Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jon Hager

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Clarice Gilchrist

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Gerard Bauer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Louis C Morris

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species as I did with my family many years ago!

I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness

protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marlene Gargan

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sharisa Kochmeister

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Stephanie Pedro

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joseph Ayres

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,

and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I COMMEND the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I STRONGLY urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I STRONGLY urge you to EXPEDITE the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

George Seman

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carol Kraus-NARICK

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brian Beinlich

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Wassilak

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jeanne Vanis

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Wayne&Susan Wright

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred

alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rick Nepomnick

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive

archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Allena Bassett

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

Your draft management plan states a preferred alternative of adding nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Adding these wild acres will help protect the park's oldest archaeological sites, its native species and the renewal process for the very dunes for which the park is named. Wilderness acreage will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative

agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

MARY TROLAND

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Maslin

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Constance Bencze

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

kim thomas

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Caroline Jurovic

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bambi Tucker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Chris Bechard

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nikolai Balah

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nancy Everhart

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for

access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive

archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kathleen Trefry

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Megan Allsup

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cherie Townsend

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Anthony Martin Dambrosi

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sandra Murray

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jessica Prack

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Scott Baker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help

protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

FRANCESCA DI POPPA

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Thomas Sheffield

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

William Ridgeway

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Andrew Levesque

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Theresa Barbour

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Steve Aydelott

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Diane Heath

protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael geci-black

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Harriet Damesek

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

julia phillips

Mosca, CO 81146

Dear Superintendent Chaney,

We need FEWER jerkoffs on ATVs.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal.

Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

D. K. Strong

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

alice armstrong

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Fred and Betty Krueger

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

K.E. Battig

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Ann Kiger

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

leon clingman

Superintendent Steve Chaney

Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Debbie Lopez

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ted Schultz

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Suki DeJong

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150

Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Liane Salgado

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

jerry leigh

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rev. Mother Anastasia-Ruth+

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Patricia Shaskin

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Patricia Daniels

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Susanna Isbell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joan Mitchell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from

sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brad Taylor

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Hannah Andersen

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michelle Civatte

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kia Wright

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help

protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Terri Volk

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Amy Duin Ratcliff

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Russ Seekatz

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone:
please recommend wilderness protection for lands not slated for
access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant
entities. Please direct trails and visitor use away from
sensitive riparian zones, such as the Deadman Creek corridor,
and please note that I very much believe that motorized and
mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive
archaeological sites and, in aid of that, I urge the Park
Service to conduct archaeological surveys on all park lands as
soon as possible.

Finally, I strongly urge you to expedite the purchase of
subsurface mineral rights to protect the park from
energy-related intrusions.

Thank you for considering my comments.

Sincerely,

f. joseph carragher

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carol Rowland

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Clifford Liehe

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Melissa Pappas

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Bryans

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jessica B

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Craig & Alice (mother) Downer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Douglas Walker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sarah Forrester

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Amanda Scuder

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

gaile carr

Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Elizabeth Jackson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Herrmann

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joele Jaffe

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tom Reeve

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Anderson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Suzanne Willlliams

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rich Moloney

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Shannon Harper

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Megan Zusne

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Eric Serxner

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

PATRICIA MCRAE

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future

generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Maria Gabrielle

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Evelyn Weddel

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.
Only one gravel road separates them from other deserving

wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jennifer Yamakoshi

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside

the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cynthia Patterson

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

l. Young

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important

given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.
