Subject: Engineering Evaluation & Cost Analysis Approval Memorandum
Coggins Flat Placer Mine
Whiskeytown National Recreation Area, California

PURPOSE

This memorandum recommends and documents the decision of the National Park Service (NPS) to conduct an Engineering Evaluation/Cost Analysis (EE/CA) pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. 9601 et seq., for Coggins Flat Area Placer Mine (Site), Whiskeytown National Recreation Area (WHIS) in Shasta County, California. NPS is the CERCLA lead agency with authority to respond to the release or threatened release of hazardous substances at or from the Site. This Memorandum was prepared in accordance with CERCLA, the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), 40 C.F.R. Part 300, and the U.S. Environmental Protection Agency's (EPA) *Guidance on Conducting Non-Time-Critical Removal Actions Under CERCLA*, OSWER Publication 9360.0-32 (August, 1993).

BACKGROUND

The Coggins Flat Area is located within WHIS, approximately fourteen miles west-northwest of Redding, Shasta County, California. The Coggins Flat Area is an abandoned placer mine site located approximately ¼ to 1 mile north of CA State Route 299 along Trinity Mountain Road and is situated along Clear Creek at approximately 1,300 feet elevation. The Site is located in Section 34, Township 33 North, Range 7 West of the Mount Diablo Meridian (latitude 40° 40' 18.1" north and longitude 122° 38' 17.5" west). Placer gold mining occurred along Clear Creek from the late 1880's to the early 1900's. Placer mining started in Shasta County in the spring of 1848. By the late 1800's, mining was taking place along Clear Creek in the Site area. Dredge mining, one of the methods used in the Site area, consists of dredging creek bed sediments and washing them through sluice boxes over mercury held in the riffles and troughs. Mercury amalgamates with the fine-grained gold in the sediments. The mercury-gold amalgam was

treated to remove the gold and the remaining material discarded along the creek bank. Lode mining also took place in the Site area, particularly upstream along Clear Creek. In 1852 the Washington Mine was discovered in the French Gulch Mining District upstream from the Site outside of NPS lands. Other lode mines upstream from the Site include the American, Black Tom, Franklin, Gladstone, Milkmaid, and Philadelphia mines. In the 1940's, a portion of the Site was used for a lumber mill which was owned and operated by the Shasta-Trinity Lumber Company.

The primary pollutant of concern is mercury derived from past dredging and gold processing. The Site is approximately 150 acres in size and extends north along upper Clear Creek from the Clear Creek picnic area north to the park boundary. Contamination may extend outside this area, particularly to the north on private lands, however this is unknown. The Site has fairly low visitation but immediate public access from Trinity Mountain Road includes a developed day use picnic area and undeveloped parking areas that provide access for Clear Creek recreation. No structures exist on the Site, with the exception a bridge, a vault toilet, and tables at the picnic area and only Trinity Mountain Road is paved. The alluvial terrain in the area is highly altered by the dredging and subsequent land uses. Where the dredge piles are still intact a series of sub-parallel berms created by dredge form large hill-like piles. In other areas, the terrain has been leveled out by heavy equipment or flooding and the piles do not exist. Access to some areas is difficult or impassable by 4x4 truck due to the difficult terrain and vegetation which mostly consists of grasses, riparian vegetation, shrubs, and pines. In past investigations, an all-terrain drill rig was required to complete soil sampling due to the access and terrain which included crossing Clear Creek in low water conditions.

Four studies have been performed at the Coggins Flat Area from 2005 to 2015, a Preliminary Assessment (PA), a Potentially Responsible Party search (PRP), a Site Investigation (SI) and a Supplemental Site Investigation (SSI).

A PA was completed in January 2006 by Versar Inc. The results of the PA showed that based on the observations of the Site and review of available information regarding the past use of the Site, it was likely that a release of mercury to soil and surface water had occurred. Also

identified by the study was a lumber mill on the Site that had potential to release oil and grease, and pentachlorophenol to the Site. A SI was recommended by Versar, Inc.

A SI was completed in February 2011 by Advanced Environmental Services, Inc. (AESI) in which soil, groundwater and surface water samples were collected. Twelve continuous core soil borings and three surface water samples from Clear Creek were analyzed for mercury. Four groundwater borings were also sampled and analyzed for mercury, polychlorinated biphenyls (PCBs), and total petroleum hydrocarbon (TPH). Analytical results from soil samples revealed concentrations of mercury between 0.019 and 0.052 mg/kg in 9 samples from 4 of the 12 locations. All samples analyzed for PCBs and TPH were below method detection levels and all surface water samples analyzed for mercury from Clear Creek were also below method detection levels. AESI recommended a further investigation to verify the distribution and quantity of mercury impacted soil before any remedial options could be effectively evaluated.

A SSI was completed in February 2015 by AESI in which soil and water samples were collected. Thirty-two continuous core soil borings and three surface water samples from Clear Creek were collected and analyzed for mercury. Analytical results from soil samples revealed concentrations of mercury between 0.03 and 0.193 mg/kg in 17 samples from 6 of the 32 locations. Mercury concentration results in 5 soil samples, collected at 4 locations, exceeded the federal and State of California soil screening levels (SSLs) based on maximum contaminant levels (MCLs) for groundwater protection of 0.1 mg/kg. Additionally, comparing the laboratory soil analytical results against environmental screening values (ESVs), seventeen samples exceeded the Birds ESV of 0.013 mg/kg and five soil samples exceeded the Soil Invertebrates ESVs of 0.1 mg/kg for mercury.

USE OF REMOVAL ACTION AUTHORITY

Pursuant to Sections 104(a)(1) and (b)(1) of CERCLA, 42 U.S.C. 9604(a)(1) and (b)(1), whenever there is a release or substantial threat of release of a hazardous substance into the environment, the President is authorized to act, consistent with the NCP, to remove or arrange for the removal of such hazardous substance or take any other response action, including appropriate investigation, deemed necessary to protect public health or welfare of the

environment. Section 104(a) and (b) response authority (including the authority to perform an NTCRA, including the EE/CA that is the subject of this Memorandum) has been delegated to the Secretary of the Department of the Interior (DOI) pursuant to Executive Order 1258, 52 Fed. Reg. 2923 (1987), and further delegated to NPS by DOI Departmental Manual Part 207, Chapter 7, with respect to property under the jurisdiction, custody, or control of NPS.

Section 300.415(b)(2) of the NCP establishes the criteria for determining the appropriateness of a removal action. The following are applicable criteria that support the determination to consider a removal action at the Site:

i. Actual or potential exposure to nearby human population, animals, or the food chain from hazardous substances or pollutants or contaminants;

ii. Actual or potential contamination of drinking water supplies or sensitive ecosystems;

iii. High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface that may migrate and;

iv. Weather conditions that may cause hazardous substances or pollutants or contaminants to migrate or be released.

The AESI SSI found that mercury concentrations exceeded both human health and ecological benchmarks, posing a potential danger to the human population and the surrounding environment and satisfying criterion i and iii. Furthermore, satisfying criterion ii, areas within the National Park System are considered sensitive ecosystems as presented in the NPS Organic Act, 16 U.S.C 1. These results suggest further characterization of the Site and declare the Site to be of potential environmental concern.

Based on these findings, NPS has determined that the use of removal action authority at WHIS to investigate, abate, prevent, minimize, stabilize, mitigate, and/or eliminate the release or threat of release of hazardous substances at or from the Site is appropriate. Additionally, NPS has determined that a planning period of at least six months exists before on-site activities must be initiated. Therefore, NPS is authorized to conduct an EE/CA pursuant to and in accordance with Section 300.414(b)(4) of the NCP. An EE/CA is performed to determine the nature and extent of contamination, assess potential risks posed to human and ecological receptors from exposure to

such contamination, identify and evaluate removal action alternatives to address unacceptable risks, and identify a recommended removal action alternative that best meets the evaluation criteria.

EE/CA IMPLEMENTATION AND FUNDING

NPS has received funding from the DOI to implement the Site EE/CA. Upon approval of the recommendation, the Site EE/CA will be implemented.

APPROVAL

Based on the information and analysis presented in this memorandum, please indicate your concurrence or non-concurrence with the recommendation to perform an EE/CA as part of a NTCRA at the Coggins Flat Area Placer Mine at the Whiskeytown National Recreation Area. If you have any questions, please contact Stephen Mitchell at (415) 623-2286.

Safety Briefing

Topics	Information Reviewed (Reference Material Covered or Attach Copy)
Review site Health & Safety Plan	SOP for soil sampling
Slip, Trip, Falls, PPE	Tailgate meeting discussing PPE for the task. Use caution around site: hiking around rocks, through brush, tall grass, and along creek.
Weather	Extremely hot temperatures (>100 °F): plan early start to take advantage of cooler temps earlier in day; wear appropriate clothing, sunscreen, hats, hydration; watch out for each other, take breaks, set up and work in shade, cool down in truck with AC, use portable shade cover if shaded work areas not available, plenty of ice water available.
Wildlife, Biohazard	Be aware of snakes, especially in tall grass, near creek, around downed trees, early morning; poison oak, wear appropriate clothing; general awareness of surroundings; insect repellent; sunscreen.
Traffic	Be aware of traffic along roadside, especially when crossing roadway and near curves in road.

Samples

Samples Collected	Decision Unit	Sample ID	Type	Description

Comments/Issues:

No samples collected.

Planned activities for next work day:

Start on southern portion of Site. CF-SO-13, -14, -15, CF-SD-09 and CF-BG-10 will take considerable effort hiking through brush - plan to collect these locations earlier in the morning before noon.

Samples

Samples Collected	Decision Unit	Sample ID	Type	Description
	Coggins Flat	CF-SO-07	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy soil. Area appears to have flooded this past winter. NPS stated first time this channel flooded since 1990's and looked very different than when the initial site visit was conducted. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SO-16	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt with gravel and cobbles. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SO-08	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy soil. Area appears to have flooded this past winter. NPS stated first time this channel flooded since 1990's and looked very different than when the initial site visit was conducted. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SD-03	Sediment	Reddish brown staining observed on bank at this location, NPS identified the staining as evidence of a possible methylation reaction. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 without significant amounts of water - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SO-13	Soil	Located as close to mapped location as we could get. Very thick brush, poison oak, and blackberries closer to creek. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SO-14	Soil	Located on tailings pile in thick brush/poison oak. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Tailings, silt, fractured angular rock. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-BG-10	Soil	Moved approximately 100 yards upslope because of observed prospect pits and a water channel/ditch. Prospect pits adj to SE. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt with gravel. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for CAM 17 metals.

DAILY FIELD WORK REPORT

Prepared by: Nicole Hastings-Bethel

Report No: 2 **Project No:** 44017190 **Date:** 8/2/17

Project Name: NPS - Whiskeytown, CA

Location of Work: Coggins Flat Area Placer Mine - Trinity Mountain Road and Clear Creek

	Coggins Flat	CF-SO-15	Soil	Located in tailings area. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt with gravel and fractured rock. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SD-09	Sediment	Located about 200 ft. downstream of mapped location because of dense vegetation. Visible sediment deposits at new location, also at end of foot trail. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample dry enough to sift through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-SD-10	Sediment	Visible sediment deposits in easily accessible recreation area. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-ER-01	Equipment Rinsate	Equipment rinsate collected by pouring distilled water through decontaminated sieve into the decontaminated collection tray, then siphoning the water into sample jars. To be analyzed for mercury.
		CF-SO-06	Soil	Located in northern portion of recreation area/apparent parking area. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt with gravel. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-BG-06/ CF-BL-04	Soil	Collected on hillside adj to the east of recreation area. Collected 10-pt field composite (approximately 6 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt. Soil sifted through #40 sieve prior to placement in sample jars (blind duplicate also collected at this location). To be analyzed for CAM 17 metals.
		CF-BG-07	Soil	Collected on hillside adj to the east of recreation area (slightly southeast of restroom). Downslope from possible archeological site. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt with gravel. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for CAM 17 metals.
		CF-BG-08	Soil	Location relocated approximately 270 ft. northeast because of archeological site. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for CAM 17 metals.

Comments/Issues:

Moist to wet samples will not pass through #40 sieve without the use of water which we worry may dilute the sample. Contacted the lab, ok to submit bulk samples in doubled Ziploc bags to be dried and sieved at the lab (will test %Moisture and correct dry weight results).

New 4 oz. glass jars were used as a scoop to collect aliquots for the soil samples.

New, precleaned (EPA protocol B) individually packaged Conbar plastic sampling scoops were used for collecting sediment samples for methyl mercury and mercury samples.

Planned activities for next work day:

Start on northern portion of Site. CF-BD-01, -02, -03, -04 and -05 will take considerable effort hiking through brush - plan to collect these locations first thing. Shade may also not be as readily available later in the afternoon.

Samples

Samples Collected	Decision Unit	Sample ID	Type	Description
	Coggins Flat	CF-SD-11	Sediment	Area between tailing piles and creek; cannot access creek because of berm covered in blackberry bushes. Area appears to have flooded this past winter with no apparent outlet (evidence of formerly ponded water). Originally collected this sample in place of CF-BD-01, but later found access to the creek closer to that location. Kept this sample because of sediment location between tailings and creek. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample dry enough to sift through #40 sieve prior to placement in sample jar. To be analyzed for mercury.
		CF-BD-02	Sediment	Located upstream of mapped location but best access point in area of dense vegetation. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-BD-03	Sediment	Located upstream of mapped location but east side of creek from CF-BD-02. Wearing layered gloves, one person crossed the stream to collect the methyl mercury sample. The outer glove was removed just prior to opening the sample container and collecting the sample. Bulk sample for mercury also collected. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-BD-01/ CF-BL-05	Sediment	Located access point to creek near CF-BD-01. Blind duplicate CF-BL-05 also collected here. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SO-09/ CF-BL-02	Soil	Relocated approximately 75 feet south to find area where there was soil and not just cobbles. Collected 10-pt field composite (approximately 8 oz. per aliquot because of rock and duplicate location) from an approximate 5 ft. radius. Blind duplicate CF-BL-05 also collected here. Tailings with silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for CAM 17 metals.
		CF-SO-01/ CF-BL-01	Soil	Collected 10-pt field composite (approximately 8 oz. per aliquot because of coarse sand and duplicate) from an approximate 5 ft. radius. Blind duplicate CF-BL-01 also collected here. Coarse to fine sand with some silt. Soil sifted through #40 sieve prior to placement in sample jar. To be analyzed for CAM 17 metals.
		CF-SO-10	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Tailings with silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury.
		CF-BD-04	Sediment	Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-BD-05	Sediment	Wearing layered gloves, one person crossed the stream to collect the methyl mercury sample. The outer glove was removed just prior to opening the sample container and collecting the sample. Bulk sample for mercury also collected. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SD-01	Sediment	Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.

DAILY FIELD WORK REPORT

Prepared by: Nicole Hastings-Bethel

Report No: 3 **Project No:** 44017190 **Date:** 8/3/17

Project Name: NPS - Whiskeytown, CA

Location of Work: Coggins Flat Area Placer Mine - Trinity Mountain Road and Clear Creek

	Coggins Flat	CF-BG-02	Soil	Moved southwest out of road cut and south of former hydraulic mining pathway. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for CAM 17 metals.
		CF-SD-07	Sediment	Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SD-06	Sediment	Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SD-05	Sediment	This sample was overlooked in the sampling process. It would have been collected between CF-SD-06 and CF-SD-04, but there is no record in the field log book, photo log, or on the GPS of this sample being collected. This sample will be replaced by the additional sample collected.
		CF-SD-04	Sediment	Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. High organic content (roots). Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SD-02	Sediment	Wearing layered gloves, one person walked up the stream to collect the methyl mercury sample. The outer glove was removed just prior to opening the sample container and collecting the sample. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SO-11	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Tailings with silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury.
		CF-BG-01	Soil	Moved to what appeared to be an undisturbed location on the west side of Trinity Mountain Road, on the west (uphill) side of the power lines. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for CAM 17 metals.
		CF-BG-02	Soil	Moved to what appeared to be an undisturbed location on the west side of Trinity Mountain Road, on the west (uphill) side of the power lines. Some evidence of possible prospect pits was observed nearby. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for CAM 17 metals.
		CF-SO-02	Soil	Mistakenly collected in road cut. Sample discarded and resampled 8/4/17
		CF-BG-03	Soil	Moved to what appeared to be an undisturbed location on the west side of Trinity Mountain Road, on the west (uphill) side of the power lines. Some evidence of possible prospect pits was observed nearby. Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Coarse sandy silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for CAM 17 metals.
		CF-ER-02	Equipment Rinsate	Equipment rinsate collected by pouring distilled water through decontaminated sieve into the decontaminated collection tray, then siphoning the water into sample jars. To be analyzed for CAM 17.

Comments/Issues:

Collected samples and saved sieving (where needed) until the end of the day in a shaded area. For samples requiring sieving, time on COC is post sieving, when placed in final sample container and put in cooler on ice. Brian only stayed on Site while actively collecting samples.

Planned activities for next work day:

Meet at central portion of Site to collect remaining samples.

Samples

Samples Collected	Decision Unit	Sample ID	Type	Description
	Coggins Flat	CF-ER-03	Equipment Rinsate	Equipment rinsate collected by pouring distilled water over newly opened scoop directly into sample jars. Collected adjacent to location CF-SD-08 (very dusty at truck did not want to collect rinsate sample there). To be analyzed for methyl mercury.
		CF-SD-08	Sediment	Moved approximately 50 ft. upstream of mapped location where reddish orange staining was observed on rocks on bank (possible evidence of methylation reaction). Reddish orange staining observed up and downstream of sample location. Collected methyl mercury sample using clean hands/dirty hands technique, and a bulk sample for mercury. Sample too wet to sieve through #40 - lab will dry and sieve bulk sample prior to mercury analysis.
		CF-SO-04	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Silt and some gravel; hard pan type material at 3 inches. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury.

Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury. Easy access to creek; reddish brown staining (possible evidence of methylation) observed on rocks adjacent to creek near this location.
		CF-SO-05	Soil	Collected 10-pt field composite (approximately 8 oz. per aliquot because of rocks) from an approximate 5 ft. radius. Silt and gravel. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury.
		CF-BG-05	Soil	Collected 10-pt field composite (approximately 4 oz. per aliquot) from an approximate 5 ft. radius. Tailings sandy silt and gravel, no clear undisturbed areas to relocate. Soil sifted through #40 sieve prior to placement in sample jars. To be analyzed for mercury.
		CF-ER-04A	Equipment Rinsate	Equipment rinsate collected by pouring distilled water over newly opened scoop directly into sample jars. Collected in recreation area where we were set up but had not started to sieve mercury/CAM 17 soil samples). Collected rinsate sample here because most likely to be neutral location. Previous rinsate sample collected in an area where potential evidence of methylation was observed. Sample to be analyzed for methyl mercury.

800 - Arrive office start loading truck, go over scope w/ PM Tim Berger one last time. Question about sieving methyl mercury samples — TB research do not sieve methyl mercury samples + avoid all contact w/ metal — check w/ Envirotech for plastic or teflon scoops will pickup on way to site

1100 Leave ~~site~~ office to Envirotech then Whiskey Town Lake HQ

1430 Arrive HQ go over scope + Health and Safety w/ Brian Rasmussen — heat #1 concern as well as rattlesnakes (esp. near creek), stinging insects, ticks possibly carry Lime Disease, poison oak, slips, trips + falls

1500 Brian leads us through various potential staging areas of site. Access in many areas will be challenging. Keep away

from western private parcel unless NPS is present — may need to relocate some samples if unsafe.

1530 Brian leaves site — OK for Geocon to flag/mark locations just stay off private land. Brian in office till 430 if we have questions otherwise meet at 6am in RFC area west of Bridge

Geocon flag southern samples accessible from RFC Area

1715 Geocon leave site, pick up supplies, head to hotel

1800 Offload truck at hotel end work day

525 Leave hotel, ice
605 Arrive at site H&S set up for sampling. Brian R w/ NPS already onsite
650 Start sampling CF-SO-07
~~780~~ ~~Start sampling~~ not enough material after run through sieve go back collect 10 samples from same location
700 Collect CF-SO-07 (sieved)
725 Start sample CF-SO-16
748 Collect CF-SO-16
~~800~~ 800 Set up to collect CF-SO-08 + CF-SD-03
810 Collect CF-SO-08 in ziplock
820 Collect methyl mercury CF-SD-03 reddish brown matial on bank where sample collected possible evidence of methylation collect methyl mercury sample at location, collect sediment sample for mercury in ziplock to process at truck
840 Sieving ~~CF-SO08~~ not enough

material — go back collect another 10pt set from same locations
850 Julio sieving CF-SO-08 start sieving CF-SD-03 sediment mercury sample, wet material Try using distilled water (spray bottle) to help push material through sieve — possible to use this method but worried we might be using finer sediment call Tim Berger Tim to check w/ lab to see if we collect bulk samples if they can sieve at lab — also to check on containers Zip locks or overnight larger sample bottles
930 Keep sediment sample collected from 1/4 of CF-SD-03 sample
940 move into REC area set up to collect CF-SO-13, -14, -15 CF-BG-10 + CF-SD-09 (little in locations)
10-11 finish CF-SO-13

1045 locate SO-14 on tailings pile lots brush/ poison oak
1055 Collect SO-14 in zip lock bag
1115 collect BG-10 background ziploc location move ~ 100' yds up slope prospect pits observed adj to southeast ~~east~~ of water ditch
1130 Collect SO-15 in ziploc
1140 collect SD-09 sediment sample methyl mercury at location grab bulk sediment sample - Sample location moved ~ 200 ft downstream because of dense vegetation
1200 Return to truck cool down

1235 CF-SO-14
1245 CF-BG-10
1255 CF-SO-15 (dry material able to sieve) sieve
1310 CF-SD-09 methyl mercury
collect mercury in ziploc, sieve

at truck - ~~dry enough to sieve~~ not dry enough to sieve put bulk sample double bagged on ice
1345 Collect equipment blank for mercury CF-ER-01
1350 Collect sample CF-SO-06
1355 Locate CF-BG-06 collect Blind Dup CF-BL-04 at this location as well
1415 CF-BG-06
1420 CF-BL-04 (blind dup BG-06)
1430 Go collect CF-BG-07. NH sieve BG-07 Julio + Brian go to grab CF-BG-08
1450 Collect (sieved) CF-BG-07
1500 Julio + Brian return w/ samples. Brian leaves site no more sampling to day
1510 collect CF-BG-08 (sieved)
1515 pack up truck drive to find staging for northernmost location

530 Pack truck leave hotel

600 Arrive site set up + H&S

645 walk to northernmost locations heavy brush thick blackberries btw flood channel and creek — impenetrable, however evidence of ponding ~~water~~ in channel decide good location to collect sediment sample CF-BD-01, though not adj to creek (in flood channel no apparent outlet btw tailings piles + creek)

715 collect above described CF-BD-01* methyl mercury + bulk mercury

730 collect CF-BD-02 upstream of location on map, best/only access point — bulk sample wet no sieve

745 CF-BD-03 collected across stream ~~from~~ BD-02 both samples methyl mercury + bulk mercury — wet no sieve

810 Find another creek access point closer to CF-BD-01

815 collect sample + Dup label

* renamed CF-SD-11

810 *CF-BL-05 @15 ##

sample CF-BD-01, change sediment sample collected at 715 to CF-SD-11 * No sieve

840 collect CF-SO-09 — relocated about 75' south to find ore w/ soil

840 Return to vehicle CF-BG-01 is in tailings discuss alt. locations w/ Tim, Brian NPS suggests county park north of site but reconissance shows further from site than thought + evidence of tailings in undisturbed areas.

Evidence of mining west of road (hydraulic mining, but not as obvious further south — will collect/relocate CF-BG-01 to that area

925 Collect bulk sample for CF-SO-01

930 Collect bulk sample for CF-SO-10 move over too much rock

1010 Collect CF-BD-04 methyl mercury + bulk - wet cannot sieve

Rite in the Rain

1025 Collect CF-BD-05 methy mercury and bulk mercury - wet cannot sieve

1100 HAK 8/31/17 Collect CF-BD-01 SD methyl mercury and bulk mercury - wet cannot sieve

1120 CF-BG-02 mining road observed collected sample ~20 yds uphill from road bulk sample collected

1210 collect CF-SD-07 methyl mercury and bulk sample - wet no sieve

1220 collect CF-SD-06 methyl mercury and bulk sample - wet no sieve

1240 Collect CF-SD-04 methyl mercury and bulk sample - wet no sieve

1300 lots of organics collected extra soil

1300 Collect CF-SD-02 methyl mercury and bulk sample - wet no sieve

1325 Collect CF-SO-11 bulk sample relocated slightly because of significant amounts of rock little soil

1345 collect BG-01 relocated south and west side of road

1355 CF-BG-04 is right on tailings pile move west side of road some evidence of prospect pits, location appeared relatively undisturbed

1425 collect CF-SO-02 bulk sample

1435 Collect CF-BG-03 bulk sample

1445 Brian leaves site Tobacon sieve samples

Comments
Samples checked on the COC were dried in the lab and sieved with sieve #40 prior analysis. This procedure was applied only on samples used to analyze for EPA7471A-Mercury test. Spread sheet with drying conditions was provided
%Moisture test was done in TA-Irvine in association with methods 6010B and 7471A and results were reported as analyte Percent Moisture
%Moisture test was done in TA-Canton in association with method 1630-Methyl Mercury and results were reported as analyte Fine Moisture

Receipt
The samples were received on 8/5/2017 10:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 16.7º C.

GC Semi VOA
Method(s) 1630: The opening CCB had poor surrogate recoveries. The CCB and MB are prepared at the same time and are identical. The MB is analyzed immediately after the CCB. The MB shows that the prep and analytical processes are free from contamination. Surrogate recoveries for all other QC and client samples met recovery criteria, indicating that the problem was isolated to the CCB. No further corrective action was taken.

(CCB 240-291010/25)

Method(s) 1630: The following samples were diluted due to the nature of the sample matrix: (240-83447-A-17-D) and (240-83447-C-17-B DU). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-422409 and analytical batch 440-422577 were outside control limits for Antimony. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 7470A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-421693 and analytical batch 440-423141 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-423112 and analytical batch 440-423270 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-422535 and analytical batch 440-422971 were outside control limits for Nickel, Antimony and Zinc. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The post digestion spike % recovery for Silver associated with batch 440-422971 was outside of control limits.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to TestAmerica Laboratories, Inc.

SUBJECT: NPS Whiskeytown, Data Validation

Dear Ms. Herbert,

Enclosed is the final validation report for the fraction listed below. This SDG was received on September 6, 2017. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #39411:

SDG #	Fraction
440-189680-1	Metals & Methyl Mercury

The data validation was performed under Level II guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Engineering Evaluation/Cost Analysis Sampling and Analysis Plan, Coggins Flat Area Placer Mine, Whiskeytown National Recreation Area, Shasta County, California, June 2017
- USEPA, Contract Laboratory Program National Functional Guidelines, for Inorganic Superfund Methods Data Review, January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Shauna McKellar
Project Manager/Chemist

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Engineering Evaluation/Cost Analysis Sampling and Analysis Plan, Coggins Flat Area Placer Mine, Whiskeytown National Recreation Area, Shasta County, California (June 2017) and a modified outline of the USEPA National Functional Guidelines (NFG) for Inorganic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:

Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Molybdenum, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc by Environmental Protection Agency (EPA) SW 846 Method 6010B
Mercury by EPA SW 846 Methods 7470A/7471A
Methyl Mercury by EPA Method 1630

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

All technical holding time requirements were met.

II. Instrument Calibration

Instrument calibration data were not reviewed for Level II validation.

III. ICP Interference Check Sample Analysis

Interference check sample (ICS) analysis data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

V. Field Blanks

Samples EB1 and EB2 were identified as laboratory equipment rinsates. No contaminants were found.

Samples CF-ER-01, CF-ER-02, CF-ER-03, CF-ER-04A, CF-ER-04B, AND CF-ER-05 were identified as equipment rinsates. No contaminants were found with the following exceptions:

Blank ID	Collection Date	Analyte	Concentration	Associated Samples
CF-ER-01	08/02/17	Copper Lead Zinc	0.011 mg/L 0.0086 mg/L 0.014 mg/L	CF-BG-10

Sample concentrations were compared to concentrations detected in the field blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated field blanks.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	Flag	A or P
CF-BG-10MS/MSD (CF-BG-10)	Antimony	38 (75-125)	41 (75-125)	UJ (all non-detects)	A
CF-BG-10MS/MSD (CF-BG-10)	Zinc Nickel	156 (75-125) -	160 (75-125) 127 (75-125)	J (all detects) J (all detects)	A

For CF-BG-10MS/MSD, no data were qualified for Barium percent recoveries (%R) outside the QC limits since the parent sample results were greater than 4X the spike concentration.

Relative percent differences (RPD) were within QC limits.

VIII. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

IX. Serial Dilution

Serial dilution was not performed for this SDG.

X. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (%R) were within QC limits.

XI. Field Duplicates

Samples CF-BG-06 and CF-BL-04, samples CF-BD-01 and CF-BL-05, samples CF-SO-09 and CF-BL-02, and samples CF-SO-01 and CF-BL-01 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

XII. Sample Result Verification

Raw data were not reviewed for Level II validation.

XIII. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to MS/MSD %R, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Mean of Detected Logged Data	N/A	SD of Detected Logged Data	N/A

Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs!
Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit!
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable Antimony was not processed!

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers
and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data
represents a background data set and when many onsite observations need to be compared with the BTV.

For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers
and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data
represents a background data set and when many onsite observations need to be compared with the BTV.

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers
and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data
represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

95% USL	0.04	95% KM Chebyshev UPL	0.00725

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers
and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data
represents a background data set and when many onsite observations need to be compared with the BTV.

Cost are not solicited or competively bid at these rates. Using general gate rates and general state and federal prevailing wage rates for transportation, labor, equipment and materials

ASSUMPTIONS:

Assumes that this is a union, state or federal prevailing wage project including transportation.
Owner will identify, de-activate, cap and/or relocate all underground utilities within project limits. Unrestricted site access
Excavation limits are free of all underground active and inactive utilities
No Replacement or Repairs to Existing Building Structures, Concrete Footings and Roadways, Storm Drainage, Asphalt Highway Surfaces, and Underground and Aboveground Utilities and Anomalies.
Does not include De-Watering, Shoring or Relocating of any Utilities, Light Poles, Water Lines, Electrical and Gas Service, Permanent Fencing, etc.
Does not include Import and compaction of any Clean Quarry Fill Materials.
Erosion control is estimated and actual cost may vary based on specifications being provided to contractor later by owner
