I've cherished and appreciated thousands of hours, and years spent in the park, stewarding resources, and educating the interested. During contemplative times at overlooks, at backcountry sites, or hiking many trails, as well as leading groups of visitors, experiences have been shattered, daily, by the seemingly incessant thrum of helicopters. One can hear them approaching from miles away. The noise is perhaps even more intrusive during times of cultural practice when connections to and with place are most important. Birdsong disappears, lost are the sounds of Pelehonuamea and her creative work, and we are left wondering when will the next batch of air tours arrive? What's most disturbing, is that for all the commotion caused, visitors in the air spend only a few minutes observing places, then they move on to the next. And the next. And unfortunately, this doesn't only happen at Kaluapele. The noise is everywhere in the Park, including wilderness backcountry sites. One cannot escape.

While the Preferred Alternative greatly decreases flights in the Park, ANY flight along proposed routes, either from the ocean up to Pu'u'ō'ō, or offshore along the south coast of the Park will be noisy and will impact cultural

resources and those participating in cultural practices such as Native Hawaiian religious ritual, fishing, gathering, etc.

I understand that there is a 5,000' AGL ceiling, above which the ATMP does not impact. I believe that there should be no commercial airtours over any of the lands of any National Park, including Hawai'i Volcanoes National Park, so peace and quiet can be preserved.

Mahalo for the opportunity to comment.

Correspondence: Air tour operators have NO RIGHT to continue disturbing the peace of our aina and Ohana's. The ATMP for the park should be No Fly. Operators like Blue Hawaiian have repeatedly and consistently shown they prioritize profits over locals. I've seen Blue Hawaiian helicopters fly below the mandated minimum altitude over my house in HPP and when I call the office they just say "we'll look into it". No accountability needs to end. A business mode that has to fly helicopters over houses has no place in our state.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Ms. Rhonda Loh, Superintendent
Hawai'i Volcanoes National Park
P.O. Box 52
Hawaii National Park, HI 96718

Subject: Proposed Air Tour Management Plan and Environmental Assessment for Hawai'i Volcanoes National Park

Dear Superintendent Loh:

I am writing on behalf of over 2,400 members of the Coalition to Protect America's National Parks (Coalition), all of whom have worked or volunteered for the National Park Service (NPS) and who collectively represent more than 45,000 years of national park management experience. The Coalition studies, educates, speaks, and acts for the preservation of America's National Park System. Among our members are former NPS directors, regional directors, superintendents, resource specialists, rangers, maintenance and administrative staff, and a full array of other former employees, volunteers, and supporters.

We offer the following comments for your consideration regarding the proposed Air Tour Management Plan (ATMP) and Environmental Assessment (EA) for Hawai'i Volcanoes National Park (HAVO or Park).

GENERAL COMMENTS

1. First, we commend the agencies for preparing a proper environmental assessment (EA) for the proposed ATMP that considers a range of alternatives and evaluates the potential impacts of those alternatives - When considering a proposed agency action, such as a new ATMP, NPS must comply with the National Environmental Policy Act (NEPA) and related guidance, including the Council on Environmental Quality (CEQ) NEPA implementing regulations (40 CFR Parts 1500-1508), and with the agency's own NEPA guidance found in the NPS NEPA Handbook 2015. We have been deeply concerned that NPS has failed to comply with basic NEPA guidance by issuing numerous previous "proposed ATMPs" for other parks without considering a reasonable range of alternatives and without preparing any sort of environmental impact analysis for public review. We applaud you and the planning team for following the appropriate NEPA process requirements that the HAVO ATMP proposal deserves.

2. Compliance with the NPS Organic Act (54 USC §100101) is integral to compliance with the National Parks Air Tour Management Act (49 USC §40128), yet the EA barely mentions the Organic Act or its relevance - Section 802 (Findings) of the National Parks Air Tour Management Act (NPATMA) states, in part: "Congress finds that--

- (1) the Federal Aviation Administration has sole authority to control airspace over the United States;
- (2) the Federal Aviation Administration has the authority to preserve, protect, and enhance the environment by minimizing, mitigating, or preventing the adverse effects of aircraft overflights on public and tribal lands;
- (3) the National Park Service has the responsibility of conserving the scenery and natural and historic objects and wildlife in national parks and of providing for the enjoyment of the national parks in ways that leave the national parks unimpaired for future generations[.]" (Emphasis added)

The NPS "responsibility for conserving" park resources and values mentioned in NPATMA §802(3) above derives directly from the NPS Organic Act and is often referred to as the NPS "conservation mandate." As described in NPS Management Policies 2006, Section 1.4.1: "The most important statutory directive for the National Park Service is provided by interrelated provisions of the NPS Organic Act of 1916 and the NPS General Authorities Act of 1970, including amendments to the latter law enacted in 1978." As further stated in Management Policies Section 1.4.3:

The fundamental purpose of the national park system, established by the Organic Act and reaffirmed by the General Authorities Act, as amended, begins with a mandate to conserve park resources and values. This mandate is independent of the separate prohibition on impairment and applies all the time with respect to all park resources and values, even when there is no risk that any park resources or values may be impaired. . . Congress, recognizing that the enjoyment by future generations of the national parks can be ensured only if the superb quality of park resources and values is left unimpaired, has provided that when there is a conflict between conserving resources and values and providing for enjoyment of them, conservation is to be predominant. This is how courts have consistently interpreted the Organic Act. (Emphasis added)

Given that both the proposed ATMP and EA are or should be focused on reducing potential impacts of commercial air tours on the Park's natural and cultural resources, and visitor experiences, we would expect the NPS conservation mandate to serve as a key basis for evaluating those impacts. However, we are quite concerned that the EA barely mentions the Organic Act (e.g., it is mentioned in regard to cultural resources on EA p. 80). In our view, the NPS conservation mandate is so important to the management of air tours in national parks that Congress chose to embed a key portion of the Organic Act in §802(3) of the NPATMA. To address this concern, we recommend that a section summarizing applicable laws relevant to the proposed action, including the NPS Organic Act, be added to Chapter 1 or as an appendix.

3. The EA appropriately considers the 2017 Foundation Document for Hawai'i Volcanoes National Park, which provides important context for the planning process regarding the Park's significance and the Fundamental Resources and Values that could be adversely affected by commercial air tours - As described in the document: "The purpose of Hawai'i Volcanoes National Park is to protect, study, and provide access to Kīlauea and Mauna Loa, two of the world's most active volcanoes, and perpetuate endemic Hawaiian ecosystems and the traditional Hawaiian culture connected to these landscapes[.]"

The document identifies "Fundamental Resources and Values" that help focus planning and management efforts on what is truly significant about the Park. Fundamental Resources and Values are "those qualities that are essential (fundamental) to achieving the purpose of the Park and maintaining its significance." (Emphasis added) HAVO's Fundamental Resources and Values identified in the Foundation Document, which are potentially impacted by air tours, include:

- Natural Sounds. Park soundscapes are protected from many human-caused sounds and are dominated by the sounds of wind, ocean, volcanic activity, and native species.
- Wahi Kapu (Sacred Places) and Wahi Pana (Celebrated Places). The entire park landscape and all of its inhabitants and features, including the sky as a layered extension of the landscape, are sacred to Native Hawaiians[.]
- Opportunity for Traditional Cultural Use. Native Hawaiian traditional uses in the park perpetuate traditional practices, knowledge, and the cultural importance of this area. These practices, including chants and dances, depend upon natural sounds, unobstructed views of mountain summits, and an environment that has not been greatly altered by human-caused changes.

The cultural and spiritual importance of the Hawai'i Volcanoes landscape to Native Hawaiians cannot be overstated. Kīlauea Volcano, the home of Pelehonuamea, and Mauna Loa Volcano are sacred to many Native Hawaiians. The Park is a place of birth and the physical representation of many spirits and forces; the active volcanism, the features of the terrain, and the plants and animals that live there are all important to the Native Hawaiian sense of identity, unity, and continuance. The journeys of the Hawaiian people, and those who followed, portray cultural clashes, adaptations, and assimilations that provide enduring lessons about human resourcefulness, interdependence, and respect on an active volcanic landscape. As a result, the sacred nature of the Park's landscape to Native Hawaiians provides one of the, if not the most, compelling reasons to eliminate air tours at HAVO.

4. Consistent with NPS Management Policies Section 1.5, the EA should include an "appropriate use analysis" for the proposed action - Management Policies Section 1.5 states, in part: "An 'appropriate use' is a use that is suitable, proper, or fitting for a particular park, or to a particular location within a park. Not all uses are appropriate or allowable in units of the national park system, and what is appropriate may vary from one park to another and from one location to another within a park. . . When proposed park uses and the protection of park resources and values come into conflict, the protection of resources and values must be predominant. A new form

of park use may be allowed within a park only after a determination has been made in the professional judgment of the superintendent that it will not result in unacceptable impacts." (Emphasis added)

The NPATMA established procedural requirements for allowing air tours over parks; however, the Act does NOT mandate that commercial air tours are appropriate and must be allowed. In fact, section (b)(3)(A) of the Act provides that the agencies "may prohibit commercial air tour operations over a national park in whole or in part." Under the Act, air tours are essentially a discretionary activity subject to agency approval. As far as we know, NPS has never formally considered or determined whether commercial air tours are an appropriate use of (or over) HAVO. As a result, we strongly recommend that the EA be amended (e.g., through errata or as an appendix) to include an appropriate use analysis as described in Management Policies Section 1.5.

5. The eventual decision document for the ATMP should include an "impairment determination" for the selected action - NPS Management Policies Section 1.4.7, states, in part: "Before approving a proposed action that could lead to an impairment of park resources and values, an NPS decision-maker must consider the impacts of the proposed action and determine, in writing, that the activity will not lead to an impairment of park resources and values. If there would be an impairment, the action must not be approved." (Emphasis added) Furthermore, "[t]he impact threshold at which impairment occurs is not always readily apparent. Therefore, the Service will apply a standard that offers greater assurance that impairment will not occur. The Service will do this by avoiding impacts that it determines to be unacceptable. These are impacts that fall short of impairment, but are still not acceptable within a particular park's environment." (Emphasis added) As a result, we strongly recommend that the eventual decision document, presumably a Finding of No Significant Impact (FONSI), includes an impairment determination as described in Management Policies Section 1.4.7.

6. Section 9.0 ("Amendment") of the ATMP itself should be revised - We have a significant concern about Section 9.0 in the proposed ATMP. This section of the ATMP is not described in the EA. The very first sentence in Section 9.0 (ATMP p. 14) states that "the ATMP may be amended at any time" (emphasis added) if either NPS or the FAA notifies the other agency. We imagine that the Amendment clause is intended to convey the concept that the ATMP could be updated and revised if/when the agencies determine it is needed and appropriate; and we fully understand that all management plans are subject to future change.

However, the use of the words "at any time" creates the distinct impression that reversal of the ATMP decision and/or resumption/expansion of air tours at HAVO could happen on short-notice (i.e., "at any time"). This wording also suggests there is little certainty that the significant reduction of air tours proposed at HAVO would be a durable decision (since it could be changed "at any time"). In our view, creating such uncertainty in the ATMP unnecessarily invites industry appeals and/or political intervention on behalf of air tour operators. Our observation has been that many NPS management decisions that curtail or eliminate controversial recreational and commercial activities in parks, such as off-road vehicle (ORV) use, hunting, and in this case commercial air tours, are often subject to industry lobbying and/or political reversal, especially if/when there is a change in administration.

Over 20 years after the passage of the NPATMA, litigation was needed to force the agencies to finally prepare the required ATMPs. Moving forward, it is critical that the new ATMPs are widely viewed as providing for consistent long-term air tour management at the individual parks involved, rather than creating the distinct impression of uncertainty about their longevity. Toward that end, we recommend that the agencies revise the wording of Section 9.0 of the ATMP itself to state the following:

(add new first sentence) This ATMP will remain in effect until amended or terminated by mutual agreement of the agencies. This ATMP may be amended at any time (i.e., delete: "at any time"): if the NPS, by notification to the FAA and the operator(s), determines that the ATMP is not adequately protecting Park resources and/or visitor enjoyment; if the FAA, by notification to the NPS and the operator(s), determines that the ATMP is adversely affecting aviation safety and/or the national aviation system; or, if the agencies determine that appropriate changes to this ATMP are necessary to address new information or changed circumstances.

These minor revisions would affirm the intended stability and longevity of the ATMP; and refocus the Amendment provision on the limited circumstances that could justify reconsideration of the ATMP, rather than on the potential timing or abruptness of amending the ATMP.

SECTION-BY-SECTION COMMENTS

Chapter 1

1. Section 1.1 Introduction - The third paragraph of this section describes the "objective" of ATMP under the NPATMA, as follows: "The objective of the ATMP, under the Act, is to develop acceptable and effective measures to mitigate or prevent significant adverse impacts, if any, of commercial air tour operations on the Park's natural and cultural resources, Native Hawaiian sacred sites and ceremonial areas, Wilderness character, and visitor experience." (Emphasis added) Of concern (again), the NPS Organic Act's "fundamental purpose of parks" statement (54 U.S.C §100101(a)) provides the legal basis for conserving the above mentioned park resources and values, yet there is no mention of the Organic Act in this section of the EA or in the ATMP itself. As described in General Comment # 2 above, compliance with the Organic Act's conservation mandate is integral to compliance with §802(3) of the NPATMA. To address this concern, we recommend that a new section summarizing applicable laws relevant to the proposed action, including the NPS Organic Act and the HAVO enabling legislation be added to Chapter 1 or as an appendix. Or, at the very least, this section should include a sentence stating that "Conservation of park resources and values is a fundamental purpose of units of the National Park System as described in the NPS Organic Act (54 U.S.C §100101(a))."

2. Section 1.4 Purpose and Need - As stated in this section, "The purpose of the ATMP is to comply with the Act and other applicable laws. . ." (Emphasis added) Similar to our previous comment, this would seem to be the perfect opportunity to identify the "other applicable" laws, such as the NPS Organic Act, that the agencies considered or should have considered during the development of the ATMP. By not identifying any other "applicable laws," it leaves the impression that the agencies have not consciously considered the proposed action within the context of the Organic Act's conservation mandate. This should be addressed by providing a brief summary of "other applicable laws" in Chapter 1 or as an appendix to the EA.

3. Section 1.5 Environmental Impact Categories Not Analyzed in Detail - As described in this section of the EA, the agencies have appropriately identified a number of impact categories that were considered but not analyzed in detail. In our view, the dismissed categories are generally not relevant or significant to the analysis; and the impact categories that have been carried forward for detailed analysis in the EA include the most relevant or significant impact topics for the analysis that follows in Chapter 3 of the EA.

Chapter 2

1. Section 2.1 Alternatives Development - We greatly appreciate the detailed description of how the ATMP preliminary alternatives were developed primarily by an NPS inter-disciplinary team and then reviewed by the FAA. We also appreciate the detailed references to the Park's Foundation Document purposes and management objectives, which helped inform development of the alternatives. In general, we believe that the agencies have developed and considered an appropriate range of alternatives. It also is very appropriate that the alternative of "Air Tours Above Existing Levels or Air Tours at Existing Levels with Current Operating Parameters" has been eliminated from further study for the reasons stated in Section 2.2.1.

2. Section 2.4 Alternative 1 (No Action Alternative) - As described in this section, "[t]he No Action Alternative represents a continuation of what is currently flown under existing conditions. . ." We strongly agree with the statement that "[t]he No Action Alternative. . . is not a selectable alternative because it does not meet the purpose and need for the ATMP (refer to Section 1.4, Purpose and Need)." (Emphasis added) It is highly evident from the impact analysis of the No Action Alternative in Chapter 3 that the existing level of air tours at HAVO is causing unacceptable impacts to park resources and values that NPS is mandated to conserve unimpaired under the NPS Organic Act.

3. Section 2.5 Alternative 2 (Elimination of Air Tours) - As described, "Alternative 2 would provide the greatest level of protection for the purposes, resources, and values of the Park because it would not authorize air tours in the ATMP planning area. Under this alternative, the heart of the Park, including the summit of Kīlauea, all Wilderness areas, and cultural and visitor use areas, would be free of commercial air tours. Alternative 2 would prohibit commercial air tours within the ATMP planning area no later than 180 days after the ATMP is signed by all required signatories from both agencies (the ATMP's effective date). . . Air tours outside of the ATMP planning area (i.e., at or above 5,000 ft. AGL or more than ½-mile outside the Park boundary) are not subject to the Act and are therefore not regulated under the ATMP. Thus, there would be no limitations on the number of air tours that could occur outside the ATMP planning area." (Emphasis added)

Alternative 2 (i.e., elimination of air tours at HAVO) would clearly provide "the greatest level of protection for the purposes, resources, and values of the Park." Given the cultural, biological and Wilderness significance of HAVO, we believe that elimination of air tours should have been identified as the Preferred Alternative for this ATMP. It is the alternative that is most consistent with NPS Management Policies Section 1.4.3, which states: "[W]hen there is a conflict between conserving resources and values and providing for enjoyment of them, conservation is to be predominant."

4. Section 2.6 Alternative 3 (Preferred Alternative) - As described in the EA, Alternative 3 would reduce the number of air tours over the Park from 11,376 (three-year average) to 1,565, an 86% reduction. It would also limit all air tours to the following three designated routes:

1. Pu'u'ō'ō Route: The Pu'u'ō'ō Route consists of a route on the east rift of Kīlauea in the Pu'u'ō'ō area with a single entry and exit over the ocean.

2. Coastal Route: The Coastal Route runs bi-directionally offshore along the edge of the Park boundary, but within ½-mile of the Park boundary. Air tours on the Coastal Route would maintain 2,000 ft. lateral distance from shore and a minimum altitude of 2,000 ft. AGL.

3. Kahuku Route: The Kahuku Route runs bi-directionally across the south side of the Kahuku Unit following Highway 11. Air tours on the Kahuku Route would maintain a minimum altitude of 1,500 ft. AGL. This route would provide access for Kailua-Kona flights and circle island tours to provide expansive views of Mauna Loa.

Based on the designated routes above, the heart of the Park, including the summit of Kīlauea, designated Wilderness areas, and key cultural and visitor use areas, would generally be free of commercial air tours. In comparison to the No Action Alternative, Alternative 3 would significantly reduce how much of the Park would be impacted by air tour noise by restricting flights to 3 designated routes and by limiting the number of flights per day. The Pu'u'ō'ō and the Kahuku air tour routes, in particular, would reduce impacts on the Park's resources and values. Importantly, the Halema'uma'u Crater is protected, enhancing cultural and natural resource protections and visitor experience.

The Coastal Route, however, will continue to result in substantial impacts on both cultural and natural resources and on recreational activities. Importantly, the EA does not take into full account the concerns of Native Hawaiians who consider the entire Park as sacred. Their voices were not heard especially regarding the Coastal Route which includes many ceremonial areas, sacred sites and fishing grounds. In addition, along the Coastal Route are the primary nesting areas of endangered sea turtles, and where important wilderness hiking and camping sites occur to Halapē and up the Hilina Pali to over 3,300 ft. elevation. Air tour flights at 1,500-2,000 ft. over the Coastal Route would be visible below by those who hike to the top of the Hilina Pali. Alternative 3 would also adversely affect Wilderness qualities in some native forest bird habitat where rare honeycreeper, 'I'iwi, occur, and in locations where endangered nēnē (Hawaiian goose) occur.

In brief, although Alternative 3 represents a significant improvement in resource protection over the No Action Alternative, it would still result in significantly more adverse impacts than Alternative 2. For this reason, we strongly support the selection of Alternative 2, the elimination of air tours at HAVO.

5. Section 2.7 Summary of ATMP Alternatives - Table 3 provides a side-by-side comparison of various Alternative Attributes for Alternatives 1-3. We call your attention to the "Monitoring and Enforcement" attribute on p. 27 of the EA. As described in the table, monitoring associated with Alternative 3 would focus primarily on documenting flight numbers and locations. There is no mention of resource monitoring to document ongoing impacts to natural and cultural resources that would undoubtedly continue to be adversely affected by air tour noise disturbance along the designated route corridors.

The lack of a resource monitoring plan is an obvious and significant flaw in the proposed action. If NPS decides to allow air tours to continue at HAVO, we strongly recommend that NPS develop and include a monitoring plan that would systematically and periodically assesses the impacts of air tour noise on wildlife, Wilderness character, Native Hawaiian cultural sites and fishing grounds, and recreational activities in general. Such information will be essential for evaluating the effectiveness of the ATMP over time and for informing future amendments of it.

Chapter 3 includes comparative analyses of the respective alternatives on various impact categories (i.e., resources or uses affected by air tours) at HAVO. Nearly every analysis indicates that Alternative 2, the elimination of air tours at HAVO, would provide the greatest level of protection and/or restoration of resources at the Park. Our comments below are focused on the impact categories that we believe would receive the most significant benefits of significantly reducing or eliminating air tours at the Park.

1. Section 3.1 Noise and Noise-Compatible Land Use - This section includes appropriate references to relevant FAA and NPS policies. Specifically, FAA Order 1050.1F, paragraph 11-5.b(10) defines a noise sensitive area as "[a]n area where noise interferes with normal activities associated with its use. Normally, noise sensitive areas include residential, educational, health, religious structures and sites, parks, recreational areas, areas with Wilderness characteristics, wildlife refuges, and cultural and historical sites." (Emphasis added) In other words, the entirety of HAVO is a noise sensitive area and should be protected accordingly.

NPS Management Policies (2006) Section 4.9, Soundscape Management, directs the NPS to preserve soundscapes and the acoustic environment to the greatest extent possible and to restore these resources to their natural condition wherever they have become degraded by noise and unwanted sounds. In other words, NPS management policies direct NPS to restore the natural soundscape at HAVO that has been adversely impacted by air tour noise.

In addition, the HAVO Foundation Document identifies natural sounds as a Fundamental Resource and Value of the Park. The natural soundscape is a highly desired value for park visitors as well as for Native Hawaiians who consider the Park to be a sacred place; and low ambient sounds plays a vital role in the health of HAVO's natural ecosystems.

Section 3.1's comparative analysis of the noise levels likely to be caused by the respective alternatives strongly supports Alternative 2 as the alternative with the greatest likelihood of restoring the natural soundscape at HAVO, consistent with FAA Order 1050.1F and NPS Management Policies Section 4.9. Under Alternative 1 (No Action), 82% of the Park would continue to experience audible air tour noise. Alternative 2 (elimination of air tours) would provide 365 days per year without noise from air tours within the ATMP planning area and would reduce noise in the most noise sensitive regions of the Park resulting in direct beneficial effects compared to the No Action Alternative and Alternative 3. Under Alternative 3 (Preferred Alternative), on "Standard Days" (see Table 6), 18% of the Park would experience audible air tour noise for at least 60 minutes a day (non-contiguous). And on "Quiet Technology-Only Days" (see Table 7), 9% of the Park would experience audible air tour noise for at least 60 minutes a day (non-contiguous). Because Alternative 2 would clearly result in the greatest reduction of air tour noise, we support the elimination of air tours at HAVO.

2. Section 3.3 Biological Resources - This section includes analyses of the potential impacts of air tours on biological resources, specifically mammals, reptiles and birds, including multiple species that are federally listed as threatened or endangered. As described in the analysis, multiple protected bird, mammal, and reptile species within the TAMP planning area that are adversely impacted by aircraft noise. Alternative 2 (elimination of air tours) would provide the greatest level of protection to these biological resources and would likely "have no effect on federally listed threatened or endangered species." See EA Appendix H. For this reason, we fully support selection and implementation of Alternative 2. In contrast, the Preferred Alternative (Alternative 3) provides a lower level of protection in that it may affect, but is not likely to adversely affect federally listed threatened or endangered species, nor would it result in the destruction or adverse modification of federally designated critical habitat.

3. Section 3.4 Cultural Resources - The National Historic Preservation Act (NHPA), 54 U.S.C. §§ 300101 et seq., is comprehensive federal preservation legislation intended to protect cultural resources. Section 106 of the NHPA (54 U.S.C. § 306108), as implemented in 36 CFR Part 800, requires federal agencies to consider the effects of undertakings on historic properties, should any such properties exist. In addition to Section 106 of the NHPA, the NPS's Organic Act* and Section 110 of the NHPA apply to and provide for the preservation of historic, ethnographic and cultural resources on parkland. (*EA p. 80 is a rare instance in which the EA actually mentions the NPS Organic Act.)

The EA, Table 10, identifies 43 cultural resources within the Area of Potential Effect (APE), including historic, architectural, archaeological, and cultural resources, inclusive of ethnographic resources, traditional cultural

properties (TCPs), sacred sites, cultural landscapes, historic districts, and prehistoric and historic buildings and structures. It is noteworthy that the entire Park is considered a TCP because of its associations with the cultural practices, traditions, beliefs, lifeways, arts, crafts, or social institutions of Native Hawaiians. Commercial air tours, by their nature, have the potential to impact resources for which feeling and setting are contributing elements.

Under Alternative 2, the elimination of commercial air tours from the ATMP planning area would significantly reduce the noise and visual intrusions from directly impacting the feeling and setting of cultural resources within the APE and result in the greatest beneficial impacts to ethnographic resources and sacred sites, TCPs, archaeological resources, cultural landscapes, historic districts, and prehistoric and historic buildings and structures compared to current conditions. Indirect noise impacts may still occur due to air tours displaced to outside the ATMP planning area.

Compared to Alternative 1, Alternative 3 (the NPS Preferred Alternative) would reduce noise and visual intrusions over most, but not all, cultural resources in the APE by reducing the total number of air tour flights allowed and by restricting tours to designated flight routes. However, portions of the Hawai'i Volcanoes National Park TCP over part of the Puna-Ka'ū Historic District, over the edge of the Kahuku-Pōhū Parcel Archaeological Sites, and over the Kahuku Ranch Cultural Landscape would continue to experience air tour noise impacts.

Because the elimination of air tours would provide the greatest level of protection for the diverse cultural resources within the APE and the greater Hawai'i Volcanoes landscape that Native Hawaiians consider sacred, we fully support the selection and implementation of Alternative 2. It would be the most appropriate alternative to implement under applicable NHPA, FAA, and NPS cultural resource guidelines and policies.

4. Section 3.5 Wilderness - The Wilderness Act of 1964 is the primary federal legislation regulating the management of designated Wilderness areas. While Wilderness is not an impact category the FAA traditionally examines, the NPS has agency wide (see NPS Management Policies (2006), Chapter 6, and Director's Order 41, 2013) and park specific guidelines (NPS, 2015) for managing designated Wilderness areas within the National Park System. HAVO has four distinct sections of designated Wilderness that are informally considered "units" because they vary in characteristics such as vegetation, elevation, location, and climate. These four units, the Mauna Loa, Ka'ū Desert, East Rift, and 'Ōla'a, collectively span approximately 123,100 acres of the park's 354,461 acres.

The NPS manages the Wilderness for the following qualities of Wilderness character:

- Untrammelled: Unhindered and free from the actions of modern human control or manipulation. Natural: Ecological systems are substantially free from the effects of modern civilization.
- Undeveloped: Retaining primeval character and influence without permanent improvements or modern human occupation.
- Solitude or Primitive and Unconfined Recreation: Ability to provide outstanding opportunities for solitude or primitive and unconfined type of recreation.
- Other features of value: Wilderness preserves other features of value that are of scientific, educational, scenic, or historical value.

Air tours would have no direct effect on the "untrammelled" and undeveloped" qualities of the four Wilderness units at HAVO; while potential impacts to "other features" (e.g., cultural resources) are evaluated elsewhere in the EA. As a result, the EA analysis focuses on potential impacts to the "natural" and "solitude" qualities of Wilderness character. Because natural sound is such an integral part of Wilderness character, the NPS considers noise above 35 dBA to negatively impact Wilderness character.

Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area, which would offer the greatest protection to Wilderness character. Alternative 3 would not allow air tours to be conducted directly over any of the designated, eligible, or potential Wilderness within the ATMP planning area. Compared to current conditions, this would enhance qualities of Wilderness character by reducing the intensity noise, the footprint of noise, and the number of noise events over Wilderness areas, although some noise would still be present. Under Alternative 3, noise above 35 dBA would occur for less than 15 minutes a day in the Great Crack, East Rift, and Ka'ū Desert Wilderness units, while the majority of the Wilderness areas within the Wilderness study area would not experience impacts to the natural quality of Wilderness, as noise above 35 dBA would not occur. While Alternative 3 would provide significant improvement (i.e., reduction in air tour noise) over existing

conditions, it would still allow for considerably more cumulative noise impacts than Alternative 2. As a result, we strongly support Alternative 2 as the most appropriate alternative to implement under applicable NPS Wilderness stewardship policies.

5. Section 3.6 Visitor Use and Experience and Other Recreational Opportunities - While visitor experience is not an impact category the FAA traditionally examines, the NPS has agency wide (NPS Management Policies § 8.2, 2006) for managing visitors within the National Park System. This section of the EA also examines impacts to air tour customers.

As described in the EA, from 2017-2019, the Park welcomed an average of 1.5 million visitors per year. Due to the equable climate year-round, Park visitation is fairly evenly distributed throughout the year, with slightly higher visitation in July, August, and particularly December. Most park visitation is for day-use, with visitors typically entering the Park between 10:00 AM and 2:00 PM and visiting just the Kīlauea caldera area. In 2017, an estimated 82,600 people took commercial air tours of the Park, which equates to approximately 4% of the over two million visitors that same year.

Under Alternative 2, commercial air tours would not fly within the ATMP planning area which would eliminate this source of noise from the ATMP planning area. Therefore, Alternative 2 offers the greatest protection of visitor use and experience. However, elimination of air tours would be an adverse effect on those seeking that experience within the ATMP planning area.

Alternative 3 would permit air tours to be conducted along designated routes and altitudes (see EA Figure 20). The authorized routes avoid flying directly over or close to areas of the Park that have the highest amount of visitor use, including those near the Kīlauea caldera, which would promote hearing the natural sounds, including of lava, by park visitors. However, the Noise Technical Analysis indicates that Alternative 3 would not meet the Park's acoustic-based visitor use standards for two modeled location points in the transitional zone and three points in the wild/primitive zone. Other modeled location points would be in compliance with the standard, which represents an improvement compared to the No Action Alternative. Alternative 3 would limit the availability of air tours for those who wish to view the Park from an aerial vantage point to no more than 1,565 tours per year.

Noise is undisputably one of the most significant adverse impacts of air tours over parks. It is clear from the Noise Technical Analysis that Alternative 2 would provide the greatest level of protection from (i.e., the greatest level of reduction of) air tour noise that significantly impacts visitor use and experience at the current level of air tours at HAVO. While Alternative 3 would provide significant improvement (i.e., reduction in air tour noise) over existing conditions, how is it acceptable that the positive experience provided by an air tour for several people per flight is allowed to adversely impact the experiences of hundreds of park visitors on the ground? Continued air tours under Alternative 3 would still allow for considerably more cumulative noise impacts than Alternative 2. For this reason, we support the selection and implementation of Alternative 2.

6. Section 3.8 Visual Effects - As described in this section, visual resources include buildings, sites, TCPs, and other natural or manmade landscape features that are visually important or have unique characteristics. Visual character refers to the overall visual makeup of the existing environment where the alternatives would be located. Within the Park, visual resources can be related to the Park's geologic features, including lava flows, craters, coastal areas, mountains, and other natural scenic areas, such as forests, coastal plains, and grasslands, and are often tied to visitor use and ethnographic resources. One such viewshed is the historic Crater Rim Drive, the most visited corridor in the park that provides access to a number of unique volcanic, scenic, and cultural features such as Nāhuku lava tube, Uēkahuna, Kīlauea Visitor Center, and Steam Vents. A major attraction for visiting HAVO is to experience the natural scenery and landscape of the park. In addition, as approximately 123,100 acres of the Park are federally designated Wilderness, the natural areas and features provide an aesthetic and visual character unique to HAVO that is free from visual evidence of human civilization.

Studies indicate that aircraft noise in national parks can impact human perceptions of aesthetic quality of viewsheds (Weinzimmer et al., 2014; Benfield et al., 2018). Visitors may notice aircraft overflights because of the accompanying noise. Impacts to visual resources and visual character relate to a decrease in the aesthetic quality of the Park resulting from air tours. In general, commercial air tours detract from the visitor's opportunity to observe these resources when commercial air tours are present. Reporting data from 2017-2019 indicates that

visitors have the potential, on average, to see commercial air tour aircraft approximately 31 times per day, and the maximum number of tours reported over the Park during this time period was 90 tours a day.

Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area so commercial air tours in this area would not detract from visual resources in the visual effects study area. Visual character would improve significantly compared to current conditions; and Alternative 2 would provide the greatest protection to Park viewsheds across the three alternatives.

Under Alternative 3, some Park viewsheds would continue to experience temporary impacts when commercial air tours are flying within the visual effects study area, and those instances would be generally limited to viewsheds where aircraft could be seen along the designated routes and altitudes (see Figure 24). This would be limited to no more than 1,565 instances per year, an 86% reduction compared to the No Action Alternative.

In sum, although Alternative 3 would reduce impacts to visual resources compared to the No Action Alternative, it would still allow greater adverse impacts than Alternative 2. The elimination of air tours would provide the greatest level of protection to the Park's visual resources; and for this reason, we strongly support the selection and implementation of Alternative 2 at HAVO.

7. Section 3.11 Summary of Environmental Consequences - Table 16 provides a side-by-side comparison of the environmental consequences for each of the alternatives considered across each environmental impact category. This comparison provides overwhelming evidence that Alternative 2, elimination of air tours, would provide the greatest level of protection to or within the various impact categories analyzed in the EA. For this reason, we strongly support selection and implementation of Alternative 2, the elimination of air tours at HAVO.

CLOSING COMMENT

In closing, we commend the agencies for preparing a proper EA that evaluates the potential impacts of a range of air tour alternatives at Hawai'i Volcanoes National Park. The information and analysis provided in the EA provide overwhelming evidence that Alternative 2, elimination of air tours, is the most appropriate alternative to implement. We greatly appreciate the opportunity to comment on this important issue.

Sincerely,

Michael B. Murray, Chair

Correspondence: Mahalo,

Tour aircraft and their impacts have NO PLACE in Hawaii Volcanoes National Park (VNP)!

The adopted Air Tour Management Plan (ATMP) for VNP should be NO FLY.

For 24 years the Interim Operating Authority (IOA) tour aircraft have had unlimited use of the Park. This not only negatively impacted VNP but also visitors on the ground trying to enjoy VNP as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts. In particular, see the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008. This should be a guideline and model going forward.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

Correspondence: Volcano National Park should have a very limited or NO FLY zone. I have spent many years of my life hiking around the forests there and the helicopter noise is always an annoying occurrence. Now that the lava is erupting again, I understand the world wants to see the action, which is why I propose there be set hours if they must fly at all, such as 10am-12pm, and 7-9pm. Please consider how the constant noise of helicopters affects those living in the area and how it affects the environment and people who are trying to enjoy some peace in nature.

Thank you.

Danica Walsh

Correspondence: I moved here to embrace the beauty, serenity, and spirituality of the Park. My trips into the Park to meditate and enjoy the peaceful setting is constantly interrupted by the incessant noise of overhead helicopters. How much is enough? I understand the complex nature of the National Park System, to provide maximal access and enjoyment of resources while maintaining them, which is a bit of an oxymoron. Other aspects of access are limited in three tiers: 1) visitors center access and hiking, 2) camping permits are required for campers, 3) back-country permits limit access to exceptionally fragile locations in the Park. Why can't we limit access to the airspace over the Park? This is on the same tier as back-country permits. I believe that the fragile balance between "use" and "protection" is out of control.

Another of my concerns involves the use of electric bicycles (motorized vehicles) on trails in the Park. I've been nearly run-over by these machines. I realize that they are allowed on paved trails, however, they are motor vehicles and should be limited to roads. I've also noticed the leader of the tour parking on Hwy 11, unloading passengers and vehicles at the gate, and entering via the escape road on Old Volcano Rd. Are they paying to enter the Park? I haven't seen them depositing their payments into the box at the gate. If not, why are we supporting their invasion of our privacies?

Please use my testimony to help limit this intrusion into our enjoyment of our Park.

Correspondence: I am totally in favor of limiting helicopter flights. Living close to Hawai'i Volcanoes National Park, I am often there in the park to hike, experience nature, and to relax. There are certain trails that I like that I tend to avoid because of the noise of the helicopters. There are times I have experienced having to pause in mid-sentence while talking with hiking partners because I can not be heard over the helicopter noise. There are viewpoints where when I go to sit and reflect only to be buzzed by four or five helicopters I less than an hour. One of the thrills of an eruption is hearing the volcano only to have the sound of the volcano drowned out by helicopter noises. The sounds of the native birds are too often replaced by the sounds of whirlybirds. The park is supposed to be a place of peace, a place to experience the beauty, serenity, and power of nature. Please adopt the program to limit helicopter flyovers so the park can better fulfill that role.

Correspondence: I attended the June 7th Zoom information meeting for the Draft ATMP for Hawaii volcanoes NP. It is a great improvement from the inflated IOAs that were temporarily granted years ago but it does not go far enough. Operators have no entitlement to continue disrupting the natural sounds for private profit. This is a unique place that the Superintendent stated is 71% in need of wilderness character protection.

Although the proposed number (from an average of 11,376 to 1565/year) is a huge improvement, the Parks' inhabitants, sacred sites, and natural ecosystems do not have "hours" for wilderness character and quality quiet visitor experiences. Natural sounds are delicate and easily overpowered by even one tour flight. Overflights can disrupt the preservation and interpretation of these sites by creating intrusive noise and visual distractions. These disturbances can diminish the cultural and historical value of the park, affecting its educational and heritage aspects.

In a recent article in AINonline, the organization Helicopter Association International claims that the limitations imposed by the ATMPs unfairly affects access to the Parks for the "elderly, very young, disabled, and others", further claiming that it discriminates against visitors who might not have the time or physical ability to see the park except in a helicopter.

This argument is flawed. No operator has ever volunteered data to back up this claim and they certainly don't advertise to accommodate these groups of people- they advertise the thrill, the view that nobody on the ground can get (at the expense of the ground visitor that they get their thrill). Yet many of the Parks developing ATMPs have dozens of studies on noise and the overflight nuisance. And any very young or disabled or elderly person that can climb into a helicopter can climb into a bus or a car or a boat to see the Parks.

From the start, one of the options in NPATMA has been that an ATMP may prohibit commercial air tour operations entirely. There is no more worthy place than a National Park with World Heritage site recognition, Int'l Biosphere Reserve with the culturally important Hawaiian history.

Overflight proponents keep suggesting 'quiet technology' will solve all the problems - except that in the ATMP Section 4, reference to quiet technology incentives as defined in lines 513-516 it is apparently one of the main arguments for keeping flights? None of the helicopters listed qualify as quiet technology (average helicopter noise ranging from 78 dB to >100 dB).

According to 1999 report by the Natural Resources Council, helicopters typically produce noise louder than a jet, depending on factors like rotor design, engine type, and flight operations. Helicopter noise attenuation is STILL in its infancy.

Who will protect the natural sounds in the meantime?

And as Hawaii as Representative Ed Case has stated, "These overflights are fundamentally incompatible with our national parks and should not be allowed."

Also at the ZOOM meeting June 7th, there was a statement that approximately 4% of Hawaii Volcanoes National Park visitors take an air tour. That means 96% do not and must endure the noise pollution of the overflight industry's assumption of entitlement.

Allowing commercial tours, benefits individual operators' profit, while destroying the very conditions the ATMPs were designed to protect for all Americans who seek refuge in a National Park.

Advocates for natural sounds in our National Parks are protecting every Americans' right to enjoy the parks set

aside for their natural resources and unique characters, which includes the quiet and natural sounds. The taxpayer has no obligation to the operators of overflights to allow the disruption and adverse impact to peace and quiet found National Parks. All visitors have the right to seek solitude and tranquility in visiting a National Park. Do you think of the noise of a helicopter when you think of going to a park, even a city park? This is why National Parks should be no fly zones. Only a ban on commercial overflights will eliminate the manmade noise that overpowers natural sounds resources, whether it is 5 helicopters a day or 50. By avoiding overflights, we can help ensure the preservation of these special places for current and future generations.

Correspondence: I agree, tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protective as the FAA-mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

I have lived in Volcano for over 20 years and the helicopter tour groups disregard the residents and fly low over our homes and cause much noise pollution. We moved here for the solitude of the tropical rainforest and the peace and quiet. Our daily lives are shattered by loud noise.

I would appreciate protecting the aina(land) and natural resources by stopping the over-flights.

Thank you

Correspondence: Last night (June 14th) beginning just before 9pm and continuing for some time maybe till around 930. There were helicopters, at least one and maybe one more. Circling around the Golf Cour subdivision (I'm on Kaekaha Place).I understand about tourists, but not at that hour. I'm an early to bed early to rise type person, I couldn't go to sleep, thinking it might some other reason for the noise. The copter go overhead every day, I don't complain about daytime. . .but geeze. . .9pm.

Correspondence: Aloha, I am a Volcano area resident for 20 years, and I support the draft ATMP. I understand the need for heli tourism but the numbers in the past (especially during the Pu'u'ō'ō era, with flight paths over my neighborhood) were ridiculous. Perhaps there is a way to fold in a "surge capacity" so that during the few days a year that there is extra volcanic activity there would be a way to allow more operations, or perhaps there would be a mechanism to allow more "news" flights during those times. Apart from those concerns, the drastic reduction in flights is very necessary and I am in full support.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: • As noted in the ATMP documents, helicopter tours are incompatible with the primary purposes national parks were established and maintained for the majority of park visitors, and for the wildlife residing in the parks. We therefore support significant restrictions, if not a total ban, on helicopter tours over the park. We would like to see the maximum number of flights per year at zero. Failing that, the number should certainly not be above the proposed 1,565/year.

• Shortly before the latest eruption, I and my family visited the Byron Ledge/Devastation Trail area of HVNP, partly to view and listen to the many beautiful birds. By 0830, there were extended periods when we could no longer hear any birds, due to rotating/successive overflights of a number of helicopters directly overhead and over the nearby caldera. Just when we thought we might gain some relief from the constant helicopter noise, another helicopter would rotate into the caldera area as the previous one departed the area. These helicopters basically destroyed our enjoyment of the park and its wildlife which we were there to see and listen to. I can only imagine how this noise negatively affects the behavior of the birds.

• We are residents of the Volcano Golf Course development. We and many other residents have noticed an uptick of tour helicopters using the golf course area, directly above residents' homes, at fairly low altitude and at night, for approach to the caldera area and as an orbiting/hovering location for views of the eruption. We are concerned

that one unintended consequence of this ATMP's rules governing flights within a half mile of the park boundary is to dramatically increase the number of low-level flights (well below 5,000 feet AGL) over the golf course area, as it is the closest area to the caldera and current eruption that is not governed by the ATMP.

- As the ATMP governs flights below 5,000 feet AGL, doesn't this mean that any number of flights can be conducted above 5,000 feet, with all the attendant noise and disruption to park enjoyment? Lines 349/350 of the draft ATMP would therefore not be correct: "air tour noise will not be heard for approximately 9.5 hours of a 12-hour day in that area of the Park." If the helicopters can make their noise even in the heart of the park above 5,000 feet AGL, everyone will be able to hear their noise at all times and every day including Sundays.
- We are concerned that the coastal route would disrupt a beautiful and pristine area of the park. We always recommend that visitors take the time to drive down Chain of Craters Road to the coast, to see the stunning, desolate beauty where lava met the sea. I have also hiked to and camped at both Halape and Keauhou campgrounds on the ocean in the park wilderness area, and hiked to Apua Point, and lament that anyone would think helicopter tours running directly adjacent to those areas would be acceptable. Just as helicopter tours disrupt and destroy visitors' enjoyment of the heart of the park at Kilauea's summit, so too would helicopter presence and noise severely detract from the reasons visitors hike to and spend time at the coast and at the camping areas by the park seashore.

Correspondence: As was clear in the year 2000 and even more clear today, helicopters are not compatible with the crown jewels of the United States, our national parks.

Air tours over national parks are incompatible with the purpose of these national parks. The proposed ATMP is a step in the right direction, but does not go far enough. All nonessential overflights (within 3 miles of the park boundaries) should be banned. This would benefit the many rare species in the parks, would greatly enhance the visitor experience of these scared places, and would help stem climate change. It would also improve the health of those residents of Hawaii who are subject to these overflights.

Correspondence: 1. Thank you for completing a full EA. As you know well, whenever NPS is considering proposed agency action, such as a new ATMP, it must comply with the National Environmental Policy Act (NEPA) and related guidance.

2. Compliance with the NPS Organic Act (54 USC §100101) is integral to compliance with the National Parks Air Tour Management Act (49 USC §40128). The EA hardly mentions the Organic Act.

3. The NPS "responsibility for conserving" park resources and values derives directly from the NPS Organic Act and is often referred to as the NPS "conservation mandate."

4. The proposed ATMP and EA should be focused on reducing potential impacts of commercial air tours on the Park's natural and cultural resources and visitor experiences. I would expect the NPS conservation mandate to serve as a key basis for evaluating those impacts.

5. The cultural and spiritual importance of the Hawai'i Volcanoes landscape to Native Hawaiians cannot be overstated. The sacred nature of the Park's landscape to Native Hawaiians provides one of the, if not the most, compelling reasons to eliminate air tours at HAVO.

Correspondence: I am glad to see the ATMP designates three routes that avoid the summit of Kilauea and outlines flying hours. That being said, I hope the FAA enforces violations of this plan. I live in the village of Volcano and I have routinely observed and heard helicopters flying over/near my house. While at the Volcano golf course I have also seen helicopters flying close to 500ft altitude over the parking lot/driving range. How can citizens report violations if we don't get tail numbers; do you want video or location/times observed? Would be helpful to put this information in plan and advertise to public as it sounds like it will be in us to alert authorities.

Correspondence: The plan for HVNP may be the wrong forum, but low-altitude flight paths over subdivisions need to be curtailed. Both very loud and invasively low-flying helicopters are a regular intrusion into otherwise quiet life in HPP and Maku'u Hawai'iian Homesteads. A flight path inland could easily be routed in between Maku'u Homesteads and Hawaiian Beaches/Shores if they really need to be flying that low for the tourists. Flights over large residential areas should NOT be at low altitude. This invades privacy in our own backyards, subjecting residents to being photographed/video recorded from the air. If auntie wants to sunbathe topless in the backyard behind her fence, she should not have to panic that a helicopter just flew over low enough that the tourists will be posting photos of her on instagram. The noise levels disturb babies and alarm our animals. There is ZERO reason for tour operators to be flying tourists slowly at low altitude directly over our non-coastline homes. Plenty other paths to take.

Correspondence: The proposed plan by the NPS for HVNP is fabulous and will address the current noise problems. I fully support the current plan proposed and hope that there are no compromises. Being a resident of Volcano living 3.2 miles from Kilauea and having a constant stream of helicopters during the current eruption has

made it seem the area is under attack even though most of the tours do go around. It would be nice if all of the tour companies were encouraged to use stealth rotors rather than the ones they are using now, as they are heard at least a half mile away! We love the peace and quiet of our Ohia forest home and hope to keep it that way! Mahalo for allowing me to voice my concerns.

Correspondence: Aloha: Regarding the Draft EA for managing commercial air tours over and around Hawaii Volcanoes National Park:

I comment being a retired naturalist here in the Interpretation Division at HAVO.

I commend the staff for creating such a well written EA.

However there is one significant OMISSION to the Draft EA:

While the EA mentions (3) commercial air routes and altitudes, the 4th alternative should be NO helicopter flights or routes whatsoever over nor near Hawaii Volcanoes National Park.

This 4th ALTERNATIVE is the one that I would most strongly support.

Correspondence: I agree, tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protecting as the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

Correspondence: Tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protecting as the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

Correspondence: I would request that helicopters be required to fly at an altitude to and from the park at which the noise level would not exceed 85 decibels at ground level. Companies exceeding that noise threshold would be fined heavily. From the airport they could have a 1 mile zone to reach such altitude to reach the allowed noise level without fines.

Correspondence: The draft air tour management plan for Hawai'i Volcanoes National Park (HVNP) is a sham that should not be empowered in any form. The air tour industry has been running amok for years, disturbing not only HVNP, but also neighboring communities and habitats for native species. To continue such disturbance in any alleged attenuated form is more of the same, and none of it should be tolerated or authorized. The continued auditory disturbance to HVNP is unjustifiable in that the park is a special place that should not suffer such disturbance for commercial purposes. That HVNP announces and apologizes for any park-mission flights is its own admission of the intrusion that these few such flights provide to the public and natural resources of the park. Similarly, HVNP restricts drone aircraft in recognition of their adverse qualities. For the park to have such commercial intrusions as proposed in these draft rules is a travesty against the nature of the park and the natural and cultural sensitivities therein. Decades ago, commercial flights were not happening and the park was true to its mission of protecting the resources of the park for their intrinsic values. This needs to continue. Any of this industrial air touring at any level has been the bane of such values and it needs to stop now.

In addition to the sanctity of HVNP airspace, the proposers of this callous rule need to consider the neighbors of HVNP, as they also share the consequences of these intrusions. The human neighbors have been subjected to the same intrusions to their quiet lives as the park, as the flight sounds carry far and start early (5:36am this morning, for example). More importantly, the native organisms, especially the birdlife, are under the same auditory assault and are equally traumatized by the cacophony. This noise adversely affects the birdlife as it does the human life. HVNP and surrounding areas are home to both common and rare bird life, and these noise intrusions are disruptive to their lives. For HVNP and FAA to authorize the flights in these proposed rules is a travesty to both the human and natural animal life nearby. It is decidedly an abhorrent and unneighborly act.

The current disturbance to neighbors extends several miles outside the park's boundaries, especially near the summit where so much of the industrial air tour activity is centered. Both HVNP and FAA should abandon these proposed rules and start over with rules that will protect the lands and cultural and natural resources of HVNP and those of its neighbors. All commercial tour flights should be legally restricted from all the HVNP airspace and from a buffer of three miles outside its boundaries. We have seen in the past couple of decades that no voluntary "fly neighborly" or other self-imposed restrictions by the air tour industry have had any positive effect on the natural and human residents of this island. We all have suffered immensely for their profits. Restrictive and enforceable exclusionary regulations are the only solution. These restrictions need also to apply to fixed wing and other private aircraft. Military aircraft need also adhere to this same airspace exclusion. Their over flights have been particularly noisy and have also included night hours.

Correspondence: The impact of tour aircraft on visitors to HVNP are all negative.

The ATMP should be NO FLY.

The default in national parks is to have no overflights and there is no valid reason to carve out an exception. Doing so is giving away our public interest in enjoying the park.

Please preserve our national park and protect it from tourist overflights.

Thank you.

Correspondence: The Hawaii Volcanoes Draft ATMP reduces but does not eliminate the problem of tour helicopter noise over the park. National Parks should be tranquil, reflective places for visitors and the wildlife within them should not be disturbed. The only answer is for the FAA to mandate NO FLY zones in these sanctuaries. Tour helicopter companies do not have to right to shatter the peace and quiet that should exist in all National Parks.

Correspondence: Is this Volcano National Park or Volcano International Airport?

Appalled at the amount of noise pollution the tour helicopters are making around volcano national park. At what point are you going to let greed get in the way of guests enjoying the beautiful national park? The helicopters are disturbing not only the guests visiting the park but more importantly disturbing the animals, like The Nene , Tropic birds, Amakihi , I'Iwis and Apapane. Yesterday my family and I visited the park to enjoy the new eruption ... Fantastic job logistic wise on the new parking area at KMC and a huge thank you to the parking rangers. Anyway the whole morning and afternoon we could not enjoy the beautiful eruption and scenery due to the tour helicopters continuously flying over the active caldera and surrounding areas including Mauna Ulu, Makaopuhi and Napau crater. They actually fly really low around Makaopuhi and Napau Crater and while bird watching there I have witnessed the honey creepers cower / take cover in fear when they fly so low over these areas and if your in the open I can feel the ground shake from them. If I'm feeling the ground shake there is no way the pilots are following the FAA rules at maintaining 2000 feet and all for what , to entertain a few people? This is harassment of wildlife especially these birds that are endangered Thought this was a federal offense and violation of The Endangered Species Act of 1973???? Can't believe it's gotten to this point with them at Halemaumau crater now. We could not even enjoy the birds singing away, all we heard was the helicopters flying back and forth and hovering. Again certain birds can only be heard on the islands and these helicopters are harassing them. We were so grateful when the clouds covered the caldera up and the helicopters stopped. In fact We could not even hear the actual eruption until they flew off which is a once in a life time opportunity for people to be able to hear. If the park does not allow guests to fly drones in the park because it disturbs people and harasses wildlife then why are you allowing something larger and louder ruin people's experience at Volcano National Park. If you allow helicopters then please allow drones so I can get better footage of the lava flowing! Please, please , please don't ruin this beautiful, magical area with these annoying machines. Keep it as nature should be , not sounding like an international airport all day. Thank you for reading and hope we can not turn Big Island into a huge tour playground. Warm regards

John Gill

Correspondence: comments on

Air Tour Management Plan (ATMP) Hawai'i Volcanoes National Park
and on

Draft Environmental Assessment (DEA) for an Air Tour Management Plan Hawai'i Volcanoes National Park
due June 20, 2023

<https://parkplanning.nps.gov/document.cfm?parkID=307&projectID=103522&documentID=128163>
from Sierra Club, Hawai'i Island Group, PO Box 1137, Hilo, Hawai'i 96721

GENERAL COMMENTS

We urge that there be no air tours over the park, at any altitude, with a no-fly buffer zone around the park of one
and one-half miles, to protect the park's irreplaceable resources.

The park is part of an international biosphere reserve, is a World Heritage Site, and has special protections under
the Clean Air Act. According to the Foundation Document, the park is "a laboratory for the study of
biogeography and evolution within the Pacific Islands and a cornerstone for recovery of native Hawaiian species
found nowhere else in the world. ..an important home to living cultures in Hawai'i."

If the park doesn't protect these resources, who will? And why should the few who run tours, and who can afford
tickets, be allowed to degrade these resources, and disturb the experiences of cultural practitioners and visitors on
the ground? 35 years after recommendations on overflight impacts were made in Public Law 100-91, it's high time.
US Representative Ed Case supports a ban, and bans are in effect or proposed in other locations.

The prospect that air tours will re-route, increasing impacts to communities outside the park, does concern us, but
the park resources need to be protected, and we plan to continue our support for aviation-impacted communities.

Constant human intrusion heightens our awareness of our own species, while diminishing our awareness of other
species. This affects our perceptions of their value and our knowledge about the planetary ecosystem, and
ultimately directs our actions, which in turn impact the planet.

COMMENTS ON ATMP

See also our April 1, 2022 comments on the ATMP (attached) but note those comments were incorrect in saying
the Air Tour Management Act did not allow prohibiting all air tours.

APPENDIX A

1.0 COMMERCIAL AIR TOUR ALLOCATIONS p. 16

There should be a limit on daily operations to ensure compliance with this law:

AIR TOUR MANAGEMENT ACT 2000...

Sec. 40128. Overflights of national parks

“(a) In General...

“(3) Exception.--Notwithstanding paragraph (1), commercial air tour operators may conduct commercial air tour
operations over a national park under part 91 of the title 14, Code of Federal Regulations if--

...(C) the total number of operations under this exception is limited to not more than five flights in any 30-day
period over a particular park. [bold added]

COMMENTS ON DEA

1.5 Environmental Impact Categories Not Analyzed in Detail

Biological Resources (Fish, Invertebrates and Plants)

The ATMP would not result in ground disturbance or in-water activities that could affect plants, fish or

invertebrates. p. 4

These categories should be analyzed because ultrafine particles could affect them. See our April 1, 2022 comments.

2.5 Alternative 2

Alternative 2 would provide the greatest level of protection for the purposes, resources, and values of the Park because it would not authorize air tours in the ATMP planning area. p. 15

In line with our April 1 comments, we urge that there be no air tours over the park, at any altitude, with a no-fly buffer zone around the park of one and one-half miles.

There is precedent elsewhere:

“Cusco province has published regulations banning helicopters at Machu Picchu and the surrounding 125 square miles.”

Helicopter ban to protect wildlife at Machu Picchu, the Guardian, June 21, 2010,
<https://www.theguardian.com/world/2010/jun/21/helicopter-ban-at-machu-picchu>

“The Park Omnibus Appropriations Act of 1998 banned the use of low-flying, commercial air tours over Rocky Mountain National Park.”

<https://www.nps.gov/romo/learn/nature/night-sky-natural-sounds.htm>

“Air tour bans that would take effect if the proposals become final after a 30-day comment period would apply to Badlands National Park and Mount Rushmore National Memorial, both in South Dakota...”

Glacier National Park's plan calls for all commercial air tours to be phased out by the end of 2029”
<https://www.nationalparkstraveler.org/2023/05/update-national-parks-proposing-ban-significantly-cut-back-commercial-air-tours>

US Representative Ed Case of Hawai'i also supports a ban on overflights:

“Every day our beautiful national parks, especially Hawai'i Volcanoes and Haleakala, are being deeply disrupted and degraded by tour helicopter/small aircraft overflights. The National Park Service (NPS) and Federal Aviation Administration (FAA) have issued draft Air Tour Management Plans for our Hawai'i parks which would reduce but not eliminate this disruption. These overflights are fundamentally incompatible with our national parks and should not be allowed.”

June 7, 2023 e-mail to Cory Harden from Nestor Garcia, Communications Director, Congressman Ed Case

However, we offer comments on Alternative 3 to reduce impacts in case that alternative is chosen.

2.6.6 Additional Requirements

Annual Meeting

The Park staff, the local FAA FSDO, and all operators would be required to meet once per year to discuss the implementation of the ATMP and any amendments or other changes to the ATMP. p. 22

A representative from the public should be included in the meeting, and the meeting should be open to the public.

Adaptive Management p. 23

Public comments should be taken before decisions are made.

3 AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES

This section should analyze impacts on surrounding communities from air tours flying overhead to reach the park. A Sierra Club member attended a meeting on air tours on August 14, 2018, at Nani Mau Gardens in Hilo. Over 100 people attended, some so irate about overflights that they talked about shooting at the helicopters. Please see the clip from Big Island Video News, especially testifiers at the beginning and at 14:10 and 15:38 minutes.

https://www.youtube.com/watch?v=7m-nml3eksE&ab_channel=BigIslandVideoNews

3.1 Noise and Noise-Compatible Land Use

Section 4.9, Soundscape Management, of NPS Management Policies (2006) directs the NPS to preserve the Park's natural soundscape and acoustic environment which refer to the combination of all the natural sounds occurring within the Park, absent the human-caused sounds, as well as the physical capacity for transmitting those natural

sounds and the interrelationships among Park natural sounds of different frequencies and volumes. This management policy directs the NPS to preserve soundscapes and the acoustic environment to the greatest extent possible and restore these resources to their natural condition wherever they have become degraded by noise and unwanted sounds. . .

An important part of the mission of the NPS is to preserve or restore the natural soundscapes associated with units of the National Park System (NPS, 2006). pp. 29-30

3.1.1 Affected Environment

All four sites [in the Kakuku Unit in 2013] had nearly untouched natural soundscapes with no more than 0.3 dBA added to the natural ambient sound level from anthropogenic sound sources. p. 32

The NPS should choose our alternative to comply with its own policies, and preserve one of the very few places left on earth with little human noise.

If the NPS doesn't protect natural quiet, who will?

...Park soundscapes are protected from many human-caused sounds and are dominated by the sounds of wind, ocean, volcanic activity, and native species.

Foundation Document, Hawai'i Volcanoes National Park, January 2017, p. 7

People can escape noise of cars and other people by travelling away from certain places--but they can't escape a helicopter that can appear overhead without warning and has an enormous noise footprint

The detrimental effects of noise on physical and mental human health are well documented.

Humans evolved in natural quiet, surrounded by subtle and constant input from nature, so we are not adapted to human-dominated soundscapes.

Constant human noise heightens our awareness of our own species, while diminishing our awareness of other species. This affects our perceptions of their value and our knowledge about the planetary ecosystem, and ultimately directs our actions, which impact the planet.

Silence by Sara Teasdale

We are anhungered after solitude,
Deep stillness pure of any speech or sound,
Soft quiet hovering over pools profound,
The silences that on the desert brood,
Above a windless hush of empty seas,
The broad unfurling banners of the dawn,
A faery forest where there sleeps a Faun;
Our souls are fain of solitudes like these . . .

The excess noise can do more than just annoy park visitors. It can also undo the benefits of spending time in nature, like improved mood and memory retention. For plants and animals, the ruckus can disrupt entire communities. Some plants need silence for seed dispersal--revving cars can scare away rodents that might otherwise do the job. Animals need silence to hear predators approaching or to communicate with their mates: A bird whose song would normally travel 100 meters would, with a 10-fold increase in noise, have its melody stifled to a 10-meter radius. "In so many landscapes, both people and other organisms are living in shrunken perceptual worlds," says Clinton Francis, an ecologist at California Polytechnic State University in San Luis Obispo, who was not involved in the work.

Noise pollution is invading even the most protected natural areas, Science, May 4, 2017

<https://www.science.org/content/article/noise-pollution-invading-even-most-protected-natural-areas>

Renowned acoustic ecologist Gordon Hempton has declared that there are only, at most, 12 places in the US where one can go without hearing any human caused noise. Hempton records soundscapes and has travelled across the world three separate times to capture the sounds and rhythms of nature.

Hempton lives in the Northwestern part of Washington state, very near to Olympic National Park. His work includes the documentary Soundtracker: A Portrait of Gordon Hempton, more than 50 soundscape albums available for download on iTunes, an adventurous and brave narrative entitled One Square Inch of Silence, and many other interviews and lectures.

Hempton's passion is to record and find places that are quiet. The quiet which he sets out to capture is not silence, as some might assume, but rather the quiet that is created by the sound of pure nature, void of any and all manmade noise. Hempton considers a location to be quiet if he can listen to the sounds of nature without any manmade interruptions for 15 minutes. His work has caused him to state that there may only be twelve of these quiet places left in the continental United States, although ten is the more likely number.

Hempton will only reveal three locations where one can find absolute quiet. He names The Hoh Rainforest in Olympic National Park (ironically, near his own home), Boundary Waters Canoe Area in Minnesota, and Haleakala National Park in Hawaii. He believes anonymity to be the only power at his disposal to ensure the preservation of the remaining locations, thus the rest are known only to Hempton.

Anyone who has spent time completely engrossed by nature knows that it creates an inimitable feeling of both comfort and transcendence. A feeling that you are part of something much larger than yourself. The prospect that humanity may destroy all places where the pure sound of nature can be experienced is frightening.

There are Only 12 Quiet Places Left in the U.S. (And This Man Will Only Tell Us 3 of Them), Inertia, June 21, 2016
<https://www.theinertia.com/music-art/american-idol-winner-iam-tongi-and-jack-johnson-perform-together/>

Gordon Hempton, an acoustic ecologist and founder of the non-profit One Square Inch, recorded sounds from one or two aircraft per hour. "Even if you are far from a road, you are not far from the roads in the sky," he says.

Unfortunately, Hempton says that there is absolutely no place on Earth that is completely free from human sound all of the time. A map of the established flight paths over the US, for example, "looks like a plate of spaghetti," he says.

Hempton is not alone in this pronouncement. "There are no places on Earth that I've been that haven't been affected by human sound," agrees Bernie Krause, an expert in bioacoustics and one of the founders of the field of soundscape ecology. "All over the Earth, not a day goes by when you don't hear something."

For the past 30 years, Hempton has made it his mission to discover what he calls the last great quiet places, areas that clock in at audible human noise-free intervals of 15 minutes or more. He only counts areas of around 3,100 square kilometres (1,200 square miles) or larger - enough to create a sound buffer around a central point of absolute quiet. Over the years, his list has shrunk as he returns to a previously quiet spot, only to find it now polluted by noise. ...

Hempton and Krause hope that nations will adopt a quiet area program akin to dark sky programs. They are pushing for the US National Park Service to adopt such regulations in 2016, in time for the agency's centennial. "I absolutely believe we will have our quiet places," Hempton says. "Just like we went through with water quality, things have to get really bad before we recognise them as a basic value and clean them up."

The last place on Earth without human noise, BBC, January 16, 2014

3.1.2 Environmental Consequences

Indirect and Cumulative Effects

Indirect Effects

For any alternative (Alternatives 2 and 3) that would limit the number of flights per year to a level below existing conditions (11,376 flights per year), it is reasonably foreseeable that current air tour operators could seek to make up lost revenue in other ways. One of the ways that operators could potentially generate revenue is by offering air tours outside of the ATMP planning area, as these would not be regulated by the ATMP. This type of shift in air tour activity is referred to as "air tour displacement," and could consist of air tour operators shifting routes or altitudes to just outside the ATMP planning area. This could result in impacts to resources to the extent that they are present near the locations where the displaced air tours would occur. p. 46

This does concern us, but the unique and irreplaceable resources of the park need to be protected, and we plan to continue our support for aviation-impacted communities.

3.2 Air Quality and Climate Change

3.2.1 Affected Environment

Air Quality

The Park is a designated Class I Airshed, which means that it is afforded the highest degree of protection (NPS, 2015). p. 50

See the section on ultrafine particles in our April 1, 2022 comments on the ATMP.

3.3 Biological Resources

3.3.1 Affected Environment

There are hundreds of native species within the Park, many of which are recognized as threatened or endangered (NPS, 2019). All native mammals and several bird species in the Park are listed as federally and state listed threatened or endangered species. . . . Many of the Park's native wildlife species face pressure from nonnative species. . . . p. 56

Federally Listed Species

Mammals

Hawaiian Hoary Bat

Noise exposure to bat species during daytime roosting and while rearing young can lead to abandonment of their roosts and young. . . .p. 56

Hawaiian Monk Seal

[studies indicate] seals show a heightened response to helicopters versus fixed-wing aircraft. . . .p. 58

Birds

Forest Birds

. . . noise from aircraft has been demonstrated to influence bird vocalizations to overcome the masking effects from aircraft noise in areas where loud and frequent helicopter traffic occurs (Gallardo Cruz et al., 2021). While altering vocalizations may not result in death of impacted birds, this change in behavior is likely to be indicative of other effects (e.g., stress response) seen in numerous bird species in response to noise disturbance (Francis et al., 2009; Barber et al., 2010; Shannon et al., 2016; Buxton et al., 2017). Stress is well known to reduce survival and reproductive success in birds (Delaney et al., 1999; Kleist et al., 2018). p. 62

These facts support our recommended alternative.

Seabirds p. 63

Analysis of the effects of aircraft overflights should be done for these species.

3.3.2 Environmental Consequences

Noise from commercial air tours may impact wildlife in a number of ways, including altered vocal behavior, breeding relocation, changes in vigilance and foraging behavior, direct collisions, and impacts on individual fitness and the structure of ecological communities to name a few. . . .p. 68

See comment re.3.3.1.

Alternative 3

Mammals

Alternative 3 would provide protection to the 'ōpe'ape'a (Hawaiian hoary bat) primarily by limiting the hours of operation for commercial air tours within the ATMP planning area to 10:00 AM to 2:00 PM for non-quiet technology flights and 9:00 AM to 5:00 PM for quiet technology flights. Since the 'ōpe'ape'a is a nocturnal species that may be active near dawn and dusk hours, these restrictions would provide protection to those that may be active during this time. p. 73

The EA should cite relevant studies and analyze effects on sleeping bats.

3.4 Cultural Resources

3.4.1 Affected Environment

Cultural Resources (including Ethnographic Resources, Sacred Sites and Traditional Cultural Properties)

Many chants that are found in written and published stories of Pele reiterate the importance of silence. Silence, in most traditions of Hawaiian practice, is essential Hawai'i Volcanoes National Park ATMP Draft Environmental Assessment 84 for learning, understanding, observing, and respecting another's space, thoughts and kapu. Silence, in the presence of Pelehonuamea, reflects one form of ultimate respect (Keali'ikanakoleohaililani, 2009). Pp. 83-84

These facts support our recommended alternative.

3.4.2 Environmental Consequences

Commercial air tours, by their nature, have the potential to impact resources for which feeling and setting are

contributing elements. p. 91

See previous comment.

Alternative 3

Some points in or near the following cultural resources may experience a slight increase in noise intensity and/or duration as compared to current conditions as more flights may fly near these resources than currently pass those areas [12 sites]...p. 93

See previous comment.

3.5 Wilderness

...natural sound is...an integral part of Wilderness character...p. 101

See previous comment.

Solitude

The ability to experience solitude is an integral component of Wilderness character. In preserving this Wilderness quality, the NPS places importance on considering the value of maintaining these places where present and future generations have the opportunity to feel free, at peace, and self-reliant, and observe landscapes without modern human effects. p. 102

... A review of research suggests that solitude encapsulates a range of experiences, including privacy, being away from civilization, inspiration, self-paced activities, and a sense of connection with times past (Borrie and Roggenbuck, 2001)" (p. 51). p. 104

See previous comment.

3.6 Visitor Use and Experience and Other Recreational Opportunities

3.6.1 Affected Environment

Visitor Experience

About half of all visitors at Steam Vents (43.2%) and Nāhuku (Thurston Lava Tube) (53.9%) reported that hearing the sounds of nature was a very important reason for visiting the Park, and about one-quarter of Steam Vents visitors (29.2%) and one-third of Thurston Lava Tube visitors (32.6%) reported that enjoying peace and quiet was a very important reason for visiting the Park. The same study examined the effects of natural and human caused sounds, including air tour sounds, on the visitor experience at the Park. Most visitors that reported hearing aircraft considered it either unacceptable or annoying and reported negative emotions or feelings associated with hearing aircraft sounds at the Park. p. 111

See previous comment.

Other Recreational Opportunities

In 2017, an estimated 82,600 people took commercial air tours of the Park, which equates to approximately 4% of the over two million visitors that same year. p. 110

Why should a few people in aircraft be allowed to impact millions of people on the ground--who are doing nothing to bother people in aircraft?

3.6.2 Environmental Consequences

Alternative 1: No Action

Natural quiet is a foundational resource for the Park and a primary reason for visitation, and air tours disrupt natural quiet throughout the Park which affects the visitor experience for activities such as hiking, camping, bird watching, nature viewing, and hearing the sounds of lava flows, all activities which value natural quiet. p. 113

Alternative 3

Alternative 3 would not be in compliance with the Park's soundscape management standards for visitor use and experience in these locations within the wild/primitive zone...p. 118

These facts support our recommended alternative.

3.7 Environmental Justice and Socioeconomics p. 120

Air tours impact native Hawaiians more than other groups because of their deep connection to the natural world.

Commercial Air Tours

The price per person for each air tour varies by company and can range from \$350-\$650 per person pp. 124-125

Why should a few people who can afford air tours be allowed to impact the experience of many people who cannot afford them?

3.7.2 Environmental Consequences

Alternative 2

...the air transportation industry represents less than 1% of the total employment in Hawai'i County, and the prohibition on air tours within the ATMP planning area would not preclude operators from making up this revenue generation Hawai'i Volcanoes National Park ATMP Draft Environmental Assessment 128 in other ways such as using their aircraft for other business ventures or conducting air tours elsewhere within the region. . .p. 127

These facts support our recommended alternative.

COMMENTS BASED ON

FOUNDATION DOCUMENT (FD) HAWAI'I VOLCANOES NATIONAL PARK, JANUARY 2017

https://www.nps.gov/havo/learn/management/upload/havo_fd_sp_508.pdf

The park Foundation Document describes the uniqueness and significance of the park, certainly worthy of the highest protection.

.. Hawai'i Volcanoes National Park is both a laboratory for the study of biogeography and evolution within the Pacific Islands and a cornerstone for recovery of native Hawaiian species found nowhere else in the world. ..an important home to living cultures in Hawai'i. FD pp. 3-4

Fundamental Resources and Values . . .

Natural Sounds. Park soundscapes are protected from many human-caused sounds and are dominated by the sounds of wind, ocean, volcanic activity, and native species. FD p. 7

...scenic vistas are unobstructed by development . . .Natural Landscape Character. . .Opportunity for Traditional Cultural Use. . .The entire

park landscape and all of its inhabitants and features, including the sky as a layered extension of the landscape, are sacred to Native Hawaiians. . .Native Hawaiian traditional uses . . .depend upon natural sounds, unobstructed views of mountain summits, and an environment that has not been greatly altered by human-caused changes. FD p. 8

Part 2: Dynamic Components

Special Mandates and Administrative Commitments

Special Mandates

Hawai'i Volcanoes and Haleakalā National Parks were designated as "Hawaiian Islands International Biosphere Reserve"; . . .the conservation of these ecosystems and their biodiversity is sought to be maintained. FD p. 10

Hawai'i Volcanoes National Park was designated as a World Heritage Site in 1987. The United States, as a country that has ratified the World Heritage Convention, has pledged to conserve its World Heritage Sites and to protect its national heritage. . .FD p. 11

Hawai'i Volcanoes National Park is designated a Class I area under the Clean Air Act Amendments of 1977, which provide special protection for air quality, sensitive ecosystems and clean, clear views. . .This designation bestows an "affirmative responsibility" on federal land managers to integrating air resource management into NPS operations and planning for the protection of air quality and related values, including visibility, plants, animals, soils, water quality, cultural resources, and public health, from adverse human-caused air pollution impacts. FD p. 11

comments due April 1, 2022 at
<https://parkplanning.nps.gov/projectHome.cfm?projectId=103522>

We support a fifth alternative: no air tours over the park or within one and one-half miles of the park boundary. Since the Air Tour Management Act of 2000 does not give the National Park Service (NPS) authority to do this, we urge that NPS advocate to gain that authority through an executive order or a Congressional law.

The four proposed alternatives are all insufficient to protect the environment and people's wilderness experiences. However, we note that Alternative 2 offers more protection than the others, prohibiting air tours within the ATMP planning area (areas below 5,000 feet AGL and within ½-mile of the Park boundary).

History

The glacial pace of action on overflight noise is unconscionable. Attempts to address the problem have now been going on for 35 years, since Public Law 100-91 was passed in 1987, containing recommendations re. protecting national parks from overflight impacts.

It took 20 years, and a lawsuit by Hawai'i Coalition Malama Pono and Public Employees for Environmental Responsibility, to compel agencies to start writing ATMPs as required by the Air Tour Management Act of 2000.

And even the August 2022 deadline set for ATMPs after that lawsuit will not be met.

In addition, the Air Tour Common Procedures Manual has not been updated for almost 15 years, despite major changes in population and land use.

Meanwhile, air tours continue to impact people and wildlife in the park. There were over 16,500 commercial air tours over the park in 2017, an average of 46 per day.

Noise impacts

Few, if any, places on Earth, remain free of human noise. Quiet and solitude are becoming extinct.
<https://www.bbc.com/future/article/20140117-earths-last-place-without-noise>

The Sierra Club air tours policy states:

- (1) Air tours are flights conducted for sightseeing.
- (2) The Sierra Club supports management tools and methods to diminish or eliminate impacts from aircraft tours and landings, including bans of tours and landings wherever and whenever appropriate, on National Monuments and units of the National Park System and the National Wilderness Preservation System.
- (3) Agencies should preserve and, where there are impacts, fully restore the natural quiet within protected areas and address this issue in their general management plans.
 - (a) The Sierra Club believes that, to be the most appropriate and effective, control over air tour use of airspace above such protected areas should rest with the respective land management agencies (e.g., National Park Service, U. S. Forest Service, Bureau of Land Management, U. S. Fish and Wildlife Service). These are the agencies in position to understand these areas most intimately, and which are charged to provide them the fullest possible resource protection.
 - (b) The managing agency should work with responsible parties to reduce or eliminate air tours or landings outside a protected area if needed to restore natural quiet within the unit. Federal managers of adjoining areas should coordinate their management planning efforts.
 - (c) The Sierra Club supports the establishment of appropriate noise standards and comprehensive baseline sound-level monitoring and sound-source inventories of all protected areas. This includes continual assessment of noise from all human-generated sources and incorporation of public comments about noise impacts.

Principles of Natural Quiet

- (1) The sounds and silences of nature are among the intrinsic elements that combine to form the natural

environment. Natural sounds amidst intervals of stillness are inherent components of the “scenery and the natural and historic objects and the wildlife” within National Monuments and units of the National Park System and National Wilderness Preservation System.

(2) Natural quiet is the extended opportunity to experience only natural sounds amid periods of deepest silence. The quiet to be preserved or restored is as defined by the National Park Service as “the quiet at the lower end of the ambient sound level range that occurs regularly between wind gusts, animal sounds, etc., not just the average sound level.” As the Park Service explains, “Lulls in the wind or interludes between animal sounds create intervals where the quiet of a sylvan setting is quite striking. In considering natural quiet as a resource, the ability to hear clearly the delicate and quieter intermittent sounds of nature, the ability to experience interludes of extreme quiet for their own sake, and the opportunity to do so for extended periods of time [are] what natural quiet is all about.”

(3) Many of these protected areas are vast, open places of astonishing beauty and wildness. Each protected area has a distinct and powerful aura, fully dependent upon the tenuous natural sounds and natural quiet. As such, these areas afford unique opportunities for undistracted respite, solitude, contemplative recreation, inspiration, and education. Further, these units also provide scarce refuge and undisturbed natural habitat for animals. Artificial, human-generated noise can disturb some sensitive animal activities. Therefore, noisy overflights that disturb the peace are not normally appropriate in our protected areas.

Quotations are from National Park Service, U.S. Department of Interior, Report to Congress on Effects of Aircraft Overflights, 1994.

Policy adopted by the National Sierra Club Board of Directors, February 17th, 2001.

<https://www.sierraclub.org/policy/air-tours>

Large portions of the park are wilderness areas. The 1964 Wilderness Act says that wilderness areas “shall be administered . . . in such manner as will leave them unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of these areas, the preservation of their wilderness character . . .”

In Hawai'i, the sound and sight of aircraft is often reported to impact native Hawaiian cultural practices.

Quiet in the park would give island residents welcome relief from the noise and vibration of tour helicopters that has been bedeviling people in their homes for decades. Repeated and widespread concerns voiced by beleaguered communities have largely been ignored. The noise terrifies children and animals, sets off PTSD in war veterans, intrudes on sleep, interrupts conversations, and causes inescapable stress. On Hawai'i Island, during the eruption, tour helicopters never let up--they kept flying, over people who were losing their homes, their neighborhoods, and their livelihoods.

Visual Impacts

Even if quiet technology is used, the sight of aircraft impacts wildlife and impacts people's wilderness experience.

Lead agency; monitoring, and enforcement

NPS, not FAA, should be the lead agency and enforcing agency, since the mission of NPS is to preserve resources, but the mission of FAA is to provide an aerospace system.

NPS should do full disclosure of monitoring and key findings. Noise monitoring should be appropriate for air tours, reflecting the impacts of intermittent noise and its intrusiveness upon the natural background of quiet. Use of quiet technology should be maximized to keep noise from flights near the park from entering the park area.

Aircraft should be required to use tracking devices and keep them turned on. Complaints should be tracked.

Carbon footprint

The tours, which are not essential travel, generate a carbon footprint. This should be quantified by NPS.

Ultrafine particles

Ultrafine particles from aircraft emissions affect human health, and are likely to affect the health of insects and other animals under the path of air tours.

From Quiet Skies Hawai'i <https://www.quietskieshawaii.org/environmental-impacts>:

Aircraft emissions have environmental and health impacts. Ultra Fine Particles (UFPs) have been associated with cardiovascular and neurological effects to humans, as they have been shown to cross the blood-brain barrier. Dr.

Neelakshi Hudda, Research Professor, Department of Civil & Environmental Engineering at Tufts University, has been studying the impacts of aviation emissions and has published peer-reviewed research.

Preterm Birth Rates Among Mothers Exposed to Ultrafine Particles from Jet Exhaust

Criteria for comments

NPS should consider comments supporting various alternatives even if specific reasons are not given. Large numbers of these kinds of comments are valuable for reflecting community sentiment.

We appreciate the opportunity to comment on the ATMP.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: Tour helicopter pilots are the main culprit in air noise pollution. I live in Hawi and tours pass by on the way to HVP. Minimum altitude standards are violated daily. Air tower operations indicated that the pilots are mostly retired military and don't like being told what to do(????). The bottom line is no matter what

rules are in place, pilots will continue to violate minimum altitude restrictions. Accountability is the only solution in my opinion.

Correspondence: I agree, tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

A 1994 study sponsored by the Hawaii Department of Transportation was published by UH Professor Panos Prevedouros.

This report shows that Helicopter NOISE has the LOUDEST impact of all types of noise in our community. Fast

moving low flying Helicopters on cloudy days over hard terrain produce the greatest degree of noise due to the reflection of the sound between the clouds and hard surfaces.

Helicopter tours customers pay to have a good view. Hawaii is the only state which allows a minimum altitude of 500 feet above ground over residential communities during cloudy weather. Therefore, most of the time they operate at MINIMUM altitudes. The pilots want to complete the route quickly, therefore operates at near MAXIMUM speeds. Hawaii Island is volcanic and our ground is HARD. Also, located at a higher elevation we have more CLOUDY than sunny days per year.

Tour Helicopters produce the greatest noise of any other equipment operated in our community due to the nature of their business.

Comments from online Petition at Change.org (2017)

Sharon Lee P?hoa HI 96778 United States 6/23/2017 Please let us stop the madness of tour helicopters who have invaded and interrupted our lives with their money hungry attitude and disregard for the health and welfare of the people on land that they fly over in excess of 100 times per day. That works out to one flight every three minutes all day long.

Kat Thomason Tappan NY 10983-1111 United States 6/23/2017 It is inhumane to subject people to this ceaseless helicopter noise.

Isis Albright Hilo HI 96720 United States 6/23/2017 "I am constantly bombarded by tour helicopters. There is no peace in my home. There is NO NEED to fly over peaceful residents not the name of profit. Helicopter companies refuse to be pono despite constant requests over many many years. It is time to legislate and regulate. Ps in the time it took to write this 3 have flown over my home. LOUD. Not pono "

Penny Shaver P?hoa HI 96778 United States 6/24/2017 I live in the neighborhood they fly over. Very disturbing for some of our PTSD vets!!!

Kathie Griffeth captain cook HI 96704 United States 6/24/2017 I live in Ocean View. Multiple times a day we have helicopters well below the 1000 foot limit. We hear them, see them, wave (or salute), but no care. Our animals freak out, no care. The almighty tourist dollar means NOTHING to us, so take your high dollar choppers out to sea.

Aloha Steven Pahoa HI 96778 United States 6/24/2017 Helicopter operators are making millions of dollars a year yet I have never once seen a helicopter company put any money back into the community; no sponsorships, no scholarships, no community improvement grants, nothing. There are times when the helicopters fly significantly below the required 500 feet above houses and livestock, yet there is no response to complaints let alone enforcement of existing regulations. On days when a family member is ill and trying to rest having helicopters blasting over the house (which upsets animals and causes them to bark or squawk or yowl) dozens of times is quite frustrating. Probably they "donate" (that is the proper term for bribe, kickback, and pay-off, right?) the big bucks to Schatz, Hirono, and Hanabusa so that makes it all good. Yep.

Bradley Duell Kailua Kona HI 96740 United States 6/24/2017 I TOTALLY support this. So many times I have gone to Volcanoes Park and had to endure helicopter after helicopter after helicopter after helicopter go over and disturb the sacred peace of Kilauea.

Frederick Warshauer Volcano HI 96785 United States 6/24/2017 Much of Hawaii Island suffers from the frequent noise from the air tour industry flying tourists over the quiet forests, parks and residential areas of the island without any considerations for those below. Any other noise making industry seems to have some sort of regulation, so it is time to regulate where these tour helicopters can and cannot fly. The industry and its clients come from other places, but we residents have to bear the obnoxious noise and attitude of the air tour industry day after day. No place is it worse than over the extensive residential subdivisions of Puna, where the majority of their flight path lengths are right over residences. The industry and its impacts continue to expand, with absolutely no regard for us residents. Regulate their flight paths to off shore.

Armand Rivas Missoula MT 59801 United States 6/24/2017 I live in Papaikou and constantly have helicopters flying over my house. :(

Christine Gower West Sussex ENG BN14 8BJ United Kingdom 6/24/2017 Everyone has a right to a quiet life, it's inconceivable that you should feel it's okay to people with sound pollution in the name of greed.

Rudi Stade Huntsville ON P1H1N9 Canada 6/24/2017 Is it too much to ask to be able to visit a place so beautiful and sacred without having to yell to each other over the racket of choppers overhead like so many mosquitos? Is nothing sacred anymore?

Gary Hollister Scottsdale AZ 85253-1103 United States 6/24/2017 When I visit Hawaii, I too am disturbed by all the helicopter's and resultant noise in this island paradise. If tourists want to see Hawaii from the air, do like we do in Arizona - take a quiet hot air balloon ride! Thanks for your consideration.

Linda Evans Kalaheo HI 96741 United States 6/24/2017 There is way too much noise and interference in modern life....and these helicopters are a plague....More silence and peace is needed, Please stop the excessive helicopter flying; have mercy on the people/animals etc.

Candis Dow Mountain View HI 96771 United States 6/25/2017 I have helicopters flying over my home. Some times as early as 8 am and as late as 6 pm. Many times too low and some times about two minutes apart. I hang out my laundry, they are there, I garden, they are there, I have friends over for a BBQ and we have to yell because they are there. The dogs in the neighborhood bark because they are there. I, as many others, don't want them there. I will find myself becoming so full of anxiety. They interfere EVERY DAY with my life. The animals lives. My community. There must be a solution. So many years.

Makua Maipono Haiku HI 96708 United States 6/25/2017 Unnecessary, Destructive and Profit driven. These must STOP!! Maui also is plagued by Helicopter Tours, especially over Haleakala which is ironically dubbed "the Quietest place on Earth";

Don Diehl Pahoa HI 96778 United States 6/25/2017 "Living the last twenty years here in Hawaiian Paradise Park I can attest to the unreal noise. Yesterday starting at six a.m .

Christmas or any day for that matter is interrupted by teeth chattering noise. It is totally fucked. Please help us this once. Put people over money if you know how."

Dorian Weisel Honokaa HI 96727 United States 6/25/2017 The irresponsible, care nothing about those that are adversely impacted by their tours, behavior of the helicopter industry on the Big Island of Hawaii must stop

Bodhi Anderson Hilo HI 96720 United States 6/25/2017 There is no need for helicopter tours to fly over our homes during their tours. The off shore route is beautiful and respects the lives of the people who live here.

Trish Campbell Honolulu HI 96822 United States 6/26/2017 I immensely dislike having helicopters flying over my home and down my street unless they are rescue oriented or with the military, police, or fire department. It is especially creepy when I google my street address and see how much of my home and my privacy has been exposed to the public, so having helicopters flying overhead feels like an invasion of my privacy. Mahalo.

Mary Ann Saindon Keaau HI 96749 United States 6/26/2017 I am signing because of the constant loud noise over my property. Also I consider this an invasion of my privacy.

Dexter Williams Pahoa HI 96778 United States 6/26/2017 Sometimes we have helicopters one after the other for hours on end. The noise is so loud that we cant even talk on the phone. On other islands people have succeeded in making tour companies be re reasonable. Lets do it here.

Jeremy Bracken Kurtistown HI 96760 United States 6/27/2017 The helicopters fly low over our Kurtistown Puna Hawaii farm causing us and our livestock & pets stress anxiety and diminished quality of life

Bonnie Terry Keaau HI 96749 United States 6/29/2017 I live in Hawaiian Paradise Park and helicopters fly over my house many times a day on their way to see the lava. I feel that a flight plan that goes out over the ocean would be nice for the tourists, and also give us peace and quiet, privacy and would be safer for the residents

Susan Sodan Graham NC 27253 United States 6/29/2017 There are multiple helicopters in the air over my home at ant given time during the summer. They are loud and obtrusive. This is a residential area. This needs to stop. There is absolutely no concern for the people whose lives are disrupted due to the noise and theft of our feeling of privacy.

Vickie VanFechtman Pahoa HI 96778 United States 6/30/2017 I am signing because the heavy flight traffic over our neighborhoods adversely effects our peaceful homes. Too much noise! Take the helicopters off the coast.

Meriam Corcoran Ocean View HI 96737 United States 6/30/2017 The danger factor of something going wrong with a copter flying over public could cost enormous on property owners and the lives lost or injured. This alone should be an intelligent reason why helicopters should fly off shore in the first place.

Correspondence: Good afternoon,

I applaud HVNP's efforts to reduce the number of helicopter overflights and mitigate the associated impacts. I think the Draft ATMP is a good start but I do not think it goes far enough. Personally I do not believe that tour helicopters belong near Hawai'i Volcanoes National Park's air space at all.

As a long time resident of Hawai'i Island I have enjoyed hiking the park's trails and spending time appreciating the amazing beauty, unique species and culturally significant landscapes for decades. There is something so completely incongruous about strolling in the native forest listening to the chatter of the forest birds and then, in a moment, to have the peace obliterated by loud helicopter noise booming overhead. The disturbance is even worse when a large number of flights come one after another as on cruise ship days.

I believe there is already adequate access for all people to appreciate the beauty of the park and helicopter overflights are an unnecessary and destructive disturbance. They clearly negatively impact native species, disturb cultural practices and diminish the overall experience of this amazing place.

Thank you for creating a plan to mitigate the impacts of tour helicopters. I only wish they could be banned completely.

With aloha,
Malia

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: I was an Air Traffic Controller during my time in the US Army (1966-68). As such, I believe in the opportunity for visitors, (all types) to experience Hawaii Volcanoes National Park at its fullest. This would include the valuable prospective from aircraft.

The visitors who I've spoken to, and they were numerous, almost all believe that with the limited time available to visit the National Park, they would NOT restrict flying on any one day. They would embrace it. And they also suggested that flights be allowed on every day of the week- especially on Sunday (along with Saturday). If any one day needs to be restricted, it should perhaps be Tuesday followed by Thursday but NOT the weekends. Thank you for the opportunity to respond on this subject.

Correspondence: ***DRAFT ATMP COMMENTS***

Lines 147-148: Can they hover/loiter/circle for up to 5 min multiple times along the route, or only once?

Lines 191-193: How will you ensure you're receiving accurate reporting data? Will there be on the ground monitoring or enforcement?

Lines 311-314: No specific mention of avoiding/minimizing impacts to wildlife.

Lines 333-335: What is the predicted max noise level from air tours? How many hours/day will have noise levels above 35 dB?

Lines 356-357: Results from Gallardo Cruz et al. (2021) were not cited and would provide a stronger justification for the proposed ATMP measures, as it was a study conducted within HAVO and examined helicopter noise effects on native Hawaiian bird species. The research found that helicopter noise induced a temporal shift in songbird vocalizations at Napau Crater, which had average helicopter noise levels of 81 dB and a flight frequency of 13.8 helicopters/hour during the study. In contrast, there were no significant temporal changes to songbird vocalizations at sites with fewer than 4 aircraft/hour and average helicopter noise levels of 75 dB. Noise levels were obtained from Online Resource 3 and converted using the equation in the section "Power measurement conversion": $y = 1.8x - 268.09$

Lines 361-362: Higher altitude requirements also reduce noise levels over important bird habitat.

Lines 371-372: Minor, but the last sentence appears to be a different color from the rest of the text.

*** DRAFT ENVIRONMENTAL ASSESSMENT COMMENTS***

P. 4, Paragraph 2 of "Biological Resources": Gallardo et al. 2021 should be corrected to Gallardo Cruz et al. 2021

P. 71, Paragraph 3 of "Forest Birds": Gallardo Cruz et al. 2021 did assess effects of noise on I'iwi in the Upper Waiakea Forest Reserve and found a slight decrease in vocalization time during helicopter noise compared to before and after the noise, but it was not statistically significant (See Fig. 2). This was likely due to low rate of helicopter overflights, higher altitude overflights, and lower power of noise. It is likely that helicopter noise would have a significant effect on I'iwi vocalizations in areas with higher power of noise and rate of overflights.

P. 72, Paragraph 1 of "Other Native Birds": The work described for 'apapane should cite Gallardo Cruz et al. 2021. This study also assessed effects of noise on Hawai'i amakihi and 'oma'o, but these species were only present in the two sites that had a lower rate of helicopter overflights and lower noise levels than Napau crater, where significant impacts on 'Apapane were found. There was no significant effect of helicopter noise on their vocalizations, but there was a slight increase in 'oma'o vocalizations during helicopter noise (Fig 2). It is likely that helicopter noise would have a significant effect on Hawai'i amakihi and 'oma'o vocalizations in areas with higher power of noise and rate of overflights.

Section 3.3 Biological Resources: I did not see any mention of how helicopter noise can affect arthropod species, of which there are many endemics in HAVO, including crickets like Laupala spp. and Trigonidium spp. that may also be sensitive to noise.

Some suggested papers, though there may be more recent relevant work:

Schmidt R, Morrison A, Kunc HP (2014) Sexy voices no choices: male song in noise fails to attract females. Anim Behav 94:55-59

Orci KM, Petroczi K, Barta Z (2016) Instantaneous song modification in response to fluctuating traffic noise in the tree cricket Oecanthus pellucens. Anim Behav 112:187-194

Costello RA, Symes LB (2014) Effects of anthropogenic noise on male signalling behaviour and female phonotaxis in *Oecanthus* tree crickets. *Anim Behav* 95:15-22

Correspondence: We just took a helicopter tour over Volcanoes National Park on June 18, 2023. It was a wonderful and awe-inspiring adventure that gave us a once-in-a-lifetime opportunity to see a volcano actively bubbling lava in its caldera. It is impossible to have this experience from the ground in the national park. Although I am a staunch supporter of the environment and would not want to engage in an activity that was actually harmful to the environment, I think there has to be evidence of actual harm being committed before an activity like this were to be prohibited. The more humans are exposed to the natural beauty of our earth, the more they will (hopefully) take action to protect it. I know that my children's experiences with national parks has made them avid supporters of nature and animals. As such, I believe direct harmful consequences of air tours should be assessed before they are banned altogether from flying over the Volcanoes National Park. Thank you,

Subject: Air Tour Management Plans for Hawaii Volcanoes National Park

This company strongly opposes the draft ATMP for Hawaii Volcanoes National Park. No cost analysis has been conducted on revenue loss to the VNP and the drastic reduction of flights to all the operators over the VNP. Aircraft access brings into the National Parks much needed additional income without costing taxpayer's additional costs. The reduction or elimination of flights would cause a serious economic impact to the local communities. Hilo district has already been designated an impaired economic area. The ATMP creates additional hardships within this zone.

The Federal Government recognized that those operators who were flying into a National Park before any regulations like the Interim Operating Permit were technically "grandfathered" and could not be eliminated. The Interim Operating Permit allowed existing aircraft operators to continue. This company would be reduced to approximately 17 flights per month, which is not even a break-even situation. A break-even would be approximately 70 flights per month. In essence, this would be a condemnation of this company that has been conducting tours over VNP for over 30 years without due compensation.

Initially, this company qualified for its Interim Operating Authorization with three (3) aircraft operating from Hilo and Kona International Airports. Due to the lack of enforcement by the VNP and FAA of the existing IOA Specifications with other companies, this company has experienced additional economic damages and reduced its operations down to one (1) aircraft for the last ten (10) years. Had there been proper enforcement of the IOA for other operators, this company would have been able to maintain its existing approved authorizations.

It is already mandated for all operators to have ADS-B equipment installed on their aircraft. Mandating additional equipment that does the same as satellite tracking data to agencies is a totally unnecessary economic burden.

"Quiet technology" is not defined and as such it becomes arbitrary and capricious. It needs to be defined by decibel levels during daylight hours. A case-by-case basis to determine what is and is not "Quiet Technology" is completely arbitrary. Once a definition is determined, it must be applicable to all vehicles within the VNP. No passenger cars, motorcycles, buses, or any other noise creating equipment can be exempt.

The ATMP for VNP does not allow for people whether by age, physical handicap, elderly or time constraints to visit portions of the park otherwise inaccessible unless one was of peak physical condition to visit. This would be discriminatory and in violation of existing Federal Regulations.

The current route structure is unreasonable even if the lava flow is only from the Puu O'O' Vent. A flight is just being diverted over a different location to the coast which requires operators to fly over communities' operators have been trying to avoid for noise abatement. There is a major safety factor for having aircraft fly to and from the entry point which causes head-on traffic and is a major safety concern. It had been tried before and with current weather conditions, it would increase the potential for head-on traffic concerns. This company has on file a video which was submitted to NTSB under the former Chairman, Mr. Jim Hall, of a fast moving fixed-wing aircraft at the same 1,000-foot AGL flight pattern and within seconds the helicopter pilot saw this aircraft at the corner of his eye and avoided a mid-air collision within 50 feet of each other. It is obvious that the National Park has no clue about safety of flight. Only the FAA can determine what is and is not a safety issue.

There is no provision for other eruption locations that may occur in the future within VNP. The Puu O'O' Vent has not erupted for almost 3 to 4 years. Once an eruption begins, it may only last a few days. There is no provision for such a circumstance in this proposal. If none, then all operators cannot see current volcanic activity which has been done for the past 35+ years.

A proper ATMP should welcome collaborations with FAA, NPS and flight operators to work out reasonable considerations within the VNP. Organizations like HiCop are politically motivated and did not even file their concerns through the 9th Circuit of Appeal but used a Washington D.C. court to avoid any defense by existing operators who are affected by this new ATMP. HiCop members reside in the 9th Circuit. This gives rise to proper jurisdiction of their filing. VNP, operators, visitors and public concerns are all under the jurisdiction of the 9th Court of Appeals.

Submitted,

Preston S. Myers
President

Correspondence: For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protecting as the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

From personal experience living in the Puna district which was (and may still be, we have since moved) part of a very popular route to Volcanos National Park, I can confirm that the impact on the local communities in the flight path of the commercial helicopter tours to Volcanos National Park was severe and extremely stressful to have to endure day after day. With easily 30 flights per day flying over our homes at low altitudes, we could in no way avoid the sound and sight and of the air tour helicopters. When I contacted the FAA about the situation I was sent a letter in which they said they considered the case closed. Apparently the impact on the community was simply not something that they considered important enough to hear about, let alone take any action on.

There is a growing body of evidence that excessive helicopter noise is harmful to humans and animals:

<https://noisefree.org/sources-of-noise/helicopters/>

<https://stopthechopnynj.org/why/>

<https://www.icao.int/environmental-protection/Documents/ScientificUnderstanding/EnvReport2019-WhitePaper-Noise.pdf>

<https://www.nature.com/articles/hr200886.pdf>

<https://www.gao.gov/products/gao-21-200>

Based on past behavior, it is clear commercial helicopter air tours have proven they will not self regulate enough to consider their impact on those they fly over, be it local communities or National Parks. It is well past time the FAA did its duty to protect the public and our Volcanos National Park.

Tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

Correspondence: We came to The Big Island all the way from Colorado staying 3 nights in Volcano so we could view the eruption. We were so disappointed. We were subjected to endless helicopter noise throughout the 3 days. There are signs telling us to listen to the volcano erupting but that was hopeless because of the helicopters engines echoing off the crater walls. I never thought I would be thankful for cloud cover when the flights ceased. How can you let a few elite destroy such an amazing environment?

Why are they allowed? Can't the viewers come up by car/ tour bus/ or passenger bus to see the eruption to prevent this noise invasion like all the hundreds of other viewers? And what about the wildlife? Tropic birds live around the crater and they must be disturbed every time a flight goes over.

IF they have to fly, limit it from sunrise for no more than 4 hours. Give the regular viewers peace and quiet for the rest of the day. Ceasing flights for five days a year is absolutely ridiculous. There should be a quiet time for at least four hours during every day.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: Mahalo for the opportunity to comment.

All of these flights are a travesty betraying the mission of the Park Service. As a regular hiker in the park, I find spent toilet paper on the trails and helicopters in the air as similar daily nuisances. This noise pollution offends and perturbs the auditory sense of peacefulness, and impacts negatively all other senses of the non-wealthy visitor. For these reasons, my comments of support, in CAPS are:

- Authorize up to (delete:1,565) 1464 air tours per year on three defined routes, WITH NEVER MORE THAN 3 IN ANY GIVEN 24 HOUR PERIOD.
- Designate Wednesdays for quiet-technology (QT) flights only during the hours of 9 a.m. to 5 p.m.
- Designate no-fly days on Sundays, AND SATURDAYS
- Establish specified flight times of 10 a.m. to 2 p.m. for non-QT flights and 9 a.m. to 5 p.m. for QT flights.

PLEASE GIVE OUR NATIONAL PARK BACK TO NATURE, NOT TO BUSINESSES.

Kevin Kunz

Correspondence: Support all four Park management objectives, lines 102 -122 of draft document on page 4; however, at present there are too many helicopters flying over Halemaumau Crater and the noise is disturbing. With this kind of noise pollution, the Plan's objective to "protect natural sounds" cannot be achieved. There should be stricter controls for fly overs where tourists have independent access to view volcanic activity.

Line 126: I support limiting ATMP tours to 1, 565 commercial air tours per year. This should be a benchmark against which the ATMP is evaluated.

Line 152: Coastal Route should be suspended during Hawksbill turtle breeding and hatching season. Noise pollution can disrupt this fragile ecological area.

Line 190: SUPPORT SEMI-ANNUAL REPORTS by air tour operators. Together with this, I would like to recommend that any public complaints be incorporated into the review of the operator's reports by the FAA and NPS.

Line 272: Please make available online and elsewhere, the form which the public can use to file complaints and reports of violations by air tour operators.

Lines 217 to 322: I totally agree! Well stated. In addition, we do hear air craft and helicopter in the Village, which is absolutely disruptive to our community.

Thank you for this opportunity to provide input into the ATMP. Please provide a final report to all of us with much appreciation.
Kathleen Mishina

Correspondence: Aloha e,

Thank you for the opportunity to comment on the Hawaii Volcanoes Draft ATMP. I am a local resident and regular user of Hawaii Volcanoes National Park. It is time to stop the commercial helicopter flights over this unique natural, cultural and social resource, which has been recognized as an International Biosphere Reserve and a World Heritage Site.

The noise from commercial helicopter flights generates high extremely disruptive experiences for those residents and visitors seeking to experience, use and enjoy the Park's unique ecological landscapes and wildlands. The noise from commercial helicopters degrades the cultural resources of the landscape and the ethnographic resources. The noise negatively effects Native Hawaiian sacred sites and cultural practices. While specific studies are not available, the noise from commercial helicopters is so intrusive and widespread within the Park, it is questionable how the noise would not be negatively impacting native wildlife, including federally listed species.

Commercial helicopter flights serve as a form of entertainment for visitors and a limited number of residents. The flights generate business income and a limited number of support jobs. Commercial flights over Hawaii Volcanoes National Park have been allowed to go on for decades. That does not mean that is has been the right thing to do in the past or going forward.

It is now time to stop utilizing the Park for entertainment and commercial gain. Visitors and residents have access to extensive portions of the park via vehicles, vans, buses, bicycles and walking. This includes extensive paths that are handicap accessible.

Stop the commercial flights now. Businesses - their owners and employees will evolve and find new enterprises and work to support themselves and their families.

Mahalo.

Correspondence: These helicopter tours are more than a nuisance, it's dangerous for those onboard and below, as the areas they're flying aren't always the best for flying, due to the winds and other natural weather conditions. But the biggest thing is commercialized tourism that is always getting the green light to do as they wish, when we should be giving the green light to preservation and protection of Hawai'i. We the people of Hawai'i are sick and tired of being pushed out of our own home and it starts with the tourism, as we cater to their needs before the ones who live here... especially the natives of this land, the Kānaka Maoli and Hawaiians. Enough is enough... if they want a Birds Eye view of Hawai'i or want to visit our home, just Google it!

Correspondence: Mahalo for accepting my comments. We live on the north side of the Big Island in the Kohala district (home of Kamehameha I).

The Pu'ukohola National Park protects the Historic Heiau that Kamehameha built according to Hawaiian prophecy that one day

he would unite the government of Hawaiian Islands and no more warring. Further, prophecy required a human sacrifice, hence the Heiau or altar.

This altar is the highest structure, at that time but was built without cement and at constant risk of crumbling due to vibration by low flying helicopters.

Our request is to include this National Park to this Management Plan. Seems all the requirements, all the same helicopters, etc. are the same. Thank you

Correspondence: STOP FLY SO LOW OVER MY HALE!

They scare my animals, wake da napping keiki up, no can lay out in da sun cuz tourists taking pictures!!!

INVASION ON PRIVACY!!!

NO FLY ZONE OVER HOMES!!!

NO LOW FLY NEAR HOMES!!!

Make em fly farther and not bother people who live here.

Correspondence: Aerial noise is tremendous when it happens.

I feel in the last two years they are trying BUT could they try harder to always fly different patterns to give us all a break.

Two weeks ago we had helicopters over the same area of Lorenzo Road with the same pattern of flying and time of day. That's then people I feel get upset.

Including this when I have called the FAA they say they don't see all flights that get out and is this the case? Are airplanes and such out there and they took off without mention? Spooky if so.

Late after 10 pm sometimes we hear jets going down the coast by Naalehu etc.

Good luck and thank you for the companies who try and I am sorry for the companies that don't think people, farm lands aren't affected by loud noise. You hellies fly to low most times and if you'd fly over more than 200 feet higher than our trees fine but some of you fly right just above the ohias.

a hui hou

Correspondence: I am writing to state my opposition to helicopters flying over our national parks. I agree with the following letter. Please add my name to the opposition of these flights over Hawaii Volcanoes and Haleakala National Parks. I have witnessed first hand the disruption to the beauty and solitude of these beautiful areas and I believe there should be a NO FLY zone above all of our national parks.

"Every day our beautiful national parks, especially Hawai'i Volcanoes and Haleakala, are being deeply disrupted and degraded by tour helicopter/small aircraft overflights. The National Park Service (NPS) and Federal Aviation Administration (FAA) have issued draft Air Tour Management Plans for our Hawai'i parks which would reduce but not eliminate this disruption. These overflights are fundamentally incompatible with our national parks and should not be allowed."

I agree, tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protecting as the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY..

Thank you,
Nadine Ordway

Correspondence: Aloha, I have lived in Leilani Estates for 20 years. We have had to listen to tour helicopter noise constantly since the 2018 eruption nearby. They are loud and fly directly overhead at very low elevations causing daily disruption to our lives. Perhaps if they flew over the ocean until arriving at their viewing destination, and flew over at a higher elevation just one time that would help.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.
