Impact on pages 322-324. It is presumed that when stating Ethnography, it is not necessarily referring to the culture, biology, social branches of anthropological study of a group in the past-tense. In fact, in the case of the study, understanding, and interpretation of ethnography for the Ozark National Scenic Riverways, the ethnography of the group about which they study and promote, is the same group it has sought for many years to close off cultural, social, and literally biologically connected sites along the Current and Jacks Fork Rivers. In fact, it should be taken into consideration when mentioning protecting the rights of Native Americans to access and to use their tribal lands, that most of the families which settled and lived along the Current and Jacks Fork Rivers had Native American ancestry, many times very recent. Most of the residents were of the Cherokee Tribe, however there were many other tribes represented in that group-as prevalent as this topic is, it should be noted that ancestral access to the regions Native American population should not be shut off, bottled up, and held for only a few to view, study, and ponder.

Wilderness designation recommendation-fiscal responsibility. It is a travesty that the National Park Service has actually spent the insurmountable amount of money they have on the General Management Plan process when this could have been so easily addressed with the Advisory/Oversight Committee as mentioned above, in this case, specifically in relation to the Wilderness Study. It is prevalent, even from

the presentation provided by the ONSR during the comment period public forum discussions, that it is not and will not be foreseeably possible for a Wilderness designation to be obtained for any section of the Current and Jacks Fork Rivers watersheds due to the process involved to establish such a designation. Considering the budgetary cuts to providing services and offering proper number of staff for recreational activities within the ONSR, this money should have been more responsibly managed. Chambers take on the economy and how the ONSR impacts it. The Ozark National Scenic Riverways has had a mixed review of impact on the counties it is located in. Rather than bringing up historical impacts the NPS had on the resident population of these counties, let's discuss current impact in relation to the impact from recent history. Shannon County, the second largest in acreage in the State of Missouri, is the poorest county per-capita in the entire state. Shannon County is traditionally the county in the state with the fewest resources and is highly isolated, in terms of economics, travel patterns, communication, representation in the government, and education. The county has a majority of the land owned by the LAD Foundation, the State of Missouri, and the US Government. This negatively impacts education, public services, government representation, resident population, job opportunities, and the economy. In-lieu-of-tax payments are substandard and are in no way comparable to what should be paid to the Shannon County government and to our schools. Jobs, that upon the establishment of the ONSR, were explained would be given to locals have been outsourced, whether to Canada for camping reservations, residents of other counties in order to substantiate an impact on a region for payroll, rather than the counties in which the ONSR resides, or that locals are not to be hired because of the idea that Federal employees should not work in career jobs for a Park Service managed property. In being a community member, the Ozark National Scenic Riverways is lacking in several aspects, including consideration for publicity and how negative public statements affect the economy negatively, how giving unwarranted citations to park visitors sends tourist dollars away from this area, dollars that are vital to the economy, or when rules and regulations are whimsically applied to appease the section of environmentalists from St. Louis County that have the ear of the Park Service administration in Van Buren and Omaha.

Positive impacts upon the local population are created when visitors have a good experience in the ONSR and do not have to battle superfluous regulations, combative government employees, and ease of access to the resources, both natural and cultural, and use of the resource as traditionally experienced. This process does happen, but we can make the experience even more productive and fruitful for the visitors of the Current and Jacks Fork Rivers' watersheds by truly enhancing the visitor experience. The tourist economy is vital to Shannon County, since the land for which productive use for economic activities is owned by the aforementioned entities. Tourism is vital to the economy for many reasons, it not only brings income into the county, but also helps to increase the services of the residents of the county as the tourist need access to those various services as well. Tourists are not only from throughout the nation, but we have local and regional residents that we might consider in the tourist category, this is a definite impact on the economy.

It cannot be overstated how important tourism is to the economy of Shannon County and it should be the duty of the National Park Service to work with our county to improve tourism in this region, rather than to squash and starve the resident population with superfluous rules and regulations.

Plan B Commentary. On page ii of the NPS Summary of Key Concepts for the ONSR General Management plan, Alternative B (which is the Park Service preferred plan) is described that it will "enhance opportunities for visitors to discover and learn about the natural wonders and Ozark heritage of the National riverways, while maintaining a mix of traditional recreational and commercial activities."

We beg to differ on the idea this plan will enhance activities and provide for traditional recreational experiences in many ways. To begin with, there is nothing to be gained from zoning areas and closing off use and limiting use for the traveler, except to enhance the notion that a limited number of people can access the riverways. Additionally, the concept of traditional use is obviously a vision the National Park Service does not share with those whom participate in the traditional recreational activities, because the agency has continually sought to limit access, use, and participation in the riverways, whether because of preservationist doctrine, lack of funding, appeal to particular interest groups, or to make it easier for them to manage fewer people with fewer resources. It is however, not the purpose of the National Park Service management of the Ozark National Scenic Riverways to limit access and use to cultural and natural resources, nor should it be their goal to limit the economic resources available to the resident population.

People, after reading, reviewing, attending public comment forums, and speaking with NPS personnel

about the GMP draft, question how the NPS can afford to build and maintain a new learning center and other costly proposals in the plan which would require expenditures above what is publicized cannot be afford to be spent to pay for current staff and maintenance.

#### Summary and Conclusion.

Through the discussion of the benefits of using more public input from the actual users, visitors, and residents of the neighboring area, it should be plain to understand the ONSR should make changes, but in a much different manner than is proposed in any of the GMP Alternatives. Even the plan of "No Action" does not address the proper concerns enough; it is however, recommended the National Park Service mandate the use of the "No Action" plan alternative until it is evident more practical and useful changes are made to the alternatives as presented. One way to best understand a method that would steer the organization in the right direction is the establishment of an Advisory/Oversight Committee spelled out above. This could certainly alleviate some of the concerns all stakeholders have.

One very peculiar topic of concern is that of overcrowding along the rivers. To establish a blanket policy across the ONSR to limit activities, access, recreation, and the desire to return to this riverways because of overcrowding along the rivers that occurs a few days a year is utterly and unmistakably a point that proves an oversight committee needs to be established. There are many points along the riverways where people can travel even when there is overcrowding in certain sections of the river where solitude and serenity may be found. Similar to the management of the roads and highways of this nation, it is not their policy to close down sections of the sections of roads most highly used, it is their practice to improve access, resources, and availability for those who wish to travel to be unimpeded. We are in no way suggesting support for environmental degradation due to an overabundance of humans, but at this time there are no worries of this happening. The basic concept to comprehend here is that through a little better management of resources, improved access points, additional bathrooms, better services, many of these concerns can be addressed.

Addressing concerns should, additionally, not be just those concerns of particular interest groups with money, ready access to education and to other resources, such as those environmental groups which desire to shut off access to our cultural heritage-concerns should be addressed for those that actually use the riverways, quite literally assist in the cleanup of the system, protect the environment by individual actions and group actions, and have a year-long interest in the subject, not just those who find interest in this when an email is sent out from an organization with paid staff, lawyers on retainer, and a desire to further limit an entire group of people's rights.

Each topic of discussion here should lead the reader to better understand the necessity of a flagship management program to enhance visitor experiences. Expansion of access and use to create a positive visitor experience is integral to the economy of this region, but commerce is also how the government receives their funding. To limit and to chain commerce to a point where it is not possible by the government is a self-defeating purpose. We request the Secretary of Interior to cease and desist discriminatory practices against the people in and around the Ozark National Scenic Riverways. And we ask to have more and better access to the resources, more reasonable local input placed into the management of the Ozark National Scenic Riverways, assistance with legislation to protect the true needs of the users of the ONSR, to follow the intended use of the ONSR in accordance with the enabling legislation, to implement a plan to keep the park open during another government shutdown, and to institute an Advisory/Oversight Committee formed in similar fashion as the enabling legislation entails but with more powers to ensure decisions by the committee make an impact.

Eminence Area Chamber of Commerce Board of Directors and undersigned supporters. January 27, 2014

I have great concern that environmentalist organizations have had a very disproportionate influence on the shaping of the management plan. They are not the major stakeholders. Many of their association members

who have never visited the ONSR. The primary stakeholders are citizens living in those counties where the ONSR is located. Their lives will definitely be impacted if provisions of the management plan are unnecessarily restrictive.

I have read some of the comments of environmental organizations. They talk of significant environmental impact due to too many access trails/roads, too many horseback riders and riding trails, too many ATV riders, too many floaters/boaters, etc. They assert that these uses are excessive and have led to environmental degradation. Yet none of these claims are based on empirical science and should not be considered credible.

I have a Ph.D. in environmental toxicology and have designed and managed many studies on terrestrial and aquatic impact. Based on personal observation and review of aquatic monitoring in the Jacks Fork River, environmental quality in the whole of the Ozarks is very good. If there are terrestrial studies within the ONSR demonstrating significant impact (= decreased species diversity or aberrant diversity indices), I don't know of them. Despite the assertions by environmentalists, the ONSR is in excellent environmental health and is a long way from showing signs of being degraded. It cannot be assumed that the presence of man in a natural environment automatically translates to significant environmental degradation. It does not.

If current management practices are protective of the environment, as they are, why close trails and accesses and impose other draconian provisions that are unnecessary.

**Correspondence Type:** E-mail

**Correspondence:** I am writing to urge you to take a strong stand for the preservation of the Ozark National Scenic Riverways in

Missouri and vote for Management Plan Alternative A. These riverways are a jewel of the south central Ozarks region and deserve the greatest attention. Like many in our state, I enjoy the recreational opportunities made available through the riverways system, but certain private enterprises and individuals are cashing in on the pristine nature of these areas via large-scale trail rides and ATV access in and along these rivers, which are causing extensive damage to the watershed and endangering water quality, wildlife, and others enjoyment of a peaceful day on the river.

I personally have seen large groups of horses standing or walking in the river for long periods of time, during which they not only churn up the gravel and release silt and destroy fish nesting sites, but also defecating and urinating in the river itself.

Not only is an unpleasant encounter for other recreationists, but it is also dangerous for us and our children to play in e-coli laden-waters. ATV's and horses have severely denuded the river banks in multiple locations where they repeatedly cross the river, causing yet more erosion and sediment release into our clear, clean rivers.

Horse and ATV enthusiasts have a massive network of trails already established throughout the Mark Twain National Forests and they don't need these trails to enjoy their sport. In lieu of banning them outright (which I personally favor) horse and ATV enthusiasts should be limited to designated trails away from the river corridor and access to the river should be restricted to designated crossings only and only for crossing - not for lingering, watering, or washing their animals and machines.

In addition, trail riders should be required to tether their horses or park their ATV's (filled and covered with oil, gasoline and other injurious petrochemicals) away from the river when not using designated crossings for that specific purpose.

I would also like to see large-scale private ride organizers should be treated like the canoe concessionaires and limit groups in their scope and size. Not only are these trail rides an environmental disaster in the works, but they are truly unfair to the rest of us who enjoy the cleanliness and tranquility of the riverways system as it was meant to be.

Many in my community, including myself, volunteer their time and effort to keep our rivers free of trash, monitor water quality, and generally maintain and protect this National Treasure at no cost to our state and federal government.

Now I ask you to do your part to ensure that everyone has the opportunity to experience and enjoy the very last sliver of "wilderness" in Missouri and to ensure that our rivers remain protected for generations of Missourians to come.

I want to express my concern about the 65 miles of horse trails being closed on the Current River. While not everyone likes or enjoys horses or trail riding, there are a lot of us that do. I realize there are some bad apples in any group of people but as a trail rider I have seen how my group stop to clean up trash, beer cans and glass bottles along the river's edge. We keep the trails clear of debris and are good stewards of the land.

I support protecting our wilderness but at the same time I support the right of people to enjoy the trails on horseback. As a Senior citizen rider I have waited well over half my life to full fill a childhood dream and to think it might be taken away just breaks my heart. Where I live there is no where to ride but blacktop roads. The trails at Jadwin, MO are close enough that at 71 years of age I can drive there by myself, and have the time of my life.

I implore you to reconsider this closing.

Sincerely,

Catherine Reagan

**Correspondence:** Dear Superintendent Detring:

I grew up in Columbia, Missouri and the Current River was a haven and refuge for my friends and I in high school and college at the University of Missouri. From canoeing on the Current and other Ozark rivers, I became a guide on the Colorado River in Grand Canyon National Park and guided river trips in the Himalayas, in Africa and in Turkey.

I see from your resume that you have worked in Canyon de Chelly, the Everglades and in Glacier National Park, among other places during your NPS career, so I know you are keenly aware of how fragile and sensitive the Ozarks Riverways are. I also know that as a Missouri native, you are proud of what makes the Ozark National Scenic Riverways unique and you know that our Ozark Mountains, springs, rivers and habitat are a unitary system.

I also realize, as a long-term employee of a park concessioner in Grand Canyon, and through a lifetime of use on the Current, that many people make their livings in and around the Ozark National Scenic Riverways. However, the reason the riverways are attractive is because they are protected and almost pristine. Therefore, I urge adoption of Alternative Plan A, which will provide the most protection and provide the most uncrowded experience for park visitors. Thank you kindly for considering my comments.

Re: Riverways Draft General Management Plan

Dear Supt. Black:

Although I gave brief oral comments at the Van Buren open house, I hereby wish to give more substantive input into the Draft Management Alternatives. But let me begin by saying that I found the Van Buren meeting to be a poor forum for expressing input on the obviously controversial proposals. The first two hours, wherein NPS personnel provide information and took input, went fine. But the final hour devoted to discussion of wilderness management in the Big Springs section ended up being a free-for-all anti-government forum that was stifling to anyone who wished to express opinions on the wilderness management proposal. Worse, allowing a politician (Rep. Jason Smith's delegate) to do a "crowd rousing" speech at the start created a chilling atmosphere for anyone (like me) who wanted to express a divergent view. I will also hasten to add that I live in Reynolds County and I am therefore represented both by Congressman Jason Smith and by State Representative Fitzwater: the former was represented by Darren Lingle, who gave the opening crowd-rousing speech, and the latter was there in person, yet neither acknowledged that they had constituents, such as me, who strongly disagree with their "No Change" attitude. Neither Mr. Smith nor Mr. Fitzwater has actually conducted a legitimate survey and they therefore cannot claim that they know for certain what their constituents desire in terms of Riverways management. I had specifically written to Mr. Fitzwater asking him to acknowledge that not all his constituents agree with his views on Riverways management: that he failed to do so only demonstrates the efforts that were made to give the appearance of a united "local opinion" when in fact there is no unanimity. Further, it was obvious that many if not most of those attending the Van Buren meeting had been actively recruited to attend multiple open houses to give the appearance that their numbers are greater than they actually are: one person attending four meetings is still just one person!

My following comments basically support Alternative B, the NPS preferred Alternative, with a few expectations which I will clarify.

Re: Motorboat-free zones: One of the speakers at Van Buren (Mr. Fitzwater, I believe) said that restricting motorboats from any sections of the rivers endangers human lives: he obviously is unaware that certain river sections are impassable for motor boats anyways, but mostly he shows his insensitivity to the desires canoeists have for a natural wilderness experience, one which includes being free of motor noises. Would one dare suggest horse-back riders should be accompanied by ATVs because the latter could provide additional safety? Of course not! Anyone canoeing the upper reaches of the Jacks Forks ought to know that motor-boat rescues is not going to happen and that is part of the charm of being there.

As to the amount of river that should be designated as motor free, Alternative B is good but I am moved to support Alternative A which would restrict motors all the way to Two Rivers on the Current and the Jacks Fork. This is a significant stretch of river and motor-free zoning would be much appreciated by canoeists who form the majority of recreational users on both rivers. With this, I have no objection to 60/40 hp limits.

Re: Equestrian Management: Alternative B provides for 35 miles of newly designated trails while closing 65 miles of undesignated trails: this is a significant gift to horseback riders, most of who hopefully refrain from participating in riding their horses in the undesignated trails. Those who feel that National Parks entitle them to ride wherever they choose irrespective of the ecological impact will of course be unhappy. My only concern is that large number of horses- upwards of a thousand or more at times- will still be crossing the rivers. The recommendation that riders are given to stop their horse 100 feet from the stream to allow it to defecate and urinate prior to crossing hardly seems sufficient to prevent stream water contamination- shouldn't riders be required to use muck bags if they intend to cross streams? Park Service rules call for burying human waste at least 100 feet from water or trails: why doesn't the same rule apply for horse waste? I suggest as an alternative to muck bags that the Park Service aggressively monitor streams for bacteria: if a danger surfaces, all activity (horseback riding, canoeing, motor boating, etc.) should be prohibited until the waters are again safe.

Vehicular access: Keeping vehicles off of gravel bars makes sense. Missouri State laws ban vehicles from the rivers (except at designated crossings) and in many ways gravel bars are part of the rivers: they often are underwater! Much of the conflict between recreationists is a result of vehicles driving onto the gravel bars and using the bars for making spins, thereby. Vehicles also allow loud music (via car stereos), to say nothing of large containers of alcohol, to be brought onto the gravel bars.

As to road access, it is certainly extremely important that undesignated roads and river crossings be closed and that law enforcement be increased. The ONSR is a National Park, not a national racetrack. Those who argue for keeping open all the current illegal entry points are asking that crime be condoned. I note that Alternative B calls for opening 20 new designated access points: this is more than generous! Those who complain that the NPS are trying to keep the public from entry into the ONSR obviously have not read the Draft Management Plan.

Regarding the proposal to allow mountain biking on some hiking trails, I prefer that this be deleted from all Alternatives. I have no objection to mountain bikes on vehicle roads, but their use on hiking trails is a problem: inevitably, the trails widen and for those hiking it can be difficult to quickly move aside for a fast-moving bicycle. I realize that mountain biking is a popular activity elsewhere, but I do not think it is appropriate to encourage it within the Park.

Caving: In view of the escalating numbers of White Nose Syndrome cases in Missouri, I am glad to see that recreational caving is not being encouraged. Further, caves are a very delicate habitat and deserve the same protection as do archeological sites. Only persons trained in safe caving techniques should be allowed entry, and even that should be made secondary to wildlife protection.

Big Springs Wilderness Management: The proposal for wilderness management of the Big Springs tract is a good idea. I was surprised at the Van Buren meeting by the vociferous objection, but I heard no explanation other than opponents dislike and fear the federal government- that is hardly a rationale but instead a statement of one's mental status. I worked in mental health and I understand that people can get alarmed needlessly by all sorts of things, which seems to be the case here. The Big Springs tract is already managed mostly as wilderness and the only change would be that a few man-made items (the training range and a cesspool) would be removed, and a road already closed to the general public would be enclosed to Park officials as well. As I understand the proposal, that

road could be made into a hiking trail which would encourage greater visitation than is currently happening.

Conclusion: In summary, I support Alternative B with a few changes as recommended above. The "No Action Alternative" is really a prescription for continued and escalating problems in the Riverways. The National Park Service recognized the 1984 Plan has long been outdated and they are to be complemented for coming up with reasonable alternatives in the Draft Management Plan, any of which would be preferable to continuing on with current host of problems. I hope the discourtesy shown towards the NPS at the Van Buren meeting will not be viewed as a wide-spread sentiment: I truly believe most of us who choose to live in this magnificent area appreciate what the NPS does to preserve and protect it for we the people and for all the wildlife.

Sincerely,  
Susan Hagan

The Salem Area Chamber of Commerce requests the comment period for the Ozark National Scenic Riverways General Management Plan Draft be extended an additional 90 days beyond the February 7, 2014 deadline.

The Ozark National Scenic Riverways provides tourism experiences that have a significant impact to our economic bottom line similar to Eminence and Shannon Counties. The combined impact of the ONSR on this region is significant. The Current and Jacks Fork rivers have provided jobs and recreational opportunities for our community. We are concerned with unemployment and poverty in our community and are looking at ways to continue and expand opportunities for local employment.

The Salem Chamber appreciates opportunities for our area citizens to comment through the public information and comment meeting scheduled for January 8th and asks you consider providing a similar opportunity to citizens in or near Shannon County. Our natural resources are an important feature in our community and we understand the National Park Service has extended significant effort to develop resource plans to sustain the park system. Our board hopes you look forward with patience and understanding as our local communities attempt to understand and return viable comments on your Draft Plan regarding our future water assets.

Most Sincerely,  
Salem Chamber Board  
The Salem Area Chamber of Commerce Board of Directors

Scott Roberts, President

**Correspondence:** Three years ago, my family decided to go to Powder Mill and travel up river for a change. We normally put in at Log Yard and go down. We put our boat in and there was a man, his wife, and son who was maybe 18 months-2 years old. He was kicked back in a lawn chair watching his child and his wife was sunning and walking back and forth to their vehicle that was parked at the edge of the gravel bar by where the road ends. We did our boating and came back and they were still there enjoying the day... So I thought. I noticed an older heavy-set woman close to

him wailing her arms and looking like she was getting excited about something. He just stared out into the water. We backed our vehicle in and I waited in the driver's seat as my husband loaded the boat. The woman then threw her hands in the air and began to flop over my way. The man continued to not budge from focusing on the water. As she approached me, I realized she was blabbing about the man who parked his vehicle on the gravel bar, while the sign clearly states NO PARKING. Here I am, sitting in my old K5, backed into the water, while we load a boat. My children are here. His children are here. And she was just showing her butt. About how that man was eroding the land and breaking the law. Still I sit there, backed into the water. I was appalled by her behavior and I could only assume she was drunk, but I don't really think she was. Those were her true colors. Finally I asked her, "Really, ma'am, where are you from?" She replies, "Illinois."

"Ah," I say. "That explains it!"

She groaned and flopped some more and finally walked away. After she was out of sight, the man finally spoke up, "There's idiots everywhere you go on this river anymore!" To this day I regret not getting this mans name and shaking his hand for sucking it up and taking that woman instead of stooping to her level. I regret not giving her a piece of my mind. THIS is why I am angry. THIS is why I resent you, National Park Service! You rip the land from my family decades ago and continue to allow people who might come down here once every 5 years to tell us how to use our land. Yes, this is a National Park. But you are not taking into consideration our rights as locals and the main source of revenue for this area. DO YOUR JOB, then you wouldn't have to worry about writing a 500-something page draft over the course of a few years, Lord knows how much this has cost us. What, with false E. coli studies and wasted research money. You have continued to step on our toes and we will not stand for it anymore. Current river is restricted more than enough as it is. Leave us be. This isn't a fight we will back down on.

Preservation Restoration Inspiration					
Comments, Revisions and Suggestions for the ONSR General Management Plan					

## INTRODUCTION

This set of comments and recommendations is the sole responsibility of the president of the Ozark Heritage Project's president Dr. Eric "Rick" Mansfield. It is being written after literally hundreds of interviews with those that visit the ONSR, some locals tracing their residency back more than a century and others that were first time visitors from out of state. OHP has spent more than a thousand dollars and at least that many hours trying to facilitate civil and constructive conversation concerning the development of the new General Management Plan that will guide the oversight of the Ozark National Scenic Riverways for the foreseeable future. We have held additional opportunities at computer labs at Salem and Eminence, soliciting 3 7 comments at the first and two dozen at the second. We have distributed more than three thousand comment forms in a five county area, another two thousand flyers bringing attention to the comment period and appeared on a dozen radio stations. We have hosted a Trivia Night in Ellington to bring attention to the issues, provided a free Fish Fry and Boat Rides Saturday, January 4, at Pulltite to give businesses, other organizations and any interested visitors the opportunity to experience firsthand motorized jonboats on that stretch of river. We organized the Boat Rally at Powder Valley and provided the shuttle bus for the convenience of all visitors there.

OHP has been responsible for numerous newspaper articles to enlighten people about legitimate concerns of the present and past management of the ONSR as well as genuine apprehensions of visitors to the area. OHP was founded with the goals of preserving and restoring the physical environment of the streams and lands surrounding them as well as the culture of the people that evolved there, and to inspire others to do likewise. OHP has hosted the Current River Power Team's annual river clean-up this past year and participates in several others every year. OHP has conducted numerous stream cleanings along with cleaning up several land sites. We have published a book "Kids, Crafts & Christ: A Collection of Games and Things" in an effort to preserve traditions that entertained pioneer youth and often helped to prepare them for adult responsibilities; we have another book coming out this summer "A Riverman's Legacy and Other Ozark Tales."

Last year in 2013, OHP co-hosted the Haunting in the Hills event scheduled at Alley and just this January 31 of 2014

ONSR Chief of Interpretation Faye Walmsley approved OHP's "planning, coordinating and conducting Heritage Days in June and Haunting in the Hills in October." OHP looks forward to a long mutually beneficial relationship. It is with that intention and belief that we are submitting this modified Management Plan.

For ease of integration, we are following the same format as Alternatives A, Band C as well as the No Action offered as a baseline. We believe these recommendations to be extremely implementable. In some instances, there will be explanatory commentary at the end of a section. These are to be viewed as observation for the sake of increased understanding; not as criticism, though they are often not flattering. These are to better appreciate some of the animosity that unfortunately has led to nearly a half century of gridlock. It has been said that "The farther back you can look, the farther forward you are likely to see." It is with Churchill's observation in mind that these comments for reflection will be added.

Again, numerous people were consulted. Law enforcement from several agencies. Environmental groups. Hunting clubs as well as the sponsors of fishing tournaments. Guides from the old days reminiscing of nostalgic days gone by; canoe concessioners struggling in a new and ever challenging market. Church leaders as well as educators. Hikers along with horseback riders. This input was funneled through four decades of personal experience and a strong passion for the region and the culture.

We hope that this document can serve as a blueprint on which a new era of cooperation and stewardship might be built. Throughout this process of development, as with other interactions with the ONSR staff, we have found them to be cooperative and pleasant with which to work. Superintendent Bill Black and Deputy Superintendent Russ Runge in particular have been quite receptive to questions and suggestions and I believe them sincere in their desire to create new partnerships and develop a better opportunity for all visitors to the riverway.

## ZONING

If in fact, a new zoning is required, we would propose the less restrictive zoning parameters as defined in Alternative C. It was a bit disappointing that the data of current zoning was not included, even if only as a baseline and not a selectable option. Though the deadline for comments ends February 7, OHP reserves the right to supply additional data in the time immediately following this submission. Word of this report has generated more interest from outside entities than was at first anticipated, and numerous copies will be distributed to them as well. Any significant additions will be forwarded. You may consider them or not.

This is just one example of the ambiguity and noticeable omissions represented in this report. There has been a great deal of confusion about appropriate responses to the draft. Some of this might have stemmed from the roll out of options a few years back when "No Action" was an acceptable option. This confusion has most recently been manifested by such legislative actions as HR 8 and HR 9 which were resolutions in our Missouri House of Representatives calling for No Action. The confusion is further aided in that in the Draft General Management Plan itself, there is constant reference to the No Action Alternative (pages i and 37 for example). Other confusion existed about the format of the meetings. Literally hundreds of visitors came to Open House events believing there would be some interaction on a larger scale.

## VISITOR EXPERIENCES AND ACTIVITIES

The ONSR should be managed to preserve as well as when possible increase the recreational opportunities within their boundaries, particularly when such activities are a significant part of the cultural heritage the establishing legislation stated it would preserve. These would include social gatherings and family oriented activities; certainly floating motorized and non-motorized, basically un-restricted hiking and horseback riding. Any and all restrictions are a deprivation of someone's liberty, and should only be done upon the documented establishment of environmental need, such documentation consisting of the inclusion of an unbiased collection of data and the consideration of least intrusive options. One individual's desire to enjoy solitude at their convenience should not be justification to limit and exclude the enjoyment of others. I enjoy fishing when the rivers are not crowded; hence I do so in the winter. I occasionally enjoy the quiet serenity of the springs. I visit them at night or off season.

### River-based Recreation

OHP proposes that current rules be modified as following:

- 1) Implement a 90/65 motor size for above Van Buren to Two Rivers on Current River.
- 2) Implement a 60/40 motor size from Two Rivers to Highway 19 Bridge at Round Spring (more recognizable boundary) on Current River.
- 3) Implement 40/25 motor size from Highway 19 Bridge at Round Springs on up on Current River. The river will take care of how far; it will regulate itself.
- 4) Implement 60/40 from Two Rivers to Eminence on the Jack's Fork River.
- 5) Implement 40/25 above Eminence on the Jack's Fork River. Again, the river itself will regulate boat traffic in these areas.

Such restrictions would be more than adequate to assure safety and environmental integrity on the river. As to safety issues, a seasoned veteran law enforcement officer of the Upper Current will attest that "for every bad example I have heard a hundred comments about the 'unknown' boat operator who prevented drownings, exposure to the elements, recovered gear and equipment, and assisted floaters in some manner." Such a ratio by a seasoned observer would strongly suggest that elimination of these watercraft and their operators would in fact put more visitors in harm's way. It might be said, it would leave people in distress "up the creek with only a paddle."

The NPS logs incidents of inappropriate behaviors concerning motorized watercraft. There needs to be implementation of a record keeping process for compliments as well. As to those isolated "bad apples," a more visible presence of law enforcement officers along with enforcement of existing statutes such as 306.125 which addresses "Failure to operate watercraft in careful and prudent manner; Failure to operate at a rate of speed so as not to endanger others; Failure to exercise the highest degree of care; ... " Commonly referred to as the "highest degree of care" statute, it's fairly broad parameters should certainly enable law enforcement to address any and all true safety violations.

Positive steps that could and I believe should be taken also include the following:

- 1) Establish Trophy Smallmouth Bass Zones on both Upper Current and Upper Jack's Fork Rivers. This would enhance fishing for purists, spread the season out and quite possibly create guiding opportunities. Possible cooperating partners would include the Missouri Department of Conservation as well as the Missouri Smallmouth Bass Alliance.
- 2) Expand trout fishing on Current River with releases increased in volume, frequency and distribution area. With Pullite Springs and Fire Hydrant Springs above and Round Springs right below the warmer water from Sinkin Creek; it is feasible to stock trout certainly to the Mouth of Sinkin. A study in the 1970's indicated they could easily survive downstream as far as Grassy. Again, this would expand the areas for trout fishing and extend the season. Local fishermen and families would be pleased, it would be one more attraction for tourists and very likely extend the tourism season. It is probable that this too could lead to the creation of guide services. A possible partner would be the Missouri Trout Fishermen's Association which has chapters in Springfield, Kansas City and St. Louis.

Both of the above speak to the economics and the cultural heritage of an area that is experiencing both financial strife and cultural dissolution. Guided float fishing was a way of life decades before the Congressional Act in 1964 establishing the riverways. The probable extension of tourist seasons as well as the development of a cottage industry such as guided trips would serve to restore the rich heritage of free running Ozark streams unfortunately eliminated by the dam construction on other Ozark streams in the past century.

Access points could and should be dramatically improved, without a doubt expanded in size and very possibly increased in number. These were designed in the 1960's when there was approximately 50% of the concession canoes and only a fraction of the private canoes and kayaks entering and departing the rivers today. The ONSR's lack of management in this area has actually led to the creation of an illusion of being overcrowded because of the congestion at these focal points. The gravel bars themselves have been dramatically decreased in size. Please compare photos from just two to three decades ago. When the NPS/ONSR substantially increased canoe and inner tube allotments for concessioners and did NOT increase launch and take out accesses they set the public up for frustration and conflict.

Access points should be expanded and hardened to create high quality efficient access for both concessioners as well as private watercraft. Once constructed, they should be properly maintained in a timely manner. County Commissions should and could be partnered with to make this happen.

Address the "party" atmosphere. Many, myself included, do not visit the rivers during summer Saturdays because of the drunkenly and obscene behavior going almost unaddressed because of the lack of law enforcement presence.

#### Land-based Recreation

We encourage the development of new hiking trails as well as the identification of discovery sites. We do not believe this should be done by road closures, as experience has taught me that both horse trails and primitive roads can already be hiked. As to horse trails, there should be more of an effort to maintain existing trails. Again, private clubs and groups should and could be approached to make this happen. I, as did many others, took offense at a governmental institution wishing to discourage "social trails." Unless totally misunderstanding this terminology, it appears almost contradictory to our First Amendment right of assembly.

To address the impact of horses in significant numbers and to decrease their environmental footprint (hoof print?), numerous horse owning volunteers stand ready at their own personal expense to build Rest Stations complete with wooden hitch rails and rustic wooden benches for both horse and rider to rest above and outside the flood area of the rivers. ONSR staff need only identify areas for construction and approve rudimentary designs. At this time, OHP stands ready to place these plans into operation for the main part of the 2014 riding season.

Often, the multiple roads for all types of vehicles have been the result of one road NOT being properly maintained. Multiple roads/paths arise as earlier ones become impassable. Again, County Commissions and private citizens could be approached for assistance.

The ONSR/NPS should work with the Missouri Department of Conservation (MDC) to implement policies reflective of the Open Fields Management Plan that was instituted in the 1960's and '70's. I know that they are already conducting such projects on the lower parts of the river to increase elk habitat, so the precedence is already there. These were extremely popular with sportsmen and visitors, as they opened up the river bottoms for more esthetically pleasing visages along with bolstering the opportunities for floaters and hikers to view native wildlife. Such efforts would again increase tourism having a positive impact on the local economies.

Possible partners in such efforts would include local sportsmen (in the 1970's I myself put in numerous acres of wildlife plots on the Upper Current) as well as both state and national organizations. The National Wild Turkey Federation has a new program called "Save the Habitat, Save the Hunt" that is expanding their focus to include upland game. The NWTF has chapters all over this state and in the surrounding states as well. Field management for quail alone would bring the return of a significant number of visitors who hunted these fields in the '60's and '70's. Hunters who rented motel rooms, purchased gas and groceries.

As to plans to develop increased campgrounds at Akers, that is a good idea. The question is, "Why was the Akers campground closed in the first place?" The answer at the time was there were not funds sufficient to maintain it, including mowing costs. Right now, it is an eyesore; despite the nice new building. Unfortunately, much of that concession area is an eyesore-from either side.

Concerns in the area of recreation are multiple. The "management by neglect" that took place throughout most of the 1980's and '90's took its toll on both the resource itself, the behavioral patterns of visitors and the trust between the ONSR as well as between diverse usage groups. We concede that things are improving, but too much still appears to be on paper and not in practical application. Myself being a non-drinker, it is perhaps easier to recommend that alcohol be banned. Short of that, I do find it ironic that back during the previously mentioned period, when the NPS identified alcohol as the main source of problems and then within months approved the sale of alcohol with ONSR boundaries. To date, the most consistent and prevalent complaints are alcohol related and the NPS apparently has chosen to continue alcohol sales and to NOT further restrict the container size limitation of four gallons. Again, I know this is a state restriction but could not the NPS add further restrictions?

A consideration by our legislature might be to revise state statutes to the equivalent of those that apply to impounded waters. That is to revise the law so that the third DUI given on either of these rivers to a boat operator would constitute a felony, not simply another misdemeanor. As will be addressed again later, a more visible law enforcement presence would be of significant help.

#### VISITOR SERVICES AND FACILITIES

The quality of the canoeing experience at many concessions has been decreasing for years; a study of the percentage of returning customers would identify problem areas. From interviews and firsthand experiences, along with poor enforcement of the existing laws and regulations, the decline coincided with venues going from small Mom and Pop operations to the creation of mini-conglomerates. Even with managerial best efforts, there were no longer the bonds that had been growing between customer and operator, including almost familial relationships with drivers. When I drove in the late '70's and the '80's, families often requested the same driver year after year. We knew each other by first name. As operations were combined and enlarged, this degree of personal consideration and alignment became much more difficult to maintain.

New visitor services would augment the economy and possibly spread the consumer load. Before drunkenness became the norm, which has been for quite some time, many families expressed a real interest in other activities. Restoration of events such as whiskey making (or at least a demonstration of the process without the final product) and sorghum cooking would be welcomed attractions, as would increased blacksmith demonstrations.

As to facilities, increased oversight of expenditures is a must. As past performance is often the best indicator of future behaviors, there are troubling facts coming to light that only add credence to other examples of former mismanagement. Facilities, when needed, should be more representative of Ozark architecture.

Only recently has it come to light the more than \$300,000 per year rental agreement the NPS entered into in 1999. The 20 year agreement will come to an end barely five years into the execution of this new management plan. This is endemic of the type of governmental waste that should no longer be tolerated by tax payers at any level of government. For comparison, in 2001 I was superintendent of a public school where we built an even larger facility for approximately \$800, 000 total-a little more than two and a half years rent on the ONSR headquarters!

The desire to add an educational facility to their infrastructure is ironic considering the beautiful and fairly well maintained rock school house at Cardareva. Originally there were Steering Committees called for that I have heard actually met in the early years. Those should be reinstituted immediately; should have been part of this process. An Advisory Committee consisting of representatives of the various groups and stakeholders should be formed and listened to on a regular basis. It appears that one of the reasons such gridlock and perpetual conflict has come to exist in this riverways is the elitist thinking that borders on intellectual arrogance that only NPS personnel know what is best for the area, and even this is compounded by the lack of consistency in both their planning and implementation. Such an advisory committee would have the added bonus of introducing true synergy (the recognition that rather than seeking compromise where parties are asked to give up something, alternatives might be found that had never yet been considered-it is the force behind most modern breakthroughs in medicine and technology) into the planning process.

Another at least perceived problem is a lack of passion for the land itself, as well as its native people. Too often Park Rangers have been all too willing to exercise their authority but reluctant to accept potential responsibility. A glaring example is the fact that for almost a decade there have been three major stream clean-ups on the two rivers with NO significant NPS presence. The rest of us can volunteer our time to do what many might argue are their jobs. Notable exceptions are Supt. Black's visit to this past year's Current River Power Team (now part of the OHP) clean-up and Deputy Superintendent Runge's work with native woodworkers. Positive trends include those NPS personnel that consistently involve themselves in such community efforts as volunteer fire departments and pie suppers.

## INTERPRETATION AND EDUCATION

This would be a further step in the right direction, but again the aforementioned perception of NPS superiority rears its ugly head. Why must all guided tours be "Ranger led?" Why not call upon local resources and develop a cadre of volunteers/local contacts that have an intimate knowledge and historical perspective of local treasures within the ONSR? Why not the same as a bridge into our public and private schools?

I have firsthand knowledge of being that have offered their services for free and either been turned down or placed on perpetual bureaucratic hold. In fairness, both the superintendent and the deputy superintendent have taken some steps to improve this. There is still great room for improvement. OHP would be very much interested in assisting with the development of a school curriculum. Just in its president, you have access to a person with four college

degrees in education, three decades of teaching experience and curricular development experience in both public schools and our Federal penal system. There should at the very least be a feasibility study done as to the conversion of the school building there being returned to educational purpose.

## NATURAL RESOURCE MANAGEMENT

I believe it important that it be remembered that the NPS did not purchase a "wild river system." Nor was the intent of the establishing legislation the creation of one. Current River and Jack's Fork had agricultural communities that should have been part of the preservation. We had then and still have knowledge of agricultural practices that are complimentary of environmental preservation and wildlife support. The Open Fields Management Plan should be revisited and again implemented. Organic based no till cultivation is quite feasible (we are in our eighth year on our farm in Reynolds County) and congruent with established environmental practices. Native grasses and shrubs are extremely self-sustaining and attract both wildlife and tourism.

## CULTURAL RESOURCE MANAGEMENT

This should be emphasized in both planning and practice. I believe much of the animosity that unfortunately is all too prevalent originated in the destruction of home sites and iconic structures for no good reason, and is only compounded by the remaining denials of such tragedies. There needs to be a readily accessible inventory of what historical sites and structures still exist and it needs to be reviewed by the previously mentioned Advisory Committee. A better job of identifying family cemeteries needs to be done, with assurances that people can readily access such sites. For example, the Bland Cemetery across from Spring Hollow on the Current River is barely accessible by boat or by County Road 534 which the ONSR has considered shutting off. The same is true of the Reed Cemetery on Trail 25.

A current example of continued denial is the comment by a NPS staff person on the ONSR facebook page about the lodge at Round Springs. It did not "burn down." Its demolition was sanctioned by park personnel. Some of the recovered lumber is still on the Hughes Farm in Eminence, MO. Freeman and his son Frank tore it down. Admittedly, OHP knows all too well the difficulty of maintaining accuracy or controlling comment on such media. For the record, the misinformation did NOT come from their spokespeople or administration.

Both this as well as the management of natural resources speak to the destruction and degradation of a people's heritage. Whether by design or poor management, local people as well as visitors have witnessed the destruction and decline of too many structural treasures. Real effort must be made to reverse this trend. It appears that the management is becoming "top heavy" and that perhaps monies could be better spent. A step in the right direction would be an open invitation to reporters to attend and report on weekly NPS management meetings. I believe this would go a long way in addressing the public confidence issues. I know that at least two of the papers for which I write would be very interested in such coverage and improved transparency. Such reporting would also make the job of the Advisory Committee more effective.

## WILDERNESS

As stated at the hearing at Powder Valley, though I can see a possible economic benefit to Wilderness Area designation, an inherent distrust of the Federal government is blocking local support. At this point, it would appear that voluntary removal of the NPS training range and conversion of administrative roads to hiking trails should be considered.

## PARK OPERATIONS

As to the infrastructure, I believe involvement of an Advisory Committee along with media invitations to regular planning meetings would add both transparency and synergistic thinking into this process.

Several times this report has advocated a more visible law enforcement presence. I am not necessarily saying we need more personnel, though that might be the case. I do believe we need more efficient utilization of their time. I believe that supervisors themselves need to be in the field more so that they can better assess the situation as well as have opportunity to set the example. Last fall I witnessed Deputy Superintendent Runge remove a dead animal from a

pavilion as to not detract from a visiting family's experience. I am NOT suggesting custodial duties become a significant part of his responsibilities. I DO know from experience (superintendent of three different public schools) that such examples go far in changing an institutional culture. As I have heard consistent complaints from both locals and the Sierra Club as to the perceived mismanagement of the ONSR, the often expressed concern that the Rangers don't seem to want visitors, the expressions from six and seven year olds "to leave us alone"; a heartfelt three page plea from a retired teacher, a good man, who "no longer feels welcome in a natural treasure only a couple of miles" from his home- -time for a change in culture is here!

I believe a really good start would be the creation of something like a "110% Club " Instead of focusing on a Friends of the Park organization that would raise even more funds to be used, why not take a page from JFK 's iconic encouragement and NPS staff ask themselves what more they might be doing? ONSR/NPS staff could volunteer an extra ten percent in this time when services are being curtailed because of funding limitations. In these trying financial times, ONSR staff are well paid I am NOT saying overpaid, but well paid How better to show the public we are in this together than make and execute such a plan? Even if the administration cannot mandate such an effort, I know from experience- if the top does this subordinates will follow.

## PARTNERSHIPS

Throughout this paper numerous organizations have been mentioned that are available and willing to be partners. The majority I spoke with to confirm their support before including them. I believe better effort could be made to be accessible via the media. I know all too well press releases seem to go into internet black holes, that to get radio time I must initiate personal conversations with reporters and talk show hosts. Deputy Runge and I shared one such event. To create true partnerships, it cannot be only about what the other organization or business can do for the NPS/ONSR. Just recently, the ONSR has extended an offer, which we have accepted, to plan and help present the Heritage Day event at Big Springs in June and Haunting in the Hills at Alley in October. I hope that in turn OHP is allowed to increase their book offerings and opportunities for oral presentations.

The partnership that must be focused on are the stakeholders. I believe we have already outlined and specified projects and suggestions that not only should be included in the new General Management Plan, but that will stand on their own merit and could be implemented immediately. The formal comment period ends today. OHP reserves the right to submit specific concerns to ONSR/NPS staff on a continuing basis.

We will be sharing copies with other entities as requested, including our local, state and Federal elected representatives. Copies will also be going to the potential partners with whom we have already had contact. We greatly appreciate the ONSR's genuine request for comment and look forward to the dialogue we hope we have helped create. Along with this document are being submitted more than six hundred written comment forms that have in common the following concerns/beliefs:

- 1) We would like to see more done to preserve the traditional culture that was here prior to 1964.
- 2) Alternative B that the ONSR is proposing unnecessarily adds further restrictions with little or no empirical data for a basis. A more visible and active presence of Park Rangers along with broader resource based recreational zones would better address the growing number of visitors.
- 3) Any and all bans on motorized watercraft should be eliminated from whatever General Management Plan is adopted. In fact, present restrictions should be reviewed as to their necessity. The river reasonably regulates itself as to motor size and times of usage. The parties creating a specific safety hazard should be addressed individually under the multitude of present laws.
- 4) We applaud the decision to recognize 60/40 as 40 HP and wish that they continue to recognize 40/25's as 25 HP.
- 5) We wish that the NPS would do a better job of maintaining our access to the river, given the elderly and the disabled that are wholly dependent upon such physical accesses.
- 6) We wish that the staff of the ONSR would increase their efforts to reach out to horse and boat owners to increase their usage and resolve whatever conflicts might actually exist.
- 7) We believe the GMP as presently put forth exceeds the scope of policy and is actually prescribing regulations, and doing that somewhat ambiguously.

The preceding comments were part of a generic form developed after literally hundreds of interviews and are just part of OHP's efforts to facilitate civil and constructive conversation.

We appreciate this opportunity and welcome any questions.

Respectfully submitted February 7, 2014

**Correspondence:** Tourism is a staple of our local economy, which relies heavily on our local rivers. We, "locals", have more than proven our respect for, and ability to care for, our rivers. Generations have grown up on these rivers, and to take away our access to them is akin to taking away our own histories. Our rivers are meant to be enjoyed and used, not viewed from a distance like a museum exhibit. Control of the local rivers belongs with the local people.

**Correspondence:** My comments on Scenic Riverways Draft EIS I have to say, is since I live in this area, Eminence, MO. I'm retired, and farm raise cattle. I was born here in Dec. 28, 1928: So I've seen a lot" The better was in the 30's, 40's, 50's, 60's, 70's. But things in the last 20 years or so, I find and see too much conservation Park Service involvement.

Another thing that's a bother or frustration, is too many employees, and probably management; it seems like every employee has a vehicle: I think we could get by with half the force: and half of vehicles; our country is deep in debt. So a down size would really help. So when you draw up a draft, be sure that it's what all the live in the area want.

When you have the good will of us folks it will make your job a lot easier. Don't be hateful towards residents, that's lived here about all their lives. But I know there has to be rules, we all know that. Never try encroachment. This is mostly private property and we will keep it that way. No government land grab. This is America.

**Correspondence:** Superintendent ONSR,

I am a farmer and landowner on the headwaters of the Jacks Fork. I have spent many days on the Riverways since 1977, poling and paddling a canoe upstream from Greseneck to Montauk on the Currant River, winter hiking along both sides of the Kacks Fork from Buck Hollow to Alley Spring, and exploring bluffs a hollows along both rivers. I have also participated in annual Stream Team cleanups on the ONSR.

I know these rivers, I know this park. I have seen the damage done to ONSR by:

1. Too many access points
2. ATV traffic on gravel bars
3. Bank eroding, polluting horses
4. Noisy, polluting, wake producing powerboats.

I favor Alternative A as it is most likely to stop the degradation of the ONSR Park, I also support the nomination of Big Springs Natural Area for Wilderness Designation.

**Correspondence:** Dear Superintendent Black,

I am a member of the Ozark Wilderness Waterways Club of Kansas City, Missouri. For a number of years I coordinated week-long trips for the club on the Current and Jack Fork Rivers. It became obvious through the years that a serious impact was occurring on these rivers by increased horse and people incursion, by river crossings by horseback riders and by increase access by vehicles. On one occasion on the Jacks Fork I was starting into a riffle in my canoe when a parade of horseback riders crossed in front of me; they surely should have seen me coming but I had to jump out of my canoe to keep from running into them. On another occasion on the Jacks Fork below Eminence we were having lunch on a gravel bar below the horse outfitter; a continuous string of riders crossed the river for approximately thirty minutes during our lunch. On the Current River we noted that many of the gravel bars that previously had not been used were being accessed by vehicles. I could continue to site examples but I feel these incursions were not intended in the original National Scenic Rivers plan.

I have studied the proposals for change and feel that Plan A would have the best chance of reversing the harmful effects. These rivers a truly a national treasure and should not be further spoiled.

**Correspondence ID:** 2884    **Project:** 15793    **Document:** 56208  
**Received:** Jan,27,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** After attending several of your informative meetings regarding your proposed General Management Plan for the Ozark National Scenic Riverways, I believe the absolute best option is the "NO Action Alternative". The "NO Action" plan is the most beneficial to all those directly affected by the use of the riverways: the local residents, businesses providing services in the area, and all visitors to the ONSR. There are currently sufficient rules and regulations in place to protect the environment and the riverways.

My wife, Shirley, and I have owned a cabin and property on the river south of Doniphan for over 25 years. We,

along with friends who also own property along Current River, enjoy motoring up to Big Springs, having lunch at the lodge there, and then floating and motoring back. We have done this regularly from spring to fall over the last 10-12 years. What a wonderful way to enjoy the beauty of one of Missouri's natural resources. And much of the river in the Big Springs to Gooseneck area would be seen by very few people if further restrictions were placed on the use of the riverway.

Canoeists, floaters, and boaters currently use the riverway with respect for each other. Occasionally, some canoeists or floaters will get in trouble in the faster areas or where there are root wads, but the boaters are very good about coming to their rescue. Without some of the boats with larger motors, some of these individuals would most likely have drowned before help could be summoned. We personally have a large motor and have helped many individuals in dire circumstances. Additionally, the larger motor at cruising speed creates less wake than most 60/40 motors which are the proposed limit for this section of the river.

During the summer, there is congestion on the weekends near Van Buren and Doniphan due to the large number of floaters and canoeists that visit the area using the local rentals. Proposing the change in the regulations to eliminate outboard motors on sections of the river will only increase the congestion in the above mentioned areas. And from September 15 through the end of January, new regulations would prevent fish gigging in large portions of the river. Again, this would cause congestion in the areas open to outboards and remove fish from the river in concentrated areas.

Missouri residents are the primary individuals that use the riverways and should have ability to determine the regulations for the areas that we use. Obviously, we want the river to always be there in its current pristine condition for our own enjoyment and that of our children and grandchildren. With all of the boaters currently using the ONSR, there is very little if any trash left on gravel bars or in the river. What trash is there is caused by canoes overturning, floaters losing items in the river and being unable to retrieve them, and occasionally items blowing out of a boat. But again, there are river clean up days where those using the river regularly will meet up and pick up any litter or items that have floated downriver in floods.

After speaking with several hundred people in the meetings that you have held regarding the ONSR, and after listening to our state and national senators and representatives on the subject, it appears that the "NO Action" option is the option favored by all. I respectfully request that you adopt this "NO Action" alternative.

Sincerely,  
Ray and Shirley Batton

Mr. Reynolds,  
We entered our comments on the ONSR website but someone at the meeting suggested we mail you a copy.  
Thanks,  
Ray Batton

## I. SUMMARY OF COMMENT

On behalf of the constituents from my district who use and enjoy the Ozark National Scenic Riverways (ONSR) and depend on its local economy; and also on behalf of the tourists who come from all over the country, and even the world, to use and enjoy the Park, I write urging you to continue implementing the No-Action Alternative proposed in the Draft General Management Plan. The "No Action Alternative" is a continuation of management policies that have been used successfully for over thirty years, and would continue sound park management without threatening the Public's use and enjoyment of the rivers.

The other Action Alternatives proposed by the National Park Service (NPS) fail to conform to current statues on the federal and state level. Moreover, a No-Action Alternative is the best option because it is compatible with preservation, it is economically viable unlike the other alternatives, it has worked for thirty years and does not require overreaching by the NPS contrary to the other Action Alternatives. Therefore, a No-Action Alternative is the best course of action as it protects the natural resources of the ONSR while securing the property rights of those who depend on the local economy of the region.

## II. OFFICIAL COMMENT

### a. The Scope of the National Park Service Organic Act and the Wild & Scenic Rivers Act

The National Park Service Organic Act (Organic Act), under 16 U.S.C. Â§Â§ 1-4, established the NPS. The Organic Act directs the NPS to: promote and regulate the use of Federal areas known as national parks, monuments, and reservations...by such means and meaures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

This textual quote is commonly referred to as the "preservation/use mandate." The mandate seeks to balance preservation and use to determine the extent of permissible recreation on federally owned lands. The majority of citizens, and many of my constituents in the Eighth District of Missouri, contend that the enjoyment of national parks requires physical access. Therefore, the Act could not have intended "impairment" to be used in its broadest sense.

Fredrick Law Olmsted, Jr., the father of American landscape architecture, and Congressman William Kent insisted that the Organic Act contain an overriding statement of purpose that provided a type of mission statement as its guiding principle. See Symposium: The National Park System: The National Park Service Act of 1916: "A Contradictory Mandate?" (Deny 74). U.L. Rev. 575, 597 (1997). These men not only wanted to conserve the national parks, but they also wanted to ensure the parks received substantial public use, and therefore were not content with using an overly-expansive definition of "unimpaired" in the Act. Instead of using the language "unimpaired for future generations", Congress inserted the keywords, "for teh enjoyment of future generations." The term "enjoyment" reasonably requires access, and so long as roads, trails, public access points, hotels, campgrounds, administrative facilities, and other forms of entertainment are not unduly invasive, the public has a right to "enjoy" the national parks.

The Organic Act provides clear guidelines for any type of Draft General Management Plan that sets forth a comprehensive plan for a national park. Although the Secretary of the Interior is allowed to "make and publish such rules and regulations as he may deem necessary or proper" (16 U.S.C. Â§ 3), the promotion and regulation of the various areas of the National Park System "shall be consistent with and founded in the purpose established by section 1 of this title, to the common benefit of all the people of the United States." See 16 USC Â§ 1(a-1). Thus, any form of comprehensive plan, including the one in question for the ONSR, must conform at a minimum with the balance of preservation and use that is expressly declared under the Organic Act. The NPS is not permitted to dismiss or unfairly undermine the recreational interests citizens have in the ONSR.

Moreover, the National Wild and Scenic Rivers System (WSRS), created by Congress in 1968 and codified under 16 U.S.C. 1271, states: rivers of the Nation which, with their immediate environments, possess outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historic, cultural, or other similar values, shall be preserved in free-flowing condition, and that they and their immediate environments shall be protected for the benefit and enjoyment of present and future generations.

Again, a fundamental requirement of "enjoyment" is use and access, and therefore, under the WSRS, it is imperative that the NPS give greater consideration to use and recreation when developing a final General Management Plan. Any action alternative that minimizes recreational interests in favor of preservation runs contrary to the plain language of the Organic Act and the WSRS which seeks to balance both.

#### b. Statutory Authority for the Ozark National Scenic Riverways

##### 1. Public Law 88-492

The ONSR was created not only to preserve the history and resources of the region, but it was also meant to provide for recreation and enjoyment uses as well. See Public Law 88-492. The law states that it was passed for:

the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free-flowing streams, preservation of springs and caves, and management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States ....

Thus, similar to the Organic Act and WSRS, the statutory authority for the creation of the ONSR was intended to ensure preservation along with the use and enjoyment of outdoor recreation. Neither interest is given greater textual weight than the other. The NPS must adhere to this statutory language by securing the rights of folks who visit and enjoy the ONSR for recreational purposes. Closing 20 public access points and preventing the use of motors on boats in certain areas is diametrically opposed to the intent and plain language of this Public Law because these measures place preservation interests far above the recreational rights of the folks who use the park. These arbitrary and burdensome regulations are not only inconsistent with the Public Law, but are potentially crippling to a local economy that depends on the access and use of the rivers for their businesses.

The ONSR includes 134 miles of clean and clear water, comprising large portions of the Current and Jacks Fork Rivers. Although the last comprehensive planning effort for the ONSR occurred in 1984, changes within the region have not been substantial enough to warrant any form of action alternative. Given the lack of adverse environmental changes, and the detrimental economic impact any proposed action alternative would have on recreational use of the ONSR, the best option is a No-Action Alternative which would continue to conform to the original purposes of the park: the preservation of its history and resources, and the protection of recreation and enjoyment uses.

##### ii. Missouri Revised Statutes Section 12.025

In 1965, one year after the passage and designation of the ONSR, the State of Missouri codified section 12.025 to incorporate the area ceded to the federal government comprising the Ozark National Scenic Riverways "for so long as this area is administered and maintained by the United States." See Â§ 12.025 (2). It also lists an exception explicitly stating: "Provided that no part of this section shall apply to the White River watershed." See Missouri Revised Statutes, Â§ 12.025 (3). This section raises multiple issues about the NPS's jurisdiction and administration of the ONSR:

(1) During the period of government shutdown the NPS and the Obama Administration continuously denied state requests to open and maintain the public use of National Parks. Missouri specifically requested to open and maintain the Ozark National Scenic Riverways for public use, and its request was denied. Thus, the Park Service chose to no longer "administer and maintain" the public use of the Ozark National Scenic Riverways during the period of government shutdown.

a. Please address specifically:

1. The Nature of the Federal Government's property interests in the Ozark National Scenic Riverways, in light of the closure of the Park during the period of government shutdown and RSMo. 12.025.

(2) The second issue involves the attached map of the White River watershed (Watershed) produced as part of the failed attempt to designate the White River and its watershed as a National Blueway. As depicted on the map, it appears the ONSR falls completely within the Watershed. Thus, the regulation by the NPS of the ONSR through its Draft General Management Plan will inevitably apply to and impact the Watershed.

a. Please address specifically:

1. The Nature of the Federal Government's property interests in the Ozark National Scenic Riverways, in light of its geographic location entirely within the WhiteRiver watershed.

c. No-Action Alternative as the Best Option

The No-Action Alternative describes how the ONSR has been and would continue to be managed without the implementation of an action alternative. The No-Action Alternative encompasses the 1984 general management plan, 1989 river use management plan, and the 1992 statement for management and uses these past plans and statements as a description for current management conditions. A No-Action Alternative is preferable because there is no evidence of considerable adverse effects to resources in the ONSR, and the other proposed alternatives are too restrictive of users' enjoyment of the park. Additionally, the other alternatives, including the one recommended by the NPS, lack sufficient economic analysis to measure the impact these action alternatives will have on recreation and the local economy. The Action Alternatives amount to overreaching, arbitrary, and capricious government action to confiscate the recreation and property rights of Missouri residents and visitors alike with no reasonable basis. Therefore, because the No-Action Alternative is compatible with preservation, the other alternatives lack sufficient economic analysis, and the NPS is overreaching their delegated authority with any of the other alternatives, the No-Action Alternative is the best option for the NPS to take.

1. Compatible with Preservation

Current forms of permitted recreation in the park are easily compatible with preservation. The NPS should not be afforded the right to impose its preservationist viewpoint on the people of Missouri and the millions of visitors that the park receives every year. This detrimentally impacts the local economy built to accommodate visitors with food, lodging, and entertainment; including canoeing, horseback riding, and camping. The closure of 20 of the access points on the river and horsepower limitations for boats would inevitably reduce the number of visitors the ONSR receives each year, stifling commerce and hurting the local economy in the process. Any Action Alternative would be an excessive demonstration of regulatory authority by the NPS, significantly disrupting the delicate balance of preservation and use as explicitly set forth in every piece of legislation mentioned above. The closure of 20 access points is an arbitrary and capricious action alternative to the current management practices that have sufficiently maintained the health and vitality of the ONSR region. Oftentimes, the use of boats on the

Current and Jacks Forks Rivers is the only means for some people to access the park due to disability or age. Aside from being excessive, arbitrary, and unnecessary, the closure of these access points on the river would threaten the access these folks have to the park and implicate their fundamental right to travel under the U.S. Constitution.

Under current management practices, the ONSR Park Staff is tasked with preserving the natural resources of the Park, and have done an admirable job of protecting the area's habitat. The discretion they have to exercise adaptive management approaches is more than sufficient to ensure the continued protection of the resources in the park to guarantee that any permitted recreational activities are compatible with preservation. These current management practices are consistent with the balanced approach between preservation and use as set forth in the statutes above. Thus, under the No-Action Alternative, unforeseen or emerging issues can be readily and effectively addressed by Park Staff when they arise.

#### 11. Lack of Economic Analysis

The Draft General Management Plan suffers from a lack of economic analysis, preventing the NPS from accurately gauging the economic impact of closing public access points, eliminating motorized boat traffic in certain areas, restricting boat motor horsepower, closing gravel bars, and designating new wilderness areas. Additional economic analysis is needed to determine the impact these changes will have on the local, state, and national economy. The cumulative effect of these changes is likely to lead to long-term, major, and adverse economic effects to commercial services and tourism in the Riverways. The conclusory economic results provided by the NPS are insufficient and require additional analysis and data to support their findings.

While the NPS evaluates each of the individual changes from the action alternatives to the ONSR (i.e. the closure of public access points), it is their cumulative impact that will likely create significant economic harm for the folks who depend on the economic vitality of the region. This lack of economic analysis is in direct contravention to the requirements of the Organic Act which explicitly calls for a balance of preservation and use considerations. Without sufficient economic data to support its conclusions, the NPS would be completely neglecting the micro and macro-economic effects that this General Management Plan will likely produce. Therefore, additional economic analysis is needed in order to conform to each of the statutes mentioned above.

Furthermore, I would also request that the National Park service specifically address the potential for the other action alternatives to change, limit or eliminate small business vendors and concessionaires from operating in the park

#### 111. De Facto Wilderness Areas usurp Congressional Authority

Each of the action alternatives offered by the NPS include management zones, which only apply to land areas where the NPS has fee title land ownership. I take contention with the NPS using these management zones as de facto wilderness areas in the Action Alternatives. By proposing additional areas for designation as federal wilderness, the NPS is taking an already over-managed region and employing additional measures that only serve to harm a local economy that has tirelessly worked to preserve the region since its creation as a demonstration park for the "Wild and Scenic Riverways" program. The authority to designate federal land as wilderness is clearly vested in Congress alone under the 1964 Wilderness Act. See 16 U.S.c. 1131. Thus, the NPS does not have the authority to prevent recreation or use of these areas without Congressional authorization. It does not have the power to create de facto wilderness areas from self-created management zones that have not been approved as wilderness by Congress.

Designation of the Big Spring area in particular would be a terrible act of overreach by the NPS. Under Action Alternative B, which NPS prefers, most of the Big Spring Wilderness Study Area would be recommended for wilderness designation. This action would severely threaten the private property rights of folks who have cabins and homes in the area. The removal

of telephone lines that serve these residences, access roads, and a fire tower are arbitrary and unnecessary changes to an already pristine and protected area. The confiscation of our local state forests by the NPS seriously infringes on private property and land use rights of the citizens of Missouri.

#### IV. Boat Motor Restrictions lead to safety / access concerns

Along with the proposed wilderness designations, the restriction of boat motor horse power in certain areas and the elimination of motorized boat traffic in others are capricious actions that serve no purpose aside from restricting fishing, trapping, gigging, guided float trips, and other forms of recreational activity on the rivers. Total elimination of motorized vessel access in the northern section of the park would eliminate recreational activities like gigging that have been historically performed in the park. Often, motorized vessels remain the best option to get injured visitors medical attention quickly and safely.

#### v. Closing Access points will be unnecessarily burdensome

Additionally, closing gravel bars will unnecessarily restrict camping activities to designated sites. Moreover, limiting public access points will severely affect the commerce generated by the rivers as the number of visitors will inevitably decline. In some instances, the closure of access points on one side of the river may increase travel time to an access point of forty-five minutes or more. These actions all serve as primary examples of the numerous instances of overreaching by the NPS in their proposed action alternatives.

#### VI. Horseback riding effectively managed under current practices

The tourism industry supported by horseback riding in the Ozark National Scenic Riverways provides visitors with a unique and irreplaceable opportunity to experience the park from a different perspective. The arbitrary closing of 65 miles of trails that have been widely used by the public under current management practices, with no concern for what economic impact that may have on the local economy, is an excessive solution for a non-existent problem. I urge the National Park Service to continue to manage horseback riding, and trails, in substantially the same manner as it is managing them now.

### III. CONCLUSION

In light of the concerns raised above, I urge the NPS to implement the No-Action Alternative as described in the Draft General Management Plan. It is the only proposed plan that conforms to current federal and state statutes, it is compatible with preservation, and it has proven to be economically viable for the last thirty years. Folks in Missouri's Eight District do not need the federal government to implement any additional regulations to govern their forests, streams, and rivers. The Ozark National Scenic Riverways has been a premier destination for tourists in Missouri, it is the lifeblood of the local economy, and it provides some of the best recreational opportunities in the region. The No-Action Alternative is the best course of action because it not only ensures that folks will be able to enjoy the region as they have for years, but that it will continue to be preserved as well.

I look forward to your response.

Sincerely,

Jason Smith

Member of Congress

**Received:** Jan,23,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** This letter is in regard to the General Management Plan (GMP) in review for the Ozark National Scenic Riverways (ONSR).

My 25 year career as a park interpreter began at Big Springs National Park in 1986. After working several other parks across the country, my husband and I chose to return to southeast Missouri, solely because of our personal connection to Current River and the ONSR.

For the past 24 years, when we seek solace, renewal or recreation, we turn to Current River. Floating, fishing, swimming, camping and hiking are favorite activities. Whether alone or with friends, Current River has been at the top of the list.

Unfortunately, severe overcrowding, extremely rude behavior of so many others, and resource degradation along the river have more recently limited our trips to "off" days and seasons, when we hope to avoid crowds and conflict. "Off" days are getting extremely difficult to find.

We were both so glad to see the National Park Service (NPS) proposing new management guidelines for the ONSR. We are also glad to see that all three alternatives offer at least some degree of protection for the resource. Without the resource, there will be no visitors at all.

While our first preference would be the most environmentally friendly (Alternative A), we understand that Alternative B provides protection and education/ interpretation. This option provides somewhat of a balance, a middle ground, between two very disparate groups. Since no single plan will satisfy all interested parties, a "compromise" may need to be made.

We hope that this compromise will still focus first and heavily on the resource. After all, the river is what draws in visitors. The better their experience, the better chance they will return.

The interpretation proposed in Alternative B is an extremely important component, which should ideally be included as part of all alternatives. Interpretation done well can ultimately lead to protection of the resource.

The proposed ecological restoration projects will allow use, while minimizing impact on the resource. Restoration of cultural structures and landscapes are also important, along with protection and management of areas possessing wilderness qualities. Properly-constructed trails can provide for horse and mountain bike use with minimal impact.

Silence and solitude are also resources to be protected, both on and off the river. Enforcement of regulations is crucial to maintaining these resources. Any development will hopefully take these resource concepts into consideration.

Again, we are pleased that the NPS has proposed alternatives for a new GMP, and that all have resource protection as a major component. If Alternative A cannot be adopted, then Alternative B would provide a reasonable balance, protecting the resource and enhancing visitor experience.

Thank you for your efforts,  
Janet Price

<b>Correspondence ID:</b>	2889	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Jan,24,2014 00:00:00				

**Correspondence Type:** Letter  
**Correspondence:** Dear Sirs,

Below is my comment to the Draft General Management Plan that is currently open for comment.

**RECOMMENDATION:**  
My recommendation is the "No-Action Alternative"

**BASIC REASONS:**  
The first reason is because all 3 alternatives require more staff to manage the zones. Staffing has already been reduced because of funding cuts, so it does not make sense to put plans together that increase staffing levels. I am not in favor of increasing the size of government and creating more deficient spending.

The second reason is because all three alternatives eliminate approximately 65 mile of undesignated horse trails. The plans talk about creating 25 to 45 miles of additional designated trails, but did not indicate the area where they will be created. This is one of the most important items left out of the 3 plans. Most of the trails to be eliminated are in the Northern Boundary to Akers zone, which includes the Cedar Grove area. The Cedar Grove area is one of the most popular staging areas for horseback riding activities, yet the plan is going to eliminate all of the trails, with no assurance of the creation of new designated trails.

The third reason is the negative effect of the elimination of horse trails described in reason 2. If horseback trail riding is eliminated in this area, (Northern Boundary to Akers) it will create economic ruin for the three private horse campgrounds that depend on those horse trails. It will also create an economic hardship for all of the commercial businesses that depend on the many hundreds of horseback riding tourists, (many from out of state) that ride those trails.

**SOLUTIONS:**  
1st. Create a Community Volunteer Group to perform the necessary Equestrian trail work, in cooperation with the NPS.

2nd Designate and maintain 65 miles of sustainable horseback riding trails in the area mentioned above.

3rd Reroute and close unsustainable horseback riding trails.

4th Develop and implement a modest fee system for all trail users to help pay for trail improvements.

I personally know of 3 organizations and at least 30 people that would help with the solutions above. During the last 10 years, the equestrian community has become more aware of trail degradation, and how important it is to practice good land stewardship and LNT. These principles already have been demonstrated in the Rolla/Salem/Licking/Houston area in cooperation with the National Forest Service.

**CONCLUSION:**  
Follow the examples of the National Forest Service and other Missouri State Agencies, and form a Community Volunteer Group to perform the necessary Equestrian trail work. Do NOT eliminate this very important and economically viable recreational activity in the Northern Boundary to Akers area of the ONSR. Since nothing in the three alternatives has addressed the above issues, I have no option but to recommend the "No-Action Alternative".

Respectfully Submitted,  
Maury Mertz

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Sir:				

Tonight my husband and I attended the Draft GMP Open House held at our local city hall. We were somewhat

disappointed that this was not a meeting where plans were explained nor a time of open discussion. It was pretty obvious that, as with the introduction of elk by the Conservation Commission, everything was pretty much "cut-and-dried" like so many federal government decisions are these days, having little regard for the citizenry in general.

Your representatives were gracious and made information somewhat available. However, the lighting made reading of endless charts and posters very difficult and required standing for long periods, as did the wait for talking to representatives personally. We were able to talk to one NPS person at Station 7 of all the ones set up; he showed us the 3 possible plans of action and gave us a brochure.

We also were given a CD which we immediately brought home and read about the first 50 pages before it, too, became too exhausting and we turned to the brochure to see the charts of comparison. After all this time and effort expended, it is still very much our conclusion that the no-action alternative remains the best one. When we see government expansion to a huge extent, with less regard to the opinions or well-being of the people, with tax burdens increasing rapidly, and with executive orders ignoring the rights our Constitution guarantees, the people of our country and our state do not wish to see changes dictated to us by any federal agencies!

We are not against progress, but we are against widespread change that involves greater regulation and further taxation. We are lovers of nature ourselves, but to have people telling us how to use the natural resources with which our area is blessed does not appeal to us at all. Clearly, any of the other proposed plans involves a need for increased funding, which must surely come from further taxation or fees. We do not view the role of government as further expansion of land ownership or control, even "for the good of everyone," when our government clearly has shown it cannot control its own spending.

For all these reasons, we strongly urge the maintaining of the status quo for the foreseeable future as far as our scenic riverways are concerned. The no-action alternative would seem on IV to require a single regulatory change as to the power of boat motors. This would be far less costly, more sustainable, and far more citizen-friendly than any of the proposals offered.

Jessie Harris

<b>Correspondence ID:</b>	2891	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Dec,09,2013 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Superintendent Black,				

Please allow me to introduce myself. I am Gary Buchanan, President of the Shannon County Hunting and Fishing Club, Inc. The purpose of this letter is twofold. First, I wish to offer whatever assistance we may be able to provide in relation to the request for partnerships in the recent Draft Management Plan, and second, to request additional information relating to the details of the plan.

The SCHFC celebrated our 100 year anniversary in September of 2012, and throughout the past 100 years, our organization has enjoyed the natural beauty of the Jacks Fork River and the surrounding areas. There is mention of our organization on the ONSR website in the article titled Rymers Ranch and the Birth of the Ozark Riverways in the History & Culture section.

Our cabins along the river are now gone, and much of our original property between Rymers Landing and upriver to Meeting House Cave was incorporated into the ONSR, however we still own 169 acres bordering the ONSR on County Road O-C on the north side of the Jacks Fork. The membership of our club still enjoys the use of both ours and the park's property in this area.

After reviewing the proposed Draft Management Plan, we have a concern about statements in the plan regarding the closing of roads. We have reviewed the maps and zones provided in the plan in regards to how the area bordering our property would be categorized (Primitive, Natural, etc.). We believe, based on the maps the management plan, the ONSR property bordering ours would be zoned either Primitive or Natural, but the map resolution is insufficient to determine this. We would like to request any details available on how the Draft Management Plan may affect our area, and our access to the river. We specifically are concerned about any potential closing of the river access via

County Road o-c. I have attached a topographical map of the areas discussed here for reference.

Our organization is committed to the preservation and appreciation of the Jacks Fork River area, and we wish for us and our future members to continue enjoying this area for the next 100 years.

Please contact me using the contact information provided above.

Thank You,  
Gary Buchanan  
President

12/11/13 Dene spoke with Justin Buchanon - explained that County Road O-C would not be closed or impacted in any manner because it is a county road. Also encouraged them to pursue their offer for partnership following the finalization of the GMP.

**Correspondence:** To Whom is May Concern,

The picture on this card says is all - a beautiful river, as it the Current R.

I am writing to support Plan B - I do not want to destroy the livelihood of the people on the river, but I do want to save the river. Some management is necessary - the gravel bars and spawning grounds are being damaged. E-coli levels are very high. Let's work together for a win-win situation, but foremost save the beauty and integrity of the Current River.

Sincerely,  
Judy Sung

Also a volunteer at the Mo. Wildlife Rescue Center.

**Received:** Jan,28,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** Dear Mr. Black,

Thank you for the opportunity to attend your open house regarding the National Park Service's Draft Management Plan for the Ozark National Scenic Riverways held in Van Buren, Missouri, on January 21, 2014. I trust these comments will be accepted considering the numerous postponements to the public forums as a result of weather. I found the exhibits informative and the staff generally prepared to answer direct questions. I request this letter be entered into the official record and its' contents are carefully reviewed and considered for any changes or modifications that may be considered by the Government.

I have reviewed the documents regarding the Government's Plan for the Ozark National Scenic Riverways (ONSR), and wish to comment on several changes, these comments are contained below. I am a multi-purpose user of the area, actively fishing, hunting, boating, canoeing, gigging, camping (land and water based), and hiking. I am not an equestrian, therefore I will not comment on that portion of the Plan.

The Plan, particularly the Preferred Alternate B, mentions camping will only be allowed at designated locations. When I questioned your staff regarding this matter, I was informed selected areas (gravel bars) would be designated as areas to camp, picnic, and swim. They further informed me, the designated areas would be properly marked and would be made available to the public on a first-come first-served basis. I wish to formally oppose this portion of the Park Service's plan. This particular portion of the plan poses too many restrictions on the users, creates safety concerns, and may force user fees or visitor restrictions as the number of visitors will soon outweigh available designated locations.

Your plan also requests to limit outboard motors throughout the ONSR. There are several parts of these restrictions which cause me great concern. The first is the elimination of all motors above Pulltite and Rhymers, and the summertime elimination of outboards above Round Springs and Bay Creek. This will essentially eliminate all gigging, a strong Ozarks winter tradition, during the winter months and severely hinder anglers who wish to participate in the fantastic fishing opportunities via modern john boats. I am also concerned about the safety of canoers whom often bring along a small outboard motor to escape weather. These changes only satisfy a small group of canoers and kayakers, but bring undue hardships on many others leading me to strongly oppose these proposed changes.

A proposed change from Big Springs to Gooseneck (Carter/Ripley Co. Line) to limit motors to 60/40 may be acceptable to me as a user, however I have purposely equipped myself to fish, gig, and boat in the upper reaches of the ONSR and this change will not directly affect me. I do have concerns for those neighbors of mine which own and operate equipment larger than the 60/40 threshold. Based on these facts, I oppose this rule change.

The verbiage used in the Plan references "40 HP at Powerhead Year Round (60 HP with Jet Motors)". This is a strange statement considering the National Marine Manufacturers Association changed its' criteria from rating horsepower at the powerhead to the propshaft in the early to mid 1980's. Based on the verbiage in the plan, the Park Service is referencing technology approximately 30 years old, and if enforced verbatim, could result in nearly every outboard engine manufactured in the last 30 years being illegal on the ONSR. I strongly urge the Park Service to correct this error and specifically allow all engines rated 60 HP at the propshaft legal if equipped with a jet drive, whether installed at the factory or aftermarket.

The Plan also discussed the addition of a Congressionally Designated Wilderness Area in the vicinity of Big Springs. The immediate area has two Wilderness Areas, one on Mingo National Wildlife Refuge and the other at the Irish Wilderness. These two Areas are significant and were established by Congress due to their unique statuses. Mingo was designated based on the fact that it was one of the last remaining Bottomland Hardwood Forests in Southeast Missouri and the Irish Wilderness based mainly on the trials of Fr. Hogan and his parishioners. The area proposed near Big Springs contains very little, in any, historical or natural significance. The Big Springs area is currently managed as a natural area, and could remain nearly untouched through normal management practices by the Park Service without the Wilderness designation.

Further, as a Wilderness Area, the proposal near Big Springs leaves countless surrounding acres at severe risk to fire danger. A wildfire within the Wilderness Area would have to remain uncontrolled as a result of Congressional action. I strongly oppose any attempts to create a Wilderness Area in the vicinity of Big Springs not only for the possible dangers to the surrounding properties but the undue financial burden that taxpayers would suffer as a result of the proposal.

The fiscal impacts on the Plan, not included in the 22 page summary, were finally explained to me during yesterdays' meeting. I was shocked to learn that Alternate B increased the number of full time staff (FTEs) and the annual operating budget by nearly 35%, Alternates A and C were even higher. Increasing the operating budget by any amount is totally unacceptable to me as a user and taxpayer. I'm certain my concern is shared by the majority of the ONSR users. I am also opposed to the planned restrictions eliminating all motor vehicle traffic on gravel bars. Many of the affected gravel bars offer access to canoers, boaters, and other visitors. I do agree, some users have damaged these areas, but enforcement and minor improvements appear to be a better option. As written, I must oppose this portion of the plan.

In closing, I propose the National Park Service chose the NO ACTION option. The various alternatives, including the Preferred Alternative B, do not serve the immediate area. These alternatives may actually hurt our local economies and severely restrict our access to a resource we so dearly love. I trust these comments will be entered into the official record and carefully considered when a final selection for the new Management Plan is completed.

Sincerely,  
Stephen Bubanovich

**Correspondence:** I would like to voice my support of the Alternative B plan for OSNR. This plan presents a nice balance between preserving the integrity of the exceptional natural scenery and resources that the Current and Jacks Fork river valleys provide and access by the public to enjoy these wonderful resources. There currently is too much noise and pollution from vehicular/ORV and motorboat traffic and too many undesignated horse trails across both rivers. These unauthorized vehicles and undesignated horse trails severely erode river banks, endangering both natural resources and archaeological resources.

Sincerely,  
Jack H. Ray

**Correspondence:** Dear Superintendent,

I believe keeping the Ozark National Scenic Riverways in its natural state is becoming uncontrollable. More restrictions are needed.

There are few riverways in the United States that are springfed, clear and freeflowing. The rivers and its tributaries are a major tourist magnet for Missouri.

In an attempt to prevent the streambeds and the tranquility of the environment from being disturbed, off-road vehicles must not be allowed near the streams.

Let's do whatever is possible to maintain the Ozark National Scenic Riverways as serene as nature left it.

Yours Sincerely,  
Earle F. Rimer

**Correspondence:** To whom it may concern,

I was raised on Current River until the Park Service FORCED us out! Our house burned in May 1969. It looked a lot better back then but it's all grown up now.

We enjoy our motor boats and canoes. We are on the river all summer long from Akers Ferry down to Round Springs. I am 65 years old I grew up on this river. I cannot ride in a canoe anymore. We pick up trash along the river and help with stranded canoes and assist with first aid if needed.

I attended the meeting in Kirkwood, MO on January 22, 2014. In my opinion, the Sierra Club has no right telling the property owners that pay taxes along or near the river how to live.

Current River is open to the public and welcomes visitors. But visitors need to respect the river and property owners too. Just as if anyone would visit another country and didn't like it then they wouldn't go back. You cannot force the culture to change, so why try to force the culture on Current River or anywhere in AMERICA!

We enjoy our motor boats, fishing, gigging, swimming, floating and sitting on the gravel bar watching canoes float down the river. The Sierra Club is entitled to their opinion and this is mine!

MARY SNYDER

**Correspondence:** Thank you for this opportunity to comment on the Draft Management Plan for the ONSR. I had planned to attend the meeting on January 8th with a friend, but was not able to come because of the time change to evening. I hope to be brief in these comments.

My Background. Since moving to Missouri in the 1980s following retirement from the Air Force, my husband and I were thrilled to "discover" the ONSR with its beautiful rivers, springs and geological wonders. Through the years we had taken our children to many national parks and were delighted to find such a beautiful park here in our chosen state. We came many times to explore, float, and enjoy nature. Later, our children brought their friends to float and camp. In the summer of 2012 they came from other states with their own children for a reunion, floating the Current, staying at our favorite Rosecliff Lodge in Van Buren.

My Choice. I've read the summaries of all 3 management plans and appreciate the immense effort in planning that has gone into them. Although I lean toward Plan A, I feel that it is not practical to turn the clock back and attempt to restore the park as it was decades ago. Such a restoration, if it were possible, would be difficult to maintain. I would also reject Plan C in that it would open up too many new areas for use and visitation, and would likely result in increased noise and congestion.

Plan B, I believe, offers a worthy compromise and an effort to accommodate both those who prefer a quieter experience and those who view the ONSAR in terms of recreation only. I am thrilled as I read all of the new provisions in this plan! I would endorse it with one recommendation:

Motorized vehicles should be excluded from gravel bars. Our family has property on the Little Niangua River and one sees there how easily these fragile ecosystems of sand and gravel are disturbed by natural forces such as flooding, but also by cows crossing the river or motorized vehicles causing disturbance on the banks of the river and on the gravel bars.

National Parks have been set aside for us through the efforts of many citizens, naturalists, scientists, ecologists, politicians (presidents!) and others. They are, as it were, the gifts from the evolutionary forces of our planet. They belong to all of us, to care for, to preserve, for those who come after us.

Thank you, thank you, for your efforts to preserve the beautiful Ozark National Scenic Riverways!

Sincerely yours,

Barbara E. Yates

**Correspondence:** Dear Sir,

I grew up more than 80 years ago in Iron County, MO and visited the Current River when I was young and it was wild and pristine.

There are too many people loving this river and Jacks Form now for these streams to be enjoyed without regulation. I favor more regulation and think it will not damage the economy of the region.

I will add that I was a housewoman and I frequently rode horses into the local creeks which did no harm when there so few of us. But what was harmless then is not harmless now. Keep the horse manure out of the rivers.

Sincerely Yours,

Doris B. Pree

**Correspondence:** To Whom It May Concern:

Much of the Current and Jack's Fork watershed is situated in counties that are part of our chapter's area of responsibility. The Current River and the Jack s Ford and their vast watershed are home to one of the most endangered bird species in Missouri- the Swainson's Warbler. We cannot over emphasis the importance of this watershed and the surrounding habitat to migrant species of birds that call the Ozarks home.

It is without reservation that we fully support the Alternative B proposal as proposed by National Park Service to immediately begin healing of an already damaged habitat. '

Thank you.

Respectfully yours in bird conservation!

**Correspondence Type:** Letter  
**Correspondence:** I very much support the park service providing a high level of protection of natural & cultural resources, with some opportunity for visitors to float, canoe & kayak and ride bikes in the park. I would be somewhat reluctant to see expanded horse trails - as horses destroy trails more than bicycles. I believe some motorcycle trail use would be acceptable as long as they are well muffled (and perhaps limited to less than 900cc machines).

Overall though I wish the rivers would be mostly limited to paddle. Jet boats and jet skiis perhaps could be limited to a few sections.

But overall - let the Park Service have overall control to protect and limit this area as the professional staff desires. Also hunting & guns should be extremely limited in the park.

P.S.

It is unfortunate another hearing can not take place given the attempt (shown in the picture in the post-dispatch\_ to limit access to the Powder Valley hearing site by local (close to the park) residents. Particularly disturbing is that the Shannon County Sheriff's car with a large boat and trailer was used to block off the lot.

Thank you,  
John Saxton

**Correspondence:** Ozark Nat. Scenic Riverways,

I would like to comment on keeping Federal Regulations on the Current Rover, Jacks Fork and Others.

These rivers need stronger Federal regulation to insure a clean environment for these areas.

There are too many boaters on these waters, too many horses and ATVs harming these riverways.

I have seen a steady decline of these areas.

Please keep strong regulations to protect our rivers.

Sincerely,  
Charles Hill

**Correspondence:** Dear Superintendent:

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative A as outlined in the Draft General Management Plan Environmental Impact Statement.

For many years J have enjoyed the use of the Riverways in an appropriate fashion, canoeing and often camping on the rivers. We have brought visitors to the area and often comment on what a wonderful state treasure we have with pristine waters and beautiful scenery. However, in recent years we have worried about excess bacteria from large concentrations of animals and other abuses of the riverfront. Alternative A can correct these abuses without providing undue restrictions. This is a national park and, in all the national parks I have visited, there have been some restrictions to provide a safe, long lasting environment.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address the conservation and preservation functions of the National Park.

The Current River and jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation.

Yours Truly,  
David Garin

**Correspondence:** To whom it may concern,

I was raised on Current River until the Park Service FORCED us out! Our house burned in May 1969. It looked a lot better back then but it's all grown up now.

We enjoy our motor boats and canoes. We are on the river all summer long from Akers Ferry down to Round Springs. I am 65 years old I grew up on this river. I cannot ride in a canoe anymore. We pick up trash along the river and help with stranded canoes and assist with first aid if needed.

I attended the meeting in Kirkwood, MO on January 22, 2014. In my opinion, the Sierra Club has no right telling the property owners that pay taxes along or near the river how to live. Current River is open to the public and welcomes visitors. But visitors need to respect the river and property owners too. Just as if anyone would visit another country and didn't like it then they wouldn't go back. You cannot force the culture to change, so why try to force the culture on Current River or anywhere in AMERICA!

We enjoy our motor boats, fishing, gigging, swimming, floating and sitting on the gravel bar watching canoes float down the river. The Sierra Club is entitled to their opinion and this is mine!

**Correspondence:** To Whom It May Concern:

I would like to express my support for Plan A which is the most protective of the streams. Although Plan B is designed to be a compromise, it is still destructive to our streams and heritage.

I own 120 acres in Laclede County with a half mile of river frontage on the Osage Fork. I have a vested interest in the protection of our streams, not only for myself, but my children and all of those who use our streams. I have enough difficulty keeping the ATV's off of our property, and can only imagine what would happen to our section of the Osage Fork if we had ATV's running across the river.

We were considering donating our land to the Ozark Regional Land Trust, however in view of the plans you have put before the public for discussion and a vote, we will certainly not consider a donation if you adopt anything other than Plan A for our streams.

Sincerely,

Steve Miller

**Correspondence:** Dear Bill and Russ,

Please accept the following as my comment to the draft GMP.

I applaud the NPS for taking consideration in keeping the National Scenic Riverways pristine for future generations to continue to use. As a young father I hope to have the opportunity to raise my children as I have enjoyed the nature that surrounded my home.

However, I have some issues with the direction that the GMP is taking, in an effort to preserve this beautiful place.

As a business person in the local community I ask if there was any consideration the local economy that the GMP will have in the rural areas surrounding the Riverways. Not only is the Federal Government responsible to preserve the land and water that park includes inside its boundaries, it has a responsibility to people who have lived their whole lives to provide an economy that is sustainable to raise a family.

Our Constitution properly gives rights to citizens of the United States of America, and in doing so the Constitution should protect those rights. It is those rights that should not limit the horsepower of a boat that carries a family of s. It should not limit the access points that my father and his father drove to get to the river for over 100 years. It should not limit the economy that is heavily based in horse trails providing over 1/2 of the annual sales tax to operate a municipal in a rural part of the country.

We lose sight of some of the things our Constitution tried to protect, such as heritage, lineage, history, and traditions. Has the NPS studied how the GMP will affect these integral parts of our society? Have the NPS and the GMP taken any consideration as to what option will directly affect the mass of people who live, use, and work in the National Scenic Riverways?

It is these reasons that I do not support any option that the GMP has came up with as the future of the National Scenic Riverways future may hold. It is my opinion that any changes in the GMP will not be sustained by any of the local economies. It is my opinion that by allowing the National Park Service to have more regulations regarding the National Scenic Riverways, it will only cripple the struggle economy we are holding on to in rural Missouri.

Thank you for your time and consideration. Please include me in future mailing concerning the General Management Plan.

Sincerely,  
Dustin W. Turner

<b>Correspondence ID:</b>	2907	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,10,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Superintendent:				

On behalf of Missouri Faun Bureau, the state's largest general farm organization, I submit the following comments regarding the Draft General Management Plan for the Ozark National Scenic Riverways (ONSR). Based on concerns raised by many Farm Bureau members who live and work in the vicinity of the park, we support the No Action alternative.

Although many of our members participated in the recent public meetings and have submitted written comments, our organization was not among those notified by the National Park Service (NPS) of these meetings and other opportunities to provide input during the development of the draft plan. The notification mailing list provided by NPS pursuant to our request includes the Missouri Coalition for the Environment, Sierra Club, L.A.D. Foundation, Missouri Parks Association, American Rivers and The Nature Conservancy, but no organizations of comparable stature representing landowner interests. On a regulatory proposal with potentially significant ramifications for land use policy, we believe this was a serious oversight. At this point, we strongly urge the NPS to "level the playing field" by according proportionately more weight to views expressed by local residents.

We believe the No Action alternative is the least intrusive option in terms of property rights. We oppose the proposed wilderness designation and further restrictions on the use of park property as well as any restrictions that might affect the use of surrounding private property.

As suggested by numerous commenters, we urge the NPS to improve management under the existing general management plan in two ways. First, involve local citizens in seeking solutions to management problems and ongoing planning efforts. One commenter suggested reactivating a local advisory board. Second, focus enforcement resources where needed rather than adding new regulations that impose blanket restrictions. Budget constraints are likely to keep enforcement staffing shorthanded. Enforcement action that targets ,disruptive behavior rather than

blanket restrictions that penalize more visitors makes sense not only from the standpoint of limited staffing but also fairness.

Compared to parks in more remote locations, further restricting access to this park would impact more park visitors. Reduced access would be especially adverse for those whose physical condition makes motorized access for hunting, fishing and other activities necessary. Such individuals would include a significant number of military service veterans and others locally for whom these activities are a cultural tradition and part of their lives since childhood. Furthermore, an aging population is likely to increase demand for motorized access.

The existing management plan can accommodate diverse uses of the park and at the same time provide for a positive experience for all. We urge the NPS to adopt the No Action alternative and work within its framework by targeting resources to address priorities identified with local input. Thank you for the opportunity to comment.\

Sincerely,  
Blake Hurst

**Correspondence:** COMMENTS & RECOMMENDATIONS  
FOR CURRENT & JACKS FORK RIVERS

**OVERVIEW:** After reading the article in the Sunday 1/26/14 Post Dispatch titled "At odds over future of national park" I could not resist providing my comments and recommendations. These are intended to be objective and constructive.

**COMMENTS:** Since the Ozark National Scenic Riverway is a national park it is intended to be preserved in its natural state for all future generations. The operative word is national. The river way and surrounding land is owned by the government for the use of everybody - not just local land owners. I get the impression from the article that local land owners think they own the river. This needs to be addressed by the National Park Service (NPS) in sessions with the local landowners.

Further, the NPS has the duty and responsibility to maintain this natural resource in its natural pristine condition for current and future generations while still providing reasonable access to these facilities. Not an easy charter agreed.

**RECOMMENDATIONS:**

1. NFS needs to setup a series of educational meetings with local land owners to help them understand that this resource belongs to everybody and it is in their best interest to further these goals for their own local economy and future health of the rivers.
2. No outboard motors should be allowed to prevent erosion to the banks and safety of other canoers.
3. No ATV's should be allowed in the river or on gravel bars. There should be designated areas for ATV's.
4. No horseback riding in the river or in gravel bars. Designated horseback riding trails should be setup.

5. No overnight camping on gravel bars or sandbars. Designated camping areas should be setup were open fires are safe and fire rings available. A permit system instituted.

6. All trash must be carried out or deposited in available trash containers. Fines should be imposed for littering.

7. Only designated launching areas should be provided.

8. In order to limit the number and frequency of boats on the river at anyone time, a permit system should be instituted for groups of five (5) or more canoes. This would reduce congestion at boat ramps and on the river.

9. BWI tickets should be issued to intoxicated individuals on the water. I would not recommend a no alcohol policy on the water, but intoxicated individuals and rowdy behavior should be a cited.

10. Designated stopping areas should be provided for lunch or picnic's with trash receptacles and pit toilets if possible.

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Sir:				

I am writing as a concerned citizen regarding the effects the Draft General Management Plan will have to the Current and Jacks Forks Rivers. Our area relies on the tourism industry, and shutting down access to the river will have devastating effects to our economy. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and the surrounding areas. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve. I do strongly recommend that the National Park Service take a No Action Alternative to prevent unnecessary restrictions on public lands, ownership of private lands, and preserve the rights of landowners, and at the same time, protect our local tourism industry. We do not need the cost of big government here, nor do we want to be controlled by the government in any way, we have done well without the intervention or control of the Washington D.C. and we do not need them now. We have seen that in the past years that when the government gets to be involved, all things go sour. Those in D.C. cannot balance the budget, so why put out the funds to take what is ours when they cannot take care of it anyway? I consider these comments to be "substantive" and as such would appreciate a response. In the event that you believe they are not "substantive", please provide me with a methodology for making that determination and an explanation for how that allows you to ignore this comment.

Sincerely,  
J.D. Moore

<b>Correspondence ID:</b>	2911	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,03,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Superintendent:				

I am writing to comment on the draft management alternatives for the Ozark National Scenic Riverways. In 2013 we witnessed the United States federal government experience a government shutdown. In that shutdown the overextended federal government identified services that were not essential to the operation of the federal government. Parks, waterways and memorials were deemed nonessential. In a time of an over extended federal

government this is an excellent place to say "NO new action be taken", at minimum. Intact I would suggest that in light of the federal government's actions of depriving citizens of the use of "our citizen's parks, memorials and waterways" The federal government should no longer be entrusted with these public properties. I suggest that these properties be turned over to the care of the states in which they are found. Therefore I feel there should be no increase in federal activity or authority relevant to proposal A, B, OR C "NO new action be taken". Response to Question 1: "NO new action be taken" Response to Question 2 "NO new action be taken" Response to Question 3: "NO new action be taken" Response to Question 4: "NO new action be taken"

John Webb

**Correspondence Type:** Letter  
**Correspondence:** Dear Superintendent Black:

We are deeply concerned by the Draft General Management Plan and the preferred "Alternative B" chosen by the National Park Service. We feel the NPS is attempting to unreasonably restrict public use by closing roads, river access, campgrounds, boat usage and trails and do not think the heritage of the local people or the possible economic impact on the area have been given sufficient consideration. The following highlights are a few areas that we feel have not been given proper consideration by the NPS:

**Road Closure within the ONSR:**

1. Every road within the ONSR was once a county road built and maintained with state and local funds. Those roads connected homes, farms and small communities that were built on fertile ground on or near these important rivers. Such old "home places" were home to many current residents of the area or their ancestors, and that land, even though the houses or communities no longer exist, still has strong sentimental value to the descendants of those original owners. It was customary in those early days to bury family members just outside the yard fence or on the highest point of the family farm. We are aware of many unmarked grave sites that belong to families who still make their homes in Reynolds and Shannon counties. If roads are closed, then living family members of the deceased will be unable to travel to those grave sites to pay respect and to show their children and grandchildren that valuable part of their heritage.

2. The Draft GMP Plan B does not state which roads shall be closed. If a road is closed, the same procedure should be followed as is done for current county road closings. The proposed road closure should be posted for three consecutive weeks in the local newspaper where the road exists and posted in the local post office. Any known family member should be afforded a letter informing them of the NPS's intention to close such road. Every effort should be made by the NPS to notify affected families of proposed road closures.

**River Access Closure:**

1. Every access is considered valuable to the local people. Memories are an important part of raising a family, and sharing a favorite fishing or swimming spot with younger family members may become a thing of the past if all river accesses are not kept open.

2. River accesses are natural and caused by the rise and fall of the river. Mother Nature has actually created almost every river access currently used.

3. River accesses being considered for closure should be listed in the GMP so the affected community has the option to raise questions as to the value of each specific access.

**Campgrounds:**

1. Primitive camping is a favorite pastime of the local communities. Many of the favorite spots are used primarily by locals only. Campers at these spots are afforded no services for the camping locales even though they are required to pay a fee. If you were to visit a primitive campground you might find a family deep frying the days catch for supper, kids gathering firewood for the evening fire or family members playing a friendly game of washers or horse shoes. On any given night at the Cardareva Primitive camping area you will find a group of locals - young and old - with

their instruments, pickin' favorite old tunes and singing old camp songs and river songs. This is a part of the heritage of these people, a tradition that they have the right to pass down to their children, grandchildren, nieces, nephews, etc.

2. People currently camping in primitive campgrounds must pay a fee to camp. Canoeists are allowed to camp at those same spots without having to pay a fee to camp. Most would call this discrimination.

3. The campgrounds being considered for closure would remain open for canoeists, kayakers, etc. This seems once again like the NPS is showing unreasonable favoritism for one group over another.

4. We request that the NPS identify the proposed campgrounds to be closed in the GMP.

#### Boating:

1. Boating is a favorite pastime of the locals. Rarely does a visitor show up to operate a boat on either the Current or Jack Fork rivers. For this reason the local boat owners feel unwarranted preference is being given once again to the canoeist and kayakers.

2. Boat owners do not mind, and understand, the importance of sharing the river with visitors; however, rarely do boat owners feel the affection returned. Floaters do not understand the jet boat and so educating floaters as to how a boat operates, etc., would be helpful and could curtail confrontations almost always caused by a floater not understanding a boat.

3. Closing off the northern 40 miles of the river to boat use restricts the use of the local people. If boating is allowed during the winter months for gigging, then what reasoning does the NPS have for stopping boat use during summer months?

4. Boat taxes, application fees, licensing, etc., all contribute to the state economy. Fuel, parts, accessories, supplies, etc., all contribute to the local economies.

5. Boaters have saved the lives of many floaters and boaters and on a regular basis pick up the trash left behind by floaters.

#### Enforcement of regulations:

1. The NPS needs to enforce the current regulations already in effect before increasing the regulations proposed in Alternative B.

2. As a community and an organization how can we trust that the proposed new rules/regulations would be enforced.

Since the creation of the Ozark National Scenic Riverways in 1964, this area has become a premiere destination for visitors and tourists wishing to experience the "wild Ozarks" and the rivers that flow here. This designated area was created with the intent of the park being utilized as recreation for the people. The Interior and Insular Affairs Committee who formed the ONSR felt so strongly that recreation be kept as a primary purpose that the committee emphasized "to make clear that recreation is a purpose" of the creation of the Ozark Scenic Riverways. The love of the river truly is the life blood of many, many local families!

To service those visitors taking advantage of the recreational opportunities afforded by open and accessible rivers, an economy has developed providing lodging, food, supplies and entertainment - including camping, canoeing, boating, hiking and horseback riding. This economy provides thousands of jobs for our local people and those people depend on this service industry to provide for their families. For this reason, we fear that our economy will be in jeopardy with the proposed changes in "Alternative B."

As an organization of nearly 65 businesses and members, we have resolved to support the "No Action" alternative. We would be willing to discuss further With the NPS our thoughts on why we support this action as well as listening to your reasoning for "Alternative B."

Many of our members will be attending the upcoming meetings and have sent in personal comments and letters.

Respectfully Submitted,

Christy Roberts  
President Ellington Chamber of Commerce

**Correspondence Type:** Letter  
**Correspondence:** Dear Superintendent Black,

The Ozark Wilderness Waterways Club of Kansas City is a longtime supporter of the Ozark National Scenic Riverways and was part of the organizational effort in the 1960's to preserve the Current and Jacks Forks rivers. Our organization represents over 170 families that have camped and canoed on these rivers for over 50 years. We support the park service's program to develop an updated management plan that recognizes the present conditions of these rivers and use patterns. The way these rivers are being used and enjoyed has greatly changed since this Scenic Riverways was established. Many of the changed usages of the river are causing damage to these rivers that may change the rivers forever and degrade their enjoyment. The Ozark Wilderness Waterways Club supports the implementation of Plan A in the proposed General Management Plan. Plan A has the best chance of reversing the harmful effects on the river by achieving the following:

â€ The most effective option for decreasing the number of access points and closing illegally developed road/trails. This must stop motorized vehicles from driving on gravel bars.

â€ Places the best limits on motorized vehicles to official roads. Implements a reasonable plan for limiting motorboat horse power to motorboats above Two Rivers.

â€ Provides better usage of river system by horses by limiting their trails, eliminating illegal trails and reducing river crossings. These changes will also reduce E. Coli contaminations and make it safer for swimming. It is also important to stop the damage and contamination to gravel bars by horses.

â€ Proposes a reasonable gravel bar usage plan that has the potential to restore the gravel bars to their natural state.

Plan A is the strongest option for reaffirming the priorities originally established in the law to guide the National Park Service to restore the river areas and conserve it for future generations. Above all, the NPS must act for to do nothing would further damage this river system and push the system to the point that it is beyond saving. Time is of the essence to prevent further harmful use of these rivers that will damage these rivers for generations to come.

Not only the members of our club, but thousands of individuals and families visit these rivers each year expecting rivers that are scenic and an experience that allows them to enjoy the rivers without damage from mankind.

Sincerely,  
Ron Bishop  
President, Ozark Wilderness Waterways Club

**Correspondence ID:** 2914    **Project:** 15793    **Document:** 56208  
**Received:** Feb,10,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** The people of the City of Eminence have some concerns regarding Ozark National Scenic Riverway's (ONSR) Draft General Management Plan Alternative B. We are concerned about the effect it may have upon our economy. Tourist revenues in Eminence have remained flat for about 10 years. With everincreasing costs of doing business, our local economy is suffering at this point in time. Any attempt to further limit the number of visitors will have a damaging effect upon our economy.

In a documentary filmed in the late 1970's and released for viewing circa 1980, "Shannon County: Hearts of the

Children", Windy Smith of Windy's canoe Rental in Eminence proclaims that "we can put 2,500 canoes in the river on a Saturday". In 1987, local adventurers stacked 767 rental canoes to claim the Guinness Book of World Record's largest canoe tower record. Currently, there are only 700 canoe permits in the Eminence area. During peak season weekend demand, about 500 of these canoe permits are used on the Jacks Fork River, and 200 are used on the Current River.

Any further limitation to the total number of floaters would have a negative effect upon our economy. There are two statements in the Draft General Management Plan that suggest this may happen. 1) the redesign of access points to alleviate overcrowding" issues, and 2) a suggestion of 40 canoes per mile of river. A subsection of the DGMP pertains to "overcrowding". Yet, an ONSR visitor survey from 1996 showed that 84 percent of respondents did not believe that overcrowding was an issue. Although we agree that there are a lot of people on the river approximately 25 days/year - twelve weekend Saturdays three 3-day weekend Sundays ten June and August trail-ride weekdays - there are 340 other days in the year, and we do not believe that this constitutes "overcrowding". Instead of fewer canoes, we plead for an incremental increase in canoe permits in the Eminence area. Alternative B proposes a horse permitting system which would further limit the number of visitors to the Eminence area. Instead, we would suggest a well-designed horse trail system that disperses riders away from the rivers. Missouri Department of Conservation's Lick Log trail system does just that, and additional trails will alleviate many concerns without resorting to a horse permitting system. We suggest that you coordinate with MDC to extend our Eminence-area horse trail system.

Instead of fewer horseback riders, we need more.

We are concerned about the closure of 45 miles of roadways inside the ONSR. We plead for the ONSR to honor the 1989/90 Roads and Trails Agreement, and we ask that ONSR leave open any previously NPS maintained roads. We ask that ONSR not close roads to historical family homesteads and family cemeteries. If closed, elderly residents and handicapped citizens will not be able to access them. And, it is our belief that the ONSR must maintain current roadways for emergency services and forest fire incidents.

We support motorized 60/40 boat horsepower limits along much of the Jacks Fork and Current Rivers. However, we want to see traditional motorized boat usage on the upper reaches of both rivers; We are of the belief that low summertime river flow rates are sufficient to regulate motorized boats during peak tourist season.

We insist that a visible presence of law enforcement personnel would positively impact many of the current "problems" that exist in the ONSR. It has been said that 90 percent of law enforcement is simply being seen, so we suggest Park Rangers be more visible to the public. They can offer assistance and" advice, and write tickets where warranted.

The City of Eminence completed an extensive water system upgrade in 2013, and we are pleased to announce that we are in the process of upgrading our sewer system. We will replace two sewer main trunk lines, and we will be adding a sewer line into a residential neighborhood. We have completed the sewer works preliminary engineering survey, and our system upgrade plan is in committee at MSWWWA. We anticipate start of construction in 2015. Any financial assistance from the National Park Service would be greatly appreciated.

We anxiously await the final General Management Plan, and we plead that you give consideration to our requests.

Signed,

Jim Anderson, Mayor  
Mike Atchison, Alderman & Chairman  
Ernest Middleton, Alderman  
Gary Young, Alderman  
Robert McQuerry, Alderman

**Received:** Feb,10,2014 00:00:00

**Correspondence Type:** Letter  
**Correspondence:** Dear Superintendent.

I prefer Alternative A for the GMP of the ONSR. I oppose the use of motorized boats & equestrian use on & in the rivers in the park. This park's problems have included the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements.

I believe Plan A will decrease the number of access points and close illegally developed roads/trails. It will limit the horse power of motorboats above Two Rivers. Plan A provides better usage of the rivers by horses and motorizes boats. It limits access to the rivers by motorized vehicles except on official roads. It eliminates illegal horse trails and reduces river crossings. These changes reduce E Coli contamination and make the rivers safer for swimming. Plan A proposes reasonable gravel bar usage and stops the damage and contamination by horses. This will have the potential to restore gravel bars to their natural state.

Plan A has the best chance of reversing the harmful effects on the rivers and returning them to the condition they were in when the Scenic Riverways was established.

Alfred M. Hussar, Jr.

<b>Correspondence Type:</b>	Letter				

**Correspondence:** Thank you for opportunity to provide public comment on the subject proposal. I grew up in the Ozark National Scenic Riverways (ONSR) and enjoyed countless hours of recreation there. My son Daniel is now 16 years old and is enjoying the same experiences in the ONSR as I did as a kid. We appreciate the opportunity to provide our comments and relay our personal experiences on one of America's natural treasures.

#### BACKGROUND:

Over the past 44 years I have spent many days on the ONSR enjoying the diverse opportunities it has to offer. My son has spent the last two years enjoying the same things. In addition to that many of my family members and friends spend just about every weekend on the ONSR. I am very familiar with all that the ONSR has to offer. I have personally floated the ONSR in canoe from Cedar Grove to Two Rivers. I have boated many stretches of the river in a motorboat with both a 25 horsepower jet and a 60/40 jet, I have swam, waded, and floated tubes on various portions of the river. I have giggered from a 60/40 motorboat. I have floated in a non-motorized flat-bottom boat while fishing. I have fished from the shore. I have visited many of the caves and springs in the area and walked some of the hiking trails. I have road ATV's where permitted and also camped on the gravel bars. After reading the draft management plan, the only thing I see in it that I haven't personally participated in is horseback riding. However, I do have friends who have. I would say this gives me a very broad and unique view on the opportunities available on the ONSR.

Additionally, I am a frequent user of many of our other National Parks; places like Glacier National Park, Yellowstone National Park, Voyagers National Park. I also take advantage of many similar locations that offer "limited access;" places like the Boundary Waters Canoe Area with non-motorized areas, MINGO Wildlife Refuge and Hamburg Bend Conservation Area limited to muzzleloader and archery hunting. I have a great appreciation for the need to balance the protection of our natural resources and their use.

This is the perspective that I bring with my comments that follow. Having studied the full 534 page proposal, I have selected a few specific areas that I feel need consideration as this proposal is reviewed. This is not a comprehensive discussion on the proposal. I will focus my remarks to a few very specific areas that I feel are critically important as you consider this management proposal.

#### JUSTIFICATION:

The plan states, "This new management plan for Ozark National Scenic Riverways is needed because the last comprehensive planning effort for the National Riverways was completed in 1984." I agree. It is important to consider strategic objectives every so often and this was likely overdue. However, the proposal fails to make a substantive argument for such a radical change in the management strategy. The proposal fails in four specific areas as discussed below:

- 1) The proposal says, "Patterns and types of visitor use have changed ... " Yet this is not validated by the data contained' within the report itself. The only substantive change in visitor activities noted in the proposal and based upon my personal experiences is the use of tubes to float the river vs canoes. While I agree this is a change, it is certainly not one that provides for a substantive or substantial change in overall impact to the resource itself or the other visitors to ONSR.
- 2) The proposal says, " ... technology has introduced opportunities for recreational activities and access not envisioned in the past." Yet, the proposal fails to identify and quantify these "technologies" or other "opportunities."
- 3) The closest this proposal comes to a coherent justification for such a radical change in management strategy is what it describes as "By far the most commonly expressed concerns in public scoping were related to visitor behavior." It is reported that, "A recurring complaint by commenters was the growing amount of disrespectful and vulgar visitor behavior. Most commenters stated concerns about drug and alcohol use, and trash and litter along the rivers and surrounding lands." I agree that they may be an issue. However, in my personal experience these are largely isolated events and have little impact on the overall resource and rarely impact visitors. Regardless, this is not substantial justification to radical change the use habits of the majority of the visitors. Instead, a more logical approach would be to focus efforts on controlling and enforcing the questionable behavior.
- 4) Lastly, the proposal seeks to significantly limit public access to much of the ONSR. There is no substantial argument to justify this. The fact is visitor use has remained essentially stable at approximately 1,500,000 visits per year from 1973-2008 (ref: page 200, Figure 10). That is 30 years! The National Park Service (NPS) might have a reason to address usage rates if there were trends of increased usage that were putting unsustainable pressure on the natural resources or if the experience were becoming so unsatisfying that visitors quit coming to ONSR. Neither is true. I have enjoyed the ONSR since 1980. I spent two weeks there this summer and I can say without doubt that the resource is essentially unchanged from 1980. The resource is not suffering from the current use levels. Additionally, the visitor satisfaction survey cited in the proposal itself discounts negative visitor impacts. In fact, 84.2% in the survey said there was "no need to limit amount of visitor use" and 75% said the ONSR was "not excessively crowded. We know that no matter how few users there are, some will always say there are too many. Additionally, the 2010 study cited in the proposal stated the following: "Motorized and nonmotorized watercraft users were asked if other river users were a problem for them. Among motorboaters, 13.5% thought that other users were a problem, while only 3.9% of nonmotorized watercraft users perceived other users as a problem. These numbers clearly indicate the vast majority of visitors are happy with the current usage strategy.

#### FISCAL ACCOUNTABILITY

The NPS recommends Option B. Within that recommendation is the assertion that "NPS's estimated cost to implement Option C will likely prevent its implementation." That is an excellent point. In the current budget environment we face in the Federal Government fiscal accountability is a paramount concern. So let's take a quick look at the projected cost of each proposal. According to Table 9 on page 114 (there is more data in Table 12 on page 116, however those numbers don't match Table 9 numbers and it is unclear if they are in addition to the Table 9 numbers), the additional cost for each option is listed below:

No-Action	Option A	Option B	Option C
Option			
One-time facility costs (table 9)	\$0	\$7,498,000	\$6,703,000
Annual operating costs	\$6,582,000	\$9,304,000	\$8,821,000
Increase to annual operating	\$0	\$2,722,000	\$2,239,000
		\$5,677,000	
		increase	increase

costs  
Full-time staffing 0 34 26 47  
Increase  
Total

As can be clearly seen if cost is an issue (and in this era of tight budgets better be), the option with the lowest cost is the No-Action Option. According to the charts provided in the report they claim approximately \$4,000,000 more additional cost in "deferred maintenance" for the No-Action Option, however that is not justified in the proposal. Options A-C then would cost an additional \$7-12M in one-time facility costs, \$2-6M per year additional operating costs, and 26- 47 additional full-time equivalent positions at an extremely high personnel cost. Even if you estimate the FTE's at a low cost of \$50,000/year that amounts to an additional \$1.3-2.35M in cost per year.

Based upon these numbers I would agree with the NPS that Option C's cost would "likely prevent implementation." However, I would also argue that the costs of options A and B are significantly higher than the No-Action Option and are not substantially lower than Option C. According to the proposal, ONSR is currently only able to staff 72 of its 95 authorized positions and maintains a current backlog of deferred maintenance of \$27,083,000. If they can't find the funds to hire 23 currently authorized positions and pay for \$27M in needed maintenance, where would the greatly increased funding requirements for Options A-C come from, especially in a federal government budget that is looking to cut funds wherever it can? Given that, it is illogical to pursue and adopt any management strategy as fiscally unsustainable as this one; thereby leaving the No-Action option as the only feasible option.

#### ADDITIONAL ISSUES:

While the previous two issues are very significant, I do want to address a couple other issues of concern.

1) The alternative to "limit gravel bar camping to designated gravel bars away from the river" is unjustified. The proposal asserts that "This would help minimize some riverbed disturbances, erosion, sedimentation, water quality degradation, and turbidity in many gravel bar areas." Anyone who has spent time on the river knows that the impact of a camper or tent on the gravel bar is extremely minor compared to the impact on these gravel bars with each spring flood. Every year the flood waters change these gravel bars. To suggest that my setting a tent and a small campfire or even an RV on the gravel bar has a negative impact is frankly unfounded. I've watched these gravel bars for 30 years and know it is not true. As with many of the assertions in the report, there is no evidence proving this point.

2) The proposal to limit motorboat access to only the period between Labor Day and March 15th is unjust and unfair. Our rivers are for everyone's enjoyment. There are a large percentage of ONSR users who do so in the summer months via their motorboats. According to the 2010 study cited in the proposal only 3.9% of other non-motorized users perceived other users (e.g. motorboat users) as a problem. Yes, there may be some isolated issues of conflict between motorboat users and non-motorized users but these are isolated and antidotal, not the norm. There is no sound justification within the proposal to limit motorboat usage beyond its current limits.

3) I take issue with the proposed watercraft usage numbers in Table 8, page 99. There is no justification or logic to these proposed numbers. The chart suggests 70 watercraft per mile for the upper sections (Cedar Grove to Pulltite) of the Current River and 10 watercraft per mile for the middle sections (Round Springs to Chilton Creek). This makes no sense. The river is much smaller and can support fewer watercraft in the upper sections. Additionally, much of that area has naturally extremely limited motorized boating opportunity. However the river is much larger/wider from Round Springs to Chilton Creek and can support more watercraft, including providing more opportunity for motorized watercraft. The current watercraft usage on the river is appropriate. I've been there on weekends and weekdays both. Anyone wanting an more "isolated" opportunity to enjoy the river can do so very easily on a weekday. In fact I just spent this past labor day weekend camped at Bee Bluff for 4 days. The amount of canoes and motorized boats I saw was pretty small. They in no way detracted from my experience. I was able to set in the river for over an hour without interruption by anyone on a busy stretch of the river on one of the busiest days of the year. Try doing that at Yellowstone or Glacier. I have. It is impossible. Those parks are bumper to bumper traffic all summer long. The ONSR has got it right the way things are now. They are not too crowded.

#### SUMMARY:

Based upon the analysis above I strongly urge the NPS to adopt the No-Action Option. It is clear that Options A-C

do not reflect the desires of the majority of users of the ONSR, do not provide substantive improvement or protection of the ONSR, and are not financially viable or sustainable. Options A-C unnecessarily restrict access to and use of the ONSR by the 1.5 million visitors who enjoy it every year and does so at a substantial cost. Rather than adopting the radical restrictions on use proposed in Options A-C I encourage NPS and ONSR to concentrate their efforts within the current strategy by updating it and making logical improvements focused on addressing the minor issues discussed in the proposal.

Finally, LEAVE IT ALONE! The current management strategy provides a tremendously wide range of opportunities for all to enjoy. Anyone can enjoy a quiet hike alone a trail, an ATV ride, sitting on a peaceful gravel bar, camping on a gravel bar, a quiet canoe float without motorboats, a nice motorboat ride, a nice swim, diving off a cliff, a horse trail ride, etc, etc, etc. The ONSR offers all of these opportunities for anyone willing to seek out the parts of the ONSR that currently offer what they are looking for.

Thank you again for the opportunity to provide input. I hope my inputs will be carefully considered along with the many other inputs I'm sure you will receive. Our public lands are a tremendous resource to this country, Missouri, and the Ozarks. We all want to ensure they are available for enjoyment to the widest public, not "locked" away so that only a hand full of the elite are able to enjoy them.

Respectfully,  
Phillip and Daniel Callahan

**Correspondence:** The mission of the St. Louis Canoe and Kayak Club and its one hundred plus members is to promote paddling and boating skills, foster safe and sustainable water recreation habits, and promote the wise use and stewardship of our water and watershed resources.

With that mission in mind, we reaffirm our position to pursue improvements in the operations of the Ozark National Scenic Riverways. We recommend the acceptance of National Park Service preferred Alternative B in the draft General Management Plan for the Ozark National Scenic Riverways.

We believe Alternative B will:

â€ First and foremost, provide the visitor an opportunity to enjoy the natural beauty and outdoor experience of one of the most beautiful and unique river systems in the country.

â€ Provide the visitor a safe wholesome recreation environment.

â€ Support the Park Service Management to bring Ozark National Scenic Riverways up to expected National Park standards.

â€ And, at the same time, provide an economic boost to the state, the region, and the local communities.

We recognize and applaud the efforts of the National Park Service in creating the draft plan and its many considerations. It's imperative that action is taken promptly to end the abuses and degradation of the Ozark National Scenic Riverways rivers and their watersheds as they exist today.

Respectfully,  
Joyce L. Bork  
St. Louis Canoe and Kayak Club

<b>Received:</b>	Jan,13,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Sir,				

My name is Joe B. Whetstine, a citizen of Texas County Missouri. My address is 4021 Eagle Dr, Cabool, Mo. 65689.

My phone number is home: 417-962-4650, cell 417-254-1939.

I would like to submit 2 comments on the "Ozark National Scenic Riverways Draft General Management Plan" for your consideration. (See attached.)

My family has lived in Texas County since the 1870's. The forests of this area essentially built St. Louis during these years.

We had the freedom to use the natural resources to our best advantage and to the advantage of our cities. The rivers were very important for transportation of logs to the mills and people to market, fishing, trapping, building material (gravel for concrete) as well as recreation.

Evidently we have not done too bad a job as our government and city citizens have been and continue to want to preserve what we have managed over the past 150 years.

Today we live with rules and regulations and permitting on our land and rivers and the timber industry that has severely affected small business (such as saw mills, charcoal plants, and the flooring industry.

Farmers are limited to how many cattle they can have in one place, also hogs, and chickens. Permits are required for any of the previously mentioned.

Why would we native people want to misuse our country? We live here and depend on it for our livelihood.

What might the reaction be if some of the citizens in this area would petition to close 65 miles of roads and many bridges (river access) commonly used by your citizens?

Therefore: I strongly recommend NO ACTION ALTERNATIVE for the proposal of a wilderness area where

essentially all activity would be prohibited.

As a retired County Commissioner of Texas County and a citizen of this area for my lifetime, I highly recommend that you or your legal people look at the Texas County Land Use Plan. I believe that the other counties involved in this proposal also have land use policies that pertain to Federal and State control of local land, traditions, customs and lifestyles.

These plans are recognized by State and Federal courts. I do object to further regulation and control of our country by foreign (city & urban) folks. Our native folks have made these hills and valleys what they are now, so why do we need all this help to do what we have already been doing? We don't come to your city and set rules and regulations on what you do in your back or front yard. Therefore I strongly recommend that the National Park Service take NO ACTION ALTERNATIVE.

**Correspondence:** I am opposed to the park service proposed "New Management Plan" that would shut down public access points on the rivers, eliminate motorized boat traffic from certain areas, further restrict boat motor horse power in other areas, close several gravel bars, and propose additional area to be designated as federal wilderness. These are some of the same proposals presented in the "CRM" plan that the public was so adamantly against "Revisited."

Our Eighth Congressional District is home to some of the most naturally beautiful areas in the country. We are fortunate to have the Jacks Fork and Current Rivers that provide families with a place to canoe, swim, boat, and fish close to home.

The rivers also support numerous small businesses that cater to the needs of visitors who come from far and wide to enjoy the clear waters and natural scenery.

These are some of the same proposals presented in the "CRM" plan that the public was so adamantly against "Revisited."

In 1964 the National Park Service included the Jacks Fork and Current Rivers in the Ozark National Scenic Riverways with the goal of preserving access to numerous areas in our Congressional district. Just last week the Parks Service released a new management plan that would shut down public access points on the rivers, eliminate notarized boat traffic from certain areas, further restrict boat motor horsepower in other 'areas, close several gravel bars, and propose additional area to be designated as federal wilderness.

Generations of Missourians in our congressional district have enjoyed the Jack Fork and Current Rivers. The rivers are also the engine that drives numerous small businesses. When bureaucrats in Washington try to restrict land and river usage for families and businesses, our district suffers. I hope residents across the Eighth District will join me in supporting access to our public lands and rivers and urge the National Park Service to support the No Action Alternative.

**Correspondence:** Dear Mr. Black:

The following are comments on behalf of the st. Louis Audubon Society regarding the alternatives for the Ozark National Scenic Riverways in Missouri. The st. Louis Audubon Society has over 3,000 members in the greater st. Louis area. We are a local affiliate of the National Audubon Society whose mission is to conserve and restore natural ecosystems, primarily birds and other wildlife and their habitats, for the benefit of humanity and the earth's biological diversity.

We commend the Ozark National Scenic Riverways for its decision to review its management practices. The increased pressure of horses, mechanized vehicles, easement issues and lack of funding for enforcement is threatening the water quality and overall integrity of this superbly featured region. Many of our Missouri natural areas have been studied for bird habitat and conservation recommendations. The Riverways is within the Current and Jacks Fork Watershed Important Bird Area (IBA). This is one of 47 mA's in the state, and is exceptional because it is one of the largest IBA's and overlaps with two of Missouri Department of Conservation's designated Conservation Opportunity Areas (COA). Since IBA's are important for migrating and breeding birds, the st. Louis Audubon Society and other Audubon affiliates hope to assure that conservation goals for these areas are met.

Of the general management proposals for ONSR, the st. Louis Audubon Society recommends Alternative B, opposing Alternatives A and C. Because the conflicting nature of many of the current activities are degrading the stream banks and water quality, we support stronger management and control with regard to access enforcement and habitat restoration. We agree with policies that restrict access by all-terrain vehicles, decrease horse volumes, and increase enforcement efforts at unauthorized access points. Plan B also supports resource monitoring, research and preservation projects that are critical to inform both future NPS management plans as well as provide the most accurate information to area visitors. We also support the proposal for wilderness designation of the Big Spring section.

In addition, we feel that the NPS has the deepest knowledge of its own capabilities and which management plan is most likely to be realistically and successfully implemented in the ONSR. Our support of Plan B reflects our vote of confidence in the NPS preferred plan.

The enjoyment, beauty and benefit of the Ozark National Scenic Riverways will be dependent on it remaining as natural and wildlife-diverse as possible while continuing to provide well-managed recreational and educational opportunities for visitors.

Sincerely,  
Jean P. Favara

The changes proposed by the Park Service \A,ould have a devastating impact on the economies of any communities in our Eighth District. Historically, individuals and businesses have been allowed to guide tourist through the riverways, and provide them with valuable services. These folks are the backbone of our local economy. Restricting access to park and closing public access points are extreme measures that do not make sense. Preventing the use of motors on boats in certain areas, and limiting their poser in others, will damage a local economy that is already the victim of burdensome federal regulations. The land use policies associated with Wilderness Areas are unwelcome additions to a park that is well functioning and beloved by those of us who grew up here.

**Correspondence Type:** Letter

**Correspondence:** The Ozark Wilderness Waterways Club of Kansas City is a longtime supporter of the Ozark National Scenic Riverways and was part of the organizational effort in the 1960's to preserve the Current and Jacks Forks rivers. Our organization represents over 170 families that have camped and canoed on these rivers for over 50 years. We support the park service's program to develop an updated management plan that recognizes the present conditions of these rivers and use patterns. The way these rivers are being used and enjoyed has greatly changed since this Scenic Riverways was established.

Many of the changed usages of the river are causing damage to these rivers that may change the rivers forever and degrade their enjoyment. The Ozark Wilderness Waterways Club supports the implementation of Plan A in the proposed General Management Plan. Plan A has the best chance of reversing the harmful effects on the river by achieving the following:

â€ The most effective option for decreasing the number of access points and closing illegally developed road/trails. This must stop motorized vehicles from driving on gravel bars.

â€ Places the best limits on motorized vehicles to official roads. Implements a reasonable plan for limiting motorboat horse power to motorboats above Two Rivers.

â€ Provides better usage of river system by horses by limiting their trails, eliminating illegal trails and reducing river crossings. These changes will also reduce E. Coli contaminations and make it safer for swimming. It is also important to stop the damage and contamination to gravel bars by many hundreds to thousands of horses.

â€ Proposes a reasonable gravel bar usage plan that has the potential to restore the gravel bars to their natural state.

Plan A is the strongest option for reaffirming the priorities originally established in the law to guide the National Park Service to restore the river areas and conserve it for not only the members of our club, but thousands of individuals and families visit these rivers each year expecting rivers that are scenic and an experience that allows them to enjoy the rivers without damage from mankind.

Sincerely,  
Greg Hall

**Correspondence:** To Whom it May Concern,

In response to the general management plan proposed by the park service, I strongly support the no action alternative. To prevent taxpayers from using the land they have supported is unjust and a communistic way of dealing with the local public. We, who live in the local area use the riverways weekly, all year long. We clean up after the tourist leave. We love the area, that is why we are here. We choose to live in this area because we enjoy the river, hunting, fishing, riding atv's, year around, not just one time a year on vacation(as the tourist from the cities do). We choose to live here, having to drive over an hour to go do the things that the city folks live next door to. We aren't trying to go to their neighborhoods and put restrictions on their daily lives. We have taken care of this area because we want to preserve it, for ourselves and our grandkids, just as our ancestors took care of it for us. I saw a comment made by someone from one of the big cities, stating that the congressman isn't taking into account what the "majority" of the people want done(which is closing the park down) with the ONSR. O.K. take into account the large number of tourist that come in the summer, and that is a large number. Then take the smaller number of local folks and multiply it by 52 weeks of the year. I haven't counted the numbers, but common sense tells me that the locals use and take care of it more days of the year than the tourist do. I would venture to say that some of the people that are commenting that they want everything and everyone shut out of the park, has never set foot inside the ONSR. My husband's grandfather owned a large farm right in the middle of what is now the ONSR. He didn't want to sell, but the government paid a small fraction of what it was worth and took it. He also was a river guide, taking Leonard Hall and other tourist on the river. So boats are also in our heritage. Now his grandkids ,great, and great-great grandkids, are wanting to continue enjoying what was once their family inheritance, and there is a chance that if the general management plan is changed, family tradition will be changed forever. Our family doesn't drive hours to vacation, we drive 15 minutes to the river to meet with family and friends. We hunt, fish, boat ride, float, camp, ride 4 wheelers and UTVs. We have in our family, disabled veterans and disabled in a wheelchair. They couldn't enjoy family get togethers without the use of motorized vehicles to get to the river. It is just as much our right as taxpayers to use the riverways as it is the right to the folks that want to use it once a year, or that just doesn't want anyone to use it at all. Please consider these comments before making a decision that discriminates against "We the People of the United States".

Thank You,  
Rhonda Moss

**Correspondence:** Dear Superintendent,

I support Alternative A, the most aggressive approach at protecting the Current/Jacks Form Rivers. I realize this maybe a compromise for some, but I believe Alternative A offers the only approach to ensuring the long term health of the river and the wildlife it supports. I love this area and feel committed it is protected.

Thank you for your help.

Sincerely,  
Sandy Kaplan

**Correspondence Type:** Letter

**Correspondence:** I would like to submit my opinion on the proposed new NPS Management Plan. I support Alternative B, agreeing with the NPS, as a fair compromise with respect to the various interest groups concerned. I am a resident of Shannon County, living near the Eminence area. I retired here from a large Missouri city and have been enjoying floating the Ozark streams since high school.

I have tried to look at this from the viewpoint of groups like the Sierra Club, as well as, from the eyes of my friends who grew up down here and whose families have lived here for generations. I consider myself to be a strong environmentalist and I am concerned with wanton and illegal off-road A TV and 4-wheel truck driving in the Ozark National Scenic Riverways (ONSR).

I also realize the pollution that has been increasing in our stream areas due to soil erosion, litter and oil/gasoline (from the afore-mentioned), as well as pollution from the large numbers of horses along and in the streams during the trail rides.

I also have friends whose livelihoods depend upon the income generated in the area from our seasonal visitors. This ranges from trail ride workers, the vendors who provide canoes, tubes and transportation to floaters, to local businesses including gas stations, those who provide camping, and restaurant and grocery store owners and their employees.

I also enjoy being able to float from Bay Creek to Eminence without worry from motor boats in the summer. I like having friends who visit not having to worry about this as well. My friends and family who visit are often beginner canoe floaters and they lack the ability to do quick maneuvering around motor boats. Despite the safety we enjoy the quiet of being on a part of the Jacks Fork where motor boats are not allowed during the summer. The tranquility of our floats are still often interrupted by trucks (and their accompanying stereos) and from ATV's travelling illegally along adjacent stream trails and parking on the gravel bars. We are hesitant to camp along these rivers overnight anymore for the worry of trucks and ATV's illegally driving up on us in the night. It's hard to even picnic along the river without these same worries.

Many of our friends who grew up here do not participate in these illegal behaviors, but unfortunately, many residents do. They have a myriad of illegal trails that only they understand and use. Despite it being against the law they either do not care or realize that they face no repercussions for their actions. These illegal roads and trails open up the wildlife and fish to illegal poaching activities as well. Gunshots near the river also present obvious safety concerns. These illegal activities more times than not also include excessive drinking and/or illegal drug use. Loud music excessive alcohol consumption, illegal drug use, raucous behavior and firearms all present reasons for me to worry about the safety and enjoyment of me and my family along these streams (especially at night). These behaviors also bring litter from beer cans to other assorted trash that we have to look at and then do our best to pick up and remove.

Unfortunately many people do not realize th.at these resources belong to all Americans and that these lands are not their private hunting, fishing, camping, and off-road parks. Closure of illegal roads and trails, and restriction of horse-riding to only authorized areas and trails would be some great starts to restoring these areas health and tranquility. Strictly enforced vehicle-free zones along these streams would allow us to follow the rules to have safe and wholesome areas for us to enjoy (including overnight camping) without the present concerns we have. Access to historic homesteads and grave yards should still be allowed, of course, to the people who grew up and live here. Permission could be given for vehicle access to these areas on an individual basis with prior permission having been received from the National Park Service (NPS). This argument of free access to these areas is often used as an excuse for illegal behavior by those who drive their trucks and A TV's, or ride their horses, wherever and whenever they wish.

I also understand the sadness and resentment that many residents feel for past actions and behaviors from some employees of the NPS. Polite and professional interactions with the public and protection and restoration of historic sites, buildings and graveyards would go a long way in mending many peoples hurt feelings with the NPS. I realize that present NPS employees and administrators weren't the ones who took land and property away through eminent

domain from some of the local residents. But unfortunately there is still a real "us against them" feeling from some locals toward the NPS. Also the abuse and selfish manipulation of those who own or control scenic easements and can afford good lawyers is a slap in the face to those who lost their land through eminent domain. The large and expensive newly built homes and resorts along these rivers are an eye sore and proof of the inequality that has been practiced on ONSR lands.

An obvious visual presence of professional-acting NPS employees, including ample numbers of members of enforcement, along our streams, access points and campgrounds would also help with curbing many illegal activities and provide positive interactions between the public and the NPS. I also feel that (if this is not presently occurring) that in the future a portion of canoe or tube rentals, and fees paid by trail ride participants, should go directly to the NPS for the management, care and restoration of the ONSR.

I appreciate the opportunity to comment on the upcoming decisions on how our ONSR lands will be managed. I have been a participant in public meetings concerning these issues now for many years and I hope the NPS will proceed with the strategies and action of the proposed Alternative B. I am not signing this because I was told by NPS staff at the Van Buren office that my anonymity could not be promised if legal actions to obtain all pertinent records by opponents of the proposed alternatives was pursued in the future. Thank you again for allowing me to comment on these delicate issues.

**Correspondence:** I am opposed to the Federal and State Governments taking away more of my rights. I am 70 years old, a taxpayer all my life, and have enjoyed Current River before it became "ONSR". My wife and I own a small cabin just downstream from the Van Buren Bridge.

Originally the plan was sold to local people as a scenic easement. Through the years since Patricia Nixon dedicated the park, more and more rules and regulations (with fines) have been imposed on users of the park.

I have enjoyed the old roads to long-gone homesteads, cemeteries, sawmills and CCC camps. Now many roads are closed. I am too old to hike to these historic places; therefore I rely on my ATV to get me there.

The Carter County Nature Conservancy welcomes ATV's. As their study shows, the ATV's do no damage to fire trails. They do not want horses whose hooves tear up the soil or trucks which compact the soil. "ONSR" and the MO Dept. of Conservation has an opinion quite the opposite. They cannot close roads and trails quick enough.

My boat has a 60/40 motor. However, I am opposed to banning boats with larger motors below Big Spring. I see these larger boats transporting large families to gravel bars for swimming, picnicking and fishing.

PLEASE LEAVE THE PARK AS IT IS. Just because you have the power to control something, doesn't mean you should use it.

Please include me in future mailings concerning the General Management Plan.

Respectfully,

Sam Beggs

**Correspondence:** Dear Mr. Reynolds,

I am writing on behalf of the Missouri chapter of the Sierra Club regarding the comment period for the Ozark National Scenic Riverways General Management Plan revision process. The comment period is scheduled to end February 7, 2014 and we recommend that it not be further extended.

Our 8000 plus members in Missouri cherish the ONSR as an invaluable local and national resource. We began engagement in the GMP public participation process in 2006. In the intervening years various events have conspired to lengthen the process. We value the NPS' perseverance and hard work in developing meaningful alternatives aimed at protection of the riverways and enhanced recreational opportunities. NPS also included a public input component at each step.

Most recently dangerous winter weather compelled the NPS to reschedule public meetings and extend the comment period. That was a prudent and appropriate decision. We understand that some requests for even further extension have been presented to the NPS. However, barring any similar weather event, we urge the NPS to carry this process forward without delay. The ONSR has contemporary problems which are not met by the current, outdated plan. The public deserves to see the GMP process completed and the park managed under an updated plan.

Sincerely,  
Caroline Pufalt , Conservation Chair  
Sierra Club, Missouri chapter

**Correspondence:** The Current and Jacks Fork Rivers and surrounding lands are important resources, both nationally and locally. I understand the inclination of managers who wish to improve management and protection of this resource. They naturally see more restrictive GMP guidance as key to their efforts. Additionally, I fear there is a culture within the NPS that encourages that viewpoint.

I would argue that just as important to the protection and management of the resource is the support of the citizens who use and enjoy the area. Their support is key to enforcement, fee collection, fire management, respectful use, etc. I have extensive first-hand experience with the impact of constant ratcheting of regulations while I was a District Ranger managing nearly half the use of the Boundary Waters Canoe Area Wilderness in northern Minnesota. When public support erodes, management difficulties and costs increase and the resource ultimately suffers.

Consequently, while I support many of the more protective measures proposed, I strongly urge you to select the No Action alternative and work within the guidelines of your existing GMP. Users are familiar with its restrictions and no doubt feel it represents a series of hard-won compromises. Both the resource and its users will be best served in the long run by continuing to build support for the ONSR through implementation of the existing plan.

Sincerely,  
Bruce L. Slover

**Correspondence:** I have enjoyed our natural resources, the Current and Jacks Fork Rivers, since before the designation as a National Park. At no time have I considered restricting our access to our resource a positive notion. The very idea that our citizenry causes harm by our mere presence in nature is preposterous! On April 27, 2009 nature itself did more, in minutes, to alter the scenic riverways than man could possibly do today.

The slow creep of regulations created by the NPS over the years has not gone unnoticed by the majority of us who value the wise use of our natural resources. Consider this letter a protest of any changes to what the people established and have maintained since 1964, in spite of the NPS.

Sincerely,  
Bo Bohnsack

**Correspondence Type:** Letter  
**Correspondence:** This is response to the Draft General Management Plan ("Plan"), October 2013

Preface:

On September 25, 2012 while loading our jonboat on trailer, a park ranger told a fellow senior citizen and me that our use of the upper portion of Current River was about to end. He suggested that we get a canoe. In order to adapt, he said that I should begin a regiment of exercise. Being 70 years of age in conjunction with the effects of rheumatoid and osteoarthritis on my hands and shoulders precludes much paddling. Because of these limitations we use a small 25 hp outboard engine with an electric starter. The ranger's motives for the admonitions were uncertain, but it appeared that he enjoyed the delivery of the news. As is often true during our visits, on that day there appeared to be no other people using the river in the Akers area.

If we are expected to canoe, it would require another vehicle for shuttling. Our grandchildren and I would be unable to float without an additional, accompanying licensed driver. Canoe usage would also add two more hours of ancillary activity for launching, loading, unloading, and swapping vehicles. Due to the cost, we do not have a second vehicle. And my deformed arthritic knees inhibit bank fishing activity. For me and similarly handicapped individuals these factors make use of jonboat nearly mandatory. The current rules make the portion above Akers available from September 15 to May for our jonboat. Although the Plan indicates otherwise, the 18 miles from Akers to Round Spring are available year-around (see footnote). All Plan proposed changes would eliminate our usage above Akers, and greatly limit our enjoyment of the remaining portion to Round Spring.

History:

Current has very fine fishing from Welch Spring to Round Spring. With little success on November 17, 2013 a friend bank fished at Akers. The following day we launched our jonboat at Akers and traveled upstream two holes. On the float back, it continued to be common to catch trout of 17". On the third day, we launched at Round Spring and went up to Sinking Creek. During the float back, my friend caught several smallmouth. Couple this experience with the closeness to mother's house in Houston and her delight of fish dinners, then you can understand how cherished these opportunities are.

Whether for the individual fishing, inclusion of a larger portion of family, or in conjunction with enjoying scenery, we are known to visit upper Current several times per month. We have been doing this for well over a half century.

Behavior:

When on the river we often pull over to sit motionless while others pass. We use these occasions to have conversations with fellow visitors about the area, fishing success, or the absolutely beautiful scenery. A common question concerns the distance to the next take-out.

If we pass a canoe or any other vessel, we do so in quiet water at a speed and distance so as to cause no disruption. Even at floating speed, we attempt to never pass in a riffle unless there is ample space. It is my understanding that law requires all motorized boats to yield to non-motorized boats. We always adhere to that principle.

Due to the actions of canoe clientele with their attendant congestion, rowdiness, noise, and disruption we stay away from the Akers area during the three months of summer. We have learned that a continuous parade of canoes and the above listed accompanying factors are not conducive to fishing nor relaxing. However the other nine months of the year offer increased opportunities for relaxation, family fun, and fishing in this area. Before it became too busy and our handicaps dictated, we logged many canoeing miles on upper Current.

Although the prevailing rules allow our year around boating of Current's 18 miles from Akers down to Round Spring, we visit only the 4 miles portion from Round Spring up to the Jerry Presley Conservation Education Center. Due to the frequency of canoes, we do not visit even that small stretch during summer weekends. In this way, we often see very few others on the water. By completely banning or simply shrinking the available dates, the Plan's three alternative options will exclude us from the area above Round Spring during the prettiest seasons and the best fishing months. You want to eliminate even that.

For security we always go upstream from put-in. Last summer while upstream, the outboard starter stopped functioning. The 15 year old and I floated back to Round Spring. If we had been downstream, the return would have required more physical strength than we possess. The Plan will virtually relegate us to launching at the former (Junction Ferry) landing below Jacks Fork.

#### User Conflict:

In 40 years of using our jonboat, we had only one "conflict". Our jonboat was resting on the south bank approximately 3 miles up from Round Spring. We were quietly fishing one of the best trout holes on planet Earth. A canoeing group appeared and a female canoeist began yelling at us. As she landed on the opposite gravel bar she shouted, "You don't belong here!" She yelled for her canoe-mates to get my boat information. After more hollering, the others in her group asked her to get back in the canoe. They appeared to be embarrassed. She said that she planned to contact a park ranger about us being on the river, in order to assure our arrest. At first my fishing partner and I thought that she was kidding. As she continued, it became apparent that she was serious. After they left, we continued to fish and enjoy the scenery. Except for that episode, we have never been involved in such a situation. She obviously believed that she was one of a select group.

That scene occurred during a sunny Wednesday in June 2011 when we caught (2) large rainbows, (4) nice-sized shadow bass (aka goggleye), a smallmouth bass, and (2) chain pickerel. This was not an atypical day.

This event is certainly no reason to outlaw anyone off the river. The canoeist's obnoxious behavior did no real harm.

#### Conclusions:

Since we all would not be allowed to benefit, then we all will miss the fishing, boating, and general fun of being in the area. It would be neither fair nor right for only some to continue the experience. It would be selfish.

Among those involved in the Current experience have been our grandchildren of ages 15, 10, and 8. The newest attendee is our 6 years old, water-loving granddaughter. It appears that she will have upper Current only as a fading memory. If the proposed changes become true, all the grandchildren will be robbed of further memories. My mother will miss her fresh fish dinners. I will miss being able to catch them for her. Other handicapped and senior citizens will also be so treated and denied access. In this case the creation of an exclusionary, select group of floaters is neither noble nor just.

A half-century ago with the help of family friend U. S. Representative Richard Ichord in saving it from destruction by dams and other such projects, we assumed that Current River's availability was assured. In spite of that we are now close to losing the pleasures of the prettiest portion of the arguably most uniquely beautiful stream on Earth.

This is more than an inconvenience. The result of banning our usage will be to limit the experience to a privileged class. Our favorite place on Earth, upper Current River, is about to be taken from us.

Having found ways to overcome our handicaps and limitations, this is especially disheartening.

This morning I discovered an "errata" on the same web page. Having never seen that esoteric word, it meant nothing to me. It listed the errors contained in the Plan which were referenced in my footnote.

My spouse was a legal and medical administrative assistance for four decades. She has also never seen that word before today. You may disregard my "footnote".

This applies no change to the rest of the response.

Larry McKinney  
lmckinney@cox.net

#### Footnote:

On December 31, 2013 the Ozark National Scenic Riverways Draft General Management Plan ... was downloaded from the following address.

<http://parkplanning.nps.gov/document.cfm?parkID==158&projectID=15793&documentID==56208>.

On page 61 is a map displaying the "No Action" option which proposes to use existing rules. It describes a 25 hp zone with 10 hp seasonable usage as currently being in effect down to Round Spring. The actual lower boundary is 18 miles upstream at Akers. These 18 miles have no seasonal restrictions. In this zone we are able to use our 25 hp engine all year. I saw no online notation which might either acknowledge reality or correct the error.

The existence of this false and misleading information is disturbing.

**Correspondence:** To start out with, in 1983 I floated both the Current and Jack's Fork River. To say the least I was overwhelmed by the beauty and the primeval natural of the ecosystem. Even at that time (20 years ago), I was appalled at the large number of canoes and the party like atmosphere on the river (beer cans in the river along with trash on the bars and in the river). Also canoers not showing respect for other canoers on the river. That was 30 years ago - I can only speculate what it's like 30 years later. Another concern I have is that I've heard the ecosystem is overrun with uncaring ATV user and cattle and horse manure washing into the river. The river is not only for the benefit and the profit of the local community and residents. The rivers and the ecosystem belong to all of use and should be managed for the long-term integrity and benefits of all (including wildlife).

I was also saddened and angered when I heard the Jack's Fork has been dredged for gravel on its banks and bars (causing erosion). It sounds like the locals have driven a political and economic wedge in how the ecosystem is managed. It sounds like the economic and financial factors are weighted heavily in the management of the rivers and ecosystem. Long-term planning is a must. This jewel in the Ozarks must not be compromised or plundered.

Thank you for seriously listening and taking my thoughts and ideas in consideration. In the future, may I hear good news and positive things about the future of Ozark National Scenic Riverways.

Thank you.

Sincerely,

Rick J. Myers

<b>Correspondence ID:</b>	2936	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Dec,09,2013 00:00:00				
<b>Correspondence Type:</b>	Letter				

**Correspondence:** I am writing in response to the National Park Service, Ozark National Scenic Riverways Draft General Management Plan.

I do not support the NPS preferred alternative, Alternative B. I feel this restricts locals/year round residents use and ability to access and enjoy the river ways as families have for generations.

Some examples of the unnecessary restrictions include:

- National Park Service wants to restrict an activity primarily partaken by the local resident. They are doing this by restricting motorized use of 34% river year round and an additional 14% during the summer time. That is 48% of the river basically closed to the locals during the peak season. Yet they didn't restrict nonmotorized visitor (tourist) at all, in fact all areas of the river are open year round.
- They want to close "about" 10 miles of roads primarily used by locals and turn them into "hiking trails". I pity the

handicapped or the aged local population.

- It closes an untold amount of access to the river. I am sure those accesses are primarily used by local residents.
- They also want to close "approximately" 65 miles of horse trails. The local equestrian population and the economy will suffer as a result of this.
- It eliminates traditional camping. It requires that campers only camp in designated areas. So you wouldn't be able to just pick a gravel bar and set up a tent for the night. Also, all designated campsites have a fee.

I feel the no action alternative is the best course of action.

- It treats all visitors: local, floater, hiker, and equestrian alike. It gives them equal access
- It doesn't restrict motor boats to nearly 50% of the river during peak times, while it gives floaters 100% access anytime.
- It doesn't turn traditional local roads to "hiking trails", yet hikers could still hike if they chose to.
- It also doesn't eliminate traditional camping, where you can float, boat, hike, or ride until you find a place to camp for the night.

I feel that the National Park Service has unrealistic ideas that they can create a silent area of the river where there are no unnatural sounds. They must think that visitors aren't going to talk, cough, breath, launch or exit their craft, touch the water with anything, or even move. They, also, must not take into account the highways and county roads in the area and the vehicle sounds that emit from normal travel. I feel that the National Park Service and any visitor, which thinks they can have a completely silent visit, are completely out of their minds.

Thank you,

Justin D. Tyler

<b>Correspondence:</b>	Re: Comments Draft General Management Plan ONSR				

Attention: Superintendent Black

Over its 78- year history the Conservation Federation of Missouri (CFM) has been a consistent voice for conservation, preservation and outdoor recreation in Missouri. Twenty-five years ago CFM was one of the three partners along with the Missouri Department of Conservation and Department of Natural Resources in establishing the Missouri Stream Team Program to help restore and protect Missouri Rivers and Streams. We understand the value of these great water resources and what they mean to the people of Missouri and to the economy, health and quality of life for our state.

The Current River and its tributary the Jacks Fork (which make up 134 miles of the Ozark National Scenic Riverways) are a threatened national treasure which deserves our highest level of support as a unit of our National Parks System.

We also clearly understand the need to plan for the future protection of the OSNR fish, forest, wildlife and unique cultural and natural resources in a manner that insures long term sustainability of the park. Such planning that can hopefully result in best management practices for the resource, a safe and rewarding visitor experience and sensitivity to legitimate local, regional, statewide and national interest.

As The National Park Service (NPS) is presently seeking public comment on preliminary alternatives for a new general management plan and wilderness designation for 3430 acres in the park. We encourage your support for the implementation of a new plan to help ensure quality park management services in the future.

This letter is to advise you that The Conservation Federation of Missouri is in support of "NPS Alternative B", a balanced plan that would address many of the lingering abuses and issues associated with the degradation of the

park resources and a diminished visitor experience. We also support the need for adequate staffing, the enforcement of necessary park rules/regulations and the monitoring of existing conservation easements. In addition, CFM favors the designation of a 3340- acre tract near Big Spring as wilderness.

If properly designed and implemented this new plan will hopefully be a start towards reversing nearly two decades of benign neglect in the OSNR that has lead to less than a positive visitor experience and negative impacts on the park and river. We encourage your support for helping to shape a plan that will bring resolution to the numerous perils faced by the park and allow NPS to capitalize on future opportunities for the Ozark National Scenic Riverway.

Thank you for your time and consideration of this important natural resource matter. If we can be of further assistance, please feel free to contact us at anytime by e-mail at [mhaymaker@confedmo.org](mailto:mhaymaker@confedmo.org) or call 573-634-2322.

Sincerely,  
Richard Ash, President  
Conservation Federation of Missouri

<b>Correspondence ID:</b>	2938	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,03,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				

**Correspondence:** I reviewed the GMP and found the document to be very detailed; having covered about every conceivable aspect of the complex issues that the park now faces as it did throughout tenure there from 1997 until the first of 2006.

My observations and comments are 36 years of what I experienced and learned from a variety of parks I was assigned to, including the last eight at Ozark NSR.

#### The Plan

The preferred alternatives (B) to about every section seemed to be somewhat the same as the old general management plan that I had to work with, which I felt was a pretty good document except its age and somewhat lacking addressing all of the newer complexities managers of today have to face and fine solutions to.

However, I would like to address some of the sections of the plan of which I found to be either fundamentally lacking in information, legal history or addressing current issues:

Scenic Easement section must state in more detail some of the management challenges and shortfalls in handling changes and requests that often come to the managers attention without a formal procedure and process that meets all NPS regulations and reviews. I can only imagine the comments that come from your environmental friends that have involved themselves this planning process and how I mismanaged certain scenic easement tract issues. However, my actions were not taken without consultation with the regional lands office, or their advice. Anything that would strengthen this part of the plan would be better for all future managers.

60/40 horsepower issue: I had eight years of boating regulation experience Glen Canyon NRA on Lake Powell in both Utah and Arizona parts of the lake. I then got somewhat involved in the interpretation of the regulations I found at OSNR. I found that the regulations were designed for the time around the mid-1980s. They were written around the available level of outboard motors that were for sale at the time these regulations were written. The 1980's regulations were, ok, however nobody considered the change in technology and basically the size of aluminum jon boats being built to be used on the rivers in the park in the next twenty plus years. As the boats became wider, allowing for heavier load capacity, the heavier and bigger engines were installed on the boats to push them up and over the shallow shoals. To add to the conflict of understanding, newer motors have their power described as kilowatts not horsepower.

My concern is that all of the boating power limits and use sections on the rivers were designed mainly for enforcement personnel to follow and if necessary be able to articulate these regulations in court before a U.S. Magistrate. Under the current rules and regulations the Ranger must be able to identify a motor's horsepower from registration document, title, and or manufacturer's manual. If challenged in court, I suspect that the Ranger would have a hard time identifying where the engine's horsepower is located at the head or at the jet prop. If asked to convert horsepower to kilowatts and how do you measure that.

I argue that the park should have historically made boating limits and restriction limited to size and speed, as it is on most waterways. This would allow all future enforcement personnel the basic tools to restrict use of boats on certain sections of the rivers. No one realized that the size of the boats would change from old wooden 22 foot by 24 inch jonboats with 10 hp motors from the 1960's to boats now found with 200 hp outboard motors on 18 foot long and 56 inch wide boat that can be used below the Big Spring launch ramp. My main points are, that if you restrict the size and speed of any boat, you will automatically limit the size of the outboard engine. No person would invest in a \$8,000 dollar engine to be placed on a boat restricted in size to operated on a section of river that had a limit on speed along sections of the river.

Wilderness designation: As Chief Ranger of Death Valley NP for eight years I was present when the California Desert Protection Act was passed in 1994, which converted proposed lands of the Death Valley National Monument, adding 1.5 million acres to the park and making all of the National Park lands outside of developed areas wilderness.

This was a big challenge for us as managers and enforcers of new regulations over the new 3.2 million acre park. As you indicate in the plan the Big Spring area of the park is best suited for wilderness lands. I believe that all of those proposing wilderness, should investigate further if you can (cherry stem) roads and historical structures out of the proposed lands. That made it much easier for us to follow the intent of the wilderness act in DVNP. The management and strict administrative uses of these lands will change. While at ONSR and having also worked as a high school summer student in the original Big Springs State Park, nothing has changed since the State Park days. Everything is pretty much the same without any human threats from mechanical use; therefore, if nothing happens to make the land wilderness, the land use really remains the same. You can still remove the firearms range and make it all more in line with the wilderness intent.

Remember, Grand Canyon National Park has no wilderness designation based on its natural characteristic of being isolated and limited vehicle traffic to a small area. The same can be said for the lands proposed in and around the Big Spring area.

Issues Not Addressed in Plan: I would have greatly liked to have seen a specifically proposed section identifying the need for a stand-alone visitor center. The visitor center would or could be multi agency addressing all of the regional diverse related land management themes.

Beginning in 1997, I was made to contact person of the park to work with developers, and General Services Administration in beginning and finishing the Park Headquarters building where you now reside.

My ideas at the time was that it was too bad that the structure could not be located on the new four lane highway 60 that brought more traffic to the area. The GSA agreements and politics were already agreed upon before my arrival, so the best of a not great situation was made. GSA stated that they don't build Visitor Centers, just buildings for administrative use, therefore, you have what was handed to the park, not necessarily what we all wanted.

I would, for planning purposes, still include in the plan a section identifying the need for a high profile visitor center that would surpass that MDC center near Winona. I believe that the visitor center could serve as a model for educating, informing and serving the many visitors that pass through and around the park. After the new highway was completed studies indicated that the traffic increased by several thousand a month. We missed the opportunity to increase visitor contact and become more visible to the general population in the southeast part of Missouri.

Judicial System for the park: As someone who spent most of there first twenty five years of service as a visitor protection ranger throughout nine different parks and various jurisdictions I found the U.S. Magistrate and Eastern District Court of Missouri to be the worst I have observed in all of my years of service. The U.S. Magistrate in Cape

Girardeau was refusing to handle misdemeanor cases. He indicated that he was too important to handle "petty misdemeanor cases". Noel Poe and I began the process of finding a solution to our cases not being properly handled, we finally met with the District Judge in St. Louis only to find that pretty much all of those involved close ranks to protect their own.

However, the issue finally began to clear to our satisfaction, but the main reason I bring this up is that everything relative to changing regulations on boating, closing roads restricting activities anywhere within the boundaries will only be effective if and when the federal judicial system is in place and supportive of the park administration and understanding of the mission of preservation and protection.

Lots of wording in the plan indicate that education of the visiting public is the factor to reduce behavior problems and help correct activities that directly conflict with park policy or administration. I am here to advise you that having a supportive court system is paramount in correcting visitor behavior problems as complex as they are during peak visitor season. The arrest or citation will only work as long as the Judge adjudicates the cases and supports the intent of the regulation and the ranger's actions in the case.

Politics: Remember, it may not seem to be this way but there are more quiet supporters of the park than you may hear on a day-to-day basis. Everyone I knew growing up and rejoined after moving back after 30 years away, realize that the alternative to not having the park there would be much worse, but they would not let you know that. I hear of threats to turn the old state parks back to the state, and what Jason Smith is spouting off in Congress; don't let that get to you, that's been going on since the beginning. Ignorance is bliss, my mother always said, so the louder they are; the less they contribute to the well being of the park.

Finally, thanks for letting me comment and do not hesitate to contact me if you see fit for any historical, political, or general information that the current locals and or staff cannot provide.

Sincerely,

Chris Ward

<b>Correspondence ID:</b>	2939	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,03,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Superintendent:				

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, my experience in the Riverways in the following recreational uses:  
Swimming in Current River and Jack's Fork River, Hiking in to Blue Spring on Current River, Kayaking Current River near Van Buren.

These uses are important to me because:

I support preserving the clarity of our Springs and Rivers. Physical Health and my support of keeping rivers safe and clean for human recreation and wildlife. Missouri is unique in having clean rivers.

In addition, I appreciate the conservation and preservation functions of the National Park because:

Outfitters have dangerous drivers of old school buses which drive recklessly. My family has a century-long support of preservation and conservation of these rivers and springs to the fifth generation!

The primary areas I use are:

Jack's Fork River at Alley Spring Big Spring, River above and below. Big spring from Owl's Bend South.

Wehmeyer is especially overused by outfitters.

The No Action Alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further it fails to address these critical problems in the Riverways:

- Overcrowding of Current River by the Landing which is a monopoly in Van Buren area, making area unsafe for children, families, elderly, outfitter abuse of river.
- Pollution of rivers by meth users
- Aggressive and violent behavior by floaters involving drugs and excessive alcohol intake threatening children's safety.
- Aggressive use of large motor boats which belong on lakes

The Ozark National Scenic Riverways ("Riverways"), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation.

The management of ONSR in terms of resource preservation, sustainable use management, and restoration of natural ecosystems should rival that of our nation's most pristine and unique public lands.

A. Edgar

**Correspondence Type:** Letter  
**Correspondence:** Anything less than Plan A is unacceptable. I first canoed the Current River over fifty years ago. Many heavier uses of the river are taking place today. Following the 1927 flood on the Mississippi, conservationists fought off dams on the Current. We wouldn't have a river today if it weren't for conservationists.

Today conservationists continue to fight for the qualities the river was set aside for. Plans B, C, etc., if continued for a hundred years will destroy the Current River. Anything less than Plan A will hand the river over to anarchists.

Sincerely,  
Duane B. Kelly

**Correspondence ID:** 2941    **Project:** 15793    **Document:** 56208  
**Received:** Feb,03,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** On the whole, I support Alternative B, but I have some comments on various aspects of this plan. My comments are specific to the Current River above Two Rivers and the Jacks Fork River. I am not familiar with the lower Current River.

Motor Boats:

1. I am in favor of limiting motors on the upper sections of the Current (above Akers) and the Jacks Fork above Alley Spring. It is nice to have a section of each river that is quiet and you don't have to worry about dodging a boat tearing up the river around the next bend which you can hear coming.
2. Jet boats have no place on these two rivers, too noisy and too fast. They belong on bigger bodies of water.
3. 25 HP is enough.

## Horses

1. To begin, the Ozark National Scenic Riverways is not primarily a horse park, so accommodating trail riders should be secondary in terms of money spent and labor expended to the cultural and natural experiences of park visitors.
2. Overnight horse camping areas should be located outside the park, operated by private business. Overnight horse camping areas would require clearing, vehicle access, outhouses, water, signage and trash collection. On going maintenance would include removing manure, roads, trash removal, vegetation control and supervision. This all cost money, better spent elsewhere.
3. Horse Trails-put the horse trails where the park wants them. Close the trails that the park does not want. Add more trails away from the river, especially on the ridges where it is more fun and prettier to ride anyway.
4. Every National Park I have been in that has trails, state that visitors stay on the trails. This park is no different. If the trail riders do not stay on the trails and cross the river at unauthorized crossings, only allow rides with a licensed guide or groups that have checked in to a post and have been given permission to ride in the park.
5. I think there should be a fee for riding horses in the park, just as there is for taking a boat on a federal lake. This money would help maintain and build new trails.

## Hiking & Bike Trails

1. Definitely more hiking trails. Wonderful way to enjoy the area. Wholly different experience than a river experience. Hiking, added to floating, would persuade people to spend more time in the area. Especially when added to more interpretive activities.
2. The lengths should be day hikes, half day hikes, overnight hikes and several day hikes. There could also be designated backpacking camping areas.
3. There are all kinds of groups that would love to build new trails and put up signage. This would save money.

## Parks Roads

1. This subject is a tough cookie, a balance between what the ONSR users want to experience on the rivers and what the locals believe they are entitled to. The one thing I might suggest is that there needs to be a lot more communication and cooperative decision making between the ONSR administration and local entities. These arrangements should be established in writing and stuck with. It should be part of standard operating procedure.
2. Securely close and restore roads and vehicle crossing not needed.
3. Designate which gravel bars vehicles can drive to, restrict the type of damage those vehicles can do to the gravel bars, and what kind of camping and noise that can happen on these designated bars.
4. Keep vehicles out of the rivers. Make violations hurt financially.
5. Vehicles cross at designated fords.
6. Signage is really important here, saying what is open and what is closed.

## Camping

1. Primitive campgrounds- I think there should be more of these spread throughout the park. The smaller, less impact camping experience is something a certain group of campers really treasure. These campgrounds might be an area that you could work with locals to use for their family reunions, deer camp, etc., only with prior notification.

## Interpretation

1. This one area where working with other groups would be beneficial. Missouri has a logging interpretive center at Twin Pines, and has a potential education and conference center at Current River State Park.
2. ONSR has at Alley Spring an incipient cultural interpretation center. Round Springs is compatible with a natural interpretation center with the cave and springs. If ONSR concentrates on the "cultural" at Alley and the "natural" at Round springs, first there is no duplication of resources and two, the ONSR experience is expanded, perhaps persuading people to spend more time in the area.
3. Preserving and restoring historical structures could be an area of potential partnerships with local church groups, state historical societies, local and state educational institutions, and special interest groups like scouts.

## Funds

1. Trail riders should pay something for park use.
2. People who put in canoes, but don't have concessionaire's permits should pay something.
3. How about season passes, nominal, for locals who put boats on the river.
4. Nominal seasonal camping passes in primitive areas for locals.

I have one more comment which probably has to do with funding, but is really a comment on the management of the park. The staff and administration associated with ONSR must be committed to implementing this new plan. They will need to put in place measures and personnel to carry out and enforce whatever is decided. Otherwise, the present situation of haphazard management or no management will continue.

The park itself is wonderful, truly a great place to spend time by oneself, with family and friends, especially grand kids. My husband and I fish, float, hike, bird and just sit in the Park. I grew up in St. Louis and have spent years enjoying this area through float trips, vacationing, camping, and now as a resident.

I also respect the local families attachment for this place, considering how recently these families lost their land. This land is still very much a part of their traditions and family experiences, which are still now being handed down to children and grand children. The natives who live away return for holidays, birthdays, reunions, graduations, deer season, gigging, turkey hunting, funeral and to retire back home. Their attachment to this area and its cultural traditions, i.e. music, hounds. Turkey calls is unique in this age of no one having roots. The rivers are central to these traditions and activities. I think locals should be given special access within decided upon limitations. They are the ones who have folks buried in family cemeteries, have memories of cabins where they lived with parents, grand parents, great grand parents, brothers and sisters and stories of all kinds of "remember whens" they shared with friends in these hills.

It is a very special place.

Yours truly,  
Carla Bascom

---------------------------	------	-----------------	-------	------------------	-------

<b>Received:</b>	Feb,06,2014 00:00:00
------------------	----------------------

<b>Correspondence Type:</b>	Letter
-----------------------------	--------

<b>Correspondence:</b>	I am writing to comment on the ONSR GMP. I have spent time in the Ozark National Scenic Riverways my entire life and am the third generation in my family to do so.
------------------------	---

I prefer Alternative A as outlines in the GMP because of the protections it affords to our citizens and natural resources.

As a boat owner I have noticed the perils that swimmers, tuber, and canoeists are subjected to by careless and aggressive boaters. Alcohol and drug use is rampant and contributes to the rowdy atmosphere and lack of safety on the river.

I also own kayaks, canoes, and tubes and am hesitant to allow my son to play I the Current River most weekends because of the over-crowding, reckless jet-skis and drunk debauchery.

I urge you to protect our natural resources, families, and way of life and promote a safe environment. Outfitters should be required to comply with safety provisions rather than be given free range over the Ozark National Scenic Riverways. If not for conservation efforts and wise management - the treasures we value today would have destroyed long ago.

The "no action" alternative is unacceptable. It fails to address the need to address law enforcement's current challenge of enforcing the existing standards and laws. It also fails to address the issues of overcrowding, pollution, littering, drug and alcohol use, outfitter profit above everything else, and jet ski and boat use that is inappropriate for the rivers.

The establishment of the Ozark Scenic National Riverways 50 years ago was done to preserve converse and promote recreation. I encourage you to be the best steward you can be and move forward with the original commitment to these three principles.

As a southern Missouri Native and devoted Ozark fan, I hope that you will do all you can to do to protect one of our most valuable and loved natural resources.

Sincerely,

Sylvia Edgar

**Received:** Feb,03,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** I am a long-time resident of the Missouri Ozarks and have visited the Riverways and floated its rivers many times.

My comments on your draft General Management Plan/Wilderness Study/EIS are provided below. I tried to provide them via your internet website but found that I could not print a copy for myself of my completed comments. It would only print the first part of my comments that fit within the small space of page one. I learned about the document via newspaper, which is the avenue I prefer.

Comments:

The Ozark National Scenic Riverways, sitting as it does in the center of the Ozarks in the center of the Nation, might well become the centerpiece of the National Park System in the future. Certainly, it fulfills National Park System mandates admirably by virtue of its unparalleled diversity of plants, animals, natural habitats, scenery, and public uses. Yet, review of this document leads me to believe-despite the extensive public involvement that the Riverways is still being drastically undersold. Perhaps too much "group think" has occurred among public and private interests alike. Perhaps the National Park Service lacks a master vision for all of its parks- -especially this one.

For example, 65,000 acres are authorized, yet only 51,654 have been acquired. Why is there not at least some mention of additional land acquisition. It would enhance public benefits and help solve specific resource/public use conflicts. Overall, the park is much too narrow, making it extremely difficult if not impossible for management to protect resources adequately. Again, thinking long range, a distance of, say, 2 miles back from the rivers on each side would make for greatly enhanced resource protection, public use, and management capability.

As another example, why is there not consideration of a major training academy, with housing, dining, and recreational facilities located in the Riverways? Certainly, management challenges here rival those of any park in the System. Therefore, it would be an ideal place for internships and practical experience following formal training for Park Service employees. Additionally, facilities could be provided for research and for preservation of biological, cultural, and historic resources. Workshops, seminars, and field trips for local citizens and others could educate, influence perceptions, and reduce conflicts among competing uses. Drunken, rowdy behavior by visitors must have no place within the Riverways. It is inconsistent with the serenity and beauty that soothes our souls. We don't allow it in art museums and we shouldn't allow it here either. For the same reason, off-road motorbikes should not be permitted, and the big, loud jet boats should be eliminated as well. If the Park Service does not demonstrate respect for natural resources-including freedom from noisy intrusions, who will? I support whatever means are necessary to ensure quiet and respectful public uses consistent with the purposes for which the Riverways was established. Zoning, increased enforcement, limiting the number of people who can have access, and requirements for permits are all legitimate management methods as needed to protect resources and provide superb visitor experiences and safety.

Human populations around the globe and in our Nation will continue to grow, causing increased potential for environmental degradation. It falls to agencies like the National Park Service to protect our natural resources from ourselves. Those of us alive today and using the Riverways are but a tiny number compared to the generations who'll use it for eons into the future. Therefore, we must err on the side of resource protection, if we err at all. For these reasons, I prefer Alternative A. It includes a wilderness designation-which I support. It has the best chance of preserving and enhancing environmental values while we wait for a master vision of a complete and fully functioning Riverways to appear for guiding the direction of management.

Sincerely yours,

R. Wayne Weier

**Correspondence:** Good Day Mr. Black,

I hope you read all this letter and begin to be led by the spirit of God to make your decisions in time to come because this earth belongs to the one who created it, he supposed to be the one to make decisions about it as man read's his word. Read Psalms 104:5 who laid the foundations of the earth that is should not be removed forever, Ecclesiastes, chapter 1 verse 4 say: one generation passeth away and another generation cometh "But the Earth abideth Forever" No Global Warming to destroy it, back to Psalms 104:11. He sendeth the springs into the valleys which run among the hills, they give drink to every best cattle of the field, the wild asses quench their thirst if we fail to make our decisions according to what Go's word says this is what his word say's and I did not write it. Psalms 34:15. The eyes of the Lord are upon the righteous and his ears are open unto their cry. 34:16 says the face of the Lord is against them that do evil, to cut off the remembrance of them from the earth, and I am not writing these things to threaten or condemn you. I am writing them to help you and our land. I don't think man should clutter it up with trash beer bottles glass and but there needs to be middle ground. What's wrong with taking pictures God don't care he gave man the technology to make cameras, he didn't intend for someone to charge for it. We have plot maps I didn't charge for man to take of picture of my farm's.

Who Jesus was baptized in the River of Jordan Matthew 3:13 people are still living baptized today in Jordan River God created the Rivers for man to be baptized in, he told all believers to be baptized Jesus or John either one did not have to pay to use the rover, god anoints his people today with his pity, he says do not touch mine anointed, and do my prophets no hard, and he said if you offend one of my little ones it would be better for you if you had a millstone tied around your neck and cast you into the sea, and again sin. I'm not trying to condemn you but not me but God is going to judge America for wrong doing I don't know if you believe in Prophets but I have heard there have been at least 2 prophets God told them that New York would be hit by a bomb, one said it would be in OBAMAS time in office, I believe that government of man is trying to take over our freedom, not making Godly decisions, but if it not of God it will be destroyed. Read Isiah 9:6 God will have last say. The Righteous shall inherit the earth they shall never by removed.

Thank you for reading my letter,

Gary Honeycult

**Correspondence:** Dear Mr. Black,

Thanks for this opportunity to comment on the proposed ONSR General Management Plan. At age 73, I'm the former editor and co-owner of the Daily American Republic in Poplar Bluff. I've spent the past 60 years enjoying the Current River from its confluence with the Black River eight miles upstream from Pochontas, Ark., to Montauk State Park.

As a newspaper reporter/photographer and outdoor columnist I covered the development of the Riverways from the initial proposal to the passage of the enabling legislation to the dedication ceremony on June 10, 1972. Dignitaries present that beautiful day included Tricia Nixon Cox, the President's daughter; National Park Service Director George Hartzog; Assistant Secretary of the Interior Nathaniel Reed; Congressman Richard Ichord and U.S. District Judge H. Kenneth Wangelin, a native of Grandin and strong supporter of the park.

Personally, I, too, have always been a strong supporter of the Riverways. Without the protection of the park, I'm convinced we now would see extreme over-development of the rivers, with the accompanying problems of blight and environmental degradation.

In 1982 Secretary of the Interior William Mott appointed me as chairman of the ONSR Advisory Commission. On May 20 that year I presided over the final meeting of the Commission, which by law was dissolved on June 10, 1982, 10 years after the park dedication.

Now, fast-forward to 2014. It's my opinion that the general public will be served best if the Park Service adopts a "no changes" course of action for the new management plan. If horses are a problem on the upper river, for example, correct the individual cases where needed. If vehicles are intruding on a gravel bar and won't respect warning signs, close it off. But don't issue a blanket regulation shutting dozens of traditional roads. That makes for terrible public relations.

Also, there is absolutely no need to ban outboard motors on the upper Current just because "the public has asked for it," the reason given to me by one of your personnel at the Van Buren public meeting. Outboard motors have been a traditional use on the rivers for 100 years. (Ole Evinrude invented the first one in 1907.) Just let Mother Nature (the depth of the shoal) govern outboard use. The current 40-horse limit (at the lower unit) is a reasonable accommodation. Another major consideration, in my opinion, is the safety issue. Those of us who have operated outboards on the Riverways for many years (I run an environmentally clean Yamaha 40/30 four-stroke) can cite you numerous instances of having rescued tubers, canoe paddlers, etc., from dangerous situations because so many of those people are grossly ignorant of the river's hazards. These are the very people, I suspect, who are pushing for an outboard ban. You don't hear boat operators demanding a tube, canoe or raft ban when traversing the river in a john boat becomes impossible on a summer weekend.

I, too, enjoy the solitude of taking my grandchildren on an overnight canoe-camping float. But I do it on weekdays and in the late fall when the river traffic has subsided.

The occasional john boat we encounter is simply part of the natural landscape for us.  
The river should be managed for EVERYONE.

Finally, I am opposed to the proposal to convert a portion of the former Big Spring Park area to a federally designated wilderness. I know that your agency mandates you do a study to determine if you have an area that might qualify. Just continue to manage Chubb Hollow as a natural area. A statutory federal wilderness area would preclude heavy equipment being used to fight fire. Also, it likely has a "slim-to-none" chance of ever being approved anyway. All the proposal has done is create a huge wave of animosity toward lithe feds." You don't need that.

Finally, I want to thank the Park Service for its 40-plus years of stewardship of our natural treasures, the Current and Jacks Fork rivers, and the riverine corridors they support.

Sincerely,  
Yours in Conservation

JOHN R. STANARD

**Correspondence ID:** 2947 **Project:** 15793 **Document:** 56208  
**Received:** Feb,06,2014 00:00:00  
**Correspondence Type:** Letter  
**Correspondence:** Dear Mr. Black,

I would like to make the following comments on the Draft General Management Plan for the Ozark National Scenic Riverways.

I am opposed to the Wilderness proposal.

The area you propose to be classified as Wilderness has been exposed to centuries of anthropogenic impacts such as fire, large scale logging operation and grazing. All of these activities have caused dramatic changes in the composition of forested areas and local streams. The primeval characters in this area is long gone and can never be recovered.

I am disappointed with efforts of NPS to protect and restore cultural resources of the Riverways area. It appears NPS may have lost the opportunity to protect and restore significant artifacts from this area.

I suggest NPS proceed very carefully with any proposals to reduce noise within and adjacent to the Riverways.

It appears NPS is willing to adopt management alternatives that will have negative impacts on the local economy.

I am disappointed in the quality of the various studies and surveys conducted by NPS that were used to support NPS recommendations for the future. I question the validity of some of your information.

Your preferred plan (plan B) proposes to drastically reduce the use of motorized watercraft and reduce horsepower on the Jacks Fork and Current Rivers. About 34% of the Riverways will have motorized watercraft restrictions. These proposed restrictions will have serious impacts on people that fish from motorized watercraft.

It will also impact public agencies that are impowered [sic] to manage our fishery resources and provide law enforcement.

I am disappointed NPS has not fully implemented the 1984 plan.

I am opposed to Alternative A, B, and C. And suggest you continue with your no-action alternatives until you have fully implemented the 1984 Plan. I suggest you consider the suggestions of the Missouri Department of Conservation, especially comment 4.

Thank you for the opportunity to comment on your proposals.

Jerry Presley  
Director Emeritus  
Missouri Department of Conservation  
1988-1997

**Correspondence Type:** Letter  
**Correspondence:** Dear Sir,

As the Texas County Farm Bureau Board of Directors. who represent farmers and ranchers of Texas County Missouri. we would like to comment on the Ozark National Scenic Riverways Draft Management Plan.

We have approximately 600 members who unanimously support the No Action Alternative". We realize that we are

heavily outnumbered, underfunded, and unorganized compared to the people from the urban areas of this state. Please consider our story.

Texas County and surrounding counties have a Land Use Plan on file which addresses the relationship between the county, state and federal governments. This plan clearly states the position of the county when various changes are proposed for our area. It has been recognized by the courts as valid.

Major changes such as closing river crossings, changing our roads and trails, regulating river traffic and river access has a big impact on our way of life, our traditions, and our heritage as well as the economy of our area.

Our citizens rely heavily on our natural resources for our livelihood. Over the years our timber industry has had to deal with many burdensome rules and regulations. The sawmills have rules pertaining to waste disposal, mill operation. OSHA, EPA. dust and pollution, labor rules, and on and on.

Most of the oak flooring and a large amount of the railroad ties used come from these hills and valleys. Charcoal is another major product produced here in the Ozarks.

When more land is set aside for wilderness, it limits our access to harvest and manage this God given asset.

Tourism is a major concern also. Our rivers and forest are a beautiful and awesome site that we like to share with city folk. We have worked and managed these hills for over 150 years to get to what we have now. We really don't need people coming to us telling us what we are supposed to do when all they know has come from a book.

We realize that we native folks are considered unlearned, uneducated hillbillies. However we must have not done too bad if now you want to preserve what we presently enjoy.

Tourism has become a major business in our area. Please don't infringe on local control anymore than you have already.

Please honor our right to private property, and the BHI of Rights in the United States Constitution.

Therefore we recommend the No ActIon Alternative.

Thank you for your consideration.

**Correspondence:** Dear Mr. Bill Black,

I was not sure about sending in a comment about the Ozark National Scenic Riverways Management Plan/Environmental Impact Statement. Then I met park superintendent Timothy Good, from Grant Historic Site south of St. Louis, MO at the Van Buren open house last evening. He assured me that he knew you and that each comment would be read, even if there were over 1,000. So here goes.

I have pictures of my Grandparents and dad in a wooden john boat on the Current river when he was a kid. My mother's family would have their family reunion each summer at Big Springs. My family was invited and attended the June 10, 1972 christening of the Ozark National Scenic Riverways by Tracia Nixon Cox throwing a bouquet of flowers into Big Springs. My husband's family also camped on the Current River enjoying fishing and floating during the day and singing around the camp fire in the evening. .

My Grandpa Sulser and his friend were featured in the July, 1947 Sports Afield magazine. They took a writer/hunter, fisherman, Charles Callison, on a gigging trip on the Current River to show him that giggers are not out to kill all the game fish.

Taking care of the Current River and surrounding area have been something that we learned growing up and continue to instill in our children and grandchildren.

Each year for 35 years my husband, Dale, and I have boated, fished, floated, hiked and camped on Current River with our family. Our favorite spot is Logyard gravel bar. I could show you pictures from 35 years ago until now and you could see that the gravel bar still looks the same. Those who live in this area are the caretakers of the river. Sure the river has changed some but this is from mother nature, not from the people who love spending an afternoon fishing, swimming, and floating. We don't need a number on a post to tell us where to camp, we camp where there is a spot open with family and friends.

There are some who think that floaters and boaters don't get along so there should be a motor limit. There have been several times when we have helped floaters collect what they lost or helped them get out of a jam. Once it was a rainy campout and here came a family floating soaked to the bone and we warmed them by our fire and took them to call to be taken out early.

We want the traditions to continue, the ones that were started 3 generations ago. Our 4 year old granddaughter caught her first goggle eye last summer. How excited she was. Singing around the campfire after a day on the river, what can be better than that. Gigging on a cold night in December and eating yellow suckers, what taste better than that.

The management statement plans to take away some of these traditions up and down the river. Please allow us to continue with our family traditions and enjoy the Current River. We and the community around us will continue to take care of the river and its surroundings as we have for generations.

Sincerely,  
Krista Hampton

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear National Ozark Scenic Riverway:				

As a lifeline canoeist and kayaker at 62 years old having floated 90% of the rivers in Missouri and rivers in Arkansas, Tenn., and N.C. and a member of the Small Mouth Alliance and Conservation Federation of Missouri. I would hate to see the Jack Fork, Eleven Point, Current and Buffalo turned into playgrounds for ATVs and mudd trucks. I feel many of the roads in sensitive areas need to be closed to curtail abuse to plant and fisheries and wildlife plus fire hazards and trash.

The horses crossing the river I don't agree with; they are doing it in such large amounts that manure and pee don't work well with fishing and aesthetics I did stream team on Joachin Creek and adjacent to our 160 acre farm and

excess nitrogen in the water makes for water pollution.

I am not saying the people around the river are all hoosiers but Eminence and the folks around those rivers need to realize they get a lot of their \$ from tourist, fisherman, and floaters. If you turn it into a sewer and abuse it the % wont be there. People from the cities and nation own and have a say in what happening there.

Thank you,  
Gary Kappler

**Correspondence:** Re: Draft General Management Plan for Ozark National Scenic Riverways

Dear Mr. Black:

I would like to take this opportunity to express my appreciation to be able to submit my comments to you regarding the National Park Service and to express my feelings toward the Draft General Management Plan for Ozark National Scenic Riverways (ONSR). I am writing this letter as an individual and it is not to be taken to be representative of any organization or department with which I may have an affiliation.

This plan, I feel, has been developed exclusive of local input from the citizens residing in or near the ONSR. Further, and probably more important is the exclusion of all parties that will be impacted in a negative fashion by the proposed plan. Therefore, I express my very strong opposition to this proposal and would recommend that the National Park Service enforce the current General Management Plan.

I would urge the National Park Service (NPS) to consider abolishing the proposal and moving forward with an appointed group of citizens and state agencies to develop a workable plan providing solutions to issues of concern to the NPS. I know state agencies and stakeholders would be most appreciative of having the opportunity to work with you and your staff in the development of a new General Management Plan

Again, thank you for the opportunity to present you with my comments.

Sincerely,  
Don C. Bedell

**Correspondence Type:** Letter  
**Correspondence:** The following is my comment on your draft plan.

I am unable to read or print the draft plan from my wife's PC. The print is too small. Don't know why we can not print.

With that info my comments are:

The Missouri Department of Natural Resources and The Missouri Department of Conservation both encourage the use of Missouri and Natural Resources it is my hope and prayer that ONSR is continuing to encourage the use of our riverways by following the example set by DNR and MDC by expanding the opportunities. Our pamphlet "floating the Ozark Rivers" giving outfitters and the multifold pamphlet in full color titled Ozark are both good encouragements to continue the use.

Now for my recollection.

I watched the Park Service purchase and take the rivers, farms, homes, and livelihood (being a farmer). It was difficult for my Father's first cousin as he lost his farm. He could not find a replacement. My father Hulbert Rader

his first cousin David Pummill.

I have floated the full length of both rivers as a professional fishing guide with a guides license from both Mo and Ark, and also personal floats. Also have done many floats on Eleven Point.

Please continue to encourage use of Missouri's Natural Resources as MDC and DNR do.

Sincerely,

Jerome Radar

<b>Correspondence:</b>	Dear Superintendent,				

My mobile phone didn't allow me to comment online, therefore, I want to make sure with this note I am "voting."

Changes needed to be made. Motorboat traffic on the river last summer make it nearly impossible for me to float a canoe. The wakes from the boat nearly capsized me ALL DAY LONG. Worst was the sheriff speeding along with the boats front and in the air!

Another time all the horses in the river, lots partying and fireworks made it impossible to sleep on a gravel bar. Noise traveled until 2am scaring wildlife towards us. Bear in campsite!!

I vote for as many changes as possible. These rivers are being destroyed!!

**Correspondence:** Park Service: Please consider my support for the park services Alternative B as described in the STL Post Dispatch, January 26, 2014 article. It seems balanced to please both land owners and the general public (me) as a national park. The area is unique but is in danger of over use and destruction. I have floated the river and hope it will remain for my relatives in the future. Beer bongos, nudity and violence- -a man was shot this past year by a landowner. I am incredulous of the sheer numbers of people using the river. It needs to be managed in some way as to limit the amount of canoes and people per day. The canoe rentals could be used to control as a start. The access points could be patrolled and limited. Livestock and wheeled vehicles should not be allowed to pollute this stream. It is not infinite and could be debased to a point where no longer a treasure of nature or a source of pleasure for those who float the stream. Please use all the power of the US park service to plan and implement permits, procedures and even levy costs for entry if necessary. Nature's beauties are for all to use although those who were there first may feel ownership (although inaccurate).

Sincerely, Emily LaBarge

1-22-14

This evening I was very disappointed when I arrived at the powder valley nature center to attend this evenings open house and was greeted by a Kirkwood police officer at the entrance to the area only to be turned away due to the over crowding of the facility. Apparently the facility was at occupancy, and there were folks outside in the cold, unable to enter. The officer was very polite, and informed me that I could walk up the hill to the building, but in all likelihood, would not be able to enter the open house due to occupancy restrictions.

I have been a park user all of my life and very much enjoy the current status quo. I strongly object to the restrictions described in alternative A. If a change in the status quo is going to happen, then would prefer either the B or C options.

My observations of the use of the park is that during the 3 summer holiday weekends, the park is at or exceeds capacity. Fortunately, this occurrence is limited to these 9 days a year. The other summer weekends can be busy, but not intolerable. As to the fall, winter and spring seasons, the park is very peaceful. My concerns are restrictions could likely be imposed on the users of the park for the full calendar year due to the park being "over loved" on 9 days of the year.

As to specifics:

HP limits. Option C is preferred with the exception of the banning of motors in the upper portions of the streams, in these locations I would prefer the restrictions remain unchanged.

Gravel bar camping: Status Quo preferred.

Thanks for all the hard work that has gone into this study, it is very well written and extremely informative. I particularly enjoyed the history of the Ozarks and the Current river region. I visited the river this past weekend and i am always amazed at the solitude of the river and region in general in the winter. What a beautiful country we live in.

Thanks for doing your part in helping to keep this country a great place, but, please keep it accessible to folks of all ages and abilities. Further restrictions of access points will likely cause increased concentration of users at the fewer available points decreasing the experience of those who are unable to float the river and camp on a primitive gravel bar sites.

"Feedback on Rivers Plan"

Ozark National Scenic Riverways

To start out with, in 1983 I floated both the Current and Jack's Fork River. To say the least I was overwhelmed by the beauty and primeval nature of the ecosystem. Even at that time (30 years ago), I was also appalled at the large number of canoes and the party like atmosphere on the river (Beer cans in the river along with trash on the bars and in the river). Also canoers not showing respect for other canoers on the river. That was 30 years ago - I can only speculate what its like 30 years later. Another concern I have is that I've heard the ecosystem is overrun with uncaring ATV user and cattle and horse manure washing into the river. The river is not only for the benefit and the \$ profit of the local community and residents. The rivers and the ecosystem belong to all of us and should be managed for the long-term integrity and benefit of all (including wildlife). I was also saddened and angered when I heard the

Jack's Fork has been dredged for gravel on its banks and bars (causing erosion). It sounds like the locals have driven a political and economic wedge in how the ecosystem is managed. It sounds like the economic and financial factors are weighted heavily in the management of the rivers and ecosystem. Long-term planning is a must. This jewel in the Ozarks must not be compromised or plundered. Thank you for seriously listening and taking my thoughts and ideas into consideration. In the future may I hear good news and positive things about the future of Ozark National Scenic Riverways. Thank You.

Sincerely,

Rick J. Myers

**Correspondence ID:** 2967    **Project:** 15793    **Document:** 56208

**Received:** Feb,04,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** Dear Superintendent Black,

Thank you and your staff for all of the hard work you have put in over the last several decades in building, maintaining and working to preserve the Current and Jacks Forks for our future generations. Regarding the General Management Plan, I ask that you stand firm and consistent with the original purpose of the National Park Act of 1916 "to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

I respectfully request that you adopt Alternative A. I believe that it provides the best protections for the Ozark National Scenic Riverways of the three proposed options. I strongly support closing illegal roads and restoring natural conditions, closing undesignated horse trails, and restricting vehicle and horse access to gravel bars. My grandkids have had bad experiences on the gravel bars due entirely to the damage and contamination from horses. I hope you can improve the rivers so that they will have a great and safe experience decades from now when they take their kids and grand-kids on the Current and Jacks Fork, and Buffalo Rivers.

I am also becoming more and more concerned about the E-Coli contamination of your streams, and I hereby request that you start a regular program of testing the river's contamination and water quality on a regular basis at several fixed points along each stream and continue to monitor and develop a database of these readings for future reference and stream quality management. Please keep these rivers safe for our kids and grandkids.

Thank You,

Edward Gross & Family

---

**Correspondence ID:** 2968    **Project:** 15793    **Document:** 56208

**Received:** Feb,10,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** Dear Superintendent,

I prefer Alternative A for the GMP of the ONSR. I oppose the use of motorized boats & equestrian use on & in the rivers in the park. This park's problems have included the seemingly ever-expanding presence of motorized vehicles and their maze of eroded tracks in riparian areas and on gravel bars; the explosive growth of equestrian use and proliferation of undesignated trails and river crossings (many of which are in sensitive riverine areas or on steep, heavily-eroded slopes); overcrowding in certain reaches of the rivers and resulting conflicts among user groups, coupled with the rowdy behavior of some visitors; and inadequate monitoring and enforcement of scenic easements.

I believe Plan A will decrease the number of access points and close illegally developed roads/trails. It will limit the horse power of motorboats above Two Rivers. Plan A provides better usage of the rivers by horses and motorizes boats. It limits access to the rivers by motorized vehicles except on official roads. It eliminates illegal horse trails and reduces river crossings. These changes reduce E Coli contamination and make the rivers safer for swimming. Plan A proposes reasonable gravel bar usage and stops the damage and contamination by horses. This will have the potential to restore gravel bars to their natural state.

Plan A has the best chance of reversing the harmful effects on the rivers and returning them to the condition they were in when the Scenic Riverways was established.

Anne M. Hussar

**Correspondence Type:** Letter

**Correspondence:** It's Our Back Yard

Dear Riverways Superintendent Bill Black,

Let me start by introducing myself. My name is Charles Stewart and I am a 34 year old father of two. I reside in Reynolds County Missouri. I am very proud to live in such a naturally rich region of the great state of Missouri. Those natural resources are the very foundation of my concern and the reason I am drafting this letter. I am sure that you are aware of the latest proposals to change the regulations concerning the management of the Ozark National Scenic Riverways. Changes to the regulations along the 134 miles of the Jacks Fork and Current Rivers will have a tremendous impact on the counties, towns, and people that call this region home. The Federal Park Service has released three proposals that range from extreme changes to no changes of the existing regulations. If I was forced to choose one of these proposals it would definitely be the one outlining no change. Rather than be forced into a proposal drafted by the national government I am proposing that the national government release its control of the Ozark Riverways and allow the state of Missouri to make the decisions concerning one of its greatest natural resources.

I have been a resident of Missouri for twenty years. I have witnessed, first hand, Missouri's ability to manage its vast park system. According to an editorial written by Lt. Governor Peter Kinder, "Missouri has a robust state park system, which has been ranked as one of the top four state park systems in the nation. In its 87 state parks and historic sites, Missouri has more than 200,000 acres available to the public. The state does an outstanding job preserving forests, prairies, springs, streams, and lakes."(Kinder) I couldn't agree more! Missourians are proud to have such great parks and the natural resources those parks protect. The state of Missouri has found a balance that allows not only its citizens but visitors to the state, the privilege to enjoy the state's natural resources.

Reynolds County is only one of several that rely heavily on the revenue created by the Jacks Fork and Current rivers. Other counties include; Dent, Shannon and Carter, just to name a few. The towns that originated along the banks of these rivers have long used tourism to generate revenue. This revenue helps to maintain the thousands of miles of country roads used by the people who live in these counties. Many businesses depend on the cash flow that wouldn't exist

if the National Park Service denies access to the rivers and the surrounding land. The evidence of this fact was clear during last year's federal government shut down. During an interview with the Kansas City Star, Joe Devall (owner of Silver Arrow Canoe Rental), said, "The shutdown has had a dramatic impact on my business", which is a National Park Service concessionaire south of Salem. "We don't have any business", Devall said, adding it would violate his contract to even shuttle anyone to access points on the Current River. He said he normally has a brisk business this time of year but he's had to turn people away. (Kansas City Star) This was only one of the hundreds of businesses affected. Not only did the government shutdown affect visitors, it affected the locals.

The evidence of opposition to my proposal is equally clear. Town hall meetings have been held to obtain opinions on the proposals that the federal government released. It's not uncommon to see supporters of the most extreme proposal to completely shut down access to the rivers and the abutting land. The problem with this opposition is that many of these supporters have never seen nor heard of these rivers prior to the proposals being released to the public. This is just bad news for the people who consider the Ozark Riverways their back yard. Opinions from people who have no idea what shutting these rivers down to the public would mean for the surrounding communities have no place in this discussion.

I mentioned earlier that I was a father of two. I have enjoyed raising my two children in a region where it is possible to enjoy Mother Nature at her finest. Thousands of other local families and the families of regular visitors to the area would surely agree. Not only do the Ozark Riverways bring revenue to the inhabitants of the Ozarks, but they bring peace and joy to people's hearts. This reason alone should be enough for the federal government to see that releasing control of the Ozark Riverways back to Missouri is in the best interest of those who matter the most, Missourians and the visitors we welcome into our back yards.

I sincerely hope that you will give my proposal some serious thought. I understand that the Federal Park Service wants to protect the Ozark Riverways but I truly feel that Missouri could be equally effective doing so without jeopardizing the rights of all who enjoy these natural paradises.

God Bless,  
Charles M. Stewart

**Correspondence:** Dear Superintendent Black:

This constitutes the response of the Cave Research Foundation (CRF) to the proposed Ozark Riverways Draft General Management Plan. CRF believes that usage patterns that have developed over the last thirty years have had a degrading impact on the natural resources of the park. Specifically:

- Excessive canoe usage on certain stretches has caused problems of bank erosion, trash, and vandalism.
- Excessive power boat usage has caused erosion issues, negative effects on the habitat of the Ozark hellbender, high noise levels, water quality issues, and a general degradation of the visitor experience.
- A poor trail system limits alternative forms of non-motorized recreation.
- Unrestricted horse usage has had many negative impacts on soils, erosion, visitor experience, and water quality.
- The tremendous growth of off-road vehicular use has also negatively affected many of the values of the park. In our experience, for example, the Jam-Up Cave area (a designated natural area) has been greatly affected. Rough trails which were rarely used in, say, 1980 have become roads and, to a certain extent, institutionalized.
- Increased numbers of maintained roads has not resulted in higher levels of visitor enjoyment. Traditional family usage has dropped during the years we have been involved with the park.
- Scenic easements have been widely violated without enforcement.
- Traditional usage of the rivers, the intent of the park enabling legislation, has been replaced by too much high-volume and disruptive usage patterns.

#### Wilderness

We favor wilderness designation for the Big Spring primitive area. The present usage patterns would not change much but designation would provide an accessible wilderness for families in a safe environment. Such a designation, along with attendant trailheads, would stimulate visitation to the area and provide an economic stimulus to the area.

#### Alternatives to General Management

The no-action "alternative" should not be considered because, basically, it would continue practices that are currently illegal and against NPS policy. This would result in degraded visitor experience which eventually would have a severe impact on the economic base of the surrounding communities.

We favor Alternative B with some important modifications.

-Because high usage and large numbers of access points have caused considerable problems, we do not support keeping the present number of access points. We favor reducing these to a manageable level. Many of these access points were not usable thirty years ago, and a return to that status is needed. For example, on the upper Jacks Fork, concession-available access points are only needed at a very few sites:

Buck Hollow, Bay Creek, and Alley Spring.

- We support the creation of new concession opportunities for non-motorized activities. The potential exists for shuttle service for backpackers as trails continue to be built in the river corridor.
- Horse trails should be limited to old road beds where degradation can be minimized. However, a joint backpacking and horse trail should be considered utilizing old roads on the upper Current River. Such a trail could go from Round Spring all the way to Cedargrove.
- We do not support the creation of new horse camps unless they are remote camps, utilized for overnight trips, or unless they replace current, unauthorized, unmaintained social camps. Otherwise off park facilities would be beneficial to the local community. Horse camps are not a low-maintenance item and a proliferation of them will likely degrade natural resources.
- We support the creation of a learning center at Powder Mill, provided that does not reduce the usage of the present research center, which is not mentioned. CRF occasionally keeps the present center open as a visitor

contact point, with good results. The research center has enabled thousands of hours to be volunteered in the interest of park natural resource management. The wording of the GMP alternative says that "some living quarters" "might" be provided. This should be reworded if the intent is to keep the research center element. If the intent would be to remove the research center, then we would certainly be in opposition to that.

-Wording should be added that addresses partnering with "volunteers and others" to accomplish natural resource stewardship projects; that language was used for "cultural" resource projects but no mention was made of natural resource partnerships, which are ongoing at this time. The ongoing partnership with CRF and others has provided for effective management of cave resources within the park. Not mentioning this type of natural resource partnership is an oversight, one that could potentially be interpreted as unauthorized.

-We do not favor the horsepower limits as delineated in Alternative B. Specifically, we believe that horsepower limits be lowered on the Current River between Pulltite and Two Rivers. We suggest 25 horsepower limits between Two Rivers and Round Spring, and no motors allowed at all above Round Spring. If high-horsepower usage is reduced on these stretches then canoe traffic can be redistributed to these sections, as was the case in the 1970's. Family camping on the stretch of river between Round Spring and Two Rivers has just about vanished due to the high usage by powerboats, day and night.

-Depending on the spread and disposition of White Nose Syndrome, CRF supports the opening of such caves as can handle traffic. However, visitation of caves should never be considered to be of high recreational value. Most OZAR caves are either: too small to be of recreational interest, too geologically or biologically sensitive, or are technical in nature requiring specialized equipment or skills.

-Under Alternative B it is said that no FTE increase in Resource Management and Science will be needed despite additional responsibilities and duties. We cannot agree with this statement. For example, Ozark Riverways has the largest karst springs of any national park unit, and yet there is no physical science or hydrologist or geologist position. This should be changed in the final plan and a goal made to create a physical science position through the addition of one FTE in natural resources.

Thank you for this opportunity to comment.

Sincerely,  
Scott House  
Ozarks Operation Manager

**Correspondence:** Official Comment on the NPS draft GMP for the Ozark National Scenic Riverways  
12.19.2013

On behalf of Environment Missouri's more than 13,000 supporters, activists, and members, we applaud the National Park Service for releasing a draft General Management Plan that offers the potential for the restoration and protection of the Ozark National Scenic Riverways and we urge them to adopt Alternative "A" in lieu of their preferred alternative.

Nearly fifty years ago, the people of Missouri entrusted two of their most spectacular rivers to the NPS. The agency established the Ozark National Scenic Riverways, the first-ever national park created exclusively to protect a river and its watershed. The NPS promised to take a snapshot of the rivers in 1964 and preserve them in that condition for future generations. Unfortunately, that didn't happen. Decades of mismanagement and neglect have taken their toll on the parks. According to current estimates, access points on the rivers-places where the foliage has been broken in order to allow access by trucks, ATVs and RVs-have proliferated from the original dozen or so official points to over 130. Rather than use the 23 miles of parkdesignated horse trails, designed to minimize equestrian impact on water quality and maximize the safety and enjoyment of all park visitors, local horse operators guide tours on over 80 miles of trails. This has resulted in e. Coli impairment on the Jacks Fork. Overcrowding, scenic easement violations, and a general "anything goes" atmosphere all contribute to the degradation

of the wilderness surrounding the rivers, the quality of the water in the rivers, and the overall park experience.

This is unacceptable. These are among the most beautiful rivers on the planet, and the park is one of the few wild places where people can explore a world-class spring system. The NPS is supposed to protect and preserve the beautiful places that make America such a natural wonderland. Their failures to enforce the previous management plan, and the overall inadequacy of the 1984 plan itself, are a failure to respect the wishes of the citizens of Missouri, who consider these rivers the gems of the state; and the wishes of all Americans, who rely on the NPS to ensure that our nation's special places remain special.

Visitors to the park-the vast majority of them from outside the Ozarks and outside of the state-are the single biggest contributors to the economies of Shannon, Carter and Dent counties, which rank among the most impoverished in the state. Should the rivers lose their natural charm, people will stop visiting. And if people stop visiting, the communities that live along the river will suffer economically.

Further, the park provides critical habitat for the Ozark Hellbender, an endangered salamander unique to Southern Missouri. Worsening water quality (an unavoidable result should the NPS fail to take adequate action) could result in the extinction of this 65 million year old species. Fortunately, the NPS has listened to community leaders, small businesses, environmental groups, and nearly 15,000 petitions from locals, Missourians, and people from across the country, who have asked for stronger protections for Missouri's river gems.

We congratulate the NPS on their decision to appoint Bill Black as Superintendent of the Ozark National Scenic Riverways. Superintendent Black has done an excellent job righting some of the long-standing wrongs that have tarnished the park's reputation. However, his ability to do so is hampered by the 1984 GMP, which was inadequate when it went into effect nearly 30 years ago and is seriously outdated now.

The draft GMP that the NPS has released shows that they've heard what we've known for years-that the vast majority of Missourians think that the Current and Jacks Fork rivers deserve the protection and preservation that the NPS promised when they established the park. We urge the NPS to make their first priority in choosing an alternative the restoration of the Current and Jacks Fork to their 1964 conditions. We urge them to focus on preserving the wild nature of the rivers and traditional Ozarks heritage, as well as fostering deeper communication and understanding between park staff, the locals, and the people who travel from around the world to enjoy the park's spectacular beauty.

We urge the NPS to adopt Alternative "A", which provides the strongest protections for the rivers and does the most to establish deeper, more meaningful connections between the NPS, the region, and the park's visitors.

Alternative "A" does the least violence to the National Environmental Protection Act and conforms more closely to the original intent of the NPS to "take a snapshot of the river" and keep it in a similar state for future generations to enjoy. Further, Alternative "A" does the most to address many long-standing issues with the park, and puts into place protections that will ensure that the rivers are as beautiful twenty years from now as they were twenty years ago.

Alternative "A" accomplishes these goals through an aggressive plan to close roads and illegal access points and to provide equestrian experiences that allow horse-riders and boaters alike safe enjoyment of the park. Alternative "A" provides for the management of almost 3,500 acres of the Big Springs area as wilderness and places sensible limits on boat horsepower on ecologically-sensitive parts of the river. Alternative A better manages access points on the river, increases the number of hiking trails in the park, and provides the most cultural engagement with traditional Ozarks folkways.

Further, Alternative "A" does the most to engage the public with the park, by providing a large number of experiences designed to educate visitors on natural features and Ozarks heritage.

Alternative "A" allocates the most resources to the enforcement of the rules that keep the park the special, safe and beautiful place that attracts millions of people from around the world each year to the Ozarks. Alternative "A" also seeks to develop an official "friends group" that would foster greater communication between the NPS, the communities that live along the rivers, and people that return to the Ozark National Scenic Riverways year after year.

Our more than 13,000 members, supporters, and activists we thank the NPS for taking the first

steps towards addressing serious issues that have plagued one of our nation's greatest natural parks for decades. On behalf of those who have enjoyed the park since its establishment and on behalf of the future generations of Americans who will come to the Current and Jacks Fork rivers to canoe, hike, swim, fish, and experience the Ozarks, we urge the NPS to adopt Alternative "A" and protect the Ozark National Scenic Riverways for the next twenty years.

Sincerely and with great appreciation,  
Stuart P. Keating

Good Day Mr. Black

I hope you read all this letter and begin to be led by the spirit of God to make your decisions in time to Come because this earth belongs to the one who created it, he is the one to make decisions about it as man reads his word read PSALMS 104:5 who laid the foundations of the earth that it should not be removed forever, Ecclesiastes, chapter 1 verse 4 says one generation passeth away and another generation cometh BUT THE EARTH ABIDETH FOREVER NO GLOBAL WARMING to Destroy it, Back to PSALMS 104:11 He sendeth the springs into the VALLEYS which run among the hills, they give drink to every beast cattle etc of the field, the wild asses quench their thirst IF We fail to make our decisions according to what Gods word says this is what his word says and I did not write it PSALMS 34:15 The eyes of the Lord are upon the righteous and his ears are open unto their Cry 34:16 says the face of the Lord is against them that do evil, to cut off the Remembrance of them from the earth, and I am not writing these things to threaten or Condemn you I am writing them to help you and our land I dont think man should clutter it up with trash beer bottles glass etc but there needs to be middle ground, whats wrong with taking pictures God dont care he gave man the technology to make cameras, he didnt intend for someone to charge for it. We have plot maps I didnt charge for man to take a picture of my farms

Also Jesus was baptized in the River of Jordan Matthew 3:13 people are still being Baptized today in Jordan River God created the Rivers for Man to be Baptized in, he told all Believers to be Baptized Jesus or John either one did not have to pay to use the River, God anoints his people today with his spirit he says do not touch mine anointed, and do my prophets no harm, and he said if you offend one of my little ones it would be better for you if you had a millstone be tied around your neck and be cast into the sea, and again sir, I am not trying to condemn you but not me but God is going to judge America for wrongdoing I dont know if you believe in Prophets, but I have heard that there has been at least 2 prophets said God told them that New York would be hit by a Bomb, one said it would be in OBAMS time in office, I believe that Government of Man is trying to take over our freedom, not making godly decisions, but if it not of God it will be destroyed READ ISIAH 9:6 God will have last say.

THE RIGHTIOUS SHALL INHERIT THE EARTH THEY SHALL NEVER BE REMOVED

Thanks for reading my letter

Gary Honeycutt

**Correspondence:** Superintendent Ozark National Scenic Riverways,

We the Dent County Commission, in regards to the Draft General Management Plan for the Ozark National Scenic Riverways, would like to submit the following comments.

The Dent County Commission supports the "No Action Alternative." We feel the "No Action Alternative" allows the Park Service to continue management of the Riverways in accordance with the current management plan which provides the National Park Service more than enough authority to meet the needs and concerns of all of us who use and love our Current and Jacks Fork Rivers.

The Dent County Commission is strongly opposed to Alternatives A, B, and C, as all the proposals call for increased restrictions on motorboat uses that in some instances would only serve to end gigging and trapping on these rivers, particularly on the upper reaches. The history of gigging and trapping on the Current and Jacks Fork Rivers using boats with small motors pre-dates the early 1960's establishment of the Riverways by many, many years and poses no threat or conflict what-so-ever to any other users of the Riverways or to the health of the Riverways themselves. The Dent County Commission also strongly opposes the goals of Alternatives A, B, and C to close or eliminate several miles of roads, trails and accesses to the Riverways, which only serves to further restrict local historical uses of the rivers and will result in forcing more and more people to congregate on smaller and more crowded access points.

We also would like to state our opposition to the Wilderness Area Designation.

Further, the Dent County Commission would like to express our overall extreme disappointment in the Draft General Management Plan produced by the Park Service and our anger over the National Park Service conduct at the 4 public meetings held by the Park Service to discuss it.

It is clear the National Park Service totally ignored local input and concerns about the Riverways when constructing this Draft Plan and Park Service staff openly and blatantly attempted to influence those in attendance at all of the public meetings to support the restrictive Alternatives A, B, or C by telling attendees the "No Action Alternative" was really not an alternative at all.

It is readily apparent the National park Service has skewed this entire process and proposal.

How unfortunate!

Sincerely,  
Presiding Commissioner, Darrell Skiles  
Associate Commissioner Dist. #1 Dennis Purcell  
Associate Commissioner Dist #2 Gary Larson

<b>Correspondence:</b>	Dear Superintendent,				

My mobile phone didn't allow me to comment online, therefore, just to make sure with this note I am "voting".

Changes needed to be made. Motorboat traffic on the river last summer made it nearly impossible for me to float a canoe. The wakes from the boat nearly capsized me ALL DAY LONG. Worst was the sheriff speeding along with the boats front end in the air!

Another time all the horses in the river, loud partying and fireworks made it impossible to sleep on a gravel bar. Noise traveled until 2am. Scaring wildlife towards us. Bear in campsite!!

I vote for as many changes as possible. These rivers are being

**Correspondence:** Re: Ozark National Scenic Riverways Draft General Management Plan

I am writing on behalf of East Ozarks Audubon Society, a Chapter of National Audubon based in Farmington, Missouri, serving six counties and with a membership of approximately 160. Before making my comments on the ONSR Draft Management Plan, I'd first like to make some general comments about the process.

There has been a good deal of opposition to the NPS proposals expressed by local politicians and to a lesser extent from the populace of the counties surrounding the Riverways. I believe the extent of local opposition is overblown and I think the politician's opposition is largely opportunistic, driven by a radical anti-government ideology. Although I did not speak publicly, I did attend the Van Buren open house and found the forum to be extremely intimidating to anyone not in conformance with the Tea-Party line which amounted to: the government cannot put any restrictions on use of the river; the National Park Service is illegitimate; give control of the Riverways back to the State and counties. The meeting was badly managed in that the spokesman for Representative Smith was allowed to give an opening speech which frankly amounted to rabble rousing, thus setting a hostile tone, and other politicians were happy to follow that example. There was no attempt by the moderator to encourage a respectful exchange of opinions, indeed no attempt at moderation! I personally know of many people who broadly support the proposed changes who stayed away from the Van Buren meeting because they feared the scenario that in fact developed. This anti-government ideology is extremely unhelpful to the National Park Service Riverways managers and I firmly believe it does not represent the views of a large majority of Riverways users and visitors: despite the wishes of the more extreme elements, the Riverways belong to the people of the United States, not solely to the citizens of Shannon and Carter Counties. As you point out in the Draft Plan, the "no action" scenario is a baseline against which to measure the management proposals, not a rational or practical alternative. Maintaining the status quo is simply unacceptable.

Turning to specifics of the plan.

**Motorboats:** At present there is no stretch of stream in the entire State of Missouri where a canoeist can enjoy an outdoor experience free of motor boat traffic and noise. Upper reaches of float streams which used to be impractical for power boat access are now wide open to jet boats. When Leonard Hall wrote his famous book, *Stars Upstream*, motors were 10 hp and users like him would spend a week going down the river versus today when high-powered boats engage in hourly back and forth maneuvers over long stretches of the rivers. The management plan alternatives are probably the only opportunity in the foreseeable future for establishing a motor-free zone for those who seek a primitive outdoor experience free of urban noise. Canoeists and kayakers now vastly out-number motorboat recreationists, but a single jet boat can drastically impair the enjoyment and even the safety of 100 floaters in a short period of time. Of course the motor boat users are protesting loudly but your mandate as managers is to balance the interests of conflicting user groups, and the proposed plan does just that.

A notion has surfaced recently that motor-boat traffic makes canoeing safer, That is ludicrous and objectionably patronizing - the opposite is true. Canoeists willingly accept the risks inherent in any outdoor activity and prefer to have at least a few short stretches of float stream free of motor noise and the reckless behavior of a minority of motor boat operators. The plan goes out of its way to accommodate motor boat users by continuing to permit hp limits in excess of federal guidelines. We are willing to accept this in exchange for motor free zones.

Therefore, we support Alternative A regarding the extent of motor-free zones and other motor limitations. This is a long enough stretch of river to allow for a high quality recreational experience for river users, the majority of whom are canoeists, while not restricting access to the middle and lower rivers for motor boaters.

**Horse Management:** With a few exceptions, we support Alternative B which provides for 35 miles of newly designated trails (in addition to the current 23 miles of existing trails) while closing 65 miles of undesignated trails. Horseback riding is a legitimate and appropriate activity in the Riverways and we support its continuation, but as you well know in recent years the numbers of riders has grown out of control. When the volume of traffic is enough to result in serious trail and river bank erosion and in the degradation of water quality to the point where portions of a National Scenic River are unsafe for human contact, something is badly out of balance. We are concerned that many of the illicit trails are in riparian zones, thereby endangering bird nesting and feeding habitats.

Closing the illegal trails will go some way towards mitigating the problems, and establishing a permitting system is crucial when the volume of traffic is so high. Again, the horse riders are protesting vocally, but comments that access to the Park is being denied ring very hollow when legal access to Park trails will increase under the proposal. The NPS has a legal mandate to balance recreation against preservation of the resource and cannot accede to every demand for unregulated access. In the unlikely event that the "No Change" option end up being selected, we would ask that the NPS vigorously limit horseback riding to the 23 miles and that further use of un designated trails be stopped. We do not support the establishment of a new horse camp on the upper Jacks Fork. There are massive commercial horse camps serving the Riverways and we do not see the need for an NPS-managed camp. Among other problems, an additional camp is only likely to exacerbate the overuse problem, will risk degrading water quality in the pristine upper Jacks Fork and will further strain an already understaffed management system. If a horse camp is to become part of the Riverways, it should be in a site well away from river access and in a site that will not encourage new trail-making.

While mainly supporting the Alternative B, we would urge an added proviso: since traffic will probably continue to be heavy enough to degrade water quality, horses should be required to wear manure bags, at least during river crossings. The recommendation that riders are asked to stop their horse 100 feet from the stream to allow it to defecate and urinate is badly inadequate - you can lead a horse to the stream bank but you can't make it pee!

Vehicular access: One of the worst aspects of the status quo is the uncontrolled proliferation of unauthorized "traces" - illegal routes established or expanded by ORV traffic - which permeate the Riverways top to bottom and result in even the remotest gravel bars being invaded by trucks and ATVs. The complaint that NPS is trying to ban access to the rivers by trying to establish some modest measure of control is patently ridiculous; all alternatives allow for a generously high density of legal access points. We strongly support the management plan call in all the alternatives for the closure and restoration of illegal roads. With regard to access points, we support Alternative A, which does not call for additional legal access points; there is already a more than sufficient high density of legal access that, protests aside, no-one's access to the Riverways is seriously impeded.

Big Springs Wilderness Management: There is no rational reason that there should be such vociferous opposition to the proposal for wilderness management of the Big Springs tract. Those calling for the no action alternative would continue to see the tract managed as de facto wilderness, and the preferred alternative calls for very little change in management other than that public access would be somewhat enhanced if the existing closed road is converted to a hiking trail. There seems no rationale for the opposition other than the opponents dislike wilderness on principle and distrust the government - that is no basis for rational management. We support either of Alternatives A or B.

Hiking Trails: ONSR is seriously deficient in hiking trails; this is in part because the linear nature of the park and the patchwork ownership pattern within the authorized boundaries make the development of trails difficult. Nevertheless we believe insufficient effort has been put into catering to hikers and backpackers and would like to see some longer trails developed in collaboration with neighboring agencies (MDC, DNR, Pioneer Forest, etc. In our view, none of the alternatives propose an adequate increase in hiking opportunities.

Research: The draft plan acknowledges the importance of research to properly manage the resources, but we are concerned about the plan to convert the one existing structure for visiting researchers - the Powder Mill building - to a visitors' center. We understand that the lodging for researchers would be retained but the office space currently used by researchers would be lost. Having spent many hours of volunteer labor conducting cave and karst related research in the Riverways I can personally attest to the usefulness of that office space. We are sympathetic with the notion of increasing visitor education and interaction but we hope that some way can be found to accommodate this without compromising research capability, e.g., we encourage the construction of a new visitor's center at Powder Mill.

Staffing levels: We applaud the notion of increased law enforcement and increased resource management but realistically, in the present Congressional atmosphere of austerity and government cut-backs we see little prospect for additional funding. We therefore believe it would be wise to opt for Alternative A or B or some combination thereof rather than the more staffing-intensive Alternative C. We would also like to see more NPS personnel in the field and fewer performing bureaucratic tasks in the office.

Conclusion: In summary, we support a modified combination of Alternatives A and B with a few changes as outlined above. The "No Action Alternative" is a prescription for continued and escalating problems in the Riverways. The National Park Service is to be complemented for coming up with reasonable alternatives in the Draft Management Plan, any of which would be preferable to continuing on with the current host of problems. We trust that the NPS managers will stick to their guns and institute the very positive management strategies being proposed and not bow to undue pressure from those whose attitude is purely negative. Otherwise we really might as well convert this national treasure to a series of degraded county parks.

Sincerely,  
Michael Sutton  
EOAS Conservation Committee

**Correspondence:** REGARDS: Two Major Comments Concerning Ozark Scenic Riverways General Plan Alternatives

The National Park Service will find during the comments period that there will be overwhelming opposition to their preferred alternative plan that drastically restricts access of the Ozark National Scenic Riverways to the Missourians who depend on the area for their socio-economic existence. However, after reading the National Park Service's General Plan, it was apparent that the National Park Service planners ignored two essential areas that make the entire General Plan unacceptable to review.

(1) The first area was the National Park Service's statutory duty to comply with the Federal Law which created the Ozark National Scenic Riverways. The Secretary of Interior has failed to meet the requirements of the Ozark National Scenic Riverways Act of 1963, by not cooperating with the State of Missouri and its political subdivisions in formulating comprehensive plans for the Ozark National Scenic Riverways. The result of this failure has allowed the National Park Service to produce three General Management Plans (A, Band C), that were developed by their Denver, Colorado based planning employees and a large number of consultants; of which, none represented the State of Missouri and their political subdivisions.

16 U.S.C.  
United States Code, 2011 Edition  
Title 16 - CONSERVATION  
CHAPTER 1- NATIONAL PARKS, MILITARY PARKS, MONUMENTS, AND SEASHORES  
SUBCHAPTER LXX - OZARK NATIONAL SCENIC RIVERWAYS

From the U.S. Government Printing Office, [www.gpo.gov](http://www.gpo.gov)

Â§460m-4. Cooperative land development programs; hunting and fishing

(a) Development of comprehensive plans

In furtherance of the purposes of this subchapter. the Secretary is authoriz.ed to cooperate with the State of Missouri. Its political subdivisions. and other Federal agencies and organizations In formulating comprehensive plans for the Ozark National Scenic Riverways and for the related watershed of the Current and Jacks Fork Rivers in Missouri. and to enter into agreements for the implementation of such plans. Such plans may provide for land use and development programs, for preservation and enhancement of the natural beauty of the landscape, and for conservation of outdoor resources in the watersheds of the Current and Jacks Fork Rivers.

â&#160; Consultation and Coordination with the State of Missouri amounted to the following:  
On November 15, 2010, park staff met with representatives of the Missouri State Historic Preservation Office and the Missouri Attorney General's Office. At that meeting, the park staff explained the general management planning and wilderness study process and the current phase of the plan. The state historic preservation officer was provided a copy of the Newsletter 3 (spring/summer 2009) and was informed of the preliminary alternatives that

had been developed. The National Riverways would keep the state historic preservation officer in Toirilid -a-s general management planning progresses .. (Pg. -383)

(2) The second area was the omission by the National Park Service, within the Alternative Plans, of the actual devastating effect on this area of Missouri if portions of the Ozark National Scenic Riverways become Wilderness Areas or if the National Park Service is given the authority to "prepare" the areas after Wilderness designation. Within the National Scenic Riverways Draft General Management Plan / Wilderness Study / Environmental Impact Statement; the National Park Service admits that the General Alternative Plans are "based on research and the professional judgment of planners who have experience with similar projects. In terms of geographic scope, the impact analyses in this section primarily focus on the socioeconomic conditions of the local communities (primarily Eminence and Van Buren), and the 10 adjacent counties (Carter and Shannon counties) because this is where most impacts would be most noticeable."

A perfect comparative example of the public's actual interest in a "Wilderness Area" is the 16,000 acres of Irish Wilderness that is located only 20 miles southwest of Van Buren. The Irish Wilderness has a similar topography as the Ozark National Scenic Riverways area and also contains the Eleven Point National Wild and Scenic River. The visitor use of this area is estimated by the United States Forest Service as being 500 - 700 visits on average each year. Rather than promote a logical comparative study in the proposed Alternative Plans with the Irish Wilderness, the National Park Service totally ignored this huge underutilized area that was formed by the federal government in 1984. Such an omission by the National Park Service is incompetence at best; or at worst, a dishonest cover up of the true SocioEconomic consequences of their preferred alternative plans.

**CONCLUSION:** The only legal Ozark National Scenic Riverways General Plan is the "NO ACTION PLAN"

(a) Development of comprehensive plans

In furtherance of the purposes of this subchapter, the Secretary is authorized to cooperate with the State of Missouri, its political subdivisions, and other Federal agencies and organizations in formulating comprehensive plans for the Ozark National Scenic Riverways and for the related watershed of the Current and Jacks Fork Rivers in Missouri, and to enter into agreements for the implementation of such plans. Such plans may provide for land use and development programs, for preservation and enhancement of the natural beauty of the landscape, and for conservation of outdoor resources in the watersheds of the Current and Jacks Fork Rivers.

Consultation and Coordination with the State of Missouri amounted to the following:

On November 15, 2010, park staff met with representatives of the Missouri State Historic Preservation Office and the Missouri Attorney General's Office. At that meeting, the park staff explained the general management planning and wilderness study process and the current phase of the plan. The state historic preservation officer was provided a copy of the Newsletter 3 (spring/summer 2009) and was informed of the preliminary alternatives that had been developed. The National Riverways would keep the state historic preservation officer informed as general management planning progresses. (Pg. 383)

(2) The second area was the omission by the National Park Service, within the Alternative Plans, of the actual devastating effect on this area of Missouri if portions of the Ozark National Scenic Riverways become Wilderness Areas or if the National Park Service is given the authority to "prepare" the areas after Wilderness designation. Within the National Scenic Riverway ... Draft (Kl) Management Plan / Wilderness Study / Environmental Impact Statement, the National Park Service admits that the General Alternative Plans are based on research and the professional judgment of planners who have experience with similar projects. In terms of geographic scope, the impact analyses in this section primarily focus on the socioeconomic conditions of the local communities (primarily Eminence and Van Buren), and the two adjacent counties (Carter and Shannon counties) because this is where most impacts would be most noticeable."

A perfect comparative example of the public's actual interest in a "Wilderness Area" is the 16,000 acres of Irish Wilderness that is located only 20 miles southwest of Van Buren. The Irish Wilderness has a similar topography as the Ozark National Scenic Riverways area and also contains the Eleven Point National Wild and Scenic River. The visitor use of this area is estimated by the United States Forest Service as being 500 - 700 visits on average each year. Rather than promote a logical comparative study in the proposed Alternative Plans with the Irish Wilderness, the National Park Service totally ignored this huge underutilized area that was formed by the federal government in 1984. Such an omission by the National Park Service is incompetence at best; or at worst, a dishonest cover up of the true SocioEconomic consequences of their preferred alternative plans.

CONCLUSION: The only legal Ozark National Scenic Riverways General Plan is the "NO ACTION PLAN"

**Correspondence Type:** Letter

**Correspondence:** Dear ONSR,

Please strongly consider either Alternative A or B or a combination of the two.

We moved here from Iowa thirty-three years ago to escape dirty air and water poisoned by chemical agriculture. We bought land as did many immediately next to the Jacks Fork River, just downstream from Jam-up Cave. We lived on our land for 18 years and still own it. I got to know the area intimately. We enjoyed the clean, cold water, the numerous springs, caves and other remarkable features. I came to the conclusion many years ago that the Upper Jacks Fork is a really special place. Its semi-primitive state produces a high quality river in the downstream areas. I urge you to keep development in the Upper Jacks Fork to a minimum. It would be fatal mistake to permit any horse camps, ATV (or bike) trails or any other motorized activities. I have identified (actually seen and photographed) 29 rare, endangered or sensitive

plants just up and downstream from Jam-up Cave. I have seen several Ozark hellbenders in that region over the years and marveled over their ability to survive in such an area. Horses and motorboat traffic in that area could mean their eventual extinction. Some fools run their boats in that area during floods and even try it during low water after June. The area from Buck Hollow to Bay Creek should be reserved only for motor less and horseless transportation. Hay, straw and horse manure also bring weed seeds and the very real possibility of introducing invasive plants that would squeeze existing natives!

The Jacks fork and Current are best enjoyed in a tube, canoe or kayak and these should be a priority. 4wheel drive vehicles, ATVs and motorized campers should be kept out of the gravel bars and stream banks. Oil, gasoline and erosion by repetitive travel have no place in or on these rivers. Too often they trample vegetation whose roots stabilize gravel bars. Canoe concessioners should be the only exception to deliver and pick up canoes in very narrow corridors. Even though I am now disabled and can no longer access some of my favorite spots on these rivers, I would not ask you make exceptions for disabled people. I can rest assured they will be better protected if such vehicles are prohibited. I also think that it should be strictly enforced. On the third ticketed offense the vehicle should be confiscated and sold to help fund the enforcement of the park.

I am also calling for more funding of the ONSR! Increased funding would result in better enforcement, educational opportunities and ability to manage the park properly. These two rivers are indeed rare in the Midwest and the US and deserve all the protection we can afford. No one is making more clean water-just ask the people in West Virginia!

I am also concerned about the poor way in which the public meetings were facilitated. ONSR bent over backwards to accommodate the local people in Shannon, Dent and Carter Counties. These are NATIONAL SCENIC RIVERS; not locally owned and operated. They have remained under federal control and the only serious problems seem to originate from the areas known as the gaps in Eminence and Van Buren, where local control remains. Why can't the National Park Service be as accommodating to the rest of the nation and at least have public meetings in Columbia, Springfield and Kansas City??? By rights a meeting in Chicago should NOT be out of the question, but to cater to the local population over the city dwellers at a 3-1 ratio is grossly unfair!

Then there was the fact that many from Eminence and Van Buren packed the parking lot with trailers etc. at Powder valley trying to prevent the people in St. Louis from attending the meeting. Those people with trailers and disrupting the meeting should have been evicted from the premises.

You also seem to cater to the cheap politicians such as Lieutenant Governor Peter Kinder and 8th District Rep. Jason Smith, who were busy fanning the flames for decommissioning the ONSR and selling it to the state of Missouri. They would chose to rile up the tender feelings of how the ONSR was created and would spread vicious untruths and rumors about the Park Plan. You should have cut them off when they rambled on about decommissioning. They were supposed to comment on the topic at hand.

When people ramble on off topic they should be handed a piece of paper and the address to write their written comments, not waste the public's time at a supposed meeting open to all. These meetings were a sham!

I have committed myself to defending these rivers from polluters whether they be towns like Mt. View who released raw sewage into Jam-up Creek when their waste water treatment plant broke or when a private entity like the Missouri State Teachers Assn piling soil into Flat Rock Creek. I was relentless when Doe Run proposed six mine and mills in this area and sued the Missouri Dept. of Conservation when they illegally allowed Doe Run to explore for lead on Conservation lands. Angel and I and our Stream Team friends are YOUR best friends. We will work to make sure you have enough funding and we are here to help wherever possible.

Sincerely,  
Tom Kruzen

<b>Received:</b>	Feb,10,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				

**Correspondence:** Dear Superintendent for ONSR,

I am writing to request the National Park Service give full support to Alternative A for managing and maintaining the Ozark National Scenic Riverway (ONSR). This proposed plan provides the greatest protection for the myriad of ecological, biological, geographical and hydrological features contained in the riverways and their waterways. The bottom line - without these features there is no ONSR to enjoy!

For 30 years, I have canoed, camped and hiked the ONSR, years around. My goal is to retreat from the hectic, motorized and noisy daily world temporarily. Having grown up in rural Indiana, it is an opportunity to capture a few quiet days and hear myself think once again.

The tranquil scenes where turtles sun themselves on logs; blue and green herons fish along the stream edges; frogs and peeper cals; cliff swallows, buzzards and kingfishers fly above; native flower and tress grow; fish dart beneath the water surfaces and insects, ever pesky horseflies, hover, collectively create a glimpse to a world hard to find even in the Ozark region.

So how do increased illegal roads that fragment habitat and permit unauthorized vehicular access to quiet gravel bars; churned up river sediment that negatively impacts aquatic life caused by motorized speeding boats, ATV and large numbers of horses fit into the scenic national park systems creed to protect and preserve a pristine wild area?

With regards to the January 22, Powder Valley Public Hearing, there were local people, who were turned away due to an influx of recreational trailers brought from some distance. It appears there was an organized effort to disrupt the original attempt for input from a wide audience. Limited parking prevented participation. This happened despite the multiple hearing scheduled throughout Missouri. Please use sound ecological studies to dictate policy, no rowdy rhetoric or behavior.

Sincerely yours,  
D.J. Allbright

<b>Correspondence ID:</b>	2981	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,05,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Re: Comments on the Draft General Management Plan for the Ozark National Scenic Riverways .				

I submit the following comments on the draft General Management Plan ("GMP") for the Ozark National Scenic Riverways ("ONSR") on behalf of the Center for Biological Diversity (the "Center"). The Center is a national, nonprofit conservation organization with more than 625,000 members and online activists dedicated to the protection of endangered species and wild places. The Center and its members are concerned with the conservation of imperiled species, including the endangered Ozark hellbender.

For the reasons explained below, the Center recommends that the National Park Service ("NPS") adopt the environmentally preferred alternative, Alternative A, to guide management of the ONSR. Alternative A is most protective of the ONSR's water quality, which is critical to the survival and recovery of the Ozark hellbender.

#### ONSR's Prime Recreational Waters

The Ozark National Scenic Riverways was established in 1964 as the nation's first federally-protected national river. The park extends along 134 miles (approximately 80,000 acres) of the free-flowing Current River and one of its tributaries, the lacks Fork, in the Ozark Highlands of southeastern Missouri.

The Current River and lacks Fork are prime recreational waters attracting approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than 55 million dollars with nearly 90 percent of spending from non-local visitors. Because of this spending and

employment by the NPS, the ONSR has generated 845 jobs, which is approximately 15 percent of the total employment in Shannon and Carter counties. Accordingly, maintaining water quality is important for the local economy that depends on these waterways for recreational uses, such as boating, fishing, and floating.

As a unit of the National Park System, management of the ONSR must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value.

#### Status of Ozark Hellbenders in the ONSR

Ozark Hellbenders are endemic to the White River drainage in northern Arkansas and southern Missouri. Hellbenders are habitat specialists that depend on consistent levels of dissolved oxygen, temperature, and flow. See US. Fish and Wildlife Service, Endangered Status for the Ozark Hellbender Salamander, 76 Fed. Reg. 61956, 61,957 (Oct. 6,2011). Evidence indicates Ozark Hellbenders are declining throughout their range, and no populations appear to be stable (76 Fed. Reg. at 61,958). Likely less than 600 Ozark hellbenders remain, and the US. Fish and Wildlife Service listed the Ozark hellbender as endangered in October of 2011. 76 Fed. Reg. 61956 (Oct. 6,2011).

Historically, Ozark hellbenders could be found in portions of the Spring, White, Black, Eleven Point, and Current Rivers and their tributaries (North Fork White River, Bryant Creek, and Jacks Fork) (76 Fed. Reg. at 61,958). Currently, Ozark Hellbender populations are known to occur in Bryant Creek, North Fork of the White River, Eleven Point River, and Current River, with some individuals possibly still present in the White River, Spring River, and Jacks Fork (USFWS 2012).

In the Current River, which flows through the ONSR, it has been estimated that 80 hellbenders remain (76 Fed. Reg. at 61,960). Scientists documented Ozark hellbenders in Jacks Fork, a tributary of the Current River that flows through the ONSR, in 1992. But no hellbenders were found during investigations of Jacks Fork in 2003 nor were any found in 2006 during 7 person-hours of searching (76 Fed. Reg. at 61,960).

#### Planning Documents for Park Management

Every park in the national park system is required by law to have a current general management plan. The ONSR's last plan was done more than 25 years ago, in 1984, The 1984 General Management Plan authorizes numerous activities on the ONSR (NPS 1984). The plan called for a more detailed study of river access sites and of other roads, traces, and horse trails in the riparian corridor (Flader 2011). These studies resulted in a river management plan issued in 1989 (NPS 1989) and a roads and trails study issued in 1991 (NPS 1991). Along with the annually issued Supervisor's Compendium, these documents authorize ongoing activities on the ONSR, for example, by setting maximum use limits for canoe use, setting horsepower limits for motorboats in some areas, identifying areas on the Current River and Jacks Fork where boats can be launched, and designating which roads are open for travel.

In 2006, the NPS began the process of developing a new plan for the ONSR. On March 8,2013, the NPS provided the FWS with the draft revised GMP and Draft Environmental Impact Statement ("EIS"). As a result of this analysis, the NPS initially concluded that the revised GMP "may affect, but not likely to adversely affect" the Ozark hellbender, Indian bat and gray bat. See Memorandum dated March 18, 2013 from Bill Black, Superintendent, Ozark National Scenic Riverways, to Amy Salveter, Field Supervisor, US. Fish and Wildlife Service.

In a letter dated April 25, 2013, the FWS explained that it could not concur with the NPS's determination. The FWS recommended that NPS conduct "a programmatic consultation in which effects from all actions occurring within the park are evaluated." See Memorandum dated April 25, 2013 from Amy Salveter, Field Supervisor, U.S. Fish and Wildlife Service to Bill

Black, Superintendent, Ozark National Scenic Riverways.

On November 8, 2013, the NPS released the draft GMP, which is open for public comment until February 7, 2014.

#### Management of ONSR Affects the Endangered Ozark Hellbender

The Ozark hellbender is primarily affected by water quality, including sedimentation and nutrient loads. As such, any activities on the ONSR that impact water quality may in turn impact the salamander and its habitats. Ongoing activities near or on the riverways of the ONSR that deposit sediment or nutrient loads in waterways include: use of the road and trail system and recreational activities (such as boating, ATV use, and horseback riding). 76 Fed. Reg. 61,966. These activities in the rivers may also directly harm or disturb hellbenders or their cover rocks. Studies conducted by the USGS (Barks 1978), NPS and the Missouri Department of Natural Resources (1998) have suggested that "heavy recreation use is causing adverse impacts on the water quality of the Lacks Fork River, including elevated fecal coliform bacteria densities that exceed the standard for whole body contact recreation" (Vana-Miller 2007). Indeed, in May 2011, ONSR was identified as one of America's ten most endangered rivers due to inadequate management by the NPS (American Rivers 2011).

Dirt and gravel roads within the Ozarks in general are the largest source of sediments to streams, outweighing the combined impacts of pasture erosion, logging, and natural erosion (Vana-Miller 2007, citing USDA 1986). Heavily used gravel roads can contribute 100 times more sediment than paved or abandoned roads (Reid and Dunne 1984). Roads can cause marginally stable slopes to fail, and they can capture surface runoff and channel it directly into streams resulting in increased sediment deposition (Allan 1995). The 1991 NPS study of roads and trails found that the existing system of roads results in "substantial sediment loading to small creeks that empty into the Lacks Fork and Current Rivers," which reduces water quality and adversely impacts riparian vegetation (NPS 1991).

Over 130 motorized vehicular river-access points exist on the ONSR, according to a 2007 analysis (Friends of the Ozark Riverways 2010). Virtually all gravel bars (used for canoe and boat camping) are accessed by all-terrain vehicles (ATVs) and other motorized vehicles (American Rivers 2011). ORV activity also increases erosion and sedimentation by exposing bare erodible soils in areas with frequent activity. ORVs frequently cross rivers inhabited by hellbenders and are driven in riverbeds where the water is shallow enough to enable this form of recreation. ORV use in the riverways could also directly impact hellbenders, as well as displace cover rocks (76 Fed. Reg. 61,967). Horseback riding near or in the riverways can also increase sedimentation and nutrient loads and reduce available dissolved oxygen, as explained in detail below.

The practice of removing large rocks and boulders to reduce damage to canoes is common on many hellbender streams (76 Fed. Reg. 61,967). The areas under these large rocks are important habitat for cover and nest sites; therefore, overturning or removing these rocks can diminish available cover and nest sites for hellbenders. The force delivered by a boat hitting a rock could easily injure or kill a hellbender, in addition to displacing or disrupting cover rocks (76 Fed. Reg. 61,967). Indeed, hellbenders encountered with gashes in their heads suggest that watercraft traffic likely impacts these animals (76 Fed. Reg. 61,966). The NPS has found that "increased use of jet boats has created a more constant level of disturbance to aquatic and riparian animals as well as physical disturbance to bank and bottom substrates" (Vana-Miller 2007).

#### Horseback Riding Near and in Rivers Causes Adverse Impacts to the Ozark Hellbender

Impacts of horseback riding on the ONSR must be considered in the context of other horseback riding that contributes nutrients or sediments to the Current River and its tributaries, including illegal horseback riding in the ONSR and horseback riding outside the ONSR. As explained below, pressure from horseback riding in and near streams inhabited by Ozark

hellbenders has increased substantially and may affect the amphibians by degrading the water quality of the riverways (76 Fed. Reg. at 61,967). It is also possible that horseback riding in the rivers may also directly harm or disturb hellbenders or their cover rocks.

#### Extent of Horseback Riding

Horseback riding in and near the ONSR is extensive. Currently, through an annually issued Supervisor's Compendium, NPS authorizes horseback riding by the public on unpaved state and county roads and four designated horse trails with designated river crossings. Within the ONSR, there are five designated river crossings on the Current River and two designated river crossings on Jacks Fork. The 2013 Supervisor's Compendium was approved on May 20, 2013, and is effective for one year. Supervisor's Compendium, [http://www.nps.gov/ozar/parkmgmt/zipload/LOZAR-SI/pt-Comp 051613 final-20 13 .pdf](http://www.nps.gov/ozar/parkmgmt/zipload/LOZAR-SI/pt-Comp%20051613%20final-2013.pdf) (last visited Sept. 27, 2013).

The four designated horse trails in the ONSR total approximately 23 miles (<http://www.nps.gov/ozar/planyourvisit/loader.cfm?csModule=security/getfile&PageID=164559>). Even just considering the four designated horse trails on the ONSR, there are several miles of trail where the proximity to the riverways would allow runoff of nutrients from horse waste or sedimentation through soil erosion.

Yet this only accounts for a fraction of miles of the available horseback riding routes because the NPS allows unlimited horse use of unpaved state and county roads. A 2000 analysis led by NPS found that within the 56-mile stretch of the Current from the upstream boundary to Goose Bay, there were 51 miles of horse trail running parallel to the river and on the flood plain, 83 percent of which were used exclusively for horse riding (Fenders 2011). There were nearly 30 miles of additional flood plain trail in other sections, in addition to numerous trails on higher ground (Fenders 2011). These trails include more than 80 places where horses cross the rivers and harm water quality with erosion and fecal coliform pollution (Fenders 2011). Moreover, when the water is low, many people use the river as a trail, riding along the river's edge.

In addition, the NPS authorizes commercial horseback riding operations through annual issuance of Commercial Use Authorizations ("CUAs"). For example, on July 26, 2012, the NPS authorized Trail Ride Guides LLC (aka Cross Country Trail Rides) to use the Two Rivers confluence area of ONSR from Jerktail to below Two Rivers and up the Jacks Fork to the Alley Mill area. This essentially amounts to the entire designated horse trail system on the ONSR. On November 2, 2012, Trail Ride Guides LLC reported that it served approximately 10,000 clients and took about 20 trips in the ONSR that year, utilizing three designated horse trails: Broadfoot Loop, Jerktail Loop, and Shawnee Loop. Although the Commercial Use Authorizations limit group size for guided rides to 25, it is not uncommon to observe groups with several dozens of horses on unpaved roads and trails near and on the ONSR.

To illustrate the demand for horseback riding in the area, consider that Trail Ride Guides LLC, which is located on the banks of Jacks Fork, boasts over 3000 horse stalls (<http://crosscountrytrailrides.com/general-info/>). At one study site on the Jacks Fork, observers documented up to 500 horses crossing per hour (Davis and Richards 2002).

A 1991 NPS study of roads and trails found that about 95 percent of horse use in the ONSR is attributable to the large organized multi-day trail rides, such as those held by Trail Ride Guides LLC (NPS 1991). That study suggested that the NPS consider restricting the total number of horse riders by utilizing a permit system (NPS 1991).

#### Impacts from Horseback Riding

The adverse impacts to the hellbender from horseback riding are caused primarily by erosion and sedimentation along the river and at river crossings, and manure being deposited into the river (76 Fed. Reg. at 61,966). Increased siltation may affect hellbenders in a variety of ways, such as suffocating eggs, eliminating suitable habitat for all life stages, reducing dissolved oxygen levels,

increasing contaminants (that bind to sediments), raising water temperatures, impeding movements, and reducing prey populations. (76 Fed. Reg. at 61,966-67).

Undoubtedly, sedimentation is a major threat to hellbenders (Quinn et al. 2013; Lawson 2012). Moreover, hellbenders require consistent levels of dissolved oxygen, which can be reduced when organic wastes like horse manure are deposited into waterways (76 Fed. Reg. at 61,957). Because hellbenders require high levels of water quality (e.g. Briggler et al. 2007), even minor alterations to stream habitat are likely to be detrimental to hellbender populations (76 Fed. Reg. at 61,964).

#### Erosion and Sedimentation

Horseback riding can lead to erosion and sedimentation when horses' hooves dig into the soil, especially when descending steep banks at river crossings. Impacts caused by horses generally occur to a much greater degree than other trail users because the large weight of the horse is transferred to the ground at the hooves, which are relatively sharp points that easily dig into and loosen soils (Wilson and Seney 1994; DeLuca et al. 1998; Newsome et al. 2004). The hooves loosen soil particles that are mobilized and transported into waterways (Newsome et al. 2004).

The movement of soils from the trails often results in trail proliferation and widening as users seek to avoid deeply incised or wet areas of trail. Prolonged sedimentation can eventually decrease the water depth and cause changes in the water flow and temperature, which also may affect hellbenders.

Widespread erosion problems may also undermine the soil-rooting zone of nearby vegetation, causing localized loss of individual plants and an extension of the erosion problem, as the protective function of plant cover continues to be lost (Newsome et al. 2004). The destruction of this vegetative cover can result in excessive solar heating of the water. Increased temperature regimes can affect oxygen levels in the waterways and affect respiration of aquatic animals.

#### Horse Wastes

Waste produced by horses ridden in and near waterways also affects Ozark hellbenders by increasing nutrient loads and reducing available dissolved oxygen. As a 2007 NPS report on water resources in the ONSR explains, "bodily wastes from animals is a major contamination threat to the park as well as a human health risk" (Vana-Miller 2007). "For example, increased levels of nitrates (that reach waterways as surface runoff or leachate from horse manure) can affect amphibians by inhibiting growth, decreasing survivability, and impairing their immune systems (76 Fed. Reg. 61,966-67). Fecal coliform bacteria are present in horse manure and are indicative of potential viruses and pathogens that cause swimmer-associated sickness in water bodies. Also, when horses walk in the river, they stir up sediment. Bacteria tied up in the sediments can be released whenever the streambed sediment is disturbed (Missouri Dept. of Natural Resources 2004; Marino and Gannon 1991). These water contaminants not only pose a threat directly to the Ozark Hellbender but also to the larger aquatic ecosystem and humans (see 76 Fed. Reg. 61,967).

There is evidence that horseback riding operations have degraded water quality in the ONSR (see, e.g., Emrie 1986; Vana-Miller 2007; Missouri Department of Natural Resources 2004). In 1998, a five-mile stretch of the Jacks Fork River from the town of Eminence to its confluence with the Current River was included on Missouri's list of impaired waters as required by Section 303(d) of the federal Clean Water Act. The identified pollutant on the Jacks Fork was fecal coliform bacteria, whose presence in large numbers indicated contamination by fecal wastes of warm-blooded animals (Davis and Richards 2001). The length of the impaired reach was increased to seven miles in 2002 because of data indicating the fecal coliform bacteria problem existed over a broader area (Davis and Barr 2006). From 2003 to 2008 the Missouri Department of Natural Resources again expanded the impaired stretch of the Jacks Fork, to eight

miles (76 Fed. Reg. at 61,966). In 2002 at river mile 4.5 the annual coliform geometric mean was 26, and in 2009 it was 116 (Friends of the Ozark Riverways 2010).

The USGS conducted a three-phase study to better understand the extent and sources of microbiological contamination in the impaired reach. Davis and Richards (2001) found fecal coliform densities were generally larger in that reach and that the standard was exceeded at some sites. Data from Phase II (Davis and Richards 2002) indicated that, after accounting for wetweather flow, the largest densities were during horse trail rides - this occurred in both water and streambed sediment samples. That study did not positively identify sources of contaminants but runoff from a commercial horse trail ride outfitter and horse stream crossings were identified as likely sources (76 Fed. Reg. at 61,966, citing Davis and Richards 2002, pp. 1,3, and 36).

Phase III (Davis and Barr 2006) was an attempt to determine the causes and sources. The scientists found that increases in fecal coliform bacteria densities in the Jacks Fork are associated with cross-country horseback trail-riding events (Davis and Barr 2006). A total of 501 fecal coliform bacteria isolates were analyzed via a methodology that identifies presumptive sources of fecal bacteria in the Jacks Fork River -70 isolates were from sewage, 132 to horses, 118 to cattle, and 181 unknown. In short, recreational users (including boaters and swimmers) are not the primary source of fecal coliform bacteria in the Jacks Fork; rather, the presence of fecal coliform bacteria is associated with other animals, of which horses are the primary sources (Davis and Barr 2006).

#### Analysis of Alternatives

The "No Action" alternative is a description of current park management to serve as a baseline for comparison. existing conditions include expanding presence of motorized vehicles, explosive growth of equestrian use, proliferation of un designated trails and river access, overcrowding resulting in conflicts among user groups, and inadequate monitoring and enforcement of existing regulations. This alternative is unacceptable because it would result in further degradation of natural resources and the visitor experience.

Each of the action alternatives would provide some important benefits over the existing conditions. In particular, all of the action alternatives include: engaging in ecological restoration projects, such as closure of some undesigned roads, trails, and river access points; increasing law enforcement for compliance; maintaining Big Spring's primitive character; providing for non-motorized zones; preparing a recreational horse use and trail management plan; and establishing a permitting system, as necessary, to manage impacts of horse use. We are extremely supportive of these proposals. In particular, increases in law enforcement for compliance is important to stop illegal ORV activity, which increases erosion and sedimentation as explained above. Also, creation of non-motorized zones would result in less disturbance to the aquatic environment and would likely benefit the hellbender.

Yet the action alternatives vary in the extent to which they emphasize protection of natural resources. The NPS identified Alternative A as the environmentally preferred alternative, and the Center encourages the NPS to adopt Alternative A for the reasons explained below. Alternative A is More Protective of Water Quality than the NPS's Preferred Alternative B. Because undesigned roads and trails can contribute to water quality degradation through erosion and sedimentation, we support the NPS's proposals to close undesigned and illegal routes. Alternative A would restore 50 miles of such routes and Alternative B would restore 45 miles. In addition, Alternative A would replace 15 miles of un designated roads with hiking trails and Alternative B would replace 10 miles. Although both of these alternatives are a big improvement over the existing condition, Alternative A is more aggressive at addressing illegal and undesigned routes and should be adopted.

Equestrian overuse is a significant threat to water quality and the Ozark hellbender. As such, the Center is very pleased that all action alternatives will establish a permitting system, as necessary, to manage impacts of horse use. We believe that current impacts from horses,

including river closures due to high bacteria levels, show that such a permitting system is absolutely necessary. Unlike Alternative B and Alternative C, Alternative A would not allow horse camping. We are extremely concerned that a large developed horse campground along Jacks Fork would have adverse impacts to water quality. We believe that adequate opportunities for horse camping already exist outside of the ONSR. In addition, a horse campground would attract additional use of the horse trail system, which is already strained from overuse.

Although we are pleased that all action alternatives would close and restore 65 miles of unauthorized horse trails and river crossings, all action alternatives would significantly expand the designated horse trail system, with Alternative A adding 25 miles and Alternative B adding 35 miles with new stream crossings. The NPS must use great caution when planning any additional stream crossings to ensure no adverse impacts to the hellbender. Plus, we strongly believe that such an expansion of the horse trail system cannot occur unless the impacts are fully analyzed, and we support preparing a recreational horse use and trail management plan under all action alternatives. In addition, the NPS must consult with the U.S. Fish and Wildlife Service under the Endangered Species Act on how such horse management would impact the Ozark hellbender.

#### Suggested Changes to Action Alternatives

To reduce erosion and sedimentation, the NPS should emphasize restoring and stabilizing the riparian corridor. There should be no new conversions of bottomland riparian forests to open fields, and impaired and eroded riverbanks should be restored with native vegetation.

We appreciate that Alternative A prohibits motorized access to gravel bars, which could help reduce problems of erosion and aquatic disturbance at these sites. Under Alternative B, the NPS would designate which gravel bars are accessible by motor vehicle. If that alternative is selected, the NPS should be sure to locate these sites away from areas occupied by Ozark hellbenders. In addition, any new developed facilities along rivers should be considered only after analyzing impacts on water quality and Ozark hellbenders.

Some of the impacts to Ozark hellbenders are the result of unintentional but harmful human activities that could be modified with public education. For example, some canoeists move boulders to avoid collisions without realizing that they are destroying potential hellbender habitat. And some anglers kill hellbenders based on myths that they are poisonous and damage the sport fishery. We recommend that the NPS promote public education about the importance of hellbenders with various forms of outreach, such as signs and displays.

We are very concerned that the NPS lacks the funding and personnel to implement the expanded recreational use and new developments that are proposed under Alternatives B and C. The ONSR has seen a 30 percent reduction in staff in the last decade due to funding decreases, and NPS should hesitate to make changes to park management that would require increases in staff to monitor resources and provide enforcement to respond to increases in use.

We understand that the U.S. Fish and Wildlife Service will be preparing an Endangered Species Act Section 7 biological opinion on the effects of the GMP on endangered wildlife within the ONSR, including the Ozark hellbender, Indiana bat, and gray bat. We are pleased that the NPS is consulting with the Service and recommend that the NPS adopt any mitigation measures recommended during consultation.

\*\*\*

For the above stated reasons, the Center recommends that NPS adopt Alternative A, which is the environmentally preferred alternative. We support the NPS's commitment to dealing with the serious problems from overuse that have developed on the ONSR. If you have any questions or would like to discuss these comments, please contact me.

Sincerely,  
Collette L. Adkins Giese

Trisha Crabill

**Correspondence:** Re: Ozark National Scenic Riverways Draft General Management Plan, Wilderness Study & Environmental Impact Statement

Dear Superintendent Black:

Great Rivers Environmental Law Center ("Great Rivers") submits these comments on behalf of Mrs. Edward ("Pat") Jones on the National Park Service's Draft General Management Plan, Wilderness Study and Environmental Impact Statement ("Management Plan"). Pat Jones has enjoyed the Ozark National Scenic Riverways ("ONSR") for more than 80 years, and urges the National Park Service to manage the ONSR so that as many people as possible can have good experiences spread out over as long a period of time as possible. Pat and her husband, Ted Jones (now deceased) spent many weekends and summers enjoying the Ozark Rivers and Pat believes the Ozark Rivers are a great part of Missouri and will remain that if we properly care for them.

#### Introduction

The National Park Service ("NPS") seeks public comment on its Draft General Management Plan and Environmental Impact Statement, a document presenting four alternative management plans for the ONSR. The NPS hopes "the approved general management plan will provide comprehensive guidance for perpetuating natural systems, preserving cultural resources, and providing opportunities for quality visitor experiences at ONSR for the next 15 or 20 years.<sup>1</sup>

Congress created the ONSR "for the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States.<sup>2</sup> Alternative A best fulfills legislative intent regarding the ONSR. Specifically, the NPS should select Alternative A as the ONSR management plan for the following reasons:

1. Excessive equestrian use in the ONSR has increased bank erosion, increased stream sedimentation, reduced habitat quality and increased potentially unsafe bacteria levels. Alternative A will do the most to restore damage due to excessive equestrian use and to prevent further damage from excessive equestrian use.
2. Excessive All Terrain Vehicle ("ATV") use in the ONSR has caused increased bank erosion, increased stream sedimentation, reduced habitat quality and created numerous undesignated trails and river crossings. Alternative A will do the most to restore damage due to excessive ATV use and to prevent further damage from excessive ATV use.
3. Development and continued use of unauthorized roads in the ONSR have caused increased bank erosion, increased stream sedimentation, reduced habitat quality and created numerous undesignated trails and river crossings. The habitat for the federally endangered Ozark Hellbender has been reduced, leading to a 75% decline of the species since the 1980's. Alternative A falls short of taking the aggressive steps necessary to ensure the long-term survival of rare aquatic species like the endangered Ozark Hellbender and should be strengthened, but it will do the most of the proposals to restore damage due to the development and continued use of unauthorized roads and to prevent further damage from the development and continued use of unauthorized roads.
4. Excessive development and continued use of authorized roads in the ONSR have caused increased bank erosion, increased stream sedimentation, reduced habitat quality and created numerous undesignated trails and river crossings. Alternative A will do the most to restore damage due to the excessive development and continued use of authorized roads and to prevent further damage from the excessive development and continued use of authorized roads.

5. Gravel mining operations adversely affect adjacent tributaries and the ONSR by altering flow patterns, changing channel structure, relocating channels, and causing bank erosion. This in turn reduces the habitat quality within the ONSR. Alternative A will do the most to restore damage due to gravel mining operations and to prevent further damage from gravel mining operations.

6. Climate change threatens to affect the hydrology of the ONSR in dramatic and unpredictable ways. Alternative A offers the best chance of mitigating damage to terrestrial and aquatic habitats.

In addition, Mrs. Jones requests the NPS to add these items to its Plan:

1. The NPS should set a limit on the number of people allowed on the rivers in the same places at the same time to a smaller number. This could be done by either or both of the following: a) requiring people to obtain permits (they can be free) from the NPS before allowing them on the rivers; and/or

b) requiring the canoe and raft rental places to limit the number of people "put-in" at each place to a manageable number. Currently, there are times on weekends the rivers are jammed with rafts and canoes blocking the rivers so completely that other people cannot find space to pass by the jammed boats.

2. The NPS should require every group floating to carry a camping toilet as they do in other national parks, and to take their wastes out with them. At times the gravel bars smell foul and toilet paper is visible on them. This should be stopped. Other National Parks have better requirements; the NPS should manage the ONSR more restrictively so that it looks clean.

#### Analysis

1. Excessive equestrian use in the ONSR has caused increased bank erosion, increased stream sedimentation, reduced habitat quality and increased potentially unsafe bacteria levels. Alternative A will do the most to restore damage due to excessive equestrian use and to prevent further damage from excessive equestrian use. No additional equestrian trails should be added in the ONSR. Additional trails are contrary to the ONSR's purpose of preserving the natural values of the area. The area is already serviced by a "large commercial, cross-country horseback trail riding facility"<sup>3</sup> Therefore, Pat Jones and Great Rivers urge the NPS to consider removing the addition of equestrian trails from Alternative A. However, Alternative A falls short of taking the aggressive steps necessary to ensure the long-term survival of rare aquatic species like the endangered Ozark Hellbender. If the NPS declines to do this, Great Rivers and Mrs. Jones still support Alternative A as the plan that will allow the least amount of harm to ONSR due to equestrian activities.

Both Alternatives A and B (the NPS's preferred alternative) will provide for the addition of approximately 25 miles of trails designated for equestrian use. Under Alternative B, some new stream crossings will be included in this trail network but under Alternative A, no new stream crossings will be added. Because these stream crossings increase bank erosion, increase harmful sedimentation, and reduce habitat quality, they frustrate the ONSR's purpose of conserving unique scenic and natural values, preserving the Current and Jacks Fork Rivers, managing wildlife and providing for enjoyment of outdoor recreation opportunities.

Additionally, horse manure contains bacteria, including E. coli and Salmonella.<sup>4</sup> While probably not harmful in small amounts, high concentrations could potentially be dangerous to people and wildlife, especially in waterways used for boating, fishing and swimming. By not including any additional stream crossings designated for equestrian use, Alternative A best ensures that the waterways within the ONSR will be protected from harmful bacterial contamination due to horse manure. Therefore, Alternative A provides the best option for successfully managing equestrian use within the ONSR.

2. Excessive All Terrain Vehicle ("ATV") use in the ONSR has caused increased bank erosion, increased stream sedimentation, reduced habitat quality and created numerous undesignated trails and river crossings. Alternative A will do the most to restore damage due to excessive ATV use and to prevent further damage from excessive ATV use.

Alternative A best fulfills legislative intent regarding ATV recreation management within the ONSR. First,

Alternative A will decommission approximately 15 miles of roads in primitive zones and replace them with trails. As motor vehicle uses are not compatible with primitive uses, it is essential that the NPS remove these roads and ATV access be prohibited. Second, Alternative A will prohibit all vehicular access to gravel bars. Gravel bars are sensitive areas and are extremely susceptible to erosion, sedimentation and reduced habitat quality. Overall, Alternative A will restore approximately 50 miles of roads to natural conditions. These management changes are essential to fulfilling the NPS' purpose of conserving unique scenic and other natural values, preserving the Current and Jacks Fork Rivers, managing wildlife and providing for enjoyment of outdoor recreation opportunities.

3. Development and continued use of unauthorized roads have caused increased bank erosion, increased stream sedimentation, reduced habitat quality, especially for the federally endangered Ozark Hellbender, and numerous undesignated trails and river crossings. Alternative A will do the most to restore damage done to the ONSR due to the development and continued use of unauthorized roads and to prevent further damage from the development and continued use of unauthorized roads. Although all of the proposed alternatives (except the No-Action Alternative) provide for the closure of all unauthorized roads, the NPS can best prevent future development of such roads by selecting Alternative A. Alternative A will prohibit all vehicular access to gravel bars. Gravel bars are sensitive areas and are extremely susceptible to erosion, sedimentation, and reduced habitat quality. Alternative A will also restore approximately 50 miles of roads to natural conditions. By decommissioning these unnecessary roads and prohibiting vehicle access to gravel bars, the NPS will discourage the future development of unauthorized roads because access to many areas will be limited exclusively to watercraft or foot traffic. The habitat for the federally endangered Ozark Hellbender has been reduced, leading to a 75% decline of the species since the 1980's.

Alternative A falls short of taking the aggressive steps necessary to ensure the long-term survival of rare aquatic species like the endangered Ozark Hellbender and should be strengthened. These management changes are essential to fulfilling ONSR's purpose of conserving unique scenic and other natural values, preserving the Current and Jacks Fork Rivers, managing wildlife and providing for enjoyment of outdoor recreation opportunities.

4. Excessive development and continued use of authorized roads in the ONSR have caused increased bank erosion, increased stream sedimentation, reduced habitat quality and created numerous undesignated trails and river crossings. Alternative A will do the most to restore damage due to the excessive development and continued use of authorized roads and to prevent further damage from the excessive development and continued use of authorized roads.

Alternative A best fulfills legislative intent regarding road management within the ONSR. Alternative A will prohibit all vehicle access to gravel bars. Gravel bars are sensitive areas and are extremely susceptible to erosion, sedimentation, and reduced habitat quality. By prohibiting vehicle access to gravel bars the NPS can both ensure their preservation and emphasize traditional, family-oriented recreation like gravel bar camping. Alternative A will also remove all roads to primitive sites. As motor vehicle uses are not compatible with primitive uses, it is essential that the NPS remove these roads. Additionally, Alternative A will restore approximately 50 miles of roads to natural conditions, restoring and de-segmenting wildlife habitat. By decommissioning these unnecessary roads, prohibiting access to gravel bars and removing road access to primitive sites, Alternative A best fulfills the ONSR's purpose of conserving unique scenic and other natural values, preserving the Current and Jacks Fork Rivers, managing wildlife and providing for enjoyment of outdoor recreation opportunities.

5. Gravel mining operations adversely affect adjacent tributaries and the ONSR by altering flow patterns, changing channel structure, relocating channels, and causing bank erosion. This in turn reduces the habitat quality within the ONSR. Alternative A will do the most to restore damage done to the ONSR due to gravel mining operations and to prevent further damage from gravel mining operations. The NPS has determined that gravel mining on adjacent land can adversely impact the geologic, water and wildlife resources of ONSR. 5 Alternative A provides the ONSR with the best protection against these potential impacts. By closing roads, removing river crossings and prohibiting vehicle access to gravel bars, Alternative A best protects the resources within the unit and therefore will result in the least cumulative damage to them. In fact, the NPS has determined that "Alternative A would contribute an appreciable, long-term, beneficial increment to the cumulative effect" on geologic, water and wildlife resources, while the benefits of Alternatives B and C are characterized as "small" or "small to appreciable." 6 These benefits will help restore habitat quality and mitigate damage from adjacent gravel mining; therefore Alternative A best fulfills the ONSR's purpose of conserving unique scenic and other natural values, preserving the Current and Jacks Fork Rivers, managing wildlife and providing for enjoyment of outdoor recreation opportunities.

6. Climate change threatens to affect the hydrology of the ONSR in dramatic and unpredictable ways. Alternative A

offers the best chance of mitigating damage to terrestrial and aquatic habitats.

The effects climate change will have on the Ozark region are not fully understood.<sup>7</sup> That is precisely why the NPS should exercise caution and select Alternative A, the least environmentally harmful alternative, as it prepares to manage the ONSR through climate change in the coming decades. Possible conditions range from an 80% increase in peak flood flow if climate change brings wetter conditions to the region, to a 41 % decrease in minimum flow in dry conditions.<sup>8</sup> Regardless of where the ONSR's actual climate falls on this spectrum, the NPS supported study "suggest[s] that streamflow changes resulting from the landcover change and climate change could cause significant changes of the basin's surface hydrology and, thus, the aquatic as well as terrestrial habitats in the basin."<sup>9</sup>

All of the aforementioned reasons have intrinsic merit and are reason enough for the NPS to select Alternative A. With the cumulative beneficial impact Alternative A offers in light of impending climate change, it becomes clear that the NPS must select Alternative A. By prohibiting new equestrian stream crossings Alternative A best protects the streams from erosion, sedimentation and microbial contamination. By decommissioning roads and restricting ATV access Alternative A best protects and restores the terrestrial and aquatic habitats of the ONSR. All of these measures help ensure the ONSR has a healthy, dynamic ecosystem which will be best able to withstand the effects of climate change.

Great Rivers reserves the right to rely on all public comments submitted, requests a written response to comments, and requests written notification of any action taken on the Ozark National Scenic Riverways Draft General Management Plan, Wilderness Study & Environmental Impact Statement.

#### Conclusion

As the first Scenic Waterway in the nation, the Ozark National Scenic Riverways is an invaluable resource for the citizens of Missouri and all Americans. It is therefore imperative that the NPS take all precautions necessary to ensure that this fragile, unique environment maintain the characteristics that inspired Congress to reserve it over 50 years ago. By regulating equestrian and ATV recreation more stringently, removing and discouraging unauthorized roads, eliminating unnecessary and intrusive authorized roads, and protecting against damage from adjacent gravel mining operations, Alternative A will best allow the NPS to fulfill the purpose of the ONSR as outlined in the enabling legislation. For these reasons Pat Jones and Great Rivers urge the NPS to implement Alternative A of the Ozark National Scenic Riverways General Management Plan, Wilderness Study & Environmental Impact Statement.

Very truly yours,  
Mrs. Edward (Pat) Jones

**Correspondence Type:** Letter  
**Correspondence:** Re: OZARK NATIONAL SCENIC RIVERWAYS DRAFT GENERAL MANAGEMENT PLAN I WILDERNESS STUDY I ENVIRONMENTAL IMPACT STATEMENT

Dear Mr. Black:

The Department of Conservation (Department) appreciates this opportunity to submit comments on the National Park Service's Ozark National Scenic Riverways (Scenic Riverways) draft General Management Plan / Wilderness Study / Environmental Impact Statement (GMP).

The Department's mission is to protect and manage the forest, fish, and wildlife resources in the state; and to facilitate and provide opportunity for all citizens to use, enjoy and learn about these resources. In addition, the Department is responsible for managing significant acres for Missourians adjacent to the Scenic Riverways.

Based on our review of the draft GMP, the Department offers the following comments:

1. Many aspects of the existing 1984 GMP are not being implemented/enforced by the National Park Service (NPS), such as undesignated trails and roads. The Department opposes options presented in the newly prepared draft GMP, while supporting implementation/enforcement of the existing 1984 plan.
2. The Department requests the NPS to organize a working group that includes local community members, resource agencies, and other interest groups to develop new management approaches that resolve unauthorized access/use issues within the Scenic Riverways. The GMP states that "undesignated trails and crossings are not designed to withstand the use they receive or control potential impacts to natural resources. Typically, undesignated trails and crossings are susceptible to erosion and a loss of vegetation, which can lead to impacts on wildlife habitat, hydrologic processes, and water quality, including increased turbidity." The NPS must work to ensure access points are safe and accessible for both public and commercial users.
3. The Department opposes the recommendation to designate 3,430 acres of the Big Spring unit as "Wilderness" under the Wilderness Act of 1964. The area under consideration for the wilderness designation includes the Big Spring Pines Natural Area and is also part of the Department's Current River Hills Conservation Opportunity Area. The wilderness designation is a concern for continued management of the pine-oak woodlands because this community type requires periodic fires and natural disturbance. The wilderness designation usually precludes the use of chainsaws, leaf blowers, ATVs/UTVs, and air operations, which are critical for safe prescribed fire operations. Limiting prescribed fire crews to hand tools would hinder efforts to restore and maintain the area's pine-oak woodlands. The wilderness designation would also constrain standard operating procedures for wildfire suppression, creating safety concerns for firefighters and risks for adjacent lands.
4. Proposed year-round changes to horsepower restrictions or the designation of nonmotorized zones are not supported by the Department. Zoning based on horsepower limits access in some areas of the river. Restriction of motorboats would impact the Department's ability to manage fish populations, assist with required public safety and rescue activities, and enforce the Wildlife Code within the Scenic Riverways.
5. The Department requests that the NPS continue to allow hunting, fishing, and

trapping throughout the Scenic Riverways. Department staff look forward to continuing the trout management program administered by the Department on the upper reaches of the Current River and continuing to provide management of fisheries and wildlife resources throughout the Scenic Riverways.

These comments are intended to help the National Park Service develop a GMP that will provide sustainable and resilient habitats for future generations to enjoy. Mr. Alan Leary is available at (573) 522-4115, extension 3346 or email [atalan.learv@mdc.mo.gov](mailto:atalan.learv@mdc.mo.gov) as a point of contact for additional discussion on these comments.

Thank you for this opportunity to review and provide comments on the draft GMP.

Sincerely,  
Robert L. Ziehmer  
Director

<b>Correspondence ID:</b>	2984	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,01,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Re: Revision to the General Management Plan for Ozark Scenic National Riverways.				

The following comments are based on the proposed plan for the Ozark National Scenic Riverways. In the thirty years since the last management plan the US population has increased placing additional stress on the usage of the ONSR. The choice of "no change" is simply to stick one's head in the sand and ignore reality. This simply does a disservice to the ONSR and the American public. Change is scary for some but it is needed because of population increases and changes in recreational usage patterns of the American public. My comments are restricted to areas of concern to me.

1. ATV Usage. Simply put ATV type vehicles have no place on the ONSR. The ONSR, like a large portion of the Ozark's, consist of highly desiccated ridge tops surrounding the deep valleys of the two rivers. The topsoil is marginal at best and highly at risk for erosion. The U.S. Forest Service bans the use of ATV's off of authorized roads in the Mark Twain National Forest, which comprises a lot of flatter land then the steep terrain of the ONSR. The Forest Service provides for off road ATV usage at several locations, Sutton Bluff etc., but even there usage is restricted to laid out and approved trails. Because of the terrain in the ONSR the use of ATV type vehicles, due to their propensity to seek challenging terrain to ride roughshod over, should not be allowed. The issue of ATV usage was not addressed in the old management plan simply because thirty years ago ATV's essentially did not exist and it was not an issue.

2. Horse Usage: I own and ride horses. However my "right" to ride my horse cannot justifiably prevent others from enjoying the ONSR. With a number of competing user groups wanting access to the ONSR the effect of the different activities on the other uses must be considered. Simply put no one should expect that their pleasure should be allowed unfettered and without consideration of other usage groups. If one or two horses defecate in the river at a crossing the manure will be disposed of by natural biological processes. However several hundred horses defecating at one location at the same time presents a problem. No one wants the presence of E. Coli in the rivers of such a magnitude that it becomes a health issue. Yes, I am aware that deer may poop in the river but natural biological processes break down the distributed manure from a smaller animal than a horse. These same processes will eliminate distributed horse manure but it is the concentration and quantity of manure that may pose a problem. Since a river crossing offers the horse an opportunity to drink, the time spent in the river is increased and thus the opportunity for manure to be deposited in the river. Since the reduction of "horse apples" floating in the river adjacent to people floating in tubes is desired, consideration of a way to reduce horse exposure time in the river might be of use. For example the availability of watering troughs placed back from the river would serve two purposes. One would be the reduction of manure being deposited in the river and secondly allow managed use of manure as a resource. The water tanks might be arranged such that gravity feed from the river might be possible or a small solar powered pump might be used to provide water to the tanks adjacent to river crossings.

The manure could be useful as a soil conditioner for help in restoration of damaged soil areas. Horse manure is an

excellent organic soil conditioner and fertilizer to restore the thin topsoil. Or more creative uses such as selling manure in plastic bags with labels such as "Found something at the ONSR that reminder me of you" at the Visitors Centers. I think it was H.L. Meneken who said, "No one ever went broke underestimating the intelligent of the American public."

The great naturalist John Muhr, beloved of the Sierra Club, did not explore and write about what would become Yosemite National Park on his own. His companion on these ventures was Brownie, a mustang horse. Muhr did not walk around Yosemite but in fact rode his horse. Horse usage in park areas has a long history and predates a number of parks. There are historic and economic reasons for continued horse enjoyment in the ONSR. Management of horse trails to enhance the enjoyment of riders while reducing conflict between users is desierable. The visual experience I get from riding the rim overlooking the rivers compares favorably with other trails I have ridden such as the Pacific Crest Trail, the historic Western States trail to the California gold fields and trails in the Smoky Mountains of Virginia. The ONSR is a local treasure to be cherished, but must be available for usage by multiple usage groups.

3. ROAD ACCESS: From talking to a number of people the issue of closing roads seems to be the "They want to take away my access to \_\_\_ (fill in the blank) that my Grandpappy used when he took me fishing when I was a little boy." The comment being made from a grizzled retired person. The problem is that there are a lot more popel using the river then when "Grandpappy" took a kid fishing thirty or forty years ago. I am old enough to remember when there was no traffic light in Salem. Now they're several and also one way streets, why? because there are more cars on the roads. Increased uncontrolled usage is not a desirable management plan. However the question that must be considered is, does the road cause a problem to the park. If not, then why close it to the public. Perhaps by upgrading the facilities at certain key road access points the public would be better accommodated then with continued usage of marginal roads that present a problem to the park. The issue seems to not be the one "local" who uses an old road for access but the 50 or 60 "non-locals" who follow in his tracks. The "local" may consider him or herself to be a steward of the land but the 50 or 60 "non-locals" who follow in their tracks may not have the same historic reverence for the land. As pointed out above the elimination of off road ATV type equipment may lessen the adverse impact of access everywhere and whenever mentally that seems to prevail among some visitors to the ONSR.

4. Management Issues. In graduate school I had a management professor that spent his early career in private industry and I still remember one of his admonishments. It was to avoid large scale sweeping management changes like the plague. When you gore everyone's ox at once everyone's against your changes and makes common cause against you. Unfortunately the General Management Plan has placed the ONSR in the position of having ALL the peasants besieging the castle with torches and pitchforks at the same time. Note that the term "peasant" is used only in the allegorical sense and is NOT meant in a literal sense. Yours is a difficult task and I do not envy your position. The best of luck to you.

<b>Correspondence:</b>	REGARDS: Two Major Comments Concerning Ozark Scenic Riverways General Plan				

#### Alternatives

The National Park Service will find during the comments period that there will be overwhelming opposition to their preferred alternative plan that drastically restricts access of the Ozark National Scenic Riverways to the Missourians who depend on the area for their socio-economic existence. However, after reading the National Park Service's General Plan, it was apparent that the National Park Service planners ignored two essential areas that make the entire General Plan unacceptable to review.

(1) The first area was the National Park Service's statutory dllty to comply with the Federal Law which created the Ozark National Scenic Riverways. The Secretary of Interior has failed to meet the requirements of the Ozark National Scenic Riverways Act of 1963, by not cooperating with the State of Missouri and its political subdivisions in formulating

comprehensive plans for the Ozark National Scenic Riverways. The result of this failure has allowed the National Park Service to produce three General Management Plans (A, Band C), that were developed by their Denver, Colorado based planning employees and a large number of consultants; of which, none represented the State of Missouri and their political subdivisions.

16 U.S.C.

United States Code, 2011 Edition

Title 16 - CONSERVATION

CHAPTER 1 - NATIONAL PARKS, MILITARY PARKS, MONUMENTS, AND SEASHORES

SUBCHAPTER LXX - OZARK NATIONAL SCENIC RIVERWAYS

From the U.S. Government Printing Office, [www.gpo.gov](http://www.gpo.gov)

§460m-4. Cooperative land development programs; hunting and fishing

(a) Development of comprehensive plans

In furtherance of the purposes of this subchapter, the Secretary is authorized to cooperate with the State of Missouri, its political subdivisions, and other Federal agencies and organizations in formulating comprehensive plans for the Ozark National Scenic Riverways and for the related watershed of the Current and Jacks Fork Rivers in Missouri, and to enter into agreements for the implementation of such plans. Such plans may provide for land use and development programs, for preservation and enhancement of the natural beauty of the landscape, and for conservation of outdoor resources in the watersheds of the Current and Jacks Fork Rivers.

¶ Consultation and Coordination with the State of Missouri amounted to the following:

On November 15, 2010, park staff met with representatives of the Missouri State Historic Preservation Office and the Missouri Attorney General's Office. At that meeting, the park staff explained the general management planning and wilderness study process and the current phase of the plan. The state historic preservation officer was provided a copy of the Newsletter 3 (spring/ summer 2009) and was informed of the preliminary alternatives that had been developed. The National Riverways would keep the state historic preservation officer informed as general management planning progresses. (Pg. 383)

(2) The second area was the omission by the National Park Service, within the Alternative Plans, of the actual devastating effect on this area of Missouri if portions of the Ozark National Scenic Riverways become Wilderness Areas or if the National Park Service is given the authority to "prepare" the areas after Wilderness designation. Within the National Scenic Riverways Draft General Management Plan / Wilderness Study / Environmental Impact Statement; the National Park Service admits that the General Alternative Plans are "based on research and the professional judgment of planners who have experience with similar projects. In terms of geographic scope, the impact analyses in this section primarily focus on the socioeconomic conditions of the local communities (primarily Eminence and Van Buren), and the two adjacent counties (Carter and Shannon counties) because this is where most impacts would be most noticeable."

A perfect comparative example of the public's actual interest in a "Wilderness Area" is the 16,000 acres of Irish Wilderness that is located only 20 miles southwest of Van Buren. The Irish Wilderness has a similar topography as the Ozark National Scenic Riverways area and also contains the Eleven Point National Wild and Scenic River. The visitor use of this area is estimated by the United States Forest Service as being 500 - 700 visits on average each year. Rather than promote a logical comparative study in the proposed Alternative Plans with the Irish Wilderness, the National Park Service totally ignored this huge underutilized area that was formed by the federal government in 1984. Such an omission by the National Park Service is incompetence at best; or at worst, a dishonest cover up of the true SocioEconomic consequences of their preferred alternative plans.

CONCLUSION: The only legal Ozark National Scenic Riverways General Plan is the "NO ACTION PLAN"

We the undersigned Support this Comment Letter that identifies:

1. The Secretary of Interior has failed to meet the requirements of the Ozark National Scenic Riverways Act of 1963, by not cooperating with the State of Missouri and its political subdivisions in formulating comprehensive plans for the Ozark National Scenic Riverways.
2. The National Park Service omission, within the Alternative Plans, of the actual devastating social and economic effect on this area of Missouri, if portions of the Ozark National Scenic Riverways become Wilderness Areas.
3. Support of the "WO ACTION PLAN"

Richard Joyner

<b>Correspondence:</b>	January 20, 2014				

Superintendent  
Ozark National Scenic Riverways  
PO Box 490  
Van Buren, MO 63965

REGARDS: Support of "No Action Alternative General Plan"

Superintendent:

When I was a young boy, my grandfather, Frank Roberts, owned 200 acres at the mouth of Rocky Creek on Current River. The National Park Service took the farm by eminent domain in the 60's. The NPS told my grandfather they were going to make the river a place where all people can always enjoy it. Unfortunately, that seems to no longer be the goal of the park service.

Through the years I have seen the changes that the Ozark National Scenic Riverways have made. They have made it where families can enjoy it for a day or a lifetime. There is access all up and down the river and room for everyone to enjoy it. If they want to canoe, tube, run a boat, go hiking, hunting, or fishing, or just enjoy the scenery and the beauty of the nature they can. Now, the ONSR is forgetting the purpose of our tax dollars spent. It is not for the special groups or lobbyist with money. It is for the enjoyment of all people.

I have spoken with the Department of Natural Resources and there is no study showing the riverways being misused or in a state of digression. The locals are very proud of their rivers and do many projects each year to keep the rivers clean, including a yearly clean out. Most trash and misuse comes from those coming into the park and not being educated on how our river systems work and how we operate as a community to keep them clean and cared for. We need to find a way to educate them about our river systems and the amazing ways this river system provides for our communities, and that we want to share our awesome rivers and parks with all.

So Mr. Superintendent, I am asking you and the committee to leave the river as it is, "No Action".

As for the wilderness area suggested for the now Big Springs area. We have an Irish Wilderness area of several thousands of acres just a few miles from here. This Irish Wilderness Area sees 400 to 700 visitors a year. This is as many visitors that Big Springs now accommodates in one day during peak season. So why the change if we are wanting to make this for the people? Can you give me a reason? Once again I state, "No Action".

Sincerely,

Rickie L Roberts  
Mountain View, MO 65548

**Correspondence:** I CAN HEAR CURRENT RIVER CRY

Growing up on the Current River where the river ran through my back yard at Akers, MO makes me feel very, very fortunate to have had the opportunity to grow up in such a beautiful area and has left me with wonderful memories. The river is where I go to meditate and enjoy God's beautiful creation of nature and the beauty around it and celebrate the happiest and heal the saddest moments of my life. I absolutely enjoy swimming, canoeing, kayaking, inner. tubing or just sitting in the river. I feel deprived if I don't get enough of it. I have always cried in the river when I have been terribly frustrated or devastated at whatever has occurred in my life (the loss of a loved one or some other disappointment in my life.) The river has a healing and energizing effect on me.

My love for the river and land at Akers runs very deep. The land had been passed down through my family for generations since the Civil War in my mother's family (Loreen Purcell Maggard.) Akers was the trade center for the community for miles around. Members of the Purcell family lived up and down the river from Akers. Beanie Purcell lived down the river across from Cave Springs. They farmed, trapped, fished, logged, and raised hogs and cattle to make a living. My grandfather, George C. Purcell owned the country store (on the hill above the Junction K and KK.) He owned seven sawmills and much of the land surrounding Akers. Some family members were even moonshiners. They also ran the ferryboat. Members of his family (Frank Purcell, Marion Purcell, George Purcell and finally my mother, Loreen), were the postmasters at the Akers Post Office which was inside their country store. The country store met the needs of all the community. Shoppers could shop for food, dry goods and even get a haircut. It had a potbellied stove so many hours were spent socializing and telling hunting stories and whatever was on one's mind at the time. The upstairs of the store housed the Oddfellow's Lodge. They had an initiation chair that they would have the fellow sit on and the legs would collapse. I have fond memories of tricking my friends with that chair (The lodge had disbanded before I was born.) The telephone office was there also. A member of the family had to be stationed at the phone and connect all the neighbors who received calls.

Mt. Zion Church sat at the top of the hill above Akers. The land where the church house sits was donated by my grandparents and built by the community. My father was very proud of his part in building the church. I remember riding horseback in front of Robert Crosswhite to church on most Sundays while Mt. Zion Church was operating. My family attended many baptisms at the river below the ferryboat. Revivals, singings, community dinners and gatherings were held at Mt. Zion. It is a beautiful rock building. After the park service took over, they gave everything away that was in the building and wanted to tear it down. The Missouri State Historical Society got involved with the community members and thank God the building was saved. It is sitting there empty when it could be used as an inspiration point, museum, and be used for community events. I would like to see it restored to its original state. Rev. Yount and later Rev. Wobus preached there.

The Akers School sat on the east side of Gladden Valley Creek. In her early years, my mother taught there. My sister, Omaleta, had her for a teacher. Unfortunately, the park service tore the school building down years ago. I spent many hours playing in that building. Mom also taught for a period of time at Bluff school. The Bluff school house still stands but is in dire need of some tender loving care. Schools up and down the river have been destroyed or painted park service colors and used for storage instead of being preserved for historical purposes.

The Akers Cemetery sits on the hill overlooking Gladden Creek north of where the school sat. Both sets of my grandparents are buried there as well as aunts and cousins. My great- great grandparents on the Purcell side are also buried there. Several graves are marked with cave rock. My parents are not buried there because my mother feared the Park service would let it grow up and be destroyed. Before the national park, she and Dad and other community members took very good care of the cemetery. My brother Gene and I sit on the Akers Cemetery Board. He is the president; Richard Purcell, vice president; Jim Purcell treasurer and I am secretary at present. I never want the Akers cemetery to grow up and be destroyed like many cemeteries up and down the river. For example, the pre-Civil War Purcell family cemetery located on what was the Beanie Purcell place across from Cave Springs is grown up, grave markers lost, and cannot be found unless if you know exactly where you are going. Veterans are buried there. I never want the Akers cemetery to suffer the same fate.

After my parents were married, they built the store where it stands today. Half of the building was our home and the other half was the store. The store had a post office built in one corner of the building just like my grandparents store. My mother was the Post Master there as well as my father being the barber. It was the hub bub of the community. People gathered around the wood stove and told stories. People still traded for most everything they needed. Salesmen and traders would come through the area selling their goods and would repair what needed repairing.

Traditions and the Ozark Mountain People culture continued. The neighbors would take turns having square dancing in their homes. My father (Buck Maggard) was the fiddler on most evenings and my uncle Doc would market their moonshine. (My parents met each other at one of these dances.) life at Akers was good.

My parents, Buck and Loreen Maggard, bought a couple of canoes from Sears and Roebuck catalog to rent to people who might want to float, fish or just enjoy the Current River. He also built a campground on both sides of the river for campers to use. My dad would use his red 1950 model one and half ton cattle truck to haul floaters to and from the put in and take out points on the river. The people would ride in the back with the cattle panels protecting them. I remember some people enjoyed the ride in the truck almost as much and their boat ride. Canoeing really became popular. He bought Grumman aluminum canoes, Osage canoes, and various brands over the years. My parents never turned anyone away on reserving a canoe. They went and bought more until they had around 300 canoes before the Ozark National Scenic Riverways bought their land by eminent domain and reduced the amount of canoes they could rent. I will never forget the devastating news that the government was taking our property for recreation, the land that was so dear to us. It felt like we had a death in the family. I will never forget when the federal marshal came to serve papers on my father. My brothers (Eugene and Dwight) and I were instructed that we could not accept the papers so we turned the marshal away three or four times because dad was not present.

Well, one evening when everyone was sitting around the stove telling stories, the marshal came in and joined us. After a while he asked if anyone knew Buck Maggard and one of the local drunks spoke up and said, "There he is!" So the papers were served!!! After the park service came in, I will never forget that feeling of emptiness that I felt when I floated the river and all the neighbors were gone. There was not any one to stop and visit or share goodies like watermelon and pastries as you floated down the river.

Currently, my brother Eugene and family have the concession at Akers. They have a canoe rental and store where things that you might need on the river can be purchased. Eighteen years ago the park service closed the campground at Akers which had really hurt the economy. It cuts to the core that land that even the Indians loved years ago and tourist once enjoyed camping upon was closed by the government so that the sounds, smells and beauty of the river at that point can't be enjoyed as it had been for years.

The beautiful farm up the river that belonged to my grandparents and later my uncle Dee and Aunt Pearlle across from Welch's Cave was also purchased by the government It had a huge barn that housed all the animals from the chickens, sheep, horses and cows. The park service tore it down. The house (Maggard Cabin) was torn down to the log frame and is about half way restored. My aunt Pearlle and I loved fishing at the family's favorite fishing hole where she helped me catch my biggest trout.

I can hear Current River cry because all the people who grew up, loved and respected the river have had to move away. There is not anyone left to care for the land, the traditions, the culture and the structures (school houses and churches). It is the Ozark Scenic Riverways responsibility to preserve the history and culture of the area. So far they have shirked their responsibility. It has always left a sour taste in my mouth when park service personnel have asked what a building or place looked like when it was the park service that tore it down. Rules and regulations are being implemented to govern the park and limit the amount of tourists/users. It appears that the park service does not have the funds or manpower to manage all the acreage they took from all the people. Consequently, they need to come up with a plan that will protect and take care of the river and preserve the culture and traditions of the Ozark Mountain People. Everyone needs to be able to enjoy the river1 not a select few and never ever shut it down again!

**Correspondence Type:** Letter

**Correspondence:** The lifeblood (livelihood, culture, recreation) of the people (Ozark Mountain people) of Round Springs, Missouri was centered around Current River and the surrounding mountains, valley's and creeks. The people of the community were trappers, hunters, fisherman, loggers, farmers, saw millers, merchants, postmasters, teachers, engineers and moonshiners. The economy of Round Springs depended upon the natural resources of the surrounding area. Round Springs had two general stores, (Carr's and Vaughn's Spring Valley Store) a post office, a state park, three canoe rentals( Carr's, Sullivan's, and Vaughn's) two lodging establishments,(Round Springs Lodge and Cottages, Bank's Cabins), two restaurants(Patterson's and Hinkle's) Round Spring's Cave, Spenser's Sawmill and Camp Zoe's Children's Camp.

The economy of Round Springs was adversely impacted by the Ozark National Scenic Riverways as the result of limiting access to the river and acquisition and then closure of most of the above mentioned businesses and of many existing roads and limiting access to the river. The only remaining business is Carr's Canoe Rental. The remaining access to the river are: Carr's Landing, Round Springs Middle Landing and Round Spring Lower landing (Asphalt). The following river access have been closed:

1. Road and access to Mose Prater Place
2. Vehicle access at mouth of Sinkin Creek
3. Access above Sinkin Creek Bridge
4. Road and access to Philchew and Willhite Hollow
5. Road and access to Tom Conway Place (Benton Hollow)
6. Access from Rt. 19 across river from Benton Hollow.
7. Access to Sawdust hole
8. Road and access to Courthouse Subdivision

Plainly speaking, most everything that made Round Springs a good community to live and visit is no longer available to the general public. Riverfront and Spring Branch camping have been virtually eliminated. Roads to favorite camping, fishing and hunting spots have been closed. Many older and handicapped people can no longer camp, fish or hunt due to limited vehicle access to the spring branch, river and surrounding area.

Law enforcement in Ozark National Scenic Riverways is a dismal failure. The geography of the park (90 miles long, Y2 mile wide) laced with county roads makes law enforcement extremely difficult. Let the general public keep the existing roads and trails for recreation and emergency use. Before the establishment of the ONSR the individual landowners enforced strict rules according to their way of thinking. People did not abuse the river and surrounding land; bad plan; the people became unwelcome. Now that the river and land is controlled by the National Park Service, lack of respect for the river, land and people is rampant. A few people are destroying the whole park. The attitude is that if something belongs to the government then people feel that they are entitled to do as they please. This attitude creates many problems for both the local people and tourist. Law enforcement needs to be highly visible, enforce existing regulations and educate the public. Management needs to develop regulations and have a management plan that provides for a positive experience for all the people.

The Management Plan developed by the Ozark National Scenic Riverways is written to satisfy well-funded special interest groups. The general population is unaware of the management plan and what they want does not seem to matter. I feel the general population wants the park managed in such a way that all people can access, use and enjoy the park while still maintaining and preserving it.

The Management Plan fails to address the social aspects of the people, (both the tourist and local communities). The plan fails to address the needs of the old and handicapped, the local businesses, the tourist. The plan promotes the Park for the Park's benefit and has become a bureaucracy that provides for and consumes itself from within. The Ozark National Scenic Riverways needs to be managed and run for the use and enjoyment of all the people, not a select few.

I grew up in the Round Spring's Community, working as a teenager for the Round Springs Lodge, Cottages, and Caverns; Camp Zoe Children's Camp, Round Springs State Park and Seasonal Park Ranger for the National Park Service. Round Springs is a microcosm of many communities throughout Ozark National Scenic Riverways. Many communities have all suffered and died with the help of the National Park Service. Favorite camping, fishing, and hunting spots are no longer accessible. Let's give the park back to the people, return it to the Missouri State Park System and manage it for the people, not special interest groups.

<b>Correspondence:</b>	PARK SERVICE CHANGES LIVES				

Recalling the area below the confluence of the Jacks Fork and Current Rivers in the early 1940's through the 1970's, which was my early childhood, seems to be a formidable task. The warm community of people is no longer there as a result of the takeover of the Ozark National Scenic Riverways.

My parents were living in Chicago, IL where Dad and a partner had a profitable company that manufactured parts for equipment used by the military called Patlyn Gears. He invested some of his profits in a piece of property below the junction of the two rivers. At the time I was little girl of four years old when we moved to Shannon County. The property had a beautiful waterfall on the creek called Matthews Branch. His dream was to build a dam at the head of the falls and generate electricity. He wanted to have an all electric home in the Ozarks. The structure that was on the property was built initially for a summer home by people from St. Louis their last name was Ruhack. It was a very small two room structure with a wide front, screened porch. There was a hand pump in the back yard for water, a little house out back for sanitary purposes, no electricity or phone. It was a difficult move for my mother who was accustomed to a modern home. She learned to cook on the wood stove and to deal with the problem of laundry in the wilderness. Dad rigged up a generator that he placed in the little outhouse and set up a concrete slab under a lean-to attached to the side of the house as I recall Mom had to start the generator to help with running her wringer washing machine. I believe that she had a gas powered machine first and then graduated to the electric. In a few years my parents built a new home and a dam on Matthews Branch and set a generator. He was ready to complete his dream when the park service took their property by eminent domain. My father's dream was destroyed as a result of the National Park Service purchasing all his river front property thus preventing him access to the river and use of the ferry boat to be able to travel on the west side of the river.

We had next door neighbors in the summer, there were two small cabins that were owned by the Flarety family in St. Louis and members of the family came as often as they could. Down river from us was the Dan Corbin family and further down the river another family from St. Louis had two cabins owned by the Hertel family. Between the Flarety house and the Cooley shack was another small house where Mrs. Cooley lived, the mother of John, Sim, Joe, and Ernest. I believe they lived with their mother except when they were on duty for the ferry. Ernest Cooley was married and he and his wife lived in a farmhouse on the top of the mountain behind our house. Later, the Johnny Brown family lived there. At a small spring up on Matthews Branch Bob Brown lived with his large family. Some of the time this family lived on Thompson's Creek. And living further up the creek was a family by the name of Patterson.

The Cooley's brothers, John, Sim, and Joe, ran the ferry boat. They stayed in a small shack on the top of a hill that overlooked the river. When a car wanted to cross they would honk their horn and one of the men would come "set them across". The cars that crossed were usually going to an area called Himont which was a lumber community, Midridge, or Bunker. That road was built by WPA with a pick and shovel. The ferry boat and community of families are no longer at Two Rivers after the Park Service bought all the land in that area.

There was another summer cabin across a small stream next to the ferry that was Tony Swiney's. But I do not remember who owned it before them. There was a road that ran parallel to the river. It went to Thompson's Creek and served many families there and beyond. We lived on the North side of the river. At that section of the river the

hills were higher close to the river so when the river flooded these homes were safer. If you crossed to the south side of the river at that point there was a nice flood plain to take the excess water. The river road on that side of the river went to the Jack's Fork store and post office. We walked to the store most of the time to fetch our mail and to pick up necessities. The store and post office served all of the families previously mentioned. But there were more. The Botts' Sawmill set was across the Jacks Fork River in the 1930's and the George Fry family and his brother Jim's family lived on that land where the sawmill set had been. The children of these families attended school on Sutton's Creek. But got their mail at Jack's Fork; it was also true of the families that lived on Thompson creek.

The store and post office was owned Albert and Bertha Russell. They had a couple of small cabins that they rented out to summer visitors. The best I remember Bertha also preached to help supplement their income. I remember going to a preaching at Prairie Hollow in a wagon with Clifford Hunt. The Hunt family lived on the top of the long steep hill that led out of the river valley from the junction. They too got their mail and goods there and their children attended school at Sutton's Creek. The store sawmills, school, and post office all do not exist anymore as a result of purchase by the Ozark National Scenic Riverways. The Russell family sold their business to Pete and Lois Salisbury and they had a family named Easton who was in partners with them initially. Their daughters were named Peggy and Kay. They constructed a lodge where they served family style meals and added more cabins, plus a shower house with toilets. Clients all went to a pump for water and filled buckets. There were horses for rent but most people came to float the rivers and fish. Any people who wanted to eat at the lodge let them know early in the day so sufficient food would be prepared. Salisbury's Lodge also could not survive due to what the park service has done to the community.

After the National Park Service came in everything changed. No families live in the area. The small farms are gone. The ferry boat is gone. The Post Office is gone. The lodge dining hall is a small store that services floaters. The resort that was at the junction is gone. This community of people and businesses died when the National Park Service bought all the land. It is gone forever just like other small communities up and down the Current and Jack's Fork Rivers. Large busses come to the old ferry landing and pick up or put in floaters. This community was destroyed as a result of the takeover by the government. Why can the government take our land for recreation when recreation was already being provided by the local people?

Re: Draft General Management Plan  
First Comment

Dear Bill and Russ:

I hope this correspondence finds you both doing well in the new year. I am submitting this letter as my first

comment on the newly released draft General Management Plan (GMP). I trust you will give the same due consideration.

## I. Regulation of the Waterway Surface

Public use of a particular waterway's surface is generally linked to the ownership of the waterway's bed. The determination of bed ownership, and corresponding rights over the waterway's surface, involves complicated interplays between navigability for title, the equal footing doctrine, public servitudes, prescriptive easements and the property clause.

Specific to the Ozark National Scenic Riverway (ONSR), if waterway segments are determined navigable for title, the State of Missouri is likely vested with title to the bed by virtue of equal footing. Conversely, if waterway segments are determined non-navigable for title, then the bed is likely vested in the federal government by virtue of title acquisition of adjacent land during ONSR's formation.

In those segments navigable for title, I suggest the federal government regulation of the waterway surface violates sovereignty principles not contemplated under the property clause. Additionally, those segments non-navigable for title, remain subject to those restrictions encumbering title. Once such encumbrance is a general servitude in favor of public use of the waterway surface. I suggest restricting this general servitude remains outside of the property clause, or at a minimum, is constrained to only those restrictions which are narrowly tailored to correct activity injurious to federal property interest.

As the above relates to the draft GMP, the National Park Service (NPS) makes a base assumption it has the authority to regulate the entire waterway surface within its geographic boundaries. This assumption is made without discussion as to riparian rights, Missouri's sovereignty and constitutional constraints of federal jurisdiction. For that reason, I respectfully request that the NPS address the following:

- Identify those waterway segments which are navigable for title;
- In those segments determined navigable for title, please explain NPS's regulatory authority over the waterway's surface;
- Identify those areas of the waterways which are non-navigable for title;
- In those segments determined non-navigable for title, please explain NPS's regulatory authority to restrict the general servitude in favor of public access, and;
- Finally, in those segments determined non-navigable for title where regulatory measures are planned, please address the anticipated costs of the public servitude's diminution and future potential "takings" litigation.

Finally, if after exploring the above comments NPS believes regulatory authority exists, I next ask for specific detailed facts justifying each waterway surface regulatory measure to be implemented. I do not believe the justifications stated in the draft GMP are sufficient to meet the heightened review standard necessitated by the riparian rights in play.

## II. Similar Issues with Land Restrictions.

I further question the propriety of certain road and gravel bar closures due to vested public interests prior to ONSR's ownership. While certain roads, trails, gravelbar crossings and/or gravelbar uses were not in existence prior to ONSR acquisition, several were. This past continuous hostile use predating federal title arguably renders that title subject to the same.

I suggest closures - or regulations restricting use beyond those uses common at title vestiture - of those areas in public use at ONSR's formation will operate as a taking. For that reason, I request that the NPS address the following:

- For those areas subject to closure or restrictions, what efforts were made to evaluate the prior public use and potential prescriptive rights, and;
- Please address the anticipated costs of future takings litigation.

Finally, I again request specific detailed facts justifying each regulatory land measure that restricts these prescriptive interests. I do not believe the justifications stated in the draft GMP are sufficient to meet the heightened review necessitated by the prescriptive rights in play.

### III. Sacrifice of the Recreational Purpose

Recreational use was a material consideration during ONSR's creation. The initial proposal for the establishment of an "Ozark National Monument" was defeated due to concerns it went too far in restricting recreational use. Subsequently, a compromise was reached in a proposal to create the "Ozark Scenic Riverways."

In the initial report by the Interior and Insular Affairs Committee, the committee noted the geographic location of the riverways lends itself to the creation of a federal recreation area. The committee emphasized the "importance of creating Federal recreational areas" through establishing the Ozark Scenic Riverways. And, the then secretary of the interior, Stewart L. Udall, wrote in a correspondence to the committee that he wanted "to make clear that recreation is a purpose" of the proposal to create the Ozark Scenic Riverways.

The final bill creating the ONSR reflects this compromise. Specifically the stated purpose of the ONSR follows:

For the purpose of conservation and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States . . .

Finally, in creating the ONSR, the drafters noted the Secretary's authority for conservation and management of natural resources could be utilized only to the extent it furthers ONSR's stated purposes. 16 U.S.C. 460m-5 Again, one such purpose is recreation.

The congressional intent is clear that recreational use stood on equal footing with the remaining stated purposes. However, this footing has continually eroded since ONSR's formation

I request that the NPS address the following:

-Why is recreational use subordinated junior to conservation and preservation? Examples of this subordination are found in multiple ONSR park policy statements, as follows:

" Provide the widest range and highest quality of recreational activities which are consistent with the purpose of the Riverways and which can be accommodated without undue impact. 1989 River Use Management Plan (emphasis added).

" Conditioning recreational use to only those "[opportunities] consistent with the preservation of the park unit's resources." GMP October 2013 draft, pg. 12

" "If a conflict occurs between visitor use and protection of resources, the intent of Congress is to favor resource protection." GMP October 2013 draft, pg.18.

-In making these policy statements, what consideration was given of 16 U.S. C. 1 a-1 directive that requires authority to be exercised so as to prevent "degradation of the values and purposes [e.g. recreational use] for which" a park has been created.

As to the specific proposed regulation of recreational uses, I ask you to address the following:

-What are the overriding governmental interest supporting the following restrictions/eliminations of recreational use:

" banning vehicular traffic on non-designated gravelbars;

" banning motorized watercraft on the Riverways through permanent and seasonal closures;

" implementing caps for the number of users undertaking certain recreational activities, e.g. watercraft, camper camping, etc ... ;

" closing 55 miles of vehicular road and trails;

" closing approximately 20 unidentified river access points;

- " closing 65 miles of equestrian trails;
- " implementing a permit system for equestrian users;
- " developing potential permit systems for watercraft users, and
- " imposing new horsepower restrictions below Big Springs.

- What alternatives were considered by the ONSR for protecting these interests, and why were these alternatives not chosen?
- Are there any more narrowly tailored alternatives for protecting these interests, and if so, why were these alternatives not chosen?
- How do these restrictions further ONSR's recreational purpose?
- How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S. C. 1a-1?

#### IV. Waterway Restrictions

The draft GMP proposes three waterway zones: mixed use, seasonal mixed use and nonmotorized. The later two zones limit motorized watercraft use only. I ask for the NPS to comment on the following:

- What are the overriding governmental interests necessitating motorized watercraft elimination in certain areas of the waterways?
- If that interest was to create differing user experiences?
  - " What considerations, if any, were given to the river levels seasonal fluctuations preventing motorized watercraft?
  - " What considerations, if any, were given to differing volumes of motorized watercraft during seasonal weather changes?
- If seasonal weather and river level fluctuations were considered, why were they determined insufficient to adequately create differing user experiences?
- How does eliminating motorized watercraft further ONSR's recreational purpose?
- How does eliminating motorized watercraft degrade the recreational purpose, and is such degradation permissible under 16 U.S. C. 1 a-1?
- Is the elimination of motorized watercraft -in violation of the general servitude in favor of public use? If so, what are the anticipated takings cost.
- Is the elimination of motorized watercraft in violation of prescriptive rights predating ONSR's title? If so, what are the anticipated takings cost.

I suggest eliminating motorized watercraft is unnecessary, overbroad, and outside of regulatory authority. The NPS should shift its focus to provide users information concerning the best times and locations to obtain their desired experience.

#### V. Land Based Restrictions

The draft GMP land based management zones are separated into four categories: Developed, Resource-based recreation; Natural, and; Primitive. I ask for the NPS to address the following:

- What are the overriding governmental interests that supports 72% natural land zoning?
  - " How is that interest furthered through limiting recreation to only those lowimpact uses where "evidence of human use would be limited"
  - " How does this zoning concept further ONSR's recreational purpose?
  - " How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S. C. 1a-1?

-What are the overriding governmental interests that supports 16.4% primitive landzoning?  
" How does this zoning concept further ONSR's recreational purpose?  
" How do these restrictions degrade the recreational purpose, and is such degradation permissible under 16 U.S.C. 1a-1?

If zoning is utilized, I suggest the zone consistent with all stated purposes is Resources-based recreation. With modifications to allow amenities which are minimally detractive from aesthetic values, the Resource-based recreation concept can properly balance recreational use with conservation and resource preservation. Has this been considered by the NPS? If so, and if a determination was made that conservation and resource preservation could not be accommodated within Resource-based recreation zones, please provide the reasons said conclusion was reached.

## VI Visitor Use Management

To address perceived congestion, the draft GMP implements Visitor Experience Indicators and Standards. The NPS states these standards are an attempt to limit excessive users, or disruptive uses, inconsistent with the desired river zone. As it relates to the standards, I ask the NPS to address the following:

-Why are the watercraft "caps" based on historic watercraft users instead of capacity?

-What reasons support your decision to exclude tubes from the definition of watercraft?

-The 6 camper restriction is ambiguous. Please provide clarification as to its intended meaning?

" In implementing designated gravel bar campsites, did the NPS conduct studies to compare congestion on holiday vs. non-holiday weekends?

" If congestion is not present on non-holiday weekends, did the NPS consider more narrowly tailored management approaches to correct the specific holiday congestion in lieu of a blanket management strategy?

" If a narrowly tailored solution was considered, please advise what solutions were considered, and why the same were rejected.

-Please explain why the disorderly conduct standard is not river segment specific.

As the same relates to corrective measures, I ask the NPS to address the following:

-Did the NPS consider that the stated corrective measures may prevent future management discretion to consider changing uses and recreational technology?

-If disruptive behavior problems occur in specific river segments, does the NPS intend to implement corrective measures throughout the entire riverways, even non-problem areas?

-Please explain the logic of requiring quieter boats as a corrective measure for excessive watercraft users.

" This corrective measure has nothing to do with overcrowding, the stated purpose for implementing the standards.

-Please provide greater detail to the potential water craft permit system

While regulating by numbers is logical to counter congestion, it is illogical to regulate disruptive uses. In so far as the visitor standard's purpose is to regulate disruptive uses, planning by numbers should be abandoned. Rather the NPS should implement a management strategy that squarely addresses the perceived problem.

## VII Primary Objective and Favored Use

The preferred alternative's seeks to convert the vast majority of the park to a natural area where evidence of human use is minimal. Similarly, the favored user experience is the ability to "observe native wildlife, explore a cave, or ponder the size of a spring flow" in solitude.

While the concept of a natural area may be desired by some, others favor recreation based improvements and

amenities. Additionally, while pondering the size of a spring flow in solitude is an important user experience, equally important are those social experiences realized between friends and family.

No one use should predominate to the exclusion of another use, and policy formulated to accomplish the same is unnecessary. Seasonal river conditions provide both experiences. Social recreational uses predominately occur on summer weekends, the avid "spring ponderers" will find solitude during the week, winter, spring and fall.

#### VIII. Horsepower Restrictions

I commend the NPS for recognizing the need for larger horsepower motors to safely navigate jon boats with family sized loads. At present, the 60/40hp motors minimally accommodate the same.

That stated, why are horsepower restrictions necessary? If the intended purpose is to reduce excessive speeds, why not implement speed limits? If the intended purpose is to control wake, why not implement wake restrictions or boat weight restrictions?

Whatever the claimed justifications for limiting horsepower, I ask the NPS to consider if an alternative narrowly tailored regulatory measure exists to accomplish the desire objective.

Superintendent  
Ozark National Scenic Riverways  
PO Box 490  
Van Buren, MO 63965

REGARDS: Support of "No Action Alternative General Plan"

Superintendent:

The very first impression I received from review of the General Plans were the use of the negative term "No Action" Alternative General Plan to describe the present National Park Service's General Plan. That immediately showed the National Park Service's bias and activism by those who prepared the General Plan alternatives. It was clear to this reader that the purpose of using this negative term was to deceive the public that the National Park Service did not have adequate protection authority over the Ozark National Scenic Riverways. In fact within the opening "Executive Summary" the first subject being the "Purpose of the Plan", readers are subjected to immediate bias and activism; "The first general management plan for the National Riverways was completed in 1984, and this plan served the park unit well for many years. However, the 1984 plan is outdated and the NPS Riverways is now facing an increasing array of issues that require guidance through an updated, approved general management plan. A new plan is needed for the following reasons: etc."

The following are comments that support the present General Management Plan that the National Park Services is using to operate and manage the property within the Ozark National Scenic Riverways Park.

1. The present General Plan (No Action Alternative General Plan) is clearly not being considered by the National Park Service. However, it is being presented to the public as one of four Draft General Plans under consideration.
2. I could find no reference where the Chief Executive Officer of Missouri, Governor Jay Nixon, endorsed any of the Draft General Plans submitted by the National Park Service. I did see where he and others in the state government were sent copies of the Draft General Plan after it was developed and ready for approval. I doubt that he or anyone in our state government realizes that the present General Plan (No Action Alternative General Plan) is not under consideration as referenced in my opening comment. The Ozark National Scenic Riverways Act states; "In furtherance of the purposes of this subchapter, the Secretary is authorized to cooperate with the State of Missouri, its

political subdivisions, and other Federal agencies and organizations in formulating comprehensive plans for the Ozark National Scenic Riverways and for the related watershed of the Current and Jacks Fork Rivers in Missouri, and to enter into agreements for the implementation of such plans."

I would hope that our Governor and all elected officials of Missouri would insist, per the language of the Ozark National Scenic Riverways Act, that they must be a partner during the development of the Draft Plan rather than being treated as an "after thought" and given a subservient role by the federal government.

3. On January 2, 2014, our Missouri Lieutenant Governor Peter Kinder, wrote in the Cape Girardeau Missouri newspaper "Southeast Missourian" a Guest Column titled "State Better Equipped to Manage Parks" regarding the Ozark National Scenic Riverways. His concluding statement was "Its time for Missouri to begin efforts to reclaim this resource from the federal government". His statement is referencing the "reversion" clause of the Ozark National Scenic Riverways Act which allows Missouri to take back the state parks that were conditionally given to the federal government. As the second highest executive officer in Missouri, he sits on the Missouri's Property Board which has control over state property and buildings. Also, the Lieutenant Governor is a member of Missouri's Development Finance Board and the Tourism Commission that are housed in the Department of Economic Development. The Lieutenant Governor essentially has notified the National Park Service in writing that they have not cooperated with the State of Missouri in developing the Draft General Plan and have violated the Ozark National Scenic Riverways Act. His statement serves as a rejection of the National Park Service's preparation, activism and bias that treats the State of Missouri and its citizens as submissive components of their future plans to restrict access. The planned restrictions will adversely affect Missouri's tourism and economic development within an area of the state that is economically distressed per the defining guidelines of the federal government agency Delta Regional Authority.

Sincerely,

Richard Pretz  
294 Hickory Meadow Lane  
Poplar Bluff, MO 63901

**Correspondence:** I think that we already have too many regulations on the riverway. Maybe the tourists don't understand how to take care of our environment but we local people have been taking care of it for years before there was a park service and I think we must have done a really good job or else all the tourists wouldn't want to come here and enjoy OUR home.

We are very capable of regulating ourselves and don't need someone who has never been here telling us what we need to do. In this area there is really no need for a park service.

The people here take a lot of pride in our area. This is our home and this is our heritage that we are talking about. I'm reminded of a lady that met a man and found that he was perfect in every way, so she married him, and the first thing she wanted to do was start changing him. The rivers, the streams, the woods and lakes were perfect when the park service got here that's what they wanted then, now the thirst that they can express it now. The people that buy boats, motors, trailers, tires, gas, fishing licenses, hunting licenses and such really support this area not the people that came here and bring their beers with them once a year for 2 days. The local people spend ALL their money here and support what is here not the tourists. They don't bring enough income for this area to cater to them. The park service is supported by my taxes and need to listen to the people that are affected every day by their decisions.

**Correspondence:** I believe that it is in the best interest of both the National Park Service and the citizens that there be NO Action. I say this because it is irrelevant that the local people of southern Missouri be punished because of tourist being unhappy with boats on the river. I agree one hundred percent that the tourist have as much right to the river as the local people therefore why penalize the locals who pay as many taxes as the tourists spend money. I as a local have as much right to the rivers as the tourist do, so why am I getting restricted more and more, why the tourist gain more of the river for canoeing or floating. I have no issue sharing the river with anyone I do have problems getting restricted more and more.

I believe that our heritage as a born citizen of the Ozarks relays being on the riverways. I want my kids and grand kids to be able to enjoy our riverways like I did. That's not going to be possible if more and more regulations from the park service are put in place.

Truthfully the tourist are getting cattered to by the plans put in place that is not fair to the local people. We already have streams that are regulated like jacks fourth and upper current were we cant go if we don't have small 25 horse motors. The upper parts of the river like jack fork regulates its self in the summertime anyway. Its to shallow to run these places any way. This is not going to solve the issues between motor boats and tourist. If anything its going to make it worse. People will hold grudges against tourist, and the park service. There will be even bigger controversy between everyone. We should all be able to use the riverways as we want along with the accesses. If there that much problems on the river maybe more law enforcement is the issue. But restrictions is not the answer. I personally am going to use the riverway as I always have along with many other people.

NO ACTION the right CHOICE

**Correspondence:** My name is Curtis Black and I am 58 years old I went fishing on Current River for the first time when I was 8 years old. My family have lived here for at least 75 years and my family now owns businesses and depend on the river for a major part of our income. Since my first fishing trip I have seen very few changes in the quality of the river or the fishing and I spend most weekends on or around the river. I own a big motor and stay mostly on the lower Current from Big Springs down I see nothing that would warrant any change in the river. As we have it now I hope that local customs would be considered in the park services plan.

**Received:** Jan,20,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** I am opposed to any and all plans that would restrict usage of any kind on the riverways. Most of our rivers will regulate itself. People aren't going to take their boats where they are likely to tear something up. Besides we live here and this is our land. we are very tired of being pushed around. Limiting the motor size will not clean up the river. You cannot just cater to the floaters. I have fished and hunted on the river for more than thirty years. I would hate for my kids not to be able to do the same, and have the same heritage as I have. Any of these plans is just a slap in the face to the local people.

---

**Correspondence ID:** 3018 **Project:** 15793 **Document:** 56208

**Received:** Jan,20,2014 00:00:00

**Correspondence Type:** Letter

**Correspondence:** I think you should leave the Rivers alone. It seems to me the local people have been doing a pretty good job taking care of it all this time. The only thing this is going to do is hurt the local people and businesses. why try to fix something when it isn't broke. Some of us just want to go and enjoy the river with what we already have. If things change a lot of people would have to buy new motors and some people can't afford to, so they would be screwed.

Public Comment concerning the ONSR Draft General Management Plan:

I am writing as a concerned citizen regarding the effects the Draft General Management Plan will have to the Current and Jacks Fork Rivers. Our area relies on the tourism industry, and shutting down access to the river will have devastating effects on our local economy. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and their surrounding areas. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve. I strongly recommend that the National Park Service take a No-Action Alternative to prevent unnecessary restrictions on public lands, preserve private landowner property rights, and protect our local tourism industry.

I consider these comments to be "substantive" and as such would appreciate a response. In the event that you believe they are not "substantive" please provide me with a methodology for making that determination and an explanation

for how that allows you to ignore this comment.

No-Action Alternative

I support it !! :)

I oppose Wilderness Area

This river has been the life of our town for centuries. People have been driving boats and going gigging and fishing forever. People that are not from here and don't understand our family values and traditions don't need to take our

boats away. The locals that are driving boats actually save people's lives. I know we have saved several people floating during the summers. I vote there be no change to the current laws of the river and the boats. I want to teach my kids how to go gigging when they grow up and I can't do that if we have no boats to do it with.

In regards to the recommended changes to North boundary to Round Springs this section of the river is very low during the summer months and not usable by boats. Changing would only affect the locals who like to gig and other similar activities during the off season months. WHY regulate a section of river that regulates it's self? As far as changing the hp from the spring to the south boundary, I take my family there every weekend during the summer as my family has done for generations. We RARELY come across any floaters, this area is not a problem so why change it?

Any areas along the river are memories to so many families, generations & family gatherings, fishing, boating, hunting, swimming. The Ozarks is made up of real people & who live here for its beauty & because we love the outdoors.

We pay our taxes, we work for lower wages just to be able to live here. We love the river & closing more access roads, moror sizes will hurt our income both to provate business, county, state & to federal. More regulation is not the answer - enforcing laws on the books would keep you busy.

**Correspondence:** Sirs:

I wish to register my strongest opposition to your plans for the Ozark National Scenic Riverways'. It appears your plans conveniently support radical environmental desires to create more wilderness rather than consider those who actually use and love the area. I strongly suspicion an Agenda 21 connection somewhere. I am 71, have spent many of those years camping, canoeing, hiking and hunting the Current River/Jacks Fork area. Personally I fondly recall the old Akers Ferry and the private campground we used there for many years. I was never bothered in those days by your NPS air driven patrol boats which I still find a gross intrusion on the solitude of that river. Enough government intrusion is enough. Please just leave it as is? May I strongly suggest you assume the "no change" policy toward the ONSR? Please? Thank you.

**Correspondence Type:** Letter  
**Correspondence:** Dear Mr. Black,

Thank you for the opportunity to provide input on the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS. This letter contains the formal comments of the International Mountain Bicycling Association (IMBA). We at IMBA, urge you to give increased consideration for mountain biking for this and future plans. We oppose the no-action plan, which will continue the prohibition of mountain biking on all trails within the Scenic Riverways. With mountain biking currently disallowed on all existing trails and bicycling on the roads discouraged by the Scenic Riverways web page, it does not allow visitors the fuB range of recreational options available from other state and national areas.

Missouri was named "Best Trail State" of 2013 which has a large and active mountain bike population with IMBA chapter affiliations that if given the opportunity, would use, enhance, and help maintain public access for these trails including all user groups.

Founded in 1988, IMBA leads the national and worldwide mountain bicycling communities through a network of 80,000 individual supporters, 750 affiliate clubs, and 600 dealer members. IMBA teaches sustainable trail building techniques and has become a leader in trail design, construction, and maintenance; encourages responsible riding, volunteer trail work, and cooperation among trail user groups and land managers. Each year, IMBA members, chapters and supporting organizations conduct more than 750,000 hours of volunteer trail stewardship on America's public lands and are some of the best assistants to federal, state, and local land managers.

Bicycling is low impact, active recreation that enhances the visitor experience

Mountain Bicycling is Low impact. Numerous scientific studies exist regarding the natural resource impacts of mountain biking showing that mountain bicycles do not disturb the environment any more than hiking, and significantly less than equestrian and motorized uses.

Active Recreation: Bicycling broadens the recreational offerings and helps Americans get exercise. It connects people with the natural world and is fun. Fun, active recreation directly contributes to the physical and mental well being of the people of the United States.

Relevancy for Youth: Many parks lack relevance with today's youth - bicycling is a great way to help kids fall in love with parks and become future stewards. According to the Outdoor Industry Foundation, bicycling is the number one gateway activity that gets kids outside and ultimately interested in other activities such as hiking, camping, and fishing. Kids don't fall in love with the outdoors at a visitor center or information kiosk, they want to explore and have fun.

Improves Visitation and Visitor Experience: Visitation numbers are down at many NPS units. Improving opportunities for bicycling and promoting trails tourism could benefit economic conditions for nearby communities. Once inside the Park, visitors on trails traveling by foot or bicycle can immerse themselves in the natural experience rather than simply observing it from roads inside cars and RVs.

Mountain Bikers Volunteer: Many NPS trails are in disrepair. Annually, mountain bicyclists conduct almost one million hours of trail work on public lands. Volunteers from the mountain bike community can help build environmentally sound, sustainable trails.

Thank you for your time and careful consideration of our comments. We look forward to a productive relationship in the future. Please feel free to call us (303) 545-9011 (Boulder Office) or email (steve.schneider@imba.com). If we can be of further assistance.

Respectfully Submitted,

Steve Schneider

South Central Regional Director

International Mountain Bicycling Association

<b>Received:</b>	Feb,07,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Mr. Black:				

RE: Review of Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways, Missouri

The U.S. Environmental Protection Agency has reviewed the Draft Environmental Impact Statement/General Management Plan for Ozark National Scenic Riverways. Our review is provided pursuant to the National Environmental Policy Act 42 U.S.C. 4231, Council on Environmental Quality regulations 40 C.F.R. Parts 1500-1508, and Section 309 of the Clean Air Act. The DEIS was assigned the Council on Environmental Quality number 20130325.

Based on our overall review and the level of our comments, the EPA has rated the DEIS for this project LO (Lack of Objections). A copy of EPA's rating descriptions is provided as an enclosure to this letter.

The DEIS adequately outlines the purpose, need, and general management plan for this project. The preferred Alternative (B) seems to address and provide a good balance of the various uses and resources of ONSR. We commend your coordination efforts with various other agencies and entities throughout the development of this

project. We would encourage continued coordination with local, state, and federal agencies to ensure that all laws, ordinances, and regulations are followed and all necessary permits acquired. We also would like to thank you for prominently addressing the direct, indirect, and cumulative effects of each potential environmental consequence.

Though environmental impacts included in the DEIS were overall minimal, EPA offers the following comments for additional considerations of potential environmental impacts and a focus on minimization and mitigation of these impacts and provide additional information related to the project.

While it is understood that the proposed management process would allow for site-dependent flexibility in management and mitigation practices, it would be useful in instances such as these to include at least a few specific examples of practices and procedures that may be used to meet these directives and how health and condition will be measured. EPA continues to support avoiding and minimizing adverse impacts to air, land, and water quality, including wildlife and their habitat. We would like to suggest that any potential effects or disturbance of fish and wildlife species be minimized to the extent possible through the use of BMPs for such activity.

In the event that there are jurisdictional wetlands impacted by the proposed action, we recommend that any mitigation should occur in the same HUC 8 or smaller watershed as the location of the project impacts. If changes occur in the project purpose, need, alternatives, or impacts between now and the time of issuance of Public Notice, EPA's 404 program reserves the ability to comment further on this project. Information may be generated through the 404 public interest review process that was not documented during the EIS process and should be considered in the final decision. This could include changes in regulation or processes, advances in the knowledge of the resources to be impacted, discovery of populations of threatened or endangered species, new best management practices, and/or improvement in stream or wetland restoration science.

Thank you for the opportunity to provide our comments regarding this project. If you have any questions, please contact Amber Tucker, NEPA Reviewer, at 913-551-7565 or via email at tucker.amber@epa.gov.

Sincerely,  
Jeffery Robichaud  
Deputy Director  
Environmental Services Division

**Correspondence:** Im for no action on the proposed changes to the Park. And one of my reasons is quality of life would be diminished not enhanced. Adding more rules more regulations etc is not the answer. Taking away a individuals way of life, supposedly for the good of the majority is hog wash. Sounds all good in theory but it is not practical. The few complaint's in proportion to the visitors is hardly even measurable. What is it about 20 complaints with thousands of visitors. Your never going to make everyone happy. Americans can't totally agree on much of anything. That"s what makes this country so great to live in. More government and more tax dollars is not the answer. Restricting a individuals rights and quality of life of a person living in this area has to be the most important concern. sounds selfish but it isn't. what if everyone in the United States went around unhappy and felt restricted? Sounds like communism to me. My comments more than likely be in vain. But I fought for my country, paid taxes my whole life. Paid into Social security my entire life and am 70 years old now. And I don't want anything more changed. People say change is needed for the good of future generations and in a lot of cases it is true. But not in the future, when everything is so regulated with tours. guides. more rule more regulations, it will suffocate all the good intentions.. I was brought up to reslect the land and people . You either have it or you don't. Respectfully< jOHN IINKUL

**Correspondence:** My topic is ECONOMICS that covers just about every thing.I'm over 70 yrs old and am commenting not for myself much but I feel strongly about this subject.What or who does it help to take something away from people. I live outside Eminence. These people in Shannon county are on a whole fine ,decent friendly

law abiding citizens. They wave to everybody they see. It is one of the poorest counties in Mo. And for the life of me I cant comprehend how some entity has the gall to come in and try to change another ccommunity's and county's quality of life to the worse instead of better. Who would feel good about doing so. Eminence relies on the tourist for most of its tax dollars. If tourist decline, who pays more the citizens of the entire county. who is affected the most the citizens again in higher taxes. Their quality of life. And what do they tell their grandchildren..? Kids this is what it used to be?? You cant do any of this now.. People have come in here and took away all your quality of life.. Think about it when you make your decision again I am writing this for the good of all the fine folk who live and raise their families here. Respectfully John IINKUL

**Correspondence:** I am concerned about the planning, development of the Ozark National Waterway, esp the Current River. I am a resident of Mo and am a avid outdoor person. I have paddled the Current river many times. Sometimes, on a holiday weekend, I could not place my paddle in the water without hitting the canoe next to me. It is extremely overcrowded. Paddling in Oct was less crowded, but the multitude of horses crossing the river was large. There are huge ranches corralling horses, creating to the pollution of the river. This river is designated as a National Park, yet is is getting very polluted. Would we let the same occur in the Grand Canyon or Yellowstone? It should be used by the public, but not destroyed by horse feces and atvs destroying the quality of the water. I am a member of The St Louis Canoe Kayak club, Missouri White Water association, St Louis Adventure Group, Team River Runner, and Lets Hike.  
I am a registered voter.

**Correspondence:** This is response to the Draft General Management Plan ("Plan"), October 2013  
Preface:

On September 25, 2012 while loading our jonboat on trailer, a park ranger told a fellow senior citizen and me that our use of the upper portion of Current River was about to end. He suggested that we get a canoe. In order to adapt, he said that I should begin a regiment of exercise. Being 70 years of age in conjunction with the effects of rheumatoid and osteoarthritis on my hands and shoulders precludes much paddling. Because of these limitations we use a small 25 hp outboard engine with an electric starter. The ranger's motives for the admonitions were uncertain, but it appeared that he enjoyed the delivery of the news. As is often true during our visits, on that day there appeared to be no other people using the river in the Akers area.

If we are expected to canoe, it would require another vehicle for shuttling. Our grandchildren and I would be unable to float without an additional, accompanying licensed driver. Canoe usage would also add two more hours of ancillary activity for launching, loading, unloading, and swapping vehicles. Due to the cost, we do not have a second vehicle. And my deformed arthritic knees inhibit bank fishing activity. For me and similarly handicapped individuals, these factors make use of a jonboat nearly mandatory. The current rules make the portion above Akers available from September 15 to May for our jonboat. Although the Plan indicates otherwise, the 18 miles from Akers to Round Spring are available year-around (see footnote). All Plan proposed changes would eliminate our usage above Akers, and greatly limit our enjoyment of the remaining portion to Round Spring.

History:

Current has very fine fishing from Welch Spring to Round Spring. With little success on November 17, 2013 a friend bank fished at Akers. The following day we launched our jonboat at Akers and traveled upstream two holes. On the float back, it continued to be common to catch trout of 17". On the third day, we launched at Round Spring and went up to Sinking Creek. During the float back, my friend caught several smallmouth. Couple this experience with the closeness to mother's house in Houston and her delight of fish dinners, then you can understand how

cherished these opportunities are.

Whether for the individual fishing, inclusion of a larger portion of family, or in conjunction with enjoying scenery, we are known to visit upper Current several times per month. We have been doing this for well over a half century. Behavior:

When on the river we often pull over to sit motionless while others pass. We use these occasions to have conversations with fellow visitors about the area, fishing success, or the absolutely beautiful scenery. A common question concerns the distance to the next take-out. 2

If we pass a canoe or any other vessel, we do so in quiet water at a speed and distance so as to cause no disruption. Even at floating speed, we attempt to never pass in a riffle unless there is ample space. It is my understanding that law requires all motorized boats to yield to non-motorized boats. We always adhere to that principle.

Due to the actions of canoe clientele with their attendant congestion, rowdiness, noise, and disruption we stay away from the Akers area during the three months of summer. We have learned that a continuous parade of canoes and the above listed accompanying factors are not conducive to fishing nor relaxing. However the other nine months of the year offer increased opportunities for relaxation, family fun, and fishing in this area. Before it became too busy and our handicaps dictated, we logged many canoeing miles on upper Current.

Although the prevailing rules allow our year around boating of Current's 18 miles from Akers down to Round Spring, we visit only the 4 miles portion from Round Spring up to the Jerry Presley Conservation Education Center. Due to the frequency of canoes, we do not visit even that small stretch during summer weekends. In this way, we often see very few others on the water. By completely banning or simply shrinking the available dates, the Plan's three alternative options will exclude us from the area above Round Spring during the prettiest seasons and the best fishing months. You want to eliminate even that.

For security we always go upstream from put-in. Last summer while upstream, the outboard starter stopped functioning. The 15 year old and I floated back to Round Spring. If we had been downstream, the return would have required more physical strength than we possess. The Plan will virtually relegate us to launching at the former (Junction Ferry) landing below Jacks Fork.

User Conflict:

In 40 years of using our jonboat, we had only one "conflict". Our jonboat was resting on the south bank approximately 3 miles up from Round Spring. We were quietly fishing one of the best trout holes on planet Earth. A canoeing group appeared and a female canoeist began yelling at us. As she landed on the opposite gravel bar she shouted, "You don't belong here!" She yelled for her canoe-mates to get my boat information. After more hollering, the others in her group asked her to get back in the canoe. They appeared to be embarrassed. She said that she planned to contact a park ranger about us being on the river, in order to assure our arrest. At first my fishing partner and I thought that she was kidding. As she continued, it became apparent that she was serious. After they left, we continued to fish and enjoy the scenery. Except for that episode, we have never been involved in such a situation. She obviously believed that she was one of a select group.

That scene occurred during a sunny Wednesday in June 2011 when we caught (2) large rainbows, (4) nice-sized shadow bass (aka goggleeye), a smallmouth bass, and (2) chain pickerel. This was not an atypical day.

This event is certainly no reason to outlaw anyone off the river. The canoeist's obnoxious behavior did no real harm. 3

Conclusions:

Since we all would not be allowed to benefit, then we all will miss the fishing, boating, and general fun of being in the area. It would be neither fair nor right for only some to continue the experience. It would be selfish.

Among those involved in the Current experience have been our grandchildren of ages 15, 10, and 8. The newest attendee is our 6 years old, water-loving granddaughter. It appears that she will have upper Current only as a fading memory. If the proposed changes become true, all the grandchildren will be robbed of further memories. My mother will miss her fresh fish dinners. I will miss being able to catch them for her. Other handicapped and senior citizens will also be so treated and denied access. In this case the creation of an exclusionary, select group of floaters is neither noble nor just.

A half-century ago with the help of family friend U. S. Representative Richard Ichord in saving it from destruction by dams and other such projects, we assumed that Current River's availability was assured. In spite of that we are now close to loosing the pleasures of the prettiest portion of the arguably most uniquely beautiful stream on Earth. This is more than an inconvenience. The result of banning our usage will be to limit the experience to a privileged class. Our favorite place on Earth, upper Current River, is about to be taken from us.

Having found ways to overcome our handicaps and limitations, this is especially disheartening.

Larry McKinney  
lmckinney@cox.net

On page 61 is a map displaying the "No Action" option which proposes to use existing rules. It describes a 25 hp zone with 10 hp seasonable usage as currently being in effect down to Round Spring. The actual lower boundary is 18 miles upstream at Akers. These 18 miles have no seasonal restrictions. In this zone we are able to use our 25 hp engine all year. I saw no online notation which might either acknowledge reality or correct the error. The existence of this false and misleading information is disturbing.

**Correspondence:** Upon reviewing the draft general Management Plan,I think plan A is by far the best. I have seen too much abuse of the area in question. There needs to be better control of the sensitive habitat to preserve it for generations. Plan A seems to have the best solution of allowing everyone access, yet controlling over use of the area. The streams are some of the best float streams in the country. Motor boats are in conflict with this use. their use must be strictly controlled to avoid damage to the streams and conflict to floaters. I do not float the streams. I am a hiker. I also feel that the floaters and equestrian users are abusing the area. There is too much partying in the streams by both, causing noise, litter and damage to the environment. Plan A still allows all users access to certain parts of the area. It is the best mix of use to control and preserve the area while giving everyone access.

**Correspondence:** Please leave the current regulation as they are with one suggestion for change. If you eliminate alcohol usage it will eliminate most of the bad "people experiences" of the Park. It would also reduce cost of policing, cleaning and vandalism. Alcohol is not necessary to the use and enjoyment of the Park.

Additional motor boat restrictions are not needed and actual infringe on the native cultural use of the river. The current horsepower limits and size of the river keep speeds down adequately for safety and common courtesy eliminated most conflicts.

Motor boats have long been part of the native cultural use of the river for fishing, gigging sand trapping. I often use the river above Round Springs for this purpose and have many wonderful experiences there with family and friends. We might have to watch the water levels and pull over some sand bars but it is safe and good floating.

Most motor boat use for these activities on the upper river is not during peak tourist season so there is little conflict with other uses.

Motor boats were used on the river long before canoes.

Additional motor restrictions have an economic effect in addition to reducing cultural uses. I would have to drive another 25 miles to use the river with my boat and couldn't even go to Akers to start and see if it is running alright.

Additional restrictions mean less use and less money spent in the area. In this time of government deficits how do you think you will get funding for additional management and development?

One last recommendation. Listen to the natives. They are the ones most effected by regulation changes. It effects our cultural uses and economics. Government is poorly respected already use some common sense and don't make it worse.

**Correspondence Type:** Letter  
**Correspondence:** Dear Ms. Dena Matteson,

I am contacting you to voice support for adopting an updated National Park Service General Management Plan for the Ozark National Scenic Riverways. I represent no organizations, only myself and several other local folks and visitors from around the area who frequent the ONSR. This letter does not specify a chosen Alternative but rather is intended as general support for a GMP update that allows the NPS to better patrol and preserve the scenic nature of the Current and Jack's Fork Rivers. Many of us will be submitting additional comments and specific suggestions independently.

Missouri 8th District House Representative Jason Smith is encouraging local people to reject all three Alternatives and call for the "No Change Option", charging the NPS with already over-managing and over-burdening local users while still failing at protecting the river environment. While we agree, in general, with his critique of the NPS' poor management legacy, we strongly disagree with his suggestion to reject a GMP update. Many users of the ONSR are displeased with the NPS' management over the past 30 years, but to allow a "No Change" conclusion will simply lead us further down this unacceptable course, and the ONSR will suffer.

The tourism dollars spent by visitors to the ONSR is the economic lifeblood of towns like Salem. If the river ever becomes an undesirable vacation destination, it will dramatically impact the economy of our area. Some residents may associate any kind of new rules or restrictions in the ONSR as a threat to tourism. We disagree, and believe that this update to the GMP is our opportunity and responsibility as people with local interests to insist that the NPS use the GMP update to provide management that broadens the types of visitors we hope to attract to our area. There are many local users of the ONSR who do not approve of the party atmosphere that has evolved on the Current River under the existing 1984 NPS GMP. These types of visitors show little respect for the natural environment of the ONSR or the quality of experience for anyone else on the rivers. The party crowd descends each summer weekend, often scaring off families, fishermen, and others who use the river to connect to the outdoors. They do spend money in the area through canoe and campsite rentals and purchasing alcohol, although most of the alcohol is purchased where they depart, before they ever arrive in the counties bordering the ONSR. This group of users is a minority, and their contribution to our economy is a small sliver of a larger, more diverse economic potential.

We believe that the various zoning distinctions being proposed are sorely needed to offer guidance for the intended uses of the ONSR and to offer increased protection that requires more rigorous planning for future development of the ONSR. We also support the designation of the proposed area near Big Spring as "wilderness" due to the area existing currently as undeveloped land - wilderness in all aspects outside of official designation. The Ozarks, and Missouri in general, have very few options in providing a wilderness experience. Those who seek true undeveloped wilderness in a dramatic landscape are forced to head west to the Rocky Mountains or East to Appalachia. The Big Spring Wilderness can be an attractive alternative to local people and offer a destination to outdoor lovers coming from outside of the Missouri Ozarks.

In response to the concerns of restricted access due to road and trail closures, it's clear that the largest ecological issue that is being addressed by these closures is that of sediment and gravel erosion into the streams. Locals have been aware of the gravel erosion problem for some time, and we would be more willing to accept measures to reduce it if the NPS themselves weren't notorious for circumventing that effort. Locals have a long memory, and events like the spreading of chat gravel on tourist parking lots that lie well below the flood plain are more than enough cause to question the intentions and wisdom of NPS efforts at gravel erosion prevention. Regardless of past erosion prevention failures, we do agree that there are more access points than necessary along the river, and that a great number of these are unmanaged by the NPS and in varying degrees of disrepair. We also understand and agree with the fact that in heavy rain, these roads and traces erode, dumping silt and gravel into streambeds already brimming with gravel. In general, we are in favor of a more detailed study that determines the access points that are the greatest offenders in contributing to the erosion problem, and the subsequent closing and restoration of these areas. When promoting the idea of road closures, it's important for the NPS to understand that this knowledge of the back roads is a point of pride for those who have grown up here. It is also a very valuable method of finding ways to bypass the swarms of outsider tourists that are becoming more and more prevalent in the ONSR. The study of closing these access points should be undertaken with transparency and with open feedback from the local population. A compromise that could be considered by the NPS would be to determine and retain several of the least damaging and most valued secondary roads that are frequented by locals. These should be preserved as truly secondary access points, patrolled and to a degree maintained by the NPS, but not publicized or ever opened up for commercial use.

We support the proposal of a much greater trail network throughout the ONSR. Distinct trails could be established for hiking, horse riding, and mountain biking. We encourage the NPS to reach out to and work in collaboration with other trail establishment advocates around the area. We understand and agree that trails in erosion prone areas and river crossings are a water quality concern, and we agree with the intent to limit the number of these trails and river crossings. However, the long linear nature of the ONSR could provide opportunity for a great mileage of trails that

traverse the ridgelines bordering the ONSR. If these trails were well-planned and well-built this would add a great community value to the ONSR with minimal impact upon the environment.

To conclude, we support thoughtful updates to the GMP that will encourage the NPS to change course and broaden the activities available in the ONSR while still insuring that the river retains a healthy water quality for users and adequate protection for the incredibly diverse animal species that reside there. With increased enforcement of new protection efforts for the rivers, we can rein in the party crowd and attract other user groups. We have the opportunity to help the ONSR become an outdoor destination akin to the other great national parks, attracting visitors from across the nation and world to come and spend their money in our towns and at our pride and joy, Missouri's own national park. With an increase in wilderness areas and the establishment of specified horse, mountain bike, and hiking trails, we will not only attract canoeists and kayakers, but also hikers, cyclists, horse riders, hunters, anglers, backpackers, naturalists, and recreationalists. We can all coexist. Families will again feel comfortable and welcome in the ONSR. They will rent canoes on summer weekends, take winter hikes to visit notable springs and tributaries, experience views of the river from high country trails on horseback. They will rent hotels and bed-and-breakfasts in Salem, Van Buren, or Eminence, and maybe they will even tour a future Montauk museum that presents the history of settlement in the Ozark Riverways and reveals the artifacts and mystery left behind by those who walked these valleys thousands of years ago. Most importantly they will understand the importance of these rivers and why we fiercely defend them.

We encourage the NPS to adopt an update to the GMP that places utmost importance on preserving and protecting the natural environment of the Current and Jack's Fork Rivers.

Respectfully,

John Whitaker - Raleigh, NC (formerly of Salem, MO)

**Correspondence:** Dena:

The above web address does not take you to a place where a comment can be left about the planning of what the government wants to do to our Current River. Nothing comes up. I can not leave my comment there because the link does not work.

I am a Carter descendant. Our Current River is in Carter County. We, here in the country, take care of our river. We do NOT want our privileges taken away. Why should people in St. Louis, or anywhere else, have a say in what we are doing with our land & river when we have no say so about their Arch nor do we want to? This is WRONG. NPS is trying to take away our rights to camp on a gravel bar as my family has been doing for a century. They are trying to make it so that we can't boat on our river. This is wrong. We, UNCITY people, don't want to be crammed into a stupid National Park campground when we go camping. We need to retain the right to camp on our gravel bars. ALSO, if you want to make a difference in the quality of the river get rid of the TUBE rental place in Van Buren... it's the trashy drunks coming in from the cities that defile our beloved river. Period.

Please take a look at the link above where we are supposed to be able to leave our comments.

Thank you.

Liz

**Correspondence:** I do not believe you should close roads and accesses to gravel bars. The horse power on boat motors should be left alone. Money will be lost from such restrictions from the river. There will be taxes lost for all local counties. I use the river all the way from Two Rivers to Van Buren. This is a way of life for the residents of the area. These are rights that should not be taken away from our generation and future generations.

**Correspondence:** The draft plan for MOSNR is inadequate and in need of significant revision. While it closes some undesignated trails that are damaging the ecosystem, it also authorizes 35 miles of new horse trails with additional river crossings and a new horse campground along Jacks Fork, which will increase water quality degradation. I am especially concerned about its impact on the hellbender. I know that you can devise a better plan, one that protects this remarkable creature and its ecosystem and I urge you to do so.

Sincerely,  
Michael Kutilek, Ph.D.

**Correspondence:** Ozark National Scenic Riverways Proposed Management Plan

The ONSR proposed, 534 page management plan was released for public viewing and comments on the 8th of November 2013. The NPS has allowed a choice of 4 alternatives for the implementation of guidelines for each section of concern.

The 4 alternatives : No Action Alternative Alternative A Alternative B Alternative C

Once implemented the plan will be the structure for managing the Ozark National Scenic Riverways for the next 20 years. The following address contains the proposed plan for your review: [www.parkplanning.nps.gov/ozar](http://www.parkplanning.nps.gov/ozar)

A great deal of explanation and background research is contained in the 534 page plan. The plan has been in the making for several years. I have been a concessionaire with the ONSR as a fly fishing guide for the past 10 years and I have a weekly awareness, as well as a backcountry awareness as to the effects of current usage. I have also been required by the NPS to provide a yearly report concerning my observations of park usage. The yearly reports provided by park concessionaires helped provide information toward the ONSR proposed management plan.

The following are My Personal choices toward the proposed plan:

Motorboat Horsepower (HP) limits B

Federally owned acres within each land based management zone for each action alternative A

River miles within each river based management zone for each action alternative B  
 Cost estimates and staffing for full implementation of the action alternatives B  
 Estimated staffing levels to implement the alternatives B  
 Estimated one-time facility costs to implement the alternatives B  
 Management  
 Concept B  
 Zoning A  
 Visitor Experience B  
 Non-Motorized watercraft code of federal regulation motorboat horsepower limit B  
 Concession floating B  
 Hiking trails B  
 Accessible trails B  
 Mountain bike trails B  
 Horseback riding and camping A  
 Developed camping A  
 Gravel bar access A  
 Gravel bar camping A  
 Backcountry camping A  
 Primitive camping A  
 Caving All alternatives are the same  
 Visitor services and facilities Options need to be clarified as they are not consistent in content A  
 Visitor entry and information All alternatives are the same  
 Additional contact locations B  
 NPS road and river access points A  
 Undesignated NPS roads, traces, crossings and river access B  
 Concessions A  
 Interpretation and education B  
 Natural resource management B  
 Cultural resource management B  
 Historic structures A  
 Cemeteries A  
 Archeological sites A  
 Cultural landscapes A  
 Curatorial facility B  
 Wilderness B  
 Park operations B  
 Partnerships A, B and C are all the same

---

**Correspondence:** Draft Management Plan of the Ozark National Scenic Riverways

I am grateful to personally suggest concerns and recommendations to the NPS regarding the Management Plan for the Ozark National Scenic Riverways. Superintendent Bill Black stated "Because this is a "Draft" plan, we recognize that there are going to be details we need to adjust or clarify. This is the intent of public review- to help us identify where we need to make those adjustments." Although recreation and public use are important issues for any national park; The citizen volunteer group Greenway Network's mission is to "conserve natural resources, encourage sound management of the watersheds and protect the quality of life for the residences." underlies our prior comments. Greenway's Comment which I gave to the NPS during the public meeting in St. Louis (attached) stated that we preferred Alternate A to best protects the natural resources and watershed. The NPS agreed with that conclusion.

This comment from myself alone. I should first say that Alternative A is also my recommendation. I felt that I should also address some specific concerns under your preferred Alternative B. These comments are not comments from Greenway Network as it would be difficult to get consensus on so many issues presented in the short time remaining for public comment. But, the board may still decide to send a second comment If we are able to have

consensus.

Present damage to the fragile ecosystem is directly resulting from public use and recreation. I now includes some recommendations regarding management practice which need to be adjusted in the NPS recommended Alternate B.

As you are well aware, the fragile, karst ozark uplands require stringent guidelines for public use to both improve and to maintain the watershed's pristine character and its national significance guaranteed for our children's children and beyond. Without such guarantees in place there will be no "public use or recreation" because the watershed will have been degraded to the extent that both tourists will not come and the local related economy will fail.

As you are aware during the public meetings, Politicians and some local residence have pushed for the NPS lands to return to Missouri State control. I am grateful for the NPS presence and are sorry for that insult. The Missouri Legislature has denied funding for the present state parks and would not be able to staff, fund, maintain and operate the properties. We need you! So does this Ozark watershed. The NPS has a history of finding, conserving, preserving, and managing of the lands the late Pete Seeger immortalized; "This land is your land!" I understands and recommends heartily the establishment of a new "Wilderness Designation" it would benefit the very ones who reject it the most. It would bring both regional, national and international tourism and respect for the oldest mountains, most caves and springs and the only free flowing, still healthy stream watershed of the union I might add in jest which is not "blessed" with a dam. My involvement in conservation started with the most amazing and successful push to not build a dam on the Meramec River.

NPS mentioned in the draft plan a desire for increased outreach and networking. I would like to see that some road access points to the Jacks Fork and Current Rivers be used as locations for portable rest room and sinks if required by the health department to reduce nitrate and solid waste loading in the streams and to help the local economy. Perhaps this could be partly or wholly paid for by the NPS to a local provider? Included in this Public Comment is a letter sent prior to Superintendent Mr. Bill Black which outlined this suggestions. Also mentioned was a suggestion to Network with

NPS in the design of a laminate, self sticking notice to be placed on the back of the bus chairs of all the canoe outfitters using the park. This could be something that Greenway Network printed and set up with the outfitters using the park. It could also include a map showing the locations of these portable toilets and give any additional information which NPS may desire. For instance, "no glass bottles permitted or trash removal using the provided mesh bags". Please feel free to call me, Dr. Michael Garvey about these suggestions at your convenience at 636 441 2777.

Below find some personal suggestions to help maintain and improve the water quality and health of the park:

\* The Upper Jacks Fork River from the western boundary to Bay Creek is a most fragile, karst, headstream upland watershed and should be preserved with a zoning designation of "primitive" and not "natural". Many rare and endangered species are found in the upper section of the Jacks Fork River, including:

1. *Campanula rotundifolia* Bluebells of Scotland
2. *Galium boreale* Northern bedstraw
3. *Plantago cordata*...Heartleaf plantain
4. *Cheilanthes lanosa* Hairy lip fern
5. *Goodyera pubescens* Rattlesnake plantain
6. *Cypripedium calceolus* tall yellow ladyslipper
7. *Cypripedium parviflorum* small flowered ladyslipper
8. *Silene regia* Royal catchfly
9. *Aster furcatus* forked aster
10. *Delphinium exaltatum* tall larkspur
11. *Sedum ternatum* Stonecrop
12. *Zigadenus elegans* Mountain deathcamas
13. *Gratiola viscidula* Hedge hyssop
14. *Helenium virginianum* Virginia sneezeweed
15. *Viola pallens* Small white violet
16. *Phlox bifida* Sandphlox
17. *Amsonia ciliata* Ciliate bluestar

18. *Ribes odoratum* Golden current
19. *Berberis Canadensis* American barberry
20. *Matalea oblique* climbing milkweed
21. *Waldsteinia fragarioides* Barren strawberry
22. *Hamamelis virginiana* Eastern witch hazel
23. *Liparis loeselii* Loessel's twayblade
24. *Trillium pusillum* Ozark trillium
25. *Tradescantia longipes* Ozark spiderwort
26. *Trautvetteria caroliniensis* Carolina bugbane
27. *Sullivantia sullivantii* Sullivant's coolwort
28. *Athyrium pycnocarpon* Glade fern
29. *Spiranthes odorata* Ladies tresses

\* The NPS should not expand or upgrade the "Blue Spring Campground" and it should be not be "developed". This karst area with a pristine spring and sinks also contains many rare plant species. This natural resource needs the protection supplied with a designated "resourced-based recreation" not "developed".

\* The Upper Jacks Fork between the western boundary and Bay Creek especially during low flow cannot support any motor boats without damage to the aquatic invertebrates in the gravel substrate and motor oil and gas contamination. The Current River should limit the HP to 40 HP including even jet type motors. These boats disturb the gravels and the oils impairs the streams. A permitting system for the less than 40 HP flat bottom John Boats on the Current River is needed.

\* Horse trails should be relocated wherever possible out of the flood plain areas within the entire Ozark National Scenic Riverways because of the loading, which harms the water quality. There are many miles of "Undesignated Horse Trails" which all need to be "Designated" or removed. All river crossing points of "designated" horse trails needs clearly mapped and reduced in number.

\* The Horse Camps in the Upper Jacks Fork are point source pollution and should be removed especially from the flood plains which are sensitive. There should not be a 25 horse campground at Blue Spring. This is a very bad idea because of the wastes in the flood plain and invasive plants resulting from the hay.

\* A permitting system for the horses on the river is needed.

\* Increased use of non-motorized mountain bikes would both expand the recreational use and not impact the water quality of the rivers. It is a great idea! The users could help NPS to properly maintained the bike trails under NPS oversight. This is done in St. Charles with our County Parks systems.

\* Archery Ranges could be included. Local archery clubs could help set up and maintain them.

\* Disc Golf ranges could be included. Disc golf users or clubs could help set them up and maintain them,

\* Hiking trails are also a great expansion of public use with minimal negative impacts to the watershed. They should be promoted but need patrol and maintenance by the NPS. They should not coincide with the "Designated" horse trails. Local users could help design and maintain them.

\* ATV's are not allowed in the Park grounds. They should not be on the gravel bars, flood plains, horse, hiking or mountain biking trails. They cause excessive erosion.

\* The ATV users now use all trails and horse trails, this issue needs to be addressed with enforcement before any expansion of any possible additional trails or trail systems in the Park are considered. This was a source of many public comments at the public hearings.

\* Motor vehicles and ATV 's do not belong on gravel bars. The oil and gas lowers the water quality and the stream disturbance kills the aquatic invertebrates in the gravel substrate.

\* NPS should be stewards to resist the persistent pressures for mineral prospecting which always then leads to mining and the potential for major degradation of the upland topography and the entire watershed. In the past lead mining tailings has found it's way to springs with disastrous impacts. and adjacent lands within the watersheds

\* Pressure for local gravel mining and use for roads should also be resisted, as it results in a complete change in hydrogeology and alteration of the pristine free flowing, fragile nature of the ozark uplands.

\* Local non-professional archeologists could display their collection "on loan" along with NPS collections at a NPS museum or park office to help educate and network with the public and address the cultural history of the region. All to often these private collection are dispersed after the collector dies and the cultural value of these artifacts and the historic locations they were found are lost.

\* A village archeological site might be researched, documented and possibly the village site could be rebuilt based upon the found remains. It could be done using local residence, students or non professional archeologists under the direct supervision of trained archeologists on staff at NPS.

\* The powder mill needs major protection from flooding damage and the grounds in the flood plain need to be off limits to development. Is their a consideration to use the Mill again for public and cultural benefits?

\* The upland watersheds which feed the water resources of the streams are under the jurisdiction of the MoDNR. There needs to be a point person to work with NPS to address point source pollution and how to address it with the local residence so the stream is not degraded.

\* All failing septic systems need to be repaired on the flood plain.

\* NPS could network with local Government agencies and the local Stream Teams to paint warnings on all Storm Water Sewers Covers in the developed areas of Eminence and Van Buren. Greenway Network is presently working with local governmants in a similar way to paint 6000 sewer covers in St. Charles using local scout groups, residence and students.

\* Perhaps the NPS could work with the local Univ. of Mo. Extension Centers or local garden clubs to discuss ways to address point source contamination reduction using wetlands, native prairies, rain gardens or vegetative swales near loosing streams or sinks.

\* NPS employees and rangers could take the stream Team introductory level testing in Van Buren and set up their own Stream Team to network with the children and public about the importance of issues related to the degradation of the watershed. What a bonding experience for the NPS! Also they could educate the rest of the NPS about the potential to incorporate the Mo. Stream Team concept nation wide.

\* NPS could network with the Stream Team Program and turn the old fishing lodge (Welsh Lodge) into an educational school/camp for the children of Missouri. The Stream Teams locally and the NPS Ozark Stream Team, if created, could use this area as an outdoor educational classroom to teach both the public and the employees of the NPS about the importance of the aquatic invertebrate balance of healthy rivers and water testing to show point source pollution.

\* NPS could network with the St. Louis Zoo to stage areas to incorporate the Hellbender population back to healthy stream sections of the park. Hellbender habitat areas need both protection and new areas need to be added and there needs to be a definite designation of protection for such habitat. The scientific, biologic reason for the species loss needs to be detailed.

\* NPS could consult with the U.S. Fish and Wildlife and Mo DOC to consider stocking of other aquatic species I.e. Rainbow or Brook Trout if reasonable

\* Bat species are under attack by pesticides, habitat loss and white nose fungus. Many cave openings need protection and possibly gates maintained or installed.

\* Bees also are having stress from pesticide use and loss of diversity of flower types. Local bee keepers could be allowed to place hives on park grounds. Both bees and bats are major pollinators.

\* Locate possible site for a native prairie and possibly work with the Missouri Prairie Foundation or Shaw Garden in St. Louis to recreate a native wetland with wetland plants or native prairie with native grasses and forbs.

Below find the e mail of Jan 24th described above sent to Superintendent

**Correspondence Type:** Letter

**Correspondence:** Dear Secretary Jewell:

I am writing with regard to the National Parks Service's (NPS) proposed General Management Plan for the Ozark National Scenic Riverways, a unit in the NPS created to preserve the Current and Jacks Fork Rivers in Missouri. These spring-fed Ozark rivers have been enjoyed for many years by visitors from throughout the United States, and I support efforts to ensure that they will continue to be enjoyed for decades to come. Proposed Alternative B appears to outline the most reasonable approach to accomplishing this goal, but the NPS must incorporate flexibility into any plan it implements.

Missourians have long supported state parks, and have shown that support by making Missouri one of only four states with a dedicated sales tax to fund parks. With this support, the Missouri state parks system has become one of the top parks systems in the country, winning awards that include Missouri's status as the number one trails state in America. Missourians understand that we hold these valuable resources in trust for future generations, as well as for current use and enjoyment.

It is important to note that without our state's donation of Missouri's first three state parks - Alley Spring, Big Spring and Round Spring - there would be no Ozark National Scenic Riverways. This gift from Missouri to the United States was not universally popular among Missourians then, nor was the process by which lands in the Riverways were acquired. And many of these sentiments remain today, reflected in many of the strong responses to the NPS' proposal. Some of these responses include a call for the transfer of ownership of the Riverways to the State of Missouri. This does not seem the most prudent step in protecting and allowing continued use of the Riverways.

Floating, fishing, hiking, camping, horseback riding, and other such recreation along the Riverways have provided visitors with enjoyable outdoor opportunities. And these activities have a significant positive impact on Missouri's outdoor economy. But some of these activities, in the wrong location or in too heavy a concentration, can pose a threat to the Riverways. Similarly, there are acceptable levels of activity that can accommodate both enjoyment and preservation of these treasures. Alternative B strikes the most appropriate balance between these two, provided that it also contains the flexibility that is necessary and appropriate in managing a resource such as the Riverways.

Missouri is an integral partner in the management and preservation of this area. We have seen significant investment in the protection and enjoyment of the Riverways, both by public and private entities. In recent years, the Missouri State Parks system acquired Current River State Park, an 800-acre park located about two miles from Round Spring. We also last year acquired a new park in the area, a 330-acre tract of land on Sinking Creek, which flows into the Current River a few hundred yards downstream from the new park. Missouri State Parks also manages Roger Pryor Pioneer Backcountry, a 60,000-acre privately owned forest that fronts the Current River for 15 miles and features 30 miles of hiking trails. And Montauk State Park, located at the headwaters of the Current River, is a premier trout fishing destination. There can be little doubt, therefore, as to my interest in ensuring that this area of our country provides the same tremendous outdoor opportunities to our children and grandchildren that it has given to us.

Among the alternatives presented, Alternative B provides the best course for continued and future enjoyment of this treasure, provided that you allow for flexibility to give entities and individuals an opportunity to demonstrate that the activities they propose do not pose a risk to the Riverways.

Sincerely,  
Jeremiah W. (Jay) Nixon

Governor.

**Correspondence Type:** Letter

**Correspondence:** Dear Superintendent Black:

The Ozark Society sincerely appreciates the hard work you and your staff have invested in developing this proposed GMP. As the organization that led the effort to save the Buffalo River from dams and fostered the establishment of Buffalo National River, we see and directly experience many parallel, even identical issues here that affect ONSR, and we take notice of your proposed actions addressing such issues.

Many members of the Ozark Society including contributors to this comment letter grew up enjoying the Current and Jacks Fork long before ONSR came into existence in 1964. They will testify that the trashed gravel bars and river bottoms and banks dotted with cars, parts, and tires and household trash are now relatively pristine. They will testify bottomland tree stands are very gradually expanding and healing the banks, and shading the stream ever more. They will testify the common practice of watering cattle in the rivers and grazing them on the banks and in woods (free ranging in some areas) has been virtually halted. Many of these welcome great changes are the direct result of NPS management and early citizen advisory guidance in management planning.

However, as visiting recreational use displaced agriculture and local recreational use, huge new problems developed, such as too many visitors in too many places doing inappropriate things. They went unaddressed, indifferently addressed, or incorrectly addressed for decades. This resulted in deteriorating quality of user experience on the water, and resource degradation on the land and to some degree the water, culminating in the Current being declared one of America's Ten Most Endangered streams in May 2011, by American Rivers.

It is our sincere hope that future administrations and politicians will address residual and developing problems in a timely and sufficient manner.

An early settlement description of the Current River is presented in an out of publication book by Leonard Hall, Stars Upstream, 1958, The University of Chicago Press, Library of Congress F472.C9H3 917.788 59-5772. Hall captured oral descriptions from the oldest people he could find then living along the Current River, or what they recalled their elders told them. He also strongly advocated for the establishment of ONSR. Obviously, the Current was far different way back then, but it is and can continue to recover given sound NPS management and enlightened political support.

The Ozark Society vision for ONSR is better described in Alternative A. However, we recognize that correcting the direction of ONSR is best accomplished as a gradual process. For this reason, the Ozark Society generally endorses Alternative B and recommends Friends of the Riverway positions on various nuances with the following modifications, additions or exceptions:

**Scenic Easements:** 9,257 acres are protected by scenic easements intended to ensure the view shed of the visitor remains natural and the waterway is buffered from degrading factors.

Existing violations of easements and encroachments such as cabins, platforms, and pads must be immediately removed and restored to benchmark conditions. Diligent monitoring must be performed to discover and prevent violations. Provisions in the proposed GMP for this minimal administrative function are absent.

**Horses:** Horses invariably have the potential to be of very severe harmful impact because of their physical attributes. All horse facilities such as camps, stables, corrals, loading ramps, parking areas, wash down facilities and the like should be left to private parties outside the boundaries of ONSR. Equestrian trails should be confined to old gravel roads or horse trails designed as horse trails that can be closed to horse traffic due to precipitation or other conditions conducive to erosion or transfer of manure or nutrients to streams.

**Motor Boats:** The imposition of limitations on the operation of motorized boats is necessary and appropriate, but deviation from Federal horsepower regulations in deference to local practice is not appropriate.

Horsepower represents the presumed potential for speed and noise, but it is speed that maims and kills fellow river users while noise irritates and spoils the tranquility. Inappropriate speeds with significant wake motion also accelerates streambank erosion as happened on the Eleven Point River in Missouri. There are now speed limits in place on the Eleven Point to protect riverbanks. The speed, in addition to the horsepower, of motorized craft should be limited by zone and proximity to users wherever they are.

The total prohibition of motorized craft from any zone should be explicitly modified to recognize that exceptions are necessary for retrieval of lodged water craft, reducing the danger of snags, and so forth. If authorized at the discretion of the Park Superintendent, this would allow canoe rental agencies or individuals to recover their property.

Elk/Buffalo, non-native species: Species or sub-species, wild or domestic, not genuinely native as determined by DNA and clear evidence of being or having once been native in the wild should be explicitly prohibited from free ranging presence in the ONSR in addition to a general prohibition. Species such as western elk and plains buffalo, cows, goats, horses and hogs, or Japanese Honeysuckle, fescue, various fungi, python, walking catfish, etc., don't belong in the ONSR.

Native plants should be substituted for non-natives, for example various bluestems or wild rye for tall fescue, wherever feasible. In no case should non-natives be planted, nurtured or allowed to propagate.

Riverbank issues: Regarding the comments of FOR on this issue, we add that movement of streams within the flood plain and streams acting to enlarge the flood plain are natural and ongoing processes. High bank erosion is not solely or always the result of abuse of the stream banks. Bank erosion provably the result of human abuse may be corrected or mitigated utilizing native plants and materials for devices closely mimicking natural mechanisms. If not the clear result of abuse, the natural process should be allowed to proceed.

Feral Hogs: Feral hogs were common before the establishment of ONSR; then they seemed to subside with the end of open range. They are back as "wild boar" now, purposely set loose and hunted, and doing significant resource damage. Wild boar, wild hog, feral hog or whatever the name should be explicitly banned from ONSR so ONSR can more readily justify funding for eradication.

Wilderness: 3, 430 acres of the old Big Spring State Park have been and are proposed to be continued to be managed as de facto wilderness. However, this management or eventual designation as Wilderness should contain explicit provisions for maintaining existing trails and the establishment of additional trails, particularly as part of a linear trail system from Montauk and the Prongs to the southern end of the ONSR.

Hiking Trails: The land along the rivers is underutilized, especially in comparison to the intensity of river use. The proposed addition of 15 or fewer miles of hiking trails is not adequate for the ONSR.

At a minimum, a river length hiking trail system from Montauk to the southern limit of ONSR along the Current, joined by a connecting hiking trail from the Prongs of the Jack's Fork to the Current, should be planned now and explicitly provided for in the proposed GMP ~~â€¢â€¢â€¢~~

It would expand and diversify visitor opportunity to experience ONSR significantly without increasing visitor conflict or degrading the ecology. This trail might be called the Two Rivers Trail in recognition of the traditional name of the historic recreation facility at the junction of the Current and Jack's Fork as well as the synergistic relationship of these two streams.

The route of the "Two Rivers Trail" could coincide with the Ozark Trail in places such as the Powder Mill area.

The TRT and other trails should be permitted to traverse private property of consenting owners who grant easements for this purpose. Obviously, 50 years ago many displaced agrarian landowners granted occupancy easements were in no mood to cooperate even for their own benefit, but times have changed and will continue to improve, so inclusion of planning for a TRT should begin now. For granting private owners, the TRT would enhance property values or benefit the recreation value of such property.

Any GMP alternative must not be permitted or construed to obstruct, limit or negatively affect the OT.

The Ozark Trail and the Ozark Highlands Trail (Arkansas) are in the process of construction toward meeting at the Arkansas border at Lake Norfolk (Tecumseh, MO). This will create a hiking trail from Lake Fort Smith State Park in Arkansas to St. Louis. There are over 300 miles on the ground in Missouri, and 240 miles in Arkansas with 28 under construction along the Buffalo River (BNRJOhn, and more along Lake Norfolk (OHT).

Please contact us if we can assist with additional information or discussion.

Sincerely,

Alice Andrews, Conservation Chair

The Ozark Society

**Correspondence:** ONSR enabling act has three stated purposes- conservation, preservation, and recreation. The recreation purpose should not be sacrificed to conservation and preservation. Rather, recreation uses should be widely accommodated. Specifically, I regularly participate in the following recreational uses Atv in some areas as well as camping and boat riding.

These recreations are important to me because I have done them in the same areas for the past 60 years of my life and now I enjoy these recreations with my grandchildren and great grandchildren.

Alternative B unnecessarily restricts/ eliminates my recreational use and use areas. The NPS should explore available amenities that support a wider variety of recreational use which expand motorized vehicle use will accommodate those less fortunate and elderly users who rely on that transportation.

Mixed use river based zones adequately accommodate my recreational use.

It is illogical to place greater restrictive horsepower limits on the River ways upper sections because the water moves too swiftly over the swift areas.

Finally the most disturbing aspects of the draft GMP, the GMP draft process, the NPS, and/ or present ONSR direction is closing of roads, campsites, water access points or sites. Economically there will be tax loss of the local, state, and federal levels effecting all of the community's in the surrounding areas of the purposed plans.

**Correspondence:** Superintendent Black,

As we have discussed on multiple occasions in-person, I am opposed (individually, and speaking for the overwhelming majority of the 37,000 constituents that I represent) to the National Park Service's (NPS) preferred "Alternative B," and to the further restriction of enjoyment/access for all users. Adoption of the "No Action Alternative," with a priority placed upon enforcement of existing regulations, would continue to protect the natural features of the area, while being the least disruptive to the local culture and economy. I consider the following comments to be separate and substantive, and should you disagree, I would appreciate a detailed explanation which outlines your reasoning.

When the Ozarks National Scenic Riverways (ONSR) was formed in the late 1960's, land was purchased, donated by the State of Missouri, and also taken from private landowners through eminent domain for the purpose of conserving/protecting the Current and Jack's Fork Rivers, natural features, and recreational opportunities for "future generations." Alternative B (NPS Preferred) of the Draft General Management Plan (GMP) directly contradicts the goals set forth when the ONSR was created; through increased restrictions on access and the outright elimination of recreational activities in vast portions along the riverways. Allowing users to responsibly experience this area that we agree is special was the central idea shared by property owners, the State of Missouri, and the PS when the ONSR was created; rather than to create restrictions so that fewer individuals will be able to enjoy this treasure.

It also bears mentioning that the comment/regulation process being used in this instance is severely flawed. Users should not have to comment/advocate to prevent further restrictions from being implemented. Conversely, the burden should fall upon the NPS to justify your proposals to the users; with the final decision resting in the desire and interest of the people we serve.

1. Ironically, the GMP is not "General." Alternative B is very specific in the restrictions that are proposed.
2. When this area was identified as a special area that was worthy of management by a governmental agency, the very river accesses and roads which you now seek to close (or limit to hiking trails) in Alternative B were in existence, and are currently utilized by patrons, park staff, and law enforcement.
3. Current regulations exist to curtail lewd/obscene behavior, horse/vehicle traffic in the river, unsafe/discourteous motorized boat/floater traffic, and littering. Alternative B does not resolve these issues. A visible presence and enforcement of existing regulations is a solution currently at your disposal. At current funding levels, if you are financially unable to enforce current regulations, why would you seek to expand restrictions further? Maintaining a "family friendly" atmosphere should be a priority of any future plans.
4. Closing 2/3 (65 miles) of "undesignated" horse trails will be detrimental to a vital area of our local economy by further limiting the amount of our beautiful scenery that can be enjoyed via horseback.
5. Eliminating motorized use on the upper stretches of the Jack's Fork and Current Rivers is unacceptable. These areas are generally "self limiting" due to the amount of water available, but should remain accessible to users within the current limitations. The use of motorized boats in these areas is not prolific, but is a very important alternative for those with mobility challenges to be able to enjoy the scenery that the upper stretches afford. The use of small john-boats for fishing and gigging is a very significant part of the local culture. The most common use of motorized boats on the upper parts of the rivers are for "river clean-ups," when many tons of trash are hauled out of the rivers by local volunteers (Not NPS employees). I personally know of a number of individuals, that while enjoying the upper stretches, have come to the rescue of someone in a medical emergency. The benefits of motorized use (within the current limitations) far outweigh any problems, and should not be further restricted.
6. Camping along the river on gravel bars should not be limited to "designated areas." Part of the enjoyment of floating/boating is being able to camp at a convenient time and location along your route. Attempting to regulate this is nearly laughable. While the NPS has focused on closing camping areas in recent years, there should be a renewed effort to attract families to visit, camp, and enjoy their stay; rather than to say, "You can't camp here, because it's not designated. "

Your consideration of my comments is appreciated. Should you wish to work together for the betterment of the Jack's Fork and Current Rivers, while jointly preserving the recreational opportunities that many enjoy and numerous families rely upon, I would be happy and willing to assist. This entire situation/discussion revolves around stewardship. The individuals in this area (who live, work and recreate here) have been responsible stewards for generations, in ensuring that the Jack's Fork and Current Rivers are maintained in a pristine state and available for all to visit and enjoy; which is incidentally the same reason that some wanted to designate this as a Scenic Riverway roughly 50 years ago. The question which logically follows: "Is the NPS maintaining the balance of stewardship given to them, through the proposal of the GMP Alternative B?" Sadly, I would say not. If the GMP Alternative B is implemented despite the concerns that have been expressed and the detrimental effects (culturally/economically) which will ensue, I will again state my commitment of "returning the Jack's Fork and Current Rivers to State management," so that the original intent of the founders of the ONSR may be fulfilled; "For the purpose of conserving and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jack's Fork River in Missouri as free-flowing streams, preservation of springs and caves, management of wildlife, and provisions (or use and enjoyment of the outdoor recreation resources thereof by the people of the United States .... "

Yours in Service,

Representative Robert Ross  
Proudly Serving the 142nd House District  
Missouri House of Representatives.

<b>Correspondence:</b>	Dear Sir/Madam:				

I am concerned that your draft management plan does not go far enough to protection delicate species like the Ozark hellbender. While the new plan does close some undesignted trails that are damaging the local ecosystem, it also authorizes 35 miles of new horse trails with additional river crossings, as well as a new horse campground along Jacks Fork (which the Park Service itself admits would increase the likelihood for water quality degradation).

Please consider tighteneing up the proposed plan to protect threatened species.

**Correspondence:** I am pleased to see that the National Park Service is taking steps to update its General Management Plan

for the Ozark National Scenic Riverways. The Riverways needs a strong plan to preserve Missouri's world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered species. As Missouri's largest national park, the Riverways deserve protection for the enjoyment of future generations.

Adverse impacts from unauthorized roads and horse trails, vehicles on gravel bars, and the lack of enforcement against irresponsible behavior are a few of the critical issues facing the health and longevity of the Riverways. A new General Management Plan will address these issues and aid the Park Service in carrying out the Riverways' stated purposes of preservation, conservation and recreation .

The 'No Action' alternative proposed by others is unacceptable because it fails to address the need for enforcement of existing laws and standards, to better manage overcrowding and to improve communication and partnership with local landowners and communities. In many ways, the Riverways are in worse shape than when it was designated a National Park in 1964. The solution to this problem is an updated and stronger General Management Plan, not a transfer to our overburdened state park system. The Riverways and Missourians deserve better.

I support the National Park Service in pursuing a new General Management Plan and its preferred alternative, Alternative B, which would address some of the most critical issues facing the park and the rivers while

promoting opportunities for recreation.  
Thank you,

Sincerely  
Senator Joseph P. Keaveny  
4th District

**Correspondence:** Dena,  
I could not locate a link to comment on the draft plan for management of the Ozark National Scenic Riverways and I hope you are the right person to receive my comments and that my comments are not too late for meaningful consideration.  
I reviewed some of the lengthy complex proposals and am grateful that there has been a lot of work that has gone into preparing these options. I am not sure which of the proposed alternatives my comments best support because I support both a high degree of regulation of activities to protect the environment and the old time traditional ways of exploring but also a low presence of law enforcement, which seem to be mutually exclusive as your plans are currently presented. I see both sides of many perspectives because I live on a float stream in Crawford County and have visited Ozark National Scenic Riverways hundreds of times in my life. I also have heard many stories about people's experiences on the rivers in the course of my work.

The two most common problems I have experienced and heard are about the high powered motor boats that disturb primitive users and the environment and the omnipresence of police in the wilderness. I think the Park Service should publicize and implement reward systems such as the Missouri Conservation Department's Operation Game Thief system for citizens who photograph or otherwise document people who are destroying ecological features, littering, using excess horsepower motors, or otherwise causing harms so that they can be civilly sued by citizen activist groups; and focus law enforcement on incidents that involve violence or threats of violence. In order to have public support for such a system, it is necessary that the public be engaged in supporting the policies. The series of recent public presentations about this draft plan could have served this purpose better if there was not such a dominant presence of armed law enforcement officers present. This public impression that the Park Service is

dominated by police control rather than public support is contrary to the environmental purposes of the Ozark National Scenic Riverways because it undermines the depth of public support when policy is presented under the impression of threat of force and criminal penalty rather than through voluntary public cooperation and civil compensation from violators. To the degree the Park Service is willing and able to engage the common citizen in the business of environmental protection through civil suits with rewards for witnesses and litigants there will not have to be the trade-off between the peace that comes from not being disturbed by environmental transgressions and the peace that comes from not living in an overburdening police state.

This libertarian principled approach to proactive citizen environmental protection can also be enhanced through workforce training in non-violent conflict resolution to minimize the need to summon law enforcement for minor problems, expanding the campground host program, authorizing unarmed Park Service employees to write summonses for minor environmental and minor peace disturbance problems, public education about the reasons for regulations, and public education that deterring violence and threats of violence against environmental monitors and other users will be the top law enforcement priority. I realize there is a need for law enforcement to be available to respond to incidents of violence and to provide investigative services for some major crimes, but public support will be increased in proportion to the degree that law enforcement is not involved in minor violations of law or environmental regulation. I encourage you to seek to expand protection of the environment and traditional means of exploration in the most environmentally sound ways possible while utilizing every possible means of reducing the need for armed law enforcement by engaging the public support for Park Service policies.

Sincerely,

/s/Tony Nenner

**Correspondence:** RE: Ozark National Scenic Riverways Draft General Management Plan/Wildemess Study/EIS  
Dear Superintendent Black:

On behalf of the Missouri Coalition for the Environment (the Coalition), we submit these comments in response to Ozark National Scenic Riverways' Draft General Management Plan/Wilderness Study, dated October 2013.

The National Park Services (NPS) submitted a Draft General Management Plan (DGMP) for Ozark National Scenic Riverways (ONSR) dated October 2013. The DGMP contains three "action alternatives" to address park management issues since the ONSR's last comprehensive planning effort completed in 1984. The DGMP also contains a "No Action" alternative that would leave the NPS' management of ONSR as is and would leave many management issues unaddressed. At the NPS' various hearings on the proposed DGMP, and in the popular press, a number of people and entities have suggested that the NPS simply take no action and continue to operate under the earlier management plan. Taking no action deviates from the NPS' statutory and regulatory directives and is not in accordance with the NPS' own guidance. A new General Management Plan (GMP) is needed and the NPS should move forward with its plans to issue one.

Federal law requires the NPS to file a GMP in a "timely manner" to address changes and provide guidelines for future management of ONSR. See 16 U.S.c, Â§ 1a-7(b). Because the NPS' 1984 planning and management effort for ONSR is outdated, a new GMP must be developed in order to comply with the statutory mandate.

According to section Ja-7(b), a GMP provides guidelines for park management and development including desired resource conditions, user capacity standards, visitor use management, and changes to boundary modifications- and has an expected life of fifteen to twenty years. 1 ONSR's last management effort was conducted over 29 years ago.' ONSR's natural conditions and the park's usage have significantly transformed since the 1984 planning effort. Visitor intensity changes, increased recreational activity, new illegal access points, uses of neighboring property changes, and unresolved legal compliance issues require new management directives that should be addressed by issuance of a new GMP. A new GMP is required to address the current conditions and to provide guidelines for future management of ONSR.

Since the early 1980s, the park has experienced a significant increase in the number of visitors. This requires NPS to revisit the methods by which it achieves its purposes: conservation and interpretation of

the unique scenic values as well as the provisions for use and enjoyment of these resources. See 16 U.S.C. Â§ 460-m. Increased visitor traffic means more stress on the park. These changes must be addressed through a new GMP.

In addition to the increased number of visitors, the ONSR has faced a significant increase in certain types of recreational activity. Since the early 1980s, ATV usage and river activity such as canoeing, floating, tubing, boating, rafting fishing and horseback riding have increased. These recreational activities have brought an increased use of illegal park and river access points, along with overcrowding from an increase in the number and size of motorboats used on its waters.<sup>3</sup> It is the NPS' task to account for these changes in recreational patterns and balance them against the need to conserve the environment. Management cannot rely on an old, outdated planning effort, which was developed before these significant changes, and still accomplish this balancing act. The NPS must take action and adopt a new general management plan as its October 2013 draft envisions.

Moreover, the ONSR has seen an increase in motorboat usage with retrofitted motors in excess of forty horsepower. See 56 FR 30694, July 5, 1991. The regulations to which the ONSR is currently subject do not allow motorboats with more than forty horsepower. See 36 CFR Â§ 7.83(a)(2). The Department of Interior Regional Solicitor's Office has advised the NPS regarding this issue and has determined that retrofitted 60/40 motorboats violate the federal regulation. Despite this known violation, the NPS continues to allow 60/40 motorboat usage on ONSR's waters.<sup>4</sup> A new GMP is needed to address these issues. Continuing management under the "No Action" plan- essentially keeping the earlier management guidelines in place- would continue to violate existing regulations. Id The NPS must either enforce the regulation or make changes to the regulation to accommodate the use of 60/40 horsepower motorboats through an updated management plan.

Thank you for the opportunity to present these comments. If you have any questions about the above or if you would like to discuss the Coalition's comments, please let me know. My contact information is below.

**Correspondence Type:** Other

**Correspondence:** None of these are in my area, but this is an issue I'm passionate about. I grew up in the Ozarks and have many family members living in Dent, Shannon, and Reynolds counties. My primary concern with the plan is the effect to local families who have made the commitment to live in and around the Ozarks and its waterways. The lengthy plan includes limited information related to the traditions and heritage of the local people. It seems that once again, a local heritage is at risk of being marginalized to support non-local visitors enjoying the home of someone else.

The people of the Ozarks have a rich and deep heritage of living with the rivers and streams in a symbiotic way. They know and care for their home. I would be in strong opposition to the plan alternatives that weaken the access and use of waterways for the locals. I've spent many afternoons fishing on Current river between Baptist Camp and Akers Ferry. I've gigged Pultite and Round Spring areas. I've floated around Van-Buren. And I hope to take my young sons to these beautiful places as they grow. In all that time, I have seen locals picking up the trash of visitors. I've seen local men standing up for values in the presence of women when others (often drunk) are lewd and disrespectful. I've seen the local men and women take the time to explain the history and ecological significance of a feature on the waterways. The men and women of the Ozarks are among the most hospitable you will meet and they love welcoming visitors into their homeland - and they do so with respect and genuine care. They resist the urge to become unwelcoming to all guests because of the actions of a few.

My concern is that the effects of this plan (particularly Alt B) will result in forcing unnecessary changes on the people who call the Ozarks home. The current regulations - when enforced - create a wonderful experience for locals and guests alike. A respectful local gigger with a 60/40 engine following the existing rules causes no problems for visitors - quite the opposite. I've seen gigging boats used to pick up trash, clean the streams, shuttle guests, and get visitors to safety in the event of an accident or storm. A rude person with little respect for others will cause problems with a motor of any size. The same goes for ATV's, horses, access, campsites, etc. Adding restrictions will hamper the rule-abiding citizens and guests, and those ignoring the existing regulations will continue to ignore the new regulations.

My preference would be Alternative A (no action) with added resources to enforcing current regulations. I believe that adding resources to protecting this beautiful culture and landscape make it an attractive place for families to visit. It is indeed a national and state treasure - but we should always remember that it is also the home to a rich, friendly and viable culture of men and women that love their land and streams. They are one of the most valuable resources in the area - not an obstacle to the vacation of visitors.

**Correspondence:** February 6, 2014

Dear Superintendent Black,

On behalf of our more than 800,000 members and supporters, the National Parks Conservation Association (NPCA) submits these comments on the Ozark National Scenic Riverways (OZAR) Draft General Management Plan (GMP) and Environmental Impact Statement (EIS).

The decisions made in this GMP are critical to the long-term health of the Ozark National Scenic Riverways. It is not a stretch to call this a national park in peril. Since 1984, the year the last General Management Plan was completed, lax National Park Service (NPS) management of natural resources and enforcement of laws and regulations, combined with a drastic increase in recreational use on the rivers has caused highly degraded water and destruction of plant life and wildlife habitat.

Congress valued our treasured lands enough to create the National Park Service to manage the national parks on behalf of the American people. When the Organic Act passed in 1916 - legislation that was championed by a Republican from Utah and an Independent from California - the NPS became responsible for conserving the "scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." <sup>1</sup> (emphasis added) This Act clearly points out the responsibility of the National Park Service to conserve the natural resources and maintain balance of conservation with recreation in our national parks.

A series of bills to designate the Riverways were introduced in the early 1960s, but Congressional differences of opinion about the way the rivers should be managed led to the bills' defeat. A united Missouri congressional delegation rewrote the bill with provisions for hunting and fishing, and property owner rights and the bill to establish the Ozark National Scenic Riverways passed. The park's enabling legislation reflects a mandate for balance of preservation and recreation: "...preservation of portions of the Current River and the Jacks Fork River...preservation of springs and caves" and provisions for use and enjoyment of the outdoor recreation resources."<sup>2</sup>

A park unit's purpose statement focuses the NPS' management role at a particular park and at OZAR that statement calls on the NPS to "preserve and protect in an unimpaired condition" the clean, freeflowing Current and Jacks Fork rivers, springs, caves, and their karst origins" and to "provide for uses and enjoyment of the outdoor recreation opportunities consistent with the preservation of the park unit's resources."<sup>3</sup> (emphasis added) The Ozark purpose statement again reflects the need for balance of preservation and recreation.

The Organic Act remains the strongest mandate for managing national parks, the enabling legislation is the legally binding mandate of the NPS at OZAR and the park's purpose statement is in effect to guide management. But at OZAR, the balance between protecting the natural resources and providing enjoyment through recreation has tipped, jeopardizing the ability of the park to survive for the enjoyment of future generations. Resource preservation and recreational use can be balanced without degrading resources, sacrificing the quality of the visitor experience or negatively impacting the local economy. And it must be balanced at Ozark for the park to survive.

Most of the provisions in the Preferred Alternative B could provide that much-needed balance, but without increased staffing and enforcement of park regulations, the park's natural resources - resources important to people and wildlife alike - will continue to degrade.

## WATER RESOURCES

NPS acknowledgement of managing for clean water:

Ozark National Scenic Riverways contains 134 miles of clear, free-flowing, spring-fed rivers - the Current and Jacks Fork Rivers. Protecting the cleanliness of these rivers is central to the mission of the NPS and there is significant evidence in the GMP that underscores that importance. The following four excerpts illustrate that the NPS understands that good water quality is a critical part of their stewardship at OZAR:

"Exceptionally high water quality and clarity of the free-flowing Current and Jacks Fork rivers has led to designation of these rivers as two of only three Outstanding National Resource Waters in Missouri. This designation has national, recreational, and ecological significance."<sup>4</sup> (emphasis added)

"Both rivers are also classified as Tier Three Waters by the State of Missouri. These stringent federal and state standards are designed to protect against any degradation in the water quality of these rivers."<sup>5</sup>(emphasis added)

"The National Riverways' water resources are of exceptional quality; however, they are also highly susceptible to pollution. This is because karst terrain does not allow for effective filtration and absorption of pollutants from surface water as it travels into the groundwater system" <sup>6</sup> (emphasis added)

• Recreation activities also have the potential to threaten the water quality of the Ozark National Scenic Riverways if they are not managed properly. For example, manure from horses and petroleum byproducts from gas-powered motorboats can contaminate river water. In their 2006 study, Davis and Barr reported elevated bacteria levels within the lower Jacks Fork River that exceeded the existing Missouri single sample standard, and was attributed to horses and other land uses<sup>7</sup> (emphasis added)

Collectively, these excerpts reinforce that management practices at the park must be designed to ensure that the Current and Jacks Fork Rivers are clean and clear in order to satisfy state and federal standards. The excerpts also reflect the acknowledgement of the NPS that it is the role of a General Management Plan to provide the path to manage park waters responsibly. These water quality standards are in place to protect human health as well as the well-being of wildlife and plant life. Some actions in the Preferred Alternative B, and certainly the practices currently underway as referenced in the No Action Alternative, are at odds with federal and state standards for clean water:

• Proposed equestrian management would result in new river crossings that would disturb the water, increase erosion and sediment and introduce manure deposits to new areas of the rivers. Although these new crossings would cause pollution in new parts of the river, the net effect of proposed changes to equestrian crossings in the plan may provide overall benefit to water quality. The Preferred Alternative B also says that "Unauthorized crossings would be closed and restored."<sup>8</sup> NPCA supports a limited number of new equestrian crossings in the context of closing and strictly enforcing currently used unauthorized river crossings.

• Establishing a new 25-campsite for horses along the Jacks Fork, as recommended in the Preferred Alternative B, will also introduce new negative impacts to water quality. NPCA recommends locating this campground outside of the national park, which could also provide the added benefit of providing local small business growth for an owner/operator of the campground.

• The Preferred Alternative B will reduce the number of gravel bars accessible by cars and trucks, which will in turn reduce riverbed erosion, sedimentation and turbidity. The No Action Alternative results in far too many cars and trucks parked in the river during peak visitor use. The reduction of gravel bars is critical to implement and enforce as current conditions are not only detrimental to water quality, but also to visitor safety.

• The Preferred Alternative B calls for managing vehicle access points to the river through zoning combined with an increase in law enforcement. This action should halt rather than "reduce the creation and continuation of undesignated roads in the park unit."<sup>9</sup> (emphasis added) There are already dozens of unauthorized roads and access points to the rivers creating negative impacts to water quality, including to rivers, wetlands, streams, and floodplains. NPCA urges the NPS to halt development of new access points, systematically close and restore the unauthorized access points, and enforce the use of authorized access points in order to restore water quality.

#### NPS Management Policies and the Clean Water Act:

NPS's Management Policies set forth specific rules designed to ensure that NPS will manage and perpetuate surface waters and groundwaters as integral components of park ecosystems and these Policies call for compliance with the Clean Water Act. Specifically, the NPS Management Policies say:

The Service will determine the quality of park surface and groundwater resources and avoid, whenever possible, the pollution of park waters by human activities occurring within and outside the parks. The Service will:

• work with appropriate governmental bodies to obtain the highest possible standards available under the Clean Water Act for the protection of park waters;

• take all necessary actions to maintain or restore the quality of surface waters and groundwaters within the parks consistent with the Clean Water Act and all other applicable federal, state, and local laws and regulations; and

• enter into agreements with other agencies and governing bodies, as appropriate, to secure

their cooperation in maintaining or restoring the quality of park water resources.<sup>10</sup>(emphasis added)

Importantly, Section 313 of the Clean Water Act requires NPS, in implementing its park management activities, to "...comply with all federal, state, interstate, and local requirements, administrative authority, and process and sanctions respecting the control and abatement of water pollution in the same manner and to the same extent as any non-governmental entity including the payment of reasonable service charges." <sup>11</sup> (emphasis added)

According to the GMP bacteria in the rivers often exceed standards set by the U.S. Environmental Protection Agency (EPA), creating an obvious threat to human health. In conversations with staff at OZAR, there are times the levels of Escherichia coli (E. coli) are very high during peak season in portions of the river with a large number of recreational tubers or floaters. Additionally, according to NPS staff, there are E. coli spikes in areas with high horse traffic. Although the GMP does not specify the number of times annually that the E. coli count in the rivers falls above EPA standards, from conversations and as evidenced by the GMP, it appears to be fairly often: "In locations of high recreational use, bacterial counts can be elevated."<sup>12</sup>

The NPS suggests that to "â€ensure that this standard [to control E. coli] is not violated, the NPS Riverways managers might consider increasing educational efforts to raise awareness of the impacts that river users can have on water quality."<sup>13</sup> (emphasis added)

Since the state of Missouri is responsible for water testing in the rivers at OZAR, NPCA strongly urges the NPS, in cooperation with the state, to develop a communication system to notify people on the rivers that the E. coli count is high enough to risk human health. In the Great Lakes, when E. coli levels are above a set number of colony forming units (cfu) per 100mL, the public beaches are closed and warnings are posted. The EPA has developed a Beach Action Value (BAV) as a tool for notifying beach goers that levels are high. At minimum, the NPS should implement a system for notifying visitors when these levels are high. In addition, the NPS should consider closing portions of the river until levels are within a healthy range. Finally, the NPS should adopt an aggressive education campaign through local outfitters and at authorized river access points to educate visitors about how human body waste must be disposed of while in the park.

Just last year, a Superintendent's Compendium, issued May 20, 2013, reinforces the regulations for disposing of human waste while in national parks:

"Where a toilet facility is not available human waste must be buried at least 6 inches underground and a minimum of 100 feet from any water sourceâ€" <sup>14</sup> (emphasis added)

The laws and regulations governing water quality and disposal of human waste must be enforced because given current conditions, and in the No Action Alternative, visitors are either uneducated about the dangers of E. coli infection or they are content to recreate in a river with high levels of human feces. Either way, if floating the rivers continues to increase, as it has since visitor capacity monitoring was outlined in 1989<sup>15</sup> the NPS will need to address this health risk with education and potential closing of some portions of the river.

As a final note, there is no correspondence in the Appendix indicating that NPS consulted with the EPA regarding impacts on water quality that any of the Alternatives presented in the GMP will have.

NPS, EPA and State of Missouri consultation on plan:

NPS's Natural Resource Reference Manual #77 sets forth a comprehensive set of policy objectives related to water resources management within the National Park System. NPS recognizes that "[m]aintaining water in its natural condition, free of pollutants generated by human activity, is an important goal of NPS managers."<sup>16</sup>

As the Manual observes, states have developed best management practices for a variety of activities

that may be conducted inside or outside of park boundaries and that may contribute nonpoint source pollution, including, among other things, animal waste management and grazing by wildlife and domestic livestock. Specifically, this Manual notes that "[a]ll parks that permit, manage, and/or conduct the above activities, or if any of the activities occur in watersheds that contribute to park water bodies, are encouraged and advised to obtain their respective state's nonpoint source program management plans and incorporate appropriate Best Management Practice into their resource management plans or individual project plans." 17 (emphasis added)

There is no correspondence in the Appendix to indicate that the NPS has consulted with the State of Missouri regarding impacts on water quality that any of the Alternatives presented in the GMP will have. Record of this communication is important because OZAR has Tier Three Outstanding National Resource Waters as defined by the EPA and voluntarily designated by the State of Missouri. Under the Clean Water Act, once the existing uses of a water body have been established by evaluating the water's quality relative to uses already attained the State must maintain the level of water quality that has been identified as being necessary to support those existing uses. In the case of the Current and Jacks Fork, the State of Missouri has committed to the highest (Tier 3) level of anti-degradation for the rivers. Cooperation between the State and the NPS is critical in order to carry out these provisions.

NPS and the Federal Pollution Control Standard:

The Federal Compliance With Pollution Control Standards signed by President Jimmy Carter on October 13, 1978, requires the head of each Executive agency to ensure that all necessary actions are taken to prevent, control, and abate environmental pollution with respect to Federal facilities and Federal activities, and that such agencies comply with all Federal environmental pollution control laws, including, among others, the Clean Water Act.<sup>18</sup>

Among other things, each Executive agency shall cooperate and consult with the EPA Administrator and with State, interstate, and local agencies concerning the best techniques and methods for the prevention, control, and abatement of environmental pollution. <sup>19</sup>

The GMP is not clear to what extent the NPS has consulted with EPA, the State of Missouri, and local governmental units on the impacts that the Preferred Alternative B will have on the rivers' Tier 3 Outstanding National Resource Waters status. The degraded water quality, especially during peak season and especially with the addition of numerous unauthorized river access points and horse trails and crossings, illustrates that there are few measures in place to ensure these regulations and laws governing water quality are enforced. And the GMP in general is very weak in specifying what changes in management need to occur to comply with those laws and regulations.

Water quality and the Endangered Species Act:

Anticipated potential impacts to federally and state-list threatened and endangered aquatic species have been covered in Preferred Alternative B and in the consulting correspondence between NPS and U.S. Fish & Wildlife Service (USFWS) regarding the Ozark hellbender (and two other non-aquatic species). This consultation is done to pursue required compliance with section 7 of the Endangered Species Act.

The park is known for providing one of the few U.S. habitats for the Ozark hellbender. The GMP acknowledges that not much research exists to assess how NPS management of the rivers affect hellbender habitat, however the GMP cites research from the USFWS and the U.S. Forest Service (USFS) that says "â€degradation of water quality can have considerable negative impacts on hellbender habitat given the hellbender's dependence on clean, clear, and cool river water."<sup>20</sup>

In current practice, and in the No Action Alternative, there are several instances cited above of recreational river uses combined with a history of lax NPS management and enforcement that cause degraded water quality. Equestrian and vehicle access to the river and the pollutants that each introduce are currently causing and would continue to cause adverse impacts to the Ozark

hellbender.

The NPS has analyzed that the Preferred Alternative B would likely provide for an improvement to hellbender habitat, mainly because of changes in resource management strategies. The NPS must continue to consult actively with the USFWS on the health of this fragile and unique wildlife.

#### MOTORBOAT AND NON-MOTORIZED USE:

Generally, NPCA supports the provisions in the Preferred Alternative B for motorized and nonmotorized use of the rivers as described in Table 4 of the Draft GMP/EIS (page 48).

NPCA reinforces that current regulations are mentioned in the GMP: "On waters situated within the boundaries of Ozark National Scenic Riverways, the use of a motorized vessel is limited to a vessel equipped with an outboard motor only."<sup>21</sup> On some portions of the rivers, this is limited to 25 hp and in others it is limited to 40 hp.

In practice, the NPS has not been enforcing the 40 hp for some time, but allowing boats of 60 hp on the river. NPCA understands this allowance - mainly because of powerboat industry changes - and supports the necessary rule-making to allow the 60 hp boats to legally operate in the park.

In addition, NPCA supports the balanced approach to non-motorized zones in the northern Current and Jacks Fork Rivers and seasonal mixed-use. The increase in non-motorized zones provides a beneficial impact to visitors and wildlife alike. The resulting quiet in non-motorized areas will allow the park birds and wildlife to settle. And with nearly 18 million Americans participated in canoeing, kayaking and rafting last year<sup>22</sup> it is important to provide a safe and quality visitor experience for those who want to see the park in a slow and quiet atmosphere.

#### HORSES:

Most negative impacts caused by equestrian traffic that are of concern to NPCA are covered in the comments on Water Resources, but a few provisions in the Preferred Alternative B also bear mentioning.

Critics of the action alternatives have pointed to the reduction of equestrian trail miles and a proposed permitting system for horses as unacceptable. The Preferred Alternative B proposes a system that includes "nearly 60 miles of designated equestrian trails" <sup>23</sup> (emphasis added) and includes about 35 miles of newly designated trails. Because of profound overuse, existing trails will be closed and restored, which is a significant benefit to area equestrian concessioners who rely on a good trail system for their livelihood.

The proposed permitting system would help manage horse levels and impacts on the trail system and park's resources. This permitting system must be implemented or simply put, the park will not exist - even in the condition it is today - for much longer. It is hard to imagine people wanting to pay for a horseback experience along severely rutted trails, crossing a polluted river.

In implementing the permit system and in closing trails for restoration, the NPS must work with local small businesses in order to cause the least disruption in their enterprises. There are many national parks in which trail restoration occurs and in which there are permitting systems that control the numbers of horses on trails at any given time. The NPS may find models within the National Park System on which to base changes at OZAR.

#### LAND-BASED RECREATION:

The Preferred Alternative B calls for mountain biking as a new, allowable use, but only on designated trails. NPCA understands that mountain biking is an increasingly popular activity - especially by an age group that is younger than the typical national park visitor. And although providing this activity is a worthy goal, NPCA fears that there are already a number of management changes in the Preferred Alternative B - horse riding and motor boat use in particular - that will require extra enforcement. This need for extra enforcement on currently allowed activities could preclude

adequate enforcement of mountain biking on designated trails.

The NPS has analyzed potential negative impacts and disturbances to wildlife and plant life as a result of developing trails where there currently are no trails.<sup>24</sup> This potential negative impact could increase if mountain bikes begin forging unauthorized trails through the park.

More importantly, if mountain biking trails are located close to the riverbanks, erosion could degrade water quality further. Finally, without adequate enforcement, unauthorized trails are certain to emerge as well as potential new unauthorized crossings of the river by mountain bikes. For these reasons, NPCA is not supportive of this new use at the park.

#### STAFFING:

The NPS anticipates an additional 26 new Full Time Equivalent (FTE) positions to implement the provisions of the plan, but none of these additional staff members are dedicated to Resource Management.

"The proposed management strategies are not about doing substantially more; but rather are more about managing differently, in a more proactive way that is in accordance with the purpose of the park. Strategies would (also) help restore environmentally degraded park unit lands and facilities."<sup>25</sup>

NPS envisions 8.5 FTEs in the area of Law Enforcement, Safety, and Emergency Services to "help improve protection and monitoring of cultural and natural resources in key areas of the NPS Riverways."<sup>26</sup>

The balance of new FTEs would be primarily for Maintenance and Engineering Division to upgrade visitor facilities projects referenced in the Preferred Alternative B.

NPCA is very sensitive to the underfunded state of our national parks, but additional staff at OZAR is critical. The Ozark National Scenic Riverways is a very difficult park to manage and patrol because its boundary runs on either side of 134 river miles. For the last 30 years, management and enforcement of regulations and laws governing water quality and recreation have been lax and none of the Alternatives will be successful without additional staff and new training programs and a system of accountability to ensure that regulations are enforced. Even the No Action Alternative presumes that existing regulations - again, which are currently not being enforced - will be in place. NPCA supports an immediate increase in the staff of Law Enforcement combined with a staff-wide training and accountability program in order to ensure that laws from the Organic Act to the Clean Water Act, and park-specific regulations, are enforced.

#### ECONOMIC OPPORTUNITIES:

With about 1.3 to 1.5 million visitors each year, the Ozark National Scenic Riverways provides significant economic impact for local communities around the park. Visitor spending is estimated at \$55.5 million with nearly 90 percent of that spent by non-local visitors. The park directly employs more than 125 staff members and leverages 845 jobs outside the park.

The NPS has identified potential opportunities for new concessions based on the action alternatives. The Preferred Alternative B is projected to create new business opportunity for "shuttle services for river users with non-motorized watercraft and overnight river activities such as guided float trips and guided (hike in) back country trips in the natural and primitive zones."<sup>27</sup> There are likely others.

National parks are tremendous economic generators, leveraging at least one dollar in economic activity for every federal dollar invested and the Ozark National Scenic Riverways is no exception. But it will take open minds and entrepreneurial spirits to find those opportunities created by the action in the General Management Plan.

END NOTE:

The NPS calls their charge out clearly throughout the Draft GMP/EIS:

"Congress had charged the National Park Service with managing lands under its stewardship 'in such a means as will leave them unimpaired for the enjoyment of future generations.' (NPS Organic Act, 16 USC 1)"<sup>28</sup>

NPCA urges the NPS to take their charge to heart because the Ozark National Scenic Riverways is an imperiled national park and will not survive for the enjoyment of future generations without strong NPS management and enforcement of the law.

**Correspondence:** Dena, .

I am writing in regards to the horse trails be recognized. I would just like to say that I thoroughly enjoy riding in the upper ONSR around the Jadwin area. It is very convenient for me to travel to those places on a Friday evening after work since It s usually just me and my daughter. I have been riding for most of my life and have a daughter of my own that I enjoy sharing my love for riding with. I have older family members that enjoy riding this area as well and have rode there for probably 30yrs. We would like to express our concerns on having these trails in this area recognized under your new plan . The area around Eminence is nice as well but we prefer the Jadwin area for it seems to be more family oriented. We have made many great friends through our riding days and would love to be able to continue that in and around the ONSR. We try to ride several times a month during the summer and this area is one we are more drawn to go to for the convenience leaving after work on Fridays. We would love to help and show our support in having these trails recognized in this area.

Thank You,  
Trisha Spaunhorst  
Villa Ridge MO

**Correspondence:** Although you are not asking people to vote on their choice of alternatives, it is likely you will realize that I am in favor of Alternative A. I feel very strongly that the impact of visitors be minimized or the resource will be degraded too much in my lifetime. I realize they would run me out of town if I made the comment in Van Buren or other towns in the area, but I see no reason for motorized boats in the NP at all, except for law enforcement and emergency. It is a beautiful river to float without the noise of a motor.

The management plan is an impressive piece of work. As a scientist who regularly writes reports and publications, I am in awe at how much work went into the document.

I hope to get my adult children down to enjoy the river this year as I'm afraid it will be lost by the time they are my age.

My comments are in red following sections out of the management plan.

From Page 14:  
Visitor Experience Values

There are few opportunities  
for such high-quality recreation  
experiences in a natural river environment.

To me, the value of this riverway warrants all the protection we can give it. I don't believe that the

local businesses that depend on the river realize that once it is polluted and compromised people will no longer visit and spend their money renting canoes, tubing, fishing in the area. Although a reader might infer it, I did not find this mentioned anywhere in the management plan and I believe it is reasonable to state it clearly.

From Page 18:  
National Park Service Organic Act

The National Park Service and its mandates are authorized under its Organic Act (16 United States Code [USC] 1,2-4) and the General Authorities Act (16 USC 1a-8). These acts direct the agency to conserve the scenery, the natural and historic objects, and the wild life, and to provide for the enjoyment of those resources in such a manner as to leave them unimpaired for future generations.

It seems to me, based on the above paragraph, that the only logical choice would be Alternative A. I realize that most of the local citizens feel that this is "their river" and they should be able to do whatever they want there. I can appreciate that this seems like a massive government intrusion to them. However, the value of this riverway is so great and times have changed- the impact of all the tourism has made changes to the river. Many of these changes have occurred in recent years and the impact has been escalating exponentially. It is no longer just a few people riding their horses or ATVs through the river occasionally. It's many people - every weekend. I did not see this captured and detailed in the management plan.

Amending the Organic Act, the Redwood Act (March 27, 1978, 16 USC 1a-1) further defines that the National Park Service may not allow degradation of the values and purposes for which the various areas were established unless authorized by Congress. This act also affirms that if a conflict occurs between visitor use and protection of resources, the intent of Congress is to favor resource protection.

Once again, it seems to me that the only logical choice would be Alternative A.

From Page 26:  
Visitor Behavior  
Education, interpretation,  
partnerships with special interest groups  
and concessioners, and increased law  
enforcement were suggested as ways to  
reduce conflicts and increase respectful  
behavior.

The only way you can get rid of the drunks is to ban alcohol. Those that would drink responsibly will probably comply, those that don't should leave the river. Unfortunately I can imagine what a huge/impossible job this would be, but you have to start changing the expectations of the floaters so they don't think it has to be a floating drunken party to have fun on the river.

From Page 39:

Alternative B would include several actions, beyond those shared with the other action alternatives:

• Restart oral history program.

• Enhance archive and museum collections program.

• Expand curatorial facility to provide additional archeological storage space for smaller national park units in the region.

• Develop the NPS Riverways as a regional curatorial hub.

• Include monitoring, research, and preservation projects that would actively support and strengthen management capabilities and ensure accurate visitor information.

These are important tasks that should be done. I hope the average person who thinks of a float trip as an excuse to get drunk and disorderly will someday care about this I hope the local people who want us to leave them alone so they can jetboat up the river and do whatever else they want will care about this someday.

Alternative B would include several actions beyond those shared with the other action alternatives:

• Research effects of visitor use on river and karst habitats.

• Partner with the county and state to replace Cedar Grove low-water bridge with a high-water bridge

- Improve park unit waste systems and partner with the community about waste systems adjacent to the riverways.

\_ I never found the reason this was so important. Why? It might be stated in the plan.

• Wouldn't that need to be done under the Organic Act (16 United States Code [USC] 1,2-4) and the General Authorities Act (16 USC 1a-8) anyway?

The three different alternatives each indicate some roads would be restored to their natural condition. I would assume that they would be closed and revegetated. However the plans differ widely on the extent:

Alternative A: "Natural conditions would be restored to approximately 50 miles of roads."

Alternative B: " Natural conditions would be restored to approximately 45 miles of roads, including 10 miles of roads to primitive zone campsites."

Alternative C: " Natural conditions would be restored to approximately 404 miles of roads. (Page 78)

Is this a typo?

From Page 89:

Educate visitors on the importance of protecting the NPS Riverways'

historic properties and leaving them undisturbed for the enjoyment of future visitors.

This was stated with respect to "Historic Structures", "MITIGATION MEASURES COMMON TO THE ACTION

ALTERNATIVES". Throughout U.S. and world history people have destroyed natural resources, historic sites, culturally important sites because:

- they did not know their significance or value (can be overcome by education)
- they did not know how to properly preserve them (can be overcome by education)

The next two cannot be overcome by education:

- they wanted to make a buck and they didn't care about anyone but themselves
- they were unwilling to do the right thing even though they knew better

The last one is very, very difficult to overcome by education:

- since they "lived there all their lives" and treated the important sites any way they wanted, they should be able to continue even though the impact would eventually ruin the sites for everyone.

I personally feel the education efforts of the NPS would be of great value, but many people don't care (see the last three items above) so somehow you have to convince them. We are fortunate that some people have the foresight to preserve some of these resources (e.g., Teddy Roosevelt, when he created the first National Park).

I would hope there are local people who have seen the impact crowds and increased usage has had on the river that you could partner with to educate the local people, that you just can't keep abusing it without eventual ruin.

Until you can convince all the people who use these resources, you have to regulate the impact. There are many places in the country that limit access (e.g., the Boundary Waters in Minnesota) and somehow the outfitters still make a living. It doesn't crash their economy as some has said increased regulations in the National Riverways will. In Yellowstone NP, backcountry camping as well as developed camping are limited and somehow people cope and still enjoy the experience when they can arrange it. Camping and lodging at the bottom of the Grand Canyon is limited and somehow people still enjoy it.

**Correspondence:** Still searching for "high ground" (final thoughts)

January 13, 2014

In my August 7, 2009 letter to the editor of The Current Wave I expressed the hope that local residents and the park could come together and reach "high ground." Now, four years later, local residents and park officials seem to be standing on opposite sides of the river. To make matters worse, the budget battles from last October and park closures pushed the two parties further apart. If the park is looking for compromise and acceptance from the local community, their timing is poor.

The two opposing sides are now at what appears to be the confluence of two rivers. As a local resident I am hopeful that we can finally accept the park and celebrate the enabling legislation, Public Law 88-492, preserving the Current and Jacks Fork as free flowing rivers. The park is going to do what it has to do "... to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such a manner and by such means as will leave them unimpaired for the enjoyment of future generations." However, the park also needs to be grateful and show appreciation for the "crown jewels" in the park that were given to them by the local residents and the state of Missouri. What would the Ozark National Scenic Riverways be without Round Spring, Alley Spring, and Big Spring? It would be reduced to a few primitive campsites along the river. The park also needs to adopt and display an attitude of social responsibility towards the community. Local residents with a passion for the area are allowed to serve as seasonal employees but rarely given serious consideration for permanent positions that include an opportunity to provide input and leadership in the decision making process. In order for any business or organization to be truly successful and accepted they must be socially responsible to the community in which they operate.

I understand that nostalgia is not what it used to be and we have a romantic notion of what life was like before the park was created. However, the riverways was our community and the park has done little to help conserve this tradition. Rather than forming a partnership with local residents, there is a perception that the park has chosen to become occupying invaders of the community. Real or imagined, local residents have a sense of loss and no longer feel they have input or any ownership in the riverways.

Where can we go from here? We have to turn to our rivers to find a solution. The rivers keep running and we will have to keep trying to come together and look for "high ground." Local residents will look for some display of social responsibility from the park. At the same time the park will be looking for some acceptance from the community. I believe we really all have the same goal. Please, let's find our "high ground" and keep going to our rivers for the answers.

**Correspondence:** The Salem Area Chamber of Commerce requests the comment period for the Ozark National Scenic Riverways General Management Plan Draft be extended an additional 90 days beyond the February 7, 2014 deadline.

The Ozark National Scenic Riverways provides tourism experiences that have a significant impact to our economic bottom line similar to Eminence and Shannon Counties. The combined impact of the ONSR on this region is significant. The Current and Jacks Fork rivers have provided jobs and recreational opportunities for our community. We are concerned with unemployment and poverty in our community and are looking at ways to continue and expand opportunities for local employment.

The Salem Chamber appreciates opportunities for our area citizens to comment through the public information and comment meeting scheduled for January 8th and asks you consider providing a similar opportunity to citizens in or near Shannon County. Our natural resources are an important feature in our community and we understand the National Park Service has extended significant effort to develop resource plans to sustain the park system. Our board hopes you look forward with patience and understanding as our local communities attempt to understand and return viable comments on your Draft Plan regarding our future water assets.

Most Sincerely,  
Salem Chamber Board  
The Salem Area Chamber of Commerce Board of Directors

JANUARY 16, 2014

Public meeting transcript

Kari Chilton  
Eminence, Missouri  
No change. That's my comment. Leave it alone. We got enough rules on the river.

Gay Self  
Winona, Missouri  
Well, I just - - you want to know how I feel about it? I feel that I don't think that our area should just be from one organization, that we should have the right to be able to camp where we want to, ride our horses, you know, the Ozark way of life. I don't feel like that it's right that there are people from the cities wanting to tell us what we can and can't do. I think they should vote on the city things. We should vote on the country things. I doubt that they'd like for us to go to the city and tell them where they can and can't camp, where they can and can't ride, or, you know, and so that's just how I feel about it. I'm definitely against it, and I really appreciate you.

Gail Armitage

Eminence, Missouri

Okay. Well, I feel that the people that are from here and live here and their way of life should be honored and that the things that they have done all their life shouldn't be taken away from them, and I feel restrictions are not the way to go because that's what makes this place so popular. And if they start putting restrictions on it and hurting the tourism, not only are they hurting the tourism but they are also hurting the - - well, the money around here. You know what I'm trying to say. They're hurting the businesses. They're hurting everything. They're hurting everybody. So that's my opinion.

Fred Mattison

Summersville, Missouri

I've lived there on the river all my life.

I don't want them to change - - blocking me off from where I can't go up and down it, and I ride horses and gig. And I want to be able to go up and down the river any way I want to. It was the way I was raised.

Sandra Mattison

Summersville, Missouri

I don't want them closing any of the horse trails or the rivers. I don't think they should lose any access to our ground down here. I don't think there's anything that is important enough to shut the public off of our public lands.

Dave Hannigan

Eminence, Missouri

They're talking about closing certain roads and stuff, closing roads, which the access to the park is bad enough already. When I first moved here, we had a little - - a small car, and a little Saturn would not - - could not visit most of the areas of the park, had to have four-wheel drive. As an employee of the park, I made it one of my goals to make every road accessible, as many as I could, make them drivable, but the - - there's still too much of the park that is inaccessible by vehicle that should be, too many of the river access areas even. The roads need to be brought up to the level of county roads as far as safety, and it's a national park. You go to any other national park and the visitor areas are all mostly paved or at least travelable, whatever the right word is to use there. They need to do more for that, and also another main big issue is they promise to maintain the heritage of this area. And all the old grain fields are gone and with it went the quail. There's a lot of habitat that should've been maintained, which, you know, we provide for the birds, rabbits, turkey, deer, elk, et cetera, if those grain fields were reestablished and maintained the way they were originally agreed to be maintained. Another option on that is to maintain food

plots under all the power lines, which need to be cut down anyhow, but when I say, you know, the place needs to be accessible by vehicle, I mean only the roads. The horse trails should be kept up. They're very important to the economy of the area. They're very important to us visiting and enjoying the park, but I still also enjoy the area where nobody can go with a horse or a four-wheeler or a car, you know, places to walk in. And, okay, I'm a hunter. On the plus side just keep up the good relationship with the conservation department, et cetera, which because I feel like they do a great job of supporting the hunters and fishers and photography and everything else that people like to do with having wildlife, abundant wildlife.

Tommy Boyd  
Summersville, Missouri

It's going to be such an economic hardship on folks around here the businesses if they -- if they go with the 20-year plan, and I wish you'd just leave it alone. Let the state take care of it. I don't know how the park service got so much authority down here anyway, but I'm where I'm against it. I'm against it. It's going to hurt this area bad in the long term.

Vanessa Stone  
Eminence, Missouri

I don't want anything -- no obstructions to the horse trails, keep them as is. Do not eliminate the 65 miles or whatever y'all want to do there. I want -- I don't want any authorized horse crossings. I don't think we abuse that, so it's not necessary. Especially no permits for riding our horses. We pay enough in taxes; right? Right. This place is starving, and so I don't want the economy messed up from this for recreational purposes. I know because my husband hires tons of these young guys, and they all look like little hound dogs on the road. They are starving in this area even when they come from good families. They look it, so please don't mess up the little bit of canoe rental jobs that they have and unnecessary -- I hate the when y'all -- what did they do the other day when they closed up everything in the parks? Yeah, the government shuts down shutting down all the bathrooms during the height of trail ride season is ridiculous. Everybody pees in the woods. It's just crazy.

Marium Feutral  
Summersville, Missouri

I've lived here in this community for years. I graduated from here, and I'm disappointed with our rivers that we can't be free to use them as we used to use them, and I'm opposed to all this that's going on.

Glenn Ritter

Bunker, Missouri

On this size limits on the motors and stuff,  
I don't think that - - well, I really don't feel that  
they should tell you what size motor you can run.  
That's already going, but I can live with the way that  
it is. But now their proposition wanting to take where  
we drive in and camp. We camp at Big Bluff all the  
time. That's - - oh, not a park service thing and  
they're wanting to do away with that. I've camped  
there all my life. I don't think it's right that  
anyone should be able to tell you that you can't camp  
there or anything. I don't know - - I don't agree with  
the law. While we're talking about it, on that size on  
the motors, I don't think that's right either. We  
ought to be able to run any size motor that we want to.  
I mean, I've went out of my way to help canoers and  
stuff on the river pull their boats out of the water  
and help people drowning. If it wasn't for our boats  
on the river, canoers would be in a lot of trouble,  
too. Everyone's got to work together. There're good  
and bad on both sides. There's people that abuse it  
and misuse it. I wish everything would just go back to  
just before there was any laws. Just let everybody  
live on it and do fine.

JoAnn Pussehl

Eminence, Missouri

I'm just concerned that this is a rerun of  
the biosphere stuff from years back, and it just seems  
like it's the same thing only a different version.  
That's my comment.

Mildred Elders

Summersville, Missouri

Well, I just think it's beautiful. God made  
it the way he wanted it to be, and we have enough  
concrete around in this world. And I'm afraid that's  
what will happen to our beautiful area if they take it  
over by the park service.

Wanda Shouls

Summersville, Missouri

I just would like for the park service to  
just leave everything like it is.

Suzanne Smith

Eminence, Missouri

I'm worried about the park service taking  
into consideration people who live in Colorado, live in  
California, live in New Jersey their opinion of what  
should be done with the river over the people that live  
here. I have been here off and on since I was born,  
and it doesn't change. The river's still beautiful.  
The river is still nice. The only time I've seen it

abused was by tourists, and I just feel like they ought to consider more of the opinion of the people that live here and that have to make their money on this river, the kayak people, all the people that rent kayaks, everything. I just think it's - - I see what happened around Springs. It just dried up. It's nothing now. I don't want that to happen to Eminence.

Carl Warren  
Akers, Missouri

I want it left alone. I see no reason in changing anything. I was born and raised here. My ancestors homestead is Pulltite, and, you know, I just I don't understand them trying to - - it seems to me like they're constantly trying to take our rights our freedoms away from us.

Curtis Warren  
Salem, Missouri

I've lived here all my life, and when the park come in, they pretty well ruined the place. And that's all I've got to say.

Joe Loyd  
Centerville, Missouri

I guess I have more questions than anything. One of the main questions is I wanted to know what trails - - if they had a specific list of trails/roads that they wanted to close and why they weren't published tonight and if they had any scientific information on horsepower limits showing that a larger horsepower unit created more environmental damage to the environment than a small one and if there was any scientific data that would back up as far as the safety issue on that. I think that's pretty much what I wanted to ask, and I prefer the - - what is the no action plan. Yeah.

Eddie Williams  
Black, Missouri

I just want to say I'd like for them to leave it the way it is, and if they can't take care of it, give it back to the state. We're taxpayers. I feel if we pay taxes on it why are they trying to take it away from us. I don't know if that's the right thing they want. I just know that it seems like they take more taxes, and they just keep taking more and more and more away. And I've got grandsons that's six and ten, and I'd like for them to be able to go when they want to. They love to go gigging. My six year old likes to go gigging. He can't kill a fish, but he tries. And if they start shutting the rivers down, they ain't going to have nothing to look forward to. I'd rather them be fishing or hunting or being on the river than I would be being in drugs and alcohol and stuff, you know. I just think if it's took away it

just takes something away from our youth that's coming up.

Mike Bell

Summersville, Missouri

Now this refers to the alternative plan B on the interpretation education part of the plan. Their there own words here says that self-guided interpretive opportunities would provide visitors with a sense of being the first to discover the remote, hard to find places such as no cabin or secluded spring. Guided opportunities would include ranger-led tours of special features such as old settlements, springs, and river environments. This would be - - this would reach visitors who are looking for a different or additional activities to the traditional float trip, and it goes on and states some other things. And it says down that - - I would like to know how they plan to do that when my ancestors that lived on the river up in the - - on the upper Jacks Fork - - or the lower Jacks Fork I guess you would say being Bay Creek up in that area live there and raised - - there was 13 kids in my grandmother's - - great grandmother's family, and they raised families along the river there and had corn fields and pastures and stuff there. How would they - - how would they be able to show anybody any old settlement there because since they took this over in 1964 it's all grown up in brush. There's no - - I would challenge any park ranger or whoever's going to go down and interrupt anything to anybody down the river to find any old settlement along that river any more because it's all covered in brush since it's grewed up. Now, first off, to do that, they want to give these ranger-led tours. I don't know how big a boat they would have to have because since they don't dredge any gravel out of the river anymore like they used to there's no river there for more than two people in a canoe. They have to get out all the time to drag down. How are they going to do that in a boat in a river that is being filled with gravel since they won't allow any gravel to be taken out of there, and that's in their own plan that they prefer. I just wonder how that would work. That's a statement I want to put them is how they plan on doing it because used to the rivers were grand. They were wide. They were deep. Everybody met on the rivers on the weekends, and everybody picnicked and just had a good time on the rivers with family and stuff. And now, you know, the rivers are so shallow that you have to meet in certain places where there is water, or we can't even have - - can't even swim or anything. The kids can't swim or anything because there's not enough water because of no gravel being taken from the Jacks Fork or the Current River where everybody floats. Now, I do know that they dredge on the upper Current River right at the very head waters. They were dredging up there this last

week. They do that if not every year at least every other year because I work up there. I see it. They do it. They do that because they have to make a place for people to gather at the Montauk Park for the traps because they got to have enough water for them to swim in. Why won't they move that dredging down the river and allow the river to be grand again like it used to be. That might be something they might want to consider looking into, because without it we're just going to have a river of rocks in the next very few years. That's my opinion.

Dale Hampton  
Ellington, Missouri

Well, the comment I got I guess mainly is if they're going to change, you know, what we had going and it's going to really change the way we've used the river for the last 30 or 40 years. I mean, they're starting to close off roads and not allowing people access to gravel bars, and it's been a family thing for us and a lot of other people in this area. And it's something that we don't want to lose. It seems like the government just keeps wanting to put recollections [sic] on the local people, and for what reason I don't know why they're wanting to take away our heritage. And then they show pictures on these billboards of logging and different things that they don't even allow to be done anymore, and those are the comments I got. It's just something we don't want to lose. That's the reason the local people are fighting this so hard.

Doug Warren  
Ellington, Missouri

I know they say they don't want to hear the no action thing. I don't know what else to say other than just give us the no action, you know. Leave us just - - just more law enforcement on the river and keep things the way they are is what we need.

Kenny Wells  
Salem, Missouri

The National Park Service has treated this like a national park when it was legislated by law to be the first scenic riverways in the United States. We were supposed to have had all traditional activities to continue, and public roads were to be maintained. Why did over years did the National Park Service decide to close river accesses that were county roads when it - - its establishment in 1964? In the 1980s the park service decided that trapping would not be allowed because of the word trapping being omitted. Hunting and fishing was allowed, but the word trapping was omitted, not because they wanted the activity omitted but because it was a form of hunting at that particular time. There was a lawsuit filed and a permanent injunction issued against the park service to keep

people. I'm still trapping. If we hadn't have had legislation - - and we tried to talk to people numerous times, and deaf ears were turned toward the local people. Why does the National Park Service take this approach instead of trying to get along with local people? Anything that we do seems to be very much hindered or tried to be stopped.

William Piatt  
Salem, Missouri

They're trying to shut the boats down from Pulltite up, and I've been raised there all my life using that part of the river. And it 's not fair to me for them to shut it down. To me, I've got three boys that use it - - have used it with me as I've raised them, and I say boys. They're men now because they're all but one's in their 20s, and they use it like I do. And if they shut it down from Pulltite up, they're shutting me down. I feel like they're doing - - I feel like they're doing the people in the Ozarks like they done the Indians. They're just forcing us out of here. They want us forced out of here, and I don't know what we can do it about it, but that's the way I feel.

Travis Morrison  
West Plains, Missouri

First of all, several points. First of all, I don't believe it will have any impact, but I want make sure it has no impact on my being able to mine sand and gravel on the watershed that flows into the Current on the upper end. It's not on government land. It's on private land, and we are permitted. And we do everything by the permit. We're inspected regularly, and we have a good reputation. But I would hope that the park service would not do anything that would take that away from us because I can't produce concrete that built this building without sand and gravel that we're getting out of that sand and gravel plot. So that's one thing. I don't think this plan will do anything, and I've been reassured tonight that it will not. Secondly, I know the trail ride issue is a sensitive issue, but it's very important for several families in this region. And I would hope that respect would be paid particularly to the Howell family that has a trail ride on the upper reaches of the park service property up by Acres Ferry and Ceder Grove that they would not be denied the ability to have trails and have their trail ride, because that's the way they feed their children. Okay. The issue on canoes and motor boats I would leave to the folks here that could speak better to that than I could. The closing off of roads I would suggest that that should be - - taking away the ability of local people to access the river by closing roads is - - has a very detrimental effect to people locally, and that may be popular in the urban areas. But these

are the people that live in this community, and taking away that access that they've been using for generations is something that - - that I would argue should be - - should not be done unless there is some very, very compelling reason. Many of the issues that are being looked at regarding this proposal has a lot to do with the impact on local people versus the wishes of people from the urban areas, and the wishes - the local people need people from the urban areas to come down to recreate. That's important to the economy, but the park service should be very, very careful about altering that balance. There may indeed need to be some adjustments, but if it's too much, it takes away the ability of these families to make a living in this region. These towns will - - it's hard enough to make a living here already, and I would urge the park service to be very careful about altering the ability of these communities, the people in these communities to make a living.

Mike Woolsey  
Summersville, Missouri

On plan B and C that propose a bridge across Ceder Grove high bridge my concern is that that is a public access gravel bar and everything. If they build a bridge there like they done paid for the pavement going there that that will limit access if they have another shutdown like they did awhile back we won't be able to put boats in. They will control exits or whatever to the river access. It will no longer be a county access because they won't own on both sides of the road, and the reason that they're doing this they say is because the bridge is obstructing the free flow of the water. If they're worried about that, why are not they getting the gravel out of the creeks and not worrying about the bridge?

**Correspondence:** Thank you for the opportunity to speak about the proposed Wilderness Area at Big Spring. More importantly, I appreciate the opportunity to speak for the large majority of the people in the 8th District that are opposed to such a proposal and all of the alternatives in the Draft General Management Plan (GMP). Every day, families and businesses in Southern Missouri and all across the Country are under assault from unchecked federal agencies. More and more it seems the federal government is looking for ways to infringe on our property rights and restrict our freedoms. Whether it is crazy proposals to regulate dust on farms, saying kids can't work on their family farms, a National Blueways Designation, or something as ridiculous as requiring a permit to be baptized in a river, the hardworking, law abiding, taxpayers of the 8th district have had ENOUGH..

When congress passed the wilderness act they made it clear that wilderness areas had to be approved by congress. It has been the tradition of Congress to never approve a wilderness area that was not supported by the member(s) whose districts it would be in. Furthermore, wilderness legislation must start in the natural resources committee and specifically on the public lands sub committee on which Jason serves. Let me be clear, Jason Smith and this

Congress will NEVER support a wilderness area within the Ozark National Scenic Riverways nor anywhere else in the state of Missouri. Also, Congressman Smith will fight any attempt by the Park Service to ignore the congressional designation portion of the wilderness act and try to manage lands as if they were wilderness. The elderly, infirm, and disabled veterans and citizens of Southern Missouri deserve to have access to public lands and Jason Smith will not tolerate any attempt by a federal agency to deny that.

Thank you for your time and I urge the National Park Service to reconsider their Draft General Management Plan and allow the people that live and work along the rivers to thrive.

**Correspondence Type:** Transcript

**Correspondence:** CARRIE SPRUELL: I have a question for you. How many of you guys have ever gravel bar camped? If you have, did you like it? If you never had, then why would you want to take it away from us? If you never have, then come down with us and you will see why we love it so much.

Our family, which is very large, have had so many fun memories from weddings, birthdays, anniversaries and just enjoying family fun. Our memories are from family and friends that are no longer with us, memories of ones that are still here and ready for the memories of the new ones joining us in the future. We have had anywhere from 20 to 100-plus people with us on our little piece of heaven down there.

If you really want to improve the scenic riverways, spend the money to hire more rangers to patrol the area. In the last seven years, we have had two rangers come down where we stay and once was whenever there was a drought and just to tell us that there was no fires.

Use the money to inform people how to respect the land and waterways like how we've been taught and how we teach our kids. Leave it cleaner than it was when you get there and if you see trash in the water, pick it up, even if it's not yours.

They've passed laws about like jello shots and beer bongs and others, but I've never seen them enforced very well on other waterways. Concentrate on the trouble areas and on other waterways. That is where your problems are.

We float on many waters, the Current, Huzzah, Courtois, Meramec, Black River and the Current River is the best out of all of them. At the other ones they've seen - - I've only seen three rangers take actions on the water and we usually float at least three times a year and we've been doing it for over 30 years.

So please don't mess with our piece of heaven and use the money to help improve the waterways because I don't want to have to tell stories to my grandkids about all the fun memories we had on Current River that they can enjoy themselves if you don't go through this when they grow up.

I have three kids, 24, 17 and 16, and their favorite time is going down to the Current River. And in today's society with all the technology, with phones, computers, games and when we're there there's none of this available. So you can tell me what that means. We have family time where we can go and have fun and not have any technology to be in our way. And plus, where can you go for 300 bucks a week and have this quality time? It's priceless. So please consider a different decision so we can enjoy the Current forever.

And then also what about the community that's along the riverway? What impact will that have on their living? And maybe you should make rules first and follow them through, instead of trying to take it away from us and try to improve it first.

CONNIE ZIMPFER: I'm asking that you please do not close the access roads to the gravel bars on Current River. We've been going to the gravel bars since I was a teenager and I'm not anymore. Ha-ha. We all go at least once a year. It is a set weekend. Some stay a week or more. Some years we have 60 floaters, some 30. The fact is we go. We use the gravel bars. We love it. We respect the river and all the gravel bars along the way.

As we float down, we see people camping on gravel bars all the way down. So why close them to us? We are here to ask you to please don't take away our gravel bar camping. We really don't understand why you would. Thank you.

ALICE HEZEL: Well, my comment is I don't see anything in there as far as restricting alcoholic beverages on the rivers and my concern is that people - - it will not be a family river. It will become a party area where everybody will be floating down. And when people get into these wilderness areas, they think it's God county, nobody owns it, so they can do whatever they want. And with drinking, there will be the debris, the beer cans, broken beer bottles, you know, people generally then start peeing in the river. Are they going to outlaw cigarette smoking so everybody isn't pitching their cigarette butts in the river and along the way? At least make it be a law so the park rangers can enforce it in case they run across these situations. I think it's been proven that any place where they have alcoholic beverages and smoking and stuff it becomes more of a bar than a wilderness.

You know, I did a lot of floating on the Jacks Fork and the Niangua and, you know, the fun of it was the fact that you were in the wilderness and you got away from all the hustle and bustle of city life and all the traffic.

I know that they're doing something regarding restricting all-terrain vehicles, because all-terrain vehicles and horses in a river going in and out of the river tend to deteriorate the shoreline.

I went on a wilderness float trip in Canada many years ago and they gave you a backpack and you weren't allowed any liquor and they packed the bag, so. And if you wanted to go fishing, they gave you the bait so that you would not bring in foreign bait that was foreign to their lakes and everything up there. So everything was really regulated so that they could protect those lakes. And I think we have to consider doing this also because just past experience tells us how things deteriorate so fast and that you can't make rules after the violation has occurred. That these park rangers need to have the authority to enforce the rules of the road, or the rules of the river. I guess that's about it.

**WILLIAM BRINKHORST:** I was a teacher for 43 years. The school that I worked at had a camp on Sinking Creek which runs into the Current River. When I started going down there, Camp Zoe, which is on Sinking Creek, was the family campground, and then it was bought out and became a place for rock concerts. And I observed what happened to Sinking Creek when trucks and vehicles were allowed on gravel bars.

So my comment is that I would hope that the whatever this is, this process, would keep all-wheel vehicles off of gravel bars. It seems to me that if you want to go down on the gravel bar, you can park on the ground and walk the 30 feet down to the gravel bar just as easily as parking on the gravel bar, because once you allow trucks and cars on the gravel bar, some of them are going to go in. You have to keep them all off.

**DAVID SARTIN:** And my comment is I understand that they want to manage things, but I think they need to consider the way of life of the people that live there, and perhaps give them I guess a more stringent review for allowance of access and allowance of their boats and things like that on the river more so because they live there, and they've lived there forever; rather than to implement change for like allowing bike trails and

things like that. I've lived there a lot of my adult life and I don't see people riding bikes down there quite honestly. So I think their focus needs to be on the people that live there and not for the people who may travel there to use their resource.

ALICE HEZEL: I just wanted to add in addition to the prohibition of booze and cigarettes, that they establish a substantial fine so that it's not just a slap on the wrist, that if the park rangers give them a ticket for having alcohol or cigarette or, you know, throwing their cigarette butts in the river and stuff that there is a substantial fine, that it makes an impact on the people that violated and as an example to future canoeist that they need to obey the rules.

BILL NEUKUM: A no action plan is what I'm after. So not alternative A, B or C. With no action.

LYNN: I think I'm for alternative A because it seems to give more protection to the natural resources. I believe right now there's deterioration of the natural resources, and I believe the other alternatives could actually make it worse. So I think the alternative A is the best.

DAVID HAMILTON: I prefer no action and no change, and the reason I do that, I'm an engineer and I've worked doing county bridges and streams and I know from experience that if you do anything to change the silt boat in that stream, then clean water will run faster, at a higher velocity, than silty water or the condition that presently it is. And I'm opposed to change in the use of this stream supposedly for the argument of removing the silt boat of it because I don't think changing the use will accomplish that. And I see this effort to just trying to remove the people that are presently using it to make it fit other users would prefer.

My other concern is that I work as a county engineer and there are State laws and I've been involved with trying to close roads and was unable to do that because there was a horse trail down an abandoned road and we weren't able to close that road because of that horse trail. I'm a horseback rider. I've been riding on the Current River down there for at least the last 12 years and I just feel like those trails are open to the public

or being used by the public now, whether they're open or not they're being used by the public. And I just don't see how a federal agency can come in and close a trail when a county engineer and a county commission can't close one because it's being used by horseback riders. I don't see how the federal government has more authority to do something that a Missouri county couldn't do.

DAN ARNOLD: I would like to see less restriction put on the areas between Round Spring and Van Buren, and I would like to see none of the access points closed. Would like to be able to camp in the areas that are open now and be able to continue to use the river as we have been in our family for years and years. That's about all I got to say.

GARY BUCHANAN: I would support alternative B. I agree that riverways has areas where large motorized boats should not be allowed. I also support limited canoes put in along the riverways. The current usage is way too heavy in the summer. I do not support spying techniques to try and catch violators whatever they're doing. I believe that all old roads should not be closed. Locals have used river access wherever. Why should the park service tell them where they can use their riverways? Problems on the river are by overusage from floaters more than people using an old logging road to camp. Primitive areas in alternative B should still be able to access without a canoe. All canoe camping should be open along the entire riverways. Sincerely, Gary Buchanan, President of the Shannon County Hunting and Fishing Club. My email is garysharon@buchmail.com. We are also open to being good neighbors and partners with the National Park Service.

KENNY WELLS: I don't want any changes, no roads closed and no motor restrictions. I want to be able to hunt, fish and trap without any restrictions from access.

ARLON HELD: Pretty much the same thing. I like what the alternatives are. I mean, to some of the alternatives I'm like Kenny. I don't see any reason to close all these roads. I'm very concerned about losing my ability to trap because of accesses restricted so much that you can't comment. You

can't get access to areas to do the trapping. You can't trap. You can allow trapping, but if you don't allow access, you're virtually eliminated. You have to have retention of access which can there, in fact, would impact the idea of restricting the motorized boats on river. You can't go up and down the river in a canoe. You can go down, but you can't go up very well. So you can't run a trap line without a motor in certain areas because you can't go back up the river where your vehicle is. So you need some kind of alternative to what they're talking about there.

MARJIE SAITER: My comment: We should not have to vote for someone manipulating us to keep water for necessary business or recreation. Here's what I've seen happen: The most obvious in the last three, four years is 2010 there are two United States Representatives in the San Joaquin Valley of California. They were refused water to save the Smelt Fish. The one who voted for ObamaCare under duress received water for his district. The one who rejected ObamaCare, that land that used to produce great other Mediterranean-type food and, of course, fruits and vegetables, beautiful agricultural land, is from what I understand still cracked dirt, no moisture at all.

Then what's this bit with the flooding?

Why - - was that two years ago - - that Missouri, the breadbasket of the nation, was flooded versus a little town of 600 in Illinois? Now, why was the Illinois - - you know, you know, what President could have anything to do with Illinois? Why was it saved when it was saved in 1993? They should have moved up to higher land as other towns did and use their money once and be done with it. Instead, they were given - - they were saved and farmland, fertile, beautiful farmland in Missouri is under 20 feet of silt sand, cannot be farmed for decades.

So I do not want this manipulative system of having to vote for a person, for me or anyone else to receive water. I want no action, but I said all the other stuff because what they're trying to do is a money laundering system to get money and more bureaucracy, to charge us taxes to pay for stuff that we don't want. Keep the land as it is.

MICHAEL HAMPTON: In response to the Scenic Rivers GOP Draft Plan, my questions that I have is on why are they trying to ban vehicular traffic on non-designated gravel bars? It doesn't say what is a designated or non-designated gravel bar in any of the management plans.

Why are they banning motorized watercraft on 48 percent of the riverways through permanent and seasonal closures? Do they have a baseline of a study that they're trying to do this? Why are they implementing caps for the number of users undertaking certain recreational activities? Examples of watercraft, camper, camping, canoeing, kayaking, etc. Why are they closing 55 miles of vehicular roads and trails?

Why are they closing approximately 20 unidentified river access points? Were they ever deemed unidentified, have they ever been deemed unidentified, that doesn't say. It just says unidentified without any explanation on where they are located.

Why are they closing 65 miles of equestrian trails? In doing that, you're not going to be able to regulate if it's people using the equestrian trails or just simply the wild horses that are already there in the area. So there's no way of knowing if the trails that they're closing they're still going to be used by wild horses instead of people that come in there and ride.

Why are they implementing a permanent system for equestrian users? Why would they single them out to where they have to have permits to ride in there? There again, you still won't know your numbers that are using trails because of the wild horses.

Why are they trying to develop potential permit system for watercraft users and why are they imposing new horsepower restrictions below Big Springs? And I ask this, I mean, is it a speed problem? If so, why not implement a speed limit and lift the horsepower limit off the boats?

I mean, I've canoed from one end of the Jacks Fork to the other and from one end of the Current River to the other and I've never had any kind of trouble while canoeing with boat traffic, especially on high congestive canoeing areas like the upper Current River or the Jacks Fork River. It's never been a issue.

I boat as much as I can all summer long and a lot into the wintertime also and I've never had any kind of conflict with the canoers while I was there or the horse traffic for that matter.

There's never been a problem whatsoever.

If there's any kind of change at all with any of the alternatives, it takes something away from everybody, not just interest groups. What they do is they take a right that we have right now away from certain sections of the river. If you're going to have a plan, it should be blanket over the entire place, not sectioned into out different little spots where you can and can't do things here to where as you can in this spot. It should be open

and left open and left alone.

I go for no action on the whole thing.

The alternatives that they have now will take away boat traffic on each one. They should not take boat traffic away from any of them. They should leave boat traffic alone. They never say anything about taking away the number of canoers concessions that they have and they shouldn't. They should leave the canoers alone, the boaters alone and the horse riders alone. They shouldn't number the number of horses that can be in there.

You know, you don't ever see overuse if you visited every week like I do. You can go down there on a weekly basis and the numbers will change variously during the summer months, but as it gets into the fall and the winter the numbers decline to where there's absolutely nobody over there. If you're after a quiet setting, the weeks and weekends in the summertime that aren't holiday are very quiet. Overpopulated, overuse is not anything of any problem.

The only problem that has really been had is the park service taking away little portions of what they say they're going to do. They've turned water off because they said they couldn't afford to pay to keep the water turned on. They quit having a trash service because they couldn't afford to keep the trash took off the river.

In doing that, it makes the people look bad that go there because they are the ones that have the trash and try to keep it out of there and if not, wildlife can get into your trash and spread it everywhere and make it look bad on you. If somebody were to come down and take pictures after a night that you camped out there and wildlife had got into your trash and drug it everywhere, it looks bad on you. It looks bad on the user and then that's the kind of publicity that we don't need, because the park service has took away all these amenities they said they're going to keep for us and they haven't.

I go for no action, leave it alone, and try to manage what they have already. Put trash service back in, you know, manage it, enforce the rules, enforce the laws and don't change anything.

DARRELL SKILES: I'm Presiding  
Commissioner for Dent County. We own the northernmost portion of the Ozark National Scenic Riverways. Current River starts in Dent County. First of all, I'm very concerned because all three of the alternatives, A, B and C, further restrict usage of the river by motorboats and access and so forth. The motorboat restrictions particularly on the upper end towards the northern

boundary would totally restrict activities that people in my county have done on the Current River going back to the 1800s, maybe not with motors, but it will eliminate gigging. That is one of the things. The no motors restrictions, no motorized boats restrictions on the upper end of it will basically eliminate gigging.

I have lived in Dent County all my life, I have floated that stretch of the river hundreds of times from the northern boundary all the way to Pultite where these motor restrictions are proposed and never one time have I ever even experienced a motorboat, but I'm floating it and doing it during the summer when most of the canoe floating business is and it's not typically when the - - the gigging season is in the winter. So there really is no conflict that's being addressed by putting this no motor restriction on that section of the river.

And frankly, from what I understand from those friends of mine, people that live in the lower section, these further restrictions on the lower section as well really aren't addressing the problem. That really sometimes will create an even bigger issue because of the longer amount of time it takes to get a boat up on plane with a smaller horsepower motor and the longer it takes to get up on plane, the larger wake that it creates, which creates a greater issue for canoeist and kayakers.

And I'm very disappointed at the format of how the park service has put this proposal together, because by putting it together with the no action alternative and then the alternatives are A, B and C, it's being explained to people to make them think that really their only choices are A, B and C and it's almost geared toward getting a public mandate for broad changes much different than what is currently being used. And I believe these changes find the face of promises that were made in the original enabling legislation in the early 60s that guaranteed traditional uses of the river and those lands would be guaranteed for people.

The same goes for the further restrictions on access to the river and the gravel bars. When they point out in all these plans there are miles of roads and trails that they intend to close and restrict access to. We've asked where are these accesses if they're going to close and nobody can show us. We haven't yet had anybody who could point to one, but it's out there. It's very nebulous. There's no way to find out what the facts are as to what's being proposed.

It's very vague, and to be quite honest, I was at all the meetings that were held earlier over the last, going back two or three years or more to get input from people in the region and what I see it being proposed doesn't even closely resemble

what the people were saying. And frankly, I just don't see where any of these restrictions are coming from and I'm just very, very disappointed in what's going forth.

In regards to the wilderness proposal, I'll address that in this hearing. I'm absolutely opposed to the wilderness designation. There have been eight wilderness areas designated by Congress since 1976 with over 71,000 acres of wilderness just south of the Ozark National Scenic Riverways. We have the Eleven Point River going through the Irish Wilderness. That's 16,000 acres of wilderness through the national forest. And again, wilderness designation and management of that subsequent designation, again, would circumvent the enabling legislation guaranteeing traditional uses.

And what we found over the - - let me just add too. What we have found over the last several years is that the park service is not very, let me say, dependable to live up to promises made as to what's going to happen. So I'd be very opposed to it and I know most everybody in my county I believe would be very opposed to the wilderness designation added in with this project.

BILLIE LUTES: I live in Ballwin now, but I'm originally from Summersville, Missouri down around Alley Springs and Current River. And what I would like to know is why are they putting this to the vote to people in St. Louis? They don't know a darn thing about this country down there, the rivers. And when the federal took over the Scenic Riverway, they ruined the rivers down there. They polluted, people throw trash in them, they don't clean them up. It's got to be all wilderness. Well, it's a hell of a wilderness. It ain't pretty. And why should these people that don't know, and I've talked to so many of them - -

DORA RICE: And they never go there.

BILLIE LUTES: No. They don't know anything about it. Yeah, the Sierra Club people, they make it sound like a good thing, but they don't know. Half of them don't even know because they've been listening to somebody else.

I grew up down there and I know what federal did to the rivers and now they want to do it for the ways down there. They can't ride their horses, they can't have a motorboat on the river. Well, why not? They've got these canoes all down the river and if one of them gets in trouble, which happens all the time, who goes after them? Somebody in a motorboat. If they don't let motorboats on the river, those people are going to drown. And anyway, why shouldn't there be?

There's always been motorboats on the river, not big boats. They don't allow big boats. You know that. But people have businesses there, they give people rides on the river. If they don't allow it, then why not? That's their business. Why should they take that away from them?

Why shouldn't people down there that have horses and want to ride, go on trails, why shouldn't they be able to ride horses like they've always done? I mean, people put a lot of money in horses and they have their horses, their trailers.

DORA RICE: They have designated places for the horses.

BILLIE LUTES: And they don't just ride them everywhere, no.

DORA RICE: So I don't understand why they're having such a problem with horses.

BILLIE LUTES: Why they want to shut down all the trails so you can't ride your horse?

You can't go on a trail. And that's how a lot of people's business. I mean, what is it?

DORA RICE: Oh, there in Eminence they have - - I can't remember right now what the name of the club is.

BILLIE LUTES: Big Creek?

DORA RICE: No, it's not Big Creek.

Anyway, they have probably throughout like say through the months April through October, I mean, these people make their living on the trail rides.

That's how they make their living and why should they - - I mean, this is something that's been going on for years and now all of a sudden, you can't have your horses there anymore. That's not right.

That's just not right.

BILLIE LUTES: Well, it's the same with the motorboats. People make their living giving people rides and there's nothing wrong with that. But when the federal government took over the rivers, they don't allow anybody to take gravel out of the river, which they always did before, and that kept the river from getting all clogged up, kept the river running. Now you can't do a good float on the rivers because they're all full of gravel, they're all clogged up.

They don't clean them out and people that ride in the canoes - - not everybody. I don't because I'm from there. If I see a beer can in the river, I pick it up, but who put that beer can there? It wasn't the people who lived on it. It's from the federal. And they don't take care of it and they won't let - - they won't even let you take care of it. They catch you down there cutting weeds, oh, no.

DORA RICE: Oh, you can't cut a weed down. You can't - -

BILLIE LUTES: No, don't do that. It's

got to be wilderness. It's so beautiful. It used to be beautiful. It ain't anymore. I mean, if you could compare it to now to what it was when the State run it and people took care of it, there's no comparison. They ruined the rivers. They ruined a lot and now they don't even want the people down there to be able to go anywhere near it. They won't be able to go and go to the parks or to the rivers, because it will all be federal and you don't have any rights anymore. And there's a law against that, which we can look into. I just found out about it, but there's a law that says you cannot take people's property and not allow them to be there.

DORA RICE: I'm in Union, Missouri. I would like to know why they are wanting to shut down the park at Big Springs. What is the reason for it and what is the advantage of it? It's a beautiful park. Why are they wanting to shut it down to where people can't enjoy it?

I don't know what else to say about it, because I mean, it's a park that people have enjoyed for years and years. It's a nice park. Why all of a sudden do they want to shut it down and make it go back to wilderness? I don't understand that.

It's like they take this - - they take a piece here and they take a piece here and they take a piece over here. Pretty soon there's not going to be any pieces left except what the federal government owns. That is what they're doing and I would just like to know why, because I do not - - there's no reason for it. There's no reason for it.

BILLIE LUTES: And why did they take the turkeys from Missouri and trade them for rattlesnakes? I wish somebody would tell me that.

DORA RICE: I asked the park ranger about that and they didn't know, they knew nothing about no rattlesnakes. And let me tell you, if you camp down there, you will find them because they are there and they put them there and it's a \$1,000 fine if you kill one, and that's a fact.

DRAFT GENERAL MANAGEMENT PLAN  
WILDERNESS HEARING  
PUBLIC COMMENTS  
JANUARY 22, 2014

TIMOTHY GOOD: Good evening. My name is

Tim Good. I've been asked to serve as the facilitator for this evening's wilderness hearing. I consider it an honor to be with you tonight. And I just want to add, I am so impressed with the number of people that have given up their evening to be with us this evening. Unfortunately, I've attended meetings like this in different areas of the country where I could count on one hand the number of people that decided to give up their evenings to attend an event like this. It speaks very well for you, your interest in the community, your park and your country that you're here this evening. To begin I'd like to start with the Pledge of Allegiance to the Flag of the United States of America. Please rise and remove your hats.

(The Pledge of Allegiance was conducted.)

As required by law, this evening we are holding a public hearing for the Ozark National Scenic Riverway Draft Wilderness Suitability Study. We are here because of a federal law that was passed in 1964. It was called the Wilderness Act. The act requires that the National Park Service study lands to determine their suitability for wilderness designation.

Of the over 80,000 acres that comprise Ozark National Scenic Riverways, due to the strict criteria for wilderness suitability, the National Park Service found that only 3,430 acres, which is 4 percent of the park, was suitable for wilderness designation. These acres are within the Big Spring wilderness study area.

Now, it's important to understand that this eligibility assessment may lead to the National Park Service director making a proposal to the Secretary of the Interior, who then may make a proposal to the President of the United States and then to the United States Congress. If there's just one thing that I ask you to remember from this evening, is that the power to designate a wilderness area lies with the United States Congress and not with the National Park Service. The power lies with your federally elected representatives and not with unelected federal employees.

Now, currently the area is being managed for wilderness values. If it is designated as

Page 7

wilderness, the fire tower, the incinerator, the barn, the Civilian Conservation Corps camp buildings will remain; however, the National Park Service training range will be removed, administrative use of the roads will be discontinued and they may be repurposed as hiking trails.

Now, there's one person this evening I especially want to point out and I want to ask all of you to give a warm welcome to. It's because of her work tonight the comments that are made here will be preserved not only for the Americans of today, but most importantly, for those Americans yet to come. So please give a warm welcome to the court reporter this evening, Amanda Farrar.

Applause.)

I'd also like to take this opportunity, are there any American Veterans in the audience this evening? Please stand up and give them our gratitude.

(Applause.)

Thank you for your service to our country.

Now, this hearing is being designated for the wilderness area. The National Park Service will only consider comments that are voiced this evening at this time concerning the Wilderness values. This is not a forum to discuss other issues of the General Management Plan or other issues of the park. There's a comment area, there's an online website. Those will be the proper areas to make those comments. And we do ask that you restrict your comments to issues involving the wilderness area.

Now, as far as the procedures for this evening, each person who signed up to speak tonight should have a card with a number. Due to the number of people that have been asked to speak this evening, each person will only have one minute to speak. The gentleman here has a card. When you have 30 seconds left, he'll show you the yellow. When he shows you the red, we ask that you stop speaking and the person at the other microphone may begin.

There were three people in the Ukraine that were killed today because they were at a protest and some other people did not agree with their point of view. I can't emphasize enough that we as Americans have to respect each other's opinions even if we disagree with them. It's easy to sit there and listen to someone's opinion that you agree with. To be an American citizen is to sit there and listen to someone whose opinion you disagree with, but you still give them the opportunity to so.

This goes to our First Amendment, the freedom of speech, the freedom of assembly, the freedom of petition, it goes to the Declaration of American Independence that all men are created equal. So I ask that you respect all the comments that are made this evening whether you agree with them or whether you do not.

I will also ask that you be respectful

of the time you've been allotted. When you're exceed the time, it's telling everybody in the audience that you're more important than everybody else, and ask that you please confine your comments to one minute.

The only other thing I would ask, when you approach the microphone, please state your name, you can also list your place where you live and your affiliation and that's for Amanda's benefit so that she has your name down and this will be part of the permanent record. The comments this evening will also be available on the internet.

JOHN HICKEY: Hello. My name is John Hickey. I'm with the Missouri Sierra Club. I live in St. Louis.

And I'd like to first start off by thanking everyone who's here from the National Park Service and all the rangers who risk their lives to protect us on the river and so I'd like to give a round of applause for the park service.

(Applause.)

And I'd like to thank everybody who came tonight. Whether you came from here or whether you came from far I think we're all here because we all love the Ozark National Scenic Riverways and we all want to see the rivers as good as they can be.

The Sierra Club supports wilderness protection for the Big Spring area. We feel that it is a legitimate wilderness area. It only represents 4 percent of the total acreage of the Ozark National Scenic Riverways. It's a very small area, but it is an important area.

I've got two children, a 10-year-old and a 12-year-old. When they grow up, I want to make sure that they have a wilderness area they can go to in Missouri that isn't trashed and full of roads and motorized vehicles. And I think all of us who've got children, who want to see their children see a beautiful Missouri would share my thoughts on that.

I think if you look at the Irish Wilderness Area along the Eleven Point River, we have a great example of a wilderness area along another river in the Ozarks. I think that wilderness area has been a great success over the last 20-odd years. Thanks a lot.

DOUG BROWN: I'd also like to thank the National Park Service for giving us this opportunity to say this. Although, I didn't prepare for a strictly wilderness oriented thing. So this will be short and sweet.

It's my belief that Big Spring wilderness proposal should probably be delayed for

now, but that they should continue to manage the acreage according to wilderness principles until the trends from climate change are better understood and successful protection protocols are identified and can be implemented, rather than put ourselves into a situation where we may not be able to do important management things that have to be done regarding fire prevention and other issues. Thank you.

GREG IFFRIG: Good evening. My name is Greg Iffrig and I work for Pioneer Forest. Our lands are down in the Ozarks along both of the rivers. Worked for them for more than 20 years. I'm here this evening for my family. I've got a wife and two daughters. One of my daughters is here this evening. We've used state parks and the national parks for years. We like to hike. We take other families with us. We take friends of our daughters along. And I remember my first trip to the Big Spring area 30 years ago, climbing the fire tower. That's a place that was bought by the State of Missouri in 1926 as Big Springs State Park. It's been managed as a wildland of back country all the while Missouri had it and then it was transferred to the park service and it's been much the same. That's a 90-year history. It's been well cared for. And my comment is is that we don't change that. We continue to take good care of it, and the management plan is very specific to that effect and I support that. Thank you.  
(Applause.)

RICHARD LaBRASH: My name is Richard LaBrash. I live in Dent County, born and raised there. I am against the wilderness area designation for one reason and one reason only: I don't believe the National Park Service has the expertise, the funding or the staff to manage what they have now. Thank you.  
(Applause.)

LORIN CRANDALL: My name is Lorin Crandall and I am the Clean Water Program Director at the Missouri Coalition for the Environment. I'd like to say thanks to everybody who came up here. I had the opportunity to speak with a lot of people from the area during this open house and I was, you know, very impressed by the amount of local knowledge and care that these people bring with them and brought up here to share with us. I think that, you know, I support the preservation of wilderness. I don't think we have that much wilderness left in

Missouri, in the country even, and so, you know, the plan may achieve that.  
It may have already, like Greg said, been pretty well managed as a wilderness up to now anyways, but I think in a bigger sense what I'm excited about is people having good conversations about how we're going to, you know, take care of the riverway and how we're going to take care of the whole watershed and how we're going to take care of the community down there at the same time and I hope that those conversations continue, because we really have to, you know, overcome some of our differences and have a good, thoughtful narrative around these issues. So thank you.  
(Applause.)

MICHAEL BERG: Hello. My name's Michael Berg. I'm from the City of St. Louis and I support wilderness designation for the Big Spring area. It's been 29 years since any area of Missouri has been designated a wilderness area and I think it's time and this is the only wilderness area in the Ozark National Scenic Riverways. So, again, I support designation of wilderness area for Big Spring.  
(Applause.)

DARRELL SKILES: I'm Darrell Skiles. I'm the Presiding Commissioner for Dent County. I live in Salem, Missouri. Born and raised in Dent County. I've lived all my life along the very northern boundary of Ozark National Scenic Riverways. The Current River portion - - actually, Current River starts in Dent County. I adamantly oppose the wilderness designation. Such designation and management of a wilderness area violates the intent of the original enabling legislation creating the Ozark National Scenic Riverways was guaranteeing that all existing and traditional uses would continue. Many may not realize that there have been eight wilderness designations in Missouri since 1976 totaling over 71,000 acres. There are plenty of places for folks to go to have a wilderness experience. So for these reasons and many, many more, which I don't have time to get into tonight, I do strongly oppose this wilderness designation.  
(Applause.)

MICHAEL GARVEY: Hi. I'm Mike Garvey. I'm representing Greenway Network here and I'm also speaking on behalf of myself.

I think the comment about us working together is critical. Greenway Network is primarily a conservation group and wants to maintain pristine waters. And the karst aspect of the spring, Big Springs, is the reason why we're all here and I think what we need to do is understand water quality.

What we do is we do water quality testing, we do stream teams, we get these kids to get in the springs and the invertebrates and it's a real educational experience. The problem is the nitrate loads. The problem with this wilderness area might be related to the lead levels in some of the shooting areas.

A karst environment is very fragile.

The water can go into sinks, it can go into seats, it goes into the stream. The reason that I've been going to these streams for 50 years is because it's a crystal clear water. This is what brings the money into this area, and I think that people that are residents there, the horse people, they need to really appreciate that because that is the primary reason why the National Park Service picked this area to be a national hub. Really a wonderful area. Every time I go down, I see the filamentous algae after we see the cattle and the horse and the contaminants that are getting into the stream and this is where Greenway Network is coming from. We have a comment, but, you know, but I just really appreciate you guys speaking. I really enjoyed the discussions of the stream weathers and how that's impacting these streams.

But these springs are valuable resources. We are the cave state and everything on that water goes into that stream and once those streams are gone, nobody's going to go there and you're taking on a loss that would be great. (Applause.)

JUDY STEWART: Hi, I'm Judy from Eminence, Missouri. I grew up at Akers, Missouri on the Current River. My roots go back to the Civil War in Shannon County. I have a deep love for the Current and the Jacks Fork River.

The intent of the enabling legislation of 1964 had three major provisions that were of equal import, none taking precedent over the other. They were an equal footing. One was not any more important than the other. These provision were: Number one, recreation; number two, conservation; number three, preservation.

This was clearly the intent of the enabling legislation due to the fact that the national monument failed to pass in legislation because it did not preserve the traditional

recreation activities such as hunting, trapping, gigging, etc. When recreation was added, the bill passed, which was the Ozark National Scenic Riverways. The general management plan with the rest of the options A, B and C conflict with the intent of the enabling legislation.

The plan for a wilderness doesn't fit anywhere in this puzzle. I propose we go back to square one and follow the enabling legislation. If that fails, then give it back to the State of Missouri.

(Applause.)

BARBARA ANN HUGHES: Good evening. My name is Barbara Ann Hughes. I live in St. Louis, Missouri. I'm here representing myself. First of all, I'd like to thank the National Park Service for supporting wilderness designation for the Big Spring area.

I support the alternative A because of the following, and I'm looking at your own proposal: It talks about creating visitor experiences, providing resource conditions that help visitors better understand the riverways of the past, greater opportunities for traditional non-mechanized forms of recreation and visitor experiences that are quieter, less crowded, and slower paced.

There would also be focus on protecting natural resources and systems, opportunities for historical cultural connections. Emphasis would be placed on restoring national resources to more natural conditions and limiting development. And the example that you give I highly agree is roads and trails that have been illegally developed would be closed and rehabilitated with native vegetation.

I support alternative A and it's my understanding that there have been no new wilderness designated areas in Missouri since 1984 and it's time to protect the Big Spring area. You have my full support for alternative A. Thank you very much.

(Applause.)

TERESA DOUGLAS: Hello. My name is Teresa Douglas, and as Missouri residents we have a long history of being the Show-Me State. We value our freedom, our independence and we love our country and our natural environment. In the 90s we fought the biosphere. Now more recently we've had the White River Blueways that the residents of Missouri, southern Missouri had to fight against. That was where the Department of Interior had the Blueway designation which would have limited the water rights and the personal

property rights for 17.8 million acres of Missouri and Arkansas, 21 counties in Missouri. Eighteen counties voted and signed resolutions to say we don't want this in our state and now you come back with this.

The moment we had the Blueways designation taken, here we are. This should not be happening and I'll tell you they have backup plans. They're working on a Mississippi basin study, they've got the Great Lakes, Mississippi River and that will take control of 50 percent of the waterways in the United States.

That's what we're facing if they get this - - if we get this knocked down, they're still going to keep coming at us. I say we forget all of these alternatives and give the land back to the State of Missouri where it belongs.

(Applause.)

STUART KEATING: Hello. My name is Stuart Keating and I represent Environment Missouri with over 13,000 members, supporters and activists as well as Representative Jill Schupp and by proxy the people of House District 88 in the great state of Missouri.

And I am here today, first off, to start a dialogue with people and I want to thank everyone that talked to me out there before the meeting. It was wonderful hearing from you and I feel like I learned a lot and hopefully you did too.

And speaking to the plan, I support the National Park Service's designation of the Big Springs area as wilderness and I think the fact that all three alternatives that are in the plan show significant improvements in park management proves that the National Park Service has listened to not only the community, but the people that live along the river, love the river and the people that need the river to survive for their economic well-being.

If the river is preserved for all users and provides an excellent balance for everyone, the river is going to be a moneymaker for Shannon and Dent Counties. The best way we can do that is finding ways for all of the river users to maximize their enjoyment and I believe that alternative A does that. It closes the most illegal roads, it does the most to allow horse users and boaters to cooperate with each other and live side by side and I think it does the most to protect the river for future generations to enjoy. Thank you.

(Applause.)

THOMAS BALL: My name's Tom Ball and I'm a resident of Webster Groves, but my family's been

in Dent County for about six generations. I'm a descendant of Lewis Dent. And so our family's been going to the Current River for a long, long time and I'm here to speak in support of alternative A. I like the idea of having wilderness designation for the Big Springs area.

I've worked many, many years with Missouri Stream Team 2793 to clean up various portions of the Current River and it's always disturbing to have to go down the river and see the trash that winds up in the river even accidentally from so many people doing what they do. You know, we've had to pull boats out, we've had to pull dead carcasses of deer out that had arrow holes in them and stuff like. Those don't belong in the river. But the wilderness designation, the Wilderness Protection Act of 1974 was one of the best pieces of legislation this country ever had. We've got darn few places that we've actually been able to conserve in the same form that it was when settlers first arrived here. And when we find those areas, it's really important that we try to preserve them and conserve them. If you want to be a conservative, you've got to conserve something. And, in fact, this is an opportunity for us to do that.

I'm thankful that there's so many people here who came out despite the weather and despite the move of this meeting a couple of times. I can tell you I love the river whatever side you're on. Thanks.  
(Applause.)

NANCY HIGGINS: Good evening everyone. I'm Nancy Higgins and I'm a resident of the City of St. Louis and I'm a proud resident of the State of Missouri.

Like so many others here, I've been going to the riverways since I was about nine years old every year and over those years I've met many of the folks who were born and raised down there, taking my friends down and brought our money to those residents and outfitters down there. What I've also seen over the years is a decay of our riverways and what I believe is that there does need to be a more organized management plan that involves everyone.

This course here is lovely this evening and respectful, but I believe that in order to preserve both the economy and the wherewithal for everyone who lives and works down there and to provide for all of the beauty that we get to enjoy when we go down there that we have to preserve and we have to evolve in order to preserve. Thank you very much.

(Applause.)

SUSAN FLADER: Hello. I'm Susan Flader from Columbia, Missouri, representing tonight the Missouri Parks Association. We support the park services preferred alternative B in their management for the Big Spring area.

The National Park Service can't designate a wilderness. Only Congress can designate a wilderness and it doesn't look as though it's going to happen anytime soon and that's okay. What we favor is a continuation of the management that the National Park Service has given to this area from the beginning and that the State gave before that managing it in a way that it is de facto wilderness and we therefore support alternative B. Thank you.

(Applause.)

JOHN FELDMANN: Hi. My name is John Feldmann. I'm from St. Louis. I'm a big supporter of the wilderness act and I love the wilderness areas we already have in Missouri. I'm a big hiker and backpacker and I've hiked and backpacked a number of them in Missouri and around the country too. So I am a big supporter of making another one at Big Springs. Thank you.

(Applause.)

DARREN LINGLE: Good evening everyone. My name is Darren Lingle and I'm honored to be here on behalf of Congressman Jason Smith who represents the counties that the Ozark National Scenic Riverways are in.

I've got prepared statement here that I won't read. I'll submit it for the record though. The Congressman regrets that he can't be here to give those comments himself.

Oddly enough, I agree with something that the first gentleman that lead this off from the Sierra Club said. He said that we all want the riverways to be all that they can be, and I don't think anyone in this room understands and wants what these rivers - - wants these rivers to be all they can be more than the people who live and work on those rivers.

(Applause.)

And that's the people who live - - they welcome people from outside, they need people from outside to come in, float these rivers, enjoy these rivers, but no one is impacted more than the people that raise their families and try to earn a living off these rivers.

Congressman Smith was raised in Dent County on the northern end of these rivers. No one understands it more than him. And I will end by saying this, and I could go on. Again, I'll submit these records and Congressman Smith will submit more in writing before the deadline.

Under the Wilderness Act, no new wilderness designation can be made without the support of the member of Congress that represents that area. Let me be clear: Congressman Smith in this Congress will support no wilderness area in the Ozark National Scenic Riverways.

(Applause.)

He will support no new wilderness area in the State of Missouri, period, and he will also fight any attempt by the park service or outside groups to manage any areas in a wilderness area that does not fall under their authority.

I thank you all for your time. I'm glad everybody's here. Everybody make sure your voice is heard. Thank you so much.

(Applause.)

CRAIG SCANDRETT-LEATHERMAN: My name is Craig Scandrett-Leatherman. I'm a pastor from St. Louis, Missouri and I love the city and its diversity of people and I love to get out of the city and be renewed by the beauty of God's creation and I especially appreciate wilderness areas where my soul and beauty renew me and so I support the Big Springs wilderness study area.

(Applause.)

CAROLINE PUFALT: Hello. My name is Caroline Pufalt. I'm a resident of University City which is in St. Louis County.

I'd like to support the park service's study analyzing the Big Springs wilderness area and it's recommendation and support the ongoing management that it has exercised in that area for the last several years. I was pleased to be able to say the Pledge of Allegiance at the beginning. It's nice to be able to do that in a large group like this, to hear everyone together.

The phrase liberty and justice for all reminded me of one of my favorite phrases I think is relevant to wilderness by Edward Abbey, that great writer and outdoor adventurer. He says, "What good is freedom without a blank spot on the map?" And that is one of the things wilderness provides, a blank spot where you can be challenged, where you have freedom and you have uncertainty, and I hope we can have a little bit of that freedom and challenge on the Ozark National Scenic Riverways. Thank you.

(Applause.)

MICHAEL WALL: I'm Michael Wall. I teach at a local high school here and for over 25 years I've been leading outdoor trips, river trips in the Ozark Scenic National riverways. I've cut trail there with Greg Iffrig and done other service oriented trips there. My family has owned property on the Meramec River, upper Meramec, in Crawford County for over 50 years.

And I've seen what paddlers can do on the Meramec when they get drunk enough. There was a time when I could lead trips down the Jacks Fork and be secure that we could set up camp without ATVs coming screaming through our campsite. And although I'm naturally inclined to favor wilderness, a wilderness designation, after discussing, pretty heated discussion with people who didn't agree with me other there on the other side of the room, I think one thing we all did agree about was that whatever management plan is endorsed, it really doesn't make much of a difference unless it's enforced.

(Applause.)

And so, you know, I'm not a big fan of motorized traffic on the river, but I have a fond memory of leading a float trip down the Current River and there was a fisherman with a trolling engine set at the appropriate, you know, RPMs fishing along and we were just happy side by side. That was okay. And we've also paddled down the Meramec River and had to have my kids form a tight formation to protect them from jet boats screaming up river full throttle around tight bends. So whatever's happening, I just hope it's enforced.

(Applause.)

TERRI KREITLER: My name is Terri Kreitler and I am from Festus in Jefferson County. I am representing myself, although, I am an elected official also.

My family settled in Dent County in the 1870s, and my great-grandmother sold milk and eggs in Montauk State Park before it was ever a park. She couldn't do that today. And I am talking about the rights of these personal property owners along these rivers and in these wilderness areas and I think we need to remember those are their personal properties.

Over 3,300 acres were taken in the 1960s. How much was taken and how much will be taken? How much more will be taken in the future? So you might want to say 4 percent, that's not much,

but how much was taken then? Thank you very much.  
(Applause.)

RANDY REECE: Hello. My name's Randy Reece. I live in the City of St. Louis. My family's been recreating down in the Ozarks since I was in grade school. I think we've had too much degradation of the riverways. I remember, you know, floating the Current River when people still lived in the stillhouses with no electricity and no running water and there were no motorized vehicles whatsoever, you know, on the water or over on the side of the water. I think the wilderness designation is important for this small area there that's left. Thank you.  
(Applause.)

RICHARD ORR: My name is Richard Orr. I live in St. Charles, Missouri and I work at a place here in Kirkwood called the Alpine Shop where we outfit people to do things in the outdoors ranging from canoeing, hiking, backpacking and we even have some horseback riding equipment. So we cover the whole spectrum. But I would just like to say I support the wilderness designation A that the National Park Service has put out partially because my family has been recreating in the Current River area since 1959, my parents celebrated their honeymoon with a float trip on the Current River in 1959. But my love for that area and the Ozarks in general got me into the outfitting business and I would like to assure a lot of the people on the side of the issue who think wilderness is a bad thing, just to assure them it can be a great economic engine for your community. It's proven itself to be throughout the United States and it's generally a good thing, not a bad thing. Thank you.  
(Applause.)

HELEN GELHOF: My name is Helen Gelhof from St. Louis and I'm here tonight in support of no federal control of our state waterways.  
(Applause.)  
Thank you. We see more and more federal control over everything. The tentacles just keep spreading. We have, all of us, a big respect for the waterways and the wilderness. I think we all love it equally, but the way I see it is it's more of a State issue and should be maintained on a local and a State level.

(Applause.)

And that's really the bottom line. It's the dividing line. Thank you.

(Applause.)

PAUL STUPPRICH: I'm Paul Stupprich and I'm here from St. Louis and I want to thank the park service for all their hard work and for giving us the opportunity to speak for a wilderness. I've been going down to that area since the 1960s and I go into the Ozarks still about four or five times a year and I've hiked in Big Springs area four or five times in the last ten years.

I don't think it's too much to ask to protect 4 percent of the park, or if you think about the whole State of Missouri, it's 44 million acres, and we're going to protect another 3,000 acres. I don't think that's too much to ask. Thank you.

(Applause.)

RICK MANSFIELD: I'm Rick Mansfield with the Ozark Heritage Project. Our stake in this is to try to facilitate a conversation. We're the ones that brought all the jet boats up tonight. We still have several outside. We invite people when this is over to come out and ask any questions, share any concerns.

As to the wilderness area, we're confining our remarks. It's been managed as a wilderness area, as pointed out, de facto since 1920s. I do not believe in these designated wilderness area even though the one upside, there's two sides to every coin, as one gentleman pointed out, the designation might, in fact, create some because some people when they look at the national map, they want to visit the wilderness area. So I can see that point.

Having said that, it seems like it would already be within the park service power, because this is almost to be discussion. If I'd gone first, we could have gone home. The roads and entrances have had gates on them since the 1930s, if not before. The only thing that would change is that designation I just alluded to and I believe the park service could right now decide to no longer use those roads for administrative driving. They could do that within their own executive power. They could decide to remove that one training range.

And so I guess my biggest concern is is Thomas Jefferson reminded people a long time ago that a greater threat to the freedom of the people was not a foreign principality, but an ever increasing government in size. I do applaud the Pledge of Allegiance.

I would ask now that if you wouldn't mind bowing your heads, and those that don't want to participate please in a respectful silence as we go to Lord in prayer for about ten seconds. Thank you. Dear God, we are thankful for the people that risk their lives to protect our rivers and freedom. We're thankful for the men and women that wear the uniform that give us those liberties in so many ways. We ask that as we continue these discussions, not only tonight, for the foreseeable future, that we remember it is your teachings that we can disagree without being disagreeable. We ask for the patience and wisdom to do so. We ask that everybody return home safely tonight. We ask this in your son's name. Amen.  
(Applause.)

STEVEN TOMEY: Good evening. I'm Steven Tomey, teacher at Lindbergh High School here in south county, St. Louis. And thanks for everybody. I've had the pleasure of having about 32 of my students here tonight giving this wonderful experience. And I also am born and raised in Missouri. I'm a lifelong resident. And we're all in this together that I see whether you're St. Louis or down in Eminence where some of my good friends like the Manglers are. I've been down there for 25 years like most of you here. I just three days ago had 25 students in Big Springs. I'm there all the time. I've taken 1,000 students down there because that's where it starts, getting people to care. And I try to teach my students life is a balance and we have to understand that the needs of maybe tourism versus local needs a balance. And I've discussed with my students after this rich experience and we have a consensus of the no change alternative, that right now the government is struggling with enforcing laws that exist. So why produce new needs for enforcement that might not happen anyway?  
(Applause.)  
So that is a consensus of my high school students. Thank you.  
(Applause.)

BRUCE MORRISON: Good evening. My name is Bruce Morrison. I am a resident of Maplewood, Missouri. I'm also a lawyer with Great Rivers Environmental Law Center in St. Louis, but these comments are my own. The law center will be submitting written comments later. We support - - or I support, excuse me. I support the designation of the wilderness area.

It is the wilderness area, it is the wild areas within the park that draws me and my family to the park several times a year. We spend several hundred dollars each time. We support the local community each time and we want to continue to do so. For that reason we want the park to - - we want the park service to preserve the park. The park is slowly dying. The park service needs to adopt an alternative that preserves its precious resource. Thank you.  
(Applause.)

WILLIAM TERRY: My name is William Terry. I wanted to first say it's good to see so many people out who care about the river. You know, everyone here, we all have different opinions, but it's good to see that we care about the river. And, you know, growing up I've lived my whole life on the Current River. There's no place that I would rather be any time of the year. I visit it spring, summer, winter, fall. And with the general management plan as it's currently constructed, I feel it's hard to make an informed decision. The park does not give us the tools to make an informed decision. We don't understand the why of how they developed their management plan. They don't give background data on what is it about. How come they want to restrict access on these areas? You know, the park has laws. You know, people talked about the illegal roads that have been developed, but that's not being enforced and so how will a new management plan enforce these rules that have already been in place? You know, I think everyone here wants to see the park in its best possible fashion. We want to all use the park and utilize it, but it's not currently happening. And so with that said, you know, I support the park and their mission to preserve the resource, but I don't think the alternatives that are laid out currently do that and that's why I want to support the no action plan currently. So thank you.  
(Applause.)

ANDY KNOTT: Good evening. My name is Andy Knott. I live in Shrewsbury, Missouri. I also work at the Sierra Club. The Missouri Sierra Club has 8,500 members throughout Missouri. I want to thank the National Park Service for holding this hearing tonight. I support the designation of Big Spring as a wilderness area. I'm going to talk a little bit about the water

quality benefits of doing so.

I'm a transplant to Missouri. I grew up in southern Indiana, which has its fair share of pristine rivers and geological areas that are karst just like Missouri does, but I actually have fond that Missouri is less many times over my birthplace in terms of these rivers and in terms of these karst areas.

And it's very important to protect karst for water quality. Water quality is really the basis for life and for biodiversity and it is also critical for both our quality of life and for our economy.

So I would urge that the park service move ahead with a designation of the Big Spring area as a wilderness area. Thanks.

(Applause.)

BETTY DENNEY: I am Betty Denney, St. Louis, Missouri, also Stream Team 1546. I believe the highest use of the proposed wilderness area at Big Spring is designation as a wilderness. The description as found in alternate B is the best option.

I believe the trees, the hills, the rocks, minerals and the soil are the raw materials from which our ancestors built the United States. The very character of our country came from the wilderness that was America. There are very few wilderness areas in Missouri and very few acres and this is one of the best examples of what Missouri was like before the 20th century. This is history we are also talking about. Thank you.

(Applause.)

RICH BROWN: Hello. My name is Rich Brown. I'm a citizen of Missouri and a citizen of the United States, and I would like to support the A alternative. I'll try and make this really short.

This parkland and wilderness have been carved out for preservation because of its uniqueness and its pristine character. As a heritage, it belongs to us all and to posterity. I would like to remind everyone that wants to have a fiscally responsible government that it costs far less to protect and preserve than it does to pay for cleanup and restoration. Thank you.

(Applause.)

MARTHA LaFATA: My name is Martha LaFata. I live here in St. Louis County. When I first came to Missouri in 1970, I was introduced to the Current River and absolutely fell in love with

it. It was pristine and not like anything I had ever seen.

I support the designation of the wilderness area and preserving this river and area for all of us to use and enjoy and I support the A. (Applause.)

SARA EDGAR: Hi. My name is Sara Edgar and I'm with the Sierra Club and I'm here to support alternative A and the wilderness area designation. I'm a fifth generation Missourian and my family lived for four generations just one county outside of the Ozark National Scenic Riverways. My father believed that Ozark National Scenic Riverways was the crown jewel of Missouri. I really believe the same and I know that everybody in this room is here because they believe the same thing as well. You know, this area is not only significant for all of Missouri, all of the U.S., but it's of international significance and I think it should be protected as such.

I don't think that anyone in this room, especially the people who live in the communities by the parks, should be negatively impacted, but I do think that we all need to work together to find the best way to protect this area so that we can all have clean water, we can have fish that's safe for consumption, we can have economic opportunities for everyone in the state so we can all continue to enjoy this area for future generations and bring our friends and family and people from across our country, from across the world to view this amazing, beautiful site. Thank you so much. (Applause.)

DAN MOSBY: My name is Dan Mosby and I've been using the scenic riverways for over 50 years and I think one thing that needs to be very clear is that over that perspective of 50 years there's been a continuous degradation, dirtying up of our pristine riverways and some plan has to be made to address that. We can't just let it go on. I want to speak to the designation of the Big Springs area as a wilderness area and use an example from Florida to support it. I was just in Wakulla Springs, which is a beautiful area like Big Springs, and it's designated as a wilderness preservation and wildlife preserve and they give tours there where on one side of the line, which is the preservation area, you can go and you can see an amazing variety of fish and you can see alligators, you can see birds and the abundance is astounding. My wife and I thought, well, let's just see the other side of the line and see what that is

like. So the next day after taking this tour, we went and we paddled our canoe along just to the other side of the line. It was beautiful. We saw a normal amount of fish, we saw a normal amount of birds, but it was just a line. On one side of the line people could fish. On the other side they could not. So for just a small area of preservation designation is extremely important.  
(Applause.)

KATHLEEN LOGAN SMITH: Thank you. I can't really add a lot. There's so many people here who've already said what I've been thinking, but my name's Kathleen Logan Smith. I live in St. Louis. I work for the Missouri Coalition for the Environment. We support the wilderness designation. I came tonight with questions about some of the features of the designation and the scope of it and the impact on some of the local residents living in the area because I think it's important that we consider all the inhabitants of the area when we make these decisions. In general, we do support the wilderness designation. We have so little places that are just for nature to live that are not for the rest of us. So I think it's important that we share pieces of this world that have habitat that's set aside for them and we don't have very much of that in Missouri. I also work enough with the State of Missouri and I see enough of the toxic legacy around the state. I see enough of the resource constraints on our State agencies. I know that the Department of Natural Resources and our parks department does not have the resources to sustain Ozark National Scenic Riverways like you and I would want it done and so I can't possible support the idea of giving this resource and this national treasure over to the State government. I know too much about how the State government's activities are constrained right now and some of the limitations that they have. So tonight I want to thank everyone here who's helped inform me and express their love for the riverways and I know that I share that and I want to see what's best for the riverways and I'd like to see this tiny, tiny, minuscule piece of wilderness set aside.  
(Applause.)

ANA GRACE SCHAETNUZU: My name is Ana Grace Schaetnuzu and I'm a member of the Wild Ones Natural Landscapers. We educate people on planting native plants in their yards so that they can recreate wilderness in their own little areas, and

that's my point. I live in St. Louis and I live downstream.  
And everything we do makes a difference.  
And I plant native plants in my yard to help preserve the runoff so it will stop polluting our local streams and hopefully it will keep our local streams cleaner as they go into the Mississippi river. I've seen examples of this all over the country. Another example of wilderness versus not, today in Alaska the EPA released a study about the pebble mine impact on the waterways of Alaska and one of the congressman has decided not to vote for it.  
I just hope that we can remember whether we live in the local area or whether we live downstream that water is life and sometimes the impact of farming and traveling along the edges of the river impacts the water. We just have to preserve it. Thank you.  
(Applause.)

STEVE ROBERTS: Good evening. My name is Steve Roberts. I'm a resident of Reynolds and Shannon County.  
You know, I've heard several comments tonight. One of them is the dying park, continued degradation of the park itself, undesignated roads. All those are issues that need to be addressed because we all agree that the float streams should be preserved.  
Now, if we have a dying park and there's continued degradation of those areas, for example the littering, by the end of summer, we have to get stream teams or people to go by and they pick up the trash. That trash is not - - it doesn't come - - it comes from people that have used - - that's abusing it. So the park service isn't doing their job now. Their rangers aren't enforcing the laws that we have on the books.  
The best way that we can prevent the degradation and the dying park is for them to do the complete jobs, the drugs, the alcohol, the rapes, the assaults, the degradation of the dying of the parks. Closing the accesses for no reasons that aren't really open to us, not giving us an exact number of accesses they're going to close, closing the horse trails down when there's no really evidence of problems.  
We need to look at the big picture here.  
So that's all we're here for. We all love the rivers and we want to keep them pristine and make sure things go right. So thank you.  
(Applause.)

TIMOTHY GOOD: This concludes our wilderness hearing. For exiting we ask that people exit out the fire exits.  
And I just want to make one note. This is one of the best hearings I've ever attended. You were so respectful of the different opinions being voiced and it speaks very well for you as Americans and for our country. Have a good evening.

DRAFT GENERAL MANAGEMENT PLAN /  
ENVIRONMENTAL IMPACT STATEMENT  
SUMMARY OF KEY EXCERPTS

#### COMMENTS

OPEN HOUSE held on January 17, 2014, between the hours of six o'clock in the afternoon and eight o'clock in the afternoon of that day, at the Salem City Hall Auditorium, 202 North Washington, Salem, Missouri 65560, before Sarah J. Pokorski, a Certified Court Reporter and Notary Public within and for the State of Missouri, regarding the DRAFT GENERAL MANAGEMENT PLAN / ENVIRONMENTAL IMPACT STATEMENT SUMMARY OF KEY EXCERPTS. Taken on behalf of the National Park Service.

(Starting time: 6:00 p.m.)

#### STATEMENT OF DARRELL WYATT

DARRELL WYATT: I came to ask that the Nation Park - - well, first of all, we appreciate what they're doing with this study. It's important. Something needs to be done. And all the people that live on the river and stuff should be glad that it's being done, because of the past. The last twenty years, not enough has been done. But what - - I've come here tonight to ask that they reconsider for Alternative Plan A. It's - - Plan B, I don't feel goes far enough. It's an improvement - - definite improvement, but it doesn't go far enough. If we don't do something now to curb some of the overuse - - abuse and overuse by - - you know, I won't say who, you know, but certain elements, certain groups, then, you know, what - - if we don't do something stronger now, then how are they going to do it later, if needed? And I just feel like this doesn't do enough. Plan B doesn't do enough. And I appreciate them doing it. That's all I have.

## STATEMENT OF RICHARD TYLER

RICHARD TYLER: We need - - don't need no regulations for the boats, period. You know, the river's always controlled the horsepower of the boats and everything. And the main boat owner on the river, that hasn't helped people out. Time was the Park Service wasn't around to help them out. Okay. And I went blank. And if they take the boats away, the elderly and the handicapped, a lot of them will never be able to see part of it. I mean, a lot of them ain't been anyway, but you know, I've took several handicapped and elderly people up and down the river to see different things. If they take the boats away, those elderly people have no way of getting down, because they ain't able to paddle a canoe down the river and stuff. And the Park Service, when they took it 40-some years ago and said we'll leave everything natural, well, they've let all the fields grow up along the river, they've closed the roads that - - where people could get to the river. And then part of their comments, they want to have not such big crowds in one area. But then they close all the roads and the camping spots so the people can't get there, so they've got to go in one area to camp and that. But you know, we don't need no roads or nothing closed. Need to open it up where more people can see what we have. And when the Park Service took the ground what? 40 years ago, they liked what we had then. But ever since then, it's went downhill. I mean, in their management plan here, they have nothing about improvements. It's always taking away, closing it off. There's no improvements to what they can do to improve it, what we have. But like I've told them in the past, we need more restrooms up and down the river. And we have the - - the hellbenders, you know, salamanders, you know, they've disappeared. The fish has disappeared for one reason, so much canoe traffic and people urinating in the water. And there's no deep holes - - there's no deep holes anymore in the river like there used to be, because half the time, a tree falls in, they'll cut it out, because some canoer hollers they couldn't get down the river. They want Six Flags, riding their automatic logs, floating down the river. So they go hollering about the trees in the river, they cut them all out, we have no more deep holes of water like we had 40, 50 years ago. Okay. That's it for right now. I had a whole lot of stuff. I'll get it one of the other places.

## STATEMENT OF GARY LAY:

GARY LAY: I said apparently from the few things I've heard since I come in the door, these issues don't have anything to do with what I thought we were here for. I thought they were trying to stop

the horse riding on the river, and move us away from the river, and I had some comments I wanted to make about that. I've been riding from Baptist Camp access on the Current River to Akers since 1991. And if they want to talk about erosion, the horse trails in the bottom along the river look the same as they did in 1991. There is no erosion on them trails. Now, you get up on the steep hillside and you get away from the river, there is some erosion from the trails and going up the steep hillsides. But on the river, they look the same as they did in '91. If the issue's the E. Coli, the E. Coli is not coming from the horses. It's coming from the two thousand people down there in the canoes. If you think about it, two thousand people down there for two days, every one of them's going to have to go to the bathroom. There's not no bathrooms along the river. If you ride the horse trails, you see the little pile of people feces and the little pile of toilet paper. And I have been told, as bad as this sounds, that some people don't even bother to get out of the river. But so if they're wanting to try to blame the E. Coli on the horses, I don't think that's where the trouble's coming from. As far as economic impact, I realize that the horse riders are out-numbered by the canoer, badly. On any given day down there, you'll see a hundred horse riders and two thousand canoers. If they want to say that the horse riders are not contributing enough money into the economy, they need to rethink that, because like I said, I've been riding since '91, and I meet a lot of - - what I - - I ain't all about riding. I'm all about meeting people and, you know, finding out things and that. And I meet gobs of people, and I've lost count of how many that have moved here from out of state, retired people, rich people and that. And I said well, what brings you to a poor place like Texas and Dent County or Shannon County. And their first answer will be the riding on the river. So these people have come in here and bought a half-a-million dollar farm and built a half-million-dollar house on it, they're driving a sixty-thousand-dollar truck, pulling a seven-thousand-dollar trailer, spending god knows what on tack and feed. And if anybody thinks horse riding's cheap, they've got another thing coming. And this is all going into the economy in four counties around here. You understand what I'm saying? I'm talking to you like I'm talking to you, and I'm actually talking to that. But anyway, that's just really what I wanted to say. If they cut the horse riding down on the river down there, they're going to kill a lot of money into the economy. I'm going to quit before I say anything I shouldn't say. I realize that you're not the bad guy. I try to be friendly to everybody. Matter of fact, I guess I am. I've been riding since '91, I've got friends all up and down the river, and they maybe talk about the

conflict between the horse riders and the canoer. Since 1991, I've never had a conflict. They - - most of the canoers love the horses. They just - - I don't have any problem. But now, I'm not a guy that's out trying to make a problem or stir a problem. You know, I'm easy-going and I'm friendly. If you speak to somebody and they don't speak back, just go along and leave them alone. That's just common sense. But I guess some people don't possess that. You know what I'm saying? But if you think about it, '91, 2001, what is it? 22 years, 23 years now, I have had no problems, and I live on that river from the first of April to the last of October. Other than, you know, during the work week, I have to work. But on the weekends, I'm there all the time. Anyway, I'm going to shut up.

#### STATEMENT OF TODD KINERK:

TODD KINERK: Okay. I'm sure it's not in the plan, but one thing they've needed for a long time is mile markers on the river. Sign - - you know, little thing says mile one, two, three, four, five, whatever, like that. Most people on the river don't have - - don't have a clue where they're at. And there's no way to know. If they had anything, it would be helpful to the visitor. So that's my suggestion.

#### STATEMENT OF JAMES ALMOND:

JAMES ALMOND: So basically, I prefer either Alternative B or A, with the idea that we keep as much area semi-wilderness as possible, with virtually no motorized vehicles in the upper reaches. At the lower end of the river, I wouldn't be opposed to motorized boats. But I don't like the idea of stirring up the sediment in the bottom of the river and destroying the fish eggs and so on. And so it's basically to keep it as close to what it is as possible. It's a unique area that can't be duplicated, it isn't being duplicated anywhere. So we want to keep the unnecessary traffic out of the riverway itself, particularly. I'm not opposed to hiking trails, perhaps even horse trails, if they're away from the river. I don't like the idea of crossing. If they've got to cross, they can cross at the access points. Keep them out of the river. I want to retain the natural resources we have, in other words the mills, the fire towers. That's what they're doing anyway. And I like what they've been doing all along. But I don't like the urban influence that's come in that destroys the territory. The urban influence, meaning the drinking and all that sort of

thing, particularly. I've floated the river a number of times with my family, and it's an enjoyable experience. Anyway, but that basically is the idea, to keep it as natural as possible, like it was 100 years ago, 150 years ago, rather than modernize it with too many parking lots and too many access points. I think that covers it. I like what they're doing, have been doing, and I think their head's in -- head's in the right place, but we've got the rednecks that come in and destroy it.

#### STATEMENT OF DALE COUNTS:

DALE COUNTS: First thing I'd like to say is I wish they'd just give it back to the State, let the State take care of the riverways ourselves. I have a feeling that probably won't happen, so in this plan that they're wanting to do, it's going to -- I'm County Commissioner of Shannon County. And it's going to affect our county revenue. But if they would just maybe leave the riverway open from Pulltite up and Bay Creek up in the off season -- they're wanting to close it right now completely to boat owners. But let them run in the off season. That's the best time -- that's when we gig and trap and hunt. There's no canoes on the river to amount to anything. That's my main deal. And then not letting us camp on the gravel bars, shutting us off from -- if you float in in a canoe, you can camp on any gravel bar you want to. But a local cannot pull their camper down on a gravel bar and camp on it. But my main deal is I wish they'd leave.

#### STATEMENT OF DAVID SNIDER

DAVID SNIDER: I don't know what all this is about or nothing, but I'm against, you know, where they're having to close the roads and stuff like that off the river. I enjoy -- we don't ever ride down there much, but I enjoy riding horses down there every once in a while. We probably don't ride down there two or three times a year. We ride different places, you know, me and the wife, and sometimes a few more people, you know. And I used to love the joy of -- of fishing down there all the time. My grandpa had a big farm. Just right when you get out of Montauk, you know, State Park, that first farm was my grandma and grandpa's. Because I grew up on the river, sort of more or less, and fished all the time. But anymore, you know, it's hard to get down there to fish. You know, they've got so many canoes. That's -- I think you ought to have maybe a little restraint on -- a little bit fewer canoes, you know, where people could

fish, you know, and ride horses a little bit if they want to, or - - or this and that. But that's about the only comment. I hate to see them close the roads, because I enjoy that part of it. You know, I don't know why they would want to close the roads to begin with. Do you? Do you know? I don't understand what's going on, really, you know, why they'd want to take it away from the people that's enjoyed it all these years, you know. Which I don't think we've hurt it all that much, you know. Because, you know, my grandpa and grandma, you know, they come in and, you know, they bought up - - I guess the government bought up like a quarter of a mile, each one. But they got to live there until they died, then nobody else could live on the property, you know. Things have changed a lot since I was young. You know, I'm - - I'm 71 years old now. I don't know how much longer I've got. So thank you. That's about all I have to say. Thank you very much.

#### STATEMENT OF SHERMAN ODOM AND MARSHA ODOM

MARSHA ODOM: I can't remember if Plan A or C was the more extreme. Plan B would be the one that I think suits our locale the best, the Upper Current, which we feel like is where we see the most impact.

SHERMAN ODOM: And understand, we own and operate the Holiday Inn Express here in Salem. So we're associated with the tourism business. We also own the drugstore here in Salem, along with several rental properties. So we're very invested in this area. And our - - probably one of my concerns - - and I've been a horseback rider - - not currently, kind of retired from that - - is that in the past, we - - it's been our impression that "no use is best use" has been the attitude of the management of the Ozark National Scenic Riverways, and we would disagree with that. And we realize that the national park is indeed a national park to be used by everybody, owned by everybody in the United States. But it does impact our local economy significantly. And so we would like to see it utilized not only for canoer, but for horseback riding, for hiking, for various different things that it can be used for. Part of the problem with the conflict with the horses is the park system has never - - never is the wrong word - - the wrong - - has invested little - - very little in establishing established trails. And that's been a real problem, so you have people that ride outside of the, quote, established trails, and establish their own trails. And I mean, it's - - it gets to be chaotic.

MARSHA ODOM: And harassment.

SHERMAN ODOM: And harassment. And we probably need less river crossings for the horses, but in order to do that, you have to establish some

established trails that don't just meander back and forth across the - - you know, across the river. They need to actually get on one side of the river. And realize you're going to have to cross occasionally, but you don't have to cross every half mile or mile.

MARSHA ODOM: Canoeing.

SHERMAN ODOM: Canoeing, we had a real problem - - and again, this is kind of a selfish interest - - that we have several guests that have stayed at the Holiday Inn Express that come down explicitly to float on the - - on the Current River, and have been, quote, harassed. I think hopefully they've got this one under control. Such things as wading in the - - the natural springs - - Welch Springs. And they were given tickets for wading across the springs, whereas if they go up and wade in Medlock Springs, they aren't given a ticket because it belongs to the - -

MARSHA ODOM: I've been to Welch Springs, and there might be twenty people wading in the spring. But yet if nobody is wading in the spring and a Park Service attendant is - - ranger is there, they will issue a ticket. It's not well posted. Those kinds of rules are not well defined on the river. I don't want to wade in the spring. It's too cold. But - -

SHERMAN ODOM: Right.

MARSHA ODOM: That's a problem.

SHERMAN ODOM: Signage is a real problem.

I mean, my grandson and my son and I, last fall, went down and floated the river, and decided to camp at Sinking Creek. And anyway, we pull a canoe up there, went and made camp. And anyway, rather - - and it is all right - - rather indignant park personnel come down and asked us if we had paid our fee. And I said I'd be glad to pay a fee, but I have no clue what we're supposed to pay, because the signage was for - - it wasn't made so that if you were coming from the river, you saw it. You only saw the signage that you need to pay a fee if you drove into the site. So signage has been a real problem down there. And another thing that needs to be done, if we're - - there are no - - when we go to the Lake, go to Lake of the Ozarks, you go to Norfolk Lake, there are mile-marker signs on the lake. Never has there been any mile-marker signs on the Current River. And it's something that would be most helpful.

MARSHA ODOM: Really a good idea.

SHERMAN ODOM: Oh, it would be most helpful. And you don't have to make them intrusive, as far as the natural beauty. Just a simple sign saying this is the 42nd mile, you go another mile, say this is 43rd mile. It would really be most helpful. Something very inexpensive to do, and be very, very helpful. And not only - - it's a life safety deal. You know, if somebody turns over in a canoe, you know,

I turned over at the 43 mile marker, you know, rather than I turned over and there's a big root wad here. Nobody knows where it's at. That's something that really needs to be done. And I know it's been mentioned before, but nobody ever picked up on it. Know anything else? "No use is best use" is not acceptable. That's probably my biggest deal. It's - - I mean, it's a national treasure, and needs to be used. But wisely. I understand that. Anything else? MARSHA ODOM: I can't think of anything.

#### STATEMENT OF BRIAN GLENN

BRIAN GLENN: I just - - I don't know why they can't make from Baptist to Pulltite seasonal. You know, I'd really rather not just have any kind of changes on the river. And my concern is closing traditional roads that's been - - that we've used for years, you know. But that - - that's going to affect local people on the - - on the motors. It's going to affect trapping and gigging and fishing if we can't use motor boats up on the upper part. You know, we've always done that. And I just - - I'd rather not have any changes, but if they're going to change it, just make it seasonal, you know, like they did the other - - I don't know what the - - I'm trying to think. I - - like you know, I don't know why they can't just make it seasonal - - at least seasonal, you know, if they're going to change it. I guess that's about it. I can't think of anything else I'm wanting to say. But I just - - I would just as soon not have any changes, but if they're - - my main concern is the boats and road closures. Okay.

#### STATEMENT OF JOHN JOHNSTON

JOHN JOHNSTON: Well, I mean, I've only got two statements. One's on the - - the size of the motors on the river, and - - and the closing of the roads. I think they should leave - - leave open to the public. I mean, it was public ground when they - - when they took it over. But as far as the motors, I don't think there should be any restrictions on them. That's my - - that's really all I've got.

(Ending time: 8:00 p.m.)

JANUARY 21, 2014

(Starting time of the hearing: 8:00 p.m.)

(Statement from Congressman Jason Smith read by Mr. Darren Lingle attached to hearing transcript.)

## TRANSCRIPT OF PROCEEDINGS

MR. GOOD: Good evening. My name is Tim Good. I consider it an honor to be with you this evening. I'll be facilitating the wilderness hearing with you tonight, and I always look forward to an opportunity to come down to the Ozark National Scenic Riverways. I want to take a moment to thank you. I have the unfortunate experience of attending meetings like this in other parts of the country where I can count on one hand how many people showed up for the meeting. I cannot tell you how disheartening it is that so few American people have an interest in the national parks. This is a compliment to you and your families that you gave up your evenings here to be here to speak about this park. I know there were 400 people attended at Eminence, which is extraordinary. 200 people showed up at Salem, and I've talked to some of you got who had to get babysitters. One person had to leave a disabled son at home to be here tonight. This speaks all so well for you, the interest in your parks, in your community, in your country. Out of respect, I would like to begin with the Pledge of Allegiance. Please rise and remove your hats.  
(At this time the Pledge of Allegiance was recited)

MR. GOOD: This evening we will hold a public hearing on the Ozark National Scenic Riverways Draft Wilderness Suitability study. We're here because of a law that was passed in 1964. It's called the Wilderness Act. It requires the National Park Service to study lands within the National Park Service system to determine if any of those lands are suitable for wilderness designation. The National Park Service study over 80,000 acres that comprise the Ozark National Scenic Riverways. The criteria for wilderness designation is very, very strict. Of those 80,000 acres only 3,430 acres, just four percent of the park, met that criteria. These acres are within the Big Spring wilderness study area. Now, it's important to understand that this proposal may lead to the National Park Service director passing it on to the Secretary of the Interior who then may pass it on to the President of the United States who then may pass it on to the United States Congress. If there's only one thing that

I ask you to remember from this evening is that the power to designate a wilderness area lies with the United States Congress and not with the National Park Service. The power lies with your federally-elected representatives, not with unelected federal employees. Now, currently the area is being managed for wilderness values. If the area's designated as wilderness, the fire tower, the incinerator, the barn, the civilian conservation court buildings will remain; however, the National Park Service training range will be removed. Administrative use of the roads will be discontinued, and they may be repurposed as hiking trails. Now, there's one very important person I'd like to introduce to you this evening. It's because of her work that the comments that you make tonight will be recorded not only for the Americans of today but most importantly for those Americans yet to come. I want you to give a warm welcome to Kathy - - to Joanna Charlton, who's being the court reporter for this evening. I'd also like to thank Kathy Alfred. Is she around? She just did an extraordinary job helping reserve this, and two times it was canceled. And both times she was able to get it re-reserved for us tonight. If you get a chance, please thank her for her efforts. I'd also like to recognize one other group tonight. If there's any American veterans here, could you please stand up? I'd just like to - - Richard, I know you're one. Please thank you for your service to our country.

Okay. For the hearing, I know I've talked to at least one person here who is going to stand up before you and give some comments. It's important to understand that for this next part these comments are supposed to be addressed to the wilderness area designation. This time has not been allotted for other issues of general management plan, for other issues involving the park. It is just for the wilderness designation. The Park Service will take these into consideration to determine what, if any, changes will be made to the proposal, and again, the comments made here are being recorded. It will be part of the permanent record, and they will be made available on the internet.

As for the procedures for this evening, each one of you have signed up back there when you came in. You had an opportunity to sign. You should have a card with a number on it. We're going to go in numeric order. We have two microphones here. Now, due to the number of people that want to speak, fortunately each person will have three minutes to speak, and this gentleman here is going to keep track of the time. When there's one minute remaining, he will hold up a yellow card. When the time is expired, he will hold up the red card, which means the person at the next podium will be able to start speaking then. So the person with number one card why don't you come forward. The

person with number two - - who's got number two? Okay. You can stand there. So all the evens are going to be on this side. Odd numbers are going to be on this side. When you begin, what I'd like you to do if you feel comfortable is just state your name, where you live, and your association, and you can begin your comments. Okay. How about three and up line up over here just for ease, person number three, four, five.

MS. GLASSMAN: Hi, my name is Vickie Glassman. I do live in Van Buren. I grew up in Shannon County, so I've lived here all my life. We've enjoyed the wilderness, the rivers generation to generation, and it has not gotten worse. I'm 62 years old, and I don't see it getting worse. I've seen Big Spring park get worse when the Park Service took it over. I don't mean to offend anybody here from the Park Service, but it's not pretty like it used to be. What's going to happen when you take our wilderness. We take care of it. Our families, our generations taking care of this land because this land is who we are. Van Buren is a destination. It's a destination for families. It's a destination for tourists because of the environmental treasures. I own a small art gallery in town. It's local and regional artists. It's local art from local people. I'm afraid once - - if we don't stand up and start taking charge and watching our leaders and making them responsible, then they're going to chip it away little by little. My ancestors were Cherokee Indians, and you all know what happened to Native Americans. The government took the land, and they moved them off. They ruined the culture. We have to protect our culture, and I thought that that was part of why the Park Service was here, to protect the cultural heritage around here. I don't see that happening. If they cared, they wouldn't be doing what they're trying to do. I'm afraid that if it's passed and if they keep interfering, chipping away at our way of life, then it's going to die, as well. Our businesses need it. Mr. Good touched on that. I'd like to say, Mr. Good, I don't trust the government. I don't trust them as far as I can spit. Every day it gets worse. It gets worse. We the people are stronger than the people in charge. We have more power than the people in power. We need to stand up and take our lives back and keep it the way it is, and the government - - I'll not say what I want to say.

MS. MOSS: My name is Charlotte Moss. I live in Ellington, was born in Eminence. I am with a family that is a sixth generation user of Current River, and I might want to put a little thing in here that I could not leave a comment. The thing didn't work. I tried at home and I tried here. My speech is very short. I am not for the wilderness. I agree that the government can't really be trusted in a lot of this

stuff. They led us to believe that one thing that happened or wouldn't happen, and it just - - you just - - I get exasperated, but anyway, my comment is I am not for the wilderness whatsoever.

MR. WOMACK: My name is Joe Womack, born and raised here. I work and live on the river at Montgomery Cabins actually inside of Big Springs park. With the wilderness package my main concern is accessibility, if they're going to close roads whether I could even drive back home or not or to work. A lot of people don't understand the wilderness and the natural areas. It mainly closes everything out to the public to all people to stay natural to the animals, wildlife out there. I have more questions than comments. I'm sure I won't get any answers tonight, but I hopefully will in the future. Main concern with the wilderness is the road closures, inaccessibility, and I'm with her as far as not trusting the government.

MR. COOKSON: I'm Representative Steve Cookson from the 153rd. I represent the areas in which we are sitting in presently. I have lived in this area for decades and have enjoyed the Current River. I have had relatives all up and down through Carter and Ripley County that have grown up along the Current River. I would like to just go on the record as saying that the state legislature, which I serve on the committee for in the House on natural resources, is in complete solidarity with our Congressman Jason Smith, which we had the pleasure of serving with before he went to work in Washington, DC for the people. So all the things that Jason said a while ago we are in complete agreement with. I believe I speak for if not all my colleagues a vast majority of them. I would also like to say that, you know, this park came into existence because the people of this area and the people of the State of Missouri saw fit not to let dams be put on this river. These were state parks, three of the finest state parks in the whole state and in the Midwest, and we deeded those over to the federal government with a promise that they would always be accessible and always be available for our people and other people across the nation to come and enjoy. And I see this as an encroachment upon that promise that was made, and if I can also say that one of the things that we - - that we gave up when we decided not to let this become a dammed-up couple of lakes along here was economic opportunity. Lakes would've brought a lot more economic opportunity, but we chose to protect it like it is right now. And that's what we want to see continue is that it be protected, and we were the people that first started protecting the river long before the federal government came and started managing it for us. We're ready to take it back if need be. Thank you.

MR. FITZWATER: I'm State Representative Paul Fitzwater from the 4th District. What an honor it is to be here. I'm been standing over there trying to think how to be nice about this whole thing. Obviously, you know, I'm up here, and I'm supposed to be talking about the wilderness area. But as we all know, the wilderness plan it's dead. It's gone. It's not going to happen. The true issue here is that we have the federal government that thinks they know what's best for our lives. I tell you what. I don't know about you, but I'm very sick of it. I'm sick of it. You know, and I know I'll probably get cut off here, but obviously the regulations and the new mandates that they're trying to - - I won't say the rivers but they're trying to put into our lives here obviously why put more and more regulations on the rivers when they can't enforce what they have in the first place? You think about that. It's the truth. Why are we allowing that? This is a great group of people. I don't think - - I hope they understand that a lot of people in this area they depend upon the rivers for their livelihood, and the economic impact that's going to happen in this area is - - it's a tragedy. It really is. I think we in the Missouri capitol as Representative Cookson says we have worked very hard. We'll continue to work. I just think it's time that we in Missouri here we take back our rivers. Many of us are going to travel to Kirkwood tomorrow, and you know what bothers me? We've got many of you that will be traveling up there, spending your money on gas and the time, and obviously I'm not saying you don't have the money. But that's - - you know, I guess my question is why are we going to Kirkwood? Why are we going to Kirkwood? I mean, I guess the bottom line is obviously - - I bet there won't be ten people in the whole building up there besides us and those on the Jack Forks where the Current Rivers are in the first place, and I'm very excited, you know. I know that the National Park Service is fixing a great expansion on the Gateway Arch up there. They're going to build out over 70, you know. This is awesome, you know. They're going to spend millions of dollars up there, but I'm beginning to wonder when - - I want to know when is the National Park Service going to come down here and have these informational meetings, and that's what we think about their building the Gateway Arch up there, their project. You know what, if they're going to get their opinions up there about our rivers, maybe we should give more opinion about our Gateway Arch up there. I know I'm out of time. You know, people, I came down here in 2009, started knocking on doors in Reynolds County and Shannon County. They told me that a republican couldn't get elected down there, and I just said, wait a minute, don't tell me I can't do that. But I worked hard, but I knew immediately that the river was important to you. It's our way of living.

We claim the rivers. You know, there's going to be some people, a lot of people, that will lose their lives on the river from drownings because, you know what, you boaters how many of you have drug people out of the river? How many of you have gone and drug people out of the river to save their lives? Where are the park rangers going to be when those people need their help? They're not going to be there. All right. So let's keep working hard. I know I'm done. Thank you.

MR. ROSS: I'm Representative Robert Ross. I have Texas County, portions of Phelps, Pulaski, and also Howell County. This is a personal issue for me. I actually was raised in the Summersville area, actually the continental divide, if you will, between the Jacks Fork and the Current River. My wife's from Eminence. We enjoy taking our family down the river, and really that's what this is about. You know, for generations the people of this area have been good stewards of this land, and we've taken care of it. And now that the federal government has come in - - and once again, it's been incremental the amount of restrictions and further regulations that have been placed upon this area. We're now seeing it head once again in the direction of where, you know, back as Representative Cookson said this was originally turned into the scenic riverways so that all, you know, all individuals from this point forward would be able to have access and be able to use and enjoy our gems that we have here. With regard to the wilderness area and the rest of the general management plan, I just, you know, want to keep my comments short, but I want to make a commitment, a commitment to the National Park Service that if you're going to continue to try to shove this down our throats as long as I am in office - - and I don't care what the office is - - I will continue to pursue any avenue that I can to bring this back under state control to make it available to the people. I want to speak to one other thing. I know that Superintendent Black was mentioned in the Salem paper that you've heard from all these elected officials that unanimously every one of them are opposed to this plan. I want you to think about this, you know. Within this - - within this room, you know, we all have different ideas about, you know, how we handle this and that situation, but for every county commissioner, every state representative, every senator, all the way up to, you know, our U.S. representative to all be in solidarity and opposition to this garbage I just want you all to think about that for a minute and to understand where that's at. We are every one of us opposed, and it's great to work with, you know, individuals like Representative Fitzwater and Cookson, and we appreciate all that they do. But the Park Service, you have my commitment. I'll be watching. Thank you.

MR. KING: My name Jerry King, and I live in Shannon County. The monitor said that we're supposed to talk about the wilderness area. Okay. Let's talk about the wilderness area. The congressman has told many of us that there will be no wilderness designation, but yet we have 3,400 acres in it's 534-page plan that are designated as wilderness area. We don't trust you. We do not trust the Park Service. We were told - - there were meetings in Thayer. There were meetings in Texas County, Shannon County. We were told we can't afford to go there. We can't afford to pay for the gas to get there because our budget is so slim. There's five people here from Omaha and Denver who flew in just for this meeting. You're bringing people in from other parts of the country paying six-figured salaries, and they look down their nose at people who make \$20,000 a year. I'm told by the Chamber of Commerce in Eminence that 18 million dollars a year comes through that city due to tourism. If you impact tourism even the slightest amount, you're going to hurt the people there. According to your own figures in your own book, \$24,000 is the average income in Shannon County. That's not very much, but the Park Service superintendent makes \$145,000 a year. The deputy superintendent makes \$125,000 a year. He supervises five people who make \$100,000 dollars a year. Your budget's all about your salary. It's not about managing this ground for us. We resent it. We resent that you bring people in from the outside, pay them a bunch of money so they can look down their noses at us. We're not happy with that. We're not happy at all. The congressman said there won't be a wilderness area, but you're going to edge it in just like the heritage area of the plan, the Blueway plan. You're always coming up with something new. Just go back in the office and formulate a new idea. There's nothing but smoke and mirrors in that 534 pages. Thank you.

MR. STEWART: My name is John Stewart. I live in Eminence, Missouri, and I'm a former mayor of Eminence. And I grew up in Jacks Fork Hallow off of Spring Valley, Round Springs, Missouri. I lived all my life in Round Springs and read the newspapers, and we started out with nine positions at Round Springs when the National Park Service come in. We got one part-time now. They wiped us out. That's all that's left, but let's go back to the enabling legislation in 1964. This is even more important. The legislation went over about three things conserve, preserve, and recreate. Now, these were set up in 1964 in legislation, and they were all on equal footing. They were on equal footing until special interest groups came in and wanted us to go to wilderness areas. There's where the wilderness areas come in. The enabling legislation from 1964 has no place, anywhere,

form, or fashion that says we can have wilderness. It says preserve. We had Ozark farms all up and down the river. I don't see them preserved anywhere. We had roads and trails going into the rivers. I don't see them preserved anymore anywhere. I don't see the historic buildings, the civil war cemeteries, the family cemeteries, and anything else preserved up and down these Rivers. They try to smooth them over and wipe them out. You can't even get to most of them anymore. Now, I get pretty emotional about these kind of things because I was born and raised to this. Why can they come in and say one special interest group can take away our use of motorboats, take away use of campgrounds, powder mills, campgrounds? There's no campground at Acres anymore. By the way, that was my father-in-law's place. Goose Neck's gone. I'm just from Round Springs the upper river. Okay. I don't understand the lower end, but it's a microcosm. It works all from one end to the other, folks, and what I'm going to say about this whole situation is let's go back to the enabling legislation in 1964. Let's not pretend we want A, B, C, or what we got now. Let's go back to the original and make them live by what was put forth by the congressman. That's what I got to say about it. That's what we got to do. I can't even boat for anyone plus what we got now. We don't have any park rangers to speak of that's from around here. I talk about places I don't know where I'm talking about. I'm 64 years old. I served in the military. I've done my part as an American. I want to be able to go to the river and enjoy it and not have to put up with tourists being naked. I don't want to be run over by some drunk out there either. The rangers need to get out there and do their job. There's not enough of them. There's not enough money. I know that, but I'm not going to be out there breaking the law. I might. I don't know. Sometimes I will. There's too many of them. I don't know what they all are, but listen, let's give it back to the state. Let's give it to somebody that can take care of it. Let's be able to get back to the family cemeteries and other places. That's what I got to say.

MR. RAMSEY: I'll Allen Ramsey. I live over at Eminence. I lived in - - born and raised in this country and was up in Salem the other night and talking to one of the park personnel, and they commented that they was going to have this 3,500 acres down there. And he also said, now, we got a place across from Pulltite up here. I thought, boy, I was reading in the paper. I didn't really see anything that included this area up here, so tonight I went over and talked to the gentleman. He said this guy over here takes care of it. Well, essentially after talking to him, they just took it on their own. He says they had a barn there. They moved their stuff out, shut the road off, so they've essentially already made it a wilderness area.

It's unofficial, but if we don't follow up and make sure that they do not just keep people out of there, you know, they're going to make them a wilderness area in spite of what congress does. They want it, so I thought that was, you know. At these meetings when you go talk to the park personnel, you know, I don't know. I've heard that so many times, and I would've thought with them representing the Park Service they should've been able to answer our questions. I'm sure you all have the same deal, so anyway that's all I've got to say, but I just - - you know, they've already - - and if y'all want to talk to this guy back here, he can tell you the same thing. That's what he told me that they already started pulling their stuff out like they're all ready to designate it.

MR. SLACK: I'll be quick, folks. A lot of people in this room - - my name is Mike Slack. I'm from Thayer. I'm with a group called the Ozarks Property Rights Coalition. A lot of folks in this room fought something called the White River Blueway a few months ago. Who all was against that? That was the Department of the Interior, the same group that controls the National Park Service, also the Bureau of Indian Affairs. I trust the Department of the Interior as much as the Indians did. Okay. But most people said we couldn't beat the Blueway, and we did. We had probably 20 groups in Missouri, 12 in Arkansas that got together with all the elected officials in this room and a lot of others. If we stand firm here and make clear that we all believe that, while we have a lot of nice folks who work for the Park Service, this was a dog and pony show today. Now, on the wilderness area, is there anyone here who doesn't work for either the Park Service or Claire McCaskill who is for it? Okay. There's one. Anybody else? Okay. I'd say the vast majority do not want the wilderness area. Okay. And that's it. Thanks.

MR. JACKSON: My name is Matt Jackson. I have lived in Van Buren my whole life. I was born and raised here. My dad worked for the Park Service for 32 years. They want to designate a wilderness area? They got out one out at Irish Wilderness if they want to play with one. Not many people go out there do anything because it's just walking access if you do anything, so if they need a wilderness to play in there's plenty out there. They don't have to deal with another one here in this county. As far as the management plan, if they were to use the money they spent on this to actually run our park service, we might not have had local people mow their grass down there for them, and I think any more infringement on the rights of the people on using this river is just that, an infringement on their rights. I understand that people all across the nation had the opportunity

to use this, but I don't think special interests like environmental groups that can flood in their comments to swing one way or another on a management plan should be used over the rights of the people that actually live here. I think a person that comes here for a month shouldn't designate me what I can do on the river on upper or lower running a boat because they're only here for one weekend, one week, or whatever. They might have big ideas, but I don't see many people out there hiking, biking, or anything like that on their own. If they were to come down here and hike, there's plenty of hiking to be done on forest service property or anything else, so I don't see any damage being done more so than what they would be doing by closing stuff off, and it's just going to be a shame that they would do this to the people in this area. I feel worse for the people of the park service here because they're good people. They're local people, and they don't want this either. They know there's going to be rangers out there that are going to be enforcing laws that they don't believe in because it's just something that come down from people that don't understand what they're dealing with. They don't ever come to this area or even want to be a part of this area, that they want to enforce their will upon this area, so I feel for the Park Service here in that regard because they're local. And they're good people, so I hope they have enough say to sway what's going to happen on this and at least stay with the no - - do nothing plan or go like that guy says back to the way it was in the beginning. Thanks.

MR. HAGAN: I am terrified, so bear with me. I was raised a Baptist, and my mother always said even if you are in the minority you got to be truthful. And I'm going to be truthful. I am not terrified of our government. I vote. I don't always get in office people who I want, but I do vote. And I do believe that our government works for the good of the people. That's why I was terrified. Thank you. Thank you. You're helping me get over my terror. I will restrict my comments, unlike most everyone else, to the wilderness issue. They are not calling, as first Jason Smith's clone said, they cannot declare a wilderness. They are talking about managing an area that has been managed as wilderness and continuing to manage it. That said with the one - - with the few exceptions, there would be a road closed and maybe converted to a hiking trail. I have lived in Missouri the greater portion of my life, and I start collecting Social Security next year. I travel a lot to other states, and I go to wilderness areas. I believe this will be good for Van Buren, for Eminence, and I live in Reynolds County, who will have a little effect on Reynolds County. So I do know that I'm not alone in speaking my mind on this, that there other people from Reynolds County, from St. Francois, from this county

who want to see the National Park Service succeed. We've seen the problems. We've experienced - - there's many people who have stopped coming to the rivers because of the problems, and I think that the park service has gone out of their way. There will continue to be baptisms. That's ridiculous for anybody to say that you would need a permit to have a baptism on the river.

MS. GLASSMAN: They did.

MS. HAGAN: Who did it?

MS. GLASSMAN: The Park Service.

MS. HAGAN: Who? Did the Park Service stop a baptism in a river?

MS. GLASSMAN: No, they didn't stop it.

They required a permit. You better find out.

MS. HAGAN: I've watched baptisms in these rivers.

MS. GLASSMAN: I was baptized in that river.

MS. HAGAN: I've stood there. Nobody walked up and said you got to have a - -

MS. GLASSMAN: I didn't need a permit, and I was baptized.

MS. HAGAN: Then the Park Service was wrong on that occasion. I'll agree with that. You do not need a permit to have a baptism, so thank you.

MS. BOYD: Okay. Hi, everybody. My name's Candy Boyd and I am not a politician. Beyond that, I live in Doniphan, and my family has been in southern Missouri dating back to the Osage and the Cherokee and the original settlers. My grandmother's name was Yocum, and we've been around. I just want to say that I would like to - - if all of us can imagine beyond politics and also I just like to look at the wilderness plan, not looking at A, B, C, D and not whether we trust this one or that one or that one, but honestly, if we just look at the wilderness plan, it might work because the area has been managed by the State of Missouri and through the years and over the decades as a wilderness area. And some of that area's pretty pristine property, and it is - - they've reintroduced deer, and so it's been good for deer hunting. They've opened it up now to bow hunting. It's good for the water quality. The only roads that they're talking about closing off, ironically, it's only government employees that can go on those roads now, so the only limitation is to government employees. It's kind of a levelling of the playing field where, you know, those of us who've been saying, hey, we can't go down those roads anymore why are they able to down the roads. Well, now they're going to have to put their boots on, too, and so there's really not a lot of change there. But what it will do is designate that area as a wilderness area. Now, I'm raised in Missouri. I self-educated myself. Before I was a schoolteacher. I've been around the world working in the tourism

industry. Okay. And honestly, honestly, honestly I think I can say to you that the reason that 18 million dollars a year is coming through Eminence - - I'm sorry it's not coming through Doniphan, but the reason it's coming through Eminence is because it's a national park. And when people in tourism look at it, they say, oh, look here's a pretty national park in Missouri. I can go there and kayak on rivers - - and this is what breaks my heart. I'm so glad we still have it here in southern Missouri - - on rivers that are still clean. I can tell you. I've travelled the world in tourism, and I love, I mean, I'm outside all the time. As soon as school's over, I'm out on the rivers or out near the river, and I've got kids in my classroom. They're out on the river all the time, and we love those rivers. But I can honestly tell you that up in St. Charles County they used to have clean rivers and lakes. And at the Lake of the Ozarks and even the Mississippi River when I was kid we used to be able to go swim in there, and now they don't. There's part - - so we've got to preserve it. We've got to preserve it, and if you do nothing else, just think of what's best for the water quality. How can we preserve - - because outside of Costa Rica, I can honestly tell you there's not very many places in the world that have these clean rivers, and so on behalf of my ancestors and on behalf - - look forward to the seventh generation, to our grandchildren. We want to keep these rivers clean, and how can we do it? The National Park Service has been happen - - right, but they've been helping us. They've been helping us. They really have, and so just do whatever we need to do. But if it's designated as a wilderness area, it will bring in tourism dollars, and the National Park Service can help keep it clean. They're not the CIA. They're not the NSA. They can help us, and many of the National Park Service employees that are here tonight were born and raised in Van Buren, maybe not born here, but they were raised here. So just let's just think about how can we all come to common solutions and keep it nice and clean. All I can say about that is the standard government says anybody has to have a permit to hold a ceremony. The Lakota, who've lived up in the Black Hills and own the Black Hills, they have to ask for permits, too, so we're not - - the baptisms are going to keep going. We're fine. All we can do is the best that we can, and I'm just asking that we try to keep it clean.

MR. EVANS: Okay. Maybe I'll just cut this off. My name is Michael Evans. I do a radio program here, and the name of the program is American's Voice Now. I know many of you listen. We stepped in and made an effort to defend this area against the Blueways when we saw that monster coming down the road, and we were successful in doing that. But I notice that when Mr. Good came up and began his program he mentioned a

couple of things that I thought were worthy of mentioning. He brought out that all the power lies with Congress and that no authority will be given without Congress's - - without Congress's permission. I'd like to take this thing on a different trek for a second. This is an administrative agency, and it's an administrative agency that operates out of any constitutional authority whatsoever. There are only two constitutional agencies that exist. One is border patrol, and the other is commerce, ladies and gentlemen. And the other myriad of hundreds or even thousands of agencies that exist, including this one, have no authority. Thomas Jefferson himself said to us that those laws that are made that are not pursuant to the constitution are null and void and have no effect, and with all due respect, this is an agency that is making law. They may call it a rule. They may call it a regulation, but it parades about as law. If you can be fined, penalized, your property taken from you, if you can go to court and are listened to and heard before an administrative judge without a jury, ask yourself is that constitutional ruling? The truth is they want to have this meeting up in Kirkwood tomorrow not because Kirkwood has any involvement here. I mean, does Chicago come to us and ask us if it's a good idea if they pave their runways or highways? We may go there occasionally, but we really have no say in it. The truth of the matter is it's the area of all of these nongovernmental agencies that are influencing these people are the ones who are making these decisions. This is - - what you've seen and experienced here and what we've been seeing in all of these meetings and we've seen it routinely. We saw it in the Blueway. We saw it in the Biosphere. We saw it on every one of these organizers, Delphi Technique. If you don't know what the Delphi Technique is, I'd like all of you to write that word down, Delphi, D-E-L-P-H-I. I'd like you to go home and look it up. What it is is it's a manipulative system that is designed and intended for you to do one thing to reach a public consensus that they have already predetermined, and that's why there's very, very little public commentary. That's why we're limited to three minutes, because they know that for all intents and purposes all of these written comments we'll never know whether they're all actually submitted or not. It's a sham. This entire thing is a joke. This concept has been used over and over and over, and it's used in everything. You see it in Common Core and everything else. Look, the simple truth is this. Here's the real reality of this. We've been given false coercive choices at the point of a gun. That's why we gave them the property in the first place because it was either dams or the NPS, and we chose the lesser of two evils. And now we're given another choice of the lesser of two other evils. How many more evils do we have to live

with before there's really nothing left of us here?  
That's the simple truth, ladies and gentlemen. This organization, this National Park Service needs to leave. They need to return this property to the State of Missouri. We can take care of it ourselves. We can put people in place who don't need to make \$150,000 a year and have three or four people under them each making equal money. The truth is, Washington, you may leave now.

MS. RAY: Hello. Hi, name is Nancy Ray.  
I'm from Eminence. I'm sorry to say I'm not a native, but I feel my heart of hearts has always been here. And it's just taken my body a little while to catch up, and they're talking about enterprise and making money. I want to read to you what it actually says about wilderness. It says, except as specifically provided for in act subject to existing private rights, there will - - shall be no commercial enterprise and no permanent road with any - - within any wilderness area designated by this act. Except necessary to meet minimum requirements for the administration of the area for the purpose of this act including measures who require emergency involving the health and safety of persons within the area, there shall be no temporary road, no use of motor vehicles, motorized equipment, or motorboat, no landing of aircraft, no other form of mechanical transport, and no structure or installation within any such area. And that's what a wilderness area is. We got to remind them. They do not own this land. It belongs to the people. They're not dictators. They're supposed to be caretakers. Thank you for your time.

MR. GOOD: Thanks very much. Anyone have a card that has not been up to speak? Thanks so much for your time. Thanks for your comments. This concludes the wilderness hearing. Thank you.

(WHEREIN, the hearing was concluded  
at 9:00 p.m.)

TRANSCRIPT OF COMMENTS MADE

Kenneth Wood

Ellsinore, Missouri

What I'd like - - I would like to see is no changes whatsoever. That's the comments I want, and I was born on Current River in 1945 just around Big Springs. The park service bought our farm in '68. I was in the service. They come to my mom and told her said - - my dad had already passed away - - my mom, said if you don't sell we're going to take you to court and take this land. She sold, so I have a sort of a disrespect for the park service, not in regard as persons but what they have done. So I would like for no - - nothing to be changed. Stay like it is.

Marylin Sharp

Mountain View, Missouri

Leave it like it is.

Noel Meade

Ellington, Missouri

I fish this river a lot, summer and winter, and a lot of what they're basing on is when it's real busy in the summer. I can go fishing in September, March don't see nobody on the river, and they're trying to say the river is overused. But that's just about 30 days of the year. The rest of the time it's underused really. Other than that, I mean, that's all I'd like to say. I think basically they're doing the wrong thing, just my opinion.

Jack Basham

Eminence, Missouri

I'd like to make a comment that I wouldn't want to lose my boat lunch and Sutton's Creek, Jerktail I don't want to lose any of my boat lunches on Current River because we hit them all, and I see that we're going to take out some of the trails for the trail riders. I'd like to make sure to see that they can still get up to the river and enjoy the scenery. I don't ride horses, but I know a lot of people do. And I'd really like to see the no change actually happen. I like it the way it is. I've lived there for quite some time, and we take care of our parks ourselves, we help, and actually, at Jerktail we're the ones that put the signs up there down there take your trash out. And we go down and pick up the trash when the park service quit doing it here a while back. I mean, we actually take care of what we like, you know. That's about it.

Elizabeth Pageler

Winona, Missouri

Okay. What it is I am against big brother government and their control. I'm also against the damage the four-wheelers do, and I think that that needs to be controlled. And emotionally I'm against it, but I know the damage - - or I know some of the damage they do. I grew up along the Kansas River. If you look at the map furthest north bend in the river, that's where I grew up. Daddy took us kids, and we walked down to the river a lot of Sunday afternoons in the summertime. People come mushroom hunting down there, didn't bother us any. So I'm for people having access to such because God gave it to us, but I'm against them tearing it up and the four-wheeler thing. I lost a nephew. He was married, had two sons, two tours of duty in the Air Force, and he went straight up and fell over backwards. My sister watched it happen, killed him. We lost a grandson. At least he wasn't married or had children, but he had a tour duty in the Navy, was on the USS Ronald Reagan. We got to go and be on there with him, and he was in a buggy or something. It wasn't a four-wheeler. So I'm against some of these activities that they do. I don't think big brother government should take over, but I think they ought to catch them when they're doing something wrong. I mean, that's just as illegal as running a stop sign in my mind, so you know how I feel about stop signs. I don't know what else I can say;

Robert Rowland  
Poplar Bluff, Missouri

I'm against - - I support the no action alternative, but the change to that plan I would like to see is acceptance of the 640 jet. And the reasons I'm against the other alternatives are I'm against spreading out the floaters. I'm against the permit system, and if they are going to have a permit system, it needs to be spelled out so we know ahead of time. I'm against it, but I don't even know what the hell it is, against more horsepower restrictions. And I'm against the limited access.

Brian Keathley  
Van Buren, Missouri

Do not like the idea of having to apply for permits to go floating with canoe, kayak, or raft or anything such as that at all. I'm not real happy with the horsepower limitations they're trying to put on the upper end. The seasonal I don't really care for too much, nor do I like the idea that they're taking our larger motors down below the park. If I had to pick one, I'd pick a C - - a plan C hands down. Wilderness, I'm actually okay with if they want to do wilderness. That's a good thing. I would like to see some of the river crossings, designated river crossings on the

upper end of Current removed. We don't need that many. I don't like the idea of seeing motorized vehicles on gravel bars, but yet I don't want to see all gravel bars closed off. The main thing is Sinking Creek gravel bar I'd like to see open up traditional there the way it always has been. Log yard I don't want to see where people can't bring their campers and stuff out on the river. It's what we've been doing forever, you know. Basically as far as the designated gravel camping that we have now, just leave it alone. If they want to shut down roads to it, that's fine, but if it's county road, it needs to be left alone. Other than that, that's pretty much all I got.

Ike Bartlett  
Ellington, Missouri

I would like to know why there is in all options there is - - why is there no option that - - why isn't there one alternative that decreases the restrictions that are set down that were set back in 1984. That's it. Why is there no alternative that allows more access and is less restrictive than the present situation?

Andrew Hampton  
Ellington, Missouri

My comment, I would like to state that in all three of the alternatives something is taken away, and over the last 20 years I've noticed small things you took every time they try this. If their plan is a funnel plan, I don't know why they're trying to take everything from the general public. It's their right to be over there to be able to use that. There is I guess - - there is nothing in any of the alternatives that says anything about why they're doing what they're wanting to do. They just - - they have to have a management plan, and for no apparent reason why, they're wanting to plan vehicle traffic on non-designated gravel bars. It doesn't state why they want banning motorized watercraft on 48 percent of the riverways. Why are they wanting to get rid of half the number undertaking certain recreational activities such as camps, watercraft, camper, camping, et cetera, closing 55 miles of vehicular road and trails that the State of Missouri has to use to maintain the wildlife and woods and the fish and the waters, close approximately 20 unidentified river access points. What do they deem identified? They all are marked on a map that the park service gives out. Implementing a permit system for equestrian users, why can they do that when they can't keep track of the numbers of horses over there because there's wild horses, feral horses, and there's elk now, so they're not going to be able to see the impact that that has because the wild

horses can roam anywhere they want as the elk can, any animal can. So I don't see how a permit is going to work. All it's going to do is create more money for them that they can use against the public. Imposing new horsepower below Big Springs I don't see what horsepower restrictions will do to help anything. It's going to cause a bigger conflict between people that use it every day and the park service itself, but in none of this at all does it say anything about how many kayaks can be on the river and where they can be at. It doesn't say about how big a kayak you can have or a canoe, where you can put it. It doesn't say anything about that. I mean, I elect for no action to be changed anything. I don't want nothing to be changed what because if you take something away it does not matter what interest group it comes from it's taking away from the general public across the board. If I'm a boater and I want to go horseback riding, I want to be able to do that and not have to worry about what they want. If I'm a canoer or a kayaker, I don't want to be told where I can go put in my canoe or kayak or what stretch of river I can be on. Same as a boater I don't want to be told I can't go here but I can go here. I don't want to be told that I can't use public lands to the full potential as we have in the past. I don't understand why they want to do this. One thing they take away takes away from everything, and they say that they're trying to get closer together from one side of the spectrum to the other to make everybody happy. You're always going to have conflicts no matter what you do, so it's not going to solve any of their problems, and they know that. It's just something that will they say. That's my comment.

Joseph Kelly

Birch Tree, Missouri

On the Jack Fork River I would like to see it kept to be no outboard motors on it, that it be used only for canoeing and tubing down it. I think the river's too shallow, too narrow to accommodate outboard motors, and on the Current River, I would try to restrict motors to at least 40 horsepower on everything at maximum in areas that could sustain it in the wider, you know, wider parts of the river. We probably - - we also need to get more enforcement during the summer. We have a lot of problems with visitors coming and locals too messing up the river in many ways drinking, swearing, going around naked, half sometimes, and then, you know, it hurts it for families going down the river. ATVs there are people that can't walk, and an ATV would be a help for them to see the outer parts that you can't walk to. The problem is that you have ATVs with large horsepower, noisy, and they have a tendency to tear up the tundra or the landscape. That should probably be looked at to address so that we don't have erosion created by tracks from ATVs. That's

about what I have to say.

Rick LaPlant

Piedmont, Missouri

Only question I got on this is back in the early '80s I used to work for the department, and I seen a map showing this whole area in here that they wanted to make it back into pristine forest, all back in natural wilderness is what I'm asking. Is this a foot hole in the door towards that?

Sue Hagan

Lesterville, Missouri

I just want to say that I think the park service has done a marvelous job coming up with these different alternatives. A, B, and C are all great improvements over the way the things have been, and I know the preferred alternative is B. And I think that's a very strong one, so I just hope they succeed in going with that and not make compromises. Especially - - I'm especially concerned with our local legislator, who's been saying he represents the citizens and that they want no changes, I disagree with Representative Fitzwater, and I do want to see changes. I think that the rivers have been mismanaged, and I think that they've got some good proposals.

Eric Bland

Van Buren, Missouri

I want a no action alternative, but I want the big - - Van Buren the Big Springs no horsepower limits, Van Buren to the southern boundary no horsepower limits.

Matt Jackson

Van Buren, Missouri

I feel that the no action plan is the best plan available for this area. All of the other plans limit people of some nature or another from doing what they are entitled to do on the river.

Tony Towner

Van Buren, Missouri

I'd like to go with the no action except for Van Buren down to the southern boundary no limit, no horsepower limit.

Mindy Gallaway

Bunker, Missouri

My comment is the horse trails on designated

versus non-designated I'm opposed to designated horse trails. The national parks are the people's. We should be free to come and go as we like. We don't need a park ranger checking in with us. The recent death of the father and the two sons on the Ozark Trails a designated trail shows that whether it's designated or not accidents, things happen. Where were the park rangers for the designated Ozark Trail? Why did this man and his two sons die? It makes no difference whether rangers are there or not. Things happen. The majority by far are safe, happy, free experience. Less rangers, less money to the park service, less government. Park service works for the people. Remember that.

Kenny Wells  
Salem, Missouri

I'm worried that the motor boat restriction on the upper current will impact trapping. Trapping is a legitimate use of the river. We use a motorboat to trap from Cedar Grove down to Pulltite. I'm not asking for a big motor. I've got a 20 horse on a Jon boat. Also gigging a lot of the - - a lot of the people have traditional uses. Trapping's one; gig's another. You're going to stop all that traditional use when you limit the motorboat use. Park service should recognize all traditional uses, camping, hunting fishing, trapping, gigging, all traditional uses that we've did for generations before the park service came about.

Mark Jackson  
Van Buren, Missouri

On the wilderness designated area, I don't agree with that. I think it's just a start to more, eventually just keep adding more and more until it's all wilderness and no one's allowed on the river. As far as the boat motor limitations, I think they're fine just the way they are. As far as camping out on the gravel bars, I think they're fine the way they are. I think we ought just stick to - - what is that - - no action alternative. I think that the zone areas on the river it would be a problem because of the people call things different things. Different people call different locations by different names, and posting them signs don't stay up on the river when flood - - during floods. It'll take a while for people to learn where the zones and areas were. Starting out it'd be a problem. I think eventually they would get to know where it's at. I think it'd cause a lot of conflict starting out.

Gary Garner  
Poplar Bluff, Missouri

I am supportive of the plan B. I'm an equestrian user, and I'd like to make sure that simultaneously with them closing down the non-designated trails that they would open up the trails that they're saying they're going to add so there's not a five-year gap or a ten-year gap, and the last plan they had had an equestrian campground suggested. And it never did happen, and it's been many years since this whole process came to be. And I - - there are many organizations. I'm in back country horseman myself that know that we can get grants to help out the National Park system put in something like that plus the labor that we can also add to that. We'd like to be a part of that. Then we're also kayakers, and our lives have been endangered as we tube and kayak by high powered boats. But I'm in favor of the areas of the river which can be non-motorized all times, you know, off and on peak season, so there's always a place to go for people that want the quiet on the river.

**Correspondence:** Dear Secretary of the Interior:

I am concerned about the Ozark National Scenic Riverways.  
The Park Service should continue to manage these lands, and rivers.  
The Missouri congressmen are wrong to try to terminate the NPS' responsibilities.

Also, the various horse-trails should be kept as they are. The trail rides likely do less damage than the a t vees. And I hope the "wild horses" can live peacefully on these lands. (Maybe bears will keep their numbers down.)(Bears have been moving in to MO.)

**Correspondence Type:** Fax

**Correspondence:** It is the belief of the Eminence Area Chamber of Commerce, our members, our associates, and our community (based on facts by people who actually use the river ways), the Ozark National Scenic Riverways management does need change, but the vague, often-contradicting alternatives as presented are not the solution needed. The "No Action" Alternative use, as it currently applies to the ONSR management, should be extended until it is clear more of the advice, information, and commentary from the local and regional population are used in the plan alternatives. It is our opinion that rather than request "No Action" because we do not want e:xperiences within the beautiful boundaries of the ONSR limited, that we, in-fact, propose changes to further the visitor experience one may have in the Ozark National Scenic Riverways, in and along the Current and Jacks Fork Rivers, and throughout the south central Missouri region. some contained in the proposed plans and others not.

The basic idea behind any of the necessity of implementing any of the suggestions for change to the management of

the ONSR is to create an experience akin to the core concept entailed with the inception and design of the Ozark National Scenic Riverways. The thought processes behind these suggestions propose a set of changes not harking back to a time of better management, as when the Missouri State Parks managed the major springs in the area, nor to a time when the Federal Government owned no land in this region, but to offer a glimpse at what an experience in this region of unparalleled natural beauty should really be.

There are preservationists, whom want to limit access to this area whether because of strict beliefs, jealousy of accessibility, or because of a particular movement to make the ecology, environment, and life systems exist as they did before European explorers encountered this unique locale. This is based on a belief that humans had no interaction with the environment in this region, which is a falsehood. Land and water throughout the entire planet have had living inhabitants which have made some sort of impact on the environment. In this region, Native Americans lived here, both prior to and during the westward expansion of the Americas. So to restrict access and use of this place because humans never impacted the land, simply put, just does not make sense.

Understanding the land and making sound decisions in regards to its management is the best method to follow. Just as the Ozark National Scenic Riverways was founded in such a unique manner, so should it be managed.

Flagship NPS managed property. The Ozark National Scenic Riverways should be managed as a National Park Service flagship river way. Rather than forcing a relatively small park such as the ONSR to comply with federal standards for parks and river ways and monuments with very different purposes, needs, and resources, this Scenic Riverways should be managed as a flagship program-one that is a leader and innovator in programs for the Federal government. Changes include tailoring staff, resource use and management, cultural and heritage programs, visitor experience enhancement, as well as recreational opportunities to those actual visitors to the ONSR need and desire. The desires and needs of people who actually visit the Current and Jacks Fork Rivers is what was used to establish the Ozark National Scenic Riverways and these concepts should still be used in the management of it.

Stars Upstream and its author, why he argued for a recreational park. Although Leonard Hall was not a resident of the Eminence area, nor was he originally from this area, Leonard visited the Current and the Jacks Fork River watersheds quite often. It was documented through the local boat and canoe liveries that he came quite often and had a sincere interest in providing for the recreational experience of such a beautiful place as this. His book did argue through propaganda the area needed to be purchased by the government rather than owned by locals, using a few stock photos from area farms not near the rivers, but he used this propaganda for the reason that this area should be open to the public to enjoy, not shut off by a few, whether by mismanagement of the resource, by shutting down the public access by the wealthy elite, nor by placing a lake over this Ozark terrain.

The Ozark National Scenic Riverways, in the arguments of proponents of a park, as opposed to the proponents of a lake, was to be an open recreational adventure, ready for the taking of anyone whom might choose to use it. It is not the purpose of the government nor those making rules to discriminate against any group when deciding public policy.

In an excerpt from attorney, Chris Yarbro, the following fairly describes the creation of The ONSR.

Recreational use was a material consideration during the creation of the Ozark National Scenic Riverways (ONSR). The broad coalition that formed to preserve the Riverways from damming, split due to concerns surrounding intended uses of the Riverways. The initial proposal, the "Ozark National Monument", was unsuccessful in part for want of protection for recreational users. After its defeat, a second proposal, the "Ozark Scenic Riverways" proposal, was given consideration.

In the Interior and Insular Affairs Committee's initial report on the Ozark Scenic Riverways proposal, the committee emphasized the Importance of creating Federal recreational areas" and noted the Riverways' geographic location was uniquely situated for the same. Additionally, the Secretary of the Interior, Stewart L Udall, reassured the committee and federal law makers that "recreation is a purpose" of the Ozark Scenic Riverways proposal.

With the committee's support, and Secretary Udall's reassurance, the Ozark Scenic Riverways was passed into law with the new title "Ozark National Scenic Riverways." The stated purpose of the newly created ONSR was:

For the purpose of conservation and interpreting unique scenic and other natural values and objects of historic interest, including preservation of portions of the Current River and the Jacks Fork River in Missouri as free flowing streams, preservation of springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources thereof by the people of the United States...

Significantly, the ONSR's enabling act places recreational use on equal footing with the other stated purposes.

ONSR enabling legislation. The enabling legislation establishing the Ozark National Scenic Riverways, rather than simply the Ozark National Monument or a lake in this region, plans for a park which allows the public to enjoy the beautiful natural wonders near and along the Jacks Fork and Current Rivers. Each sentence of the enabling legislation describes a venture between the Federal, State, County, and City Governments as well as organizations from the region near the Ozark National Scenic Riverways. It in fact states such a fact so clearly that the blatant ignorance for opinions for the local and regional populace in the current plans for the ONSR makes such a process for drafting plans one-sided and should be reconsidered. It is the intent of the enabling legislation to give the population residing in and around the Ozark National Scenic Riverways input in the management of such an integral part of the economy and lifestyle of the south central Missouri Ozarks. Preservation for the sake of preservation and the ideal of a select few should not dictate what the visitors in the ONSR encounter when pursuing recreational activities.

Advisory Commission. An advisory commission, such as the one that was created for the Ozark National Scenic Riverways during the formative years of the park, should be reinstated to provide much-needed oversight for the National Park Service's management of the ONSR.

It is the belief that we should have an advisory board of people in similar fashion as the one for the Ozark National Scenic Riverways that was set up in the enabling legislation of the ONSR in 88-492, which also expired 10 years after the formation of the park, that has been prevalent for many years. It is not unusual for a Federal government agency or entity to have an oversight committee and it is very apparent, especially with the federal tax dollars spent on the General Management Plan draft process, that the ONSR needs exactly that, an advisory and oversight committee. The advisory and oversight committee should be set up in similar fashion to the original advisory committee that was created with the ONSR enabling legislation, but it should have the capabilities to carry out and suggest implementation of policies regardless of the request of the Secretary of the Interior. This should be an ongoing and continuing committee of people to aid in the management of the National Park System management of the Ozark National Scenic Riverways-in so doing, the management process would already take into consideration the opinion of the stakeholders for the Current and Jacks Fork River watersheds. This would not only be a time saver, but would save immeasurable dollars spent on the GMP drafting process.

As formed during the creation of the Ozark National Scenic Riverways, there was one member appointed from each of the county commissions in which the ONSR is located, Shannon, Dent., Carter, and Texas, as well as two appointed by the Governor of Missouri and one appointee from the Secretary of the Interior. The one issue with the legislation forming this advisory committee was the Secretary of the Interior was allowed to use them at his or her discretion and really an oversight committee should not be used at the leisure of the agency, it should be the oversight committee that reviews policy, practices, and management procedures of such an agency as the NPS and ONSR continually and regularly. It is also our understanding that other agencies of the US government have oversight and advisory committees with real power to suggest policies and help enforce them in the management of the agency.

Campsite Reservation System. Campsite reservations are a common complaint and factor requiring the chamber to make a statement specifically about the disorganization of the present system. It is understood that the NPS presumably pursued using the current campsite reservation system to save money and resources for other ventures within the park. However, the current campsite reservation system saves no money, in fact the current system, shuns away visitors. Since there a~ no way to make reservations locally nor to track: reservations on a local level, campsites remain vacant and are not filled. for example, if a visitor reserves a campsite and does not arrive at the agreed-upon time to maintain the reservation, that campsite is not filled and that campsite is not able to be filled because the system does not account for such actions. When one arrives at a campsite where there a~ no cell phone towers, no public telephones, nor access to the internet, the local ranger station cannot even help with this venture because the Omaha office must be called and directed through a prompt system that not only confuses, but deters visitors. This is a prime example of visitor deterrent policies.

In fact, some services for the smaller campgrounds have been removed, yet fees are still charged, despite the lack of a trash pick-up service. If it is necessary to raise fees for camping to provide services for the campsites and to maintain the unique visitor experience, then fees should be raised to accommodate visitors for the campsites they wish to use rather than simply eliminating the services for one campsite [ineligible text]. This is a general trend for the National Park Service management of the Ozark National Scenic Riverways and this management style should cease and desist as it currently exists.

In fact the campsite reservation system should not be held by a Canadian company for the ONSR, specifically, and move to a local position in order to fund a job, and use the \$9.00 surcharge for making a camping reservation to fund that position. Last minute reservations should be allowed for every campsite, without respect to any 7 day advance reservation policy. Campsites should be allowed to be in place for more than 2 weeks at a time, due to the nature of traditional camping activities. In fact, the ONSR camping system should be modelled after the system at some of Missouri's State Parks, where reservations abound throughout the year and tourists and locals alike are waiting in line for reservations. By creating a system similar to that of the one at some of Missouri's State Parks, the reservation position within the ONSR will pay for itself. The campsite system should be tailored to the Ozark National Scenic Riverways, rather than tailoring the needs and wants of a much smaller park to those of the giant parks like Yellowstone. The size of this comparatively smaller riverways park system is one that prompts a camping plan which allows for the type of camping that visitors desire and need, rather than complying with and adhering to the policies of larger parks.

Large Boulders and other pieces of obstructive objects, 80oulders and travel-restrictive objects placed In and clang stream beds, creeks, and riverways are actually detrimental to the ecosystem of the rivers and encourage erosion. Such environmentally detrimental obstructions change the flow of the rivers and streams around which they are placed worse than the supposed activities which they were meant to prohibit. The best plan possible would be to partner with other agencies tie. the Army Corps of Engineers) to secure river banks and stream banks with protective materials and native plants so that erosion is minimized. This would protect not only the visitor experience, but also the wildlife and plants from erosive effects.

Gravel bar camping. An activity which is a traditional use pattern with no substantiated claims of environmental degradation is vehicular accessed gravel bar camping. This form of camping also helps to alleviate camping at less primitive campsites with more services. In fact, to increase some of the drive-in camping spots at current locations and to improve those sites would enhance the visitor experience and provide for more and different forms of camping that have very little impact on the environment. Basically, drive-in camping is a local and regional resident tradition for many families for generations. Prior to the establishment of the ONSR, extended friends and relatives would come visit this area and stay for weeks at a time to enjoy the pleasures of vacationing in and along the Current and Jacks Fork Rivers. Prior to European settlement, even the Osage used various spots along whit is now the ONSR as hunting camps to refuel and recharge while gathering food for their tribe. Although the Osage did not drive-in to camping locations, it would be assumed that not every one of them arrived to their spot by watercraft.

Canoes, Tubes, Rafts, Horseback Riding, and Jet Boats. It is integral to the economy of the area that access is kept for our canoe outfitters, our horseback riders, and our outboard motor visitors. The experience the groups have should be enhanced, improved, and considered when drafting the management plan, rather than placing limits and restrictions on the recreation they enjoy. It is illegal to double charge horseback trailriders to use the horse trails. Campsites and services for our campers, who prefer public campgrounds, whether large or small, should be improved. Today, people are mobile. Everyone has access to vehicular transportation, so if a tourist does not have a good experience here in the ONSR, they can choose to go elsewhere.

Position on "zoning" of rivers and lands. In the enabling legislation, it is cited that zoning is allowed for the management of wildlife and hunting, in relation to the enjoyment of visitors, public safety, administration and must consult the Missouri Conservation Commission for such topics of discussion. Zoning for the sake of copying urban-planning models is not described in the parks founding documents.

Conservation Commission's comment from 2009. There are a few basic concepts that will be exemplified by excerpts from this letter. First, in paragraph 3, page 1, "The Department recommends hunting, fishing, and trapping continue to be allowed throughout the ONSR" This statement clearly should alert the National Park Service to the necessity of keeping access available to the public for the purpose of wildlife management-in fact, this might be a good reason to expand upon the current access points, campsites, and roads along the riverways for that express purpose.

On page 2, in paragraph 1, they state, "Any discussion of boat motor horsepower limits would be incomplete without consideration of the impacts of proposed changes on angler access and fish communities. Zoning based on horsepower dictates where certain boats can gig or fish. Some areas of the river will receive more or less harvest pressure and a corresponding shift in fish community". The thought that there will be fish not ever touched or encountered by a jet boat or even by a fisherman is a nice thought to some who wish for no one to enjoy the Ozark National Scenic Riverways, but from a practical standpoint of Resource Management, the rivers should be fished and gilled to help maintain proper fish populations. It is the express concern of the Missouri Department of Conservation to manage the state's wildlife, fish, and forest resources, so their experience and professional opinion should be used for management purposes. As far as the fishing and gilling are concerned with completely zoning out jet boat transportation along the riverways, this same management tactic would apply. The river needs to have fishing and gilling in order to manage fish species.

Further in the letter the Commission states to, "upgrade the existing camping facilities and day-use facilities to attract and encourage families and children to experience nature in the great outdoors." This coincides with the notion the NPS should improve current accesses, campsites, and facilities to enhance the visitor experience, rather than shut down, close, and block access to resources. In the letter they also state they support the "No Action plan with a few minor provisions-it is quite evident the National Park Service has ignored official comment from the Missouri Department of Conservation in the current draft plan (an agency to which the ONSR is bound to cooperate with by the enabling legislation) as well as local comments.

Access for the purpose of Wildfire management. It is imperative that because the National Park Service makes no attempts at forest management that every road, trail, and transportation avenue be left open within the Ozark National Scenic Riverways for wildfire prevention and management. Although we have not had wildfires in this region for a number of years, that is thanks in part to the preventative efforts of management agencies such as the Missouri Department of Conservation and the US Forest Service. The roads as they presently exist represent years of travel as established presumably by some of the Native Americans and later travelled by the European settlers and pioneers. Eventually the roads and trails that are left today represent a cultural and historical lesson to the student and to the visitor. However, the important lesson to be learned is to allow for proper wildfire management so the entire stand of forest does not burn down. Additionally, such libelous behavior endangers the residents of the region with the likelihood of a wildfire reaching homes and more populated areas due to the unmanaged forest. Roads and trails provide more than leisure activity, they provide a lifeline to wildfire management

Access for Emergency personnel and management. Closing access points along the riverways is a counterproductive notion when considering the needs of emergency management. If people are injured, have an accident, encounter an issue and need help, it is very important that emergency management personnel are able to access the creeks, rivers, and lands in and along the ONSR.

Access for elderly, the very young, and the disabled. It is a common theme among the federal government at this time that access to federally owned properties (ie. Courthouses, agency offices, public works buildings, public monuments in urban areas, property held in trust for public use), no matter what a person's age, creed, nationality, sex, color, ability, disability, and other descriptive devices used to categorize people and prevent them from accessing what should be available to all people. It is a basic ideal that is embedded in policy, legislation, regulations, and practices carried out by the Federal government-the idea that discrimination toward a segment of society, especially if that segment of society is underprivileged, under-represented, and lacks resources.

It should be noted that by limiting access to campsites only to those who can travel on the river is discriminating against those who cannot ride in a watercraft. Access to gravel bar camping should be allowable by those who can travel by a land operated vehicle-which allows access to the elderly, the very young, and the disabled.

By limiting motorized boat access on certain points of the river, it is not only a discriminatory act against the above-mentioned groups, it is also a self-regulating zoning conversation. Jet boats will not travel on stretches of water where there is insufficient water to travel. During seasons when there is sufficient water in the river to allow jet boat travel, there should be no restrictions. There should be no restrictions in order to allow for the travel of the elderly, the very young, and the disabled to spots of historic, cultural, and natural beauty interest just like anyone else who wants to visit the spot that can travel by foot or a method that is non-restrictive to those in the minority groups aforementioned. Additionally, the National Park Service has questionable jurisdiction over navigable rivers, no matter whether they fall onto the lands owned by the Federal government. So any limitations placed on jet boats or watercrafts have an equally questionable ability to be enforced.

Access for graveyards and cemeteries. This issue pertains to that of road and trail closures. In a group meeting held in Rolla, Missouri, the Missouri Coalition for the Environment proposed that 64 "illegal" roads and trails be closed due to the fact that these roads and trails contribute to the presence of gravel, through environmental erosion, in the Current and Jacks Fork Rivers, which lie within the ONSR. There are three arguments which discount this claim which cites these roads and trails should be closed. First, these roads and trails are not illegal, nor are they new; every road and trail that exists that is claimed to be illegal is a road or trail based from use patterns that exist since European settlement of this area. This information is based on a road and trail study performed in the 1980s which stated these roads and trails are illegal because the National Park Service did not account for them when the ONSR was being formed. This is in fact a fallacy. The NPS, simply put, did not desire for these roads and trails to be accounted for, so they left them out of the original documents describing county roads. This was furthered by the roads and trails study performed in the 1980s. Once this was created, the roads and trails that are now being said to be illegal, some of which are slated to be closed, have actually been in existence prior to the formation of the ONSR.

Additionally, the Missouri Coalition for the Environment and the National Park Service are basing the decisions to close roads and trails on data gathered from studies which is skewed, and non-existent in some cases. There is no proven point of entry into the water system for the gravel which appears in the riverbeds today. There are many theories about this subject, however, none are accepted as being the authoritative theory for where the gravel in the rivers originate. The roads and trails are desired to be closed simply because there is a belief among some environmental groups that access to natural resources such as those that exist in the ONSR should be closed off, exclusive only to use patterns approved by them-a privilege, in a sense. This is why they push to close these roads and trails. Furthermore, they wish to close off access at the ends of county roads which allow the public to access the river, which is problematic for many reasons, including access for the handicapped, the very young, and the elderly, in addition to emergency management, wildfire management, traditional use

patterns, and access to the cultural, natural, and historic locations as set forth in the enabling legislation.

Another point to be considered for the argument to keep the roads open is access to cemeteries, graveyards, and gravesites. Most of the roads and trails within the ONSR lead to a burial site of a local family which resided at that location prior to the establishment of the ONSR. It is very important to the residents of our communities that they be able to access and to visit their family burial plots located at their old homeplaces along the Jacks Fork and Current Rivers. It is cited in the "Management Policies 2006: The Guide to Managing the National Park System- (produced by the National Park Services in section 8.6.10, that burials will be allowed to be visited by family members or designees. It is important to not cut off the heritage and culture of people from visiting their ancestors at their old homeplaces. Graveyards and grave sites should be given the respect to allow descendants to visit the resting places of loved ones and ancestors, regardless of policy or regulations.

Timber management. Simply stated, a timber management policy of selective cutting, even highly selective cutting would be a wildfire-prevention method. a stimulus to the local and regional economy, as well as provide for safety management for visitors. The NPS could partner with government agency, for example the Missouri Department of Conservation, to actively manage the timber and wildlife resources. Just as it is important to have existing and longstanding forests for animal habitat, it is equally as important to have different stages of the forest to encourage various wildlife populations to flourish and inhabit these managed forests. We do not desire to have visitors of the ONSR to encounter stages of the forest which are cleared or unattractive, which was the sentiment of ONSR proponents and congressional officials at the time of inception and is why the original purchase of land included a corridor of land nestled only next to the Current and Jacks Fork Rivers in most places. This was to control the visitor experience and allow them to see natural beauty from their trip on the rivers. But it is imperative to have forest and resource management for the purpose of wildfire prevention. wildlife proliferation, stable environment conditions, and an enhanced visitor experience.

The basic concepts behind timber management include wildfire prevent, traditional fire patterns the Native Americans applied to the region (which was the environment documented by Henry Rowe Schoolcraft). ecological (meaning ecosystem degradation and regeneration is part of the natural forest and fauna life cycle), as well as economic.

Gravel removal. According to the plan on page 241, "Gravel mining operations can adversely affect the geology of adjacent tributaries by altering flow patterns. changing channel structure. increasing stream gradient, relocating channels, and causing scouring and bank erosion." This notation does not take into account the necessity for the gravel to be removed as part of a cyclical process. There are no reports, studies, tests, nor hypotheses which prove where the gravel in the river comes from. Frank Hughes, a local scientist and resident. once stated, "that it is very likely the gravel is a cyclical trend and in order to manage it, the gravel must be mined to protect the wildlife and fish, so the streams do not fill up and choke out all the wildlife." Although this alters what the present state is of the river.; it is a process which the local residents have operated since settlement. These patterns help protect the fish and wildlife to ensure there is a future for them. as opposed to a dry creek bed filled with gravel.

It is very clear, the management of this park should be proactive, rather than laissez faire. The lack of interest by the NPS management of the ONSA extends beyond the gravel, but encompasses tourist information, assistance, and general visitor experiences. Meaning, the NPS does very little to assist the tourist or visitor, except in the form of inspecting and writing tickets..

System of computerized paperwork for park rangers so they may be visible, rather than combative toward visitors. Combative and harassing park rangers is the number one deterrent to recreational experiences in the ONSR, second only to the negative publicity from the ONSR. It is integral in management of this riverways system to have park service employees and rangers to be visible for assistance, information, and to provide a positive presence within the system as far as visitor experiences is concerned. It is not intended for the National Park Service to employ more rangers, more employees, nor additional staff in any form to provide these services, but it is intended to shift the NPS

from spying activities on visitors and trying to "catch them in the act" of performing illegal or citation-worthy activities. It is meant to provide a regulatory presence. The purpose of NPS staff is to provide help to visitors within the riverways and to enhance the visitor experience. In so-doing, the employees will not prohibit activities by citations, but encourage good behavior of visitors by appearing in uniform throughout the system in a capacity design to assist visitors.

Local cultural and heritage aspects-discrimination and degradation. When the United States government purchased our river frontage, springs, and significant cultural structures, which is the most valuable land and resources in the immediate area, they promised to protect the history, heritage and culture of our river communities. Through a process that negated that promise, the Ozark National Scenic Riverways destroyed homes, barns, outbuildings and other structures of highly significant value, both worthy to keep for posterity and for the sake of our culture and heritage. Fields, most of which were promised to be cared for in the same manner they were left, in order to show what working farms were of the current time and those of the past, to grow over. The experience of people to view life as it was in river communities of the day was severely altered and detrimentally impacted. These concepts were as much a part of the visitor experience as the purely natural beauty in and along the Current and Jacks Fork Rivers.

It is peculiar that once again the National Park Service seeks to protect our culture and heritage, interpret and catalog the society that once was and further push our culture to the break of collapse. This form of discrimination is the ultimate detriment to the Ozark National Scenic Riverways. It is one that, under the guise of protecting the environment, they close off access, further discourage people to visit their ancestral homeplaces, and limit the ability of all people, regardless of race, creed, color, culture, access to resources, and ability to fight this cultural slaughter, to truly enjoy what the unique experience is of going to and becoming one with the waters and lands in and along the Ozark National Scenic Riverways.

Necessity of management during government shutdown. It became glaringly apparent during the government shutdown of 2013, the Ozark National Scenic Riverways needs to have legislation passed to protect the resource and to protect the rights of the people to access public property, which is owned by the people. There should be no citations issued, no scary signs prohibiting access placed-the park should have legislation in place to allow people to access and to use the resource, if not managed by the Federal government employees during the shutdown, then most certainly managed by employees of the State of Missouri, whether by the Missouri Department of Conservation, the Missouri Department of Natural Resources, or by a joint venture between the two. There are examples of similar legislation to keep the park open such as the Washington monument in Washington, DC, and examples from the State of Utah where state employees managed federally owned lands during the shutdown. Similar legislation should be passed, not only to protect the rights of the people, but so that the economy of our region is not further diminished by the actions of the Federal government.

Legislation to protect activities in and along the ONSR. If it were the intention of those who lobbied to create the Ozark National Scenic Riverways to establish a park where there are no recreational activities allowed, then it would have been set forth to create a park designed to limit visitor activities, focus only on wildlife and fish and plants and other living inhabitants of the ONSR, besides humans, and create a park, for the knowledge that someone in St. Louis can strong-arm the National Park Service into shutting down access to this region so they feel comfort in the solitude of the plants and animals here. However, they did not. It was meant, by Secretary Udall, Congressman Ichord, and author Leonard Hall, to have a recreational area-one where people can enjoy the resources, both historical from human habitation as well as natural.

Wild and Scenic Rivers Act of 1968. In accordance with the following statement taken directly from [rivers.gov](http://rivers.gov), the government interpretation encourages use of input from the visitors and resource users from the area near the ONSR and encourages the general management plan to more greatly consider the enabling legislation:

Regardless of classification, each river in the National System is administered with the

goal of protecting and enhancing the values that caused it to be designated, Designation neither prohibits development nor gives the federal government control over private property. Recreation, agricultural practices, residential development, and other uses may continue. Protection of the river is provided through voluntary stewardship by landowners and river users and through regulation and programs of federal, state, local, or tribal governments.

Points from the Plan Draft:

Management of "degradation of water resources in the National Riverways from land-based recreation would continue to be managed on a site-by-site, case-by-case basis."

It is clearly stated on page 242 of the GMP, "When the likely effects of the no-action alternative are added to the effects of the past, present, and reasonably foreseeable future actions, there would be a long-term, moderate, adverse, regional cumulative impact on soils and geologic resources. The "no-action alternative would contribute to an appreciable, long-term, adverse increment to the cumulative effect." In summary, by managing in the present status, the natural resources would be detrimentally affected, which could impact the region for a fairly long time. This statement is based on skewed data, used only by the NPS to shut-off access and use of the resource to make the management of this park closer to the idea of preservationist propaganda. Based on the fact that data gathered and used for the park service studies and results are skewed, thus, null and void the premise that these resources need to be shut-off is also null and void.

Equestrian pursuits mentioned on pages 252, 253. Studies that have tried to prove adverse effects to the environment from equestrian pursuits have been both skewed and shown to be invalid.

Municipal wastewater discharges on page 253. The City of Eminence is currently in compliance with State and Federal agencies. They have recently completed a community public water project. The city is proactively pursuing keeping the river clean through proper management of the city water and sewer system. "'Keeping our rivers clean" is part of the motto of the city water projects.

Vegetation on page 263- 264. Vegetation along undesignated roads and trails is not trampled in such a manner as to disturb the plant life in any significant way. It is clear by visiting a road or a trail to see these recreational activities taking place on them do not, in any way, shape, or form, disturb the ecology nor cause detrimental environmental impact so as to substantiate placing it in this document.

Wildlife & Fish on page 276. Some claims are made in this section which related river crossings, jet-boats, undesignated roads and trails, and "motorboat-based petroleum pollutants" as causing "water quality degradation and having adverse effects on aquatic habitat. As discussed earlier, studies and data related to pollution have been proven to be skewed and incorrect as far as land-based recreation is concerned. In relation to jet boats "California Standards" apply to the jet boats, which places minute parts per million of pollutants into the water. There were no studies proving that the jet boats had a detrimental effect on the rivers nor the fish nor wildlife. Erosion does not happen from boats, but from the floods that occur naturally. So if it were proven that detrimental effects to the water quality does not happen due to these activities, it should be safe to say that recreational activities within the ONSR do not degrade the aquatic habitat.

Ozark Hellbender. As discussed by a National Geographic study recently published online through the Smithsonian Institute, "Snot Otters Slipping Away", ambient temperature of the water affects reproductive cycle of the Hellbender. This should be attributed to the increase in the ambient temperature of the air and the importance of environmental factors from other parts of the country, as the water and lands in this part of the Ozarks are well cared for. Another attributable factor is the increased number of bass in the river eating the young Hellbenders, which substantiates furthering the unregulated use of jet boat on the riverways, which would allow continued traditional fishing patterns.

280 1st paragraph, discussion on human interaction with plants and animals. The impact of humans to the ONSR is negligible in this discussion as humans have, for at least a few thousand years, been

involved in the environment of the Current and Jacks Fork Rivers, and should continue to be allowed to be a part of the resources here.

Cultural Resources discussion on page 307. Interestingly enough, cultural resources, as it relates to those with long-time connections to the land and water, in addition to those whom have acquired a connection to the land and water through their interest in History, Anthropology, the Sciences, or Socio-Environmental studies, refer to any number of old homeplaces, remnants of structures, former community hubs, schoolhouses, campsites, name-places on the rivers and streams - even when someone has an unique experience at one of these locations without a prior knowledge of the location can inspire this connection - and natural wonders associated with the culture. It is tradition through Native American and European cultures to visit ancestrally connected locations, in fact it appears in several cultures besides the two mention (but these two are relevant for this discussion). The simplest notion of visiting the location where a baby in the family died and was buried on an old farm can represent this connection to the land.

It has been said that this dirt and these waters run through the veins of the people with this connection to the water and land, and so it is impossible to truly separate them from this area. Which, in the process of limiting access and use to any point through the Ozark National Scenic Riverways, it is in fact degrading, discounting, and providing a detrimental effect to the local and regional culture. Although it may also be said that people come from every state in the United States to visit their ancestral homelands here in the ONSR.

To select areas to shut off access and use, to limit regardless of handicap, ability, age, socioeconomic level, or connection to influential public officials, is to commit the highest form of an act of discrimination - essentially, this is denial of access to one's heritage and culture.

Historic Buildings and Structures discussion on pages 313- 316. It should be the duty of the National Park Service to maintain, catalog, interpret, and provide public Information about the culture, history, historic structures, and other parts of life in the past and present in the Ozark National Scenic Riverways. Historic structures should not be limited to those whom are not disabled, very young, or elderly. Present accommodations for travel to historic structures and locations should, in fact, be increased and accessibility be better maintained, it is impossible to consider making changes to the current management patterns of the historic structures as it is proposed in the General Management plan when it is purported by ONSR staff that there is not sufficient funding to sustain the existing structures, interpretive programs, and cultural activities that are currently needed.

Ethnographic Impact on pages 322-324. It is presumed that when stating Ethnography, it is not necessarily referring to the culture, biology, social branches of anthropological study of a group in the past -tense. In fact, in the case of the study, understanding, and interpretation of ethnography for the Ozark National Scenic Riverways, the ethnography of the group about which they study and promote, is the same group it has sought for many years to dose off cultural, social, and literally biologically connected sites along the Current and Jacks Fork Rivers. In fact, it should be taken into consideration when mentioning protecting the rights of Native Americans to access and to use their tribal lands, that most of the families which settled and lived along the Current and Jacks Fork Rivers had Native American ancestry, many times very recent. Most of the residents were of the Cherokee Tribe, however there were many other tribes represented in that group -as prevalent as this topic is, it should be noted that ancestral access to the regions Native American population should not be shut off, bottled up, and held for only a few to view, study, and ponder.

Wilderness designation recommendation - fiscal responsibility. It is a travesty that the National Park Service has actually spent the insurmountable amount of money they have on the General Management Plan process when this could have been so easily addressed with the Advisory/Oversight Committee as mentioned above, in this case, specifically in relation to the Wilderness Study. It is prevalent, even from the presentation provided by the ONSR during the comment period public forum discussions, that it is not and will not be foreseeably possible for a Wilderness designation to be obtained for any section of the Current and Jacks Fork Rivers watersheds due to the process involved to establish such a

designation. Considering the budgetary cuts to providing services and offering proper number of staff for recreational activities within the: ONSR, this money should have been more responsibly managed.

Chambers take on the economy and how the ONSR impacts it. The Ozark National Scenic Riverways has had a mixed review of impact on the counties it is located in. Rather than bringing up historical impacts the NPS had on the resident population of these counties, let's discuss current impact in relation to the impact from recent history. Shannon County, the second largest in acreage in the State of Missouri, is the poorest county per-capita in the entire state. Shannon County is traditionally the county in the state with the fewest resources and is highly isolated, in terms of economics, travel patterns, communication, representation in the government, and education. The county has a majority of the land owned by the LAD Foundation, the State of Missouri, and the US Government. This negatively impacts education, public services, government representation, resident population, job opportunities, and the economy. In-lieu-of-tax payments are substandard and are in no way comparable to what should be paid to the Shannon County government and to our schools. Jobs, that upon the establishment of the ONSR, were explained would be given to locals have been outsourced, whether to Canada for camping reservations, residents of other counties in order to substantiate an impact on a region for payroll, rather than the counties in which the ONSR resides, or that locals are not to be hired because of the idea that Federal employees should not work in career jobs for a Park Service managed property. In being a community member, the Ozark National Scenic Riverways is lacking in several aspects, including consideration for publicity and now negative public statements affect the economy negatively, how giving unwarranted citations to park visitors sends tourist dollars away from this area, dollars that are vital to the economy, or when rules and regulations are whimsically applied to appease the section of environmentalists from St. Louis County that have the ear of the Park Service administration in Van Buren and Omaha.

Positive impacts upon the local population are created when visitors have a good experience in the ONSR and do not have to battle superfluous regulations, combative government employees, and ease of access to the resources, both natural and cultural, and use of the resource as traditionally experienced. This process does happen, but we can make the experience even more productive and fruitful for the visitors of the Current and Jacks Fork Rivers' watersheds by truly enhancing the visitor experience. The tourist economy is vital to Shannon County, since the land for which productive use for economic activities is owned by the aforementioned entities. Tourism is vital to the economy for many reasons, it not only brings income into the county, but also helps to increase the services of the residents of the county as the tourist need access to those various services as well. Tourists are not only from throughout the nation, but we have local and regional residents that we might consider in the tourist category, this is a definite impact on the economy.

It cannot be overstated how important tourism is to the economy of Shannon County and it should be the duty of the National Park Service to work with our county to improve tourism in this region, rather than to squash and starve the resident population with superfluous rules and regulations.

Plan B Commentary. On page ii of the NPS Summary of Key Concepts for the ONSR General Management plan, Alternative B (which is the Park Service preferred plan) is described that it will "enhance opportunities for visitors to discover and learn about the natural wonders and Ozark heritage of the National riverways, while maintaining a mix of traditional recreational and commercial activities." We beg to differ on the idea this plan will enhance activities and provide for traditional recreational experiences in many ways. To begin with, there is nothing to be gained from zoning areas and closing off use and limiting use for the traveler, except to enhance the notion that a limited number of people can access the riverways. Additionally, the concept of traditional use is obviously a vision the National Park Service does not share with those whom participate in the traditional recreational activities, because the agency has continually sought to limit access, use, and participation in the riverways, whether because of preservationist doctrine, lack of funding, appeal to particular interest groups, or to make it easier for them to manage fewer people with fewer resources. It is however, not the purpose of the National Park Service management of the Ozark National Scenic Riverways to limit access and use to cultural and natural resources, nor should it be their goal to limit the economic resources available to the resident population,

People, after reading, reviewing, attending public comment forums, and speaking with NPS personnel about the GMP draft, Question how the NPS can afford to build and maintain a new learning center and other costly proposals in the plan which would require expenditures above what is publicized cannot be afford to be spent to pay for current staff and maintenance.

#### Summary and Conclusion.

Through the discussion of the benefits of using more public input from the actual users, visitors, 0100 residents of the neighboring area, it should be plain to understand the ONSR should make changes, but in a much different manner than is proposed in any of the GMP Alternatives. Even the plan of "No Action" does not address the proper concerns enough; it is however, recommended the National Park Service mandate the use of the "No Action" plan alternative until it is evident more practical and useful changes are made to the alternatives as present ed. One way to best understand a method that would steer the organization in the right direction is the establishment of an Advisory/Oversight Committee spelled out above. This could certainly alleviate some of the concerns all stakeholders have.

One very peculiar topic of concern is that of overcrowding along the rivers. To establish a blanket policy across the ONSR to limit activities, access, recreation, and the desire to return to this riverways because of overcrowding along the rivers that occurs a few days a year is utterly and unmistakably a point that proves an oversight committee needs to be established. There are many points along the riverways where people can travel even when there is overcrowding in certain sections of the river where solitude and serenity may be found. Similar to the management of the roads and highways of this nation, it is not their policy to close down sections of the sections of roads most highly used, it is their practice to improve access, resources, and availability for those who wish to travel to be unimpeded. We are in no way suggesting support for environmental degradation due to an overabundance of humans, but at this time there are no worries of this happening. The basic concept to comprehend here is that through a little better management of resources, improved access points, additional bathrooms, better services, many of these concerns can be addressed.

Addressing concerns should, additionally, not be just those concerns of particular interest groups with money, ready access to education and to other resources, such as those environmental groups which desire to shut off access to our cultural heritage-concerns should be addressed for those that actually use the riverways, quite literally assist in the cleanup of the system, protect the environment by individual actions and group actions, and have a year-long interest in the subject, not just those who find interest in this when an email is sent out from an organization with paid staff, lawyers on retainer, and a desire to further limit an entire group of people's rights.

Each topic of discussion here should lead the reader to better understand the necessity of a flagship management program to enhance visitor experiences. Expansion of access and use to create a positive visitor experience is integral to the economy of this region, but commerce is also how the government receives their funding. To limit and to chain commerce to a point where it is not possible by the government is a self-defeating purpose. We request the Secretary of Interior to cease and desist discriminatory practices against the people in and around the Ozark National Scenic Riverways. And we ask to have more and better access to the resources, more reasonable local input placed into the management of the Ozark National Scenic Riverways, assistance with legislation to protect the true needs of the users of the ONSR, to follow the intended use of the ONSR in accordance with the enabling legislation, to implement a plan to keep the park open during another government shutdown, and to institute an Advisory/Oversight Committee formed in similar fashion as the enabling legislation entails but with more powers to ensure decisions by the committee make an impact.

Eminence Area Chamber of Commerce Board of Directors and undersigned supporters.

**Correspondence Type:** Letter

**Correspondence:** Dear Michael,

First and foremost, I want to thank you and your staff for releasing a General Management Plan that offers substantial improvements in protections for the Ozark National Scenic Riverways. I just submitted our organization's official comment on the plan and I'm looking forward to the public hearings in early January. I'm writing today as the official representative of Environment Missouri and Environment Missouri Research and Policy Center to request that you do not extend the public comment period for the draft GMP past February 7th, 2014.

We agree that pushing the public hearings into January was a prudent move given the weather in Southeastern Missouri earlier this month, and we think it entirely reasonable that the comment period be extended for a month after the public hearings to give individuals and groups the chance to thoroughly develop and articulate their thoughts on the GMP.

However, it has come to our attention that organizations and individuals, all of whom appear to be in complete opposition to a management plan of any sort, are agitating for a further extension in the comment period.

We believe that this is just a stalling tactic and that those who are asking for the extension are merely seeking more time in which to figure out how to delay, hinder or derail the GMP process. This is a blatant subversion of the rationale behind public comment periods and shows complete disrespect and disregard of the National Park Service's mission to protect and preserve the places that make America so special. For the sake of the park, and all Americans who believe in the great work that you do, please refuse any requests for further extensions of the comment period.

Sincerely and with great appreciation,

Stuart P. Keating  
State Advocate  
Environment Missouri

**Correspondence:** Dear Director Jarvis:

Regarding the proposed General Management Plan (GMP) of the Ozark National Scenic Riverways (ONSR), we have concerns that the National Park Service has not taken into great enough account the input from directly impacted citizens who live, use, and work along the Riverways.

Our goal is to provide citizens with a variety of recreational opportunities while continuing to preserve and protect the economic, natural, and cultural resources of the ONSR for future generations. The current proposals under the new GMP do not address our primary concern:

Tourism is one of the most critical components of our rural economy and the ONSR is the primary attraction. Thousands of out-of-state as well as in-state hikers, campers, boaters, hunters, fishermen and horseback riders visit this area annually and bring many irreplaceable dollars when they come. Any further limitations on the access to these assets would severely impact this local economy.

While our legislative delegation agrees we need to protect the ONSR, we must not overlook our citizens' heritage

and livelihood. We were disappointed that your initial review period had only two open houses for citizens to give their input. Only one of those meetings is located in the region; the other was in St. Louis, which is 150 miles away.

Providing directly impacted citizens with an opportunity to have input on this critical issue is essential for the success and future management of the ONSR. The economic and cultural importance of the ONSR to families and small businesses in Missouri will be threatened if the "NPS Preferred Alternative" is implemented. It appears that the goal of this plan is to shutdown public access points to the rivers, eliminate motorized boat traffic from certain areas, further restrict boat motor horsepower in other areas, close several gravel bars, and propose additional areas to be designated as federal wilderness. We are adamantly opposed to all of these proposals, as are our constituents and business owners.

We support the "No-Action Alternative" to the current operating system. The ONSR value to the region is unparalleled. Do not adopt a GMP that is contrary to our wishes, those of our constituents, and the other folks who depend on access to the Riverways and cannot operate with additional government regulations. In our opinion, the ONSR is already over-managed with burdensome federal regulations. The Riverways support a vibrant and growing tourism industry that is critical to our region and state. We will continue to strongly advocate against further encroachment by the National Park Service limiting our citizens' access to public lands.

As you continue with the process, we hope you will consider our comments and those of the directly impacted citizens who will be affected by your actions.

Kindest regards,  
Holly Rehder  
State Representative  
District 148

<b>Received:</b>	Nov,08,2013 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Mr. Reynolds:				

Thank you for your presentation on Nov. 6 regarding the proposed General Management Plan of the Ozark National Scenic Riverways.

Our goal is to provide citizens with a variety of recreational opportunities while continuing to preserve and protect the economic, natural and cultural resources of the Ozark National Scenic Riverways for future generations. We believe that more public input is needed. The current proposals under the new General Management Plan do not address our primary concern:

The Ozark National Scenic Riverways is vital to the continuing success of our local communities and economies. Tourism and economic development are essential to the future success of this treasure. Thousands make their way to this area to enjoy recreational activities, including boating, horseback riding, sightseeing and camping. Limiting, or even banning, some of these activities would be devastating to our communities that depend on these tourism dollars that support their schools and sorely needed jobs for their citizens.

While our legislative delegation representing the Ozark National Scenic Riverways agrees we need to protect this area, we must not overlook our citizens' heritage and livelihood. Following your presentation, we determined two public meetings are not enough for the National Park Service to realize the overall impact regarding any changes to a new General Management Plan would have on our region. Providing only two locations for public meetings does not give citizens enough time to provide their valuable comments on the draft plan by Jan. 8, 2014.

Additional meetings are needed at Salem, Eminence and Poplar Bluff, thus providing directly impacted citizens with an opportunity to have input. The locations selected in our region for your open houses will be at no cost to you.

Respectfully submitted,

Senator Doug Libla

Senator Mike Cumminigham

Representative Robert Ross

Representative Paul Fistzwater

Representative Todd Richardson

Representative Stephen Cookson

**Correspondence Type:** Letter  
**Correspondence:**

Dear Director Jarvis,

I am deeply concerned with and disturbed by the "Draft General Management Plan" that was released Friday, November 8th, for the Ozark National Scenic Riverways ("ONSR"). Among other things, it appears that the goal of this plan is to shutdown public access points to the rivers, eliminate motorized boat traffic from certain areas, further restrict boat motor horsepower in other areas, close several gravel bars, and propose additional areas to be designated as federal wilderness. Mr. Director, I feel the need to personally, and formally, inform you that I am adamantly opposed to all of these proposals on behalf of my constituents and their local businesses.

Since its creation in 1964 as a demonstration park for the "Wild and Scenic Riverways" program the Ozark National Scenic Riverways has been a premier destination for tourists from Missouri, the United States, and even foreign countries. An economy has arisen locally from accommodating these visitors with food, lodging, and entertainment; including canoeing, horseback riding, and camping.

Traditionally, local individuals and businesses have been allowed to guide these tourists through the park, and provide them with valuable services. These folks are the backbone of our local economy. Further restricting access to the park, and possibly closing up to 90% of the public access points, is an extreme measure that looks punitive in nature. Preventing the use of motors on boats in certain areas, and limiting their power in others, will damage a local economy that is already the victim of burdensome federal regulations. The Draconian land use policies associated with Wilderness Areas are unwelcome additions to a Park that is well functioning and beloved by those of us who grew up here.

Your Park Service's attempts to restrict the public use of the park and threaten private landowner's property rights are well documented and have been at the forefront of this, my first term in Congress. They started with your Park Service's involvement with the National "Blueways" System and the (now defunct) designation of the "White River National Blueway," continued with the sudden requirement for a permit to perform a baptism, solidified with the ONSR's punitive preclusion policies during the shutdown, and are now popping up again with this draft General Management Plan.

In January of this year fourteen of the thirty counties in my district were included in the Blueways designation without having ever been contacted, and with no public meetings or information provided to them. As reprehensible as doing something like that was without public notice in the affected areas, even worse were some of the proposals in the plan itself that would have infringed on the property rights of area landowners. The Blueways plan called for the creation of 180' wide "buffer zones" that would have prevented farmers from using their land to graze and water cattle, and also for the acquisition of hundreds of thousands of acres of private property.

When local folks found out what was in the Blueways' program they were rightfully outraged. Why would the Park Service sign on to a proposal to take away private landowner's rights without even holding a public meeting?

In relation to the oversight of the Blueways program conducted by the House Natural Resources Committee, of which I am a member, I had the opportunity to discuss the White River National Blueway with Secretary Jewell in an open and public Congressional Hearing. At the end of our discussion, on July 17th, I expressed concerns about an upcoming General Management Plan for the Ozark National Scenic Riverways. Specifically, I informed the Secretary that I would not support any plan that limits access points, closes trails, lowers boat motor horsepower limits, bans motors on parts of the river where they are currently allowed, or proposes new wilderness areas. I realize that this administration has made it a habit of ignoring the wishes of Congress, but I would have hoped that at the very least when changes of this magnitude are proposed in a particular part of the country, in a specific congressional district, that the member's wishes would have at least warranted a response. I see now that my expectations were too high.

I spoke with you on October 16th in an open and public hearing about the sudden requirement in the Ozark National Scenic Riverways that churches wishing to perform baptisms must obtain permits. As I mentioned, the idea that individuals can party on the river, can swim in the river, can float the river, or perform any other lawful activity in the river without a permit but baptisms would require federal approval- is insane. I am troubled that the same Park Service that would seek to require permits for baptisms is now proposing a new General Management plan while ignoring the public comments that I made to Secretary Jewell.

During the Obama Administration's government shutdown, your Park Service refused to allow the Missouri Department of Conservation to open the Ozark National Scenic Riverways to the public, free of charge to the Federal Government. That land that now composes the park used to contain two state parks, and the state gave that land to the Federal Government with the hope that it would be preserved and protected for public use. Mr. Director, it was within your purview to allow the State to open the park back up; you chose not to. I wonder what the true intent of this new general management plan is, when your organization would choose to close a National Park to the public, when there were viable alternative options to keep it open.\

Mr. Director, you may be making these decisions to close public lands to make a political statement, or to appease radical environmentalists who believe that the whole park should be unusable, inaccessible "Wilderness" areas, but the people you are hurting are regular folks.

My district is under assault. We rely on manufacturing, agriculture, mining and tourism. The Obama administration

has proposed new regulations that would prevent children from working on family farms, close the only domestic lead smelter left in the United States and raise . the cost of electricity. Price raises on electricity in particular would put out of business many small manufacturers, and would be devastating to many of my constituents on a fixed income. The only clear objective that the Obama Administration appears to be meeting is shutting down business in rural America, and in particular my district.

Mr. Director, you have a chance to be a part of the solution for my district, not the problem. The Ozark National Scenic Riverways is priceless, its value to my district and our area is unparalleled, and the jobs and economic activity that the park facilitates are irreplaceable. Don't allow your department to adopt a General Management Plan that is contrary to the wishes of myself, my constituents, and the other folks who want to be able to access the River.

As we move forward with the process of considering this General Management Plan, I hope you will consider my comments, and also the many other public comments from concerned land and business owners in the district.

Sincerely  
Jason Smith  
Member of Congress

**Correspondence:** Dear Mr. Jarvis:

I understand that the Ozark National Scenic Riverways (National Park Service) seeks to dramatically curtail the way we enjoy the Current and Jacks Fork Rivers in Missouri. I understand there is a 20 year plan which will place restrictions that will lessen recreational opportunities and cause economic hardships on the communities in and around the two rivers, including:

- â€ Eliminate 65 miles of horse trails adjacent to the rivers
- â€ Eliminate unauthorized river crossings
- â€ Require permits for horseback riding
- â€ Eliminate motor vehicle access to gravel bars

I have been taking my children and horses to Eminence, MO to the Cross Country Trail Ride for 15 years. It's our family vacation. We enjoy trail riding along the rivers, swimming and floating in the rivers and camping along the rivers.

Please do not take away the opportunities for Missourians to enjoy our rivers. It's becoming harder and harder to find places to enjoy our horses in a family setting and the Jack's Fork River in Missouri is our favorite place to combine our passion of horses, riding, family, camping, swimming and floating.

If you 'd like to speak to me by phone, my day time phone is (573) 886-4391 and evenings is (573) 875-5479.

Sincerely,

Melinda Bobbitt

<b>Received:</b>	Dec,23,2013 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Interior Secretary Jewell:				

I am writing regarding the Ozark National Scenic Riverways General Management Plan Draft (ONSr). I am requesting that serious consideration be given to extending the comment period for an additional 90 days to allow for proper response from our citizens and elected officials. Due to the comment period falling during the Christmas season, hunting season, and inclement weather conditions the comment period should be extended to fully accommodate interested parties in our region.

I feel as though this plan could have significant impact on the rights of the public to access and to use the ONSR and its waterways, which has prompted me to ask for further time for review of this expansive document.

These are all legal matters that should be given time for the public to review and to properly comment on. Considering the time it took to create the document draft, it seems that it would be in the best interest of the public to extend the time to review this and follow proper comment procedures as requested by the NPS.

Grace and Peace

State Representative Jeff Pogue  
District 143

<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Acting Superintendent Runge.				

In light of the historic cold weather, snowfall, and ice impacting Missouri. we ask you to postpone the meetings scheduled this week for public comment on the "Draft General Management Plan" for the Ozark National Scenic Riverways. Our constituents should have an opportunity to make their voices heard. However, with dangerous 'road conditions and sub-zero temperatures, safety is a real issue,

It is our understanding from discussions with the Omaha office of the National Park Service that it is within your sole discretion to postpone these meetings. Please exercise this discretion, and postpone these meetings until a point in the future at which they can be attended safely.

Sincerely,

Jason Smith  
Roy Blunt  
Clair McCaskill  
Ann Wagner

**Correspondence Type:** Letter  
**Correspondence:** I am writing in response to the National Park Service, Ozark National Scenic Riverways Draft General Management Plan.

I do not support the NPS preferred alternative, Alternative B. I feel this restricts locals/year round residents use and ability to access and enjoy the river ways as families have for generations.

Some examples of the unnecessary restrictions include:

" National Park Service wants to restrict an activity primarily partaken by the local resident. They are doing this by restricting motorized use of 34% river year round and an additional 14% during the summer time. That is 48% of the river basically closed to the locals during the peak season. Yet they didn't restrict nonmotorized visitor (tourist) at all, in fact all areas of the river are open year round.

" They want to close "about" 10 miles of roads primarily used by locals and turn them into "hiking trails". I pity the handicapped or the aged local population.

" It closes an untold amount of access to the river. I am sure those accesses are primarily used by local residents.

" They also want to close "approximately" 65 miles of horse trails. The local equestrian population and the economy will suffer as a result of this.

" It eliminates traditional camping. It requires that campers only camp in designated areas. So you wouldn't be able to just pick a gravel bar and set up a tent for the night. Also, all designated campsites have a fee.

I feel the no action alternative is the best course of action.

" It treats all visitors: local, floater, hiker, and equestrian alike. It gives them equal access.

" It doesn't restrict motor boats to nearly 50% of the river during peak times, while it gives floaters 100% access anytime.\

" It doesn't turn traditional local roads to "hiking trails", yet hikers could still hike if they chose to.

" It also doesn't eliminate traditional camping, where you can float, boat, hike, or ride until you find a place to camp for the night.

I feel that the National Park Service has unrealistic ideas that they can create a silent area of the river where there are no unnatural sounds. They must think that visitors aren't going to talk, cough, breath, launch or exit their craft, touch the water with anything, or even move. They, also, must not take into account the highways and county roads in the area and the vehicle sounds that emit from normal travel. I feel that the National Park Service and any visitor, which thinks they can have a completely silent visit, are completely out of their minds.

Thank you,  
Justin D. Tyler

**Correspondence Type:** Letter  
**Correspondence:** Secretary Jewell:  
I write to urge you to return the Ozark National Scenic Riverways to the State of Missouri. This issue is of great

importance to me as a senator representing the 33rd Senatorial District and those people whose lives are affected by the riverways. The State of Missouri has the number one Conservation Department in the United States. Superintendent Black and his staff do their best to operate the park with their limited fund and staff. I know the Missouri Department of Conservation and our Missouri Department of Natural Resources, State Parks Division is in a much better position to maintain and operate the area.

I also feel that they are in a better position to consider with the needs of the local people and better understand the economy of one of the poorest areas of our great state.

In 1959, Senate Resolution No. 33 and House Resolution No. 19 recognized the importance of the extraordinary manifestations of nature and recreational attributes of the Current and Eleven Point riverways. Because of this, Missouri requested that Congress enact legislation to preserve the natural resources and provide recreational development and other improvements for the public's use.

After the resolutions were enacted in 1964, the use of the riverways, in accordance with the resolutions, resulted in tourism and trade dollars for this area along with tourism-and recreational -based jobs.

Currently, the Ozark National Scenic Riverways is operating under the General Management Plan. The General Management Plan allows opportunities for recreational use, managerial methodology for access, and development designed to successfully achieve the national riverways' purpose. However, the National Park Service is currently proposing a new management plan and urging the adoption of the "Preferred Alternative" management plan. Under the "Preferred Alternative" plan, riverways' access points would be restricted, citizens' abilities to use motorboats would be further restricted, and the Ozark National Scenic Riverways would no longer be using the land for its intended purpose.

Due to the course of action the National Park Service is taking, I urge you to return the lands granted to form the Ozark National Scenic Riverways back to the Missouri Department of Conservation and ultimately the state of Missouri.

Sincerely,  
Mike Cunningham  
State Senator  
District 33

<b>Correspondence ID:</b>	3090	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,05,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				

**Correspondence:** In 1967, my father took me on a canoeing and camping trip to the Upper Current River. I caught my first rainbow trout near Welch Spring at the age of 5. I fell in love with the Ozark National Scenic Riverways (ONSR) on that trip and have been going back multiple times every year since then (I am now 51 years old).

My love stems from the natural beauty, clear spring-fed streams and the extraordinary user experiences I have enjoyed there, BECAUSE the ONSR is governed by the National Park Service (NPS). No other rivers in our state command such reverence.

As the heated debate over how the ONSR will be managed in the future as set forth by the upcoming General Management Plan (GMP), I am compelled to point out a few things that seem to be lost in all the recent rhetoric.

When the ONSR was established in 1964, the clock began ticking on the Federal management and protection of this natural resource. As quoted in the NPS Criteria for New National Parks guide, "The National Park Service is responsible for managing areas to provide for public enjoyment in such a way that will leave resources 'unimpaired for the enjoyment of future generations.'"

No one, not even those who support a No Action Plan, can claim this amazing natural treasure is the same today as it was when the ONSR was originally established. No need to go into all of the science, statistics and data ... it's all

there and those at the tip of the arrowhead at ONSR and Regional Management are deeply aware.

Suffice to say, the ONSR has been greatly impaired over the past 50 years. As such, the NPS has violated its own criteria upon which the ONSR was originally established. No direct finger pointing here as this degradation has metastasized like a slow-moving cancer over many years.

Sure things change, and that's precisely why action plans need to be put into place to manage the changing conditions. The 1984 GMP took aim at and essentially hit the target on how the ONSR was to be managed until now. And just as updates were needed in 1984, so too are changes warranted in 2014 ... different time, different streams and 134 miles of formerly pristine riverways that are begging for an intervention. To submit to a No Action Plan for the GMP is pure and utter folly.

As a lifelong supporter and park-goer at ONSR, I am in favor of Alternative B as it provides the most balanced plan for all park visitors.

Lest it be known, I fell (and remain) so much in love with the ONSR that I chose to marry her many years ago ... translation, I am a single, never-been-married, childless man who has set up a "Gift-By-Will" specifically designating the ONSR as the sole beneficiary of my estate.

I am also so passionate about resolving the misunderstandings and deeply rooted resentment for the NPS by local land-rights citizens that I have brought forth a solution to NPS officials from Van Buren to Washington DC ... the solution is in the form of a summer camp to educate school children (especially in local Missouri 8th District schools) about the unique history, culture and ecosystem of the ONSR region.

The camp (originally known as Camp Current River) was validated under former NPS Director, Mary Bomar, but never came to fruition due to budget constraints. The camp was originally designed to be established (very sentimentally) where I caught my first rainbow trout at Welch Lodge on the banks of the Upper Current River.

The purpose and logic of the camp is simple: unless and until future generations understand and appreciate why this area has earned the title of National Scenic Riverways, the resentment will linger and the ONSR superintendent at the post in 2034 will find him/herself fighting these same battles when the next GMP is drafted.

The merit of Camp Current River remains near and dear to my heart; however, I am watching and waiting to see what happens with the GMP and to my ONSR ... and yes, I chose the pronoun "my" on purpose. I own this park along with every tax-paying citizen in the United States. To that end and to uphold the core values of the National Park Service itself, I implore you to support Alternative B in the Ozark National Scenic Riverways General Management Plan.

Best,  
Keith Kohler

<b>Correspondence ID:</b>	3091	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Feb,10,2014 00:00:00				
<b>Correspondence Type:</b>	Letter				
<b>Correspondence:</b>	Dear Mr. Black:				

Since the establishment of the Ozark National Scenic Riverways (ONSr), citizens from across the state have had the opportunity to experience the rich natural treasures that span the 134 miles in the Ozarks region. Thirty years ago the first General Management Plan (GMP) standards were set to preserve the ONSR for future generations. Today, many believe the National Park Service (NPS) fell short in administering the 1984 GMP.

In 2009, the Missouri Department of Conservation (MDC) wrote the ONSR to express opposition to the preliminary alternatives as either too restrictive or permissive for practical management considerations. A "No Action" GMP alternative was ultimately recommended.

Recently I was informed that MDC's position on the GMP remains the same. In submitted comments, MDC has

committed to work closely with ONSR to administer a GMP that will provide sustainable and practical management for future generations. MDC has suggested developing a working group to maintain a dialogue on protecting and enhancing the interests of the ONSR. Stakeholders throughout the region have also expressed interest in this proposal to my staff repeatedly during the ONSR GMP hearings. The ONSR cannot overlook what MDC can provide as one of our nation's most highly respected state conservation agencies.

I know that ONSR has received input from individuals with many differing opinions on the GMP preferred alternative, many from well-organized networks. Even more community-based groups like the Eminence Chamber of Commerce and Ozark Heritage Project have worked extensively to assist local citizens with less technical capabilities to compile suggestions to share for consideration. I hope you agree that anyone with concerns about the treasures of the ONSR should have a right to submit comments on this important matter.

Like many Missourians, I have reservations about the ONSR GMP preferred alternative B, especially with the significant increase in funding required. I plan to continue to seek guidance from Moe in the near future to discuss various conservation issues and concerns the agency has about the GMP. I look forward to being kept apprised on the progress of the GMP and other plans to enhance the ONSR for future generations.

Sincere regards,  
Senator Roy Blunt

**Correspondence Type:** Petition  
**Correspondence:** Dear National Park Service,

The Current and Jacks Fork rivers, which make up the Ozark National Scenic Riverways, are Missouri's river jewels. More than 1.3 million people visit each year to hike, float, fish, and swim amid some of Missouri's most stunning natural scenery.

But the Current is threatened by illegal and unauthorized vehicle access, deteriorating water quality and torn-up trails. Last year, the Current was named one of the nation's 10 most endangered rivers.

As the Park Service now updates the General Management Plan for the park, I urge you to adopt a strong, forward-looking plan that will protect the Current for the next 20 years.

**Correspondence:** Dear Superintendent Black,

I'm writing to express my vigorous support for a revised management plan for the ONSR that places far stronger restrictions on the use of motorized vehicles and boats, as well as horseback riding. As a dedicated fisherman, canoeist and camper, I regularly make the roughly 2½ hour journey from my home in Springfield to the ONSR to take advantage of the beauty and natural resources of this unique park. There is nothing even remotely similar to it in the Springfield area. Over the years I've increasingly noticed the environmental degradation resulting from ATV use and horseback riding. In fact, one night while camped on a gravel bar on the Current River I was awoken past midnight by the roar of a group of several ATVs! The ONSR is too valuable a resource to Missouri and the nation for this abuse to continue. I know that some members of Congress have suggested that the local community would suffer from the National Park Service's proposed new management plan, but I fish on the Current River roughly fifteen days per year and on each trip I patronize local merchants, including gas stations, restaurants, sporting goods stores and canoe rental companies. Over the years my family and I have probably spent thousands of dollars in Houston, Jadwin, Eminence and other local towns. If the decline of this park continues I will feel obligated to seek out other sites for my outdoor recreation, including the Buffalo River in Arkansas, which seems (from what I can tell) to be more tightly regulated than ONSR. In sum, I feel it would be extremely short-sighted to allow the continued degradation of the ONSR simply to placate a few local businesses who wish to exploit the park for their

own profit regardless of the long-term consequences.

Best,  
Gabriel Ondetti
