

## Public Comments on the Ozark National Scenic Riverways Draft GMP/EIS

**Correspondence ID:** 1    **Project:** 15793    **Document:** 56208  
**Received:** Nov,08,2013 10:25:04  
**Correspondence Type:** Web Form  
**Correspondence:** I am writing in response to the Ozark National Scenic Riverways Draft General Management Plan.

I do not support the NPS preferred alternative, Alternative B. I feel this restricts locals/year round residents use and ability to access and enjoy the river ways as families have for generations.  
Some examples of the unnecessary restrictions include:

\*National Park Service wants to restrict an activity primarily partaken by the local resident. They are doing this by restricting motorized use of 34% rver year round and an additional 14% dring the summer time. That is 48% o the river basically closed to the locals during the peak season. Yet they didnt restrict nonmotorized visitor (tourist) at all, in fact all areas of the river are open year round.

\*They want to close about 10 miles of roads primarily used by locals, and turn them into hiking trails. I pity the handicapped or the aged local population.

\*It closes an untold amount of access to the river. I am sure those accesses are primarily used by local residents.

\*They also want to close approximately 65 miles of horse trails. The local equestrian population and the economy will suffer as a result of this.

\*It eliminates traditional camping. It requires that campers only camp in designated areas. So you wouldnt be able to able to just pick a gravel bar and set up a tent for the night. Also all designated campsites have a fee.

I feel the no action alternative is the best course of action.

\*It treats all visitors; local, floater, hiker, and equestrian alike. It gives them equal access.

\*It doesnt restrict motor boats to nearly 50% o the river during peak times, while it gives floaters 100% acess anytime.

\*It doesnt turn traditional local roads to hiking trails, yet hikers could still hike if they chose to.

\*It also doesnt eliminate traditional camping, where you can float, boat, hike, or ride until you find a place to camp for the night.

I feel that the National Park Service has unrealistic ideas that they can create a silent area of the river where there are no unnatural sounds. They must think that visitors arent going to talk, cough, breath, launch or exit their craft, touch the water with anything, or even move. They also must not take into account the highways and county roads in the area and the vehicle sounds that emit from normal travel. I feel that that National Park Service and any visitor which thinks they can have a completely silent visit is completely out of their minds.

**Received:** Nov,09,2013 00:14:16  
**Correspondence Type:** Web Form  
**Correspondence:** At this time I would advocate minimal change from current use plans. I utilize the park for canoeing and camping - generally multi-day floats of varying lengths. Because of associated activities, including hiking from various river points and interactions with others, as well as vagaries of river flow rates it is not possible to closely monitor progress and plan for set campground way point targets. Accordingly, I and those traveling with me engage in low-impact primitive camping at available locations along the river. Plans which restrict the ability to use the river in such a non-guided format would seriously detract from enjoyment and access to this recreational and

wilderness resource.

A great deal of my enjoyment is gained by the close access to the river without being surrounded by large groups of individuals, especially at or near sunrise and sunset when prime wildlife viewing opportunities occur. There is also a great deal of enjoyment to be derived to being on the river either before or after less experienced canoeists and campers have yet to put in or have already taken out of the rivers.

While an urban dweller, I choose to recreate in areas that tend to be primitive and off the grid as a form of disconnection and rejuvenation from the travails of modern living. I think imposing additional regulation on when and where one could camp along the river - with its concurrent forced congregation with other groups of users would seriously degrade the river systems use for such restorative and pastoral pursuits.

For all of the above reasons, I would encourage continuation of the current management plan, or in the alternative the plan that would least impact use of the river by non-motorized watercraft and least disturb availability for primitive camping along the river in seclusion or limited access.

**Correspondence:** You tell us the government doesn't have any money. You can't fund the projects you have, yet you want to involve yourself in things that you aren't well versed in such as managing Mo waterways and forest areas. Please let the land owners in MO. of the counties affected have their say and let them decide what is best for their economy and have control over the land and waterways. I am a trail rider and I come to Mo at least 2 times per year to ride trails. Part of the reason I come to MO is because in Illinois, my home state government has already closed down and taken away my right to ride on Illinois trails that I used to ride. Please don't let this happen in MO.

**Correspondence:** I am commenting on the draft general management plan for the ONSR. I am a canoeist who frequently visits the Current and Jack's Fork rivers. I am strongly opposed to both alternatives B (favored by the NPS) and C. As I understand it, both these alternatives open more stretches of the river to motorized boat traffic.

I have been a paddler for a long time. I can tell you from abundant personal experience that while some power boat operators are considerate of paddlers, many are not. There are many places that power boat owners can go. There are relatively few natural waterways left that are free of the noise, pollution, and wakes that accompany power boats. The Current and Jack's Fork are two waterways that in that latter category that can be paddled year round. Please preserve them as such.

Sincerely, Peter Blanc

**Correspondence:** There are too many unnecessary and costly rules and regulations already in place. I want the park service to take no action, unless there is a plan to lift some rules and open some riverfront for free day use for the people, especilly the locals. Unless a person owns a boat, owns riverfront, or pays a concessioner, they cannot enjoy a day on the riverbank picnicking, fishing, and swimming with the kids. The familes of this area has been stripped of their culture and heritage.

**Correspondence ID:** 11    **Project:** 15793    **Document:** 56208  
**Received:** Nov,10,2013 07:32:41  
**Correspondence Type:** Web Form  
**Correspondence:** We hold our group rendezvous on the Current and Jacks Fork Rivers twice a year. We have to do it off season because the river traffic is too heavy during tourist season. Please restrict boat traffic on the river according to Alternative A: prohibiting it on the Jack's Fork entirely and on the Current River down to Two Rivers during peak season, and down to Round Spring in the off-season.

I realize that this will make people with motor boats unhappy but consider this: When they are on the river, they ruin it for those of us who are there to enjoy the beauty, the wildlife, the sounds of nature. In particular, they destroy the quiet and create wake. We don't do that. When we're on the river, we don't ruin the experience of others on the river. In all fairness, if someone wants to bring a large fishing boat on the river, they should paddle it, not use a motor.

I am sure there are plenty of wonderful bodies of water where those who love nature and love to pollute and make a lot of noise can congregate. They will be able to do this without ruining each others' experience. That would be fair.

**Received:** Nov,10,2013 11:06:17  
**Correspondence Type:** Web Form  
**Correspondence:** Thank you for taking action with the thorough study on options to protect the Ozark National Riverway. I visit annually to enjoy the beauty and quiet atmosphere of the river. However, I only float on weekdays during the spring\summer months simply due to large crowds and noise from visitors and also to avoid motorized boats.

I am glad to see both Options A & B help provide better controls on motorized boats and help protect the river with fewer access points. While I am supportive of both Option A & B I really do like the further controls of motorized boats of Option A. I feel the 'No Action' option would be irresponsible and unfortunate. I hope the final decision does not head in that direction. We need to protect the river for future generations to enjoy.

**Correspondence:** Preferred plan B seems to be a decent proposal as well as C. Plan A will only hurt local people. A lot of focus seems to be on motorized boating and access points. None really address the canoe liveries which is 99 percent of pollution and damage to the river. I think the Maggards shouldn't be allowed to hold 4 permits. An the amount of people on weekends from cedar to pull trite is ridiculous. But I'm just a hillbilly. Who likes to use a motorized boat and a vehicle to enjoy the river that 4 generations of my family lived on its banks.

**Correspondence:** I am always amazed at how our government try's to work. Your plan includes, accelerated melting of sea ice (which can further alter global weather patterns)

What has sea ice melting have to do with a park in the middle of the USA?

Am I missing something or is this mostly smoke and mirror's to do what ever the park Super wants to do at the time he want's to make a change.

I have been on the river since the early 70's and the late 80's were the hay day and if you think the number of users are the same as in 89 you weren't here then.

It may be time for the people of Missouri to take back their river. The Missouri constitution states that all free flowing water in the state belongs to the people of Missouri.

If you haven't figured it out by now I support the No-action Alternative.

I would even go as far as to say it would be better run if it was privatized.

**Correspondence:** Starting in 1972 I have been floating the eleven point river and now no longer do so unless i can go during the week which is hard to do because of work. The reason i stopped floating this river is the jet boat use has become unbearable.sometimes a boat roars by every five minutes and ruins the whole natural experience. I was also swamped once by boat wake. I told the canoe rental person we would never come back and did not for ten years until recently i went out of season and it was fine. You have no chance to get rid of these boats due to local politics but i think maybe two or three weekends could be set aside for floaters during the summer in the same way areas are closed to hikers during hunting season. I sent a request to MDC for a study that was done by Washington University on the effect of jet boats on fish spawning compared with prop boats. The study used a water depth of 2 or 3 feet for the comparison which of course defeated the whole purpose of the study since jet boats can run in 6 inches of water.A real study under actual usage conditions would find these boats destroy fish spawning sites thereby damaging the natural fish populations and crustaceans also.That would be a basis for limiting their use during certain seasons or at certain areas. I think these boats could use the area below Riverton, Mo. and have plenty of recreational opportunity.The river widens out and is deeper there.  
These fish populations are required to be protected by law aren't they?

**Correspondence:** Gentlemen;

Having perused the three alternatives proffered by ONSR, I lean strongly toward Alternative "A" due to its minimal increase in "Commercialized" usage of the Park. I feel strongly that this park, out of all our National Parks, should be saved in as primitive and pristine a manner as possible. This Park is already among the more secluded, and should be protected for use by those who prefer that kind of Park experience. There are already a number of Parks that cater to the "Camper/motel" park visitor. I would like to see \*something\* saved among them all, that is reserved for a truly "Primitive" Park visit.

In this regard, I am troubled and a bit confused by the proposed "prohibition" on gravel bar camping. I have no problem with closing the gravel bars to vehicular traffic, this should have happened long ago. However, one of the greatest draws to the ONSR is ones ability to float/camp among these wonders of Nature. To limit the experience, ie "Camping on gravel bars would be allowed in designated campsites only", defeats the purpose, and denigrates a wilderness experience that we have the rare opportunity to engender with this new Use Management Plan. There are already a number of \*designated\* primitive sites on the rivers...Bay Creek on the Jacks Fork is a prime example. If you would, please clarify your meaning/intent in this regard.

As a member of the Missouri Stream Team Program, and founder of ST#713, I am on these rivers year-round, and am familiar with the ebb and flow of both the Rivers and the politics of ONSR. I am a staunch supporter of the Park Service, and hope that your future policies will only enhance the "Park Experience" that I have come to enjoy.

Sincerely;

Ted Haviland  
Stream Team #713  
(Upper Jacks Fork River Rats)

**Correspondence:** Table 5, on page 49 of the draft management plan, titled "Recreation Activities by Management Zone" indicates that "camping on gravel bars would only be allowed in designated areas" in all three river-management zones.

Table 13, on page 126 titled "Summary of Key Differences Among the Alternatives" indicates that "camping on gravel bars would be allowed in designated campgrounds only" for all three proposed alternatives.

Does the NPS propose to restrict gravel bar camping for paddlers on overnight river trips to certain designated sites? If so, which sites?

If it is not the intention of the NPS to restrict gravel bar camping for overnight river trippers, this needs to be spelled out clearly.

**Correspondence:** After reviewing the GMP Plan I must recommend "NO ACTION". Our government is in such dis-array and in such a financial crisis I just do not see how we can possibly implement more regulation.

Our local communities depend on the recreation of the rivers for their economy, local fun & entertainment and family traditions. We live this and depend weekly on our right to be able to go to the river when we choose, where we choose.

It's sad that it take 524 pages to explain what the NPS wants to propose; but then again that is what is wrong with our Country. The government wanting to regulate America more.

NO Action; NO Action; NO Action!

**Correspondence:** I choose NO ACTION for the GMP. I have spent my entire life on the Current River, year round. It is a way of life and economy for our community here in Ellington, Missouri. We as locals respect the Current and we take great care including having annual trash clean ups. We do not litter nor destroy the area in any way, shape, or form. We treasure it. We appreciate the greatness of the outdoors and our rural area. Any further regulations will only take away more rights we have to the river and the ONSR. That is why I support NO ACTION for the GMP, 110%. If there is more regulations added to the ONSR, we are limited to the area, and the government gains one more piece of our freedom. Activities in the area encourage wonderful aspects of nature and gets back to the basics of life. Here is isn't about technology and materialistic items, its about connecting with nature and enjoying the small things in life. Why take this away? This is important in today's society. WE NEED OUR FULL RIGHTS TO THE ONSR! I VOTE NO ACTION FOR THE GMP!!!!!!

**Correspondence:** I'm recommending NO Action. I grew up on this river, camping here EVERY year. I've spent many countless hours fishing, camping, floating, fish fries, playing music over the campfire, and making endless memories with my family. This was passed down to me, and now I have now passed this down to my kids generation and teaching them to appreciate it and LOVE it the way I do. We've also helped so many people along the way either canoeists who didn't know what they were doing, and got themselves in a bad situation in a root wad, or boaters' who've had trouble and many people who have needed medical attention and stopped at the gravel bar for help..... We've helped them all, we've picked up trash not only at the gravel bar, but in the river from Owl's Bend to Paint Rock... Do not take this away from us...

**Correspondence:** I would like to see Plan "A" implemented. Here is why I think it offers the choice.

I have been going to the Current and Jacks Fork rivers for over 30 years. In the last 10 years especially it has become increasingly apparent that the crowds are really taking their toll. Too many canoes are being put in by outfitters, but far more troubling to me is the many illegal roads, trails, and access points that have been created in recent years - I have witnessed firsthand rampant ATV use on gravel bars and in the stream bed as well as ordinary vehicles pulling right out onto gravel bars or in the river!

Motorized watercraft on these waterways have also increased to the point where I am concerned not just about the loss of peace and solitude, but also believe there is a serious safety threat. Many of these boats are going way too fast in water where people are swimming or fishing and the margin for error is very slim.

Horses - I love horseback riding, but it is starting to get out of hand on these rivers. Way too many horses are pounding the stream banks and fouling the water of these rivers and tearing up the trails.

So in summary, 1) No more new accesses, 2) Close all illegal ones and the roads and trails going to them. And 3) I'd like to see future discussion of limiting the # of boats that can put in on a given day as well as the # of horses that can go out. All of these things and the ONSR "might" eventually heal and get back to the way it should be. As a National Park the enjoyment of many should not be ruined by just a few. Missouri has many, many other public places to go to run motorboats, ATV's and horseback riding. These riverways are definitely not what they used to be and something needs to be done.

**Correspondence:** To whom it may concern,

I am an avid user of the riverways, making approximately 10 trips a year to overnight canoe and camp along the river. What makes the park especially special to me is the beauty and incredible character that the Jack's fork and Current river provide. I have been visiting the area for about 15 years and I have seen the degradation and overuse by jetboats, tubers, canoes, and horses. I had an especially bad experience with a group of 4 drugged out and drunk tubers who attempted to steal my canoe off a gravel bar just before dark one night last summer so that they could make it to the take out before dark (roberts field access).

It is because of these reasons that I would highly support alternative A. Lots of other rivers in the ozarks provide opportunities to drink and innertube, ride horses, or blast up and downstream in a jet boat with no regard for canoes or other river users. I really hope that this general management plan leads to more protection for such an outstanding resource.

On another note, I would very much like to see some fishing regulations placed on smallmouth bass on the current river from two rivers to van buren. The river has the ability to produce the biggest smallmouth bass in the ozarks if regulations are enacted and enforced.

**Correspondence:** I can't comment on the draft plan if I can't get it! Something is wrong with download (today 11/13/2013). I tried a couple of times this morning and loads to 9.9megs and then comes up with an Internet Explorer internal error message. Please fix. I would like to review document. If you can't find anything wrong, I guess it could be my older (Windows XP) computer and I'm still on dial up. But I have down-loaded even larger pdf documents before without issue. My adobe program is up-to-date. I will check your website again this week to see if problem has been fixed. If you find no problems with the document or the way you are allowing access on your end, can you please send a me CD or DVD copy of it instead? Thanks.

**Correspondence:** I'm on the Current at least one day most weeks of the year and have been using the area since the '70's. The last few decades I've noticed increasingly it's more difficult to find a campsite where someone doesn't come into camp on a horse, ATV, or 4WD. This is especially true from Cedar Grove to Akers. The Flying W area ESPECIALLY has far too many ways to the river. You need to limit all these accesses that were not commonly used before the days of ATV's and everyone having 4WD vehicles.

I'm also afraid that I'm seeing the upper Current deteriorate into an area like the Eminence to Shawnee Creek section of the Jack's Fork with all the horse traffic. During the summer it's tough to find a place to urinate without a horseback rider coming up on you. Thank God for wintertime! How long before all that extra traffic from this proliferation of accesses affects the heron rookery in this stretch? Back in the early '80's I used to frequently fish Eminence to Two Rivers. I stopped when it started smelling like a barn yard. I hated to give up my favorite fishing stretch and the place I first saw otters and wild horses, but you allowed it to be raped in the name of the all mighty dollar. PLEASE, do not let this scenario replay itself on the upper Current!

Also, what's up with the private residence you allowed below Pulltite? I thought the riverways was protected? My friends and I were very disenchanted to see that built. It was especially disturbing before you put up the fence; at least they don't seem to have all the parties and crap on their "Private" gravel bar now. My friends and I used to use that as a lunch stop, but no more. I think ONSR should be ashamed for moving out the poor folk that resided in the area only to allow the "Elite" to build there decades later! I HOPE this does not continue, however; I have very little faith in anyone in administration with the Dept of Interior.

**Correspondence:** Dear Sirs,

Thank you for considering my comments. I have spent many years boating on these rivers. My main concern is any suggested horsepower changes. I am a landowner in Carter County and I spend 1/3 of my time there. I would like to see no changes in hp regulations, merely enforcement of existing laws. This means no personal watercraft in the park. If changes must occur I suggest 60/40 hp below Jerktail and Eminence to Big Spring landing #2. Unlimited hp below that to the park boundary. Twenty five hp from Pulltite to Jerktail and Alley Spring to Eminence. This would simplify the zones and protect the upper river. No motors above Pulltite and Alley Spring. This simplification is easy to understand, and would preserve the upper reaches and lifestyle of the residents on both the upper and lower rivers. Scenario 'C' is the closest to this suggestion. There would be a no motor zone, small/medium zone, and unlimited motor zone. The Current below Big Spring is a major river.

On another note, existing laws must be enforced better. This means no personal watercraft, underage drinking, drug

use, illegal fishing, and especially litter control. It makes me sick the amount of trash I recover in my boat each week. If more funds are needed for manpower, charge an annual launch fee tag.

Thank you for your attention. I look forward to the meeting in Kirkwood next month.

Kenneth E. Kram, DMD

**Correspondence:** I have read all the documents and would like to recommend Plan A rather than Plan B. I have somewhere over 1500 miles behind me in a canoe. I first floated the Current River in 1966, just out of high school, from Baptist Camp to Round Spring. The river was pristine and beautiful. Very few people, if any, shared the river with my group of 12. I continued nearly every year on either the Current or the Jacks Fork and while leading my church high school youth group in 1973 we decided to have a camping and canoeing trip. Over the years I had noticed the water pollution in the form of suds at every riffle and root wad was getting worse. After the area officially became the Ozark National Scenic Riverways the area slowly became less polluted. I noticed the change and applauded the efforts that brought about cleaner water.

My concerns for the future fall into two main categories. First, I realize popularity brings people and while most people are respectful of Nature and other people there are some folks who just think they can do whatever they want and that's OK. There isn't much I haven't seen take place on the rivers and I'll be the first to say I don't want a police presence everywhere. There needs to be a way to educate people that the river system will be here for the future ONLY if EVERYONE takes care of it. Excessively loud and drunk people in camp sites are almost impossible to avoid and we need more Rangers on hand to remove them if they won't behave. I have witnessed people being removed. The entire camp site erupted in applause.

Second, I believe motor boats should be even more limited than they are currently. 40 horse power is way more than necessary to go upstream on virtually any part of either river. 40 horse power being limited to the lower reaches where the water is slower is further reason why it's too much. There is no possibility of enjoying the wild life or the peace and quiet of a morning mist in the sun rise if a motor boat is around. The thought of allowing motor boats further up stream in off peak times of the year is absolutely insane. That's some of the best time to see and hear nature and avoid the crowds. Different times of the year present different faces of the rivers and that's exactly why many people float different times of the year.

My youth group floated every year for 13 years. It was the high-light of the year and many of the kids came back when in college and helped lead the younger kids. It wasn't unusual to have 20 canoes. We ran into a very belligerent motor boater one year as we neared Two Rivers on the Current. He didn't want canoes on "his" river and tried his best to swamp as many of us as he could. He went up and down the river several times but was not successful. On his last pass the kids had had enough and blockaded the river. He pulled a shot gun and they let him by. They noted his description and boat number and we reported him to a Ranger at Two Rivers. The man was arrested. My point is this...Motor boats and canoes DO NOT MIX. There is no way of knowing the experience level of anybody that boat might encounter. Serious harm is possible.

I would like to float in the areas that allow motor boats currently but I will not do so. The disruption is not worth it. I stay up stream. Allowing motor boats will further restrict my enjoyment of the rivers.

Plan B will not help in the areas I feel strongly about. My sons grew up on those rivers and are in complete agreement. Plan A will restrict motor boats the most and that part of the plan should be implemented in Plan B at the very least. For those who feel the rivers are too crowded please consider that removal of motor boats might spread people out and reduce congestion.

Thank You. Good luck.

**Correspondence:** Please, I'd like to know the justification for people motoring on the river at such excessive speeds. What's the hurry?  
What about "wilderness designation" includes the use of Jet Boats- the noise, the smell of exhaust, and the velocities? Where are they going? Is it an emergency?  
The river is 70 miles long from Akers Ferry to Big Springs. If someone was going 10 mph they could easily cover the river in a day.  
What's wrong with limiting to electric motors for fishermen, or even 10 hp for the whole river? The argument that jet boats stimulate the local economy is very weak. I would posit, by far, that canoers stimulate the local economy 10 times more.  
Can't we have just one river that is free of noise, air pollution, and yes, dangerous situations aka a drunk or a kid, behind the wheel of a 40 hp (yeah right...) boat?

**Correspondence:** While the new plan does close some undesignated trails that are damaging the local ecosystem, it also authorizes 35 miles of new horse trails with additional river crossings, as well as a new horse campground along Jacks Fork (which the Park Service itself admits would increase the likelihood for water quality degradation). This plan is supposed to revise an outdated 1984 version that has resulted in misuse and water pollution... but will it really do the trick? The hellbender, for one - - an amazing, ancient 2-foot-long salamander, the largest in North America - - deserves more.

This park gets so many visitors each year, I would hope more would be done to protect this park for future generations of people, native plants, and native animals.

**Correspondence:** I am writing to comment on the National Park Service's draft management plan for the Ozark National Scenic Riverways.

Missouri's Ozark National Scenic Riverways covers an incredibly vast and beautiful landscape. Home to rare animals like the Ozark hellbender, rare crayfish and gray bats, Ozark National Scenic Riverways currently sees more than a million visitors a year.

As you no doubt know, the Ozark hellbender is an amazing, ancient 2-foot-long salamander that is the largest salamander in North America.

While the draft management plan does close some undesignated trails that are damaging the local ecosystem, it does not go far enough to protect this ecosystem and the magnificent wildlife that call it home.

Specifically, the draft management plan authorizes 35 miles of new horse trails with additional river crossings, as well as a new horse campground along Jacks Fork. This would substantially increase the likelihood for water quality degradation.

The draft is a good start, but it does not do enough to preserve this area for future generations to enjoy.

Thank you for your consideration and the opportunity to comment.

**Correspondence Type:** Web Form

**Correspondence:** The draft plan for management of Missouri's Ozark National Scenic Riverways, while successfully closing several trails that are damaging the local ecosystem, does not do nearly enough, and in fact opens the door for 35 miles of new horse trails with additional river crossings that will be detrimental to the water system. Additionally, the inclusion of a new horse campground along Jacks Fork will most likely lead to water quality degradation, which is exactly what this plan should be attempting to prevent.

Please rewrite the plan with water quality maintenance as a top priority.

Thank you,  
A. Nelson

**Correspondence:** As with all of our wild public lands, I would encourage you to let it remain wild; for the properties we've acquired that have been badly desecrated by human activity simply let it regenerate over a period of 100-200 years, tweeking where necessary to get the land back to a more wild, pristine, virgin state.

In regards to the Ozark national scenic riverways, this should mean hiking,camping, canoeing, kayaking, tubing and similar minimalistic human activities are acceptable. Building of most structures, motorized vehicles, and most human activities should be banned or severely restricted.

Simply think what the area was like before Lewis & Clark era, then try to get the land to that state and keep it there.

Thank you for your consideration of my input.

**Correspondence:** I suppose I would like a combination of A and B. I would like to see less mechanized boating and ATV use in the National Scenic Riverways. Both scare the wildlife in the immediate area. Motor boats can be a hazard to canoers and swimmers and honestly, if someone has to use a motor boat, there are plenty of area lakes that offer wide open spaces and plenty of fishing. I realize that ATVs are popular in this area, but I feel they destroy the national beauty with the tracks they leave behind and they frighten wildlife. I feel that most tourists to this area are getting away from mechanization and going back to nature and this area certainly offers it. There is nothing better than sitting in a canoe or flat bottom boat or on a quiet bank and hearing only the natural sounds the riverways offer.

I do have a problem with the horseback riding and have concerns about the droppings the horses leave behind. Plan B would expand the areas for them but I feel there are too many horses here anyway, especially with the concentration of them during the monthly trail rides. I worry about ground water pollution, pollution in the rivers where the riders cross and the health of those swimming in the rivers. I do not feel the trail riders contribute significantly to the local economy. If they did, there would be more economic development in the area. They help a minority of the general population here from my own observation. They have ridden their horses in town and leave horse droppings on the sidewalk and do not clean up after the horses. Locals do. If their horses are messing up the sidewalks here, imagine what they are doing to the rivers and groundwater around the horse camping area.

We moved here because it is a pristine area with lack of big commercial development. I hope it continues. I do appreciate the opportunity to express our viewpoint. Thank you.

**Correspondence:** Basically there are two ideas I want to submit :

The most valuable natural resource we will have this century is potable water. We must do everything we can to preserve and protect this national resource. Protecting our fresh water from pollution should be one of our nation's sacred duties to the future.

The second idea is that we need to :

It is time for the states and people of Earth to set aside some significant environmental reserves where people may visit but they may not remove, alter, or denigrate the environment. Such reserves provide a biological plant and animal reservoir against species loss and a safe place for nature to evolve without the rapacious human destruction witnessed around the globe.

Does the Management Plan accomplish these two goals and if not what can be done to protect water and the ecosystem to maintain animal and plant diversity from the threats of increased human populations ?

Thank You.

**Correspondence:** why has this not been announced in the local newspapers affected by these proposed changes? I received notice from a friend who got it from a friend. This is public information and should be done by press release so all of the local public is informed. It appears to be intentionally only published to the minimum in an effort to minimize public opportunity to review it fully before the deadline.

**Correspondence:** Please halt all motorized vehicle use in streams and trails with slopes that cause erosion into streams. Please continue to allow horseback riding in this area and stabilize trails and stream crossings to decrease negative impacts on the ecosystem. Perhaps you might consider creating a few stream crossings using techniques employed by the managers of the South Fork Recreation area in TN where they have installed concrete bars at stream crossings to reduce siltation and erosion. Please decrease motor size on boats to what is recommended and do not allow motorized boats in areas deemed too sensitive for their use.

Thank for considering my recommendations and comments.

**Correspondence:** We have traveled to Missouri and Arkansas with our horses five times in the past 10 years to trail ride. With the high price of fuel and upkeep of the horses, we have chosen locations that are lower cost so we can continue traveling and trail riding. We have limited our visits to places in our own state and the neighboring state of Minnesota, because of the cost of trail passes!! It starts out small and increases every year. It would cost me five annual trail passes @\$20 and a park sticker of \$25 just to ride at a place 40 miles from home. It costs a similar amount if I ride in a park 70 miles away in Minnesota. It also costs similar amounts to ride in the two counties I live near. Add it up!! No one of modest finances (people with families to feed) can continue to pay that and still ride. Everyone wants to charge, and they state they will use the money to improve the trails, etc., but what happens is they make the trails so expensive that the local people who created them can no longer afford to ride on them. That is not the values this country was founded on. Whatever happened to the idea President Roosevelt had of creating a national park system that would be forever preserved and available to every American??? A quick visit to the Grand Canyon or Yellowstone will show you what happened to it. Greed! Those parks are totally over run by foreign visitors who can afford to visit them because they do not have to pay our property or income taxes to preserve them. Americans pay for them, everyone else enjoys them. Please do not make the same mistake other states have by instituting fees that then require more and more fees to hire more and more people to maintain and police trails that were once free.

Sincerely,

Anita, the taxpayer who can't afford to trail ride in her own state.

**Correspondence Type:** Web Form

**Correspondence:** Please, make no changes to the existing rules regarding the availability of trail access in Missouri.

It is a very popular region for many outdoorsmen, especially those who enjoy riding their horses on the trails, and people travel many hours to camp and ride in that area.

By limiting access or closing trails, the NPS would not only give "local" residents fewer places to ride, but it would also provide less incentive for people to travel to the area.

That, in turn, will mean less money coming in. The trucks that pull those horse trailers utilize local businesses for fuel. The people camping use local businesses for food, camping and grocery supplies. They often buy hay for their horses once they arrive in their destination, rather than having to pack it in their trailer, so that also benefits the local farmers and feed store operators.

Limiting trail access, or closing trails, will cause many horsemen to find other places to ride and the businesses that rely on that income will suffer for it.

**Correspondence:** Please leave the current plan in place with no changes. Horseback riders spend lots of money in these places and the economic result of closing trails to horses would be devastating to these communities. We come to these parks from all over the country to see these national treasures.

Horseback riders and trail riding organizations work with the park services to maintain trails for no charge as well as donate money toward trail system maintenance all over the country. ATV and mountain bikes cause as much if not more destruction than horses. We understand and want to protect these trails. We are also taxpayers!

**Received:** Nov,19,2013 11:15:36

**Correspondence Type:** Web Form

**Correspondence:** The proposals under this plan are not only infringing upon the rights of citizens but will hurt the local economy. People flock to the Ozark National Scenic Riverways for recreation, thereby contributing to local campgrounds, restaurants, etc. In these tough economic times people do not have extra money for permits and passes to use areas that were established for recreational purposes to begin with so they will just stay home or find some place else to go for vacation.

The horse and mule built this country and should have access to the trails without restrictions. If it were not for horseback riders a lot of the trails would not even be open or accessible. The majority of equestrians value the trails systems available to us here in Missouri and we do everything possible to preserve the land.

We have too much government control in our lives now and we do not need more. Public land should be controlled

by the state in which it is located, not by bureaucrats in Washington DC.

**Correspondence:** I want to comment on the proposed changes as it applies to the horse trails. I would like to suggest that if any horse trails are removed that they be replaced by trails with the same mileage, rather than decreasing the amount of riding available. There are so many places already where horses are not allowed that, as horse people, we need to advocate for trails to remain open to us. As my husband and I are elderly, we cannot hike like we used to and find that horses allow us to enjoy the natural beauty of this area. Please consider this when deciding on your changes.

Thank you.

Judy Spitzer

**Correspondence:** 11/20/13 \* \* GO BACK TO THE REGULATIONS BEFORE THE BOULDERS WERE INSTALLED \* \* \*

I filled out a comment card on the previous Draft General Management Plan.

At that time, my request was NO CHANGE. SINCE THAT TIME, the Park Service

has methodically closed access points by installing large boulders.

You are offering the NO CHANGE option on the new Draft General Management Plan, which would leave the Park Service regulations as they CURRENTLY ARE. What happened to the option of leaving the Park Service regulations as they PREVIOUSLY WERE ??????

---

**Correspondence ID:** 98    **Project:** 15793    **Document:** 56208  
**Received:** Nov,20,2013 08:40:53  
**Correspondence Type:** Web Form  
**Correspondence:** 11/20/13 HORSE TRAILS

The Draft General Management Plan includes the closure of approx. 65 miles of horse trails. The economy of Eminence, Missouri depends heavily on the tourist industry, which includes many trail rides.

The Ozark National Scenic Riverways was established as a recreational park, not a wilderness or a limited-use area. Keep all the horse trails and access points open - in fact, create more horse trails in addition to those we already have. AND - reopen those that have been quietly closed in the interim.

Thank you.

---

**Correspondence ID:** 99    **Project:** 15793    **Document:** 56208  
**Received:** Nov,20,2013 08:52:29  
**Correspondence Type:** Web Form  
**Correspondence:** 11/20/13 \* \* \* \* \* BOAT MOTORS \* \* \* \* \*

We were given the option of NO CHANGE on the PREVIOUS proposed Draft General Management Plan, and that is what I selected on the provided Comment Card.

Now we have a new proposed Draft General Management Plan, with the option of NO CHANGE. However, if this option is selected, it means that the regulations will remain as THEY CURRENTLY ARE. Why don't we have the option of going back to the way the Park Service regulations were before they were changed to the proposed current regulations?

Please go back to the regulations on boat motors as they were before work started on the new Draft General Management Plan. This is a recreational park, not a wilderness or limited-use area. People enjoy using their boats on the Current & Jacks Fork Rivers. Many local businesses specialize in selling, customizing and repairing boats and motors. The new Plan will impact our enjoyment of the rivers and our economy.

The people who come to the Park infrequently should not dictate how the PEOPLE WHO LIVE HERE use OUR Park !

Thank you.

---

**Correspondence ID:** 100    **Project:** 15793    **Document:** 56208

**Correspondence:** I visit Eminence Missouri at least one week a year. While riding in the adjoining areas there's one thing I'd love to see. We need signs saying when we're 50ft (or however far you want us) from the river. That way we can rest our horses and they'll probably poop then and not in the river. It's always so stressful and impossible to stop when your horse is pooping in the river. We don't want tickets, we don't want to add pollution. The reason most horses poop in the river is because that's where we stop to rest and it's the first chance they get to relax and go.

So if there's a sign and small clearing at the appropriate distance from the river on the trails that have river crossings it would be hugely appreciated. I've been thinking of this for years but never knew who to tell.

Thanks for taking the time to listen!

**Correspondence:** I was alarmed to hear of this news. My husband and I have recently purchased property in Eminence along the Jacks Fork River. We have been riding these trails for 20 years and love the people, trails, and forest area. We have purchased property there and intend to spend our vacations and retire there in the next few years just to keep enjoying the trails and river. This is a small town with down to earth and hard working people that struggle to make ends meet on a daily basis and depend on tourism for their livelihood. By closing the river accesses and charging for people to ride the horse trails, you are taking food out of their mouths.

I'm sure the government feels they have legitimate reasons to impose their regulations at the cost of citizens, but honestly hasn't the government already taken enough.

This is the last thing this county needs.

**Correspondence:** I heartily thank the National Park Service for the good work in preserving the beauty of the parks and waterways of the Ozarks. I have spent many weekends for many years enjoying the parks, the rivers and the natural beauty of Missouri's Ozarks. It saddens me to see such destruction of all the natural resources and sickens me to see added roads, litter and river crossings.

Please consider Alternative A as it offers more protection to these delicate areas. I know that tourism is critical to the economies of these small towns but there is only ONE Ozarks and it needs to be preserved. A few people losing their selfish individual rights to pollute, be noisy and uncaring of the natural beauty ruins the place for everyone. When I come down there and see people dropping trash, playing loud music and being rude, it makes me wonder why they even bother. They could be noisy and rude and raucous in a hotel room in Branson or somewhere else and leave the natural beauty quiet for those of us who truly respect it and come down there FOR the peace and quiet and communion with nature.

Perhaps I'm an old fuddy duddy but we only have one Mother Nature and we need to help her preserve her treasures.

**Correspondence ID:** 116    **Project:** 15793    **Document:** 56208  
**Received:** Nov,22,2013 04:00:52  
**Correspondence Type:** Web Form  
**Correspondence:** First I would like to thank the National Park Service for developing the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS, and for knowing something must be done to actually protect this national treasure. The degradation that has already occurred must be reversed and those people interested only in immediate pleasure and are not interested in the future of the park must be stopped from committing their abuses. Although Alternative Plan "B" is an improvement, I feel it still allows room for those that would do harm to the park, an avenue for reckless behavior.

Please seriously reconsider Alternative Plan "A".

From contemplating the past and current abuses by public and business interests to the ONSR and the stated alternative plans of action, it is my opinion that the Alternative Plan "A" would be the best course of action to take.

My particular points of interest;

Close and repair all illegal accesses to the parks rivers, and enforce by law those closures.

No access to the park for any kind motorized vehicles except limited access to roads determined by the National Park Service.

Raise necessary numbers of employees to oversee and preserve the natural beauty and integrity of the park.

Restrict the numbers daily of the equestrian community and related businesses to lessen the damage done to the parks land and rivers. Allowing such numbers that requires warnings of unhealthy Escherichia coli (E. coli) bacteria levels in certain areas of the rivers should be considered unacceptable to everyone, including horse lovers.

Access to river gravel bars for day use or overnight camping by non-motorized boats and walk in only.

Thank you for your considerations.

**Correspondence:** I have floated and camped around the current and Jacks Fork for over 30 years and have concerns about degradation from ATV use and excessive horse pack use. Moderate individual horse use seems reasonable but large group tours may be too impactful and need to be kept to less vulnerable areas. ATV users ruin the floating and camping experience for all others with the noise and the vehicles cause significant damage. These should not be allowed and have their own areas away from scenic riverways where their impact will not disturb others or cause environmental degradation. Thank you.

**Correspondence:** I would like to thank the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

However, as a member of the Missouri Sierra Club I believe Alternative B doesnt go far enough as it relates to preservation.

I would recommend and support the adoption of Alternative A. This plan takes further steps to provide the following:

- Additional protections for the rivers
- Closing illegal roads
- Restoring natural conditions to 50 miles of these roads
- Closing 65 miles of undesignated horse trails
- Adding no new stream crossings
- Barring all recreational vehicle access to gravel bars

We will only get one opportunity to preserve with land for future generations.

Thank you!  
Carol

**Correspondence:**

I ask that you withhold my personally identifiable information from public view.

I am encouraged that the National Park Service (NPS) has proposed an improved Draft General Management Plan for future of the Ozark National Scenic River ways management. I would remind the NPS that the main reason for creation of the National Scenic River ways is protection of this magnificent natural resource.

The Current and the Jacks' Fork rivers are truly wonderful natural areas that can be enjoyed in many ways. As population pressure, development, climate change, misuse, and competing usage increase, it is important for river management to increase protections from disruption and destruction.

I believe that Alternative B is an improvement in management that will help the Ozark National Scenic River ways. I believe that some additions that would improve protections should also be included.

I am concerned about misuse of ATV's and excessive horse traffic along the rivers and their destructive river crossings. I strongly urge the NPS to adopt those proposals in Alternative A that would better protect the rivers. Specifically, I believe that closing of 65 miles of undesignated horse trails and not adding any new stream crossings should be adopted in the management plan. I also believe that closure of 50 miles of illegal roads would be of huge benefit to the rivers and surrounding environment. I believe these roads should be restored to natural conditions to benefit both the river and the wildlife.

I personally find the jet boats on sections of the river to be disruptive. I realize their usage was a traditional use that continues to be allowed. I also realize that their allowance was important in gaining support of local residents. I also know that they are noisy, create heavy wakes and can easily carry cans and waste into the river. I have personally found that many locals have gradually increased their tendency to speed by canoes without slowing or yielding right of way. There will always be scofflaws and problems between motorized and non-motorized river traffic and I ask that the NPS will continue to work on this issue.

Thank you for improving the protections for the rivers and keeping their integrity and tranquility uppermost in your management plans.

**Correspondence:** I'm in favor of making NO changes (especially by the national government). The less jurisdiction you have over Missouri's natural resources the better as far as I'm concerned. You really ticked me off when you closed accesses during the govt. shutdown. We all know why this was done, because we know how your bread gets buttered.

Why could I not take my canoe out of the river at Cataract landing? It was my understanding this access was closed by you. I NEVER have seen a park employee there. Remove the trash can and leave us alone! We had to go to the Meramec River that week, and Carter Co. and their concessionaires lost potential revenue because of you. You messed with people's livelihood!

You're thinking about adding more horse access to the NPS? Seriously? How about less? Or better yet, leave that alone too. You'll only screw that up! I really "like" how Mr. Black wants to raise the camping fees so you're not competing with the "privates". I'll bet THEY love this idea. What's to keep them from immediately raising their prices after you raise yours? They offer more amenities anyway, so their prices should be higher. Typical government idea- --stupid! It's probably just a "fig leaf" after he screwed with their finances during the govt. shutdown.

**Correspondence:** Thanks to everyone at the National Park Service for putting in all the hard work to develop this draft General Management Plan! My family did a 3 day float trip on the Current River this past July, and I did hiking trail maintenance with the Sierra Club near the Current River this past October, so I am a regular visitor to ONSR.

While the preferred alternative B would be a major improvement over the present conditions in the park, I would recommend that the NPS adopt alternative A because it provides stronger protection for the park in several critical areas, including:

1. Unauthorized horse trails - alternative A would not create any additional stream crossings for horses, and would add 10 fewer miles of new horse trails than alternative B would do.
2. Undesignated roads - Alternative A would restore an additional 5 miles of road back to natural conditions.
3. Horsepower limits - alternative A provides stronger protections against big horsepower boats, which are not compatible with canoeists and tubers who also use the river.
4. Hiking trails - alternative A provides for 5 more miles of new hiking trail than alternative B does. As a volunteer who has done trail maintenance along the Current River, I think there are great opportunities for expanding hiking options in ONSR.

Thanks in advance for your attention on this!

**Correspondence:** It has been my privilege to live alongside the beautiful Jack's Fork River for the last 30 years. I love it, every riffle and pool of it, with a depth and passion that defies description. It is an entity that exists for its own sake; not simply to serve the public as a recreational venue.

We owe this river our very strongest level of protection. We do not owe the horses, we certainly do not owe the atvs,

we do not owe the roaring power-boats, & we do not owe the drunken crowds of loud, littering, destructive humans the right to desecrate this treasure.

Therefore, after considerable thought, I support Plan A. Somewhere in this bright land of ours, there must be places where we can show our respect in peace.

**Correspondence Type:** Web Form  
**Correspondence:** Dear National Park Service officials,

As a Missouri resident and member of the Sierra Club and many other environmental protection organizations, I want to thank you for preparing a comprehensive and thoughtful analysis for the future of the Ozark National Scenic Riverways, including protections for the Current and Jacks Forks Rivers.

In your report, the National Park Service recommends adopting Alternative B from among the three alternatives presented under the NPS Draft Management Plan. I also believe that adopting Alternative B would be a positive step forward from the status quo.

However, the Missouri Sierra Club believes that Alternative B could be even better in several ways. The Sierra Club recommends the adoption of Alternative A because it provides ADDITIONAL protections for the Current and Jacks Forks Rivers. Of greatest importance, Alternative A accomplishes three things: 1) it closes illegal roads and restores natural conditions to 50 miles of these roads; 2) it closes 65 miles of undesignated horse trails and adds no new stream crossings; and 3) it bars all recreational vehicle access to gravel bars.

As a Missouri resident, I have personally enjoyed this natural/scenic area of Missouri. I have also canoed down the Current River as well.

Thank you for your work regarding this important environmental issue. And thank you for considering my letter.

**Correspondence:** Hello,

I have reviewed the two alternatives for the Ozark Senic Rivers Management Plan. I believe that Alternative A is the better choice for these river areas. In my opinion, the greater protection for these beautiful river areas that Alternative A provides is better. I think it is very important to close the illegal roads and stream crossings to preserve this area. It is also important to keep recreational vehicles out of contact with gravel bars, which exposes the rivers to pollution.

Thank you for creating these two alternative proposals. Both are an improvement over the current situation, but I really think that Alternative A is the better choice.

Sincerely

Deor Braun

**Correspondence:** Dear Sir or Madam,  
I have been a canoeist in the Ozark National Scenic Riverways since 1972. I have seen much devastation from the horse trails that have been created since then. I hope the future of the Jacks Fork and Current River does not allow the horses to continue crossing the river and making more trails. I know that nothing stays the same, but the rivers have not been the same since all the horse trails have been created. I want the management plan that was drafted to include Alternative A instead of Alternative B. This will make sure there are no more horse trails added to the riverways. Thank you for your time and concern.  
Sincerely,  
Joe Dittrich

**Correspondence:** First let me thank you for developing this plan. I have been an avid "floater" in the Ozarks since childhood and continue to enjoy it. I agree that plan B is a good choice but personally feel that Plan A would provide more river oriented experiences with closing of illegal roads and decreasing the horse traffic (I also love horses so mixed feelings) that tends to degrade trails as volume goes up.  
My vote is for plan A to provide the best river experiences there are other places to horseback ride and motorized vehicles deteriorate the trails and impact everyone within hearing.  
Thanks for all the effort you put into this

**Correspondence:** P.S.  
I was not happy when my three favorite access roads to the River were closed. I'm a caretaker, after all: a watershed protector. Couldn't see how i was doing any harm by driving down the hills to the gravel bars. Maybe I wasn't. But somebody was, because we started seeing major erosion.  
A road is a road, and if it's there it's going to be used by one and all.

**Correspondence:** Thank you to the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless, the Missouri Sierra Club believes Alternative B could be better. We recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;

Closes 65 miles of undesignated horse trails and adds no new stream crossings;

Bars all recreational vehicle access to gravel bars.

Thank you.

**Correspondence:** I am a professional ecologist and I am writing to recommend Alternative A. It does the best job of closing illegal roads and undesignated horse trails, keeping recreational vehicles off gravel bars, and adding no new stream crossings. These rivers are a real treasure to the state of Missouri. The last time I floated them I was on a three-day camping trip and the second day was hours of thunderstorms. It was the most awe-inspiring, majestic demonstration of the power of nature and the wildness of the area you can possibly imagine. I was absolutely transported, and not just by my canoe! There have to be other places for people who want to use recreational vehicles to go, and keeping horses out of the river will help to keep it from being contaminated by e. coli and prevent erosion of stream banks at crossings.

**Correspondence:** I do not believe in limiting activities for anyone in our parks system, but some limitations are necessary for keeping our few river ways pristine. No new access for horse or ATVs is one way. I have floated rivers in the Ozark National Riverways system and had the peace and quiet of the afternoon interrupted by ATV traffic.

I have noticed at certain times the year, the waters are not as clear. More unsettled sediment making the water murky. It is bad enough that as we float, we can see on the bottom sunken beverage cans and other litter left by canoeists without also having to deal with surface pollution.

Lets not become as some third world countries where we can't even go into the water for fear of disease and pollution contamination. We in Missouri are very fortunate to enjoy river ways that are still natural and protected.

Lets keep them that way by allowing the parks department to better monitor and manage their use.

Robin

**Correspondence:** These rivers are our treasures of Missouri. We must protect them and presevere them in as natural a condition as possible. They are to be enjoyed by Missouri residents. The income from tourists from elsewhere contributes to our state economy. As the Meramec was threatened in the mid 70's, all our rivers and streams will be threatened in some way and we must be committed to defend and preserve them as time passes. These are the heritage of our children and grand children.

**Correspondence:** I taught in High School for 6 years and Middle School for 13 years, mainly in History or Geography areas. Part of the most interesting additions to our curriculum was the portions dealing with our environment and our influence on it. My students were always fascinated with the field work that we did with field trips, tours sponsored by the Illinois State Geological Survey. These rolling field trips encompassed not only physical geography but also our society's influence on it. Both the positive and the negative contributions for these actions.

The way these students' eyes lit up when they recognized what society was doing to our environment was spectacular to observe as they saw what things we were doing would affect our descendants. This, and the 30 years I then spent after teaching working as an administrator at a local Parks and Recreation Department helped me continue this work in a way that I know was positive.

I remember seeing our streams and rivers with 4 wheel drive and other vehicles in them, tearing up the rivers and steams. This damage, and litter does great damage to our environment. I remember one trip where were shown landfills that were located right in the middle of a major drainage area and the leaching chemicals polluting the water supplies of towns below that landfill. On the same tour we observed a hillside where a contractor had gone in and graded it, causing the shale under it to start slipping, causing the subdivision with some foundations and basements already poured to be abandoned.

We cannot allow this damage to continue. Please regulate this destruction of our environment. It is us, and our descendants who will suffer otherwise.

Thank you for your concern.

**Correspondence:** Alternative A would be my choice. I'm for giving maximum protections to these rivers.

Here in Missouri we have an excellent Department of Conservation, however, schools seem to fall short on education in basic field biology/ecology. I'm convinced this is the reason the public, both rural and urban, has so little respect, knowledge or sensitivity to Missouri's extraordinary natural environment. The thinking seems to be, getting outdoors is such a virtue, any kind of treatment of nature is okay. All too often recreation becomes wreck-reation, if you give it an inch, it will take a mile. Being forward-thinking is to be pro-active. Don't let wreck-reation get a foothold. Missouri's scenic rivers are our greatest natural asset here. Please give them the maximum protections they deserve.

Bars all recreational vehicle access to gravel bars.

My family spent our first 'camp' at Round Springs, way back when it was still owned by a farmer. And I am sure he

laughed all the way home when we set up camp right next to the Spring. Boy! was it cold that night even tho' it was August! We learned our lesson and moved camp the next day. We also lost the cantaloupe and honeydew melon that we had put into the stream to keep cold for breakfast the next morning to raccoons.

Needless to say, this area of Missouri holds many memories for the remainder of my family, and we still visit the areas, even tho' we are not able to sleep on the ground anymore!

Keep up the good work you do and, I thank you for doing it!

**Correspondence:** Dear National Park Service,

Thank you putting together a well done and thoughtful analysis for your Draft General Management Plan for the Ozark National Scenic Riverways.

While your recommended alternative, Alternative B, is a big improvement over the status quo, I believe that Alternative A is superior. It creates additional protections for the Current and Jacks Fork rivers.

This is why the Park Service should adopt Alternative A:

Alternative A closes illegal roads and restores natural conditions to 50 miles of the roads.

Alternative A closes 65 miles of undesignated horse trails and adds no new stream crossings.

Alternative A bars all recreational vehicle access to gravel bars.

Please fulfill the mission of the Park Service and these national riverways - adopt and implement Alternative A.

Thank you.

**Correspondence:** I support River Management Plan A.

I appreciate that the Park service recognizes the need to develop a management plan for our Ozark Scenic Rivers, the Current and Jacks Fork. My wife and I have been frequent canoeists on the Ozark riverways for the past 30 years making anywhere from 3 to 10 trips each year. Over those years we have seen the degradation particularly to the Current which we float more frequently usually in the stretches between Baptist Camp and Two Rivers. Twenty years ago we would go on 4 day summer trips with our kids, camp on the gravel bars and have pristine, private, and secure experiences. However, with increased road access to the river, you cannot find a gravel bar that is not covered with tracks, trash, human excrement and fire scars. Three times in the past 10 years, we've been set up to camp on gravel bars and had pickups drive on to the gravel bar and set up for a loud party. I don't begrudge people that experience, partying on the river is fun. Its just that with the current non-management plan, it can happen anywhere at any time.

The Wild and Scenic Rivers plan is intended both to make more natural wilderness experiences possible for people and to preserve the flora and fauna of the river in a more undisturbed state. I believe that River Management Plan A would restore those qualities to the river experience. I recognize that there would be resistance from people who have enjoyed and profited from the environmental abuse of the Current and Jacks Fork rivers. However, they have options to go to other Ozark streams that are not designated Wild and Scenic.

**Correspondence:** To whom it may concern,

I live on the East bank of the Current River just north of Van Buren, Missouri. As someone who has enjoyed fishing on both the Jacks Fork and Current Rivers for years, I would like to make clear that I support the NPS choosing the No-action Alternative.

All of the proposed plans restrict access to the rivers for boaters. The false belief that this river system is in anyway under threat due to the use of boats can be proven false by the pristine condition of the river currently.

The area's residents and businesses receive considerable income and pleasure from the access that recreational boating provides. These same residents pick up trash and aid tourists year round making the parks more enjoyable for all.

These suggested changes to the management plan purpose a solution to a nonexistent problem. To be clear, the rivers themselves are not overcrowded, or polluted. The ecosystem supports incredibly healthy and expanding populations of wildlife too numerous to list. There are more bald eagles, beaver, otters, and fish every year and we look forward to the area supporting the recently reintroduced elk population.

Please believe me when I say that the people living in this region care deeply for this wilderness area and do not seek to damage it in anyway. We want it to be more pristine for our children than it is now and endeavor to make sure that it will be.

It seems that there is a movement to restrict boat motors in parks because some people believe that they "must" cause damage. I concede that cutting roads through the forest is certainly something that would change and potentially damage it. However, it is quite a leap to claim that a small boat floating on top of the river creates any more damage than a slight wake. It should be especially noted here that this river system has multiple natural yearly rises of ten feet or better that change the river infinitely more than any human activity on it could ever hope to.

The idea that sportsmen/women using small boats on a river will damage it is akin to claiming that walking along the Appalachian Trail will increase the rate of erosion of the mountain chain itself. In reality, a trail it must be traveled if it is to be maintained. I maintain that the public use of the river by concerned and interested citizens guarantees its preservation in its present pristine condition for generations to come.

Thanks for listening  
Allen Edmison

**Correspondence:** Thanks for the analysis. I support the adoption of alternative A. We must do all we can to protect and preserve our rivers for ourselves and our children. There are so few places left for folks to experience the wonder and beauty. There are plenty of other places for horses and ATVs. We do not want the pristine disturbed by illegal roads and unauthorized uses. Thanks again.

V/r,

**Correspondence:** Spent many years floating and camping on the Current and Jacks Fork river. I have traveled all over our country and have never seen any place more natural or beautiful than these streams.

I visited these rivers for most of three decades in the 70's, 80's and 90's. Floated with small groups of a few up to 200 with the Real Estate League of St Louis. These are not places for motorized vehicles, riding trails and drinking parties. We need to get these areas back to peaceful and enjoyable family areas.

**Correspondence:** Thank you for your efforts to protect and preserve the Jacks Forks and Current Rivers as part of the Ozarks National Scenic Riverways. I have gone on canoe trips down the Jacks Forks and Current Rivers several times and enjoy the natural beauty that both rivers offer. However, I have noticed an increase in the number of illegal roads and undesignated horse trails, including undesignated stream crossings; these along with recreational vehicle access to gravel bars have begun to deteriorate the natural beauty and the scenic quality of the river. I hope you will consider closing all illegal roads and undesignated horse trails and restoring them to their natural state, as well as banning the gravel bar access of recreational vehicles in an effort to preserve the scenic and natural qualities of the rivers. Thank you again for your efforts to protect and preserve the Ozarks National Scenic Riverways.

**Correspondence:** It appears you are unilaterally punishing the equine industry. We already have to travel sometimes hundreds of miles just to enjoy nature. We respect nature as much or more than those who walk, and we definitely respect it more than those who bike or use 4-wheelers. We have 4-wheelers but if I have to choose who can use the trails, it would be the horse.

The horse MADE this country! Without them you wouldn't even HAVE these areas for people to enjoy. Without horses the country wouldn't be half the size it is.

Horses are part of history, and to eliminate us being able to traverse the trails along with hikers, and cross the rivers the same as hikers, is unbelievable.

Then we get to taxes. Our taxes pay for this as much as any hiker/biker. Probably more, because most of us have farms and get taxes out the gazoo!

There needs to be a meeting of the minds with environmentalists but we know that will never happen with extremists, and they are the ones usually greasing the wheel, not the moderates. the realists.

This is my opinion, and not the opinion of my club. I will see if I can get an 'official' response from the club and I will send that forward.

**Correspondence:** Dear National Park Service

I agree with the comments from the Missouri Sierra Club. They support sensible guidelines that will protect the character of this national treasure, and allow it's enjoyment by people with the least damage possible.

As they have said, Alternative B would be a big improvement, but Alternative A will give the rivers more much needed protection. Limiting and restoring damage from roads, horse trails and ATV's is key. I know there is much public and commercial pressure to continue bad practices that have been allowed to flourish, but without enforced and strict rules, these rivers won't be scenic or biologically healthy.

I am grateful for the experiences I have had canoeing and hiking along these rivers through the years. I treasured the calm and naturalness where I found it, and did my best to preserve it while I was there.

I'm sure you love these areas too and want to protect them.

Sincerely, Dee Dokken

**Correspondence:** Please restrict the use of ATV's and horses in the Current and Jack's Fork River areas. We must protect these areas to keep them as 'wild' as possible. Areas where people can get away from the noise and pressures of what has become daily life are very important for the physical and mental health of the people. The destruction caused by overuse or improper use needs to be stopped before the entire area is ruined forever.

**Correspondence:** My family (currently 12) come to the Jack Fork Area specifically the Cross Country Trail Ride. My grandchildren ages 7-2 talk about our vacation all year long. It is the only vacation we go on and enjoy camping and taking our horses. We are very concerned about the environment and take care not to do anything to endanger it. We handle our horse waste properly and never leave anything on the trail. To close down more trails and restrict river access would be a shame. I know that we spend several thousand dollars in the area stores and restaurants in just this two week period. We grocery shop, buy school jeans and boots, and assorted other things. You are going to take away the reason that so many people come to this area to camp. If you are concerned put your park people on horses on the trails and actually stop the few folks that are causing the problem. Thanks for your time.....

**Correspondence:** Because of historical uses and the economics that have arose around the Ozark Nat. Scenic Riverways, the accesses,roadway accesses and other traditional uses should be maintained as is. Years ago, NPS stated they would maintain the traditional accesses and uses of the river as they had been used in the past.

For these reasons, I wish for the river accesses, remote trail accesses, horse trails, traditional river crossings, the use of outboard motors on the river to be maintained at the current level.

**Correspondence:** To Whom it may concern,

The information I have read on the trail riding along the Ozark Riverways

which would include Shannon County needs to be given back to the State. We

live in a State that has many trails in which we enjoy riding our horses. We

litter or veer off the trail provided. The State of Illinois has been out

doing this State even has a Dept that maintains the trails to keep people

like us wanting to visit their State. To put such restrictions on riders

that live here is NOT FAIR!!!

I cannot be attend the meeting in Van Buren, but please note that WE care

as citizen of this State, we want to enjoy the riding here as much as we do

in other States.

Thank You,

David and Starla Wagster

**Correspondence:** Thank you for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless the Missouri Sierra Club believes Alternative B could be better. We recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A: Closes illegal roads and restores natural conditions to 50 miles of these roads; Closes 65 miles of undesignated horse trails and adds no new stream crossings; Bars all recreational vehicle access to gravel bars.

**Correspondence:** Please consider the A Alternative for adoption. My family and I have been canoeing the Jack's Fork River for almost thirty years. It is truly a natural gem that deserves protection. Horses. Unless you have seen a herd of horses descend a river bank and cross the river at an undesignated spot it is hard to imagine the permanent damage that it does to an area. Every year large groups of riders do exactly that and in the process introduce large amounts of fecal material to an otherwise pristine waterway. I ride and love horses. This is not an anti-horse tirade. There is a place for large groups of riders to enjoy the outdoors together but we don't have to damage a natural resource to do it.

Four-wheelers. If you have ever enjoyed the peace and quiet of the outdoors with your spouse and children in a remote area only to be interrupted by the noise and activities of four-wheelers illegally entering the gravel bar areas then you would understand my concerns. Currently the rules provide enough loopholes that the drivers always claim to be legal. Loud,drinking drivers racing vehicles through a make shift gravel bar camp site is incompatible with what the riverway should be. I understand that there are complaints about drinking and canoes. We go in the early spring season specifically to avoid that problem only to encounter the four-wheelers. It is time to take control of the wonderful resource.

**Correspondence:** I strongly support the "No Action" proposal that would make no changes to the current operating system. We are trail riders and use the trails in the Ozark National Scenic Riverways. I think it would be a huge disservice to all those that enjoy the area to put on the restrictions and make the changes that are being proposed. I know as far as trail riding goes, this area brings in a lot of out of state people who not only enjoy the area but spend money in our state. Closing trails and placing restrictions would just cause them to go to our neighboring states like Illinois, Arkansas, Oklahoma, etc.

**Received:** Nov,25,2013 14:07:00

**Correspondence Type:** Web Form

**Correspondence:** We presently use Current and Jacks Fork rivers and land to float, camp, fish, hike all areas of park. What a wonderful resource. I have been using Current River since 1950's. I have seen many changes; mostly good; but of particular concern is the rapidly increasing usage levels. What use to be 'absorbable' by the river environment is not now. Shear numbers of people and the activities associated bring devastating impacts that don't heal thus bring detonating experience levels and devalue the whole park system. In particular:

1) Too many and too high horse power boats running too high up river causing bank erosion, noise pollution, oil contamination, generally negative experience for those using the river in a way more befitting it's natural state. Not saying ban but MANAGE for a change.

2) Too many horses and/or trails that clearly cut river banks, change shoals, dump higher levels of contaminates in river.

3) Need to control human impact of shear high numbers of floaters leaving human waste, trash, fire damage, irreverent activity and non civil or even criminal activity. Beyond education and enforcement some suggestions might be:

A) using park livery system to track violators and restrict or limit return use of park resources. If someone gets a ticket or is 'cited' for non punishable 'offense' they should have to endure some reuse restrictions.

B) begin mandatory use of fire trays and portable waste systems for campers in non designated camp areas. In use in Western US river systems and seems to have good compliance. Or at least provide designated bathroom points.

Human waste is high on list of negative impact activities to the river quality.

C) increase enforcement presence either thru rangers, mdc or sheriff.

Additional input:

1) As stated in your introductions, the spring system for the rivers is like none other. In addition to the above comments I think special emphasis should be provided to study all the major springs, create base lines of volume, morphology, water quality and then monitor. What is more critical to the future of the river.

2) Regarding 'GAPS' where Park service doesn't have control, provide more public notice to negative impacts and take legal routes where justifiable to seek change/compliance to reduce negative environmental impact.

We see what popular awareness and sheer numbers of people has done to negatively impact the river at this stage. It can't heal itself any longer. It will only get worse. Therefore more restrictive (we support the most restrictive use plan) measure should be implemented now. If we hope to have this great treasure even in its present form, which is surely not an original state, then we must take the most protective steps available.

Thanks for allowing for my input!

Riverman 65

**Correspondence:** I would like to go on record as favoring Alternative B of the Draft General Management Plan. Both plans A and B are very good and much better than the status quo (No action alternative) and certainly better than C. Alternative C allows for too much development and crowding, and would result in a much degraded experience for the park visitor seeking a more pristine and natural park setting for which ONSR is well renowned.

Alternative A is actually preferable in respect to river usage rules as it reduces the horsepower allowed, or eliminates motorized boating altogether, in critical areas such as below Eminence and below Round Spring,(all the other plans are far too liberal in that respect-including B) but B seems overall to accomplish more of the unmet needs of the park such as more planned trail linkages with the Ozark Trail,a restarted oral history program, and the proposed opening of a visitor and learning center at Powder Mill. The reopening of the long-shuttered Akers Ferry Campground called for in Alternative B is also long overdue and would once again allow visitors coming to experience the upper Riverways a convenient place to camp. Allowing some highly regulated horseback camping to be conducted as proposed in Alternative B seems fair as well as long as restrictions are obeyed.

The NPS recommendation to designate most of the Big Springs Wilderness Study Area to be officially designated as Wilderness by Congress in both alternatives is very desirable as well.

Thank you

**Correspondence:** Please protect the Jacks Fork River and the Current River in Missouri. Excessive ATV 's in the area can cause erosion and other bi-products that endanger the river. I also ask that you closely monitor the number of horse trails and traffic in that area. We have been floating these rivers since we were in our teens. The beauty and clean water in these rivers are worth protecting. I would ask that you choose option A as I feel it affords safeguards that could further protect and preserve the area and it's rivers. I do appreciate the NPS and their efforts at maintaining a quality park experience for citizens.

Kind Regards,  
Laurel

**Correspondence:** My comment is concerning the draft management plan of our rivers, the Current and Jacks Fork. I am very much against this "plan!" These rivers DO NOT belong to the government. These rivers belong to the people who live here. Our families were forced to give up these farms years ago. They were promised to be able to stay here and use the rivers. What happened to that promise?

We now know how the Indian Nation felt when the white man came along and took their property. This is the exact same principal. The government came in years ago and took property for nearly nothing.

My family were the Broadfoots. My family was told, "anytime you want to come here, you're welcome to do so."

Where is that promise? This river belongs to us, the people who live here. We have taken good care of our rivers for centuries. I cannot say the same about the park service.

This is an oligarchy!!! We should have rights too!! Do we live in a nation where the ones with the most money has all the rights? We are tax paying citizens and this IS a crime! Politics should not be the rule!! You have NO right to change this policy!! You should be held accountable for your actions!!

**Correspondence:** Thank you for a thoughtful analysis. I support adopting Alternative A as it provides additional protections for the rivers by:

\* closing illegal roads and restoring natural conditions to 50 miles of these roads

- \* closing 65 miles of undesignated horse trails and adding no new stream crossings
- \* barring all recreational vehicle access to gravel bars

I've been lucky enough to spend time paddling on the Current and Jacks Fork Rivers. I, like many others, want them to remain healthy. Alternative A would eliminate human-caused sources of degradation. If left unchecked, the roads, horse trails, stream crossings and recreational vehicles will continue to spoil the Current and Jacks Fork Rivers.

**Correspondence:** I have only been visiting the Jacks Fork and Current river area for 3 years but I visit several times a year. From a customer perspective I appreciate the job that the PS provides in enforcing the existing rules on the waterways. The result is a clean family friendly river. I also trail ride on horseback. Again I love the way things are. The river seems to flood at least once a year sometimes several times a year. It looks like a new river to be explored every time.

As a taxpayer I am totally against any more proposed spending! The alternatives A, B, and C do not list what all of the new things will cost. The costs has to be considered and should be the top consideration. Additionally the financial losses to the surrounding are considered but are described vaguely. The financial losses need to be better defined.

Alternatives A, B and C also introduce a new permitting system for horseback riders. I am adamantly against being regulated to ride my horse on a park where I am already paying substantial taxes to support.

I know people who have been coming to Eminence to ride for more than 40 years. The river and the surrounding areas look great to me. the only plan that will continue to provide my friends and I the same level of recreation as the past is the current system of less regulation.

**Correspondence:** I have been floating and camping on the Jack's Fork and Current Rivers for 20 years. I agree with the limiting of horse trails and prohibiting ATVs on gravel bars. During a 20 mile trip on the Jack's Fork two years ago, every gravel bar we stopped on had the smell of horse manure. It was impossible to get away from it. It was the first time I noticed this level of pervasive stench.

I always carry hydrogen peroxide now on each trip because any crack or split in your hands or nails will get infected due to the fecal chloroform count being so high in the water.

Four wheel ATVs have made gravel bars too accessible. There is no private camping. Groups of motorized vehicles can invade a campsite at anytime night or day.

Just a few years ago these rivers were a completely different experience. Let's get back to why these rivers were

protected in the first place. To keep them wild.

**Correspondence:** The Current and Eleven Point Rivers were so very important to the early settlement of Arkansas. They're also very important today to our tourism industry and local recreation as well. They are among the very few locations on Earth to provide a home to the endangered Ozark Hellbender.

It's very important that these rivers are presented in a pristine state. They are the gems of the Ozark rivers.

**Correspondence:** Regarding Alternate B (NPS Preferred), does the NPS have an estimate of how many motorized boats would be affected by the extension of the 60/40 horsepower limit to Gooseneck? Perhaps I missed it in the 534 page document, but can the NPS also speak to the rationale of limiting horsepower?

I purchased a larger boat and outboard engine in 2006 to avoid the crowds north of the Van Buren bridge. The Van Buren Gap just got a lot more crowded with the displaced larger boats and outboard engines. Perhaps a Grandfather Clause would be appropriate for those of us who already have larger outboard engines permitted by the current Plan.

Round Springs Wilderness Area  
Doing away with illegal access points  
Reduction of horse trail crossings of Jacks Fork

Prohibit:

ALL outboard motors on entire lengths of Jacks Fork and Current rivers in keeping with ex-Secretary Salazar's memo about reduction of global warming emissions. Outboard motors, whether jet pump or prop driven, emit copious amounts of CO2 and, in addition, pose a hazard to kayakers, canoeists, and rafters.

Reminder;

These are NATIONAL scenic rivers and comments from folks in Van Buren and Eminence should be considered, but only as much as comments from users in St. Louis, Kansas City, my town of Columbia and such faraway places as Seattle and NYC.. Not only are these NATIONAL rivers, but attract international visitors from Europe. Visitors don't come to smell and view horses or horse dung and if they like outboard motors, I recommend Lake of the Ozarks

**Correspondence:** I am strongly in favor of increasing the protection of the Ozark waterways through the proposed General Management Plan, and support Option B for its enduring benefits and impact in preserving these areas. My support is based on personal experience with two similar major natural resource protection acts. The first pertains to Quetico-Superior National Forest. When I was 11 years old, I spent 10 remarkable days in an extensive

canoe trip in these pristine waters with my brother and his University of Illinois adventure group. Ten years later, in 1975, this area was struggling with overuse and misuse, problems with trash, and a diminution in the wilderness experience so many had enjoyed. The park service then imposed restrictions: requiring registration and regulating the number of users at any one time, becoming more strict on allowable food containers and carry-out waste requirements, and restricting camping to designated sites with fire grates. I initially felt affronted at these added restrictions that placed some limits on my access and freedom of use. However, when I returned in 1990 with our two young children, I was extremely appreciative of the management plan and its reasonable and appropriate restrictions. While I had to plan in advance to gain access to the waterways, the limited number of users allowed the relative isolation desired in such an experience, and the few encounters with other people were welcome. My initial disappointment at being restricted to designated camping sites quickly turned to appreciation for the long stretches of wild, pristine shoreline dotted by the occasional designated site. Without such restrictions, the entire shoreline would soon be devoid of underbrush and would look like a city park. These restrictions overall had no negative impact, and instead allowed me to share the same wilderness experience with my children that I have marveled at 25 years earlier.

The second experience was with Grand Teton National Park. I was initially annoyed with the required registration and the daily limit on users. Once I gained entrance after a two day wait, my annoyance was quickly replaced with appreciation. Again the scarcity of other humans and the effect of registration and site restrictions created a marvelous wilderness experience, because of these protections. Similar restrictions are needed to protect our beautiful waterways and the forests they run through for generations to come.

**Correspondence:** The only trail I see on any of the maps is the 'Ozark Trail' - where would the 25-45 miles of additional trails be located in the alternatives and what are the locations of the 65 miles of undesignated horse trails that would be closed??

Eminence provides a great opportunity for outdoor enthusiasts of all types. I understand the reasoning behind management; however, if the levels of danger are only during the peak use periods perhaps stringent rules/regulations are not required. To limit the number of people on the river, close trails that have been used for years, and other restrictions would damage the economy horribly in the little town of Eminence not to mention ruin the recreational enjoyment everyone returns to every year.

Enforcing stricter use of the environment and beauty God created would be like displaying fine china that is never to be used and therefore not enjoyed and used to its full potential.

Please reconsider - with the many years of use, the trails are in great shape and should be available to the public to enjoy for years to come along with the rivers.

I was informed by a representative of NPS: "In response to your question regarding horse trails, there have been no specific decisions made on the management of the horse trails. The final General Management Plan will provide broad guidance for management, but the specifics for designating additional horse trails will actually be carried out in a separate planning process and will have a separate opportunity for public input."

MMMm, really? Actually the plans do not appear to be very general but specific decisions. I have yet to receive a response to that comment.

How can there be 'no specific decisions' when the plans indicate a specific number when referring to miles of trails????

Please do not stop or strictly restrice the use of such beautiful resources!

**Correspondence:** To Whom It May Concern:

I am writing in strong support of Alternative A in the NPS's Ozark National Scenic Riverways Draft General Management Plan. As a neighbor of the park and a regular user, I understand well what a treasure our Ozark riverways are. I have fished, hiked, and floated on rivers inside and outside of the NPS lands. On three trips this summer to the Current River, I was impressed as always by the beauty of the water, the steep valleys, and the rich animal and plant life. However, I was also disturbed by several factors:

- \* First, I was startled by the amount of trash we encountered throughout the upper length of the river.
- \* Second, I was concerned about the network of informal roads and trails we saw, which provided vehicular access to the river at undesignated points. The visitors who took advantage of these undesignated access points clearly contributed to the litter and stream bank degradation.
- \* Finally, I noted that at Cedargrove and Akers Ferry, the sanctioned streamside access could do more to mitigate the impact of visitors on the environment.

The riverways within the NPS lands are just a small fraction of the high-quality recreational waters in this region. I have also enjoyed time spent on the Meramec River, the Huzzah, and others. For those seeking easy access, motorsports, and higher-impact lodging and amenities, there are ample nearby opportunities. I hope that the NPS will opt to preserve these lands for minimal impact recreation and education.

Yours sincerely,

Jeffrey M. Zacks

**Correspondence:** I urge you to decide on Alternative A. As a retired wildlife refuge manager located in a highly developed county of New York, I know firsthand how important nature experience is for human beings. I also know with the constant increase in human population that the wear-and-tear on wild areas is greater all the time. My own refuge tells me that, a wild area set aside for only "passive recreation": nature education, walking, snowshoeing and -skiing. Still, over the years, rare species of plants have been dug up or picked, habitat trampled, small animals taken, and non-native species introduced. In general I love people but they often do ignorant and disrespectful things.

Now in the case of Ozark Riverways, if you allow such activities as horseback riding, the destruction of habitat will come with it, particularly along streams and other waterways. Both people and horses in various ways will introduce invasive species. This brief example of horseback use is just the beginning...

Additionally, people sorely need quiet, peaceful experiences. Where can they get them in this day and age? Mostly in the out-of-doors, in the "back woods", at small wildlife refuges like mine and hopefully at Ozark National Scenic Waterways!

Ultimately, Alternative A does the best job for people and nature both.

Think hard about your choice. Of course, you should have public input. But ultimately you are the professional staff, and along with your experience and sound science it is up to you to make the best decision to prevent damage, to preserve these lands and waters for future generations - - of plants, animals and people!

Thanks for your consideration of my comments.

**Correspondence:** I support Alternative A.

It does so much to protect these rivers.

This includes: Closing illegal roads and restoring natural conditions to 50 miles of these roads.  
Closing 65 miles of undesignated horse trails and adds no new stream crossings.  
Bars all recreational vehicle access to gravel bars.

These are all huge points in favor of Alternative A.

In the early 1970s I spent a good bit of time floating both of these rivers. I returned this year for the first time in almost 40 years. I was still impressed but noticed some degradation which I think Alternative A would go a long way in taking care of. These rivers are too good to lose and these changes would, again, help save them.

Thanks.

**Correspondence:** As with any plan to change the ONSR, people will be voicing many different opinions; all knowing they have the best and only solution. However, as a native Shannon County resident, I have firsthand knowledge of Current and Jacks Fork rivers. I moved to Shannon County in 1969 at age ten. I am the sixth generation of my family to use these rivers and now have grandchildren that make the eighth generation to enjoy this wonderful area. I have heard the stories of floating logs to the mills, gigging with pine knots, wagons crossing the frozen rivers in winter, running moonshine and all of the others. Through the years, I have witnessed and experienced many changes to the rivers and that's why I believe the only option is the no-action alternative.

The main conflict appears to be between the people using the rivers. Canoeists, boaters, horse riders, hunters, bikers and hikers all have different agendas. To a hiker, seeing an atv cross a creek might be considered an abomination. Similarly, to the hunter it is a valid way to get to the game. The list of conflicts goes on and on and there is generally no middle ground. Canoeists don't want to see jet boats, hikers don't want to see atvs and some don't want to see people camping on gravel bars.

The primary question is whether locals should be restricted from doing the things they have done forever; things they learned from their parents and grandparents - just so someone that visits once a year can have a pristine experience.

I agree that many of the designated camping areas and canoe rental accesses can be overcrowded during the peak months. However, go to those same areas on a 'peak season' weekday and see just how few people utilize these same campgrounds and accesses. To restrict outboard motor usage to 'off-peak season' use is not a logical argument since most summer weekdays are 'off-peak'.

The impact to the 'environment' as a result of recreational use is minimal. I would argue that more 'damage' is done during a minimal flood than could ever happen as a result of horses, boats, atvs and camping combined. I have seen many smaller floods and several large ones (1973, ~1976 and 1993). Flooding is a natural phenomenon, but has a

major erosional impact to the environment, far more than the immediate impact of humans. From a pure 'environmental' argument, the park should build levees and place riprap along the banks to reduce the erosional impact of flooding.

Since there appears to be no middle ground, the Park Service is faced with the task of 'balancing' the usage of this national park. Should they side with the locals or lean towards total restriction? There is no way to make this decision without displeasing one side or the other. That is why I believe that the no-action alternative is the only solution. At least everyone is getting along together now.

**Correspondence:** I fully appreciate the effort, dialogue and data collection that have contributed to the crafting of a draft Management Plan for the Ozark National Scenic Riverways. In reviewing the lengthy Plan, I am of the

opinion that Option A presents the best course for preserving the scenic beauty and recreational opportunities of the ONSR. I am an avid fly fisher, but also one who enjoys the quiet beauty of a day on the river with others - others who do not jettison their garbage into the river mid-float, who ride horses around, but not through, our rivers, and enjoy human laughter and conversation above the din of ORVs and other motorized vehicles that send the fish and every other animal for cover. Without the scenic beauty of this important Riverway, there is no reason for others to visit; it will remain an under-appreciated, dwindling asset.

**Correspondence:** I am glad your management plan process is about to produce a better vision for the Current & Jack's Fork Rivers. I was floating those rivers before they were designated Wild & Scenic. I watched the cabins and clear cuts recede and cheered the chance for solitude on the upper river parts and didn't mind an occasional "john" boat on the lower river. Horse flies could be avoided by a quick plunge into a pool.

Sadly, as you have managed my stream boats have gotten (jet) fast and loud. Easements seem to be ignored and that gravel bar I used to camp on now has a giant pickup truck and trailer sitting by the water's edge. Where the bars aren't occupied, the trails behind them are often now mush. Horse traffic churns up the gravel bar edges and pocks trails. Trail multi-use is fiction when some users leave fecal fall out and that affects stream quality as well.

Although plan B makes some moves in the right direction, I prefer a closer match to the terms Wild & Scenic. Isn't A a better choice?

**Correspondence:** I have floated the Current and the Jack's Fork multiple times over 45 years. It is a national treasure. The photos of horses in the rivers is upsetting. Getting cattle out of streams but allowing horses in doesn't make sense. Photos of the horse trail ride vendors' stables and parking lots from the air, make me think of my last trip to the Grand Canyon. The ride vendors at THAT national park are limited, and trails are marked and maintained, and policed. If we are going to try and accommodate different uses, we have to upgrade our guardianship of these remaining wild areas. There aren't really many places left wild. There are so many of us trampling around. I support more stringent guidelines and the manpower to protect the Riverway.

**Correspondence:** I support the increased protections of Alternative A for management of the Ozark National Scenic River ways in Missouri.

These rivers and surrounding lands are a national treasure that is losing some of their value by not being better protected from misuse and overuse. Environmental factors, population, encroaching development, improper horse stalls and waste run off, violation of easements, undesignated horse trails and misuse by ATV's all combine to disrupt and despoil the habitat, enjoyment and serenity of the river ways.

I favor closure of undesignated ATV and horse trails that crisscross fragile areas and urge that they be closed to that type of traffic. Illegal roads allow for illegal timber cuts and access for harmful pursuits to occur undetected and they should also be closed. Easements must be enforced and no new roads constructed. Damaged areas must be restored, wildlife better protected and the values for which the river ways were established must be reclaimed.

I am thankful that Congress saw fit to protect these river ecosystems and I trust the NPS to manage them with that protection uppermost in their priorities.

**Correspondence:** I thank the National Park Service for putting together a well-done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless I and the Missouri Sierra Club believe Alternative B could be better. We recommend the adoption of Alternative A, as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
Bars all recreational vehicle access to gravel bars.  
Please consider these ways to protect a vital and beautiful and much-cherished natural resource.

**Correspondence:** I am strongly in support of a stricter management of the Current & Jack's Fork Rivers. My family and I spend an average of two weekends a year on these rivers and have been surprised by the amount of horse traffic along the Jack's Fork, including an incident this Memorial Weekend when one person in our party was nearly run into by a rider crossing the river. The ATV noise along the rivers has also reduced the natural feel, and I can only imagine what damage is being done beyond the banks. A plan should be put in place designating any Horse & ATV trails and all others should be closed. The majority of the river should have a wild feel. Horseback Riding and ATV activities can take place away from the river, Canoeing cannot.

**Correspondence:** We've canoed down the Current River many times over the past 40 years. It is my favorite river in Missouri. We especially love the serenity and beauty experienced along the Current River. Most important the lack of development and human encroachment makes you feel like you're in a national park.

We have noticed more and more access points to the river, horse crossings, and even vehicles parked next to the river's edge. I do not believe these changes are in line with the national park status of the river and degrade the experience. Therefore, while the proposed plan B is a definite positive step for the Current River protection, I think more needs to be done. These new access points and encroachments need to be removed, or at least the most

damaging ones.

Please protect the greatest ozark rivers in Missouri and adapt a management plan that will ensure they remain worthy of national park status.

**Correspondence:** Ozark National Scenic Riverways preserves the free-flowing Current and Jacks Fork Rivers, the surrounding resources, and the unique cultural heritage of the Ozark people.

Mr. Black please read what you wrote,(above) the park was put here to maintain the free-flowing water as the Ozark people were afraid of the river being dammed and making a lake. It was never the intent of the Park or the Ozark people of it becoming a Wilderness or shut down from local use.

Remember the local people let you in and they can force you out.

**Correspondence:** I would like to comment on your plan to change our river use. I am very much against this. The Jacks Fork and Current Rivers are not optional for change. These rivers belong to the people here. It is my opinion that you are overstepping your bounds, just like every other part of government.

Our families have played on these rivers for years. I want my grandchildren, and generations to come to have that same option. There is no problem with our rivers now, so there is no reason to change. Eminence and the surrounding towns depend on those rivers for the economy.

I am VERY MUCH against this!

Doris Ann Broadfoot Warren

**Correspondence:** As a mother, educator, businesswoman and human, I am urging you to take a stand for the Ozark National Scenic Riverways. Missouri is blessed to be home to some of the most pure and beautiful waterways in our country. These rivers provide homes to many unique aquatic animal and plant species, allow many residents to work in the tourist industry which helps sustain lives in an economically challenged region, provide many people with priceless experiences. Please have the courage and the wisdom to understand that you have an opportunity to help America redefine abundance. It's up to leaders like you to create a world where abundance is not only money, rather it is clean air, clean water, good food, good shelter, and good relationships.

Thank You.

Sincerely,  
Sylvia Donnelly

**Correspondence Type:** Web Form  
**Correspondence:** I agree with the NPS plan except motorized limits should not be restricted below southern boundary of park north of Van Buren.

Limiting to 60/40 below Big Springs to park boundary is excessive limitation also as proposed in plan B. I own and operate a watercraft with a larger motor than a 60/40. I do not normally operate at full throttle, nor do other operators with slightly larger engines. When you operate a vessel with three or four occupants and a 60/40 you must operate at high to maximum RPM. If you operate with a higher horsepower engine, you will tend to operate at half throttle, which is nearly equal to the 60/40.

This example may explain, I own a Chevy Suburban, I do not operate at full throttle, requiring me to have a three cylinder engine operating at full throttle is not better than operating a 327 HP engine at 2,000 rpm cruise speed. I do not pollute the environment more, while operating at less noise.

Yet I possess the additional horsepower that is occasionally necessary to assist other boaters or floaters in need of assistance.

**Correspondence:** We like Plan A because it does more to preserve and conserve this wonderful national/natural treasure farther into the future so that our children, grandchildren and maybe great-grandchildren may enjoy it! There are other Ozark river alternatives available for more intensive activities such as ATVing and horseback trail riding- -both of which are more destructive in practice than hiking and canoeing. There is so much invasiveness of the natural world as it is, so let's do the right thing to preserve and conserve this jewel for a long time to come.

**Correspondence:** I just spent thirty minutes filling out this form It was not accepted and I was NOT given a

chance to make any correction (did NOT mark that I was a representative of the organization listed). All the more reason I fear that my friends are most probably right and that NPS has already made up its mind. The first clue might very well be that the NPS has a preferred option. The restrictions are unjustified. Especially the elimination of trails and outboard usage above Pulltite. I have gigged and fished that area for more than forty years. I am being deprived of my heritage and culture for NO listed reasons. For the past several years I have had an outboard on the Upper Current River Clean-up, and typically pick up more trash in my boat than the majority of the others combined on the same stretch.

**Received:** Dec,05,2013 00:00:00  
**Correspondence Type:** Web Form

**Correspondence:** Our organization was created to help preserve the best of Ozark culture. I have been gigging Upper Current River for more than forty years. We have hosted family, friends, fellow educators and church members at parties that included thirty plus people. We have introduced youth to the sport of their ancestors while educating them to their place and their responsible role in our environment. We have enabled the more elderly in our communities to relive treasured aspects of their past. All the while, we have had a significant impact on the economy. In the past thirty years, I have purchased five boats and motors just to fish this specific stretch that is now being threatened- -Pulltite and above. At all of these many gatherings, there were purchases of food, fuel and equipment. This unjustified action will have an extremely negative impact on the local economy. There has been NO evidence offered that the use of outboards on that stretch harm either the river or the riparian border is harmed by their use. There has been little evidence offered that their use significantly conflicts with other recreational use in the peak season and NO evidence it interferes in the off season. It appears to be simply one more example of unnecessary intrusion into our lives; one more instance of the NPS 's history of mismanagement of this waterway.

**Correspondence:** Our river ways are a way of life for many in our areas. Local businesses thrive because of the river access in our remote rural areas. Taking our access points, trails, and gravel bars away is obscene. We people of these areas take great pride and great care of our riverways. It is one of the only places we can call Gods country! Many locals and tourists alike would not disagree that you cannot find a much more beautiful place than the Current river to camp, boat, and fish on. Most of us have grown up on the river and it would be a shame to not pass down it's heritage to future generations. There are much bigger problems that need resolved in this world than taking away access to Current river. Shutting it down will devastate our communities and how we survive. Please reconsider your actions for the sake of our communities future!

**Correspondence:** Access points are being further restricted, again. One of the largest problems I have witnessed during the NPS management of this property is that more and more rules and restrictions are implemented but unfairly executed. As a user and often a worker on the river (hauled canoes for almost three decades) I have watched rangers spend hours at Akers and at Running River sitting and visiting while drunks were reported, trespassers were driving where they should not and maintenance was not being done. Glaring examples include the closing of Sinkin Creek in part because campers were staying there too long. People charged with the ability and power to carry fire arms actually told me (as a member of the Missouri Press) that campers were left there all summer, circumventing the rule of two weeks by campers telling them that they were a different group. I mean, if these law enforcement officers cannot write down a license plate number and a date and the follow up two weeks later- -regardless of who is sleeping in it or sitting by the fire- -it is actually scary that they are empowered to carry firearms. Another recent development is the apparent, and when asked- -confessed, belief that a college degree disables them from pulling trash from an overflowing barrel. I have four including a doctorate and as a school superintendent mopped up vomit if the occasion demanded. Another worrisome concern is that there is too little accountability. Though there are NO cleanups being conducted by the majority of canoe businesses, the Van Buren office seems to believe there are because the concessionaires say there are. One official even offered to show me the dates on paper, after admitting they themselves had never attended one. A move in the right direction was that Supt Black did attend the Lower Current River Clean-up this past summer. Such mismanagement is I believe a significant reason that usage is down

and the local economies are suffering.

**Correspondence Type:** Web Form  
**Correspondence:** Given the NPS's support of a specific option, interested parties would appreciate answers to the following:  
1) Who specifically developed these options?  
2) Who chose the preferred plan?  
3) How many trips to the Ozark National Scenic Riverways had each of these people made in the recent past?  
4) What information and observations led to the decision to exclude outboard motors from the Upper Current River above Pulltite?  
5) Which of the people involved in this suggestion have ever been present on the Upper Current River above Pulltite? And were their observations made during peak season or during the off season times?  
6) What negative impact or believed/perceived negative impact led to the proposal to eliminate motors from above Pulltite? Is there ANY empirical evidence to support such beliefs and or perceptions?  
I and my friends would greatly appreciate answers to ALL of the above questions. As an officer to more than one organization (Ozark Heritage Project, Current River Power Team) committed to the preservation of these free flowing streams and the lands and culture that surround them, as well as a member of the Missouri Press, I believe we are entitled to them. Lastly, if these answers are NOT readily available, how can you put forth and support such a proposal; particularly when such proposal jeopardizes both the culture and economy of the area with which you have been given stewardship?

**Correspondence:** 1 in the gmp plan onsr wants to restrict motorized boats to less than 60/40 in some areas you shouldn't do that because smaller boats can't hold as many people therefore it will take more boats to haul the same amount of people, and that is less efficient ( uses more gas ) and in turn more noise. the boats have no ill affect to the river . we boaters have helped multitudes of canoers in distress . and the newer four stroke engines are much more efficient and quite than the older models . I repeat there is no reason to further limit the output of motorized boats. there should be not action taken. 2 onsr also wants to close access to the rivers . onsr has already closed too many . if anymore are closed there will be too few accesses to fight fires , get to people in case of emergency , and get to the camping ares where I have camped all my life. since I was two weeks old I have been on the river, in a wooden john boat , when rangers didn't set up cameras to watch your camp, and invade your privacy. there should be no action taken. 3 there should not be natural areas in the onsr , because it only creates confusion and the ability to see whatever cave ,spring or landmark that you are try to observe. why is it better for a few to see what a group can see? it is not better . onsr only wants to keep people out. there should be no action taken. or more trails, accesses provided to see these things. 4 increased recreational use of the onsr should be implemented for the visitors that want use motorized (atvs) so that they can see the beauty of our rivers and countryside . which are very few if any designated trails for that. why can't there be more attractions for recreational use that doesn't detract from the natural landscape. there should be more trails or no action taken. 5 there should be no zoning on the rivers that will take away my heritage and ability to see the parts of the river that I have seen all of my life and plan to see for the rest of my life. I have been from Montauk to Doniphan and from the prongs to two rivers many times . you have already taken away upper jacks fork isn't that enough .there should be no action or resend the restrictions you have already put on the upper jacks fork river. 6 restrictions are only a way to keep people from seeing and experiencing our beautiful Ozarks rivers and countryside. there are already too many restrictions and the use of the our rivers and parks reflect that. any more restrictions will further increase the downward spiral of less usage within the parks. we enough restrictions, don't put another dagger in the heart of the Ozarks tourism and people. no more action. you have already done enough.

**Correspondence:** Dear NPS,

As a lifelong user of the Ozark National Scenic Riverways, I urge you to protect these rivers. My parent began taking us to the Current and Jacks Fork when I was 8 or 9. We enjoyed many summers on those rivers. As I grew into an adult, I continued to trek down to the Ozark rivers with friends and family. In fact, I just spent four days paddling the Jacks Fork and Current Rivers over the Thanksgiving Holiday weekend.

Please protect these streams from pollution and commercialization. They are truly a national treasure that should be kept pristine for future generations.

Thank you for your time.

Sincerely  
Keir Thomas Haug

**Received:** Dec,06,2013 11:39:52  
**Correspondence Type:** Web Form

**Correspondence:** I understand that Plan B of the Proposed National Scenic Riverways Plan would Eliminate Motor Vehicle Access to Gravel Bars. I am totally against cutting off motor vehicle access to the gravel bars on the Scenic Riverways. This change will have a serious Negative Impact on the Culture of the area. Local residents have been enjoying the use of the gravel bars on the rivers for generations.

Several years ago I enjoyed camping in what is now the Patty Creek Wilderness Area almost every weekend during the Summer. After the area was made into a Wilderness Area my access roads were blocked off, and I could no longer use the area except my foot or horseback. This change eliminated my ability to camp, and enjoy this area except in designated camping areas. I do not want this to happen in the Riverways area.

I am totally against blocking off access to the Gravel Bars. I recommend NO ACTION.

**Correspondence:** I understand that Plan B of the Proposed Ozark National Scenic Riverways Plan would Eliminate all ATV, UTV, and Four Wheeler Use in the Ozark National Scenic Riverways.

I am Totally Against this change. Infact I would like to see the Park Service open up more trails to ATV, UTV, and Four Wheeler use on the Riverways.

Back in the 1970's I enjoyed driving my Land Cruisers on the old gravel roads, and existing trails in what is now the Patty Creek Wilderness Area. Myself and several others would help keep the brush cut back, and the trails kept clear of debris for the enjoyment of all who used the trails. After the area was made into a Wilderness area the trails were blocked off, and we could no longer enjoy drivingn the trails.

I have been driving on back woods trails in Missouri with Jeeps, Land Cruisers, 3 wheelers, ATV's and UTV's for over 40 years. I have NEVER seen any Negative Impact to the Environment or Trails created by their recreational use.

I am completely against the Elimination of all ATV, UTV, and Four Wheeler use on the Riverways. I recommend NO ACTION.

**Correspondence:** I understand that Plan B of the Ozark National Scenic Riverways Plan would Reduce Boat Motor Horsepower. I am totally against this change. Residents of the area have been fishing and gigging on the

rivers for generations. The reduction in horsepower would cause hardship on residents of the area who would have to buy new motors to meet the new requirements. In this Very Low Income area this is a hardship that residents cannot afford, and furthermore there is no need for the change.  
I am Totally Against this change, and recommend NO ACTION

**Correspondence:** grew up in Missouri and have been going to Eminence Missouri for my summer vacation for 40 years now. I am gravely concerned about this proposal specifically related to closing the equestrian trails. ONSR's enabling act has three stated purposes - conservation, preservation and recreation. The recreation purpose should not be sacrificed to conservation and preservation. Rather, recreational uses should be widely accommodated. The Ozark National Riverways is a huge part of my life and I can't imagine things changing where I can no longer enjoy the beauty that it provides. I now take my children horseback riding in this area and they cherish the memories that we make while enjoying the river by horseback. While there I am continually working to be a steward of the area by making sure my children and the people that I associate with treat the area as sacred ground. It seems to me that the canoers are to blame for the trash and pollution that takes place. More regulation should be done to ensure that the rules are followed. More trash cans should be placed in areas close to the riverway. Alternative B unnecessarily eliminates my recreational use and use area(s). To better accommodate my recreational use, I suggest implementing broader resource-based recreational zoning concepts in lieu of primitive or natural zones. The NPS should explore available amenities that support a wider variety of recreational use which minimally detract from aesthetic values.

**Correspondence:** To Whom it Concerns,  
I have been trail riding at the Cross Country Trail ride for the past 27 years. The first year we attended was back in 1986 (I was 6 years old). We have been going every year since. When we are trail riding we stay on designated trails and are all very respectful of the land. We make sure to always leave the area we ride through, just as we found it. It is a time for us to all enjoy nature and see all the wonders God has blessed the Ozark area with. It has become a family tradition. My Grandma went and now her great grandkids attend the ride. Please allow us to continue this tradition, one that brings us back to a simpler time. There are not too many places left in the world where you can go back and feel just like the people who walked it 100 years ago felt.

**Correspondence:** I'd like to express my appreciation to the NPS for working to improve the management of the Ozark Scenic National Riverways. I am an ecologist and botanist employed by the Missouri Botanical Garden, though my comments are made as an individual and not as an official representative of MBG. As an individual

professionally and personally dedicated to conservation, I deeply value the Ozark Scenic National Riverways. Float trips on the Current and Jacks Fork Rivers (during off-peak recreational usage periods) are one of my family's favorite means of enjoying the natural beauty of the Ozarks. I am encouraged by the recommendation of Alternative B by the NPS, though needed additional protection of our priceless natural resources could be provided by Alternative A. Alternative A would do more to address illegal roads, user defined horse trails, and ATV use of gravel bars. As an ecologist and conservationist concerned about the preservation of our natural heritage for future generations, I am concerned about the impacts of these recreational uses on water quality, vegetation, and the aesthetic beauty of the river and the surrounding landscape. I strongly encourage the NPS to adopt Alternative A! Thank you.

**Correspondence:** 12/7/13 \* \* \* \* \* ACCESS VIA CAR \* \* \* \* \*

I am a senior citizen, residing in Shannon County, and one of the joys of living near Ozark National Scenic Riverways is being able to access many points on the Current and Jacks Fork Rivers via car to take in the views. Additionally, I like to drive down the roads to look at the woods and hills from different vantage points.

Closure of ANY of roads is unacceptable. I do not feel safe walking down closed roads alone to reach these destinations.

The Ozark National Scenic Riverways was established as a public park to be enjoyed by everyone - no access points should be eliminated. The priceless scenery is there to be seen, not hidden at the end of a road blocked by boulders or barricades.

Please remove the boulders and barricades that were quietly installed during the writing of the Draft General Management Plan, and LITERALLY GO BACK TO THE WAY THINGS WERE BEFORE THE FIRST DRAFT GENERAL MANAGEMENT PLAN WAS SUBMITTED FOR REVIEW.

Thank you.  
Anne Guelker

**Correspondence:** To Whom It May Concern,

I am writing to express my support for the new General Management Plan for the Ozarks National Scenic Riverways. I urge the National Park Service to adopt either Alternatives A or B, which both would help to protect this extraordinary place, which many Missourians and visitors from throughout the United States hold dear. I fear that to take no action on this plan would lead to further degradation of these beautiful rivers and the adjacent landscape.

As a resident of the Ozark Plateau, I spend a good deal of my free time during the summer visiting this park and others like it with my wife and three young children. These opportunities to canoe, camp, and hike represent perhaps our happiest family time for the whole year. It is very important to us that these invaluable public resources be protected for our children and future generations.

Regards,  
Jeremy Neely

**Correspondence:** In my humble opinion, the no action plane should be implemented. The other plans, while well researched and written, leave enough "loopholes" for more restrictive measures to creep in as time goes by. Looks and smells like an effort again for the government to grab and control public lands. I would like to see more designated horse trails but not at the cost of other trails currently being used by those who know the area trails. Secondly, the cost of these proposals is high especially when the budget has already been cut. These new laws can't be enforced without appropriate staff and funds. There are more important things in the budget. I think best to leave well enough alone. I do think people in general should be mindful of the impact they have on the land and should leave things as they found them or better. I know we choose not to ride when the ground is muddy and more vulnerable to erosion, we respect designated river crossings and carry out all that we carry in. That is my opinion, thank you for allowing public comment.

**Correspondence:** Trying to convert the Ozark Rivers/Lands to a Yellowstone Park concept is laughable. The Ozarks are a very seasonal retreat for those that have discovered it's secret and beauty. For instance, the small town of Eminence, MO (population 500 -). The people of Eminence and surrounding areas depend on tourist attracted by the rivers and trails for their livelihood.

I believe the imposing General Management Plan, if implemented, would devastate many small communities in the Ozarks. The Plan would create a domino affect including lost revenue, land and real estate values, deficit of sales and closing of many small business' in the affected areas.

In closing and after reading the rules and regulations of the General Plan, I asked myself if I would consider entering the "Parks" if the Plan was implemented. The answer was "no" and I believe that many others in the area would have an opinion of the same.

Sincerely,

Jodi Collier

**Correspondence:** The proposed limitations on various recreational opportunities will impose undue hardships on an already impoverished community! Tourism and the dollars that circulate within the local economy are imperative to the survival of the people of the area in question. Your economic impact study is flawed in that it does not predict/speculate the loss of economic dollars if your "preferred option" is implemented! Your document states that 47% o the people in Eminence and 23% o those in Shannon County currently live below the poverty line. These number will only increase when you go forward with PLAN B.

**Correspondence:** Thanks to the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless, Alternative B does not go far enough. We should adopt Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:  
Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
Bars vehicle access to gravel bars.

This is one of the most beautiful areas remaining in Missouri. Please protect it.

**Correspondence:** Greetings,

As a United States citizen and working tax payer, I am commenting on the pending management plan. As a former local resident of the Ozark National Scenic Riverway area, I have enjoyed the area for many years and still continue to do so. I believe that with continued care and management, that the area can be maintained and used by locals and tourists alike for many years to come. I believe the current management plan with added enforcement and engineering funding would offer the best options with current funding levels. I oppose any plan that cannot be properly funded, and with the burden of our current budget deficit I am against adding more cost to implement restrictions. Regulations that restrict access, cannot be maintained or enforced are a waste of taxpayer funds. Local residents make up a very small percentage of the usage group, but seem to be the largest target of restrictions in the proposed changes. I would hope that the opinions of local residents are not overlooked versus the paid voice of lobbyist and environmental groups. As for current regulations, I believe that motorized boat use should continue to be allowed with the 60/40 rule modified to allow useage. With advancing 4 stroke motor technology,I believe sound and pollution levels will decline in the near future. As for non- motorized usage I believe that proper distribution is the key to an enjoyable experience for all with fewer complaints between user groups. An increased enforcement presence would also improve the success of the current management plan, as most of the problems noted in the study are already in violation of the current regulations. I would also support more engineering support to care for existing facilities and improvements to them, as well as added access and facilities. And again as noted above, I would hope that the small voice of local taxpayers is heard and taken into consideration when making possible changes and restrictions to the management plan.

Thanks

i personally support the below statement to protect our Earth and all Earthlings.  
COUNCIL STATEMENT

This statement reflects the wisdom of the Spiritual People of the Earth, of North and South America, working in unity to restore peace, harmony and balance for our collective future and for all living beings. This statement is written in black and white with a foreign language that is not our own and does not convey the full depth of our concerns.

The Creator created the People of the Earth into the Land at the beginning of Creation and gave us a way of life. This way of life has been passed down generation-to-generation since the beginning. We have not honored this way of life through our own actions and we must live these original instructions in order to restore universal balance and harmony. We are a part of Creation; thus, if we break the Laws of Creation, we destroy ourselves.

We, the Original Caretakers of Mother Earth, have no choice but to follow and uphold the Original Instructions, which sustains the continuity of Life. We recognize our umbilical connection to Mother Earth and understand that she is the source of life, not a resource to be exploited. We speak on behalf of all Creation today, to communicate an urgent message that man has gone too far, placing us in the state of survival. We warned that one day you would not be able to control what you have created. That day is here. Not heeding warnings from both Nature and the People of the Earth keeps us on the path of self destruction. This self destructive path has led to the Fukushima nuclear crisis, Gulf oil spill, tar sands devastation, pipeline failures, impacts of carbon dioxide emissions and the destruction of ground water through hydraulic fracking, just to name a few. In addition, these activities and development continue to cause the deterioration and destruction of sacred places and sacred waters that are vital for Life. Powerful technologies are out of control and are threatening the future of all life

The Fukushima nuclear crisis alone is a threat to the future of humanity. Yet, our concern goes far beyond this single threat. Our concern is with the cumulative and compounding devastation that is being wrought by the actions of human beings around the world. It is the combination of resource extraction, genetically modified organisms, moral failures, pollution, introduction of invasive species and much much more that are threatening the future of life on Earth. The compounding of bad decisions and their corresponding actions are extremely short-sighted. They do not consider the future generations and they do not respect or honor the Creator's Natural Law. We strongly urge for the governmental authorities to respond with an open invitation to work and consult with us to solve the world's problems, without war. We must stop waging war against Mother Earth, and ourselves.

We acknowledge that all of these devastating actions originated in human beings who are living without regard for the Earth as the source of life. They have strayed from the Original Instructions by casting aside the Creator's Natural Law. It is now critical for humanity to acknowledge that we have created a path to self destruction. We must restore the Original Instructions in our lives to halt this devastation.

The sanctity of the Original Instructions has been violated. As a result, the Spiritual People of the Earth were called ceremonially to come together at the home of the Sacred White Buffalo Calf Pipe Bundle. These Spiritual Leaders and those that carry great responsibility for their people from both North and South America came together with the sacred fire for four days at the end of September 2013 to fulfill their sacred responsibilities. During this time it was revealed that the spirit of destruction gained its' strength by our spiritually disconnected actions. We are all responsible in varying degrees for calling forth this spirit of destruction, thus we are all bound to begin restoring what we have damaged by helping one another recover our sacred responsibility to the Earth. We, the Original Caretakers of Mother Earth, offer our spiritual insight, wisdom and vision to the global community to help guide the actions needed to overcome the current threats to all life.

We only have to look at our own bodies to recognize the sacred purpose of water on Mother Earth. We respect and honor our spiritual relationship with the lifeblood of Mother Earth. One does not sell or contaminate their mother's blood. These capitalistic actions must stop and we must recover our sacred relationship with the Spirit of Water

The People of the Earth understand that the Fukushima nuclear crisis continues to threaten the future of all life. We understand the full implications of this crisis even with the suppression of information and the filtering of truth by the corporate owned media and Nation States. We strongly urge the media, corporations and Nation States to acknowledge and convey the true facts that threaten us, so that the international community may work together to resolve this crisis, based on the foundation of Truth.

We urge the international community, government of Japan and TEPCO to unify efforts to stabilize and re-mediate the nuclear threat posed at the Fukushima Dai-ichi nuclear power plant. To ensure that the Japanese government and TEPCO are supported with qualified personnel and information, we urge the inclusion of today's nuclear experts from around the world to collaborate, advise and provide technical assistance to prevent further radioactive contamination or worse, a nuclear explosion that may have apocalyptic consequences.

The foundation for peace will be strengthened  
by restoring the Original Instructions in ourselves

Prophecies have been shared and sacred instructions were given. We, the People of the Earth, were instructed that the original wisdom must be shared again when imbalance and disharmony are upon Mother Earth. In 1994 the sacred white buffalo, the giver of the sacred pipe, returned to the Lakota, Dakota and Nakota people bringing forth

the sacred message that the winds of change are here. Since that time many more messengers in the form of white animals have come, telling us to wake up my children. It is time. So listen for the sacred instruction. All Life is sacred. We come into Life as sacred beings. When we abuse the sacredness of Life we affect all Creation

We urge all Nations and human beings around the world to work with us, the Original Caretakers of Mother Earth, to restore the Original Instructions and uphold the Creator's Natural Law as a foundation for all decision making, from this point forward. Our collective future as human beings is in our hands, we must address the Fukushima nuclear crisis and all actions that may violate the Creator's Natural Law. We have reached the crossroads of life and the end of our existence. We will avert this potentially catastrophic nuclear disaster by coming together with good minds and prayer as a global community of all faiths.

We are the People of the Earth united under the Creator's Law with a sacred covenant to protect and a responsibility to extend Life for all future generations. We are expressing deep concern for our shared future and urge everyone to awaken spiritually. We must work in unity to help Mother Earth heal so that she can bring back balance and harmony for all her children.

<b>Correspondence ID:</b>	368	<b>Project:</b>	15793	<b>Document:</b>	56208
<b>Received:</b>	Dec,08,2013 10:13:21				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I believe that Alternative A would be the best choice and deserves to be implemented in spite of the storm of resistance by those that have more short sighted or powerful selfish interest.				

I appreciate the efforts of the NPS in this effort. Alternative B would be an improvement over what has become negligent management that has allowed far too much damage by those that would love the rivers to death.

I am a lifelong user of the Current River and Jacks Fork Rivers starting before the ONSR existed. It is one of Missouri's, the nations and world treasures that must be protected from degradation. We have enough commercial entertainment parks of all kinds, there is only one ONSR in the world and is unique and must be preserved before it is too late. I own what looks like the only private property at the end of the road at "raftyard" above Van Buren, it is under scenic easement. The abuse and impact of those wanting to enjoy the river by building, boat, horse, ATV, 4-wheel drive truck and all the others must be vigorously controlled and managed to protect this national jewel for future generations. I do not want to bring my grandchildren to a poor imitation of what my grandfather and his generation of conservationists handed to me for safekeeping.

Please do the right thing and protect, preserve and conserve this unique treasure at the level it deserves for future generations with Alternative A.

**Correspondence:** We have floated the Current River many times, camped on its banks and enjoyed the general environment including birds and mammals. I prefer plan A. I would restrict all powerboats to the region below Van Buren, or at a minimum, reduce the horsepower allowed where powerboats are currently allowed. Every effort should be made to keep the river as undisturbed as possible. We gave up floating weekends because it is too busy and there is no sense of solitude. Fortunately, on weekdays one can usually find oneself floating alone, acquiring some sort of wilderness experience.

Thank you for the opportunity for commenting.

**Correspondence:** The no action alternative is the only alternative . I as a tax paying citizen of the United States, am greatly disturbed by the NPS trying to restrict and limit access to the rivers,gravel bars and motor boats. Any alternative other than the no- action would be detrimental to the local economies . Restricting the numbers of users on the rivers would equate to less money spent in the surrounding towns. These small towns can only survive on the tourist trade.

**Correspondence ID:** 373    **Project:** 15793    **Document:** 56208  
**Received:** Dec,08,2013 19:58:57  
**Correspondence Type:** Web Form  
**Correspondence:** No action alternative. I am against restricting gravel bar use. I camp at Log Yard 6-7 times per year and have for the past 10 years. Limiting vehicle use and camping spaces at this site would not allow me and my family to enjoy the rivers as we always have. I have made many memories camping at log yard with friends that I only get to see while there. Any restrictions or limits on usage of this gravel bar would be an infringement of my rights as a citizen of the United States . The NPS is funded by the taxpayers and is subject to review by the taxpayers. This is my review. I am also inform that the NPS would like to restrict usage of the gravel bars at Two Rivers. I have camped there in the past and would like to in the future. Restrictions would not allow me to camp with my friends .

**Correspondence:** No action alternative . I am against any action that limits my access to the river or surrounding areas. NO ROAD CLOSURES!!!!!! Any closures would limit hunting opportunity's. When this happens less hunters come and the local economies suffer. The same happens with river access closures being detrimental to fishermen. This to hurts the economy. The surrounding towns are dependent upon the tourist dollars. By closing roads and river access points the canoe and floating concessioners would have a harder time getting their customers to and from the river . This could cause people to become upset and not want to come back.

**Correspondence:** In regards to the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS, I believe the proposed solutions are too extreme. Most preservation and conservation can be sustained by following current guidelines.

Closing the unauthorized horse/roads should already be permissible under the current rules, and I believe ATV's are already not permitted. If you close any approved trails along the river, open a new trail of equal length. Increase enforcement to prevent individuals from using unauthorized trails.

I do agree with some points however. Vehicles should not drive on the gravel bars, and motor boats should be curtailed in certain areas of Scenic Riverway.

The main point a disagree with the plan is to disallow camping on the gravel bars. For the most part campers are courteous and take any trash with them. If you wish to open a few camp sites, you would see a reduction in the number of campers on the gravel bar.

I believe this could be a happy compromise. The local area would not undergo finical hardships, and great stride will be made at preserving the river.

**Correspondence Type:** Web Form

**Correspondence:** Thank you for the opportunity to comment on the draft management plan. I applaud the NPS in their effort to act in the best interests of the Ozark Riverways and understand the difficult task to balance the concerns of all interested parties.

Above all, I would ask that any final plan take any and all steps to preserve the resource. Ultimately, future generations will judge us by how we have managed this incredible, unique landscape. Even the most harsh criticisms of any final plan would acknowledge the worthiness of taking steps to make sure we have done everything possible to preserve and enhance the natural qualities we have all come to enjoy. Adopting a management plan with emphasis on preservation should not be viewed as punitive to any particular group. Any and all interests should be willing to support this effort for the greater good.

With a 39 year history of utilizing the Ozark Riverways primarily for canoe camping experiences in winter, we have dedicated ourselves to limiting impact on the landscape. We have witnessed first-hand the degradation to water quality caused by excessive accesses and crossings of the river. We choose to utilize the park in winter to avoid contact with canoes/kayaks/rafts that treat the river as a party zone with no environmental ethics. Our experience has been negatively impacted by disrespectful motorized boaters and unauthorized four-wheel vehicle activities. Any and all steps to curb this misuse of the Riverways is encouraged and will have a long lasting positive impact on the resource.

I have been committed to the principle of "preserving the resource" in spite of constant demands on park facilities

during a 39 year career in parks and recreation. I have always erred on the side of determining what is in the best interests of the resource. That same principle would be strongly emphasized in any final management plan adopted by NPS.

Thank you.

**Correspondence:** Please consider this message as our comment on the draft GMP for Ozark National Scenic Riverways. Although we live far from the site, we have friends in St. Louis, and I visited the Current River in my work.

We see the ONSR as a national treasure, with special value because it is situated in a region of the country that lacks many protected natural areas such as national parks. The ONSR was designated by an act of Congress in 1964 to protect 134 miles of the Current and Jacks Fork Rivers.

We favor the elements described in Alternative B. This alternative continues the well established backcountry management program, which has proved its value over the years. It provides for public access in the same manner already in use, and it continues established recreational uses. We favor the acreages and boundaries indicated under Alternative B.

A few changes proposed in Alternative B are well worth adopting. We favor the removal of the obsolete underground utility line. We support moving the training range out of the ONSR to less critical lands; there it can still serve as training for NPS employees.

Roads: We support the closure of undesignated roads and access points, where unauthorized motorized vehicles have been intruding, degrading the wild character of the land and spoiling other visitors' time in the ONSR. This should include restoring 45 miles of undesignated roads to a natural condition and converting 10 miles in primitive zones to hiking trails. We also favor closing motorized camping sites on gravel bars, reducing the presence of motors on the river.

Horse Trails: To reduce excessive impacts from horseback riding, we favor closing and restoring 65 miles of undesignated horse trails and unauthorized river crossings, and improving the design of the 23-mile horse trail system to avoid sensitive areas.

Wilderness: We favor the recommendation in Alternative B for 3,430 acres to be submitted to Congress for future designation as wilderness. The wilderness designation is the most secure protection that can be given to federal lands. It will strengthen the hand of NPS managers in rejecting inappropriate uses and activities that would spoil the natural values and wilderness character of this small area.

We wish to thank all who worked on this plan. We hope Alternative B will be adopted.

Sincerely,  
George & Frances Alderson

**Correspondence:** This management plan does not consider access to the Current & Jacks Fork rivers and trails in the event of a government shutdown, which we recently all experienced.

All management plans should have an alternate/emergency staffing plan that is made up of "caretaker" volunteers. Under no circumstances should these rivers be closed due to the fiscal mismanagement in Washington DC.

Until such an alternate/emergency staffing plan is presented many of my fellow outdoor enthusiasts will not be happy with this bill. These rivers are in our state and we will not accept closures due to US government incompetence and fiscal mismanagement.

**Received:** Dec,09,2013 13:58:56

**Correspondence Type:** Web Form

**Correspondence:** Thank you for the opportunity to comment on ther draft management plan. I have been a life-long supporter of the NPS as well as having worked in a supervisory/management capacity in natural resources and park administration for nearly thirty-five years ( US Forest Service, Missouri State Parks, St. Louis County Parks, City of Clayton). I fully understand appreciate the extraordinary task involved in creating a management plan- especially within a federal agency. I fully support the preservation of this valued national resource while insuring the natural qualities inherent to this unique NPS unit.

I have had the good fortune of floating on the these two rivers for fifty years. From the very first float I took from Round to Big Springs fifty years ago I have always insured that my presence and use did not function as a detriment to the resource. Unfortunately over these many years I have opted to stay off these rivers (like many Missouri float streams) due to the overabundance, rudeness, and lack of concern created by the huge amounts of canoeists, kayakers, rafters, ATV's , four wheel drive vehicles, motorized boats and horseback riders. The volume and use of the rivers during the peak time is detrimental to the quality of the river and riparian environments as well the user experience. The ONSR is no longer a family-oriented adventure rather than an excuse for overcrowding, drunkenness, and sophomoric behavior. Motorized boats travel well too fast and cause damage to the stream banks, spawning beds and pose a danger to canoeists and kayakers alike. The no-wake policy is rarely adhered to.

It is very important that this resource is preserved for the future generations as well as use during the current time. I do not believe compromise on some issues should take place. I support what the NPS staff and the Friends of the Current River are espousing under Alternative B. However, I also support points under Alternative A. A more primitive and pristine environment should be embraced and pursued. The river and its use predates motorized boats, ATV's and massive horse trail rides. I ask that you review and consider the following deviations from the management plan as offered:

- greater restrictions on horsepower limits. 60/40 I feel is excessive. HP should be set a manuufacturers' statement of thirty (30) horsepower not forty.
- Increased non-motorized boating zones.
- Minimal intrusion by horses; no horse camps within the ONSR and enforced smaller trail rides.
- Trail ride groups should have minimal access points to cross the rivers.
- Trail ride sizes should not exceed twenty horses at any given time.
- Fewer access points and or roads within the ONSR
- All unofficial trails and roads that could or are being accessed by ATV's and 4WD vewhicles should be eliminated and restored fully.
- No vehicles, ATV's or horses allowed on any gravel bar within the ONSR.
- greater watershed protection to insure water and air quality.
- Greater stream bank restoration.
- All motorized boats, ATV's and vehicles should be 4-cycle, not 2 cycle.
- NPS staffing should be markedly increased to effectively meet management objectives and law enforcement demands.
- Greater law enforcement throughout the ONSR.
- Full wilderness designation for the Big Spring area.
- Wilderness designation should be pursued for the Upper Jacks and Current; land use and practices should be

mitigated to allow designation.

-Proper funding of land acquisition for wilderness designations should be legislated.

-Limitations put on outfitters for the number of canoes, rafts, kayaks that are put on the rivers per day.

-Outfitters should be held legally responsible for the actions and compliance of their clients.

-Air and water quality monitoring stations should be installed on both rivers.

-A fee permit system should be instituted (revolving fund?) to insure proper funding of staff, law enforcement, operations and land acquisitions.

-Carrying capacity limits should be set and rigidly enforced.

I fully understand that much of what I have proposed deviates from existing and proposed plans. However, with fifty years experience on these rivers and thirty-five as a professional there is much short and long-term benefit to be gained from a more primitive approach. I want my grandchildren and thier children to be able to experience these rivers like I did fifty years ago-with the same wonder and amazement that I felt. Thank you for your efforts and consideration. Respectfully,

Steve Brewer

**Correspondence Type:** Web Form

**Correspondence:** Thank you for allowing this opportunity for public comment. I am a frequent user of the Scenic Riverways and have canoed, jet boated, fished, and hiked this area for over 40 years. My greatest concern is that resource be protected. I recognize that the rivers are multi-use and there are competing interests but it should be managed for what is was originally and that is a wilderness. I generally use the rivers in the off season due to the excessive number of summer floaters who do not respect the resource.

1. I recommend a brief education before anyone can put on the river. The commercial outfitters should assist with this. Floaters need to be educated to move a healthy distance from the river to dig a cat hole and bury human waste. Not to leave litter in fire pits. Not to create multiple fire pits on a gravel bar. Carry out trash. Secure coolers so that contents don't dump out if canoes flip. Most people probably don't know any better and although some wouldn't bother, education before getting on the river would help. It is impossible to police but many gravel bar camping areas are despoiled with human waste during peak season. It is not only unpleasant but significantly adds to water pollution.

2. I am a jet boater as well as an avid paddle so I understand the conflicts. I am extremely respectful of non motorized floaters when I am jet boating. I agree with the 60/40 zones as stated in the preferred plan. I intentionally purchased a 60/40 motor so that I COULD use it on the Current. I agree that that the 60/40 limit should be extended from Big Spring to the southern boundary. I am sure that this is not popular but a 200 hp motor does not belong on the Current! High speeds contribute to bank erosion. I would also suggest that the NPS consider completely restricting motor boats above Round Spring or possibly even Two Rivers. This upper section should be designated as a pristine non motorized zone and would still leave lots of river for the jet boaters.

3. Restrict ATV and road access to the river. These activities are high impact and add to the deterioration of the banks and river beds and surrounding environment.

At all costs, please implement a plan that protects the resource from over use and abuse. It is a treasure that we and future generations need to protect.

Thank you,

Dave Miller

**Correspondence:** 12/9/13 \* \* \* \* \* ECONOMIC IMPACT \* \* \* \* \*

I am opposed to the ONSR Draft General Management Plan because many of its features will have a significant impact on the local economy in the Eminence area and vicinity. The people of Shannon County rely heavily on tourism - just look around in winter and notice the absence of tourists !

Just SOME of the businesses that would be impacted by the proposed new, more stringent regulations are:

- a) Canoe Rentals
- b) Motel and Cabin Rentals
- c) Restaurants
- d) Horseback Riding
- e) Grocery Stores
- f) Campground Rentals (other than NPS)
- g) Motorboat Sales

When your proposed regulations restrict the tourists' enjoyment of the ONSR, people will stop coming here.

Please go back to the regulations as they were BEFORE THE FIRST DRAFT GENERAL MANAGEMENT PLAN.

Thank you.

**Correspondence:** 12/9/13 \* \* \* \* \* LET THE STATE TAKE IT BACK !! \* \* \* \* \*

There is a simple solution to the power grabbing being attempted by the Federal Government and, in particular, the National Park Service. Some of the ONSR park lands originally belonged to the State of Missouri. Give these lands and all other land within the ONSR boundaries to the State of Missouri !! They have an excellent Parks Department, who would maintain this treasured area, and respect the rights of those who live in Shannon County. No more blocked roads, no more senseless regulations designed to empower an army of park rangers, and no more big bureaucracy!

Let us have a park that we can enjoy for what it is, and not a "museum piece" that we must view from a distance, under the watchful eye of Ranger Police.

Thank you.

**Correspondence:** Why does the preferred alternative want to close river access and landings? Are you doing this so you can charge people to get on the rivers eventually? That is not part of the original legislation forming the Ozark National Scenic Riverways. I do not think you should limit river access or boat landings. Also why are you against campers on the river banks? They should not be limited. There is no good reason to do this. They have never been a problem. Is this all because you want to charge people to do any camping near the river? Money should not be the cause of more regulation and limitations on recreation. Remember the ONSR is charged with preservation and recreation not to make money or drive people out of this area.

Mike Reynolds  
Regional Director  
National Park Service  
601 Riverfront Drive  
Omaha, NE 68102

RE: Draft General Management Plan/  
Environmental Impact Statement

Dear Mr. Reynolds:

We, the Commission of Shannon County, would like to ask you to consider going with a No Action Plan on the basis of the economic impact study completed for our area. Our county is one of the poorest counties in the state of Missouri and we are very economically deprived. The tourism industry is our major source of income for our county government and the citizens of this county. The above mentioned plan would add to the difficult situation the county government is currently experiencing in trying to provide necessary services for our citizens. Our county does not have the resources available to supplement a loss of revenues in the tourism industry that we rely upon. The county real estate property taxes are very limited due to the ownership of over fifty percent of our land by the state and federal government. We feel this General Management Plan would greatly reduce the tourism industry as well as be a financial hardship to the local concessionaires, citizens and area businesses of Shannon County.

The Ozark National Scenic Riverways was originally designated for recreational purposes. According to the Alternative B, there will only be 8.8 percent of the land the park owns as resource based recreation and 72 percent of it designated as natural, out of 88 thousand total acres. When the recreational area is greatly reduced, there is no way that will not have a significant impact on the economy of Shannon County. We feel this will also affect all tourists across the United States from being able to come and enjoy our parks.

We feel the Alternative C would have been a lesser impact on the economy of Shannon County, as it has 59.6 percent being resources based recreation and only 28.2 percent natural. We respectfully urge you to reconsider any plan that has the potential to erode our tourism industry and economic base of the county. Letter was signed by Jeff Cowen, Presiding Commissioner, Dale Counts, Northern Commissioner and Herman Kelly, Southern Commissioner.

**Correspondence:** The security and sanctity of the National parks is extremely important to me and my wife. I have enjoyed the pristine solitude of the wilderness areas in Missouri's part of the National Forest for so many years (about 40). Keeping the nature of nature in our state is of the utmost importance to us. It is so depressing to see people breaking the rules when it comes to taking care of and respecting the park lands.

Thus, I support wholeheartedly the plan known as Plan B. Please keep the motorized vehicles out of our national forests! They stink and ruin the landscapes. I also support restricting use of the trails for horseback riding. Near Paddy Crk, there is a "outfitter" who has run so many horses over the ground there that it appears like a highway going through the forest.

We need to take care of our forest land. If that means that more people will be required to get off their duffs and walk, then so be it. I'm sure they won't suffer.

**Correspondence:** This is outrageous. The"Horse Barns" look like an Urban Shopping Mall. The traffic on the River between canoes, tubes, horses etc. look like a traffic jam in the city at Rush Hour. I started canoeing the Current and Jack's Fork in 1958 when they asked you what you were catching and you answered that you weren't fishing and they looked at you like you were crazy. My Father was Admin. Asst. To Congressman Richard Bolling and they were instrumental in the process of introducing and getting The Wild and Scenic Rivers ACT passed by putting a lot of pressure on both Houses of Congress and President Johnson. The intent was to save the Rivers, which also included The Buffalo in Ark. and protecting them from just what is happening to The Current and Jack's Fork.. I visited the Buffalo River last year and was impressed by how well managed and non commercialized it has remained. My read is someone is not minding the store and enforcing the Federal Regulations that are already in place. When is Money going to stop trumping the Enviornment. I'm sure We'll hear the same BS arguments about jobs but the truth is that a select small percentage are making a killing financially and the service people working for them are not being paid that well for what is mostly seasonal employment. I agree with the Sierra Club's plan. It looks like some extreme measures have to be taken and the truth is they wouldn't be extreme if the intent of the Scenic and Wild Rivers Act had been followed and a bunch of people either figured out how to get around it or just ignore it.

**Correspondence:** The NPS already owns most of the recreational land in Shannon County. Now these new alternative plans are seeking to have more and more control by limiting people from accessing the river by closing roads, access and boat landings, and riverbank camping. We saw during the government shutdown what the NPS is capable of when they "closed" their "parks" by not allowing people to even walk to the Alley Mill or access the river through their land. REALLY! No Park officials are ever their anyway! This new plan is all about more control but the park has no funds or ability to maintain what it currently has control over. You don't pick up trash anymore. Facilities are not maintained. Boaters and campers are not hurting the rivers or gravel bars. There is absolutely no proof of any harm by us. The park should focus on controlling their campgrounds at Alley, round springs, Big Springs and Two rivers where the majority of tourists camp. People that live here have a vested interest in the river and land. The park should partner with local people like they do with the Indians and other groups rather than trying to drive us out!

**Correspondence:** Hello,

I find myself as a user of the scenic riverways two or three times per year. Activities I enjoy there include: canoeing, fishing, and hiking. The area is a unique and I enjoy experience much of the time I am there. I note that much of the area consists of the rivers with relatively narrow strips of land along either side of the river. This tends to funnel all types of activities within these narrow bands.

One thing I have noticed is some degradation of the environment based upon the increasing number of trails, many created by illegal ATV use. Sometimes, we camp on the river, and we fear that some of the sites we camp at; that are obviously extensively used by ATVS, based upon the patterns at site, may visit our site in the middle of the night. I would support alternative A, that would close these trails. ATVs not only disturb campers, but also damage fish habitat in the smaller steam areas neat the river. The fact of the matter is that ATVs can use other streams and gravel bars outside of the National Park to have fun, rather than disturb the environmental of this national treasure.

I also notice that particularly in the reach of the river neat two rivers, that there is extensive horse riding activity, and that degradation of the water quality of the river is apparent. Although I believe that horse riding should continue,

the number of horses that use the area, appear to be excessive, and perhaps, there could be a way to reduce the density of this activity.

I support alternative one based primarily on the need to close illegal trails and keep the density of activities at a manageable level.

**Correspondence:** I am not sure which, if any, plan described would be the best solution. In my opinion the government already has too much control of land. People should be allowed to go where they want using whatever means of transportation they choose. My choice of plans would be one that removed all government control of parks and lands. When the government was shut down, the rivers were closed during gigging season. This was inconvenient for many people. Some people rely on gigging to provide food for their families.

**Correspondence:** I ride horses in the ozarks, the gravel you use damages there hooves and is not good for foot travel, , the inclines you proved endangers the horse and rider, hikers, the tarps and flags you leave endanger horse and rider by spooking horse or horses. You tell us where sit on the river bank, where to have gathering on the river bank, where to cross the river, how to keep it clean, stay on designated trails, how to build a camp fire and put it out, where and how to dispose of trash, but it's time to stop taking over land, if roads are there keep them open and serviceable not black top. Keep camping primitive, people are not there for electricity, they can bring a generator, solar or batteries, campers/hikers are welcome they don't interfere with horses we can pass them safely or they can pass us, canoes there fine, horse people watch out for them. I have heard complaints about horse droppings in the river where do they think the wild horses droppings go or the fish poop, deer droppings and all the rest of nature out there. If you don't like sweat, dirt stay home. National park service/EPA, KEEP OUT, if I could afford a billboard on every highway in this great land we call the United States of America it would read dismantle the EPA you prevent prosperity, government has too much control, ownes to much land, is to involved in individual lives. Government if you want to take over things keep highways open, provide free communication, phone and internet, free utilities water, electricity, natural gas, and decrease auto gas/desil. Guess that's enough please leave the Ozarks alone

**Correspondence:** After review of the proposed alternatives, I favor the "No Action" alternative, or the current management plan. If that is not an option, I would favor alternative "C", since it appears to result in the least amount of changes to the current management plan. I am satisfied with the current management of the riverways, and do not believe in further restrictions on the use of our rivers. The only change I would like to see, however, is a weekday, preferably a Monday or Friday, that would eliminate or limit motor boat use during the "peak season" on the rivers upstream of Powder Mill. This would allow a better experience while fishing from a canoe. Fishing on a weekend from a canoe is not that good due to not only motorboats, but the number of canoes on the river on a weekend.

I do not support any further restrictions on horseback riding within the lands managed by ONSR. I also do not support any further lands being designated as "wilderness area", not only within ONSR, but elsewhere throughout the U.S. Wilderness designations eliminate resource recovery (minerals, timber, oil and gas, etc.), increases wildfire potential, and prevents revenue generation for the government and the private sector.

**Correspondence:** Dear Sirs,  
As a Missouri Master Naturalist and a citizen very involved in conservation issues, I urge you to approve and

activate the program to protect Missouri's Ozarks National Scenic Riverways. The press of population necessitates that our natural heritage, which belongs to posterity, not just to us today, be protected from degradation due to unlimited ATV and 4-wheel drive and horseback riding trail usage. Many creatures and their scenic habitat will be destroyed if there are not reasonable regulations to protect them. Thank you. Ronda Sherrill

**Correspondence:** I support a comprehensive responsible management plan for the Ozark National Scenic Riverways that provides responsible public use but also provides essential management and protection of the natural resources and these beautiful waterways.

In review of the key excerpts of the draft GMP, I too tend to favor Alternative B in the listing of alternatives for the National Park Service planning team to focus toward. While I will be unable to attend any open house or public meetings, as an environmental professional and advocate for our natural resources, I anticipate that my voice will be heard through the Missouri Chapter of the Sierra Club.

Thank you for allowing me to provide comments on this significant and important planning process. Likewise, I certainly hope the plan receives the proper funding and staffing support.

Sincerely,

David Tyson  
Independence, MO 64050

**Correspondence:** The development of this management plan is greatly appreciated and addressing the issues concerning the Current and Jacks Fork River is extremely important. I strongly recommend that one of the three management plans be implemented. I do not believe doing nothing is an option. To do nothing would further damage this river system.  
I have canoed the Current and Jacks Fork Rivers for over thirty year. I have also enjoyed hiking the many trails in the area. Usage of the two rivers has dramatically changed over the years. Motorized vehicles have greater access to the river because of the vehicles increased four wheel capabilities. Noise and destroyed vegetation from these vehicles is degrading the river system.  
In addition to motorized vehicles, horse back riding has greatly increased. My experience is that horses are damaging the gravel bars and making them unusable because of horse manure. There also appears to be increase motorized boat traffic on the river.  
Because of the above issues I support Plan A. I particularly like the reduction of illegal horse trails and horse crossings of the two rivers. Another strong point for this plan is the change in the permitted power boats above Two Rivers.  
If plan A can not be implemented than I support Pan B as the next best plan in this document. Plan A addresses the issues the best from the stand point of a canoeist,hiker and camper in the Current River and Jacks Fork area. Please implement one of the plans (hopefully Plan A) as soon as possible. Time is of the essence to prevent further damage to these rivers that could have harmful effects for generations to come. The thousands of individuals and families that visit these rivers each year do so expecting rivers that are scenic and an experience that allows them to enjoy the rivers with a minimum of motorized noise and pollution.

**Correspondence:** Having read the Park Service's GMP Summary of Key Excerpts and having floated most of the length of rivers involved, I would like to endorse Alternative A. I do so primarily on the grounds that it provides for the greatest expanse of river without motorized traffic of any kind, and secondarily because it provides the most 'Primitive' and 'Natural' land use.

Non-motorized rivers are almost impossible to find outside the National Scenic Riverways, and primitive and natural public lands are not much more common. If this 'state of nature' is not provided by the National Scenic Riverways then it will not be available at all.

Of the various aspects of the other alternatives, the visitor education and interpretive center proposed for Powder Mill and the expansion of the curatorial facility under the Park Service's preferred Alternative B are the most appealing and could easily be incorporated into Alternative A.

Thank you for your time and attention.

**Correspondence:** I strongly suport the no action alternative. I live on the river 365 days a year and see very little pressure on the resource except for six weekends a year during the summer. Those weekends can be sporadic with visitors depending on the weather. And besides for a small amount of litter the tourists have zero impact to the area as compared to a six foot plus rise of which no one has control. There are countless days in the summer of which only a handful of visitors are present. As far as the outboard motors go, again little impact as compared to a several foot rise. The large majority of boaters I see on the river are an asset due to helping floaters in distress. Myself as friends have untangled canoes and tubers from root wads. Some in distress others not so much. In one case this year a drowned person. The attempt to rescue the person was done several minutes before law enforcement was on the scene. I and a friend personally cut a woman loose from the same root wad the young man hand tangled and drowned in the week before. She was in grave danger. If not for the motorized boat I don't know if we could have helped her. Boaters are responsible for removing much of the litter left behind by canoe and tube floaters. I have been in the park and on the river a large portion of my life and again the only damaging changes I've witnessed are done by mother nature. Much of my family's spare time is spent in and around the park. Many days we encounter no one. Some days just a few. The park is well taken care of now. We need no more government regulation. I would think less time and money should be spent on additional regulations and plans and more time and money spent on upgrading access points, roads, and law enforcement of the many rules we already have.

**Correspondence:** I am in favor of the "no action plan" so that myself, my family and friends are able to continue to enjoy the Current River in our boats. Many memories have been made on the Current River. My son caught his first trophy fish there at the age of 8. We are teaching him to appreciate our natural resources and take care of them. Also, if boats are restricted from Current River this is going to impose a huge negative impact to the local economy. We travel to Current River a minimum of 5 times per summer. We spend money at local businesses to fill our boat and vehicle with gas, for food, etc. If we no longer have access to the river we will no longer be spending this money.

**Received:** Dec,15,2013 23:25:48  
**Correspondence Type:** Web Form  
**Correspondence:** To Whom It May Concern,

After reviewing the DMP, it is my belief that the NPS should implement and enforce Alternative A. I grew up in Salem, Missouri, and I have floated/canoed/fished the Current River my entire life. I currently live in Oklahoma City, but I try to make it to the river every time I visit my parents. Sometimes I only have time to drive down to Akers or Welch Spring, and walk along the shore. But I thoroughly enjoy every single time I get to be on or around the Current, especially when I get to experience the Current without anyone else around. I love the gorgeous natural setting of the Current River.

However, I fear the Current River is in danger of being negatively impacted by people who do not respect the

Current River or the areas surrounding the river. During the summer months, the Current is overrun with people on weekends - many of them drunk - that are only interested in partying rather than enjoying the beauty that the Current provides. They show no respect for others on the river. They drive their vehicles onto gravel bars without considering the impact such vehicles could have on the river and blare their music (much of which contains profanity and adult themes unsuitable for the ears of children). Many children are subjected to obnoxious and offensive behavior (including lots of profanity) that seriously affects their experience of the river in a negative way. A specific example I witnessed a couple of years ago occurred at an area named "Flying W" where several drunk people were jumping off bluffs into the river (even though I believe jumping off bluffs was banned along the Current at the time this incident occurred). As canoes floated under the bluffs, the drunk idiots (for lack of a better term) would jump off the bluffs and splash near such canoes in an attempt to overturn the canoes, or, at the very least, splash those in the canoe with water. Several canoes had children in them, some of which were no older than four or five years old. I was appalled, and I'm sure the families that had to deal with the dangerous actions of these drunk idiots were as well. As a result of actions such as these, many families avoid the river on the weekends during the summer, which is the peak season for the river. I support any alternative that may cut down on such obnoxious behavior while giving families and those that truly enjoy the beauty of the Current River a chance to experience the river without such obnoxious behavior.

I believe Alternative A is the option that best fosters a respect for the natural environment of the Current River and the people who truly appreciate the river. I believe Alternative A will allow the Current River, as well as the rest of the Ozark National Scenic Riverways (ONSR), to be restored to a much more natural, beautiful, wondrous environment. I believe Alternative A will preserve the beauty of the ONSR and cut down on activities that harm the ONSR, while still allowing for ample recreational activities that foster an appreciation of the ONSR. I encourage the NPS to seriously consider making changes to the way it has managed the ONSR since the 1984 DMP. Specifically, I encourage the NPS to implement Alternative A, which is the option that respects both the ONSR and people who visit the ONSR more than any other alternative presented, including the No Action alternative. Thank you for your consideration.

Sincerely,

Nathan Prugh

**Correspondence:** By eliminating access and eliminating the trail system here, the already poverty stricken Shannon County (Shannon county has the lowest per capita income and unemployment rate in the state). The city of Eminence and other areas involved will lose income from recreation (horseback riding/canoeing/kayaking/fishing/boating). Go to downtown Eminence and see how many existing empty buildings already are there. Add to it the remainder of the town - this will guarantee closing of their doors.

I moved here from New Orleans this past year. Many of my friends from out of state visit me. They utilize the river and horse trails. They also go to the gas station to get gas; the grocery to get food; shop at the local stores. If this plan goes thru, the economy of Eminence will falter more since they are dependent on visitors. In addition, if I am not allowed to go out my front door to the trails, crossings, river, etc, I will more than likely sell my house and move back to Louisiana. The economy will suffer again because it will be another house for sale added to the enormous list of empty house for sale. No one will want to buy my property or any other property if they have an interest in the use of the Ozark National Scenic Riverways area. Add my house for sale along with others from out of state who have moved here to utilize the amenities.

**Correspondence:** NO ACTION PLAN!!!!!!!!!!!!!! I am 47 years old, and I am a native of the Carter & Shannon County areas. All my life I have enjoyed the current and jacks fork rivers. As a kid my grandparents took me camping on the Current River, we took our boat and fished and enjoyed swimming, riding in boat and camping right on the gravel bar. As an adult I have enjoyed the same things. I take my kids, and grandkids to the river ever weekend. We fish, swim and boat ride. We camp on gravel bar right next to the river. We also enjoy gigging in the winter months on river. I have experienced this hobbie all my life. I don't think that the NPS should try to take away my right, and my kids, grandkids right to enjoy thes hoppies or to tell the local people where they can access the rivers, where we can or can not camp at. My big pet peeve is, trying to shut down the rivers to our boats and motors. As a local to these areas, I believe we should have more say about our rivers, than these so called naturalist, from different states around the us, that may or may not have ever been here. Before the NPS took over our rivers, local business men used the rivers, one to hunt and trap for sale of fish and wildlife. Other used rivers to send logs to the saw mills. So what is the difference in using the rivers for that or for local hobbist. We are not the ones polluting the rivers... Its the tourist that come here from all over the world. I work as a court clerk in the Shannon Co Circuit Court and process all the tickets that are written on the rivers, which,some include for Possession of Marijuana, Littering, Possession of all kinds of illegal drugs, indecent exposure, etc. Those are the people that are polluting and destorying our rivers, and camp sites. Tourism is what makes our cities grow,and we all need to be able to experience the beautiful rivers,but I believe if the people (locals or tourist) that are breaking the law by polluting rivers, camp sites, disturbing our river banks from ATV access should be ticketed. But please don't take our camping access and boating privlidges away. Its our way of life growing up here!!

**Correspondence:** I would like to voice my opinion on the management plan. River access and atv. use, I feel that if you stay on the roads that have been here for many years, and cause no trouble you should not be punished for someone else's actions. My sister and family have came several times a year to ride their atv and have family fun, and also have spent a fair amount of money to ride their atv. River access is very important not only used for fire. They are also used for emergency reasons. There are places on the river that are very sentimental to people that will be closed off if this plan goes through. Me and my family enjoy going to the river to camp and picnic several times a year that will be taken away if this plan goes through. I would also like to make a comment on the river boat use on the jacks fork and current river. I have been here for 16 years, and I can see no damage that the boats have done to the river. Me and my family enjoy the boat use around here as many other family's enjoy, and also brings in revenue for the county and state, and don't forget the working man and his family.

**Correspondence:** I support Alternative B. There will always be pressure to relax rules and standards that, if implemented, will degrade this outstanding national park. These demands for change will come because of population growth and more and more user groups wanting to use the Riverways for their particular activity. ATVs and stand up paddle boards, for example, hadn't even been invented when the Ozark National Scenic Riverways were first established. What other recreational devices will be developed in the future, with the users of such

wanting their piece of the Riverways too? Other pressures, such as water quality degradation, stream bank erosion, invasive species and more access, etc. will always exist which will require due diligence in protecting the resource.

The original objectives and purposes of protecting the Riverways must always remain the prime driver when considering any changes in management. We could easily "love the river to death" through overuse or degrade it with our recreational toys, losing or damaging in the process the qualities that make the Riverways so unique and special.

A most disturbing change I have observed over the 50 plus years I have canoed the Riverways has been the increasing use of the rivers as a place for people to party and drink. On the weekends many young floaters have discovered they can party in relative anonymity on the rivers with little fear of law enforcement or adult supervision. This makes a river a "place of choice" for partying rather than land based locations where they are more apt to get into trouble. This activity then becomes a misuse of the river in my opinion. The only saving grace is that canoes themselves create little if any harm to the river. That can't be said however about the human waste large crowds of partying floaters deposit along the way.

I encourage the National Park Service to "stand your ground" when it comes to managing and protecting this resource. Political and influential people will constantly apply pressure to change something to benefit them or their constituencies. You are the primary protector when it comes to managing the Riverways and protecting the qualities that make the Ozark National Scenic Riverways the unique resource that they are to people from all over the US.

**Correspondence:** Although I prefer action alternative A, there are aspects of alternative B that I find attractive. I support having the campground at Akers Ferry reopened and developing a campground at Blue Spring on the Jack's Fork. I have generally stayed at Pulltite campground but Akers Ferry is more conveniently situated for day paddling trips on the Current River headwaters. The campground at Alley Spring on the Jack's Fork is really too far away to be convenient for paddling trips on the Prongs or the upper Jack's Fork River.

What I am not too happy to see are potential plans for a 25 site horse campground on the Jack's Fork or the Current River for that matter. With a huge horse facility available near Eminence, I question the need for it, but my main concern is the possibility of contamination from horse manure. There seems to be good evidence that fecal contamination from horses has been a significant contributor to poor water quality on the Jack's Fork River below Eminence in the past.

One improvement that I would favor that is not mentioned in any of the action alternatives is a better approved access on the Current River between Round Spring and Two Rivers. This 18 mile stretch of river is too long for many individuals to undertake as a day trip, and gravel bar camping is not for everyone. The road to Jerktail Landing leaves much to be desired. Ideally, what I would like to see is an improvement to that road, and if possible, development of a new river access site just a bit upstream of the existing Jerktail Landing (if possible), which would more evenly divide into two parts the stretch of river from Round Spring to Two Rivers.

Although I would favor the motor traffic restrictions in Alternative A to those in Alternative B I don't feel terribly strongly about it. Otherwise apart from the concerns mentioned above I fully support the NPS favored Alternative B.

I would point out, however, that without enforcement any proposed regulations are useless. It is pretty generally accepted that for whatever reasons, NPS enforcement of the regulations in the existing GMP have been thoroughly ineffective overall.

**Correspondence:** Thank you, National Park Service, for putting together a well done and thoughtful analysis.

Adopting Alternative B would be a big positive step forward from the status quo, nevertheless I agree with the adoption recommended by the Missouri Sierra Club. Alternative B does not go far enough. Alternative A provides important additional protections for the rivers.

Of most importance, Alternative A closes illegal roads and restores natural conditions to 50 miles of these roads; it closes 65 miles of undesignated horse trails and adds no new stream crossings; and it bars vehicle access to gravel bars.

Thank you for your careful consideration of the future of these important waterways.

Sincerely,  
Ann Megyas

**Correspondence:** I live in the City but I bring my family to camp and boat ride in the Country every year. I want be able to continue camping on the gravel bar and taking my family down the river. If we can't have a 60/40 motor, I can't take my whole family in the boat. A 25 hp motor just won't carry us all. We love camping on the gravel bars. We don't bother anyone and no one bothers us. We always clean up after we leave. The only complaint I have is the Park Service used to have trash cans but they have taken them all out. I says just leave things the same or as they say, "If it ain't broke, don't fix it."

**Correspondence:** As a native Missourian, an avid hiker, and a lover of the outdoors, I'm writing to support Alternative B as the best plan for the future use of the Ozark National Scenic Riverway. Though not as rigorous as I might have liked, it does address the problems that have plagued the area: motorized intrusion via unauthorized roads, the number of river access points, and equestrian overuse and damage to resources, while it provides ecological restoration and improved visitor experience. The NPS has done a good job in this instance, and Alternative B is the best choice.

**Correspondence:** Thank you NPS for developing a great management plan for the Ozark National Scenic River ways! We Missourians love our rivers. We all have different ideas of what the river provides as far as recreation. I support the adoption of plan B. I would have liked to see stricter guidelines such as those in plan A, for example no vehicles should be on the ever-changing gravel bars. However I think that some of the road closings and other factors would hinder recreation opportunities for the local river enthusiasts.

These locals can be hard-headed and stuck in the old ways. But one thing is for sure: They love the river. They are supporting what they think is best for the river. I hope to see more education offered to these people. Through education brings understanding.

The NPS has the duty as well to listen to the concerns of the locals. I assume the planners have formal education and experience dealing with land management plans. This often leads to the thought "We know better than they do".

This is a dangerous mindset. If you don't try to understand local tradition and their relationship with the wilderness then you may be pushing people away from the nature they have loved. Pushing people away from the river and the wilderness would be detrimental to the river ways and our environment as a whole.

Missourians must learn how to love their local places of wilderness if they are going to continue supporting a conservation agenda. But by working with the locals, and educating them about responsible river access and usage, hopefully support and cooperation will improve. I am optimistic that this plan will ultimately be a good thing for the wildlife of the now federally protected area.

Thank you for your time

-Frequent floater, inspired youth, Student, Nature Nut, Kelly K.

**Correspondence:** On behalf of Environment Missouri's more than 13,000 supporters, activists, and members, we applaud the National Park Service for releasing a draft General Management Plan that offers the potential for the restoration and protection of the Ozark National Scenic Riverways and we urge them to adopt Alternative "A" in lieu of their preferred alternative.

Nearly fifty years ago, the people of Missouri entrusted two of their most spectacular rivers to the NPS. The agency established the Ozark National Scenic Riverways, the first-ever national park created exclusively to protect a river and its watershed. The NPS promised to take a snapshot of the rivers in 1964 and preserve them in that condition for future generations.

Unfortunately, that didn't happen. Decades of mismanagement and neglect have taken their toll on the parks.

According to current estimates, access points on the rivers-places where the foliage has been broken in order to allow access by trucks, ATVs and RVs-have proliferated from the original dozen or so official points to over 130. Rather than use the 23 miles of park-designated horse trails, designed to minimize equestrian impact on water quality and maximize the safety and enjoyment of all park visitors, local horse operators guide tours on over 80 miles of trails. This has resulted in e. Coli impairment on the Jacks Fork. Overcrowding, scenic easement violations, and a general "anything goes" atmosphere all contribute to the degradation of the wilderness surrounding the rivers, the quality of the water in the rivers, and the overall park experience.

This is unacceptable. These are among the most beautiful rivers on the planet, and the park is one of the few wild places where people can explore a world-class spring system. The NPS is supposed to protect and preserve the

beautiful places that make America such a natural wonderland. Their failures to enforce the previous management plan, and the overall inadequacy of the 1984 plan itself, are a failure to respect the wishes of the citizens of Missouri, who consider these rivers the gems of the state; and the wishes of all Americans, who rely on the NPS to ensure that our nation's special places remain special.

Visitors to the park-the vast majority of them from outside the Ozarks and outside of the state-are the single biggest contributors to the economies of Shannon, Carter and Dent counties, which rank among the most impoverished in the state. Should the rivers lose their natural charm, people will stop visiting. And if people stop visiting, the communities that live along the river will suffer economically.

Further, the park provides critical habitat for the Ozark Hellbender, an endangered salamander unique to Southern Missouri. Worsening water quality (an unavoidable result should the NPS fail to take adequate action) could result in the extinction of this 65 million year old species.

Fortunately, the NPS has listened to community leaders, small businesses, environmental groups, and nearly 15,000 petitions from locals, Missourians, and people from across the country, who have asked for stronger protections for Missouri's river gems.

We congratulate the NPS on their decision to appoint Bill Black as Superintendent of the Ozark National Scenic Riverways. Superintendent Black has done an excellent job righting some of the long-standing wrongs that have tarnished the park's reputation. However, his ability to do so is hampered by the 1984 GMP, which was inadequate when it went into effect nearly 30 years ago and is seriously outdated now.

The draft GMP that the NPS has released shows that they've heard what we've known for years-that the vast majority of Missourians think that the Current and Jacks Fork rivers deserve the protection and preservation that the NPS promised when they established the park. We urge the NPS to make their first priority in choosing an alternative the restoration of the Current and Jacks Fork to their 1964 conditions. We urge them to focus on preserving the wild nature of the rivers and traditional Ozarks heritage, as well as fostering deeper communication and understanding between park staff, the locals, and the people who travel from around the world to enjoy the park's spectacular beauty.

We urge the NPS to adopt Alternative "A", which provides the strongest protections for the rivers and does the most to establish deeper, more meaningful connections between the NPS, the region, and the park's visitors.

Alternative "A" does the least violence to the National Environmental Protection Act and conforms more closely to the original intent of the NPS to "take a snapshot of the river" and keep it in a similar state for future generations to enjoy. Further, Alternative "A" does the most to address many long-standing issues with the park, and puts into place protections that will ensure that the rivers are as beautiful twenty years from now as they were twenty years ago.

Alternative "A" accomplishes these goals through an aggressive plan to close roads and illegal access points and to provide equestrian experiences that allow horse-riders and boaters alike safe enjoyment of the park. Alternative "A" provides for the management of almost 3,500 acres of the Big Springs area as wilderness and places sensible limits on boat horsepower on ecologically-sensitive parts of the river. Alternative A better manages access points on the river, increases the number of hiking trails in the park, and provides the most cultural engagement with traditional Ozarks folkways.

Further, Alternative "A" does the most to engage the public with the park, by providing a large number of experiences designed to educate visitors on natural features and Ozarks heritage. Alternative "A" allocates the most resources to the enforcement of the rules that keep the park the special, safe and beautiful place that attracts millions of people from around the world each year to the Ozarks. Alternative "A" also seeks to develop an official "friends group" that would foster greater communication between the NPS, the communities that live along the rivers, and people that return to the Ozark National Scenic Riverways year after year.

Our more than 13,000 members, supporters, and activists we thank the NPS for taking the first steps towards addressing serious issues that have plagued one of our nation's greatest natural parks for decades. On behalf of those

who have enjoyed the park since its establishment and on behalf of the future generations of Americans who will come to the Current and Jacks Fork rivers to canoe, hike, swim, fish, and experience the Ozarks, we urge the NPS to adopt Alternative "A" and protect the Ozark National Scenic Riverways for the next twenty years.

Sincerely and with great appreciation,

Stuart P. Keating  
State Advocate  
Environment Missouri

**Correspondence:** I am in support of the "No Action" alternative regarding this issue. While I feel very strongly about keeping our parks and natural resources clean and well maintained, I know that any of the proposed plans will negatively affect the residents of our area. I feel that in an attempt to further regulate this area it will only penalize the people who do abide by the rules and regulations currently in place. No amount of regulations will change the behavior of the people who violate the rules of these parks. They will continue to do so while the people who are abiding by the rules will lose access to the activities that make this area such a wonderful place to live in. I believe wholeheartedly that it is a colossal mistake to allow this to happen. Please take the time to consider who is really going to be negatively affected by this proposal and don't let it be the law abiding resident.

**Correspondence:** As an avid stream smallmouth bass angler, canoeist and wilderness camper, I strongly support Alternative B as preferred by NPS for the management of the Ozark National Scenic Riverways. I believe it offers a balance approach for citizen use of this valuable natural recreational resource. The draft Plan curbs abusive practices including unfettered vehicular access, motorized water travel in areas incongruent or unsafe for such watercraft, and restricts overnight RV camping to appropriate venues where they will not detract from other users' experiences using the waterways.

ONSR is a indeed an National Park and a national treasure. It should be managed in a manner that preserves its wildness and pristine characteristics while allowing reasonable use by the public in a manner fitting of that designation.

**Correspondence:** As a respectful horseback rider, I am opposed to restricting the access to the Ozark National Scenic Waterway to just environmentalists. Such beautiful country should not be restricted to anyone - we should all be able to use it. We have ridden in that area many times and are always mindful of rules and regulations. Excluding horseback riders would greatly decrease the economy of some of the areas located close to the waterway in southern central Missouri. There is such beauty on the waterway that can only be reached if on horseback. Please do not take away access to the waterways from campers and riders.

**Correspondence:** I definitely support the "No Change" Plan because not only do I spend the majority of my summer on Current River but so do my family and friends. I grew up down on Current River at a location where my Grandma and her family was born and raised. My Grandma had a house down on the Current River and they also went to school down on Current River. I have and see so much history each time I go to Current River. Also my Grandmothers siblings and parents are buried at several locations on Current River. It would not only be a huge mistake to close down accesses to Current River you would be closing down access to my family's history. So much

of my family has camped down on Current River, we were raised to respect the River and to take care of it. It is people like us that will be more than devastated if the River accesses are closed. Please understand that Current River is more than just a place to us, it is a part of us and who we are.

**Correspondence Type:** Web Form  
**Correspondence:** We are in favor of the no-action alternative.

The river is currently well managed, providing an excellent balance of ecology along with ready access to those who wish to enjoy the river.

The Plan A, B, and C may all have basically good intentions, but are dangerous in their interpretation. Often bureaucratic oversight results in unintended consequences of denying the local people, in fact all citizens, from enjoying a natural resource that belongs to all of us.

We now have a good balance. The other plans will introduce tighter controls which will rob the average citizen of enjoying the river and the surrounding natural habitats.

We propose no change.

**Correspondence ID:** 453    **Project:** 15793    **Document:** 56208  
**Received:** Dec,20,2013 17:06:31  
**Correspondence Type:** Web Form  
**Correspondence:** We want no action taken to restrict Current River more than it already is. Higher horsepower on a boat would actually be a good thing since we could haul more people in a boat= less boats on the river. The 60/40 jet is just barely satisfactory. River accesses must be left alone and kept open WITHOUT charging the public to use them. Double taxation is what you are doing when you charge for campsites and river access-especially when there is no water or electricity provided. I pay my taxes for the Park Service to do their daily duties, I should never have to pay to enter a NATIONAL PARK.

---

**Correspondence ID:** 454    **Project:** 15793    **Document:** 56208

**Correspondence:** I feel that motorized boats be permitted on the upper Current River to the headwaters in assisting injured people in canoes or inner tubes.

Gigging of fish(suckers) using motor boats is an Ozark Mountain tradition along with small mouth bass and trout fishing that needs to be kept open.

Motorized boats were used on Current and Jacks Fork River before the National Park Service was established. In fact, this is a part of our culture that dates back to the 1040's.

**Correspondence:**  
A Simple Statement

I ride. That seems like such a simple statement. However as many women who ride know it is really a complicated matter. It has to do with power and empowerment. Being able to do things one might have considered out of reach or ability. I have considered this as I shovel manure, fill water barrels in the cold rain, wait for the vet/farrier/electrician/hay delivery, change a tire on a horse trailer on the side of the freeway or cool a gelding out before getting down to the business of drinking a cold beer after a long ride.

The time, the money, the effort it takes to ride calls for dedication. At least I call it dedication. Both my ex-husbands call it 'the sickness'. It is a sickness I've had since I was a small girl bouncing my model horses and dreaming of the

day I would ride a real horse. Most of the women I ride with understand the meaning of 'the sickness'. It's not a sport. It's not a hobby. It's what we do and, in some ways, who we are as women and human beings.

I ride. I hook up my trailer and load my gelding. I haul to some trailhead somewhere, unload, saddle, whistle up my dog and I ride. I breathe in the air, watch the sunlight filter through the trees and savor the movement of my horse. My shoulders relax. A smile rides my sunscreen smeared face. I pull my ball cap down and let the real world fade into the tracks my horse leaves in the dust.

Time slows. Flying insects buzz loudly, looking like fairies. My gelding flicks his ears and moves down the trail. I can smell his sweat and it is perfume to my senses. Time slows. The rhythm of the walk and the movement of the leaves become my focus. My saddle creaks and the leather rein in my hand softens with the warmth.

I consider the simple statement; I ride. I think of all I do because I ride. Climb granite slabs, wade into a freezing lake, race a friend through the manzanita all the while laughing and feeling my heart in my chest. Other days just the act of mounting and dismounting can be a real accomplishment. Still I ride, no matter how tired or how much my seat bones or any of the numerous horse related injuries hurt. I ride. And I feel better for doing so.

The beauty I've seen because I ride amazes me. I've ridden out to find lakes that remain, for the most part, unseen. Caves, dark and cold, beside rivers full and rolling are the scenes I see in my dreams. The Granite Staircase at Echo Summit, bald eagles on the wing and bobcats on the prowl add to the empowerment and joy in my heart.

I think of the people, mostly women, I've met because I ride. I consider how competent they all are. Not a weenie among the bunch. We haul 40 foot rigs, we back into tight spaces without clipping a tree. We set up camp. Tend the horses. Cook and keep safe. We understand and love our companions; the horse. We respect each other and those we encounter on the trail. We know that if you are out there riding, you also shovel, fill, wait, and doctor. Your hands are a little rough and you travel without makeup or hair gel. You do without to afford 'the sickness' and probably, when you were a small girl, you bounced a model horse while you dreamed of riding a real one.

**Correspondence:** I have made many canoe and backpack trips on the NPS Ozark National Scenic Riverways; several in 2012 and 2013 and dating back to the mid 80's.

I have noticed the obvious decrease in water quality on the Jacks Fork from my visits in the 90's.

Please work to keep ATV and horse usage to a minimum near the waterways.

Please close and patrol all unauthorized roads/trails.

Please limit jetboats and large HP motors!!! These are very dangerous on these small streams. I have experienced my canoe almost swamped by a jetboat speeding around a blind curve.

Closing trails to horses is just one more nail in the coffin of the natural rider who may show once in awhile and who has loved,owned and cared for the horse since they were used in every day life as transportation. How absurd that trails are closed to horses and opened to atvs' when the natural environment is not harmed by horses.

On behalf of Environment Missouri more than 13,000 supporters, activists, and members, we applaud the National Park Service for releasing a draft General Management Plan that offers the potential for the restoration and protection of the Ozark National Scenic Riverways and we urge them to adopt Alternative "NO-Action" in lieu of their preferred alternative.

The draft GMP that the NPS has released shows that they've heard what we've known for years-that the vast majority of Missourians think that the Current and Jacks Fork rivers deserve the protection and preservation that the NPS promised when they established the park. We urge the NPS to make their first priority in choosing an alternative the restoration of the Current and Jacks Fork to their 1964 conditions. We urge them to focus on preserving the wild nature of the rivers and traditional Ozarks heritage, as well as fostering deeper communication and understanding between park staff, the locals, and the people who travel from around the world to enjoy the park's spectacular beauty.

We urge the NPS to adopt Alternative "No-Action", which provides the strongest protections for the rivers and does the most to establish deeper, more meaningful connections between the NPS, the region, and the park's visitors.

Remember NO-Action is the only action needed to save the river's.

**Correspondence:** I fully support the rational compromise that is Alternative B, with one addition: Alcohol use in the Ozark NSR should be banned.

The excessive use of alcohol on the rivers is probably the largest problem the park faces. The area has developed a reputation as the Daytona Beach of the Midwest where people can drink to excess and behave in any manner without fear of consequences. Incidences of public nudity, abusive and foul language directed at family groups including young women and girls, assaults, vandalism, and alcohol related fights and injuries are all increasingly commonplace on the river.

As a park employee responsible for managing public information, including our main telephone information line, I

hear many comments about the issue. Calls from visitors concerned about coming down to the park due to the parks reputation as a party center are increasing. Unable to tell them with confidence that they will be safe from harassment, or that they will truly experience a family friendly atmosphere, I tell them they are better off coming during the week or during the off season. Sadly, I can no longer in good conscience recommend family groups float the rivers on summer weekends. I will not knowingly expose my children to that environment, nor suggest others do.

There have been suggestions about means for limiting alcohol consumption, such as limiting the size of coolers floaters may have. These will be circumvented. The only real solution is a comprehensive alcohol ban on the rivers and in the campgrounds. To those who are only having an occasional beer and are not looking to get drunk, it is only the loss of one beverage choice. (They weren't going to get drunk anyway, so what's really the difference between beer and soda?) To those looking to bring their beer bong and Jello-shots, they may be encouraged to go elsewhere. If not, the law enforcement staff has clear cause to cite them, without any subjective judgments as to what is disorderly conduct or just fun.

It has been argued that an alcohol ban would have a detrimental effect on local businesses. Possibly so, but this is short term thinking. With the behavior situation under control, and good press about how the rivers were taken back from the drunken mobs, more affluent family groups would return to the area. The park, and concessionaires should undertake a positive spin publicity campaign after the ban is in place. Targeted at family groups, advertising by concessionaires and press releases by the park, would quickly spread the word of the changed atmosphere. This would remind families who no longer visit that we are again welcoming them. Family groups have a higher per capita spending rate than the extended peer groups who now come to party. They are more likely to purchase souvenirs, stay in motels and Bed & Breakfasts and eat in restaurants. Currently family groups are increasingly avoiding the park. Inviting them back would only make good economic sense.

I believe that a park superintendent has the authority to do this, as stated in Rock Creek Parks website:

Park Superintendent, by authority of 36 CFR 2.35 (3)(I), may close all or a portion of a public use area or public facility within a park to the consumption of alcoholic beverages.  
(<http://www.nps.gov/archive/rocr/justificationetoh.htm>)

There is much precedence for alcohol bans in national parks:

Cuyahoga Valley National Park: Alcohol banned  
Isle Royale National Park: Alcohol banned in campgrounds and boat docks  
Oregon Dunes National Recreation Area: Alcohol banned Memorial Day weekend  
Siuslaw National Forest: Alcohol banned in backcountry  
National Mall, Washington DC: Alcohol banned  
Delaware Water Gap: Banned in PA section, restricted from several areas in NJ  
Cumberland Gap NHP: Alcohol is allowed at individual camp sites but not permitted in public areas or buildings within the park.  
Steamtown NHS: Alcohol banned  
John Muir NHS: Alcohol banned  
Great Falls Park: Alcohol banned  
Andrew Johnson NHS: Alcohol banned  
Petrified Forest NM: Only allowed in restaurants and picnic areas  
Indiana Dunes NL: Alcohol banned at beaches  
Wisconsin State Parks: Alcohol ban  
Kansas State parks: Alcohol ban on all recreational lakes  
Michigan State Parks: Alcohol ban in 27 state parks  
Illinois State Parks: Alcohol ban in 53 state parks  
Parks Canada: Banned alcohol during three day weekend nationwide  
(also instituted by all Provincial parks during same period)

Some voices say that the public won't support an alcohol ban in the park, however, a survey of some 7,000

Americans by the Robert Wood Johnson Foundation found that 63% sport banning alcohol from public parks and 53% sport banning alcohol from public beaches and campgrounds. (<http://www.cspinet.org/booze/rwjfsurvey.htm>)

In order for Ozark NSR to ever return to a positive, resource oriented national park experience for visitors, alcohol must be banned, and that new policy must be widely promoted in the media. Half measures will only exacerbate the problems. If allowed to continue for another decade, the rivers will be so trashed and the area have such a poor reputation, that the situation may not be salvageable.

**Correspondence:** Alternative B seems to be the best way to balance competing park uses. All uses have the potential to infringe on other uses, such as my experience hiking with jetboats.

One early spring day while hiking in the proposed Wilderness area near Big Spring, I heard a most distressing sound: a low whine that grew louder and louder. I recognized this as the sound of a jetboat on the Current River a couple of miles away. I know that completely banning jetboats would never be politically feasible, but people who think they do not affect either others' enjoyment of the park or the riparian ecosystem are badly mistaken.

That loud whine definitely degraded my experience that day. More importantly, the exhaust, which is mixed with the water by jet power units pollutes the water, as does the inevitable sheen of oil coming off of those motors. Unless you are on the very upper stretches of the river, there is no escaping the sound. The wildlife that had the misfortune of being born on the Lower Current has no choice. The aquatic organisms, the fish the anglers seek, as well as the macro-invertebrates and microorganisms their food chains are based on are also adversely affected by the sound, pollution and wave action of the boats.

Similar arguments could be made regarding horses, which create 60 pounds of waste per day, ATVs, and unnecessary backcountry roads. These uses, and others, are all having a degrading impact on Ozark Riverways' resources right now.

The National Park Service is charged with preserving its areas "unimpaired for future generations" and only allowing uses that leave the resources unimpaired. The Redwood Act was very clear about which comes first, and it's the unimpaired preservation of resources. Uses such as jetboats, allowing motor vehicles to cross the river, tolerating huge numbers of horses and the like are a clear violation of the charge the NPS was given when it was given stewardship over the rivers in 1964.

The park needs to take its responsibilities seriously, without regard to the inevitable negative public feedback. Comedian Bill Cosby once said: "the key to failure is trying to please everybody." The park should be guided by one simple rule: do right. Our mission, as laid out in the Organic Act, the Redwoods Act and the park's Enabling Legislation is quite clear: to preserve these rivers and their environs unimpaired for future generations. If we keep going down the same road we have been going, future generations will only inherit a muddy creek amid eroded and stripped hills. As the younger folk say, "let's not go there."

**Correspondence Type:** Web Form  
**Correspondence:** Alternative B, which I fully support, indicates and increased attention to natural resources management and the scientific underpinnings of how we do this.

Ozark NSR has no legislative obligation to maintain open fields, either as Cultural Landscapes or as artificially enhanced hunting areas. However, the NPS does have an obligation to preserve native wildlife populations. Forest fragmentation has been shown to be a cause of neotropical songbird decline in the United States. The increased edge effect of cleared areas makes predation easier, as well as encourages populations of the brown-headed cowbird, a ruthless nest parasite. (See quote below from Audubon Society website)

Large blocks of unbroken forest are being shattered into increasingly smaller fragments, allowing such meso-

predators as crows, jays, raccoons, possums, feral cats and fox to prey on once-secure migrant song bird nests. In addition, increasingly fragmented forests have enabled the brown-headed cow bird to colonize areas they once would have found unattractive.

Cowbirds live at the edge of forests and feed in farms fields and pastures. Though native to North America, the brown-headed cowbird was once confined to the forest edges of Midwestern prairies where they fed in grasslands grazed by roaming bison. Today, however, because of widespread forest fragmentation, parasitic cowbirds can be found all across the United States. ([http://www.audubon.org/campaign/population\\_habitat/sprawl.html](http://www.audubon.org/campaign/population_habitat/sprawl.html))

Also, the Ozark NSR has an obligation to acknowledge the vital role forested river corridors play in songbird ecology. To quote an NPS publication, Park Science:

Riparian corridors may be of critical importance to the maintenance of healthy bird populations. Some species may benefit from a contiguous transition from lowland riparian to upland mixed hardwoods. ([http://www2.nature.nps.gov/parksci/vol21/vol21\(1\)/09-3gardali.GOGA.html](http://www2.nature.nps.gov/parksci/vol21/vol21(1)/09-3gardali.GOGA.html))

The edge effect created by open fields is considered to be beneficial to game species, but may decrease overall biodiversity and use of the area by declining species, such as migrant songbirds. Note information from the University of Virginia:

However, not all wildlife is suited to edge habitat, and the deliberate construction of large amounts of edge has been contested by some wildlife biologists. They are concerned that an abundance of edge may cause reproductive failure, restriction of range, loss of genetic variability, and mortality for species that have very specific habitat requirements (Harris 1988, Wigley and Roberts 1997). (<http://www.ext.vt.edu/pubs/forestry/420-152/420-152.html>)

Based on this information, and the NPS mission to preserve parks unimpaired for future generations, most open fields and agricultural permit areas within the park should be encouraged to revert to forest. The Ozark NSR should not be managed in a way detrimental to songbird populations for the benefit of an increasingly small number of recreationists (hunters)\* or on the basis of obscure academic interests few visitors are concerned about, the so-called cultural landscapes.

The park can fulfill its Legislative obligations to protect historic objects without preserving these open areas as cultural landscapes. To maintain a true cultural landscape indicative of the time era the park interprets would also require the virtual denuding of the hills since at the turn of the 20th century the forests were decimated and the addition of both intact and derelict farm equipment and structures.

The surrounding rural countryside and Mark Twain National Forest, as well as state conservation lands offer ample opportunities for hunting. The use of bottomlands in the Ozark National Scenic Riverways that best reflects the mission and value of the National Park Service, is to encourage all areas to grow up in river cane, bottomland forest and other natural vegetation.

#### NOTES:

\*According to US Fish and Wildlife Service, from 1991 to 2001 the number of hunters in the United States decreased by 7% ([tp://library.fws.gov/nat\\_survey2001\\_trends.pdf](http://library.fws.gov/nat_survey2001_trends.pdf)) However, the number of people who enjoy birdwatching has steadily increased. The following is from the testimony of Mike Daulton of the Audubon Society in support of the Neotropical Bird Conservation Improvement Act on June 23, 2005:

These birders, out to spot Neotropical migrants, can provide a significant boost for local economies during the migration periods. In fact, according to the US Fish and Wildlife Service, in 2001 46 million birders spent \$32 billion on pursuing their interest in bird and wildlife watching. Birders spend money on equipment, birding trips and vacations, bird food, park fees, hotels, food, and more. More than 18 million people take trips specifically for bird watching. These trips alone account for a staggering \$7.4 billion in spending by bird watchers each year. Overall, these purchases have a ripple effect in the economy that leads to a total of \$85 billion in economic benefit and generates more than 800,000 jobs, according to the Fish and Wildlife Service.

**Correspondence:** Alternative B seems to be the best of the alternative GMPs for properly managing the park's natural resources. The narrative seems to indicate that the natural resources would be managed more in line with national NPS policies and "best practices" in the field. In line with this intent, trout stocking should cease immediately

The deliberate introduction of non-native trout to the Current River is contrary to NPS policies, goals, practices and values. As large aquatic predators, they must be having some negative impact on the aquatic ecosystem, which can no longer be assumed to even resemble the original system in which bass were presumably the top predator among fish species. One cant help but wonder if there is a correlation between continuing stocking of trout and the decline of Ozark hellbenders (an endangered species) in the Upper Current. A study by Alex Avery of the Hudson institute implicates introduced trout in hellbender decline:

"In Missouri, concern over the recent and rapid decline in the number of Ozark hellbender salamanders has led to a flurry of research into the possible role of an agricultural pollutant or other so-called endocrine disruptor. Yet extensive dams built in the region have massively altered and destroyed the Ozark hellbenders habitat. These impacts are magnified by the fact that Ozarks hellbenders live for decades and dont reproduce until they are 5-7 years old. Moreover, the Ozark hellbenders have no instinctual fear of predatory trout. Trout were never historically in the Ozark hellbenders range, but have now been purposefully introduced throughout." ([www.hudson.org/files/publications/Frogs and Pesticides Final.pdf](http://www.hudson.org/files/publications/Frogs%20and%20Pesticides%20Final.pdf))

The NPS as a whole is aware of the impact of exotic fish stocking and is beginning to address it, as evidence from information on the NPS Fisheries website:

"Often new species were brought into an area and introduced into lakes or streams with hopes of increasing the number and diversity of fish available. As our scientific understanding and knowledge of natural ecosystems has progressed, managers of protected natural areas have come to realize that the introduction of fish species that are not native to the area results in harmful impacts to the natural ecology of the aquatic system. Native species are often out competed by the introduced fish species and become greatly reduced in number or even lost from the system completely. Food organisms may be over consumed and the natural balance of other aquatic organisms present will likely be changed." ([http://www1.nrintra.nps.gov/wrd/fisheries/native\\_species.cfm](http://www1.nrintra.nps.gov/wrd/fisheries/native_species.cfm)) Emphasis added.

ONSR should get with the program nationally. The website cited above continues:

"Today the National Park Service no longer stocks fish in natural areas but instead relies on natural reproduction and careful management of fishing activities to sustain fish populations and fishing opportunities. However, early stocking practices have left the parks with many areas in which non-native fish continue to dominate and displace the native species. Elimination of these non-native species is not possible in many cases, but where possible, the NPS is working to remove the non-native species and reintroduce or restore the native species to help reestablished the natural aquatic ecosystem."

All the park needs to do is simply stop. The trout do not reproduce well by all accounts. In time the population would die out. Of course, stopping MDCs stocking of a Federal river would be legally easy - its already a violation of several laws and regulations, but politically difficult, as anglers are powerful lobby.

Allowing the introduction of trout may be prohibited under several applicable laws, such as Executive Order 13112 - Invasive species, which states:

"federal agencies cannot authorize, fund, or carry out actions that it believes are likely to cause or promote the introduction or spread of invasive species in the United States or elsewhere unless all reasonable measures to minimize risk of harm have been analyzed and considered."

Also: Executive Order 11987, Exotic Organisms. 42 FR 26949 (May 25, 1977)

"Federal agencies shall discourage the States from introducing exotic species into natural ecosystems of the United States. In addition, Federal agencies will restrict the use of Federal funds for the purpose of introducing exotic species into ecosystems outside of the United States."

Seems like we could do this if the new GMP simply stated the park was going to go by the book in adopting NPS policies. The park could say sorry MDC, our hands are tied&

**Correspondence:** I would like to express my support for Alternative B. While it doesn't address all the concerns I have regarding the future of this park, it does seem to strike a reasonable middle ground. No plan is going to please everyone, but this seems to have the ingredients for good long term stewardship of the Ozark National Scenic Riverways.

Horse use has long been identified as a recreational use that can be detrimental if not properly managed. Re-routing trails and changing from "homemade" trails to horse trails that are engineered and laid out by professionals can only be a positive development. While visitors wish to enjoy the view of the river, moving trails away from the riverbanks should help control erosion. Reducing river crossings will help control turbidity as well as reduce potential conflicts with floaters and boaters. Properly done, trail riding can be a worthwhile recreational activity that gets visitors out into the resource with little impact. However, riders need to be informed of the detrimental effects of erosion caused by informal trails and turbidity caused by frequent river crossings.

**Correspondence:** I support Alternative B as the most reasonable compromise Plan. Please continue to keep a lid on ATV use in the park. It is my understanding that off road travel and travel by ATVs on park owned roads has always been prohibited. I have had the experience of having ATVs come roaring through my camp (at Troublesome Hollow) late at night, with little regard to my children's safety. They tore up the creek bed and generally raised a drunken ruckus before retreating into the night. Besides the inevitable environmental damage, we simply do not need that sort of behavior in a "family friendly park." This damage is evident if you hike into the Cave Spring / Devils Well area, where unsightly informal rutted ATV trails crisscross the area.

**Correspondence:** I support Alternative B in part because of its commitment to increasing hiking opportunities in the park. The river is sometimes "up" as we say and therefore closed to boating of any kind. Many visitors who have made their reservations and arrive only to be told they can't float are disappointed. The park needs more land based recreational activities to give folks more to do and a reason to stay in the area on flood days. Currently there are few hiking opportunities in the park, and the existing ones are not convenient to major campgrounds. Each major campground should have a network of trails, perhaps an easy short one, a longer moderate one and a spur that would connect to the Ozark Trail for the serious hiker.

Also, "hike and float" opportunities could be developed wherein a person might hike a moderately long trail to a canoe rental location, rent a canoe and then return via river to his/her car at a trailhead. This might be very popular in the cooler spring and fall when the local communities could appreciate the increased tourism dollars.

Lastly the park should encourage backpacking. While the Ozark Trail is a backpacking trail, there is nowhere backpackers can camp off trail legally, except on gravel bars and developed campsites. Perhaps the park needs to develop or designate a few small camping areas along the trail for this user group.

**Correspondence:** Please consider the comparative cost of getting a horse to a trail ride as opposed to hiking. I am a trail rider. We ride many multi use trails all over the country. St. Charles County MO has recently developed multiuse parks and included hikers, bicycles, and horses. Please talk to them about incorporating different users into trail instead of restricting them. All share the trails very well. We did pass, a law in MO that requires replacing every mile of trail removed from use with equal trail. Also consider the history of the area with Jesse James riding many of the same trails used today along the current river. Please consider the serious financial impact on the area and the investment made by trail riders in our sport/hobby. We are more than happy to share the trails available. Also the simple inequity of restricting one constituent's use of the trails over another is definitely not in keeping with basic fairness and equal protection for all of the citizenry.  
Thank you for your time and consideration.

**Correspondence:** It is my opinion that the rivers should be left as they are! We local people enjoy going there to camp, canoe, swim, etc. Since they are public rivers to be enjoyed by all, and especially local tax payers who treat the rivers with care, we do not want the government telling us when or where we can enjoy our public rivers!

Our area would also hurt from lack of tourist who enjoy our rivers. Several businesses rely on the summer to bring money into our area as means of survival.

The motor boats are not harming the rivers! There again, money is brought into our area by these people enjoying the rivers. They do shopping in town for gas, food, lodging etc. and that also would hurt the economy of the area if they could not use the rivers for recreation.

Bottom line.....leave them alone!

Glen Edgar

**Correspondence:** The no-action plan should be the plan used. The NPS and Riverways haven't shown by past actions that they're "recommendations" have been in the best interest of any community. The plans A,C, and even (B - The preferred plan)

are only a plan to limit use of the rivers by locals. Hunters and fisherman and campers, use these rivers and gravel bars and access points for they're recreation too. Motor boats have already been limited on both rivers but the amount of canoes and tubes and horse trails haven't been. Canoes and tubes are put on these rivers at an alarming rate each day in "Peak Season" and they pollute the waters and gravel bars with trash, feces, and bottles. Not to mention all the drugs that they smoke, shoot, and swallow along the way. Motor boats are not the cause of bank erosion like some suggest but it is caused by trails being made into the woods for lots of reasons unmaintained horse trails, game trails, unmaintained boat landings, but the biggest cause of bank erosion is that the stream channel is not cleaned out... when storms or whatever falls trees into the rivers blocking the channel. That then starts a gravel deposit narrowing the passage and eventually another gravel bar altering the river channel. So maybe the NPS should look into a plan that includes cleaning out the rivers giving outdoorsmen and fishermen the same access as the canoe and tube outfitters that are cramming these rivers full weekly.

So far the plans A,B, and C that I have read are only interested in limiting motor boating and vehicle accesses. maybe we should limit how many canoes and tubes can be released daily. limit horse trails to not be within 100 ft. of river bank, and pooper scoops for the horse feces and walking trails. fence it off so the wild deer, elk, otters and other animals can't damage the banks. Let it fill up with dead fall trees, it is almost that way now. Sound silly? So does your plans A, B, and C...

**Correspondence:** I understand the Park Service's desire to keep the Ozark area protected from pollution and destruction. However, in doing so you are going to be keeping our children from falling in love with mountains, water and animals that you are so desperately trying to protect. It is those who are in love with this area that care for it. I understand there are many who just use and abuse the land that they are enjoying. These people are not in love with the land and therefore do not take care of it. Please do not take away the opportunities for our children to engage in the natural and beautiful Ozarks, creating a deep connection, because of those who do wrong. It would be like not allowing anyone to drive on the roads because of the sins of drunk drivers.

**Correspondence:** My family has floated the Jacks and Current rivers for many years. The three biggest changes to bring about an enhanced visit would be the following. First, no alcohol on the stream. This practice encourages a lot of foolish to dangerous behavior. In camp is ok subject to the current limits. No motor boats above Powder Mill on the weekends from the Thursday before Memorial day to Labor day. Third, no ATVs!!! Nothing spoils a visit like the smells and sounds of high engine rpm whining.

The Park Service should also disclose which access points are being considered for closure and/or upgrade/downgrade and/or new access. Gravel bar camping should be continued to be allowed but with permit. This would attach some responsibility for trash.

Lastly, it must also be recognized that it is unlikely that the park service budgets will be increased going forward. Therefore any proposals that require extra funding must be avoided.

**Correspondence:** As an avid paddler, and a person experienced in Swift Water Rescue. I would suggest that the shut down of the USGS gauge at Aker's Ferry should not be closed, as this will affect many local businesses and outfitters that depend on a reliable gauge for current river levels. Not only is this an important gauge for outfitters and paddlers that travel to the area on this very popular river system, but it is a safety issue as well. Without a reliable gauge, people may travel to the area, not knowing just how much water/or rain fall has happened in the area locally, and this can be a huge safety issue for those floating the river, and for those camping on gravel bars. I think there are some rivers or creeks that are much less popular where closing a gauge would have much less of an impact.

**Correspondence:** I am posting this to inform you that I would like the no change policy. I have lived in the Bunker, Missouri area for the biggest part of my life and have raised my children enjoying our family vacations on the Current River. It has been a family tradition of my husband's family and we have carried it on with ours. We are a middle income family that does not get to enjoy the leisure of traveling around the US for family vacations, therefore, we have been blessed with getting to spend our summers on the Current River. I would hate to see this

taken away from my family, my children and my grandchildren. It is my sincere hope and prayer that you leave this beautiful country and river to those of us who truly enjoy spending our time there, that is why that I am requesting you invoke the NO CHANGE POLICY. Thank you for your time.

**Correspondence:** i appreciate the opportunity to comment on the considerations of this new plan.

My family and i have been enjoying the many activites that the ONSR(ozark national scenic riverways) have allowed for almost 40 years. We have fished, floated, camped, rode horses and ATVs throughout the area.

My main concern with the proposed changes is the additional closure of access road as well as access to gravel bars on the river. These closures would greatly reduce our enjoyment of the river as both my wife and i are disabled and have little use of hiking trails and buffer zone which restrict our access to the river.

At this stage in my life as a impaired senior citizen, I/we utilize our ATV vehicles to take us to the river for camping and fishing. These new regulations would drastically reduce our access to our favorite spots on the river.

I would hope that consideration of ADA principles would be considered and that our rights to access these public areas would not be restricted through unfair regulations.

If these measures are pursued to restrict the rights of access for the disabled, our rights will be violated and we will have to seek a remedy through the judicial system to ensure that these rights are upheld for everyone.

You may be walking today and one day maybe not. Can you imagine the dissappointment of be unable to reach your favorite gravel bar or site because it is only open to those who can still hike or walk on roads or trails that you have walked for your entire life.

**Correspondence:** I read in the Kansas City Star that you are considering restricting camping on multi-day canoe trips to the backcountry campgrounds. Please reconsider this. The backcountry campgrounds are not patrolled as regularly and often become used by local "partiers" which does not lead to a peaceful outdoor experience. If the river is receiving too much use, it would be preferable to establish camping zones and restricting the number of parties as many parks do for backpacking. It would be a great shame to not be able to experience the true wilderness by camping out on the river bars at least once a summer. It is magical to sit alone by the river as the stars and fireflies come out at night. Thank you.

**Correspondence:** I want to thank the National Park Service for putting together such a well done plan & study.

I'm in favor of the adoption of Alternative A as it provides additional protections for the rivers.

Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
Bars all recreational vehicle access to gravel bars.

The Current and Jacks Fork Rivers are so beautiful, and are a vary valuable natural asset that deserves as much protection as we can possibly give them. We need to keep our promise to future generations that the Ozarks National Scenic Riverways remain intact & unspoiled.

Thank you for your consideration.

**Correspondence:** Regarding the proposed General Management Plan (GMP) of the Ozark National Scenic Riverways (ONSR), I have concerns that the National Park Service has not taken into great enough account the input from directly impacted citizens who live, use, and work along the Riverways.

We should provide citizens with a variety of recreational opportunities while continuing to preserve and protect the economic, natural, and cultural resources of the ONSR for future generations. The current proposals under the new GMP do not address my primary concern:

Tourism is one of the most critical components of our rural economy and the ONSR is the primary attraction. Thousands of out-of-state as well as in-state hikers, campers, boaters, hunters, fishermen and horseback riders visit this area annually and bring many irreplaceable dollars when they come. Any further limitations on the access to these assets would severely impact this local economy.

We must not overlook our citizens' heritage and livelihood.

Providing directly impacted citizens with an opportunity to have input on this critical issue is essential for the success and future management of the ONSR. The economic and cultural importance of the ONSR to families and small businesses in Missouri will be threatened if the "NPS Preferred Alternative" is implemented. It appears that the goal of this plan is to shut down public access points to the rivers, eliminate motorized boat traffic from certain areas, further restrict boat motor horsepower in other areas, close several gravel bars, and propose additional areas to be designated as federal wilderness. I am adamantly opposed to all of these proposals, as are our constituents and business owners.

I support the "No-Action Alternative" to the current operating system.

---

**Correspondence ID:** 502 **Project:** 15793 **Document:** 56208  
**Received:** Dec,30,2013 11:15:18  
**Correspondence Type:** Web Form  
**Correspondence:** I support the "No-Action Alternative" to the current operating system.

The ONSR value to the region is unparalleled. Do not adopt a GMP that is contrary to the wishes of my constituents and the other folks who depend on access to the Riverways and cannot operate with additional government regulations. In my opinion, the ONSR is already over-managed with burdensome federal regulations. The Riverways support a vibrant and growing tourism industry that is critical to our region and state.

I will continue to strongly advocate against further encroachment by the National Park Service limiting our citizens' access to public lands. As you continue with the process, I hope you will consider our comments and those of the directly impacted citizens who will be affected by your actions.

<b>Correspondence:</b>	I am fully against ANY MORE RESTRICTIONS on properties that are acquired and maintained with tax payer dollars yet with very limited accessibility to the public. The debt ceiling limit has been raised twice within the past year but yet the National Park Service (NPS) wants to INCREASE THEIR budget 2.8 million. They will cost tourism and commercial jobs but will INCREASE THEIR employment roster by nearly one-half again. It is not just an NPS tactic but all Federal Government branches that present ridiculous proposals, one usually so ludicrous (Proposal "A") that the public fearing it will go through grudgingly accept a lesser evil (Proposals "B" and "C".) Any of the three will be a huge win for the NPS and their budget. My family and friends have enjoyed the Current River responsibly for years. I do not want a "designated" area for camping on the river bank. On an overnight float I don't want to have to speed up or set camp early to be at a designated camp. I also like camping with my family, not with everybody else's in a designated area. I do not understand wanting to remove horse trails from an area that boasts primitive wild horses other than wanting to limit equestrian riders access to the land that their tax dollars paid for. I guess the wild horses will have to be trained to only cross at the NPS approved crossings. As far as the proposed Big Springs Wilderness area, I have family that has property next to a wilderness area and when there is a fire threatening it the U.S. Forest Service workers request to use their dozer to cut fire lines on HIS property because if the fire gets on the wilderness area they cant use a dozer, chainsaw or even a motorized backpack blower to fight the fire. ENOUGH ALREADY!!

**Correspondence:** I'm in favor of Alternative A if it is an A,B,C choice. More restrictions on jet boats would be a plus.....Give the floaters a want to discover some of the water below the Jack's Fork for a change.....It is overrun with jackwagons' in jet boats on most weekends. I don't mind the folks that run up once and float back down....but the ones that run up and down all day long are a problem. Not friendly stretch for floaters...

Horses...I don't get down to the JF much, but keep the horse operator out of Parker Hollow. Think they had 30-50 horses down there when we pulled out after a float a couple years ago in January. Horse dung all over the place, and our vehicles were blocked in. Had to be an organized ride....but that does not belong there. The horses really rip the place up. Ok for private riders I guess...make them get a permit if it is over 10 or so..

Illegal roads and trails...Cedar to Akers is a disgrace....you cant walk 50 yards off the river without finding a two track 4x4 trail...I don't head down river from Akers in the winter, but I'm wondering just how bad it is.

**Correspondence:** Alternative A is preferred. These areas in the state are special and need the maximum protection from pollution related to horses,other livestock, crops, agriculture runoff, roads and other infrastructure/building, etc.

I have been canoeing on these rivers for several decades (since the 1970s) and have seen the deterioration! The NPS has done a good job evaluating the options/alternative. However, the horses and roads and ORVs have to be brought under control as they are ruining the natural beauty of these majestic rivers that are so clean and clear unlike any others in the state.

Please select the protective Alternative A; the other alternatives are not protective of the treasures these rivers represent to the people of Missouri and the rest of the country. We have so few natural places left especially of this high quality. It is your responsibility to protect these special places.

Thank you for your consideration.

**Correspondence:** Please, no change, leave the river-ways as is and find another way to clean it up. I know any time I ever rode horses on the Current River, I never littered. Any, and all trash I had, went back into my pack. I truly believe that the one's that are trashing the river-ways are the ones that don't live in these areas. I mean think about it, and of course I am only referring to horse/trail riders, we enjoy a clean undisturbed (trashed up) trail, so why would we be the one's that are doing the trashing of it. And as far as horses crossing the rivers causing any kind of damage, that is just ridiculous. Wild horses have always crossed the rivers and it has caused no harm in any way. Deer probably cross the rivers more often than horses. I believe that floaters, (canoe, kayak, tubes etc. are more to blame for trash left on the banks and slews on the river. Not all are careless, but it only takes a few to ruin it for everyone else.

There has just got be a better way to handle all of this, besides taking away more of our rights.

Sincerely,  
Shelby Shepherd

**Correspondence:** As a former NPS employee, I understand the need for a more cogent and comprehensive Management Plan. I am concerned, however, with several of the provisions as put forth in their chosen Alternative B. For one, the total exclusion of outboard motors on the Upper Current River and Jacks Fork. As a trapper and fisherman, I have friends who frequent these areas and there is no negligible conflict with other forms of recreation, especially in the off season months. Out board motors on johnboats precede the creation of the ONSR as well as the commercial canoe business on these waterways. Fishing would actually be hindered by the ever increasing otter population if trappers cannot access these areas by boat. There would be an extreme negative impact culturally and economically if these activities were stopped. I strongly advise that the NPS reconsider these suggested provisions.

**Correspondence:** I am writing as a concerned citizen of the state of Missouri regarding the effects the Ozark

National Scenic Riverways, new Draft General Management Plan, will have on the Current and Jacks Fork Rivers. Shutting down access points on these rivers will have devastating effects on our local economy. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and surrounding areas. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve. I strongly recommend that the National Park Service take a No-Action Alternative to the proposed new Draft General Management Plan and prevent unnecessary restrictions and regulations on our public lands.

**Correspondence:** We are new homeowner living in Mountain View, Missouri. We moved here expecting to retire and be able to canoe/fish the Jacks Fork and Current rivers. The National Park Service has just released a Draft General Management Plan that will add many unwanted changes, restrictions, and added cost for the Ozark National Scenic Riverways. Their Plan is all about what they want to do for the visitors and no consideration for us local folks. Their Plan includes closing 20 river access points. For us older folks, we need more access points to reduce our travel distance on the river. We strongly recommend that the National Park Service take the No-Action Alternative for the Draft General Management Plan to prevent additional program cost and hardship on us older local folks.

**Correspondence:** I have tried to read as much as i can find from the National Park Service, and from my local state info on the closing of the Jack's fork and the Current River. I would like to say that I am not opposed to changes for the betterment of our great resource. But I can't see how such a drastic change would be beneficial to all of us that use this land. I urge you to vote the no-action proposal at this time. I don't know if the people making the choices for our rivers are from around here. But your welcome to come ride in my boat and head out one weekend, and we will stop and ask everyone we meet on the river that day and see if they want such changes made to their river. Come out and see all the happy family enjoying a great river. I am sure it would change your mind to come out and enjoy this great river and land with us.

again thanks for your time. I urge you to vote no action proposal  
Chris Williams

**Correspondence:** Well I have lived within 5 miles of Current River for 8 years and within 20 miles of it my other 29 years. I can see absolutely NO reason for any changes. Horses have been on these rivers for hundreds of years without issue. I have never seen any real problem with the trail riders, they pick up their trash and are always polite. They stay on designated trails the best I can tell and don't bother anything. As for boats, "motorized vessels", why make the changes you are proposing. The boats are not really a problem. We are on the river at least 2 days a week from April, sometimes earlier thru December. I cant count on one hand the issues we have ran across in all the times and all the years. There is the occasional drunk canoer or tuber that acts the fool but it is what it is and has been very rare. Most every boater I've been around stops or slows for non-motorized vessels anytime its possible, with the exception of shoals where they just cannot. We have assisted floaters who have tipped, flipped, or sunk more times than I can possibly count. Countless times we have picked up trash from floaters who have tipped over, we never ever allow trash to float by or be left behind. I just DO NOT see where we pose any real problem at all. And if we do pose such a problem, why did we only see Park Rangers twice in all of 2013. Seriously! And why even suggest closing any parts of the river to boat traffic thru the fall and winter. There are virtually no floaters during mid October thru mid March. In the winter, it is mainly gigging traffic.

I firmly believe this is just another attempt by the Federal government to control everything. Well these lands were entrusted to you on the grounds that the public would have the use of them. Now you just keep taking more from us without good cause.

I COMPLETELY disagree with you holding meetings concerning local rivers in Kirkwood! Do you hold meetings here about proposed changes to the Arch or any other Federal parks, etc. NO YOU DO NOT! So exactly why would you let them affect the decision? Because some of them travel here a couple times a year and float. Wow! Well, meanwhile those of us around here utilize this river weekly, even daily! I travel to the Arch and other Federal parks once or twice a year, I fully expect you to hold meetings here regarding all park changes.

Do those of us actually affected the changes a favor and leave us alone!

**Correspondence:** ONSR Draft General Management Plan

I am writing as a concerned Missouri resident regarding the effects ONSR Draft General Management Plan will have on the Current and Jacks Fork Rivers. Shutting down 20 access points to these rivers will have devastating effects on us local folks. Everything in the Ozark National Scenic Riverways Draft General Management Plan is about the treatment of the visitor and there is no concern for us local folks. This is our back yard, we don't need guided float trips, guided fishing trips or guided field trips when it comes as an added cost to us in additional restrictions and regulations. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and surrounding areas. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve. I strongly recommend that the National Park Service take the No-Action Alternative On the ONSR Draft General Management Plan, to prevent unnecessary restrictions and regulations to our public lands.

William Hohn

**Correspondence:** I am writing as a concerned Missouri resident regarding the effects the Ozark National Scenic Riverways Draft General Management Plan will have on the Current and Jacks Fork Rivers and surrounding area. I remember when our three State Parks, Round Spring, Alley Spring and Big Spring were very well maintained by the Missouri Conservation. Today, you can see the lack of maintenance, added restrictions and regulations placed on us local people since the National Park Service has taken over the responsibility for our parks and rivers in the Ozark National Scenic Riverways . I strongly recommend that the National Park Service take the No-Action Alternative on the Draft General Management Plan, since they can't take care of what they have. Take a look at Falling Spring Mill, Turner's Mill Spring and Greer Spring, all are in the Ozark National Scenic Riverways, they can't even maintain the arrows directing visitors down the paths to the scenic attraction. The path down to Greer Spring is loaded with Poison Ivy and Poison Oak. It's a real mess and a real waste of our money. The Missouri Conservation did a much better job then the National Park Service.

**Correspondence:** I am no longer a resident of Missouri's 8th District, but I grew up in Salem, where I still frequently visit family & friends. I also frequent the Current and Jack's Fork Rivers, most recently hiking with family to Cave Springs on Thanksgiving Day. A large part of my childhood was spent in the Ozark National Scenic Riverways Park. I've taken my very first and my most recent float trip on the Current. While hunting with my father many years ago, I shot my first quail in the fields of Flying W after "blue stemming" across on a cold November day. I have a great love and pride for this place.

I'm stating my support for the draft GMP Alternative A. These rivers are changing and the users of the river have greatly increased within my 30 year experience on the rivers. Greater protection now is essential to keeping this area the pristine wilderness that it is today. The economic potential of surrounding towns depend on keeping the quality of these rivers high. Unfortunately, many local residents do not understand that.

I strongly disagree with Missouri 8th District House Representative Jason Smith who is encouraging local people to reject all three Alternatives and call for the "No Change Option". He does not speak for all of the locals - regardless of his claims. Many users of the ONSR are displeased with the NPS' management over the past 30 years, but to allow a "No Change" conclusion will simply lead us further down this unacceptable course, and the ONSR will suffer.

I believe that this update to the GMP is our opportunity and responsibility as people with local interests to insist that the NPS use the GMP update to provide management that broadens the types of visitors we hope to attract to our area. There are many local users of the ONSR who do not approve of the party atmosphere that has evolved on the Current River under the existing 1984 NPS GMP. These types of visitors show little respect for the natural environment of the ONSR or the quality of experience for anyone else on the rivers. The party crowd descends each summer weekend, often scaring off families, fishermen, and others who use the river to connect to the outdoors. They do spend money in the area through canoe and campsite rentals and purchasing alcohol, although most of the alcohol is purchased where they depart, before they ever arrive in the counties bordering the ONSR. This group of users is a minority, and their contribution to our economy is a small sliver of a larger, more diverse economic potential.

In response to the concerns of restricted access due to road and trail closures, it's clear that the largest ecological issue that is being addressed by these closures is that of sediment and gravel erosion into the streams. Locals have been aware of the gravel erosion problem for some time, and we would be more willing to accept measures to reduce it if the NPS themselves weren't notorious for circumventing that effort. Locals have a long memory, and events like the spreading of white chat gravel on tourist parking lots that lie well below the flood plain are more than enough cause to question the intentions and wisdom of NPS efforts at gravel erosion prevention. These kinds of bone-headed decisions must stop - and those responsible for making them must be removed from their responsibilities. Events such as that send a message to local people that the NPS is more concerned with paving the way for the commercial canoe industry than caring for the rivers or the opinions of local residents who care deeply for these streams.

Regardless of past erosion prevention failures, I do agree that there are more access points than necessary along the river, and that a great number of these are unmanaged by the NPS and in varying degrees of disrepair. I also understand and agree with the fact that in heavy rain, these roads and traces erode, dumping silt and gravel into streambeds already brimming with gravel. In general, I am in favor of a more detailed study that determines the access points that are the greatest offenders in contributing to the erosion problem, and the subsequent closing and restoration of these areas.

I have studied the Alternatives thoroughly and believe that Alternative A will be the most impactful and long lasting. I would like to express an emphasis on the importance of the NPS recruiting and working with local hiking trail and mountain biking trail enthusiasts. A healthy trail system throughout the ONSR and the Big Spring Wilderness should be a high priority. I would also like to emphasize the importance of enforcement of these new and existing regulations. It is a major failure of the current ONSR NPS that many existing regulations are not enforced leading to unauthorized horse trails and river access points. We would not be having many of the issues we are now if existing rules were enforced.

Lastly, I encourage the NPS to keep the existing schedule for the end of public comments and the establishment of the updated GMP. There is no legitimate reason for a 90 day delay. We the interested and engaged public have had plenty of time to study the published document.

Thank you

<b>Correspondence:</b>	I favor Plan A. I am attracted to the Current River and Jack's Rivers for their wilderness like qualities. I plan my trips so that I can enjoy the rivers when they are not experiencing heavy numbers of recreational boaters utilizing outfitter services. I favor keeping development to an absolute minimum. Keep motorized boat use to a minimum. Do not allow any motors of 40/60 HP above Two Rivers. Get rid of the illegal riverside camps and illegal trail and road usage.				

By the way, I am encouraged with the ecological restoration work including prescribed burns that I have seen along ONSR. Good work!

Thank you for your service!

<b>Received:</b>	Jan,04,2014 09:15:22				
<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	To whom it may concern:				

I am contacting you to voice support for adopting an updated National Park Service General Management Plan for the Ozark National Scenic Riverways. I represent no organizations, only myself and several other local folks and visitors from around the area who frequent the ONSR. This letter does not specify a chosen Alternative but rather is intended as general support for a GMP update that allows the NPS to better patrol and preserve the scenic nature of the Current and Jack's Fork Rivers. Many of us will be submitting additional comments and specific suggestions independently.

Missouri 8th District House Representative Jason Smith is encouraging local people to reject all three Alternatives and call for the "No Change Option", charging the NPS with already over-managing and over-burdening local users while still failing at protecting the river environment. While we agree, in general, with his critique of the NPS' poor management legacy, we strongly disagree with his suggestion to reject a GMP update. Many users of the ONSR are

displeased with the NPS' management over the past 30 years, but to allow a "No Change" conclusion will simply lead us further down this unacceptable course, and the ONSR will suffer.

The tourism dollars spent by visitors to the ONSR is the economic lifeblood of towns like Salem. If the river ever becomes an undesirable vacation destination, it will dramatically impact the economy of our area. Some residents may associate any kind of new rules or restrictions in the ONSR as a threat to tourism. We disagree, and believe that this update to the GMP is our opportunity and responsibility as people with local interests to insist that the NPS use the GMP update to provide management that broadens the types of visitors we hope to attract to our area. There are many local users of the ONSR who do not approve of the party atmosphere that has evolved on the Current River under the existing 1984 NPS GMP. These types of visitors show little respect for the natural environment of the ONSR or the quality of experience for anyone else on the rivers. The party crowd descends each summer weekend, often scaring off families, fishermen, and others who use the river to connect to the outdoors. They do spend money in the area through canoe and campsite rentals and purchasing alcohol, although most of the alcohol is purchased where they depart, before they ever arrive in the counties bordering the ONSR. This group of users is a minority, and their contribution to our economy is a small sliver of a larger, more diverse economic potential.

We believe that the various zoning distinctions being proposed are sorely needed to offer guidance for the intended uses of the ONSR and to offer increased protection that requires more rigorous planning for future development of the ONSR. We also support the designation of the proposed area near Big Spring as "wilderness" due to the area existing currently as undeveloped land - wilderness in all aspects outside of official designation. The Ozarks, and Missouri in general, have very few options in providing a wilderness experience. Those who seek true undeveloped wilderness in a dramatic landscape are forced to head west to the Rocky Mountains or East to Appalachia. The Big Spring Wilderness can be an attractive alternative to local people and offer a destination to outdoor lovers coming from outside of the Missouri Ozarks.

In response to the concerns of restricted access due to road and trail closures, it's clear that the largest ecological issue that is being addressed by these closures is that of sediment and gravel erosion into the streams. Locals have been aware of the gravel erosion problem for some time, and we would be more willing to accept measures to reduce it if the NPS themselves weren't notorious for circumventing that effort. Locals have a long memory, and events like the spreading of chat gravel on tourist parking lots that lie well below the flood plain are more than enough cause to question the intentions and wisdom of NPS efforts at gravel erosion prevention. Regardless of past erosion prevention failures, we do agree that there are more access points than necessary along the river, and that a great number of these are unmanaged by the NPS and in varying degrees of disrepair. We also understand and agree with the fact that in heavy rain, these roads and traces erode, dumping silt and gravel into streambeds already brimming with gravel. In general, we are in favor of a more detailed study that determines the access points that are the greatest offenders in contributing to the erosion problem, and the subsequent closing and restoration of these areas. When promoting the idea of road closures, it's important for the NPS to understand that this knowledge of the back roads is a point of pride for those who have grown up here. It is also a very valuable method of finding ways to bypass the swarms of outsider tourists that are becoming more and more prevalent in the ONSR. The study of closing these access points should be undertaken with transparency and with open feedback from the local population. A compromise that could be considered by the NPS would be to determine and retain several of the least damaging and most valued secondary roads that are frequented by locals. These should be preserved as truly secondary access points, patrolled and to a degree maintained by the NPS, but not publicized or ever opened up for commercial use.

We support the proposal of a much greater trail network throughout the ONSR. Distinct trails could be established for hiking, horse riding, and mountain biking. We encourage the NPS to reach out to and work in collaboration with other trail establishment advocates around the area. We understand and agree that trails in erosion prone areas and river crossings are a water quality concern, and we agree with the intent to limit the number of these trails and river crossings. However, the long linear nature of the ONSR could provide opportunity for a great mileage of trails that traverse the ridgelines bordering the ONSR. If these trails were well-planned and well-built this would add a great community value to the ONSR with minimal impact upon the environment.

To conclude, we support thoughtful updates to the GMP that will encourage the NPS to change course and broaden the activities available in the ONSR while still insuring that the river retains a healthy water quality for users and adequate protection for the incredibly diverse animal species that reside there. With increased enforcement of new

protection efforts for the rivers, we can rein in the party crowd and attract other user groups. We have the opportunity to help the ONSR become an outdoor destination akin to the other great national parks, attracting visitors from across the nation and world to come and spend their money in our towns and at our pride and joy, Missouri's own national park. With an increase in wilderness areas and the establishment of specified horse, mountain bike, and hiking trails, we will not only attract canoeists and kayakers, but also hikers, cyclists, horse riders, hunters, anglers, backpackers, naturalists, and recreationalists. We can all coexist. Families will again feel comfortable and welcome in the ONSR. They will rent canoes on summer weekends, take winter hikes to visit notable springs and tributaries, experience views of the river from high country trails on horseback. They will rent hotels and bed-and-breakfasts in Salem, Van Buren, or Eminence, and maybe they will even tour a future Montauk museum that presents the history of settlement in the Ozark Riverways and reveals the artifacts and mystery left behind by those who walked these valleys thousands of years ago. Most importantly they will understand the importance of these rivers and why we fiercely defend them.

We encourage the NPS to adopt an update to the GMP that places utmost importance on preserving and protecting the natural environment of the Current and Jack's Fork Rivers.

**Correspondence:** The plan and analysis is very thorough.

I find the land use portions of Alternative B too restrictive because access is the key to a good recreational experience. More roads and trails are needed, not fewer. I recommend land use and access provisions much closer to Alternative C than Alternative B. Only those few unofficial trails that are causing significant environmental problems should be closed. The remainder should be remain and some developed and maintained further.

I fully support the motorized boating and horsepower restrictions of Alternative B. The noise of power boats is disruptive to the majority of river users and should be accommodated on a limited basis but restricted per Alternative B.

**Correspondence:** Dear Sirs and Madams,

I am a resident of Ozark and Howell counties for the last 23 years, but have been floating the Current and Jacks Fork rivers for the past 30 years. I live near the North Fork of the White river and consider myself a steward of land that washes itself into the river.

These rivers provide so many with the opportunity to commune with nature. Over the last many years I have seen changes in the rivers that are not good. Many new trails have appeared, the sound of motorized boats disturbs the peace of the day, and 4 wheelers and other 4-wheeled vehicles come to "play" in the sandy banks (drivers often well lubricated with alcohol). Every time that I go camping I spend an hour in the morning picking up trash from the river bank. We filled 4 kayaks with large trash bags full last summer on the Jacks Fork.

We are fortunate to have these natural areas that are vital to our spiritual and mental health. There is a growing body of evidence that suggests that separation from the wilderness has profound untoward psychological and physical effects upon humans. Confinement in Urban setting has been linked to attention problems, mood disorders and addictions.

I think that if you count the number of motorized vehicles that utilize these rivers you will find that only a few motor boats are present relative to canoes and kayaks, but that one motor disturbs the peace of many. I have had the

experience of trying to avoid being knocked over by motorboats on the last stretch of the Jacks Fork near 2 Rivers. It did not appear to me that these gentlemen were fishing, and their attitudes were not courteous. It is my strong opinion that motorized boats have NO place on these pristine rivers. The argument for fishing is easily resolved: canoes work just fine for that.

I cannot state strongly enough how wrong it is that thousands of horses are ridden along the river bank, into the stream and all along the watershed. I have for many years heard stories of the drunken revelry, taken care of drunks in various stages of alcohol poisoning, and witnessed the rude behavior of these people. I have seen people washing their horses with soap in the river. The coliform burden from all of these animals is enormous. I have horses and have ridden beautiful Ozark trails throughout my life here, but I would not consider riding in the river or washing my horse in it.

I am strongly in favor of Option A. I would very much like to be there to publicly comment but have to be at work that evening. Please cast my vote.

Respectfully submitted,

Clara N. Applegate, M.D.

**Correspondence:** I support the wilderness designation and the wild and scenic river designation for the entire area. ban all hunting and trapping and wildlife and bird assault and attack by gun wacko predators from this site. no law requires that every public site be made into a wildlife attack area for gun wacko human predators. the fact is wildlife watchers are the majority of the American population and spend much more money than the gun wackos, so when you let in these insane people with their guns you scare away the families who are the American majority. its time to stop turning every public site into a dick cheney assault area. led shot decays and polluts air and water, so that these gun wackos bring in pollution with them. and that is violating the wetlands protection act and the endangered species act because those gun wackos kill everything they see. their poaching numbers and wounding numbers are notorious. leave the place natural and stop letting govt employees boost their salaries by touching everything to make extra pay. this plan impairs the park for future generations. you need to understand that the usfws under the direction of dan ashe, gun wacko hunter/wildlife murderer, wants to turn every American site into gun wacko heaven and the number of hunters is diminishing every single year. people do not hunt anymore. hunters represent just 2% of the American population. you are acting as if this is still 1940. it is not this is a plan of destruction, killing and slaughter. the American public does not need fake grassland. storms come along and create them naturally with weak trees and that is the way it is better functionally. ban all prescribed burning, motorized vehicles which are noisy and eroding. this comment is for the public record. our govt agencies have become totally corrupt and seem to be all taking bribes from the nra.

**Correspondence:** I am writing as a concerned citizen of the state of Missouri regarding the effects of the Ozark National Scenic Riverways, Draft General Management Plan.

The lifeblood (livelihood, culture, recreation) of the people (Ozark Mountain people) of Round Springs, Missouri was centered around Current River and the surrounding mountains, valley's and creeks. The people of the community were trappers, hunters, fisherman, loggers, farmers, saw millers, merchants, postmasters, teachers, engineers and moonshiners. The economy of Round Springs depended upon the natural resources of the surrounding

area. Round Springs had two general stores, ( Carr's and Vaughn's Spring Valley Store) a post office, a state park, three canoe rentals(Carr's, Sullivan's, and Vaughn's) two lodging establishments,(Round Springs Lodge and Cottages, Bank's Cabins), two restaurants(Patterson's and Hinkle's) Round Spring's Cave, Spenser's Sawmill and Camp Zoe's Children's Camp.

The economy of Round Springs was adversely impacted by the Ozark National Scenic Riverways as the result of limiting access to the river and acquisition and then closure of most of the above mentioned businesses and of many existing roads and limiting access to the river. The only remaining business is Carr's Canoe Rental. The remaining access to the river are: Carr's Landing, Round Springs Middle Landing and Round Spring Lower landing (Asphalt). The following river accesses have been closed:

1. Road and access to Mose Prater Place
2. Vehicle access at mouth of Sinkin Creek
3. Access above Sinkin Creek Bridge
4. Road and access to Philchew and Willhite Hollow
5. Road and access to Tom Conway Place(Barton Hollow)
6. Access from Rt. 19 across river from Benton Hollow.
7. Access to Sawdust hole
8. Road and access to Courthouse Subdivision

Plainly speaking, most everything that made Round Springs a good community to live and visit is no longer available to the general public. Riverfront and Spring Branch camping have been virtually eliminated. Roads to favorite camping, fishing and hunting spots have been closed. Many older and handicapped people can no longer camp, fish or hunt due to limited vehicle access to the spring branch, river and surrounding area.

I strongly recommend that the National Park Service take the No-Action Alternative to the Ozark National Scenic Riverways, Draft General Management Plan.

**Correspondence:** I am writing as a concerned citizen of the state of Missouri regarding the effects of the Ozark National Scenic Riverways, Draft General Management Plan.

Law enforcement in Ozark National Scenic Riverways is a dismal failure. The geography of the park (90 miles long, ½ mile wide) laced with county roads makes law enforcement extremely difficult. Let the general public keep the existing roads and trails for recreation and emergency use. Before the establishment of the ONSR the individual landowners enforced strict rules according to their way of thinking. People did not abuse the river and surrounding land; bad plan; the people became unwelcome. Now that the river and land is controlled by the National Park Service, lack of respect for the river, land and people is rampant. A few people are destroying the whole park. The attitude is that if something belongs to the government then people feel that they are entitled to do as they please. This attitude creates many problems for both the local people and tourist. Law enforcement needs to be highly visible, enforce existing regulations and educate the public. Management needs to develop regulations and have a management plan that provides for a positive experience for all the people.

I strongly recommend that the National Park Service take the No-Action Alternative to the Ozark National Scenic Riverways, Draft General Management Plan.

**Correspondence:** I am writing as a concerned citizen of the state of Missouri regarding the effects of the Ozark National Scenic Riverways, Draft General Management Plan.

The Draft General Management Plan developed by the Ozark National Scenic Riverways is written to satisfy well-

funded special interest groups. The general population is unaware of the management plan and what they want does not seem to matter. I feel the general population wants the park managed in such a way that all people can access, use and enjoy the park while still maintaining and preserving it. The Draft General Management Plan fails to address the social aspects of the people, (both the tourist and local communities). The plan fails to address the needs of the old and handicapped, the local businesses, the tourist. The Ozark National Scenic Riverways, Draft General Management Plan promotes the Park for the Park's benefit and has become a bureaucracy that provides for and consumes itself from within. The Ozark National Scenic Riverways needs to be managed and run for the use and enjoyment of all the people, not a select few.

I strongly recommend that the National Park Service take the No-Action Alternative to the Ozark National Scenic Riverways, Draft General Management Plan.

**Correspondence:** We use the the riverways in Missouri quite often for treatment outings for our youth. With that being said, I believe that plan B would work best for us with the permission of gravel bar camping. We do practice Leave No Trace in our program so we always leave our sites cleaner than we found them. Generally it is difficult to camp in campgrounds with our troubled youth.

Thank You

**Correspondence:** I would like to complement the NPS on trying to address the many issues of concern at the Ozark National Scenic Riverways. Having worked in the Missouri State Park System for 32 years, the last 3 as the director of the Planning & Development program, I know how difficult it is to resolve issues that are of such local concern while at the same time trying to protect the resources that make the area significant as a national park. I do however think it is time to deal with these issues because the situation with unauthorized river access and non-designate trail use is never going to get any easier. The ONSR needs to be afforded the same protection as any other unit of the the national park system and I don't believe the abuses that are taking place on the riverways would be tolerated in Yellowstone, Yosemite, the Grand Canyon or almost any other national park. If the resource is lost due to abuse or over use all the benefits it provides both economically and recreationally will be lost to both the local community as well as everyone else. So despite the locals desire to use the ONSR as they like, they can't have their cake and eat it too. I understand that compromise is required to make any plan work therefore I would like to lend my support to Alternative B which I feel would address most of my concerns. I would however like to see the standards for horsepower limits that are proposed in alternative A extended to alternative B. Implementation of alternative B will probably require additional staff which I would support. Thank you for the opportunity comment.

**Correspondence:** I have been a user of the Current and Jacks Fork rivers for many years and have floated it numerous times. I have been disappointed in the increased amount of vehicular access that has been allowed to develop to most gravel bars. I would like to see the NPS reduce significantly the amount of vehicular access and streamside vehicular camping now found along the rivers.

I am in favor of Alternative B of the proposed plan with the exception that I would like the same motorpower limits proposed in alternative A for the Pulltight to Two Rivers stretch of river included in Alternative B.

I greatly support the idea of an NPS campground at Akers Ferry; like there was a number of years ago.

**Correspondence:** I wish to comment on the Ozark National Scenic Riverways National Park's General Management Plan. While there are a great number of issues, I wish to comment only on the horseback riding issue. I do support protection and strong but fair management of the river and the surrounding lands around the river. In regard to the alternatives, I favor a mixture of alternative B and C for the horse trails. I support the closing of the multiple river crossings as long as there are adequate crossing for riders to cross for access to trails along the river. I am not opposed to some kind of bridle tag or permit for horseback riding only if all trail users, not just horseback riders, have similar permits for trail use. The permits need to be reasonable in cost, and the revenue goes to the management of horse trails, horse trailheads, staging areas, and campgrounds and not into the general coffers. I support alternative C for maximum equestrian trail miles only because too few trails will create overuse and further environment damage. I wish to see the most popular social trails that currently exist be the ones selected for designation. The trails along the river that were once old roads such as the one around the Flying W, the old roads leading to Ackers Ferry, the Susie Nichols cabin should be selected for designation. All users want to be near the water, has a destination, and these old roads do no damage to the environment at this point.

I support environmentally sound horseback staging areas and a campground with as easy access as possible for large trailers and enough campsites for a good number. Once the Horse Management Plan is started it is vital to have horse people involved in the planning to form a sense of responsibility and stewardship.

I realize the Park is constantly facing funding and manpower shortages to implement many of the changes that are needed for the Park. I would encourage strong educational programs or events for horseback riders; involve Show-Me Missouri Back Country Horsemen in your planning and taking advantage of their mission to protect access through volunteer efforts and help; and being very inclusive to area riders. The creation of a Horse Patrol similar to the current one but in the Upper Current River area may be helpful if involving the local riders.

**Correspondence:** Plan C #1 Over 50 years ago I went with my Father to meetings put on by the county, state and federal farm agent's on ways to control erosion along creeks and rivers because of the increase in the numbers of livestock. The answer

was "make the livestock walk more and different paths and cross in more and different places". With the very big increase in numbers of livestock in the last 50 plus years this years advice was the same. The numbers of livestock per acre on public land and mile of river is very small compared to the farm. If more paths [trails] and more river crossing has worked for farmers for 50 plus years why will it not work for public land?

# 2 Water Pollution; Look at the number of people floating the river per day, month and year. Look at the number of port-a-pots that are require for this number of people at fairs, concert, and horse shows. Check out the horse trails near the river "people use them for restrooms". The water pollution is human not equine. Suggestion: Because the float trip operator needs a clean river they should be require to place a port-a-pot very hour of a float on the river and maintain them. The float trip operator takes no responsible for the human waste along the river. Also the addition of more horse trails near and crossing the river would spread out the human waste.

**Correspondence:** I need your help... Will you forward the attached letter to the Superintendent of the National Park Service, Mr. William H. Black, for me? I was told that his email address was: ozar\_superintendent@nps.gov When I use this address, I get the following message:

Hello captwilliep@centurytel.net,

We're writing to let you know that the group you tried to contact (ozar\_superintendent) may not exist, or you may not have permission to post messages to the group. A few more details on why you weren't able to post:

- \* You might have spelled or formatted the group name incorrectly.
- \* The owner of the group may have removed this group.
- \* You may need to join the group before receiving permission to post.

\* This group may not be open to posting.

Will you help me to forward the following message to Mr. Black.

I am writing as a concerned citizen of the state of Missouri regarding the effects of the Ozark National Scenic Riverways, Draft General Management Plan.

The lifeblood (livelihood, culture, recreation) of the people (Ozark Mountain people) of Round Springs, Missouri was centered around Current River and the surrounding mountains, valley's and creeks. The people of the community were trappers, hunters, fisherman, loggers, farmers, saw millers, merchants, postmasters, teachers, engineers and moonshiners. The economy of Round Springs depended upon the natural resources of the surrounding area. Round Springs had two general stores, ( Carr's and Vaughn's Spring Valley Store) a post office, a state park, three canoe rentals(Carr's, Sullivan's, and Vaughn's) two lodging establishments,(Round Springs Lodge and Cottages, Bank's Cabins), two restaurants(Patterson's and Hinkle's) Round Spring's Cave, Spenser's Sawmill and Camp Zoe's Children's Camp.

The economy of Round Springs was adversely impacted by the Ozark National Scenic Riverways as the result of limiting access to the river and acquisition and then closure of most of the above mentioned businesses and of many existing roads and limiting access to the river. The only remaining business is Carr's Canoe Rental. The remaining access to the river are: Carr's Landing, Round Springs Middle Landing and Round Spring Lower landing (Asphalt). The following river accesses have been closed:

1. Road and access to Mose Prater Place
2. Vehicle access at mouth of Sinkin Creek
3. Access above Sinkin Creek Bridge
4. Road and access to Philchew and Willhite Hollow
5. Road and access to Tom Conway Place(Barton Hollow)
6. Access from Rt. 19 across river from Benton Hollow.
7. Access to Sawdust hole
8. Road and access to Courthouse Subdivision

Plainly speaking, most everything that made Round Springs a good community to live and visit is no longer available to the general public. Riverfront and Spring Branch camping have been virtually eliminated. Roads to favorite camping, fishing and hunting spots have been closed. Many older and handicapped people can no longer camp, fish or hunt due to limited vehicle access to the spring branch, river and surrounding area.

Law enforcement in Ozark National Scenic Riverways is a dismal failure. The geography of the park (90 miles long, 1½ mile wide) laced with county roads makes law enforcement extremely difficult. Let the general public keep the existing roads and trails for recreation and emergency use. Before the establishment of the ONSR the individual landowners enforced strict rules according to their way of thinking. People did not abuse the river and surrounding land; bad plan; the people became unwelcome. Now that the river and land is controlled by the National Park Service, lack of respect for the river, land and people is rampant. A few people are destroying the whole park. The attitude is that if something belongs to the government then people feel that they are entitled to do as they please. This attitude creates many problems for both the local people and tourist. Law enforcement needs to be highly visible, enforce existing regulations and educate the public. Management needs to develop regulations and have a management plan that provides for a positive experience for all the people.

The Draft General Management Plan developed by the Ozark National Scenic Riverways is written to satisfy well-funded special interest groups. The general population is unaware of the management plan and what they want does not seem to matter. I feel the general population wants the park managed in such a way that all people can access, use and enjoy the park while still maintaining and preserving it. The Draft General Management Plan fails to address the social aspects of the people, (both the tourist and local communities). The plan fails to address the needs of the old and handicapped, the local businesses, the tourist. The Ozark National Scenic Riverways, Draft General Management Plan promotes the Park for the Park's benefit and has become a bureaucracy that provides for and consumes itself from within. The Ozark National Scenic Riverways needs to be managed and run for the use and

enjoyment of all the people, not a select few.

I grew up in the Round Spring's Community, working as a teenager for the Round Springs Lodge, Cottages, and Caverns; Camp Zoe Children's Camp, Round Springs State Park and Seasonal Park Ranger for the National Park Service. Round Springs is a microcosm of many communities throughout Ozark National Scenic Riverways. Many communities have all suffered and died with the help of the National Park Service. Favorite camping, fishing, and hunting spots are no longer accessible. Let's give the park back to the people, return it to the Missouri State Park System and manage it for the people, not special interest groups.

**Correspondence:** Although I do not reside there now I do own property there. I know that the NPS was to be a park service when it first started. It has now become a control freak like any government entity left unchecked. The Jacks Fork-Current River should be returned to the status that it was before the park service took control. Open up the roads and let people camp on the river as it was then. Leave the boaters and their boats alone. We do not need more controls.

**Correspondence:** I am hoping to attend the meeting at Powder Valley on Jan 8th but, due to the current weather, I am afraid it will be canceled.

So, I will comment here to make sure my views are heard.

I have floated and camped on the Jack's Fork and Current rivers my entire life. Most of this time has been spent camping at Alley Springs. I have floated the entire length of the Jack's Fork river from the prongs to two rivers. I enjoy the Ozark National Scenic Riverways very much. There is nothing better than an overnight float on these rivers. I hope that I can retire with land on one of these rivers.

Here are my comments relative to the management of the ONSR.

1. There should be no motors allowed on any boats upstream of the bridge in Eminence on the Jack's Fork. There is no reason, the river is not big enough for motor use and it just destroys the pristine environment.
2. The locals should be able to use old access roads to continue there lifestyle. I have befriended many of the local residents and find that the use of local roads is part of their everyday lifestyle. Tourists should be limited to designated roads.
3. No motorized vehicles should be allowed in any river in the ONSR.
4. There needs to be a better way to integrate the rangers with the tourists and the locals. Too often they are looked at as cops. I understand that there are federal laws that need to be enforced but this needs to be done in a way that brings people together to protect the beauty of the area. I say this not as a criticism but as a way to improve the mission of the National Park.

Thanks for the opportunity to comment.

Sincerely,

Doug Guenther

**Correspondence:** A review of the preferred plan appears to favor horse enthusiasts over other river users. While

undesigned trails will be closed, new trails and a campground for horses would be developed. At the same time, gravel bars and other access points will be closed to vehicles but no other vehicle access will be developed. Horses may be less appear to be less intrusive when casually compared to vehicles, but large trucks and trailers are brought into the area to haul the horses in, not to mention the manure left behind around and in the river.

Those of us who like to drive onto a gravel bar and pitch a tent next to the river will be driven out. The only camping available will now be in a designated slot next to other campers in their designated slots which are built so closely together we can hear each others conversations. Not exactly accoustically pleasing - one of the goals of the plan. But it will make it easier for the park rangers to keep an eye on everyone. I agree there are sometimes rowdy visitors, but not everyone should suffer due to the poor behavior of a few. Camping next to the river will be available only if you access it from the river. Really, isn't the best part of visiting the Riverways park is to be able to access it?

The gravel bars have been driven on for many years with no adverse effects on them. Why would we be banned from driving on them? It is the most simple way to access and enjoy the resources the park has to offer.

**Correspondence:** I was born and raised in Poplar Bluff, Mo. I go back often to visit and always visit Current River! I spent many hours enjoying float trips, camping, day trips to Big Springs, and swimming in Current and Jacks Fork Rivers. I have friends who's family property in Winona and Eminence was taken to be part of the Ozark National Scenic Riverways. As I understand the Ozark National Scenic Riverways was formed to protect the areas and provide management for the ecology. If more homes are being allowed built, more motorboats cruising the rivers, motor vehicles forging unauthorized roads then the ecology is disrupted. The program should maintain and manage these issues. If rules need to be made to prevent growth that hampers the environment then they should be made. Program A seems like the best plan to do this even though there will be those who grumble because their freedom to use the land gets limited, the land needs protecting. I love the peace and stillness when I visit, although I see the summers have become more and more crowded and there lies the problems of maintaing the land. I want to encourage you to implement a worthy plan, please don't let this all go to waste!

**Correspondence:** To whom it concerns,  
I support Alternative A. I was born and raised in Shannon County, Missouri beginning in the early 1980's. I spent many summer days within the Ozark National Scenic Riverways (ONSR) boundaries, notably on the rivers. I have great respect for the rivers and their natural habitat as do most of the locals. Both of my parents dedicated their careers of public service with the National Park Service and have combined over 50 years of service to more than just ONSR, including Yellowstone National Park, Rocky Mountain National Park, LBJ National Historical Park,

and Buffalo National River. However, ONSR holds a special place in all of our hearts due to the memories we have growing up there and hope to continue to share the rivers with our future children and generations to come.

Thank you for your consideration,  
Deanna Dillard

**Correspondence:** I would like to congratulate the NPS team on a detailed and interesting management plan. You have provided valuable information to judge the alternatives available. Having used the Scenic Riverways on both the Current and Jack's Fork rivers for over 45 years I fully recognize their outstanding wilderness qualities and the valuable resource they provide for users from around the world.

I am in favor of your Alternative A because I believe that the area is best appreciated for its solitude and natural beauty and it appears that this alternative would best enhance those features. I have floated all sections of both rivers down to Big Spring and believe Alternative A provides adequate access for motorized watercraft while preserving the best floating areas to non-motorized craft. Having camped on the gravel bars and hiked into backwoods primitive campsites I also think that access should be limited to those willing to put in the effort to reach them. I believe Alternative A's restriction of vehicular traffic to gravel bars is a positive feature of the plan. I also think that the creation of designated horse trails and closure of non-designated trails to horses reaches a good balance.

I favor any approach that increases primitive and designated wilderness areas. Alternative C is clearly unacceptable in that it would alter the essential wilderness qualities that make this area so wonderful. I do favor Alternative A but could live with the NPS preferred Alternative B.

**Correspondence:** I would prefer alternative A of the ones listed in your plan.

Regardless of which plan you adopt, it will be worthless if there is no enforcement of the policy. The park now is pretty much open to all abuses. There is not law enforcement now. I cannot believe all the open access roads and illegal horse trails along the rivers. I cannot find a gravel bar to camp on that does not have a road or a horse trail across it.

I drove up a road from the campground at Bay Creek on the Jacks Fork for miles one day. There were people living up there in campers that obviously had not been moved in months. Some had CORDS of firewood stacked next to them. It is pretty obvious that anything goes as far as vehicle access.

I did like all the plan alternatives when it comes to horses. I feel that there is no place for horses within 100 yards of the rivers. There is plenty of opportunity for horseback riding in areas all around the Ozark National Scenic

Riverways. Many, many miles of trail are open on private trails and national and state forest. We don't need horses defecating in the river or being washed in the river.

I plan to attend the meeting at Salem if it is ever held and I can make it. I think it is important that you know all the "locals" are not supportive of the open range mentality of the park.

**Correspondence:** I have been floating and camping on the Jacks Fork with my children and extended family for the past thirty years. Now retired, I look forward to spending more days on the river. For the past ten years my brother and I meet at Eminence, put in at Buck Hollow and float, camp overnight, and finish the float the next day. No-trace camping on the gravel bars far away from cars and noise is a most pleasurable experience. I do feel that horse back riding pollution, jet boats, sewer runoff from Alley Springs, trashed out camp grounds, and loud noisy campers are a problem. How you manage it will be interesting. I love the Ozarks, moved here on purpose to be close to the beauty and wonder of it's unique ecosystems. To be restricted from access to the wilderness rivers, I am not supportive of. For the waterways to be regulated for use by the public in a ecofriendly way, I do support.

**Correspondence:** I support Alternative A, because it provides the most robust protection for the Park's resources.

In particular, this alternative promises action the three top threats to the park, which include:

1. Excessive horse traffic, which results in water pollution as well as collision hazards.
2. ATVs in the rivers - by shutting down illegal roads, and clamping down on motorized camping on the gravel bars, Alternative A would reduce noise pollution, erosion, and collisions.
3. Wilderness Protection for the Big Spring area - it is important to manage this area as a wilderness, and both Alternative A and B provide expanded protection here.

My family and I canoe on the Current River every year, and we have a trip planned to the Jacks Fork for this May. I was also on the Current River this past October to do volunteer trail maintenance on a hiking trail that runs next to the ONSR.

**Correspondence:** I wanted to write in to give my support for proposal "B," which is supported by the NPS and a variety of other organizations who favor protecting The gems that are these rivers. I understand why there may be local opposition, but time and time again, history has proven that preservation of the few remaining "islands" of wildness is not only an economic benefit to the region, but also to the soul of our nation. Folks hollered about Yellowstone, the Tetons, Yosimite, the list goes on. Nobody regrets saving them now!

**Correspondence:** I am writing as a concerned Missouri resident regarding the effects the Ozark National Scenic Riverways Draft General Management Plan will have on my fishing the Current and Jacks Fork Rivers. After reviewing the Draft General Management Plan, it is my understanding that the National Park Service recommends

closing many of the river access points as well as many of the roads near the rivers. I have lived and worked most all of my life in Missouri. I have supported my country by joining the U. S. Marine Corps and fighting in the Korean war. I have paid my taxes and have been a good citizen all of my life. All I want is a simple retirement and to be able to canoe and fish the Current and Jacks Fork Rivers without the fear of the Federal Government getting in my way. The Federal Government is already trying to screw up my Medicare, that I already paid for, and now you are trying to screw up my fishin. All I want is for the Federal Government to stop screwing with me and my fishin. I strongly recommend that the National Park Service take the No-Action Alternative to the Ozark National Scenic Riverways Draft General Management Plan and prevent closing access points on our rivers, increased restrictions and increased regulations to our public lands.

**Correspondence:** I Am the 5th generation that has lived on or near Current River. My ancestors moved in from South Carolina in 1856. They lived on Current River from Sutton's Creek to Big Creek. You can imagine all the stories I've been told on how they lived on the river. i like to take my kids and grand-kids to the river as much as possible. We love to camp, boat ride fish and hunt on the river. But the way things are going it doesn't look like we are going to be able to enjoy the river the way my ancestors did. They fished, hunted, and camped on the river year round. I think you need to go with the no action proposal. Let us enjoy the river the way we have been for the last 5 generations.

**Correspondence:** I support the strongest environmental protections possible for the Current and Jacks Forks Riverways. Therefore I support ALTERNATIVE A. Alternative A provides for the largest non-motorized river segments, it decommissions the most miles of illegal horse riding trails and provides the most protection for gravel bars. I am also in support of a Wilderness status option.

I have enjoyed many beautiful outings in the area of the Current and Jacks Forks Rivers. This is a unique and delicate ecosystem that requires the strongest environmental protection possible.

I support the National Parks Service management of this priceless area and thank you for this comprehensive plan option.

**Correspondence:** I am writing as a concerned Missouri resident regarding the effects the Ozark National Scenic Riverways Draft General Management Plan will have on the Current and Jacks Fork Rivers.

Does the National Park Service really know what they are doing??? On the upper Jacks Fork River, at the Highway 17 river access point, there is a park sign stating the fishing regulations on the Smallmouth Bass and stating that the upper Jacks Fork River was becoming a world class fishing area for the Smallmouth Bass. This was great news.

Talking with some local residents there, they told me that the National Park Service just released 16 pairs of otters into the river and they have eaten all the fish in the upper Jacks Fork River. Please tell me what is going on??? Is this

an example of how the National Park Service operates??? I strongly recommend that the National Park Service leave our rivers alone and take the No-Action Alternative on the ONSR Draft General Management Plan to prevent unnecessary cost, restrictions and regulations to our public rivers and public lands. Bring back the Missouri Conservation to manage our rivers and public lands.

**Correspondence:** Dear NPS,

I grew up floating along the pristine rivers of south east Missouri in particular the Current and Jacks Fork rivers. My earliest and fondest memories are of building camp with my dad on these rivers. I caught my first fish on the Current and caught my first trout on the Jacks Fork. I learned how to jump off a rope swing and where the best crayfish holes are on these rivers. I've found there's nothing more enjoyable than sitting on a gravel bar in the hot summer sun then jumping in to the cool refreshing river water. I have traveled across the world and there are less than a handful of places that compare to the beauty found in Southeast MO. I look forward to the day I can raise my own children teaching them the virtues and wisdom of life that can only come by spending time in nature only found on the Current or Jacks can bring. We are the only ones who can preserve this precious gift from god for future generations.

Sincerely,

Z Lee Stokely

**Correspondence:** I've floated (canoe) on current river for at least 25 years. The proposed horsepower limits are a non-starter for me. On multiple occasions me or my family have been insulted, threatened, etc. by recreational canoe/tube floaters high on drugs and alcohol. I can't recall a single instance of such behavior by someone in a jon boat. How do these plans help the NPS ENFORCE the laws already established?

I would like to see an alcohol free river. It has no place on the river if people truly wish to have a genuine outdoor experience.

**Correspondence:** First, I would like to thank the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless, it seems to me that Alternative B does not go far enough. I would recommend the adoption of Alternative A, since it provides additional protections for the rivers such as:  
â€Closes illegal roads and restores natural conditions to 50 miles of these roads;  
â€Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
â€Bars vehicle access to gravel bars.

I remember my first float trip on the Jack's Fork/Current Rivers, and wholeheartedly recommend that they be protected from these kinds of degradations.

**Correspondence:** I have lived in Hartshorn most of my life. My fondest memories are of camping, floating, fishing and boating on the Current River. Akers Ferry is just 11 miles from my home of 38 years. I cannot remember a summer when I didn't spend time at Akers Ferry. In the evenings when I was growing up, my family would go down to Akers, 2 or 3 evenings a week, so we could enjoy our supper and a swim. Since I have my own family now, my own children have their own memories of Current River and Akers Ferry. We bought a boat with a 25 hour power motor when our children were young. We would put in at Akers Ferry and go up passed Welch Cave, Trout Fishing, or gigging. Our children learned to fish on this stretch of the river. Now my children have grown up and moved away and have their own families, but they always come home several times a year to go Trout Fishing and gigging. With this proposed plan, we are going to lose our stretch of the river that we have always enjoyed. My grandchildren will never get to experience the fun that my children had on this end of Current River. I believe that this stretch of Current River is quite big enough for the canoe traffic and the 25 HP boats. Most of us that own boats in this area, are hard working people that have lived in this area all of our lives. We are, for the most part, family oriented. Most of us were Baptized at Akers Ferry. My point is, I feel like the locals are being SHUT OFF of the river, so that the tourist will be the only ones allowed you utilize this upper end of Current River.

**Correspondence:** I moved to this area when Congress was considering including the Current and Jack's Fork Rivers in the National Park System. Springs and rivers have always fascinated me and the National Park System being considered, I felt, may perhaps provide me summer employment to complement my teaching of biology, chemistry, etc. throughout the school terms. Indeed, I worked as a Ranger, a Naturalist, and later purchased and ran Camp Zoe, and finally, I worked as the environmental coordinator at the Welch YCC facility. These experiences have allowed me to appreciate and enjoy the beauty of the area. At the same time, the increased visitation of outsiders as well as the local citizens' use of this area have caused much concern as I observed the relatively recent destruction of areas not seen by most of the rivers' floaters. This destruction has been caused by only a few and, with the exception of the horses, it is the result of four-wheeling trucks driven by people who enjoy the rush of mud on the seldom-traveled off-road timbering trails. The truck drivers now have "Flat Nasty" to quench their thirst for backwoods trails. The equestrian trail riders, I believe, might be catered to by developing numerous quality trail systems that do not negatively impact the countryside or the river quality, as I believe the current ones now do. The development of these trails may be quite costly; therefore, our present Congressman, the Honorable Jason Smith, should be able to secure federal funding for this project since his desire seems to be to allow anyone to use this formerly pristine area in any way they might desire. The quality of a river float trip on the Upper Current River must be preserved for visitors. They come because of the water quality, beautiful springs, and their desire to visit a river not visibly changed or degraded by modern development. This is a truly remarkable natural environment, devoid of river-side structures, as are present on most Missouri streams. While some visitors to this park may be loud and rowdy, they are always still WOWED by the river's wild life and gushing cold water springs. Providing the best tourist experience and preserving the natural beauty of the area many times conflict. Caring rangers and naturalists, through structured programs in surrounding communities such as Eminence, Salem, Bunker, Ellington, Van Buren, etc. should educate locals about the essential preservation of our streams and rivers that supply us with such a beautiful and unique environment. It is only when local river users understand the great jewel of nature that we have

in this park to be treasured by and for us and for future generations, will more distant visitors see how much we value the area and work with us to protect and preserve our park. I may not agree with all the provisions of Plan B, but it has a nice balance for preserving the area and providing a positive visitor experience for a myriad of uses.

**Correspondence:** I often use the Current and Jacks Fork and Eleven Points River. While I only travel them via kayak or canoe, I am not in the least bothered by fishermen whether they are in power boats or human powered craft. I think the rivers are managed in a great way currently and think that restricting power boats more than they currently are is unnecessary and overly intrusive to the locals and others who use these rivers. I also think the safety factor could be affected by restricting power boats. Thanks for listening and allowing my comments.

**Correspondence:** It is apparent that much thought and effort have gone into the reports detailing the proposed regulation of the Current and Jacks Fork rivers in south-central Missouri. Although I am a sometime active member of three different organizations, I believe I am representative of the non-affiliated citizen who has experienced frequent use of these river areas. My experience includes probably 150 to 200 river trips over 50 years on the Current, Jacks Fork, and North Fork in south-central MO, the Buffalo River in northern Arkansas, and many trips on the floatable areas of Swan Creek, Beaver Creek, and Bull Creek in the past 28 years as a resident of Taney County, MO. My original experience started at age 12, in 1962, on Sugar Creek near Pineville, MO, as a Boy Scout from Parsons, KS, my hometown. I also floated the Elk River in 1971 from Noel, MO all the way to Grand Lake in Oklahoma, with a large group of college friends from Enid, Oklahoma. Many of the floats in the early years were with my rather large family of uncles from Kansas, often with 8 to 10 canoes. We always respected the rivers and the landowners when we floated.

At the age of 60 I participated in the Missouri River 340, the race from Kansas City to St. Charles, 340 miles, in 61 hours. Most of my kayak/canoeing in the past 25 years have been either alone or with one other person, and I cherish the memory of all those floats on these beautiful Ozark streams, which are a national treasure. I would venture to say that my experiences over the years have led me to an intense admiration and desire for the preservation of these areas for future generations, and promoted my interest in the Sierra Club, the Wilderness Society, and the National Arbor Society. I am also a veteran of over 1100 organized races in running, bicycling, kayak/canoeing, triathlons, adventure races, and other multi-sport races. I am passionate about the preservation of wilderness areas and believe that they must be protected aggressively. One story, among many I have about the river floats I have experienced: One late September day about 20 years ago I put in at the Current starting at Akers with my bicycle lashed to the front of my kayak and overnight gear. I floated to an area above Big Springs and set up camp for the night. About dusk, my reverie was interrupted by a group of ATV 4-wheelers who were obviously drinking and shooting off guns as well as tearing across a low-water shoals. I decided not to engage them, as I do not carry weapons. My preference would be that this kind of activity would be unlawful, as it put a dent in my enjoyment of the serenity of my trip and was probably damaging to the river. My preference would be the more severe protection of the Current and Jacks

Fork areas as outlined by the Sierra Club. Thank you for listening, and again, thank you for your hours of planning and investigation into this sacred and beautiful watershed.

**Correspondence:** I agree the Current river is in need of changes but banning boats off of a strip of river that seldom has boats except in the winter for gigging, and then that no where compares to canoe traffic. To ban boats to solve the problem is like heating a hot tub with a candle.

If you want to really save this river, more practical measures will be needed. For instance, limit or ban canoes along with boats, and horses at least from above Cedar Grove to Akers, ban horses from entering the water. I think a nice gesture would be to permit the seniors and disabled to ride ATVS on designated trails. They are not going to be tearing up jack. Gravel and chat spreading is filling up all the holes of water, sure it makes access points look attractive but when a flood comes, its all washed down, and then here comes the dump trucks full of gravel again.

I have lived on this river for 64 years, own land adjoining the river, worked on the river for three years. If changes aren't made, The Current may soon look like the Gladden river. I wade and fish the river a lot, Im so shocked at the way the fishing holes are disappearing. I have sat down at Cedar Grove and counted 30 or more horses in the water stomping and messing, while children are swimming below them. Hundreds of canoes with people wearing the banks off.

I hope you can come up with a genuine way of helping this crippled river, we have loved it to death.

**Correspondence:** Our family is very upset that you would want to stop gravel bar cammping on Current River. We have been doing this for years I am 39 and have only missed two times one cause I was having one of our children. One of our cousin started this at least 50 years ago And may Stan R.I.P. we just lost him last year and no matter if you havent talk to anyone you know when we will be down their cause its the same time every year it is our family tradition every year Some go down for the weekend and some of us for a week or more. We have had anywhere from 25 to a 125 family members their at one time. We have grown up down their and sometimes would spend a whole month down their. We were rasied to respect the land and the river. We were taught you leave it cleaner then what it was when you got their. You dont litter the river and if you see trash you better pick it up even if its not yours. We have been to many different river to float on and Current is far most the best one. It is the cleanness and never crowed like the others. I couldnt tell you how many times we have yelled at people on other rivers to clean up after their self and we always have extra trash bags so their trash can go in it. I think you would need to invest in taking care of the other scenic river ways and focus on the problem areas and leave our little place of heaven alone. You should concentrate on educating the public of the proper ways on the river like we were rasied to and our children and grandchildren are being raised to. Why should the ones that respect the river and the land suffer for the ones that abuse our natural resoures. I can tell you in the last 7 years we have had 2 park ranges come where

we camp and one of those times was when we were in the drought to tell us no fires which we didnt have. I remember when I was growing up the park ranger would at least come down once a day and they would know some of the older ones by name they would sometimes eat with us and talk to us forever it seems like. And doesnt our tax money pay for National Parks so I just cant imagine how you can tell us where we can go last time I looked are we not the land of the free. So you just need to leave the ones alone that respect the river and worry about the ones that dont. Thank you for taking the time to read my letter I could go on and on on this matter.

**Correspondence:** Friends,

Our family began enjoying the Jacks Fork and Current rivers some 40 years ago. The pristine waters and wilderness left lifelong impressions that I cherish to this day. Not having floated either river in recent years, I was saddened and dismayed to see so many images of encroachment, posted by MO Sierra Club- -auto access, ATVs, horses, home construction, etc. It is a essential paradox, but allowing unfettered access to these rivers in essence means that through over-use and abuse NO ONE may eventually be free to enjoy that which we have thus destroyed. For the good of ALL, this abuse must be stopped.

For several generations we've been reminded by Emerson, Thoreau, Muir, and so many others that "in wilderness is the preservation of society." My fervent hope is that those responsible for determining how to preserve the natural heritage represented by these two rivers- -a gift and heritage we are charged to pass on to future generations- -will rise above mundane considerations of politics or profits, thinking long-term to preserve for our children and children's children, and beyond, what is surely a sacred inheritance of wonder and beauty.

I support therefore "Plan B," but would even more support "Plan A" to provide maximum protection for the Current and Jacks Fork rivers.

I would remind those making this decision that if they allow the Jacks Fork or Current rivers to die from human abuse, something inside them will die as well. I've experienced "living water" in sacred places like Big Spring, as billions of gallons of cold, crystal clear refreshment gushes from the deeps. I hold these memories as holy, and pray that your actions will preserve those places for others to encounter their own connectivity to all that is.

Sincerely, in hope,

James Hannah

**Correspondence:** I would like to comment in support of Alternative A, which would close non-designated horse trails and prevent access by motor vehicles to gravel bars. I did a memorable float trip down the Current in the past and have visited both rivers several times for photography and sightseeing. They are true national treasures and deserve the highest level of protection, especially against uses that can degrade the visitors' experience by promoting unsightly erosion and stream damage.

Thanks for your work on this issue and for protecting our natural areas.

Randy Tindall

**Correspondence:** On behalf of the rivers, and all the joy our family has with them - Thank you for putting together a well done and thoughtful analysis. I think that adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless I think that Alternative B does not go far enough. I recommend the adoption of Alternative A as it provides additional protections for the rivers including road closures and undesignated horse trails, and restoration.

Most importantly, Alternative A:

- \*Closes illegal roads and restores natural conditions to 50 miles of these roads;

- \*Closes 65 miles of undesignated horse trails and

- \*adds no new stream crossings;

- \*Hoofprints are particularly destructive - and we don't need any more crossings!!

- \* Bars vehicle access to gravel bars - this is awful when we're on the river and an ATV comes charging thru, making tire tread tracks and noise...

We love peaceful canoe times on the Current and Jacks Fork Rivers. These are national treasures, for sure.

I'd appreciate your response...thanks again!

**Correspondence:** To whom it may concern:

After reviewing the proposed management plans for the Current and Jacks, I would like to voice my support for plan A. Plan B, a pragmatic compromise, one that seeks to please as many as possible while still attempting to protect the river, would be my second choice. Plan C is simply unacceptable to me.

For nearly 30 years, I have enjoyed the Current and Jacks. During that time, I have seen both rivers change quite a bit, and not for the better. Increases in the number of roads, number of horse trails and number of visitors have all taken their toll and both the aquatic environment and wilderness experience have suffered. Indicator species like the Hellbender seem to validate this. It saddens me to think that my children are unlikely to see an Ozarks Hellbender in the wild.

A true wilderness experience is something that is becoming harder to find, particularly in the midwest, where roads, access and "use" mentality are so prevalent. My childhood memories of these rivers are just that, distant memories.

More recent experiences with the Current and Jacks contrast greatly with the river I remember. Last time I floated on a weekend, my family had to contend with some very lewd behavior. Not trying to sound pretentious, but when I take the family to a National Park we should not have to contend with boobs and beads, drunks and their trash or sailor-ennivous language. Sounds more like a strip club than a National Park. I've not encountered this type of behavior in other parks, many of which I have visited. In fact, I even worked as an Interpretive Ranger in Sequoia National Park for several years. This type of behavior was simply not tolerated, nor should it be here.

Over the years, I've made a few observations regarding this river riff raff; they don't like weekdays, they don't like the cold and they don't like to carry much in their boat other than a cooler. Based on these observations, we no longer float on the weekends and stick to the weekdays. We avoid the summer months and take to the river in the off season. And lastly, we carry all of our equipment in our boat and low impact camp on gravel bars. This strategy has successfully helped us avoid the aforementioned behaviors. Problem is, it looks like all three of the management plans ban gravel bar camping.

This effectively means that everyone using the river will have to camp in a campground or enjoy the river for day use only. This seems unacceptable to me. National Parks have always been a low cost source of family recreation, yet under these plans, everyone now has to pay for camping. Yes, there will be free primitive camping in designated areas, non of which seem to be on or near the river. So much for my plan to "get away from it all" and enjoy a quiet night from a star-filled gravel bar.

Not only will the gravel bar camping ban affect my family, it will also affect my job. I work with at risk, court

adjudicated teens. In the summer months, we routinely take them on canoe trips. These trips seem to be quite beneficial to them. Many suffer from substance abuse issues and this, combined with safety and security issues, relegate us to gravel bars. Under these new plans, it appears that this is no longer acceptable. Again, this saddens me.

It seems that there ought to be some middle ground here. Issuing limited gravel bar camping permits seems like one possibility and then look at other regulations like fire pans, low impact requirements, etc. I doubt that the wheel would need to be re-invented. There are plenty of other parks that have such regulations already.

"Can't have it both ways" you may say. You can't ask for stricter management with Plan A, yet still allow gravel bar camping. Yet, I would disagree. For the most part, gravel bar campers are much like backpackers. They tend to have higher levels of respect for the environment and behave in ways that demonstrate that respect. They are not the ones who litter gravel bars with trash and feces, nor are they the one's who incessantly curse. Spend a day on the river and observe the boats with camping gear versus only coolers and I think you would agree. In short, folks that camp on the river have a better wilderness ethic. It seems that this is type of person you want to attract, not deter.

For too many years, the Current and Jacks have been neglected. Every time I go, there seems to be a new access that doesn't look "official" or accesses that get larger and larger. The explosion of unofficial horse trails continues to go unchecked. And the reputation as "party rivers" continues to be a problem. It appears that these are the areas to focus on, not the lowly gravel bar camper who is fairly environmentally conscious to begin with.

I appreciate your time and consideration in this matter. It is my sincere hope that the new management plan will reflect a new approach to managing the Current and Jacks; one that puts the rivers needs first, those with some wilderness ethic second and those with little to none last. This approach is most reflected in plan A, with plan B the second choice.

I look forward to hearing your decision.

Sincerely,  
Kyle Bentley

**Correspondence:** I believe that the Jacks Fork and Current Rivers would be best looked after by the State of Missouri. I feel our State has a vested interest in these natural resources and will do a better job than any National Park service out of Washington DC.

Our family canoes both rivers most every year and sometimes 2 or 3 times per year. We like to be able to drive up near the waters edge to put our canoes in. Since I am a disabled Vet it is important to me to gain access to the river and get into our canoe that it be close to the waters edge,for I do not have the strength I once had since I used much of it protecting our nation and it's people.

Thank you for your work and concern for our states natural resources. May God bless you.

Sincerely,

Richard Warner

**Correspondence:** First of all I want to thank the park service for a well done and thoughtful analysis of the Current river and Jack's Fork river management.

My family and I have spent much time on these rivers for at least four generations. In the last thirty years we have noticed serious degradation of these rivers, very sad to see. We feel that we must take a strong pro-active stance on saving these rivers from any further damage. Not just for the enjoyment of future generations but for our very survival. We all depend on intact eco-systems for our food. Without intact eco-systems, we will have no pollinators, no clean water, no air to breathe, it's all alive and it's all connected.

I request the adoption of the "Alternative A" plan as the most sensible plan for the health of our rivers.

Sincerely,  
Shelly Knichel

**Correspondence:** Thank you to the National Park Service for putting together such a thoughtful analysis of this important issue. I am also a member of the National Parks Association, so I am aware of your interest in such an area as the Ozark National Scenic Riverways. And although your recommended adoption of Alternative B would be a big step forward, this plan does not really go far enough in its protection of the rivers. Alternative A would provide additional protection.

Having spent many years living in Missouri and taking a number of float trips on both the Jack's Fork and Current Rivers, I feel they need the strongest protection possible from those who carelessly harm the natural surroundings and pollute the rivers simply for their own recreational pleasure. Alternative A would close illegal roads and restore natural conditions to 50 miles of these roads; it would close 65 miles of undesignated horsetrails and add no new stream crossings; and, it would bar damaging, loud, and polluting vehicle access to gravel bars.

**Correspondence:** Thank you putting together a well done and thoughtful analysis. Adopting Alternative B would be a big positive step forward from the status quo.  
I believe that Alternative B does not go far enough and instead recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance,  
Alternative A:  
- Closes illegal roads and restores natural conditions to 50 miles of these roads;  
- Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
- Bars vehicle access to gravel bars.  
As an avid canoeist and camp leader in the area, we are often upset with the condition of our gravel bars with deep ruts from vehicles running through the area destroying plants and the natural landscape.  
Protect the most important of our natural resources and limit the access.

Thank you again for your work on preserving our rivers.  
Mary Jo Wilmes

**Correspondence:** I kayaked on the Current River for three days this past summer (from Round Spring to Owls Bend)

I think that the Ozark National Scenic Riverways should keep up the good work. The Park Service should manage the park to keep motorized vehicles, and gasoline generators, away from the river bank. These eyesores reduce the scenic value of the rivers. I heard generators running on the right bank near Two Rivers.

I congratulate the Park for shutting the illegal boat access on the right bank by the big clearing that the wild horses use. I saw the wild horses there two, and it was amazing.

I support the strictest level of protection for the Park, which would be Alternative A.

**Correspondence:** I kayaked on the Current River this past July for 3 days. I go there at least once per year for kayaking and hiking. As a lifelong Missourian, I want to see this park protected to the same standards as other National Parks, like Yellowstone.

I spent a week in North Cascades National Park, and that park was well-maintained.

Meanwhile, the Ozark National Scenic Riverways is allowed to deteriorate from excessive horse traffic, ATVs in the river, scenic easements that are ignored, and unauthorized accesses.

I support Alternative A, which would provide the strongest protection for the river!

**Correspondence:** I do understand conflict with boaters and floaters and try to enjoy both. I live on the river here every weekend all summer. I have had bad to border line dangerous experiences with both. Mystery to me is where is law enforcement other than along the 4 mile stretch at bridge out of scenic riverways. Everyone knows that's where all the tubers are and should be no wake zone other than Emergency after 10 am. Now if motorboats are such a problem WHY restrict them along scenic riverways where there are fewer floaters. Don't get me wrong though I've been run off

the river by careless imprudent drunken ignorant boaters in fear of my safety and passengers. Why can't state laws be enforced why do I have to be restricted for other people's ignorance. Common sense is No, one needs a 300hp motor on this river however it is grand to be able take grandparents and grandchildren for a boatride together can be experience with old stories the grandkids will never forget and carry on. So from experience I know can manage that boatride with 150hp easily with 6 people. Ok with 1 or 2 people in 150hp it can be too fast on this small river how about a speed limit and ENFORCE it. Another concern if motor size is restricted along scenic riverways won't everyone with a large motor have to use their boats in the 4 mile unrestricted stretch at the Van Buren bridge where all the tubers are. Yeah think there's conflict now. Makes a person wonder if we aren't using the boaters against the floaters like wise to shut it all down? Is that the goal? I would feel so much better to see laws enforced just like on the highways rather than everyone be restricted from driving a boat. I do both just don't understand why boaters are made out to be the villain. Can't remember how many tubers and canoers I've rescued in a motor boat. Maybe there isn't a happy medium and no one can get along without all having restrictions forced on them?

**Correspondence:** FYI:

Earlier today I submitted a public comment largely based on page 146 table 13 of the 534 page EIS/management plan regarding the Current and Jacks Fork rivers and camping on gravel bars. This evening, while conferring with a friend, we discovered discrepancies between this table and table 13 of the 22 page plan overview.

Wondering which one is correct and whether this discrepancy has caused any confusion in relationship to the public comments. Clearly, the differences in language could lead to quite different interpretations of these plans. Based on this, I would recommend extending the public comments period to allow for corrections, particularly since the last public meetings were cancelled.

Please let me know what your decision is regarding this confusion.

Kyle Bentley

**Correspondence:** I am writing to express my support of PLAN A which will reduce the hp size and range of motorized craft on the Current and Jacks Fork Rivers in Missouri. I was a resident of the state of Missouri for 4 years and still make frequent visits to the state and to the rivers indicated and I know first-hand how fragile the environmental balance is on those and other rivers. It is my opinion that any form of motorized craft would ruin the pristine nature of those rivers and would impact their long term economic value and a tourist destination and other recreation.

**Correspondence:** I have lived in Missouri all of my life. Many years ago I owned property near Akers Ferry and the Current River. The river was always a very clean and peaceful place. A place where you could experience the natural beauty and wonder of nature in our state. I have seen it changing as the years have gone by. There are more motorized boats and vehicles, people are building on scenic easements, there is overuse of commercialized horse

traffic, and overall overcrowding of people who are abusing this beautiful river way. These are problems that must be addressed and corrected to the greatest extent. I feel strongly that something needs to be done before the damage goes so far that it cannot be remedied. I am asking you all to do what is best for our state and our national scenic river way. I do appreciate that the National Park Service trying to put together a solution to these problems, but I do not believe that adopting Alternative B would be to the best interest in saving and preserving the beauty of our natural wilderness. I would like to see Alternative A adopted as I see that it adds additional protection to our river ways. Once we lose our natural wilderness it can never be regained. It is a known fact that being in nature benefits humans health in many ways. It is our responsibility to save and preserve these natural wilderness areas for the generations to come. Please choose wisely in adopting the right Alternative.

**Correspondence Type:** Web Form  
**Correspondence:** Having perused the draft management plan for the Ozark National Scenic Riverways, I most strongly agree with Alternative A.  
I have witnessed (may 2011) excessive numbers of canoers (every 10yards 1-2 canoes)in the Eminence area, as well as drinking and lewd behavior. I feel strongly that there needs to be more stringent enforcement of existing legislation to ensure an enjoyable family atmosphere. Don't let the outfitters self-regulate the number of canoes on the river at any given time.  
Secondly, I have seen rutting apparently caused by ATV running from bank to bank across the river. This destroys wildlife habitat and causes erosion and shitst the channel of the river in extreme cases. I realize that some individuals enjoy nature primarily for the seat of an ATV, but there are other areas where they can do this.  
Third, I see a need for a ranger-naturalist presence along the river, and or accompanying groups. I have witnessed trash (beer cans and bottles, plastic bags)loud music along the river. These instances need to be prevented through enhanced enforcement.  
Finally, I urge you to take these comments into account. God forbid there should ba nother senseless murder along our rivers, but the situation between nearby landowners and floaters has gotten out of hand.

Sincerely

Don Evans

**Correspondence:** I first saw the Current River in the late 50s on a home movie screen to the clatter of my father's 16mm projector. He had gone back home to Missouri on a beloved fishing expedition- skinny john boats, skinnier river guides, great footage of the boys going down the river fishing. Never did I, a girl raised in Chicago suburbs, dream that one day I would be living on that river, and subsequently several others in Missouri.

I lived on the Current River in for a decade in the 70s, and learned to love the wild springs, root-wads, caves, whirlpools, eddies, flora, fauna, and backwaters that make up that part of the Ozark Scenic Riverways. We had a 25 horse motor for the boat, we had canoes. We used the gravel bars to camp, and tried to leave only a footprint or two. Sometimes joined in on the big fish-fries and gigging season. I hardly recognize the place these days.

I advocate for Plan A .

I recently was honored to be on 2 private trips down the Colorado River from Lee's Ferry to Pearce Landing in the Grand Canyon. 24 nights out one year, 21 nights out this year; and the designated hiking and camping areas were pristine each time. LOTS of people go down that river each year, but thanks to regulation, it remains a wild thing of beauty. I am so saddened when I paddle down the rivers here at home and see diapers, cans, wall-to- wall rafts etc., hear the boom boxes and ATVs, just because it's the way we do it here. There aren't many streams as beautiful as our Ozark beauties. Let's keep them that way before it is too late.

During my years on that river, I met plenty of folks who had been born there in Carter County, whose ancestors had settled there. They are a proud and self-sufficient lot, and usually those people are not the ones who want to abuse what they have.

I just don't see the need for giant motors- perhaps a few licensed for rescue missions? I also don't see the the need for every single landowner to have a road directly to the river's edge. Or ATVs going everywhere on earth. I am also a trail horse owner, but have never set hoof in Eminence- Missouri was voted #1 Trail State of 2013- there are plenty of trails that don't disturb the environment like the ones do down there when masses pass through.

Please, oh, please, don't let the Ozark Scenic Riverways turn into the equivalent of a strip mall on our scenic byways.

**Correspondence:** After careful study of the ONSR Draft General Management Plan (Plan) I support the "no action option." It is unfortunate I have to come to this conclusion as there are many components of the Plan that I believe would be supported by the majority of the citizenry who comment on the Plan. What follows are comments citing pages that elicit a comment.

Pg. 39: "- partner with County and State to replace the Cedar Grove low-water bridge with a high-water bridge." This would be an extraordinarily good project and needs to move forward regardless of the outcome of this process. Low-water bridges are barriers to fish and aquatic as well as hazards to floaters. The Cedar Grove low-water bridge is well built but a barrier to fish and aquatic passage never-the-less. The US Fish and Wildlife Service funded the "Stream Crossings Posing Barriers to Aquatic Organism Movement: Bourbeuse River Watershed" as one of the definitive studies in Southern Missouri. I recommend this document to anyone wanting to read more about the effects of low-water bridges.

Pg. 39: "- improve park waste systems and partner with community about waste systems adjacent to riverways." Again, regardless of the outcome of the Plan, the NPS needs to lead and promote improved waste systems within the ONSR watershed, including private septic and lagoon systems. The Top of the Ozarks Resource Conservation & Development managed a Missouri DNR grant a few years ago that made improvements to private septic systems in the Jacks Fork River Watershed and the model is worth replicating. In addition, the ONSR needs to install more vault toilets at locations along the river. When I have been part of river cleanups I noted areas where many floaters stop to relieve themselves. These should be target areas for vault toilets and be marked on maps used by outfitters as well as with signage. None of the arguments against these installations holds up to scrutiny as there are always sites

above the flood plain and the occasional old service road to be reactivated to service the toilets. Signage may need replacing after high-water events but I trust NPS Maintenance can figure that out. Presently the ONSR Rangers find those areas where floaters stop to relieve themselves as places to write tickets. If the Rangers can identify and get to those locations certainly planners can too when locating new vault toilets.

Pg. 41: "Improve Park Operations: Organize a Park Advocacy Group." Certainly a good idea. Not a good idea to see such a group as under the thumb of park managers and with the function of raising money for ONSR. As a Stream Team member and equestrian, I would like to be part of such a group, as long as we had autonomy and functioned not merely as NPS puppets. Believe it or not the general public, park users and neighbors of the ONSR have good ideas and would love to be part of an inclusive advocacy group.

Pg. 69: The options within the Plan change ever so subtly from beginning to end. I comment here on equestrian usage:

1. "-close 20 access points and design and open 20 new access points." There are many access points that are severely eroded and a hazard to horses and their riders. There has not been any prohibition, as far as I know, about ONSR partnering with equestrian groups to close problem crossings and install signage at proper crossings. Why hasn't this been done?

2. "Horse trails: 25 miles of additional trails and 65 miles of undesignated trails closed." Again, why hasn't the ONSR been working with equestrian groups to shut down junk trails and install signage that directs horse riders to the proper trails? Without maps a rider finds him/herself suckered into a trail that should not be in use. Worse, the ONSR Maintenance does not patrol trails to remove fallen trees from trails and so riders create new trails around the blockages. I'm sure that 10's of miles of undesignated trails are created by the lack of ONSR maintenance. Signage? Ask us, we'll help you! One more burr under my saddle: doesn't anyone within the ONSR pick up trash along trails anymore? I know that Rangers and anyone with a GS-9 or more is above picking up trash, but really people, don't you think you could at least partner with groups willing to get their hands dirty??

Pg. 70: "- undesignated NPS roads, traces, crossings, and river access points would be closed." Which ones? How many? The Plan goes on to say "Law enforcement would be increased for compliance." This seems to be the mindset of NPS. A lack of planning and cooperating with local groups will be offset by guns and badges. Has anyone studied the history of land acquisition along the ONSR? Nerves are still raw about the roughshod treatment given to landowners. Compliance by badge, gun and citation isn't a real good plan.

Pg. 77: Alternate C: 45 miles of new trails including new crossings sounds good; tell us more. A 25-campsite horse camp along the Jacks Fork River is an excellent idea. Close 65 miles of undesignated trails: again, show us the map of those trails to be closed. Create 23-miles of improved trails to discourage creation of social trails: show us where; allow us to work with planners; the ONSR could have been doing this all the while and certainly cheaper by using equestrian groups as the labor. Install signage and 99% of riders will ride the designated trails.

Pg. 90: Sustainable Design & Aesthetics: new buildings need to be constructed to minimize energy and water usage, have eastern and southern exposure orientation for passive heat gain and avoid overheating from western sun exposure.

Pg. 91: Trail Construction Materials: "add" no asphalt used in 500-year flood plain; use of asphalt only after public notice and comments received that asphalt to be used on a trail project.

Pg. 97: "Citations for inappropriate behavior: If standard violated, managers might consider closing areas of concern." Could the writers of the Plan have used any more incendiary language to rile up the locals?? Who gets to measure and decide? Did I miss something or am I mistaken that the ONSR belongs to the citizens of the US?

Would it not work to increase Ranger presence at areas and times of heavy use? This is where I am adding my own anecdote: I travel across the Ozarks regularly and stop at Alley Mill for lunch or breaks. One late fall day there was a family with an out-of-state vehicle and myself at the gravel parking lot adjacent to the mill. As I returned from a relaxing walk around the spring I heard the family getting rounded up in a hurry to leave. As I looked up the gravel lot I saw a Ranger parked crossways in the lot "glaring" at us for being there. The family heard the message loud and clear, "get out!" Knowing the mindset of NPS Rangers from years working NPS Seasonal Maintenance, I knew we were violators of his domain and probably committed some violation he hadn't seen- yet. As I sauntered up the lot to get a clearer understanding of the Rangers problem he thought better of his situation and took off. I documented the situation with Russ Runge.

Pg. 100: Table 8: "Bacteria Actions, temporary closure, permits for horse use, permanent closures." A number of years ago the ONSR and Missouri DNR funded a bacteria study. I happen to be a friend of the Heath Department employee in charge of the study. Both the ONSR and DNR were convinced that horses were the predominant cause of high bacteria counts. Indeed, it was found that after high visitor usage by equestrians and floaters bacteria counts spiked, but the river cleared up fast. The study showed that high usage by floaters was more problematic but the funding was stopped for the study as it did not agree with the opinions of ONSR and DNR managers. Again, install

vault toilets at strategic locations as most people prefer a toilet over a trek through the poison nettle.

Pg. 103: "NPS would immediately close undesignated crossings." I would caution managers that they need to work with equestrian and adjacent horse camps to sign and improve appropriate crossings BEFORE closing undesignated crossings. Aren't all equestrian crossings undesignated now?

Pg. 126: Table 13. Summary of Key Differences. All the Alternatives have negatives for equestrians. If the ONSR staff would work with users I'm sure we could pick the favorable parts from the Alternatives, but as they are presented they are all unacceptable.

Pg. 165: "2006 Study- -elevated bacteria levels Jacks Fork River- -attributed to horses and other land uses." Again, the study identified problems with horses but there are more problems from high usage events by people. Further, we have identified cattle and poor logging and agriculture practices as major sources of bacteria and nutrients in other watersheds.

Pg. 202: Visitor Characteristics "- the most severe issue was litter or trash." Even though this was learned from NPS surveys, a serious discussion of how to deal with litter and trash is missing from the Plan. Missing-In-Action from Stream Team river cleanups on the Current and Jacks Fork Rivers are ONSR Staff. The Plan would have the reader believe that more Rangers are needed as this is an enforcement issue. The ONSR needs to have more Maintenance Staff on the river doing trash cleanup. Further, the ONSR needs to work with other watershed partners in Missouri to get a bottle law passed. The majority of trash found in Southern Missouri river cleanups are recyclable aluminum beer cans. Increase the redemption value and we will have less trash in the river.

Pg. 207: "77.3% o horse respondents- -lack of trail markers/signs- -getting lost." The ONSR could have been installing signs, closing junk horse trails and problem crossings all these years, and with the help of equestrian groups! Pay attention to the surveys, the public you serve is trying to tell you something.

Pg. 211: Table 24 has a 6-year average for violations, alcohol 355, drugs 256, littering 18; I'm afraid citations for litter are not glamorous. Further, isn't giving cautionary advice to young people about alcohol and drug usage better than citations that hurt future education and job prospects? Are the NPS Rangers our last hope for moral behavior in this country? Another anecdote: in dealing with NPS outfitters I found one fit to be tied due to outrage. It seems that he picked up a group of St. Louis teenage biology club students after a float who were cited for open bottles/underage possession of alcohol. The students were picking up trash and certainly had a lot of open bottles and cans that once contained alcohol. Never mind they were picking up trash, they shouldn't have been caught with empties! The outfitter identified a Seasonal Ranger who was trying to make an impression with management. As a retired federal employee I resent the stupidity of anyone in federal employment painting other federal employees with the stupid brush.

Pg. 347: Alternate C, what is the timing? Closing trails and crossings is only palatable after new crossings and trails are created as well as the 25-campsite horse camp is open; only then should closing happen with assistance from horse camp owners and equestrian groups.

The Plan then introduces "a horse trail permit system might be implemented- -." This is a non-starter. Unless the ONSR is prepared to deal with a great deal of civil disobedience you should drop this language.

Pg. 417: Water Quality- -there is no mention of more vault toilets.

<b>Correspondence:</b>	To Whom it may concern,				

I would like to voice my interest in and concern for the plan for the Current River and its watershed. I favor protecting as much of the riparian zone and watershed as possible and would like to see less concentration of access and less engineered manipulation of the riverbank or riparian zone. We need to protect this incredible resource and keep it as wild as we can. I concede that we must allow people to visit, to enjoy, and to use the river and the area around it, but the focus must be on protection and preservation where possible and prevention where necessary. I have been canoeing on the Current river for over thirty years, so I too love to have access. But, unlimited, irresponsible use will rob us and future generations of the river that I have come to love.

I support the Missouri Coalition for the Environment position to prosecute easement violations, limit motor boating, and to back Alternative B with the stipulations they have outlined. Please protect this beautiful river and watershed, it is priceless and irreplaceable.

Darren O'Brien

**Correspondence:** I wish to register my strong support for your proposed management plan alternative A. My age is 66 years and I have been exploring and enjoying the outdoors all my life. I have travelled extensively in the US and have been all the while an avid hiker and canoeist.

I recently returned home from the second of two 21 day rafting trips in the Grand Canyon of the Colorado River. On both occasions I was able to see firsthand the effects of strict use management policy. The benefits of such strict management are obvious and far reaching, resulting in a wilderness experience of incomparably pristine quality. As we know, Grand Canyon access is severely limited by a permit process and many people wait years for the opportunity to raft the Colorado River. I would far rather enjoy one trip of very high quality than have free access to that resource in a much-diminished state due to heavy and poorly-restricted use.

The Ozark National Scenic Riverways is a resource with a different character, but equally unique and comparably important as a national treasure. It deserves as much care in stewardship as does the Grand Canyon of the Colorado River.

We must develop a management plan whose primary goal is the preservation of an undiluted, uncompromised condition of its original pristine character.

This resource of national significance belongs to all Americans. Just as in the case of our national highway system, for example, the building, maintenance, and management of its roads and bridges comes under the purview of the community at large, not just of those through whose home area the roads pass. In this case we are discussing the fate of a very unique national treasure. We must not rob from our children by subjecting the Ozark NATIONAL Scenic Riverways to further degradation.

Please implement alternative A as the management plan for Ozark National Scenic Riverways.

Sincerely  
Franz E Mayer  
Augusta, Mo.

**Correspondence:** As a recent visitor to the Current River Section of the Ozark Trail, back in mid-October, 2013, I was very dismayed by the conditions of parts of the trail and, especially a gravel bar south of Powder Mill.

The gravel bar is approximately 2 miles south of Powder Mill Visitor's Center. We were attracted to Blue Springs and the beautiful bluffs across from the gravel bar. The gravel bar would have been a nice place to camp for a couple of weary backpackers, but we were so shocked by the condition of the gravel bar. It was rutted from vehicles driving right up to the water's edge. There were numerous large fire rings from camp fires and 2 gallon plastic containers that looked to be used for fueling the fires. There was also a barbecue grill on the bar. The whole scene was one of a very littered party area.

We were shocked to see such misuse and damage to such a fragile area, where a large spring discharges into the river and eagles fly up and down the river, even in mid-October. There is a road with too easy access to the gravel bar which needs to be permanently closed. As a canoeist or backpacker, I would not feel safe camping here on a weekend for fear of loud, destructive parties descending upon us. I can't imagine it being a safe place for a family outing on the river.

And, south of this section of river, along the Ozark Trail, we encountered horse manure along this stretch to Klepzig Mill. Horse use is not allowed on this stretch of trail.

When we camped near Klepzig Mill, we were all too aware of what sounded like poaching going on in the National Park land and the Conservation Area nearby. It was nightfall and we heard 3 separate, close rifle shots. The last shot occurred at 9:30 pm, followed by the sound of a truck along the nearby gravel road. We couldn't help but think that someone was out hunting with spotlights. Needless to say, we did not feel safe on this stretch of trail for the 5 days

we were out.

Upon returning to St. Louis, an article appeared in the St. Louis Post-Dispatch about the high levels of ecoli in the Current River, the source of which is illegal horseback riding along the river. So our experiences of misuse is not isolated. We have a permanent eagle population down there that depend on clean water, not to mention the other wildlife and people who legally use the riverways.

I think Plan A is a better option for management of the rivers. BUT, it must be MANAGED. I realize the resources are not there for monitoring such a large area, but more could be done to mimic the management in other national parks. I would welcome closing roads to sensitive areas, especially gravel bars. Access to the river should be by foot or canoe, not vehicles. Motorized boats only add to pollution, but if they must have access, they need to be regulated. More family-oriented campgrounds could be managed by the park service, with fees enforced just as they are in other parks. I would welcome a park entrance fee, just as in other parks around the country. Roads leading to historical mills could be dead-end, making it harder for through traffic for illegal hunters.

The conditions I saw on this recent visit left me feeling that it was just not a safe and enjoyable visit. Access to the river must be limited, so that fewer access points could be better monitored. Though my preferred outdoor activity practices low-impact use, I'm not advocating that for everyone. But there really is no need, economically or recreationally, for destructive off-roading, large horsepower boating, illegal hunting, or horseback riding. Parks are for everyone, not just people seeking a joyride. Keep the rivers clean and family-friendly so that all may enjoy a wilderness experience on the waters. If law enforcement can monitor canoeist for excessive drinking, they can divert some time and energy to monitor illegal use of the waterways too.

**SUBJECT:** ONSR Draft General Management Plan/Wilderness Study/EIS Public Comment

Thank you for opportunity to provide public comment on the subject proposal. I grew up in the Ozark National Scenic Riverways (ONSR) and enjoyed countless hours of recreation there. My son Daniel is now 16 years old and is enjoying the same experiences in the ONSR as I did as a kid. We appreciate the opportunity to provide our comments and relay our personal experiences on one of Americas natural treasures.

#### BACKGROUND:

Over the past 44 years I have spent many days on the ONSR enjoying the diverse opportunities it has to offer. My son has spent the last two years enjoying the same things. In addition to that many of my family members and friends spend just about every weekend on the ONSR. I am very familiar with all that the ONSR has to offer. I have personally floated the ONSR in canoe from Cedar Grove to Two Rivers. I have boated many stretches of the river in a motorboat with both a 25 horsepower jet and a 60/40 jet, I have swam, waded, and floated tubes on various portions of the river. I have giggered from a 60/40 motorboat. I have floated in a non-motorized flat-bottom boat while fishing. I have fished from the shore. I have visited many of the caves and springs in the area and walked some of the hiking trails. I have road ATVs where permitted and also camped on the gravel bars. After reading the draft management plan, the only thing I see in it that I havent personally participated in is horseback riding. However, I do have friends who have. I would say this gives me a very broad and unique view on the opportunities available on the ONSR.

Additionally, I am a frequent user of many of our other National Parks; places like Glacier National Park, Yellowstone National Park, Voyagers National Park. I also take advantage of many similar locations that offer limited access; places like the Boundary Waters Canoe Area with non-motorized areas, MINGO Wildlife Refuge and Hamburg Bend Conservation Area limited to muzzleloader and archery hunting. I have a great appreciation for

the need to balance the protection of our natural resources and their use.

This is the perspective that I bring with my comments that follow. Having studied the full 534 page proposal, I have selected a few specific areas that I feel need consideration as this proposal is reviewed. This is not a comprehensive discussion on the proposal. I will focus my remarks to a few very specific areas that I feel are critically important as you consider this management proposal.

#### JUSTIFICATION:

The plan states, This new management plan for Ozark National Scenic Riverways is needed because the last comprehensive planning effort for the National Riverways was completed in 1984. I agree. It is important to consider strategic objectives every so often and this was likely overdue. However, the proposal fails to make a substantive argument for such a radical change in the management strategy. The proposal fails in four specific areas as discussed below:

- 1) The proposal says, Patterns and types of visitor use have changed& Yet this is not validated by the data contained within the report itself. The only substantive change in visitor activities noted in the proposal and based upon my personal experiences is the use of tubes to float the river vs canoes. While I agree this is a change, it is certainly not one that provides for a substantive or substantial change in overall impact to the resource itself or the other visitors to ONSR.
- 2) The proposal says, &technology has introduced opportunities for recreational activities and access not envisioned in the past. Yet, the proposal fails to identify and quantify these technologies or other opportunities.
- 3) The closest this proposal comes to a coherent justification for such a radical change in management strategy is what it describes as By far the most commonly expressed concerns in public scoping were related to visitor behavior. It is reported that, A recurring complaint by commenters was the growing amount of disrespectful and vulgar visitor behavior. Most commenters stated concerns about drug and alcohol use, and trash and litter along the rivers and surrounding lands. I agree that they may be an issue. However, in my personal experience these are largely isolated events and have little impact on the overall resource and rarely impact visitors. Regardless, this is not substantial justification to radical change the use habits of the majority of the visitors. Instead, a more logical approach would be to focus efforts on controlling and enforcing the questionable behavior.
- 4) Lastly, the proposal seeks to significantly limit public access to much of the ONSR. There is no substantial argument to justify this. The fact is visitor use has remained essentially stable at approximately 1,500,000 visits per year from 1973-2008 (ref: page 200, Figure 10). That is 30 years! The National Park Service (NPS) might have a reason to address usage rates if there were trends of increased usage that were putting unsustainable pressure on the natural resources or if the experience were becoming so unsatisfying that visitors quit coming to ONSR. Neither is true. I have enjoyed the ONSR since 1980. I spent two weeks there this summer and I can say without doubt that the resource is essentially unchanged from 1980. The resource is not suffering from the current use levels. Additionally, the visitor satisfaction survey cited in the proposal itself discounts negative visitor impacts. In fact, 84.2% i the survey said there was no need to limit amount of visitor use and 75% sid the ONSR was not excessively crowded. We know that no matter how few users there are, some will always say there are too many. Additionally, the 2010 study cited in the proposal stated the following: "Motorized and nonmotorized watercraft users were asked if other river users were a problem for them. Among motorboaters, 13.5% tought that other users were a problem, while only 3.9% o nonmotorized watercraft users perceived other users as a problem. These numbers clearly indicate the vast majority of visitors are happy with the current usage strategy.

#### FISCAL ACCOUNTABILITY

The NPS recommends Option B. Within that recommendation is the assertion that NPSs estimated cost to implement Option C will likely prevent its implementation. That is an excellent point. In the current budget environment we face in the Federal Government fiscal accountability is a paramount concern. So lets take a quick look at the projected cost of each proposal. According to Table 9 on page 114 (there is more data in Table 12 on page 116, however those numbers dont match Table 9 numbers and it is unclear if they are in addition to the Table 9 numbers), the additional cost for each option is listed below:

No-Action Option Option A Option B Option C

One-time facility costs	\$0	\$7,498,000	\$6,703,000	\$12,259,000
Annual operating costs	\$6,582,000	\$9,304,000	\$8,821,000	\$10,072,000
Increase	\$0	\$2,722,000	\$2,239,000	\$5,677,000
Full-time staffing increase	0	34	26	47

Total

As can be clearly seen if cost is an issue (and in this era of tight budgets better be), the option with the lowest cost is the No-Action Option. According to the charts provided in the report they claim approximately \$4,000,000 more additional cost in deferred maintenance for the No-Action Option, however that is not justified in the proposal. Options A-C then would cost an additional \$7-12M in one-time facility costs, \$2-6M per year additional operating costs, and 26-47 additional full-time equivalent positions at an extremely high personnel cost. Even if you estimate the FTEs at a low cost of \$50,000/year that amounts to an additional \$1.3-2.35M in cost per year.

Based upon these numbers I would agree with the NPS that Option Cs cost would likely prevent implementation. However, I would also argue that the costs of options A and B are significantly higher than the No-Action Option and are not substantially lower than Option C. According to the proposal, ONSR is currently only able to staff 72 of its 95 authorized positions and maintains a current backlog of deferred maintenance of \$27,083,000. If they cant find the funds to hire 23 currently authorized positions and pay for \$27M in needed maintenance, where would the greatly increased funding requirements for Options A-C come from, especially in a federal government budget that is looking to cuts funds wherever it can? Given that, it is illogical to pursue and adopt any management strategy as fiscally unsustainable as this one; thereby leaving the No-Action option as the only feasible option.

#### ADDITONAL ISSUES:

While the previous two issues are very significant, I do want to address a couple other issues of concern.

- 1) The alternative to limit gravel bar camping to designated gravel bars away from the river is unjustified. The proposal asserts that This would help minimize some riverbed disturbances, erosion, sedimentation, water quality degradation, and turbidity in many gravel bar areas. Anyone who has spent time on the river knows that the impact of a camper or tent on the gravel bar is extremely minor compared to the impact on these gravel bars with each spring flood. Every year the flood waters change these gravel bars. To suggest that my setting a tent and a small campfire or even an RV on the gravel bar has a negative impact is frankly unfounded. Ive watched these gravel bars for 30 years and know it is not true. As with many of the assertions in the report, there is no evidence proving this point.
- 2) The proposal to limit motorboat access to only the period between Labor Day and March 15th is unjust and unfair. Our rivers are for everyones enjoyment. There are a large percentage of ONSR users who do so in the summer months via their motorboats. According to the 2010 study cited in the proposal only 3.9% o other non-motorized users perceived other users (e.g. motorboat users) as a problem. Yes, there may be some isolated issues of conflict between motorboat users and non-motorized users but these are isolated and antidotal, not the norm. There is no sound justification within the proposal to limit motorboat usage beyond its current limits.
- 3) I take issue with the proposed watercraft usage numbers in Table 8, page 99. There is no justification or logic to these proposed numbers. The chart suggests 70 watercraft per mile for the upper sections (Cedar Grove to Pulltite) of the Current River and 10 watercraft per mile for the middle sections (Round Springs to Chilton Creek). This makes no sense. The river is much smaller and can support fewer watercraft in the upper sections. Additionally, much of that area has naturally extremely limited motorized boating opportunity. However the river is much larger/wider from Round Springs to Chilton Creek and can support more watercraft, including providing more opportunity for motorized watercraft. The current watercraft usage on the river is appropriate. Ive been there on weekends and weekdays both. Anyone wanting an more isolated opportunity to enjoy the river can do so very easily on a weekday. In fact I just spent this past labor day weekend camped at Bee Bluff for 4 days. The amount of canoes and motorized boats I saw was pretty small. They in no way detracted from my experience. I was able to set in the river for over an hour without interruption by anyone on a busy stretch of the river on one of the busiest days of the year. Try doing that at Yellowstone or Glacier. I have. It is impossible. Those parks are bumper to bumper traffic all summer long. The ONSR has got it right the way things are now. They are not too crowded.

#### SUMMARY:

Based upon the analysis above I strongly urge the NPS to adopt the No-Action Option. It is clear that Options A-C do not reflect the desires of the majority of users of the ONSR, do not provide substantive improvement or protection of the ONSR, and are not financially viable or sustainable. Options A-C unnecessarily restrict access to and use of the ONSR by the 1.5 million visitors who enjoy it every year and does so at a substantial cost. Rather than adopting the radical restrictions on use proposed in Options A-C I encourage NPS and ONSR to concentrate their efforts within the current strategy by updating it and making logical improvements focused on addressing the minor issues discussed in the proposal.

Finally, LEAVE IT ALONE! The current management strategy provides a tremendously wide range of opportunities for all to enjoy. Anyone can enjoy a quiet hike alone a trail, an ATV ride, sitting on a peaceful gravel bar, camping on a gravel bar, a quiet canoe float without motorboats, a nice motorboat ride, a nice swim, diving off a cliff, a horse trail ride, etc, etc, etc. The ONSR offers all of these opportunities for anyone willing to seek out the parts of the ONSR that currently offer what they are looking for.

Thank you again for the opportunity to provide input. I hope my inputs will be carefully considered along with the many other inputs Im sure you will receive. Our public lands are a tremendous resource to this country, Missouri, and the Ozarks. We all want to ensure they are available for enjoyment to the widest public, not locked away so that only a hand full of the elite are able to enjoy them.

Respectfully,  
Phillip and Daniel Callahan

**Correspondence:** I grew up camping and floating the Ozark National Scenic Riverways. The dramatic changes that I have seen over my 40 years are distressing. The streams we floated and swam in are now over crowded with drunks on rafts blasting music that can be heard for miles around, poluted with oil and gas from SUV's and ATV's and private residences and illegal roads that are being blasted into wilderness areas. During the peak seasons it is almost impossible to find a quiet unspoiled piece of river. While Alternative B is a good first step it does not go far enough. Alternative A is the best choice for beginning to bring the park back to what it is supposed to be. Without these protections my kids will never be able to enjoy a park that belongs to all of us not just the few who have no respect for what they are destroying.

**Correspondence:** My family and I are very grateful to the NPS for the hard work you've put into preparing the management plan for our beloved Ozark National Scenic Riverways. I would like to voice my support for plan A as plan B has the following shortfalls:  
The illegal roads must be closed and the original, natural condition of the area around them needs to be restored;  
This area should be protected from undesignated horse trails and absolutely must prohibit vehicle access to gravel bars.

When our children were little, this was one of the few places we could afford to vacation and camping and floating the ONSR gave us so many wonderful memories. We have one son who grew up to become a professor of environmental ethics and he says that his connection to nature began with those float trips. Unfortunately, as time progressed, we noticed more and more degradation in the ONSR area due to inappropriate use (vehicle and horse

access in particular). We hope that you do everything in your power to bring back the wonderful experiences that our sons enjoyed for future generations.

**Correspondence:** Thank you for all the work you have put into the management plans for the Ozark Scenic National Riverways. I have been camping and/or floating on the Current River for at least 50 years, first with my parents, then with my children, camping with my dog, and now with my partner. At the time there was a group campsite across from Pulltite and we always camped there. I remember having cows wander through our campsite once when I was very young. Last summer I was floating with my partner and we were tipped over by the wake of a motorized boat. I long ago quit going to the Current on weekends and I certainly don't want to also give up the weekdays!

The NPS preferred plan, Alternative B, is a good start. But I thought that the river was declared a National Riverway to protect its natural state. And I think that Alternative A will give the river the best chance to recover from the years of abuse it has taken.

**Correspondence:** I would first like to thank you for your time and efforts in developing this plan, particularly given the multiple and varied stakeholders. Having never been to the Current River I write to you as an individual with plans to take a multiple-day kayak and camping trip later this year on the Current. I was drawn to the Current due factors difficult to find on our waterways: public lands buffering the river for camping and avoidance of the private property issues that limit access and portage, relatively few instream impediments to flow, and opportunities for fishing. However, after further reading about the Current there are several uses that give me pause about visiting this river. The apparent prolific use of motorized boats on the Current is a great detractor from using the river for the noise, safety, and water quality concerns. Further, per the online chat boards belligerent behavior, littering, drunkenness, loud music, and off putting behavior is apparently common on the river. I know to take online comments with a grain of salt, but numerous posts on numerous boards by numerous authors certainly gives me reason for concern. My preference is to see a management plan more reflective of the types of uses, management priorities, and enforcement of regulations found on the Buffalo River. Therefore, I encourage you to consider Option A as the desired scenario. Option B, the NPS preferred option, would also be acceptable as it is considerably more inline with my desires than the status quo. Thank you again for your efforts in preparing this plan.

**Correspondence:** I spent my childhood camping and fishing on the Upper Current. Jet boating to fish for trout above and below Acres Ferry with my dad are memories I cherish and wish to continue with my sons. We also enjoy gigging, boating and camping. We want to see the horsepower limit left alone and want to be able to camp along the river as it is. We want the roads left open so we can camp at the few campsights that are left that my family has camped at for several generations. Thanks

**Correspondence:** I Sam Peifer dont think there should be any changes above round springs. I use this area for fishing and recreation during the peak months. I have a 25 hp jet i use to take my family up river from round springs. There have been many occasions i have helped canoers and people camping in this area. When canoes have tipped over i have helped retrieve them and there belongings. approximately five years ago my wife and i were fishing on our anniversary above round springs in the afternoon evening hours. There were lots of canoes floating by and we were all having a good time. approximately two hours before dark a gentlemen in his late fourtys and two kids around the age of thirteen to fifteen floated by and the older gentlemen in a canoe by himself. The older gentlemen later had broke his leg and they were screaming for help. The bone was about to break the skin. My wife being in the medical field knew how to help the man as the kids were terribly scared. We got the man on the deck of my boat and hauled him to the round springs lower access. My wife held his leg for an hour and a half while he was in shock. They air evacked him out. My point is if we had not been there who knows what would have happened to the gentleman and kids. I feel the NPS heres all the bad things about the motor boaters. What about all the good things i do as well as many others boaters. Myself and many others from the area have been using this area for recreation for alot of years. Please take this letter into consideration.

January 9, 2014

Dear Superintendent Black:

Thank you for writing a General Management Plan which offers a variety of options for managing the Ozark National Scenic Riverways. My first trips to the Current River were during the late 1950's with my family and other canoeists from Kansas City. We heard that the Army Corps wanted to dam the Current River, so I am always thankful that didn't happen.

For many years the National Park Service has protected the river and its many cultural and natural features and habitats. But the use of the river has changed since 1964 and there is damage in the floodplain, the riparian corridor and sometimes disturbance and pollution in the Current and Jacks Fork Rivers themselves. There has been overuse of the rivers by a variety of recreationists.

I believe that Alternative B is the best choice for future Ozark National Riverways management. It is a compromise because it does not entirely protect and may not be adequate to protect the waterways and riparian areas from overuse by recreationists. But it does establish non-motorized zones on the upper rivers which will protect some of the river resources and should decrease user conflicts. Many miles of the lower rivers in the park are still open to motorized boats. Alternative B is a compromise between protecting the rivers and riparian areas themselves and offering a variety of recreational uses but Alternative B is also the most practical and economically feasible of the choices.

The 65 miles of social horse trails must be closed especially at unauthorized river crossings but I like the idea of having a horse use and trail management plan with 25 miles of well built horse trails so that sensitive and riparian areas are protected. It sounds like a good idea to offer some horse camping with permits as long as the horse camps don't pollute the waterways.

Keeping ATVs and other motor vehicles off the gravel bars and out of the streams is the single most important action to protect the Current and Jacks Fork. The worse problem overall is sediment getting into the river. Can the National Park Service cooperate with our state StreamTeam program so river users understand why damage to riparian areas, gravel bars and stream beds can ruin the fishing-swimming-the whole river environs? Another issue is that motor noise disturbs all users and wildlife. Consideration must be given so that a family and/or a first time user has an enjoyable visit to the Ozarks National Scenic Riverways.

I camped and hiked at Pulltite campground, Round Spring, Alley Spring and Big Spring as well as hiked other trails when I could find them these last 4 years. I don't find enough trails near the Pulltite campground, Alley Spring and especially at Round Spring. I hope the National Park Service will approve the trail to be build from Round Spring up the Current River to Current River State Park and then down from Round Spring and across the Big Creek watershed to the Ozark Trail.

I would like to see these changes made to improve the hiking trail system:

1. Close roads in primitive zones and replace with hiking trails as stated in Alternative B.
2. Increase and improve signage and improve maintenance of present hiking trails.
3. Produce maps of hiking trails and make readily available.
4. Increase hiking trails in natural zones especially to natural and cultural features.
5. Survey all trails for invasive species and prevent them from getting off trail into forest clearings and pastoral fields as well as into natural and other cultural features.

I camped and hiked at Big Spring in 2010, 2011, 2012 and 2013 partly because I love the spring and partly because I enjoy the system of trails there. Since there is a marvelous complex of trails at Big Spring with access to numerous interesting natural features, I believe that park naturalists or volunteers should offer more programs or hikes for park visitors. A number of the trails have easy access points and there are many day hikes which can be offered. But some of the trails are hard to find.

Wilderness Study Area:

I especially enjoyed the large, old pines and oaks along the trail within the Big Spring Pines Natural Area and through the proposed wilderness area. I believe the 3430 acres proposed for wilderness area as in Alternative B will

be the best use of the area for the future. This is an area which can be enjoyed for its natural qualities yet is accessible for learning, training and study more easily than most other wilderness areas. It is truly unique and should have continued protection in its primitive state.

I find the fire tower is a landmark which helps me orient myself from various places throughout the Big Spring complex. To me it is acceptable as a part of the wilderness area although I think the wide road which leads to it is an intrusion. The fire tower has historical and cultural meaning as a way of remembering that through the 1900's Missourians worked hard to eliminate fire throughout the Ozarks. Yet now we use prescribed fire as a tool to bring back plants and flowers that once grew on glades, in fens or in woodlands. Additionally, I hope to find that your use of prescribed fire at Big Spring also helps regenerate pines and oaks. Well managed national park forests with use of planned fire can protect human lives and property from massive wildfires. In that way public lands become a real asset to all of us!

I am not certain that the fire tower will ever be open to the public but it can stand for what we have learned about the use of fire and it can stand for what we hope to learn about forests and woodlands.

I request that the underground utility lines be retired as soon as possible and any acreage allotted to them be allowed to revert to its natural state. The above ground equipment which the company must use to service the line is on the trail through the Big Spring Pines Natural Area and is intrusive. I request it be decommissioned and removed.

Closing of the fire tower road and excluding any vehicles from the Big Pines Natural Area along the ridge trail is important to preserve the character and the health of this area. For instance, care must be taken that any maintenance done on the utility cable doesn't spread invasive plants which may not ordinarily grow in the forest shade but may take hold in forest gaps naturally created when some of the old trees die. Care must be taken that invasive species are not spread along roads and trails. The utility structures above ground do not fit into an otherwise natural and beautiful area and trail.

I enjoy knowing about and seeing the remains of CCC structures where the boys lived as they worked to protect the spring and to build the many structures at Big Spring. While there is much history of the Current River that I don't know, I enjoy the connection to the CCC years. My grandfather and uncle worked for the CCC in eastern Missouri.

Closing:

It would be interesting to know more about Indian use of the rivers and river bottoms. Also, it would be interesting to know more about the families whose names are on tombstones in grave yards in the Current River country.

Please use the best science possible in your plans to protect the riparian area and the rivers. Please protect the native flora and fauna for future generations. It is most important also to work with citizens who live nearby so the springs and waterways won't be polluted from trash, human waste and changes in land use.

Thanks for the chance to comment on the management plan for the Ozark National Scenic Riverways.

Betty (Becky) Denney

**Correspondence:** I think by making the proposed changes lively hoods of towns and people will be affected. People depend on the tourism to the Ozarks for jobs and income. The rivers and forest land should be able to be enjoyed by the people. The National Park Service was started to ensure areas like these were continued to be enjoyed by the tourists. The proposed changes will have and drastic and devastating affect on the communities and

people that live in them, as well as on the tourist who enjoy the area.

**Correspondence:** I believe that the most restrictive option should be selected for management of this area. These river ways belong to all the people in the United States, and should be managed with this in mind. It is wrong for a few who choose to ruin this beautiful area to be allowed to do so simply because they live there and consider it their personal playground.

As our population expands, even under the most restrictive plans, the use will increase. This needs to be kept in mind.

This area is one of the jewels of the state of Missouri. It needs to be preserved and protected for our children and grand children.

Thank you very much.

Marion Mace and Harman Dickerson

**Correspondence:** I am a canoe camper and an Ozark Trail backpacker. I have been float camping on the Current River for over 30 years. I have read, with great interest, the 3 proposed alternatives for the new management plan. Although my own personal interests would be best served by Alternative A, that IS NOT the alternative I would choose to support. I find it much too restrictive, and, may I say, "elitist". I believe, very strongly, that National Parks and other public lands should serve a wide multitude of public users, in order to provide strong public support for the protection of public land. We canoers and backpackers are not the only people who pay federal taxes to support these lands (Although I have some friends and acquaintances who seem to act as if they think they are). Of the 3 alternatives, the one I would favor would be C, for I feel that it would provide the greatest service to the greatest number, while still preserving the natural integrity of the Riverways. In fact, I would go further to say that I would favor the "No Action" alternative. I have always felt that the NPS has done a rather good job of balancing diverse public interests at ONSR.

I am particularly disturbed by what I consider to be the extreme restrictions against motorboats in the upper Current and Jack's Fork Rivers, especially those of Alternative A, which would banish them from the Jack's Fork entirely. Ozark people have been using motorized johnboats to fish the rivers long before people started pleasure floating in canoes (and rafts, tubes, and kayaks). They were here first. Should not that tradition be part of the culture that is the ONSR's mission to preserve. I was wondering if it could be possible to suggest an additional variant besides "Peak Season" in zoning the use of motorized craft for fishing... such as... "Time of the Week". Could motorized fishing be allowed Monday through Friday, and prohibited only on the weekends in those "peak season" zones. That would be the best time for fishing anyway.

I would raise the point that when the federal government acquired the rivers for public use, years ago, and displaced a lot of local property owners, it engendered a lot of resentment which is still not forgotten today in the riverways communities. Sometimes that resentment, or even hostility, is directed to people like me - backpackers and canoe floaters - who are seen as outsiders and intruders. I fear that further restricting the use of motorized watercraft will only serve to keep that local resentment alive, as an open sore.

On a more positive note, I very much support the idea, in Alternative C, of placing 2 developed campgrounds at Akers and Blue Spring (JF). These are facilities, I feel, which would serve a great need.

From a personal level, as an Ozark Trail user, I wonder if a modest camping area with fire rings and a privy would be compatible with the zoned use under any of the alternative plans, for the OT crossing of Rocky Creek at Klepzig Mill.

Thank you for this opportunity for input. I look forward to positive changes that I know WILL COME, under whichever alternative should be chosen.

Mark Hodges

**Correspondence Type:** Web Form  
**Correspondence:** First, I want to thank the National Park Service for putting together a well done and thoughtful analysis.

Although adopting Alternative B, as NPS recommends, would be a positive step forward from the status quo, I believe Alternative B could be better, and I therefore recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

â—Closes illegal roads and restores natural conditions to 50 miles of these roads;  
â—Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
â—Bars all recreational vehicle access to gravel bars.

My father was born in Shannon County, near Eminence, and although I'm from the Kansas City metro area, I spent every summer growing up on Current and Jacks Fork Rivers. I love those rivers and that country as much as my distant cousins who live in that area; so this is personal. I still canoe those rivers, visit the springs, and hike the trails. I've seen a lot of changes over the years, and I don't like the degradation I'm seeing. ONSR is not nearly as wild and pristine as it once was.

Please adopt Alternative A.  
Thank you.

**Correspondence:** I am Shannon County landowner and have been using the river for over 40 years. I have participated in many different 'river' activities over those years including hunting, fishing, camping, hiking, boating (motorized) and canoeing. As I get older, I feel stronger about protecting the resources in the park. I am happy to see increased horse use controls and elimination of unauthorized access are a part of all the plans. And I agree a bridge at cedar grove is a beneficial addition for visitor access and river integrity.

As I have seen the increase in traffic and development along the river over these past years, I lean more towards Alternative A for purposes of protecting the resource.

I appreciate the opportunity to comment.

**Correspondence:** I support Alternate A. My family and I frequently visit the Current River. We come to paddle and camp, to enjoy nature and solitude. We refuse to visit Ozark Scenic Riverways from Memorial Day weekend to Labor Day weekend due to the crowds in canoes, motor boats and horse back riders. Alternate A would enhance the visitor's ability to experience nature.

It is difficult to find a gravel bar without tire tracks on it along the Current River. The illegal roads and illegal access points need to be closed for a better visitor experience. We are concerned when we camp on the gravel bars on the Current River that in the middle of the night vehicles will come barreling thru our camp area.

The motor boats zooming along the river dodging canoes and people swimming is a safety concern. Areas without

motors is supported for multiple reasons.

I support management of Big Springs area as wilderness. It would be an important addition to the Wilderness Areas of Missouri. The wilderness area would be a draw to the area and increase tourist revenues by hikers and hunters.

**Correspondence:** I am writing to urge the NPS to use the No-Action alternative for the General Management Plan. I believe there are sufficient laws and restrictions in place already that provide adequate protection for the ONSR. I have lived here all of my life and have not seen any negative effects on our rivers requiring further restrictions on use by the public.

I would guess that there are approximately three or four months of the year when the tourist season brings a fairly large number of visitors to ONSR. I would be interested to know how the NPS arrives at the numbers of visitors each year. I believe that for eight or nine months out of the year it is primarily, not all, but primarily, local area residents who use the rivers and adjacent land. I do not believe we who live here all twelve months of the year should have to be so restricted in our use of the rivers and lands because of a three or four month very busy period of time.

It is hard for me to express my feelings of just how much I love the beauty of this area and how moved I am, the happiness I feel when I see, for instance, the snow at Big Spring and along the river. I, like more local people around here, are not young people anymore and if you try and make it possible for me to be able to use the river only by a canoe then that will not be possible for me. I believe it would be, at the very least, unfair to people like me to not be able to travel up and down the river by boat. I do not believe it is what was ever intended to happen when the Riverways act was passed.

We do want the rivers and lands protected because we love them and want them to be enjoyed by future generations of our families and friends but not to the exclusion of people being able to use them as we always have. There is a long history of activities like gigging that have been enjoyed for many years by people including my family and I know the NPS, Riverways take an interest in honoring and documenting the history of the rivers and that is a part of it, as well as camping.

I will close my comments about the plan by again asking you to please go with the No-Action alternative.

I am NOT in favor of Wilderness designation for the 3,430 acres near Big Spring. In the newspaper article published

in the Dec. 5, 2013, Current Local, Van Buren, MO, it states that "Public use of the area would remain unchanged from current management conditions.". It seems to be sufficiently maintained without requiring wilderness designation.  
Thank you.

**Correspondence:**

WITH ALL DUE RESPECT:

Upon the reading of the changes that are about to made, probably without any concern of those impacted by the changes that will probably be shoved down our throats.

I can't help but wonder what my "LORD" and "SAVIOR" thinks on these changes, that are about to be mandated, a river system he gave man to use and to preserve by all means without serious compromise from those who wish to shut down all use because of their beliefs. Their seems to be a growing movement of these stereotypes in our nation, creating confusion and hatred throughout this great nation "GOD" gave us to use and preserve.

My first visit to current river in 61' was a campout @ the John Grubbs property , GRUBBS' was the beginning of my love for this "GREAT RIVER SYSTEM".

Every spring and fall, my wife and I spend one week of total relaxation, camping @ Big Springs Park. Smallmouth & walleye fishing, floating down the river is a bonus!

But upon reading these changes, it will eliminate the use of my boat which has a 175 hp outboard. Allow me to rattle your brain, the outboard I utilize is a evinrude e-tec ,the industries most compliant motor made, best fuel economy and the leader in the least emissions of any outboard used in the Scenic Riverways, have your board to investigate this claim, but yet it will be prohibited!

Please reconsider this issue, the greatest problem I see on the system is the canoes, rafts, tubes,leaving all their trash behind,severe drunkenness, dope smokers, and most of these people come from urban areas (St. Louis), but yet it seems , the urban people are in favor of the changes that are about to be made. "WHAT A SHAME". I've NEVER HAD A PROBLEM WITH FELLOW FISHERMAN, I REPECT EVERYONES PRIVACY, BUT LET THE TRUTH FALL WHERE IT BELONGS!

Please don't let the anti groups sway the Park Service into making such a rash decision, that will only impact the local people who were reared on this system,I being among the elite!

I pray you reconsider your plan, throw it in the trash, because that is exactly what it is!!!!!!!

DUE RESPECT,  
DOYLE L.ABBEY

**Correspondence:** One of the most wonderful beautiful things our state has to offer is ONSR. In this day and age of electronics we find it hard to get the younger generation involved in the outdoors. To sit here and read a document that is geared towards limiting one of the most unique outdoor resouces we have to the point of being anything remotely easy to access and enjoy is ridiculous. I find it as something the NPS should not be supporting. As I read it I find myself wondering if the NPS really just wants to get rid of the public. Instead of limiting and cutting back on the area of the park available for use shoudl NPS not instead be fnding ways to increase use of the park? Looking for ways to draw familes and indivuals in to the park, not making it more difficult. The improvements need to be made for recreation not to kick recreation out. People need to be educated on how to properly care for the river and habitat.Kicking people out is not education. Turning people away is not education or preservation. Teaching people and giving them more areas for recreation is the way. We use ONSR for many uses each year. You will find our family in canoes floating the rivers, swimming, hiking it many trails and horseback. WeWe travel six hours round trip to visit the area from the beginning of March until Thanksgiving. We are avid users. While I know that no change is not an option, the drastic changes being called for are unrealistic to keeping this area appealing to its users. Be it those that are regulars or those that come a couple times are year to first timers. WE travel to many other national parks: Rocky Mountain, Shawnee, Grand Teton, Smoky Mountain, etc. None of these parks have a permit system, granted some used to but they no longer do. Why hassle your patrons with such requirments? Missouri was recently distinguished as the "Trails" state. We also are one of the leading states in the

nation when it comes to horse population. One would think that the NPS would be interested in growing and devolving those 2 things together. That NPS would want to promote more riding and recreation use such as camping in its parks. Instead of turning these people away with permit requirements. I find it disheartening that a service that was developed to help promote recreation and being outdoors and education is turning itself into a department of regulation. For turning people off of our national parks and outdoors. There are a 3 weekends a year that the area has a lot of visitors, so those 3 weekends are going to be allowed to dictate what happens the other 49 weekends of the year? There are things the park service can do as in making water crossings safer, less erosion in those areas as well, we have seen things they have done in other states, without limiting the amount of people allowed to enjoy the rivers and surrounding area. Instead of forcing more regulation why doesn't the park service offer more resources to the users over a wider area? Instead of concentrating everyone together. Why not put in some rest areas along the river to give river folks a place to pull over to use the restroom instead of the river to help with the e.coli. Vaulted toilets would go a long way for all users. More resources over a wider area are needed not less in a more concentrated area. How is that better for the environment and the recreationist? There are things in the plan that can be implemented but on a smaller basis. Is it really necessary to get rid of so many trails and roads? Obviously there are people coming to the area warranting a need for those things, by taking them away you are turning people away. There are things that can be done to help preserve the river for everyone's use. Limiting it to where it is more of a pain to enjoy is not what it was for. Getting out with nature means getting out, not being forced with all users into a small area. Recreation while educating people on preservation is the way. More education on leaving no trace, steeper fines for litter, etc are needed not kicking people out of areas. It is like NPS wants to put everyone in one area to better patrol them. The park is for the American citizens to enjoy not be harassed out of.

**Correspondence:** I have spent many nights reading over the plan. While no change is only in there because by law it has to be it is the closest to the best option based on what the other options are. While change is something that will always happen it doesn't have to be as drastic as what NPS is proposing. More education is needed in getting with people on taking care of the area. So many businesses will be hurt by your proposal. So many people will be turned away from coming to the area. Having permits for riders is ridiculous. So many other states have gotten rid of bridle tags and here NPS wants to bring it to Missouri. What once you have turned off all the riders to the area and the damage is done to business then it will be dropped? Same as has happened in other states. More resources are needed in this area to accommodate users. The answer is not limiting the area to be used it is growing the accommodations to meet the needs of the users. More campgrounds for special interests, more vaulted toilets, etc.

**Correspondence:** First, I wish to thank the National Park Service for putting forth a very good and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a huge positive step forward from the present.

However, Alternative B does not go far enough. I would strongly recommend the adoption of Alternative A since it provides additional needed protections for the rivers.

Most importantly, Alternative A closes illegal roads and restores natural conditions to 50 miles of these roads. It also closes 65 miles of undesignated horse trails and adds no new stream crossings. Finally, it bars vehicle access to gravel bars. All of these actions would prevent further degradation of both the rivers and the riparian areas.

**Correspondence:** Dear Park Supervisor,

Please protect and preserve the Ozark National Scenic Riverways from degradation by unauthorized ATVs, horses, and motorboats. They are more than a local playground, they are a National Resource that cannot be duplicated or replaced. They should retain a high quality natural character for hundreds of years and many future generations of US citizens and international visitors alike.

I have greatly enjoyed taking my private canoe to the float the rivers dozens of times each year for 25 years. It is healthy to be in nature, to watch the clear spring waters, listen to migratory warblers and ducks, study the plants and aquatic wildlife, and to listen in a motor-free environment. I practice "leave no trace", respect the land and other people. I do all I can to support MDC and other conservation organizations to preserve our natural resources.

More and more I am shocked at the over-use of the rivers by fast motor boats that make wake on the river banks, large parties of trail riders whose horses defecate in the river and erode the land, ATVs that tear up the gravel bars, and nudity and extreme drunkenness by canoeists. There seems to be little regard for regulations.

Recently, I was e-mailed a video made by local men of the Ozark area. It made a poor argument that the local people should direct the use of the river and not be influenced by "ignorant" urban outsiders that did not know anything about the river. This video included promoting a commercial tour guide motoring into Pulltite Spring and Cave Spring on the Current River.

Here is a link to that video. It includes names. <http://ozarkareanetwork.com/localnews/?p=28661>

I know you are relatively new to this position. I hope that you will see the job as a National responsibility to protect the resources under your care, more than to be pressured by local users only. Your decision will have a permanent effect on these amazing rivers.

Respectfully yours,

Barbara Van Vleck

**Correspondence:** I support the NPS-preferred Alternative B. I disagree with those who think that those who live outside the area shouldn't have any voice in the management of ONSR. The national significance of the area was recognized with the enabling legislation which established this first protection of a river system in the United States. If direction to management is left totally to those with economic or pure recreation interests, the resources will be further degraded.

Those uses which threaten the world class resources of the area, particularly the aquifers and cave systems, as well as the water quality of the rivers, must be mitigated. There are far too many ATV trails, campsites and river access roads that have been developed by illegal use. This somehow needs to be addressed. Enforcement is not the total answer. Some effort and funds needs to be toward obliteration, etc. I'm not sure another Roads and Trail planning document with public input will be effective. This GNP should give adequate direction to take the necessary action.

Another issue which needs to be addressed, is the numbers of users on the rivers: both tubers and canoeists. In some cases the rivers have become so crowded with people, the total visitor experience is negatively impacted.

I hope that the horses involved in the Trail Ride at Eminence is better controlled. The levels of e. coli in the river used to reach dangerous levels in past years.

Vehicles on gravel bars should only be allowed in very limited and designated places. Vehicles should never be allowed in the rivers except at a designated ford. The same with horses. I agree with limiting crossings.

I'm not sure about additional campsites being added. Maybe to better delineate some that are already being used. Also, where are horse trails being added? Is this necessary?

**Correspondence:** I want to state for the record the "NO ACTION " plan is what is best for the Current river basin area that Is included in the National Park Service plan.

To address some of my concerns regarding the different areas of problems that the NPS says needs to be changed..

Why is it that Wild horses make their own trails and if recreations horse back riders come across horse trails made by these wild horse and use them to ride on .... Why or how would stopping recreational horse backriding make any impact on our rivers and the land around it ?? Wild horses have and will continue to use NPS land and they make NO impact on land ...

Second As a retired Water Patrolman , I know the problems and continuing issues with the NPS and their Park Rangers. They do NOTHING ...regarding law enforcement. THEY MAKE NO ARRESTS , unless someone has parked on the grass , or have gotten off some roadway in an open field , Run people off camping areas or gravel bars where people have camped for hundreds of years.. It seems they want to do things that only drive the local people away from building a good relationship with themselves and the NPS

As a law enforcement officer I remember working in different locations on the river ways on planned enforcement actions for drugs and alcohol situations..

Only to have the NPS Rangers tell us the couldn't write tickets or make arrests.. They would only assist with transport or observation to promote the arrest of violators...

This mindset has continued even today with practically no law enforcement action taken on the biggest problem on the river ways ...The litter, nudity , drug and under age alcohol abuse, assaults rapes all have continued to get worse with no one to address these issues except the occasional participation from the Mo. Highway Patrol .

They do address all of these issues and make arrests .What is a mystery for me is What exactly do Rangers do ?? Taking a look at their arrests , complaint calls , and evidence of their daily activity should show why we need them as law enforcement officers.. They are paid by the people and should be seen making arrests and keeping things in check on the rivers . Why is it when someone drowns they don't make recovery of the victims ?? Why do they not work or check boats for intoxicated operators ? why don't they patrol campgrounds in the NPS areas ?? Someone will soon request for the past 5yrs of arrest and complaint records from the NPS on the rangers in the Current river jacks fork area ..

WHAT DO PARK RANGERS DO ALL DAY ?? I think lots of these issues regarding the Gen Man Plan could me headed off if Rangers were REAL LAW ENFORCEMENT OFFICERS and work to make NPS a safe family place to go for all .

My thought is The NPS rangers are NOT law enforcement officers and don't conduct themselves in a manner to stop any of these issues.. To prove these comments , IM sure the arrests for the last five or six years or more can be obtained though proper channels ..

Stopping local people from using the riverways, closing horse trails, shutting down river access, and stopping boat use on the upper end of the river due to someone from Colorado or some other far away place ,who never has visited or used the river is a complete injustice to people. I have one more comment and that is how people will know if these Comments are actually being counted correctly ?? or even considered ??? Is there someway each one of the comments can me verified to make sure everyone is being heard ?? What would keep this comment I just wrote to just be deleted and not counted ??

Im thinking due to the way this is being done, I have to depend on someone from the NPS to be fair and honest to hear not only my comments but hundreds of others .... Government trust is something at this point something most of the general population DOES NOT TRUST ...

NO ACTION IS THE ONLY ACTION TO TAKE.....

**Correspondence:** The NPS proposal for the Ozark Scenic Riverways is a much needed proposal which I heartily support. I have been a "river rat" in years past, organizing float trips with friends, and have stopped doing so because of bad experiences having to contend with noise and intrusion from ATVs and motorboats, which I feel have no place in a protected area. It's bad enough having your natural experience ruined by the noise, but the effect on the environment is really bad. My husband and I both go to places like the Current River and Jacks Fork to enjoy nature, and we hope that the NPS Management Plan will succeed and return this area to the one we remember from years past.

**Correspondence:** To Whom It May Concern:

In the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS, you have an opportunity to improve the management of a unique and valuable area that will provide enduring resources for future generations of visitors. Some obvious benefits to the NPS and the citizens it serves could include increased revenue from tourism, increased educational opportunities, and improved habitat for game and non-game animal species. Another great result of improved management of this area could include the recognition of this area as an exceptional example and precedent for future management revisions.

I recognize that each of the various action alternatives would benefit certain groups of potential users and constrain others. As an avid hiker, fly fisherman, canoer, and camper, I realize the benefits of improved access and facilities. At the same time, I also appreciate the benefits presented by wilderness areas that offer few or no improved facilities. Before moving to Missouri, I have spent my life living in Michigan, Montana, and Alaska. In each of these states, I was lucky to enjoy their vast and wild spaces. I speak for myself, my friends, and my family when I state that we would all truly love to have wild and unimproved areas to enjoy in Missouri.

I appreciate your request for public comments, and thank you for considering mine. I support Alternative A as described in the Draft General Management Plan / Environmental Impact Statement.

**Correspondence:** Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless I believe Alternative B could be better. The Missouri Sierra Club recommends the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:  
â— Closes illegal roads and restores natural conditions to 50 miles of these roads;

â—‹ Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
â—‹ Bars all recreational vehicle access to gravel bars.

Let's take advantage of this opportunity. Let's not break the promise we made to future generations when the Current and Jacks Fork Rivers were designated America's first National Scenic Riverways in 1964.

**Correspondence:** There is no way to "improve" the wilderness areas left in the United States. I ask anyone who doesn't agree to find a natural place here in Missouri and look at it differently. By becoming aware of the "space" in your vista as well as the things seen as objects, I believe you will understand why some people believe that the natural world is divine.

In my youth my family spent time every summer on the Current River, at Owl's Bend, and I know that places like these, as this one was then, carve a deep place in us where we can relate not only with the world around us but with one another with compassion. Noticing the space in the world brings us closer to reality.

Getting rid of such places for another purpose is like replacing ourselves with robots. From the bottom of my heart I ask you to protect our divine areas for those of us now and those in the future, because they are crucial to our humanity.

Comments on the Ozark National Scenic Riverways General Management Plan

Dear Sir or Madam:

Thank you for your fine research and your excellent detailed document, "Draft General Management Plan / Wilderness Study / Environmental Impact Statement Ozark National Scenic Riverways".

Our country's scenic treasures must be preserved. Ozark National Scenic Riverways is one of our greatest treasures.

Sadly, they have been degraded through overuse and inappropriate use. It is past time to restore these riverways to a pristine condition so we can enjoy them now and for many generations to come.

It is time to close illegal roads and restore them to a natural condition..

It is time to limit motorized access to the riverways.

It is time to limit overuse by horses.

It is time to limit over-commercialization.

It is time to bring to justice those individuals, businesses and government entities that continue to degrade our riverways through illegal use. They should not be rewarded for their past bad behavior.

While the preferred alternative "B" would be a step in the right direction, it does not go far enough. Only Alternative "A" can provide ONSR the protection it needs to recover from years of misuse.

Yours sincerely,

Tom and Helen Sager

**Correspondence:** Dear Sir or Madame:

I must first render my most sincere gratitude for a thorough study on a precious resource here in south central Missouri as well as in the entire United States. While not as breathtaking as the Grand Canyon, the beaches of California, or the mountains of Colorado, the Scenic Rivers of the Ozarks are a unique ecological, recreational, and beautiful area of our country.

I do not support any plan that does not take into account all evidence available. The study was exhaustive and complete.

If a new plan must be implemented, I agree with the NPS preferred plan B. While it may be a bit more restrictive for some users, it is the most responsible and equitable for the use and protection of the area.

However, I have some concern about the use of 'climate change' as a creditable metric for decision making. I am thankful that "climate change" was not a determining factor in an otherwise well crafted product.

Sincerely:

**Correspondence:** I totally vote for plan A. We need to protect this precious waterway. My family goes there every summer, and I am definitely noticing the effects of too may horses, motorized vehicles, illegal building. I see the ground that has been plowed to make roads for these motorized vehicles and it are so ugly, and polluted, and bare. When we canoe in the water it is so peaceful and then all of a sudden a motorboat dashes by and the kids are in danger, the oil from the boats are making their marks, and the peaceful canoe trip is destroyed. The horses poop is destroying the pureness of the water..way to many horses.  
I come from Los Angeles originally and watched the polluting of the ocean where it is now too dirty to swim. When I discovered these waterways I was so very pleased to haver a clean waterway where we could vacation safely. My children come back to Missouri every summer to canoe on the Current and the Jack's Fork.I beg you to please pass plan A so we Missourians (and other persons also) can continue to enjoy a wonderful resource that is currently in danger.  
Thank you.

To whom it may concern,

I have been fortunate to explore a number our nation's finest national parks and forest service wilderness areas. Yellowstone, Acadia, Grand Teton, the Smoky Mountains, the Wind Rivers in Wyoming, and the San Juans in Colorado are some of the magnificent places that I've experienced alone and in the company of others.

While a walk along the Current or a float down the Jacks Fork will not include a panorama of alpine peaks or a sunrise over the Atlantic, close inspection reveals beauty no less sublime. Water, transparent as air, dances down riffles and into the aquamarine depths along an ancient bluff line. Delicate fronds of ferns cascade from a shady alcove, while just across the river, the bold blossoms of prairie dock glow in defiance of the scorching sun. People I've taken here, people with whom I have stood atop the Continental Divide deep in the heart of Wyoming, are as moved by subtleties of Blue Spring as they are by impossible heights of the Rockies. The rivers, as you know, are a national treasure.

Yet, we allow this treasure to be diminished. Quiet enjoyment is displaced by the almost constant drone of jet-boats.

The woods, the fields, the gravel bars, and the river itself are all scarred with ATV tracks. There are no jet-boats screaming up and down the Snake River at the base of the Tetons and no fleet of ATVs tearing up any beach at Acadia. Float the Current or Jacks Fork and you'll see this in spades.

Just this past spring, my wife, my two young sons, and I rounded a bend near Lewis Hollow below Akers only to be greeted by gunfire on one side of the river and a schoolbus, two RVs, and five other vehicles on the opposite gravel bar. Years ago, there was no road to this spot. Now there is a 10 foot wide, eroded gash through the forest, all the way to the river. There are frequently RVs parked along the river bank at Twin Rocks. An old forest track at the "jumping rock" above Pulltite now serves as a full blown jet-boat launch site. And the list goes on. The river is commandeered by the few to the detriment not only of the many who come to experience the rivers as they were meant to be, but to the obvious detriment of the rivers themselves. We permit abuses in the Riverways that would not be countenanced in any vaguely comparable location. There is no excuse for this.

It is for these reasons that I write in strong support of most of the Park Service's draft management plan. The Park Service's preferred alternative forges a workable compromise among the competing demands on the rivers. If the rivers are to remain relatively pristine in perpetuity, you simply cannot permit the continued proliferation of unauthorized roads along the rivers. The Park Service's preferred alternative addresses this issue.

The preferred alternative falls short, however, of adequately addressing the use of jet-boats, particularly on the Current River between Round Spring and Two Rivers. This stretch, along with the upper Jacks Fork, represents perhaps the finest stretch of float stream in the state. If motorized boats are to be permitted for the sake of motorized access, such access can be achieved, as it is on the Buffalo River, by boats equipped with low horsepower motors. Some say that further limits will end a long-standing tradition of jon-boating the rivers. This is absurd. The famed wooden jon-boats of the Ozark rivers were never equipped with modern jets that allowed them to virtually fly up and down the river. Instead, the only discernible reason for allowing jet-boats or any other high powered motorized vessel on this stretch of the river is to satisfy the demands of a miniscule minority of river users who desire not only access, but access via a high speed joyride. Limiting the use of jet-boats above Two Rivers is no more a limitation on access than requiring people to walk down the sidewalk rather than drive. The Riverways were not set aside to ensure some imaginary "right" to an aquatic superhighway; but on most days from May through September, that is precisely what it has become.

Throughout this process, the park service has gathered and received loads of data demonstrating the exponential increase of motorized use in and along the rivers. Those who dispute these facts rely on hyperbole rather than reality. This is because the increase in motorized use is an irrefutable fact and demonstrates conclusively the need for reasonable limits on motorized use.

There is, however, a more fundamental issue than the facts and data demonstrating the wisdom of reasonable limits, and it is this: in the long run, it is our shared experience of the rivers that will dictate how we choose to treat the rivers. The decision you face is not one that can be made solely on the basis of numerical reduction. To do so would relegate the rivers to the status of a mathematical abstraction; a set of extrapolated data, a point on a graph, a simple resource to be used according to popular whim.

To make the wisest decision, you must account for not only the numbers, but the reason why so much time and toil has been expended on gathering those numbers. The reason is the rivers themselves and the unique, increasingly scarce opportunity they provide for potentially world class outdoor experience. The legislation establishing the Riverways recognized these values and must be re-affirmed. When the rivers become, as they have in many places on many days, nothing but an outdoor amusement park, people come to see them and treat them as such. One need not spend much time on the rivers to see this. If this continues, the time is not far off when most people have no recollection of a peaceful day on the river; no deep, personal conviction that the rivers are a treasure at all. If that happens, degradation will continue and the Riverways will become a national park in name only.

There is an easy way to avoid this. Adopt the preferred alternative, with a slight modification to limit the use of jet-boats and other motorized vessels to areas below Two Rivers. There are hundreds of thousands of acres of reservoirs in the Ozarks that are open to power-boating. There are hundreds of miles of Ozark rivers to run jet-boats as one sees fit. Conversely, there are precious few miles set aside for the overwhelming majority who seek a quieter experience. Please, take this opportunity to do what is right both for the rivers and the vast majority of river users.

Limit the use of jet-boats above Two Rivers.

Sincerely,

Eric S. Peterson  
St. Louis, Missouri

**Correspondence:** As a member of the Friends of Ozark Riverways(FOR), the Missouri Parks Association and the Sierra Club I agree with FOR's recommendation that agrees with NPS that alternative B provides the most balance among the 3 alternatives. I also believe the plan could be strengthened by dealing with scenic easement violations; designating 3430 acres for wilderness management; zoning for horsepower limits and motorized free zones; increasing hiking trails more than is planned; no new horse camp inside the park and methods to significantly reduce horse impacts, including permitting; natural and cultural resource management as outlined by FOR; riverbank issues should be managed with natural solutions and any development have low impact; prioritize solutions for problem areas that does not included more hardened development, but rather - restoration; and finally I support park management that manages it as a national resource focused on long-term stewardship that protects these resources in an unimpaired condition for the public benefit of recreation, education, and scientific value.

I and my family use and appreciate this valuable natural resource as a floater, camper and hiker throughout each year.

**Correspondence:** I have went on multiple camping and floating trips on, and around, the Current River. They have all been really memorable experiences. In particular the natural beauty of that area of the Ozarks really impressed me. I especially enjoyed hiking around the river, and fishing in it.  
After reading the management plans I really think Alternative A is most appealing. To me, one of the best things about the Current River is that many stretches of it have a very natural appearance. It gives you the feeling that you are somewhere relatively untouched by modern development. I believe a lot of people share this same sentiment with me. I am sure many of the people I have traveled with to the Current River do. I am encouraged that your recommended plan seeks to end the continued use of un-designated horse trails and crossings, but I think it is also important to limit peoples camping access by vehicle onto gravel bars. I think this should be limited because people really tend to turn any area near the gravel bars into a parking lot. They forge their own "roads" down to the river. This is just unnecessary and no doubt contributes to increased erosion in those areas of the stream bank where peoples vehicles have driven over them repeatedly.

**Correspondence:** Greetings- -

---

Just a short note to say that my family (from Kansas) has enjoyed visiting the magical environment of the Current River for many years and hope to do so many more into the future. We spent upwards of a week in MO every year and certainly appreciate the many precious differences it has to offer compared to our prairie home state. Long may this jewel (and all of God's creatures) in it be protected by the federal government!

Best wishes,

Dave & Ann Redmon

Manhattan, KS

**Correspondence:** I have been a regular visitor to the Eleven Point River for the past 15 years and make 5-6 multi-day trips a year to the Eleven Point River area. I hope that the Eleven Point River will be included in any type of management plan for the future.

I have camped on the river gravel bars many times, although as I have gotten older, my group of friends and myself mostly rent cabins from local owners in the area now. In the 15 years of going to the Eleven Point River, I have seen a big increase in the number of people that use the river. While 15 years ago, a float trip on the Eleven Point River would be an experience with much solitude and a quiet, peaceful nature experience, it seems that it is a very rare day indeed that one can capture the quiet peaceful experience in nature on this river. My biggest complaint is I have seen a tremendous increase in the number of jetboats on the river. While some jet boat owners are respectful and courteous on the river, the vast majority fly up and down the river with no regard for others, especially those in a canoe. Numerous times I have witnessed a family with small children get turned over in a canoe by the wakes from an inconsiderate person operating a jet boat that flies by with no regard for others on the river. THIS IS A COMMON OCCURENCE, NOT A RARE EVENT.

I am in favor of eliminating all jet boats on the stretch of river that is part of the Ozark National Scenic Riverways. There is plenty of river downstream for people to enjoy the jet boats. There should be a stretch of river that visitors can expect to have a quiet, peaceful experience of floating and camping out on a gravel bar without the constant disruption of jet boats racing by.

I have no problem with small prop boats of horsepower or less that make very little noise, very little wakes, and do very little damage to shorelines.

I have also seen an increase of unauthorized access points on the river and ATV paths. Law enforcement should and must put an end to this illegal trespassing.

I will say this - it is my expectation and the expectation of others who feel the same way that I do, that NOTHING will be done about the rampant abuse of jet boats on the Current and Eleven Point Rivers because there are now too many LOCAL jet boat owners and the legislators in that part of the state will never make a decision to protect the streams and the peaceful experience that some of us want because no legislator is going to risk VOTES to do the right thing.

In closing, the Eleven Point River, Current River, and Jacks Fork River are truly natural gems in Missouri. Long ago, our predecessors made a decision to protect these natural resources for future generations to enjoy. I am afraid that now our legislators and natural resource overseers have lost the GUTS to DO THE RIGHT THING AND PROTECT THESE RESOURCES.

Please consider making the necessary decisions to return these areas to what our predecessors intended them to be for future generations.

Mark Vogt, Ste. Genevieve, Missouri

**Correspondence:** I enjoyed a wonderful weekend with my son canoeing the Current and Jacks Fork Rivers in Missouri a few years ago. While seeing bald eagles, otters, and deer was great the damage and disturbances caused by excessive horse and other traffic detracted from the "wild and scenic" experience. I therefore urge the NPS to adopt Alternative A to maintain this national resource in a more natural state, so that current and future generations can also enjoy the pristine beauty.

**Correspondence Type:** Web Form

**Correspondence:** I am writing in strong support of the Park Service's draft management plan to limit the use of large engine powered boats on the Current and Jacks Fork Rivers. I am also in support of protecting the unique riverbanks and gravel bars from the harmful erosion caused by vehicles that barrel through the woods to gain access to remote spots on the rivers.

You will no doubt note that I am what they call an interloper. I live in New Hampshire where we (like you) have a proud tradition of enjoying the great outdoors, so why should my views on the management of natural resources so far away be considered at all?

Before I answer this question a bit about me. I went to school in St. Louis and learned to love the Ozarks. I have been on many a float trip over the years and have been saddened each time I hear another engine angrily buzzing on the river like a giant mechanical mosquito. My last trip was this past summer to celebrate my 40th birthday. I brought my wife and we joined two dear friends who are Missouri natives for a wonderful three day float. The reason I keep coming back is I enjoy the unique natural beauty and tranquility that can be achieved by a relatively short drive from St. Louis. I have often thought that the Ozarks rival the White Mountains (and others) when it comes to getting away from the hustle and bustle of every day life. It is a place to enjoy the natural beauty of the world and to recharge my spiritual batteries.

So why should my thoughts be considered? Over the years I have made several trips to your great state for the sole purpose of floating these rivers. I have brought different friends with me from time to time so they could enjoy the experience as well and I have never had a friend who did not rave about it afterwards. In short, I have brought my out of state dollars half way across the country to spend in your restaurants, your stores, and your canoe rental businesses (I have used them all from Two Rivers to Carrs) solely for the purpose of enjoying the beauty of these rivers. When I was in school, back in the mid-90s, I noticed far less motor/jet boats angrily buzzing up and down your rivers and I notice far less trucks lurking on their banks. As the years passed I have continued to take vacations in Missouri for the purpose of floating, but my enjoyment and its draw (at least for me) has decreased as I have felt less and less like I am getting away from it all when I am faced with these machines pushing my little canoe out of the way or leaving us to navigate their wakes. I have seen more and more gashes in the hills caused by trucks and I have had a harder and harder time hearing the pleasant noises of the birds and insects over blaring radios.

I hope you follow through with your thoughtful plan to protect this natural treasure. I promise if you do, I will continue to make trips to enjoy them in a respectful way.

Sincerely,

Jonathan Cohen  
Concord, New Hampshire

**Correspondence:** I recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance is the closure of illegal roads and restoring natural conditions to those 50 miles of these roads; the closure of 65 miles of undesignated horse trails and adding no new stream crossings; and barring vehicle access to gravel bars.

I would also suggest that weekly water quality testing be undertaken for E Coli, any other disease causing organisms, and for any suite of known water pollutants that are harmful to human health and the environment. Those water quality results should then be publicly disseminated to every person that may come into contact with the water so they can make an informed choice of subjecting themselves to health risks.

**Correspondence:** Dear National Park Service,

I have been an enthusiastic visitor to the Ozark National Scenic Riverways for decades. I learned my appreciation for Missouri forests, karst topography, and spring-fed streams and Missouri's varied plants and animals through dozens of hikes, canoeing and camping trips to the Ozarks. My favorite streams in Missouri are the Jack's Fork and Current Rivers while my favorite springs are the Bluespring, Round Spring and Big Spring.

Thanks for the opportunity to comment on the EIS. I would recommend the route of preservation and protection of our river ways by adopting Alternative A. I appreciate Alternative A because it closes illegal roads, 65 miles of undesignated horse trails and prohibits vehicle access to gravel bars. I also think its important to minimize, if not prohibit, stream crossings as this often results in siltation and foreign material left in the streams at the crossings. I urge you to support Alternative A.

Sincerely,  
Mark Bohnert

**Correspondence:** Hello,

I just finished reading the plans for the management plan for Ozark National Scenic Riverways. I find Plan A somewhat encouraging but it truly does not go far enough in terms of conserving our states only national park. So much more could be done in terms of limiting traffic, roadways, and horsetrails which have already led to so much degradation of the beauty of this park. Please consider further action to limit overdevelopment, scenic easements, and overcrowding in general. It should be a place of wilderness as it was intended. We have plenty of State Parks over run with tourists. A national park should be something different.

**Correspondence:** My grandparents raised a family of 8 kids on the Current River at Parker Hollow. The river & land was a source of food, water & recreation. If it had not been for wildlife the family would have been hard-pressed for survival. Now with this day & age I realize that families have other sources of survival. The river has been there for hundreds of years & will be for many more years. The use of it for food or recreation should remain as God had intended it.

**Correspondence:** There are many people in the Ozarks who want to see better management and a family-friendly atmosphere on the National Scenic Riverways. Those that are against the management plan are those that have control over local access areas and are doing a poor job of maintaining the natural beauty and water quality of the rivers. Advocating that the Riverways be "reclaimed" by the state may sound like a good idea, but in reality you can be sure they are not willing to pay for it. The National Scenic Riverways is a state and national treasure. It needs to be controlled by those that genuinely care and want to see it thrive for all who come to enjoy and respect it. Those that are squawking the loudest on this issue are those that only want to make a fast buck and a quick profit. They could care less about maintaining this beautiful treasure for future generations.

Thank you for your consideration on this very important issue.

**Correspondence:** I am writing concerning the draft General Management Plan for the Ozark National Scenic Riverways. After reviewing the alternative plans, I would urge that Alternative B be adopted. This alternative would enhance opportunities for visitors to learn about the park's natural and cultural resources, and provide a balance of diverse recreational opportunities with increased opportunities for education and appreciation of park resources. To reduce motorized intrusion it would close undesignated roads and access points, restore 45 miles of such roads to natural condition, convert 10 miles of roads in primitive zones to hiking trails, and reduce and designate campsites on gravel bars open to vehicles. To reduce equestrian overuse it would add 35 miles of designated horse trails, close and restore 65 miles of undesignated horse trails and unauthorized river crossings, improve the design of the 23-mile-long currently designated horse trail system to avoid sensitive areas, establish a permit system for horse use with the park, and may allow for designated horse camping sites To improve visitor experience there would be a new learning center and visitor contact station at Powder Mill; two additional campground at existing day use areas at Akers on the Current and Blue Spring on the Jack's For; additional trails; a resumed oral history program, discovery sites, and enhancement of archive and museum collections; and strengthened monitoring, research, and preservation projects. The Cedar Grove low water crossing would be replaced with a high-water bridge. Waste systems in the park would be improved. There are staffing increased under this alternative as well.

I believe that Alternative B provide the most balance among the three alternatives. Several additional improvements I agree with include:

Maintenance of scenic easements and enforcement of easement violations.

Horsepower limits with inclusion of motor-free zones.

Increasing the number of hiking trails overall.

Development of a concession horse camping operation outside the park.

Restoration of impaired riverbanks.

Continued preservation of undeveloped backcountry/wildland areas, including the use of prescribed fire to manage wildland quality.

**Correspondence:** Superintendent, Ozark National Scenic Riverways P.O. Box 490 Van Buren, MO 63965  
Subject: the General Management Plan

Dear Superintendent:

I am writing to comment on the draft management alternatives for the Ozark National Scenic Riverways. In 2013 we witnessed the United States federal government experience a government shutdown. In that shutdown the overextended federal government identified services that were not essential to the operation of the federal government. Parks, waterways and memorials were deemed nonessential. In a time of an over extended federal government this is an excellent place to say "NO new action be taken", at minimum. In fact I would suggest that in light of the federal government's actions of depriving citizens of the use of "our citizen's parks, memorials and waterways" The federal government should no longer be entrusted with these public properties. I suggest that these properties be turned over to the care of the states in which they are found. Therefore I feel there should be no increase in federal activity or authority relevant to proposal A, B, OR C "NO new action be taken". Response to Question 1: "NO new action be taken" Response to Question 2"NO new action be taken" Response to Question 3:

"NO new action be taken" Response to Question 4: "NO new action be taken"

**Correspondence:** Hello I love our National Parks and I come to ONSR the most of any unit. I have been going there since the early days. My first time was in 1972. I have seen many changes over the years and most of them have been for the worst. We need more Rangers. Cedar Grove is dangerous after dark as it is a "party hole" for local tough guys. There are drug buys. I'm afraid to camp there anymore. I have had trouble there before when a young girl came into our camp who was trying to elude some guys that she said wanted to rape her. Next on my list is the fact that the concessionaires are licensed to put in way to many canoes. I can't even come there in the summer. It's been like that for years. I have seen the river with so many canoes in it that you could walk across the river by stepping in the boats. It's grid lock. These concessionaires, contrary to popular believe don't have to become millionaires in year or two. Thirdly there are to many ways that people can get ORV's down to the river. They load them up with party supplies and they ride them back empty. I have seen the debris left over many times next to the river at the end of the ORV trail. Next I would like to say that outboard engine displacement should be at a minimum on the Current from Round Spring on up to Baptist Camp and on the jacks Fork from Eminence on up to the prongs. I am delighted to read that portions of the ONSR are being considered for Wilderness status. Thank you.

Ozark National Scenic Riverways  
404 Watercress Drive  
PO Box 490  
Van Buren, MO 63965

To whom it may concern:

Thank you for the opportunity to comment on this proposal for the Ozark National Scenic Riverways (ONSR). We appreciate the time and thought that goes into developing a range of alternatives.

One of the most critical issues facing ONSR is the loss of staff to manage and protect this precious landscape. While we like the most ecological option (Alternative A), we don't believe this option-without additional enforcement- will lead to the results needed to protect ONSR and allow visitors to enjoy it fully. Alternative B seems to provide

the greatest long term protection for ONSR particularly if some of the modifications mentioned below are incorporated into the plan.

Please ensure the easement remain in place and provide access to visitors. That said, monitoring and enforcement of the easements are critical to the protection of ONSR.

Wilderness protection is the gold standard for ensuring that future generations have access to wildlands. We support managing 3,430 acres of ONSR as wilderness even though official designation is beyond the scope of Alternative B. These lands can be managed with controlled burns to protect the lands and move toward restoration of natural process until such time as Congress acts to include them in the Wilderness System.

We support the limits of motorized use in Alternative B. Motor-free zones are important to ensure that all types of users have access to the type of recreational experience of preference. Quiet recreation is important. In particular the area across from Welch Spring Park needs to be closed to motor vehicle use and the unauthorized roads and traces restored to their natural condition.

Hiking is a popular activity for many of the ONSR users. Please increase the number of hiking trails that afford quiet recreation. The 15 miles of additional trails proposed in Alternative A should be the minimum expansion of the hiking trail system. We encourage you to consider converting even more than 15 miles of unauthorized roads in primitive area to additional hiking trails.

Camping is a high-impact activity. Yet, camping close to ONSR is important for people to really experience the area. Please consider working with local business/agencies/groups to establish camping outside of ONSR. This makes camping possible and still protects ONSR.

Restoration of the landscape must be a cornerstone of the plan. While some protection is required for archaeological sites and structures, these should be limited to those that the public can view from designated routes. Restoration, not transforming the landscape, must be the priority. Protect riparian areas and restore upland meadows and woodlands to their natural state. Restoration allows ecosystem function naturally. Artificial manipulation of the area destroys wildlife corridors and ecological process critical to a healthy system.

Avoid development around riverbanks. Healthy rivers are foundational to a healthy ecosystem. Do all you can to bring the river back to its natural condition. This, not engineering feats, is what we need to save ONSR for future generations.

Ensure monitoring and control of erosion caused by motor vehicles. Unauthorized roads leave ruts and lead to erosion. This damage leads to loss of natural conditions and deprives visitors of opportunities to view an intact landscape instead of a maze of eroding roads.

ONSR is an important tourist destination and is important to the local economy. A well-managed park that allows visitors the opportunity to be awed by its natural beauty is worth protection. Protection will not occur without management that protects as much of the naturalness of the area and that provides adequate monitoring and enforcement to ensure the protection of this natural jewel.

Sincerely

Billie J. Hughes (Nutrioso, AZ)  
Russell Winn (Nutrioso, AZ)

**Correspondence:** As a citizen of Missouri I wish to voice my support for the proposed General Management Plan which will strengthen the management of the Ozark National Scenic Riverways. I am now in my late sixties and have floated both the Current River and the Jacks Fork River many, many times in my life time - even before they became Ozark National Scenic Riverways. Many of these trips have been three day canoe trips with camping on gravel bars. These trips have increased the quality of my life immensely - in fact these resources have been instrumental in deciding to live my life in Missouri. During my last few trips I have noticed a degradation in water quality due to crossings of ATVs and roads leading to the water's edge. This has also negatively impacted the feel of being in a wild area. Without increased regulations, you only have to observe the Black River near Johnson Shut Ins over the Labor Day weekend to see what might become of these wonderful river resources. Yes, these rivers must be used and enjoyed by citizens but not indiscriminately so. We owe it to future citizens to also preserve the wild nature of the rivers. These two objectives can only be met with increased management.

**Correspondence:** I believe that NPS recommended Plan B if adopted would be ok. HOWEVER, I PREFER PLAN A as it gives additional protections I believe our rivers need. I have lived in the Ozarks for many years and cringe at some of the abuse I've seen in the National Park located here - our beloved Current/Jacks Fork National Scenic River. Three wheelers driving as they please; overuse of the forest and river by the huge Emminence horse back rides, etc. I THEREFORE PREFER PLAN A MAINLY FOR THE FOLLOWING REASONS:

- It closes 60 or more miles of undesignated horse trails

(I've never participated in the Eminence trail ride but once when we were in the area during one, my husband and I went over to the camp to see what it was like. Shocking. Hundreds of horses, trampled ground, poop, etc everywhere. I can only imagine what gets in our streams. I'm only thankful that our place is upstream from those

gatherings, NOT downstream.

- It adds no new stream crossings

(More times than I can count, I've seen 4-wheel drive vehicles and motor cycles and 3 wheelers just cross a the Jacks and Current and others anywhere they please)

- It closes illegal roads and restores natural conditions to miles of them.

(I've lived in the Ozarks for over 30 years - and know there are many such illegal roads - they should be eliminated)

- It bars vehicle access to gravel bars

(I've seen jeeps stuck in gravel bars after getting to them by careening thru the forest OR driving off the designated river access pad across gravel bars in less than optimum conditions)

Thanks for all your hard work. Our Rivers are among the best in the country. We need to protect them from ever more abusive use.

**Correspondence:** I am writing as a concerned citizen regarding the effects the Ozark National Scenic Riverways, Draft General Management Plan, will have to the Current and Jacks Fork Rivers. Shutting down access to these rivers will have devastating effects on our community. This Draft General Management Plan makes no economical sense or plain common sense. This Plan sounds like it is part of the United Nations' Agenda 21. Confiscation of private property under the guise of "sustainability." These types of tyrannical gestures are being implemented all around our country. This Plan could seize private property basically on a whim, using "sustainability" as the excuse. I strongly recommend that the National Park Service take the No-Action Alternative to prevent any additional restrictions on our public lands.

**Correspondence:** I would like the NPS management plan to be left UNCHANGED. My family and I have enjoyed canoeing, camping, boating and fishing the Jacks Fork and Current Rivers for many generations and have seen many changes in rules and regulations on these rivers. I feel our rights to these Recreational opportunities are being infringed upon more and more by government-lead officials trying to take away our citizen's rights to tax-paid government lands! Please leave our recreation alone! We love camping on gravel bars as well as in maintained NPS parks, fishing in our favorite spot, and boating in all areas! Thank you for allowing public comment, I pray you hear what our native Missourians are saying in this matter and make decisions based not just on what government wants but what We The People want also.

**Correspondence:** I support the NPS Preferred Alternative B. Designating low density use areas or a designated family float only area on the river is a great idea. Perhaps it would be possible to keep the loud and intoxicated partiers in one area. Floating with a girlfriend, wife or family during this time is only inviting verbal abuse from these groups. To truly enjoy the Riverways, try floating in the off season. By this time the loud obnoxious groups are gone. The peace and quiet during this time is what OZAR was set aside for. The wildlife is also abundant then. Would it be possible to set up quiet zones where loud offensive noise is restricted? I also believe that the density of boaters should be regulated. Summers are pretty much bank to bank floaters. I don't know how you would eliminate alcohol entirely. Maybe just the abusers. I enjoyed a beer or too myself when floating. I support closing back country roads and river crossings but good luck in working with the counties in developing a partnership. Limiting organized horse groups would help in keeping the water quality higher. Good luck in implementation of the NPS Preferred Alternative B.

Tell that Chief of Maintenance of yours that he needs to get to work and quit goofing off. Just kidding.

**Correspondence:** i feel that no action would be the best option. I have been on the river my entire life. My father owns a cabin above williams landing. He inherited this cabin from my grandfather. I will eventually inherit this cabin. I do not believe there should be any more road closings or any further limitations on motor boats. I don't want any access points closed. There have been numerous times that I have assisted floaters who have flipped over and lost their possessions. This past summer a man and women was stuck on a rootwad above jerktail landing. My wife and i was heading up the river, the man could not swim and was hanging on to the rootwad. Their canoe was completely sunk in fast moving water. i used my boat to rescue the man who was scared to the point that once to the bank he was shaking. I then took my rope off my anchor and tied it to their canoe and pulled the canoe out. while during the process of pulling the canoe out my front handle broke off my boat. once we got both the man and wife and all their possessions that we could find we realized that they did not have a paddle. I gave them my own

personal paddle so they could make it to 2 rivers.

I would also like to say that if the rivers have gotten so out of hand, then more patrolling of the rivers by the rangers should be utilized. You can't drive down the highway over 100 miles without seeing a highway patrolmen but you can go practically anywhere on the river and very seldom will you see a ranger.

**Correspondence:** I do not agree with the proposed plan. I don't think it is very well organized. When attending a meeting, any questions asked of the park service employees were not answered in a straight manner. They had no real answers. They said that area was something that needed working on. That should have been worked on before

all of this took place. I feel that the current plan should stay in place. For one, I feel that the government already has too much control on the park now. It is going to hurt the livelihood of local residents who have resided here their whole life or who have moved here to start a new life and will be more than likely have to close their business because of the repercussions of the proposed plan. I think the group of people who have come up with this plan don't even live here, and have too much time on their hands getting paid way too much for it. The impact on local economy will be bad. Not only will more people have to depend on state and federal aid because of lack of jobs (i.e. food stamps, housing), but there will likely be more crime as a result of less jobs should this go into effect. God made this land for everyone, there should not be restrictions on it's use because some tree hugger wants their way and has never or probably will never have to experience what it' like in the real world of the working man.

**Correspondence:** I'm for the no action plan. I've been boating on the current river since I was just a kid with my family. We spent a lot of weekends camped out and have always enjoyed being able to go down and boat ride, fish, and swim. My personal view on the HP restriction is it just going to make things worse. If a jet boat is underpowered it makes it harder to maneuver, causes a bigger wake because it can't get enough speed to properly plane out(get on top of the water. Plus you've got people that bring there families and friends with them, they need all the power they can get to bring them along. What if a family has a bunch of kids it's not like they can leave a few behind while you take the others up stream to drop the off to go back for the others. I don't know how many times boater have had to help canoers out. Whether it someone tipping over and losing there stuff or some one getting injured. I know I've retrieved items that floated down river while they try to get there canoe back in order. Most of the time they're to drunk to even say that's, but I still make an effort to help. The canoe rentals need to better inform canoers about jet boats. Most people don't realize that the slower a boat goes the bigger the wake behind it gets. They also don't understand that a jet boat can just stop and start anywhere. If the water is to shallow you have a chance of grounding the boat. Most people have \$10,000 or more invested into a boat and I know I don't want to be beating the bottom out of my boat because a canoers can't share the river. Even if you don't ground the boat there still and chance of sucking up gravel which could ruin a \$200 impeller and a \$50 liner or a \$350 shoe. If the canoe rental would explain those few simple facts it would help boaters and canoers relation on the river.

As far as the erosion goes what about every time the river floods? It gets huge. That's a lot of water and a lot of force. I'm sure the flood causes more erosion then horses, atvs, and boats cause. Entire bends in the river can change because of a flood. Can a horse, atv or boat do that? People complain about the horses crossing the river and how they cause erosion and defecate in the water as they cross. If we ban horses from crossing the river what do we do about the population of wild horses? Do we exterminate them? Or the deer or the elk that are sure to make there way

on to the ONSR sooner or later?

I don't feel that it's right for people that don't even live in this area to be able to tell us that we can't enjoy what we have in our back yards because they don't like the way we do it. They want to change a way of life for us just so they can have one weekend of relaxation.

When I'm older and have a family of my own I want to be able to take them to river and show them how I spent my time growing up on the Current river not just be able to show them pictures and tell them stories of when you could boat ride on the Current river. That's just my 2 cents on it.

**Correspondence:** I favor the NPS' preferred plan and would even be amenable to a more restrictive plan. The increase in population coupled with more intense park usage demands that reasonable restrictions and regulations be implemented. As a sixth-generation Carter Countian, I do not agree with those claiming riparian "rights" bestowed by local tradition. When the park was established a ten horsepower prop motor on a wooden john boat was considered to be more than adequate for motoring up river. That is tradition. The proposed limits do not infringe upon that. The park is a national park- -not a county park- -and should be administered under a management plan which will allow reasonable use, restrict abusive practices, and, in so doing, preserve the natural beauty of the rivers for the enjoyment of all citizens, present and future. The preferred plan is both reasonable and appropriate.

**Correspondence:** Limiting or preventing access to the Current River will be truly devastating to everyone that live in or around the surrounding areas. People will lose incomes even jobs because many businesses rely on tourism. Many locals have spent every summer of their lifetime fishing, camping, and boating on the river. My family meets at the same part of the gravel bar every sunny Sunday after church lets out for a barbeque and a swim. Every year we dedicate one weeks vacation to camping at the Log yard gravel bar and boating up and down the river with our two children. It is so peaceful on cloudless Summer nights around the bonfire roasting marsh mellow listing to the frogs and river flowing in the background. This is the one place where it seems you can disappear from the chaos of the world and one of our best freedoms as an Americans. Changing anything will crush our community and personal lives. As locals we preserve and care for the river and its surroundings.

**Correspondence:** I would like to express my concern in regards to the horse trail proposal. As a local resident I would have to express that I see a lot less horse issues causing environmental issues verses the thousands of human waste left in the Current and Jacks Fork Rivers. I am not asking or seeking to stop people from using the river ways, I am asking to reconsider you move to stop or restrict local equestrian people who try to respect and obey all those they come in contact with in or near the NPS. I realize there are those who do not obey the rules and for those who do not deal with them in the proper way and continue to allow those who do to enjoy to continue to ride without fear of being harassed for enjoying their freedom to do what they enjoy as much as the person floating the beautiful river ways. If there is a change that needs to be made to he trails and crossings wouldn't it be better idea to glean some valuable thoughts from the trails ride campgrounds owners in whom some may feel have the biggest impact on the areas in question

**Correspondence:** In response to the accessibility of vehicles on selected gravel bars I fell would be a slam on the local people being able to go and enjoy the beauty of the Current and Jacks Fork River. I know it would make it easier to just allow tourist to use the gravel bar with out any local people being there but those folks are only here maybe 1-2 times a year and the local people live her year round. What I see in this proposal is we the local people need to stay away or act like the tourist. Drinking, drugging, and acting like animals. Each time I use the river in the NPS I remove all my trash, I make sure I leave it better than I found it and I try my best to respect others who are using the river even though they may not be acting appropriate. In my opinion this is not how the tourist leave the areas they use for the most part. I know there is no way to for the NPS to monitor every inch of both the Current and Jacks Fork Rivers, but I feel there are ways to make the gravel bars open to all whether as a local or a person who come to the area to visit all the counties who will be impacted by this proposal.

**Correspondence:** I am having a really hard time with more NPS control of a place that is and has been a part of my family for over a hundred years. If those people that don't enjoy it the same way we do, they need to just stay away. My Mother's dream was for her children to have a place on Current River to have all of our family functions so we could stay close as a family, and then to see posts that say that our cabin is a disgrace and that it was a scandalous land trade is very hurtful.

It would not ever come to my mind, to see a beautiful cabin sitting on a high bluff and to think- --What an eyesore. It would not matter where I was. I just cannot imagine the mentality of a person that would think that.

I am very disappointed with what our country is coming too. Government takeover is out of control.

This all began in 1966/67, for my family. They took land from my family then and we are still having to fight for our right to hang on to what we have. This is getting real old.

**Correspondence:** I would like NO CHANGE on this plan. The Current River has been the summer vacation spot for me for over 20 years and my family's for longer than that. My grandmother was raised on this river and my father has raised my siblings and I to know this river as our "second" home. Further more, my husband and his family have been raised in an area where the river is practically in their back yards. To have this part of our lives taken away would be devastating. It would take away the opportunity for many people to enjoy and be apart of one of God's greatest gifts to Missouri. I for one would love to have the chance to raise my children to be able to go to the river and learn to love it as I have, the same chance my parents had and their parents before them. Again I would like to see NO CHANGE to the plan. Thank you and God Bless!

**Correspondence:** In regards to the proposal of restricting the use of ATV, UTV and off road vehicles. As a local tax pay and a cancer victim, I use my UTV on roads that are already existing to get to places on the NPS and County because I am not able to walk very far. I have my flag, slow moving sign, county permit, lights and all that a person needs to be responsible in the use of this vehicle. I also have my drivers licenses. I know there have been some issues with under age drivers using ATV's, UTV's and off road vehicles in the past. I have spoken with one of the ranges in regards to this issue with the exception of explaining why (cancer issue) I use my UTV the way I do. I do not go out on the gravel bars and turn circles. I don't make new roads to get the best fishing spot, I don't try to out think what the Law states to do what I want to do. I do try to respect all those I come in contact with whether it be a person using the river, horseback riders or someone just walking in the road. In stead of trying to stop all local people from using what is theirs, who try to respect those they come in contact with, try stopping those who are not driving with a legal licenses, to many on the vehicle in areas they should not be, those who are destroying the gravel bars and making new roads. As for me in this proposal you are going to stop me as a tax payer and a local citizen who has a health issue from being able to continue to use the Current or Jacks Fork River. I have lived in this area all my life and it makes me very sad to know that I would not be able to continue to go and be able to fish, swim and just have a great time with my family in areas that we have used for years. Again why could we not as find a way to sit down and look at this issue and try to work out a better way of working for all involved?

**Correspondence:** In terms of the NPS protecting "our" river ways- I'd like to submit the following comments. First and foremost, my concern along with many others is the devastating impact your proposals would have on our community. Small businesses, schools, and our way of life (basically "our" habitat) would cease to exist. We would therefore have to "migrate" to another location, giving up our culture, way of life, and inheritance. Our economy is based on the ability to provide these natural resources to the public. Take this away and our businesses will cease to flourish. Our children will see there school close. Families will be uprooted and their stability and way of life will be threatened. Please consider "people" as we'll as our natural resources. Yes, protect the river ways (enforce thoe laws you have already), but don't forget the people who have been protecting them for a couple hundred years already.

**Correspondence:** Looking at the motor boat issue in regards to gigging I feel that we the local people continue to loose the right to use state waterways like the Current and Jacks Fork Rivers for reasons I am not sure about. Why is it necessary to put more restrictions on motor boats and restrict the river during gigging season on certain parts of the NPS seems to think they control. My question would be, why is it such an issue for the local people to use the Current and Jacks Fork River during gigging season when there are little to no tourist using the rivers at that time and gigging is done for the most part in the dark/night not in the day when most tourist are using the river. I have lived here all my life and I have yet to see a tourist swimming, floating, walking or what ever you would put there during this time of the year that would be disturbed by a gigging boat. My thoughts to this issue to have not action to be place on this matter.

**Correspondence:** I think I can speak for everyone in this area that we want no action to be taken. It seems like so many people who don't live here, probably have never been to the rivers, and don't understand our way of life, are the ones trying to keep us off the rivers. Being on current river is part of our lives, it's what we look forward to all year round. During the spring, we love to fish. During the summer we love to boat ride, fish, swim, etc, every single weekend (not to mention one or two days through the week). During the fall and winter we go gigging a few times a week, we also camp many times through the year. We don't liter the river, we do our part to keep it clean. We follow the laws that have already been set forth. We LOVE to be on the river, period. From the time I was old enough to go to the river, I have loved it, I don't want to see a day that my children won't get to enjoy it like I have. It's the place we go for family days (since everyone in my family owns a jet motor and blazer boat). I understand that Alternative B would still allow some river access, but that still crosses the line. If any action is taken now, but the time my kids are adults, the forest service will have already made 10 other acts that would eventually allow no access. It has been seen in other states. One small step is taken, then another, then another, until all is lost for people to enjoy. I know my family will continue to fight for the people's freedom to go to the river and enjoy it as it is now. Not to mention how the economies would be affected. Eminence and Van Buren rely on the revenue from tourists here to access our rivers, any proposition would end up destroying these towns! It feels like this has been a constant battle that we want ended! NO ACTION ALTERANTIVE!!

**Correspondence:** We very much appreciate the work of the National Park Service to put together the well-done, thoughtful analysis that went into drafting the Draft General Management Plan for the future management of the Ozark National Scenic Riverways.

While the adoption of Alternative B, recommended by the National Park Service, would be an improvement over the existing management of the ONSR, we don't believe it provides enough protection for this wonderful and unique area.

In order to adequately protect our national treasure we believe stronger protections need to be in place. Therefore we recommend the adoption of Alternative A because it provides for additional protections that include:

- o The closing of illegal roads and restoration of natural conditions along 50 miles of these roads;
- o The closing of 65 miles of undesignated horse trails and adds no new stream crossings;
- o The barring of all recreational vehicle access to gravel bars.

We believe these are vital actions that need to be taken to better comply with the National Park Service's stated mission.

As people who have loved to visit, canoe, and camp in the ONSR area, it is the unique beauty and the solitude that we experienced years ago that has been so special to us.

Inappropriate use of motorized vehicles-motorboats and ATVs-and excessive numbers of horses with the impact to the natural beauty, water quality, and noise levels have greatly diminished the experience of visiting the ONSR. For those wishing to take part in these activities there are numerous opportunities outside the ONSR and they should not be permitted to degrade the natural area by these activities.

We believe that by adopting Alternative A, the National Park Service will come closer to fulfilling its mission:

to promote and regulate the use of the...national parks...which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." National Park Service Organic Act, 16 U.S.C.1.

Thank you for considering our concerns and request.

<b>Correspondence:</b>	I don't even know how to begin my comment. My grandfather is one of the men that this beautiful land was stolen from years ago. My mother grew up on these waters as did her parents before her. I have been truly blessed to live near and have a cabin on the current river for the last 33 years. I have spent every summer of that 33 years enjoying the peacefulness and beauty. Yes I have enjoyed it all in a jet boat! I truly can not imagine a time in my life that I would not be aloud to do such a thing. What bothers me most is that you have no REAL reason to do what your doing. You have no REAL proff that taking the boats and the horses off the river will have any real benifits. If horse poop is such a problem then it was most likely not a good idea to add elk in the mix. It makes me angry to think there might be a time when I have to have a permit to show my grandchildren current river. The river is like a medication to me it calms me as soon as I get on the gravel bar. It makes me happy! I vote for the no management option and I don't see any of the other options as coming close.

**Correspondence:** I am registering my objection to any change to the ONSR general management plan. I believe the problems that exist could be overwhelmingly resolved by stricter enforcement of regulations currently in place but not rigorously enforced. Further regulation will not stop the deterioration of our rivers by outsiders who come in and play for a week and then leave the mess for locals to clean up.

Further regulation will, however, restrict local residents - many of whom, like myself, are fifth, sixth or seventh generation residents of the area - from visiting and enjoying our ancestral homes and cultural meeting places to swim, fish or picnic.

The original purpose of the ONSR - as promised to us - was to protect the recreational rights of all persons to the rivers and surrounding land (which, by the way, once belonged to our forefathers, not the government). Newer regulations and recent enforcement policies seem to be aimed at denying access to the very backbone of our heritage - our rivers.

**Correspondence:** Mr. Black and all who will view this:

Please do not disregard this, let it be a learning tool to not make the same mistake that was made over 100 years ago.

I am sending this commit just to sum up how I feel as a local citizen of Shannon County and I feel that I speak for many others who live in this area and other counties.

What I see with the NPS is history being repeated. I go back to December 29, 1890 to a place far from Shannon County. I want to take you back to a place in South Dakota where a group of Lakota Indians were being forced to a place they did not want to go. The government seemed to feel that the Lakota Indians needed to be place in an area they could be better controlled. That place is called a reservation. About 350 Lakota people did not want to live on a reservation and they were only trying to defend what they had, known for many years.

What I see in the New Management Plan is exactly what the Lakota people were seeing, restriction of their rights, forced removal from their native land, and massacred for their resistance.

That is what I fear as a local, people who try desperately to hang onto what has been for years as those who sit behind a desk push a pencil with one stroke of ink seem to have the power to restrict and control a large group of people without any thought for their rights or feelings. As a local I feel just as the Lakota people who sit down and talked with the government, signed treaties, and felt like they were doing what was right and in return truly receive nothing.

I ask you Mr. Black and all who will be a part of the new rules and restriction. Will we as the local people be apprehended stripped of all our defenses and gunned down like the Lakota people were. If killing the Lakota people who would not submit to the government reservation was not the first intent why was 4 Hotchkiss canons need to peacefully control 350 Lakota Indians.

As I entered the public viewing of the New General Management Plan in the New Eminence High School gym last night (Jan 15) it became very obvious that only a chosen few was allowed to carry a side arm, night stick, mace, and this list could go on. If we feel that this plan is so right why the need to carry so much protection or to try to show authority over a group of people. For the most part we the local people are very peaceable until we are shoved into a corner I didn't see a person other than the NPS and one State Trooper with any kind of protection.

Speaking as just one person I am asking that you and the powers that be, take a step back, re-think and re-evaluate what is about to be pushed on the local people in not only Shannon County but he Counties that the NPS seem to control. Please don't let history repeat itself. Please do not continue to take away from the local people in the thought that everyone likes it or it is what is best for the people.

I am open to visit with you about your plan in a peaceful manner trying to resolve this without the government dealing with local people as the Lakota people were dealt with. Again I am only one person but I truly believe there are many others who are willing to try to figure out a better way than just pushing this Management Plan down the local people's throat.

Thank you in advance for your reconsideration and hopefully some very need discussion with some true local insight.

**Correspondence:** ONSR Draft General Management Plan

I finally got into one of the public meetings for the Draft General Management Plan of Ozark National Scenic Riverways after driving to the last two meetings to find them rescheduled. Very disappointed again to find there was not going to be a meeting here in Eminence and instead it was just an open house. There was at least 20 or more National Park Service personnel there to hand out free cd 's of the complete Plan and answer questions, but there was no one there to answer questions and give you a truthful answer. Most all the local county and state officials that were there expected an open meeting where we could all ask questions and voice our opinion.

The tone of the open house was, "This Plan shows you what we are going to do to our river and and if you have a comment, you can write it down and place it in the box at the end of the table and someone will look at it later".

Why is the National Park Service going out of it's way to mislead all of us local folks??? What is really the big picture??? The greatest threat to our rivers and wilderness areas is the National Park Service.

If you like your river, you can keep your river, period... Does that sound familiar, where have we heard that before??? It is no wonder that no one trust the Federal Government or the National Park Service anymore. We have all been through this before with the "Blueways" System. We will never give up our rivers... All of us folks that live here and grew up here, like our rivers just as they are with no changes. I strongly recommend the National Park Service take the No-Action Alternative to their Draft General Management Plan.

**Correspondence:** Me being local resident I feel its my obligation to voice my opinion on the River ways Management Plan. In using the river for fishing, boating and horse back riding I feel I should speak on the behalf of all three recreations I indulge in. Whether we are boating or fishing while camping we always clean up when we leave the river the way we find it. The biggest pleasures we get IS Horse back riding. We enjoy all of the beautiful sights the river has to offer. A large number of us trail riders every spring we have what we call trail clean up. We clean trails up and down the river and miles each way from the river and I must say 95% othe trash comes from the river trails. We pick up beer and pop cans along with things I will not mention. I know for a fact that the horse people do not litter the river ways when just riding the trails. It mostly from the non local people who float the river. I don't know how much revenue the canoe people make for the federal and state government, but the horse industries bring in more than 40 billion dollars. With that being said I believe the folks making the decisions about the river should reconsider all the different avenues involved .

**Correspondence:** I was not raised on the banks of the Current River like some of my frieds and coworkers in fact I did not visit the Current River until I was 19 years old and an Enginnering student in Rolla at the Missouri School of Mines. Upon graduating with my Engineering degree I had job offers from around the country but the excitment of big cities like Dallas, Boston and Denver could not draw me away from my adopted home in Missouri. I new that this is where I wanted to work, live and raise my family. The Current River and surrounding areas is why.

Although I cannot say that life on and around the Current River is a part of my heritage (since I am a transplant from Illinois) this area is now a huge part of my children's heritage. My daughter is 19 years old and in her second year at the University of Missouri-Columbia and my son is a 17 year old senior at Salem R80 High School and the Current River and the surrounding forrests have been a huge part of their lives. I would venture to say that as a family we have spent at least 75 days per year in the ONSR since 1995. At first it was time spent in a tent camping in a primitive area (with no camping fees) and floating on innertubes we brought from home. We couldn't afford to rent a canoe or to pay to camp so we had to live cheap. When I had vacations from work we didn't pack up and drive to

Florida we loaded up our truck and drove 45 minutes down the road to the banks of the Current River. As time went on we were able to purchase a used pop-up camper and later a motorized jon boat so we could spend even more time and explore more areas on the Current River and in the ONSR. We would camp and boat nearly every weekend in the summer. We would use our jon boat to fish in the summer, gig frogs in late July and gig fish in mid-September through mid-January. We use our jon boat for transportation to and from our favorite deer hunting spots in the fall and turkey hunting locations in the spring. Our photo albums are full of pictures that center around our times on the Current River. This kind of life is all my children know so it is their heritage. I only hope that when they graduate college and start to raise families of their own they can pass this heritage on.

Over the years I have met many people on the river and have come to appreciate their personal heritage and understand how their usage of the ONSR has shaped their family lives. I am allergic to horses and I don't own enough land to board them but I have met a lot of good people who grew up trail riding in the ONSR before it was a national park, passed this heritage on to their children and are now passing it on to their grandchildren. Even though this is not a recreational use of the ONSR for me I cannot support any plan that keeps them from continuing to ride in areas where they historically have. This is their heritage. I have met a lot of fine people who grew up on the banks of the Current River and continue to visit the old home places they were raised even though there is only a stone foundation or concrete step remaining. I have stumbled upon several old family burial plots while hunting only to find an elderly person there reminiscing about their childhood on the river. Many of these old home sites and cemetery plots are only accessible by old roads. I cannot support any plan that blocks these roads and in effect keeps people from visiting these places that are a part of their heritage. Being a motor boater I have met lots of people on the river who have built a heritage for their family revolving around canoeing and gravel bar camping on the river. They are just as passionate about their recreational heritage as I am and I cannot support any plan that restricts them from camping on a gravel bar off by themselves or canoeing a certain part of the river because there are already too many people there.

One of the things that makes the ONSR so enjoyable for me is the diversity of the people you meet. Any changes to the GMP put in place to zone and segregate people will only divide people and keep people from enjoying their preferred means of recreation in the locations they choose.

As I read through the General Management Plan for the ONSR one recurring theme came to mind: For a "General" plan this document sure is specific! Rather than outlining a General plan that has room for growth the plan is very specific and stifles any opportunities for change in the future.

I support no plan that erodes recreational use by all parties. I support no plan that segregate people in the ONSR and keeps them from enjoying their heritage in parts of the park that are meaningful to them and their families. I support no plan that limits access to areas within the park by closing roads, limiting gravel bar camping or closing river access points.

So for all of these reasons and to protect my children's personal heritage I only support the option of NO CHANGE to the current GMP.

**Correspondence:** I was raised and lived much of life here in Eminence, spent five seasons as a seasonal park ranger at Alley Springs (1972 thru 1976) and have hunted, fished and horse-backed most of Jacks Forks and Current River (above Log Yard). I have read the management plan and also the input from the folks who are pushing the planned changes with their "documented violations" of the original NPS policies on new buildings along the river, erosion, and horse and vehicle traffic near the rivers. Personally I think the NPS has, up to this point, not done a bad job with the resources they have in preserving our rivers and providing for the many types of recreation and use our area receives. (However, the old state parks could use more maintenance and clearing around spring branches, but understand, don't agree with, the desire to let things be "natural", i.e. over grown with brush and weeds).

But....I do not agree we need a new management plan with more road closures, horse back trail closures, nor new boat motor limits. The ONSR superintendent said at the meeting in Eminence last night to not just say we didn't like something, but to offer alternatives. Well...doing nothing different IS an alternative to any problem, and in my years

of experience, it is many times the best alternative. Sometimes changes cause more problems than they solve...I believe this is the case here, as I believe the NPS will discover down the road if the proposed changes are made.

**Correspondence:** As a Shannon County native and someone who grew up on the river, I support Alternative B. My only reservation with B is the non-motorized section above Pulltite. Not a lot of people gig in that stretch, but it means a lot to the families that do. It wouldn't cause an environmental impact because of the low number of boats and restrictions on HP.

Our family has always supported the Park Service and think Bill Black and staff have done a good job in this plan accomadating both the local Boat/ATV/Leave us Alone Club and the Environmental Extremist from St. Louis.

**Correspondence:** I fully support a new GMP for the Ozark Riverways and am inclined to favor Alternative B. Having a better managed park would actually improve tourism in the area, not hinder it. I would also like to see more living history exhibits and the development of several small museums to preserve the areas cultural and natural history.

I am, however disappointed that the NPS allowed two unscheduled meetings, at the very last minute, to be held in Salem and Eminence. The Riverways are National Parks and visitors come from all over the world to enjoy it and spend their money locally. Why not have a meeting in Springfield or Columbia? There are many people from Southwest Missouri that love and use those rivers who feel shafted by the process.

**Correspondence:** A few years ago in Great Smoky Mountains NP we came across this NPS Mission Statement: The National Park System was established to preserve vignettes of primitive America. That probably is not verbatim, but that is the point of it.  
The NPS properties were ABSOLUTELY NOT established to boost local economies. The NPS properties were not intended to be theme parks. The properties were meant to be quiet places for hiking, paddling, camping, birding and just enjoying solitude. In our opinion outboard motors and 4-wheelers should not be allowed on the property. No more canoe concessions should be established and existing concessions should not be allowed to grow. The only way to do that is to establish and enforce a daily maximum quota of boats. Better yet, boat numbers should be scaled back over time. You know how a Summer weekend on the river is, and the screaming, drunken, trash-throwing parties are not part of the mission of the NPS. Also, horse traffic should not be allowed to expand because the erosion, pollution, dogs, and trash that goes along with horses is not part of the mission.  
Thank you for hearing us out.  
My wife and I definitely support Alternative A!

**Correspondence:** Having spent many great days on the Ozark waterways, I'd like to include my voice in the mix re: the GMP. The waterways should continue to be a NATIONAL treasure, to be protected for future generations of visitors and wildlife. The National Park Service should continue to operate and protect, as it has all these years, without interference from forces that might disrupt this beautiful gift of nature. To this end, I would suggest Alternative B, to also include more hiking trails, and a limit on horse parks. Thank you for your time. Dave Romea

**Correspondence Type:** Web Form

**Correspondence:** I don't think anything should be done with the river. It was fine before y'all got here, and it'll be just fine when you go away. We shouldn't be the ones to pay the price for what the tourists are doing. WE pick up THEIR trash. WE deal with THEM when THEY show up drunk at OUR camp sites. Last summer we had a couple from Illinois show up and try to have SEX in front of multiple children in broad daylight, there were none of your 'rangers' around then to write any tickets but they were very insistant that we only have ONE tent and ONE camper per campsite even if the site was plenty big enough for TWO campers. We pick up our trash when we leave, and if there is any trash there when we arrive, we pick that up too.

Restricting the boating because someones canoe might get flipped over is stupid, if that's why this is happening I would be just as happy to stand in the river and flip them by hand, I don't like those people anyway!

The rocks blocking the gravel bars prevent the physically handicapped from being able to enjoy the river as well. This is not right. We were born here, we have just as much right as any out of stater, yet we are always the ones punished for their mistakes, for their actions, and for their crimes.

The worst thing to happen to Missouri in years is when the Park Service took over the campgrounds. You take the FUN out of camping. You should just leave. If you're worried about people loosing their jobs, then maybe you should hand them over to the State Department and let them sort out the good from the bad?!

People will be people, there is no way to stop their bad behaviors with restrictions that cause them to want to act out even worse. You would take all of our RIGHTS, all of our POWER and give it to someone who DOESN'T pay our taxes, who has nothing to do with our parks getting better, only worse. WHY?!

They say punishment should fit the crime, and that the person punished for the crime should be the one who COMMITS the crime. What gives YOU the rights to take away OURS?? What do you see when you look at this place? Do you even care about what WE THE PEOPLE have to say? Or would you rather sit in a plush office removed from the world like the President, and make descisions about something you don't even know or understand about??

**Correspondence:** I think this is wrong it feels like we are being punished for the city people that come and destroy the area. They trash the area and are mostly the drunks on the river.

The jet boats dont hurt the river I have never saw a jet boat that was run in a bad manor around the canoes and kayacks on the river for the most part the people in them will help others. I have a boat and we have helped several people that have had problems.

For the camping they are trying to limit the areas in lots of the campgrounds where they could have more sites. There is a problem with the number of workers they have way to many now to do the same job that a few years back whenn ther were more campers and only one lady to do all of the cleaning, taking out trash, and maintaing the area.

Now they have one person to do each job. I see a lot of city people on the river and camping most leave there campsites trashy and we pick up there trash to keep the place like it should be. I have camped for fourty years there. I dont like the fact of the rocks being placed at the places they are it is discrimination against handicapped. I work with them and now they cant go to the places where they grew up and swim or enjoy the water. I have said things to other nps staff about this they said to take them to other places they like the same places they go because there is not a lot of tourist there. I think it is BULLSHIT!

I feel the NPS is very rude when you see them out and hateful. They have maybe a handful of rangers that will be civil towards the public the rest have a god complex just because they have a gun do give them the right to talk to people like I have heard them do first hand.

I would like to see it left alone with some of the rocks removed and make some of the campground larger. They say they have no money but wont try to make more campgrounds available to the public in the places where needed.

**Correspondence:** I congratulate you on the draft of the GMP, which reflects careful study and speaks to the purposes of the beautiful Scenic Riverway. I spent many delightful days on the Current River when I and my family were younger. However, we have not been there since it became an ATV playland and the waters a cesspool at times from horse manure.

I support Alternative A in the plan, especially since many of the good features of Alternative B require additional funding that may not be available. I believe the top priority should be halting the degradation of the rivers by inappropriate use and overuse and restoration of damaged areas. ( We don't allow livestock in our private lake because we don't want to swim in their feces! How complicated is that?)Motorized vehicles, boats or ATV's, destroy the solitude of the riverway as well as the terrain.

**Correspondence:** The meeting held in Salem was not a meeting but a show of information. No one had the opportunity to speak. It was a huge disorganized free for all to check the box of a public meeting held.

First we must vote no change because there is no acceptable option for me to ride horses or fish.

Second how can you propose miles of trails to close or designate and not provide any horse trails on any map. Very unprofessional work.

Third we do not want the trails on the upper end ruined like many others have been. Public guidance says no unnecessary material will be removed, no more than 8 feet wide, and no foreign material to be introduced. We love our timber trails and want them to be left natural.

Finally if pollution is the driving force behind this why are there no toilets proposed for canoe people when 90% of the pollution in the river is human?

**Correspondence:** The river and its surrounding ground should remain open to the people, especially the locals. Horseback riders and local canoers want the river and its surroundings kept open for its use, recreation, and enjoyment. Locals are the stewards of the river and their rights should not suffer. I have a hard time trusting anyone who barricades the river during the gov. shut down, or making churches have a permit to baptize in the river. (I understand this is no longer the case.) WHICH BRINGS ME TO ALTERNATIVE A. This looks like a plan the sierra club would like to see take place. People who may use the river once in a while or may never see the Ozarks. Unlike the locals who live here. ALTERNATIVE C looks as if the locals and local business might have been taken into consideration but still infringes upon our use of the river and forest. ALTERNATIVE B looks as if your riding the fence between big money (sierra club) and the locals who live here and some that make a living from the river. The only one any of these alternatives are infringing on is the local people who use the horse trails, gravel bars, motors on their boat for gigging etc. The reason you give for limiting these activities does not make much sense to us who live here, for instance the horse poop and the erosion. Animals (DEER, COYOTE, BEAR, CATS, THE ELK THAT WAS BROUGHT HERE, ETC. move about disturb the soil and also use the river as a rest room. I COULD GO ON AND ON BUT I'VE RUN OUT OF ROOM. I believe the locals need to play a larger role in your plan.

**Correspondence Type:** Web Form  
**Correspondence:** To those concerned taking comments on the Ozark National Scenic Riverways Draft General Management Plan/ Wilderness Study/ EIS:  
I would like to thank the National Park Service for doing such a good job with the Draft GMP for the ONSR. Your recommended Alternative B would be a positive step forward from the status quo. With my experience having relatives in the area and having visited these rivers for 50 years, I would have to recommend Alternative A, since it provides better protections for sustainable future use of the rivers. This option would close illegal roads restoring 50 miles to nature, close 65 miles of undesignated horse trails with no new stream crossings and bar all recreational

vehicle access to gravel bars.

This park was originally created for people to enjoy the unique natural springs, caves and entire river ecosystem, not to have an amusement park ride. Moving away from this original purpose over the years has been detrimental to life on the river. There is much more noise, scenic disturbance and even development. The park wasn't meant to provide for ATV's and trucks that tear up gravel bars and ground along the rivers. Nor was it meant for noisy motorboats to zip by swimmers disturbing the peace and endangering their safety. It wasn't meant for thousands of horses to criss-cross the rivers leaving feces that also threatens swimmers with E. Coli contamination. All this with the proliferation of illegal access roads, ten times what there was supposed to be, has caused erosion, which smothers the insects in the river bed which feed the animals on up the food chain. It also causes invasion of alien species which can eventually ruin the unique web of life.

Seeing evidence of all these things getting worse led me to stay away from the rivers starting over 30 years ago. Now I may go during the week in the Spring or Fall, so I can experience the tranquility, fresh air, clean water, beauty and rejuvenation that should be available all year round. For several years my family camped at Shawnee Creek, across from which relatives grew up over 80 years ago. In recent years I've seen this area closed to recreation due to E. Coli, from the horses. There should be a horse use and trail management plan relocating trails away from the river, avoiding sensitive areas and providing park permits for horse use. There should not be a horse camp along or near the river. The dirty water reportedly draining from the River's Edge Resort should be addressed. There should be environmentally sound waste systems. What happens in and around Eminence's river banks should be monitored closely and limited when inappropriate, because it affects life downstream in a national park. I used to find an entire gravel bar covered with empty snail shells. Now I find tiny aquatic creatures less abundant, trampled by people, horses, vehicles and even bulldozers scooping up parts of the beach. I used to see many fish and other animals natural to the area and green vegetation in and alongside the rivers. Now I see less of these living things and many more campsites and several buildings that shouldn't be in the park, in violation of scenic easements.

I know from my own family that these rivers are very important to the people of the area, economically and culturally. The way the Jack's Fork and Current Rivers can continue to support future generations sustainably is by not overusing, abusing and destroying it bit by bit, but by preserving it. 15 miles or more of illegal roads and trails should go back to nature and be narrowed to hiking trails. As much of the Big Spring area as possible should be designated as wilderness. Programs and facilities providing educational experiences about natural and cultural history would bring understanding to help people responsibly care for the rivers, and possibly bring in additional needed revenue. Increased staff for both education and law enforcement at ONSR should be a priority.

Thank you for considering my comments.  
Patty Brown

**Correspondence:** I am in favor of Alternative B of the ONSR Draft General Management Plan.

My understanding is that motorized intrusions would be curtailed by closing undesignated roads and access points and restricting ATV traffic.

Equestrian use would be reduced by closing undesignated trails and river crossings.

Visitor areas and additional camping areas would be enhanced.

Management would be improved on the crowded and overused areas of the river.

The plan would bring the Riverways up to National Park Service standards.

**Received:** Jan,18,2014 14:04:14  
**Correspondence Type:** Web Form

**Correspondence:** I am in favor of Alternative A in your draft GMP for Ozark Scenic Riverways for the following reasons: 1) I support a plan with minimal impact on the natural environment with reasonable levels of public access; 2) I support the closing of illegal roads and restoring natural conditions to as many of these roads as possible; 3) I am concerned about the impact of increased horse traffic in the river on water quality, and am in favor of closing undesignated horse trails; 4) I am also in favor of a permitting process for horse traffic that would limit the numbers of people on horseback in the riverways at any one time to a number that minimizes their impact on the river; 5) I am in favor of closing all gravel bars to motorized vehicles; 6) I am in favor of wilderness status for the area around Big Spring; 7) I am in favor of increased enforcement of the rules and guidelines protecting the Scenic Riverways from damaging environmental impact.

I thank the National Park Service for putting together a well done and thoughtful analysis of the issues involve, and strongly advocate for Alternative A. As an owner of land bordering the Scenic Riverways near Jam Up Cave on the Jacks Fork for the past 30 years, I have seen the impact of increased use of the river in terms of trash left behind, algae blooms that may or may not be connected to increased horse traffic upstream, and in general a loss of the sense of solitude and isolation on the river that makes it special. I would not want to see any plan adopted by the Park Service jeopardize the unique tranquility of the area for the sake of increased public traffic.

Thank you for taking my comments into account.

**Correspondence:** I am truly disgusted that we are having to go through this tyranny again. This all began in the 60's for my family. My Grandfather, my Dad and my Brother owned property that was taken from them. Yes I said, was taken. They were NOT given what the land was worth. At this time my Dad was going through larynx cancer at 55 years old. He lost his voice to this horrible disease and at the same time he was dealing with the NPS stealing his land. I wonder how some of you would feel if you were put in the same situation. You would be as troubled as my family and my friends are that we are still, after all these years trying to protect our rights and our heritage. Yes, I know you are tired of hearing about every ones heritage but if you had lived your life on this beautiful piece of Gods Creation you would be feeling the same.

Another thing that has troubled me all these years, is the fact that the NPS razed the Old Cardareva School, what was that all about? I actually attended school there as well as 3 of my other siblings. I thought the NPS was all about preservation. Today there is a High \$ toilet sitting in that very location. How disgusting!!!

Why is the Sierra Club's opinion so much more important than the local people. They need to stay in the big city's and leave us alone. I am not sure the NPS realizes how ugly this situation could get if this is not stopped soon. Yes, there are a bunch of crazy hillbillys that live in the areas where the NPs is trying to make these changes.

We love and take care of our areas very well. We have river clean ups often and things like that to help keep our shorelines and river bottoms clean. Honestly some of the vistsors leave messes that we clean up. Their have been lives saved because of the boaters. The fight is not over.

**Correspondence:** I would like the waterways to stay the same that they have for as long as i can remember. We have been coming to Eminence horse back riding for 20 years. We just bought land there this last year. Hoping to retire there and ride horses till we can no longer ride. We love it there. We love the river and are glad it is taken care of. We want the trails left open,please. There is only afew weeks a year that there are a lot of usage of the trails. Most of the time it is quiet and peaceful. I think the river erases the damage that is done by anyone every season that it floods it does more damage to itself and the environment around it. The local businesses would really suffer if the horse riding stopped. Please keep the trails open.

**Correspondence:** Your open forum's were a joke. You have already decided what you are going to do and are just ignoring how the public feels. Apparently the ones that you want to enjoy the river are the floaters never giving much consideration to the fisherman that run motor boats or the horse people. Those people spend a lot of money in the economy, plus most of them are locals who live them, support the local businessmen daily versus a group of floaters that come from the city and spend one or two days on the river. Well, you are probably going to get your wish and I am sure you are going to have to hire many more park employees to clean up all of the trash and toilet paper they leave along the river. We see it every time we ride. We pay taxes, a lot of taxes for government land use that we eventually are going to be forced out of. If it is not broken, don't fix it but apparently you government officials see a different way. Just remember the ones you force out of there, pay taxes too so you can enjoy your paycheck.

**Correspondence:** Please manage the river according to Alternative A. I prefer nonmotorized use of as much of the river as possible. That is why I go to the river - to experience nature, not to hear/see and experience the effects of motorized uses. I have treasured the Current and Jacks Fork for over 60 years and they are dear to my heart, as they are to many people in this whole country. Please preserve the rivers and lands bordering them in as close to natural and native condition as possible. I am also concerned for the water quality - the essence of the river. It must be preserved also. I especially do not approve of private horse rental businesses profiting off the river, while fouling it

at the same time. I appreciate the many concerns that the NPS faces, and appreciate the agency's protection - and rely on it.

**Correspondence:** I was introduced to the Jack's Fork and Current River in 2009 through an organized trail ride...The Cross Country Trail Ride. My daughter, grand daughter and I camped at Eminence Missouri for 4 days and we literally fell in love with the area. The waterway was so clean and the trails maintained...trash cans at popular places. I must say when we returned home we started straight away planning for the next year, and have been going to the week long rides every since.

When we were asked about our ride and the area, we always commented the same thing...."sure wish our Forest was that clean" and "it's absolutely gorgeous riding".

As a visitor to your State I ask that all options be considered to the fullest and choose the one that best serves the State, County and the People of Eminence and surrounding towns that benefit from the tourism.

We've grown to love the area and really hate the thought of not being able to enjoy it with our family and equine.

**Correspondence:** For the last 30 years, my husband and I, along with our family have been enjoying the beautiful Ozark National Senic Riverway. So much so we purchased 9 acres with two other couples so we can continue to enjoy the Jacks Fork and Current Rivers with our children and grandchildren. We are avid horseback riders and canoers. We demand respect for the natural beauty of the area and pass that respect onto our families. I am torn....I do understand wanting to preserve the natural beauty being effected by (ie..motorized vehicles in the river and unauthorized landings); but I don't understand local property owners having to purchase permits for access to horse trails. Yes, several times a year there are many riders on "some" of these trails. But there are many trails that only locals know about and ride. But at the same time these riders and canoers keep this town alive making it possible for locals and business owners to support their families.

There has GOT to be a solution that both sides can live with.

To touch on the ecoli in the water...mainly being directed toward horses...I don't understand. Horses eat natural foods, drink water, as do all the wildlife in the forest area, except, horses are vacinated for multiple viruses,etc. Whereas, what about the number of people floating the rivers....what do they do to contribute to the ecoli problem?

As far as trailriders... I would say that 75% o riders never ride much longer than 2 to 3 hours out and go back to their camps and alot of that is riding on the roads. Whereas the other 25% o riders are there for the riding and spend up to 8 hours out riding, riding on trails that are hardly ever seen. I do know that some trails are poorly marked making it hard to determine the true trail and even finding themselves on private property. This causes people to get lost forcing them to cross the river where normally they wouldn't or ride where they shouldn't. (ie.. creating unauthorized trails). One gets lost, creating a path....another group gets lost..following in tracks of the last and so on and so on. Creating a "new trail". Also, we have been on the river for many years and only 2 times have I seen anyone with the Park Service on the river and "never" have I seen anyone employed by the Park Service on the trails. Maybe the government should have more employees to monitor these areas.

The blame should not fall completely on the public or only the public be made to pay. We all need to accept and correct our failed responsibility to maintain the natural beauty of this area.

**Correspondence:** I sincerely hope that the NPS will complete its draft management plan to help secure the future of this beautiful river. A review of what has happened up to now and using this information to better manage this beautiful river is needed now.

I support the acceptance of Alternative B.

I further want to ask that part of the management plan address the terrible use of the gravel bars along the Current River as out houses. This plan needs to better educate river users to go a short distance into the woods where there is soil to defecate or urinate. This will lessen bacteria levels in the river as well as greatly reducing the number of piles of toilet paper on the gravel bars. Locals see the lack of respect by these canoeists as they leave their big cities and trash all of our rivers.

I own ATV's and I will soon be back in the horse business. Neither of these should be in the river or on gravel bars. Riffles and gravel bars help purify the river. This cannot happen when river users are abusing these sensitive areas.

I would also ask that the NPS or MDC better patrol the river. I stopped canoeing this great river due to the horrible effects of gigging. I brought a lot of friends to see this river every October. But I stopped coming in October due to unethical giggers. I am not against gigging all together, but the wanton waste of game fish by giggers needs to be better patrolled. Then add the drunks on the river, why use the river?

I own property within 100 yds of the Current River. I love this river. We all need to better protect it so our children and their children can enjoy this wild river.

Good luck with your plan review.

**Correspondence:** I am for no action to the GMP. I live in Ellington, Missouri and our small community really relies on the river for economic reasons. Without that river, our town would lose several large businesses in the area, as well as tourists that pass through our community and spend money at our local businesses. The river is a important factor to our river. If you add further limitations to the river, you are just taking away a piece of our economy at a time. Our community can't handle that. Not only will our economy suffer, but Eminence and Van Buren's economy will suffer to an extreme amount. We need no further limitations to the Current and Jacks Fork Rivers. I support No-Action to the GMP.

**Correspondence Type:** Web Form

**Correspondence:** I would like to state that I support no action to the GMP. I do so because of the amount of accesses that are said to be closed. The accesses are already extremely limited and have been closing throughout the last several years. We need accesses to the rivers so that we can enjoy the beauty of the nature of our area. I am a camper. A boater. A fisherman. A recreational friend of the Current River. I camp 4-5 times a year at the gravel bar at Cordareva Bluff. And I have been camping there since I was a baby. And even though it isn't fancy, we aren't even offered water or a trash service any more...It is a place that is very dear to my heart. We do our very best to keep the area clean and treasure it as if it was our own. If you close accesses to the riverways, who is to say you won't close that one? I can't stand by and let a place that I call home be taken from me for no reasonable purpose. Please choose no-action to the GMP. It pushes more and more limitations to our river and gives us less of a chance to experience the wonderful things it offers.

**Correspondence:** This message is to state my opposition to the General Management Plan. I grew up going to Current River and sitting along the bank fishing with my Grandma (who was born, raised and now buried on Paint Rock near Current River in Shannon County), going on picnics and camping trips with my mom and family and boating with my dad. Current River is not only a beautiful area, it is a way of life for locals. I cannot imagine my 7 year old daughter growing up not being able to camp, go boating and enjoy Current River as I was so blessed to do. Our taxes pay for this park and as such, we should be allowed to continue to use it as a recreational park rather than preserve. Tourists come from far and near to see the beauty of this river and when they visit, they frequent our local restaurants, they purchase groceries, fuel and supplies from our local stores and stations, they sometimes stay overnight utilizing our local motel and bed and breakfast. This General Management Plan will not only negatively effect the lives of locals, it will greatly effect our local economy.

Sincerely,  
Susan R. Davis

**Correspondence:** I would like to start by saying I dearly love our local rivers. I have been a resident of the Missouri Ozarks my entire life and have enjoyed the Current and Jacks Fork rivers since I was an infant. I have a long family heritage in this area. My great grandparents land is part of the Ozark National Scenic Riverways as well as only living a few miles from Current River myself. I hope that there are NO CHANGES to the ONSR management plan. I feel that the Riverways should be accessed for the recreation of the people who live here. The management plan should not reflect the wishes of people who do not reside here and that aren't effected daily by the

decisions that are made. My view of the National Park Service is that there job is to be caretakers of our Riverways. They are not owners. These rivers are owned by the people therefore the people should be able to access and enjoy this area now and for future generations. If the access is limited more than it currently is it is a slippery slop that ends with no access to a place that truley brings life to the area.

I would also like to say that limiting access to the OSNR will be devistating to the local economy. My grandparents previously owned a canoe rental and the river provided for them and their children just like it still does for many families in the Ozarks. These local families love and care for these national treasures. Again I want emphasis that want no changes to the current OSNR management plan as I feel any change would have a negative effect on the people that reside here.

Thanks,

Jessi Roderman

**Correspondence:** I retired to this area to enjoy riding my horses.I own property here & I'm vested in this area, it would be an awful mistake to close any of our trails let alone 65 miles of them,I don't understand how this could happen in the USA.Your plan doesn't indicate where this is expected to happen,when the 35 miles of trails will be done or where.I,m truley dissappointed in the park service & how the citizens of this area are being treated.It is very evident that the economy of the Ozarks is going to be devasting with this plan.Big Creek Trail Ride currently has no designated trails & it would be a huge mistake to harm the family owned bussiness of the Howell family, this is how these people live & give back to our area.To charge a permit fee for riding horses is absolutly the wrong thing to do. What kind of message are you trying to send???People come to the Ozarks from all over the world to ride horses & vacation, at Cross Country Trail Ride, thousands of dollars are spent here during these rides,money that this area could be losing because of the changes of your plan.Eminence could literally become a ghost town due to this!!! It appears that this very well could be the intent for this town. My Father fought in WWII to protect things like this from happening to American citizens.{IS THIS HOW YOU SHOW APPRECIATION FOR OUR MILITARY VETRANS?} It is heart breaking to think our own government even thinking of doing it's people this way. THIS LAND BELONGS TO ALL THE PEOPLE, NOT JUST NPS!!! WERE IT NOT FOR THE PEOPLE YOU'RE TRYING TO HARM,you would not have the jobs you have!! Are the people outraged? You bet we are!!! I realize you have a job to do, but please get on your knees & pray that you do the RIGHT THING. Thank you for considering my heartfelt comment.

**Correspondence:** I very much disagree and completely am against the general movement plan. The Ozarks are not just a place to go for camping trips with family that have been in many families traditions for years or even enjoying the beauty of the rivers, but for many small town people, it's our way of escaping and really enjoying the outdoors. Coming home from college - the river is one of the biggest things I look forward to! If you take that freedom away, What other "good quality fun" is there to enjoy without getting into a lot of trouble? For exampl : drinking, partying... Ect. Being outdoors on the river bank has been some of the best quality time with Jesus I've ever had. It's a place I can go to really clear my mind and get away from the world and all of it's distractions! I love the river and I will stand up for our freedom and fight for the beauty and land that God has created for "us" to enjoy.

**Correspondence:** The Ozark National Scenic riverway is a way of life in this area. It has always been and should always be open to the public. This area alone brings in tourist from all over the world. I personally have met people from California, Nevada & even Germany that have traveled to this area specifically because of the beauty of our river. We pay taxes for the upkeep of our river area. If we no longer have access to the river, are we therefore not going to have to pay taxes for the upkeep?? I think that would be logical. I would rather pay taxes and have access to the only recreational activitie that is available to the people of this area. It's not like we can drive 20 minutes and be somewhere where we would be able to do something. We are a very rural and poverty stricken area. Most people in this area do nothing but go to the river because they cannot afford to do anything else. I think blocking access to the river is wrong in every aspect of the word.

**Correspondence:** Letting you know that I am against the General Management Plan. My reasons are as follows:

I was raised close to the Current River. My husband and I own a cabin there and we have thoroughly enjoyed many years of boating, swimming, and all other recreational activities available. Our Heritage is an extremely important part of our lives. Yes, the Park Service is helping to preserve that. But to what avail if we are not able to enjoy what we once had.

I don't feel there is anything wrong with the way the Park is being managed thus far. Yes there are some who do things they shouldn't. They definitely can't all be locals. I'm sure that happens in all National Parks. The locals are the ones that gave up the area for this National Park, and thus they deserve to be able to use them as before. As they

are managed now the tourism is a help to our economic growth.

**Correspondence:** My comments are somewhat related to the fact that I worked at Big Spring when it was still a state park in 1960's as park naturalist. During that time I visited, either because of work or just went to them, other state parks that eventually came under the NPS. I have ever since supported the idea of the need to keep the Current River and its related natural features preserved for future generations and to not have it changed into a lake of somesort. I continue to feel that way and that is why whenever I'm in the area. And after my retirement from Missouri State Parks after 43 years, I still go by and look at the areas I either worked in or am familiar with. I believe that the park service is going, generally speaking, the best job that it can do, considering that I believe that the park is in fact short of the number of staff it needs to handle the large volume of people who annually use it, especially from an inforcement standpoint in the warmer times of the year and I certainly would like to more interpreters available to explain the resouces to park visitors.

However, some of the comments that get back to me, make me wonder where certain individuals are coming from who live in the area. I beleve that they have tended to put their own personel thoughts ( sometimes very narrow ) toward a very narrow perspective and have at times not looked at the big picture and then tried to narrow down the many sub topics that make up the big picture of the area and the resources. Granted the many sub topics need to be looked at, but they must be considered in the bigger picture of the whole region of the state that the Current River flows through.

**Correspondence:** My heritage and culture in this area goes back several generations. It is almost incomprehensable to me how the government can justify denying any citizen the right to enjoy what we all have. I ask you: If we cannot enjoy these natural areas, what good are they? I am a landowner in this area.

I served in the Marine Corps. At the time that I was in it was constantly said that we were preserving our way of life. Well, here we find ourselves in a battle right in our own backyards with a government that seems to believe it is acceptable to begin restricting people from areas that they have been going to and sports that they have been participating in for generations. What a sham. What a disgrace this is to the American people.

I have spent many hours in the wilderness areas. I have not one time seen an ATV or vehicle of any kind off of the roads unless they were lawfully cutting timber. Now what could be the logic restricting 4 wheelers from traveling these old logging roads in the future? It's ridiculous.

I own and ride horses often. Some days my family might go for a ride at the spur of a moment. And now part of these plans mandate applying way ahead of time to ride a horse through areas I have been riding for years? This is another example of socialism. Applying for a permit months or even years ahead of time to ride a horse through public land? i just cannot make sense of this.

Restricting parts of the rivers to boats is another issue. It just makes no sense to tell people that they can't take their grandkids by boat to fish or to swim where their grandparents or parents took them.

My Grandfather, my father, and I all served this country. For what? So the government can restrict or deny our offspring of their culture and heritage? It is a sad day in this nation that this is taking place.

Now I have gone back and looked at the law that set this land aside. This 1964 law was just over 2 pages long. I have also read these proposals. All 534 pages. Just this alone speaks of the injustice. I see this law setting aside land to keep it from being commercialized and developed so the public could enjoy this for years to come. Not what I see going on here.

I believe that we need a conversation. A conversation on how we can all open more trails and roads. Get more recreation here. Whatever it takes so more people can enjoy this area. Not restrict it. Let's work to find ways that we

can get more families here enjoying what God has given us. Special Interest organizations need not control this conversation.

**Correspondence:** I live on land that borders the Ozark Scenic Riverways below Blue Springs. I spend a lot of time fishing, swimming and canoeing the Jacks fork as well as picking up trash from the river while I am there. After reviewing the proposals I would prefer alternative A. I am completely opposed to the commercial horse operations on the lower Jacks and I don't float down that far because it is pretty trashed in some sections below Eminence. The bunch that supports motorized use, ATV use and horse use seem arrogant and don't really care to enjoy the rivers in their pristine states. There used to be a crossing not too far from where I live and people used to drive their 4x4 trucks through the river and then leave their trash on the gravel bar. This is the bunch that wants to keep traditional use, traditional disrespect that is. Keep this land Federal! State control of this land would just allow local politicians to take away the protection of these precious resources. These lands need to be kept safe for future generations. Thank you. Timothy Wilson.

**Correspondence Type:** Web Form

**Correspondence:** Dear National Park Service,

As the Co-Chairman of one of the largest property rights organizations in Southern Missouri I continue to be taken aback by the tactics and activities of the National Park Service. Our organization has been very active in voicing our concerns about the continued abuse of power by federal agencies. The Park Service has been involved in the outrageous National Heritage Area effort that many of us were able to expose and stop. We also have worked to expose and stop the National Blueways that was put in place over the Southern third of Missouri totally under the radar of our elected officials and the concerned landowners and citizens in the great White River watershed region. That effort was exposed and the land control agenda of the Park Service was stopped thankfully. By the way, the National Park Service did nothing to educate the people about that effort or the Heritage Area debacle. Sadly, this expanding management plan is another effort to gain more control of our region and adversely affect our economy and our property rights.

I personally own over 600 acres in Texas and Shannon County. I have done all I can to protect my right to use my property and continue to be greatly concerned by the regulations that the Park Service has been a part of in the past on these other issues, and have read the memorandums of understanding the Park Service has with other federal agencies. These agreements the Park Service has made will continue to implement land restrictions and regulations not only on Park Service lands but also regulations that will impact adjoining land owners.

I strongly oppose any further restrictions and closings of trails and roads. As a matter of fact, I believe the Park Service can no longer be trusted in Missouri and it is my desire that the land the Park Service manages would be turned back to the great State of Missouri. Our members and coalition partners number in the thousands. I personally have not heard ANY of them desire more control and more restrictions. As a matter of fact, they want less.

I have been a part of the rulemaking process for many years and believe it is completely wrong. Elected officials should be making these decisions NOT the agencies hired hands. This is an affront to our Constitutional process and there seems to be no limit to the abuses this type of process has created.

Wise and multiple use is what we need on our rivers. Sound science, NOT whatever some agency "expert" claims to be his version of the truth. I am still asking for the science of the endangered species listing of the Ozarks Hellbender. Can you please send me information on how that was decided? Our streams are choked with gravel that has destroyed habitat for our fish and other critters. It is YOUR policies that have helped lead to this destruction by tying the hands of landowners and gravel miners who would love to help ease this problem.

I tried to get a chance to make some public comments at the meeting in Eminence, but was not allowed to as no one was, except one private individual.

For the record I love our land and our rivers. I love the precepts of freedom our Nation was build upon. The agenda of Federal agencies to continue to regulate us to death here in rural Missouri is sad. You say you are from the government and you are here to help. I say help us by letting us use our roads and our rivers wisely. Your continued encroachment upon our lives is not welcome.

I certainly hope for a change in the radical goals of the Park Service in their use of European land use models to control those of us that actually must make a living from the land and it's related industry.

I certainly hope you will at the very least stay with the management plan you have had in the past and improve it by reducing your regulations and stop the limiting of access and closing of roads. Your agencies conduct during the budget process was particularly horrid with blocking of our Parks to our vets and elderly. We will never forget.

Our fragile Ozarks economy is but a shadow of what it used to be. How much longer can government regulate job creators to death and print money and pay welfare and food stamps to pick up the slack. If I was a part of your agency I would be ashamed.

Not all of us can get big government checks and nice retirement packages from the government as you agency people do. As a matter of fact, it's people like me trying to actually produce something that pays your salary. In actuality, you are destroying the livelihoods of working folks who are trying to pay for this massive, overreaching government we have. I guess it would be too much to think you would get that, as it seems all government wants to do is expand it's reach and increase it's costs and burden, but still I try.

Sincerely,

Bob Parker

**Correspondence:** I just finished reading of the Draft General Management Plan for the National Scenic Riverways (433 pages of text). It is a very thorough and thoughtful document; the authors should be proud of their

work.

I personally favor many of the goals of Alternative A because it promotes the wilderness concept of the Riverways more than any other alternative. However, I encourage the adoption of plan B because, in my view, it is a sensible compromise which stimulates responsible public use but still provides significant environmental protection.

Although I am an Illinois resident, our family has had a cabin near the Jack's fork River for 13 years. Along with our family and friends, we float and fish the Jack's Fork and hike extensively in the National Scenic River area. The Scenic River is an incredibly valuable natural resource.

I am also empathetic to the requests of ATV owners and horse riders for more roads and access points into the NRS. We can not get citizen support for environmental protection and for maintaining publicly held state and federal land if the public does not have access to these lands and does not appreciate them. However, we must balance the requests for the expansion of vehicular roads, horse trails, and increased use of motorized vehicles with the need to protect natural areas within NSR as well as provide people who wish to have a "wilderness experience" the opportunity to have this experience without the intrusion of motorized vehicles and horses.

Most of the public lands in Missouri (both state and federal) allow ATVs and horses so placing restrictions on how and where horses and ATVs may be used within the NSR is not unreasonable given the large tracts of public land open to ATVs and horses. The Current, Jack's Fork and Eleven Point Rivers are the only NSR designated rivers in the State of Missouri and they represent only a relatively small percentage of publicly held land in the State of Missouri. They also represent a unique ecosystem with springs, crystal clear rivers, a diverse (and often unique) assemblage of plant and animal species (especially minnows and darters). Opening the NSR to more intrusive use of ATVs and horses with the accompanying roads, degradation of sandbars, pollution of springs and rivers, and an increase of littering will irrevocably change the character of the NSRs.

**Received:** Jan,21,2014 08:20:45  
**Correspondence Type:** Web Form  
**Correspondence:** Dear Superintendent:  
We wish that you would please consider the following:  
1)The 1964 Congressional legislation stated that the Riverways were being established for conservation, preservation and recreation. Recreation should continue to have at least equal emphasis, and in these economically trying times perhaps should be given even more.  
2)I regularly participate in these recreational activities: Boating, camping, floating, fishing. They are important to me because it allows my wife and four sons an opportunity to enjoy more wholesome things and be with nature.  
3)The primary areas I use are Log yard, Cordareva and Powder Mill.  
4)I would like to see more done to preserve the traditional culture that was here prior to 1964.  
5)Alternative B that the ONSR is proposing unnecessarily adds further restrictions with little or no empirical data for a basis. A more visible and active presence of Park Rangers along with broader resource based recreational zones would better address the growing number of visitors.  
6)Any and all bans on motorized watercraft should be eliminated from whatever General Management Plan is adopted. In fact, present restrictions should be reviewed as to their necessity. The river reasonably regulates itself as to motor size and times of usage. Those parties creating a specific safety hazard should be addressed individually under the multitude of present laws.  
7)I applaud the decision to recognize 60/40 as 40 HP and wish that they continue to recognize 40/25's as 25 HP.  
8)I wish that the NPS would do a better job of maintaining our access to the river, given the elderly and the disabled that are wholly dependent upon such physical accesses.  
9)I wish that the staff of the ONSR would increase their efforts to reach out to horse and boat owners to increase their usage and resolve whatever conflicts might actually exist.  
10)I believe the GMP as presently put forth exceeds the scope of policy and is actually prescribing regulations, and doing that somewhat ambiguously.

**Correspondence:** I support Alt B with a few suggestions:

- Cooperation with volunteer groups to do more living history
  - Allow motorized use above Pulltite
  - Bring back jon boat rides at Big Springs
  - A long hiking trail somewhere on the upper Jacks Fork - maybe Bay Creek to Alley or 17 bridge to Reymers
  - Encourage more value-added recreation (fishing/river guiding, historical canoe tours, commissary boats, etc.)
- A better managed park, in the long run, will be much better for the local economy. River guides in most National Parks earn over \$200 a day!

**Correspondence:** I am a resident of Ozark County. Even though I do not live in the area of the National Scenic Riverways NP, I still love the area and have floated and camped along both the Jacks Fork and Current Rivers. I love the area and feel very strongly that it should be protected and preserved for future generations to enjoy.

I am also aware that there are many commercial interests and property rights folks who are against any restrictions on the use of the rivers. I myself, own property on the Bryant Creek. I see unprotected uses along the creek that harm the natural environment because Bryant Creek is not protected.

I favor Alternative B and believe it is the best combination of protection and recreational use. I am in favor of limitations on uses such as 4-wheeler activities and any gravel mining along tributaries. The silt caused by such activities makes its way into the NP areas. Such uses should be restricted.

I have been the President of the Ozarks Resource Center (an environmental protection group) in this area. I feel very strongly that the natural environment is an important resource and must not be destroyed.

Sincerely,

Jay Dee Martin, Ph.D.

Retired Economics Professor

**Correspondence:** My comment is two fold. I have my personal point of view and a business point of view. As on Office holder for Shannon County I can see the changes in the managment plan being a great detriment to the people of Shannon County. A large portion of the the people in Shannon County, especially the Eminence area make their living from the tourists. When you limit access to the rivers more than what you already have this limits the amount of money to be made by the businesses in this town. More restrictions and shut downs will close the doors to many more businesses in our area. More than what have already had to close due to the economic crisis. Those organizations that are pushing the OSNR to regulate have no concept of the "living" the day to day lives in this area. They don't care what we have to deal with. They are trying to pay their way to getting what they want strictly because they can afford it! With no other understanding to the real issues at hand. There are other ways to fix the problems "they" seem to think we have down here, without shutting things down. The information as to the river, the roads, etc. is being misrepresented. Like the erosion??? What a load of crap. Instead of doing these little private studies that the decisions are being made from, maybe an open study with input from the locals might shed some light as to the real problems and what can be fixed.

I also have a personal stake in this decision. My family and I go to the river almost every weekend in the summer. We use the river as a family fun day as much as time and circumstances allow. There is no way I would do anything that would cause the shutdown of the river. Same as most all locals in the area. We love the river too. Just like the people that want it shut down claim to do. The difference is I don't expect to get to keep it all to myself. The people

pushing for the shutdown think "they" should be able to come whenever they want and not find anyone else enjoying the river. If they want a pristine, silent place to enjoy the scenery maybe they could stay at home and go to one of the parks in their own area. I have no doubt it is pristine, unpopulated and perfect. As I'm sure they have already swept their own doorstep before they came to sweep mine. And if they do decide to come the Jacks Fork or Current River, then they should understand, other people love the river too!

Please consider all the lives that will be effected in a negative way before you choose to do this shutdown. Leave things alone. Enforce the laws you already have and let the people live to enjoy the river for years to come!!!

**Correspondence:** I would like NO ACTION on the Ozark National Scenic Riverway management plan.

I have read the entire 543 page document, and am OPPOSED to the three alternative action plans described. I do not like the idea of "management zoning." I am opposed to implementing "visitor use management strategies" which will be used to further control visitor access, use and behavior.

I am opposed to the idea of organizing a park advocacy group, which would put unelected and unaccountable persons in the decision-making process that affect Missourians' and visitors' recreational experiences. I believe the concerns outlined in the document can best be addressed through local means, not through federal regulation.

Overall, I am opposed to the increased regulation, restrictions on access, permit fees and requirements, and other onerous ideas/proposals outlined in the three action alternatives.

Sincerely,  
Erin Talcott

**Correspondence:** As a lifelong Missourian, nature and outdoor activity enthusiast with three generations of Eagle Scouts in my immediate family, I would like to voice my comment on the Ozark National Scenic Riverway mangagement plan.

I would like to see NO ACTION taken on this plan.

I oppose the three alternative action proposals for a variety of reasons- -primarily because I believe control of our state's natural resources needs to be local. I am opposed to the idea of managment zoning, implementation of visitor use management strategies, organizing a park advocacy group and other ideas in the management plan. The action alternatives in the plan impose increased regulations, restrict access, impose permit requirements and fees, and are a means to further regulate Missouri taxpayers, who should be able to enjoy the natural resources they pay for without burdensome regulation and fees. Controlling negative visitor behavior should be left to local control. We do not want unelected and unaccountable persons "advocating" and regulating our natural resources, closing roads, setting up permit systems for horse use, etc. for Missourians. NO ACTION on this plan is best. Thanks. Michael Talcott.

**Correspondence:** The plans submitted for the changes to be implemented to the Ozarks Scenic Riverways are very contraindicated regarding the people who reside in the Ozarks of Missouri. Decreasing the amount of mileage

on the equestrian trails, limiting the river crossings even more than done to date, and requiring a user fee/bridle tag are grossly unfair to this populous. We are already living in the most economically depressed area in the whole of the USA., so we don't need any further governmental regulations, taxes or rules imposed upon us! My vote is for NO changes to be imposed on our 'public' lands and to let them remain public! Let them return to the management of the State of Missouri instead of the control of Washington, D. C. beaurocrats!

The local television news should also be notified regarding any purposed changes to 'PUBLIC' lands so that ALL of the people should made aware of these purposed changes to our lifestyle, economy, and recreation sites.

I love the river and fish, canoe and camp there frequently, following Leave No Trace outdoor principals. It means a lot to me. Please also consider the following historical context...

Sigurd Olson was a conservation leader that helped establish the Current River designation and many other National Parks around the country. He argued that these resources are vital places for people to escape the stressors of the modern world and to rejuvenate the soul. I (we) have been the benefactor of that legacy and have used the Current River exactly that way.

Sigurd predicted also, that the future would inevitably bring even more intense pressure for development, mining, and other consumptive or high impact uses of the resources in our public trust as our population increases. We are now at this crossroads, and we need to make the right choice- -the best compromise we can strike which will preserve (and improve) the integrity of this precious place that we are entrusted with, so that future generations may continue to experience its benefits.

Again, and please, enact "plan B"

**Correspondence:** First of all..  
The fact you have set this up with several different options one of which is noted as ..... "No Action" is misleading and totally wrong.. Its a known fact that anyone who in fact chooses this option will not be counted in the process at ALL ! So guess the park service wants some extra insurance that they can get what they want and the tax payers or local people wont ..

I do NOT want any river access closed nor do I want to have outboard motors or the right to ride horses on trails stopped. Im sure that a major law suit is forecoming.....

I don't believe that the NPS will consider or allow anything on the riverways except the draft plan as it is ..

**Correspondence:** I would like to express my deep satisfaction that the Ozark National Scenic Riverways system haabeen established and continues to funciton as it has. I have been a regular user of the various Ozark Scenic Riverways for over 40 years (since even before its establishment). I float on the Current/Jack's Fork Rivers several times each year. I have also floated on the Eleven Point River in the past. My family and I enjoy river floating very much and find this to bde an extremely pleasant experience on these rivers in their present condition.  
2 Summers ago I floated on the Niangua River on a midsummer weekend and found it to be totally overwhelmed with drunken partiers. There was literally thousands of college or other young people on the river, with numbers that were truly overwhelming for such a river. In some of the more challenging river turns one would literally bounce off of multiple other canoes and rafts who tended to congest on such locations. The experience was very different from the more serene experience tha twe find on the Current River. I would hope very seriously that the Current and Jack's Fork Rivers would never become so overfilled with young drunken people. The Niangua was not an experience I would consider ever sharing with my young children or older parents.  
The National Scenic Riverways is an excellent system and one I support very strongly. I am aware of some of the discontent with this from some of the local people who live in these areas, but I think a much greater good is served with the Scenic Riverways System. I work with people who have grown up in Shannon County and they seem to also be supportive of the Scenic Riverways system.  
These clean, natural river systems are truly a treasure that should be protected from careless destruction at the hand of those who fail to appreciate the inherent beauty and fragility of these river systems. I enjoy seeing other people enjoying these river systems, particularly when they also make effort to help protect these rivers for future users. I was disappointed to learn that the National Scenic Riverways system had backed off of attempt develop a management plan for the North Fork (of the White)River. I understand that this was due to unhappiness expressed by many of the local landowners and river users. From my perspective, I have not found the National Scenic Riverways system to be an impediment to enjoying these rivers. It has infact helped very much to maintain the quality of these rivers and their surrounding environment. Overuse of the rivers, degradation of the river banks and watersheds, and accumulation of trash could all serve to destroy much of the beauty and quality of these rivers.

Many people are not really conservation minded and fail to see beyond their own personal wants or pleasures. I strongly believe that an overall management by a system such as the National Scenic Riverways is the best way to insure that a proper management plan can be put in place and enforced. To do less than this would be a travesty I feel.

**Correspondence:** No access to Current river means people in our areas lose their jobs. The river is a highly significant source of revenue for the small surrounding towns. Not only is it a source of income and a boost economically in our areas, but it is a beautiful river that is enjoyed by so many people. The river is a way of life for most people in our area. People from the city don't understand and should have no say in the preservation of the river. It is not a way of life for them. They simply are the type of people who come to our area and trash the river and have no respect for it! Yes, they do boost our revenue in the summer time, but it is mere to what the locals compensate to the equation. Like any business you have to take the good with the bad. I feel as if the river access was shut down in the hot spots as this plan implements it would devastate our communities! Living in this region is hard enough economically, but to take a natural resource that boosts revenue and helps our communities thrive is unfair. WE the people who love, cherish, respect and live for Current river should have final say in this plan. No one from the city who doesn't understand the full picture should even get to speak on behalf of this plan. The heart of this area is our river access. When you leave this part of the state and people try to figure out where Ellington, Van Buren, Doniphan, Eminence and other surround towns are they always relate it to Current River. The beautiful river you read and hear about. The beautiful river you live off of. The beautiful river that brings tourists to our area to camp, float and fish. The beautiful river that has the prettiest springs in the country. The list goes on and on. Something as dramatic as closing down access is heartbreaking and scary at the same time. There are bigger problems in this country then to pin point the preservation of Current River. How about taking a look into places that are polluting and not taking care of their rivers. Those would dry up faster wouldn't they?? Our river is here to stay for many more generations. This whole idea is based on city folk "facts" and computer time lapsed projections. When really no one knows how long it will be around. We are not supposed to know, we need to be able to enjoy the access while we can and continue to take of it the way we currently do. Please reconsider your plan. WE do not need any economic impacts anymore on our communities in this area. Think of the people...

**Correspondence:** Dear Sirs:

I respectfully request the "No Action Alternative" be the course the National Park Service takes for the riverways in our area. We live on those banks in the summer with our kids and grandkids. We pick up trash, we clean up other peoples messes, and happy to do it just to be able to swim and have fun on the river.

So many of our freedoms are being taken away by the government. Please realize the people of this county and others have enjoyed these areas without the government for sometime and would like to continue.

Cedar Grove and Big Creek allow my 68 yr.old husband access to wading the river and fishing. Close those and he will not be able to get to those 2 waters. He use to have another place to wade, but the government now says property owners own that part of the river. Another freedom gone.

Sincerely  
Judy Wilmont

<b>Correspondence:</b>	The perferred plan seems to be reasonable with the exception of the closure of the river to 'NO MOTORS" year round. In the winter months you will find very few tourist floating the the river in canoes and by shutting the river off to allow no motors year round, there is now a portion of the river that is not being enjoyed by anybody. I beleive it would be more resonable to make these areas seasonal so the locals could still enjoy fish gigging in motor boats in the winter. Which is an Ozark tradition in many families.

<b>Correspondence Type:</b>	Web Form				
<b>Correspondence:</b>	I am in favor of Alternative B, or a modification of B, for the following reasons:				
<p>First let me say I have canoed, kayaked, or jet boated all 134 miles of ONSR for the past 27 years. And while my canoeing/kayaking days are being limited some by my age, I now own a jet boat.</p> <p>I feel this riverway is "owned" by all people of this great nation. The fact that it is a NATIONAL scenic riverway demands that those entrusted to manage it do so with all users in mind. Alternative B is a good compromise between extreme primitive management and the no action alternative that is strangling the river and its delicate natural resources.</p> <p>I find comfort in knowing that there will be sections of the river where a floater can enjoy it without encountering a noisy boat or vehicle. I have experienced overnight float trips on the Jacks Fork where my camping experience on a gravel bar was interrupted by a pickup truck driving past my tent. If I want to camp on national scenic river I feel I should be able to choose a section of river where I can avoid vehicles or at least know what gravel bars they have access to.</p> <p>National treasures should be managed for a wide diversity of users so as long as the natural resources are not negatively impacted.</p> <p>If I had one suggestion to Alt. B it would be this: Consider motorboat use from Nov. 15 - Jan. 15 between Akers and Pulltite. This would accommodate the giggers yet avoid the floaters who are here to see the fall colors.</p> <p>I would also like to suggest a couple of information needs to help clear up any confusion.</p> <p>1. The plan talks about being able to maintain 20 access but does not yet identify which ones. Are these the canoe</p>					

concession accesses? If so, can you make that clear and at least name all those.

2. A visual map of all the river accesses that are under consideration, both permitted and unpermitted will help people better understand the challenge you are up against with maintaining them all.

Thank you for listening.

Dave Mayers

**Correspondence:** There needs to be no change and open to the public in the Ozark National Scenic Riverways, Van Buren, MO. We're strictly against making primitive areas, closing roads & limiting access to the river. We think there needs to be more regulations on non watercraft such as tubes and floatation devices, this is not a theme park & that is what it has been turned into. It needs to be for fishing, boating and family outings. we would like to see higher horsepower on boats up river, it has been years since we have been up river and we live here, this is our home and parts of the river we never see. It's unfair to the people with higher horsepower boats & what are they suppose to sell what they already own? It's not fair to the locals as we said before this is our home & the government is trying to keep us from enjoying the outdoors around us.

Best Regards,  
Rusty & Sandy Helvey

**Correspondence:** I agree with the need to reevaluate the management plan and I like using current biology practices to manage the area but I think less emphasis should be placed on Indiana bats and Ozark hellbenders. I think we should protect endangered species but not to the extent of limiting other activities that have little to no impact on these species. If the Plan B can be implanted without stopping the access or changing the current hunting, fishing, and trapping activities then I would agree to move forward. Limiting these activities would, in my opinion, stop several users from benefitting from one of our states wild treasures.

**Correspondence:** This new Ozark Riverways alternative b is the most inconsiderate idea for the rivers I've ever heard of! I will not have my rights to the river taken away become your agency is more worried about the revenue from the tourists!! I have lived near current river my entire life and I spend more days on the river in a year and spend more money in a year than a group of 10 tourists will. I do not want to here that money is not your objective because a member of the parks service told my family, to their face, that the tourists money was more of and importance than the locals money. The boats are not the problem on the river, the inner tubers that get drunk and block the whole river are the problem. You are doing no help to the environment or the area by making it harder for us boat owners to use the river!! I will make you a promise, if this passes I will never apply for a river pass. I will go on the river whenever I want and wherever I want. I will fight for my rights even if that meens taking it to court. You have heard my voice and if you don't take the voice of the people seriously you will regret it.

**Correspondence:** I grew up in the Ozarks and have many family members living in Dent, Shannon, and Reynolds counties. My primary concern with the plan is the effect to local families who have made the commitment to live in and around the Ozarks and its waterways. The lengthy plan includes limited information related to the traditions and heritage of the local people. It seems that once again, a local heritage is at risk of being marginalized to support non-local visitors enjoying the home of someone else.

The people of the Ozarks have a rich and deep heritage of living with the rivers and streams in a symbiotic way. They know and care for their home. I would be in strong opposition to the plan alternatives that weaken the access and use of waterways for the locals. I've spent many afternoons fishing on Current river between Baptist Camp and Akers Ferry. I've gigged Pultite and Round Spring areas. I've floated around Van-Buren. And I hope to take my young sons to these beautiful places as they grow. In all that time, I have seen locals picking up the trash of visitors. I've seen local men standing up for values in the presence of women when others (often drunk) are lewd and disrespectful. I've seen the local take the time to explain the history and ecological significance of a feature on the waterways. The men and women of the Ozarks are among the most hospitable you will meet and they love welcoming visitors into their homeland - and they do so with respect and genuine care. They resist the urge to become unwelcoming to all guests because of the actions of a few.

My concern is that the effects of this plan (particularly Alt B) will result in forcing unnecessary changes on the people who call the Ozarks home. The current regulations - when enforced - create a wonderful experience for locals and guests alike. A respectful local gigger with a 60/40 engine following the existing rules causes no problems for

visitors - quite the opposite. I've seen gigging boats used to pick up trash, clean the streams, shuttle guests, and get visitors to safety in the event of an accident or storm. A rude person with little respect for others will cause problems with a motor of any size. The same goes for ATV's, horses, access, campsites, etc. Adding restrictions will hamper the rule-abiding citizens and guests, and those ignoring the existing regulations will continue to ignore the new regulations.

My preference would be Alternative A (no action) with added resources to enforcing current regulations. I believe that adding resources to protecting this beautiful culture and landscape make it an attractive place for families to visit. It is indeed a national and state treasure - but we should always remember that it is also the home to a rich, friendly and viable culture of men and women that love their land and streams. They are one of the most valuable resources in the area - not an obstacle to the vacation of visitors.

**Correspondence:** It cannot be said enough. People should not be restricted from using the rivers. It has been done for years, and problems did not arise until the National Park Service took ownership of them. Then and only then did problems arise, as in Yosemite National Park.

Being raised in this area and along the Current River, I can tell you that people were not restricted from using the waterways by individual ownership along the edges of them. My grandfather never refused anyone access to the river through his land.

There is nothing wrong with the management plan as it is now, except for the restrictions concerning gravel removal from the tributaries.

Dirt and Gravel Roads are in no way the main cause of sediment to streams. There were no problems when the National Park Service purchased them. Conviction and false advertisement from the Lobbyist groups have hurt the traditional way of taking care of the Ozarks.

The problem of silt into the waterways was taken care of in part by the Counties taking gravel from the small streams and putting it to use elsewhere before it being washed into the rivers. Occupants keeping the springs and creeks clean contributed to the free-flowing waters.

Where is the end to all this? There are many, many, many beautiful places in the United States. Do the people in Washington think they can take hold of every one so that the whole of the US can have use of them?

There is no way that environmentalism is a bad thing. Care needs to be taken. But there is such a thing as 'going too far'. And it is going too far to say that local uses of these rivers should be restricted. Yes, there are those who don't play by the rules. There will always be. We cannot create a perfect world. But what good is something beautiful if it can't be enjoyed? Like Yosemite National Park. It was purchased. Tax payers whom own it pay to see it. Now they are saying it is being overused. What did they expect would happen? What purpose does it serve just sitting there?

I am proud of my heritage, and love the area in which I was born and live. Near the Current River, where my great-grandfather, grandfather, father and our family once roamed. It is my plea that the general management plan remain as is. Thank You.

**Correspondence:** I have grown up on Current River and spent a majority of my time there since I was a baby. I have literally spent every weekend there in the summer if not 4 or 5 days out of the week there in the summer. All iv ever known is fishing, hunting, and having fun on the river. Doing things such as swimming, boat ridding, etc. If you didn't grow up there then you don't understand. Just like maybe your idea of fun is going golfing or going out to a country club. Maybe that's all you have done since you were a kid. You probably wouldn't be to happy about giving all your hobbies and fun activities up. It's our life, our way of living. My parents spent every summer on the river, their parents spent their time there, and their parents and so on. It's all we know and it's something I'm willing to fight for. I look forward to spending my time on this river and gravel bar every year. Not just in the summer but in the fall and winter. I love to hunt and fish and gig, as well as my whole family and all my friends. It saddens me that it could all be taken away. Let alone, it will destroy our community. It will take away jobs, leaving people unemployed. We base our whole lives around this community and our rivers. Jacks Fork and Current rivers are recreational areas and they should stay that way!

The NPS needs to go back to the original reason of why the ONSR was created and live by the guidlines the committee laid out then.

The committe stated in 1964 they wished to emphasize the importance of "creating Federal land for recreational use". The State of Missouri gave the ONSR the right of existance back then and the NPS should keep that in consideration when EVERY County Commissioner, State Representative & Senator and our US Congressman are against the proposal being set forth by the plan.

The NPS needs to consider ALL recreation and the value it gives to the local communities. The people who live here have endured enough change and regulation already. That's why I support "No Action". Leave everything as is, enforce the rules already provided and many of the issues the NPS claims could be resolved.

**Correspondence ID:** 911 **Project:** 15793 **Document:** 56208  
**Received:** Jan,22,2014 08:37:21  
**Correspondence Type:** Web Form

**Correspondence:** Thanks for the opportunity to comment. I strongly support Alternative A. The NPS has an obligation to the people of the United States and to the residents of Missouri to take very seriously its obligations to maintain and protect the water quality and natural resource value of the streams and land along them. The NPS actually acquired this land from owner/residents of the region, with the express purpose of protecting the land for access and enjoyment by more people. To do anything less than maintain the maximum protection for our great grandchildren and beyond would seem like a betrayal of a trust.

I realize that there are many competing interests for use of the land and waters. It seems that frequently one group of users wants to blame another group for the problems with erosion, habitat decline, pollution, etc. Each group of potential users should be mandated to maintain the strictest protection of the rivers and corridors. Thus, just as in western rivers, canoe livery services should rent or provide free access to human waste containers so that canoe visitors do not leave human waste on the banks. Horses should be required to wear feces collectors or be banned for the river banks and in stream activities. Private land owners should be required to keep cattle out of tributary streams. These simple recommendations are just practical actions. Everyone needs to do his or her part to protect this valuable resource. Motorized vehicles should be strictly limited in the scenic river area. Natural systems are impacted by noise; and "quiet" places are among the most difficult natural resources to find anywhere in the USA.

I urge NPS to do what it can to limit motorized vehicles near the rivers, strictly limiting access points for users, and prohibiting off road vehicles, as well as motorized river craft anywhere above Eminence, MO.

I also recognize there is an attitude among some residents that they should be able to use and abuse the land as they

see fit. It is for this reason the NPS took on the historic responsibility of creating the scenic rivers program and I trust that the NPS will live up to that obligation to protect the rivers for all citizen and not let a few damage them for all.

Although I prefer the Alternative A, I can live with the NPS "preferred" alternative B, so long as the NPS does indeed protect the Big Spring Wilderness study area as wilderness and remove illegal roads and so long as the NPS does set stringent standards including the recommendations I make above, for requiring users to take a role in protecting the rivers. I also approve of the NPS providing educational services, because that is critical to appreciation of natural resources that many of our citizens seem to lack.

**Received:** Jan,22,2014 10:08:24

**Correspondence Type:** Web Form

**Correspondence:** I have been floating the Current and Jacks Fork rivers for more than 40 years. I usually float from Montauk State Park to Round Spring on the Current, and from The Prongs to Eminence on the Jacks Fork. I favor Alternative B on the draft management plan, and thank the National Park Service for helping to curb abuses of these wonderful resources.

I seldom float on summer Saturdays because of the crowds. My favorite floating seasons are spring, when the wildflowers are blooming, and fall, when the autumn colors are on display. I also float on warm winter days, and do an annual New Year's Eve float with friends.

When on a float trip, I stay at Montauk lodge, River's Edge Resort or Round Spring Retreat. I am too old to camp.

The noise and booze restrictions implemented in recent years by the NPS have helped curb the rowdiness, but there are still practices that have an adverse impact on anyone seeking a bit of solitude on the rivers.

There is nothing like the roar of a jetboat through the valley to spoil a float. I have witnessed these boats eroding the river banks and scouring the gravel beds, where all things nest. I usually don't float the lower stretches of the rivers, and sacrifice these areas to the powerboaters.

I also object to the ATVers who think the river is a place to play and the gravel bars are for ripping around.

The locals who argue that they know best how to manage these resources have short memories. I am old enough to remember when the woods were cut to the nub, and every rain brought more gravel into the streams. There were few deer and no turkey.

IT WAS STATE AND FEDERAL PURCHASES AND PROGRAMS (AND, YES, RESTRICTIONS) THAT BROUGHT BACK THE CURRENT AND JACKS FORK RIVER VALLEYS.

We do not want to cut anyone off from these rivers. We want to assure that they are protected for all future users, in as pristine a shape as possible.

If you want to see what happens when no one protects the resources, float the stretch of the Jacks Fork within the five-mile Eminence zone. Someone has way to the river. The land is now eroding, and the landowner is using broken concrete slabs to line the river bank. A bit downstream, another property owner has erected his fence so his cattle can enter the river to wallow. Finally, there is a historic river crossing in the stretch where ATVers play in the water. The law says they can cross the river, but not run up and down the stream bed. Try telling them that.

Thanks for your help.

**Correspondence:** Living on land close to the river and appreciating the natural beauty and quietness of the river we prefer to have only non-motorized boats on the upper Current. We would like to vote in favor of "Plan A". We feel that there are already plenty of places for folks who love their gadgets to to go a and play with them. We have no problem with gigging if the folks are not using motorized boats with generators. If they can use traditional means without disturbing those close to the river and our livestock, fine.

**Correspondence:** I am in total support of the "No Action" alternative. Any change to the existing plan will be detrimental to this area. Our community exists mainly on the tourism trade. If you make any changes, this will have an adverse effect on our local economy. The companies that exist in this area employ a lot of our high school kids and their parents throughout the tourist season. Jobs in this area are scarce and for anyone to have a job, it is extremely important that we keep those jobs that are available. The impact is unbelievable. You have the person who builds the boats and we have several in this area. Then there are the boat dealerships and of course the dealerships have their contacts at the local bank where they send people purchasing boat to go to for the financing. We have the individuals who do the upholstery for the boats who work out of their homes just to have on rental expenses. Then you have the private individuals who do the graphics for the boats and the polishing of the boats for those who like to keep their boats polished. That is just the boating industry alone. In the summertime, boats are on the river every weekend enjoying what nature provides. The tourist industry impacts every area in this town from gas stations who rely heavily on the tourist trade to the restaurants, grocery stores, the t-shirt shop, beauty shops, auto repair places, etc. Just the economic impact alone is reason enough not to make any changes.

As far as individual areas- -river access needs to be left alone. There are many individuals who camp along the river and having the river access nearby for them to launch their boats is a major convenience, especially when you have tourists who are stranded on a gravel bar too afraid to get back in the water and no other way to get back to their hotel, which happened this past fall. My husband had to rescue 5 individuals, some of whom were elderly and overweight as they were too afraid to proceed. He was camped at Jerktail and luckily was able to launch his boat, go upriver several times to brings those individuals and their gear back to camp where their vender was able to come and get them. There have been numerous times that canoers have stopped at our camp and needed assistance and because we had our boat right there or the mere fact that we were camped their with our vehicle, we were able to assist them in their time of need. We have had people who dallied too long up river and missed their pick-up time 7 miles downriver so we had to call their vendor to notify them of where to pick up their people. If we aren't allowed to camp in these wilderness areas, who is going to help these people then. You can't even get cell phone service on the river. At least by camping there we are able to climb in our vehicle and drive to the top of the hill to get service.

Horsepower-if there is any change at all it should be to put into writing that the horsepower is 60/40 so that those jet boats are considered legal. As it stands, the rules show that horsepower is to be measured at the powerhead and not at the jet. There are too many times where the jet boats have had to come to the aid of individuals on the river in situations where time was of the essence and there were no park service individuals around to help. You start regulating even more the horsepower that the boats have and that assistance won't be as timely.

Majority of the residents in this area cannot afford to take vacations, but with the way things are now, they can afford to take their family camping at one of the many river accesses for very little expense and that is the only vacation they can afford. Implementing your plan will stop them from enjoying what nature and God have provided.

Trails need to be left as they are. Is it really fair to exchange 65 miles of trails for 23 miles of trails?? I think not. This severely limits our tourists. At least with the 65 miles of trails they can ride and not have to remain on the same trail which would create more erosion than what we already have. The horseback riding industry in this town amounts to approximately 25% of the local tourist trade. You start cutting out the trails and that is going to drop significantly.

During last year's Federal cut-backs, we (the locals) took care of the property, we picked up the trash and debris that the tourists left behind. We even hung signs informing visitors to take their trash with them as the park service would not pick it up. We, as individual taxpayers own the property and why should someone who never visits our park or who only visits our parks once a year be allowed to govern our rights. They aren't here to take care of it and during a federal shutdown we aren't even allowed to have access. If I own a portion, I ought to be allowed access regardless of whether or not the government can afford to function. It's not my fault that the federal government can't manage their finances better. You take our rights away from us and who will take care of it then. LEAVE OUR PARK ALONE!!!

**Correspondence:** Dear NPS,

I want to express my opinion of the general management plan regarding the Ozark National Scenic Riverways. I AM TOTALLY AGAINST ANY CHANGES!!! I was born and raised in the heart of Current and Jacks Fork Rivers. My family's heritage goes back several generations of people who used the river for many reasons, either to make a living logging down the river, building boats for people to use or just plain recreational swimming with cousins, family BBQ's on the gravel bar, camping, etc. There are MANY local businesses in the area that would suffer great losses if people's rights are taken away of using the rivers. I take my kids on a regular basis to the river year round. I want them to experience the same family get togethers that I had when growing up on the river. It would be a SHAME for them not to be able to get to do the things that I got to do as a child. My family also depends on the river use as a way to make a living. If you have ever been to the area, jobs are scarce. The changes that the NPS are proposing would be a disaster to the area economics as well as the way of life. The NPS has made changes along the way that should have not been made. But this time, we are STANDING FIRM! Our voices need to be heard...every elected official that represents the area is against any changes. We the people have a say in this! We the people do not want any more changes!!

Superintendent

Ozark National Scenic Riverways

PO Box 490

Van Buren, MO 63965

REGARDS: Support of "No Action Alternative General Plan"

Superintendent:

When I was a young boy, my grandfather, Frank Roberts, owned 200 acres at the mouth of Rocky Creek on Current River. The National Park Service took the farm by eminent domain in the 60's. The NPS told my grandfather they were going to make the river a place where all people can always enjoy it. Unfortunately, that seems to no longer be the goal of the park service.

Through the years I have seen the changes that the Ozark National Scenic Riverways have made. They have made it where families can enjoy it for a day or a lifetime. There is access all up and down the river and room for everyone to enjoy it. If they want to canoe, tube, run a boat, go hiking, hunting, or fishing, or just enjoy the scenery and the beauty of the nature they can. Now, the ONSR is forgetting the purpose of our tax dollars spent. It is not for the special groups or lobbyist with money. It is for the enjoyment of all people.

I have spoken with the Department of Natural Resources and there is no study showing the riverways being misused or in a state of digression. The locals are very proud of their rivers and do many projects each year to keep the rivers clean, including a yearly clean out. Most trash and misuse comes from those coming into the park and not being educated on how our river systems work and how we operate as a community to keep them clean and cared for. We need to find a way to educate them about our river systems and the amazing ways this river system provides for our communities, and that we want to share our awesome rivers and parks with all.

So Mr. Superintendent, I am asking you and the committee to leave the river as it is, "No Action".

As for the wilderness area suggested for the now Big Springs area. We have an Irish Wilderness area of several thousands of acres just a few miles from here. This Irish Wilderness Area sees 400 to 700 visitors a year. This is as many visitors that Big Springs now accommodates in one day during peak season. So why the change if we are wanting to make this for the people? Can you give me a reason? Once again I state, "No Action".

Sincerely,

Rickie L Roberts

Mountain View, MO 65548

**Correspondence:** Upon the meeting held 01/21/14@ Van Buren community center, I was enlightened on the subject concerned. The reception was handled very professionally, needless to say, upon leaving I was satisfied!

My true concern was "HORSE POWER LIMITS".

As I explained to Jodie Towery, Lindel Gregory and Mr. Black, horsepower shouldn't be the issue, but the ones using the bigger horsepower engines.

Most always alcohol seems to bring out the need for speed in some. As a matter of "fact" there are 40/60 horsepower outboards being tweaked to out-perform the bigger horsepower engines. (case being) you will not eliminate hi-speed boats on the river system!

The outboard I use is: Evinrude E-TEC 175 h/p jet propelled, which in reality cuts the horse-power rating greatly, Evinrude spent millions of dollars in designing an outboard that by "fact" are the most fuel efficient, and by standards, the least amount of emissions by any manufacturer of outboard motors. This should stand above any decision the PARK SERVICE should mandate in the near future.

My wife Betty and I spend a week in the spring a week in the fall @ BIG SPRINGS CAMPGROUND LOOP 200, AND OUR PRIMARY USE OF THE BOAT IS SMALLMOUTH & WALLEYE FISHING, "FLOAT FISHING" THE ONLY TIME MY OUTBOARD RUNS IS WHEN IT IS TIME FOR LUNCH OR GETTING TO DARK TO SEE.

So please hear my plea, and if in the future upper h/p engines are eliminated, it would probably be the end of something my Wife and I have enjoyed the last several years.

Will all due respect, please consider

THANK YOU,  
DOYLE L.ABBEY

A response would be appreciated.

**Correspondence:** I am writing as a concerned citizen regarding the effects the Draft General Management Plan will have to the Current and Jacks Fork Rivers.

Shutting down access to these rivers will have devastating effects on our local economy. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and surrounding areas. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they pay to preserve.

I strongly recommend that the National Park Service take a No-Action Alternative to prevent unnecessary restrictions on our public lands.

**Correspondence:** I am a life long Shannon County resident. We love our rivers and the land around them. We take excellent care of them. I feel you have imposed enough rules and regulations on us and the rivers we so love. They are a tradtion passed down from generation to generation, from fishing, boating and camping. It is very unfair and unjust that you let people who have never been here and know nothing about this part of the country dictate what goes on in our lives. Impose limits on every aspect of our outdoor lives. We don't try to impose our wishes on their city parks and their city life.

**Correspondence:** I have been going to Current river my entire life. For no reason should our rights to the river be taken away. It has always been public and should always be. It is our right as residents of Missouri, where we pay taxes for the upkeep of the river, to have access. This area is known for its beautiful river area and draws people from far away. This brings in revenue to our area as tourists come here just for the river. But more importantly, it is a way of life for the locals. No one should have the right to take that away.

**Correspondence:** It's plain and simple...My husband and I grew up going to Current River in Shannon County, also known as Cortariva/Log Yard. We grew up swimming, boating, fishing, camping, grilling, spending time with family there during the Summer and Fall-Winter Months(Gigging) Now married 22 years this is where we spend every Sunday afternoon after Church. We have five children and want them to grow up enjoying this beautiful place. We spend entire days there and camp often. We always clean up after ourselves and have never left trash or anything on the gravel bar. I am a photographer and enjoy riding over in the fall and winter months to photograph the Eagles on the cliffs and the elk that have moved in. They don't seem bothered by us at all! Please let us continue our traditions and respect our wishes. I have several close friends that own Cabins on River..I can't imagine them losing their Family Cabins. Local hosts clean up weekends, and go down and clean up the river. Do we ever see City-Folk-or so called People against what we are doing down there helping? NO! It's always US the locals!

**Correspondence:** I grew up in Reynolds County and on the Current - Black and Jacks Fork Rivers. I worked one summer for the Conservation program cleaning up and maintaining the camping areas and rivers. From what I observed during that time, most of the damage, destruction and problems came from the people that did not live in the area. If there is restricted access for the rivers the people who live and work there locally will be the ones hurt the most. Locals are the ones taking care of the rivers and making sure they are kept clean so that generations of their family are able to use and enjoy the rivers as they were. We no longer live in Missouri but when we do come back to visit the thing we look forward to the most is spending time on the river.

**Correspondence Type:** Web Form

**Correspondence:** If the federal government is 'for the people, by the people,' then how can the federal government tell us, the people, that we have no right to be on land that is essentially ours? When did our federal government switch from being 'for the people' to 'against the people?' I have never seen prettier rivers, and they are that way because we take care of them here. We have built businesses and lives around them. People from all over enjoy them, and even though those people don't respect them as well as us locals do, it's ok, because we gladly pick up their messes as well as our own. This is not the city where weekends are spent at shopping centers and movie theaters, this is the country. We don't want shopping centers and movie theaters. We don't want concrete parking lots and highways. We want gravel bars and crystal clear water. We want campfires and pictures of American Bald Eagles as they watch us from the trees. We want what we've always had, and who is the federal government to tell us it's not ours anymore? Who is the EPA to say we aren't environmentally friendly? How many eagles sit in trees near EPA head quarters and watch them go about their day? How many rivers are crystal clear in the city? How many

stars can be seen up there on a crystal clear night? I do believe the EPA should take a step back and re-evaluate who's doing a better job caring for our planet here, then I believe they should laugh and their own ridiculousness and start barking up someone else's tree. My "country" life and my "country" rivers are the last thing that need to be under reform in this world. It's seems to me that the EPA's efforts would make more sense if they were concentrated in their own backyard. I'm sure D.C. needs more of an 'environmentally friendly' clean up than Southeast Missouri.

**Correspondence:** I understand that the NPS is not going to consider the No Action Alternative. I may just be wasting my time but I think that the Federal Government should give the rivers back to the State of Missouri. If access to the river is decreased it will have a large economic effect on cities like Ellington and Eminence. Bans on motor vehicles should be eliminated from the GMP. The citizens that live and work near the rivers should have more to say about how they are managed than the "big city folks" and the enviromentalists. The people that use the river on a regular basis are the real enviromentalists. We take care of the river. We clean up after camping at the Logyard leaving it better then it was when we arrived. We pick up trash on the river. We want it to stay beautiful.

**Correspondence:** I urge the OSNR management plan to implement alternative A plan to preserve and enhance missouri's natural lands and water systems.  
In the last 30 years I have floated the Current, Black and Meramec Rivers and have felt increasingly distressed at the slow degradation of some of my favorite natural areas. The misuse of 4 wheelers on beaches and in the rivers are most egregious to me. I would love to see that a state wide education campaign were implemented to promote conservation and pride about our beautiful state resources.  
I fear that if we don't set a high bar, it may be harder and harder to keep pace with the increased usage of the parks. Thank you for all your work on this assessment. As a nature lover and Missourian I appreciate your efforts to get this right.  
Sincerely,  
Michele Isam

**Received:** Jan,22,2014 14:26:46  
**Correspondence Type:** Web Form  
**Correspondence:** To whom it may concern:

In regards to the GMP of the Ozark National Scenic Riverways, I would like to express my concern with the proposed changes. I understand that there are three action alternatives as well as a no action alternative. I strongly support the no action alternative! I also understand that this may not be considered a viable alternative that will be implemented, but it should be taken into consideration for a number of reasons. I have read over all of the alternatives and even the least restrictive is just that "RESTRICTIVE".

There are many reasons I am opposed to any of the proposed alternatives.

1. Land/River Zone Restrictions:

a. Heritage: It should be noted by the National Park Service that prior to the formation of the ONSR, this area was home to many people including my ancestors. That being said, this is where many of them rest in peace today. I find it very unfortunate that the same entity that took over their homeland would then deny their family access to their grave sites. By closing areas of the river or roads leading into the park, this could lead to lack of access to these areas. So you say, we could "hike" into these areas since we will no longer be able to access them by road or river, believe me when I say exercise is good for anyone. Unfortunately, I personally have family members who are either elderly, disabled from serving their country in war or who have medical conditions that have resulted in paralysis leaving them wheelchair bound. Do they not deserve the right to access a national park that isn't handicap accessible

by another means such as a motorized vehicle to visit the gravesites of their family members or just to enjoy the scenery? How will the NPS determine which roads are closed and which areas are going to no longer be accessible? Will the local citizens be polled to find out which families have loved ones buried in the cemeteries that existed before the NPS? I'm quite sure the handicap accessible visitor centers will not be located in these remote areas! Let's consider others who may not have family cemeteries, but may just want to explore the beauty of the park but are not physically capable. They could enjoy the area by UTV or a motorized boat which in some of the alternatives wouldn't be possible!

b. Local Economies: I am a local business owner and believe me when I say it is very difficult in a rural area to a) get a job b) keep a job c) run a business. The backbone of the economy in the local communities is tourism. As the NPS considers restricting access, they should also keep in mind they are restricting income of the people who live and work here. Many of our local stores, gas stations, motels, etc. depend on their summer income from tourism to survive. There are also several business owners who earn their living from the river with campgrounds and canoe/raft rentals. If they lose that income and have to close their doors, that will mean higher unemployment for our area which is already high! This in turn will affect other businesses as those individuals no longer have jobs that provide pay checks and health insurance.

c. Rights: My final thought is this: I am a United States citizen and enjoy the freedoms that come along with that privilege. I will say those privileges do not come without a price. My grandfather's farm was located in the middle of what is now the ONSR. It was basically taken from him; sell it or we will take it as the US government has the right to do! We also have rights. I am a tax payer that helps fund these programs the NPS wants to implement. I should still have the right to use and enjoy the land that once belonged to my family!

I do hope this comment is read with open ears and an open mind! I understand there are two sides to every controversy but I do hope these comments are taken into account as a decision is made.

Thank You,  
Heather McCormack

**Correspondence:** The Park Service is not managing the Current and Jacks Fork Rivers as they were meant to be. The rivers are for recreational use, boating, fishing, canoeing, camping. There are some things the park service could help with. Put more rangers patrolling the river. Get them out of their little "cubicles" and put them to work doing an actual job instead of sitting there trying to figure the best way to take something away from the people. Not to many years ago when you were employed by the PS you actually worked, whether it was patrolling the river or picking

up trash, they worked. Yes it makes me furious when I go to these "meetings" and see the uniforms with all their guns & bullet proof vests on. What a bunch of bull. And instead of having a meeting in Kirkwood, which happens to be just minutes from the sierra Club in Maplewood, have it on a big gravel bar on Current River - on a SATURDAY when more people can get there. But you don't want us there, do you. And by the way, speaking of the sierra Club, how much are they donating to the PS in this venture? People in Kirkwood/St. Louis have no idea how we use the river. The majority of them have probably not been anywhere near Current River. Do they even know what a Jet boat is, or do they think like most people that do not use the river that its like a jet engine on an airplane?

My opinion is to leave the river alone. The floods do more erosion than all the boats put together. Have there even been any studies done on this? And why close down part of the river not allowing any boats on it? People gig and fish on that part of the river the same as they do on other parts of the river. Everyone has their own favorite place. No, our ancestors did not have motorized boat, but they used the river & I think they used it more than we do. Cattle drank out of the river, they floated ties down the river, commissary boats went up & down the river delivering goods to the small communities along the way. You all ever checked that out?

So just leave the river alone. Leave the boats alone. Leave the horses and ATV riders alone. And I think it would be better managed if the State of Missouri took it back.

Have you considered the amount of revenue that boats alone bring in? We pay for license, sales tax and property tax. That goes a long way in helping pay your salary. Then the towns have the revenue when we buy gas & picnic items.

**Correspondence:** To whom this may Concern:

In 1969 the NPS bought 320ac from my grandparents Everett E. and Flora V. Bland, which would be the land access to the gravel bar (Ant Hole). My grandparents were not willing to sell but were led to believe that if they kept the land they would not be able to even so much as cut a stick of wood. Now to me if I own it it's mine and I DO NOT want anyone telling me what I can or can not do with it!! Government or not!! Later they found out that if they wouldn't have sold the NPS would have just owned 300ft of the bank. They like many others in the area, my husband's family included (Frank Roberts) was lied to. All of these farms which are now just standing brush or the fields which are so rough your haying equipment will tear up; could have been farmed and took care of like they were meant to be. So no when you tell me that you are doing this for our own good or just let it go back to nature I think naturally you are feed me and everyone in this community a line!! Leave us alone we bother no one and yes the rivers are meant to be shared with everyone. No way would I want someone not to be able to enjoy our beauty but on the other hand I DO NOT go to the city and tell them how they need to maintain their city streets or anything else. So why do "they" need to feel like "they" can control us in the Ozarks?! When you start putting all of these regulation on .....who really are they for? The people that are here for maybe a week out of the year? Or for the ones who actually live here year round?

Sincerely,  
Susanna Needels

**Correspondence:** I read an artical today from the meeting in salem. It stated that there are currently no restrictions on horse power. Well I beg to differ I quite vividly remember riding in a 200 horsepower boat as a child and that is now resticted to 40 horse. The second comment in this artical that made me angry was, jet boats are not part of our heritage. Well I think the person that made this statement is an idiot! I don't think it could be any more part of my heritage if I tried. My great grandfather owned part of this property that is now the scenic river ways. He

farmed this land he hunted this land he enjoyed this land. It was basically stolen from him. That is my heritage. My grandfather owned part of this land he farmed it he also worked on the river as a young man. He had a motor boat and he loved current river. He brought his family up to love it also. This is my heritage. My mother was born within a few miles of current river and she has been a part of river life all of her life. She has had a boat on this river for 40 years. This is part of my heritage. Myself, I have been on the river for 33 years. I love it, I enjoy every moment spent there. This is part of my heritage. My children have been on this river for the last 10 years. Starting at the early age of 8 days old. This is part of my heritage and the beginning of theirs. I understand the need of keeping our park pristine. But what I don't get is the federal government thinking they can do a better job of that than us. We are the ones who clean up the waters. We are the ones that help confused and stranded tourists. We are the ones who own this river and we should be the ones who decide how we get to do that. I think that the NO CHANGE option is the only option!

**Correspondence:** I read a quote today from Mr. Black "They don't like to hear it. Local people see the riverways every day. They don't notice the little changes that are obvious to visitors that only come once a year, or the people that are trained to take care of it,". Well sir where are these facts. Why can't you show us some proff that the water ways are in so much danger. We do realize that the river changes every year and for some very good reasons. Flooding and weather. The only way you are going to stop this is if... oh wait you can't. The no action plan is the only option. The rest are just big government trying to get bigger. No thank you!

**Correspondence:** Hello,

I first would like to thank you for all of the hard work you do to preserve our great land nationwide. I am commenting concerning the ONSR Draft Management Plan. I frequently fish the upper and lower Current river for trout and smallmouth bass. I have been very concerned with the excessive use of the river in certain areas. The road from Cedar Grove to Parkers has become a 4x4 jeep trail that is overused in the summer. The Current river above Welch is not a very big river and is quite small to be used by jet boats. Jet boats have the run of the river on every river in Missouri. I believe it to be necessary to preserve the river now for future generations. I am in support of Plan B and I wish you all the best in the future.

Daniel C. Kelly

**Correspondence:** I come down to MO. a couple of times per year, sometimes with my family. We come down to camp, ride horses and tube on the Jacks Fork River. I feel the state should retain all waterway rights. I see nothing wrong with letting the people involved with and living on the waterway determine what is best for it. Let politicians in Washington deal with the debt problem they have brought on. Get rid of the free handouts to people who think handouts are a way of life. Deal with the illegal aliens and quit giving them money and benefits earned by American citizens for American citizens. Until those issues are resolved don't start making new problems for the waterways. Mo people depend of tourist trade to make their living. Don't interfere with that. Like I said before, you have a lot more issues in your own backyard to deal with.

**Correspondence:** The river has been a way of life for my family for as long as I can remember. We use the river year round. We camp and fish there in the spring/summer, we bow fish in the fall and gig in the winter. We have spent countless summer days boat riding on the river. My children learned how to swim in the river. The river is very important to us.

I feel that no action should be taken and that things should be left alone. Everything is working just fine the way it is.

**Correspondence:** Dear nps,

I have been on the riverways in the ozarks since I was a little child and that has been passed down through generations in my family. My grandfather was a river guide on the current back in the early 1900s and even has a picture in the nps building at big springs park. I have enjoyed hunting and fishing and trail riding my entire life and it has made me who I am today. I want my children to have the same opportunities in the future as I have had in the past. Please leave this land and the restrictions the way they are and have been. We do not need more restrictions on the riverways or any other places around here. I support the no-action plan 100% along with my entire family. If you all close down accesses and add more restrictions you will be cutting out a part of our lives. Not only is it a big part of our lives around here it is our way of life! This is why I live where I do and I love it here. If I wanted to get booted out of places and have more rules that are not needed I would be living somewhere else. Again I ask for you all to leave everything as it is here and take no action with the future plan. Thank you

**Correspondence:** For years the Park services has been systematically removing the rights of local people from using their streams and land. All in the name of a few people who visit the area once a year. When did it become the right of the minority to control everything. The park services should return back to the people more rights.

This plan closes and less than the rights of local people. When the Ozark riverways was created the local people were told "we take your land so everyone can enjoy it for ever" Well when you take peoples land and give it to others for their benefit that is just wrong. Some might call it stealing. Legally it is eminent domain.

I want clean stream, I enjoy the river. But I want to be able to get on the river and enjoy it. Long ago locals cleaned the river and removed trash left behind by all the drunk people who want more restrictions. NPS stopped this practice and said that the locals could not clean all the cans out.

NPS needs to take this opportunity to return to the local people more rights.

Thanks you

**Correspondence:** I am a Missouri resident, living in the city of Crestwood for 18 years. I attend Lindbergh High School and am enrolled in APES(Advanced Placement Environmental Studies). This class offers many opportunities to go out on field trips and extracurricular activities. While I personally have not attended one of these outings, many of my close classmates have and after every trip I get an earful of how much fun they had.

One trip in particular is a class favorite. Our teacher offers canoeing trips to students on the Ozark River, during which, the students engage in hands on activities and exploring the wildlife around them. From what I hear coming from my classmates they have a wonderful time on the river and wouldn't change a thing. So as their loyal friend I find it necessary to stick up for what they believe is right.

There shouldn't be a change with the Ozark River. If it isn't broken, then don't try to fix it. Who has the right to take away critical learning experiences from knowledge hungry students?

**Correspondence:** Please highly take into consideration many things before Any of the river ways rules and regulations are changed. Is the river really being damaged? Are the motor regulations really going to change things for the better? Is less people on the river really better for the river and the surrounding areas? I have lived near the Current River my entire life and have and am still operating a business near the Current River. As a river user myself, I am having a hard time seeing where boats with bigger motors are damaging the river. Not only are the boats not damaging the river but most of the boaters I know and see are actually cleaning the river from trash when necessary. Also, a family of 4 or larger will have a lot more trouble navigating the river and this might even make for a dangerous expedition for a large family in some circumstances with a small motor. The rules and regulations are sometimes made by people that are not near or have never even been to the discussed topic. Please take into consideration all the people that live, breath, and enjoy what is being discussed and consider that they are the ones that live there and should know by experience what is good or not good for what they call their home. If something was hurting your home, then wouldn't you want to fix it? The answer is yes. However, if you know it's not then you would leave it alone. Please reconsider changing what doesn't need to be fixed.

**Correspondence:** I favor Alternative A, which goes the furthest in closing illegal access to the river and minimizes vehicles on the gravel bars. I have canoed the Current River from Baptist Camp down to Pultite many times and have been very frustrated to see trucks parked on the gravel bars about every 20 minutes. This completely destroys the wilderness feeling. This negative impact is far far greater than any frustration caused by the number of rafts on the river or even by moderately noisy people. I have found myself paddling hard to get past a rowdy group of floaters and as soon as I find a peaceful stretch there is a truck parked next to the river. I actually passed an older couple as they drove down to a narrow patch of gravel, got out of their truck, and set their lawn chairs at of edge of the water so they could enjoy the river and I could "enjoy" the view of their truck.

**Correspondence:** I am a floater, but I grew up in the country & understand how folks who live there feel. I favor something in between plan A & B. There are stretches of the river that are just too narrow and twisty for larger outboards or jet motors, but I think a separate category should be made for true trolling motors. I can paddle a canoe or my kayak faster than most trolling motors! In off peak season, I think the whole river should be open to trolling motors. Fishing & gigging is how many locals who are of limited means feed themselves, we should not take that out of their mouths. I'd like larger outboards limited severely in peak season, similar to A. I'm also a fan of horses & would like more horse trails in the wooded areas, but continue limiting where they can cross the river. It fouls the water. Again, between A & B. ATV's I would prefer BANNED ENTIRELY. Thank you for the opportunity to comment.

**Correspondence:** I have been a user of the park area between Round Springs and Two Rivers for over 35 years. Each year I go on a Father-Son float trip (in canoes). Our group is having its 50th anniversary float trip this year. Generally, the Father-Son trip involves between 30 and 50 participants, about equally split among fathers, sons and grand-sons.

I also annually go on a separate Father-Daughter float trip (also canoes), which is a little smaller group (between 20 and 35 people) with a similar mix of people.

Our typical float (for both trips) involves a Friday night on the river at Sinking Creek, then a Saturday float to about Big Spring where we spend the night and have dinner and conversation and then breakfast Sunday morning. On Sunday we float to Two Rivers and arrive for our take out about 2 or 3 pm after a lunch along the way.

It is a tremendous trip for each family that goes and will provide permanent memories for the children and grandchildren.

Our only problem over the years has been the excessive use of power boats by speeding and discourteous locals. They tend to hoard the larger beach areas, are rowdy, with excessive drinking resulting in some pretty bad language, and (except for the fishermen with small motors) have little concern for the canoes we are in.

I like Alternative B as proposed by the park service, but I would support it fully, if you would use the proposed boat motor size from Alternative A for the area between Round Springs and Two Rivers.

If you cannot make that change, then I would only support Alternative A.

Thanks for reading my comments.

Lou Garr

P.S. I am a terrible speller.

**Correspondence:** Being a lover of nature, and knowing the value of maintaining healthy ecosystems, I give my full support in the adoption of Alternative A in the GMP. I believe what should occur is that illegal roads be closed and restored to their natural state. Furthermore, the majority of horse trails should be non-accessible, due to the lack of need for them. ATV's should not have nearly as many access points as they do. Designated wilderness areas need to be expanded urgently. I love to visit the riverways and do kayaking and hiking trips. It is hard to really enjoy what the Ozarks have to offer with so many areas within taking so much abuse.

**Correspondence:** This hearing is sad. I fear for my safety.  
I like Alt. A. I would to see the riverways protected as much as possible and I feel Alt. A will come close to doing that. There are just too many many people using the Riverway's and now it is a Party River!  
I would like to see the Big Springs area become a Wilderness. At little oover 3000 acreas this can be a very inportent resource for the Riverways.  
Hiking Trails , we need more hiking Trails in the Riverways. I LIKE IDEA of the Current River Trail from Round Springs to Pion  
eer Forest.  
So lets keep the Riverways as Natural as possible.

le over 3000 acers

**Received:** Jan,22,2014 18:47:23  
**Correspondence Type:** Web Form

**Correspondence:** I want to thank the Park Service for developing a thoughtful analysis. While adopting Alternative B would be a step forward, I strongly support adoption of Alternative A as it provides much more protections for our rivers. Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads.

Closes 65 miles of undesignated horse trails and adds no new stream crossings.

Bars vehicle access to gravel bars.

Provides wilderness status to Big Spring.

Missouri's rivers and their water quality are critical to our quality of life and our state's economy. Undesignated horse trails have brought water pollution,, specifically E. coli, to the rivers. Horse trails should be kept far enough away from the rivers to prevent these impacts. Illegal roads and vehicles traversing the rivers and gravel bars produce erosion and sedimentation of streams which harm fish habitat. These areas should be managed for maximum protection of biodiversity,, which form the basis of our quality of life and our state's economy.

Big Spring should be preserved as a wilderness area. I grew up in Southern Indiana, which has its share of beautiful rivers and karst areas. Missouri is blessed with even more pristine rivers and unique geological karst features. Protecting these features is critical to protecting water quality for the benefit of future generations.

Thank you very much for considering these comments.

Andy Knott

**Correspondence:** I attended the public meeting in Van Buren last night for the Draft General Management Plan of the Ozark National Scenic Riverways. I was very disappointed to find the meeting was just an open house and there was no open discussion. There were National Park Service personnel on hand to answer questions, but none of them were knowledgeable or well informed of the Plan. I wanted a simple question answered. What 20 access points to the river are they closing and why are they closing them when we need more access to our rivers.

The tone of the open house was, "This Plan shows you what we are going to do to our river and if you have a comment, you can just write it down and place it in the box."

Why is the National Park Service going out of it's way to mislead all of us local folks??? What is really the big picture??? It is no wonder that no one trusts the Federal Government or the National Park Service anymore. We have all been through this before with the "Blueways" System. We will never give up our rivers... All of us folks that live here and grew up here, like our rivers just as they are with no changes. I strongly recommend we take the No-Action Alternative to their Draft General Management Plan.

**Correspondence:** The following comments are from some of the NPS most revered documents regarding the Ozarks National Scenic River ways. "They are the most remarkable collection of places in America for recreation and learning." "These are places that offer renewal for the body, the spirit and the mind." "....to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." The Ozarks National Scenic River Ways was intended to be all of these things, but it seems that the NPS in their preferred plan want to eliminate access to only the limited population that enjoys Hiking and Tent Camping. I and my family enjoy the Ozarks National Scenic River Ways as it currently exist, allowing access to those that may not enjoy a two mile hike in order to enjoy the natural beauty and MISSOURI's Rivers. The NPS Preferred Plan seems to lean to the expectations of environmental extremist wanting everything to go back to its most natural state, without the consideration of the recreation and learning of the constituents which the NPS was established to serve. We the voting public needs these resources to renew our body, Spirit and Minds. As for leaving these parks unimpaired for the enjoyment of future generations goes, the fact is that the area within the Ozark Scenic River ways has continued to be more and more let go back to nature, including the farms and fields that existed when the park was originally established by eminent domain. So you might say that the NPS has failed to leave these areas unimpaired in a historic sense for recreation and learning. Hunting, camping, boating, and spending time at gravel bars with family and friends has been a part of my heritage and that of our family for generations, the NPS preferred plan would significantly impair or eliminate our use of resources that are owned by all citizens not only the most vocal environmental extremist.

**Correspondence:** To whom it may concern,

My name is Dustin Haynes and i currently reside in Winona, Mo which sits about 10 miles from current river (ONSR). I have resided here in this small country town for thirty years. My ancestors traveled here in the mid 1800's from Ohio and Virginia. It is here that they settled and called home, to which the lands and rivers were a major part of their everyday lives.

In the 1960's many families were forced off the riverways for whatever reason the federal government deemed reasonable. i for one and can speak for many am sick of the governments telling me what i can and cant do. The majority of the people that use these rivers and land from around here are good law abiding citizens. nearly ninety percent of tickets that are written on these rivers are handed to tourist which the park service tend to side with when it comes to the GMP. These types of people that only visit a time or two throughout the year are the real problem. in my opinion i believe the local people do an outstanding job of taking care of the land and river ways. i do not have any problem with the tourist or never have for that matter. However it is very frustrating when it seems as the if the Sierra club is a branch of the NPS. it seems as though these types of people and or organizations have a bigger influence on your decision making than the people who live their everyday lives right here.

once again i have lived here all my life. I have raised my own family here and would like to continue raising my three boys here without being denied access to PUBLIC land. We use this land to hunt, trap and recreation. i work out of town and am gone a lot of times all week away from home. My children ages 7,10 and 12 would rather be on river hunting, trapping, gigging or just boat riding than anything in the world when i come home on the weekends. i would love nothing more than to continue raising my children this way as do many families in this area.

It certainly seems that when you give the government an inch you take a mile. i 100% sport the no action plan and ask that you leave this great land as is. i certainly hope that the NPS takes into consideration how many lives and families of this area will be affected if any other action is taken. "WE THE PEOPLE" are having our freedom stripped away everyday. the least the NPS can do is leave OUR rivers and land alone. let us enjoy what we love the

most.

With all do respect,Sincerly  
Dustin Haynes  
A highly concerned citizen within the ONSR.

**Correspondence:** Having reviewed the plans available I would hope that the NPS would take a No Action Plan since there is no evidence that what is in place is causing harm. The riverways area was cut bald of timber back 100 years ago and came back to a point where it qualified to be considered a national treasure. So the measures in place now would never let the riverways to get damaged to anywhere near that extent. The measures to close off areas and roads,trails,portion of the river and more restriction on all of the above are not in the best interest of the people or the local economy.If the NPS move to Implement more restrictions they will be violating the reason for the NPS existance. The NPS should be allowing more accessiblity to all areas and providing more river access points on upper, middle and lower current river. The Park should also imbrace horseback riding or trailriding by doing what is done at Cades Cove in the great smokey mountain park. the old Tram road should be considered for a actual train ride for those who want to see more of the river without boating,floating,ect. The park use to offer boat rides at the lodge that should be reinstated or sublet to someone who can.The Park is for people, all you have done is try and make it all wilderness so no one can experince it.If you don't want to do the Job the NPS should turn the Scenic Riverways back over to the State so people can actually use the Park.

**Correspondence:** I am sending this comment to plead a no change here on the current river. I spend almost every summer on the river in my boat, on my kayak, tubbing, or fishing. The areas that are proposed for change are not the areas that need to be regulated more. I gig during the winter months on my boat and during the fall use my boat to gig up the trash left behind mostly by people who are here to visit and leave their trash behind. As do the majority of the local families. My family and I put in at the spring and go down so as to avoid the perversion and wild disrespect that happens up river by the people visiting our river. We rarely run into floaters down there so why would the NPS want to further regulate our boats? If you want to do this river, state, national park a favor do something about the disrespectful people who come and throw their trash into our river as if it's not their problem. It seems the NPS is more concerned about the comments of the few who visit and don't like the locals boats, which I would guess is mostly in the four mile stretch that you DO NOT regulate, than preserving the dignity of our river. We have lived here for many generations and would not consider ourselves "friends" of the river but something much more profound, as it is a part of our lives year round. We are the keepers and protectors of this river. The upper parts of the river are so shallow during the "peak season" that boats cannot use it anyway. Restricting it would be banning the people who live on it from using during other times of the year for actives such as fishing and gigging. This is not about people having fun, this is about you making huge changes in our daily lives and the lives of our future generations.

**Correspondence:** After attending several of your informative meetings regarding your proposed General Management Plan for the Ozark National Scenic Riverways, I believe the absolute best option is the "NO Action Alternative". The "NO Action" plan is the most beneficial to all those directly affected by the use of the riverways: the local residents, businesses providing services in the area, and all visitors to the ONSR. There are currently sufficient rules and regulations in place to protect the environment and the riverways.

My wife, Shirley, and I have owned a cabin and property on the river south of Doniphan for over 25 years. We, along with friends who also own property along Current River enjoy motoring up to Big Springs, having lunch at the lodge there, and then floating and motoring back. We have done this regularly from spring to fall over the last 10-12 years. What a wonderful way to enjoy the beauty of one of Missouri's natural resources. And much of the river in the Big Springs to Gooseneck area would be seen by very few people if further restrictions were placed on the use of the riverway.

Canoeists, floaters, and boaters currently use the riverway with respect for each other. Occasionally, some canoeists or floaters will get in trouble in the faster areas or where there are root wads, but the boaters are very good about coming to their rescue. Without some of the boats with larger motors, some of these individuals would most likely have drowned before help could be summoned. We personally have a large motor and have helped many individuals in dire circumstances. Additionally, the larger motor at cruising speed creates less wake than most 60/40 motors - which are the proposed limit for this section of the river.

During the summer, there is congestion on the river on the weekends near Van Buren and Doniphan due to the large number of floaters and canoeists that visit the area using the local rentals. Proposing the change in the regulations to eliminate outboard motors on sections of the river will only increase the congestion in the above mentioned areas. And from September 15 through the end of January, new regulations would prevent fish gigging in large portions of the river. Again, this would cause congestion in the areas open to outboards and remove fish from the river in concentrated areas.

Missouri residents are the primary individuals that use the riverways and should have the ability to determine the regulations for the areas that we use. Obviously, we want the river to always be there in its current pristine condition for our own enjoyment and that of our children and grandchildren. With all of the boaters currently using the ONSR, there is very little if any trash left on gravel bars or in the river. What trash is there is caused by canoes overturning, floaters losing items in the river and being unable to retrieve them, and occasionally items blowing out of a boat. But again, there are river clean up days where those using the river regularly will meet and pick up any litter or items that have floated downriver in floods.

After speaking with several hundred people in the meetings that you have held regarding the ONSR, and after listening to our state and national senators and representative on the subject, it appears that the "NO Action" option is the option favored by all. I respectfully request that you adopt this "NO Action" alternative.

Sincerely,  
Ray and Shirley Batton

**Correspondence:** NO ACTION PLAN FOR ME!!! I would like to voice my opinion on the ONSR draft plan for my local rivers and parks. First off my dad was a Park Ranger with you all for 30 plus years. I have nothing against the riversways personally!! As the years have went by new people have moved in here from different states to run our park service. All they can think about is change!! We don't need change!! Whats wrong with the way it is and

has been for many, many years. I grew up and lived in a park service area house on the river. I have enjoyed, swimming, camping, floating, and gigging my entire life. So, why shouldn't I be able to take my grandchildren in my jet boat, to fish, swim, float and to gig!! And to camp on the gravel bars on any part of the river I choose. I believe that the cause of the controversy is because we have the people from other organizations, such as Sierra Club that in their opinion, we are ruining our national resources and polluting the rivers with our jet boats and driving on gravel bars... Some of those people have never even been on our rivers. And some maybe float once a year. That's fine and good. Continue to come here and float, but don't try to change our way of living and the way some make their living here!! Why should they have a say in what happens to our area!! I also own a scag mill in Birch Tree. I cut timber for our business... Those same people want to tell us what we can or can't do with it. That is how I make my living!! I am for the NO ACTION PLAN!!

**Correspondence:** I grew up on the current river, spending almost every summer day in the water or fishing. But always around the river. Over the last 50 years I've been witness to the changes dealing with the river. I would like it to be pristine as it was in 1957, but that's not going to happen.

The river is for recreation, so tubing and canoeing are popular and has definitely dramatically increased over the years. We locals take care of our river. For example, I always pick up bags of trash left behind by out-of-towners. We even return items that can be identified. As far as damage to the river. There does need to be some rules concerning trash, plant and fauna damage and a number of other things.

As far as boats, they have always existed on the river. There have been many personal experiences where if I had not been there in a boat, people would have died. I can only estimate that my sons and I have rescued hundreds of out-of-towners, both drunk and sober.

We have gig offs to get the beer cans and trash out of the river. In short, don't restrict us when it comes to use of (reasonable) boats on the river. We save lives and clean our river with them.

**Correspondence:** I am in favor of the No-Action Alternative for the Ozark Scenic Riverways. Further restricting access to the area will hurt business owners who make their living on the rivers. Outfitters, canoe rentals, motel owners, restaurant owners, gas station owners. All who live in these small towns will be adversely impacted if you curtail access to the beauty of this land. If you make the VanBuren area a wilderness it will lessen the amount of people able to see and enjoy the land. I grew up playing in Jacks Fork River near Alley Spring and Eminence and the last time I saw it near Alley Spring the NPS had ruined the riverbank that I knew as a youngster. The already general management plan provides for the preservation of this area without new and more burdensome guidelines. We do not need more control. Give us freedom to enjoy the area. Please do not control this area more than you already are. Keep this area free. My ancestors settled the area and fought to keep it free. Do not impinge on our liberties anymore.

**Correspondence:** Don't know of an easy fix for this issue. Van Buren and the other communities in this area rely heavily on tourism. My store maybe not directly but I do sell to customers that make their living from tourism. My wife's restaurant relies heavily on tourism.

I am not sure how many people travel here with their boats or how many travel here to float the river. There are several that live here that boat & float.

I do think the river is too crowded during the weekends. Both boaters and floaters. Don't know how you fix it either.

I do think that the local people should have just as much right to boat as the people that come here to float. I would hate to see boats banned. There are a lot of people that have a lot of money invested in their boat.

My concern is that as hard as it is to find employment here I don't want to see one of the few industries in this area destroyed. I am speaking of the boat manufacturers and the shops that do the finish work on the boats. In the Van Buren / Ellington area that is close to 50 people. That may not sound like a lot of people to some one from a large city but it is big here.

I would like for you to consider the revenue from sales tax also. Where as the tube and other rentals do contribute some to the communities by purchasing items in the county and paying sales tax on those items the actual rental fees are tax exempt. The boater group pays sales and property taxes on their boats, motors, & trailers.

My final thought is that I know of not one single solution but hope a compromise can be reached without letting special interest groups from outside the area decide the outcome for this area.

**Correspondence:** It is a travesty that you are drawing a hard line against rock climbing. Your perspective seems to be skewed about how damaging and dangerous rock climbing is. Just as an example, check out Jackson Falls in the Shawnee Forest in Southern Illinois. You will see that the climbers keep the area very clean and the horses do far more trail damage than us hikers. And I'd venture to bet that more hiking injuries next to cliffs happen than climbing injuries. That you say climbing can damage the rock shows very little understanding of what kind of rock that climbers use. We don't want to pull on rock that will break any more than you want us to break rocks. We climb on strong, solid walls.

To exclude an activity that has been demonstrated as beneficial and undamaging in other areas is silly. Please reconsider your decision.

Thank you for your time.

**Correspondence:** Climbing is a legitimate and longstanding use of our nation's public lands. Rock climbing is practiced in many places on our nation's diverse public lands. Throughout our National Park System, as administered by the National Park Service, climbing is considered a "welcomed and historical use." Climbing is also a welcomed and historical use on other agency lands including hundreds of sites managed by the US Forest Service, Bureau of Land Management, US Fish & Wildlife Service, and Army Corp of Engineers. At the state and regional level, climbing is equally popular.

The section about "Rock Faces and Bluffs" ends with a determination that, "these restrictions will prevent permanent damage to rock faces or bluffs. Technical climbing can cause rocks or debris to dislodge and fall below, which could cause injury and/or death to visitors who are below." While the determination is true for the actions recommended, it is not the only way to protect the rock faces and the safety of visitors.

Climbing is a low-impact, human-powered, legitimate recreation group with more than 6.5 million annual U.S. participants (Outdoor Industry Association). Climbers give back to their local trail and park systems by volunteering on public land, protecting the environment, and preserving open space. The majority of climbers are responsible, considerate, and safety-conscious.

Restricting rock climbing in the Ozark National Scenic Riverways will only limit the extent to which this national treasure is enjoyed.

Please reconsider your restrictions on Rock Climbing in the Ozark National Scenic Riverways.

**Correspondence:** I am asking you for a NO CHANGE for our area....I have lived here for 21 years and the river is our way of life. We have raised our children on it and to respect it as we do. We always put our boat in below the Spring and find a gravel bar and we are there for the day with family and friends. So for you to change this would be a BIG DEVASTATION for us!!!! We are on the river through out the year fishing, gigging and boating and want to continue to enjoy it. We live here and we the community take care of it, not the tourist that (some) may come in and trash it up. We keep it clean and pick up trash...we always have trash bags in our boat to keep our gravel bar clean!!!!!! As far as boating is concerned...I can't tell you of the numerous times we have had to help floater, and tubers that have turned over and needed help or are lost and need help back to the boat landing!!!!!! So in closing I am asking there be NO CHANGE to our river or boating regulations!!!!!!

**Correspondence:** To value one recreation over another is discrimination. To say that an activity is banned is irresponsible to the people. For those of us who choose climbing as a recreation and way of life, this is an affront to our freedoms. Before terminating access to this area consult with the responsible climbers of the area to negotiate a policy of responsible practices and access. Climbers are great stewards of the land, and the bolts serve to protect these individuals in the activity of climbing. You demand PFD's for your boaters and kayakers, so too you would want the same safety regulations for climbers: i.e. The use of fixed hardware. If climbers are a scourge and somehow not worthy of respect, then charge them to climb their own cliffs, but don't banish what you don't understand or participate in to serve a personal agenda.

**Correspondence:** I would like for my family to be able to continue to use the river as we have for several generations. Erosion has occurred for 1000's of years and will continue to occur no matter what department oversees the scenic riverways. Most people around here only see the pollution in the summer months while tourism is highest. The number of boats have very little to no affect on the aquatic ecosystem when compared to the amount of sun block and urine and beer and everything else dumped in the water by tubes and canoes. Please consider these dramatic effects while doing studies on the river system boating causes very little damage compared to the chemicals brought in by tourism and should be infringed on unless you are willing to dramatically reduce the amount of tubes and canoes put in the river each day as well.

**Correspondence:** My family and I are on Current River every week during the summer. We float, boat, swim, and spend time on the gravel bar. The river is a major part of our lives and always has been. We make sure to take care of the river while there. We always pick up our trash and others as well. We just like to enjoy the wonderful thing that nature has given us. For you to try and put even more restriction on Current River is just absurd. It can be pain enough as it is to keep up with the silly rules now. As anyone can see from visiting the beautiful Current River, it is still very much preserved and well taken care of. All the local people who basically live on the river make sure to keep the river as it is so that it can be enjoyed in the future. Current River is so precious to us and we will always take care of it because of that fact. The system in place now is working just fine. There is no need to change things. I am one hundred percent against this new plan you are trying to pass. If you are not someone that visits this river every weekend, then who are you to try and decide if it needs to have more rule and regulations. I bet those of you who are trying to pass this plan spend much time on the river. So stop meddling in something you have no business interfering with! This land belongs to the state of Missouri and should be supervised by them!

**Correspondence:** As a concerned local resident of the area that the GMP will affect I would like to see the Plan C- No Action implemented. My family and I use the river year round. Any change in the HP limitations for jet boats would make it tough to get the whole family up and down the river in a boat. The system that is in effect right now is not flawed, the NPS just doesn't have the manpower to enforce the laws that are already in place. What makes you think they can enforce more regulations? The ONSR is already a place that everyone can enjoy. Why limit certain groups from doing so? Any plan other than "No Action" would not be fair.

**Correspondence:** Enforcement, no matter which route is used to better manage ONSR, is crucial, absolutely critical to success.

Therefore, increased staff for monitoring and regulating all activities is necessary.

Establish serious penalties (stand by those and publicize well) and of course make Clear the Regulations/ Rules for each activity.

Plan B with a few changes is my choice, providing the changes and additions listed below are included:

Permit system for equestrians and ATVers and mountain bikers : fees charged and regulations strongly monitored and enforced

Promote Native Plants and Native Fish

No horse camping in the Park

No motorized vehicles on gravel bars

Reduce number of Horse crossings of Rivers

Keep the riparian habitat pure, as well as its natural bottomland. Don't create, enhance the Native! Restore damaged riverbanks by using Mother Nature's pattern.

Continue to guard the wild 3,430 acres near Big Spring and be grooming that jewel for wilderness designation. it will eventually occur! It's our duty!

**Correspondence:** The problem is not the boats! It's the drunk and dopey people that invade the natural beauty of the river. I have been on the river several times, and in my experience the boats are a lot more respectful than the drunken heathens you call floaters. If you want to eliminate controversy, why don't you concentrate on limiting the number of floaters that are dumped out on the river? Oh let me guess , you are more concerned about revenue than the river, plain and simple. If it is not broke then do not fix it. If it is broken then look for the real reason that it is broken. Over crowding of the river by floaters for a huge profit for the outfitters. Simple as that!!!!

**Correspondence Type:** Web Form

**Correspondence:** I am requesting NO change in the way we, the people that LIVE in the Current River area, are able to access and use our beautiful Current River!! I would suspect that most of the families living in this area feel the same way.

I LIVE on the Current River in Van Buren, MO. This is a small, clean town on a beautiful, clean, spring-fed river. I spend almost every day during the week playing in the river after work. My children go to the river most days M-F. We, the people in this small town, nurture and clean up the river and the town after the visitors leave. We LOVE our river. We know how to manage our river best and our rights to our river should not be dictated by a bunch of city people that don't even live in our area.

The biggest problems created in our area, Van Buren, on the Current River are created by the one time "visitors" and tube and canoe floaters that come from the cities like St. Louis and Southern Illinois and clutter up the "4 mile" stretch of river, around the town of Van Buren not by the boat owners. This 4 mile problem area isn't even affected about the proposed NPS changes and is the biggest problem. The visitors, not the local folks in boats, are the people that get all drunked up and throw their trash in our rivers... I don't have a boat but I totally support the local people

that do because THEY can get away from the obnoxious "visitors". I can't take my children to the river on weekends when our area is flooded with tourist to enjoy a nice, quiet time due to the disrespectful out of town people that access our river from the cities elsewhere. RARELY do I see a local act the way the drunken city visitors do from misbehaving, loud cussing, having sex in daylight on the river banks, flashing their boobs, to throwing their trash in our river... If it weren't for the boats on the river more of the drunken tourists would drown and keep in mind that it's the boats that clean up the river after the tourists have left for the summer season. SO many of the people that live here and have boats can tell you of numerous stories about how they, in their BOATS, have pulled drunks out of the river that were drowning.... SERIOUSLY, and NPS is trying to get the boats off of the river???

I take my children to the Current River almost every day in the summer, except Saturdays & Sundays due to the drunken, rude tourists. Now I know that not every person that comes to this area falls in that category but the majority do. If NPS \*really\* wants to "clean this river up" then perhaps getting rid of the drunken tubers would be a "real" place to start. Also, we like to camp and in a "real" way... we want to be able to camp on gravel bars not shoved into national park campgrounds where there is another tent 6' from ours and where we have to pay to camp ..... That's ridiculous. DO NOT take our gravel bars from us.

The point is, it appears that NPS & some folks from the city want to make decisions and changes for OUR (the people that LIVE here) river and land based on comments from people that do not even live in the Current River area but only visit here perhaps once a year. ... this seems ridiculous. Why should people living in other cities, specifically St. Louis, have any input, with their limited knowledge of the day to day life, here, of how the Current River should be managed? It seems we have no input on how the St. Louis folks should manage their Arch park, nor do I care what they do with it, so why should people in St. Louis have any jurisdiction on the Current River area??? Ultimately we, the people that live in the proposed change area, are the ones that take care of our river and live here year round and ultimately it seems to me that since WE are the people that cherish and take care of our river that WE are the only ones that should be making decisions for this area and WE don't want any changes except to get the drunken tourists out of here.

My family settled Carter County. They have lived on or close to the Current River for well over 100 years. We are not just "friends" of the river, we are the full time caretakers, keepers, and protectors. We understand the river and how "she" flows and we see the lives, both human and animal, that are "supported" by our river....

Restricting the river by the NPS proposals is inappropriate and unfair. I VOTE NO to all of the NPS proposals!!

**Correspondence:** You don't need to change anything about our parks. These parks belong to the people, not the park service or the government. We have lived in this area most of our lives and enjoy the river. We don't need anyone telling us how or when we can use it. Why is the government constantly trying to interfere in our lives and business. They are not the best ones to try to run our rivers. Just look at the mess they have made of our country in the last 20 years. Let the people in the area have say over their rivers and parks, they know better than anyone in the park service or government what is best for this area.

#### Summary

I support the "No Action" plan. If the Preferred Plan is adopted, the "no motorized boats year-round" sections of both Current and Jacks Fork rivers should be altered to allow, at a minimum, trolling motors, and ideally 25 hp

motors in the off-season. I do not support the wilderness designation.

#### Specifics

Thank you to the National Park Service employees who talked with me at the Van Buren, Missouri, public meeting. They were gracious and informative in a stressful situation. My family has lived on the Current and Jacks Fork rivers since 1850, and I understand the emotion involved on the part of other local residents when we feel that access is being taken from us. The rivers are our lifeblood, and I'm not talking about economics. I also understand that our beloved rivers are within a national park and must be managed by outsiders. I appreciate it when those outsiders treat us with respect when they meet us face-to-face.

Regarding the Ozark National Scenic Riverways draft management plan, first I would like to state my overwhelming preference for the "No Action" plan. The Park Service has managed the park competently under the current plan for many years. I understand that this is a national park and must be managed to accommodate all visitors. However, as a life-long resident of the area, and one whose world revolves around the culture and life defined by the Jack's Fork and Current rivers, I see no reason to change a plan that works for both visitors and locals. You have achieved a difficult balance, and I can't imagine why so much work is being invested in trying to upset that balance.

That being said, if the Park Service feels the need to change the management plan to cater to non-local visitors, the Preferred Plan B could be adjusted slightly so that it is not a blatant slap in the face to those of us who carry the rivers in our souls. We don't just visit these rivers; we live these rivers and they live in us. The people who live here make an active choice to forgo economic opportunities, educational opportunities, entertainment opportunities, and all the "status" that accompanies wealth and power. We live here because the land, the rivers, and the culture are worth more to us than status, more than money, more than power.

The fact is, though, that, if the Preferred Plan is adopted, local residents would continue to cede our precious rivers to the rowdy summer weekend visitors in return for their modest economic offerings. In fairness for this sacrifice, it would behoove the Park Service to modify the plan slightly to allow us to enjoy the rivers' quiet majesty and replenishing beauty in less-trafficked areas and in the off season. SPECIFICALLY, the sections of both the Current and Jacks Fork rivers designated in the plan as "no motorized boats year-round" needs to be altered to allow, at a minimum, trolling motors year-round. As an example of this need, my son, who was raised on the Jacks Fork river like the 7 generations before him, is 6'6". Do you know how "tippy" a canoe is when you are that tall? To have an enjoyable float, he must ride in a small johnboat. Do you know how difficult it is to paddle a johnboat? He uses a trolling motor for slow holes and to control the boat while he fishes. A trolling motor doesn't make noise. It doesn't make waves. Why deny my son enjoyment of the river, all for the use of a quiet trolling motor?

It would also be sensible, and a nod of respect to the local population, to allow small motors (25hp) on the upper rivers during the off-season when park visitors are few and far between. We could continue to enjoy legacies such as gigging at a time of the year when park visitors will not be offended by the noise.

Now, regarding the wilderness study: seriously, if the 16,277-acre Irish Wilderness isn't enough foot-traffic-only land for area visitors, another 3,430 acres a mere 8 miles away isn't going to help. How many people use the Irish Wilderness each year? The figure I found is 400-700. That's about 23 acres per visitor in a busy year. That's all the wilderness we need, thank you very much! I do not support the request for a wilderness designation.

Submitted respectfully,  
Mary Kay Nicholson

**Correspondence:** Thank you for the post card mentioning the comment period and public meetings. After reviewing the Draft General Management Plan we are strongly in favor of Alternative B, the recommended plan. We have floated the National Scenic rivers since 1971, and continue to do so. We urge the National Park Service to protect water quality and other natural resources in the park. At the same time, we appreciate having the recreational opportunities that the Ozark Scenic Riverways offer and we know others enjoy this too. Alternative B seems to address these issues well. Plus, it includes mountain biking, which is another good way for people to enjoy public

lands when trails are properly constructed. This was a very thorough study, and the National Park Service staff are doing a great job. We very much enjoyed floating last summer and our grandchildren want to go back!

**Correspondence:** I attended the mtg.in Kirkwood and after hearing all of the statements made by various individuals, I wondered how many of those people had ever been involved on a volunteer basis to actually help maintain a Wilderness Area. There is so much that a lot of people are unaware of about the upkeep of such an area, both in time and money and dealing with restrictions in same areas. I'm assuming that the same restrictions would apply to any newly designated Wilderness Area. How could the parks dept. possibly keep up with continuous maintenance - providing there is still access for trail users ( hikers and horseback riders)?

I visit this area several times a year and have for 30 years or better. What I find most offensive are the riverside camping areas that left with litter and offal during the spring and summer month especially. Why are these areas not monitored and fines levied if necessary to cut down on this abuse?? It's all left in plain sight!! And if areas like this are not capable of being controlled how can anymore areas possibly be taken care of??

I think I'd have to agree to "no change" in designated area, but an increase in staff, if at all possible, to maintain the status quo. Thank you. Ellen H

**Correspondence:** As an avid rock climber I feel compelled to suggest that blocking all technically rock climbing is an unnecessary move, simply because the area under consideration sees very little traffic compared to other more popular rock faces.

These rock faces see thousands of visitors each year and very little damage is done to the rock.

Everybody has their favorite outdoor activity and simply because somebody doesn't like rock climbers does not give them the right to block access. This country already has enough problems with obesity as it is, taking away opportunities for people to get outside and utilize nature to become healthier is a step in the wrong direction.

If there are liability issues for injury on the land where the rock face are located, those issues are draconian and stand out in a national context when it comes to public accessibility to rock faces.

There are many well-funded interest groups who will use their power to keep this rock face accessible to the public, who funds it's very upkeep and existence.

Save yourselves the trouble and allow adults to make their own decisions about the sport they love. The last thing 99% of rock climbers want to do is destroy their precious climbs, which some takes years establishing. The other 1% will do what they want, regardless of what arbitrary laws say.

**Correspondence:** To whom it may concern; I grew up climbing with my father all over the country. Some of our favorite places to climb include (southern) Illinois, Arkansas, and the ever scenic river ways of Missouri. I remember my first climbing experience was on the current river. I had seen a group of people scaling one of the bluffs and was amazed that people could do that! My father, seeing that I was completely in awe, asked me if I wanted to learn how to climb like that. The rest is now history! Over last 15 years Missouri has become a very "anti-climbing" state. Many of it's state parks and wilderness areas are filled with beautiful bluffs that offer some of the best climbing the state has to offer! Unfortunately however, it is now illegal to climb in all but a few of them. It pains me to see other states in the midwest keeping climbing areas open and available to the public at no cost to the park service. They are simply just another national forest or state park that happens to allow climbing. (All bolting is climber maintained and there is a strict code of ethics among climbers pertaining to safe bolting and the use of natural protection.)It would truly be a shame to lose some of the last great climbing areas in Missouri, especially one that has so much value to the local climbing community.

**Correspondence:** I grew up in Van Buren (1972-1989) and fully understand the culture of the town, region and the importance the people put in the Current River. I have used the river before and after the concessionaires opened the river to shuttle service. I now live 45 minutes from Van Buren in Mountain View. I understand that with time comes change and I support change when needed and also when problems have been identified. I have read the GMP and agree with most parts under the less restrictive use options of "no action", "B", and "C". I have a 60/40 jet motor and use the current river year round within my HP restriction areas comfortably. My main use is on the weekend with my family and choose weekdays only to fish. I agree with the current HP restrictions and alternative B or C because I feel they are in place for user safety whether people realize it or not. I have operated all HP boats on the river and know exactly what is needed to use the river under many different circumstances. In general, the smaller the river channel the lower the HP to slow down the boats. The same, the smaller the channel then less the number of non-motorize use for safety and comfort of use. I feel a lower number of tubes and canoes in the upper sections will help in having the people that chose to use the river to get the maximum solitude they are looking for in

that mode of transportation. If I choose to use the upper sections of the two rivers as I get older, paddling a canoe will not be an option due to health reasons. I will need some type of motorized vessel to get around on the river as will most elderly users. I may need a canoe with an electric motor. I agree that we need to stop unauthorized roads to gravel bars. I agree that we need to limit in some way the number of canoes and tubes. I do not wish to subject my family to drunken parties and foul language or rude/lewd behavior that some partake in even in the gaps. I would agree with more law enforcement in high use areas. My input for selection of alternative plans 1st alternative C then 2nd Alternative B.

**Correspondence:** As a life long resident of Carter County (52 years) I have seen many changes to our beautiful area, some good and some not so good, changing or restricting motorboat use on Current River I fear would be a bad change. Why you say? Well I saw what the river looked like before it became a tourist attraction to tubers, canoeists and kayakers, it was a beautiful trash free waterway. We had many boaters before the tourist came and trash wasn't a problem. We local boaters take pride in the river, we try to clean up what tubers throw in the river, we even on occasion pull a tuber out of the river, when they are drowning. Boaters are not the problem, and any change to the current plan would be a bad thing.

**Correspondence:** My family, friends and I have been traveling each year to the Ozark National Scenic Riverways "neck of the woods" since discovering them in 2007. We come to enjoy your scenic rivers and the fishing opportunities and camaraderie they provide as a way to escape from our daily lives and to connect with each other like we have never been able to do before. Your rivers rejuvenate our souls and recharge us ~ enhancing our quality of life experiences.

I support the ALTERNATIVE C Management Strategy as I understand NO-ACTION ALTERNATIVE is no longer an option. My family, friends and I have ALL have been pleased with our yearly experience there and feel that there is no need to make drastic changes in the regulations. Our jet boats compliment the naturally flowing rivers and make accessing the rivers so much easier, which is becoming more important as we all age..

Thank you for honoring my wish for a ALTERNATIVE C Management Strategy Option so that we ALL may continue to come, to experience and to benefit from the rivers which make up the Ozark National Scenic Riverways.

Sincerely,

Sincerely,

-Roy Hawk - TN

**Correspondence:** Dear ONSR Staff,

I appreciate your careful analysis of conditions on Ozark National Scenic Riverways and the gathering of input from diverse stakeholders. Alternatives A and B propose many improvements and protections for the resources, as well as proposals to correct abuses under the current plan. I understand more specific road closures and horse trail rerouting will be examined later and probably be subjected to EA's and EIS's.

Although alternative B contains many positive proposals, I recommend a few more inclusive protections proposed in A:

- 1.Close all illegal roads and restore natural conditions to 50 miles of these roads. I have seen ORV traffic IN the Current River. Illegal and legal river crossings need to be indicated. Closing illegal roads and limiting access would discourage illegal ORV traffic and hopefully minimize need for enforcement.
- 2.Close 65 miles of undesignated horse trails and add no new stream crossings. Horses need to be kept away from sensitive vegetation and areas near streams where they contribute to erosion. Provisions need to be made for maintaining equestrian trails, especially on shared trail where rutting and horse excrement hamper hiking. Equestrians need to have input into trail designation and have some responsibility for maintaining them, like the Ozark Trail organization.
- 3.Vehicles should be banned from gravel bars to limit damage to the river, to discourage illegal roads and create a less polluted river experience.
- 4.Since Big Spring is already managed for wilderness characteristics, I support continued preservation until the Big Springs area is legally declared Wilderness. However, I support management techniques to preserve the original characteristics: invasive species removal, introduction of prescribed burns, etc. Without such provisions the natural area may lose its former diversity as a result of existing degrading intrusion. Wilderness designation minimizes human intrusion and therefore, I think, make them easier to manage than areas in ONSR that get more public traffic. These wilderness areas are small bits of natural history.

I immerse myself in the ONSR ecosystems: hiking, trail building, canoing, camping, observing nature, art- -low impact use. I am particularly familiar with the streams and watersheds around Powder Mill, near the Pioneer Forest, Blue Spring, Round Spring, Klempzig Mill, and Alley Spring, but I have canoed the upper Jacks Fork as well. With appropriate management and enforcement, I trust that many diverse users can appreciate the resource into the future.

Sincerely,

Leslie Lihou

**Correspondence:** As a resident of Reynolds County, I would recommend and favor the NO ACTION PLAN. As a longtime member and President of the Reynolds County Saddle Club, I would also recommend and favor the NO ACTION PLAN.

I have boated, floated and ridden in the ONSR for many years and strongly oppose any unwanted intrusion from the National Park Service.

In my opinion, it is not the management plans put forth by the NPS that has kept the ONSR in the condition that it is today. In my opinion, it is the heritage, traditions, and pride of the local communities that manage this area more effectively.

**Correspondence:** My family was born and raised enjoying these rivers. I spent time every summer as a child swimming and playing in these waters. They are beautiful crystal clear rivers. Most have never had the privilege to see a clear river. We camped along the Jacks Fork River often. I have nothing but wonderful memories from those times. I have shared those stories with my children.

Then I married into a family that was raised on Current River and learned the enjoyment of boating. We have the utmost respect for the water and all of those that use it. There is nothing wrong with the way people are using it today. Nothing beats a warm afternoon boat ride down the river. Then a picnic lunch with friends and family on the river bank. Watching the little ones laughing and playing in the water or sand. Or taking a dip in the water yourself to cool off. It is a family heritage and a God given right that should continue for generations to come.

I can see no purpose in making any changes or restrictions to the way things are done on these rivers. I believe they were created to be enjoyed and not just looked at. May you take into consideration that those who live on the river and use it know more and care more about it than those who desire to take all rights to use it away.

**Correspondence:** I beleive the regulations that are pertaining to the river should be left as is-NO CHANGE. This is the only form of recreation we have in this area. Most tourists that come to this area have many other forms of recreation available to them, for example, water parks, ballgames, museums, operas, etc.

Many local boat owners have helped to save floaters/tubers from property loss and possible drownings. This would not be possible if they were banned from the river.

We and the majority of local residents would like to keep the regulations of the river as is- NO CHANGE.

**Correspondence:** I have read the three proposals and although none are exactly like I would prefer, Plan B (Preferred Plan) is the best plan that would (in my opinion) fill the needs of the greatest number of people using the park. I would love more enforcement in the park of the present rules and less catering to those who would destroy our natural resources. I am a horseback rider, boater and kayaker. The boats ripping up and down the river are dangerous and detract from the beauty of the scenery. Those that wish to experience the river in high powered boats and with drunken behavior should be confined to the small section around Van Buren. The rest of the park should be kept pristine with minimal impact from all users. Cross Country Trail Ride in Eminence should pay \$20,000 a year for a usage permit and be fined \$1000 for every time they lead their rides onto Park property off the designated trails, making trails of their own. However, I understand why this is happening. The current trails are 80% road riding. This is the lazy man's trails and do not give the rider access to the beauty of the park. That is why they make their own trails. I believe designating some of the most scenic exiting trails in the Upper Current Area is very important. Having a Wrangler Camp where horse people, who do not want to "party hearty" can camp and ride in the park with their family is necessary. I think low horse-power motor boats are fine. Big engine, fast lake boats are not. Drunken behavior and cursing are not. I love the idea of a designated Wilderness Area to ride in. Go with Plan B and beef up the enforcement.

**Correspondence:** The current management of the Ozark National Scenic Riverways (ONSR) is working well. Missourians love and respect the natural beauty of the state we call home. We take care of our natural resources and value our freedom to enjoy these.

The No Action Alternative grants Missourians the most freedom in using and enjoying the ONSR. The other plans would eliminate equestrian trails, put restrictions on the allowed horsepower of boats on the rivers, and severely limit where and how the public can use this park. In turn, businesses would be devastated.

Do not make changes to the plan that is currently working very well.

**Correspondence:** The Ozarks National Scenic Riverways has been a family recreational spot for our family for generations. By limiting the access to certain areas, many families would not be able to enjoy the natural environment that God created.

Walking long distances to be able to get to the water banks may be impossible for some. Many people may have

handicaps, are confined to wheelchairs and may have illnesses prevent them from easily traveling to recreational areas.

Restrictions should NOT be placed on access to and from, nor should the general public not be allowed to enjoy the natural habitat.

**Correspondence:** I propose and support the No action alternative.

Regarding the wilderness issue, I don't think any of the areas you are proposing for Wilderness status would meet the original criteria for Wilderness. Currently vast areas of our public land are in designated wilderness areas and today additional vast areas are being managed as Wilderness even though they don't qualify. Large areas are also designated as National Monuments by presidents without Congressional Approval. In all too much public property tied up so that it restricts access and use by the public. Mention was made of no hunting in the proposed Big Springs Wilderness and these restrictions are present in other Wilderness areas. I am not in favor of more Wilderness areas or non Wilderness areas being managed as Wilderness areas.

I am in favor of keeping access, river crossings, and drive in camping on gravel bars open.

A significant amount of the old road/trail network in the area has already been closed. Many of the road and trails that make up the old network are historic in nature and may date back to early Native Americans and game trails. They are also important to the history of the early settlement and economy of the area.

I think it is important to allow dual sport motorcycles, and ATV's access to more than just the County Roads as long as they are used in responsible ways.

I had intended to attend the Salem Open house and meeting on this General Plan. It was postponed a couple of times and although I had called in and requested information by email I was unaware of the most recent meeting date and missed it. I found information on these meetings hard to find on your website. Also, few people in our community take the Rolla, Salem, or Ironton papers as these towns are 30 or more miles away. As a result we are often uninformed about these issues and meetings. This is true, even though we live within less than 50 miles of the Ozark National Scenic Riverways. We do have a local weekly newspaper that is widely read, the Quad County Star. It seems that announcements for these meetings would be posted in it.

Thank you for the opportunity to comment. I have many memories of the great times I have had on the rivers and nearby, canoeing, fishing, camping, hunting, and exploring the back roads.

Sincerely,

Robert Dunn

**Correspondence:** I urge NPS to adopt the "No Action" management plan for the Ozark National Scenic Riverways.

I have canoed and kayaked the Jacks Fork and Current Rivers many times over the past forty years. Although I am not a powerboat operator, I respect the right of those people to use the rivers, as long as they respect the safety of paddle-boaters.

I do not endorse the closure of existing equestrian trails. Horse and mule trails have been a part of the native Ozark culture for a couple of hundred years, and this attempt to limit equestrian access is yet another encroachment on local lifestyle and rights.

Nor do I endorse the closure of so-called "illegal access roads". These roads are also part of the local "infrastructure", and any attempt to limit them is an encroachment by "big government" on the local people and their enjoyment of the rivers.

I do not support the massive increase in staffing or infrastructure in plans A, B, and C. Current manpower is adequate. As a taxpayer, I see this as yet another unnecessary expenditure and an expansion of government.

I do not support the proposed limitation on "gravel bar camping". Some of the best experiences I've had on the river while floating involved setting up a pup tent on a "mini-island" with my sons. If the intent is to limit camping to designated "canoe parking lots" in "approved landings", one might as well pitch a tent at a KOA. The adventure of camping out in remote spots on the rivers is a part of the romance of the streams. To limit this opportunity is to institutionalize and sanitize the floating experience in the name of Big Brother.

For the above reasons, I ask the NPS to only adopt the "No Action" option of the four tendered management plans.

Sincerely,

William (Bill) Mount

**Correspondence:** I grew up near the Current. I remember when the land was taken from the residents along the river. It was not a good time. Homes and farm equipment was destroyed, then 25 years later, you paid big bucks to ship in farm equipment from out of state to display at your celebration. Silly. I do not believe any changes should be made to the current regulations. Right now, I can pull into a primitive campground with my RV, run a generator if needed and have a wonderful time in a serene and quiet place (the campground only has two campsites). If you take out the road, I won't be able to enjoy that anymore. My choices would include: a. stay in the noisy campgrounds where there is a lot of drinking and other pollutants occurring or, b. forget camping on the Current and find a place on another river either in state or out of state. My question has always been, "Why are certain areas not restricted at all? Take the Doniphan area for instance, why did they not have to be forced to be a part of the Ozark National

Scenic Riverways?" Well, that's politics for you; obviously, there were more politicians living in that area who had more pull. The little guys have to pay, not the big guys. And that is what is happening here. By the way, just a little way from the primitive campground I stay at is a cabin that is used by the park service only. Will that be taken away from your administrative employees???? I think not.

**Correspondence:** While I no longer reside in the area, I grew up in Salem Missouri just 5 miles off the banks of the current river. My parents still live there and I frequent the river many times throughout the year. I have read much of the new management plan and support many of the changes made in plan B of the proposed draft. I worked for the park service in the maintenance department for several summers growing up and have seen first hand the effects that the overuse is having on the river. We have a river that has the potential to be one of greatest fishing, hiking, canoeing, and camping locations in the country yet treat it like a party resort damaging the beautiful nature that it supports. Some form of change must take place to preserve the river for the long run. I love the ideas of new specific horseback trails and hiking trails. Those additions would bring many more people to the area and also allow the land to be prepared and treated properly for those activities. While most people would disagree with me, I believe there should be stricter regulations regarding alcohol consumption on the river and more rules to discourage rowdy and inconsiderate party animals who destroy the river. The current river has the same potential as a place like Yellowstone or glacier national parks has. It is time we start treating it as such.

**Correspondence:** I would like to take the time to comment about ONSR Draft General Management

Plan/Wilderness Study/EIS. Please give careful consideration to the operation of our parks as how they are operated is vital to the local communities. Residents who live in and around the areas where the Current and Jacks Fork Rivers run have found that the rivers and the land around them are a part of their heritage, it is where they grew up, and both are as though they are a part of the family. There is nothing like riding in a motor boat up the river with the wind whipping your face and water spraying on you every now and then or taking the family to the local river for a swimming party on a nice hot day, and there is nothing like pulling your rv to the river and camping on the river bank whether it's just for the weekend or for a week's vacation. There is just no other way to clear your mind of problems and stress of the workplace. God who made this earth put it here for our enjoyment, not for the National Park Service to take it away from us. Before ONSR took over our parks, they were maintained and kept looking nice, now weeds have grown up and taken over forming a wilderness and it is an embarrassment to the local residents to have visitors come to our area. Also, if your plans are only geared to visitors, where does that leave us, the residents in the ONSR? Please at least maintain the No-Action Alternative plan for the sake of the local residents as well as the visitors.

**Correspondence:** I have been a regular visitor to ONSR since 1973. In the 70's I probably visited as many as fifteen times a year. I have fished the upper Current and participated in the horse trail rides from Eminence, but my main activity at ONSR has been canoeing and float camping. I have participated as much as I knew how whenever management plans were developed.

Nowdays I do not visit as often. Maybe I come a couple times a year. I have grown old - soon to be 68 - so I'm not as outdoorsy as I once was. But I still love the place. To me, floating the upper Jacks Fork is as close to a religious experience as I have had. The experience, however, is like the "old gray mare." She ain't what she used to be. Too many roads, too many vehicles, too many gravel bars that now seem like public beaches.

I wholeheartedly support your efforts to update the management plan. Thank you. Thank you for cleaning up the rivers. When I first started visiting there, there were so many beer cans on the river bottoms it was pathetic.

I don't have a big problem with your favored Plan B. It is certainly preferable to C or No Action. I can't help but say that I'd really rather you put Plan A into effect. It's really hard to build new rivers and forests. I'd like to keep as much as we can. Also, I'm very much in favor of the wilderness area near Big Spring.

Please know that you have at least one Missouri redneck on your side.

**Correspondence ID:** 1053    **Project:** 15793    **Document:** 56208  
**Received:** Jan,24,2014 06:29:19  
**Correspondence Type:** Web Form

**Correspondence:** None of the 3 proposals are completely appropriate nor seem to have a big impact on preserving our river.

The BOATERS that you want to take the boats from are the local people that live here year round and take care of the RIVER. The boaters pick up the trash that the trashy people that come here from the cities throw in our river. The boats drag the drunken city people from the river when they are too drunk to swim and are drowning or hung up on the roots of trees. The BOATERS serve a valid place in the river community whereas the city people that want to make decisions for our river have NO RIGHT to make decisions about a community that they do not live in nor take care of.

NO CHANGE is my VOTE until there are some appropriate solutions presented.

Least restrictive allows MORE concessioners & this will help preserve the river HOW? One of the biggest problems for our Current River are the concessioners that make big bucks off of our beloved Current River by dumping mass quantities of drunk, trash throwing, foul mouthed city people in our Current River on the weekends all summer. Local folks need their boating rights to be able to get away from the drunks that are tubing in mass quantities down our river dumped in by places like THE LANDing... we need MORE of this? I think not. We need for NPS & groups like "friends of the river"- -who are primarily from ST. LOUIS to leave things the way they are OR, better yet, go away entirely.

**Correspondence:** I strongly encourage the adoption of Plan B.

I have canoed, camped and hiked in the Current River area since the 1950s, and have seen many changes, some positive, some not. Plan B will do the most to help mitigate the use practices in the area that have proved and are proving detrimental to the ecological health of this remarkable National Resource, while still allowing for non destructive public use and enjoyment of the resource. Clearly not all uses are without heavy negative impact, and however popular they may be, protection of the resource must be the first and final priority.

Thank you for considering my view.

**Correspondence Type:** Web Form  
**Correspondence:** I am a weekender landowner in Carter County and have been boating on the Current River for the last 14 years. I agree with much of the changes proposed in "Alternative B:, except for the following:

There should not be horsepower restrictions below the Big Spring. We own a 150 hp engine and see that most of our friends also own the larger engines. What impresses me is the way the river brings together friends and families together along the gravel bars in the summer. Most of the people down in Van Buren do not have alot of money, boating to a gravel bar to spend the day is affordable and brings the family unit together. I have marveled how wonderful an opportunity the river affords these locals for them to spend time together in nature and away from all the electronics. Please do not take away this simple life's pleasure from all of us.

We respect the river and rarely see floaters below the Big Spring. The larger horsepower boats would not affect nature and floaters in that part of the river.

**Correspondence:** My husband and I along with friends have made an annual autumn canoe trip to the Current and Jacks Fork rivers for the last five years. We go during the week to avoid any crowds and we love the solitude and beauty of both rivers. When we run into people, they often are from other states, which tells us we have a real treasure here in Missouri and need to protect it. We support Plan A, also supported by the Sierra Club. In the past, I have canoed on the Current on a Saturday and will never go on a weekend again. We saw drunken college students relieving themselves along the river and crowds of people in canoes and rafts so that we could hardly navigate the river. We have been disturbed by the huge number of horses we have seen along the side of the Jacks Fork and have heard from canoe outfitters what a problem they have become. They pollute the river with fecal matter and silt. We have

also read about the amount of dirt roads and access points to the two rivers that contribute to run off and pollution. Please let's regulate the numbers of people, horses and types of craft on and near the river to restore the natural health of our Ozark National Scenic Riverways. Susan Blandford

**Correspondence:** To whom it may concern,

I would like to express my reservations about some of the provisions I have heard will be included in new rules that may possibly be put in place on the Current River watershed in the Van Buren, MO area in the coming year. I have heard that horsepower limits for outboard motors will be extended even further downriver than they are at current levels and may also be made even more restrictive. My family has always used the Big Springs, Cataract, and Grubbs access points on the river and would like to continue to do so. I ordered a new boat about a month ago with a 115 horsepower engine before I heard about all of these potential changes in rules. As a public school teacher I am not a wealthy person and it would be prohibitively expensive for me to trade in this new boat and motor to comply with new rules that may be enacted. As with any other new vehicle there is an immediate depreciation hit when anyone takes delivery of a new vehicle. There is no way I can afford to turn around and trade again immediately. I also object to these proposed changes on a philosophical basis. As a person who believes in Libertarian principles I don't believe government should have this much power too negatively affect people's lives. My impression of all this is that it is an attempt to take our rivers away from the people who live here and basically hand it over to the tourist industry and the population from our larger cities. The use of these rivers and the freedom to enjoy them the way we always have is very important to native Ozarkians and it's not right that these traditions should be infringed upon for the benefit of people who don't even live here. The restrictions put on the rivers currently are more than adequate to accommodate the needs of the tourist industry. I will be contacting my congressman and senators with my concerns and urging everyone I know to do the same.

Thanks,

Mark Conway

**Correspondence:** I understand the need to protect our Ozark National Scenic Riverways. My family and I have been attending the Cross Country Trail Ride for over 20 years. It has been a long time summer vacation/tradition for my family. We love to ride horses through the trail system in that area and enjoy floating on the rivers. We have met many friends from all over the US. Texas, Oklahoma, Arkansas, Nebraska, Tennessee, Mississippi, Illinois, Kansas, Louisiana, Iowa, Colorado, and many other states. These people leave their states to enjoy the riding around the two rivers in that area. I know that my family would no longer attend the CCTR rides if we no longer had access to the rivers, roads and trails. My group of friends which we camp with every year averages 25-30 people and travel from Missouri, Mississippi, Louisiana, and Colorado. We respect every aspect of the need to limit the river crossings but love to cross the Current river and ride the trails on the other side. The multitude of trails is what makes that area. Being able to ride as many miles as you want to is a special attraction for me. It is hard to find federal and state land to ride that allows an individual the freedom that this area offers. The ability to travel and start your rides in many different direction is a major attraction. I have been to many other states riding horses, hunting, boating, and camping and there are few places I would return to every year for 20 years.

**Correspondence Type:** Web Form

**Correspondence:** I want to say first that while a lot of people still have animosity toward the park service, I understand that without it most of the land here would be in private or corporate hands and we would not be able to enjoy the rivers and lands the way we do. With that said, I think that the park service should take more interest in the local people and take their input into decision making about the park. People here hunt, fish, gig and use jet boats. The idea of shutting out jet boats or limiting them to 25 hp or 10 hp as suggested by the Sierra Club is just ridiculous. It would in effect mean shutting them out completely because a family of 4 would not be able to get up and down the river. I think the current horse power limits are sufficient.

The park used to have demonstrations at Alley and Powder Mill for whiskey making and black smithing. All that has been taken out. The "museum" upstairs in Alley Mill is outdated and has not been kept up. The park should celebrate local heritage and promote it and have dialogue with the local people rather than give them the impression they are just tolerating them at best or trying to get rid of them at worst. I thing the park should restitute the advisory board that was contemplated in the original enabling legislation. It was only to last 10 years, but I think it should be permanent.

I also want to say that I think the process of the GMP was flawed and did not follow due process. First, it was not advertised or communicated effectively when the first round of comments were submitted. It was not until the first draft came out that we were told that the park was considering shutting boats off the river and closing roads. Then the local people got very active and let their voices be heard and Congressional Representatives got involved. The park then said they were tabling the GMP indefinitely. However, they brought it back to life in full force right after JoAnn Emerson left office and right at deer season, Christmas/New Year and winter weather hit. It was also not right that the Park already says that Alternative B is their preferred plan. That shows that their mind is made up and the meetings are a farce. No real input is being allowed into the plan. Russ Runge said Alternative B is going to be the plan. Also, the park did not initially schedule a meeting in Eminence, one of the largest tourist towns affected by the GMP, and the place the restrictions on Jack's Fork will hurt the most. Instead the park opted for a meeting in Kirkwood, 3 hours away from the river. It was very obvious at the Kirkwood meeting that the people and high school students there wanted to "save the river" but when we spoke to them, they had no idea where Current River was. One guy thought it was in Alton, Illinois!! Or even what the condition of the river was here. He thought it was muddy like the Mississippi! I have never seen a meeting in Eminence or Van Buren to discuss the Jefferson National Expansion Memorial GMP or what you all plan to do in other parks.

In conclusion, I think that you need to consider the local perspective more in drafting the GMP. The horse power limits should not be changed. Roads and River access should not be limited. Camping should continued to be allowed. If you want to make money off of camping, fix up your campgrounds in Round Springs, Alley Springs, Two Rivers and Big Springs. Improve the reservation system there and improve the camp sites and hook ups. Mow the lawn in other places and pick up trash better. Other than that there is no need to fix what is not broken.

**Correspondence:** I just saw that the document was 534 pages so therefore could not refresh my memory of the details. Being a frequent visitor to this gem of an area I feel a need to give an opinion of preserving this natural setting.

The speeding,loud, boats usually carrying a just as loud boom box SHOULD NOT be above Owls Bend. They are the biggest insult to the purpose of a natural setting. Not as fast,loud,etc craft, with fishing in mind, keep below Round.

The folks that like to park RV's on gravel bars weeks at a time unattended need to be legally towed out. It stuns me to be camping/site seeing down there on a weekend, then back a following Thursday and see the same empty RV sitting there with absolutley no sign of any activity around the area.

I am not a big fan of the horse crowd either but wish there could be a way to accommodate the unfit people and the wanna-be-cowboys in some of theareas just so long as they do not cross the river.

My message sounds self-centered to my abilities probably but being 65, handicapped and can be seen down there walking with crutches, I feel the upper stretches of the two rivers should be preserved and kept sacred to healthier souls desiring to enjoy the quiet and solitude parts like I was capable of years ago. It changed my life and the river still offers me my special places. Thank you for listening.

**Correspondence:** I support Alternative B and urge NPS to focus on eliminating illegal roads and trails, eliminating all access points except those designated by and maintained by NPS, and to curtail horse use- -both in numbers of horses allowed and to restrict horses and riders to designated trails, with the possible exception for off trail use as access to designated Wilderness Areas. That should be by permit only and permits should be limited to no more than 100 horses per year, no duplicate horses or riders, and permits should be issued by lottery.

No matter what the Congressman says- -the people of his district do not own the OZAR and OZAR should not be managed for the profit of "local" businesses.

**Correspondence:** My biggest concern with the proposals is the use of any motorized boats above two rivers. That's one of the most congested parts of the Current river on any summer weekend. There is just not enough room to be running up and down the river at unsafe speeds.

It's not the fisherman that are the problem, it's the people just running up and down the river like they are on a road course. I've almost been ran over and have been purposely sprayed by the jet output of a boat just because I was in the way of them running through an area that I was fishing. I have a friend that was in his canoe and was hit by one of them. Not at a speed to do any damage but if it hadn't been for the rest of us yelling and screaming at the driver then I think it would have been a big problem.

I'm not sure what you do. A looks the best to me but I realize you have many different people with many different ideas for what's right. But I think you have to look at what's best for the land and what's safest for the people that enjoy that land.

We used to take a big trip there once a year, spend several days. But nobody wants to go back as long as those river cruisers still run between Round and Two Rivers. Lot's of other places to go that do not have these problems.

**Correspondence:** The NPS should run the Park, not the people who own business in the area. I support the preferred alternative in the GMP. Reduce horse use to a level that allows regeneration of the resource to a sustainable level. Reduce roads and traces. Stop designating every 4 wheeler trail that ends in a rat hole trash dump at the river bank as a "primitive campsite". Cap the number of people on the river every day of the year. Sell permits by lottery on line- -not too different from what MDC is doing for duck hunting. No permit, no problem- -we will just confiscate your boat and all the crap in it- -you can have it back right after you pay the fine. That includes commercial operators. The only thing I would exempt would be swimming.

The NPS should not let themselves get distracted from the issues of horse use/abuse, illegal and excessive access points, and commercial overuse. Limiting those things will drastically reduce rowdy behavior.

**Correspondence:** I support plan A or plan B.

I have enjoyed canoeing on these rivers for many years. The whole area has been the focus of a lot of effort to maintain as a place of retreat and rejuvenation.

Motors on ATV's or power boats are an intrusion and should be excluded. Even horses are too destructive to this environment.

This area attracts visitors from all over Missouri and from all over the US. I think that your focus has been excessively local.

Preserve this area for all future Americans.

Richard Luecke

**Correspondence:** I have floated the Jacks Fork and Current Rivers 68 times between 1970 and 2009, about half were overnight trips. My most enjoyable trips were the ones where I saw few other humans, because that is when one is most likely to come around a bend and see a great blue heron gracefully lift up and fly away. Or perhaps float right past a motionless little green heron just a few feet away. Or watch a mink moving along the bank next to my boat for a quarter mile or so. And of course, hear the songs of the Northern Perula, Eastern Wood Pewee and warblers. You won't see a Louisiana Waterthrush bobbing at water's edge when a motorboat is going by.

The worst float trip experience was the time that we were forced by the lateness of the day to stop at a gravel bar that had a road. After setting up our tents and getting our supper ready, several big pick-up trucks arrived. They were as disappointed to see us as we were to see them. They were not rude or threatening, except that they left one of the truck engines running for a long time. We had to get our sleeping granddaughter out of her tent so she would not be asphyxiated.

There are lots of places one can go for wild, drunken parties. There are places more appropriate for motorized recreation and horses than in or along our rivers. The Ozark rivers are unique, special and fragile. The ONSR deserves the greatest possible protection so that our grandchildren can learn to experience nature on its terms without degrading it for those who come behind.

I support Alternative A. Illegal roads and horse trails must be closed. Thank you.

**Correspondence:** Ozark National Scenic Riverways National Park is a place where I enjoy the river and land in various ways. I enjoy hiking, bird watching, canoeing and just getting out into the wilderness where I can't hear any noise from civilization. All of those activities should be valuable and worth preserving for future generations.

I am troubled many times by the illegal horse trails, ATVs driving anywhere they please and motor boats on the river that go way too fast and make way too much noise and risk to human life. The rampant erosion from illegal access points is also troubling.

I believe the NPS GMP should preserve the natural landscape, protect the water quality so the rivers and springs can be enjoyed without worry about bacteria levels or risk to endangered species.

Please do everything that helps sustain ONSR National Park in the way that preserves it for future generations and more sustainable in the short term as well.

**Correspondence:** In reviewing the General Management Plan I strongly support the No Action Alternative. However, understanding that Option B is the preferred plan of the National Park Service I have very carefully reviewed this option. A suggested change to the plan that would make the Upper Jacks Fork more user friendly is to change from a No Motor rule to a seasonal rule or to at least allow electric motors. A seasonal rule with max. 25 HP could be made that would allow those of us that want to fish gig the river in winter to continue to do so. Right now winter use of the Upper Jacks Fork River is almost entirely fish gigging. If a seasonal 25 HP restriction is not allowed then at least electric motors should be allowed. I am a large man and floating in a canoe is not possible. I use a small Jon Boat and an electric trolling motor for floating (I can also use it for gigging). If I cannot use the motor the boat is difficult to steer with just a paddle and I will no longer be able to float the river that I have grown up on and has been a part of my entire life.

**Correspondence:** Please do not implement ANY changes to the Ozarks National Scenic Riverways! the purposes changes will be too restrictive and more costly to the local populous than is necessary. we want the horse trails to remain the same in number as they presently are, and to be able to access them without the additional TAX/bridle tag that has been mentioned. the river crossings have already been reduced, so no further reductions should be implemented! these plans are only an additional way for big government to limit the people from enjoying their PUBLIC lands. I vote NO for any further changes to these parks.

**Correspondence:** My objection to your preferred alternative are number one, the restriction of motorboats. I have been running a motorboat on Jacks Fork above Alley since I was in High School. The amount of water in the river limits when you can or cannot run it. During the summer months there are very few times when the water is high

enough, however, when it is, I like to take my grandson fishing in the places that I did when I was his age. We like to stop on small gravel bars and let him swim, catch crawdads, skip rocks or whatever. I also like to use my boat at times while turkey or deer hunting to get to areas that aren't accessible by road. I don't think that the NPS has the right to say that only a part of the people should use the river the way they prefer. We have put up with the bad groups of canoe users all these years but have learned to accept that there are always a few bad apples, I understand that boaters are the same. I don't think all of the rest of us should have to live with a regulation that restricts our hobbies because of this. Thanks,

Doug Conway

**Correspondence:** I disagree with the segments regarding restrictions placed on climbing. The current draft would effectively ban climbing on the Ozark National Scenic Riverways.  
Climbing is almost universally allowed in most of the Nations Public spaces. Climbing is widely practiced and encouraged elsewhere in open space lands, whether managed by local government, or by non-profit organization including US Forest Service, Bureau of Land Management, US Fish & Wildlife Service, and Army Corp of Engineers.  
Climbing is in actuality very low impact and does not cause significant damage to cliff faces or other aspects of the surrounding environment. The use of bolts on cliff faces is also widely allowed in public spaces. Other park services rather than banning bolting often find a way to regulate it in such a way which benefits both the climbers and the public space. Climbers are generally good stewards of the land. At my local climbing crag the climbing community has significantly helped out the area through efforts such as organized trash pick ups and invasive plant species removals.  
Climbing is a very healthy activity which is a great form of exercise. Personally I have lost over 30 pounds since I started rock climbing. Encouraging outdoors activities such as rock climbing helps reduce the trend towards obesity. It would be a great disappointment and disservice to the public if climbing was restricted as proposed in the current draft.

**Correspondence:** In reviewing the options regarding ONSR, I noticed in one scenario, there would be a ban on motorized boats. In thinking about this, I suspect the real concern is with boats powered by internal combustion engines. They are noisy and disturb the quiet and peace to be enjoyed in nature. They frighten the wild life. They pollute the air and potentially the water as well.

Would the wording in ONSR not better serve the public and nature by prohibiting internal combustion engines and allowing electric powered trolling motors? Electric trolling motors are silent, they are clean, and they are less costly to buy and operate than gasoline powered motors. By allowing them exclusively, it also sends the message that the quiet and peace of our scenic river ways is something of value and is important to protect.

I am not a fisherman, but as a great lover of floating southern Missouri's rivers, I hope you consider the needs of those for whom fishing is a passion as there is a viable compromise that will serve both their needs and ONSR's.

Thank you.

**Correspondence:** I am fully opposed to the proposed ban on rock climbing / rappelling. The vast majority of rock climbers are very responsible stewards of the environment. Additionally, climbing on existing infrastructure (bolts, anchors, etc.) poses no additional harm to bluffs and cliff faces. A significant portion of park revenue comes from access and camping fees provided by the climbing community. Should rock climbing be forbidden in the Scenic Riverways, surely the park service will suffer a noticeable decrease in annual revenue from usage fees.

A positive and constructive alternative to banning rock climbing would be to work with the Missouri/Arkansas rock climbing community to raise funds for preservation of the riverways.

**Correspondence:** Dear National Park Service:

The Current and Jack's Fork Rivers are true jewels of the Missouri outdoors.

The National Park Service General Management Plan to be implemented over the next 20 years, is critically important to the security of this amazing riverway AND the cultural heritage sites that exist within the boundaries of the Ozark National Scenic Riverways.

I expect to see a strong management plan that protects and preserves these rivers, both for today and for future generations. Specifically, I want the Park Service to adopt a plan that:

- Removes illegal and unauthorized roads that allow excessive vehicle traffic.
- Ends the e. coli contamination in the Jack's Fork River that is caused by excessive horse traffic in the river.
- Enforces scenic easements to stop construction of more buildings along the rivers.
- Restores habitat lost as a result of excessive human activity in the areas/access points noted.

While the natural environment of ONSR has been screaming-out for protection for decades, it doesn't have a voice except through the NPS. Opponents of needed protections are loud but, no more deserving of attention - they have access to many other venues for their recreation; the environment of the ONSR can do nothing but sit and take the abuse. Without the strong management plan, damage will continue to escalate and will, in many instances, lead to irreversable degradation.

**Received:** Jan,24,2014 13:39:41  
**Correspondence Type:** Web Form  
**Correspondence:** This is not fair. Existing bolts should not be illegal to use and taking away the climbing is absolutely unfair. Why not post warning signs for people going on the trails. Parks should be allowed to be used by everyone including climbers. People walking on the trails don't like when bikers speed by them but your not taking the bikers privalegs away.  
Why not designate a professional route setter to inspect and place the bolts thus creating jobs and stimulating the economy while keeping the parks open for everyone to enjoy.

**Correspondence:** I would like to see the ozark scenic riverways stay the same or as close to the same as they are right now. I have lived near them my entire life and have never seen the boating effect the river. Of anything the locals help clean the river more than the organisations that are appointed the task. To be honest I don't believe people would be able to safely navigate the river with a 10 hp boat motor or make it back up some of the shoals on the river. The way if they don't have the proper amount of speed the boats won't pick up out of the water enough to clear some of the larger rocks in the river. There are more tourists that do more damage to the rivers by leaving trash and breaking glass on the river banks than the locals. There has been many times that people I know or myself personally have had to clean up after a group of tourists that camped out on the gravel bar, and many times we have helped ones out that missed their boat landing and needed a ride back up river or they flipped a canoe and needed help retrieving their lost items. The tourist believe that the river boats going by them fast causes them to rock and flip over but if we were to slow down when we were approaching them than it would cause a bigger wake and cause them to rock more and they are more likely to flip over then. Myself and many others I know are always very curious to the canoers on the rivers and usually give them the right of way unless it puts ourselves at risk of injury. I believe they should be more educated on our boats and how they work because they have no idea about is or our way of life down here. The last time this river management issue came up there was a woman from st Louis that came down to van Buren and said that they were told that the motor jets was sucking up all the fishing and killing them all. There is no way possible that this could happen. The people that plan on coming down here need to be more educated and be more understanding of the native people in this area. They don't like change in there homes and neither do we. We don't go to where they have been raised at and where they plan on raising their children and say you have had this your whole life and have dreamed of the day you will be able to bring your children and now all you can do is look at it and not really be able to enjoy it for what it is. I really hope that the riverways stay as they are and you realize that the people you are really affecting and hurting are the people that live here and use the riverways all year long. I would also like for you to have someone that can be the voice of the people who live here so you know what we want instead of telling us to shut up and fill out a comment card. At all the meeting people have been to we haven't been able to express our opinion or had any questions answered.

**Correspondence:** I strongly prefer the No Action Alternative. The other plans would limit too many of the activities that people who live and visit that area from all over the country enjoy and specifically come to the Current River to participate in. The other problem with some of the plans is that there are businesses in the area that will not survive without allowing the current activities on the river. I have personally been a regular visitor for over 13 years and would be very upset if the activities that are allowed now were to change or discontinue. In addition to all of that, the plans that are being presented seem way too expensive for tax payers without any real benefits to us.

**Correspondence:** I am strongly opposed to the General Management Plan that you have presented. During the summer months I visit the rivers daily. I love to sit in my lawn chair on the river banks and enjoy the great outdoors. Yes, there are times when some people get out of control but over all this is not the case. There are already several laws on the books that could fix the situation of those that are out of control. The rivers should be for all to enjoy and you should not punish the ones who take care of it because you don't want to control the ones who abuse it. It is your responsibility to enforce the current policy. If the current policy was being enforced we would not be having this discussion. Those who abuse the system will continue to abuse it. Making more restrictions will not stop that. You must enforce what is on the books if you want our rivers to be in better shape. More regulations will not do this but will only cause more abuse. Do NOT change what is already in place but leave it AS IT IS.

**Correspondence:** I have been on current river since I was born. My dad's family was raised there, and my grandfather owned a sizable farm on the river. That was until the National Park Service forced him to sell and took his family farm. At least, however, we were still allowed to go to the river and experience it with our families. I have such great memories of going to the river with our family and what a great time we all had. My family has always loved and respected current river. We do not litter and participate annually in the river cleanup. I have grown up on the river and I want my children to experience it as well. My kids love going to the river. They would live there in the summer if we would let them. It is always good quality family time when we go. It makes me very sad to think that they may not have the same experiences with current river as I was allowed to have because of the new NPS plan. Our family heritage is there, and I want them to be a part of it. One part of the new plan makes the recommendation that people only be allowed to walk in. What about those who are elderly and disabled? How are they supposed to enjoy the river. I have many family members who would never see the river again if this plan went into effect. I would also like to ask, how are the boats hurting anything? In my experience, the boats have always helped rather than hurt. There have been many times that boats have saved people on tubes and in canoes from drowning or serious injury. Therefore, I propose that no changes be made in the management plan. Please allow us to keep our right to enjoy current river as we always have. Anything else would be devastating to myself and my family.

**Correspondence:** I would very much encourage you to allow mountain bikes on trails in the area. I'm involved with trail development in the Kansas City area and we've had much success implementing environmentally sustainable trail building efforts in forested areas within and near the metropolitan area. We've also had a lot of success allowing access to multiple user types on our trail systems.

The type of cyclist you would likely attract in this area would be a very environmentally conscious individual and would interact very well with other trail users.

**Correspondence:** I would like to comment on the proposed changes from the NPS to current river. First and foremost, my wife's family has practically lived on current river their entire lives. When I joined this family, I saw how the river was their pride and joy. Going to the river was what they looked forward to every weekend in the summer. Because of their close connection with the river, they treated it as if it was theirs and took care of it as such. One thing I can say is that I have never seen, or been a part of, anything that would harm the river. In fact, we always participate in the river clean up and pick up any debris found when on the river. I have seen many times when people in canoes that camp on the river bank will leave trash or we will find trash from their canoe trips in the river. I have grown to love current river. I love to fish and take my wife and kids their to enjoy a great time as a family. It would be a shame if my children never got to experience the river like we have. I don't feel as though the boats are the problem. I feel like the people who come to the river from out of town are the problem. They don't take any pride in it since they are just visiting and they leave it a mess. These same people are the ones who want to get the boats off the river since we don't let them enjoy the river in it's "wild" state. What I want to say to those who want our river shut down is that we didn't come to your city and tell you how to handle your resources. You can destroy all the land, building malls, homes, and tall buildings but we can't enjoy our natural resource in a respectful way? Where is the logic in that? I personally feel that if it were only boats on the river, it would be much cleaner. However, I don't want to keep others from enjoying the same river that my family and I enjoy. I just want them to take as much pride in it as we do. I guess I could sum up my thoughts on limiting access to the river with this analogy. It is like getting a new car. Wanting to keep it nice, clean, and as pristine as the day you bought it, you never drive it. What a waste! This is how I feel about changing the access to current river. No one would do this with a new car and I hope you take the same approach to current river. God put current river here for man to enjoy and you should keep it that way.

**Correspondence:** I want to thank the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless the Missouri Sierra Club believes Alternative B could be better. We recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesignated horse trails and adds no new stream crossings;  
Bars all recreational vehicle access to gravel bars.

**Correspondence:** I feel Alternative B in the General Management Plan is the most sensible and should be adopted by NPS for the Ozarks National Scenic Riverway. While Alternative A would better restrict motorized boats on the rivers, (which I hope Alternative B will address) B appears to strike more of a middle ground. Motorized boats on the rivers are dangerous to kayakers and canoeists and take away from the beauty and solitude of our Ozark area rivers with their noise and pollution of the rivers. Please adopt Alternative B.

**Correspondence:** I am voicing my support of option A of General Management Plan for the Ozark National Scenic Riverways. The local conservators of the park for years have neglected to preserve and enforce the mandates of Public Law 88-492. The park system have back down against political pressure instead of following their mandate. The fact that other local governing bodies will not enforce the laws to protect the river from horse fecal contamination, and building illegal accesses to the road requires the park service to chose the plan that will protect the rivers. It is a pity that the rivers that are under the park services care made the list of 10 most endangered rivers. Because of these facts and history of the park service option A is my choice.

**Received:** Jan,24,2014 19:41:00

**Correspondence Type:** Web Form

**Correspondence:** I favor the more restrictive alternate Plan A. Since there is a significant amount of privately owned land that abuts the river a more restrictive plan may offset or mitigate what may occur on private land to make the overall river/nature experience more like what is proposed in plan B. Looking at all potential impacts or influences along the length of the river and how they may enhance one another or work in opposition will create the best natural environment for all.

Thanks for the opportunity to provide input on this important policy so my grandson may enjoy the natural environment as I did 50 years ago.

**Correspondence:** I do not want any changes in the park.If their has to be changes then the only thing I would want is.That the park would be. Turned over to the state of Missouri.I feel very strongly about this area.I grew up In the area. When I was a child my dad took me boat riding and camping. I have continued to do the same thing as a

adult. With a five month old baby at home I plan to do the same as my dad did if this dream is not wrongly took from me. We have already suffered enough change when are boat motor horsepower was reduced. One story that hits close to home is when this happened my grandpa like many other people was unable to afford a new boat with the proper motor and never went to the river again. He only lived two miles from the river and truley loved this place. So again I ask and beg you please do not change anything.

Ozark River Keepers Comments on the  
Draft Management Plan of the Ozark National Scenic Riverways  
To us Alternative A offers the most protection for the Ozark Riverways. We prefer that alternative above all of them but you prefer Alternative B, so we are reviewing that alternative and letting you know what we like and dislike about it.

#### Management zones

We are concerned with the lack of primitive zones in Alternative B. -In particular in the Upper Jacks Fork River from the western boundary to Bay Creek. This is a special area and we feel needs the zoning designation of primitive and not natural. Included you will find a list of the different rare and endangered a plants and plants of concern that we have found in the upper section of the Jacks Fork River. We feel that this promotes the area for the primitive designation instead of Natural. Also it is mention that you wish to expand/upgrade the Blue Spring campground. We were surprise to discover that you want to zone that campground area as developed. This area, because of Karst, rare plant species, springs, etc. can only support a moderate level of recreation and the natural resources need to be protected. So it should be zoned "resourced-based recreation" not developed.

#### Motorboats:

We like that some sections of the river are closed to Motor boats. The area in the Upper Jacks Fork between the western boundary and Bay Creek is important because of the water flow in the area. After Fathers Day if you want to float that section, be it by canoe or Kayak, expect to have to get out and walk because the water level is so low. It doesn't need a motorboat to come up the river tearing it apart. It appears that the split motorboat areas (no motor vs. 25 hp) also take into account the water flow in those areas.

We understand that because of the Federal Regulations you should only allow 40 hp motors on the rivers and I like that you are looking into regulations changes that would recognize the jet boat engines.

The Ozark National Scenic Riverways speed limit of 60/40hp is fast enough for these rivers. It's not like people are trying to water ski (or at least I hope not)

Horses: Horse trails, Campground, Crossings. Permits:

I was involved with the Horse Trail Study that was done on the Jacks Fork. When we mapped out the horse trails in that area near Eminence, one of the things that surprised everyone in the working group was how many miles of horse trails there are in that area (over 700 miles. They are on private land, MDC, and Park Service)

There were a lot of trails that were not part of the designated trails that people had made in the park. This presents a problem not just for the resources but also for the health of the riders. If someone is hurt it's a lot harder/slower to get to them if they have wandered off the trail and you have to look for them. One of the recommendations that the working group had for the trail system in the area was to post/name the trails, and close the illegal undesignated trails.

There needs to be a Horse Trail Study/Working Group for the Current River as well. There are a lot of horse trails in the Current River that are not designated trails and they need to be either designated or closed.

One of the items that were recommended by the working group was that we try to move parts of the horse trails out of the flood plain area. I am assuming (I hope correctly) that the adding and subtracting of Horse trail miles/crossings is the designation and moving of trails from the flood plain and sensitive areas. If not then this needs to be clarified.

Horse Camps in the Upper Jacks Fork are NOT healthy for the river. We have seen the results from when Boy's Town came down to camp at Ebb and Flo. They brought down about 20 mules and only stayed for the weekend. The campsite vegetation was devastated and not everything came back. The flies were so bad that you didn't want to use that area for weeks. When we had a rain storm the manure flowed right into flat rock and the Jacks Fork River! I can only imagine what it would be like if it was a 24/7 campsite. There should NOT be a 25 horse campground in the area, because of the sensitive plant life and highly developed Karst (Remember the water flow on the upper Jacks Fork is low -especially at Blue spring). Another of our concerns is the introduction of invasive plant species from the hay and manure. Once again the upper section of the Jacks Fork should be in the highest zoning of protection. (See plant list)

I think that the idea of a permitting system for the horses on the river is a great idea. This would give you some control over the numbers using the park. There are more trail ride facilities starting up in the Ozark National Scenic Riverways and it's not fair to have a permitting system for canoe rental and not have some system for the horse trail rider facilities. We do not need to have more sections of the park impaired and added to the 303d list due to over use. This is not good for business or the health of the local population.

20 access points

This is confusing and needs better clarification. What access points? Why do you want to remove them? What makes them stay or be relocated? When you design the new access points, what method/design? Designed for the concessioners or the people? Can you separate the picnic/swimming area from the river input area?

Bridge, Roads

If we understand correctly, the reason behind the removal/replacement of the low water bridge at Cedar Grove is because of the low water bridge acting as a dam and this is to be a free flowing river. Is this correct? It would be good to free the flow of the river as long as a correctly built bridge would replace it.

Also which roads are you talking about closing? Are you suggesting that you come into compliance with the roads and trails study that was done in 1990? (It has been almost 24 years.) How many roads are not closed that the study says should be? What is your time line? Do we have to wait another 24 years?

What old access road would you want to reopen to discovery sites? What constitutes a discovery site? Natural, Historical, Cultural? How many are we looking at?

Trails: other than Horse

\*ATV's are allowed in the Park but only on the state roads. They should never be on the gravel bars or trails. The ATV riders would have to comply with the state law for helmets, permits, and flagging.

\*Non motorized Mountain bikes: I think this is a great idea and would expand the recreational use with a low impact on the Riverways. As long as the trail were properly maintained and patrolled by the rangers.

\*Hiking trails- we need more.

\*The main concern that I have with trails through the Park is the lack of funding to patrol the trail and the ATV users continuing the use of the old and new trails. I think that this issue needs to be addressed before any expansion of the trail systems in the Park is done

Gravel Bars:

Motor vehicles do not belong on gravel bars. The only reason that I can see for a variance on that is for Disabled access to gravel bars. At which point they should be used only to drop off the person and then be removed. Too many times we have found oil from leaking vehicles on the gravel bar. This eventually works its way into the river.

Museum collection

I think that it's great to have a facility that could properly store some of Museum collections of the Park Service. What I would love to see is also a way to display parts of the Museum collection so that the history of the area can be shared with the people. It would be great to have a display area that can be shared with visitors.

#### Cultural History

We feel that the Park has not promoted the cultural History of the area as much as it could. The people of the area have a lot of amazing talent and knowledge. You need some sort of way for the knowledge to be highlighted and shown. (Maybe a cultural village/town could be created?) We need to make sure that the cultural history of the area is not lost!!

#### Powder Mill

We are concerned about the development of Powder Mill. When we went to check out the area I noticed that the campground was in the flood plain. I feel that this would limit the amount of development that can be done. How much area is out of the flood plain? Will you go ahead and develop part the flood plain?

#### Volunteer groups

The Park Service needs better feed back to the people who volunteer for the Park. Maybe a dedicated staff contact person could be possible? When people are willing to do volunteer work for the Park there needs to be a person that to contact directly. That person needs to be able to explain why it might be taking longer, why something can or can't be done, etc. Basically keep in touch and if need be help walk them through the process.

#### Problems in the gaps

Some of the problems in the gaps and outside the Park boundary need to be worked on. It would be great if the Park Service and the DNR could expand the networking that they have been doing. Remembering that outside of the boundaries is the jurisdiction of the DNR. For instance, there are developments with poorly planned roads and even some illegal dumps next to the river.

#### Educational facilities.

We had hopes that the Park Service and the Stream Team Program could partner and turn the old fishing lodge (Welsh Lodge) into an educational school/camp for the children of Missouri. A facility along the pristine Current River would be of great benefit to people who have never seen what a healthy river is. When I went to school we were lucky enough to have a camp that we could go to for a week. It was a way to teach us about the outdoors. It taught me respect for the environment and taught me to open my mind and heart to the world around me. The kids are our future and we must find a way to expand their world beyond the TV and video games. .

#### Hellbender, Bats, caves, etc.

We must do everything to protect the Hellbenders and bats within the Park. There are some caves that have not been gated and are in need of gating. Unknown circumstances are killing off hellbenders. Understanding the concern over identifying hellbender habitat, there needs to be a definite designation of protection for such habitat. We have found hellbenders in the Upper Jacks Fork. Horse camps and more development would put them at increased risk. Bats are major pollinators and eat millions of pounds of insects and, rare or not, are being decimated by the white nose fungus.. The ONSR needs to fully protect their bats. Meeting a hellbender or photographing a rare plant are some of the reasons people come here! Bats help make the experience more pleasant without unreasonable amounts of insect bites.

Rare and Endangered Native Plants as well as Plants of Concern Up and Downstream of Jam-up Cave (Between Western boundary and Bay Creek) on the Jacks Fork River-These are plants I have physically verified.

1. *Campanula rotundifolia* Bluebells of Scotland
2. *Galium boreale* Northern bedstraw
3. *Plantago cordata*...Heartleaf plantain
4. *Cheilanthes lanosa* Hairy lip fern
5. *Goodyera pubescens* Rattlesnake plantain
6. *Cypripedium calceolus* tall yellow ladyslipper
7. *Cypripedium parviflorum* small flowered ladyslipper
8. *Silene regia* Royal catchfly
9. *Aster furcatus* forked aster
10. *Delphinium exaltatum* tall larkspur
11. *Sedum ternatum* Stonecrop
12. *Zigadenus elegans* Mountain deathcamas
13. *Gratiola viscidula* Hedge hyssop
14. *Helenium virginianum* Virginia sneezeweed

15. *Viola pallens* Small white violet
16. *Phlox bifida* Sandphlox
17. *Amsonia ciliata* Ciliate bluestar
18. *Ribes odoratum* Golden current
19. *Berberis Canadensis* American barberry
20. *Matalea oblique* climbing milkweed
21. *Waldsteinia fragarioides* Barren strawberry
22. *Hamamelis virginiana* Eastern witch hazel
23. *Liparis loeselii* Loessel's twayblade
24. *Trillium pusillum* Ozark trillium
25. *Tradescantia longipes* Ozark spiderwort
26. *Trautvetteria caroliniensis* Carolina bugbane
27. *Sullivantia sullivantii* Sullivant's coolwort
28. *Athyrium pycnocarpon* Glade fern
29. *Spiranthes odorata* Ladies tresses

#### ONSR Reverting to State Control

Although it is not mentioned in the Management Plan, we must comment on the numerous local people being stirred up by Lieutenant Governor Peter Kinder, Rep Jason Smith and the State representatives and senators who attended the various Park Plan Comment Meetings. In this politically polarized era where many people operate outside the realm of facts, we need to entertain the impossible.

We cannot recall any established national parks ever relinquished to state or private control. In our view, such a move would be a disaster for the resource. The Missouri legislature has historically denied adequate funding to Missouri State Parks. The legislature would most likely have difficulty finding money for the purchase of such a large parcel of land and certainly would be unable or unwilling to supply adequate operational funding. It would then be too tempting to sell off pieces of or the entire ONSR in its entirety. Such a scenario would leave the rivers, springs and adjacent land open for abuse from ORV/ATVs, pollution, erosion, overuse and antithetical industry such as mining. A half century of federal management has preserved these magnificent rivers and springs for ALL Americans to enjoy. The ONSR brings in millions of dollars of revenue and employment to local counties. Decommissioning this National Park would be a physical and fiscal disaster.

**Correspondence:** I don't see a problem with the current regulations as far as the boats are concerned. I know the floaters are plentiful during the summer months but the fishermen and gigers use the rivers all year round. The local people of Van Buren clean the river after the visitors have long gone home. Why punish the locals! They live close to this beautiful river for a reason. I say leave well enough alone. It has worked for the last twenty years, give it another twenty. Thank You.

**Correspondence:** My family and I have been traveling to the Ozark National Scenic Riverways since the mid 70's and have seen the results of an all out assault on the area.

We have been disappointed by the reduction in the wildness of the area and the proliferation of access points to the river by recreational vehicles and horses.

Please adopt Alternative A of the proposed management plan as it will provide for closing of these illegal roads, and undesignated horse trails and bar all recreational vehicle access to gravel bars.

We visit the Current and Jacks Fork rivers to experience our country's wild areas which we have so few of any more. Please restore the wildness to these regions by adopting Alternative A.

Sincerely,

Eric Hoyer

**Correspondence:** I really think the Senic River Ways should be turned over to the State of Missouri. They have proven they can take better care of their parks. I think it is just sad that at the recent Gov. shutdown you would not let your employees mow the grass and take care of the parks but they could ride around in the vehicles and burn gas. what is the sad part is it was just to make a point. The truth of the matter is the Local people take better care of the parks than anybody by picking up trash and helping floaters in distress. We are the ones that are hurt worse by your changes. I have camped on the banks of the Current River for 45 years. I hate to see that change. I do feel that everyone should be able to share the parks. Its just the local people are a asset to the park service. So I hope you really consider us in making your decision. Thank You.

Ronald W. Reynolds

**Correspondence:** We have enjoyed many hours along the Current River. Our usual mode is equine related. Always cognizant of the fact of combined USE we are careful to leave as small an impact on the area as possible. The most troublesome impact we have witnessed is the human waste left in the areas of canoe landings. I refer not only to trash but also excrement. Having looked at the information available to us (we have slow internet service so the document will not download) I see no provision to reduce the impact of human waste. Folks will still need to eliminate, where are they to do this and not contaminate? Please remember we all should have USE of our National Parks.

**Correspondence:** I would like the no change alternative. This land is public land, why in the world would you close it to people who like to ride horses? By shortening the amount of trails for horses you will be wearing the trails out in a faster way than spreading out and having a lesser impact. By reducing the amount of trails you are also risking injury to people and animals that would be forced to be in a closer area to each other. Not all horses get along with each other.

**Correspondence:** Missouri rivers are our most outstanding natural asset. They belong to all residents of the state, and in fact, the nation. As you devise policies, please bear in mind the famous quote from the Constitution of the Iroquois Nation:

"In all of your deliberations in the Confederate Council, in your efforts at law making, in all your official acts, self-interest shall be cast into oblivion. Cast not over your shoulder behind you the warnings of the nephews and nieces should they chide you for any error or wrong you may do, but return to the way of the Great Law which is just and right. Look and listen for the welfare of the whole people and have always in view not only the present but also the coming generations, even those whose faces are yet beneath the surface of the ground - the unborn of the future Nation." In conclusion, Oren Lyons, Chief of the Onondaga Nation, wrote: "We are looking ahead, as is one of the first mandates given us as chiefs, to make sure and to make every decision that we make relate to the welfare and well-being of the seventh generation to come. . . .What about the seventh generation? Where are you taking them? What will they have?"

Not only should Missouri rivers be preserved for future human generations, but particular care must be taken to protect the silent, voteless, but most deeply invested interests.....that is, the birds, fish and wildlife that depend on these rivers for survival. What policies will do best to sustain other species, as well as the beauty and water quality of our scenic rivers in the long run? Certainly not the demands of selfish and destructive wreck-reationists:

[http://www.stltoday.com/news/local/metro/doubts-about-the-future-of-a-national-park-in-the/article\\_02722479-7801-5d45-83f1-10d2a3ea21e1.html#.UuQUxdrezM.email](http://www.stltoday.com/news/local/metro/doubts-about-the-future-of-a-national-park-in-the/article_02722479-7801-5d45-83f1-10d2a3ea21e1.html#.UuQUxdrezM.email)

I had thought of supporting Plan B, but having read this article, I now support Plan A, the most restrictive of policies. I feel certain that only the most stringent protections can hope to preserve the unique beauty and ecological quality of Missouri's scenic rivers, for the sake of both nature and future generations.

thank you for this input opportunity,

Gwyn Wahlmann  
Kirkwood, Mo

**Correspondence:** Dear committee,

It always amazes me when I "hear" about changes to my living area that some government organization is taking on in order to "protect or to make things better". I wonder for whom those changes and new rules and regulations are actually for? Is it job security for some of those whose job really wasn't ever necessary anyway who like the big-government power trips and the "power" to tell the small-town country hillbillies just how to live? When,Where and How to function. examples:"primitive or wilderness, limited access, ONSR, horsepower limits, parking/camping permits, campground closures". Are you getting my point? And yes, I feel some control is necessary but, where is the stopping point? Thanks to gov. "rights" I have to pay for a gate that use to cost me \$25.00 or less, to drive across 400 feet of U. S. forest property to get to my property but, now it costs me almost \$100. What can be done about that? The bill comes to me yearly from somewhere in California. Thank you. I have to get across government property to my property. Wait, who is "government/ U. S forest service"? Oh yeah, it's me too. The property hasn't changed, there is no use/abuse issue here, that's just how it is. So PLEASE, give us locals more rules, regulations and government control because we REALLY DO need it. I know you can't please everybody all the time, but WHEN is common sense going to come into play here? I love all the "naturalist" groups and "caring and concerned"

groups for the preservation of natural areas around our country, have any of them ever been on Current River? Living here, I have seen first hand that tubers, floaters and jet boats are just a big catastrophe waiting to happen. Maybe, someone of power should look at that. Maybe if something as minute as safety was a priority, local citizens could get behind that. It seems that recent years of droughts and decreasing water levels that concerns about less depth for running areas for boats might carry some reason for some changes? Please give this some thought, all of this, before it's too late. Lots of concerns, so is the answer to ruin the use for everyone who actually lives in the involved area? PLEASE THINK.

**Correspondence:** I have been coming down to the Ozark Riverways for more then 30 years and enjoying the trails and beauty of the area. I know many people from all over the United States that also come and enjoy the trails and rivers. I believe that you should leave the trails and riverways the way they are. Mother Nature does more harm to the trails and rivers ways then Trail riders ever could. Do you want to get rid of her also. Or the State could put seveal bridges over the rivers for the people and horses to travel across. Please do not mess with the riverways.

**Correspondence:** My first visits to what is now the Ozark National Scenic Riverways were as a child in the 1940s. As a teen in the 1950s I floated the Current and Jacks Fork numerous times in my canoe. I've returned repeatedly over the years to do floating and enjoy this wonderful national treasure, most recently last year.

I was fully supportive of the National Riverways designation at its inception. But I'm dismayed by the steady erosion of the "natural" in this wonderful resource.

Too much commercialism, too much unbridled and unauthorized use.

These riverways don't belong to the residents of the counties they traverse. They belong to all of us.

As resources that have already been degraded, they deserve stronger protection so that they survive for future generations, including the folks who live closer to them than I do, and to my grandchildren when they reach the age to enjoy them.

I support Plan A.

Robert Klepper

**Correspondence:** First let me start off by saying that I LOVE our Jacks Fork and Current Rivers. I have grown up here and will continue to live here probably till I die. I therefore have a natural concern for the health of our riverways and surrounding land.

I am sure my local friends who have also commented share my concerns for the health of the riverways. But some of these friends of mine I am afraid may have commented with heated irrationality, which I am also afraid may make them look like the silly, uneducated, backwoods, radical stereotype that plagues this area of the Ozarks ("hillbillies" as we are commonly referred to), and therefore NPS and ONSR may not take their comments seriously. But to enlighten NPS, there are plenty of very smart, very educated people who came from this area. Raised from Eminence alone we have teachers, nurses, doctors, lawyers, congressmen, and even an astronaut. Therefore I am going to attempt to keep my comments sounding of an educated mind who has plenty of common sense and reason, as I do have a Bachelor's Degree in Elementary Education myself.

There are good reasons that the local people are so emotional and, at times, irrational about the ONSR changing things, which I can try to explain. First, people here are very sentimental about our ancestry. Because of this we are all still upset that the NPS acquired this land and rivers to begin with and created ONSR in 1964, because we all feel our ancestors were strong-armed into handing their land over, never to be inhabited or used again. To us that is sad. People feel that the NPS's original plan was either a lie or just has changed with change of leadership. Either way people here are hurt that NPS is in charge and does not trust the locals to take care of the rivers, and scared that they will end up losing what little rights they have left.

Next, people here feel they have a right (understandably) to visit these old homesteads of their ancestors. These homesteads dotted the land and riverbanks of the ONSR. This is why there are so many "illegal" roads, because people do what they can to get to them, including making said roads. Also, being able to use the river in the present ways is important to our heritage. If we cannot use it and enjoy it and savor our use of it then our heritage is gone.

Additionally, since the NPS has "taken over", people here feel constantly threatened by NPS because they already cannot do what they want to do with the river, and are afraid that the rest of their rights with the river will be taken away. Because people from this area have so many high stakes (financial, emotional, recreational, ancestral, traditional) in these rivers those of you from NPS and ONSR should not be surprised of the emotional and angry response from the local people.

I, of all people, do not wish to see our riverways ruined. My friends and I also want to preserve them so that we (and everyone else who visits the area) can enjoy them. Therefore we share with the NPS and ONSR their wishes to maintain the riverways. I understand the need for laws and regulations in order to maintain them. That being said, the ONSR is such a big park that affects all of the local people who have grown up in the area, whose ancestors grew up in the area, and considering that the area has few assets other than the river and land surrounding it, few other industries than the river that are able to sustain the economy of the area. This struggling economy also affects the ONSR. Reason being if our towns die out because of the tourist industry crashing because no one is allowed to use the river, then ONSR will also die out, as it is the tourist industry that sustains it.

So the question is what do I suggest ONSR does? An outline of my thoughts follows.

A. **PLAN SCOPE:** The purpose of the GMP is to provide guidance on future management decisions and regulatory action. However, the present draft contains over 500 pages of detailed use prescriptions. Such detail will prohibit discretionary decisions in the future, and not allow for meaningful consideration of changing conditions. The GMP should be rewritten to include mere policy, not specifics on how to carry out those policies.

B. **ZONING:** The concept of zoning will segregate differing recreational uses. This will cause users to lose the ability to continue with present recreational uses in familiar and emotionally meaningful park areas. For me alone, these special areas include but are not limited to (on Jack's Fork River) Alley Spring, Hole in the Wall, and Shawnee Creek, and (on Current River) the whole area from Twin Rocks to Two Rivers to Blue Spring, and then Big Spring.

C. **PRIMARY OBJECTIVE AND FAVORED USE:** The primary objective of the GMP is to convert the vast majority of the park to a natural area where evidence of human use is minimal. Similarly, the NPS valued user experience is the ability to observe native wildlife, explore a cave, or ponder the size of a spring flow in solitude. [see GMP page 26]. It is this policy objective and valued user experience that will have the most negative impact on promoting a wide variety of recreational use. While the concept of a natural area may be desired by some, others favor recreation based improvements and amenities. Additionally, while pondering the size of a spring flow in solitude is an important user experience, equally important are those social experiences realized between friends and family. No one use should predominate to the exclusion of another use, and policy formulated to accomplish the same is unnecessary. Present conditions provide both experiences. As social recreational use predominately occurs on summer weekends, the avid spring ponderers will find solitude during the week, winter, spring and fall. There is no reason why the NPS cannot offer amenities which do not detract from natural aesthetics.

D. **GENERAL LAND USE:** The GMP limits land uses to specific activities depending on the zones. Primitive and natural zones are the most restrictive to recreational use, and compromise 88% of the NPS preferred Alternative B. Resource-based recreation zones are the most conducive to promoting recreational use. In my opinion, NPS needs to reduce primitive and natural zones and increase resource-based recreation zones. Increased recreational zoning is necessary to promote the park purpose of use and enjoyment of the outdoor recreation resources.

E. **GENERAL RIVER USE:** The GMP provides three river use zones. Non-motorized watercraft uses are authorized under all zone concepts. Motorized watercraft use is prohibited in non-motorized zones. Seasonal mixed provides for seasonal motorized watercraft use. And, mixed use zones provide for both motorized and non-motorized watercraft. The NPS preferred Alternative B calls for 48 seasonal mixed use and non-motorized zones. In my opinion, NPS needs to increase mixed use zones, and I am against seasonal or permanent closures. Seasonal mixed use or non-motorized zones displace motorized watercraft users from those familiar and emotionally meaningful park areas. Non-motorized user experiences remain readily available through the week and summer, when low river levels render large segments unnavigable for motorized traffic.

F. **SPECIFIC LAND USE:** The GMP proposes significant specific limitations on recreational land use. These limitations include approximately 65 miles of road closures, prohibiting motorized vehicles and campers on gravel bars, closing approximately 20 access points, establishing a permit system for horse back riders, eliminating vehicular traffic in primitive areas, and establishing visitor standards designed to limit the number of participants for different use activities. In my opinion, NPS should increase land zones that increase recreational uses, such as demanding large increases in resource-based recreation zones. My family (husband and I and three young daughters) largely uses the river with a motorboat and sometimes we take our daughters swimming at a gravel bar such as Alley Spring. It is important for us to be able to use these areas because we cannot afford a swimming pool or to drive to a lake to use our boat and swim. Furthermore we have no emotional attachment to any lakes around the area, plus they all feel dirty to us, so we don't want to go there. Therefore we should be able to continue using the river the way we do now. Finally, visitor Use Indicators and Standards will prohibit management from considering changing conditions of recreational use in the future. Specifically, management cannot be tied to arbitrary number limits that do not take into consideration advancements in recreational technology and resource conditions.

G. **SPECIFIC RIVER USE:** Similar to land uses, the GMP proposes significant specific limitations on river use.

Alternative A would eliminate 60/40 horsepower motorized watercraft. Alternatives A-C impose horsepower restrictions downstream from Big Springs. Further, visitor standards place numeric limitations for watercraft. If those limitations are exceeded, management is directed to take corrective action which includes potential closures. Additionally, Visitor Use Indicators and Standards are too strict because they will prohibit management from considering changing conditions of recreational use in the future. Management can not be tied to arbitrary number limits that do not take into consideration advancements in recreational technology and resource conditions. I think NPS should increase river based recreational use. As to horsepower limitations, larger horsepower motors are important, not just wanted, because the river is not safe to navigate with a low horsepower motor, especially if the boat is filled to capacity. This also affects emergency response. I understand and agree that current boat horsepower limits are abused. The answer to that is to make all "souped-up" motors illegal, and make it a law that motors have their horsepower posted by the manufacturer in big letters on the head of the motor. That way it makes it a lot more difficult for people to abuse the current law.

H. ROWDINESS: If ONSR is concerned about rowdiness on the river, then ban alcohol usage. Simple as that. In my vast experience with dealing with rowdy people, they are all drinking. Take the booze away, then they will most likely not be rowdy. Some would say limit alcohol usage. But that will not work because that is too difficult to enforce. NPS needs to take it all away. No one needs alcohol to have a good time. And if they want to drink they can do it somewhere else.

I. PATROL: The laws we have are not enforced. Our rivers need to have Park Rangers on them, at the boat ramps and gravel bars and in boats on the river, patrolling the area for illegal and rowdy behavior.

J. MAINTENANCE: When Alley Spring and Big Spring were state parks they were well taken care of. The camping areas were maintained and fixed when damaged, the brush was kept cut, and a person could see the Alley Spring branch while walking along it. It was like a park. It was beautiful! Slowly and unfortunately, over the years, perhaps with heads of maintenance changes or superintendent changes, these areas have been allowed to deteriorate and grow up with brush to the point that a person cannot even tell Alley is there from the highway. There have been camping spots closed and even a "loop" eliminated simply because maintenance doesn't want to fix them when the river cuts into them. This, in my opinion, is laziness, a travesty and very embarrassing to me for our tourists to see. And quite frankly it is ugly. Alley Spring is ugly. How sad. I beg of ONSR to go back to taking care of these areas. There are other NPS parks in our country that are still well taken care of. There is no reason that ours shouldn't be.

My bottom line is this. ONSR's stated purpose is to provide recreational use. The draft GMP erodes this purpose. If ONSR's purpose is not really to provide recreational use but only to preserve and protect the riverways by banning more and more recreational use, then ONSR needs to change it's stated purpose. And the way the locals feel about NPS now makes them wish they and their ancestors would have chosen to put a lake in all those years ago when the Corps of Engineers tried to. At least NPS wouldn't be here to ruin our heritage.

**Correspondence:** I support plan A. The need to restrict vehicular and equestrian access is imperative to saving our scenic Riverways. It is unfortunate that many citizens in Missouri insist on destroying nature by eroding the banks, attempting to swamp canoes with large wakes, throwing trash in the river, playing loud music and numerous other transgressions. Educating people to respect the river is important as well as how to maneuver a canoe safely through the waters.

The actions of the jet boat community at the Scenic Riverways open houses demonstrates a need for the NPS to limit their access and size of their motors on the Current and Jack's Fork rivers. They arrived early at the Powder Valley open house with boat trailers and proceeded to park them at a diagonal, some of them taking up 6 parking spots. They then proceeded to shout over comments people were trying to make. When one attendee asked them to explain their sign "Sierra Club drowns people", five jet boaters verbally attacked him. They never explained their sign.

The additional law enforcement will definitely be needed until the children of the current jet boaters can be educated on river preservation!

I support the designation of the Big Springs Wilderness area.

Thank you for taking the time to preserve two of Missouri's most precious rivers.

**Correspondence:** The final management plan, in my opinion, should lean towards Plan A to preserve and protect the park for present and future generations. I recognize the historically tenuous relationship the ONSR has with the local residents, and I understand many of their concerns. But ultimately, the park belongs to all citizens, not merely those of a few Missouri counties. I have witnessed patrons using the ONSR in ways that would be unfathomable in places like Yosemite or Yellowstone. While I respect the familial and cultural traditions of the area, there needs to be more care, more restraint taken in the use of the park. Traditions tending towards poor stewardship are not ones that should continue. Please make a decision for all. Thank you for the opportunity to comment on this plan.

**Correspondence:** I have canoed the Current and Jacks Fork river system many times over the past 40 years. Usually I spend 2 or 3 days on the river canoeing and camping on gravel bars. It offers a unique recreational experience that without fail always renews me. I strongly believe that the river should be managed with non-motorized watercraft as the overwhelmingly predominate focus. That does not mean that I think motorboats, horseback riding, hunting and other uses should be totally excluded. I can't canoe on any of the numerous equestrian trails in the state. Nor can I canoe at any of the public or private ATV/motorcycle parks. Between Truman and Lake of the Ozarks there are 115 thousand acres of water that are open to fishing, this doesn't count the other numerous lakes in the state. There are many places for people to pursue these other recreational activities, but there are very few places to float a clear stream through a relatively undeveloped landscape.

As far as local residents are concerned some things are just too special to keep to ourselves. They must be shared.

I prefer Plan A, but am willing to compromise and support Plan B.

**Correspondence:** Wildlife are what make a park a park. Without the wildlife, you would have something like a quarry. Sound like fun? Consequently, the wildlife much get top priority, because they can't protect themselves from us. In particular, mountain biking and other off-road vehicles should be prohibited. Please select the alternative that most protects the wildlife.

Bicycles should not be allowed in any natural area. They are inanimate objects and have no rights. There is also no right to mountain bike. That was settled in federal court in 1996: <http://mjvande.nfshost.com/mtb10.htm> . It's dishonest of mountain bikers to say that they don't have access to trails closed to bikes. They have EXACTLY the same access as everyone else - - ON FOOT! Why isn't that good enough for mountain bikers? They are all capable of walking....

A favorite myth of mountain bikers is that mountain biking is no more harmful to wildlife, people, and the environment than hiking, and that science supports that view. Of course, it's not true. To settle the matter once and for all, I read all of the research they cited, and wrote a review of the research on mountain biking impacts (see <http://mjvande.nfshost.com/scb7.htm> ). I found that of the seven studies they cited, (1) all were written by mountain bikers, and (2) in every case, the authors misinterpreted their own data, in order to come to the conclusion that they favored. They also studiously avoided mentioning another scientific study (Wisdom et al) which did not favor mountain biking, and came to the opposite conclusions.

Those were all experimental studies. Two other studies (by White et al and by Jeff Marion) used a survey design, which is inherently incapable of answering that question (comparing hiking with mountain biking). I only mention them because mountain bikers often cite them, but scientifically, they are worthless.

Mountain biking accelerates erosion, creates V-shaped ruts, kills small animals and plants on and next to the trail, drives wildlife and other trail users out of the area, and, worst of all, teaches kids that the rough treatment of nature is okay (it's NOT!). What's good about THAT?

To see exactly what harm mountain biking does to the land, watch this 5-minute video: <http://vimeo.com/48784297>.

In addition to all of this, it is extremely dangerous: [http://mjvande.nfshost.com/mtb\\_dangerous.htm](http://mjvande.nfshost.com/mtb_dangerous.htm) .

For more information: <http://mjvande.nfshost.com/mtbfaq.htm> .

**Correspondence:** Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS

I am in favor of a total ban of ALL ATV, motorcycles, motorbikes, motorized vehicles in and around National Park trails, heavy fines and jail time for crossing or fording rivers, streams, inlets, creeks, swamps and springs. No ATVs allowed in camping areas or park lands at all. ATV usage on private property should be restricted to within 500 yards of any National Park, Monument or other public land designation.

Horseback riding restricted to only designated back country trails that are at least 100 yards from any waterway and may not cross or interact with any type of water course no matter how small or large. Horseback riders must have a special license and pay a fee for use of trails to offset damage and fecal waste left behind. Horseback riding should not come within 100 yards of any camping or other recreational use area designated for pedestrian use.

**Correspondence:** I think it's a shame that we live here on these rivers and are the ones that clean up these rivers after you people that REALLY don't give a shit mess them up all summer. Be truthful here to yourselves for a minute, How many of you have went to the bathroom in the river, or took a bath or washed your hair in it? All you "educated idiots" want to do is something, anything for attention. My kids and grand kids fish, camp , and boat ride on the river. My husband and I ride horses and mules and camp. Camping down on the river banks, gravel bars helps keep it cooler than being out in a wide open field somewhere. All the government wants from the people of this so called great land of ours is to take it all away from us and leave u with nothing. Do you want the short off our backs too? I have a great solution for your problem, you city people stay in the city and leave us country people the hell alone. We are better off without you cause when your here it's always trouble.

**Correspondence:** I support alternative A. The National Park Service must preserve our national treasures for

current and future use for all citizens!

I have visited most of our National Parks and have always been impressed with the competence that the NPS exhibits in maintaining our natural wonders. As an avid canoeist over the years, I have followed the degradation of our National Scenic Riverways in Missouri from overuse and what appears to be an improper use plan.

As with most of our national resources, now is the time to regulate them properly for the future.

Please withhold my personal, identifying information.

Thank you.

**Correspondence:** Good morning,

Please leave this area alone. People living near to this area have a greater entitlement to use it as it is their tax dollars support the surrounding infrastructure. Any thing that would limit tourism or use of this area is NOT wanted. This is one of the few sources of income for the locals.

Local that is, state control, would be more desirable for these parks, as they have a vested interest as residents in the same state.

Thanks,  
Craig Vignery

**Correspondence:** I would hope that option B be chosen at a minimum and possibly some items in option A be included.

The residents in the area seem to have an attitude that the federal government and anyone that doesn't live in the area needs to stay out of their business and let them run things. Even some of our politicians make these statements. I would remind these people to consider how much money the St. Louis region generates for statewide use. I believe this does give us a right to have input in these decisions.

How many folks in the area are on social security, medicare, medicaid, disability? Enough that you clearly don't want the federal government to stay out of your business in all areas.

I choose option B with some items of option A to be included.

**Correspondence:** Im from the Cardareva section of the river. I truly don't see the problems in this are of the river that I kerp hearing about. There are three weekends a yesr when the gravel bar is full and those are holidays other weekends travel is much much lighter. People keep talking about atvs well they are already not aloud on the gravel bar. And the river is to deep in our area for any crossings. Then there is the horse poop thing people keep bringing up. Well that is not in our area either! But in truth if it was so bad upstream that it was polluting the waters so badly my children should have been sick long ago from the many gallons that they consume in a year. I've heard many people say that the locals trash up the river. Well that is not true either. We clean it everytime we are there. We never leave trash and we pick ip others trash if we see it. We have a trash pick ip party every year also. So in closing I just want to say maybe if you made people follow the rules that are already there there would not be so many problems. I'm for the no action alternative. I don't belive the government should be able to take away what God himself has given us to enjoy. Think long and hard about enforcing the rules that you have and you might not tick nearly as many people off as taking it away from those of us who have done nothing but love it and take care of it all of our lives.

**Correspondence:** I strongly support Alternative B. I have loved camping and canoeing on the Jacks Fork and Current River since I was a boy. We took our 3 girls once or twice every summer and absolutely loved the beauty of the rivers and forests. When we moved back to St Louis after about 10 years out of state, we were shocked at how over crowded it has become and how much litter was not being picked up. But to have ATVs running up, down and through the waterways was the last straw. This once glorious, peaceful respite has become a Six Flags water park populated by drunks and hillbillies.

Please stand up to the pressure of the locals who seem to see this National Scenic Waterway as their personal bar and ATV playground. This land is our land and it needs to be protected for future generations.

Thanks.

Steve Nollau

**Correspondence:** My entire family has been camping, fishing and canoeing on the Current and Jacks fork river since late 1960's. When I made my first trip down the Current it was still a state park. I am a Registered Professional Engineer in Illinois and have a working knowledge of water quality. Also my favorite thing to do in the river is snorkel.

Since 1968 I can say I have not seen a noticeable degradation of the rivers. I will admit the water does get murky on crowded weekends but you can snorkel the next morning and the visibility is near clear again.

It would be nice if the river was a little less crowded on the major weekends but I would hate to see more restrictions put on the river and deny anyone a chance to see and use the beautiful river system. We have simply started going during the week to avoid the crowds. And if you want the rivers entirely to yourself go in January. It is a whole new experience.

When we first visited the area we camped at Round Springs until the NPS moved most of the camp sites away and out of site of the river. We now camp at Circle B in Enemence. I will say I would rather stay there with a full camp ground than at the off river NPS sites. When we go down to the river we usually go with a large family group and the small NPS sites don't work.

In closing my comment is leave the river open to as many people as possible. Don't make it an exclusive river for a few people who don't want to see another person all day on the river or a few NPS operators who can charge gouging prices like many of the other National Park vendors do. Keep in mind the river system is mainly rock and water both very durable items. I strongly feel the river should stay accessible and affordable to all people who want to use it.

**Correspondence:** This is a very comprehensive and well developed plan and explanation. The National Parks Service did a great job with this document. I agree that this Park has been abused by many visitors and something must be done to protect the beauty and sustainability of this area before it is ruined. I am a regular visitor and am appalled to see what is happening at these riverways. Alternative B seems to make the most sense with a balance of preservation, conservation and recreation. Alternative C should be out of the question. Honestly, enforcing rules that are already in place, would be a big step in the right direction. Littering, illegal roads, and polluting the water with gasoline are some of the biggest problems, and are all already illegal.

I understand that many people who live close to the park are against any rules at all, but as a taxpayer and Missouri Resident who frequently visits our wonderful outdoor areas, my opinion should count just as much. I live near the Mississippi River, and that doesn't give me license to abuse that river, pollute it, or destroy the riverbanks and landscapes. Similarly, ozark residents shouldn't be allowed to destroy our National natural treasures just because they happen to reside close by

Thank you for all the time and effort you have put into this project.

**Correspondence:** The most important starting point is what the original park plan was intended to be and laid out and to restore that - but perhaps only for a few years. That would require closing all illegal access points and trails. Maintaining them as closed except for specifically permitted, guided activities will allow the park to recover from the years of an increasing level of unauthorized use. It recognizes the need to put the park back into a sustainable condition as the first step.

Designating as a wilderness the Big Spring Wilderness Study Area and enforcing that designation preserves a benchmark for what the original system was like against which to measure the effect of returning to the original park plan.

After three years, the closure of illegal access points and trails should be revisited to see what patterns of use have developed because of the return to the original plan. Any changes in that original plan can then be properly assessed in terms of habitat preservation, public enjoyment and sustainability, and the showing for any such changes must be convincing and supported by substantial evidence and reason.

This comment is in effect support for Alternative A with an option after three years to assess the need for changing it to accomodate some of the factors in Alternative B.

**Correspondence:** I WOULD PREFER TO NOT CHANGE ANY OF THE EXISTING RULES GOVERNING USE OF OUR RIVERS WITHIN THE ONSR. HOWEVER, I REALIZE YOU ARE UNDER PRESSURE TO MAKE CHANGES. IF CHANGES MUST BE MADE, I WOULD PREFER OPTION C, WITH EMPHASIS ON THE ONSR BEING USED FOR RECREATION, AS PROMISED IN THE ORIGINAL LEGISLATION.

ALTHOUGH I BELIEVE IN CONSERVATION, I HAVE TO ASK WHO ARE WE CONSERVING THE RIVERS FOR IF NO ONE IS ALLOWED ACCESS TO THEM?

THE RIVERS REMAIN CLEAR AND BEAUTIFUL WITH USE AS IT IS TODAY. THERE IS NO REASON TO CREATE AND MAGNIFY DIFFERENCES BETWEEN USERS OF MOTOR BOATS AND FLOATERS. THE TWO GROUPS CAN WORK TOGETHER AS IS CURRENTLY THE CASE MOST OF THE TIME. WHEN EITHER GROUP ABUSES THE ONSR AREA, PLEASE CONTINUE THE POLICY OF TICKETING OR ARRESTING VIOLATORS. MOST USERS REALIZE THE MAJORITY OF LITTERING AND EXCESSIVE DRINKING IS DONE BY FLOATERS, WHILE MOTOR BOATERS GET THE WORST PUBLICITY.

IT IS ALSO IMPORTANT TO POINT OUT THAT MOST RIVER USERS CAN TELL YOU ABOUT A FLOATER RESCUE BY A MOTOR BOATER.

THANKS FOR ALLOWING COMMENTS.

**Correspondence:** As a lifelong Missouri resident I am wholeheartedly in favor of the NPS to continue its management of the Ozark National Scenic Riverways (ONSR). National Parks are our nation's gems and I am proud to have this unique national park system in Missouri. I have been a frequent user since 1969. The establishment of a Friends group for ONSR - - especially with planned giving opportunities - - may help bridge the divide between local residents who live by the park and other users by providing more resources for its management and improvements. I for one would contribute.

The problems I have seen over the years have been the increased weekend use and abuse of the rivers by canoeists, and in some cases motorized boat operators who do not practice courtesy to their fellow floaters. Drunk and disorderly conduct gets out of hand. More limited use through a permit system works for wilderness areas, but would probably not work well for this popular area. I recognize that there is a limit on the number of canoes

available to outfitters, and that probably is the best compromise. Continued monitoring how many are permitted is recommended. Increased patrols of the rivers on high use days would help.

My biggest gripe is the semi-primitive campsites such as Bay Creek and Rymers. Neither are safe for individual campers (or families with children) anymore. One major reason for this is increased Meth use (including cooking meth), and alcohol use. Two things I would recommend are: one, eliminate the first-come-first-served system and establish a reservation system for these types of campsites. The second would be to increase patrols, and perhaps develop a system of volunteer camp hosts (partner with groups like Sierra Club) who would camp for one week at the sites to oversee and report any problems to the park service.

**Correspondence:** I have lived among the Current and Jacks Fork rivers for 38 years. All I knew before getting married was to swim at Alley Springs. After I married my in-laws always camped biggest part of the summer on these rivers. We swam, fished and motored up and down with family and friends. Many places along these rivers I have fond memories of. It was always looked forward to summer and vacation time with relatives and friends. Stories of old and making more memories. Latest of all these was under the sinkin bridge on 19 highway. The family took up the whole place under there with campers and tents. My children learned to swim and fish there. More than One birthday was celebrated on the banks of Sinkin Creek. Soon we had to start paying to camp there and then my in-laws passed away and they closed off where we couldn't get in anymore. It is sad that we could not pass this tradition on to our grandchildren. Now it is hard to even find a spot that is not trashed by tourists, you cannot take your kids to the river without the rude and foul language of indecent people. My children also learned of family time when learning to gig. Could not wait for gigging season. With all the limitations and restrictions going on I'm afraid these precious teaching and family traditions are slowly being taken away from us.

I am all for preserving the environment, but who will be there to enjoy any of it if it cannot be enjoyed and shared by those of us alive to pass down. It is very sad that we have to suffer for those that ruin or want control. It is sad that there is no respect for anything anymore.

**Correspondence:** Planning for preservation is vital to our natural world, -our only home in all the universe. Man is by nature self centered. The pursuit of personal pleasure or profit is blind to the desperate need for conservation. Therefore when tearing up the terrain on ATV's, or shorelines on speedboats or jet ski's, or clearcutting forested areas for timber profits, or fouling the waters or trashing the land with affluent and waste, or lobbying on behalf of this, is an extension of the self centered activities, whether landowner or recreational visitor or political ally, the inclination is blind to efforts or reason to speak in terms of preservation or conservation or national trust, or future generations. The need therefore is paramount to provide and establish guidelines and discipline in the use and treatment of our national and local natural resources. Truth be told there is no benefit, to anyone, for "ownership" to equate to a "right" or "entitlement" to spoil and destroy by persistent self centered pursuits that ruinously impact on the soil, waters and air of this planet. I support with little reservation the necessity of planned management of our Ozark National Scenic Riverways as the requirements of a national public trust on behalf of us all.

Most Sincerely  
Ronald L.Pohle

**Correspondence:** Overall i am a supporter two philosophies, let the locals make decisions and keep our lives free from as many regulations and rules as possible.

I think the park service should incorporate the locals input. The Feds provide great resources to put a project like this together BUT. Let the local people have a lot of input. They live there.

Alternatives - there are so many details etc. 40 horse/jet. DriVing to this gravel bar or that one. Let the locals decide.

Alcohol - just have water patrol enforce common courtesy and the laws already in existence. You can't go anywhere else in your birthday suit or not be expected to get asked to leave or locked up for inappropriate behavior elsewhere, just keep up the patrols and peer pressure so that people don't treat the river like spring break.

I've floated as a kid, as a drunken college student, and as a parent. Enjoyed all the trips.

If you are asking for a choice of plan, I'd pick C as a base and make changes as the locals see fit.

**Correspondence:** Thanks for considering mountain biking and other trail uses within the General Management Plan. I urge you to give increased consideration for mountain biking in this and future plans. I oppose the no-action option which will continue the prohibition on mountain biking on all trails with the Scenic Riverways, and urge you to allow mountain biking on trails within the Ozark National Scenic Riverways in this and future plans, wherever possible and appropriate.

Well-designed mountain bike trails are sustainable and do not have adverse environmental impacts when properly constructed in the right locations. In fact, their environmental impact is often far lower than other trail options such as equestrian.

I feel the current situation, with mountain biking disallowed on all existing trails and bicycling on area roads discouraged, does not allow visitors the full range of recreation options that are normally available at similar state and national parks across the nation. Allowing substantial mountain bike access in areas where it is appropriate would be a very important improvement in this area.

Missouri has a large and active mountain biking population that will very much use and appreciate these trails and access to this beautiful area, if it is provided.

I encourage you to involve bicycling and mountain biking groups when making decisions about trail access in the Scenic Riverways area.

**Correspondence:** After reviewing your proposals, I suggest that you implement Option 2 to help with the overuse of the Ozark Riverways National Park. Without more controls, our pristine rivers will become more polluted, overfished, and over-used to where they could lose their value. I utilize this Park annually, but have cut back due to overcrowding and general rowdiness of many of the floaters. Your assistance is appreciated.

Mike Tevlin

**Correspondence:** Your recommended Alternative B would be a positive step forward for our Scenic Rivers, a welcome change from the status quo. I would actually recommend Alternative A, since it provides better protections for sustainable future use of the rivers. This option would close illegal roads restoring 50 miles to nature, close 65 miles of undesignated horse trails with no new stream crossings and bar all recreational vehicle access to gravel bars.

This park was originally created for people to enjoy the unique natural springs, caves and entire river ecosystem, not to create a sort of amusement park around the rivers. Moving away from the original purpose over the years has been detrimental to life on the river. There is much more noise, scenic disturbance and uncontrolled development. The park wasn't meant to provide for ATV's and trucks that tear up gravel bars and ground along the rivers. Nor was it meant for noisy motorboats to zip by swimmers disturbing the peace and endangering their safety. It wasn't meant for thousands of horses to criss-cross the rivers leaving feces that also threatens swimmers with E. Coli contamination. All this with the proliferation of illegal access roads, ten times what there was supposed to be, has caused erosion, which smothers the insects in the river bed which feed the animals on up the food chain. It also causes invasion of alien species which can eventually ruin the unique web of life.

It is time for real change and real management of these amazing rivers and their surroundings. I urge you to choose alternative A.

**Correspondence:** Hello,  
Thanks for giving us the opportunity to comment.

The rivers affected by these plans are a precious natural resource. They should be protected to a very large degree, but reasonable, none destructive use should be allowed.

Our family has been on many float and camping trips on these rivers over the past forty years. During this time, much has happened to degrade these rivers and the overall experience, such as the uncivilized behavior and the litter cast off by the large floating party groups that now clog these rivers and the ATV river crossings creating noise and destroying habitat. I would hope the plan, that is selected, would help improve these conditions, while minimizing the financial hardship to the locals who make a living off these rivers.

The local residents and businesses affected by these plans, must come to realize that we must have limits; else, these natural resources will go the way of the wholesale destruction of the Ozark forests in the 1800s. We can not kill the Goose that lays the golden eggs!

Alternative B seems like a fairly good balance.

**Correspondence:** A comment in support of allowing mountain biking on some Ozark National Scenic Riverways trails, from a long time user of the facilities provided by NPS in the area:

Limited, well-designed mountain bike trails can be sustainable and have no adverse environmental impact when properly sited and constructed. A properly maintained MTB accessible trail has lower impact than some other trail uses, including those frequented by equestrian users, ATVs and other motorized vehicles.

Missouri has several volunteer driven cycling groups that can assist the NPS in the conversion of existing trails to sustainable MTB accessible trails, as well as the siting and construction of MTB specific trails.

**Correspondence:** First of all, I do not live in Kansas, but I could not get your state list to move to Missouri. I have read the A, B and C draft documents of plans for the Ozark National Scenic Riverways and I favor plan A because it is the most restrictive on motorized transportation. To begin with, ATVs have no place on or close to these rivers. That's just like letting sno mobiles into Yellowstone. Both these means of transport are noisy and destroy the peace of countryside. Likewise, noisy boats should also be removed from the rivers. Those who are physically unable to canoe or kayak can fish or get up and down the rivers with a small, trolling motor. I have a horse (but no trailer so I have never been on the trail rides out of Eminence). I sympathize with the horse people but also know that horses can really tear up trail (and the river bottom) especially in large numbers. So I think they should be kept out of the river as much as possible. I like your idea of controlling access points for the canoe traffic so that big clots of canoes won't develop. I wish liquor could be banned to reduce public drunkenness. It's a sad fact that many people go on the rivers not to enjoy nature and peace and quiet but to get drunk as skunks. Certainly destroys the peace and quiet for others. I think you should have had more meetings in the St. Louis area and in Kansas City - even in IL, Ia, KS and AR. I read in the paper that the locals are crying about having "outside" people set the agenda for "their" rivers. This is the same crap we heard when the KATY Trail was being developed. If left solely to the people down there you'd find a hell of a lot of cows standing around in the river. That's what I saw when I canoed there before it was a National Park.

**Correspondence:** Hats off to the National Park Service for trying to rein in the monster that has been created by decades of benign neglect along the Ozark National Scenic Riverways. As a resident of St. Louis, I have many happy memories as a child, some 30 years ago, in going on float trips and exploring this beautiful part of our natural heritage. However, I have been dismayed when trying to take my own children to visit this area. Today, it is crowded, over-run by motorboats, ATVs, and all manner of vehicles polluting what was once a pristine natural environment. We were nearly run over by an inexperienced horse rider- -and there now appear to be hundreds of them. In addition to the gasoline guzzlers and horse disasters, the crowds of drunk hooligans tied together in canoe trails some 20 boats long or longer are a terror. We could not enjoy our trip and have not returned since. Does this make me one of the "people living in St. Louis, imposing my views on someone who has to live down river" as quoted in the St. Louis Post-Dispatch? I hardly think so. I live near the Gateway Arch- -another national federal property- -does that mean my opinion on its use should trump all others? No! These amazing properties are part of our NATIONAL patrimony. They belong to all Americans. I strongly support option A of the plans on offer, and I hope the National Park Service will do the right thing to not only protect, but also restore, the Ozard National Scenic Riverways. Thank you.

**Correspondence:** I am in support of Plan A and B. I believe it is extremely important that we limit, or even prevent motorized boats on the rivers. I also am for limiting camping to the campgrounds and not just anywhere on

government land. I also want ATVs to stop destroying lands and riverways. And I am very much for limiting horses and trailriders in the riverways. People in this area do not swim downstream during and after the trail rides here.

Motorized boats are not a part of our history nor heritage. They are a danger to swimmers, kayaks, and canoers. They disrupt the fish and wildlife. People can gig without a motorized boat. They didn't have them 100 years ago.

ATVs on park land and rivers upset me. It is not a tourist thing, it is a local thing. They tear up the land, disrupt wildlife, and their noise are a noisy distraction to hikers and others on the rivers. People on them are usually too fat and lazy to hike. And they drive them illegally on the highways.

Limiting camping to campgrounds make perfect sense to me. Meth is prevalent in this area and I firmly believe it will be used in non camping areas. Also liquor by minors will be used, trash will be left behind and there is a threat of fires. There are plenty of remote camping areas where people aren't packed in together. It will take more tax dollars and manpower to look after those areas.

None of the park service plans will hurt tourism. We rent lodging to tourists and they love the waters, the canoeing, kayaking and the quiet and beauty of the Ozarks. They don't bring ATVs or boats with them.

I am a 6th generation Ozarkian. The park service has provided more access to parts of the river, provided better roads, bathrooms, and they keep the waters pristine. I appreciate all that has been done since they took over. Some of the people think any plan will hurt tourism in our town which is wrong. Greed, high prices of property, and lack of imagination has hurt tourism in Eminence. The park service has helped the economy.

Many of the locals believe these lands belong to them but they belong to ALL Americans. Visitors come here for the rivers, the trails, the scenery. They don't come for cheap goods made in China, or to ride ATVs or motorized boats. They come for the serenity.

Please do not give into the loud locals. Remember that the lands belong to the tourists that come here just as much as it does to the locals. There was a time that human waste from town flowed into the Jacks Fork. This was a part of the 'heritage' here. I love all of our public lands. I appreciate not having ATVs in them. Please know that there is support for a better plan. Thank you for all you do.

And Rep. Jason Smith is a self serving, lying politician. Don't listen to him.

Sincerely,

Rhonda Hunt

<b>Correspondence:</b>	I would like to comment on the Scenic Riverways Draft General Management Plan. I have worked my entire life, including three years in the U. S. Marine Corps. I've paid my dues and I am just looking forward to a simple retirement. All I want to do is put my canoe into the river, float a few miles, catch a few fish for				

supper and go back home. I don't need the National Park Service coming here and telling me when and where I can float and fish our rivers.

After reading the proposed Draft General Management Plan for the National Scenic Riverways, Current and Jacks Fork Rivers, they are planning on closing 20 access points along the river. In fact, they have already closed several access points before the Plan has been approved. Shutting down access to these rivers will have devastating effects on our local economy as well as the local folks that have come here to retire. For decades, the people of Missouri have successfully maintained and preserved the health of the rivers and surrounding areas better than the National Park Service has. Local folks are more than capable of ensuring the health of the rivers, while permitting the public to use and enjoy the land they payed to preserve. I strongly recommend that our state and federal representatives support the No-Action Alternative to prevent unnecessary restrictions on our public lands and waterways.

**Correspondence:** We need to protect the Ozark National Scenic Riverways for future generations. Multiple uses of the area are possible without impacting the qualities of these watersheds. ATV and other potentially damaging usage needs to be away from the rivers and streams. Canoeing, hiking, birding, and other less damaging usage can be closer to the rivers and streams. We need to think about erosion, water quality, sedimentation and runoff and how those processes impact plant and animal communities, especially aquatic communities. Natural communities once degraded rarely can be restored to the same level of complexity or diversity. Please protect the Ozark National Scenic Riverways and associated areas.

**Correspondence:** I filled out a questionnaire about 3 years ago. I am thinking no one paid any attention to it then. I own a 25 HP boat and motor and do use this end of the river, from Akers Ferry and above. You have already taken it away for us in the Summer, now you are trying to take it away altogether. There are several people in the Summersville, Hartshorn, Raymondville, Timber, and Salem area that own 25 HP boat and motors that like to gig and trout fish from their boats on this end of the river.

I have heard it said that "Everyone can still do what they did before, they will just have to driver further to do it."

Well, that is not true. The Missouri Department of Conservation does not stock the river with trout below Akers Ferry. My children grew up on this end of the river, trout fishing and gigging. I would love to see my grandchildren have this same opportunity.

There is enough room on the river for everyone to use. Stop catering to the tourist that come here and rent canoes and trash up the river with their beer cans, trash and filthy language. Keep this end of the river opened for the locals to use.

**Correspondence:** We have been floaters on the Current and Jacks Fork for over 60 years. Experiencing these rivers has been high on our list of what we love about living in Missouri. Over the years the quality of this experience has diminished in direct proportion to the degradation of this magnificent resource. The number of users has exploded as have the intrusions of motorized vehicles on gravel bars and loud jet boats on what used to be quiet stretches of the rivers. In heavily used areas the banks have eroded. and concentrations of horses have caused contamination. We only float during the week now to avoid the crowds but this luxury is only possible if one is retired.

On Wednesday night we drove to the open house at Powder Valley but were told by a ranger that the building was at capacity and that we would not be able to go inside. Furthermore there was no parking in the nature center lot because a group from the Ozarks parked trucks with boat trailers to make it more difficult to park. We were sorry to miss the open house and meeting that followed. It was the only meeting in a city outside of the ozark region which seemed to give into those who have never accepted that the river is a National Park and belongs to all of us.

The Park Service should be congratulated on the draft plan. Alternative B addresses most of the problems. One area of continued concern is the violation of scenic easements. As difficult as it must be to police this long narrow corridor, these easements violations must be corrected promptly. It would be great to have even more that 15 miles of hiking trails. Finally, Horse campsites should be located outside the park area where they would have less impact. We support Alternative B which seems to be an acceptable middle ground.

**Correspondence:** I'm for the no action alternative and here is why

1. If the rules that are there were enforced better the issues might disappear.
2. I truly don't understand how taking my boat off the river is going to improve anything. Erosion is going to happen if my 40 horse motor is there or not its called flooding.
3. If horse crap is such a problem then are you going to shoot the wild horses and get rid of the elk cause I'm sure they use it as a bathroom too.
4. Why does it seem that locals are being targeted? Why should the canoes and tubes have more rights than the people who are here year round.
5. My family and I frequent the cardareva section of the river and we have little to no horses in this area. There are no low water traffic crossings. We have very few canoes or tubes on this section. So why should we lose out on the use of the park. The rangers already enforce the no utvs or atvs on the gravel bars (which I think is stupid) but rules are there for a reason.
6. There are three weekends a yesr when or section of the river is busy but other wise its pretty calm.
7. Why can't you show us any real proof that there are true problems. Trust me are not going to just take your word for it.
8. If our congressmen and state leaders are not willing to side with you how can you do anything.

**Correspondence:** This country is in pretty sad shape, we have a white house full of greedy politicians that are selling this country out . Now we have a park service that is trying to keep us from useing our parks, or at least some of us. I read an article not long ago that said missouri had 87 state parks and historic sites . The article was telling missourians to go out visit and enjoy our senic and wonderful state parks. They were talking about all missourians, not a select few. Our parks and riverways are for everyone's use, not a select few. How can you start limiting access to some of us, because we ride a horse or drive an off road vehicle, or want to ride the river in a boat! You people need to remind theese Clubs and Environmental groups that all this land is ours to enjoy the same as it is there's. I understand that you have to have certain rules and regulations but to start cutting out use of these areas. (to some and not others), is not fair. If you start here in the ozarks then where next. Asking that you remember all the people and not just some of the people when you make decisions concerning OUR parks. Thank You for your time and would ask that you don't let out my information. Re: Ozark National Scenic Riverways General Management Plan

Dear Superintendent,

I'm moved to send commentary on the proposed alternatives for the Ozarks Scenic Riverways by an article that appeared on today's (January 26) front page of the Sunday St. Louis Post-Dispatch. The article begins with a farmer at an NPS meeting in Salem expressing his dismay about possible new restrictions on motorboats and limitations on horseback riding and the closing of unauthorized roads that his family and friends had used for years to reach the rivers' gravel banks. The gentleman told the reporter that "The regulations they got now are more than enough. I think they need to leave us alone."

Unfortunately, the existing regulations are not nearly enough, as the ongoing degradation of our rivers dramatically illustrates. If the gentleman featured in the Post-Dispatch article had his way, the future of our rivers would be bleak indeed. The No-action Alternative is not acceptable.

The recreational activities listed in the newspaper that the disgruntled farmer and his family and friends are enjoying come at the expense of the health of these once pristine waterways. Motorboats produce emissions and exhaust and noise, not to mention immediate physical effects from propellers and turbulence. Water clarity and water quality are affected and the growth of algae and shoreline erosion encouraged and aquatic plant and animal life damaged.

Horseback riding accelerates bank erosion rates and damages plant life and horse manure not only deposits bacteria in and along the waterway but also introduces seeds not native to the riverway. Breeding species of native and migrating wildlife are susceptible to disturbance by both motorboat and horses. Unauthorized roads invite use by all-terrain vehicles which are destructive of the habitat they travel over and which introduce many of the same kinds of pollution as motorboats do. Because of the destruction caused by these activities and the promise of yet "higher levels of social interaction with other visitors," I also find Alternative C to be unacceptable.

Of the two remaining plans, it is my hope that the NPS adopts Alternative A.

I have had the extreme joy of floating some of our state's rivers over a period of three decades. The Current has been a favorite for floating and gravel bar camping. Traveling by canoe, seeing the world pass in slow motion, hearing birds calls, and watching a great blue heron rising up over the water - this may be the best that Missouri has to offer. I've also felt dismay at seeing Missouri rivers misused - used with callow disregard for the effects on nature that human behavior can cause. So I learned that spring and fall floats were best and weekday floats ideal. No enhancements or facilities were needed to make those experiences unforgettable.

I am a firm proponent of access to our rivers - others should enjoy what I have had the good fortune to experience. I don't believe the Ozark National Scenic Riverways or present and future generations of folks who want to enjoy our rivers will be served well by increased commercialization. I doubt that even the introduction of facilities could enhance rather than detract from the natural experience. I favor Plan A.

Thank you for your consideration.

Margaret Hermes

**Correspondence:** My comments apply specifically to Alternate B which is the NPS preferred alternative.

Current River access: I would like to see commercial floater access to the river at Baptist Camp and Tan Vat eliminated and commercial floating above Cedar Grove eliminated as well. The river from Tan Vat to Cedar Grove offers wonderful fishing, birdwatching and primitive camping opportunities which are spoiled by groups of commercial floaters passing through. For example, floaters can spoil fishing for an hour or more after their passage and the noise they make ruins the experience for those seeking the solitude of time on the river.

Horse Trails: I would like to see the number of crossing reduced. From my own experience, those trails become deeply rutted and add sediment to the stream after heavy rains. Alternatively, if the existing trails could be graded to eliminate runoff and manure managed that would be acceptable, but I would not like to see more crossings added.

Limited Gravel Bar Camping: This was a bit unclear. If the intent was to limit camping from vehicles on gravel bars such as occurs at Parker Hollow then I am in favor of that condition. If the intent was to limit the number of gravel bars upon which a floater could camp then I am not in favor.

**Correspondence:** The ONSR is a national park and should be protected as such. The reason for national parks, in my opinion, is to prevent "local" interests from development that would in any shape or form endanger the park's resources.

Our group has floated these rivers for over forty years and are grateful for the opportunity to enjoy such a natural area close to home. We do however lament the fact that we have witnessed the rivers being abused by motorized vehicles, unfettered access that results in litter and damage, and the illegal fishing by the local population. I have visited many national parks and the access allowed, especially to the Jacks Fork, would not be tolerated elsewhere.

If you look south to the Buffalo National River you see limited access points, strict management of trails, and well managed campgrounds that have river access.

My simple comment would be to limit access to the rivers by authorized roads only so that the areas can be maintained and managed properly. The alternative is what we see on all of our trips to the river: ATV's on gravel bars and navigating the rivers. Large piles of trash, which we always remove, left by individuals who drive to the river. The uncomfortable situation of having individuals overlooking our campsites that have driven to the area, and in some cases have thrown rocks from bluffs towards our camp. This has happened on numerous occasions at Chalk Bluff and is extremely dangerous.

Thank you and please feel free to contact me.  
Edward Furey

**Correspondence:** I prefer the No Action Alternative Plan with the the following modifications:

1. Enforce the littering laws we currently have. As a member of Back Country Horsemen, I have worked picking up trash along the Current River. There is NO trash on trails leading to the upper Current River. You don't have much room on your saddle to carry objects in, leading me to believe it's the river traffic that is causing the littering problem. Existing littering laws NEED to be enforced!

2. Create more Designated Horse Trails. Closing trails (either designated or not) will only funnel more traffic onto the existing trails. If the deterioration of trails is the issue - we need more trails not less.

**Correspondence:** I strongly support Plan A as the best alternative to protect and preserve the beauty of the Ozark National Scenic Riverways. I have been floating the Current and Jack's Fork Rivers for more than 30 years - along with many other rivers and streams throughout Missouri. In that time I have become distressed about the degradation of the Current and Jack's Fork from overuse, litter, pollution from horses and cattle and motorboats. We typically try to avoid busy weekends when scheduling float trips in order to avoid hordes of drunk teenagers and obnoxious locals who fly down the rivers with outboard motors and loud boomboxes that destroy the peace and quiet we seek. In fact, we tend to restrict our floats to the Jack's Fork because the Current has become so overcrowded. We rarely encounter motorboats on the Jack's Fork due to lower water levels; those we do encounter on the Jack's Fork tend to be older, serious canoeists who eschew boomboxes and giant coolers full of enough beer for an entire football team. We also find little trash along the Jack's Fork and happily pick up any trash we find. I fear that loosening restrictions on these two waterways will lead to further degradation of both, similar to what is occurring on rivers like the Meramec and the Huzzah. There are entire sections of the Meramec where we refuse to get out of our canoes to swim due to the proximity of large cattle farms that border the river, while the Huzzah and others have basically become locations for weekend frat parties. Motorboats have no place on the Current and Jack's Fork; trolling motors for fishermen are fine, but large outboards churn up the bottoms of the rivers, create noise pollution and can be hazardous to canoeists (we've nearly capsized several times because boat operators fail to slow down as they approach us). Limiting the amount of alcohol each person can pack for a float also would help reduce some of the obnoxious behavior we have witnessed over the years - litter, fights, nudity, yelling and cussing and everything else associated with inebriated youth. I once witnessed a large group of underage drinkers toss all of their beer cans into the Courtois when agents appeared on the shore; I crossed the swollen river to pick up more than two dozen cans that afternoon. We will never go back to that river. Please, for the sake of future generations, do everything in your power to protect and preserve the Current and Jack's Fork. I only wish the same restrictions could be applied to all rivers and streams in Missouri.

**Correspondence:** Dear NPS

I am strongly in favor of Plan A. I understand the local's objections to interference with their commerce that is largely dependent on the tourism that the rivers draw. I have been a regular floater on these and other rivers in MO for 50 yrs and am appalled at the increasingly obvious abuse that our scenic rivers have endured. The numbers of people, boats, trash and degradation of the gravel bars that are prevalent on the Current, Jacks Fork, Black and Meramec Rivers is untenable.

To those whose livelihood is attached to these rivers, I say: who will be able to enjoy these natural resources in the next 50 yrs if we do not take care of them? We are so blessed to have such gems available to us and need to practice better stewardship so as to preserve the waters and the adjacent environment.

Please do the right thing and be a part of the solution and not complicit in the ruin of our rivers.

Respectfully submitted,

Kathy Greminger

**Correspondence Type:** Web Form

**Correspondence:** I am a regular visited to the ONSR and enjoy the beauty of the area very much. I feel the National Park Service is the best organization to manage the rivers and lands and they have done a decent job managing the park over the last several decades. I do agree with the people and groups who feel that change is needed in order to best preserve the natural beauty of the area for the future generations to come.

Currently, I visit the park in the spring and fall months as to avoid the huge groups of floaters that enjoy partying and socializing and that type of environment. I am the type of park user that enjoys camping, hiking, nature watching, canoeing and just enjoying the park in a more peaceful setting.

I happen to side with the NPS recommendations (plan B) and feel this will bring the best balance of sustainability and user enjoyment for the park and its visitors. I have read through a big portion of the management plans, however, I have not seen anything regarding light pollution (please forgive me if it is there and I have missed it).

I would like to make a recommendation that some kind of light pollution plan be included, with the future management plan, to ensure that the night skies can remain as pristine as the landscapes of the area. ONSR and the surrounding areas are one of the few locations in Missouri, and in the eastern portion of the United States for that matter, that still have decent night skies with very low light pollution levels. In my opinion, preserving the night sky adds to the overall natural experience of the wildness and light pollution is something that is causing the night skies to rapidly disappear from the United States. I fear that my young son may not get the opportunity to teach his son about the night sky when he eventually becomes a father himself, years from now. I would like to recommend that ONSR limit the use of lighting whenever possible. When lighting is needed perhaps the NPS can use directional light fixtures to help reduce wasted light traveling upwards into the sky. Conceivably ONSR could work with the surrounding communities and together they could develop a plan for the entire region. I am aware that the NPS is familiar with light pollution and they have enacted policies in some of their other parks (e.g. Arches National Park). Maybe a similar plan can be adopted for ONSR.

Thank you for taking the time to read my comment.

Sincerely,  
Chris Grunwald

**Correspondence:** In regards to the GMP of the ONSR, I want to express my concern with the proposed changes. I strongly support the NO ACTION alternative. We have been told that the no action is not an alternative, why is it listed on the plan? It should be taken into consideration because even if it is the least restrictive, it is still restrictive. My husband and I own a business, therefore, we don't take vacations. Relaxing at the river is our vacation. He was born on the land that is now ONSR, on his family's property. His grampa owned farmland that the park service wanted, so they paid him a fraction of what it was worth and took it. Grampa was a river guide, taking folks from other areas on the river for fishing and relaxation, his son, grandson and great grandson did the same. So the river is in their blood. Now the property is in the ONSR, we have paid taxes to help maintain it, we have also picked up trash and worked to keep the river beautiful after the thousands of tourists visit our river. In our family we have disabled veterans, we also have handicapped, wheelchair bound members that could not enjoy the parks beauty without a motorboat or UTV. Should they be penalized because they cannot walk or hike? Our family uses the ONSR to relax and have recreation year around, but with all the restrictions in the different alternatives, we are being punished by not allowing us to use the property that we pay taxes on. There should not be bans on motorized watercraft. We have all replaced our bigger motors with smaller already. Now the plan is wanting to go to smaller motors again. A family of 4 isn't going to the river to race, it is just about getting over the shoals safely when a much smaller motor would not be able to achieve.

I am a U.S. citizen and enjoy the freedoms that come along with that privilege and those privileges come with a price. I am a tax payer that helps fund these programs that you are proposing to implement. We should still have the right to use and enjoy the land that once belonged to our family.

I hope this is read with an open mind and common sense wins as this decision is being made. Thank you.

**Correspondence:** I'm for plan B or even plan A. The long-term environment and also economic viability as a tourist attraction, as well as the enjoyment of current and future residents will be optimized by managing the area in a sustainable manner. This sometimes means making tough decisions that people can't keep doing exactly what they are used to, if it damages the area the NPS is supposed to be protecting. The area needs to be user-friendly, but it also needs to be protected for the next generations to enjoy it also.

**Correspondence:** I just found out that you had added the a meeting in Eminence. This Park belongs to the nation not just the local people and you should also add meetings outside of the area to the list!! What about Springfield, Columbia, Kansas City! I know people that come from that area to spend there money and enjoy this Park! Delay the meeting deadline and hold meetings in those city's and make sure that there is some way to make sure that parking is available for boats and people or a way to control parking. That way they can't stop people from attending. A lot of the locals are afraid to comment because they don't want anyone to know they support the park. When I see that the Shannon Co. Sheriff's official truck is used to tow a boat up to St. Louis I can now understand their fear!

**Correspondence:** I would like to thank the National Park Service for doing such a good job with the Draft GMP for the ONSR. Your recommended Alternative B would be a positive step forward from the status quo. With my experience having relatives in the area and having visited these rivers for 50 years, I would have to recommend Alternative A, since it provides better protections for sustainable future use of the rivers. This option would close illegal roads restoring 50 miles to nature, close 65 miles of undesignated horse trails with no new stream crossings and bar all recreational vehicle access to gravel bars.

Thanks for your attention to this matter,

Stephen

**Correspondence:** I have significant experiences visiting National Parks in Colorado, Utah, Arizona, Florida, Arkansas and of course, Missouri's Scenic Riverways.

I visit ONSR 5-6 times a year and have done so for the past 40 years. Currently, on average, each visit generates \$300 for lodging, \$150 for restaurants and grocery stores, and a \$45 fill-up at a local filling station for an average total expenditure of \$490 or, approximately, \$2500 per year.

Most of my Riverways visits include floating the Current River from Tan Vat to Round Spring and/or the Jacks Fork River from 17 Bridge to Eminence. In the summer, I fish and snorkel the rivers, as well as birding and hiking.

I support the adoption of the GMP alternative B, in its entirety, and strongly recommend the addition of language that would serve to prevent any unauthorized road or trail creation to serve as precedent for any legislative or enforcement barriers that allow users to define access points by continued unauthorized use.

Additionally, I urge the adoption of a framework to broaden the restoration and protection of areas adjacent to the riverbanks to allow for ongoing habitat requirements as river channel changes occur. I think that the Big Spring Wilderness designation should not be implemented at this time, but that the land should be maintained as primitive until the trends from Climatic Change are better understood and successful protection protocols identified.

Having attended the public meeting at Powder Valley, and read about the other meetings at which the dialogue was dominated by many of the anti-NPS, anti-Federal government people from the counties where the park is situated, I feel it is important to remind the decision makers of the following:

1. The Missouri state legislature has shown little or no interest in any proposal that require revenues to be generated, even those which are clearly intended to create employment, fund education, or improve public health, even when the funds were offered by the federal government. At the time ONSR was created, the state parks that were transferred to it were done so willingly.
2. There is plenty of data to support the urgency of implementing restrictions referred to in the GMP. All visitors will need to alter their behavior if the resource is to remain as a viable national park. Allowing the river and it's land area to further degrade is an irreversible course of action.
3. One point nearly everyone agrees with is that there must be enforcement of the rules promulgated under the GMP. Clearly, had there been sufficient funding for staff to patrol and close and restore unauthorized trails and roads, the claims of 'tradition' and 'heritage' used as precedent to keep access wide open, could not have emerged as issues for debate. Squatters rights do not exist in National Parks. Whichever alternative is adopted, there must be adequate funding.
4. While the people who live near the park are exceptionally fortunate to have the opportunity to frequently recreate and to have their businesses profit from the ONSR, they do not, as such, derive any priority user status over and above any other U.S. citizen. The park belongs to all U.S. citizens.

Respectfully submitted,  
Doug Brown

**Correspondence:** I support allowing mountain biking on trails within the Ozark National Scenic Riverways, where it is appropriate in consideration of other uses and where the trails are properly constructed. I appreciate the attention given to and consideration for mountain biking and other trail uses within the General Management Plan.

I am an avid mountain and gravel road biker and would love to have more options available to me for biking other than having to compete with motorized vehicles for the right of way. I enjoy the few trails that are open to us now but, have to travel some distance to get to them and would hope that if more trails open up some might be closer to my location.

**Correspondence:** To whom it may concern.

For as long as I can remember I have always loved our Missouri waterways. The Current River being one of my and my wife's favorite places to take a float. However, during the past few year we have noticed the degradation of the surrounding area around and on the Current. Trash, rutting from 4x4's, horse droppings, ext. The Current River is

not just something for people who live in the area nether is it for people only in Missouri it is for everyone to see. Although, I am afraid that if the NPS does not do anything to address the serious environmental impacts that the Current is facing now it might be to late for this beautiful watershed. I recommend and am in full agreement with the NPS to approve alternative B. I believe this plan to be in the best interest for EVERYONE. The people who live in the watershed believe that they have clam to the water but this is wrong EVERYONE has clam and alternative B will allow for EVERYONE to enjoy this natural wonder for many years to come. Just as I have been able to enjoy it.

Thanks, Jacob Siech

**Correspondence Type:** Web Form  
**Correspondence:** I hve been canoeing Missouris rivers and streams since the 1960's. I have seen the degradation of the stream and surrounding enviroment, largely trails. The trails have been degraded due to horse traffic. Horse traffic has made some trails almost impassable for normal foot traffic due heavy useage. The use of 4 wheelers on sand bars on the river has degraded the sand bars and the noise pollution resulting from the sound of engines spoils the enjoyment that comes from being in the outdoors.

I don't that maintaining the status quo is acceptable and that option A should be implemented as the new plan for the river.

**Correspondence Type:** Web Form  
**Correspondence:** Dear NPS,

Well, first off, thank you for taking the time to organize such a lengthy and difficult process. I am sorry that it is so contentious and raises so many hackles, but c'est la vie. This comment is to express my complete support of ALTERNATIVE "A".

Alternative A is exactly what visitors to the ONSR have in mind when they book their trips to the Ozarks: quiet, peace, solitude, relaxation, and a family friendly atmosphere far removed from the ordinary buzz and noise of modern life. However, instead of peace and quiet, visitors to the ONSR are greeted with the roar of ATV's, jet boats, boom boxes, and jacked up trucks parked on gravel bars. I especially like the redistribution of concessions to reduce crowding on the river.

Alternatives B and C fail to adequately protect the very special qualities that make the ONSR a unique and memorable place.

Please understand that the vast majority of Missourians and Out of State visitors fully support Alternative A and are seeking the recreational experience that the founders of the ONSR intended. Every other river way in the state and nation at large do not have the excellent protection of the NPS and they suffer for it. Why would we want to diminish the national park experience on these rivers of international significance? If visitors long so much to use their high horsepower boats and to drive all over the river and floodplain in their ATVs they can very easily go to the Meramec, Big Piney, North Fork, and a dozen other unprotected places. The Current and the Jack's Fork were supposed to be reserved for other, higher uses and enjoyment.

Please do not forget that we are talking about properties of international importance, on par with the Grand Canyon, Yosemite, Crater Lake, etc.

Thank you for your time and consideration and please enact Alternative A.

Best Regards,

J

**Correspondence:** Dear NPS,

As an avid outdoor enthusiast in the Midwest, it is with much concern that I noted that the NPS is planing to virtually ban all recreation on cliff faces and bluffs along the Ozark National Scenic Riverways. In particular, technical climbing is singled out and prohibited in sweeping, loose language that would effectively eliminate most climbing opportunities in the area. In addition, fixed anchors such as bolts are prohibited, further decreasing the opportunities available to Missouri outdoor recreationists.

While Missouri does not enjoy a noted reputation for climbing, as do other more mountainous states such as Colorado, Utah, California and others, it does have a thriving climbing community that cherishes, respects and cares for what climbable rock we do have. Additionally, the sport of climbing is growing in popularity even in the Midwest, as evidenced by the success and growth of climbing gyms in Kansas City and St Louis. The concerns mentioned in the proposal, such as rock damage and rockfall are by no means unmanageable, nor are they more grave concerns than the risks inherent to other popular outdoor pursuits, such as hunting, horse riding, mountain biking, boating, etc, and I believe public lands should be managed in a such a manner as to afford residents equal opportunity to recreate in public lands. By way of example, there are many parks and public lands in the United States where many different outdoor pursuits including climbing coexist, such as the Garden of the Gods in Colorado Springs, CO, where technical climbing takes place in very close proximity to extremely popular running and walking trails. Finally, the proposed ban on fixed anchors may very well conflict with recent legislation enacted by the NPS concerning fixed anchors in wilderness areas.

In light of these concerns and examples, I urge you to reconsider the proposal to effectively ban climbing in the Ozark National Scenic Riverways and to consider working with climbing advocacy groups such as the Access Fund and local climbers to work out a management plan that includes the growing sport of climbing in Missouri's public lands.

Respectfully,

T. Noble

**Correspondence ID:** 1233 **Project:** 15793 **Document:** 56208  
**Received:** Jan,27,2014 16:55:50  
**Correspondence Type:** Web Form  
**Correspondence:** Please preserve the Ozark National Scenic Riverways in as pristine a way possible while still allowing people to access it. Why allow some use? If people can't access it, they will not care about it. Why keep it as pristine as possible? Because if it is allowed to deteriorate due to overuse (too many people visiting at one time )or misuse (motorboats, ATVs, other motorized use)no one is going to want to visit it anymore.

We can't possibly know what all the potential consequences of various human activities might be, but history suggests we often unwittingly damage a plant, animal, or habitat that later turns out to be important - not only to the plants and animals, but to us humans, as well.

No - to increased canoe/kayak/raft rentals per day by outfitters  
No - to ATVs, trucks, and other motorized vehicles that tear up the environment  
No - to the use of larger motorized boats on the rivers

Yes - to respectful use of the rivers (respectful to the environment and to other visitors)  
Yes - to informed management of animal populations through hunting, fishing, and trapping  
Yes - to assessment and management of plant life to eradicate invasive species when necessary, as well as forest management through dedicated thinning or controlled burns, if appropriate.

The Ozark National Riverways area is a treasure, and it is our responsibility to protect it so that future generations will also be able to enjoy its beauty. Thank you.

**Correspondence:** I would like to comment on the Ozark National Scenic Riverways Draft General Management Plan.

The National Park Service, to date, has made a big mess out of our rivers. On the upper Jacks Fork River, at the Highway 17 access point, Buck Hollow, the National Park Service was creating a world class fishing area for the Smallmouth Bass. This was great news. Now the National Park Service released 16 pairs of Otters into the river and they have destroyed all the fishing in the river. This is just another example that the National Park Service doesn't know what it is doing. Now the National Park Service has closed the river access at Buck Hollow and is wanting to close an additional 20 access points in there new Management Plan. They are destroying our rivers.

I strongly recommend that the National Park Service leave our rivers alone and that our state and federal representatives take the No-Action Alternative on the ONSR Draft General Management Plan to prevent unnecessary cost, restrictions and regulations to our public rivers and public lands.

**Correspondence:** I would like to state I support the Wilderness Act and support Alt.B

We must take steps to protect the park and river for generations to come. If we don't there will be nothing left for future generations. We must have designated trails and river crossings. I would like to see user limits on ALL user groups to control the amount of pressure put on the land and river at one time. I would be in favor of a user fee if all

the money would be put back into trail maintenance. The bottom line the park service has to in force the laws so the park will always be there to enjoy.

**Correspondence:** Thank you for this opportunity to comment. As a frequent visitor to the south-central area of Missouri and an avid trail user I am excited to learn that the Service is planning to update it's use plan. I have read each of the Alternatives and generally agree with the Preferred Alternative B. I would like to put particular emphasis on opening access to Mountain Biking. As a trail-builder of more than ten years experience I know that mountain biking is a very low impact activity. And when allowed on properly built trails in appropriate areas it is a very rewarding way to access and enjoy the backcountry. I enjoy hiking as well and appreciate that not all trails should be open to all types of users so I am not advocating for all access, everywhere. But I sincerely believe that mountain biking can be allowed on most trails and should be allowed wherever possible.

And I will back my words with action; I have invested hundreds of hours of volunteer labor to help create trails in Eastern and South-Central Missouri, I will gladly pour in more when the opportunity arrives!

Thanks again.

**Correspondence:** I favor plan B, which seems like a balanced plan.

My biggest concern is the amount of horse manure around the streams and on the gravel bars. The occurrence of this has become more prevalent in recent years. It degrades the natural beauty of the area and I suspect has a detrimental effect on the water quality.

In the past, as I recall, there have been efforts to blame the decrease in water quality on humans. However, based on the collected scientific data, horse manure was the major contributor, if not the only contributor, to this problem.

**Correspondence:** As part of a family who have been visiting the Current & Jacks Fork Rivers since the 1950's, I have witnessed the changes that have transformed a hidden, spectacularly pristine natural river way, into a well used recreational highway.

I understand the need for this jewel to be available to all Americans. I regularly avail myself to the foresight of others in Arches, Zion, Bryce, Yellowstone, Glacier, the Smokies, and so many of our other unique National Parks.

Given the Current's soft beauty, it would be a shame if the springs, bluffs, ripples, flowers, glens and all of the spectacular vistas that continue to change with the angles of sunlight and the seasons, could not be preserved to the same extent as our other legacy parks.

I suppose with success, crowding due to popularity is to be expected. This problem simply goes to show how beautiful and valuable these Ozark Rivers are.

I hope that the National Park Service could be given the authority and leeway to manage this treasure to the same degree it does the others. I know of no other organization in Missouri that would have a chance to do this to such a spectacular success.

**Correspondence Type:** Web Form

**Correspondence:** I have lived in Carter County, Missouri my entire life, which is 62 years. I'm an avid outdoorsman and enjoy fishing, hunting and boating within the Ozark National Scenic Riverways. All of my family (siblings, wife's family children, grandchildren) live in the immediate area as well.

**Comment on the Wilderness Area Designation:**

I am against the proposed designation of the Big Spring Wilderness Area. The designation will not change how that area is currently being managed with the exception that the FIRE division will no longer be able to complete control burns. If the area was ever opened to hunting, the law enforcement rangers would have no methods of patrolling the area for violations, other than foot. The USFS borders the back side of the proposed areas and illegal hunters will access the area by ATV and UTVs. Therefore, legal hunters will have to walk miles to hunt while others will illegally enter through the USFS. How much is it going to cost to manage this new Wilderness Area? Will the government have to hire someone into a new position to oversee it? If so, that's money that could be used to hire maintenance employees to help keep the developed areas maintained. The historic barn would be retained but the plan doesn't state that the barn would be preserved or maintained. Employees would not even be able to drive to the barn with supplies and materials in order to conduct repairs. If the park service didn't plan to preserve the historic barn then that would be a shame.

**Comment on Horsepower Proposed Restrictions:**

I am against the proposed changes to Alternative B regarding HP limits. My suggestions and comments are a combination from Alternative B and C.

Alternate B proposed "no motor" zones on the Upper Current and Upper Jacks Fork Rivers. There are no environmental studies that show impact to these sections of the rivers and there are no documented user conflicts on file. During the summer when canoes and tubes are floating these stretches of the river, the water level is too low for boats to operate. These sections of the rivers self regulate themselves. So what the park is really doing is preventing locals from using the river during the off season, when there is no tourists present. Individuals who live in this immediate area and use the river would not be able to hunt, fish or boat during the off season. It seems the park is attempting to restrict boats from these sections of river with no valid reason or justification. These sections should remain the same as in the No Action Alternative.

The mixed seasonal zones that are on the chart show dates from March 15 - Labor Day as a no motor season. The current seasonal zones are from May 15 - Sept 15. What is the justification for making the no motor season two months shorter? Is there that many tourist floating the river in March and April? I do turkey hunt on the river in April and early May. I don't see many canoes or tubes on the river at that time. Those seasonal dates should remain from May 15 - Sept 15. It's confusing to the public to constantly change regulations. I would keep the same seasonal zones that are already in effect in the No Action Alternative.

The plan proposes for 60/40 HP in the unlimited HP section from Big Spring to Gooseneck (southern park boundary). This is the stretch of the river that I spend almost 80% of my time boating on. I do think that there should be a limit on HP in this section, however, not the 60/40. There should be a section or zone of river open to boat operators who have larger size motors and fish on lakes. A limit of 150 HP would be sufficient. Motors with 300( ) HP have no place on the river of this size. I would be in favor of limiting the HP size to 150.

I am in favor of opening the 1/2 mile stretch of river between Van Buren and Big Spring to the same HP size limit that is implemented below Big Spring. Closing that stretch created numerous parking problems at Big Spring and made it impossible for those who use larger motors in bass tournaments to fish that section of the river. If it was opened, those owning the larger sized motors could launch at Van Buren and motor downstream. This option was proposed in Alternative C.

**Comments on Horse Use:**

I think the Lower Current section of Current River should have at least one designated horse trail for those who live in this immediate area. The middle section has 23 designated trails and it's proposed for the upper section to have 25. I think at least one trail around the Van Buren area would be appropriate and fair.

Thank you for allowing the public to comment. I hope these comments are actually read and park management considers what the majority of the park users (locals) want.

**Correspondence:** I support alternative C. Not just because I live here but also I believe everybody should have the chance to experience the Current River in the way they feel like doing it within reason of course. Whether by boat, canoe, atv, kayak, horseback or tube. I agree that the Current River is a special area but if we limit the use of too much what is the purpose of having it if you can not access it. I think there needs to be more education on jet boats and more signs about sharing the river to the incoming floaters. I have seen activities from both groups (boaters & floaters) that I do not agree with. But more than once I have had my boat out enjoying the river with my family and been cussed at and harassed by floaters just because we had a boat. I never blow by a floater I wait till I can idle by in the deeper sections and private canoe owners are the worst since they think the boats should not be allowed.

As far as ATV use why don't you charge a fee for a daily use or yearly use permits. Leave most existing trails open do not allow riding on the gravel bars which I agree with except at designated crossings. If someone is being destructive fine them.

I don't agree with the limited use for the area due to we live in a low economical area as it is and since the NPS does not pay local property taxes the tourism does help to offset the effect of lack of taxes. So more limited use would drive down visitors who help support the local economy.

Thank you for the chance to comment.

**Correspondence:** As an avid outdoorsman I have had entirely too many interactions on the Current and Jacks Fork rivers with individuals and groups that seem to regard our Ozark National Scenic Riverways as theme parks, nightclubs, trash dumps or their own property - free to do whatever they want, regardless of how it might effect other people or the environment. Because of these experiences I strongly recommend the National Park Service to implement Alternative A. Please let some aspect of our natural world remain as close to wild as possible!

**Correspondence Type:** Web Form

**Correspondence:** My family and I have floated both of these rivers since the early 1970's. The rivers and surrounding areas/watersheds need to be protected as much as possible. We avoid going to the Current and Jack's Fork Rivers on summer weekends because of the crowds. We have had to leave gravel bars because of people showing up on loud ATV's and have seen the destruction from ATV's and too many horses crossing the rivers. It's getting harder to find a gravel bar that does not have trail access and tire tracks.

I'm sorry that some of the local residents are upset about restrictions. If they care about the land and its natural resources, it seems they would want it protected too, as much as possible. In the long run, I feel this will benefit them and their area. We have to look at what's best for the larger picture, generations from now. I support more stringent regulations to prevent overuse of the park resources.

Thanks you.

**Correspondence:** My wife Ellie and I first canoed on the Current River in 1960, and have been on the Current and Jacks Fork many times since, so we have seen the increased usage of the river by other canoeists, and the degradation of its banks and gravel bars those with horses and motor vehicles.

We commend your analysis and effort to come up with alternatives for the future use and regulation of these waterways and their watershed. For those who desire preservation of our natural heritage as we do, Alternative A would be our preferred choice. The closing of illegal roads and the restoration of what those areas were like 50 years ago, and the closing of horse trails beyond what are called for by current plans, along with closing gravel bars to motor vehicles and restricting them to walk-in and canoe-in visitors.

Big Spring should be given wilderness protection, in particular.

We recognize that Alternative B would be a decided improvement from the current guidelines for operation, and would support that, especially with the above parts of Alternative A. Best wishes to those who are trying to satisfy current and future users of the Ozark National Riverway, and we hope little if any of Alternative C will be adopted for the future preservation of these rivers which Ellie and I fought to protect from the dam-builders and make available to those who want to enjoy our Ozark rivers, for decades to come.

Sincerely,

Dick and Ellie Dawson

**Correspondence:** One of the key recreational opportunities missing in the region are trails for mountain biking. Properly built trails have a lower environmental impact than many existing uses (such as equestrian use). This type of recreation drives tourism, promotes health, and offers a great way for citizens to enjoy their parks. I strongly urge you to take this opportunity to open up the area to mountain biking.

**Correspondence:** I am a life-long Missouri resident and outdoor enthusiast. In am in my early 60's, and I have fished, floated, and hunted all over the state of Missouri much of my life. In the most recent decade, I have had the good fortune to have access to the Current River via a private residence that pre-dated the Ozark National Scenic Riverways act. The owner of this cabin has long been a faithful steward of the river and has a multi-generational connection to that area of the Ozarks. In my view, many of the people who populate this part of Missouri have deep roots in individualism and generally cast a suspicious glance any time local, state or federal government seeks to pass legislation of any nature.

Unfortunately, in the past decade I have continued to see a dramatic and relatively unchecked increase in the use and sometimes the abuse of the Current River. As a fisherman, I know that there are many times of the year when attempting to fish the river is futile due to the tremendous volume of floaters. I also know that they have the same right to the river as I do. Even so, I feel that many of those who float the river don't do so because they admire the natural beauty of it, as much as they enjoy a cool river on which to float while they drink, engage in horseplay, leave trash behind them, and use gravel bars as their own personal Johnnie on the Spot. The lower Current can be

downright dangerous to a floater when they end of dodging powercraft.

Despite my personal desire to wish for more stringent restrictions on use and access of the Jack's Fork and Current Rivers, and understand the rancor tightening restrictions would cause. That is why I feel that Alternate B appears to be the more logical compromise, addressing the most pressing issues, while still recognizing the rights of those who want less restrictive access.

At the heart of this issue is the question of "who has the right to decide" on how the land and water is utilized. Since many local residents bristle at the concept of a national government organization "telling them what to do" there is no easy solution. I look, though, to the national parks across the nation. They are our natural heritage. Because of the careful management of these national parks all citizens can experience them in their natural - or almost their natural - state. Citizens don't have the right to wander anywhere they want in Yellowstone; they can't ride horses where ever they please; they can't drive ATV's through pristine trout streams. Why would we treat this national park any differently?

As difficult as it sometimes is for people to see the forest through the trees, now is the time to take a firm stance on offering further regulatory protections of the Ozark National Scenic Riverway so that my grandchildren, and their grandchildren can know the beauty of our state's pristine riverways.

**Correspondence:** The first thing I want to address is the purpose that the park was put in here in 1964 was for recreation and tourism to help improve the economics of the area. From looking at the numbers of the people we have had since that time in the Alley Springs and Big Springs areas, the numbers have decreased by approximately 40 percent. The federal government has not completed the park as agreed to with Mr. Senter at Owls Bend, nor has it made all the other agreements that it stated it would complete with the other parks. By the enforcement of rules and regulations that the park service has enforced our canoeing and camping has decreased over the last 20 years by a great number.

As far as the boating issue is concerned, your proposed plan will have a detrimental effect on the local boating industry. We have business that build the boats, boat dealerships who have contacts at the local banks to arrange financing for the purchase of their boats, as well as the individuals who do the upholstery for the boats who work out of their homes just to be able to save on rental expenses. Then you have the private individuals who do the graphics for the boats and the polishing of the boats for those who like to keep their boats polished. That is just the boating industry alone. In the summertime, boats are on the river every weekend enjoying what nature provides. The tourist industry impacts every area in this town from gas stations (who rely heavily on the tourist trade) to the restaurants, grocery stores, the t-shirt shop selling souvenir shirts, beauty shops, auto repair places just to name a few. Just the economic impact alone is reason enough not to make any changes.

The river access needs to be left alone. There are many individuals who camp (free of charge), along the river and having the river access nearby for them to launch their boats is a major convenience, especially when you have tourists who need assistance and the boaters are the ones who are able to assist them.

Horsepower-if there is any change at all I would like to see it put into writing that the horsepower is 60/40 so that the jet boats are considered legal. As it stands, the rules show that horsepower is to be measured at the powerhead and not at the jet. There are too many times where the jet boats have had to come to the aid of individuals on the river in situations where time was of the essence and there were no park service individuals around to help. You start regulating even more the horsepower that the boats have and that assistance wont be as timely.

A majority of the residents in this area cannot afford to take vacations, but with the way things are now, they are able to take their family camping at one of the many river accesses at very little expense and that is the only vacation they can afford. Implementing any of your plans will stop them from enjoying what nature and God have provided.

Horseback trails need to be left as they are. Is it really fair to establish 25 miles of trails where our visitors are used to having access to 65 miles of trails? This severely limits our tourists. The horseback riding industry in this town

amounts to approximately 25% of the local tourist trade. You start reducing the amount of trails we have and that is going to create yet another major impact in local economy. With 65 miles of trails, the ecological impact is much less severe than it would be with 25 miles of trails. We need to see more specifics with regard to these trails and the day permits. Only a small percentage of people ride on National Park Service property. For the most part, horseback riding takes place on Pioneer Forest, Conservation land or private property.

During the course of the past year when the Federal government experienced cut-backs, the locals took care of picking up the trash and debris the tourists left behind. Signs were made and hung at some of the primitive camping areas advising the tourists to take their trash with them as the park service was no longer providing trash service. We, as individual taxpayers, own the property. Why should someone who never visits our park or who only visits our parks once a year be allowed to govern our rights? They aren't here to take care of it and during a federal shutdown we weren't even allowed to have access to the property. If I own a portion, I ought to be allowed access regardless of whether or not the government can afford to function. Don't punish us because the federal government can't manage their finances better. You are taking our rights away from us and when it gets down to it, we are the ones who will step up to the plate and take care of it. I firmly believe there should be no action taken on the current management plan.

**Correspondence:** I urge the adoption of Alternative A or any other system that genuinely protects these precious finite resources. The attitudes of families residing near the riverbanks are understandable, but these parks belong to all Americans and the proposed regulations do not affect private land. Perhaps phasing in some of the restorations over several years (like the native vegetation to rehab illegal river access roads) might make some of these changes more palatable.

**Correspondence:** Dear National Park Service Administration:

I am writing on behalf of River Bluffs Audubon Society (RBAS) in support of better management of public use of the Ozark National and Scenic Riverways in order to protect the Riverways' fragile ecosystems and habitats and ensure continued public enjoyment and use of the ONSR for both current AND future generations of Americans. While RBAS feels that the NPS has offered three very reasonable alternatives for better management of the ONSR, we prefer Alternative B because it:

- â€¢ Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the OSNR;
- â€¢ Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- â€¢ Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- â€¢ Provides a balanced approach to horse trail usage within the park;
- â€¢ Increases staffing and establishes a new visitor learning center at Powder Mill;
- â€¢ Restores additional historic structures;
- â€¢ Enhances the Riverways' role as an archeological curatorial hub for the region, and
- â€¢ Strengthens monitoring, research, and preservation projects.

RBAS also wants to emphasize our support for the preservation and restoration of bottomland forests, rather than conversion to pasture for elk, as part of the National Park Service's management activities. The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. The designation of the Ozark National Scenic Riverways by Congress in 1964 served as a template for the National Wild and Scenic Rivers Act of 1968. The ONSR watershed is at the heart of the largest contiguous block of forest in the lower Midwest, and part of a globally significant Important Bird Area. Cerulean and Swainson's Warblers are numerous along the Riverways, and Bald Eagles also nest in the area. The Riverways' watershed provides critical nesting habitat for many forest-interior songbirds. RBAS is grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Thank you.

Dan Reed  
President, River Bluffs Audubon Society  
Jefferson City, MO 65109

**Correspondence:** My family has been going to the Current River section (Beal Landing (until it washed away in the 80s, and the Log Yard gravel bar) of the park well before it was a National Park (1939), I have been going since 1956 at the age of one. This was the place to go for summer vacations, long weekends etc... We always camp, mostly tents and some pop-up campers. We do not use, or require any type of hook-up and we don't use a generator. Most of the time we camp within a stones throw of the river, 20 to 50 feet, and now do most of our camping in the early spring and fall before or after the summer rush. On a typical fall day we do not see many other people if it is

during the week, on the weekend we do see more traffic, both on the gravel bar and on the river, still not what I would call crowded. We typically have a group of between six to twenty people, and we all camp in a group with as many as seven or eight tent when we have a large group. To break up the gravel bars into individual campsite or to designate specific areas to camp would not be a fun type camping experience, if I want to be told where we can camp I would be more apt to go to a more formalized camping site like the one at Alley Springs. We like the no amenities no frills type of experience. After reading the proposed changes I would have to say that I would lean towards the No Action Alternative. The park service has already discouraged the use of the gravel bars a campsite by eliminating the picnic tables and trash cans, we don't require these amenities because if we don't pack it we don't expect to use it. Our trash is always taken to the dumpster near the outhouse. I would say the outhouse is the only thing required and is used by our group. (Just a note about the facilities (outhouse) it is very well maintained). Our group always leaves the camping area in as good our better condition than when we arrived by policing the area after we are packed up and ready to head home. I am not sure what is really driving the push for change, for the most part we see people that are respectful of the environment and the times that we have seen things that are wrong it is already against the law, driving in the river, four wheelers in the river, loud after quiet time etc... If the present rules can not be enforced why should we make new rules? These new rules would only limit the freedom of the majority.

**Correspondence Type:** Web Form

**Correspondence:** I've spent 55 years growing up in Missouri, much time has been enjoyed on the rivers.

Floating, fishing, camping, site seeing have always been fun. After plowing through several hundred pages of dribble, I can only wonder how much cost has been wasted on this planning project.

There are plenty of ecological explanations along the park rivers.....no need for more....there used to be more camp grounds....open them back up!

The locals feel abused and cheated and to some degree I agree, however, since this area has been designated as a nation park, it needs to be preserved as one for everyone. I think comments from one and all should be considered.....boycotting / blocking the meeting areas w/ boats is a poor way to voice local concerns.

The park needs to be managed pretty closely to the way it is now.....the base criteria is the water quality; that's the element which makes it so special! MDC has been working for years monitoring water quality and trying to improve fishing; the floating revenue is likely effected as well by dropping water quality.....I think a prime focus should be to maintain water quality through bank / sand bar protection as much as possible. I support eliminating unauthorized access roads / trails but making sure there are ample horse trails / 4 wheeler opportunities AWAY from the banks.....you select where, but across river banks is a disaster for the river.

The tourism dollars are very important.....It would be great if the over crowded times on the river could be eliminated but I don't see how that can be accomplished. It is what it is, people have different ideas on the ideal float....they can select the time of day / year to float that best meets their need but I would like to see more enforcement patrols. I float regularly and rarely ever see an officer. I don't like having them on the river but too many trashy floaters / fisherman ruin the park.....same applies to giggers. Large areas of the river are destroyed by those that won't follow basic guidelines. The whole river experience is there for everyone.....not just locals, or for those that say "we have a heritage of gigging!"....."it's our land and right". Actaully it's everyones park and nobody has the right to destroy it! This isn't private land, it's a national gold mine and needs to be managed to fullfill the activities of all those that want to enjoy it, as long as the park qualities don't suffer from use.

I wouldn't change much of the current plan except to concentrate on maintaining water quality by limiting bank degradation, limit trash accumulation, & protect the fishery better.....I understand that's easier said than done with the increase in popularity.

**Correspondence:** It is quite understandable that those who originally purchased land along Missouri's rivers did so to use the river as a food source and that a number of next generation family members remained with the same thought. Today, with transportation and technology advancements, it is most unfortunate that so many river adjacent land owners feel the water abutting their property is theirs as well as everything in it. All of our rivers and streams are public property and, as such, usable by the public.

However, that being said, it does not entitle either the local land owner or the public visitor to abuse these precious

resources. Most people object to government intervention; but, regretfully, government is the only entity with the power to watch over and protect the public and that which is publicly owned. There are more than enough glaring examples of those who abuse and take advantage of a natural resource when it is left unsupervised; and those who say they should be left to do as they choose are simply not thinking beyond themselves. The Ozark National Scenic River Riverways, like every other natural resource, is not endless in its ability to sustain itself. Therefore, it is the roll of government to establish rules of use in order to assure the public of today, both local and beyond, and the public of tomorrow, both local and beyond, that this publicly owned natural resource will be sufficiently protected to sustain its level of quality.

**Correspondence:** I do not agree with any of the alternative plans. I think the NO Action or no new actions- - status quo- - is the right way to go. My family and I have been going to Jacks Fork for over 40 years and I do not feel that any new regulations or obstacles should be put in action. We were at Harvey's Circle B on Jacks Fork River just this past summer and it was beautiful, crystal clear and there were no problems of any kind. There were some people canoeing, some swimming and/or jumping off the tall rocks- -the kids were catching little fish and other wild life then returning them to the water. Didn't see motor boats but it wouldn't have been a big deal if there had been. I don't see a need for more restrictions like not being able to use parts of the rivers for certain things or limiting any or some access to gravel bars. Those gravel bars along the river there that has Harvey's circle B behind them looked great and in good condition even though some pulled their trucks down a little ways on them to unload their rafts, tubes, etc. IN FACT, THE WEEK BEFORE WE WERE THERE THE RIVER FLOODED AND THE GRAVEL WAS ALL WASHED AWAY FROM AROUND THE NICE TREES ON THE GRAVEL BAR AND A LOT OF THE OTHER PARTS OF THE GRAVEL BAR- -THIS WAS MAY/JUNE TIMEFRAME- -HARVEY'S CIRCLE B PAID FOR ALL THE GRAVEL TO BE PUT BACK SO THE TREES WERE SAVED- -THEIR ROOTS WERE COVERED- -AND BY THE TIME WE GOT THERE YOU WOULD HAVE NEVER KNOWN THAT THERE WAS A FLOOD- -THEY PAID FOR EVERYTHING. I think you are doing businesses, property owners, and the visitors a disservice by adding on more rules. Tax payers will certainly have to pay more for any of these new plans- -money we really do not have. We also went to AlleySpring which was exactly as it has always been since we have been going there. Please do not limit businesses, participants, property owners, visitors, etc. from using our rivers, springs, forest, etc. in any additional way.

**Correspondence:** My family and I have enjoyed our experiences on the Rivers, but have become disturbed by the amount of motorized recreation allowed on the National Scenic River. While we understand that many, perhaps even most, people enjoy a motorized entertainment, (and we do also, at times), there are ample places throughout the country for these activities. There are precious few opportunities, and fewer by the day, for peace and solitude on pristine waters. People wanting motorboats should go the lakes. That's where we motorboat. 4-Wheel toys do not belong in the riverbeds of National Scenic Rivers. Again, there are numerous unregulated creeks in the Ozarks where one can scar the countryside with a 4-wheeler. Besides the visual degradation of the riverbed, consider also the noise impact has on one's day out in the wild.

I would like to see 4 wheelers have their own dedicated area of creekbed somewhere else to desecrate. Motorboats of any horsepower should be restricted to areas below Two Rivers or Big Spring. I was appalled during my last trip to find them running up & down the river near Round Spring. I don't for the life of me see where 4-wheelers and motorboats fit in the mission of the park to (in your own words):

"preserve and protect in an unimpaired condition the unique scenic and natural values, processes, and unspoiled setting derived from the clean, free-flowing Current and Jacks Fork rivers, springs, caves, and their karst origins..."

Nothing in any of the plans seems to, in any way, restrict the right of private property owners to pursue their normal rights. The Private Interests are ruining our nation. I want to strongly appeal to your mission in the Public Interests to not become subservient at the hands of private economic interests and their paid-for political partners. Tourism would not exist (neither would property owners, since their rights would have been submerged under another lake) anywhere near its present-day levels without the creation and preservation of the National Scenic Riverways . The Private Interests should consider that. Property owners along the riverways should be thankful that none of the plans under consideration requires them to upgrade/update their septic systems.

Thank you for your consideration of our input. We know you will endeavor to do the best thing, popular opinion notwithstanding.

Very truly yours,  
Gale Wickell  
Debra Wickell

**Correspondence:** I have been canoeing the Current River since I was a boy. The trips I used to take with my father, and that I now take with my friends, and that I will hopefully take with my son when he is old enough, are some of the best memories of my life. We are truly lucky to live within a 2.5 hour drive of some of the best scenery and fishing in the country. We typically float anywhere from Baptist Camp down to Powder Mill, camping on gravel bars along the way. In recent years part of our camping chores has been removing the ever-increasing horse manure (this is not from wild horses, as evidenced by the tracks). That's something we never used to have to do. Also, jet boats have become a hazard. I'd say 90% of them charge by us at full speed, seemingly intent on swamping our canoe and gear. A few courteous drivers actually slow, but they are so few and far between I'm actually shocked when I see it. We've also had several instances of ATVs or cars coming up on our remote gravel bar camp on some road not even listed on any map. It all detracts from the experience for us. We go for the solitude, scenery, wildlife, and fishing(catch and release). I know the park and rivers are there for everyone to use, but I don't think the intent of the national park was to make a place for horses to defecate on gravel bars and jet boats to race up and down the river. I applaud any effort to return the rivers to a cleaner, quieter, slower-paced experience for all to enjoy, particularly on the stretches from the headwaters to Two Rivers. Thank you for your time.

**Correspondence:** I feel alternative B is the right approach to preserve the riverways while allowing recreational use as well. I am certain that all the scenic beauty of the Current and the Jacks Fork Rivers would have been destroyed already if the National Park had not come into existence. We in Van Buren can all look out our doors and see the "Gap" area two miles above and below Van Buren with thousands of tubes every summer weekend along with canoes, kayaks motor boats and even jet skis competing for their own little slice of the river. We try very hard to enjoy the peace and serenity of the river by going above all that or waiting till the multitudes go home. However as more and more people learn of the beauty and new highways provide easier access, the river usage seems to have doubled, every few years. I feel a lot of people have been misinformed by special interest groups looking to capitalize on this natural resource as to exactly what the various General Management Plans entail. The park service has done a poor job of informing people as well. I attended the public meetings in Van Buren and wanted to learn more about the wilderness designation. When I sat down to what I thought to be an informational meeting about the wilderness, I only heard individuals and politicians spewing misinformation about ONSR, the GMP and so on. Not one statement was made by park personnel about the Wilderness plan. It was obvious that I knew much more than most speaking about the topic-The Wilderness Proposal-and those speaking were misinformed about the topic. Alternative B would actually allow for very little change as time goes on whereas if we stay with the no-action plan, things will continue to change more and more as more users have access to more of the river. This world keeps getting larger. No change will have great change just by numbers alone increasing. I stand for PLAN B.

**Correspondence:** Having grown up around these rivers before they were part of the NP system, I have to say that they are better now than then. That said, they are used past their limit in the summer months. There needs to be fewer canoe rentals, not ATVs near the river, no untended access points. The change has been creeping up for a few years. There are campgrounds that you don't feel safe in, the water is full of algae and murky in places, and the noise and confusion of so many people in canoes takes away the pleasure of going there. I really think there needs to be more control. The more people that visit there per year means more controls must be enforced. At the bigger parks in the west there are signs and more rangers to enforce them. It need to be treated like the other big parks or it won't be worth going to.

**Correspondence:** Thank you for reviewing my comments on the Ozark National Scenic Riverways Draft General Management Plan. I agree with premise of preserving and protecting the park.

In line with Ken Burns Documentary on National Parks, the parks success is dependent on the public's ability to access it. The ability to enjoy remote areas of the park may only be obtainable to the elderly or others with impairments (MS) via horse. This is one reason that horseback riding is so popular with the retired folks.

Trail riding continues to increase in popularity with people of all ages. When the number of trails are reduced this adds stress to the existing trails.

I am very concerned when the plan calls for closing 65 miles of trails and only adding 25 miles. It costs next to nothing to close trails but funding for adding additional trails is always at risk.

Horse trails properly designed do not interfere with native vegetation and the natural condition of an area.

For these reasons we need to increase the miles of multi-use trails open to horseback riding. We should not close any trails until there are alternate ones to replace them. As such I would not be opposed to requiring "bridle tags" provided any and all funds were used for those trails exclusively.

Sincerely,  
Richard Stout  
Villa Ridge, MO

**Correspondence:** To whom this may concern,

I would just like to add my opinion to the proposed changes to the National Scenic Riverways. I would like to fist qualify my comments by saying that I was born and raised around the upper end of current river. I have made use of the river and the land surrounding it in all the ways listed under this plan, from canoe floating the Jack's Fork, to tent camping on the gravel bars, horse back riding along the river banks, as well as Jeep and ATV riding down the various county roads in the area to local camp sites and swimming holes. I am also a boat owner, and spend many weekends on the river currently with family and friends. And look forward to continuing those long running traditions.

With those experiences in mind I must say that I find the current "Alternatives" proposed will not effect the park as expected. While I will contend that the number one reason for spending time on the Current and Jack's Fork river is the peace and beauty of the natural setting, and I would never want to see that natural setting ruined, I will also say that the negative impacts I see on the river will not be fixed given the alternatives proposed. Yes it makes sense that by limiting the usage of the land will protect it, but I must ask who are you protecting it from? The majority of the items mentioned in the plan limit boat, horse, and ATV usage. These are primarily the venues of local citizens. Who better to appreciate the beauty of the natural setting, and take care of the environment then the people who have either grown up, or moved to a location that is surrounded by this wilderness. For those that call themselves "local" this is their home. And who better to take care of their home then the people that live in that home. So in that thought I would ask further why would you limit the homeowners from accessing their own home.

It is my opinion that in most cases it is the usage by individuals who may only visit this park once a year, or once in their lifetime that cause the majority of damage to the park. I have lost count of the number of times I have turned my boat around going up river to pick up a bottle or can floating in the river, many times floating beside a canoe or tube who could have just as easily thrown it away, and in some cases was most likely put there by them in the first place. This is a habit that I learned from watching countless other boaters doing the same thing. Unfortunately these are the events that make the biggest noise, not the boater that picked up the can, but the can in the river. If we move forward with some of the proposed plans, that boater may not be there. This goes along with a lot of the proposed changes, when damage is done to the park by individuals that do not appreciate it to it's fullest, that damage is primarily discovered and in a lot of cases fixed by the very local traffic that these plans aim to decrease or eliminate.

In closing I will give my suggestion for improvement to the park system. It starts by suggesting a NO ACTION plan to continue operating the park as it does now. However, I will add that to improve the park system and conserve it for generations to come the park should include increased enforcement of existing rules and policies regarding littering, and defacing the natural setting.

I thank you for your time.

- Mike

**Correspondence:** I am a law abiding citizen, I feel it is my right to have access to these Ozarks riverways. I was raised here and some of my fondest memories growing up were on these riverways. Whether it be from boating to gigging, canoeing to floating, or fishing to swimming. The rivers here are a part of life for us. It's were my father taught me how to fish and swim, and I now how have kids of my own that I want to teach them the same. I want my daughters to grow up and have those memories with me. I want to be able to just wake up and tell my family, "get up were going to spend a day at the river for a BBQ." I do not understand how this can be taken from me. Like I said I'm a law abiding citizen and I follow all laws while on the riverways, so once again how can this be taken away from me. You say your trying to protect the riverways but this initiative in the end will cripple the local economy, and most likely will further destroy its natural beauty. We have local groups that get together and clean our riverways that we love so much. Why would we hurt what we love and care so much about.....we have our rights, who are you to take them from us?

**Correspondence:** My family and I have heard that the NPS has selected option 2 of the three management plans that have been in review for years. We understand that some compromise is nearly always necessary. We are very happy that option 2 as proposed by the NPS will include a new wilderness trail Current River)and more restrictions in vehicular access in the upper to middle part of the rivers.

In the last twenty years we have found far to many illegal access points on both rivers. We come to these rivers to get away from the rush of the urban environment and not to see 4-wheelers on gravel bars or crossing the rivers.

There are already many Ozark streams with an access at nearly every gravel bar, so we dearly hope the NPS follows through with their plan to ensure that folks like us still have a place to show our kids and grandkids a more undisturbed natural Ozark stream environment.

**Correspondence:** The Riverways are important for everyone to enjoy. I'm all for conservation. Float trips are an excellent way to get out into nature and see turtles, fish, snakes, birds, and other flora and fauna. I don't own or ride horses and I understand how their fecal materials can interfere with the delicate ecosystem.

In my case, when I float I am very careful to keep all my plastic and cans in the provided mesh trash bags and at the end of the trip, I put all of the recyclable trash back in my cooler and bring it home and recycle. I am a steward of this planet and go above and beyond. There are plenty of locals who get in the river and recover the detritus that other unfortunate floaters lost.

This is a very poor area of our great state and the inhabitants use these rivers to eke out an existence. Restricting access to the river hurts their economy and I'm sure the government wouldn't want to unnecessarily impoverish their citizens.

**Correspondence:** I believe option C will do the most to allow the National Park Service to achieve success in effectively managing the Current and Jacks Fork river resources. My family, friends, and myself have enjoyed visiting these river for more than 30 years. We use both jetboats and paddle canoes and kayaks. Last summer we spent some time jetboating along the stretch from Powder Mill up to round springs. We stopped and helped some canoeists recover their belongings after they swamped their canoe. They were very thankful we were able to use the mechanized advantage of a jet powered boat to Safely help them recover items and help in keeping the river clean by not being forced to abandon items lost when they swamped. This a common occurence all along the rivers of the Many Ozarks. of those opposing motorized boating fail to consider how they would feel if a loved one was in need of medical assistance and possible rescue assistance that could be provided by private individuals in jetboats. Some comment that they wish for peace and quiet and the most disruptive human influences we experienced last summer were due to intoxicated floaters who used foul language within earshot of young children. With the price of fuel these days find that we probably use less gasoline when we take the jetboat because we drive one vehicle to one access point and motor up to an empty gravel bar for the kids to play and stay put for the duration of the day. I was thankful that all of the previously mentioned party made it safely across the slow moving water at Two Rivers without becoming drowning victims. I would like to think these individuals would be more easily monitored and cited if necessary by water patrol and park rangers who have continued access to the rivers using jet boats and that everyone will be able to enjoy these rivers safely as a result.

I believe the environmental impact of jetboat traffic is minor compared the historical changes due to the timber harvest of the late 1800's and the probability of climate change and extreme weather patterns. Gravel bars and shoals will grow and shrink due to flooding events and natural geological influences including the natural process of the ozarks hills eroding, the karst topography including the dissolving limestone beneath and the changing populations of the surrounding forests. These changes could come from invasive species such as the ash borers. Keeping

primitive access points open for access all along the course of the river should help prevent overcrowding problems that could be caused if these areas are closed off. Allowing people to camp on gravel bars could help control the budget costs of trying to establish more space in "developed" campgrounds where the grass has to be mowed and picnic tables maintained, etc. Since these gravel bars appear and disappear naturally changing every year it would be a waste of resources to start trying to label these with signage and documentation. The park visitors get to enjoy a more natural river and sense of solitude by keeping these areas open to camping. At the same time motorized vehicle access to these areas is valuable in providing that same safety net most would will appreciate if an emergency ever arises. These accesses provide a means to escape flash flooding and provide an avenue to provide medical assistance to those in need.

The establishment of a wilderness area at Big Springs which will allow hunting seems to be an effective way to protect the area while at the same time allowing the scientific management of proper carrying capacity of the wildlife populations there.

The only input on the equestrian usage I have to offer at this time is the suggestion to review the possibility of utilizing a longer trail system such as the Ozark trail to help disperse the usage over a wider area.

In closing I would like to thank you for reading my current thoughts on this matter.

Re: Riverways Draft General Management Plan					

Dear Supt. Black:

Although I gave brief oral comments at the Van Buren open house, I hereby wish to give more substantive input into the Draft Management Alternatives. But let me begin by saying that I found the Van Buren meeting to be a poor forum for expressing input on the obviously controversial proposals. The first two hours, wherein NPS personnel provide information and took input, went fine. But the final hour devoted to discussion of wilderness management in the Big Springs section ended up being a free-for-all anti-government forum that was stifling to anyone who wished to express opinions on the wilderness management proposal. Worse, allowing a politician (Rep. Jason Smith's delegate) to do a 'crowd rousing' speech at the start created a chilling atmosphere for anyone (like me) who wanted to express a divergent view. I will also hasten to add that I live in Reynolds County and I am therefore represented both by Congressman Jason Smith and by State Representative Fitzwater: the former was represented by Darren Lingle, who gave the opening crowd-rousing speech, and the latter was there in person, yet neither acknowledged that they had constituents, such as me, who strongly disagree with their "No Change" attitude. Neither Mr. Smith nor Mr. Fitzwater has actually conducted a legitimate survey and they therefore cannot claim that they know for certain what their constituents desire in terms of Riverways management. I had specifically written to Mr. Fitzwater asking him to acknowledge that not all his constituents agree with his views on Riverways management: that he failed to do so only demonstrates the efforts that were made to give the appearance of a united "local opinion" when in fact there is no unanimity. Further, it was obvious that many if not most of those attending the Van Buren meeting had been actively recruited to attend multiple open houses to give the appearance that their numbers are greater than they actually are: one person attending four meetings is still just one person!

My following comments basically support Alternative B, the NPS preferred Alternative, with a few exceptions which I will clarify.

Re: MOTOR-BOAT FREE ZONES; One of the speakers at Van Buren (Mr. Fitzwater, I believe) said that restricting motor-boats from any sections of the rivers endangers human lives: he obviously is unaware that certain river sections are impassable for motor boats anyways, but mostly he shows his insensitivity to the desires canoeists have for a natural wilderness experience, one which includes being free of motor noises. Would one dare suggest horse-back riders should be accompanied by ATVs because the latter could provide additional safety? Of course not! Anyone canoeing the upper reaches of the Jacks Forks ought to know that motor-boat rescues is not going to happen

and that is part of the charm of being there.

As to the amount of river that should be designated as motor free, Alternative B is good but I am moved to support Alternative A which would restrict motors all the way to Two Rivers on the Current and the Jacks Fork. This is a significant stretch of river and motor-free zoning would be much appreciated by canoeists who form the majority of recreational users on both rivers. With this, I have no objection to 60/40 hp limits.

RE: EQUESTRIAN MANAGEMENT; Alternative B provides for 35 miles of newly designated trails while closing 65 miles of undesignated trails: this is a significant gift to horseback riders, most of who hopefully refrain from participating in riding their horses in the undesignated trails. Those who feel that National Parks entitle them to ride wherever they choose irrespective of the ecological impact will of course be unhappy. My only concern is that large number of horses-upwards of a thousand or more at times-will still be crossing the rivers. The recommendation that riders are given to stop their horse 100 feet from the stream to allow it to defecate and urinate prior to crossing hardly seems sufficient to prevent stream water contamination-shouldn't riders be required to use muck bags if they intend to cross streams? Park Service rules call for burying human waste at least 100 feet from water or trails: why doesn't the same rule apply for horse waste? I suggest as an alternative to muck bags that the Park Service aggressively monitor streams for bacteria: if a danger surfaces, all activity (horseback riding, canoeing, motor boating, etc.) should be prohibited until the waters are again safe.

RE; VEHICULAR ACCESS: Keeping vehicles off of gravel bars makes sense. Missouri State laws ban vehicles from the rivers (except at designated crossings) and in many ways gravel bars are part of the rivers: they often are underwater! Much of the conflict between recreationists is a result of vehicles driving onto the gravel bars and using the bars for making spins, thereby. Vehicles also allow loud music (via car stereos), to say nothing of large containers of alcohol, to be brought onto the gravel bars.

As to road access, it is certainly extremely important that undesignated roads and river crossings be closed and that law enforcement be increased. The ONSR is a National Park, not a national racetrack. Those who argue for keeping open all the current illegal entry points are asking that crime be condoned. I note that Alternative B calls for opening 20 new designated access points: this is more than generous! Those who complain that the NPS are trying to keep the public from entry into the ONSR obviously have not read the Draft Management Plan.

Regarding the proposal to allow mountain biking on some hiking trails, I prefer that this be deleted from all Alternatives. I have no objection to mountain bikes on vehicle roads, but their use on hiking trails is a problem: inevitably, the trails widen and for those hiking it can be difficult to quickly move aside for a fast-moving bicycle. I realize mountain biking is a popular activity elsewhere, but I do not think it is appropriate to encourage it within the Park.

RE: CAVES; In view of the escalating numbers of White Nose Syndrome cases in Missouri, I am glad to see that recreational caving is not being encouraged. Further, caves are a very delicate habitat and deserve the same protection as do archeological sites. Only persons trained in safe caving techniques should be allowed entry, and even that should be made secondary to wildlife protection.

Big Springs Wilderness Management: The proposal for wilderness management of the Big Springs tract is a good idea. I was surprised at the Van Buren meeting by the vociferous objection, but I heard no explanation other than opponents dislike and fear the federal government-that is hardly a rationale but instead a statement of one's mental status. I worked in mental health and I understand that people can get alarmed needlessly by all sorts of things, which seems to be the case here. The Big Springs tract is already managed mostly as wilderness and the only change would be that a few man-made items (the training range and a cesspool) would be removed, and a road already closed to the general public would be closed to Park officials as well. As I understand the proposal, that road could be made into a hiking trail which would encourage greater visitation than is currently happening.

CONCLUSION: In summary, I support Alternative B with a few changes as recommended above. The "No Action Alternative" is really a prescription for continued and escalating problems in the Riverways. The National Park Service recognized the 1984 Plan has long been outdated and they are to be complemented for coming up with reasonable Alternatives in the Draft Management Plan, any of which would be preferable to continuing on with the current host of problems. I hope the discourtesy shown towards the NPS at the Van Buren meeting will not be viewed as a wide-spread sentiment: I truly believe most of us who choose to live in this magnificent area appreciate

what the NPS does to preserve and protect it for we the people and for all the wildlife.

Sincerely,

Susan Hagan

**Correspondence:** I've enjoyed the Scenic Riverways for over 45 years as a floater and a camper. There has been a dramatic erosion in the quality of my experiences in recent years on the rivers. This is due to the increase in access roads, four wheeling, and horseback activities. The lack of enforcement by park personnel is evident. The natural resources in the area have suffered as a result.

Please impose more restrictions on the above issues, and enforce them.

**Correspondence:** My family has been enjoying the Jacks Fork River our entire lives. We take several float trips from Alley Springs to Eminence or Two Rivers a year. We value the the time we spend there. We always take extra trash bags to collect not only our trash but any that we find along our way. This has been a valued part of now 4 generations of our family and would be extremely disappointed to see this family tradition come to an end. Please leave access to this beautiful and local treasure as it is for the enjoyment of those like myself and all the other local families whom use it as we do.

**Correspondence:** Sample Comments

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** The Ozark rivers are just my favorite place in the world. My parents took me to camp on the Current River when I was a child. I am now 75, but will never forget all the wonderful canoe trips we made on those rivers over the years. You must do whatever is necessary to prevent them from being further despoiled. Off road vehicles have no place there, and horse traffic must be carefully managed. Please!

**Correspondence:** If memory serves me correctly, the Ozark National Scenic riverway was established to preserve the beautiful Current River and the land and springs in the area. Everyone saw the need to save a river and its beauty from multiple ATM's, horses and a thousand canoists a weekend!!! If the powers that be are not willing to have a plan that saves the river, cuts access way down, limits ATM.s and horses and how many canoes then shame on you for letting a gorgeous river and area be destroyed by thoughtless people who do not understand the river and its environment. My parents knew someone who had a cabin on the Current River and I was lucky enough to grow up on the Current, and later my parents bought the cabin and retired there. My Mom counted canoes that came by and turned in to the Park and welcomed all the rangers who came down the river. So the Current River has a special place in my heart. I hope management will have the courage to do the right thing for the protection of the Ozark National Scenic Riverways.

There has to be a way that is compatible to all concerned and does not compromise the river itself.

Ruth Conrad Hess

**Correspondence Type:** Web Form  
**Correspondence:** As the Van Buren R-I Superintendent, I am the authorized representative of the Van Buren R-I School District. I am commenting on the Ozark National Scenic Riverways General Management Plan regarding the impact the Ozark National Scenic Riverways and the general management plan has on the Van Buren R-I School District. It is my first responsibility and priority to advocate for the students of the Van Buren R-I School District. Van Buren R-I serves approximately 550 students Preschool-12th grade. The school is the hub of the community. I have analyzed every piece of property within the Van Buren R-I School District boundaries over the last two years in terms of the financial impact the properties have on the school district.

School funding is comprised of three main portions. Federal revenue, state revenue, and local (property tax) revenue. Analysis of property within the district reveals that the Van Buren R-I School District is comprised of approximately 40% privately owned land that is taxed at \$3.43 per \$100 of assessed valuation. The State Conservation Commission owns less than 10% of the land in the district. This land is not taxed at current rates. Instead, the district receives Payment In Lieu of Taxes (State-PILT) for this property. Analyzing the last 10 year trend of this revenue reveals the State Conservation Commission is only providing funding for the school equivalent to 25% of what this land would generate if it were privately owned. The revenue would be 75% higher if it were privately owned. The federal land within the district makes up the remaining 40% of land within district boundaries. This federal land is divided into two entities. The first is the Mark Twain National Forest. The Mark Twain National Forest generates revenue for the school via Federal Payment in Lieu of Taxes (Federal-PILT) through timber sales. The ten year analysis of this revenue reveals that the Mark Twain National Forest only generates 50% of the revenue that private land owners would generate if this land were privately held. The second form of federal property within the Van Buren R-I School District boundaries the Ozark National Scenic Riverways. The ONSR generates no revenue for the district in the form of payment in lieu of taxes and there is no timber revenue or other form of PILT activity for this land to support the school. The revenue generated from ONSR land would be significantly more revenue for the district if it were privately owned land.

It is important to note that the ten year analysis was conducted assuming the federal and state property would be assessed at \$1000 per acre and as agricultural land. However, \$1000 per acres is much more than the federal agricultural acreage is assessed currently. So, the calculations are revealing more revenue generated for the school than is actually generated by federal and state property within district boundaries. The Ozark National Scenic

Riverways and Mark Twain National Forest take some of the more valuable land within the school district out of taxation. Upon visiting with the county assessor, and looking at comparable property, it is my belief that \$1000 per acre is a very conservative estimation of the value of the property within the ONSR.

In the 1940-1950's the federal government set aside funding called Federal Impact Aid to assist schools that were impacted by the presence of the military of federal land within district boundaries. This was to help offset the impact of federal presence on schools and other areas of infrastructure within the counties impacted by federal presence. If the Van Buren R-I School District were receiving fully funded Federal Impact Aid, in addition to PILT revenue, this combined revenue would still not equal the amount of revenue generated by this land if it were privately owned. Since 2009, Van Buren R-I Schools have received \$0 in impact aid due to lack of funds at the federal level. Every year, schools impacted by federal presence must lobby Washington D.C. to try to maintain this funding for the schools. Federal Impact Aid has tentatively been approved for fiscal year 2014. However, it is always a fight to try and maintain this funding even if it is not funded adequately. The continuation of PILT payments has also temporarily been authorized at the federal level for fiscal year 2014 but not beyond. Like I stated earlier, even though PILT and Impact Aid have been approved, Van Buren R-I may never see any revenue from these two sources.

I fully understand and support the benefits of the Conservation Commission and the Mark Twain National Forest and Ozark National Scenic Riverways from an educational and conservation/preservation perspective within my district. However, these properties do create a significant financial burden on the school. The school bears additional transportation burdens navigating these lands on roads and gravel roads that are not as well maintained could be should there be more funding available. The school loses out on state revenue each year due to the weather and the inability to get students to school safely due to the roads surrounding and within federal property boundaries.

Further limiting the ability of local businesses such as canoe rentals to generate revenue is also detrimental to the students within the Van Buren R-I School District.

A tax rate of \$3.43 for the Van Buren School District is as high and higher than most districts in the state of Missouri. I am forced to go to the voters again next year with a tax levy extension on the ballot in order to maintain the state established level of funding per student for their education. Because of the lack of jobs in the area mainly due to the presence of federal property, this tax levy extension will be difficult to obtain. I understand the local patrons having difficulty supporting such a tax as the poverty level in our area is among the highest in the state due to the lack of jobs because of the presence of federal property.

I am as frugal with tax dollars as I can be. A salary comparison reveals that Van Buren R-I is among the lowest in the state for staff salaries. I currently have many classes with a teacher student ratio of over 30 to one. This is among the highest ratios in the state. I am holding people accountable for their jobs and making the most cost effective decisions possible with district funds. Should I be unable to obtain a tax extension from the local tax payers, I will be forced to reduce staff, reduce resources, increase class sizes, and further impact my students negatively.

Van Buren R-I is one of twenty-two districts in Missouri impacted by federal property. Two additional districts are impacted by the military in Missouri. I am currently completing my Doctorate in Educational Leadership. The topic of my doctoral dissertation is federal impact aid. I have many sets of data analysis and maps to support my comments. I am only providing a brief overview of the impact of the ONSR on the Van Buren R-I School District within these comments. I welcome anyone to call me and establish a time for me to share this information in more detail.

My request is that the ONSR keep in mind the impact decisions have on kids within the district. I should not have to fight so hard to provide the same education for my students as others in the state provide with little or no fight to maintain funding. I am supportive of the ONSR. I do ask that you please advocate within your proposal to support the funding that should be provided without having to fight for it to support those impacted by federal property. Further, I do ask all who work for ONSR to remember to advocate at the federal level for my students by lobbying congress for consistent, dedicated financial support annually for PILT (although ONSR generates no PILT revenue) and Impact Aid for section 8002 Impact Aid Federal Property Schools. I look forward to working with you to support the ONSR and the Van Buren R-I School District.

Educationally,

Sonia Kuessner  
Van Buren R-I School Superintendent  
573-323-4281 EXT 7  
573-870-1016 (cell)

**Correspondence:** As a citizen of Missouri and one who very much enjoys our beautiful Ozark waterways, I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR).

I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I have submitted my opinion regarding the various plans proposed for the Scenic Rivers, and it was Plan A- -the most protection for the natural resource. I understand that it is important for people to be able to enjoy the outdoors so that they can appreciate the value and beauty of that resource. But if there is widespread degradation of that resource, it will not be available for future generations. Please plan and execute carefully.

**Correspondence:** I was born in Missouri from generations of native residents right here. I'm disturbed that the scenic riverways in Missouri are threatened. The general public is oblivious to the destruction they do to our delicate river ways and we rely on our Park System and the Corp of Engineers to stand strong to protect our national

treasure, the Ozark National Scenic Riverways.

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

**Correspondence:** I would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.

Shutting down 20 access points to the Current and Jacks Fork Rivers will have devastating effects on our community and our older folks. This Draft General Management Plan makes no economical sense or plain common sense.

This is another waste of our government money. This Plan sounds like it is part of the United Nations' Agenda 21. Confiscation of private property under the guise of "sustainability." These types of tyrannical gestures are being implemented all around our country. This Plan will seize private property basically on a whim, using "sustainability" as the excuse.

We just went through this all last year with the National Park Service and their "Blueways" Program. The National Park Service has done enough damage to our country giving Yellowstone National Park and other Parks to the United Nations. I'm beginning to wonder just what good the National Park Service is doing!

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan and prevent additional confiscation of private property and additional restrictions on our public lands. Thank you

**Correspondence:** 1. NFS needs to setup a series of educational meetings with local land owners to help them understand that this resource belongs to everybody and it is in their best interest to further these goals for their own local economy and future health of the rivers.

2. No outboard motors should be allowed to prevent erosion to the banks and safety of other canoers.
3. No ATV's should be allowed in the river or on gravel bars. There should be designated areas for ATV's.
4. No horseback riding in the river or in gravel bars. Designated horseback riding trails should be setup.

5. No overnight camping on gravel bars or sandbars. Designated camping areas should be setup were open fires are safe and fire rings available. A permit system instituted.

6. All trash must be carried out or deposited in available trash containers. Fines should be imposed for littering.

7. Only designated launching areas should be provided.

8. In order to limit the number and frequency of boats on the river at any one time, a permit system should be instituted for groups of five (5) or more canoes. This would reduce congestion at boat ramps and on the river.

9. BWI tickets should be issued to intoxicated individuals on the water. I would not recommend a no alcohol policy on the water, but intoxicated individuals and rowdy behavior should be a cited.

10. Designated stopping areas should be provided for lunch or picnic's with trash receptacles and pit toilets if possible.

**Correspondence:** I was born and raised in Eminence, Missouri. My entire life I grew up going to the river every day in the summer. My family and friends would go to Bluff Hole, Button Rock, the Eminence City Park and many other places to hang out and swim.

I grew up floating the Jacks Fork and Current Rivers in canoes and tubes. My Dad would and still does take us out in his john boat to fish at Two Rivers and other places. Gigging, during season, is also something I grew up doing and now my son goes out with my Dad and cousins when he is in Eminence visiting.

Many of my family members still live in Eminence. It is the place I will always call my home. I take my children there as much as possible. We spend many hours there in the summer and no trip is complete without going to the river to swim, fish or float. We will also go and visit the many springs, caves, campgrounds and picnic areas throughout the summer season.

The National Scenic Riverways are a vital part of the community and economy for a small little town like Eminence. The beauty of the area is unmatched, God placed his hand on that area and made it what it is today. He also placed it there to be enjoyed by all people whenever they wanted to.

I cannot imagine not being able to access the riverway any time or any where. I understand that they government wants to protect the river, but in doing so, you will be taking away the rights of people like me and my family to visit and enjoy them whenever I am able to come to Eminence.

The Jacks Fork and Current Rivers are so very important to me and my family. Please do not take away our right to use them and enjoy them. God gave them to us ALL.

Thank you and God Bless

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Thank you.

Of the many things that make me proud to be from Missouri, the National Scenic Riverways Park is at the top of the list. I have been floating, hiking, studying and enjoying the extraordinary and rare beauty of this place with my friends, family and students for over 40 years. Anyone who knows these areas realizes that in these rivers, caves, woodlands and riparian areas, we not only have precious state and national level resources, but also, without any exaggeration, world-class natural treasures. While thousands know and love them today, they remain relatively unknown at the national and global frames of reference. 16% o Shannon and Carter County jobs rest on these areas today, but that may one day be a fraction of the economic engine they create. Most of the story of how they will be understood, appreciated and used has yet to be written.

The Grand Canyon, and Pictured Rocks National Lakeshore, for example, were once vulnerable and in need of visionary stewardship. Today, places like these have not only entered the national and global consciousness and attracted visitors by the millions, but have enriched their local communities in ways that could not have been

imagined when the far-sighted plans for their protection and development were put in place. When the National Scenic Riverways were established, we took a giant step in that direction. Our current moment of decision for sustaining a balanced, wise and long-term vision for The National Scenic Riverways is every bit as important.

It will not be easy to put plans like these in place. The most important obstacle will be the pressure to yield to short-term, more local demands for plans that allow for increased uses with immediate economic benefit to the area. That is what we find presented in option "C." A fair, objective reading of the plan shows that the increased approaches to development it would allow will magnify the degradation we already see. In addition, the increased use would absolutely require significant increases in staffing, that at a time when staffing levels all already diminished. Personally, I would prefer the more environmentally conservative option "A" because I believe that it is impossible to put an economic and spiritual value on the planet's diminishing wilderness areas. And yet, in every age we have to find a way forward rooted in present demands and circumstances. That is why I support option "B," a plan that attempts a good faith balance between preservation and development. As in ages past, this decision will be made by those who hold the offices of public trust.

They should not listen to the loudest, angriest or even the most powerful voices, but to the voice of the deepest wisdom and judgment they can muster that emerges from reflection on the future as much as the present.

**Correspondence:** The Ozark National Scenic Riverways needs to be included in a comprehensive plan to protect this significant ecosystem against further degradation from auto roads, horse trails, dirt bike and 4-wheeler paths, mountain biking, illegal logging, motor boating and jet ski use, and overuse. The importance of this area to many species of birds, fish and other wildlife is not even in question, yet the failure of the National Park Service to protect the area from inappropriate use by powerful interests with no environmental protection in place is just plain unacceptable.

Please implement legislation and measures to restore this important and critical natural habitat to a healthy state so that the river can be removed from its current endangered status.

Thank you!  
David Mount

**Correspondence:** As a lifelong Missourian who has floated our Ozark rivers many times, I feel strongly that they are a fragile national treasure that should be protected by all means possible.

I support strong measures to prohibit all motorized vehicles in the vicinity, either on land or water. I also support protections against pollutions, new roads, or any incursions into the unique environment of the riverways.

Thank you very much for your stewardship of this fragile ecology.

**Correspondence:** I am a Missouri resident who has canoed both the Jack's Fork and Current Rivers. High motorized access was very distracting and bothersome during my fishing trips. Such unrestricted access will markedly increase erosion and damage these rivers. Jack's Fork and Current River are both beautiful rivers that can be enjoyed by all of us and future generations if we protect them. I strongly support Alternative A as the best option to insure the health of these vital state resources.

I also support full wilderness status for Big Spring.

Sincerely,  
Michael H. Bross

**Correspondence:** I very much support the National Park Service providing a high level of protection of natural & cultural resources, with some opportunity for visitors to float, canoe & kayak and ride bikes in the park. I would be somewhat reluctant to see expanded horse trails - as horses destroy trails more than bicycles. I believe some motorcycle trail use would be acceptable as long as they are well muffled (and perhaps limited to less than 900cc machines).

Overall though I wish the rivers would be mostly limited to paddling. Jet boats and jet skis, perhaps, could be limited to a few river sections.

But overall - let the Park Service have overall control to protect and limit this area as the professional staff desires. Also hunting & guns should be extremely limited in the park.

I would have liked to have gone to a public hearing and given the Park Service my support for their oversight & care.

**Correspondence:** It looks to me like your Plan B is the best of the offered options. Basically, you couldn't be too restrictive for my tastes. I consider the Current River vastly overused and abused and am adamantly against the use of large outboard motors on the entire river, but especially upper stretches. Bank and bed degradation are too seriously affected to be allowed.

Too many people seem to have no regard for the delicate balance of the river (e.g. macroinvertebrate life and food webs) to understand the need for careful use. More education along those lines would be a wonderful addition.

Abusive use of gravel bars is particularly egregious, too. I was very happy to see that you are going to be closing down many of the old unofficial access points.

If I could have my wishes, I would even like to see access from all points limited to a given number of permit bearers per day much like the system used in the Boundary Waters, but I know that is beyond your capabilities.

Thank you for taking these comments. I just hope that more weight will be given to the ideas of those who come from afar to enjoy the waterways than to those who have money to gain by being willing to abuse them.

**Correspondence:** Proposal A sounds the best. But if Alternative Proposal B is favored because it is a bit more of a compromise then I would support that. The most important thing is to keep our water systems preserved and pristine. I grew up on the Missouri rivers. We had canoes and would go canoeing and inner tubing and have picnic

lunches and go swimming and fishing on the Missouri rivers. Meramac, Big Piney, Little Piney, etc., etc. We ate the fish that my father, who was a fly fisherman(tied his own flies) caught. The best fish I've ever eaten in my life anywhere. We picked up trash on the banks of the rivers, piled the bags into the canoes and took it home with us. This was in the 70's. My daughter just did a project on the Cerulean Warbler for her class at UMC. I adore MO wild life! Saw a new born deer on a walk with my dog in early Fall. I support anything we can do to preserve it!!

Sincerely,

Celia A. Maness

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I want to express my support of better management of public use of the Ozark National Scenic Riverways.

Also, I feel that the "Alternative B" is the best alternative for best management of the Ozark National Scenic Riverways. I feel that the "Alternative B" would provide the best balance of recreational options while protecting the ONSR and would give best opportunities for public use.

The ONSR is an American gem, and can be for generations. Other "Alternative B" goals, such as restricting vehicles on gravel bars and likewise controlling horse trail use are moves in the right direction, and increasing staffing could go a long way toward protection of the area.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

I give my thanks to the National Park Service for considering better management of the ONSR.

**Correspondence:** I believe that the majority of the local population have a love and respect for our land and natural resources. There are those that disrespect all authority, be it tourist or locals but the majority of us who enjoy and love our rivers and springs do respect the land. We pick up trash left by visitors, we only drive on existing road ways. It makes me sad to see the parks grown up to the point you can only see the spring branches if you are crossing bridges. There used to be paths that led you along the branches that were maintained and you could see the streams clearly, now it looks like a brush thicket.

We enjoy floating, fishing, hiking, hunting and just enjoying nature.

As the NPS continues to block roads and accesses that have been there for decades, damage is done by locals and tourists alike attempting to gain access by driving around barriers. Before they used the roads to access these old camping sites, and river access for private floats. If the roads were maintained people would use them as it is much easier to drive in a road as opposed to driving through brush and thorn thickets. Damage to the land wouldn't happen as frequently if the roads and access points were left open. Again there are always a few who will do damage and act in a disrespectful way but they are not always locals.

Please allow the people who live in the area to have a say in what changes will be implemented instead of allowing special interest groups who have the financial backing to have a greater say because one assumes if someone has the funding they also have more knowledge. The attitude that the locals are not smart enough to care for our land is offensive. If you would listen to the real message behind the anger, the frustration of not being heard or considered when making decisions about our land and resources which affects us on a daily basis sometimes causes us to not express ourselves very well. We love the land. It is or was our heritage to hand down to our children but it was taken from us, for the good of all I suppose or for the majority. If further restrictions are implemented our town's economy will suffer even more. Restrict alcohol and drugs on the rivers. Don't restrict local residents from using our rivers and parks. Some residents of Shannon County actually have an education and are a lot more knowledgeable about nature than the employees from the City who have learned it all from a book. Thank you for reading this.

**Correspondence:**

The Ozark National Scenic Riverways-located within a globally significant Important Bird Area-provides vital habitat for hundreds of species of birds, including the Cerulean Warbler and the Swainson's Warbler.

Send a public comment to the National Park Service today and urge them to protect this critical habitat.

Take Action &€

Dear John,

The Ozark National Scenic Riverways is at the heart of the largest contiguous block of forest in the lower Midwest, and part of a globally significant Important Bird Area. But, decades of rampant proliferation of motor vehicles, motor boats, and horse trails on riverbanks, gravel bars, and throughout the waterways have resulted in erosion, sedimentation, pollution, and overcrowding-leading American Rivers to list the Ozark Riverways among its Ten Most Endangered Rivers in 2011.

Despite this degradation, powerful interests have prevented the National Park Service from improving the management of Riverways. The Park Service is proposing a new plan, and we have the opportunity to restore critical areas of the Riverways' precious ecosystems. Audubon and our coalition partners support "Alternative B" for a balanced approach to managing public use while preserving and restoring critical habitat.1 It's critical that people throughout our state make their voices heard in support of the new plan!

Follow the steps below to submit a public comment directly to the National Park Service. The deadline to comment is February 7.

- 1.Go to the Park Service's comment page (will open in a new window).
- 2.Fill in your contact information.
- 3.Copy the sample letter below and paste it into the "Comments" section. Feel free to edit the comments with your own words about why protecting the Ozark Riverways is important to you.
- 4.IMPORTANT: Let us know you sent a comment. This is the only way we have of knowing how many people are sending letters.

**Correspondence:** To whom it may interest:

Obviously, the NPS cannot legislate courteous behavior, so all discussion regarding the hillbillies and city folk are moot. The NPS can legislate to maintain the water and environmental quality within the riverways. If there is accurate, reproducible scientific data that proves the present plan is inadequate in maintaining environmental health, then changes need to be made. Changes are not required because twenty years have passed. The NPS is responsible for protection of the riverways and access by the citizens of our nation. If the access that is presently being exercised is causing irreparable damage, that access needs to be changed. Changes are not required because of lobby. The people of the Ozarks had ancestors that built a culture around the hills and waters. Living in the Ozarks includes smallmouth fishing and camping on gravel bars. Protecting a culture in many ways is as important as protecting the land. Land, rivers, people... all responsibilities of the US government.

**Correspondence:** This is a very exciting time for the Ozarks and the Current and Jacks Fork rivers as we have an opportunity to do the right thing and ensure that this area will continue to be protected from development and overuse. I really appreciate the opportunity to comment and thank you for all of the hard work and thought that has been put into developing this management plan. I love spending time in the Ozarks especially the area around the Current and Jacks Fork rivers. It is very unfortunate what the river has become on weekends especially from May-Sept. Something needs to be done about the overuse and degradation of these rivers, as it is not doing anyone or anything any good to be around these rivers during the fore mentioned time frame. I really enjoy spending time canoeing, kayaking, fishing, hunting, bird watching, camping, snorkeling, exploring, and nature observation along these great rivers.

I would like to see a limit on the number of boats that the concessionaires are able to put in on a given day. Limit the number of access points that can be used by these concessionaires on weekends during the busy season. It appears that a regulation like this is already in place on the popular Buffalo River in Arkansas. There is definitely a need to reduce the illegal access trails throughout the park as the amount of gravel and sediment washing into the river is a major concern, for all the animals that live in and around these rivers. I love the idea of turning the area around Big Spring into a Wilderness Area. With these things said I am in support of option A or B, but strongly oppose option C.

Thank you again for this opportunity to comment and I hope that whatever is best for the rivers is the decision that will be made, and we don't let special interest groups affect this special place.

If you have never read the book "Stars Upstream" by Leonard Hall you should as it is a great book about this area and what it used to look like back in the 1930's.

**Correspondence:** I have canoed the Jacks Fork and Current Rivers on and off for four decades. I've canoe the Meramec, Huzzah, and Courtois many times each year. I've seen what over us end lack of oversight can do to rivers. The rivers of The Ozarks are a precious resource and placing them under national protection was and is a good thing. I have studied the issue and prefer plan B, which I believe will reverse some of the environmental degradation and guarantee the beauty and uniqueness of this region remains for future generations to enjoy, while maintaining its economic vitality so essential for the local economies.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

I prefer Alternative B.

My family has enjoyed these waterways for years, and hope to enjoy them for many more. Plan B looks to me to provide the best alternative for securing these precious waterways for my grandchildren's grandchildren to enjoy. While also still providing the public "use" aspect my family has come to enjoy so much.

Thank you

Greg Samuel

**Correspondence:** Hello, my name is Stacy. I FULLY SUPPORT plan A and am adamantly IN FAVOR of the NEWLY DRAFTED GENERAL MANAGEMENT PLAN. My home is close to the Jacks Fork River near Buck Hollow and Jam Up Cave. I live on the National Scenic Riverways because of its natural treasure and PROTECTED beauty! PLEASE PROTECT THIS GLORIOUS NATURAL WONDER. The horse trail rides leave high levels of E-Coli Bacteria, Stafflocauccus, and other dangerous diseases in the rivers. People who camp, hike, and swim in and near the Ozark National Scenic Riverways do not go there to get sick. People go there because it is a SPECIAL PLACE, a SACRED GROUND. PLEASE keep it that way.

The opposers are GREEDY and SELFISH. They are ONLY concerned with their business or themselves. Those who oppose the management plan want to do whatever they want with no consequences. ETHICS are in order when Natural Ecology is at stake. WE MUST NOT LET THEM DAMAGE AND DESTROY THIS PROTECTED ECOSYSTEM!!! Special places like the Ozarks are disappearing. We cannot let that happen to this National Treasure. People come from all over the country to enjoy our rivers - their rivers. PLEASE KEEP IT NATURAL and SAFE for ALL VISITORS.

**Correspondence:** The Ozark National Scenic Riverways is at the heart of the largest contiguous block of forest in the lower Midwest, and part of a globally significant Important Bird Area. But, decades of rampant proliferation of motor vehicles, motor boats, and horse trails on riverbanks, gravel bars, and throughout the waterways have resulted in erosion, sedimentation, pollution, and overcrowding-leading American Rivers to list the Ozark Riverways among its Ten Most Endangered Rivers in 2011.

Despite this degradation, powerful interests have prevented the National Park Service from improving the management of Riverways. The Park Service is proposing a new plan, and we have the opportunity to restore critical areas of the Riverways' precious ecosystems. Audubon and our coalition partners support "Alternative B" for a balanced approach to managing public use while preserving and restoring critical habitat. It's critical that people throughout our state make their voices heard in support of the new plan!

Thank you for your time and consideration.

**Correspondence:** I was born and raised with the river as the backdrop to my childhood! Camping, floating, or simple just a visit to the river to skip rocks to pass the afternoon! Albeit that some of the suggestion that have been made in my opinion are spot on, many of them make me wonder what is the true goal of the endeavor. After reading the proposal it seems to me that the State of Missouri and the Federal Government realized that it wasn't profitting from the natural resource enough. Strong regulations will simple hurt the over all atmosphere that is brought on by simply letting nature be nature.

Eminence, MO depends on the river for much of its summer revenue and with these strong regulation that industry will simple dry up and will not exist.

I have seen the river very very low, and I have witnessed it in a severe flood state, but guess what that is nature.

We have laws and regulation right now on the books that are simple not being enforced, what makes anyone believe that new laws and regulations will some how be different, It will not! Alcohol on the river, is a problem, only because there is not a presence of authority to enforce such laws, which im am very sure that there is a law currently that would address this issue. Trash is in the same category, just enforce the current laws. Take the park rangers out of the offices and there trucks and put them on the river banks in high gathering areas, not only does there presence deter, but it would also educate those that have choosen to pertake in a activity on the river!

Motorized boats, now I'm a big support of doing away with this or at the very least minimizing the size of the engine greatly. If we don't someone will get hurt, killed, etc... and there is no requirement to have said engine checked for serviceability which could and does lead to oils and contaminates leaking into the water way.

Nature trails and such, in my opinion there are not enough, but the government doesn't need to be involved, make them apart of the Ozark trail system and let hikers and groups in the area help maintain these trails(Think A.P. Trail). Hiking has become a popular and great activity that requires little to no money to do. A Trail that runs along the river would be great, I for one would love to make that hike!

Campsites, not everyone considers a cleared off piece of land, with electricity and tiolet and showers next to the river camping, many people like my self like to camp very primitive and the impact to the environment is less, no tree need to be removed, no parking lots, no electricity, just nature, that is what the goal is right?

Don't just regulate, make it better for all, a natural resource like we have here is priceless, and shouldn't be a source of revenue for the government, let the people that are effected by the river make the decisions even if its not in the best interest of the government! I realize it takes money to provide park rangers, and trail crews and such, but if you continue to regulate this more and more, less and less people will be there to see what you have tried to save!

Concerned:: J.P.

**Correspondence:** The increase in unofficial road access to the river needs to be stopped.  
ATV use on gravel bars needs to be curtailed.

Horse trails need to be routed away from the water to help with lowering E. coli loads in the water.

Ecotourism is vitally important to this area. If the water quality and river banks/gravel bars continue to deteriorate, this will discourage visitors from coming to the park, and the whole community loses income.

Rules already in place need to be strictly enforced.

Overuse is a problem; people can love a place to death.

I am in favor of Plan A, to protect the river for all citizens to use, and for future generations to still have a truly scenic, natural river to enjoy.

**Correspondence:** The very Worst thing we can do to the Ozark Scenic Riverways is to do nothing.

The situation has been getting worse with every passing year.

The option "A" plan is the best, but even that doesn't go far enough.

Getting trucks and ATV's off the gravel-bars makes good sense.

Keeping horse waste out of the water, of course, is a public health issue.

Severe limits on powerboats have been overdue for decades.

They are a danger to canoes, and erode the shoreline to the detriment of fish reproduction.

A total ban on radios and "boom-boxes" should be considered.

That awful noise travels down the river for long distances.

( These days, with so many devises, using earphones shouldn't be a burden. )

Truth be told, the local population has overused this national resource.

They treat some gravel bars like it was their own back yard, or worse.

By the middle of Summer, parts of the Riverways begin to look like Dogpatch.

We've seen locals poach under-sized fish, and bait turkeys with shell-corn.

( You know darn well that the population of wild horses in the Riverways doesn't increase because the local yokels capture the colts and sell them. )

One great way to benefit the Riverways would be to ban the use of minnows or crawdads as bait.

It's probably the best way to stop the local motorboat crowd from poaching.

They zoom to a hole, tie off on a snag, drop minnows straight down, pull out 10 inch Bass, and drive off.

We've seen it, and many others have seen it. It's about time it stopped.

Bass populations, and Goggle-eye populations, are low because the locals Eat Them!

Try an "Artificial's Only" policy for three years and watch the fishing become wonderful again!

It would be difficult to enforce a limit on beer, but it should be considered.

One six pack per adult per float., and No hard liquor at all ... period.

We've seen groups on the water at 10 AM, drunk as skunks, and "yahooing" at the top of their lungs.

Excessive noise, of any kind, should be forbidden, or at least strongly discouraged.

Thanks for your time and attention.

**Correspondence:** Ozark National Scenic Riverways Draft General Management Plan

Ladies and Gentlemen,

The Current and Jacks Fork Scenic Riverways is at risk from the following threats: 1. Unrestricted equestrian activity that leaves the rivers polluted with horse manure and effluent. 2. Unrestricted ATV activity by people who don't respect the rights of others using the rivers. 3. Illegal roads put in, sometimes with the consent and help of local county officials, who think that the rivers are owned by them and who hate everything "federal".

This has got to stop. Unrestrained use of these rivers will destroy the essence of this national treasure. These illegal uses flaunt the very purpose of the scenic rivers designation and is very bad for the biological characteristics of this precious environment.

Please adopt a management plan that protects this treasure.

Jim Fossard

**Correspondence:** I have enjoyed the quiet, natural surroundings of the Ozark riverways - by canoe and on foot. Mountain biking on hiking trails would remove some of the peacefulness of this area. In addition, the erosion of the precious topsoil from these trails may lead to degradation of this area. I am myself an avid bicyclist - but keep to the roads rather than the dirt. I hope you will find ways to encourage bicyclists on the roads near and within the riverways area while keeping the hiking trails for those on foot.

**Correspondence:** My wife and I own 80 acres of timber accessible from the road that goes to Cave Spring on the Current.

Unfortunately today 1-30-2014 is the first I have heard of this proposed change to the Riverway. I agree that this beautiful natural resource could easily be "loved" to death. I have seen some examples of this in Colorado.

Unfortunately I have not seen any maps or read of your intentions as to which roads you intend to close so I can only ask that you not close the access to our property.

Otherwise from the little I have read on this web-site I would support Alternative B.

If possible could you send me by USPS any maps or information that could be helpfull to me in understanding your proposals.

Thank you for your service,

Patrick F Murphy

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** Fully recognizing that preserving or encouraging "biodiversity" is (or should be) a very important emphasis in our country that has so reduced the country's once much more abundant biodiversity, I can only encourage the Park Service to favor your PLAN ALTERNATIVE A.

Obviously, lobbying interest groups and people are favoring more "motorized access". You indicate a difference of 50% nn-motorized (Plan A) to 30% nn-motorized (Plan B). 30% is still a lot of motorized access. The country is already recognizably in the sad health state of "epidemic" obesity/Type II diabetes. We got to this sad state because of following the most comfortable path...and many do not want to "let go".

On "Wilderness Designation" the two plans differ by 26.8% (lan A) and 16.4% (lan B). Even 26.8% is not that large a percentage! 40%..50%..that's a large percentage. Not 26.8%. Again, to increase the much dwindled biodiversity of our nation should be given priority. This is Plan A; not Plan B.

As a fine example and analogy, the Park Service might remember how the State of Oregon put all of its Pacific coastline under protection for the future use of our people...maybe not in "wilderness protective status"...but protected under the correct concept of aiding preservation of biodiversity. Compare it to the Coast line of California and Washington!!

Thank you for listening...

**Correspondence:** I've enjoyed these streams my entire life and am squarely in the camp of Alternative "A". I am the President of the Mill Creek Watershed coalition and our board, members and related constituents feel the same way. I also hunt (turkey)and fish (a lot). With regards to the latter, I'm a member of the Ozark Fly Fishers, Trout Unlimited, The International Federation of Fly Fishers and Project Healing Waters.

As described in the summary, this is what we want:

"Management would emphasize greater opportunities for traditional, non-mechanized forms of recreation and visitor experiences that are quieter, less crowded, and slower paced."

This makes by far the most sense. More development of any kind could get us down a slippery slope. I'm against "B" and "C"

Respectfully submitted

James K Marstiller

**Correspondence:** I grew up in St. Louis Missouri and spend a good deal of my youth on the Current River and in the surrounding Ozark National Scenic Riverways. While I live out of the area now, I am deeply concerned for this place that I know and love. I am also a professional planner (AICP) by trade and am familiar with the process that has been conducted. I know how difficult this project must have been with such divergent viewpoints. My last visit to the Current River a few years back was a good one which involved travelling an 18 mile section of the river by canoe. I was stunned that the river had become so crowded and could see the visible impacts to the landscape resulting from recreational overuse of this resource. While philosophically, I tend to support alternative A, I also understand the concerns of locals and those seeking to recreate in other ways. I feel that the planners involved in the preparation of this EIS have done a sufficient job in balancing these competing interests in the preferred alternative B. Alternative C as well as the no action alternatives are options that I cannot support.

While I would prefer to see implementation of Alternative A, I feel this option doesn't balance all interests in the same way the Alternative B does. I therefore offer my support of the preferred alternative B. Alternative B provides for a wide array of uses without significantly overusing this natural resource.

**Correspondence:** Please protect birds and animals and their habitat, especially at the oz ark scenic rivers. Many people have worked hard to protect this amazing part of the United States. I will be glad to assist the park service in saving this beautiful areas. We have camped and canoed the for over 50 years before private canoe concessions , horse people and others ready to make a buck for their own personal needs. ATF, private canoeist are forgetting about their footprint. Please tighten the footprint of man to save the area for our children.

Let me know what I can do to help.

**Correspondence:** It is hard for me to express my concern and love for the Jacks Fork and the Current River. My husband and I have been visiting this beautiful area for forty years. We remember there being quilt demonstrations at the Powder Mill Ferry area and the blacksmith showing off his trade at the old barn on the road to the gravel bar across from Blue Springs. We remember Eminence being quite the little quaint town with a lot of shops to browse in and find local art. We are avid paddlers but appreciate the fact that locals like to socialize on the river in their jet boats. They have always been courteous as we have been to them. A few years back, we had the opportunity to camp at Two Rivers and watch them go up and down the river snagging fish in the dark. Everyone fried up their catch and walked up and down the river sharing food and stories. It was a look back into the past. I don't want to see this go away because of a lot of rules and regulations being imposed on the people whose ancestors settled this area and kept it the way it is for now. I have seen families return to the river once kegs, jello shots and etc were banned from the waterways.

Have you every heard of Gene Goforth? He lived up the hollar where the Jacks and Current come together. He was a famous old-time fiddler and I was fortunate to know him before he passed away. Ask anyone that loves Bluegrass and they will know who he was.

So, I guess I want to say - don't take everything away from the locals. Bring back some of the history for visitors to enjoy. This region is such a gift and I don't want to see the city folks make the decisions.

**Correspondence:** Dear Sirs:

I have been leading weekend backpacking trips into the Big Creek and Brushy Creek valleys for the past 42 years. Big Creek is mostly in Pioneer Forest and is an undeveloped valley, which is accessed by Shannon County Road 250 which runs perpendicular to that creek and is about about six miles north of the Current River where Road 250 crosses Big Creek. The groups I lead are students from John Burroughs High School, which is located in St. Louis. The groups range in size from 7 to 10 high school students. We usually backpack cross country covering about 6 miles per day and spend two or three nights in the Big Creek and Brushy Creek Drainage area. I take groups into this area about three times during each school year in all types of weather. The purpose of these trips is to teach the students self-reliance, basic wilderness camping skills, and to educate them about conservation issues in Missouri.

When I first started leading these backpacking trips into the Big Creek Valley in the early 1970's, the group never encountered anyone, with the exception of a lone walk-in fisherman or a pair of hunters from time to time. Over the decades, the gravel bars started to gained lots of vegetation, which was healthy. But, in the 1990's, I and the students started to see a significant change in the valley itself. On about 70% o our trips into Big Creek, we encountered groups of ATV's (2 to 4 vehicles at a time) driving through the creek and "cutting" tails through the vegetation on the gravel bars. These newly "cut" tails ran from Shannon County Road 250 right down to the confluence of Big Creek and the Current, which is about seven miles of meandering creek. This intrusion of ATV's in Big Creek and its gravel bars has damaged the ecology of the creek and made the area much less "wild" or remote.

The National Park Service is not properly funded by us citizen. But, the Park Service has accomplished a good job of trying to protect the Current River during the past decades even in the face of inadequate funding. I know the NPS has teamed up with some Missouri State agencies to try to police the Roger Pryor Back Country, which includes much of Big Creek and some of the Current. I and my students encourage you to work hard to close all the illegal roads that lead to the Current. Big Creek is a valley worth policing and protecting. ATV's should not be in

Big Creek Valley or on the delightful gravel bar at Big Creek's confluence with the Current. In fact, there are many Shannon County gravel roads already existing on the ridges of Pioneer Forest and near Big Creek and the Current that provide fine places for ATV's to legally operate. Please police and close illegal ATV trails and "roads" leading to the Current River.

Since so many people want to use the area around the Current River, the NPS must establish usage rules, however unpopular, in order to protect this rich, natural, area of Missouri. I support Alternative A, in the management plan. I also realize that I need to work to get Congress to better fund the NPS so it can properly implement its management rules.

I would like to thank the NPS for working so hard to protect the Current River and for allowing me to share my views.

Sincerely,

Eric A. Hanson

**Correspondence:** Subject of boat motors - Unlimited motor size can interfere with others enjoyment of the park. No motors is way to extreme in some areas such as below the bridge at Van Buren. Limit the size to 40 HP is sufficient for boaters to get up and down the river without fear of interfering with the floaters, fisherman, etc.

Also, gigging is something that needs to be preserved. Upper river areas where the motors would be taken out, why not allow them only at night? Preserving the rich heritage of gigging in that area.

Subject of horses - Horses are natural to be at the river. Horses by the 1,000's are not. I am not in favor of not allowing any horses. But, I don't have the solution of how to control the overrun during the trail rides.

**Correspondence:** My families Heritage along the Current and Jacks Fork River far outdates the takeover by the National Park Service. We have hunted, fished, camped, boated,swam and explored all over the area. We know all the old home places of family and friends, and the cemeteries where these Family Members now rest along both Rivers.  
Over the years we witnessed the increasing influx of people coming to see this area for themselves, either by canoe, Kayak or Horseback. We all share the same wonder in this beautiful stretch of Land. We have seen the population increase from people who visited the area and chose to remain because of the Natural Beauty. We have seen many Businesses boom as a result of the increase in tourism. The economic upswing due to this tourism is apparent from Salem to Van Buren.

When the Riverways were converted from Private to Public Lands our Grandparents were told that it would be managed for all people to enjoy. It seems that the longer it is managed by the NPS, the less accessible it has become. We have lived through many threats to our use of the Land, from the Biosphere to the White River Drainage. Favorite Gravel Bars that have been used by several generations of Families are closed overnight with no notice. Old Roads are closed off. We are being slowly squeezed out of the area, to what end? What benefit is achieved by closing off the Riverways to its visitors and turning it into a Wilderness Area, which appears to be the long term goal of the NPS?

The only option presented in the Draft General Management Plan that my family can support is the No-Action Alternative.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I read the article in the Post. THE Ozark National Riverways are like any other National Park. It does not belong to some one living in Sullivan more than someone in Kansas City or Wyoming. THE Parks are for all of us. The river takes abuse over the weekends with all the drunks. I have floated those rivers since the 60's when I was a teenager sleeping on the sand bars.

Do what you have to do to keep the national treasure for generations to come. It belongs to future National Park users too.

Sincerely,

Marianne Stuart

**Correspondence:** Hello, I think it is very important to try to preserve rivers and woods as close to their natural state as possible. Therefore, I think that motorized vehicles (ATVs, motorboats, jet boats, etc.) should be prohibited in our national and state parks. Specifically, no motorized equipment should be allowed in the rivers or in the woods. The use of ATVs, cars, etc. causes trails to be cut through the forest, which allows more and more vehicles to drive through the woods. And the use of motorized boats on the rivers damages the rivers. Please forbid these motorized vehicles and boats in national and state parks. Thank you.

**Correspondence:** The ONSR's location is important to birdlife and is an Audubon Important Bird Area, as well as has special status with the Missouri Conservation Department. We all must do what we can to maintain the quality of our rivers and streams and prevent erosion and pollution. My view is that although plan A would be ideal, the NPS preferred plan B would also be agreeable. My request is that land based motor vehicles be regulated to protect the health of the streambed and the plants. Also, the motorized boating traffic will need to be regulated to protect the safety of non-motorized boaters, and reduce pollution, both noise and chemical. Non official trails should be allowed to return to natural vegetative state. However, you may want to consider some of these unofficial trails as public input into future official trails.

I suggest you develop a policy regarding the non-native plant species, particularly the invasive species like Asian honeysuckle. Over time, the exotics should be removed, and the native species allowed to return, with some native plantings as needed. This activity should take place in all areas of the park: in wilderness, hiking areas, shorelines and also around more people centric areas. St Louis County is partnering with the STL Audubon Society and the MO Dept of Conservation to improve habitat in high priority sites in some County Parks. Hopefully you will seek partnership with interested conservation organizations.

The education focus of the plan is much needed. The younger people in the country are less exposed to nature, and their recreation is more electronic and sedentary. They could grow up, if we're not careful, as voters who do not value wildlife and wild lands.

Thank you for developing the plan alternatives and being careful to involve the public. I am disappointed that I was unable to attend the meeting at Powder Valley because when I got there at 6PM, the parking lot was already full, and my health status did not permit me to walk up from Craigwold road. I do know a person who was able to attend, and she shared with me the paperwork that she obtained. Best wishes for successful implementation.

**Correspondence:** I am in support of the "no action alternative."

Reasons:

- I am disabled. Walking is difficult. I need to be able to drive onto the gravel bar (Log Yard) to camp.
- Camping on the gravel bar is awesome. Seeing and hearing the river is a large part of the camping experience.
- Every now and then, I have been down on the river when reckless people have disrespected the gravel bar. I always leave the campsite better than I found it. I have even paid a couple of youth to pick-up trash from reckless people. I should not be penalized for the few.
- There are currently rules that are not enforced because of a lack of personnel/finances. How are additional rules going to be enforced?
- All trash cans and picnic tables were removed from the gravel bar. I do not need them to have an awesome camping experience. I use the dumpster for my trash and am greatly appreciative of the outhouse.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Thank you for taking time to submit a public comment. Please help us spread the word by sharing this message using the "Share this alert" buttons below.

Sincerely,

Lisa C. Berger, M.S.

**Correspondence:** Firstly - - I'd like to keep my email private. Please do not share.

Secondly, I am for Plan A first with Plan B second. Plan C is totally inappropriate for the area.

This link is one reason why I am completely opposed to jet boats on the ONSR:  
<http://www.kayakfishmag.com/news/conviction-of-kid-kayak-angler-killer-nears-appeal/>

Jet boats are inappropriate for the OSNR and they KILL.

Fishing boats are cool. So are horses as long as the horse lovers help with upkeep of the trails they use.

Thank you for your time.

**Correspondence:** I would like to voice my support of the Alternative B plan for OSNR. This plan presents a nice balance between preserving the integrity of the exceptional natural scenery and resources that the Current and Jacks Fork river valleys provide and access by the public to enjoy these wonderful resources. There currently is too much noise and pollution from vehicular/ORV and motor boat traffic and too many undesignated horse trails across both rivers. These unauthorized vehicles and undesignated horse trails severely erode river banks, endangering both natural resources and archaeological resources.

**Correspondence:** I will start by saying that Option C is unconscionable. The National Park Service should not be in the business of destroying the National Parks. This goes against their mission and should not be considered further. It is appreciated, however, that the study would consider a variety of options.

After looking at Option A and B, I am looking for ways to differentiate the two. It seems that the preferred option (Option B) has a number of positive attributes. I strongly support the wilderness designation status of Big Spring. Option A has even more positive attributes and does a better job of sticking to the National Park Service mission of preserving unimpaired the natural and cultural resources and values of the national park system.

I grew up canoeing on the Current and Jack's Forks rivers and have many fond memories of the peace found there. The thought of cars appearing on the gravel bars disturbs my memory and my view of what those areas can and should be. I understand that there are many ways to enjoy the outdoors and nature, but I think that in this instance Option A does the most for this area to preserve the wilderness and protect the rivers.

Thank you for allowing public comment, but I hope in the end the National Park Service will do what is best for the wilderness and the rivers rather than business or themselves.

Option A is the right choice to achieve that.

**Correspondence:** I am not totally against motors on the current river. What I am against is jet boaters speeding top speed up and down the river. What about "wilderness" includes these, often drunken, speed jockeys putting everyone's life in danger?

When we boat the river we're not afraid of rapids, snakes, animals.....we are afraid that the jet boat coming upriver at 30 mph doesn't see us, or is drunk and distracted.

On a quiet, peaceful morning, when one is enjoying a true nature getting-away-from-it-all experience, you hear the drone far away coming upriver, and immediately know what it is and you wait for it with dread.

A 10 horsepower motor will get you to ANY site on the river you want to go to within an hour, if you select the right access. This is not imposing "restrictions" on anyone, it leaves the river to be enjoyed by the disabled as well as fishermen.

And the argument that they provide safety and "save" people???? Do we have ANY recorded instance of such an event? At best they are saving each other when they collide. Nor do I doubt that someday they will be taking a swimmer or a canoer that THEY have injured. That argument is totally lame.

I implore you to consider 10 hp limit on engines. Can't there be just ONE area where speed is not the primary concern? Can't there be just one area where you can navigate without fearing for your life?

**Correspondence:** I think the NPS should take no action on this. It is not the boaters and campers, if you want to clean up the river maybe you should look at all the tubers that float it weekly. I can not even begin to tell you how much trash WE have picked up from them. They are from out of town, they come once a year and they don't care how they leave it. My family loves current river, we love taking the boat and we love camping on gravel bars. We leave everything just as we found it and we enjoy our family time together at our favorite place. YOU should not punish us for doing recreation the right way and cleaning up after the people who don't do it right. You should cut the number of tubers and raft floaters and then if you don't see any improvement then consider alternate routes. But starting off with punishing the locals is WRONG!!!!

**Correspondence:** Please consider limiting the horse power on our rivers that are in question in this debate. Recreation spots for people wishing to go fast and make loud noise is not very limited in Missouri what with the lakes a rivers already allowing access.

There needs to be places where other recreational users need not fear getting hit by jet skies.

Lets really consider if the jet ski and jet boat users really have the local economy and environment at the core of their desires.

Thank you.

**Correspondence:** I would ask that you please move forward with either plan A or B. A horsepower limit on boats for this river is very important I feel as well. I understand that people would like to use motorized crafts on the rivers and this is fine, but within reason. Nobody needs to go 30 mph and put at risk the safety of those with human powered crafts on such a small stream, especially the upper reaches of these rivers.

I have enjoyed floating down the Current river for years now and would like to continue to do so. Without regulation on motorized crafts however, I'm not sure that I would have the same desire to come visit.

Sincerely,

Raymond Brugger

**Correspondence:** Dear NPS-

While I currently reside in Idaho, I grew up in Missouri. My first introduction to Ozark National Scenic Riverways (ONSR) occurred while I was attending college in Springfield, MO. This very first trip instilled in me a passion and love for nature that I had never before experienced nor to this day forgotten. After college I got a part-time job outside of Ellington, MO and was able to spend much more time in ONSR, become further enriched with each trip. I hope one day to return to this area with my daughter so she can reap the same benefits (or at least have the opportunity to experience them).

This area is truly the crown jewel of the state of Missouri and I believe the most stringent steps should be taken to protect it (i.e. Plan A).

While I understand some of the "local" resentment from those who live closest to the park and would like to do as they wish with impunity, that is not a sustainable path for this "jewel". If the area was not given protection years ago (in 1964), it would be unrecognizable even today. National Parks are for EVERYONE. God isn't making anymore land so do yourself a favor and give this stunning jewel the protection it deserves.

Thank you for the opportunity to respond,

John C. Timpone

<b>Correspondence:</b>	As a wildlife biologist, I strongly believe that the Ozark National Scenic Riverways is in urgent need of improved management.				

The Riverways are in danger, and need much stronger protection.

Alternative B should be adopted. It increases opportunities for visitor education and enjoyment, while also providing for crucial restoration of currently abused and degraded areas that should not have ATV access. It importantly promotes science-based ecological protections by enhancing preservation, research and monitoring.

The ONSR is an irreplaceable American treasure. It is one of the most beautiful and environmentally fragile areas of our state. Access to and enjoyment of the ONSR is a right of current AND future generations.

Please adopt Alternative B. It is an important step toward much-needed protection of a precious natural area.

**Correspondence:** To Whom it May Concern:

I have lived in the Ozarks for over 40 years and am appalled to watch the continuing decline of protection for our NATURAL RESOURCES by NPS. I have given 7 months of volunteering to these waterways and over 5,000 volunteer hours beyond that. I have watched and listened to your employees expound that protecting these natural resources is YOUR FIRST RESPONSIBILITY and yet you allow the liberal behavior of destruction to abound in, on and along these waterways for the 'pleasure' of reprehensible and irresponsible citizens - many that are blatantly breaking civil laws. YOU have been given, and have taken on, the responsibility to charter courses that would protect all of our NATURAL RESOURCES for their own health and well-being and for future generations (my children and grandchildren!) to also enjoy RESPONSIBLY!

I am writing in SUPPORT of the BEST MANAGEMENT of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued RESPONSIBLE public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. We need to find ways to both live up to and preserve our name and heritage as "The Natural State". I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

To whom it may concern,

I was raised on Current River until the Park Service FORCED us out! Our house burned in May 1969. It looked a lot better back then but it's all grown up now.

We enjoy our motor boats and canoes. We are on the river all summer long from Akers Ferry down to Round Springs. I am 65 years old I grew up on this river. I cannot ride in a canoe anymore. We pick up trash along the river and help with stranded canoes and assist with first aid if needed.

I attended the meeting in Kirkwood, MO on January 22, 2014. In my opinion, the Sierra Club has no right telling the property owners that pay taxes along or near the river how to live.

Current River is open to the public and welcomes visitors. But visitors need to respect the river and property owners too. Just as if anyone would visit another country and didn't like it then they wouldn't go back. You cannot force the culture to change, so why try to force the culture on Current River or anywhere in AMERICA!

We enjoy our motor boats, fishing, gigging, swimming, floating and sitting on the gravel bar watching canoes float down the river. The Sierra Club is entitled to their opinion and this is mine!

MARY SNYDER  
Property Owner  
Tax Payer  
Family History on Current River

**Correspondence:** Please support and enact Alternative B because it:

Provides for diversity of use while protecting the fragile ecosystem of the ONSR and reduces ecosystem damage by restoring miles of undesignated roads to natural conditions.

Adding trails permit visitors to see the parks natural resources without damaging them, and permits biologists and others easier access for monitoring and research.

The ONSR is a precious and priceless resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens.

Make sure that our generations legacy is one of preservation of our world for the future, not of destructive exploitation, greed, waste or apathy.

Respectfully  
Regina A Faulkner

**Correspondence:** Hello,

My name is Jacob Titus age 24 from Eminence Missouri where I have lived for my entire life.

Over the years I have been around the national parks quite often, worked around and with the park service, and enjoyed many of the recreational opportunities in witch this lovely area has to offer,I do appreciate some things that the NPS has done for the community giving people job opportunities and what not, however I strongly believe that in your efforts to help manage and maintain the Parks you have did more damage than good, I've laid witness to

many different examples of mismanagement in which I speak of but the main and most important thing in the area that has suffered and is considerably noticeable is the condition of the Jacks Fork and Current Rivers, I'm only 24 and I can tell a major difference in the river Condition since the park was established in the are and I know many people older than me that can tell you the same thing, River levels continue to drop every year, the water is still there but its all under the gravel that keeps piling up that nobody is allowed to touch anymore, seems like mismanagement to me.

I own a Jon boat and a canoe in which I truly enjoy using as much as I possibly can, I have many friends and family that also like to enjoy these activities just as we have for years, and hope to be able to continue to enjoy for years to come, I can only speak for the locals when i say that at 99% o people who live near this area that use the rivers for recreational/ personal use love and respect the area religiously, Often picking up trash that doesn't belong to them, and never damaging the environment or leaving anything behind unlike many(not all) of the tourist that seem to treat the area more like a theme park than the beautiful ecosystem that it is.

It is to my understanding that your goal is to downgrade the horsepower size of the Motor Boats or Eliminate the use of Boats completely, well I am hear to say that that would be a huge mistake, not only would this cause a massive disturbance in the community but it would lay refuge to many local businesses that make a lot of there income from boat owners also eventually having a impact on floaters because a good majority of river management management can not be accomplished with out the use of boats, so my proposal is that you simply think hard about what your fixing to do and effect by the actions stated in your new management plan, your liable to do more damage than good.. Again

<b>Correspondence:</b>	To Whom It May Concern:				

Your offices, indeed all of Watercress National Park, is on land once owned by my family. From the time that the english speaking settlers first started stealing or buying land from the indians, no one has "owned" that land but the Mingo Indians, my family, and the U.S. Government.

You would not have job here if my grandmother, Maxine Hogan, and her sisters Dorothy and Eleanor, had not sold the land back to the Government.

Before her death on January 27, 2002, Maxine told me how much she regretted selling the land back to the government, in order that Watercress National Park could be established. She told me that they sold the land back to the government so that a park could be made here. They wanted the park to be made here so that all the LOCAL people could enjoy the river. They did not sell the land to the government so that it could be mismanage for the benefit of drunks and drug abusing idiots who pee and deficate in the water.

As far as I can tell your plans do not dramatically increase the law enforcement presence on the river.

As far as I can tell your plans do not provide sanitary rest rooms along the river banks so that floaters can have an alternative to peeing in the water.

As far as I can tell your plans do not do enough to dramatically reduce the number of tubers and canoeists on the river nor deal with the trash they leave behind.

As far as I can tell your plans do nothing to stop the flow of alcohol and other drugs on the river, nor the party barges of tubes/canoes tied together for the benefit of the drunks dancing nakid in them.

None of your plans do enough. Throw them away and start over with a committee of local people. LISTEN TO US!!! Maybe then you will get it right....

**Correspondence:** I believe that no changes would be the best form of action. I believe that we do need park service around to control some things, but I do not believe that the locals that do help to keep this area clean should be restricted from the river usage. I do not personally own a boat but I do use one on the river quite often when I get a chance to take my kids fishing and boat riding and I believe that this part of our heritage should remain so that our kids can take their kids out and do the same things. I know people who camp at the jerktail landing quite a bit that have put up signs to get people to help keep it clean. I have also personally helped clean up the area as well. I think that we could try to get people involved in a river clean up every year around labor day. Some would need incentive to do so but I would help out in any way that I could if I were home. I think this would be a good way to create more of a bond between the locals and the park service. Whether you take the clean up into consideration or not we will be trying to do that even if we only get one boat every little bit helps. But if you take the rivers away from us then there will undoubtedly be very few people who would consider attending and helping with something like that and I do not think that the people who floated the river for one weekend would be willing to come clean up the rivers that they cannot see from the city. Thank you for your time and consideration, and I really hope that you can help us locals out that enjoy the river all year round.

**Correspondence:** I am in favor of Plan A. I would lean toward Plan N but the jet boat coalition is out of control, as are the party people. I believe in shared usage but I no longer feel comfortable on these rivers due to the drunken disorderly conduct and the influx of high speed jet boats. ATVs do not need to be able to run on gravel bars or in the river. Yes, I have seen them in the river.

Jet boats do not slow for non motorized boats. I used to take young children in kayaks - I was terrified they would be run over or flip from the extreme wakes.

There is very little land or water left in MO that is not logged, polluted, over run with jet boats, ATVs and drunks. The rules of the National Scenic Waterway rules have NOT been enforced.

There is room for all, but be respectful. Jet boats should be restricted to 10 mph - if allowed at all. Jet boats do not rescue others in need - they cause accidents! Out of state jet boaters come to MO because their behavior is illegal in there states (IL is a prime example).

Drunken disorderly should be fined or in extreme cases arrested. RAFTS should be banned outright. Yes this is an extreme view but rafters are there to party, not enjoy the outdoors. I know rafts can't be banned, but my frustration with the problems on the river has me becoming extreme. I would love to be able to float these streams again, with family, and not have to worry about drunks yelling obscenities, exposing themselves and harassing our group. These rivers have become the go to place for drunken parties - not the intent of a National Scenic Waterway.

I could not get in to the Powder Valley open house - not sure who was responsible for having people turned away. I am quoting from several friends who did attend:

The actions of the jet boat community at the Scenic Riverways open houses demonstrates a need for the NPS to limit their access and size of their motors on the Current and Jack's Fork rivers. They arrived early at the Powder Valley open house with boat trailers and proceeded to park them at a diagonal, some of them taking up 6 parking spots. They then proceeded to shout over comments people were trying to make. When one attendee asked them to explain their sign "Sierra Club drowns people", five jet boaters verbally attacked him. They never explained their sign. Also, one friend was told "they would never listen to someone in a Patagonia jacket." This friend is an avid outdoorsman and conservation minded.

Please preserve our wilderness areas for the future.

Please try to withhold my personal identifying information. I realize this may not be possible.

**Correspondence:** I am writing in support of better management of public use of ONSR. I believe the Riverways'fragile ecosystems should be protected, while ensuring continued public enjoyment and use. From among the reasonable alternatives for better management of ONSR, I select Alternative B because it:

- . Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- . Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features;
- . Restores miles of undesignated roads to natural conditions;
- . Establishes a new visitor learning center and restores historic structures;
- . Strengthens research and monitoring of preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and fragile areas of our state, which should be managed for the enjoyment of current and future generations.

I am grateful to NPS for taking this important step towards better management of this nationally significant natural resource.

**Correspondence:** My name is Bryler Droste I am a 16 year old junior in my environmental science class and, I am interested in the management of the Ozark National Scenic Rivers because I have recently read about a lot of problems or complaints you guys have had in the last year or two. I believe you should take those into consideration and try to do something about it!

I understand that people take their horses around in the river and like to drink and act crazy but the high population of people and animals in the river can cause a lot of problems. For example let's say I was taking a trip down that down to go fishing because I wanted to try out new fishing spots, the capability of fishing in the areas prior to the activities that go on in the rivers would be very difficult. All of the fish and other living things in the water would migrate to a different area or maybe even a different river. That would make the population go down a lot. I strongly agree that you need to organize your rivers more fashionably. I am not trying to put hatred on the management or business but I have been on many float trips in the Merrimac River and have never once witnessed a problem like yours. Yes there is obsessive drinking and I have seen nudity but that is the only main issue. On the float trips I have been on people respect the people around them and try to be friendly with them. They realize they are on the river to float and enjoy their time, if they see someone trying to fish they are not going to get out of their canoe or raft and go cause problems to that person. Also they have a rule In the Merrimac to where if you're drinking your drinks have to be in a huggie and you must have a bag to throw your trash in, you will very rarely see trash floating around in the river, because they respect their rules.

That is why I think you should improve the rules and management you have on the river, because I enjoy going and hanging out in the rivers on float trips and what not, I am sure a bunch of other people could agree with me on this.

**Correspondence:** I have read the plan online and am writing in support of ALTERNAYIVE C.

I have fully participated in several management plans on the Buffalo National River and Ozark National Forest so I am speaking from experience and with a longer look at the results of these kinds of alternatives than most have.

I fully support horseback riding and the horse trails. I support more hiking and short trails for birders and historic places. Visitorship at our parks is declining and we need to develop more support for our parks. AS less people use them support for things like funding, creating new parks and acquiring new land wanes. If these parks do not meet the need for recreation just locking them up will only decrease support and lead to more problems with our parks.

Even the alt. b is too restrictive. It will have an impact on visitor use too much. Everyone is not out to canoe, hike or ride and never see another soul out there. That is living in fairy tale land and not realistic during peak times. Sure those who want that experience can make their plans accordingly. They can go to out of the way , less popular places , or off season. I rode on the buffalo recently after an Ice storm. I saw nobody, even in the front country areas.

Finally I am opposed to adding to the wilderness system. Call some piece of land a wilderness area and everyone wants to go there. I feel it has an adverse impact not a positive one. Additionally the management becomes a problem in certain areas. I speak from experience. Ponca wilderness here, got used much more after designation than before. Rescues are difficult and frequent because of the canoe pressure. Trail and repair was almost impossible after the ice storm due to regulations which had to eventually be exceptioned or flaunted, by park personnel.

Please implement alternative C and add nothing or as little as possible to the wilderness. thank you

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** My name is isayah burnett I am a 18 year old senior at Alton High School. I feel that if the restrictions of the river are helping the people be safe or limiting what you can and cannot do there is ok. I still can understand why the people who have been fishing there or doing whatever there have the reactions they are having. I would make changes but not as juristic as they made them. The changes I would make is keeping it clean have more trash cans down there hire people that will work to keep it clean. I would limit the hours that you can be there on week days and weekends. All of the changes should be to help the park and to still have people enjoying their self. I think the reason they made the restrictions they did is much for the safety of people and the river. The people who own property there should really be able to do what they want with their property. I really agree to disagree I feel that they should have better restrictions just not some of those outrageous restrictions. At some point people will understand but if the restrictions are stupid like the speed limit of a speed boat it's going to broke. You have to be reasonable to the people if make rules that you know the people won't follow why make a rule. Another thing I disagree on is shutting down the roads. I feel it's going to be and even more jam if there's fewer roads to get there. It's all going to be fine as long as the restrictions stay fair but if there not it's going to be chaos.

**Correspondence:** Hello, my name is Luke Wille. I am a 17 year old, senior from Alton High school. I am interested in the management of the Ozark National Scenic Rivers because my family and I visit park of the Ozarks occasionally. The issues that stand out as important to me are the people that have been living there their whole lives and now have to change the way they live because of some of the new restrictions. Such as a man named Headrick who actually has lived there his whole life. He says "It's nonsense" talking about the new restrictions on motorboats, and roads that him and his whole family have been using since before they can remember. Although in the summer the rivers become crowded, I don't see why that should change so many things. Especially with the people who own property on the river. Most people living there say they want the park to be stripped of federal control and be handed over to the state. Everyone who lives there say they love the river and how it is now. There are three management plans, the first is pretty much saying that nothing changes. The second is some restrictions, such as motorboats and what I have talked about. The third is saying that it's not being used for much at all. In my opinion I think that the second management plan is the best. It's obviously been working for some time now and I don't think you should change something that's not broke. Thank you for your time, and I hope you take my opinion into consideration. Have a good day.

**Correspondence:** I was born in the Current River Valley in the winter of 1956. I've been lucky enough to have lived my entire life within minutes of Current River near Van Buren. My remembrance of how things along the river were before the ONSR first came to town still runs crystal clear.

My life's fondest memories, and some of my earliest, are the family trips to the river. My Dad would load up our family in the station wagon at the end of most summer time workdays. We'd drive to the river and spend the evenings cooling off, playing in the water, fishing and sometimes even having dinner under the shade of a deeply-rooted sycamore.

The people's roots also run deep for many river families along the Current River. Issac Kelley was the first white settler in Carter County and maybe the first Hillbilly in this region of the Ozarks. He was my great, great, great, great, great-grandfather. Issac's love for the river caused him to settle on the riverbank just downstream from Big Springs where he traded with the Cherokee.

I am sure if we could go back in time we would see Isaac, his wife (a native Cherokee), and their family enjoying their hot summer evenings on the edge of the river also.

Since Kelly's first settlement, my family's past and current generations have lived along, played in, have been raised to appreciate, and made their living from the river and its surrounding lands. This is only one of the reasons I have a problem with additional plans to shut off ANY more of the Current River accesses.

With the current plan, it is sad to see there are no access points for family day use unless you are willing and able to walk through a jungle of poisonous snakes and spiders, disease causing ticks, and stingweed to get to the rivers edge. It's nearly impossible for a family with small children, senior citizens, and handicapped to access a riverbank

that is usable for family day use.

You can park your car in a parking lot, put your boat in the river, or pay to rent inner-tubes and party with the tens of thousands of daily floaters. But there is not a place for families to set along the river bank while the children swim and play in the water that's accessible by vehicle. Unless a person has private ownership interest in river land, owns a boat, or stands in line to rent a tube, it's hard to find a place for families to enjoy a day on Current River.

These few generational river-families don't hurt the river, they never have. Rather, they've suffered, nourishing the river back to it's pristine beauty after the big city timber companies raped this land and left out with the money in the early 1900's. Now the ONSR owns and controls it. Preserving the "history" of our culture and heritage is not enough: please, actually help to protect our culture - don't destroy it. Our way of life dies and our generations to come will grow up stunted when you cut down our roots to the river.

My heart aches to think that the grandchildren and great-grandchildren of the local families will not be able to use the river like their ancestors have for many generations. It seems that NO ONE is looking out for the local people's rights to preserve our long standing traditions, our culture, our heritage, for the local folk's river use and way of life. If the roads are closed, this soon to be sr. citizen, and many other families, will be unable to make their way to the riverbanks on Current River.

**Correspondence:** I support Alternative B. I trust the NPS to manage our land to preserve and protect, while letting the most number of users enjoy this land in a way that does the least damage to the natural resources. Limit motorized vehicle use!! Limit horse use!!

I have been enjoying the Missouri Ozark Riverways since my first memories through hiking, canoeing, camping, bird watching and swimming. This land is for everyone, not just for those who live in the immediate area of the riverways. The other rivers of Missouri have already been spoiled by development and overuse (Meramec, Huzzah, Courtois, etc.), let's not spoil the Current and Jack's Fork Rivers, too. Hurry NPS, please step in before it's too late to save these resources! Do not cave to local political pressures. Ozark National Scenic Riverways could be so much more than it is if managed properly. Make this area into a real destination National Park with visitor's centers and other things to do for those wanting to learn more about and enjoy Missouri cultural and natural resources.

**Correspondence:** Hello, my name is Max Sutton. I am a senior at Alton High School and my attention has recently been brought to the subject of the new management plan for the Ozarks River. I am interested in the plan because I enjoy the rivers and all the activities and resources they bring. These rivers create a beautiful area to see and enjoy nature while having fun with family and friends. It would be very depressing to have the experience of the rivers taken away from people because of them being mistreated.

So many families and friends plan on mini vacations and float trips on the rivers that if taken away or highly regulated could really effect the public. I would imagine start of many father and son fishing trips started on the rivers. Those are memories that should be remade year after year. Float trips are a great way to relax and get away for a few days. The Ozark Rivers are definitely a great place for them. I enjoy and I hope that I will be able to enjoy it in years to come. I don't want the rivers to be closed off to the people because of our neglect to care for the water and wilderness around it.

After reading through the management plans I have to say that I agree with plan B the most. I believe it has the best ideas and ways to clean up and care for the areas; along with allowing people like me to enjoy all the resources. I read that petroleum or gas and oil leaks were a problem with the water. Limiting the areas of four wheeling and creating new trails would impact a lot on water quality.

I read that more trails would be made to accommodate the horse riding and that would help clean the water from the feces being put back in the water.

I am looking forward to the advancements of the management plan and hope to be spending summers to come enjoying the water and wilderness. I believe with plan B the water will get cleaned up and people can still enjoy the resources. Thank you for your time have a nice day.

**Correspondence:** My floating experience on these rivers began in 1974.  
It was a lovely and peaceful.

#### NECESSARY RULES:

Whatever plan is adopted must contain the following:

No creation of new roads by ANY PERSON OR ANY VEHICLE other than those planned and created by the park service.

No parking of RV's or camping on unauthorized sites.

No ATV's driven along river beaches or in shallow water.

No shooting of guns or bows along rivers.

NO JET BOATS, HIGH POWERED PROPELLER BOATS, JET SKIS, WAVE RUNNERS, OR SKI-DO'S  
DRIVEN ON PARK RIVERS.

No boom boxes or loud music played within earshot of rivers.

All church based and/or religious baptisms in the riverS by permit only, for limited times, with limits during any one year.

Full complement of park rangers, water, park and trail, to enforce the park's rules and regulations.

#### HORSE TRAILS:

As far as the park's trails are concerned:

Limited horse trails, with adequate foot trails for hikers to get to the same place.

Horse trails are not healthy for hikers to use.

#### POWDER VALLEY PUBLIC MEETING:

The public meeting you recently held at Powder Valley, St. Louis was an uncontrolled disaster.

Why would numerous people with trucks hauling boats on trailers park in Powder Valley's visitor parking lot taking up 8 car spaces or so each on your meeting night?

Was this a plan by those who do not want any park regulations to take up the meeting night parking spaces to prevent others who wanted to attend the meeting?

Certainly all of these trucks had not been boating in this weather to have just come off a river with their boat in tow.

#### EDUCATING LOCAL RESIDENTS:

Locals who live near the designated river park areas need to stop considering these protected areas as an extension of their back yards on which they can do anything.

They are going to have to adjust to the national park rules that protect these fragile environments which are designed in the best interest of the parks and ALL VISITORS, and not just the locals.

Local families who have lived in the area for generations, had ancestors who co-existed with the land and rivers.

It is the present-day local residents who should continue their ancestor's approach to the natural habitat.

When the locals pressure the park service to relax their regulations to the point where the environment is being damaged, the locals need to be directed to other appropriate locations in the state where they can legally carry out their entertainment.

**Correspondence:** The Missouri Coalition for the Environment has been doing a stellar job tracking environmental issues for me and others for many years...and I am on board with alternative B for the most part, but I offer some general comments that capture my personal feelings:  
This watershed has been enjoyed by my family- -wife and four children since I moved to Missouri in 1974.(float trips, camping out on river sand bars, fishing etc.) We in Missouri do not have sea coasts, Grand Canyon, Niagara Falls and the like but we have some God given natural treasures of streams and woodlands. I don't know the specifics but I have visited areas in Canada's National Parks( just north of Minnesota)that have been kept in pristine condition...and all who visit seemed to have bought into their vision. My ten year old son and I canoed and camped for a week in the area where no motors were allowed. All campsites were left ship shape, etc. Spectacular beauty...private...quiet and more. The remoteness makes it easier for those areas vs. our Ozarks but we should strive for preservation of the natural beauty. Traffic quotas may have to be part of the program...more advance planning for those wishing to enjoy, but happy when you get the pass...I love horses and riding, but stables, etc should be outside the park and run by private firms...  
Less may be more...Garth F. Fort 314-991-2967

**Correspondence:**

Dear Superintendent:

We are writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP).

We prefer Alternative A as outlined in the Draft General Management Plan Environmental Impact Statement.

Specifically, our experience in the Riverways in the following recreational uses:

We have enjoyed the Current and Jacks Fork Rivers, Johnson's Shut Ins for swimming, rafting and camping, hiking.

These uses are important to me because:

they are some of the only pristine environment waterways in Missouri.

In addition, we appreciate the conservation and preservation functions of the National Park because:

the national Parks best preserve and care for the land and water, for future generations..

The primary area(s) we use are:

I have enjoyed the Current and Jacks Fork Rivers, Johnson's Shut Ins, Pickle Springs for swimming, rafting and camping, hiking.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways: pollution, uncontrolled use, abuse of the waterways.

The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation. The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of natural ecosystems-should rival that of our nation's most pristine and unique public lands.

Yours truly,

Janet and Geoff Hamill

425 W. Jackson Rd., Webster Groves, MO 63119

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and

\* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I grew up visiting relatives in Shannon County, and I have many fond memories of time spent on the Jacks Fork. I want to see the river maintained in as wild a state as possible. Alternative A seems to do that.

However, one of the common concerns I heard at the public hearing, from people with very different perspectives, was that the National Park Service doesn't seem to have the resources to enforce rules that are already in place or maintain existing facilities. Whichever management plan is adopted, I hope it adds some incentive to allocate more resources to care for this beautiful area.

**Correspondence:** Additional comments on Big Spring Wilderness

Betty (Becky) Denney  
6410 Arthur Ave  
St. Louis, MO 63139

314-645-3394

Thank you for writing a management plan which balances recreation interests with protection of our national park.

The highest use of the proposed Wilderness area at Big Spring is designation as a wilderness. The description as found in Alternative B is the best option.

I camped and hiked at Big Spring several times each year in 2010, 2011, 2012 and 2013 because I love the spring, the trail complex and the views and life along the Current River.

I enjoyed the large old pines and oaks especially within the Big Spring Pines Natural Area and out to the NPS boundary. I own a small tree farm in Reynolds Co and have shortleaf pines and oaks on it. While some of the pines were growing well before 1970 when my family bought the land my pines are not nearly as large and probably not as old as many pines I see in the proposed Big Spring Wilderness area. It is important for our enjoyment and for future generations to keep the 3430 acres primitive and to protect them as a wilderness area. We have very few acres reserved for primitive recreation and this area fits in well with the rest of the facilities at Big Spring.

Also, the wilderness area may become a much needed refuge for our native plants and animals as well as for us.

This living forest and the valleys within the 3430 acres when kept in a primitive state protect a part of the Current River watershed much better than if it were used in some other way or developed with new human structures.

The fire tower and the CCC foundations are human artifacts within that proposed area but have meaning because they represent the care and work of earlier generations for each other and for the forest, the land structure and the soil.

The trees, the hills, rocks, minerals and the soil are the raw materials from which our ancestors built the United States. The very character of our country came from the wilderness that was America. There are very few wilderness areas in Missouri and this is one of the best examples of what Missouri was like before the 20th century.

In this century and in our present culture we must use special planning and scientific knowledge to protect such an area of land with primitive zoning. We should designate the Big Spring area as wilderness and we must protect it.

Thank you  
Betty (Becky) Denney

<b>Correspondence:</b>	Alternative A is the preferable one.				

There needs to be some primitive areas which are not in Alt. B.

The wildlife, both plants and animals, need a primitive designation- -not just a natural designation, if they are to be saved.

All sections of the river should actually be off limits to all motorized boating, except for rescue boats. How much gasoline, diesel, and/or oil drips, leaks, spills, and runs into the waters of our rivers? Has anyone ever measured it? Does anyone care? The wildlife cannot speak about this, as they can only be poisoned.

No more horse trails are needed. There are horse trails enough for everyone, and if there are not, then there are too

damn many people wantig to horse back ride at the same time. Why not have a quota? It doesn't make sense to invite those huge shitting machines into the park and then wonder why E. coli has been confirmed in large numbers downstream. Who in their right mind would drink from the river, as the Natives used to do? Remember, they were able to drink from the rivers because we humans were not trashing the waterways as we allow today.

ATV's are so destructive as to merit special attention. We own an ATV for farm use and I can attest to their extreme destructiveness. The riders rarely stay on the trails, the tires create deep trenches in a very short time, the machines run over turtles, snakes, and who knows what. They have no place in a park where people (and animals) go for peace and quiet. Have you even been listening to a bird call only to have the sound drowned out by some buffoon and his miniature bulldozer? Well, I have, and more. ATV riders from Sutton's Bluff left the trails (their modus operendi) and they trashed our strawberry bed. I say ban ATV's from all parks, except paved roads which, incidentally, is where motorized vehicles belong. Sorry for any misspellings.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I, Brian Kolde, fully support Alternative A, providing generally the maximum resource protection and wilderness designation possible. The Ozark National Scenic Riverways system and its complex karst catchment area is a local, national and world treasure. If there is one river system in America to keep in a pristine, primitive state, this is it. The amazing springs, underground lakes, flora, fauna in the rivers and on the lands surrounding them are unique and extremely delicate. I have utilized the Ozark National Scenic Riverways area for quiet recreation since a child in the late 1960s. Its haunting beauty and serenity has stayed with me my entire life. However, I am very concerned about increasing overuse and abuse of the river system and its surrounding lands over time. I see more water pollution, litter, vehicle damage, motor noise and human obnoxious behavior. There are plenty of other, less sensitive water recreation opportunities all over Missouri where heavier use can occur with less harm. I support closing the most number of roads, limiting the most horse access, limiting the most vehicle/ATV activity, limiting the most areas for motorized boats, limiting engine size and noise, protecting the most shorelines and gravel bars, and designating the most wilderness areas. I do not believe increasing protections and regulations will harm the local economy or inhibit local traditional uses- - it will in fact increase tourism in local communities by responsible visitors from near and far. This is a National Park Service-managed area for a good reason. All management tools available should be utilized to protect the resources and provide for quiet, respectful recreation, while preserving the natural, archaeological and historic treasures unique to ONSR. I fully support Alternative A and the designation of the entire Big Spring Wilderness Study Area as formal wilderness. Missouri has not had substantial wilderness designations in decades. Only a tiny percentage of the state is protected in this way. This small amount of land designated will harm no person or any person's way of life. It will enhance it. Missouri is very behind other states in wilderness designations, so this is sorely needed now. Please note that I attended a public open house and hearing, listening carefully and respectfully to all opinions expressed. Thank you for taking my comments and for the great work managing the Ozark National Scenic Riverways for current and future generations.

**Correspondence:** Hello,

During my youth, my family made routine visits to the Current river every year. Now 40 years old, I bring my family to the river a couple times each year, while I personally visit several times in addition to that during all months of the year.

I am in favor of plan B that has been put forth.

Over the years I've floated, and kayaked all parts of the Current river and Jacks Fork. I do not go beyond Round Spring anymore on the Current River. The largest reason for that is because of jet boats. I've witnessed motorboats weaving in and out of tubers withing feet of them closer to Van Buren, I've been in narrow chutes and have had motor boats coming upstream force me to take evasive action. And I've had boats come at me close enough I could of touched them with my paddle as they gunned the motor and laughed.

One of these incidents scared my wife and she will not float in the river where boats are active. There is plenty of river accessible to motor boats to enjoy. The upper Current and Jacks Fork should be allowed to be peacefully enjoyed by non-motor boats and by tubers. Restrictions will allow RESPONSIBLE boat owners access and usage and deter the rowdy boaters, leaving them to use the lower portions of the river.

I'm also in favor of the new plan because of increasing trash and misuse I've witnessed while enjoying the park. I've spent way too much time collecting trash on my floats. Some of this is from rental canoe users but I've seen many an ATV "party" set up river side.

I do believe that all users should have some access to the park, but unrestricted usage leads to damage and decay. Plan B is a great compromise that allows all parties to gain benefits even if some restrictions apply. Not doing anything greatly increases the chance our park will become another degraded landscape like the many of our unregulated rivers in the state of Missouri.

**Correspondence:** I would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.

The Federal Park Service is killing us older folks. They are closing our river access points, they are killing the fish in our rivers, they have closed our caves and have run us off the gravel bars. All we want to do is enjoy our retirement and take a simple canoe float and fish a little. That is about all we can afford these days.

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan.

Thank you

**Correspondence:** Having visited every county in Missouri, I've seen a lot of the beauty of my state. When I was at Alley Spring, the water of Jacks Fork River was so clear and beautiful. There was quiet too.

I've also had the chance to see the clear running water of the Current River. Land owners near these rivers work to keep them clear of the trash and debris thoughtless visitors leave behind.

Illegal roads with ATV use and heavy horse traffic is taking a toll on these rivers within the Ozark National Scenic Riverways. Alternative A would be my choice for the management plan by the National Park Service.

Within reason, people deserve to experience the outdoors in many ways. But the land shows it has limits. For the sake of all visitors and residents near the Current and Jacks Fork Rivers, please choose Alternative A.

**Correspondence:** My only comment is simply this... why do the local, state and Federal governments always seem to bend to the lobbyists and big businesses at the cost of basic, family-oriented recreation issues?

Please save our Missouri waterways. If there just is not enough tourism to make them relevant - then start spending money on tourism and getting avid waterway users to Missouri to use them, enjoy them. Put together some cleanup groups, advertise around the country for help.

Once these rivers are gone - they will NEVER be the same. STOP pushing off to future generations what CAN BE fixed today.

**Correspondence:** The Ozarks and the surrounding areas were once an area that I absolutely loved to visit in my youth. Now it seems as if the forest lands and greenery are not only disappearing; it seems as if they are being torn apart by machinery and spillage that is left.

I understand that the people in these areas have a job to do. All I ask is that there be some sort of legislation in place to make these workers work in such a way so that they do not destroy the natural beauty like they are doing today.

Today we are losing far too many of the earth's natural resources. We can never regain these resources once they are gone. Please do not let the Ozark area be one of these resources that we lose.

Sincerely,

David H. Ong, B.S., M.B.A.,M.F.A.M.

**Correspondence:** When I was much younger, my husband and I floated the Current and Jacks Fork Rivers at least once a year. Usually in a Jon Boat leased from Twin Rivers Ranch and later on, a different place.

The water was pristine enough to use for cooking and the countryside mostly untouched. I still remember local names like Seaman Rayfield and Esther Titus.

It was a time to relax and let someone else care for the kids. A time we really looked forward to every year.

One year we brought the horses with us to a small place that had stalls and we were lucky enough to have one of the Rayfields as our guide. The horse crossings were few. (He knew just where to take us)

Looking at what has become of the area is heartbreaking. To return the area to what it once was is important, so future generations could enjoy what we did.

Thank you, Carolyn

---

**Correspondence ID:** 1539    **Project:** 15793    **Document:** 56208  
**Received:** Feb,01,2014 02:32:39  
**Correspondence Type:** Web Form  
**Correspondence:** Let me thank you all at the Ozark National Park System .. NPS .. for putting together a well done and thoughtful analysis as summarized in your "Alternative B".

Adopting it would indeed be a big positive step forward from the status quo.

BUT .. IT DOES NOT GO FAR ENOUGH  
to ENSURE a sustainable and necessary PROTECTION  
for the already damaged "mother nature wilderness"  
surrounding the the Current and Jacks Fork Rivers areas.

Therefore I and my friends and family are recommending  
the adoption of the "Alternative A"  
which has been developed by the Missouri Sierra Club,  
because  
it provides the required additional protections  
for the long term and sustainable existence  
of the rivers and this unique wilderness area.

Most importantly .. Alternative A:

closes illegal roads and restores natural conditions to 50 miles of these roads ..

closes 65 miles of undesignated horse trails and adds no new stream crossings .. and

bars vehicle access to the gravel bars.

And, of course, we strongly advocate the wilderness status designation  
for for the Big Spring river area as well.

WHY ARE MY FAMILY AND I so interested in the further development of this park system?

This wonderful natural park is just 170 miles due south from our home in Richmond Heights, a suburb just several miles to the west of St Louis.

And so we have come to realize how lucky we are to have such a seemingly pristine nature waiting for us when we visit.

In any other direction there is no other park system whatsoever which is so large and so close to us and so attractive.

So we want to do everything we can for the maintenance of this outstanding natural preserve for us and for the future generations.

We are proud to tell our fellow Missourians about the quality of these crystal-clear freshwater springs which go into the Current and Jacks Fork rivers which form the heart of the Ozark National Scenic Riverways.

These rivers are an ideal place for us to float, canoe, to fish and to camp.

We realize also how important it is that the Ozark National Scenic Riverways is the first national park area in America to protect a river system.

And therefore the Current and Jacks Fork Rivers are two of the finest floating rivers we could find anywhere in America.

They are spring-fed, cold and clear, and they are a delight to canoe, swim, boat or fish.

In addition to these two famous rivers, the park provides us hundreds of freshwater springs, caves, trails and historic sites such as Alley Mill as well.

So we cannot urge you enough to do everything you can do to protect and improve for us and future generations the long term preservation of the natural resources which we are so lucky to have created so far with the work of the NPS.

BUT WE MUST DO MORE, and therefore we urge you at the NPS to adopt and promote the "Alternative A".

Thank you so much for what you have done until now!

---

**Correspondence:** Plan A or Plan B? Missouri streams and water ways are not safe to swim in or catch fish to eat, below the Missouri River. As a "former" volunteer member of the Stream Team; picking up trash from the rivers and creeks that I loved...and as an avid camper and outdoor explorer...I was devastated to learn, first hand, that our waters and air could cause a person to become disabled physically or mentally (or both) simply from soil sediment/dust exposure or eating fish. I am more than a little disappointed that our EPA, MDNR, Department of Defense and ATSDR have not made this public knowledge to protect us, but while exposing corporations is not 'politically correct' these days, I understand their cowardice. I will attach links to back up my claims and hope that someone from an environmentally concerned entity does independent research of their own.

Once upon a time...Missouri wanted jobs. I understand that. That is never an excuse to turn a blind eye by allowing toxic substances to be released into the environment through improper incinerations of hazardous substances and ignoring federally banned pesticide regulations (using banned pesticides in Missouri), while harming wildlife and people in the process.(FIFRA) But now that it is done, to HIDE these toxins long term affects from those most prone to be 'infected', who are also (were also) the healthiest of Missourians; outdoorsmen/women, is criminal.

[www.serdp.org/content/.../8236/.../Bioavailability\\_Wkshp\\_Nov\\_2008.pdf](http://www.serdp.org/content/.../8236/.../Bioavailability_Wkshp_Nov_2008.pdf) (DoD and EPA report.)

<http://www.docstoc.com/docs/58594753/Sediment-chemistry-toxicity-and-bioaccumulation-data-report-for-the-sediment-contaminants>

<http://pubs.usgs.gov/wri/wri96-4003/WRIR96-4003.pdf>

<http://www.dnr.mo.gov/env/hwp/docs/rivol1.pdf> (This is the 'Westinghouse' report of Mallinckrodt's toxins, including radiation and 'pesticides'.)

Plan "A" or plan "B" is really irrelevant until ALL of the responsible parties clean up our rivers to make our citizens safe. This would require 'unbiased labs', as sadly, those currently responsible for protecting our health seemingly have become too "impaired" to perform their jobs. And even though all of the total 'fines' (usually in the millions) may add up to trillions of dollars when combined...

- \* those monies were not spent on their intended clean up goals

- \* the money was not spent on testing people for toxic exposures;

- \*\* for those who had children born with birth defects or

- \*\* for those who had to apply for disability after exposure or

- \*\* for those who had to seek mental health care due to toxins altering their behaviors...

- \* The money was not set up as a "Superfund Health Fund for Missourians".

- \* There were no clinics set up to simply chelate the toxins from us (when possible) or

- \* before getting cancer or having a gallbladder or other organs removed. Those corporations walked away with a slap on the wrist while the government sets up National Health Care rather than make the richest of corporations pay for the mess they made and the people they've harmed. This should NOT come out of Disability funds and Social Security and Medicaid/Medicare if testing us for radiation, BHC "666", TCDD dioxin, 2,4-D or DDT, Lindane or Atrazine, etc... would show that a mental or physical issue was due to exposure from the corporate toxins made by THAT/THOSE corporation(s). This is Social Security "Fraud Waste and Abuse" and I have already filed that complaint.

The irresponsible corporations are expecting Tax Payers to pay for the poor health THEY caused by THEIR toxins.

More 'entitlements' FOR them... America now has 11 million disabled people. ( - ) Recently, Wal-Mart was 'fined' 110 Million dollars for further contamination of Missouri(ans). Where is the lab that we can go to for testing of those shamefully unnamed, "erroneously" labeled 'pesticides' that were carelessly combined and distributed all over? Why did they not mention what those toxins were? Where were they used? When did contamination begin?

(Contamination ended, allegedly, in January, 2006) The media is 'lacking' in their reporting:

<http://enewsusa.blogspot.com/2013/05/wal-mart-to-pay-110-million-to-resolve.html>

or

<http://www.fbi.gov/sanfrancisco/press-releases/2013/walmart-pleads-guilty-to-federal-environmental-crimes-admits-civil-violations-and-will-pay-more-than-81-million>

But the richest people in America; the Waltons, or the CEO's of Mallinckrodt, or Syntex, or Monsanto, or Syngenta, etc... THE "1%". they ask that tax payers pay for their mess and leave a "trail of the dead" (wildlife and human) and autistic children or children born with birth defects... so they can use "their" money to ruin some other pristine location as yet undefiled by their presence.

I expect nothing to come of this email. It is 'toxic news' and not to be touched with a ten foot pole, right? Plan A or Plan B? Really?

**Correspondence:** Please reconsider for Alternative Plan "A".

First I would like to thank the National Park Service for developing the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS. The degradation that has already occurred must be reversed and those people not interested in the future of the park must be stopped from committing their abuses. Although Alternative Plan "B" is an improvement, I feel it still doesn't do enough to bring the abuses under control. From contemplating the past and current abuses by public and business interests to the ONSR and the stated alternative plans of action, it is my opinion that the Alternative Plan "A" would be the best choice.

-Restrict the numbers daily of the equestrian community and related businesses to lessen the damage done to the parks land and rivers. Allowing such numbers that requires warnings of unhealthy Escherichia coli (E. coli) bacteria levels in certain areas of the rivers should be considered unacceptable.

-On the Big Springs Wilderness Area, please NO MOTORIZED VEHICLES! This would better preserve the natural state of the area and eliminate degradation by four wheel drive vehicles, four wheelers and motorcycles.

**Correspondence Type:** Web Form  
**Correspondence:** I support active National Park Service (NPS) management of public use of the Ozark National Scenic Riverways (ONSR). The Riverways' fragile ecosystems and habitats should be protected, while allowing reasonable public use.

Of the three alternatives offered by the NPS for ONSR management, Alternative B would be best because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;

- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;

- \*Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;

- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:**  
Please put into place the most complete and rigorous plan for the protection and preservation of Ozark National Scenic Riverways. Although the National Park Service has put together a well done and thoughtful analysis, its recommendation to adopt Alternative B does not go far enough. The adoption of Alternative A provides additional protections for the rivers. Especially:  
Closing illegal roads and restoring natural conditions to 50 miles of these roads;

Closing 65 miles of undesignated horse trails and adding no new stream crossings; and  
Baring vehicle access to gravel bars.

Wilderness status designation for Big Spring is important to preserve this phenomenon.

**Correspondence:** I'd like to thank the National Park Service for putting together a very detailed analysis of these rivers. My family was raised along the Current River. I've personally spent a lot of time on these rivers, as well as most rivers in the state. I've seen the damage caused by ATV's and trucks on the Black River before regulations were in place. The Current and Jack's Fork rivers are true jewels not found anywhere else on earth. These rivers have slowly been deteriorating over time due to feces from horse back riding, and damage from motorized vehicles. Adopting Alternative B would be a positive step forward, but it does not provide the protection that these jewels desperately need. Only Alternative A will close the illegal roads and horse trails that are causing the damage to these rivers, and bars vehicle access to gravel bars. Big Spring is a true treasure, and should be designated as wilderness. I urge you to adopt Alternative A as the only way to keep these rivers as the jewels that they are well into the future.

**Correspondence ID:** 1560 **Project:** 15793 **Document:** 56208

**Received:** Feb,01,2014 07:07:33

**Correspondence Type:** Web Form

**Correspondence:** Option A makes the most sense as it provides actual protections. The status quo is a sad state of affairs with folks bushwhacking their way to our rivers and disrupting the ecosystem (as well as beauty) of the region. The situation is out of control; the four-wheelers and three-wheelers and four-wheel drive trucks and SUVs muddy the water, contribute to erosion/runoff, and they leak oil, coolant and other fluids into the water. Horses also muddy the water and contribute to eroded banks.

I have seen the destruction/disruption firsthand. I kayak and canoe several rivers- -from the Castor and St. Francis to the Current and Eleven Point and Black. I am amazed and disheartened by what I have seen while paddling and while fishing.

Please provide the protections our river region deserves and needs. Please help educate folks on how such regulations are in the interest of all, including future generations. And when it comes to future generations of trout, and so forth, that future is even closer.

Thanks for listening!

- -Glen Williams

**Correspondence:** My family and I support the No Action Alternative and oppose all others.

In particular, we oppose any regulation of the ability of floaters to freely camp on gravel bars of their choice. My family has been doing this for generations on the Current and Jacks Fork Rivers. Before the European-Americans, the Native Americans did it. Thousands of years of evidence shows that this type of camping on gravel bars does no longstanding harm to the rivers or the environment. "Evidence" to the contrary, I suspect, is result-oriented evidence.

I would add that, when the land along the rivers was condemned decades ago, the federal government promised the

residents of the Ozarks that, while their right to own land along the rivers would change, their right to freely use the rivers would not. Please do not make this promise another broken promise of the federal government about land usage.

Thank you for your consideration.

**Correspondence:** The Ozark National Riverways is an area dear to my heart. I have been going there to float and camp since the early 70's. I want it preserved as best as possible for future generations. We owe it to them to have the most stringent regulations to protect it's natural beauty. I have been to many other states and realize what a jewel we have in our own backyard. When I go on vacation to other states, nothing compares to these waterways for swimming, fishing and boating (canoes & kayaks). The waters aren't treacherous they are slow meandering, clean and beautiful. Let's protect them as best as possible. That means closing illegal atv trails and keeping horses out of the water. My family has horses, so I am a horse lover, but they don't belong in the river in large groups destroying the streambed. Please protect this wonderful jewel.

**Correspondence:** RE Ozark National Scenic Waterways

The NPS has compiled an thoughtful analysis. And although Alternative B is a step in the right direction, please allow me to add my support to adoption of Alternative A to provide further protection for our rivers.

Here in Missouri, we have no coastline, no majestic snow-capped mountains, but we DO have the beautiful spring fed rivers in the southern part of our state. "Tubing and canoeing those rivers is a part of my and our children's history. One of my most cherished memories is that of my high-school age son and daughter snuggled up beside me in a tent while we waited out a night time thunderstorm on the banks of the Jack's Fork (hoping not to get washed away!).

I can't wait for our grandchildren to get old enough to take on their first float trip down the Current.

Unfortunately, these priceless treasures are being abused.

Please adopt Alternative A to close the illegal roads and restore surround roads to their natural states. Please keep vehicles off the fragile gravel bars. Please close undesignated horse trails and bar additional stream crossings. PLEASE protect Big Spring with Wilderness Status. If you have ever been there, you will understand why.

Thank you for your continued efforts on the behalf of our state and our rivers.

**Correspondence:** Thank you for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless the Missouri Sierra Club believes Alternative B does not go far enough. We recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;

Closes 65 miles of undesignated horse trails and adds no new stream crossings; and

Bars vehicle access to gravel bars.

I would also like to see wilderness status designation for Big Spring

My family has enjoyed visiting the Current and Jacks Fork Rivers. We go floating, camping and hiking.

Thank you,

Matt Kuehnert

**Correspondence:** Atv use is bad, not only on scenic land, but our country roads as well, but as usual when some big company makes money, oh well. When it's gone it's gone. Here they don't even want us to work in a dry stream to help it and to stabilize it, hence the devastation when it floods. But ruining the land and the peace and quite is fine. Horse trails are getting out of hand too. The government always acts when it doesn't need to, and never when it does. Heavy fines to be used to help these situations will stop lots of this. James

**Correspondence:** Although I don't live in the States anymore, I've been enjoying the Jack's Fork and Current rivers since the mid 60's.  
Although it would be impossible to have the region return to the conditions of my youth, I would hope that my children and grandchildren could have the opportunity to enjoy the area in as natural a state as possible.  
I prefer Option A.  
Although there are several reasons I prefer Option A, three stand out in my mind.  
First of all, as a serious paddler I feel the river should be a place for enjoying nature, a chance to get away from it all. The crowds can be more of an obstacle than the root-wads in navigating the river. The ATVs buzzing around and through the river distract from the tranquil image "floating" conjures in my memories.  
The commercial aspects of the rivers is also a concern. Many people in the region depend on this income, and it has helped the economy of the area, but there are unlicensed outfitters that are exacerbating the crowding on the river. The litter, both intentional and unintentional due to tipping, is a big problem. Those of us who consider paddling a hobby seem to be a minority, yet are probably the most passionate about keeping the rivers in pristine conditions since we have invested in our own material to enjoy our pastime.  
Finally, foremost in my mind is the preservation of the endangered Ozark Hellbender. Requiring clean-sediment free water would be hard to maintain with the erosion caused by illegal roads and trails. Losing this member of the ecosystem will forever change the flora and fauna of the rivers in the area.  
Maintaining the status-quo -encouraging more use through commerce friendly policy, continuing to allow environmentally detrimental activities on a more limited basis, will only slow down the degradation of the river

system, which in the long run will end with the eventual extinction of one of the world's largest and unique salamanders. I encourage you to adopt Option A to give the rivers a better chance to recover to an more natural state.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I am writing in support of Draft Management Plan Alternative A for the future of the Ozark National Scenic Riverways. Alternative A has the strongest protections which I very strongly support. We moved from California to Missouri in 2000, and it is the beautiful rivers that I find most precious (along with the prairies and the woods) here. Allowing them to be degraded and destroyed would be criminal. Missouri lacks the natural features and grandeur of mountains and oceans - it is the rivers and streams that make it unique. Let us do all we can to preserve and protect them!

Thank you!

Allie Gassmann

**Correspondence:** Thank you for this information. I think a lot of effort was used to determine the health of this area of our state. Years ago, my family would float the Jacks Fork and the Current. Even then, I could see the problem of overcrowding beginning to arise. Last year, I visited the springs and was reminded just how beautiful this part of the state is! It is a jewel. I also understand there has to be approved trails for horses and even motorized vehicles. But they should not be allowed to cause erosion and destruction of land and rivers. It will turn into a big ugly, polluted mess! So please save our state's most beautiful treasure! Pass and enforce plan A~ for our future generations!

Thank you again.

**Correspondence:** Please adopt the Sierra Club Alternative A. It provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;

Closes 65 miles of undesignated horse trails and adds no new stream crossings; and

Bars vehicle access to gravel bars.

It is understandable that people want adventure but the 'extreme sport, over the top, disregard for everything' attitude of today guarantees there will be few, if any, remaining pristine areas for us, or any future generation, to enjoy because of the wanton destruction of these areas by the 'extreme' crowd.

All National, State and local parks should be closed to such activities because we all know that these 'extreme' folks have little regard for the laws that protect these areas and will not stay in the designated areas for their sport.

Please protect these River areas for all future generation to enjoy.

**Correspondence:** In light of recent abuses which are rapidly degrading some of the most beautiful scenic areas of mid-America (not to mention precious water resources), I think it is essential that the Federal Government assume responsibility for following thru on the "promise" made years ago when the Jacks Fork and Current Rivers were designated to be National Scenic Waterways. That responsibility would include all the provisions in Alternative A of the proposed management plan. I strongly disagree with residents of the area who fear a loss of tourism (and its inherent income); in fact, the reduction of pollution and damage that would follow closing illegal roads and undesignated horse trails as well as preventing vehicle access to gravel bars should attract ever more visitors! It is only by enforcement of such proactive policies that these treasured areas will survive for future generations to appreciate and enjoy.

Thank you.

Gerry Friedman

P.S. At the same time and for the same reasons, Big Spring should be designated a [protected] national wilderness area.

**Correspondence:** After reviewing the General Management Plan's four alternative actions I would like to submit that Alternative A is the most likely to advance the original intent of the NPS in providing "a framework for managers to use when making the decisions about how to best protect the NPS Riverways' resources, provide a diverse range of visitor experience opportunities, and manage visitor use, and what kinds of facilities, if any, to develop in the National Riverways."

My family and I have plied the Current and Jacks Fork Rivers for well over 40 years. We have seen the area at its best (natural) and worst (overuse and abuse - '80s). Our extended family, who travel from a variety of states, always look forward to our stay and adventures along the Jacks Fork and Current. As a teacher who belongs to MSTA I have used our Bunker Hill Ranch Resort almost every year since 1978. We have brought our children to play and "relax" among the natural wonders of the area, floating many times from the input and outlets along both rivers. Now, we are bring our children and their children to replicate our experiences and it seems to be working fairly well. But, there have been some events as mentioned in the analysis that have complicated our excursions and at times ruined our outings. Foremost is the amount of E-Coli in the rivers. On most occasions, when floating the Jacks Fork River, we take out just above Eminence, Missouri. It is below this point that we most encounter large number of horses in and along the river. Since we have so many children with us we don't want to chance a bad health experience after our visit. I will also wonder whether the death of my son was a result of "bad" water in my son's lungs. However, he was so disabled (multiple disabilities) to begin with and just recuperating from surgery nine weeks before, that he was susceptible to any attack on his physicality. So, no I couldn't blame our misfortune on the river. In fact it was our visitations to the Rivers and Woods that most represented our happiness with him. But, I can't help thinking that other children are at risk to poor health, and the loss of the pristine nature of our most valuable resource - the best of nature. The whole area needs to be protected by Wilderness designation, but at least consider the Big Springs Study Area. We just visited there last year; it deserves this attention.

I could go on, but this final thought: With increasing age, as many of you know, the deterioration of time, attention, and earnestness can waste our humanity and heritage. Let us not relate to our posterity the lament that once long ago

Missouri claimed its own "riverways of the mind". But, now, my children, we can only read about it in books.

**Correspondence:** I am a long time (40 years) user of the ONSR. My use varies between fly fishing on the upper Current, spin fishing on the Jack's Fork and mid/lower Current, wading, canoeing, jet boating, camping, and hiking. In general, I believe the NPS has done an admirable job with the ONSR, especially considering the consistent underfunding of the NPS over the past 30 years or so. So thank you for your efforts.

I support the NPS choice of 'Alternative Plan B'. It appears to strike the best balance of the various activities and needs. I especially support the elimination of motorized boats on the upper part of the Current River while implementing the 60/40 limit on the mid/lower part of the Current. There's no need to have a motorized boat on the upper Current.

Sincerely,

Andy Jury

**Correspondence Type:** Web Form  
**Correspondence:** These comments address the draft General Management Plan for the Ozark National Scenic Riverways (ONSR). This fragile ecosystem requires great care to protect its functions and processes while ensuring continued public enjoyment and use.

I recommend that you select and implement Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail use within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas

of our state. It should be managed for the enjoyment of current and future generations of all our citizens.

Thank you for taking this important step toward better management of this nationally significant natural resource. Please keep me informed of your decision in this process.

**Correspondence:** I fully support alternative A in regards to the management plan to be adopted by the NPS. These rivers are significant natural resources that should be protected from any threats to their biological integrity. I have floated both rivers many times. I have witnessed horses shitting up every place they are allowed. I even witnessed a vehicle that was driven straight into the river right beside Jacks Fork Campground. These rednecks need to have some regulations to follow and someone to enforce them or they will mess up the river completely. Tell the horse people to ride their beasts back to Europe where they belong. And tell the redneck hicks to stay up out of the river with their trucks and beer cans. Missouri is one of the most environmentally awful places to live. It's an agricultural wasteland with patches of forest and woodland filled with invasive plants. All of the rivers have been channelized and polluted almost beyond repair. Can't we just protect one river or is that too much to ask?

---

**Correspondence ID:** 1594    **Project:** 15793    **Document:** 56208  
**Received:** Feb,01,2014 09:29:37  
**Correspondence Type:** Web Form  
**Correspondence:** I appreciate the opportunity to provide comments on management of the Ozarks National Scenic Riverways. And I thank the National Park Service for compiling a comprehensive and valid analysis.

While adopting the NPS recommended Alternative B, would be a step in the right direction and improve the status quo, I strongly urge adoption of Alternative A. Only "A" provides the following additional protections essential to manage these rivers for the future: a) closure of illegal roads and restoration of natural conditions to 50 miles of these roads; b) closure of 65 miles of undesignated horse trails without adding new stream crossings; and c) barring vehicle access to gravel bars.

I am appalled that there are ten times more access points than thirty years ago, approximately when I first experienced the joy of canoeing these beautiful natural rivers - first as a boy scout and later with my own family. Management of these waters must preserve the natural experience for future generations and prevent overuse in which the sheer numbers and frequency of visits may destroy the very essence of what makes the Ozark National Scenic Riverways so special.

The revised management plan must: a) reduce access points; b) reform administration of easements; c) reduce large/commercial horseback trips and their resulting impacts; and d) improve management to reduce overcrowding.

Finally, the plan must staunchly defend and protect the remaining wilderness areas and provide wilderness status designation for Big Spring. The opportunities for individuals to experience wilderness (infrequently and prudently) within the Midwest - and specifically within Missouri are extremely limited. As an hiker and occasional backpacker, I know that we must preserve remaining public wilderness where ever and when ever we can!

Thank you for considering my comments.

**Correspondence:** I am in support of Alternative A regarding the Ozark National Scenic Riverways Draft General

Management Plan.

I support it because it closes illegal roads, and restores the natural conditions. People with horses and vehicles driving along the river banks, and crossing streams wherever they want degrade the waterways!

I support Alternative A because it would close 65 miles of undesignated horse trails and adds no new stream crossings, plus it bars vehicles from gravel bars. Motorized vehicles of any kind do not belong on gravel bars. Just because people live along the river, it shouldn't give them the right to ruin the area as they see fit. They do not deserve more rights than anyone else who visits the riverways.

Also, Big Spring deserves wilderness status.

**Received:** Feb,01,2014 09:37:13  
**Correspondence Type:** Web Form  
**Correspondence:** My thanks to the NPS for putting together a management plan for the Ozark Scenic Riverways. It's a tough job to address the many views and issues that face the rivers. I like plan B that the NPS has endorsed, but am afraid it does not go far enough in addressing problems with the rivers. We have floated the upper Current River in the last couple of years and have noticed new access points, more horse traffic, and vehicles parked by the side of the river. These new access areas need to be closed. I think motorized boats should be kept off the upper stretches of the river. Therefore, I support plan A and hope the NPS will consider adopting it or at least some aspects of it. I also think the Big Springs land adjacent to the river should become a wilderness as proposed. I've hiked and backpacked in a number of Missouri's wilderness areas and believe Big Springs would make a great addition.

**Correspondence Type:** Web Form  
**Correspondence:** I prefer option "A". We need areas to enjoy the quiet of nature, and areas where wildlife may go about their lives relatively undisturbed.

Motorized vehicles are disruptive to other visitors. They ruin other visitors' enjoyment of wild areas with their noise, exhaust, stream muddying, and trail degradation. These vehicles create a "second-hand smoke" effect, where one person (or one group of persons) has an outsize effect on others. I applaud all efforts to curtail their access to this area.

Overuse of the park by horse riders and watercraft also damages water quality and river/stream health, so sensible limits on these activities are needed to protect and conserve the park's resources and ecology.

Thank you for considering my comments.

**Correspondence:** You might hear people say that by applying some restrictions to the use of wild and beautiful places, we will be "excluding" them from those very places. The truth is that such restrictions serve to include future generations, and the absence of restrictions destroy the very places all of us enjoy. "Freedom" and "license" are two very different things. By protecting the beauty that still remains, we will still have the freedom of experiencing these places while our children, grandchildren, and their descendants will have the chance to experience these places and build the same wonderful memories that we are so fortunate to have. If some people are given the "license" to do anything they want to these places, soon our freedom to enjoy them will be lost forever. Protect the rivers now while there is still something left to protect!

**Received:** Feb,01,2014 10:23:57  
**Correspondence Type:** Web Form  
**Correspondence:** Jacks Fork and Current River are great natural treasures that should be protected in ways that maintain their natural beauty and environmental integrity at the highest possible levels which is why the NPS should adopt Management Plan A. It is much easier to prevent the degradation of an area than it is to attempt to reverse

damage after it is done, so Plan A which will close illegal roads and restore them to their natural state, close 65 miles of undesignated horse trails and create no new stream crossings, and ban vehicles from gravel bars should be selected over the less stringent Plan B. Also the National Park Service should advocate to the Congress the creation of the proposed Big Spring Wilderness Area. This designation will provide the kind of environmental protection to the 8000 plus pristine acres under consideration that will preserve them now and long into the future.

**Correspondence:** I have read the gmp and went to all the meetings. The plan is very vague doesn't tell you what is going to be done. The best thing I like about the park is it doesn't feel like you're in a park. I go to the Roberts field area on current river we hunt, fish, camp, just go down there to ride around. It would be a terrible thing to close any access to the river it would congest the ones that are open. The only time that part of river is a little crowded is the holiday weekends the rest of the time hardly anyone there. I am on the river every week. The park service knows where the congested problem is you can't run a boat down to Van Buren the tubes are out of control. I also think that the motor

horsepower limit is to low a 60/40 is the minumn to take a family of 4 in a boat any more restrictions family boating will not exist.A 25hp is the most unsafe restriction ever made they will barley get 2 grown men up the river the jet takes away much more power than people thinks.If the park service wants to change places do it in the set parks like big springs,alley,round springs where the vistors go.Put more thought in how to slow the gravel build up down, it is NOT coming from the roads it is coming from the creeks, in 50 years there will be parts of the river will just be a gravel bed look at some of the big creeks like pike,logan,blar in the 60s people gigged and fished these creeks,now that is impossible.We need gravel ponds or something in these creeks to preserve the rivers we have now. If this generation does not do something kids now days will not see the rivers as we do.

---

**Correspondence ID:** 1613 **Project:** 15793 **Document:** 56208

**Received:** Feb,01,2014 10:54:05

**Correspondence Type:** Web Form

**Correspondence:** I am in strong favor of managing these rivers in a manner that preserves them them for all future generations. And this means excluding motorized vehicles that destroy the river beds, and pollute the water with oil and fuel.

I canoe and kayak on the Current and Jacks Fork rivers every year, and have witnessed first-hand the destruction caused by ATVs. While recently kayaking on the Jack's Fork I witnessed a pair of ATV riders crossing the river repeatedly and destroying everything they went over. I am certain that the water washing on the bottom side of the ATV released oil into the river, and I witnessed first hand the noise pollution caused by this.

If this destruction is allowed to continue, these rivers will end up being destroyed and unable to sustain the life they sustain today. The endangered hellbender is one such species that relies upon these rivers for survival.

The time to preserve these rivers is NOW, and I commend the NPS for looking to further protect these invaluable resources. Please protect these rivers to the fullest extent possible.

**Correspondence:** As a relatively new Missouri resident just recently introduced to the beauty of the Current River, and as citizen who has enjoyed many vacations in National Parks across the country, I encourage the National Park Service to:

adopt Alternative B of the General Management Plan for the Ozark National Scenic Riverways.

Expansion of quiet and undisturbed (or restored) areas is critical; less access for motorized vehicles and more hiking trails throughout the area should be maximized. Backcountry/wilderness areas, especially the Big Spring area, should be maintained and expanded.

Increased staffing is of utmost importance. Park Rangers enhance visitors' experiences through educational programs, and by enforcing policies so that everyone who comes to ONSR for recreation or makes a living from the ONSR benefits.

**Correspondence:** Thank you for doing a wilderness study on the Ozark Scenic Riverways. It's a beautiful area in Missouri, I only wish it was larger and could become a full on National Park.

I think your recommendation for Alternative B is a great step for protecting wildlife and wilderness area. However, Alternative A provides even more protection for the rivers by closing illegal roads and restores 50 miles of natural area where those roads were, regulating and limiting horse trails, and baring vehicles on gravel bars. I would also love to see Big Spring granted wilderness status.

Can't wait to return there in the spring and summer this year.

Thank you.

**Correspondence:** I basically support Alternative B. However, I like an element of Alt. A which would close illegally established trails and roadways. Those were probably made by ATVs or at least visitors who do not obey the laws of the Park.

No mechanized vehicles should be allowed on the trails except in emergency situations. I support action that will educate people on the delicacy of the environment in the Park and the legacy that we are stewards of.

Protection of the rivers and watershed should be of ultimate importance as well as the native plants, trees and wildlife that populate the Park.

Historical and archeological preservation should be a part of the plan with small venues to provide visitor education and appreciation of such resources.

**Received:** Feb,01,2014 12:00:24  
**Correspondence Type:** Web Form  
**Correspondence:** First I want to thank the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless I believe Alternative B does not go far enough. After all this is a part of our National Park system and should be managed in the same nearly-pristine condition as our other National Parks. Kowtowing to pressure from locals because they have traditionally abused the river is not a NPS standard, nor in the interest of visitors. I recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:  
Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesignted horse trails and adds no new stream crossings; and  
Bars vehicle access to gravel bars.  
I also recommend wilderness status designation for Big Spring

Thank you for your consideration of my opinion.

**Correspondence:** I am one who feels that the Current and Jacks Fork river watershed is obviously deteriorating in quality and needs additional protections. This can be measured objectively by water quality measurements or simple observations of the rivers.

The Tea-Party people are throwing tantrums regarding their "freedom" to jet-boat at 50MPH up and down these rivers and to board thousands of horses next to the rivers, and to have unrestricted use of 4WD vehicles along and through the rivers, and basically to treat the rivers as part of their own private backyards, rather than as a national treasure.

The Current and Jack Fork rivers are the finest quality and most beautiful recreational rivers in the region and should be protected. They are under attack by uncaring people and local financial interests.

I strongly support Plan A for these rivers.

Sincerely,

Dave Ewen  
Manchester MO

**Correspondence:** I strongly support Alternative A in that ensures the best protection for the Ozark Scenic Waterway. I've been all too aware of all the problems occurring in recent months. I also strongly support giving Big Spring wilderness status. If Alternative A is not adopted in the strongest possible terms, it would be a black mark for the Ozark Scenic Waterway, and that's something that should be avoided.  
In conclusion, the NPS should adopt Alternative A and enforce it with vigor in no uncertain terms. That's the right thing to do.

**Correspondence:** @Thanks to the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. I continue to believe, however, that Alternative A is the best plan for our parks and rivers. As a lover of canoeing and camping, finding solace in the wilderness, and caring for the earth I hope you will consider the needs of animals, we humans, and our earth. I have taken youth on trips on the Current River that have actually changed their lives forever! Camping along the Jack Forks has enriched our family.  
Thank you for considering my thoughts, (Waneta) Sue Trowbridge

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** My family has been going to the Jack's Fork River for 60 years. My father was a teacher and the Missouri State Teachers Asso. has a large piece of property on the Jack's Fork River which was a gift to the association in the 40's. Of course my parents have passed away, but their children, grandchildren and great grandchildren continue to gather there every Memorial Day from wherever we live. We always thought once the river was part of the National Scenic Riverways that we would be able to enjoy it forever. We thought the river would be protected and that our grandchildren and great grandchildren would be able to enjoy the river. We never thought the National Protection would not be enforced or continued. I'm appalled that the government hasn't taken the appropriate control of the river to ensure it would be there forever as a pristine river for families to enjoy. I'm am shocked that the people who live near the river want to destroy the river in their backyard. Please continue to stand up for one of the nation's great riverways.  
I CHOOSE OPTION 1.

**Correspondence:** The following comment is mine to address the degradation of a wonderful linear park which I have been enjoying for the past fifty years. My mother started taking me to Bunker Hill Ranch, part of the Missouri State Teacher Association property on the Jacks Fork River when I was 7 years old. I am a supporter of recreational use in the National Ozark Scenic Riverways. I feel there is room for hikers, backpackers, horseback riders, canoeists, and kayaks.

Problems occur when people alter the environment for their own personal enjoyment or access. I have seen rock climbers bolting routes on rock bluffs, been heckled by rude and overly large groups of inebriated canoeists, seen jet boats fly up the and down the river, seen multiple groups of large RV's and horse trailers parked on the rivers edge, had off road vehicles drive up to and through my campsite, witnessed multiple horses and riders crossing the river, observed piles of garbage from uneducated floater/campers/hunters or other park users. All of these are examples of selfish use of our valuable limited resource and all are unacceptable to me.

The river systems have cleaned themselves, scoured by rising flood waters, but visual cleanliness belies a dirtier scientific truth. I have read studies regarding the ecoli bacteria count which is enough to make swimming unhealthy during certain periods. I have seen piles of toilet paper and bowel movements in the fragile ecosystem of cave entrances, behind bushes, and around gravel bars. Piles of plastic garbage, rusting pieces of metal, cars and car parts,

building materials, etc are infiltrating every log pile of debris from floods which pick up wood and trash to be preserved in mass as flood waters recede.

As a year round hiker, floater and park visitor, the number of trails/roads have increased, not only in number but in size of vehicles that they can accommodate. Horse trailers have been seen doing three point turns just off the rivers edge. What used to be a horse trail or unimproved road is now able to accept large SUV's and RV's. Vehicles come and go at any time of night or day, threatening the leisurely floater and camper.

As a teacher, I have taken groups of students on five day canoe/camping trips on the Current River since 2008. We studied the history of the Ozarks, hydrology, cave systems, flora and fauna, geology and logging. We taught the students to use a pack in/pack out "Leave No Trace" ethic as we traveled in the park. They were instructed on how to use a cat hole, but when in camp we used a "groover", and packed out our waste. We cleaned up campsites of people who left trash behind, made a contest of filling the red mesh recycle bags with aluminum cans. The students were upset by the amount of trash left behind at campsites and on the river.

Since I have a fifty year perspective of river use in the NOSR, and other wilderness area camping around the United States, I would like to offer the following recommendations.

1. Limit roads and access points along the river.
2. Educate park users about proper disposal of waste, before being allowed on the river. We needed to watch films about safety and waste management before getting a permit and being able to go into the Boundary Water Canoe Area. The same was required to get a permit to enter the Grand Canyon.
3. Limit the number of canoeists/horse back riders that are allowed on the river, and limit the size of groups that can travel together.
4. Conduct semi-annual cleanups of the river and haul out the trash and recyclables.
5. Require canoe and horse packing liveries to educate people that use their services about how to protect the natural resources of the park.
6. Close roads down to the river and allow them to recover from abuse and neglect.
7. Close stretches of the river to motor vehicle and motor boat traffic, especially the upper stretches, except for emergency evacuations.
8. Use a permit system to access the trails by foot, horse, or canoe and use these resources to hire additional staff to patrol the park.
9. Add internships to help educate the park visitors and also to restore areas that have been abused.
10. Levy fines for unauthorized use and violations of park rules, hire additional enforcement officers if necessary.

**Correspondence:** I have spent many days and nights on both the Current and Jacks Forks rivers. I have been a personal witness to the ATV use and have seen the damage that is left behind. It has come increasingly evident that the abuse of the river system is increasing since there is no regulation to hinder it...something needs to be done before the ecology of the system is beyond repair. I support both plans, but would like to see plan A put into effect to further the regulations in hopes that the river system is available for my grandchildren to enjoy, because at the steady rate of decline, I don't think it will be. We only miss something when its gone...DON'T let it happen.

**Correspondence ID:** 1643    **Project:** 15793    **Document:** 56208  
**Received:** Feb,01,2014 12:54:38  
**Correspondence Type:** Web Form

**Correspondence:** Thank you for the work the NPS as done on the thoughtful analysis and process for creating a healthier management plan for the Ozark

Scenic Riverways. These rivers are a natural gem in our state, and important to the health of ecosystems - - both natural and economic - - in the region.

Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo that has degraded the rivers.

Nevertheless I believe Alternative B does not go far enough. I would hope that some aspects in Alternative A could be included, to provide additional protections for these riverways. Specifically, I like how Alternative A:

- 1) Bars vehicle access to gravel bars - their noise and water pollution are untenable in these areas.
- 2) Closes illegal roads and restores natural conditions to 50 miles of these roads;
- 3) Closes unapproved horse trails and adds no new stream crossings.

I also strongly encourage you to maintain a wilderness status designation for Big Spring.

My family and I have canoed several segments of these rivers occasionally over the last four decades. Trips where we witnessed vehicles in the water and next to the riverbanks were not nearly as enjoyable as the few when we did not. The damage vehicles and horses have done to the river is obvious to the untrained eye, and I do fear what pollution levels are doing to local plants and animals, as well as visitors playing in the water like my family.

The 'No Action' alternative is absolutely unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation.

The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of natural ecosystems-should match that of our nation's most pristine and unique public lands, because it fits in that category!

Thank you for your attention.

Laura Neuman

**Correspondence Type:** Web Form

**Correspondence:** My husband & I were most distressed that when we went to Powder Valley on January 22nd, the roadway into the conservation center was blocked & the only way in was to park quite a distance from the center & then walk uphill to the center in the cold & dark. My husband has a knee injury that made that pretty impossible, & I couldn't leave him sitting in the car for 3 hours while I was inside. So we were unable to input in the convenience of the hearing & see the detailed displays. So after driving in from Franklin County, we were forced to turn around & head back home.

We appreciate all the efforts the NPS has done to give the public a chance to input & to come up with such detailed options for us to consider.

With demands increasing for intrusions into the OSRW, it seems this would be the ideal time to also designate other natural areas before they become degraded. So please establish wilderness status designation for Big Spring.

We have a strong preference for Alternative A because it does a better job of protecting the once-pristine natural beauty of the OSRW. We have spent many wonderful days floating in canoes, swimming in the clear waters, tent camping along the river, & hiking in nature there. We've taken all our four children & the older grandchildren too; & we look forward to introducing the babies to the OSRW when they're a little bigger.

We are distressed that this natural area is being maltreated & degraded in several ways. First, we're concerned that horses are being allowed in the river in so many areas & that they have caused the e-coli count to increase

tremendously. Because of the reports, we've been afraid now to float as far south as the Jacks Fork River, which we used to do. There must be some limits to too many horses in the river. Second, we're also concerned about all the illegal roads & trails to allow horses & vehicles including ATMs close to the river. We picnic on sand bars & don't like seeing vehicles there along the river. Can we no longer escape the noise & pollution in nature?

Third, there should be restrictions keeping commercial & private interests from being seen from the river. We don't appreciate intrusions of an increasing amount of manmade development along the scenic riverway. When we want to experience nature & all it offers, we don't want it overpowered by someone else's special project they wanted to place overlooking the river for their private preferences.

Alternative A seems to do a better job of addressing our concerns. Thank you.

**Correspondence:**  
Ozark National Scenic Riverways is just that... a "National" "Scenic" "Riverway" within the "Ozark" region. It is no less a National Park than Yellowstone or Yosemite. The purpose of creating and maintaining the Ozark Scenic Riverways is to preserve and protect this unique and beautiful area(s) for current and future generations. Preserving the natural aesthetic and protecting the fragile ecosystem.  
I believe that there needs to be tighter controls on preserving these areas. Specifically, unauthorized Roads, ATV Trails, Horse Trails and Hiking trails should be closed and banned from use. In addition, I think that all motorized boats should be banned from all of the designated scenic riverways. These restrictions should be strictly enforced and backed with significant penalties to violators. It has been shown through numerous independent studies of the often irreversible consequences from this type of wide ranging overuse, including, compacted soils, increased erosion, changes to water quality & chemistry, loss of native habitat, reduction of indigenous species, increase in invasive species, and many other negative changes. Furthermore, this overuse is certainly not "scenic". One of the stated purposes of setting aside national lands such as the Ozarks is to preserve the "Scenic", pristine nature of the area. Preserving the scenic natural state of this area does NOT include hundreds of non-native Horses trampling the banks and fouling the water, It does NOT include ATV's and Motorized boats drowning out the quiet serene natural

sounds of the area with their deafening engines. Preserving the natural sounds is not only a peaceful enjoyment, but an actual necessity in maintaining the ecosystem's - such as - the call of a bird, a frog, a cricket, or squirrel. Smell is another extremely important element in nature for feeding & reproduction. Natural scents are overpowered by gasoline fumes, horse excretions, & fouled water from these high-impact activities.

Some people may argue that there are regional economic benefits to allowing these unrestricted activities in National Scenic Riverway areas, however, the contrary is actually true. The greatest economic benefit is in maintaining the pristine nature of the region for eco-tourism, low impact recreation, and conservation for biologic research. These wide ranging national economies far out-weigh the miniscule exploitation of our resources by a few. If individuals and businesses want to participate or offer these high-impact activities, such as horseback riding and motor sports, they are free to do it on private lands outside of our national parks and away from sensitive waterways. In Short: The Ozark National Scenic Riverways... are

Ozark: The Ozarks are a unique geographic, geologic, and ecologic area unlike any other - one that is vitally important and deserving of preservation

National: They belong to all of us as Citizens of this nation. NOT to a few users who choose to exploit these areas for financial and personal gain.

Scenic: These areas are to be maintained in as natural and pristine a state as possible. NOT molded, changed, disrupted, and "developed" into a man-made environment.

Riverways: The Ozark riverway system stretching hundreds of miles is delicately and inseparably connected. It is a series of interconnected mountains, hills, forest, glades, fields, caves, springs, creeks, & rivers. Disruption to any one part of this riverway system alters the balance of the entire system.

**Correspondence:** First I want to thank the National Park Service for putting together a well done and thoughtful analysis, nevertheless I believe it does not go far enough. After all the Current, Jacks Fork river system is a part of our National Park System and should be managed in the same nearly-pristine condition as our other National Parks. Kowtowing to pressure from locals because they have traditionally abused the river is not a NPS standard, nor in the interest of visitors and the future I remember a time when there were no four wheeled anything and no horses. The mess they make is unbelievable, it all ends up in the river for all to see and smell. I believe adoption of Alternative A as it provides additional protections for the river. Of most importance, Alternative A: closes illegal roads and restores natural conditions to 50 miles of these roads; closes 65 miles of undesignated horse trails and adds no new stream crossing and bars vehicle access to gravel bars. I also recommend wilderness status designation for Big Spring. Thank you.

**Correspondence:** I support Alternative A. My family and I canoed the Current and Jacks Fork rivers for many years with friends and it was a relaxing, positive experience. Our son now lives in South Carolina and still canoes some of the rivers there. I would like to say that I am opposed to any new horse trails near the river and illegal roads cut through the forest. Also, vehicles on gravel bars should not be allowed. There should be a limit on the size of motors on boats as this presents a very real problem if you are in a canoe and the boats pass, creating a large wake which can swamp the canoe. Experienced canoeists know how to turn the boat when the motorboat passes but many do not. One last comment I would like to make. I support wilderness status for Big Spring.

Thank you for this opportunity to comment about a marvelous resource that should be protected.

**Correspondence:** I am in favor of Alternative B for managing Ozark National Scenic Riverways. I am in favor of more direct management of designated horse trails and a permitting system to help maintain existing ones and close non-designated or unapproved trails and restoring those to native habitat.

I also favor or propose a nominal daily use fee for any recreation in the park area. A one to five dollar per day use fee is perfectly reasonable and yearly passes at a significant discount could also be made available for frequent users. 1.5 million visitors each year could generate a significant amount of revenue if it is invested back into the park system.

**Correspondence:** Please protect the riverways of Missouri. The Jacks Fork and Current Rivers require care and will not withstand long term abuse.

Vehicles do not belong in waterways.

The river banks need to be protected from erosion, at a minimum from man-made contributions from erosion.

Roadways and river access need to be planned thoughtfully and cared for. If the entire riverway is an access point, the river will soon be choked with sediment.

Sincerely

Karen Giovanoni

**Correspondence:** My wife & I were most distressed that when we went to Powder Valley on January 22nd, the roadway into the conservation center was blocked & the only way in was to park quite a distance from the center & then walk uphill to the center in the dark, cold evening. I currently have a bad knee from an injury & that made it impossible for me to hike so far. So the two of us were unable to input in the convenience of the hearing & see the detailed displays. So we drove straight back to our home in Franklin County.

We both appreciate the efforts the NPS has done to give the public a chance to input & to present the detailed plans for us to consider.

We do want to emphasize that we request you establish a wilderness status designation for Big Spring. With demands increasing for intrusions into the OSRW, it seems this would be the best time to also designate other natural areas before they become degraded.

We definitely prefer Alternative A because it does a better job of protecting the once-pristine natural beauty of the OSRW. We have spent many wonderful days floating in canoes, swimming in the clear waters, tent camping along the river, & hiking in nature there. We've taken all our four children & the older grandchildren too; & hope to introduce our newest grand-babies to the natural beauty of the OSRW as well, when they're a little bigger.

I started floating the Current River into the Jacks Fork River in 1952 with friends while in college. Through the years I've seen evidence of increasing mistreatment of the OSRW & have been concerned. I've seen four-wheelers running on sand bars close to people picnicking. I've seen people trashing the scenic beauty-throwing cans & beer bottles in the river & other uncaring activities. We've stopped floating as far south as we used to since we heard about the higher levels of e-coli there in the Jacks Fork River; we used to enjoy that part of the river float.

We are distressed that this natural area is being maltreated & degraded in several ways. First, we're concerned so many horses are being allowed in the river in so many areas & that they have caused the e-coli count to increase tremendously. There must be some limits to too many horses in the river. Second, we're also concerned about all the illegal roads & trails to allow horses & vehicles including the four-wheelers close to the river. We picnic on sand bars & don't like seeing vehicles there along the river. We want to escape the noise & pollution when we're out in the natural environment.

Third, there should be restrictions keeping commercial & private interests from being seen from the river. We don't appreciate intrusions of an increasing amount of manmade development along the scenic riverway. When we go to experience nature & all it offers, we don't want it overpowered by someone else's special project they wanted to place overlooking the river for their private preferences or commercial value to those few individuals.

Alternative A seems to do a better job of addressing our concerns. Thank you.

**Correspondence:** My family has been floating the Current and Jack's Fork river since 1971. We have seen many changes to the management of this area, some good, some bad. The addition of motor boats on the lower Current and the use of ATV's and horse trails through both rivers has severely impacted the natural beauty and ability of all to enjoy this great natural resource. I would like to take my grandchildren to see and enjoy these natural and free-flowing streams in our state. I urge adoption of Alternate Plan A to the proposed management plan.

**Correspondence:**

I'd like to thank the NPS for the recently released Ozark National Scenic Riverways Draft General Management Plan for the future of the Ozark National Scenic Riverways.

Adopting Alternative B, as NPS recommends, is a very positive step. I believe supporting Alternative A would offer the strongest and also additional protections for these rivers and would be the best opportunity to make a change for the better.

I support Alternative A to ensure the strongest protections for the Current and Jacks Fork rivers.

Additionally, I support wilderness status designation of Big Spring.

Please, do everything you can to protect our beautiful rivers!

Thank you.

**Correspondence:** Thanks to the National Park Service for putting together a well done and thoughtful analysis.

Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

However, Alternative B does not go far enough. We recommend the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;

Closes 65 miles of undesignated horse trails and adds no new stream crossings; and

Bars vehicle access to gravel bars.

We need the most aggressive protection possible in order that our best natural resources, our Missouri rivers, be properly maintained in their natural state for the enjoyment of our childrens' childrens' children. It is our responsibility to do this.

**Correspondence:** Thank you for the extensive evaluation of the Ozark National Scenic Riverways.

I have enjoyed many vacations along the upper Jack's Fork River and float trips on the Jack's Fork and Current Rivers over the past forty years. I consider it a precious and fragile area. I appreciate access for canoeing and fishing but know that we must not be too intrusive on this lovely environment. We must maintain and preserve it.

I prefer Alternative A since it would preserve the most wilderness while still allowing access by visitors.

**Correspondence:** I think you should ENFORCE THE LAWS YOU HAVE NOW! I cannot believe all the illegal access roads you leave open. I am actually afraid to camp anywhere along the rivers. There will be an unwelcome visitor, either someone on a horse or a redneck in an ORV. PLEASE CLOSE THESE ILLEGAL ROADS.

I am not fond of any of the plans you propose. I think all horses should be banned. I don't mind anyone using the river for swimming, boating, fishing, hunting, trapping, or just hanging out. Just restrict the areas open to vehicles.

**Correspondence:** As a concerned citizen, I would like to voice my concerns on the continued adverse practices that are continuing to be a detriment to the waterways in our beautiful Missouri Ozarks country. The countryside, streams, and rivers are increasingly being subjected to large and small jet-boats along with individuals using jet skis and ATV's. ATV's are leaving tracks along the country and river beds as they currently are often being driven into the water. There is often gunfire along the waterways, and vehicles are allowed to park in gravel bars and along the river/stream banks. This not only tears up the country, which in itself is horrific, but the wildlife is being scared and sometimes even killed. These practices need to be stopped as quickly as possible to ensure the safety of the waterways, country and wildlife!

Along with many other concerned individuals/voters, I would like to ask for the creation of a management plan to determine what can be done to address these issues. We quickly need to work on stopping the degradation of the waterways in our wonderful Ozark country before it is too late!

Thank you for your help in this matter.

**Correspondence:** First of all, let me commend you for recognizing that changes in the last few decades have lead to a different ONSR than was originally intended and that changes to the system should be considered. Although I agree that changes should be considered, I must admit I am disappointed in the options presented as they don't seem to focus on the root problems in my opinion.

Just to be clear, I'll give you a little background on myself and my experiences within the ONSR. I am 49 yrs old, have been coming to the Montauk and ONSR area since I was 16 yrs old. More than 95% o my time at ONSR has been on the upper current river between Cedar Grove and Montauk Park. Thus my knowledge base and comments are directed specifically to this area. I have hunted and fished these areas extensively and have canoed the river many more times than I can count.

I currently live in Defiance, MO (west of STL) but I also have a very small piece of property with a camper near the Parker's Ford Access. I am not a local but also not someone who visits the park once a year or less. I spend probably 50 days or more per year at my camper chasing trout, turkeys, morels, and solitude with family and friends. I have friends who are locals and friends who like me own property and spend many weekends and days enjoying the ONSR. I have friends who ride horses and friends on ATV's. Friends with canoes and even know a boater or two.

Every person that I know, on each side of the aisle, would agree that over the past two decades, the ONSR experience on this portion of the river has changed. And the reason is very simple, there are just more people accessing the river than ever before. 25 years ago, horses were almost non existent in the areas I was camping and fishing. ATV's were in their infancy and UTV's didn't even exist. Now they are a common site throughout the ONSR and, of particular interest to me, the private land near the ONSR. Now before the horse lovers and ATV riders begin to bristle, I am not saying anything negative about either.....just the recognition that this is an evolving condition and that both horse and ATV traffic is increasing.

So that's who I am....just a regular guy trying to enjoy the Upper Current River portion of the ONSR.

That said, I have to say that I am fairly disappointed in the options presented. My primary disappointment is that all of the options presented, including the No Change Option, all seem to do everything they can to promote additional visitation to the park and development of resources when increased traffic is the root of the problem to start with. Now obviously, I can't say with a straight face that we should limit visitation to the park. We can't do that. However, you can and should work harder to enforce the rules already on the books. The vast majority of all the visceral comments I have read from horse lovers, horse haters, ATV lovers, ATV haters, floaters, boaters, hikers, and tree huggers are primarily the result of a small portion of the population breaking the rules. Rude, obnoxious behavior isn't limited to either locals or weekenders or even in betweeners like me. But it is this rude, unlawful behavior that is the root of much of the conflict on the river. Nobody wants to have their family witness some drunken idiot fighting or peeing in the river on a float trip. That ruins it for everyone.

The same goes for conflicts with ATV's, Horses, sand bar camping, and fishing regulations. Incosnistent and lack of enforcement of the rules has created confusion and that has lead to tensions that will only escalate until a steady and consistent enforcement of law exists.

Yet, the two options I favor, if I am interpreting your 500 page document correctly, do not provide resources for additional resources to ENFORCE THE EXISTING LAWS!!! Instead, your proposed plan as well as options A and C seem to spend money on Historical structures, Oral history programs, establishing a curatorial hub (heck, I don't even know what that is), guided tours, learning centers, and archeological preservation.

Perhaps I'm just not cultured enough to appreciate these amenities but I would venture to say that less than 10% of the ONSR visitors and in particular those that spend a lot of time on the ONSR could care less about these activities. My love of the ONSR is fishing, hiking, camping, and the solitude of nature and I am not alone. An oral history program appeals to less than 1% of visitors. And let's remember, after all, it is our river and our tax money that supports it. It is NOT yours to spend on your own agenda. Here's a thought....how about putting it to a vote. More agents to support existing laws vs. learning centers and a curatorial hub.....I wonder what locals, weekenders, and in-betweeners like me would vote for.

It is my opinion that you should spend those funds on hiring more agents and enforcing the laws you have on the books now. Maybe buy more land to add to the ONSR to spread out the increased visitation. It isn't rocket science fella's. Weed out the drunk obnoxious floaters and boaters and you will find river harmony returns quicker than if you have a regional curatorial hub. Why in the world wouldn't the "no Change Option" have some level of increased enforcement if the Options B and C do??? That's crazy and doesn't fairly address the real root cause of the ONSR conflicts that occur except in your preferred options. The ONSR is not "yours" gentlemen!! It's ours and the solutions should be tailored to make the majority happy, not you and the special interest groups that you cater to.

Secondly, I must say I'm disappointed to see that absolutely no mention of ATV's or UTV's. ATV's are as much a part of the current culture of the area as horses. Many more locals and folks like me have ATV's than horses. Yes there are conflicts between the groups but again, those are attributable, by and large, to a minority of the population that a little increased enforcement efforts might clean up. But why do horses and gravel bars garner so much attention and ATV's are left in the cold. Please do not tell me that horses impact the land and water less....I can take you to ruts 3 ft deep that are the result of horses, not ATV's and have sediment just rolling into the river when it rains....and ATV's don't poop. A little knowledge of the biological cycles and you would understand that ATV's impact water quality less than horses. Again, not trying to get the horse crowds fired up. I recognize their right to be there within the limits of the law too. In fact, I think it's cool and I'm not a horse guy by any stretch. It just seems to me that ATV's have been completely left in the cold and it's not fair....again, seems to be your agenda and not the users of the ONSR.

And if it is less traffic the trails need and that's your excuse for excluding discussion of ATV's, then why the heck would you add another complete class of access in the form of mountain bikers. Again, if the area doesn't need anymore traffic, why would you create more....yet existing users of ATV's are snubbed. Unacceptable in my opinion that ATV riders didn't even get a voice at the table.

Finally, you have created a 500 plus page document yet there are few if any specifics. Perhaps you helped draft the Affordable Care Act?? Your options and even the no change option all mention closing trails, roads, access points, and gravel bars. Yet in all the 500 pages I didn't see any specifics at all. In my little corner of the ONSR, if you closed the Parker's Ford Access, it would be a disaster in my world. At 49, learning to ride a horse is likely a bad idea for me. I can't see how or why you would do that but, there's nothing to say you wouldn't. How about the road that joins Parker's Ford and Cedar Grove as another example. I use that frequently. Are you going to close that in one plan and leave it open in another?? Those kinds of details might help people formulate a better response to your vague references. I'm sure many people like me have very specific questions that mean everything in their little part of the ONSR yet have no idea which plan to support due to the lack of specific information.

Not to mention the financial impact that closing and opening specific access points would create. I have only a small financial impact if the Parker's Ford Access closed and became for instance some type of walk in area or just closed completely. But I have friends, both local and non-local, that could be seriously impacted financially if substantial changes occur within any of the various options. They have literally hundreds of thousands of dollars invested and somewhat centered around that particular point in the river. Don't you think you owe it to the stake holders in the area to document some of these specifics for them to formulate their own responses and lobby for their own welfare. Instead, they are left to wonder what a bureaucrat will decide?? The concept of substantially impacting someone's financial well being without giving them adequate detail to respond and defend their rights and positions is what

you've created in your document. Not only is that unfair and unethical, it seems to me to border on illegal.

In closing, again I think it's great that the ONSR Management team has identified a need for review. Unfortunately, I think you truly missed the boat in solving the problem. A simple common sense approach of minimal change along with substantial enforcement of existing laws should have been considered. Instead, you've used this as an opportunity to cater to special interests from the Sierra Club, horse lobby, archeological study groups, and your own special interests instead of the common ONSR user.....I hope our park doesn't suffer as a result of your decisions.

**Correspondence:** I would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.

Missouri deeded our lands over to the Federal Government with the promise that they would always be accessible and available to the people of Missouri and the people of our nation to come and enjoy. I think this is an encroachment on the promise that was made. We chose to protect the rivers like it is right now and that is what we want to see continued. We were the people that first started protecting the river long before the federal government came in and got involved. We're ready to take it back if we need to.

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan.

Thank you

**Correspondence:** Re: Ozark Scenic Rivers / General Management Plan

I have done the best I can to read through the various options from the General Management Plan. I am glad to see that you have the foresight to address the various issues that are mushrooming within the park. My comments are as follows;

1. I am a wilderness advocate, but I do not see the value of having a postage stamp wilderness. I would prefer the resources be used elsewhere.
2. I think that vehicular access to the river itself needs to be limited. The current managed access points seem to be adequate to reach any portion of the river by watercraft or on foot.
3. Motorized watercraft usage also need to be eliminated in the smaller, upper reaches of the rivers, above Alley Springs on the Jacks Fork and above Akers on the Current. There is not enough water in those stretches to make motor craft usage safe to others using the rivers.
4. Horse usage should have limited access to the rivers as well as a buffer zone to allow animal waste to breakdown before entering the rivers. The safety and health aspects of these restrictions seem obvious.
5. It seems that an additional horse oriented campground would not be a threat as long as it was well insulated from direct access to the rivers or major tributaries.
6. In general Alternative B seemed to cover the best options overall.
7. It seems that there is room for cross choices across alternative plans.

My usage is limited to the sections above Round Springs on the Current River and above Alley Springs on the Jack Fork River.

<b>Correspondence:</b>	I have a few questions and would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.				

Why did the National Park Service hold a informational meeting in St. Louis / Kirkwood, Missouri when they are located over 100 miles from the Ozark National Scenic Riverways? It is my understanding that the National Park Service is planning a big expansion on the Gateway Arch costing millions. Will the National Park Service come down here and have an informational meeting on that? Why does the National Park Service fly in, out of state park rangers to support an informational meeting when they have no knowledge of the rivers here, the local communities, the local businesses, the culture or the people that use the rivers and parks?

I noted that the Draft General Management Plan for the ONSR requires an Environmental Impact Statement and consideration for the impact of Global Warming. I'm just a simple man, but it is clear to me that the National Park Service is having a greater impact on Global Warming then me paddling my canoe down the river. This all smells like there's a skunk in the woodpile....

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan and take a look at turning our rivers back to the state of Missouri and let the Missouri Department of Conservation and our Missouri Department of Natural Resources take control of our rivers.

Thank you

**Correspondence:** I grew up in the St. Louis metropolitan area and would make several annual trips to the Ozark National Scenic Riverways (mainly the Current River, but also the Jacks Fork River). During the trips with friends, we always enjoyed the natural beauty and quietness of floating down the river in a canoe while absorbing the natural wonder of the area.

I still try to make trips to the areas with my nephews so they can enjoy the beauty of the Current River and surrounding forests, much like my uncle took me when I was younger. After many years of travel, however, I have noticed that many activities, specifically all terrain vehicles ("ATVs") as well as 4-wheel drive vehicles were destroying the peacefulness as well as the natural habitat.

After reviewing the four proposals (A, B, C, or "status quo"), I strongly recommend that you implement version A. This would restore the area to its natural beauty, perhaps much more than what I enjoyed 30 years ago.

**Correspondence:** Why don't you people stay the hell out of Reynolds and Shannon Counties. Have any of you ever stopped to think that the local people once owned all of the properties making up the Ozark Senic Water ways. Many of the locals were duped into selling thier property, by a few locals working the Government. Had they know how it is now being run most of them would have not sold out.

Oh yes those trusted locals buying that land made a good profit for themselves. They also were alowed to aquire and keep parcels of that land located on the rivers.

Both of the rivers flood every year causing way more damage than the local boaters, atv and horseback riders can ever do the gravel bars and surrounding river bottom land.

Manage you cities, they have far worse problems than than any place on the Current or Jacks Fork rivers.

So far I have not heard of any drive or ride by shootings, muggings or rapes on the rivers, unlike your cities.

**Correspondence:** Given the current issues (pun very much intended) of overcrowding, shootings associated with trespassers, people changing the oil of their ATV's in the middle of the river, horses defecating in the river and more, I would suggest option A.

I floated those rivers as a youth 25 years ago. The Ozark National Scenic Riverways has since become more crowded, misused and frankly mismanaged. There are far too many boaters; horses and ATV's are ruining the trails. As the name implies, the riverways should be scenic - - a place to connect with nature and the appreciate beauty of the rivers, not a place to come and worry about your personal safety and the safety of your kids,

I fully understand the need for economic development, but let's find a way to do so that doesn't spoil the very reason we come to these unique places. Preserve them for what they were originally intended - - a place to escape the crowds and stresses of everyday life and to appreciate the great outdoors.

**Correspondence:** We support "Alternative C." We hope you will consider and involve the Back Country Horseman in your trail planning. Fewer miles of horse trails will put more impact on the trails that are already established. It would be more beneficial for the trails to loop instead of riding in and out on the same trail which puts greater impact on the trails.

We would like for the trails to be available for the future generations of equestrians.

If there is a fee for equine, will there be a fee for all users of the parks?

We have been involved in maintaining trails through the Show-Me Missouri Back Country Horseman organization by picking up trash, trimming trails, and placing trail markers along the equine trails in Missouri for several years.

Sincerely,

Larry and Linda Dishman

**Correspondence:** Re: Ozark Scenic Rivers / General Management Plan

I have done the best I can to read through the various options from the General Management Plan. I am glad to see that you have the foresight to address the various issues that are mushrooming within the park. My comments are as follows;

1. I am a wilderness advocate, but I do not see the value of having a postage stamp wilderness. I would prefer the resources be used elsewhere.
2. I think that vehicular access to the river itself needs to be limited. The current managed access points seem to be adequate to reach any portion of the river by watercraft or on foot.
3. Motorized watercraft usage also need to be eliminated in the smaller, upper reaches of the rivers, above Alley Springs on the Jacks Fork and above Akers on the Current. There is not enough water in those stretches to make motor craft usage safe to others using the rivers.
4. Horse usage should have limited access to the rivers as well as a buffer zone to allow animal waste to breakdown before entering the rivers. The safety and health aspects of these restrictions seem obvious.
5. It seems that an additional horse oriented campground would not be a threat as long as it was well insulated from direct access to the rivers or major tributaries.
- 6.. In general Alternative B seemed to cover the best options overall.
7. It seems that there is room for cross choices across alternative plans.

My usage is limited to the sections above Round Springs on the Current River and above Alley Springs on the Jack Fork River.

**Correspondence:** To Whom it May Concern:

I grew up in these hills. I learned to swim in the Jack's Fork River. I camped at Alley Spring when it was State owned and just last summer I camped with friends from Mississippi.

I still float, swim, canoe, sit by the side of and enjoy this wonderful riverways that I call home.

The management plan has always caused a stir. No one likes change, and change is extremely difficult when it is enforced by total strangers. I know it first hand because I married one of those strangers. I married a park ranger from Queens, New York, when he worked at Alley Springs. For many years I lived in Parks throughout our great Nation and saw the management of these lands. Somehow, someone has forgotten the real issue of what the land is to be used for. I believe it is for recreation (meaning enjoyment for our families...viewing wildlife, swimming, boating, sitting beside, picnicing, riding horses, walking, hiking, photographing, visiting loved ones burial places... the list is endless. In fact I have done all of these things during 2013.

The people in my town make a living supplying the needs of many visitors to our area. Shannon County is poor. Starved by a government that sends jobs out of the area and will barely hire anyone from the area. Shannon County is mostly owned by the Government and outsiders get profits from the timber sales. Even the timber goes to out of area harvesters.

Today I ask for common sense.

1. Return the park to a lovely status that we all enjoy going to visit. Even the animals do not visit Alley Springs anymore. I used to see all sorts of snakes, fish, turtles, frogs, eagles, deer, blue herons, muskrats, near the spring.
2. Return the Native American artifacts back to the Red Mill where they were excavated from 10-12 years ago. Not one display is located in the Red Mill to show where those arrow heads were dug from the base of the Mill.
3. Stop interfering with the people that make a living by intimidating visitors.
4. Do not close the Park again. Management is not even seen on a daily basis during winter months and when the Government shut down,it became illegal to see one of our Nations most beautiful Springs. What a disgrace to our tourists.

OUR Jack's Fork and Current rivers belong to everyone. Alley Mill and Springs are one of the most photographed places in Missouri. This is my home. My heritage, my culture and most of all the place I retreat to for peace and inner solace.

Thank you for listening.  
Respectfully,  
Tommye LaGrand

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic

Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I would favor alternative B. Alternative C puts too much of the natural resources and natural beauty that makes this area so attractive at risk. I have great concerns that alternative C would cause even more of this unique part of the state and of the country to be "loved to death" and the natural resources that make it so attractive would be further degraded and destroyed in the process.

Though there are interests that may want even more access to provide even more economic impact in the area, they are reaching the point of "killing the goose that laid the golden egg" and destroying, from overuse and abuse, the very resources that make this area so attractive.

Cerulean Warbler | [Mdf/Wikimedia Commons](#)

The Ozark National Scenic Riverways-located within a globally significant Important Bird Area-provides vital habitat for hundreds of species of birds, including the Cerulean Warbler and the Swainson's Warbler.

Send a public comment to the National Park Service today and urge them to protect this critical habitat.

Take Action 

Dear Mary,

The Ozark National Scenic Riverways is at the heart of the largest contiguous block of forest in the lower Midwest, and part of a globally significant Important Bird Area. But, decades of rampant proliferation of motor vehicles, motor boats, and horse trails on riverbanks, gravel bars, and throughout the waterways have resulted in erosion, sedimentation, pollution, and overcrowding-leading American Rivers to list the Ozark Riverways among its Ten Most Endangered Rivers in 2011.

Despite this degradation, powerful interests have prevented the National Park Service from improving the management of Riverways. The Park Service is proposing a new plan, and we have the opportunity to restore critical

areas of the Riverways' precious ecosystems. Audubon and our coalition partners support "Alternative B" for a balanced approach to managing public use while preserving and restoring critical habitat.1 It's critical that people throughout our state make their voices heard in support of the new plan!

Follow the steps below to submit a public comment directly to the National Park Service. The deadline to comment is February 7.

Go to the Park Service's comment page (will open in a new window).

Fill in your contact information.

Copy the sample letter below and paste it into the "Comments" section. Feel free to edit the comments with your own words about why protecting the Ozark Riverways is important to you.

**IMPORTANT:** Let us know you sent a comment. This is the only way we have of knowing how many people are sending letters.

Thank you for taking time to submit a public comment. Please help us spread the word by sharing this message using the "Share this alert" buttons below.

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

**Correspondence:** I cannot remember a time in my life when I did not float the Current and Jack's Fork Rivers. I was lucky enough to have parents who appreciated the sheer beauty of those cold, clear streams. My husband and I have carried on that tradition with our daughters, both of whom started floating at a very young age. Our love of the rivers was key in the family decision to buy property in Shannon County in 1999. In the next decade, my husband and I look forward to retiring in our Shannon County cabin. We have gotten to know and respect many locals, most of whom have very deep roots in the area. What to do with the park is everyone's concern. I greatly appreciate the careful studies made by the Park Service. My husband and I also attended an informational meeting at Powder Valley. After giving much time and attention to all three plans, I am a strong supporter of Plan A. I want future generations to experience the beauty of the Ozark Rivers. I also strongly favor making the area around Big Spring, one of the "Ozark Jewels," a wilderness area.

**Correspondence:** I am speaking as an 83 year old woman whose life span has been refreshed and illuminated by access to places like the pristine rivers and parks of Missouri and in many other areas of the country. They were and are a powerful asset and respite for a populace over-run by the crunch of industrialization and urbanization. We are a family of eight, and even in the early days of our camping trips on the Current and Jacks Fork Rivers, our forays into National Parks from Arizona to Maine, we were painfully aware of the misuse and over-reach of our fellow campers and land owners. When the National Park system took over the Current and Jacks Fork Rivers. we were delighted- -hoping that new rules and regulations would prevent washing cars in the rivers, allowing horse trails to further pollute the waters, and canoe and moterboat mob scenes deface the sandbars and beaches.

Now, at last, there is a plan to meliorate such violations of river and park quality, and with the Sierra Club and other watchful environmental groups I ask that you decide on Plan A instead of B in the current considerations. There cannot be "too much" oversight in defense of the natural world. With fracking, oil fields and pipelines and all the problems contributing to climate change already negatively changing our world, the need for natural resources is abundantly clear. They must be- -for everyone- -a psychologically fruitful refuge and pleasure, an aid to the greening of our planet, and knowlege that urban "escapists" like my family (we are now 21) and rural residents can all canoe down the same rivers with the same mind-set- -one of appreciation for what we all share and the wisdom to keep it serene and safe for ourselves and future generations.

**Correspondence:** To whom it may concern:

This is my second comment, so if there is a limit, I guess you can disregard this.

Yesterday, my husband and I went trout fishing on the upper Current, at Parker ford and above. It was a gorgeous day, rainy, cold, windy, and full of solitude. We were completely alone, except the bald eagle, the songbirds, an armadillo, and a squirrel or two. The fishing wasn't great, but I'm not a very good brown trout fisherman anyway, I had a couple of strikes and two brownies up to my feet, which got off (a rainbow will hook itself on a fly and spinner, so I need to adjust setting my hook and tension on the fish to be more successful, but that is ok, my husband always pulls through as he fishes with lures, we brought home a nice brownie for fish tacos). If you are wondering what the point is.... I guess I haven't done a very good job, so I will literally spell it out: there is opportunity for solitude on the Current, it is a public place and we were alone for five hours. To me this speaks to the outcry of all

the Sierra Club members, etc. that decry the overuse and crowding on the river.

I have canoed, fished and walked the banks of the upper Current for forty years. From a first person point of view, the more permanent changes I have seen on a negative level have to do with invasive species, erosion of banks and eutrophication. Rainfall drains downhill, and because the complete watershed is not protected, a certain amount of all three of these can be expected. However, all three of these also have direct sources within the park. For the upper Current, the effluent from Montauk hatchery and nursery has a deleterious effect on the water quality, causing a minor, but undeniable, effect on algal growth and thus oxygen content of the waters. Horse traffic causes both bank erosion and is a direct source of invasive species and nutrient effluent through horse excrement. I have fished at Montauk, and owned and ridden horses for thirty years. It is not that I am against either of these, but I do see the adverse effect of both on the Current, and understand the responsibility of the concessioners (both State of Missouri and Whispering Pines) and patron to protect that environment which inevitably provides for their income and/or enjoyment. The hatchery needs a treatment pond, and shod horses need to be on roads that can be graded and are not directly in the flood plain (except at hard crossings).

No one can expect privacy on a sunny day in June on the Current, but everybody should expect that flagrant contributors to the decimation of the health of the environment can be controlled.

**Correspondence:** I recommend the No Action Alternative. I have several reasons but the main one is that there is enough governmental interference in our lives here without adding more. I have resided here for 20 years after moving here from 30 years in a state where everything short of the color of your trash can was regulated. We have been fighting the Federal goals of Sustainable Development, Agenda 21, the Wildlands Project, a United Nations Biosphere Reserve, Ecosystem management, a National Heritage Area, a Blueway scheme, etc. and now you want more interference through expansion of park management...no thank you. I am also well aware of the accusations of abusive behavior of Park Service personnel in the Ozarks preceding the past twenty years and those ill feelings are instilled in the locals through their families' experiences. Also, it appears that a National Trail is in the works, giving the Park Service personnel even more outreach. Let me see..had all of the above schemes succeeded, the feds would now be in charge of just about everything but the color of our trash cans.

Put my name down for the No Action Alternative, please.

Sincerely  
Wanda Benton

**Correspondence:** On behalf of Audubon Arkansas, state office of the National Audubon Society, I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR) under Alternative B. Audubon Arkansas believes this alternative provides a reasonable balance between protecting the Riverways' fragile ecosystems and habitats, while ensuring continued public enjoyment and use.

Closing and restoring undesignated trails, while redirecting users to new designated trails and campgrounds, will protect habitat for forest interior nesting birds, which are sensitive to habitat fragmentation and human disturbance. Restoring and stabilizing forested riparian corridors, upland meadows, woodlands, and glades through prescribed fire and use of native plants will also protect bird species of conservation concern.

Audubon Arkansas appreciates its good working relationship with NPS in Arkansas. We are confident the NPS will make the right decision towards better management of a nationally significant natural resource in Missouri.

Sincerely,  
Dan Scheiman, Ph.D.  
Bird Conservation Director

**Correspondence:** Dear National Park Service,

As a Missourian I am so happy to hear that you are turning much needed attention to the Ozark National Scenic Riverways. This is a precious resource for all and especially those of us who use it regularly. Thank you for your analysis. While alternative B is a step forward, it does not target the protection of the rivers as alternative A would do. It is terribly disheartening for me to be out in the beauty of the Current and Jacks Fork Rivers, which I frequent several months of the year, and to have to watch the havoc wreaked on the wildlife and ecosystems due to the illegal road crossings. Please adopt alternative A which would close these illegal roads and restore the ecological integrity of these river systems.

I am also a very strong advocate for wilderness status designation for Big Spring. Again, I feel that this is a precious natural resource and fragile ecosystem that merits your protection.

I am deeply grateful for your study and hope that my words touch your heart as you move forward in this urgent and monumental decision. So much is at stake!

Sincerely,

Cheryl Lawler

I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Sincerely,

Dan Reed

**Correspondence:** I like the idea of a Management Plan. I prefer a balanced approach that would address the concerns of the people who actually use the park the most.

My biggest concern is access. Who determines "authorized" access. Here is a place for consensus building. A committee of concern parties should make these decisions. Example: Park officials, county commissioners, conservative group representatives and liberal groups representatives, and local folks.

The factors used to determine access should include traditional such as county roads, old logging roads, topographical maps, and trails.

I have used the park since 1976. My uses have been canoeing, hiking, horseback riding, hunting, fishing, swimming, and camping. As a young man I enjoyed cliff jumping.

Commercial use of the park by vendors of canoes, tubes, horses and such do need special rules and limitations. They should also share responsibility, through money or man power for added maintenance and up keep expenses.

I don't own a Quad runner or big motor boat so I can only say I respect their right to use of the park, but can easily see how abusive these machines can be especially in ever larger numbers. Young male craziness is probably where most abusive behavior comes in to play. Yet as we don't shut down the highway because someone speeds or litters we cannot shut down access to the river because of the abuses of a few.

The large trail rides (horses) present a special problem. Here again we shouldn't penalize local folks who like to ride horses throughout the park in small groups or as I have often done by myself.

I did not read the whole plan just the summary and stories in the paper.  
My hope is for a balanced approach, with special consideration to the local population who through proximity use the park more then others.

I look forward to more years of enjoyment and the same for my grandchildren.

**Correspondence:** Dear Sir or Madam:

On Jan. 12 we commented on the Ozark National Scenic Riverways General Management Plan (ID: 884296-56208/674). We wish to add the following to our previous comments.

Thank you for organizing the recent series of public meetings. One of us (Tom) attended your excellent public meeting in Salem. We are even more convinced of the need for the most stringent regulations found only in Alternative A.

At your open house I met a woman who was organizing a caravan of boats and horse trailers to your public meeting in Powder Valley. She seemed to be totally against government regulation and seemed to feel that she had the Right to ride her horse anywhere she wanted. Indeed, if the St. Louis Post-Dispatch is to be believed, this caravan blocked access to the parking lot preventing others from attending the meeting (Doubts about the future of a national park in the Ozarks, [http://www.stltoday.com/news/local/metro/doubts-about-the-future-of-a-national-park-in-the/article\\_02722479-7801-5d45-83f1-10d2a3ea21e1.html](http://www.stltoday.com/news/local/metro/doubts-about-the-future-of-a-national-park-in-the/article_02722479-7801-5d45-83f1-10d2a3ea21e1.html)).

Nobody from St. Louis came to Salem and tried to prevent her from having her say. Why did she feel she had the right to go to St. Louis and prevent others from attending the public meeting there? As we remarked previously, people who behave this way should not be rewarded for their bad behavior.

We have seen time and time again that lack of effective government regulation leads to disastrous environmental degradation. To name just a few instances: Deepwater Horizon, Mayflower, Arkansas, Lac Megantic, Quebec and the most recent abomination, the toxic chemical spill in West Virginia that left hundreds of thousands without water and waterways degraded for many years to come.

Again, please choose alternative A. Ozark National Scenic Riverways needs the maximum protection feasible.

Yours sincerely,

Tom and Helen Sager

**Correspondence:** I would like to comment on the Ozark National Scenic Riverways, Draft General Management Plan.

For generations, the folks in this area have been good stewards of these rivers and we have taken good care of them. These rivers were originally given to the federal government to create the Ozark National Scenic Riverways, so that everyone would have access to the rivers. We just went through this last year when the National Park Service tried to pass that "Blueways" scam on us. How much longer is the National Park Service going to continue to try and shove this down our throats? Us old folks will continue to pursue every avenue we can to bring our rivers back under state control.

We can thank the National Park Service for destroying the fishing on the upper Jacks Fork River when they introduced Otters back into the river, just above the Buck Hollow Bridge. The NPS has already closed "Buck

Hollow Access" to the river and the Plan has not yet been approved.

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan and work to bring our rivers back under state control.

**Correspondence:** I am in favor of strong protection of a that protects the resource. Restrict motorized vehicle and unauthorized vehicular access. Restrict horse traffic and maintain a controlled environment that protects the watershed from the waste products from horse usage. Restrict outboard motor sizes to appropriate areas where the river can tolerate or resist the prop wash and bank erosion. Also, power boats tend to disturb the serenity of the ecosystem.

If we fail to protect our resources now, there is no way to restore them later.

**Correspondence:** Thank you National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo. Nevertheless the Missouri Sierra Club believes Alternative B does not go far enough. It recommends the adoption of Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:  
Closes illegal roads and restores natural conditions to 50 miles of these roads;  
Closes 65 miles of undesigned horse trails and adds no new stream crossings; and  
Bars vehicle access to gravel bars.  
I would like a wilderness status designation for Big Spring. Thank you.

**Correspondence:** I would like to state my objections to the alternative B gravel bar access plan. I am a senior citizen that enjoys going to the river, sitting on the bank and watching my grandson and his friends swim fish and play in the water. Several of us parents and grandparents go as a group. We take chairs, coolers, air mattresses etc. for us and the kids to use. I was born and raised on these rivers and know a lot of small bars that we can go to and not be constantly bothered by other people. We cannot carry all of the things we need very far. I don't see any reason for you to take this privilege from us.

In my group of friends that does this four of us men served in Viet Nam and one was wounded in the leg bad enough that he has problems walking. I have a condition caused by being there that has affected my stamina so much that I can't carry anything very far. We don't want to have to go to an area that you designate that everyone else is at. They have different things that they enjoy and we would none be able to have the experiences that we have in the past.

All I hear these days are this Park is for everyone. Don't forget the seniors. Limiting gravel bar access is one of the worst things you could do to us. All the floaters could still use any place they wanted to but we couldn't. We are the ones that pay taxes here, serve on the school board, clean the roads out when trees have fallen in them, and help people that get in trouble on the river and hundreds of other things. Think about those things when you are making a decision.

For one thing, you leave yourself a blanket slate by saying that the number of gravel bars accessible to vehicles would be designated and reduced. That could mean one or all. I don't think anyone believes that it would only be a few. If you can't name the ones that you believe are a problem, then you shouldn't be given the power to close any. I also like to use some of these areas to put in a small boat or canoe for fishing. I may only want to fish a hole or two and don't want to have to put in miles away and motor to and from these spots. In fact, a lot of these places on the Jacks Fork can't be motored to because of low water conditions in the summer months. I also like to drive there and wade and fish a few holes or just fish from the bank.

Another use that you would be taking from me is the method that I use while turkey hunting. I drive to some of these areas, put on waders and go to the other side to get to good hunting areas that are not accessible from the other bank. As far as all the destruction our driving up close to the river is causing, I've been watching this river for 68 years and the floods take care of a few vehicle tracks. They do more damage to the banks, roads, trees, gravel bars and fields than all the people do and you can't legislate the weather.

In my humble opinion, if you would use some of the money that it would take to hire all these rangers to enforce these new regulations that you are proposing, and start putting river cleanup crews back on the river like we had in the past, the rivers would be a much more enjoyable place to visit for everyone. If you would go gigging some of these clear winter nights I think you be disgusted, like I am, at all the cans and trash in the pockets just below the shoals. Some of which looks like it has been there for years.

As with all my other comments, I would like to end by voting for the NO-ACTION alternative.

**Correspondence:** I would like to comment on the ONSR, Draft General Management Plan.

The proposed changes in this Draft General Management Plan will affect nearly every aspect of this beautiful scenic riverway. The closing of 20 access points will prevent local folks from floating, fishing and canoeing our local streams. The proposed changes will be devastating to this area. I would like to see the Ozark National Scenic Riverways be returned to the Missouri Department of Conservation and our Missouri Department of Natural Resources. Our State Park Division is in a much better position to maintain and operate the Scenic Riverways. They are in a much better position to consider the needs of the local people and better understand our local economy.

I strongly recommend that my state and federal representatives support the No-Action Alternative to the Draft General Management Plan and work to bring our rivers back under state control.

Attached is a picture showing how the National Park Service is already closing access to the Jacks Fork River. Picture taken at Buck Hollow access on 01/30/2014

Thank you

**Correspondence:** I would like to state my opposition to your preferred alternative B on gravel bar camping. I have camped on both the Jacks Fork and Current rivers all my life. Limiting camping on primitive gravel bars to designated sites only would be very restrictive to our Ozark way of life. It doesn't seem fair for the canoe users to get to camp anywhere they please just because they are floating. As a senior citizen, it is very important to me to be able to drive close to where I like to camp.

I have no desire to camp in your designated areas with all the young floaters who like to party all night. I was here when this wasn't a Park and well remember the promises made that it was to be a recreational area and not a Nat'l Park like Yellowstone. We were promised that our traditional ways of hunting, fishing, camping and enjoying the river would be upheld. This has not been this parks policy since the beginning. It has always been a struggle to keep our roads open. It seems every few years someone decides that several of them should be closed for one reason or another...

What benefit it would be to the park to close gravel bar camping is not easily understood. You can camp on some of those bars that you want to close now all year long and may never see a ranger. How do you propose to enforce all these new regulations when you don't have the budget to mow the grass, pick up trash or clean the bathrooms now? Of all the new proposals that you have come up with, I don't see any that was made to benefit the local residents. It seems like it is the parks position that the tourists and sierra club members are the only ones considered. What happened to "A place for all the people."

I understand that we can't go back to what it was before the park, and for one I wouldn't want to.

I believe this is a much better place to live and enjoy the rivers than it would have been without the park. You can look in the four mile areas and see what all the private land would have been like.

But I also believe that it should be left alone as things are going pretty good for the most part as it is.

The motorboat and canoe issue is as good as it has ever been the horsepower limits are acceptable by the majority of visitors, so why keep trying to impose new regulations at every opportunity?

For all the above reasons I vote; No- action.

**Correspondence:** What is needed are designated trails that make loops which would minimize traffic and provide more enjoyment. Also, fewer trails could mean overuse of the ones that are designated if you close too many trails. Horses also need access to the river, because of their need for drinking water during the hot summer months. Very important to consider the needs of horse riders and the economic impact to Missouri and the Ozark Riverway area if the good trails are closed and horse camps are forced out of business.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Thank you.

**Correspondence:** I agree wholeheartedly with the NPS plan. The Ozark National Scenic Riverways is at risk of being abused by both locals and outsiders. It is, as one person has noted, a national park, not a local playground. Locals may argue they depend on tourism to make a living, but if they cannot be good stewards in partnership with the NPS, then they will have to learn with tighter restrictions. Please keep the ONSR from being abused.

**Correspondence:** I support the restriction of using power boats, ATVs and other motorized devices on the rivers. I have been harassed by jet boaters while canoeing on the Current River and consider the noise and disruption that they cause incompatible with the peaceful use of the river and the park. They not only ruin what should be an idyllic experience but are degrading the ecosystem. I think it would also be reasonable to restrict the number of boaters on the rivers each day to avoid the overcrowding and noise that sometimes happens on weekends.

**Correspondence:** I read most of this document and believe that Alternative B is a reasonable and acceptable compromise between the maintaining as natural a state as possible in this park and increasing motorized access and commercial opportunities. As an avid hiker, backpacker, wildlife preservationist and naturalist I would like to see the park strictly limit motorized access of all kinds, as both will cause damage to shorelines, disrupt the fish and other wildlife populations and provide wilderness access to people who are more likely to disrespect and abuse the natural areas. However, if motorized boats or ATVs access and use is clearly defined and limited, and impacts are monitored, it would provide enjoyment of the area for all kinds of recreation and people with a variety of interests. My main concern is that if you open the door too wide, then before you know it, rules will loosen or Federal law enforcement will look the other way or be unable to adequately patrol the non motor areas and ATVs and motor boats will be plowing through natural areas indiscriminately and causing damage. And given federal budget cuts, patrolling and managing a wild life area is labor intensive and expensive to fund. So is it realistic to expect that enough manpower and support will be available in the near or farther future to monitor increased access to the public?

**Correspondence:** One of my major issues is the possibility of more access points for horses to drink at, by or in the water. I understand that horse riders want to have more areas on the rivers where they can water their horses. This may sound like a reasonable idea unless you have hiked where horses have torn up trails. I have hiked and backpacked on the Ozark Trail. I have built and maintain parts of the Ozark Trail. The number of horse owners who respect the trail seems to be low. The number of horse owners who have helped build or maintain trail is even smaller. The facts are there to support me. Horse riders educating each other would help and getting involved in building and maintaining trails would be an eye opener for the horse folks. I'm not against the horses but the inconsiderate owners.

Speaking of horse power. Boat motors with less horsepower is important. Environmental degradation can be seen occurring as the waves hit shorelines. Increased silt can also be a problem. Safety is a factor. Being in a canoe as a speeding boat goes by is a safety issue.

ATV abuse of the rivers is routine. More law enforcement officers could curb this problem.

All in all a few more restrictions might be beneficial. The plan with the most restrictions is excessive and undoubtedly will have opposition from the many folks who use the Ozark National Scenic Riverways.

**Correspondence:** We are opposed to the NPS taking over more land in our county and imposing more regulations on our rivers! (WE THE PEOPLE, are supposed to have a say in our government policies). For one thing we won't be getting tax money that is needed for survival. We live here and want to keep our rivers for all to use not just the tourist. We enjoy it daily and they only occasionally. But with more restrictions tourist won't want to come, thus we loose tourist money for our small towns. No doubt tourists like it as is, and not cluttered with more regulations. Our rivers are filling up with gravel, since we are not allowed to get sand and gravel out of them. Thus not much water any more as years ago like I can remember. Leave things alone and let the rivers run free so we can enjoy their pure clear water and a nice place to take a swim in the summer months and have a family picnic on the gravel bars!

**Correspondence:** Illegal roads, misuse by ATVs, and excessive horse traffic are all taking their toll on the Ozark National Scenic Riverways, home of the Current and Jacks Fork Rivers. Therefore, I support a strong management plan for the Current and Jacks Fork Rivers. The National Park Service (NPS) recently released their Draft General

Management Plan for the future of the Ozark National Scenic Riverways, which includes various alternatives for park management. I advocate Alternative A as it offers the strongest protections for the rivers. Alternative A helps save the rivers through the following:

- it closes illegal roads and restores natural conditions to 50 miles of these roads
- it closes 65 miles of undesignated horse trails and adds no new stream crossings
- it bars vehicle access to gravel bars

I also advocate for wilderness status designation for Big Spring

**Correspondence:** Please take into consideration the value these river ways bring to the communities that surround them. I have canoed and kayaked both these rivers for 15 years. I have also been a part of the trail riding community for two weeks each year for 12 years. I am 56 years old and my husband and I just spent the weekend in Eminence. Mo enjoying the river and the national park to view the fall foliage. It would bring complete devastation to these little Missouri towns who are struggling even now to survive. I have seen the wild mustangs crossing the river and it was truly a gift from God to see animals in their natural habitat. Please don't take this away from Missourians ! What will be the purpose of this much land in government control if no one comes to use it or see it. I understand trying to preserve it but surely we can find a happy medium for all involved. There are very few places where horseback riders can ride for a week and cover this many miles of trails, for me it was like a slice of heaven being able to get away from the rat race of life. I have met people from all over the United States who every year come here to ride. There have been many who have fallen in love with this area and even moved here. During all my visits I have always stayed in cabins, motels and shopped and eaten in the local communities who depend on these different recreations to put food on their table for their family and teach them the lesson of hard work. Please please consider the ramifications this will have on these families and what if your family was from a small town in southern Missouri where choices of employment were limited. Thank You ! Karen Lee

**Correspondence:** Our organization, Audubon Society of Central Arkansas, has discussed the options for managing ONSR and support Alternative B. We support Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects

This area is a treasure for our state and nation. Americans for generations to come should have the opportunity to enjoy this area. We are grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

Thank you, Jane Gulley

President, Audubon Society of Central Arkansas

**Correspondence:** I appreciate the opportunity to share my concerns about the new GMP for the upper part of the Ozark National Scenic Riverway. I feel that having a number of good horse trails that lead you through the beautiful part of the riverways is very important. There needs to be several trails that lead to the Current River from the camping area. If there are not enough trails, then there is a possibility of them being overused and possibly cause damage to the park. This beautiful country was intended to be enjoyed and that can be done by having several trails for the horseback riders to enjoy. If you will provide the trails, the horse people will be very willing to help maintain them.  
Thanks for your time and being willing to share the park with the horseback riders and others.

My vote is to follow proposal number 3.

**Correspondence:** hello I would like to start by saying I love the rivers the way they are. but year after year I hear how they want to control them more and more. and its not just wanting they do. you cant hardly float any more without being pull aside and messed with. tease rivers have always done just fine without the over controlling of them and you cant say that they are polluted because when you test them it is usually when there has been a lot of floaters in it. so that not the real reading. the real reading is after a flood because god has a way of taking care of things. I don't believe this management is about helping the rivers .I think this is about trying to take away freedoms that many generation have got to enjoy. but if you control them the next generation wont.no offence to the park service. I respect what there suppose to do and they have done good for years. but trying to control it more makes no since. my grandpa and grandma loved these rivers and my great grandparents did to. if you watch the old Shannon county home videos my great grandparent are in them the cutts family . and I have more my grandma was raised on jerktail I have a family cemetery down there that I tend to. to bunches and youngbloods . all im saying is if you need help cleaning up some trash . I and many people I know would love to help clean and help. in fact we have been on a

few stream teams . all we want in return is to leave the rivers the way they are there is no reason to try and fix something that's not broken. unless you plan on breaking it and this plan will break it. this town and many more will die. and without the towns thin there will be no wear for the people that come to see your rivers to stay or eat or do any thing .so if you rely want to protect it protect it don't try and control it. it didn't get to be a river bye controlling it. a river flows wear it wants to . so please let us be like the river .

**Correspondence:** We'll I liked both A and B versions . I don't mind the boats so much if they would slow down some and let a canoe pass before going on. Smaller engines would be nice. You do not need 5 people in a boat buzzing around drinking beer with small children in the boat. Need more hiking trails like down on the Buffalo. Very nice trails. Stay by the river , go up creeks. Not just dry old ridges. Have trails on both sides of both rivers , cross the river in so low areas. More history would be wonderful. Get rid of 4 wheelers, give them to the law only. More education on not littering and proper bathroom training on the river and forest, nothing worst than toilet paper everywhere. Hope all goes well. Now start on the upper Gasconade and slow the boats down. Very nice up here, too many cows in river though.

Thanks much. Mike

**Correspondence:** We feel that the regulations that are in place now on the Ozark National Scenic Riverways are sufficient to protect the rivers in the park. Many people living in this area depend on tourism and recreation for their income. Imposing more restrictions on the use of the park would severely damage their livelihood. The local residents appreciate and love the riverways. They are not going to do things to damage their source of income. They know better how to take care of the rivers than the bureaucrats that live in Washington D.C. or someone else who lives a few hundred or thousand miles away from the river. It is sad that there are some people who have an opinion that there is a serious problem with the rivers and the only way to solve it is to impose more restrictions on the use of the rivers. It is just ridiculous to put more limits on the recreational use of the Ozark National Scenic Riverways.

**Correspondence:** My fondest memories from childhood always include our family's annual pilgrimage to the Current and Jack's Fork Rivers. The pristine waters, abundant wildlife, and unparalleled scenery are second-to-none in the Midwest. That said, I worry for the future of this very delicate ecosystem; specifically - I worry about the impact the more recent developments along the rivers has had on what I consider an Eden-like place.

I recognize that the rivers are a huge source of revenue for the region, and it is not my intention to judge others for pursuing a better livelihood. However, I don't believe it is worthwhile to sacrifice the abundance and splendor available in the Ozarks for the purpose of limited economic development.

I would like to think our children would thank us for keeping these increasingly rare "wild" spaces free of development and intrusion by equestrians.

Thank you for your consideration,

Mike Othic

**Correspondence:** I thank the National Park Service for putting together a well done and thoughtful analysis. Adopting Alternative B, as NPS recommends, would be a big positive step forward from the status quo.

Nevertheless the Missouri Sierra Club believes Alternative B does not go far enough. I agree with their recommendation to adopt Alternative A as it provides additional protections for the rivers. Of most importance, Alternative A:

Closes illegal roads and restores natural conditions to 50 miles of these roads;

closes 65 miles of undesignated horse trails and adds no new stream crossings; and bars vehicle access to gravel bars.

I also support wilderness status designation for Big Spring. Members of my family have floated the Current and Jacks Fork Rivers every year since 1980. We rent multiple canoes from outfitters and usually buy snacks or forgotten items while in the area. We have taken many out-of-state friends to float Missouri's clear rivers.

It is hard to restore natural habitat and easy to destroy it. My grandchildren deserve natural areas to explore with their families.

**Correspondence:** I applaud efforts to revise and implement a new management plan for this very special area, as it is evident that the park has seen its share of degradation. The thoughtful analysis and varied management plans are appreciated, and even the advocacy for Alternative B would be a major improvement. However, I believe that Alternative A would be far superior in protecting the degraded communities within the park, and reducing harmful recreation that is damaging and equally repulsive for those seeking the original integrity of the area. I believe that a tourist economy can be maintained through promoting low-impact and less crowded exploration of quality ecosystems, even increasing its desirability amongst genuine enthusiasts.

I also support wilderness designation for Big Spring, and protection that would ensue.

As a local resident and enthusiast of the area, I have found it troubling to see a federally protected area so degraded by tourism- through volume of people, horse trails, obscene jet boat use leading to erosion on banks, and general trash from unregulated use and access. I hope to see major changes soon, and be able to experience a fragment of the Ozarks left undisturbed.

RE: Comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP)

Dear Superintendent:

I'm writing to share my comments on the Ozark National Scenic Riverways Draft General Management Plan (GMP). I prefer Alternative B as outlined in the Draft General Management Plan Environmental Impact Statement. Specifically, my experience in the Riverways in the following recreational uses include fishing, hiking, and canoeing. These uses are important to me because of the incredible beauty and environmental importance of this region.

In addition, I appreciate the conservation and preservation functions of the National Park because the preservation and protection of the watershed of the ONSR affects the health of this ecosystem and that of the larger systems to which it connects.

The 'No Action' alternative is unacceptable to me because it fails to address the need for more enforcement of existing laws and standards, to better manage overcrowding, and to improve communication and partnership with local landowners and communities. Further, it fails to address these critical problems in the Riverways:

erosion from all terrain vehicles and horses

bacteria levels

increased levels of recreational use involving horses, boats, and ATV's

The Ozark National Scenic Riverways ('Riverways'), established on August 17, 1964, encompasses 134 miles of the Current and Jacks Fork Rivers. The Riverways' enabling act has three stated purposes: preservation, conservation, and recreation. As Missouri's largest National Park, it showcases several world-class freshwater springs, caves, and bluffs that are home to fish, birds, rare and endangered native amphibians, crawfish, and plants. It is a testament to Missouri's commitment to conservation that the Riverways is a National Park and was the nation's first National River.

The Current River and Jacks Fork are prime recreational waters in a stunning natural karst area that attracts approximately 1.5 million visitors each year. A 2011 study estimated visitor spending at more than \$55 million with nearly 90 percent of spending from non-local visitors. As a unit of the National Park System, management of the Riverways must ensure protection of the Park's resources in an unimpaired condition for public recreation, education, and scientific value. Among its tasks is sustaining and restoring bio-diversity for the next generation. The management of ONSR-in terms of resource preservation, sustainable use management, and restoration of natural ecosystems-should rival that of our nation's most pristine and unique public lands.

Yours truly,

Steve Crock  
4 Forrester Dr  
Manchester, MO 63011

**Correspondence:** As every thinking human knows Fresh Water resources are, next to the air we breath, essential for sustaining all life on this planet. Our country has too long allowed our fresh water treasures from the Great Lakes to our rivers and streams to be trashed and polluted.

With regard to protecting the Ozark National Scenic Riverways Option "A" or at a very minimum Option "B" needs to be implemented and the sooner the better.

No one wants to put an end to recreational use of our forests, open lands, or waterways but we must educate our citizens on the proper use of these resources in the 21st Century.

---

**Correspondence ID:** 1775 **Project:** 15793 **Document:** 56208

**Correspondence:** I would agree that Option B seems to be the most balanced of the options for the management. However I do consider the "size" of the boats as well as the horsepower to be an issue. Jon boats, like my grandfather owned were narrow, not as large as they are now. And even though I enjoy gigging, the sound of huge generators do make a big noise for others. I do want my children and grand children able to use a clear clean river. I would hope that you all would find some way to protect the cemetery areas. One I went to last year was run over by ATV's. I feel that they should be completely banned from the riverways.

**Correspondence:** Please continue caring for the Current and Jack's Fork rivers. I have many wonderful memories of canoeing on the Current and both are area treasures which should always be preserved. While your plans are a good start, I encourage you to adapt Plan A, which would be even more helpful in limiting the vehicle and horse traffic pollution.

**Correspondence:** Please select Plan A. Preservation of this natural resource should be the pre-eminent guiding factor in your decision. Permitting destructive uses is not consistent with a long term goal of preserving this public space. The area has suffered from essentially unregulated use and is in decline as a result. The local people have been unwilling or unable to stop the destructive uses that threaten this area. Therefore, it is very important that you adopt the plan that will provide the most protection for the natural environment in order to preserve these rivers.

**Correspondence:** Hi,

First of all, I want to thank the National Park Service and any and all state agencies, NGOs, non-profits, businesses and ordinary citizens who took part in this study. I downloaded the 500 page study and while I admit that I did not read the whole thing, I recognize all the hard work and careful thought that went into making it. More than anything, I appreciate that the whole process was done with great transparency and opportunity for public input. WOW, imagine that!!!! Real democracy in action!!

I just wanted to say in regards to the proposed management plans put forth, I am in full support of stringent guidelines to restore the health of these streams, the only real estate in Missouri preserved as a National Park (outside of the Gateway Arch, which is NOT a natural treasure). I am approaching 50 years old and can vividly remember these streams being much cleaner when I was a kid floating and swimming in them. I would like to see them restored to their full health.

I believe the single biggest contributor to the current state of poor water quality is allow motorized boats to go up and down these rivers. Second to that is all the road crossings. Then come all the ATVs and horses.

I do not believe National Parks should be treated or run as commercial playgrounds for activities that tear up the natural landscape or waterways. I am not against hunting, floating with non motorized boats, fishing, camping, hiking.

My main complaint is with motorized boats.

**Correspondence:** I support Alternative B as a realistic compromise that will most likely garner the buy-in of local businesses, which is important and necessary, and of many if not most of the local, reasonable residents of the area.

In the 40 years of canoeing and enjoying the Current and Jack's Fork Rivers, I've noticed an increasing degradation of the rivers and their banks as more and more users frequent the area and more and more users treat the area as if their parents will arrive later in the day to clean up after their messy and unruly children. I don't know what can be done about this, but I know that other long-time users like me avoid the rivers on weekends and Mondays. We find that the period from late Fall through early Spring is the best time for enjoying the rivers.

**Correspondence:** Re: Ozark National Scenic Riverways Draft General Management Plan

I have canoed on both the Current and Jacks Fork Rivers. They are beautiful natural treasures.

Without being too wordy, Alternate B (also favored by the NPS) makes sense. Doing nothing would be nuts. Alternative A would probably entail much more debate. The NPS can always ramp up the oversight if Alternative B doesn't work. But we can't quickly undo more damage if the NPS takes no action.

Sincerely,

James E. Bryan  
Fenton, MO

**Correspondence:** I support the A rules that have been put forward. My family owned a cabin at Ebb & Flow camp since the early 1900's and I spent many weeks each summer enjoying the camp, and the peaceful river. After the riverways took over it has been a different story. The river has become a three ring circus. I am 76 years old and I remember how it was many years ago and it should be returned to that state. Get rid of the motorcycles, ATV's and the horses crossing and swimming in the river. This was not a problem when I was enjoying the pristine area. The Shannon Hunting & Fishing Club is still a viable organization that believes in keeping the land as the Wilderness that it was many years ago. If the Park service is going to take over something and claim to keep it as a wilderness area they need to keep their word.

**Correspondence:** Hello,  
My choice for the GMP for the Ozark Nat'l Scenic Riverways is ALTERNATIVE A. It is selfish for riders of horses and Motorized vehicles to degrade the natural beauty of the ONSR just for their personal pleasure. Habitat destruction worldwide is exploding, and it needs to be slowed in every way possible. Please think for the long term and preserve this natural treasure.

**Correspondence:** I have live on the Current River. Our family owned land from the sixties until a few years ago. The land was sold to the Forest Service. I have seen many changes over the years. The biggest change is the number of motorized vehicles and their size. These really impact my experience in ONSR because of the noise. The water was drinkable at one time, and our springs were clean. The NPS must step up to the responsibility of properly managing the park and protecting it from over use by locals and tourists. Many National Parks in our nation limit visitors and charge fees to preserve the delicate ecosystem and beauty. I support charging fees to floaters, campers, trail riders etc. if that's what it takes to protect and properly maintain the ONSR. I support prohibiting boats above Round Spring during May thru October. I support closing trails to prevent driving to gravel bars and setting up camps on the edge of the water. I support keeping trail riders away from the rivers and preventing crossings. People who live in Eminence and Van Buren seem to believe that unrestricted use of the ONSR by tourists is their way to a better life through a better economy...more people, more jobs. The rivers are not to be exploited for a few but protected for the future. I support Plan A.

**Correspondence:** Our family have been land owners of a 160 acre section located in the Current River watershed since 1966. We have used our place many for recreation and relaxation. We have also floated the Current River many times over the years and are intimately aware of the the subject area. With this background I would like to say that of the four alternatives, Alternative C is the one I would endorse at this time. I understand the river usage issues but am undecided on the need to convert large tracts of land to a Wilderness designation such as proposed in Alternative A and B. Thank you for allowing me to comment.

Sincerely,

George Mellicker

**Correspondence:** I would like to see horses given the same right to enjoy the riverways and trails as the hikers and the bikers. This country was founded with people on horseback. They were our way of transportation and work for many years. This land belongs to us as citizens and we should be allowed to see it in any form that we choose. Is there some that are inconsiderate? Yes but that is in all groups. I would also like to see several designated trails so it cuts down on erosion due to the fact that the horses aren't forced to travel the same trail all the time. I vote for alternative C. It has been my experience as a horse person, that most of us are more than willing to go out and clean up trails, pick up trash or whatever is required of us to keep our trails. Missouri is a gorgeous state and even better from the back of a horse!!!

**Correspondence:** Thank you in advance for allowing me to comment on behalf of the Missouri Trappers Association. It concerns me about the recent proposals of the (GMP) draft. From what I understand, these proposals would impose new horsepower restrictions on motor boats and banning motorized watercraft on much of the riverway, close approximately 55 miles of access roads, close approximately 20 river access points, closing approximately 65 miles of trails, putting a cap on the number of people partaking in various recreational activities, and implementing possible permit systems on horseback riders and motor boat users, and the most ridiculous of all, requiring to have a permit to perform Baptisms.

Since its establishment in 1964, the Ozark National Scenic Riverways has been a place of tourism, canoeing, motorboating, horseback riding, fishing, hunting, and trapping. Implementing these proposals is not only further infringing on our "taxpayers" rights and putting unnecessary, burdensome laws and restrictions on a resource that is owned by the American people, but will also negatively affect management of the local wildlife, tourism, and also will affect the economy.

In closing, I oppose all these proposals. They are all unnecessary and will impose on all hunting, fishing, trapping, camping, horseback riding, tourism, and the economy. I feel if any further infringing rights are imposed on this matter, my grandchildren will not get to enjoy the full potential our National Parks have to offer.

Sincerely,  
Robert Page  
President  
Missouri Trappers Association

**Correspondence:** Growing up in Shannon County you do not realize what unique and rare rivers we have had the opportunity to live around until you leave the area. I went to college and traveled through many states playing volleyball. We passed over several rivers and creeks in many states. None of the creeks or rivers could compare to Current or Jacks Fork. Many of my friends came and floated the rivers over our college years. Today nearly twenty five years later several of them bring their families to camp and float.

The comments that I have heard is that the locals destroy the land and rivers. Just the opposite happens. We pick up the trash left behind on gravel bars by campers. We pick up trash out of the rivers. We do not own the river but we have just as much right to have access to it as anyone. My fondest memories was taking vacation on the river. Most families in the area could not afford to take a vacation so we camped at the river for a week. Several families get together and all the kids. I have been camping every year with my kids on Current River. The new layout at Broadfoot's only has four camping spots, which doesn't have enough room for all of our friends. The funny thing was the head guy at Round Springs came down one day while my husband was at camp and ask what could be done to make it a better camping site. He said nothing needed to be changed, everyone he had talked to was happy. Some people from Mtn View used to camp and ride horses and now they will not have enough room either. This redesign of the camp ground happened when the park did not have enough money to remove the trash from several canoe put in and take out areas. But some how had funding for four separate concrete grill pit areas and lantern poles.

I see Sinking Creek is going to be blocked off and will have day pedestrians. So the tradition of camping is gone. What is wrong with camping on a gravel bar? Most people floating by does not thinks it disturbs the beauty.

Everyone loves to watch the movie Shannon County that shows a way of life that is unique to most everyone in the nation. We are labeled, "Hillbillies". Which in some ways we are because there are certain cultures and traditions that we pride ourselves in passing on generation after generation. This plan threaten the tradition of gigging, primitive camping with friends and family and access of motor boats in areas except after labor day. I vote no action.

**Correspondence:** Property rights are one thing, but something as fluid as a river needs environmental protection. Our Current and Jacks Fork rivers are incredibly unique, special to our region, and a lot is riding on maintaining their safety and viability in the future by preserving them so people will still want to- - no, so they'll still be ABLE to enjoy them as they have. I'm in favor of limiting or preventing motor-based vehicles and boats on the river, which pollute the streams with chemicals and noise, and endanger the wildlife which is necessary to attract more tourism dollars. We should take advantage of this opportunity to protect the river for ALL, not just for property owners or rip-it-up vendors who are only interested in "what's in it for me, me, me." It's ironic to me, that we live in one of the prettiest places in the country, and it's littered with trash, disrespected by "patriotic Americans," and we completely rip it apart to indulge our "recreational choices". It's disgusting to me that "wonderful fellow Missourians" can dump whatever waste they want to on their own property, hollering "property rights! no one tells ME what to do" the whole time, while they pollute everyone's groundwater and the crap flows or blows over to the next property. And

the state of Missouri CANNOT and WILL NOT oversee the rivers, too many fields and streams have become casualties due to state politics and/or underfunding monitoring efforts. I back the preservation plan.

**Correspondence:** Dear Superintendent Black:

The Ozark National Scenic Riverway was created by Congress for: "...preservation ofâ€the Current River and Jacks Fork Riverâ€its free-flowing streamsâ€springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

Sincerely,

---

**Correspondence:** "Missouri Sierra Club recommends the adoption of Alternative A as it provides additional protections for the rivers." I agree, and would go even further by banning motorized watercraft on all stretches of scenic riverways. These rivers are scenic because they are largely pristine- they stay that way only if the boat floats with the water and does not churn and bespoil it with noise and oily residue.

"The Park Service should recommend that Congress designate Big Spring Wilderness." I agree. Springs like Big Spring should be come upon as if each person visiting made the discovery...inasmuch as possible we can come close to offering such an experience if we make any adulteration of the area as difficult as possible. A Wilderness designation will do that. A great spring is a wonder that originates from a pure and mysterious source; when it deigns to show itself to mortals the viewing must be held with some reverence, and it must be earned (certainly not sped to and glanced at through glass while the engine idles).

(Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for your detailed management draft plans concerning the Ozark National Scenic Riverways Current and Jack's fork rivers.

The population of the United States continues to grow. The United States now holds the dubious title of 3rd most populous country in the world.

The ability to step away from all the negative ramifications that this title bestows is extremely important and getting more so with each passing year.

I would like to see ALTERNATE A chosen as the management plan for this important area.

Once an area is turned into a de facto 'Disney Land' it is difficult if not impossible to recover its original character.

Commerce can always move to less sensitive areas away from these treasured places.

Thank you,

Bob Hagg

**Correspondence:** Mr. Black,

The GMP that exists currently does not give adequate protection to the Current and Jack's Fork Rivers. We have seen this through the frequent river-crossing of horse trails, the damages brought about by ATV use, and the large horsepower allowance of jet boats on high, narrow stretches of river.

The health of the resource should always be held as the highest priority. The limit of recreation should be at the point where its purposes conflict with the ecological integrity of the resource itself.

Whether A or B, I hope you will consider changes to the GMP with respect to the rivers' preservation for future generations in mind.

**Correspondence:** I am writing in support of better management of public use of the Ozark National Scenic Riverways (ONSR). I believe that the Riverways' fragile ecosystems and habitats should be protected, while ensuring continued public enjoyment and use.

Although I feel that the NPS has offered three very reasonable alternatives for better management of the ONSR, I prefer Alternative B because it:

- \* Provides a balance of diverse recreational opportunities while protecting and restoring important ecosystem features in the ONSR;
- \* Adds trails and enhances opportunities for visitors to learn about the park's natural and cultural resources;
- \* Restores miles of undesignated roads to natural conditions and reduces gravel bars designated for vehicle access, thereby reducing ecosystem damage;
- \* Provides a balanced approach to horse trail usage within the park;
- \* Increases staffing and establishes a new visitor learning center at Powder Mill;
- \* Restores additional historic structures; and
- \* Strengthens monitoring, research, and preservation projects.

The ONSR is a precious resource for all Americans and one of the most beautiful and environmentally fragile areas of our state. It should be managed for the access and enjoyment of current AND future generations of all our citizens. I am grateful to the NPS for taking this important step toward better management of this nationally significant natural resource.

**Correspondence:** I have my own canoe and enjoy floating and fishing. The rivers belong to all of us. Both those who live nearby and those like me who come from a distance. Our rivers are our gift and we have a responsibility to take care of them. Four wheelers don't belong in the rivers. They can and probably do harm the gravel bars, so some limits should be put on them. I'm sure the local people want to use their motor boats to go upstream to their fishing spots. I personally hate them. They are loud, many go so fast as they pass by I fear being swamped. No wake regulations would make it safer for those of us in canoes and would cut down somewhat on the noise. Horse crossings need to be limited to reduce the amount of feces in the water. I understand that there are new trails proposed for horses that would lead to that end.

Keep our rivers clean!

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

Sincerely,

Lynn McClure Sr. Director, Midwest Region

**Correspondence:** I grew up nigh the Jacks Fork River and spent ample time there as I was younger. I have since moved away after enlisting in the Army and follow on employment, but my kin yet habituate the area and I still consider the region home, and always will. Every time I come home, I go to the River. When the Feds took the Rivers in the 60s, there was endless consternation amongst the natives, needless to say. But I aver it has turned to the best in the long run.

I record my old Granddaddy, Ed Weaver of the Birch Tree area, telling me of the times when the REA and Corps of Engineers were conspiring to dam the River and the efforts to forestall and defeat the measure. He mentioned that turning the tide against the dams was probably the single most significant accomplishment of Governor Forrest Smith's administration.

I have read with interest the proposed Alternatives as set forth by the Parks. I fully understand that the Park is for everyone, but my abiding concern is of where the "locals" come into consideration and if any consideration has been directed to their desires. I spent several years in defense of assorted vacation spots as Kosovo, Iraq, Bosnia y Herzegovina and others, so needless to say I'll not dawdle in my defense of home.

While there is considerable population and pressure from outlanders to the River, it is still visited and enjoyed by

quite a batch of folks who live there. To completely ban motors on the Upper Jacks Fork is only impinging on those that live there. Granted, during the dry there will not be a great amount of motorized travel on the Upper Jacks Fork. In all my time on the river, I rarely saw anybody not from there utilizing a john boat and motor that was not from nearby. So what is the alternative? The status quo seems a tad untenable, since that form of operation has brought us to this tipping point. Other than the boat motor restrictions on the up river areas, Alternative B seems 'middle of the road' enough to assuage a few and aggravate the majority out at the extremes. I appreciate Alternative C in that it would impact the least those who rely on the River to produce their livelihoods, but we have to keep the future well in mind lest we 'herd the hogs to a sorry waller'. I absolutely disagree with curtailing camping on the gravel bars. If 'primitive camping' includes setting up camp on an attractive stretch of bank while floating or motoring, then that is a non-issue (Ozark National Scenic Riverways, 2013, p. 40).

An amalgamation of the Alternatives may seem like fence straddling, but I feel it is the best alternative. Keep the boat motor limits as is. Reduce the time and effort wasted on the management zoning and completely forego the learning center alternative, while encouraging the Youth Ranger programs at the volunteer level along with the 'Friends of' program. Continue efforts to strengthen the horse program to include increasing authorized trails while decreasing and ultimately doing away with the unauthorized trails. Increase bike accessibility and use while curtailing ATVs plundering the gravel bars. And ALWAYS honor your contracts and agreements with the outfitters and other concessioners. While on the cover, we have what amounts to four alternatives, but the individual tenets within each are at times restrictive and relays a 'them or us' sentiment. Folks in the Courtois Hills and Ozarks are generally pretty friendly, but if it comes to 'us'n agin' them others', they will generally side with us'n.

We have an abundance of opportunity here and it's appreciated the Park's personnel has at least taken a lick at coming up with a solution, but I will not gainsay the attempt to apparently forego any consideration of them that's from there. It'd be better to re-visit the construction of the alternatives now. Because, needless to say, if WE choose wrong now it will only result in having to 'set on a blister' for the next "15 or 20 years" (ONSR, 2013) years.

Ozark National Scenic Riverways (ONSR). (2013). Draft general management plan/Environmental impact study. Retrieved from <http://www.parkplanning.nps.gov/document.cfm?parkID=158&projectID=15793&documentID=56208> on 3 February 2014

<b>Correspondence:</b>	Dear Superintendent Black:				

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

- Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

- The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

- To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

- The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30 years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. **Correspondence:** I hope we can pursue a relatively inclusive but ultimately conservative and conserving policy. Overall, I feel the Park system has done a good job in managing the scenic rivers and balancing diverse interests.

However, I believe some uses, especially in excess, are ultimately destructive of the rivers' long-term health. The uses that concern me the most involve extensive vehicular access (including power boats), extensive and un-policed equine access, and excessive canoe rental operations. Although there are other pressures that concern me, these three all hold potential for problems such as sound pollution, damage such as erosion and overcrowding that ultimately degrades or even kills the "scenic rivers" that we sought to preserve.

In general, I probably lean toward something between Alternatives A and B. I believe the ultimate goal should be keeping the national riverways as natural and primitive as possible, but I also recognize the need for diverse use for political, economic and even equitability factors.

However, access that causes damage-even the erosion from a steel-shod, 1,200 pound horse-needs to be minimized. Regulations limiting the size of riding groups, efforts to limit horse trails to less fragile areas and other steps could help a great deal.

I feel more strongly about boat horsepower limits. I have witnessed unsafe and disturbing uses by relatively high-powered boats. Being an experienced fisherman, I see no reason for these rivers to be subject to craft that are basically designed for open, artificial reservoirs. Sound/noise regulations are difficult to enforce but would help maintain the quality of these areas. I would vote for elimination of power boats but, since that may be impractical, would support regulations limiting horsepower, speed, etc. as much as possible

I noted several comments have called for more access points but, if my experience is a clue, that will not work.

Seasonal and day-use solutions do strike me as having potential benefit.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

Thank you for weighing in and caring about the future of the Ozark National Scenic Riverways. Please let your friends know that this national park needs their help.

Sincerely,

---

<b>Correspondence:</b>	Dear Superintendent Black:				

The Ozark National Scenic Riverway was created by Congress for: "...preservation of the Current River and Jacks Fork River's free-flowing streams'springs and caves, management of wildlife, and provisions for use and enjoyment of the outdoor recreation resources." (Aug. 17, 1964) It is the responsibility of the National Park Service to ensure that these resources are protected in the presence of a growing desire for outdoor recreation.

I support the following:

-Slight changes and strong enforcement of horsepower limits. I support the motor-free zones for the upper reaches of the Current and Jacks Fork Rivers and seasonal or year-round provisions for motors on other river portions as proposed in Alternative B.

-The 60/40 horsepower limit now in use on portions of the riverways is in violation of the Code of Federal Regulations and I support the Park Service proposed rule-making to make these motors legal so that recreational boaters can continue to enjoy the riverways.

-To reduce the damage to water quality and wildlife by horse overuse, the Park Service must implement action as described in Alternative B adding 35 miles of designated horse trails, closing and restoring 65 miles of undesignated trails and unauthorized river crossings, and improving a 23-mile-long trail system to avoid sensitive areas.

-The Park Service must quickly develop a plan for closing undesignated roads and access points to the rivers. Over the last 30 years, because of a lack of Park Service oversight, there have been many roads and access points carved into the rivers causing water quality to degrade. Over time, these roads must be closed and authorized access points restored.

-Finally, many of the provisions in the General Management Plan will require additional staffing at the park. I strongly urge the National Park Service to make this a priority so that regulations that have been ignored for 30

years can be enforced, or simply put, the Ozark National Scenic Riverways will not survive for future generations.

National parks are economic generators for local communities and the Riverways is no exception. The more than 1 million visitors each year spend about \$55.5 million. This national park is responsible for creating 845 jobs, representing 16 percent of the total employment of the local area. The balanced approach in Alternative B provides opportunity for growth in small business, especially for new concessioners and outfitters, and a well-managed park will continue to attract visitors for generations to come.

**Correspondence:**  
I support Alternative B(NPS Preferred). I believe it would provide a framework for reasonable compromise in updating the overall management direction for the Riverways.

Congratulations on a clearly organized, well written draft plan.

**Correspondence:** Thank you for allowing the public to comment on the Ozark National Scenic Riverways Draft General Management Plan/Wilderness Study/EIS. The National Park Service's mission is to provide the public with a safe environment that enhances the wilderness experience. Allowing off road vehicles, expanding equestrian and firearms hunting opportunities is not compatible with providing the public with a safe environment.

I support Alternative B (the preferred alternative). I believe there could also be some improvements to this alternative that could strengthen the plan including the following:

⌘ Scenic Easements: Although there are no changes to scenic easements proposed in this plan there are 9,257 acres of scenic easements that are intended to maintain the natural environment and scenery for the benefit of the visiting public. These easements are critical to the quality of the Riverways. They were acquired to add public's experience of the national park and need to be effectively monitored in a timely manner and easement violations must be promptly corrected.

⌘ Wilderness: The review includes one small, undeveloped backcountry/wildland area of approximately 3400 acres near Big Spring. The area, which was acquired as a state park in the 1920s and later became part of the ONSR, has been continually managed as an undeveloped wild area and I support keeping this area wild without NPS management interventions. The Big Spring Wild Area should be recommended for federal wilderness designation.

⌘ Horsepower limit: Zoning for horsepower limits has been part of existing regulations since the River Use Management Plan of 1989. I support the balanced approach of motor-free zones for upper sections of the Current and Jacks Fork Rivers.

⌘ Hiking Trails: There are so few hiking trails in this park and the additional miles provided in each alternative. The Park Service needs to provide more low impact recreational opportunities. Perhaps the NPS could partner with agencies and citizen groups to expand hiking trails.

⌘ Horse Campground: A horse campground with 25 sites is proposed for alternatives B and C. Instead of a new development of this magnitude, we ask that NPS work with existing local businesses to provide a concession horse camping operation outside the park that would have less impact on park resources within the narrow river corridor.

â€ Natural and Cultural Resource Management: I strongly supports the protection, restoration, and interpretation of natural landscapes, archaeological sites, historic structures, and cultural landscapes as discussed in this plan. Restoring and stabilizing forested riparian corridors should be emphasized. There should be no new conversions of bottomland riparian forests to open fields, and artificial pasture for elk and other wildlife.

â€ Annual Visitation and Economic Influence: Visitation is about 1.3-1.5 million each year. A 2011 study estimated visitor spending at \$55,445,000 and more than 88 percent of this spending is from non-local visitors. This spending combined with NPS employment accounted for 845 jobs, or 16 percent of total employment in Shannon and Carter counties. I support high-value investment in the Ozark region of south-central Missouri, understanding that a well-managed park and the visitors it attracts may be the most important contributors to the long-term economic health of local communities.

The idea of turning over the ONSR to the State of Missouri is absurd! Some citizens and politicians are not aware that this would take an act of Congress. Please do not consider this proposal.

The NPS has a responsibility to protect the Ozark National Scenic Riverways for future generations. Please consider my comments in making your final decision.

**Correspondence:** I have canoed the Current River for over 30 years and have enjoyed most of the experiences immensely. My trips have always involved no more than one other person, as the solitude and beauty of the river is what I wanted to experience. However there were several times that the trips were marred by an overflow of people and canoes even though it was in the Fall of the year or on a week day. There have been groups of thirty or more canoers that "invaded" my gravel bar campsite on two different occasions( Pulltite to Round Springs). I have had to endure the drone of an electric generators powering a banks of halogen floodlights at 2:00 AM from fish giggers boats at Bee Bluff. I also had the pleasure of having five men on horseback show up in my campsite at 6:30 AM (also at Bee Bluff). As a whole the people who use the river are polite and respectful, but I have never seen a ranger on the river. Because of these past experiences I no longer canoe the lower Current River. I have confined my trips to the upper portion that is more shallow and less prone to large numbers of people and motorized boats. I made the mistake of taking my son and his friends camping at the Pulltite campground about four years ago in July and the experience felt more like a Day at Six Flags Amusement Park than communing with nature.( An battle ship size RV complete with running air conditioner was allowed to park on a site that should have been reserved for tents). Too much of anything is a bad thing. Too many people allowed to do whatever they feel like doing in the name of an outdoor experience is the " Bad thing" that is going to destroy the beauty of the Current River. Hopefully additional regulations regarding how many people and how they can experience the Current River will save it for future generations.
