Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

ANNE-MARIE BOYCE

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Diane/Charles Brandstetter

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kenneth Harris

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Scott Falcone

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Dennis Paige

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kathleen Gutierrez

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Stephanie Wheeler

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marilyn Giardini

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Patricia Meyer

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Julie Beard

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Weston Blaney

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carol Martin-Hay

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robert Winters

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Phyllis Smith

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

As a biologist, I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for

access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robert Dolan, Ph.D.
45 Richardson Rd.
Leverett, Massachusetts 01054

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nicole Gilbert

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Fiamma Aaron

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

Let me begin by commending the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road (and in parts, gravel stream) separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness

protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Having been a recent visitor to the park, I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you very much for considering my comments.

Sincerely,

Michael Roseberry

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Wagner

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

annie laurie

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Victoria Powell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Eastwood

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Alicia Faires

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Celia Santowski

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Denise Hennessy

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Roger Schmidt

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Taylor

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Patricia Slevc

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Edward Schaechtel

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barbara Jones

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jeffrey Turner

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mike MacDougall

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kerri Zemko-Kriz

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Stephen matera

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joy Vavrek

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Christopher Barker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kevin Kendig

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

marj paynter

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tawnya Shields

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lela Perkins

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jenni Cortinas

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marilyn Borger

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Dwight Heckert

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Samantha Roddy

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

abby donovan

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Richard Purcell

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kerrie D'Ercole

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Denise Driscoll

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Theresa Ciavarella

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rob Spears

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Don McCartney

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

mary hoover

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Aaron Warren

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

CAROLE Mock

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jacqueline Cooper

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ernest J.P. Muhly

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Amanda Ridlington

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mackenzie Burlingame

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robert Kalovsky

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Dowd

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joan Yates

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Paul Schlender

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Don Reinberg

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Meagher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mark Rutherford

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carol Sears

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robyne Hamme

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Wahila Minshall

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tom Dickinson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Fisher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Janet Senneker

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Amy Mckay

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

cathy sinclair

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Douglas Thunberg

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lauren McGlynn, JD

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marilyn Evenson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Steven Barrows

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Susanna Sammons

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

A. Alcantar

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Paul Robinson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Pamela Zaber

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rick Brown

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Neil Uelman

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brian Elkins

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

peter craig

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary F Platter-Rieger

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kyle Gardner

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Joyce Carlson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Robin Skees
