NNAS Draft EAAppendixFupdate14July2021.docx; Risk_levels_DRAFT_update14July2021.docx;

Hi All,

We would appreciate your feedback and input on a few changes to an appendix (F) in the NPS Expanded NNF Management Plan that outlines the risk each species poses to native fish in Grand Canyon NP and to rainbow trout in Glen Canyon NRA. The plan allows for annual review and updates of this appendix. I've developed a short paper explaining the changes that I've proposed for each species, which are based on new information related to distribution, abundance, and science related to threats. It is important to keep this information up-to-date to inform our management response in case new invasions or changes in abundance occur.

If you can, please provide feedback by August 1.

Thanks so much,

Brian Healy
