Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robert Young

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rosalinda Lozano

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Renee Snyder

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Richard Spradling

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lora Paternoster

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Susann Gordon

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Maria Prokopowycz

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic

species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Judith Lotz

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

stephen wallace

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Kronholm

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic

species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brita Skarbrevik

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Elaine Priday

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Angel Muehlenkamp

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kathy Nance

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Paula X

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands

(those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cathie Bell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Charles Olmsted

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Dan Gallagher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Stephan Donovan

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bonnie Mandell-Rice

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carolyn Knoll

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Louis DiMento

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Timothy McGovern

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jennifer Forristal

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Eric Wilson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jeanine Strobels

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ernest Scholz

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and towards that end I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Val Marjoricastle

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Myrna Mincey

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Victoria Matthews

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Veronica Tucker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lisa Siconolfi

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Annemarie Prairie

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jeannine Berroteran

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

John Fairfield

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

robhood00@yahoo.com Orlando

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant

entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Roger Peirce

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rhoda Osterfeld

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Julie Squire

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Colleen McKenna

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Vera Brown

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kathy Burpee

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ellen Koivisto

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brent Nelson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future

generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.

Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lora Roode

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tina Brown

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Campbell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lara Cooper

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Christina Heizmann

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kris Leeseekamp

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

sybil roberts

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Laura Seraso

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Peggy Namanny

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands

(those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barbara McLendon

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Steve Branch

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barry Hatfield

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

cdiane macaulay

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joshua Scheels

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Debbie Burack

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tia Panagos

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Howard Sebold

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bob Farrell

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Christie Allen

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Evelyn J. Dymkowski

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barbara Riley

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joel Podgorski

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

John White

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative

agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jill Snyder

Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bianca Morales

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Stephanie Sepate

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Daniel Bade

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tim Mill

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carlo Popolizio

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Erica Royer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Maryann LeBlanc

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park

Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Glenn

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sarah Wiggin

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Radia Amari

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Adam Yomtov

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands

(those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

M. Mathewson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

GERALDINE TYSON

Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Philip Clift

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

evelyn interis

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Holly Holtrop

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,

and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ken Ohnemus

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carrie Crady

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joe Bilicska

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Dolores Grissom

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nancy Hey

this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Additionally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for your consideration.

Sincerely,

carolyn sommerville

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

george hendrickson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jamin Grigg

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marian Carter

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nadine Lightburn

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Gill

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tom Fulton

Superintendent Steve Chaney

Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jessica Wheeler

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lia Kozatch

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Maria Fisher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cora M Swartz

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Elaine Lawless Baker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor,

and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ruth Phoebus

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

PHYLLIS RUTH

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jack Tuber

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.

Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ruth E Martillo

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal.

Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Deborah Hepler

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

ester fuchs

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Emily McDonald

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Becca Kercher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Gina Rocchio-Gymer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside

the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Bodde

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Vicki Gay

Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sherry Hartman-Apgar

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Shirley Smith

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

pinky jain pan

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

deborah lancman

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kevin McKibbin

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Terry Floyd Johnson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tammy Wagoner

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jenny Zawisza

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Benjamin Luedke

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Pope

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

k lucas

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Thickman

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lavender Green

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

therese maltby

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Edward Winters

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

William Hittler

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Gary Kaminski

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

AL Schaefer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

cathy frye

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Catherine Small
