## RE: Peace Garden Site Design Perry's Victory and International Peace Memorial PN: 42024700

## Subject: Street Painting Options

There are multiple options for marking pavement. Environmental concerns, durability, and cost are the major differences between the various alternatives.

- 1. Water-based Paint
  - a. Less environmentally damaging than other options because of their water base.
  - b. Dry time is impacted by temperatures and humidity.
  - c. Ill-suited to application in temperatures under 50°F.
  - d. Commonly used for painting highways, parking lots, and parking garages.
- 2. Acetone-based Paint
  - a. Can only be removed with an acetone solvent.
  - b. Less susceptible to cold than water-based.
  - c. Ideal for striping in early spring and late fall, and temporary striping in the winter.
- 3. Thermoplastic Paint
  - a. Multiple application methods, depending on local and state requirements.
  - b. Depending on application method, sits at 60-90mm thickness.
  - c. Applied using heat.
  - d. Highly durable.
  - e. More expensive than traditional paint.
- 4. Epoxy Paint
  - a. Environmental concerns are a major factor, and only a few products may be compliant depending on location.
  - b. Long-lasting and highly durable, can eliminate the need to restripe on a yearly basis.

07 April 2019

- c. Requires specialized equipment for application.
- d. More expensive than other options.
