We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: The draft air tour management plan for Hawai'i Volcanoes National Park (HVNP) and also Haleakala National park (HALE) is a sham that should not be empowered in any form. The air tour industry has been running amok for years, disturbing not only HVNP and HALE, but also neighboring communities and habitats for native species. To continue such disturbance in any alleged attenuated form is more of the same, and none of it should be tolerated or authorized. It appears that the air tour industry has convinced the Federal Aviation Agency in the US Department of Transportation to propose regulations that legitimize its desecration of national parks and also that the National Park Service is willing to go along with it.

The continued auditory disturbance to HVNP is unjustifiable in that the park is a special place that should not suffer such disturbance for commercial purposes. That HVNP currently announces and apologizes for any park-mission flights is its own admission of the intrusion that these few such flights provide to the public and natural resources of the park. Similarly, HVNP restricts drone aircraft in recognition of their adverse qualities. For the park to have to accept commercial intrusions as proposed in these draft rules is a travesty against the nature and purposes of the park and the natural and cultural sensitivities therein. Decades ago, before commercial air tour flights were occurring, the park could be true to its mission of protecting the resources of the park for their intrinsic values. This needs to be re-established and to continue. Any of this industrial air touring in and near Hawaii's national parks at any level has been the bane of such values and it needs to stop now.

Presently, the air tour industry's overflights create an intolerable intrusion into the ambiance, natural values and cultural practices at these parks. At HVNP the level of disturbance has been particularly bad and increasing for the last five to ten years, especially in the Kilauea summit region where most of the visitor concentration is located. Similarly much native birdlife and cultural activities are also centered here.

In addition to the sanctity of HVNP airspace, the proposers of this callous rule need to consider the neighbors of HVNP, as they also share the consequences of these intrusions. The boundaries of HVNP Kilauea summit area are very close to residential and other private and state lands, and all are under auditory assault. The human neighbors have been subjected to the same intrusions to their quiet lives as has the park, as the flight sounds carry far and start early in the morning, especially during the periodic eruptive episodes at or near the summit. More importantly, the native organisms, especially the birdlife, are under the same auditory assault and are equally traumatized by the cacophony. This noise adversely affects the birdlife as it does the human life. HVNP and surrounding areas are home to both common and rare bird life, and these noise intrusions are disruptive to their lives. A conservation facility that raises Hawaii's rarest birds is located on private lands just a mile and a half from the rim of Kilauea's caldera, and tour flight noise near the summit is loud at the facility's open-air aviaries and flights over the facility are common. Even closer, endangered nene geese breed and forage in the summit area, in and near the summit on park and private lands.

For FAA and NPS to authorize the flights in these proposed rules is a travesty to both the human and natural animal life nearby. It is decidedly an abhorrent and unneighborly act. The proposed reductions and restrictions in total flights each year are ludicrous and insulting. Experience has shown that flight numbers will be concentrated during periods of eruptive activity and it will be just as disturbing as it is now. The "never on Sunday" provision still leaves natural, cultural and human subjects victimized by the air tour industry for the rest of the week. FAA is not likely to enforce any exceedances of restrictions anyway, just as they have ignored periodic public meeting pleas for air tour restrictions for many years.

The current disturbance to neighbors extends several miles outside the park's boundaries, especially near the summit where so much of the industrial air tour activity is centered. Both HVNP and FAA should abandon these proposed rules and start over with rules that will protect the lands and cultural and natural resources of HVNP and those of its neighbors. All commercial tour flights should be legally restricted from all the HVNP airspace and from a buffer zone of three miles outside its boundaries. We have seen in the past couple of decades that no voluntary "fly neighborly" or other self-imposed restrictions by the air tour industry have had any positive effect on the natural and human residents of this island. We all have suffered immensely for their profits. Prohibitive and enforceable exclusionary regulations are the only solution. These regulations also need to apply to fixed wing and other private aircraft. Military aircraft need also adhere to this same airspace exclusion. Their overflights have been particularly noisy and have also included night hours.

Correspondence: The continued flights by commercial tour helicopters is an unacceptable, stressful, disturbing, annoying and can feel like an invasion of privacy as they fly directly over ones home, and property. This is only from a human aspect. What effect it has upon nature, animals and the environment is also a disturbing factor. While I understand the value of tourism flights over our incredible landscape, its unfortunate cost to residents, animals and nature in general is definitely negatively affected.

Correspondence: I am totally AGAINST ALL commercial air tours!
Especially in state and fed parks.
TOO NOISY TOO DISTRACTING.
PLEASE ALSO LIMIT THEM ON THE NAPALI COAST.
The noise while hiking the Napali is incessant ..a helicopter every 3 mins.

Correspondence: Aloha,

I wanted to express my concern in regards to the proposed changes being made. I work in the helicopter industry and am very worried I will end up having to find another job, as this bill would have a massively negative impact on our ability to stay in business.

My first experience with helicopters was as a tourist here in Hawaii flying to see the volcano with my sister, who minored in geology. Learning about the volcano from her during a flight was a moment our family will never forget. While I didn't cry with tears of joy like my sister did when seeing the volcano from above, it definitely gave me a newfound appreciation for the island and how powerful yet delicate it is.

That flight with my family is what got me excited about the job I now have and love.

I hope that our community will recognize how vital the helicopter industry is when it comes to educating tourists about our beautiful island while also employing thousands of it's inhabitants.

Mahalo,
Joe

Correspondence: HAWAII VOLCANOES NATIONAL PARK DRAFT ATMP COMMENTS

Below are comments from our Hawaii Congressional Representative Ed Case:

"Every day our beautiful national parks, especially Hawai'i Volcanoes and Haleakala, are being deeply disrupted and degraded by tour helicopter/small aircraft overflights. The National Park Service (NPS) and Federal Aviation Administration (FAA) have issued draft Air Tour Management Plans for our Hawai'i parks which would reduce but not eliminate this disruption. These overflights are fundamentally incompatible with our national parks and should not be allowed."

I agree, tour aircraft and their impacts have no place in Hawaii Volcanoes National Park, the adopted ATMP for the Park should be NO FLY.

For 24 years IOA tour aircraft have had unlimited use of the Park which was 24 years of negative impacts which not only negatively impacted the Park but those Park visitors on the ground trying to enjoy the Park as National Parks are supposed to be enjoyed.

The ATMP proposed routes will not protect the Park from those negative impacts.

The proposed draft ATMP offshore route is not as protecting as the FAA mandated urban Long Island Offshore Route that the FAA implemented in 2008.

The FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

FAA Offshore Route Rule:

https://www.faa.gov/regulations_policies/rulemaking/media/NYNShoreHelicopterFinalRule.pdf

In addition, § 44715(a), provides that to “relieve and protect the public health and welfare from aircraft noise,” the Administrator of the FAA, “as he deems necessary, shall prescribe *** (ii) regulations to control and abate aircraft noise ***”

Court order upholding Offshore Rule: <https://caselaw.findlaw.com/court/us-dc-circuit/1638545.html>

Under the plain text of § 40103, the FAA has authority to “prescribe air traffic regulations . [to] protect[] individuals and property on the ground.” 49 U.S.C. § 40103(b)(2). This is exactly what the FAA did here. Responding to the noise complaints of Long Island residents, the FAA prescribed new air traffic regulations with the purpose of protecting these residents' use and enjoyment of their property.

It is beyond clear that the FAA has the responsibility and authority to protect those on the ground from aircraft noise, as they did on urban Long Island, NY.

As the FAA mandated an offshore route for urban Long Island, NY, so should the FAA also mandate an equally one mile offshore route at an altitude of 2500 feet offshore route rule for Hawaii Volcanoes with NO FLY over the Park itself.

Furthermore, the tour copter operators have argued that not being allowed to overfly the Park they would fly over the neighboring communities/homes.

HAI Slams Parks Air Tour Plans for--- Hawaii

the proposed routes now move air tour operations over communities

The Hawaiian Islands deserve and need an offshore route more so than Long Island, since in Hawaii the tour aircraft operations are year around and the number of annual operations are much higher and since the airports in Hawaii where the tour aircraft fly from have direct access to open water offshore routes.

The FAA must exercise their responsibility and authority to protect the people on the ground in Hawaii from tour copter noise nuisance pollution.

Correspondence: Aloha, I have some concerns about the Draft Air Tour Management Plan for Hawai'i Volcanoes National Park I would like addressed. [paragraph] First, why is only an Environmental Assessment being made instead of an Environmental Impact Statement? According to 40 Code of Federal Regulations Section 1502.3 all “major Federal actions significantly affecting the quality of the human environment” must complete an EIS. In the February 2022 HVNP ATMP Newsletter it was pointed out that air tour operations result in frequent and loud noise disruptions in many areas of the Park; impede the NPS's ability to fully meet the Park's purpose of perpetuating endemic Hawaiian ecosystems; does not support the perpetuation of biological diversity and ecological integrity which are fundamental resources and values of the Park; interferes with resource management activities; diminishes visitor opportunities to learn about and be inspired by Park resources and values; unreasonably interferes with the atmosphere of peace and tranquility and natural soundscapes; repeatedly interrupts and unreasonably interferes with interpretive programs and visitor activities; unreasonably interferes with the natural soundscape of Wilderness Areas; interferes with the opportunity for solitude and detracts from the natural quality of Wilderness Areas. So why isn't this plan, which addresses a problem of such importance that it was ordered by the United States Congress, worthy of an Environmental Impact Statement? [paragraph] My second concern is that this plan does not conform with 40 Code of Federal Regulation Section 1508.1. This regulation states that EA's must consider “indirect effects” which are defined as actions that “are later in time or farther removed in the distance but are still reasonably foreseeable.” “Reasonably foreseeable” is defined as “sufficiently likely to occur such that a person of

ordinary prudence would take it into account in reaching a decision." Why aren't the ATMP developers demonstrating prudence concerning the island-wide noise and nuisance of the air tours the Park is profiting from? [paragraph] Also, all the routes, rules, and regulations in the world are worthless without monitoring and enforcement. This was pointed out to the National Park Service and Federal Aviation Administration by the Government Accountability Office back in 2006 after an audit of the ATMP for HVNP that is still under development (<http://www.gao.gov/assets/gao-06-468.pdf>). When asked about this in 2010, FAA ATMP Administrator Keith Lusk wrote: "We are not far along in the development of the air tour management plan for Hawaii Volcanoes National Park to provide any specifics regarding you question about possible monitoring methods." Now, thirteen years later, this obvious flaw in the ATMP still has not been addressed. And this is despite the fact that both the FAA and NPS have been made aware that the FAA's recently installed, state-of-the-art, ADS-B tracking system does not function along the entire coastal route advocated in this draft ATMP, and that the NPS has absolutely no flight tracking equipment. How will the air tours operating in the southeast sector of HVNP be monitored and regulations enforced? And why should air tours be allowed to operate without supervision in the Park when it has been established that pilots frequently ignore regulations both within the Park and the surrounding neighborhoods? [paragraph] I am also concerned by the lack of social justice demonstrated in this draft ATMP. A review of the many meetings held by the FAA and the NPS over the years would show that nearly all Native Hawaiians -- whose ancestors have been here for over 40 generations -- feel that there should be absolutely no air tours over the park or their homes. The vast majority of air tour operation owners -- who have only been profiting from this destruction of the Park for a bit over two decades -- are Caucasian males. How can allowing these extremely noisy and disruptive businesses to continue polluting our precious island environment be considered anything but the codification of white colonial imperialism into the HVNP regulations for perpetuity? [paragraph] Please take the time to consider and respond to these comments. [paragraph] Sincerely, John Carse

Correspondence: Second Comment (also sent directly to Rhonda Loh, and Danielle Foster, HVNP)
Aloha Rhonda,

Forwarded below is the form I submitted regarding the ATMP environmental assessment and plan. I am not sure if you read this, or if it goes to someone on the East Coast. This is and has been a definite issue for many years....As a full time resident of Volcano, in the Golf Course Subdivision bordering the Park, the noise and intrusion from helicopters has increased through the years. There is not one day that we don't hear (and see them), including back-country and wilderness areas. My husband and I are backcountry volunteers and spend a great deal of time hiking and camping in the backcountry and wilderness of HVNP. About a year ago we were day hiking out to Na`pau/Pu'uO'o. Helicopters were flying by and circling every 5 minutes. The noise was unbelievable. Many if not all of the helicopters were so low that we could see the pilot. This sort of flight activity (most Blue Hawaiian) if any, should not be tolerated! We have also seen many flying over the park Mauna Loa (location 9000' and up). Thank you for your attention to this. Forwarded sent form below.
Rebecca

Correspondence: Comment Three:
(Also directly sent to Danielle Foster, HVNP)

Good morning Danielle,
Since I wrote about the helicopter impact and the ATMP last week, the helicopter flights have increased even

more! Here in the Volcano Golf Course subdivision, residents are awakening not to bird song, but helicopters. I can only speak first hand for my husband and I, but I am sure other residents are experiencing the same. The helicopter flights continue throughout the day and appear to fly in the Park from the North, circle the crater and then return over Mauna Loa. What is going on? This is greatly disturbing the peace of the area. Since reporting that one flashing night helicopter there have been no other night flights, but there are some at dusk. There are concerns with Alternative 3, with the potential for air tours to increase and congest these areas, which do include residential and avian habitats. Kalapana, Ocean View, Hawaiian Ranchos (residential) and the Kahuku unit (vast native tree canopy).

Once the new ATMP is implemented how will compliance be determined?
Whom will manage any future air flight issues, non-compliance?

Correspondence: Aloha, It would be mindful not to fly during the lunch hours. Consideration for those eating lunch peacefully or who want to socialize/talk between 11 am-1 pm would be good! Post the times of expected noise so that others who live/work nearby can plan accordingly around the noise level. Post the number the public can call in case there's a community event so that the noise level won't interfere, allow communication about it.

Correspondence: The fake state of Hawai'i should be ashamed that they allow hundreds of tour guide helicopters (including private planes) to fly over our community every day at almost all hours of the day. I have on camera about 10+ helis hovering close to us, violating our private lives and noise is horrendous from sunrise to sunset. This is atrocious, it is embarrassing all because of these greedy cooperations that make money off of stolen lands and give nothing in return to the hard working class peoples that have been here for most of their lives, including elderly, the sick, the elementary (children have to be interrupted with loud helicopters at all times they're in class). OVERTOURISM exploits every part of this island. We already have to deal with massive MILITARY planes and helicopters (which is frightening and causes PTSD and resurfacing trauma for veterans) and recently had to deal with a chemical toxic spill on our sacred Haleakalā. Where are the morals, respect for land and community and common sense? Oh it's not possible when the "state" isn't even legal. We are annoyed, tired, angry, exhausted for the misuse of land and all because of MONEY. Sadly, my comment will get pushed under the rug and the officials and Hawai'i Tourism Industry (including the Freedumbs and the patriots) will laugh at the community and say "hey it's your economy that relies on tourism!"

Enough! Bissen, if you're wanting to do right and do better than The last Mayor, direct these tourist companies back to where they came from.

Correspondence: You are asking on feedback to allow helicopter flights over hawaii's volcano national parks and all I can say as a resident in the flight path is please don't. Anyone deciding this issue who doesn't have helicopter noise all day long has no idea what it is like. The only people who can afford these rides are tourists and these visitors should not be more important then resident's right to the peaceful enjoyment of our homes.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Re: Opposition to the preferred alternatives (Alternative 3) in the Air Tour Management Plans for Hawai'i Volcanoes and Haleakala National Parks

Dear NPS Director Chuck Sams and FAA Administrator Billy Nolen:

On behalf of the National Parks Conservation Association and the National Trust for Historic Preservation, and our nearly 2.6 million members and supporters nationwide, we submit these comments on the Air Tour Management Plans (ATMP) for Hawai'i Volcanoes and Haleakala National Parks.

Since 1919, National Parks Conservation Association (NPCA) has been the leading voice of the American people in protecting and enhancing our National Park System. The National Trust for Historic Preservation in the United States is a private nonprofit organization chartered by Congress in 1949 to "facilitate public participation" in the preservation of our nation's heritage, and to further the historic preservation policy of the United States.

We believe the National Park Service (NPS) and Federal Aviation Administration's (FAA) should have prohibited air tours in both parks in order to protect natural sounds, visitor experiences, Indigenous sacred sites and ceremonial areas, natural and cultural resources, wildlife, and wilderness resources and values. We assert the preferred alternatives allowing commercial air tours 1) result in unacceptable impacts to the aforementioned resources and people and 2) do not support the management objectives of the parks.

The agencies incorrectly applied the National Air Tour Management Act (49 U.S.C. 40128) and National Park Service laws (54 U.S.C.) in the ATMPs for both parks. These laws are intended to protect national parks, not promote commercial air tours.

The NPS Organic Act and the Redwoods Amendment Act together create a clear conservation mandate, and that use of national parks cannot derogate from the values and purposes for which those protected areas were established. The NPS's 2006 Management Policies create a binding interpretation of the Organic Act (*Greater Yellowstone Coal. v. Kempthorne*, 577 F. Supp. 2d 183, 196). The NPS Management Policies explain that the Organic Act creates two independent mandates: a conservation mandate and a prohibition on impairment. Those mandates require NPS to "seek ways to avoid, or to minimize to the greatest extent practicable, adverse impacts on park resources and values" but also "allow impacts to park resources and values when necessary and appropriate to fulfill the purposes of the park, so long as the impact does not constitute impairment of the affected resources and values." § 1.4.3. Further, where there is conflict between conserving resources and values and providing for enjoyment of them, conservation is to be predominant.

In Hawai'i Volcanoes and Haleakala National Parks, the NPS has identified the protection of natural sounds as a primary purpose for each park. The NPS 2006 Management Policies define the natural soundscape as a park resource. § 1.4.6. The policies also define "unacceptable impacts" as "impacts that, individually or cumulatively, would... unreasonably interfere with... the natural soundscape maintained in wilderness and natural, historic, or commemorative locations within the park." § 1.4.7. There is no doubt natural sound is a resource protected under the NPS Organic Act.

Furthermore, NPS 2006 Management Policies' section on "soundscape management" states, in part, that "The National Park Service will preserve, to the greatest extent possible, the natural soundscapes of parks" (§ 4.9) and a section on "cultural soundscape management" provides that "The Service will preserve soundscape resources and values of the parks to the greatest extent possible to protect opportunities for appropriate transmission of cultural and historic sounds that are fundamental components of the purposes and values for which the parks were established" (§ 5.3.1.7).

Air tours are and will continue under the preferred alternatives to cause unacceptable impacts to park resources including natural sounds, visitors and Indigenous communities that utilize the parks. Existing air tours are already impairing park resources and conditions per the NPS Organic Act.

Furthermore, when implementing the Wilderness Act (16 U.S.C. 1131-1136), NPS is obligated to choose Alternative 2 which offers the "greatest protection" for the designated, eligible and proposed wilderness for both parks. In a case involving snowmobile noise near wilderness, *Izaak Walton League of America, Inc. v. Kimbell*, 516 F. Supp.2d 982 (D. Minn. 2007). Conservation organizations sued U.S. Forest Service challenging the decision to construct a snowmobile trail connecting lakes adjacent to Boundary Waters Canoe Area Wilderness. The plaintiffs claimed that the trail at issue would project the sights and sounds of snowmobiles into the wilderness area in violation of § 4(b) of the Wilderness Act.

The court held, inter alia on cross motions for summary judgment: (1) fact issues existed as to whether the agency's actions degraded the wilderness character of designated wilderness area; (2) the Environmental Assessment (EA) failed to properly analyze noise impact resulting from snowmobile use on the trail; and (3) the EA did not conduct any quantitative measurements of the sound impact in the wilderness. The court concluded:

“[T]he analysis of sound impact contained in the EA is inadequate to support the [Finding of No Significant Impact]. The EA provides no quantitative evidence or analysis of decibel levels projected by the South Fowl Trail into the adjoining wilderness... As discussed above, agency activity that results in sound that is louder, more constant, more frequent, or of a different quality, than the sound that presently exists within the wilderness, is more likely to degrade the wilderness character from its present condition and thus result in a violation of § 4(b) of the Wilderness Act. Id. at 995-96. (Emphasis added.).

Notably, the court also observed that “an agency's duty to preserve the wilderness character under § 4(b) of the Wilderness Act may apply to agency activity that occurs outside of the boundaries of the wilderness area.” Id. at 989. Footnote #1.

[footnote #1: But note: The court also stated that: “In other words, where the agency activity does not increase or exacerbate the existing sound impact on the wilderness area, such activity would not degrade the wilderness character of the area. On the other hand, agency activity that results in noise that is louder, more constant, more frequent, or of a different quality, is more likely to degrade the wilderness character from its present condition and thus violate § 4(b).” Id. at 989-990.]

We raise this specific issue because both parks are considering commercial air tour management within and near federally designated wilderness.

For both parks units, we believe the National Environmental Policy Act (42 United States Code (U.S.C.), 4321 et seq.) has not been correctly applied. The starting point of the analysis should be the natural ambient sounds of each park unit, and the impact analysis must judge the noise impacts of commercial air tours while they are taking place in each park--specifically which areas will be impacted by noise from air tours in each park. We encourage the agencies to apply this approach to every ATMP.

Hawai'i Volcanoes National Park

NPS created foundational documents for every park unit. They are grounded by each park's enabling legislation and provide guidance for planning and management decisions. Foundation documents speak to the purpose, significance, fundamental resources and values, and interpretive themes for each park.

NPS describes fundamental resources in the following way:

The fundamental resources and values are those features, systems, processes, experiences, stories, scenes, sounds, smells, or other attributes determined to warrant primary consideration during planning and management processes because they are essential to achieving the purpose of the park and maintaining its significance. Fundamental resources and values are closely related to a park's legislative purpose and are more specific than significance statements.

Fundamental resources and values help focus planning and management efforts on what is truly significant about the park. One of the most important responsibilities of NPS managers is to ensure the conservation and public enjoyment of those qualities that are essential (fundamental) to achieving the purpose of the park and maintaining its significance. If fundamental resources and values are allowed to deteriorate, the park purpose and/or significance could be jeopardized.

The following fundamental resources and values have been identified for Hawai'i Volcanoes National Park:

- Volcanoes and Associated Volcanic Features and Processes. Two active hot-spot shield volcanoes, dynamic geologic processes, and volcanic features demonstrate the effects of the forces of nature and record the geologic history.
- Body of Scientific Knowledge and Investigations. Documents, collections, and observations contribute to scientific discovery and range from early first-hand accounts of eruptive events to current scientific research and museum collections.

- Opportunities for Scientific Research and Monitoring. The park serves as a world-class living laboratory for geologic research, conservation biology, ecosystem development, island biogeography, and evolution that continues to build on the existing body of scientific knowledge for resource protection, public safety, and environmental understanding.
- Biological Diversity. The park contains an extraordinary assemblage of native plants and animals--more than 90% of which are endemic to the Hawaiian Islands and many of which are rare, endangered, and threatened with extinction.
- Ecological Integrity. The park perpetuates native ecosystems and communities, many of which are unique to the park, and provides a refuge for endemic plants and animals that span seven ecological zones ranging from seacoast to alpine. The park also supports the continuation of natural processes and interactions among species and between the biotic and abiotic environments.
- Natural Sounds. Park soundscapes are protected from many human-caused sounds and are dominated by the sounds of wind, ocean, volcanic activity, and native species.
- Night Sky and Scenic Vistas. The unobscured night sky is characterized by an absence of artificial light and scenic vistas are unobstructed by development and human-caused air pollution.
- Remote and Challenging Experiences. The park promotes opportunities for visitors to experience solitude, primitive conditions, and challenge.
- Natural Landscape Character. From mauka (toward the mountain) to makai (toward the ocean), vast expanses of the park's wilderness have been affected primarily by the forces of nature--retaining their primeval character.
- First-hand Volcanic Experiences. The park provides opportunities for visitors to approach and experience active volcanic eruptions including fountains, fissures, and flows.
- Pelehonuamea. Volcanic landscapes and all active flows and products of eruptive events are the representation of Pelehonuamea, deity of Hawaiian volcanoes.
- Wahi Kapu (Sacred Places) and Wahi Pana (Celebrated Places). The entire park landscape and all of its inhabitants and features, including the sky as a layered extension of the landscape, are sacred to Native Hawaiians, particularly Halema'uma'u Crater (home of Pelehonuamea), Mauna Loa's Moku'āweoweo caldera (a focal point for the greater Hawaiian relationship to the universe-stars, sun, moon), and mauka forested areas.
- Opportunity for Traditional Cultural Use. Native Hawaiian traditional uses in the park perpetuate traditional practices, knowledge, and the cultural importance of this area. These practices, including chants and dances, depend upon natural sounds, unobstructed views of mountain summits, and an environment that has not been greatly altered by human-caused changes.

· Cultural Resources. The park's rich and varied cultural resources, including objects, archeological sites, cultural landscapes, historic structures, and ethnographic resources are preserved and contribute to interpreting and understanding the greater Hawaiian culture and the more recent human history within the park.

As described above, Hawaii Volcanoes is national park with many unique resources and attributes. From active volcanoes to rare, endemic species, this wilderness is enjoyed by over a million visitors a year. The park is sacred to many Native Hawaiians and part of their centuries-old culture. Commercial air tours are not a fundamental resource or value and create unacceptable impacts to those resources and values.

In the Environmental Assessment, the agencies conclude that Alternative 2 prohibiting commercial air tours will best protect the fundamental resources identified by the NPS in its foundational document. It states:

Noise: "Alternative 2 would provide 365 days per year without noise from air tours within the ATMP planning area and would reduce noise in the most noise sensitive regions of the Park resulting in direct beneficial effects compared to the No Action Alternative and Alternative 3." (page 39)

Biological Resources: "Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area which would eliminate this source of noise from the planning area. Therefore, there would be a direct beneficial effect on biological resources since the intensity and likely presence of noise from commercial air tours would be less than under the No Action Alternative." (page 73).

Cultural Resources: “Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area. The elimination of commercial air tours from the ATMP planning area would reduce the noise and visual intrusions from directly impacting the feeling and setting of cultural resources within the APE and result in beneficial impacts to ethnographic resources and sacred sites, TCPs, archeological resources, cultural landscapes, historic districts, and prehistoric and historic buildings and structures compared to current conditions.” (page 93).

Wilderness: “Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area, which would offer the greatest protection to Wilderness. Compared to current conditions, this would enhance Wilderness character by reducing the intensity of noise and number of noise events over Wilderness areas. There would be direct beneficial impacts to the natural quality of Wilderness and the opportunities for solitude under Alternative 2.” (page 105)

Visitor Use and Experience: “Under Alternative 2, commercial air tours would not fly within the ATMP planning area which would eliminate this source of noise from the ATMP planning area. Therefore, there would be a direct beneficial impact to Park visitor use and experience since the intensity and presence of noise from commercial air tours would be less than under the No Action Alternative. Alternative 2 offers the greatest protection of visitor use and experience.” (page 115).

It is obvious the ATMP should have recommended eliminating commercial air tours as it provides the “greatest protection” and “direct beneficial impact” for the park. Both the ATMP and Environmental Assessment provide evidence that the current commercial air tours as well as Alternative 3 that would continue to allow air tours, will harm visitors, natural and cultural resources, wilderness, and wildlife. The agencies found that, “The Park has the highest visitor use among the nine NPS units in Hawai'i. Noise from low flying air tours can have notable impacts on visitor experience. A 2007 survey conducted at the Park found that the majority of people who reported hearing aircraft considered it either unacceptable or annoying and reported negative emotions or feelings associated with aircraft sound.” (ATMP at page 11). These broad statements about noise impacts to visitor experience have been ignored for decades by NPS and FAA. Now that the agencies have an opportunity to address this direct conflict by prohibiting commercial air tours, this ATMP recommends continuing this conflict in areas of the park.

Knowing several species could be harmed by noise, the agencies propose mitigation measures that will not guarantee the best possible conditions for them. The ATMP states, “Helicopter noise detrimentally affects physiology, pairing and breeding success, and territory size of birds by limiting communication between individuals. These effects could have a greater impact on critically endangered Hawaiian endemics, which already face a number of additional stressors.” (page 11). This careless approach to ensuring the survival of many species violates NPS laws and policies.

We continue to be baffled by the ATMP's recommendations allowing helicopters to hover over the park. On one hand the ATMP states, “Hovering, loitering and/or circling on the Kahuku Route and the Coastal Route are prohibited because they could negatively impact visitor experience and cultural and natural resources, including sensitive sites.” (page 12). As a general matter, we agree that hovering over an area is hugely disruptive for visitors and resources. Yet, the ATMP allows hovering where it states, “Hovering, loitering, and/or circling for up to five minutes is permitted on the Pu 'u 'o 'o Route and in the Pu 'u 'o 'o QT Zone. Circling aircraft must turn away from the advancing blade as much as possible minimize noise.” (at page 7). The flight path where hovering is allowed is directly adjacent to a state protected area, Kahauale'a Natural Area Reserve and close to the East Rift Designated Wilderness in the park. As we mentioned earlier, the Wilderness Act's protections apply to activities inside and outside of a wilderness area. Allowing commercial air tours is already problematic in the park, adding up to five minutes of hovering and loitering only adds to the violation of laws and policies.

Haleakala National Park

The following fundamental resources and values have been identified for Haleakalā National Park:

- Natural Sounds, Viewsheds, and Dark Night Skies - Natural sounds, panoramic views, and dark night skies greatly contribute to Haleakalā's unique sense of place. Ambient sound levels in the Haleakalā Crater are so low that they approach the threshold of human hearing, and the crater and summit offer world-renowned stargazing opportunities. Visitors flock to the summit to witness spectacular sunrises over the park's natural landscape--this

and other views in the park are supported by its excellent air quality. In addition to being highly desired values for visitors, dark night skies and natural soundscapes are vital components of a healthy, intact, biological community. Each plays an important role in wildlife communication and behavior. The preservation of natural sounds, viewsheds, and dark night skies is also critical to effective wilderness management.

- Kīpahulu Moku District (including 'Ohe'o Gulch and Palikea Stream) - Handed down over the centuries through oral tradition and practice, the 'Aha Moku system is the traditional Hawaiian system of natural resource division and management for ocean and land resources. The undiverted free-flowing Palikea stream and 'Ohe'o Gulch are part of an intact East Maui watershed that begins at the piko, or navel, of the island. The park is fortunate to protect nearly all of the Kīpahulu moku, including intact ahupua'a (smaller land divisions) within it. The Kīpahulu Biological Reserve is discussed and analyzed as part of the Native Hawaiian Biological Diversity fundamental resource and value.

- Wilderness - Approximately 24,000 acres of Haleakalā National Park is federally designated wilderness. The wilderness area includes the majority of the Haleakalā Crater and the Kīpahulu Biological Reserve, which protects one of the most intact rainforest ecosystems in the Hawaiian Islands. The wilderness area also has cultural and spiritual significance to Native Hawaiians, who have used these lands since ancient times, and continue to visit sites and features within the wilderness for traditional practices. Visitors have opportunities to participate in wilderness experiences--from expansive views across undeveloped lands to primitive recreation and solitude.

- Ongoing Connections to Living Hawaiian Culture - Haleakalā National Park has cultural and spiritual value for Native Hawaiians who have used particular places, sites, and resources in the park for a broad range of activities from ancient times to the present. Among these traditional cultural activities are ritual ceremonies, spiritual training, and practices related to birth and burial. For Native Hawaiians, traditional uses and connections between people and all things spiritual and physical are incorporated in the ancient, sacred tradition of the Kumulipo that has been passed down orally for generations in the form of a mele ko'ihonua or chant of more than 2,000 lines. The Kumulipo recounts the origin of the universe and the beginnings of the Hawaiian world; it inventories and explains the existence of all resources so that proper care and respect is applied through kuleana (responsibility). Sustaining the connections and interrelationships between Native Hawaiians and culturally significant park resources and places is an important objective of park managers.

- Outstanding Geological Resources, Including the Haleakalā Volcano and Crater - Rising to 10,023 feet in elevation, the Haleakalā volcano--also known as the East Maui volcano--is the primary geological feature of the park, and preserves a record of Maui's volcanic history. At the volcano's summit is the enormous depression known as Haleakalā Crater--described by Congress in the 1916 enabling legislation as the "largest and most spectacular crater in the world." In truth, the label "crater" is somewhat of a misnomer, as this impressive depression was not shaped solely by volcanic activity, but also by water and erosion. Northeasterly tradewinds collided with the great volcano, producing rainfall, and over time streams cut channels down the slopes of the mountain. Eventually, two streams that eroded their way up the mountain joined, ultimately creating the long and deep depression that survives today. Later, volcanic vents in this area formed richly colored cinder cones and young lava flows--major scenic features of the park. Lava at Haleakalā National Park includes lower viscosity "ropy flows" (also called pāhoehoe) and the higher viscosity "rough and jagged flows" (also called 'a'ā). There are at least 24 known lava tube caves in the park.

- Archeological and Historic Resources Associated with Native Hawaiian Culture - Haleakalā National Park preserves a high density and variety of precontact and historic archeological resources. These resources exist in many locations and include Native Hawaiian temples (heiaus), trails, altars, fishing shrines, house platforms, and other features. Historic resources such as historic agricultural sites and astrological shelters are also preserved by the park. Some of these resources are still used today as part of the vibrant Hawaiian culture. The upper Kīpahulu Valley, on the park's windward side, exemplifies this rich biodiversity - With its wet rainforests and bogs, the upper Kīpahulu Valley is a key refuge for native Hawaiian plant and animal species that are disappearing elsewhere. The park manages this area as the Kīpahulu Biological Reserve. Within the reserve, no trails or roads are planned in order to prevent nonnative species, which are capable of rapidly spreading and outcompeting native rainforest plants, from penetrating the valley. Entry to the reserve is allowed only to resource managers and scientists who are conducting research and management essential to understanding and protecting this rare relict ecosystem.

· Native Hawaiian Biological Diversity - Haleakalā, rising from sea to summit, and exposed to both the windward moist tradewinds and leeward drying air, features a striking variety of ecosystems that support a tremendous range of native biological diversity. The park protects endemic and iconic species including the nēnē (Hawaiian goose), 'ahinahina (Haleakalā silversword), 'akohekohe (the critically endangered crested honeycreeper), and many other threatened and endangered species. The park's remarkable ecological diversity is recognized by its designation as a United Nations International Biosphere Reserve. Haleakalā serves as a scientific laboratory for studies in climate history and change, classification of species, and taxonomy.

The upper Kīpahulu Valley, on the park's windward side, exemplifies this rich biodiversity - With its wet rainforests and bogs, the upper Kīpahulu Valley is a key refuge for native Hawaiian plant and animal species that are disappearing elsewhere. The park manages this area as the Kīpahulu Biological Reserve. Within the reserve, no trails or roads are planned in order to prevent nonnative species, which are capable of rapidly spreading and outcompeting native rainforest plants, from penetrating the valley. Entry to the reserve is allowed only to resource managers and scientists who are conducting research and management essential to understanding and protecting this rare relict ecosystem.

· Kuleana - The Native Hawaiian concept of kuleana is generally recognized as the responsibility passed down from the kūpuna (ancestors) to present and future generations for stewardship and respect for all things spiritual and physical. Under the traditional 'Aha Moku system of regional boundary management based on observational knowledge and sense of place, certain people had kuleana for site specific management and families had certain roles within their moku (land division). The Pōhaku Pālaha (the place where the moku boundaries converge) marks the beginning of the interconnected system linking the heavens to the depths of the ocean. How kuleana is managed affects other moku outside park boundaries as well as ocean resources. The National Park Service has accepted kuleana for the management of Haleakalā National Park. The National Park Service and the individuals who serve as konohiki (managers and stewards) represent the kia'i, or guardians of this sacred place for Hawaiian people.

There is no doubt Haleakalā is a celebrated national park because of its spectacular natural resources from the volcano, rainforest, desert to its rich biodiversity. The cultural traditions and resources are abundant, park managers embrace stewardship concepts handed down by generations of Native Hawaiians. The ATMP should have chosen the most protective management for such a special place. The Environmental Assessment validates the best, most protective management for the park is Alternative 2 which would prohibit commercial air tours, it states:

Noise: "Alternative 2 would provide 365 days per year that are free of noise from air tours within the ATMP planning area and would reduce noise in the most noise sensitive regions of the Park resulting in direct beneficial effects compared to the No Action Alternative and Alternative 3." (page 39).

Biological Resources: "Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area which would eliminate this source of noise from the planning area. Therefore, there would be a direct beneficial effect on biological resources since the intensity and likely presence of noise from commercial air tours would be less than under the No Action Alternative." (page 64).

Cultural Resources: "Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area. The elimination of commercial air tours from the ATMP planning area would reduce the noise and visual intrusions from impacting the feeling and setting of cultural resources within the APE and result in beneficial impacts, including ethnographic resources and sacred sites, TCPs, archeological resources, cultural landscapes, historic districts, and prehistoric and historic buildings and structures compared to current conditions." (page 81).

Wilderness: "Under Alternative 2, commercial air tour aircraft would not fly within the ATMP planning area, which would offer the greatest protection to Wilderness. Compared to current conditions, this would enhance Wilderness character by reducing the intensity of noise and number of noise events over Wilderness areas. There would be direct beneficial impacts to the natural quality of Wilderness and the opportunities for solitude under Alternative 2." (page 93).

Visitor Use and Experience: "Under Alternative 2, commercial air tours would not fly within the ATMP planning area which would eliminate this source of noise from the ATMP planning area for up to 1.05 million

Park visitors each year. Therefore, there would be a direct beneficial impact to Park visitor use and experience since the intensity and presence of noise from commercial air tours would be less than under the No Action Alternative. Alternative 2 offers the greatest protection of visitor use and experience.” (page 102).

NPS and FAA should be choosing the alternative that had a “direct beneficial impact” and offers the “greatest protection” for Haleakala.

According to the ATMP’s “justification for measures taken,” “The number of flights authorized per year was selected to reduce impacts to noise sensitive areas in the Park including those with Wilderness values, cultural resources, natural acoustic environment, wildlife, and visitor experience while also providing expansive views of the coastal areas to commercial air tour customers. These are noise sensitive areas of the Park where a quiet setting is a generally recognized feature or attribute.” (page 14). This is a subjective goal determined by the agencies in the ATMP, but this does not comport with the National Park Air Tour Management Act (NPATMA), the law that governs this process. The National Park Air Tour Management Act does not guarantee “customers” anything, in fact, allowing commercial activity in a park is a privilege and not a goal under NPATMA or any other the law. The law states:

Objective.--The objective of any air tour management plan shall be to develop acceptable and effective measures to mitigate or prevent the significant adverse impacts, if any, of commercial air tour operations upon the natural and cultural resources, visitor experiences, and tribal lands.

The agencies continuously admit in the ATMP that natural and cultural resources, visitor experiences and Native Hawaiian cultural sites and interactions will be negatively impacted by commercial air tours. The current noisy conditions in the park are violating laws and policies, slight management changes will not protect the park. The ATMP seeks to minimize flights to one path, but this is guidance and likely won't be strictly enforced. This is just a shell game rather than a true comparison of the ideal protection for the park. The “reduction” noted above is not significant enough to justify continuing commercial air tours. In fact, on page 13 of the ATMP, the agencies pick winners and losers where they identify some areas that will have less noise than others. More specifically, in the Environment Assessment appendices (at Table 8. Location point results for Alternative 3), there are a total of 44 locations surveyed for noise, of those, 21 locations report some level of noise above 35 decibels during the day.

We disagree with the NPS and FAA approach comparing noise impacts among the alternatives studied by the agencies. Instead of using the ambient natural sounds (a fundamental resource) as a baseline for judging noise impacts, it compares the alternatives with the current conditions that include thousands of noisy air tours. The ATMP chooses Alternative 3 as its preferred alternative for future air tour management. Using this approach, the Environmental Assessment states, “Time Audible Natural Ambient: Compared to the No Action Alternative, the overall time audible noise footprint for Alternative 3 potentially is only 1% smaller than the No Action Alternative. . .” (page 42). This means noise will continue to permeate the park under the agencies' chosen alternative.

The Environmental Assessment states, “Native Hawaiians have consistently noted that the persistent air tours over the Park unreasonably interfere with the silence needed to perform ceremonies conducted by Native Hawaiian practitioners at these sacred sites, some of which rely on hearing natural sounds. Under the No Action Alternative, these impacts to ethnographic resources would continue to occur.” (page 80). There is no mention of Native Hawaiian views of continued commercial air tours under Alternative 3, the ATMP chosen management direction.

The forest birds in Haleakala require proactive protection to ensure their survival. The ATMP states, “At least two federally endangered forest bird species within the Park, the kiwikiu and 'akohekohe, are at imminent risk of extinction, with fewer than 200 and 1800 individuals, respectively, left in the wild. In addition to impacts to the birds themselves, aircraft noise adversely impacts the NPS's ability to monitor federally protected Hawaiian forest birds, which is done primarily by acoustic-based surveys to detect birdsongs.” (at page 13). If the NPS cannot conduct the studies, the agency could be violating several laws from those governing the NPS to the Endangered Species Act. We would urge the agencies to use the precautionary principle, do not put the forest birds at risk in order to allow commercial air tours.

The ATMP has a prohibition on hovering or circling. The Environment Assessment provides the following reason for this restriction where it states, “This alternative would prohibit hovering and circling because it could negatively impact visitors, cultural, and natural resources, including sensitive sites.” (page 22). We appreciate the consideration of visitors and resources, but we find it baffling air tours are allowed at all when the agencies know they have a negative impact.

General concerns that apply to both parks

As described above, only Alternative 2 meets the Park management objective to protect natural sounds. Alternative 3 does not achieve this objective. Similarly, only Alternative 2 meets management objectives to protect wilderness character. Alternative 3 does not achieve this objective. Had the ATMPs taken as the starting point of the analysis the natural ambient sounds of each park unit, this would have been obvious.

Moreover, the ATMPs EAs for both parks failed to account for the indirect and cumulative impacts of air tour noise in their assessment of the Alternative 3s. In particular, there are a number of entirely foreseeable adaptations to the Alternative 3s that operators will make that will significantly impact park resources, but that were not analyzed, including flights outside the ½ mile ATMP buffer around national parks, the use of larger, noisier equipment, and the use of slower flights that extend the time and noise exposure over the park. Also, the policies to implement the Quiet Technology incentives are too weak and ill-defined to actually mitigate impacts. Each of these is further described below. By not properly analyzing each of these, the assessment of Alternative 3 understates the actual impacts that will result.

Flights outside the ½ mile buffer

As the EA notes in several places, with fewer permitted operations within the ATMP planning areas, some operations will be displaced outside the ½ mile boundary. This could be particularly problematic when the noise of the ATMP routes is added to the noise from the non-ATMP flights. Consequently, the EA understated the noise impact on the park of the ATMP flights because it did not address the cumulative impact of the non-ATMP flights. There are numerous locations where the Park Objectives concerning wilderness character and natural sounds are not met by Alternative 3, and additional noise will further degrade those resources. The Hawaii Volcanoes Coastal Route provides one example, where the ATMP route is only 640 feet from the ATMP planning boundary. Footnote #2.

[Footnote #2: The Coastal Route is 2000 lateral feet from the wilderness area, while the half mile ATMP planning area is 2640 feet from the wilderness area, a difference of only 640 lateral feet.]

The noise of aircraft flying 640 feet further from the Wilderness Area was not analyzed.

The noise from non ATMP tours should have been modeled by the EA where such occurrences are predictable. In the case of the Coastal Route, it is likely that two flights outside the ATMP planning area would have similar noise impacts to one flight on the ATMP Coastal Route. Moreover, it is likely that not only will operations be displaced, but in order to meet Quiet Technology incentives, it is likely that operators will use Quieter Technology flights within the park and noisier technology outside the park. The noisier equipment on the “half mile” coastal route could have a greater impact than the actual ATMP Coastal Route. The expected cumulative adverse effects of the “half-mile” coastal route, coupled with the lack of analysis in the EA, make the ATMP Coastal Route severely deficient.

Even without considering the cumulative impacts, the Coastal Route is extremely problematic. It should be noted that the ATMP Coastal Route does not provide an adequate buffer for the adjacent Wilderness Area. The Coastal Route is 2000 feet off shore but extends ¼ mile (1,320 feet) on either side, leaving only a 680 foot buffer to the wilderness area. According to the EA, “The Coastal Route runs bi-directionally offshore along the edge of the Park boundary, but within ½-mile of the Park boundary. Air tours on the Coastal Route would maintain 2,000 ft. lateral distance from shore and a minimum altitude of 2,000 ft. AGL” (EA, 21). But the EA for both parks also notes that “Air tour routes within the ATMP planning area are represented by a line with a ¼-mile buffer on either side of the route that indicates the acceptable range of deviation that would not trigger enforcement action” (EA, 20).

Flights 680 lateral feet from a wilderness area provide negligible additional buffer than what is provided by the 2,000 foot minimum height. The noise path following the hypotenuse of a triangle with legs of 2,000 feet (height)

and 680 feet (lateral distance) is only 112 feet longer than a direct overflight path. The lateral distance to the Wilderness Area is not sufficient.

The cumulative impacts of non-ATMP and ATMP routes, including the Coastal Route and other routes where displaced flights may impact the parks, and particularly wilderness areas, must be quantified and analyzed.

Larger, noisier aircraft

Larger, and likely noisier, aircraft are another possible indirect impact not considered. Given that operations are allocated, and not the number of passengers, it is entirely foreseeable that operators will seek to maximize the number of passengers with possibly noisier aircraft to increase the number of paying passengers. This outcome will change the mix of aircraft modeled by the EA. The only protection is the unspecified (by the EA and AMTP) Quiet Technology and replacement requirements (see below for a further discussion concerning the insufficient Quiet Technology policy). The replacement and Quiet Technology policy must be updated as described below.

Longer time in the ATMP area

It is almost certain that the EAs' noise modeling has understated the time aircraft will spend in the ATMP planning areas. Given that only operations are allocated, and not time in the ATMP planning airspace, it is entirely foreseeable that operators will seek to lengthen flights or increase revenue generating hours of flights, by flying at a slower rate, increasing noise exposure in the Park. Footnote #3.

[Footnote #3: It should be noted that we have heard concerns from helicopter operators who feel that the sharing of routes by fixed wing and helicopters, due to their different speeds, creates safety hazards. While we are not in a position to judge the level of hazard, there is no need to create multiple routes for each aircraft type. The aircraft can be segregated by simple time of day or day of week schedules for each aircraft type on a particular route.]

This scenario, which the ATMP allows for, would make the impacts analysis in the EAs inaccurate and inadequate. The AMTPs and EAs should have included time limits to routes in the form of an annual time budget for the year. The annual time over the ATMP planning areas that was modeled should have been disclosed. That time was the basis for the EAs' decision and should have been described in the EA as a condition of the operations granted. Instead, the time over the ATMP planning areas was not disclosed. It is not possible to know if the time assumptions were reasonable and what impact operations of greater time might have, as the ATMPs allow for aircrafts to spend greater time in the ATMP planning areas than the EAs analyzed. The lack of this information makes the ATMPs and EAs analysis of Alternative 3 inadequate.

The FAA and NPS relied on numerous time-above metrics in assessing the impact of noise, and more time in the ATMP planning area is directly related to more impacts. To achieve the impacts shown in the Alternative 3 analysis, the time operators are over the ATMP areas must be limited to those times in the modeling. Footnote #4.

[Footnote #4: time-above metrics (e.g. time audible, time above 35dba, time above 52dba)]

Consequently, Alternative 3 needed to contain an annual noise budget as much as it needed to limit operations to the number modeled. The budget should be based on the assumptions in the EA noise modeling, and if the budget is exceeded before the permitted operations are used, no further operations shall occur that year or those operations shall deducted from the following year's allocation. Footnote #5.

[Footnote #5: An annual time budget, based on the cumulative time each operation was modeled in the ATMPs planning areas in the EA, would provide operators with flexibility due to weather, traffic, and other factors throughout the year, yet ensure that impacts are no greater than those modeled by the EA. If operators were to claim that the annual budget developed from the modeling assumptions is not sufficient due to safety or some other consideration, this would mean that the initial EA modeling assumptions were wrong and understated the noise impact of flights, and would need to be recalculated with operations further limited to limit impacts on park resources.]

It should be noted that the total time an operator is over the ATMP planning areas is currently required to be tracked and is part of the required reporting data, so determination of compliance with the operations would be no different than for the time.

Moreover, without a time limit within the ATMP planning areas, the ATMP's no hovering or circling rules are ineffective. Not only are these terms not defined, but operators could easily evade the no hovering rule by simply

flying slower at specific locations, and possibly during the entire flight. Consequently, without adding a time limit, the EA modeling almost certainly understates the noise impacts.

In addition to prescribing annual operations, the ATMPs Alternative 3 should have prescribed the annual time permitted in the ATMPs planning areas. Otherwise operators will just fly slower and increase impacts to resources beyond those described in the EA. The impact of operations is directly related to the time those operations are over the park.

Quiet Technology Policy

Neither the EAs nor the ATMPs define or describe Quiet Technology. Consequently, the proposed Quiet Technology policy is insufficient to protect park resources from increasing impacts. The current plan treats quiet technology as a static condition and will not encourage further reductions in noise levels; it rewards quieter technology with more times to fly (extending hours during the day and on Wednesdays), but does not incentivize future gains. In fact, as more quiet technology aircraft are integrated into the fleet mix, the “quiet technology times” will only get louder as more aircraft take advantage of those times.

The proposed incentives for Quiet Technology are poorly designed and do not reflect a serious effort to reduce adverse impacts from operators. Had the agencies taken this aspect seriously, they would have proposed and analyzed incentives in the ATMPs and EAs that create a competitive marketplace for quiet, not incentives that expand operating times and days.

For example, a much more effective Quiet Technology incentive would be to reserve 25% to 50% of operations for the operators who fly the quietest technology. To implement such a policy, the FAA/NPS, based on the reporting data submitted by operators, would determine the rank of each operator in terms of their use of Quiet Technology equipment. In the first and second year of the ATMP, the distribution of operations would be the same as currently proposed in the ATMP, with the 25% -50% reward for Quiet Technology incentive being awarded as in the current ATMP. In the third year, the 25%-50% would be allocated to operators in proportion to their rank during the first year. In subsequent years, the 25% - 50% Quiet Technology incentive would be redistributed based on the next calculation year. Effectively, this would create a 1 year lag to allow the NPS/FAA time to collect and analyze the reporting data and allow operators to adjust their schedules based on the new allocation.

The AMTP does not define Quiet Technology, but the definition is critical to the minimization of impacts on park resources. We propose a very simple definition of Quiet Technology aircraft. Quiet Technology aircraft are those aircraft with the least noise impact on the park.

Before exploring this definition, however, it is important to recognize that previous work by the FAA published in Advisory Circular AC-93-2, is not helpful or appropriate for application in AMTPs. This document lists aircraft meeting a “noise efficiency standard” that reduces noise per seat.

The Advisory Circular is outdated and a “noise efficiency standard” is a poor definition of Quiet Technology because it may or may not correspond to a lesser impact of overflight noise on parks. The simple reason is because noise efficiency and quiet technology are not the same thing. Less noise per passenger seat does not equate to less noise and fewer impacts per operation on the park. Therefore, noise efficiency does not measure the effectiveness of quiet technology on parks.

It is actually impossible to determine which technology is quietest using AC-93-2 criteria, because the Advisory Circular employs five different equations (see below), three different metrics (EPNL, SEL, and L_{Amax}), and 5 different methodologies.

$$\text{EPNL(H)} = 80 + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

$$\text{SEL(J)} = 77 + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

$$\text{L}_{\text{Amax}}(\text{F}) = 69 + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

$$\text{L}_{\text{Amax}}(\text{G}) = 74 + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

$$\text{L}_{\text{Amax}}(\text{G}) = 77 + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

The FAA AC-93-2 noise efficiency or per passenger seat noise metric, as expressed by the equation

$$\text{Noise Threshold} = X \text{ dB} + 10\log(\# \text{ PAX seats}/2) \text{ dB}$$

is not a useful metric to identify technology that has the least impact on a national park. If it were used as the criteria, it would be very problematic and exacerbate the problem discussed above in the section entitled “Larger, noisier aircraft.” It is a metric suited for minimizing the noise per passenger, not the noise imposed on the park. Only if the park were allocating passenger seats would it be a viable option. But since parks allocate operations and not passenger seats, the metric has the perverse effect of maximizing aircraft noise impacts on the park per operation. Footnote #6.

[Footnote #6: It should be noted that it maximizes noise impacts within a given bound, the set of aircraft meeting the A-93-2 criteria. It encourages operators to use the largest/noisiest equipment the market can sustain, and therefore incentivizes those aircraft with the most noise.]

Consider, for example, Figure 1 from AC-93-2 (https://www.faa.gov/documentLibrary/media/Advisory_Circular/AC_93-2.pdf).

The vertical axis is the noise level; the horizontal axis is number of passengers. Aircraft that fall below the pink line qualify as quiet technology. The pink line defining quiet technology is actually a function of the number of passenger seats on the aircraft. In the equation, the independent variable is passenger seats while the dependent variable is the noise level experienced in the park. The greater the number of passenger seats, the greater the noise impact on the park that qualifies as quiet technology.

The curve of the pink line results from the logarithmic component of the equation (ten times the logarithm of the number of passenger seats divided by 2). The shape of the curve seems to be based on an equal energy hypothesis. The rationale for the initial threshold value (the initial starting value for 1 passenger in Figures 1-4 of AC-93-2) is not given.

The assumption underlying this equal energy hypothesis is that the combined impact of aircraft noise events on the park is related to the combined sound energy of those individual noise events on a per passenger seat basis. Consequently, each doubling of the number of passenger seats allows the addition of 3 dB to the permitted level, just as each doubling of the number of equal noise events (flights for example) adds 3 dB to the total noise level. For example, a helicopter with 4 passengers is permitted to be 83 dBA, a helicopter with 8 passengers is permitted to be 86 dB, and two operations of the 4 passenger helicopter have the same combined noise level as one operation of the 8 passenger helicopter.

The major problem with the AC-93-2 equal energy hypothesis is that it would be an effective metric only if the parks allocated passenger seats, not operations, to operators. Footnote #7.

[Footnote #7: There are additional problems with the AC-93-2 quiet technology designation that should also be noted, including:

1. The use of multiple non-comparable noise metrics.
2. The use of a threshold for quiet technology designation.

The threshold actually is a disincentive for the development of future quiet technology and a disincentive for the use of the quietest technology currently since there is no reward for being quieter than the threshold.]

If parks allocated a limited number of passenger seats, then any distribution of those seats among aircraft would have the same noise impact on the park. Footnote #8.

[Footnote #8: If for example, 16 passenger seats were allocated, then that allocation can be accomplished for the same approximately 89 dB with either one 89 dB 16 seat aircraft, or two 86 dB 8 seat aircraft, or perhaps a 83 dB 4 seat aircraft]

In this case, the impact on the park is dependent on the number of seats allocated, and independent of the number of operations used to meet the allocation.

The ATMPs, however, allocate operations instead of allocating passenger seats. In this real world condition, the noise in the park is dependent on the size of the aircraft conducting the allocated operations: the larger the aircraft, the more the impact on the park.

Instead of all configurations of seats among operations resulting in the same noise impact when allocating passenger seats, when operations are allocated using the A-93-2 equations, the incentive is to increase the noise effect on the park. For example, if the limit were four operations, that could be met with either four 4-passenger

seat operations which combine to 89 dB, or four 8-passenger operations which combine to 92 dB, or four 16-passenger operations which combine to 95 dB. Clearly, the impact on the park in the above example is dependent on, and increases with, the number of seats per aircraft. With limited operations, the operator will have an incentive to use the largest aircraft the market can sustain, causing the largest noise impact on the park.

The reason for quiet technology incentives in the ATMPs is to promote the use of quieter equipment. But the currently proposed incentives, and particular, if they are combined with the AC definition of Quiet Technology, will instead, incentivize larger noisier aircraft. There are other incentives that more effectively promote the use of quiet technology, such as rewarding operators with operations for their use of quiet technology, that we outline but which were not studied and presented in the ATMPs and EAs.

Because quieter technology exists and is constantly being developed, and that today's quietest technology is tomorrow's noisy technology, it is important to define quiet aircraft technology in terms of the quietest aircraft. Footnote #9.

[Footnote #9: For example, Stage II commercial aircraft are now considered noisy but, were once considered quiet technology.]

Static definitions, such as those in AC-93-2 become outdated and disincentives that discourage future technology improvements beyond the minimum threshold. Once the threshold for quiet technology is met, there is no incentive to develop even quieter equipment and no differentiation between aircraft meeting the threshold. Footnote #10.

[Footnote #10: Moreover, it should be noted that "quiet technology" is really a misnomer, since these "quiet technology" aircraft are still very loud. Quietest available technology is a better term.]

A better alternative to the AC method of identifying quiet technology equipment is to use the AEDT model to determine which operators used the quietest equipment, but such a process is very time and labor intensive, and ultimately unnecessary.

The simplest and most relevant measure of Quiet Technology for national parks is the Sound Exposure Level (SEL) of an aircraft in level flight at 2,000 feet, and it can easily be employed to determine which operators used the quietest equipment. The SEL metric provides a good comparison of noise between aircraft. Footnote #11.

[Footnote #11: "The Sound Exposure Level (SEL) metric represents all the acoustic energy (a.k.a. sound pressure) of an individual noise event as if that event had occurred within a one-second time period. SEL captures both the level (magnitude) and the duration of a sound event in a single numerical quantity, by "squeezing" all the noise energy from an event into one second. This provides a uniform way to make comparisons among noise events of various durations." (FAA, Fundamentals of Noise and Sound, https://www.faa.gov/regulations_policies/policy_guidance/noise/basics/)]

The other possible metric, the L_{Amax} provides the highest decibel level and measures the impact when it is most intrusive, but it lacks a measure of the duration of the event. Footnote #12

[Footnote #12: L_{Amax} is the maximum A-weighted sound level of an event such as an overflight.]

The SEL metric combines both magnitude and duration in one metric. The 2,000 foot height is the most common operation permitted by the ATMP. Footnote #13.

[Footnote #13: The FAA and NPS should develop criteria beyond just the A-weighted SEL to account for other acoustic characteristics such as frequency and sound quality that also determine the intrusiveness of the noise.]

The SEL noise level can be measured from overflights or derived from the FAA's AEDT noise model, either through modeling or the so called "Noise Power Distance" curves. Once the SEL of each aircraft used in overflights is known, the aircraft can be ranked from quietest to noisiest. From that, a simple weighted average of the "noise rankings" based on the number of operations of each operator will allow comparison between operators to determine their relative rank. For example if there were two operators, and one flew 75 operations with the quietest aircraft and 25 with the second quietest aircraft, and the other operator flew 50 operations with the quietest aircraft and 30 operations with the second quietest aircraft, their weighted average noise ranking would be:

Operator 1: [(75 ops X 1 rank) + (25 ops X 2 rank)]/100 Total ops = 1.25

Operator 2: [(50 ops X 1 rank) + (30 ops X 2 rank)]/80 Total ops = 1.375

The operator with the lowest weighted average ranking is the operator with the least impact on the park, and the one entitled to the greatest reward or incentive for quiet technology.

After the Quiet Technology rankings of each operator are calculated, and each operator is ranked, the 25% - 50% of operations reserved for operators with the quiet technology can be distributed using a formula such as:

Rank of Operator in Use of Quiet Technology Incentive (Percentage of Quiet Technology Operations Awarded)

1 30%

2 25%

3 20%

4 15%

5 10%

The ATMPs and EAs analysis of Alternative 3s failed to adequately define Quiet Technology and provide meaningful incentives for use of Quiet Technology.

Conclusion

In order to protect and preserve Haleakala and Hawaii Volcanoes, the agencies should adopt Alternative 2 (prohibition on air tours).

The ATMPs and EAs for these parks do not propose a serious attempt to address the significant adverse impacts from air tours to the natural and cultural resources and the visitor experiences. A serious attempt would have studied and presented alternatives that include features such as no new entrants, elimination of the Coastal Route at Hawaii, the consideration of cumulative impacts of non-ATMP air tours, the establishment of time in ATMP airspace allocations, and the establishment of an effective Quiet Technologies incentives program.

Sincerely,

Neal Desai Elizabeth Merritt

Correspondence: Thank you for providing comment opportunity on the proposed Air Tour Management Plan for Hawaii Volcanoes National Park

I have visited/hiked extensively in Hawaii; have visited this Hawaii Volcanoes park and Haleakala, both, on occasion, over the past fifty years, have much feel on the value of other state and national parks there; what they mean in terms of the larger environment, history, and specifically in terms of aviation noise management.

Our Sierra Club, Hawaii Chapter's comments are the official Sierra Club comments. But I offer some ideas, from individual expertise, following the suggested template within the Request for Comments.

1. What Will or Won't Work

I have nothing to add specifically right here, beyond the great detail in the Agencies' draft.

2. Assumptions

• Quiet Technology - Helicopters

(In general, there is really no such thing as a "quiet" helicopter. This is common knowledge; however, one notes modest, quantitative noise-improvement within the EA Appendices Detailed Analyses, attributed to introducing so called "quiet" helicopters, so as always: We value what we get.)

• Innovative Aircraft Technologies (involving quieter electric motors), are, however, surging suddenly, permanently, into Prominence. See 2023-11497.pdf (govinfo.gov): (signaled by the extraordinarily lengthy, June 14, 2023, FAA Notice, re air taxis' new technology development, operations and law, with, or significantly informed, by *additional* predictive content, data, and consequent regulations, in light of that data/regulation's status by the time of issuing the final EA and ATMP/ROD for this parks Plan. A fifteen- year overview statement/plan, as to therefore *phasing out remaining conventional helicopters*, will be anticipated; possibly tied to the next three five-year planning periods: updating what to expect in each phase. The ROD should state to what extent noise data in the draft EA drew on improved, up-to-date forecasts for electric-powered aircraft.

3. Factual Information to insert or to Modify

FAA and NPS, and interested public! ought continue to draw from newly issued, 160-page "FAA Publication for Comment"; comments due August 13, 2023 in re Federal Register FR Document: 2023-11497 (referenced above)

4. Reasonable Alternatives: Alternative Two (Air Tour Ban): supported by the Sierra Club.

If even not finally selected, as preferred, per the Club's Conservation Policy on Air Tours, should be retained as desirable baseline Contingency Alternative, as new information arises; at minimum, its re-consideration should be stated to occur at five-year intervals until the ATMP is revised or withdrawn. (The five-years' intervals would in turn facilitate and integrate consideration of the innovative aircraft technology described in the June 14, 2023 Federal Register pages cited previously.)

5. Important Elements of the HAVO Alternatives

• Unique 3-D, aerial perspective(s) is provided in unique way in Alternative's Element allowing "QT": with special, closer access thereby provided, to an active Volcano. This gives reason to support that item in the alternative. Given eruptions in a quite unique, Park- far- "corner" location in thus constricted time and Park space, it affords direct, closer aerial viewing of active Park Volcano-target, relative to adjacent Park acreage in other directions, yet removed from trails and ground visitor overlooks,. This improves viewing of oft-erupting site, yet note strict control in the EA as to noise, related to such overflights: being briefly admitted, yet spatially confined, within unique, incentive-, supplemental corridor for *quiet technology only*, on Wednesdays.

• Both alternatives drastically reduce air tour noise intrusion still currently allowed, as seen from Lmaxes, Time Above, etc. (the Ban Alternative nonetheless achieves this more extensively than Reduced Routes or Flying Time Allowances!)

• Practical, meaningful incentives (including appropriately creative flexibility within a given individual flight plan) are appropriately stated for Quiet Technology aircraft.

• The "BAN" alternative is great in knocking down noise and GHG emissions most efficiently and completely. (But both alternatives reduce that commendably, if compared against current operations (2017-2019), and particularly against the unseemly high IOA based on late 90's flights numbers.)

- Uses some essentially uninhabited Coastline stretch to align a Flight Corridor, taking proper advantage also of substantial irregularities in Park boundary, thus annoying no, or fewer, casual Park visitors - being otherwise removed from popular ground trails and vista points.
- Ensures extended "Respite" Hours from tour aircraft noise closer to Sunrise and Sunset.

I appreciate the opportunity to comment, especially to see updated, detailed DOT Sec. 4(f) analysis, Sec. 106 detailed analysis, (location point maps and noise-impact charts, etc.) to ensure this Project/Plan confirms with high quality expectations of longstanding/protective Federal Law. I value especially the intricate Noise Maps and Location Point Noise Data in the Technical Appendix, and the tremendous achievement/advance in Noise Measurement and Documentation and Analysis with Supplemental Metrics. (Even now under continuing FAA Review to end of July, as per its separate, recently published Notice for Comment.)

Subject: Draft Environmental Assessment for an Air Tour Management Plan for Hawai'i Volcanoes National Park

Aloha:

The Federal Aviation Administration (FAA) and National Park Service (NPS) have cooperated to develop an air tour management plan (ATMP) for Hawai'i Volcanoes National Park (Park) pursuant to the National Parks Air Tour Management Act of 2000 (NPATMA). A draft environmental assessment (DEA) has been prepared pursuant to the National Environmental Policy Act (NEPA) to support the ATMP.

The implementation of an ATMP for the Park is the proposed action as defined by NEPA. The ATMP intends to mitigate or prevent significant adverse impacts of commercial air tour operations on natural and cultural resources, designated, eligible and potential Wilderness Areas, visitor experience and Native Hawaiian Traditional Cultural Properties (TCP) including sacred sites and ceremonial areas. The DEA describes that noise from the existing level of air tours negatively impact Native Hawaiian sacred sites and areas where traditional cultural practices occur within the Park and impede the NPS's ability to fully meet the Park's purpose of perpetuating endemic Hawaiian ecosystems.

Kamehameha Schools Keauhou, Ka'ū lands are situated immediately north of Kīlauea Crater, east of the Mauna Loa unit and south of the 'Ōla'a Forest tract. We offer the following comments:

Introduction

Kamehameha Schools is a private trust established by Ke Ali'i Bernice Pauahi Bishop, the great granddaughter and last royal descendent of Kamehameha I. Our mission is to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry.

KS approach to its 'āina portfolio is through culturally-rooted stewardship of its diverse real estate portfolio of approximately 365,000 acres of 'Āina Pauahi (KS lands) in the State of Hawai'i. . Through this stewardship approach, our organization believes the outcomes we will see include Waiwai (wealth, prosperity), Lawa Kūpono (sustainability), and Honua Ola (well-being) to build resilient communities across Hawai'i for the betterment of our Lāhui (Native Hawaiian community).

KS has actively managed 'Āina Pauahi for native ecosystem health and well-being, cultural landscape restoration and stewardship including the lands of Keauhou, Ka'ū.

The NEPA Study Area

Kamehameha Schools believes that the natural and cultural resources, Native Hawaiian traditional practices and sacred sites identified and occurring in the Park are elements of a traditional bio-cultural landscape that does not stop at the Park boundary. This landscape extends across a large region and onto our Keauhou, Ka'ū lands.

We recognize that commercial air tours operating outside of the ATMP planning area- 5,000 feet above the ground and/or more than ½ mile outside the Park boundary are not subject to regulation under the NPATMA. The DEA describes that ...there would be no limitations on the number of air tours that could occur outside the ATMP planning area (page 17) and ...it is reasonably foreseeable that operators would fly just outside of the ATMP planning area surrounding the volcanoes in order to view Kīlauea crater or any active lava (Page 18).

While certain tour operators have reported current flight paths to the Park over our lands (DEA, Figure 2), if specific alternatives in the DEA are implemented it is likely that flights and prolonged hovering over our lands will increase. As a result, on-going educational programs, endangered species recovery and native ecosystem restoration, traditional practices, and cultural sites on our lands could be impacted.

Kamehameha Schools Keauhou, Ka'ū Lands

Thousands of students annually participate in educational programs that are based on our Keauhou, Ka'ū lands. The NPS has documented the effects of commercial air tours on Park visitor experience over many years and has commissioned studies that indicate aircraft noise negatively impacts the visitor experience and disrupt a variety of activities that visitors go to the Park for (DEA, Pages 111-113). For Kamehameha Schools, these documented impacts and disruptions also effect visitors to our lands- students participating in educational programs and cultural practitioners.

Ecological communities at Keauhou, Ka'ū are intact and diverse, and includes some of the highest quality endangered forest bird habitat remaining in Hawai'i. Threatened and endangered forest birds in this area include the 'ākepa (*Loxops coccineus*), 'alawī (*Loxops mana*), 'akiapōlā'au (*Hemignathus wilsoni*), and 'i'iwi (*Vestiaria coccinea*). These lands provide habitat for at least three additional species of threatened or endangered wildlife ('io (*Buteo solitarius*), nēnē (*Branta sandvisensis*), and 'ōpe'ape'a (*Lasiurus cinereus semotus*)) and 25 species of threatened and endangered plants, including at least one species (*Vicia menziesii*) that is only found here and two others (kīponapona (*Phyllostegia racemosa*) and hāhā (*Cyanea stictophylla*)) whose numbers are so low that they are considered "Special Concern" by the U.S. Fish and Wildlife Service (USFWS). These threatened and endangered species are managed cooperatively with the USFWS and the State of Hawai'i Department of Land and Natural Resources under a 50 year Safe Harbor Agreement. The Keauhou Bird Conservation Center, one of only two propagation facilities for endangered Hawaiian birds, including the 'alalā (*Corvus hawaiiensis*), is also located here.

The DEA describes that ...noise from commercial air tours may impact wildlife in a number of ways, including altered vocal behavior, breeding relocation, changes in vigilance and foraging behavior, direct collisions, and impacts on individual fitness and the structure of ecological communities (Page 68). The DEA is specific in recognizing that endangered forest birds ... are vulnerable to the effects of low-level overflights including commercial air tours because many forest birds forage and nest in the upper parts of the forest canopy that are most exposed to noise and physical effects from aircraft (Page 70).

Kamehameha Schools strongly agrees with these critical points. As active managers of the resources on these lands, we have observed noticeable changes in forest bird behavior from the existing levels of commercial air tours. Such changes in behavior could reduce reproductive rates and could have cascading effects on other species, for example pollination and reproductive success of endangered lobeliads and other species that are pollinated by these endangered forest birds. Such bird pollinated species present at Keauhou, Ka'ū include *Cyanea stictophylla*, *Cyanea shipmanii*, *Clermontia lindseyana*, *Clermontia peleana*, and *Vicia menziesii*.

Certain alternatives described in the DEA will provide direct beneficial effect on and protection for visitor experience and biological resources, and their habitats in the Park. We are concerned however that visitor experience and these same resources and habitats outside of the Park could be impacted.

Conclusion

Thank you for the opportunity to provide comments. We look forward to continuing consultation with the FAA, NPS and all other parties. Please contact me with any questions at belindse@ksbe.edu.

Correspondence: I write to you today on behalf of Airbus Helicopters to echo the comments of Helicopter Association International and other industry stakeholders in opposing the draft ATMP for Hawai'i Volcanoes National Park.

We disagree with the severe reduction in Interim Operating Authority (IOA) and urge the National Park Service (NPS) and the Federal Aviation Administration (FAA) to do more due diligence to determine the true impacts to the environment, operators, the public, and parks resources of this proposed reduction in flights in the ATMP process. We also have flight safety concerns with the proposed new routing at Hawai'i Volcanoes National Park.

According to the NPS documents, from 2017-2019 there were 11,376 tours per year on average to Hawai'i Volcanoes National Park. This draft ATMP would aggressively cut flights to 1,565 commercial air tours authorized per year, a staggering 86% reduction in flights.

We encourage the NPS to reach out to the operators to determine the economic impacts of implementing a management plan that so severely restricts overflights. We are concerned that limiting the number of allocations will not allow for a profitable business nor the realistic prospect of becoming profitable, if demand for air tours increases.

The draft plan's flight allocation numbers do not take into consideration fluctuations in the market and fluctuations in unforeseen and temporary operator limitations. Additionally, industry marketing trends change and NPS should respect that dynamic, as visitors alter their destinations according to those trends.

The ATMP provides for "quiet technology incentives", however, there is no definition of quiet technologies. The ATMP only notes that "the quiet technology incentive for air tours conducted with quiet technology aircraft is only applicable to those aircraft that the agencies have determined, on a case-by-case basis, qualify for the quiet technology incentive". To incentivize operators to invest in quiet technology, Airbus recommends defining "quiet technologies" to provide operators with greater certainty prior to making their investment decisions.

At Airbus, we are committed to reducing the sound levels of our helicopters to ensure they are smoothly integrated into citizen's everyday lives. Complying with existing industry-wide sound regulations is no longer enough: our goal is to go beyond them. Therefore, we continuously look at ways to make our rotorcraft even quieter and invest in technologies to do so. Today, our H130 (predominantly used by tour operators), H135, H145 and H160 helicopters are industry-wide benchmarks for low sound levels in their respective classes. While the ATMPs do real economic harm to the operators, we are also concerned about the impact on visitors who choose to experience the National Parks by aerial sightseeing.

As we move past the pandemic years, many National Parks such as Hawai'i Volcanoes National Park saw their resources strained by the large number of visitors as the public began to travel again. Air tours are an important option for many visitors conducting a once-in-a-lifetime trip to see famous natural landmarks. Visitors taking advantage of air tours benefit by avoiding traffic, wait times, and walking trails that are inaccessible for the disabled or elderly, while reducing congestion and demand on park infrastructure.

The National Parks should be available for all visitors to see. Limiting flights over the park unfairly limits the elderly, very young, handicapped, and others to experience the park. Limiting flights over the Parks is discriminatory to those who might not have the time, resources, or physical ability to see the park any other way.

Like ground-based tours, air tours are a valid part of our visitor experience, providing a unique window from which we can share our cultural, historical and environmental sites with the world. Air tours require no ground-based infrastructure at the park, which allows visitors accessibility without the need for roads, trails, signs, bathrooms, garbage cans, or other services.

By further restricting an already limited number of allowable air tours, we are reducing opportunities to access our parks in a way that leaves little to no environmental footprint or disturbance. Through carbon-offset efforts and strict altitude requirements to control noise - just to name a few efforts - air tour operators are working to ensure they are responsible stewards of the nation's parks. There are currently no restrictions or mitigation efforts for loud vehicles operating in the park, some of which make more noise than a passing helicopter.

Additionally, the operator pays a fee each time an air tour flies within the park boundary. The National Park Service collects hundreds of thousands of dollars in revenue each year from air-tour flights. Air tours require no park infrastructure, leaving the bulk of overflight fees to go toward supporting services that benefit the public.

On safety, the current route structure of set routes and altitudes is cause for concern. Strict corridors with fixed- and rotary-wing at the same altitude along with the changing weather patterns in the Hawaiian Islands is a very real safety concern.

Also of concern, the proposed routes now move air tour operations over communities the industry has worked with over many years to avoid flying over. Moving routes will also move the sound of operations over new areas. Air tour operators are committed to flying responsibly and flying neighborly.

Undoubtedly it is essential to preserve the National Parks, yet still enable visitations for all to enjoy. Airbus opposes the draft ATMP. Commercial air tour operators and industry partners, such as Airbus, would welcome collaborative engagement with the FAA, NPS, and all interested parties to benefit the park and the visitors.

Sincerely,

Treg Manning

Correspondence: As stated in Hawai'i Volcanoes National Park's draft ATMP, "air tours originating on Hawai'i Island from Hilo, Kailua-Kona, Hāpuna and Waikoloa, and airports on Maui and O'ahu would still continue to fly more than 1/2-mile outside of the Park's boundary at or below 1,500 feet AGL."

As proposed, Hawaii Volcanoes' draft ATMP shifts the burden of air tour impacts--the noise and intrusion-- from the park to its neighbors.

Located within the park, a view of Kilauea's summit caldera is the ultimate goal of nearly every air tour. As configured on the ATMP map, the airspace closest to the caldera outside the park's 1/2 mile boundary encompasses the Volcano Community.

The proposed ATMP will significantly impact the Volcano Community. The Volcano Golf Course Subdivision, Volcano Village, and Mauna Loa Estates will likely suffer the greatest impacts from a concentrated number of air tours.

IS THIS REALLY THE PLAN? That the park would shift its burden of air tours onto its adjacent communities, knowing that Volcano residents especially will suffer immensely from the constant noise and intrusion over their homes and neighborhoods?

Correspondence: Aloha,

The preferred alternative (Alternative 3) will lead to undesirable impacts to wilderness character, particularly along the park's coast (Coastal Route) and in the East Rift Zone (Pu'u'ō'ō Route).

The horizontal distance from the coast allowed by Alternative 3 is 2000 ft with a 1/4 mile (1,320 ft) buffer, which means that air tours could approach as close as 680 feet from the shoreline. Most of the Park's backcountry campsites - and overnight backcountry opportunities - are along this shoreline. It is unclear whether the plan takes into account the noise and visual disruption that this closest allowable flight path (rather than planned average route) would have on wilderness character, but one would reasonably infer that the closer the flight path, the greater the negative impact.

Alternative 3 also allows negative impacts to wilderness character via the Pu'u'ō'ō Route. While the Route and Quiet Technology area mostly do not overlap with the East Rift Zone wilderness, air tours will still be visible from within that wilderness area. For example, the viewshed from Nāpau trail looking across Nāpau Crater towards Pu'u'ō'ō vent would be particularly negatively impacted by air tours. This viewshed is accessed after hours of hiking; seeing an air tour over Pu'u'ō'ō from this point would greatly diminish the backcountry experience of wilderness and solitude.

In Alternative 3 the protection of wilderness values seems inconsistent for different parts of the park, with the coastal wilderness being most negatively impacted. Alternative 2 would offer the greatest protection of wilderness character throughout the park.

Correspondence: Dear ATMP Team Members,

I do not concur with the Federal Aviation Administration's finding that the proposed Air Tour Management Plan for Hawai'i Volcanoes National Park will have no adverse effects on historic properties. I feel the FAA's Section 106 conclusions have ignored the community's concerns and questions regarding the air tour nuisance problem in the park and surrounding neighborhoods. Implementation of the plan presented will clearly effect historic areas outside of the park boundaries, which the ATMP is required to consider according to 40 Code of Federal Regulations, Section 1508.8. Why does this plan continue to ignore this rule that both the FAA and NPS have been made aware of? Just citing the definition of air tours and the specific regions mentioned in the Air Tour Management Act of 2000 does not relieve the FAA from the responsibility of obeying federal NEPA regulations concerning indirect effects.

Also, all the lists, routes, rules, and regulations in the world are worthless without monitoring and enforcement. This was pointed out to the NPS and FAA by the Government Accountability Office back in

2006 after an audit of the ATMP for HVNP that is still under development. When asked about this in 2010, FAA ATMP Administrator Keith Lusk wrote: "We are not that far along in the development of the air tour management plan for Hawaii Volcanoes National Park to provide any specifics regarding your question about possible monitoring methods." Now, thirteen years later, this obvious flaw in the ATMP and Section 106 documents still has not been addressed. And this is despite the facts that both the FAA and NPS have been made aware that the FAA's recently installed, state-of-the-art, ADS-B tracking system does not function over many of the historic properties listed and that the NPS has no flight tracking equipment.

I am also very concerned that no videos of the recent Section 106 Zoom meetings are made available to the public, despite that being the standard procedure for all other government agencies. A review of the November 12, 2022 consulting party meeting would show, if it were available, that many Native Hawaiian elders - - whose ancestors have been here for over 40 generations - - felt that there should be absolutely no air tours over the park, while the vast majority of air tour operation owners - - who have only been profiting from this destruction of the park for a bit over two decades - - are Caucasian males. How can allowing these extremely noisy and disruptive businesses to continue polluting our precious island environment be considered anything but the codification of white colonial imperialism into the HVNP regulations for perpetuity?

Please take the time to consider these comments.

Aloha,
John Carse

Correspondence Type:	Letter			

Correspondence: Aloha e Ms. Walker:

The Office of Hawaiian Affairs (OHA) is in receipt of your March 27, 2023, letter continuing National Historical Preservation Act (NHPA) Section 106 consultation and providing a Finding of No Adverse Effect for the Hawai'i Volcanoes National Park (HAVO) Air Tour Management Plan (ATMP). The Federal Aviation Administration (FAA) is preparing this ATMP in cooperation with the National Park Service (NPS) for all commercial air tours flown at or below 5,000 feet above ground and within a half mile of the HAVO park boundaries. Absent an ATMP, commercial air tour flights over HAVO would continue virtually unrestricted under the FAA's Interim Operating Authority (IOA) with no limits on flight routes, altitudes, or times of day. Consultation was first initiated in March 2021 via a letter from the FAA, with various virtual meetings and updates occurring between October 2021 and present.

The current letter indicates that Alternative 4 has been selected as the preferred alternative and that there would be no adverse effect to historic properties from its implementation. This alternative would include three main flight routes (Kahuku, Coastal, Pu'u 'ō'ō) with set flight times between 10AM to 2PM for non-quiet tech flights and 9AM to 5PM for quiet-tech (QT) flights. Sundays would be designated as no-fly days, whereas Wednesdays would allow only QT type flights during permitted hours. A mandatory 5 miles standoff distance would be implemented for cultural events, with at least a 2 months-notice provided to operators. The FAA argues that implementation of Alternative 4 would reduce existing air traffic by at least 86%, minimizing flights from an annual average of 11,376 to 1,565. Further, the Noise Technical Analysis conducted by the FAA establishes specific noise level decibel thresholds that would interrupt the outdoor experience and interpretive programs. It is believed that the implementation of QT flights per the ATMP would keep noise within these thresholds and greatly reduce existing aircraft related noise. Soundscape monitoring would be conducted by NPS to ensure thresholds are met.

Background on OHA Section 106 Involvement

Previously, OHA participated in NHPA Section 106 consultations for the ATMP and did submit formal comments on January 5, 2022. We were alerted about the ATMP from concerned beneficiaries who believed air tours in the area were disrupting and endangering their cultural practices. As noted in our letter, we detailed that a helicopter enroute to HAVO crashed on OHA property within the Wao Kele o Puna forest reserve in March 2020. Other consulting parties had reported another crash in a residential area near HAVO. Given these concerns, we recommended specific trainings be implemented for pilots, establishment of a sterile cockpit during air tours, and enhanced aircraft maintenance protocols.

Our letter also strongly recommended that a traditional cultural property (TCP) study be done to better understand cultural resources within the park and to ensure that adequate vertical buffers were implanted to protect cultural practitioners and the cultural landscape. Throughout the Section 106 consultation process, many park visitors, Native Hawaiian beneficiaries, and the Kupuna Council (cultural advisors to HAVO) consistently advocated against commercial air tours due to adverse effects caused by low flying commercial flights on the use and serenity of the vast cultural landscape present within HAVO boundaries. Further, the Kupuna Council believes that Kilauea is sacred and has requested a no-fly zone for decades.

Additionally, a formal letter was provided to the FAA by OHA on March 30, 2022, indicating a preference for Alternative 2, which would have restricted all commercial air tours below 5,000 ft. We further suggested that should Alternative 4 be retained for consideration, that it be refined to add no-fly days on Sundays, restrict flights during cultural events, require mandatory interpretive training for pilots, add explicit noise thresholds, and provide monitoring methods for QT flights.

OHA Comments on FAA Finding of No Adverse Effect

OHA certainly acknowledges that the current preferred Alternative would indeed greatly reduce the number of flights occurring per year and that many of our suggestions have been incorporated into the ATMP elements. However, we believe, the determination of no adverse effect is still premature as it is solely based on improving current flight conditions without a full understanding of the cultural resources within HAVO. Since our initial comments, it has been our stance that absent the completion of a TCP study, the FAA may not be able to fully grasp the adverse effects on cultural resources. It is OHA's understanding that NPS is actually working on completing a TCP pursuant to a Programmatic Agreement condition for HAVO's Disaster Recovery project. In fact, we were provided with an early draft of part 1 of the TCP on December 1, 2022, and participated in an NPS TCP consultation meeting on February 3, 2023. The direction and completion of the study was well supported by the Kupuna Council and the Advisory Council on Historic Preservation (ACHP). It appeared to OHA that a more complete draft would be available by July or August of 2023.

The FAA letter fails to acknowledge the ongoing effort to complete a TCP or even the utility of completing one. OHA maintains that a TCP study be done first prior to issuing an adverse effect determination and that appropriate vertical buffers be established given the abundance of cultural concerns presented during Section 106 consultations. It is simply not enough to reduce the current number of flights without fully understanding the cultural needs of the Native Hawaiian people and cultural resources within HAVO. Considering NPS's current efforts on the TCP and respective timeline, it would arguably appear that proceeding with the ATMP determination absent evaluation of the TCP study materials would be rushed and poorly informed.

Further, it would appear that OHA's suggestions for improved pilot training accountability and aircraft maintenance have been ignored. In regard to pilot training, we noted that the FAA revised their Operations Specification (OPSS) B048 and Letter of Authorization (LOA) B548 to require cue-based training for air tour operations. Thus, we recommended that the updated cue-based training records be provided to NPS HAVO staff and the Kupuna Advisory Council as part of annual safety meetings. As Alternative 4 does include a provision for semi-annual reports to be provided to NPS for altitude monitoring, it would not seem overly onerous to OHA to include records of cue-based pilot training as well within these semi-annual reports.

In regards to aircraft maintenance, we expressed concern over the impact of volcanic ash, sulfur, and even salt air on aircraft engines and airframes. The FAA does in fact acknowledge the potential dangers of volcanic ash on aircraft operation and safety.¹ Based on recommendations from aircraft manufacturer Pratt & Whitney², some of these effects can be greatly minimized through more frequent checks for corrosion, daily desalination rinses for aircraft turbine engines, and engine borescope inspections during every fuel nozzle. Its further OHA's understanding that many air carriers (e.g., Corporate Air, Transair, Blue Hawaiian Helicopters) operating

turboprop engines in Hawai'i do in fact include these additional maintenance tasks to improve flight safety and aircraft performance. Thus, we still implore the FAA to consider these additional maintenance actions as requirements for air tour operators operating within HAVO under an ATMP. Arguably, while this requirement may not make intuitive sense for other National parks, it seems especially relevant considering that the area is a volcano park with active volcanoes in a salt air environment.

Closing Remarks

Mahalo for the opportunity to comment. OHA looks forward to continuing consultation and seeing that the FAA fully considers are recommendations. Should you have any questions, please contact OHA's Lead Compliance Specialist, Kamakana C. Ferreira at (808) 594-0227 or by email at kamakanaf@oha.org.

'O wau iho nō me ka 'oia 'i'o,
Sylvia M. Hussey, Ed.D.

Correspondence: Dear National Park Service and Federal Aviation Administration,

National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species--many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives--to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Sincerely,

Subject: EPA Comments on the Draft Environmental Assessment for an Air Tour Management Plan for Hawai'i Volcanoes National Park, Hawai'i County, Hawai'i

Dear Kaitlyn Rimol:

The U.S. Environmental Protection Agency has reviewed the above-referenced document pursuant to the National Environmental Policy Act, Council on Environmental Quality regulations (40 CFR Parts 1500-1508), and our NEPA review authority under Section 309 of the Clean Air Act.

The Draft EA evaluates the potential environmental consequences associated with implementing an Air Tour Management Plan at Hawai'i Volcanoes National Park in Hawai'i County, Hawai'i. The ATMP provides the terms and conditions for all commercial air tours conducted over the Park and commercial air tours within half a mile outside the boundary of the Park. We appreciate the opportunity to review the Draft EA and have identified information in need of clarification and additional minimization measures to consider as the National Park Service prepares the Final EA and Finding of No Significant Impact.

Noise Modeling

Under the preferred alternative, the Draft EA indicates that "[o]perators would be limited to using the aircraft types reported in the period from 2017-2019" (p. 21). These aircraft include three fixed wing models and seven helicopter models (p. 15-16); therefore, it is unclear why noise modeling did not include all allowable fixed wing and helicopter models. The No Action Alternative excludes BHT-430-430, MD-369-D, MD-369-E, CE-337-T337H, and CE-421-C, and doesn't differentiate between EC-130-B4 or T2 models. Alternative 3 excludes BHT-430-430, BHT-407-407, MD-369-D, MD-369-E CE-337-T337H, and CE-421-C and doesn't differentiate between EC-130-B4 or T2 models.

The EPA is concerned that the maximum noise impacts were not captured since louder aircraft models were not included in the noise modeling. For example, the BHT-430-430's flyover volume is considerably higher than the EC-130-B4's flyover volume. In the Final EA and ATMP, describe why aircraft models mentioned above were not included in noise modeling for both the No Action Alternative and Alternative 3. We recommend updating the noise modeling with all allowable models to ensure noise impacts are accurately disclosed, especially for those sites under Alternative 3 that will experience a large increase in volume due to route changes (Appendix F p. 33-34) or explain why this is not necessary for predicting impacts.

Quiet Technology Aircraft

The ATMP includes incentives for aircraft operators that convert to quiet technology aircraft by allowing an additional four hours of flight time on Mondays, Tuesdays, Thursdays, Fridays, and Saturdays, a full day of flight on Wednesdays (9 am to 5 pm), and an expanded fly zone directly west of the Pu'u'ō'ō viewing area (p. 20, 23; ATMP p. 8). To qualify for quiet technology incentives, the Draft EA indicates that "operators would be required to follow a process to be defined by the agencies" (p. 23). According to the ATMP, the Federal Aviation Administration and NPS would analyze aircraft "on a case-by-case basis at the time of the operator's request to be considered for this incentive" (p. 8). While EPA understands the concept of this approach, it is unclear what currently constitutes "quiet technology aircraft" and why a case-by-case basis is proposed. In the Final EA and ATMP, we recommend clearly defining quiet technology aircraft for both fixed wing aircraft and helicopters. We also recommend setting clear benchmarks to qualify for incentives instead of using a case-by-case basis.

The Federal Aviation Administration's more stringent Stage 3 noise certification standards were adopted into U.S. regulations on May 5, 2014, to reduce noise exposure from helicopters. The EPA recommends requiring Stage 3 helicopter certification in order to qualify for incentives to ensure that "airworthy noise reduction technology is incorporated into aircraft design and enables the reductions in noise experienced by communities." We recommend amending the ATMP when new FAA passes new helicopter or fixed wing aircraft noise certification standards to provide incentives to utilize the quietest aircraft.

Further, the proposed Haleakalā National Park ATMP includes a provision that requires all commercial air tour aircraft to exclusively utilize quiet aircraft technology by 2033 (Haleakalā National Park ATMP p. 9). To best minimize impacts under Alternative 3, we recommend that the ATMP adopt this provision.

New Aircraft

The ATMP indicates that "[a]ny new or replacement aircraft would not exceed the noise level produced by the aircraft being replaced" (ATMP p. 6). While we recognize that operators use both fixed wing aircraft and helicopters, we recommend that new helicopters meet the FAA Stage 3 helicopter noise certification standards, as mentioned above, so incremental improvements in the noise environment can be achieved. We recommend updating the language in ATMP Section 3.3 and the Final EA to reflect this.

The EPA appreciates the opportunity to review this Draft EA. When the Final EA and FONSI are available, please email the documents to samples.sarah@epa.gov. If you have any questions, please contact me at (415) 972-3308, or Sarah Samples, the lead reviewer for this project, at (415) 972-3961.

Sincerely,

/s/
