¹ Acres (max) and Acres (min) are the maximum and minimum acreage of the trail or trail segment. Acres (max) and Acres (min) are calculated by multiplying the maximum and minimum trail width for each trail segment in the same trail condition assessment inventory class. The segment acreages are added together to calculate the total acreage for the condition class.

¹ Some trails and routes designated as 'open' show short closed sections because these trails contain either a) short sections of duplicate parallel braided trail which will be closed, b) remnant trails closed prior to this EA which will remain closed or c) short sections of Y intersection trail which may be closed.

² Acres (max) and Acres (min) are the maximum and minimum acreage of the trail or trail segment. Acres (max) and Acres (min) are calculated by multiplying the maximum and minimum trail width for each trail segment in the same trail condition assessment inventory class. The segment acreages are added together to calculate the total acreage for the condition class.

² Acres (max) and Acres (min) are the maximum and minimum acreage of the trail or trail segment. Acres (max) and Acres (min) are calculated by multiplying the maximum and minimum trail width for each trail segment in the same trail condition assessment inventory class. The segment acreages are added together to calculate the total acreage for the condition class.
