

Upgrade Doors and Hardware at War Department Maintenance Building
Photos

War Department Maintenance Building (Chief Ranger Office)

Interior non-historic 32 in. x 80 in. hollow core interior will be door removed. The new door will be a flush panel steel door, metal jam with hinges and lock set.

The lands office has been identified as a physical security issue. The current door has been cut into two pieces. The security assessment recommends removing the non-historic door and replacing it with a in-kind one piece solid wood door. The new door will be stained to match the exterior wood surfaces.
