INTRODUCTION

The Federal Aviation Administration (FAA) and the National Park Service (NPS) have prepared an Air Tour Management Plan (ATMP), which regulates commercial air tours conducted over Hawai'i Volcanoes National Park (Park) pursuant to the National Parks Air Tour Management Act of 2000 (the Act)¹. The Act requires that the FAA, in cooperation with the NPS (collectively, the agencies), establish an ATMP or voluntary agreement for each National Park System unit for which one or more applications to conduct commercial air tours has been submitted, unless that unit is exempt from this requirement because 50 or fewer commercial air tour operations are conducted over the park on an annual basis, 49 United States Code (U.S.C.) § 40128(a)(5). The objective of the ATMP is to identify acceptable terms and conditions for commercial air tours conducted over the Park and effective measures to mitigate or prevent the significant adverse impacts, if any, of commercial air tours on natural and cultural resources, Native Hawaiian sacred sites and ceremonial areas, Wilderness character, and visitor experience within the jurisdictional boundaries of the Act.

The FAA, in coordination with the NPS, has prepared an environmental assessment (EA) in compliance with the National Environmental Policy Act (NEPA) to analyze a range of alternatives and evaluate potential issues and impacts as part of the ATMP planning process. The ATMP has also been developed in accordance with Section 106 of the National Historic Preservation Act and other applicable laws, regulations, and policies. A draft ATMP and draft EA were released on May 16, 2023, for public review and comment.

The agencies notified the public of the availability of the draft ATMP and draft EA using various methods including a notice in the Federal Register issued on May 18, 2023, a news release posted on the Park's website and social media accounts, emails, and hard copy mailings to the Park's civic engagement stakeholder list and congressional officials. Comments were accepted on both the draft ATMP and draft EA from May 16 through June 20, 2023. The agencies posted frequently asked questions (FAQs), the draft ATMP, and draft EA to the NPS Planning, Environment, and Public Comment (PEPC) website at the start of the public comment period. In addition, Park staff responded to media inquiries and requests for interviews. This report summarizes comments received during the public comment period.

Any comments submitted to PEPC, as well as any written comments mailed to the NPS, were considered and included in the project file. The agencies analyzed the public comments and considered all comments in revising the draft ATMP and the draft EA and in preparing a final ATMP, final EA, and the Findings of No Significant Impact/Record of Decision (FONSIs/ROD).

¹An ATMP regulates commercial air tours over a national park or within ½-mile outside the park's boundary during which the aircraft flies below 5,000 ft. above ground level (AGL). This is referred to as the ATMP planning area in this document and as the ATMP boundary in the ATMP itself.

This Comment Summary Report provides a summary of the substantive comments submitted during the public comment period.

COMMENT ANALYSIS METHODOLOGY

Comment analysis is a process used to compile and correlate similar comments into a usable format for the agencies' decision-makers and the program team. Comment analysis assists the agencies in organizing, clarifying, and addressing information and aids in identifying the topics and issues to be evaluated and considered throughout the ATMP planning process.

The process includes five main components:

- Developing a coding structure;
- Employing a comment database for comment management;
- Reviewing and coding of comments;
- Interpreting and analyzing the comments to identify issues and themes; and
- Preparing a comment summary.

The agencies developed a coding structure to organize comments into logical groups by topic and issue. The coding structure was designed to capture the content of the comments rather than to restrict or exclude any ideas. The agencies used the NPS PEPC database to manage the public comments received. The database stores the full text of all correspondence and allows comments within each correspondence to be coded. All substantive comments within each correspondence were grouped by topic. Substantive comments are those that do one or more of the following:

- Question, with reasonable basis, the accuracy of the information in the NEPA document;
- Question, with reasonable basis, the adequacy of the environmental analysis;
- Present reasonable alternatives other than those presented in the NEPA document; or
- Cause changes or revisions in the proposal.

In other words, substantive comments raise, debate, or question a point of fact or analysis. The intent of the agencies is to capture the concern raised by the commenter and evaluate each substantive comment based on the individual concern, topic, or suggestion, regardless of the repetitive nature of the concern. Those comments that simply provided support or opposition are not considered substantive. All substantive comments were grouped by similar themes under each code, and those groups were summarized with concern statements. Concern statements are written summaries of the comments received on a particular topic.

In total, the agencies received 5,447 correspondences, including two different form letters, which comprised 97% or 5,290 of the total number of correspondences.

SUMMARY OF COMMENTS AND RESPONSE TO COMMENTS

The following section summarizes the comments received during the public comment period and is organized by code. The summarized text is formatted into concern statements to identify the thematic issues or concerns represented by comments within the code. The agencies only summarized comments with substantive content. The agencies collectively reviewed and analyzed each comment to determine if there were any changes warranted to the draft ATMP or the draft EA, based on the information, question, or concern provided. The agencies have provided a response following each concern statement.

Adverse Impacts: Soundscape Impacts

1. **Concern Statement:** A commenter provided the following sources for consideration that provide evidence that excessive helicopter noise is harmful to humans and animals:

- <https://noisefree.org/sources-of-noise/helicopters/>
- <https://stopthechopnynj.org/why/>
- <https://www.icao.int/environmental-protection/Documents/ScientificUnderstanding/EnvReport2019-WhitePaper-Noise.pdf>
- <https://www.nature.com/articles/hr200886.pdf>
- <https://www.gao.gov/products/gao-21-200>

Agencies' Response: The impacts of existing and proposed helicopter air tours are disclosed in the EA. The agencies reviewed the recommended literature and determined they did not provide new information that needed to be included in the EA. The Noise Free America and Stop the Chop websites discuss issues with helicopter noise in various communities, the solutions some of those communities sought, the impacts of those solutions, and references to how noise impacts human health, including impacts from overnight noise. The EA did evaluate the impacts of noise from helicopters, and since the ATMP limits flights compared to existing conditions, it will reduce the level of overall noise within the ATMP planning area. Additionally, flights are only permitted during daylight hours and will not occur overnight. Therefore, the agencies determined that the information on these websites does not provide new information to inform the EA analysis.

The study by Sparrow et al. (2019) discusses the connection between aviation noise, community annoyance, and human health. The article does not address natural

soundscapes, visitor enjoyment of natural or cultural soundscapes, or other settings found in National Park System units, which are most relevant to the ATMP. The conditions in the ATMP provide for increased altitudes and fewer flights in the ATMP planning area, which reduce the level of overall noise within the ATMP planning area compared to current conditions. The EA acknowledges that flights may occur outside of the ATMP planning area, but because they are not regulated by the Act, they are outside of the jurisdiction of the ATMP.

The study by Rhee et al. (2008) suggests that chronic exposure to military aircraft noise, including helicopters, may be associated with hypertension. The intensity and length of noise exposure from helicopter airbases is louder and more frequent than what is being proposed in the ATMP. Therefore, the agencies determined it was not necessary to include this study.

The report from the U.S. Government Accountability Office (GAO) recommends that the FAA should develop a mechanism to share helicopter noise complaint information with operators in Washington, D.C. Therefore, the agencies determined that the report does not present new information to be considered in the ATMP.

2. **Concern Statement:** A commenter stated that only Alternative 2 meets the Park management objective to protect natural sounds and suggest that the natural ambient sounds of each Park should have been the baseline condition to compare alternatives.

Agencies' Response: Although Alternative 2 would meet Park management objectives, the agencies selected Alternative 3 as the Preferred Alternative because it would meet Park management objectives while still providing for the opportunity for those who wished to see the Park by air to do so via commercial air tours within the ATMP planning area. The agencies used the current conditions of the Park as the baseline to compare alternatives, in accordance with NEPA. However, Section 3.1 of the EA, *Affected Environment for Noise and Noise-Compatible Land-Use*, and Appendix F of the EA, *Noise Technical Analysis* describe both the natural ambient conditions as well as the current conditions and disclose the noise impacts resulting from each of the alternatives. This includes a disclosure of the actual noise under each alternative, not just the measurement of change from current conditions. The agencies disclosed time above 35 A-weighted decibels (dBA), 52 dBA, and included a comparison of time audible under natural ambient conditions, which is the most sensitive measurement available. These metrics evaluate both the intensity and duration of noise. Further, with the exception of time audible natural ambient, these metrics are calculated independent of background ambient and were considered in contrast to both the natural and existing ambient. The EA explains that compared to the No Action Alternative, the overall time audible footprint under natural ambient for Alternative 3 (the Preferred Alternative) is potentially 2% larger due to the higher altitudes of the overflights. However, a large

reduction in the extent of the area where time audible under the natural ambient condition exceeds 150 minutes would be experienced from 25% of the Park under the No Action Alternative to 2% of the Park under the Preferred Alternative. The largest reduction of time audible would be at Pu'u'ō'ō (a 301-321 minute reduction) and Top of Mauna Loa Road (247 minutes). An important part of the mission of the NPS is to preserve or restore the natural soundscapes associated with units of the National Park System. Alternative 3, as implemented through the ATMP, will move the Park's soundscape closer to the natural ambient condition.

Adverse Impacts: Wildlife/Biological Impacts

1. **Concern Statement:** A commenter recommended that the source identified on Page 4, Paragraph 2 of "Biological Resources", Gallardo et al. 2021, should be corrected to Gallardo Cruz et al. 2021. Additionally, the commenter suggested other edits as follows:

P. 71, Paragraph 3 of "Forest Birds": Gallardo Cruz et al. 2021 did assess effects of noise on i'iwi in the Upper Waiakea Forest Reserve and found a slight decrease in vocalization time during helicopter noise compared to before and after the noise, but it was not statistically significant (see Fig. 2). This was likely due to low rate of helicopter overflights, higher altitude overflights, and lower power of noise. It is likely that helicopter noise would have a significant effect on i'iwi vocalizations in areas with higher power of noise and rate of overflights.

P. 72, Paragraph 1 of "Other Native Birds": The work described for 'apapane should cite Gallardo Cruz et al. 2021. This study also assessed effects of noise on Hawai'i amakihi and 'oma'o, but these species were only present in the two sites that had a lower rate of helicopter overflights and lower noise levels than Nāpau Crater, where significant impacts on 'apapane were found. There was no significant effect of helicopter noise on their vocalizations, but there was a slight increase in 'oma'o vocalizations during helicopter noise (Fig 2). It is likely that helicopter noise would have a significant effect on Hawai'i amakihi and 'oma'o vocalizations in areas with higher power of noise and rate of overflights.

Section 3.3 Biological Resources: The commenter did not see any mention of how helicopter noise can affect arthropod species, of which there are many endemics in the Park, including crickets like *Laupala* spp. and *Trigonidium* spp. that may also be sensitive to noise.

Other papers were suggested for references:

- Schmidt, R., Morrison, A., Kunc, H.P. (2014). Sexy voices no choices: male song in noise fails to attract females. *Animal Behavior* 94:55-59
- Orci, K.M., Petroczki, K., Barta, Z. (2016). Instantaneous song modification in response to fluctuating traffic noise in the tree cricket *Oecanthus pellucens*. *Animal Behavior* 112:187-194
- Costello, R.A., Symes, L.B. (2014). Effects of anthropogenic noise on male signaling behaviour and female phonotaxis in *Oecanthus* tree crickets. *Animal Behavior* 95:15-22

The commenter also made suggestions for the ATMP.

The commenter suggested citing results from Gallardo Cruz et al. (2021) in lines 356-357. Specifically, the commenter mentioned that the study found that helicopter noise induced a temporal shift in songbird vocalizations at Nāpau Crater, which had average helicopter noise levels of 81 decibels (dB) and a flight frequency of 13.8 helicopters/hour during the study. In contrast, there were no significant temporal changes to songbird vocalizations at sites with fewer than 4 aircraft/hour and average helicopter noise levels of 75 dB. Noise levels were obtained from Online Resource 3 and converted using the equation in the section "Power measurement conversion": $y = 1.8x - 268.09$

Agencies' Response: The suggested changes to the citations have been incorporated into the EA, and the agencies have revised the EA to acknowledge that the noise effects on 'i'iwi and have been studied (Gallardo Cruz et al., 2021). Regarding the suggestions on Page 71 and 72, this study concludes that an overflight frequency of less than four overflights per hour and mean power levels of helicopter noise at 75 dBA or less (measured using a sound level meter) are sufficiently low to avoid detecting an effect of helicopter noise on bird vocalizations. This noise level and number of flights per hour are both above the levels for all of the alternatives evaluated in the EA. Therefore, the agencies have retained their determination that helicopter noise at the levels proposed in the EA would represent an improvement as compared to current conditions for i'iwi, Hawai'i 'amakihi, and 'oma'o vocalizations.

Invertebrates (arthropods) were not carried forward for full analysis in the EA since the minimum altitudes required in the Preferred Alternative that would permit air tours over the Park (1,500 ft. above ground level (AGL) over land) create sufficient separation between commercial air tours and invertebrates such that impacts are not expected to occur, either directly or indirectly. See Section 1.5 of the EA, Environmental Impact Categories Not Analyzed in Detail.

The suggested references were reviewed, and will not be included in the ATMP or EA. The study by Schmidt et al. (2014) is based on the level of noise at a distance of 10

meters from motorways during rush hour traffic. The study does not make a connection to how it could be comparable to noise generated by aircraft flying at the altitudes identified in the ATMP. Additionally, because the Preferred Alternative reduces air tours that are occurring within the ATMP planning area, the impacts of any anthropogenic noise will improve compared to current conditions. Therefore, the agencies determined that the study does not present new information to be considered in the analysis or ATMP.

The Orci et al. (2016) study focused on the impacts of road noise on tree crickets and the study by Costello and Symes (2014) focused on the impacts of road noise on tree crickets. Neither of these studies makes a connection to how the level and frequency of noise could be comparable to noise generated by aircraft flying at the altitudes required in the ATMP. Additionally, because the Preferred Alternative reduces the number of air tours that are occurring within the ATMP planning area, the impacts of any anthropogenic noise will improve overall compared to current conditions. Therefore, the agencies determined that the report does not present new information to be considered in the analysis or ATMP.

Adverse Impacts: Wilderness Character Impacts

1. **Concern Statement:** A commenter suggested that the Preferred Alternative will lead to undesirable impacts to Wilderness character along the Coastal Route and Pu'u'ō'ō Route, and that the level of Wilderness protection afforded to different parts of the Park appears inconsistent. The commenter further stated that it was not clear if the plan takes into account the noise and visual disruption that the Coastal Route's closest flight path (as indicated by the ¼-mile buffer on either side of the route) would have on Wilderness character versus an average route, and one commenter recommended a standoff of at least ¾- mile from the coast (which may require eliminating the buffer) in order to protect hikers and campers in these areas. Additionally, commenters note air tours on the Pu'u'ō'ō Route and Pu'u'ō'ō Quiet Technology Zone will still be visible from within the Wilderness area even though they do not overlap the East Rift Zone and would greatly diminish the backcountry experience of Wilderness and solitude.

Agencies' Response: The commenter's description of impacts to Wilderness from tours along the Coastal Route assumes that the 2,000 ft. offset from shore will not be maintained by commercial air tour operators. Clarifying edits have been made to the final ATMP to address this comment. It now specifically states that air tours on the Coastal Route must maintain a 2,000 ft. lateral distance from shore at all times. The ¼-mile buffer on either side of the route that formerly indicated the acceptable range of deviation was also clarified to not apply to the Coastal Route.

In addition, the agencies made further changes to the Coastal Route in the final ATMP that will have beneficial impacts to Wilderness. Operators on the Coastal Route will be required to maintain a minimum altitude of 2,000 ft. AGL when flying southwest-to-northeast and a minimum altitude of 3,000 ft. AGL when flying northeast-to-southwest. Raising the minimum altitude for northeast-to-southwest flight from 2,000 ft. AGL to 3,000 ft. AGL means that noise impacts from these aircraft will not be as intense as indicated by the modeled results.

Moreover, the Coastal Route is available for use only if commercial air tour operators can safely adhere to the required altitudes and distance from the shore. The ATMP provides that if an operator is not able to safely fly offshore in accordance with its prescribed altitude and distance requirements for the Coastal Route, the operator must not utilize that route.

As to the suggestion that the agencies implement a $\frac{3}{4}$ -mile buffer for the Coastal Route, under the Act, the agencies' jurisdiction to regulate air tours under an ATMP extends only $\frac{1}{2}$ -mile outside the Park's boundary. The agencies did consider other potential distances for lateral offsets from the shore on the Coastal Route but found that the 2,000 ft. lateral offset should protect Park resources and visitor experience. The 2,000 ft. lateral offset and minimum altitudes are consistent with FAA Advisory Circular, AC 91-36D, Visual Flight Rules (VFR) Flight Near Noise-Sensitive Areas. The lateral and vertical offsets, in addition to daily caps, time-of-day restrictions, quiet technology-only day and one flight free day per week provide for opportunities for solitude in Wilderness.

Section 3.1.2 of the EA, Environmental Consequences for Noise and Noise-Compatible Land Use, has been revised to acknowledge areas where the impacts to Wilderness adjacent to the Coastal Route may be greater than current conditions, although the alternative has overall beneficial impacts on the Wilderness character of the Hawai'i Volcanoes Wilderness. Additional language was added to Section 3.5.2 of the EA, Environmental Consequences for Wilderness, to further explain the impacts.

Per Section 3.5.2 of the EA, Environmental Consequences for Wilderness, compared to current conditions, the Preferred Alternative would enhance qualities of Wilderness character by reducing the intensity of noise, the footprint of noise, and the number of noise events over most of the Park's Wilderness areas. On days when air tours occur, noise above 35 dBA would occur for less than 15 minutes a day in East Rift Wilderness (which is adjacent to the Pu'u'ō'ō Quiet Technology Zone), but would represent an overall reduction in impacts to this area of the Park's wilderness compared to current conditions of 75 or more minutes per day.

The EA acknowledges that commercial air tours along the authorized Pu'u'ō'ō Route and Pu'u'ō'ō Quiet Technology Zone under the Preferred Alternative may be visible from the

East Rift Zone (see Section 3.8 of the EA, Visual Effects). The limited duration and reduced number of air tours that would occur under the Preferred Alternative as compared to the No Action Alternative would result in fewer impacts to viewsheds than those under current conditions, particularly for the Pu'u'ō'ō Route and Pu'u'ō'ō Quiet Technology Zone.

2. **Concern Statement:** A commenter referenced a case study involving snowmobile noise near Wilderness (Izaak Walton League of America, Inc. v. Kimbell, 516 F. Supp.2d 982 (D. Minn. 2007)). The commenter stated that because the ATMP would result in sound that is louder, more constant, more frequent, or of a different quality, than the sound that presently exists within the Wilderness, it can degrade Wilderness character and violate Section 4(b) of the Wilderness Act which states that agency activity can apply to areas outside of Wilderness boundaries.

Agencies' Response: The agencies do not agree with the commenter's statement that the ATMP would result in sound that is louder, more constant, more frequent, or of a different quality, than the sound that presently exists within the Wilderness. As discussed in Section 3.5 of the EA, Wilderness, the agencies considered the impacts of air tours on Wilderness, which identified that the ATMP would result in an overall reduction of noise in Park Wilderness. Under existing conditions, air tour operators fly over Wilderness at altitudes as low as 500 ft. AGL and may fly in numbers up to their interim operating authority. Under the ATMP, flights will be raised to altitudes between 1,500-3,000 ft. AGL, no air tour routes over Wilderness will be authorized, and the number of tours authorized per year will be reduced. The annual limit will reduce the frequency of air tours over the Park including those that impart noise on the Park's Wilderness, and the altitude restrictions will reduce the intensity of noise in Wilderness. In addition, the ATMP includes caps on the number of air tours that may be conducted each day, restrictions on the times during the day that air tours may occur, a quiet technology-only day during which operators may only use quiet technology aircraft, and one flight free day per week which will provide for opportunities for solitude in Wilderness.

The EA acknowledges that while most of the Park's Wilderness will experience an overall reduction in noise, some portions of the coastal Wilderness area may experience slightly more noise compared to current conditions. Under the Preferred Alternative, of the 13 modeled location points within Wilderness, 11 would experience less noise above 35 dBA within Wilderness compared to current conditions. The two modeled location points that would experience slightly more noise are located within the Park's coastal Wilderness (Ka'aha Wilderness Camp and Halapē Wilderness Camp). Specifically, noise above 35 dBA will occur for 7.3 minutes a day (increase of 3.8 minutes) on a standard day and 10.4 minutes a day (increase of 6.9 minutes) on a quiet technology-only day at Ka'aha Wilderness Camp. Noise above 35 dBA will occur for 7.2 minutes a day (increase

of 5.4 minutes) on a standard day and 10 minutes (increase of 8.2 minutes) on a quiet technology-only day at Halapē Wilderness Camp. See Section 3.1 of the EA, Noise and Noise-Compatible Land Use, and Section 6 of Appendix F of the EA, *Noise Technical Analysis*, for additional information. While these impacts may detract from solitude and the natural quality of Wilderness character, it will represent an overall reduction in impacts to Wilderness character compared to current conditions at most locations within the Park's Wilderness. Additionally, the majority of the Wilderness areas within the study area for Wilderness will not experience impacts to solitude and the natural quality of Wilderness character, as the *Noise Technical Analysis* shows that noise above 35 dBA will not occur. Therefore, the ATMP results in an overall improvement for the opportunity for solitude and the natural quality of Wilderness character, is protective of the Wilderness character of the Park's Wilderness as a whole, and is consistent with Section 4(b) of the Wilderness Act.

Adverse Impacts: Cultural Resource Impacts

1. **Concern Statement:** Commenters noted the various aspects of the cultural and spiritual importance of the Park landscape to Native Hawaiians. Many songs and chants speak the voice of the ocean. Pele's wind blowing through the silence found within the Park is a fundamental aspect of native practices, traditions, and ways of connecting with the lands and spirits of the land. The Park is a place of birth and the physical representation of many spirits and forces; the geologic landscape, plants, and animals are all important to the Native Hawaiian sense of identity, unity, and continuance. Any helicopter noise disturbs this silence, and disrupts cultural practices and protocols and commenters stated it is a breach of Hawaiian cultural rights, practices, and aircraft noise pollutes the volcano's mana.

Agencies' Response: The agencies recognize the importance of the Park for traditional cultural practices. In assessing the effects of the undertaking (ATMP) under Section 106 of the National Historic Preservation Act, the traditional and cultural practices that occur within the Park were considered. The ATMP includes several provisions intended to reduce or avoid impacts to, or disruptions of, traditional cultural practices: limit the total number of commercial air tours to no more than 1,548 flights per year; designate three flight paths and one fly zone designed to avoid most identified culturally significant areas; and set minimum altitudes that reduce the intensity of noise on the ground. Additionally, time-of-day restrictions to avoid sunrise and sunset are included, and Sundays are set as no-fly days (days on which no commercial air tours are authorized to allow for one flight free day a week), with additional no-fly days based on the Hawaiian Moon Calendar and Makahiki Season and days to honor and acknowledge important Hawai'i Island ali'i in order to prevent interruptions to Native Hawaiian cultural practices. The ATMP is thus protective of the Park's natural and cultural landscapes and

resources, including Native Hawaiian sacred sites and ceremonial areas, while also providing an opportunity for those who wish to view the Park from the air to do so via a commercial air tour within the ATMP planning area.

2. **Concern Statement:** Commenters stated that noise pollution of aircraft has various negative impacts on cultural procedures and protocols that occur almost every day which include interrupting native and cultural practices such as hula and chanting. Commenters stated that the Native Hawaiians are the caretakers of these elementals and wildlife and they request the same level of protection and encouragement as the birds and plants.

Agencies' Response: The Park is eligible for listing on the National Register of Historic Places as a Traditional Cultural Property for its association with Native Hawaiian culture, traditions, and sacred uses. In assessing the effect of the undertaking (ATMP) under Section 106 of the National Historic Preservation Act, the agencies found that noise levels would decrease across the majority of the Park and most notably near the Kīlauea Crater, and Halema'uma'u Crater, and the northern region of the Park. See the Agencies' Response to Adverse Impacts: Cultural Resource Impacts, Concern Statement 1 and Adverse Impacts: Wilderness Character Impacts, Concern Statement 2, which describes the minimal increase in noise above 35 dBA.

Additional details about how and where noise may be heard, along with a description of the reduction in sound levels across the ATMP planning area, are included in Appendix F of the EA, *Noise Technical Analysis*.

Adverse Impacts: Equity

1. **Concern Statement:** Commenters stated that air tours offer opportunities for the elderly and disabled people to see landmarks without the impacts of road vehicles, toilets, trash, trails, and ground-based off-trail activities which have less impact on the environment. Commenters stated that denying helicopter access create an unfair disparity of those already facing physical limitations.

Agencies' Response: Air tours are only one of many ways for a person with disabilities to experience a national park. If an ATMP reduces or eliminates air tours, a person with disabilities would still be able to experience a national park. The NPS works to ensure that people with disabilities can participate in the same programs, activities, and employment opportunities available to those without disabilities in the most integrated setting possible. Alternative means of accessing facilities, programs, and services are provided when an accessible direct experience cannot be provided. Accessibility solutions are developed in consultation with the disability community and various partners including NPS concessioners and commercial service operators. The NPS has a team dedicated to breaking physical and programmatic barriers to make parks more

inclusive for people with sensory, physical, and cognitive disabilities. The team includes regional accessibility coordinators who work to make sure that NPS staff have the tools and training necessary to provide accessible and inclusive outdoor recreation and interpretation opportunities for park visitors and employees alike.

2. **Concern Statement:** A commenter expressed concerns about the perceived lack of social justice and parallels with white colonial imperialism associated with the ATMP, and stated that nearly all Native Hawaiians, who have occupied the land for generations, feel there should be absolutely no air tours over the Park.

Agencies' Response: The NPS developed, and the FAA agreed to, the provisions identified in the ATMP to mitigate the impacts of commercial air tours on the Park's natural and cultural resources, Wilderness Character, visitor experience, and Native Hawaiian traditional cultural properties, including Native Hawaiian sacred sites and ceremonial areas. The key measures included in the ATMP that mitigate or avoid those impacts are discussed above in the Agencies' Response to Adverse Impacts: Cultural Resource Impacts, Concern Statement 1. The ATMP provides an air tour route for access to the historically active East Rift Zone of Kīlauea, a route for air tours across lower Kahuku to allow expansive views of Mauna Loa, and an offshore coastal flight route that would protect Wilderness areas and backcountry campgrounds. The heart of the Park, including the summit of Kīlauea, designated Wilderness areas, and key cultural and visitor use areas, are not overflowed by commercial air tours under the ATMP. The mitigations included in the ATMP, and elimination of a route considered during public scoping process, are all responsive to comments received through public input and consultation under Section 106 of the National Historic Preservation Act, including feedback by Native Hawaiians. The agencies selected the specific terms and conditions for the final ATMP because it would still provide the opportunity for those who wished to view the Park from the air to do so via a commercial air tour, while mitigating the impacts of those tours on Native Hawaiian cultural practices.

Adverse Impacts: Climate Change, Greenhouse Gasses, and Air Quality

1. **Concern Statement:** Commenters stated that the EA should consider the impacts of ultrafine particles on wildlife and humans. Commenters provided various links to articles related to ultrafine particles from aircraft emissions affecting human health and the health of insects and other animals:

- From Quiet Skies Hawai'i, <https://www.quietskieshawaii.org/environmental-impacts>:
Aircraft emissions have environmental and health impacts. Ultrafine Particles (UFPs) have been associated with cardiovascular and neurological effects to humans, as they have been shown to cross the blood-brain barrier. Dr. Neelakshi Hudda, Research Professor, Department of Civil & Environmental Engineering at Tufts University, has been studying the impacts of aviation emissions and has published peer-reviewed research.
- Preterm Birth Rates Among Mothers Exposed to Ultrafine Particles from Jet Exhaust
<https://static1.squarespace.com/static/6177480970b3541175fcfd91/t/6195765977aeb37bb55e5459/1637185117613/Dr+Hudda+ANE+Symposium+.pdf>
- Preterm Birth Among Infants exposed to In Utero Ultrafine Particles from Aircraft Emissions
<https://ehp.niehs.nih.gov/doi/full/10.1289/EHP5732>
- Emissions from an International Airport Increase Particle Number Concentrations 4-Fold at 10km Downwind
<https://pubs.acs.org/doi/pdf/10.1021/es5001566>
- International Airport Impacts to Air Quality: Size & Related Properties of Large Increases in Ultrafine Particle Number Concentrations
<https://pubs.acs.org/doi/pdf/10.1021/acs.est.5b05313>
- Impacts of Aviation Emissions on Near-Airport Residential Air Quality
<https://pubs.acs.org/doi/abs/10.1021/acs.est.0c01859>

Agencies' Response: Ultrafine particles as a size fraction of all particulate matter (PM) (generally defined as 0.1 micrometers in aerodynamic diameter and smaller) are not a regulated pollutant, unlike PM sized 2.5 micrometers in aerodynamic diameter or less (PM_{2.5}) or 10 micrometers in aerodynamic diameter or less (PM₁₀). However, ultrafine particles are still included in the emissions inventory for current conditions by being a subset of PM_{2.5}. The agencies analyzed the potential air quality impacts, including PM_{2.5}, and determined that emissions from air tours for all criteria pollutants under the proposed action would decrease or remain unchanged. Table 9 of the EA presents modeling results for the Preferred Alternative for the criteria pollutants in terms of change in emissions as compared to the No Action Alternative.

With ultrafine particles a subset of PM_{2.5}, it is expected the same result would be true for ultrafine particle concentrations. The Preferred Alternative reduces the overall number of air tours allowed in the ATMP planning area. To the extent the Preferred Alternative displaces air tour operations outside of the ATMP planning area, there may

be an improvement in air quality in the Park. Operations that may occur outside the ATMP planning area as a result of Alternative 2 or Alternative 3 may shift where emissions occur but the total annual emissions are not likely to change substantially. For commercial air tours outside of the ATMP planning area, it is difficult to predict with specificity if, where, and to what extent any air tours would be displaced to areas outside the ATMP planning area, including at altitudes at or above 5,000 ft. AGL. However, air tours outside of the ATMP planning area are outside the jurisdiction of the ATMP and not subject to the Act.

Adverse Impacts: Socioeconomics

1. **Concern Statement:** A commenter shared concerns related to the adverse impacts that would occur to helicopter operators resulting from limiting the number of air tours. The commenter stated that operators have invested substantial resources to ensure safety and accessibility of their flights and they state that this action would undermine operator investments and hinder economic growth opportunities associated with the tourism industry.

Agencies' Response: The ATMP is designed to mitigate the impacts of commercial air tours on the Park's resources and visitor experience, consistent with the Act. The EA acknowledges that the limited number of flights permitted under the ATMP could limit the potential future economic growth for commercial air tour operators and other ancillary businesses. However, operators could seek to make up lost revenue from air tours within the ATMP planning area by conducting air tour operations outside of the ATMP planning area, which are not regulated by the ATMP. In other words, the ATMP does not preclude operators from making up this revenue generation in other ways such as using their aircraft for other business ventures or conducting air tours elsewhere within the region.

Alternatives: Alternative 2 - No Air Tours in Planning Area

1. **Concern Statement:** Commenters stated that there is a precedent for banning or phasing out air tours at other locations and the following were provided as examples:
 - Cusco province has published regulations banning helicopters at Machu Picchu and the surrounding 125 square miles:
<https://www.theguardian.com/world/2010/jun/21/helicopter-ban-at-machu-picchu>
 - The Park Omnibus Appropriations Act of 1998 banned the use of low-flying, commercial air tours over Rocky Mountain National Park:
<https://www.nps.gov/romo/learn/nature/night-sky-natural-sounds.htm>

- Air tour bans that would take effect if the proposals become final after a 30-day comment period would apply to Badlands National Park and Mount Rushmore National Memorial, both in South Dakota.
- Glacier National Park's plan calls for all commercial air tours to be phased out by the end of 2029:
<https://www.nationalparkstraveler.org/2023/05/update-national-parks-proposing-ban-significantly-cut-back-commercial-air-tours>
- U.S. Representative Ed Case of Hawai'i also supports a ban on overflights in 2023 email to Cory Harden:
 "Every day our beautiful national parks, especially Hawai'i Volcanoes and Haleakalā, are being deeply disrupted and degraded by tour helicopter/small aircraft overflights. The National Park Service (NPS) and Federal Aviation Administration (FAA) have issued draft Air Tour Management Plans for our Hawai'i parks which would reduce but not eliminate this disruption. These overflights are fundamentally incompatible with our national parks and should not be allowed".

Agencies' Response: While the Act provides that an ATMP may prohibit commercial air tour operations over a park in whole or in part, it does not require the agencies to ban air tours, though as the comment acknowledges, Congress has chosen to mandate bans for certain parks. Each park is unique and the planning processes for other parks are not relevant to the planning process for the Park. In developing the ATMP for the Park, the agencies considered, consistent with the Act, measures to mitigate or avoid impacts to the Park's resources and visitor experience as a result of commercial air tours, and also considered an alternative that would prohibit all such tours within the ATMP planning area. Ultimately, the agencies selected an alternative that mitigated the impacts to Park resources and visitor experience, but still allowed for a limited number of commercial air tours to be conducted within the ATMP planning area subject to the operating parameters provided in the ATMP. This is entirely consistent with the Act.

Alternatives: New Alternatives

1. **Concern Statement:** Commenters suggest requiring all air tours use quiet technology aircraft and that air tours only be allowed to operate during limited hours and only a few days a week.

Agencies' Response: The ATMP for this Park includes restrictions on the times of day and days of the week for which operators can conduct commercial air tours (see Section 3.4 of the ATMP, Day/Time). While requiring all operators to utilize quiet technology aircraft was not determined to be a necessary requirement, there are additional incentives for operators who fly quiet technology aircraft (see Section 3.8 of the ATMP,

Quiet Technology Incentives). Most of the operators who operate at Haleakalā National Park also operate at the Park and given the proximity of the islands and the cost of a helicopter, it's very unlikely they would be using different aircraft. Most of the helicopters used for tours of the Park have sound reducing features, and use of quiet technology will be considered in competitive bidding.

The agencies considered a reasonable range of alternatives that would meet the purpose and need for the ATMP.

2. **Concern Statement:** A commenter suggests only allowing disabled individuals and kūpuna (70+) to tour parks via air tours.

Agencies' Response: The Act states that an ATMP may establish conditions for the conduct of commercial air tour operations over a national park, including commercial air tour routes, maximum or minimum altitudes, time-of-day restrictions, restrictions for particular events, maximum number of flights per unit of time, intrusions on privacy on tribal lands, and mitigation of noise, visual, or other impacts. The commenter's suggestion was not considered as a condition of air tours within the Park as the Act does not provide jurisdiction or authority to the operating status and requirements of an air tour operator beyond the requirements air tours as described by the Act within the ATMP planning area.

See also the Agencies' Response to Adverse Impacts: Equity, Concern Statement 1.

3. **Concern Statement:** A commenter suggested requiring aircraft to fly at altitudes that would not result in noise impacts greater than 85 decibels (dB) on the ground. If aircraft exceed the 85 dB threshold, operators must pay a fine. The commenter suggested a 1-mile zone where operators would be allowed to exceed 85 dB as they are ascending.

Agencies' Response: The agencies have considered a reasonable range of alternatives in the development of the ATMP (see Section 2.1 of the EA, Alternatives Development, and Section 3.1 of the EA, Noise and Noise-Compatible Land Use). The ATMP includes conditions that protect Park resources while still allowing some commercial air tour operations to continue within the ATMP planning area.

The maximum noise level was modeled at 46 location points in the Park under the No Action Alternative and Alternative 3 (see Appendix F of the EA, *Noise Technical Analysis*). The maximum sound level under the No Action Alternative is 72.0 dBA and occurs at Cone Peak, Nēnē Area. The maximum noise level under the Preferred Alternative, standard day, is 63.7 dBA and occurs at 'Āpua Point Camp. Under the ATMP, air tour noise would not exceed the 85 dB threshold suggested by the commenter, so incorporating that threshold, for fines or any other reason, is not necessary.

There are numerous ways to measure the potential impacts of noise from commercial air tours on the acoustic environment of a park, including intensity, duration, and spatial footprint of the noise. The affected environment and impact analysis discloses noise metrics consistent with both FAA and NPS noise guidance. Appendix F of the EA, *Noise Technical Analysis*, details the methodology that the agencies used.

4. **Concern Statement:** A commenter suggested that 25-50% of operations be reserved for operators who fly the quietest technology. The commenter proposed that operators be ranked by their use of quiet technology, based on reporting data. The commenter suggested in the first and second year of the ATMP, the distribution of operators would remain the same as currently proposed above (25-50% of operations reserved for operators who used the quietest technology), and in the third year of the ATMP, 25-50% of operations would be allocated to operators in proportion to their rank during the first year. In subsequent years, the 25-50% quiet technology incentive would be re-distributed based on operators' rank, which would allow a 1-year lag for the agencies to collect and analyze reporting data and allow operators to adjust their schedules based on new allocations.

Agencies' Response: There are many ways to handle the quiet technology incentive. The quiet technology incentive provided by the commenter would be difficult and resource intensive for the agencies to implement and thus has not been carried forward in the alternatives. The quiet technology incentive included for the ATMP authorizes time-of-day restrictions to allow quiet technology aircraft to fly from 9:00 AM to 5:00 PM (four hours longer than non-quiet technology aircraft) on all days that air tours are authorized, in addition to allowing operators that have converted to quiet technology aircraft to request to be allowed to conduct air tours on Wednesdays, and within the Pu'u'ō'ō Quiet Technology Zone. These incentives provide air tour operators with predictability to conduct their business operations within the ATMP planning area and incentivize the adoption of quiet technology while still protecting Park resources.

The agencies will be continually monitoring the effectiveness of the ATMP, including the effectiveness of quiet technology incentives. Most of the operators who operate at Haleakalā National Park also operate at the Park and given the proximity of the islands and the cost of a helicopter, it's very unlikely they would be using different aircraft. Most of the helicopters used for tours of the Park have sound reducing features, and use of quiet technology will be considered in competitive bidding.

Native Hawaiian Organizations (NHO)/Kūpuna Concerns

1. **Concern Statement:** A commenter expressed frustration that the tourism industry often wins over the preservation of resources and the interests of those that actually live in the State of Hawai'i. The commenter further stated that the preservation and

protection of the State of Hawai‘i should be put first, and that the wishes of the Kānaka Maoli and Hawaiians should be considered.

Agencies’ Response: The ATMP protects Park resources while still allowing a limited number of commercial air tour operations to continue. The agencies conducted consultation with Native Hawaiian Organizations, as required under NEPA and in accordance with Section 106 of the National Historic Preservation Act. Throughout the Section 106 process, the agencies requested consulting party input to help identify historic properties within the Area of Potential Effects. The agencies requested and received consulting party input on the potential effects of the alternatives on historic properties throughout the Section 106 process. The agencies considered all input received during development of the ATMP (see the Section 3.4 of the EA, Cultural Resources, and Appendix G: *Cultural Resources Consultation and Summary*) and the Agencies’ Response to Adverse Impacts: Equity, Concern Statement 2 and Adverse Impacts: Cultural Resource Impacts, Concern Statement 1.

ATMP Elements: Routes and Altitudes

1. **Concern Statement:** A commenter stated that there are no provisions in the ATMP that would allow operators to view eruptions that may only last a few days, such as the Pu‘u‘ō‘ō Vent.

Agencies’ Response: The ATMP would authorize 1,548 commercial air tours per year along three routes and one fly zone within the ATMP planning area. The routes authorized in the ATMP were chosen to mitigate or prevent the significant adverse impacts of commercial air tours on natural and cultural resources, Native Hawaiian sacred sites and ceremonial areas, Wilderness character, and visitor experience within the jurisdictional boundaries of the Act. If eruptions occur that are viewable from the designated routes, operators would be able to view them. The Pu‘u‘ō‘ō Route and the Pu‘u‘ō‘ō Quiet Technology Zone were designated to provide such viewing opportunities. The Act does not apply to commercial air tours flying more than ½-mile outside the Park’s boundary or those conducted at or above 5,000 ft. AGL, so there would be opportunities to view eruptions from outside of the ATMP planning area.

2. **Concern Statement:** A commenter requested additional information to clarify if the draft ATMP would permit operators to hover/loiter/circle for up to five minutes at multiple locations along the route, or if they could only hover once for five minutes total.

Agencies’ Response: The agencies have revised the ATMP to clarify that hovering, loitering, and/or circling for no more than one minute in a given location, up to five minutes total per air tour, is permitted on the Pu‘u‘ō‘ō Route and in the Pu‘u‘ō‘ō Quiet

Technology Zone. The ATMP prohibits hovering, loitering and/or circling on the Kahuku Route and the Coastal Route.

3. **Concern Statement:** A commenter stated that the ATMP and EA should consider the urban Long Island Offshore Route that the FAA implemented in 2008, as the FAA has the responsibility and authority to protect those on the ground from aircraft noise.

Agencies' Response: The agencies have considered a reasonable range of alternatives in the development of the ATMP (see Section 2.1 of the EA, Alternatives Development). The Preferred Alternative minimizes impacts to those on the ground from aircraft noise. Compared to current conditions, Alternative 3 (Preferred Alternative) would result in direct beneficial effects on the Park's acoustic environment, providing 60 days per year free of noise from air tours within the ATMP planning area and would result in a reduction in the overall noise footprint (average sound level over a 12-hour day) compared to current conditions. Compared to current conditions, the Preferred Alternative also eliminates or reduces noise in the most noise sensitive regions of the Park.

The Long Island Offshore route presents different geographic conditions and equipage. The FAA recognizes that the Long Island Offshore route puts a route one mile off the north shore of Long Island which puts the route between Long Island and New York City.

4. **Concern Statement:** Commenters stated that there has been an increase in the amount of helicopters flying over the Volcano Golf Course development, Hawaiian Paradise Park, and Maku'u Hawaiian Homesteads. Commenters expressed concern that limiting the number of flights over the Park would cause increases in the number of low-altitude flights that occur over these areas.

Agencies' Response: It is not clear if the helicopters to which the commenter is referring are commercial air tours or other types of overflights. Hawaiian Paradise Park and Maku'u Hawaiian Homesteads are located outside of the ATMP planning area. The Volcano Golf Course is mostly within the ATMP planning area, however, the ATMP does not include a route that authorizes air tours over the Volcano Golf Course. The route or flight path that air tour operators fly outside of the ATMP planning area is outside the jurisdiction of the ATMP and not subject to the Act. Air tours fly Visual Flight Rules outside of the ATMP planning area. It is difficult to predict with specificity if, where, and to what extent any air tours would be displaced to these areas outside of the ATMP planning area.

ATMP Elements: Aircraft Type

1. **Concern Statement:** Commenters suggested adopting the provision in the Haleakalā National Park ATMP that requires all commercial air tour aircraft to exclusively utilize

quiet aircraft technology by 2033 (Haleakalā National Park ATMP p. 9) in order to best minimize impacts under Alternative 3.

Agencies' Response: The agencies determined that the requirements detailed in the ATMP are effective to mitigate impacts to Park resources and will monitor the effectiveness of the ATMP. Changes in quiet technology requirements or incentives may be evaluated and implemented in the future. Most of the operators who operate at Haleakalā National Park also operate at the Park and given the proximity of the islands and the cost of a helicopter, it's very unlikely they would be using different aircraft. Most of the helicopters used for tours of the Park have sound reducing features, and use of quiet technology will be considered in competitive bidding.

2. **Concern Statement:** Commenters stated that it is unclear why current Stage 3 helicopter noise certification standards are not specifically addressed in the ATMP, and why a case-by-case basis is proposed when considering operator requests for quiet technology. Commenters suggested updating the language in the ATMP and the corresponding section of the EA to clarify that new helicopters meet the FAA Stage 3 helicopter noise certification standards so that incremental improvements in the noise environment can be achieved.

Agencies' Response: The agencies decided not to use the FAA Stage 3 helicopter noise certification standards because it is a minimum standard and does not necessarily identify the quietest helicopters. The agencies decided to instead make determinations on a case-by-case basis because aviation technology continues to evolve and advance, and because the FAA periodically updates its noise certification standards. An aircraft that may qualify as quiet technology today may be out of date in the future. The ATMP allows operators the flexibility to adopt new aircraft and technology as it becomes available thus allowing the agencies to consider more innovative aircraft technologies related to quiet technology moving forward.

3. **Concern Statement:** Commenters stated that the ATMP should define "quiet technology" to provide operators with greater certainty prior to making their investment decisions. Commenters note that quiet technology aircraft is determined case-by-case only and that procuring new technology or new aircraft is a significant investment for operators, and without clear definitions it is difficult to make business decisions. Commenters further expressed concern that quiet technology incentives would result in more noise over the Park, as it incentivizes increased operations.

Agencies' Response: The agencies found that creating a definition for quiet technology in this ATMP was not practicable because aviation technology continues to evolve and advance, and because the FAA periodically updates its noise certification standards. An aircraft that may qualify as quiet technology today may be out of date in the future. Instead, the ATMP provides a process to make determinations on a case-by-case basis.

The aircraft identified in the current ATMP reflects the aircraft currently being flown by operators who received an allocation. Subsequently, should operators wish to purchase new aircraft or make appropriate modifications to existing aircraft, they are encouraged to consult with the agencies prior to making such investment to determine whether the aircraft would qualify for the incentive. This allows the agencies to consider more innovative aircraft technologies related to quiet technology.

The quiet technology incentive does not incentivize increased commercial air tour operations, which are limited to 1,548 tours per year. Any increase in the number of commercial air tours authorized under the ATMP would require a plan amendment and additional environmental review. Thus, the quiet technology incentive is not anticipated to result in increased noise over the Park.

4. **Concern Statement:** A commenter suggested alternative aircraft types, such as air taxis or lighter than air vehicles. A commenter provided the following references: <https://www.smithsonianmag.com/air-space-magazine/airships-rise-again-180979343/> and suggested drawing upon information on air taxis included in the June 14, 2023 "FAA Publication for Comment" in Federal Register Document: 2023-11497.

Agencies' Response: The ATMP allows flexibility for operators to adopt new technology or aircraft as they become available. Section 3.3 of the ATMP, Aircraft Type, allows for operators to incorporate new and replacement aircraft but provides that any such aircraft "must not exceed the noise level produced by the aircraft being replaced." Operators are required to notify the FAA and the NPS in writing of any prospective new or replacement aircraft and obtain the agencies' concurrence before initiating air tours with such aircraft. Since no air tour operator currently operates or has proposed operating a "lighter than air vehicle" at this time, there is no need to address such aircraft. The ATMP may be amended to address technology changes consistent with ATMP Section 8.0, Adaptive Management, and Section 9.0, Amendment.

5. **Concern Statement:** A commenter stated that operators could utilize larger, noisier aircraft that can hold more passengers in order to make up for other limitations on air tours imposed by the ATMP. The commenter also stated that because the ATMP does not regulate time in airspace, operators could increase the duration of their air tours and fly slower in order to make up for other limitations on air tours imposed by the ATMP. The commenter proposed including an annual noise budget and annual time budget. The annual noise budget should be based on the assumptions in the EA noise modeling, and if the budget is exceeded before the permitted operations are used, no further operations shall occur that year or those operations shall be deducted from the following year's allocation. For the annual time budget, it should be based on the cumulative time each operation was modeled in the ATMP planning area in the EA, and would provide operators with flexibility due to weather, traffic, and other factors

throughout the year, yet ensure that impacts are no greater than those modeled by the EA. If operators were to claim that the annual budget developed from the modeling assumptions is not sufficient due to safety or some other consideration, this would mean that the initial EA modeling assumptions were wrong and understated the noise impact of flights and would need to be recalculated with operations further limited to limit impacts on Park resources.

Agencies' Response: The ATMP authorizes operators to use aircraft in their existing fleet to conduct air tours, and the noise generated by these aircraft was modeled under Alternative 3. Section 3.3 of the ATMP, Aircraft Type, states: "Any new or replacement aircraft must not exceed the noise level produced by the aircraft being replaced." Thus, operators would not be able to utilize larger, noisier aircraft that can hold more passengers in order to make up for other limitations on air tours imposed by the ATMP, as stated by the commenter. See Section 3.1 of the EA, Noise and Noise-Compatible Land Use, and Appendix F of the EA, *Noise Technical Analysis*, for additional information on noise modeling.

There are various approaches for managing noise, such as the concept of a noise budget. The NPS determined that a noise budget was not necessary because a very similar approach was used to determine an acceptable level of noise based on sound scientific data and other relevant information. The ATMP set an annual number of air tours and allocated air tours to operators based on the proportionate level of current use. The ATMP includes mechanisms for monitoring and tracking resource conditions over time.

ATMP Elements: Day/Time

1. **Concern Statement:** Commenters suggested increasing the number of no-fly days to five days and including culturally important days such as equinoxes, solstices, the opening/closing of Makahiki season, and Merrie Monarch season, when many visiting Halau are offering their ho'okupu to Ka Wahine Kapu Pelehonuamea. Commenters also suggested aircraft avoid flying during lunch hours (11:00 AM-1:00 PM), only allowing flights to occur after sunrise for four hours total per day; allowing "surge capacity days" during volcanic activity to allow for more flights; and allowing flights only after 11:00 AM.

Agencies' Response: Based on public feedback, the ATMP was revised to add six additional no-fly days based on days that follow the Hawaiian Moon Calendar and Makahiki Season. These days vary from year to year and will be determined through outreach with Native Hawaiian Organizations and confirmed during the annual meeting provided for in Section 3.7B of the ATMP, Annual Meeting. The NPS will provide at least

two months' notice of all no-fly dates to all air tour operators. These no-fly days are as follows:

- End of Makahiki (typically in January)
- Zenith Noon (typically in May)
- Summer Solstice (June)
- Zenith Noon (typically in July)
- Start of Makahiki (typically in October)
- Winter Solstice (December)

Two no-fly days per year were added to honor and acknowledge important Hawai'i Island Ali'i. These no-fly days, which do not vary from year to year, are as follows:

- Ruth Ke'elikōlani (February 9th)
- Bernice Pauahi Bishop (December 19th)

Under the ATMP, the NPS can establish additional temporary no-fly periods that apply to commercial air tours for special events or planned Park management, such as Native Hawaiian events or other natural and cultural resource programs. The NPS will consult with the Native Hawaiian Organizations on an annual basis regarding these additional no-fly periods to best mitigate impacts on Native Hawaiian practices.

2. **Concern Statement:** A commenter suggested authorizing up to 1,464 air tours annually, with no more than 3 tours per day; allowing quiet technology flights on Wednesdays from 9:00 AM—5:00 PM; adding Saturday as a no-fly day; and adjusting flight times such that non-quiet technology flights could occur from 10:00 AM – 2:00 PM and quiet technology flights could occur from 9:00 AM – 5:00 PM.

Agencies' Response: The agencies considered a reasonable range of alternatives in the development of the ATMP (see Section 2.1 of the EA, Alternatives Development). The alternative the commenter proposes is within the range of alternatives evaluated. The draft EA included an alternative that would eliminate all air tours (Alternative 2), as well as an alternative authorizing 1,565 air tours per year (Alternative 3, Preferred Alternative). The final ATMP has been revised to authorize 1,548 air tours per year. The agencies are not required to include every possible iteration of alternatives available, but instead to provide a reasonable range. While the parameters proposed by the commenter may further reduce some impacts to Park resources, the final ATMP is protective of Park resources and substantially reduces impacts to Park resources compared to current conditions.

3. **Concern Statement:** Commenters stated that air tours should be allowed on the weekends to accommodate larger crowds, and that restricting flights on Sundays is unconstitutional because it is a religious restriction.

Agencies' Response: Weekend days are not always the busiest days of the week for Park visitation. Tuesdays are generally the busiest day. The Sunday no-fly day provides opportunities for visitor enjoyment, such as bird watching. Sunday was selected as a no-fly day for consistency with the Park's Mission Critical Administrative Aviation Plan and Environmental Assessment and allows for one weekend flight-free day at the Park. The no-fly day also addresses comments from the local community and Native Hawaiian cultural practitioners to have no-fly days. The Sunday no-fly day is not a religious restriction.

ATMP Elements: Other

1. **Concern Statement:** Commenters expressed support for monitoring and enforcement, and further recommended that operators be required to record the entirety of their trip and make it available to the public by waypoint; add large numbers/characters to aircraft so they can be identified by visitors on the ground; create an online form where the public can file complaints about aircraft; and incorporate public complaints into the review of the operator's reports. Commenters also stated that ADS-B does not work along the Coastal Route or over many of the historic properties within the Park.

Agencies' Response: The ATMP includes requirements for monitoring and enforcement. Operators are required to install and use flight monitoring equipment, and to include flight monitoring data in their required semi-annual reports to the FAA and the NPS in compliance with all applicable laws. The public may report allegations of noncompliance with the ATMP to the FAA Flight Standards District Office (FSDO). The FSDO will investigate and respond to all written reports consistent with applicable FAA guidance. Given the monitoring and compliance measures included in the ATMP, the commenters' suggestions are unnecessary for inclusion into the ATMP and are overly burdensome on the operators.

2. **Concern Statement:** A commenter suggested that the ATMP be evaluated every five years in order to facilitate consideration of more innovative aircraft technologies.

Agencies' Response: The suggested evaluation in five year intervals is unnecessary given the measures included in the ATMP. Section 9.0 of the ATMP, Amendment, allows agencies to amend the ATMP at any time if, among other reasons, the agencies determine that appropriate changes to the ATMP are necessary to address new information or changed circumstances that cannot be addressed through adaptive management. Section 8.0 and 9.0 of the ATMP, Adaptive Management and Amendment, respectively, include additional information on amending the ATMP. For

example, changes to the number of commercial air tours allocated among individual operators, minor changes to routes, altitudes, or other operating parameters may not require a formal ATMP amendment if the impacts of such changes are within the impacts already analyzed by the agencies under NEPA, the National Historic Preservation Act, the Coastal Zone Management Act, and the Endangered Species Act. Section 9.0 of the ATMP, Amendment, includes additional information on when the agencies can amend parameters of the ATMP. Additionally, Section 3.8 of the ATMP, Quiet Technology Incentives, allows the agencies to consider more innovative aircraft technologies related to quiet technology by assessing the eligibility of aircraft for the quiet technology incentive on a case-by-case basis.

3. **Concern Statement:** A commenter stated that the NPS should be the lead agency since the mission of NPS is to preserve resources, while the mission of the FAA is to preserve airspace.

Agencies' Response: The agencies cooperatively developed the ATMP and EA. The Act designates FAA as the lead agency for purposes of complying with NEPA.

4. **Concern Statement:** A commenter suggested that a representative from the public should be included in the annual meeting per Section 2.6.6 of the EA.

Agencies' Response: Section 3.7B of the ATMP, Annual Meeting, has been revised to include language specifically allowing the agencies to invite other stakeholders with relevant subject matter expertise to participate in the annual meetings.

5. **Concern Statement:** Commenters expressed concern over the longevity and durability of the ATMP. Specifically, a commenter stated that language in Section 9.0 of the ATMP, Amendment, that states: "the ATMP may be amended at any time" would allow amendments to the ATMP to occur on short notice, subject to industry appeals and political intervention as lobbying interests change. Commenters gave examples of how political lobbying has caused regulation to shift regarding hunting and off-road vehicle usage, and commenters do not want the ATMP to be continually amended. A commenter suggested the following amendments to language in Section 9.0 of the ATMP: (add new first sentence) This ATMP will remain in effect until amended or terminated by mutual agreement of the agencies. This ATMP may be amended at any time (i.e., delete: "at any time"): if the NPS, by notification to the FAA and the operator(s), determines that the ATMP is not adequately protecting Park resources and/or visitor enjoyment; if the FAA, by notification to the NPS and the operator(s), determines that the ATMP is adversely affecting aviation safety and/or the national aviation system; or, if the agencies determine that appropriate changes to this ATMP are necessary to address new information or changed circumstances.

Agencies' Response: ATMPs may need to be amended for any number of circumstances and the Act specifically provides for the amendment of ATMPs. All proposed plan amendments are required to be published in the Federal Register for notice and comment (see 40 U.S.C. § 40128(b)(6)). Further, the agencies would evaluate the impacts of any plan amendment, consistent with applicable law. The provisions of the ATMP would remain in place until all necessary compliance is completed, and the amendment is finalized. Increases to the total number of annual air tours authorized under the ATMP require an amendment and will follow this process. Thus, the deletion of the language "at any time" is not needed because the Act and the ATMP ensure that the public will receive notice of and an opportunity to comment on a plan amendment and any amendment that would authorize additional impacts on Park resources and visitor experience would require further environmental review.

6. **Concern Statement:** A commenter suggested providing Park staff and the Kūpuna Advisory Council with the updated cue-based training records as part of annual safety meetings.

Agencies' Response: The agencies do not agree with the commenter's suggestion that providing cue-based training records is necessary to safely protect Park resources.

ATMP Elements: Safety

1. **Concern Statement:** Commenters stated that the current proposal (i.e., set routes and altitudes, common routes for fixed-wing and helicopter aircraft, single entry and exit point at the Pu'u'ō'ō Route) will force aircraft into potentially unsafe flight conditions. Commenters stated that the proposal does not account for weather patterns that are common in the area.

Agencies' Response: The local FAA FSDO reviewed the substantive safety related public comments, along with the routes and altitudes that would be authorized by the ATMP and made additional changes to flight route requirements to further ensure safety. These changes are detailed in the final EA and final ATMP and include providing altitude separation for bi-directional flow and detailing additional communication call-out requirements to enhance situational awareness to pilots flying in the area.

Operators may not deviate from the designated routes and altitudes except as necessary for safe operation of an aircraft as determined under Federal Aviation Regulations requiring the pilot-in-command to take action to ensure the safe operation of the aircraft. The pilot-in-command should return to the designated route and altitude as soon as safely possible after the hazard has passed.

As stated in the ATMP, if pilots are on or entering a route and encounter weather that does not allow them to proceed further along the route at the prescribed altitude, they

must safely exit the route and either follow another route where weather conditions allow or exit the ATMP planning area.

2. **Concern Statement:** Commenters expressed concern over the impact that volcanic ash, sulfur, and salt air can have on aircraft engines and airframes. Commenters stated that aircraft manufacturers Pratt & Whitney recommend frequent checks for corrosion, daily desalination rinses, and engine borescope inspections. Commenters stated that although many operators already include these mitigation measures, FAA should require these additional maintenance actions.

Agencies' Response: The Act does not provide jurisdiction over aircraft maintenance. All operators are required to meet airworthiness requirements per their certifications.

Process Comments: Impact Analysis

1. **Concern Statement:** A commenter suggested that the EA should include an "appropriate use analysis" in accordance with Section 1.5 of NPS Management Policies. The commenter added that air tours are a discretionary activity subject to agency approval, and NPS has never formally considered whether or not air tours over the Park are an appropriate use.

Agencies' Response: The NPS is not required to document an appropriate use analysis. However, out of an abundance of caution, an appropriate use analysis has been included as Attachment B to the Record of Decision, National Park Service- Statement of Compliance.

2. **Concern Statement:** Commenters suggested reaching out to operators to determine the economic impacts of limiting the number of flights. Commenters stated that the allocation numbers do not take into account fluctuations in the market and that requiring additional equipment that serves the same purpose as ADS-B (which is already a requirement) is an unnecessary economic burden.

Agencies' Response: The ATMP limits the number of commercial air tours that may be conducted within the ATMP planning area to mitigate or avoid impacts to Park resources and visitor experience as directed by the Act. Operators could seek to make up the number of daily or annual flights from air tours within the ATMP planning area by conducting air tour operations outside of the ATMP planning area, which are not regulated by the ATMP.

Commenters state that the allocation numbers do not take into account fluctuations in the market. The agencies disagree. As stated in the EA, the air tours numbers for existing conditions were determined from the average of 2017-2019 period specifically to address fluctuation between years. The Preferred Alternative was developed based upon a percentage reduction from the existing conditions. Further, the ATMP does not

preclude operators from responding to market fluctuation and daily flight demand in other ways such as using their aircraft for other business ventures or conducting air tours elsewhere within the region. In addition, commercial air tour operators would be allocated a certain number of commercial air tours over the Park, referred to as the initial allocation, until a competitive bidding process can be conducted. Appendix A of the ATMP lists the annual allocations of operations by air tour operator:

- Helicopter Consultants of Maui, Inc. (Blue Hawaiian Helicopters): 1,176
- Mokulele Flight Service, Inc. (Mokulele Airlines): 1
- K&S Helicopters (Paradise Helicopters): 77
- Safari Aviation, Inc. (Safari Helicopter Tours): 185
- Sunshine Helicopters, Inc.: 109

The initial allocation reflects the proportional number of air tours that each of the five operators reported over the Park in the period from 2017-2019.

The commenters also state that requiring additional equipment that serves the same purpose as ADS-B is an unnecessary economic burden. In order to successfully implement the ATMP, the agencies determined that it should include the standards in Section 4.1 of the ATMP, Aircraft Monitoring Technology, to allow them to adequately monitor and ensure compliance with its conditions. To this end, the ATMP requires that operators equip aircraft used for air tours with flight monitoring technology, use such technology when conducting air tours, and include flight monitoring data in their semi-annual reports in the format requested by the agencies and in compliance with all applicable laws. To the extent that ADS-B meets the performance standards in the ATMP, the operator can utilize ADS-B for those purposes. The agencies consulted with the National Parks Overflights Advisory Group regarding the cost of various flight following technologies and found that there are off-the-shelf options that could meet the requirements of the ATMP.

3. **Concern Statement:** The commenter suggested the simplest and most relevant measure of quiet technology for national parks is the sound exposure level (SEL) of an aircraft in level flight at 2,000 ft., and it can easily be employed to determine which operators used the quietest equipment, and stated that the SEL metric provides a good comparison of noise between aircraft. The commenter provided the following information about the SEL metric: The SEL metric represents all the acoustic energy (a.k.a. sound pressure) of an individual noise event as if that event had occurred within a one-second time period. SEL captures both the level (magnitude) and the duration of a sound event in a single numerical quantity, by squeezing all the noise energy from an event into one second. This provides a uniform way to make comparisons among noise events of various

durations (FAA, Fundamentals of Noise and Sound, https://www.faa.gov/regulations_policies/policy_guidance/noise/basics/).

A commenter suggested that the agencies develop criteria beyond just the SEL metric to account for other acoustic characteristics such as frequency and sound quality that also determine the intrusiveness of the noise. The commenter stated the SEL noise level can be measured from overflights or derived from the FAA's Aviation Environmental Design Tool (AEDT) noise model, either through modeling or "Noise Power Distance" curves, and with the SEL of each aircraft known, the aircraft can be ranked from quietest to noisiest and the A-weighted average of the noise rankings based on the number of operations of each operator will allow comparison between operators to determine their relative rank. The commenter provided the following example: If there were two operators, and one flew 75 operations with the quietest aircraft and 25 with the second quietest aircraft, and the other operator flew 50 operations with the quietest aircraft and 30 operations with the second quietest aircraft, their weighted average noise ranking would be: Operator 1: $[(75 \text{ ops} \times 1 \text{ rank}) + (25 \text{ ops} \times 2 \text{ rank})] / 100 \text{ Total ops} = 1.25$ and Operator 2: $[(50 \text{ ops} \times 1 \text{ rank}) + (30 \text{ ops} \times 2 \text{ rank})] / 80 \text{ Total ops} = 1.375$. The operator with the lowest weighted average ranking is the operator with the least impact on the Park, and the one entitled to the greatest reward or incentive for quiet technology. After the quiet technology rankings of each operator are calculated, and each operator is ranked, the 25-50% of operations reserved for operators with the quiet technology can be distributed using a formula such as:

Rank of Operator in Use of Quiet Technology Incentive (Percentage of Quiet Technology Operations Awarded)

1 - 30%; 2 - 25%; 3 - 20%; 4 - 15%; 5 - 10%

Agencies' Response: There are many different types of noise level metrics that can be used to assess the noise impacts of air tours, including SEL as the commenter suggests. The agencies used a variety of metrics to account for the noise impacts including duration, intensity, and spatial footprint. Specifically, the noise analysis uses equivalent continuous sound level (LA_{eq}) mapped across space and day-night average sound level (DNL), which are averaged metrics over specific time periods. Other metrics were also used, including time audible (also mapped), time above 35 dBA (also mapped), and time above 52 dBA. Finally, the maximum sound level (L_{max}) metric was also used as an instantaneous metric. The additional metric of SEL is not necessary and using SEL alone would not distinguish which aircraft are quietest. Additional information about noise modeling can be found in Appendix F of the EA, *Noise Technical Analysis*.

4. **Concern Statement:** A commenter noted that previous work by the FAA published in Advisory Circular AC-93-2 is not helpful or appropriate for application in ATMPs. The commenter stated that the document lists aircraft meeting a noise efficiency standard

that reduces noise per seat, that the Advisory Circular is outdated, and that a noise efficiency standard is a poor definition of quiet technology because it may or may not correspond to a lesser impact of overflight noise on parks. The commenter stated that this is because noise efficiency and quiet technology are not the same thing, that less noise per passenger seat does not equate to less noise and fewer impacts per operation on the Park, and, therefore, noise efficiency does not measure the effectiveness of quiet technology on parks.

Agencies' Response: AC-93-2 contains the measured or estimated noise levels for aircraft currently used for commercial sightseeing operations in the Grand Canyon National Park special flight rules area and is not applicable for the Park. The agencies have and will continue to use the best available information and data to inform decisions regarding quiet technology. Additional information about noise modeling conducted for the Park can be found in Appendix F of the EA, *Noise Technical Analysis*.

5. **Concern Statement:** A commenter stated that the EA failed to account for the indirect and cumulative impact of air tour noise in their assessment of Alternative 3. The commenter stated that there are a number of foreseeable adaptations to Alternative 3 that operators will make that will significantly impact Park resources, but that were not analyzed, including flights outside the ATMP planning area, the use of larger, noisier equipment, and the use of slower flights that extend the time and noise exposure over the Park. The commenter also stated that the policies to implement the quiet technology incentives are too weak and ill-defined to mitigate impacts and by not properly analyzing each of these, the assessment of Alternative 3 understates the actual impacts that will result.

Agencies' Response: The EA appropriately accounted for indirect and cumulative impacts. Each of the environmental impact categories, including air tour noise, were analyzed in detail in the EA and include an analysis of indirect and cumulative impacts for each of the alternatives. Section 3.1.2 of the EA, Environmental Consequences for Noise and Noise-Compatible Land Use, discloses that it is reasonably foreseeable that current air tour operators could seek to make up lost revenue by offering air tours outside of the ATMP planning area, as these would not be regulated by the ATMP. This type of shift in air tour activity is referred to as "air tour displacement," and could consist of air tour operators shifting routes or altitudes to just outside the ATMP planning area. Air tour displacement could result in impacts to resources to the extent that they are present near the locations where the displaced air tours occur. However, it is difficult to predict with specificity if, where, and to what extent any air tours would be displaced to areas outside the ATMP planning area, including over the ATMP planning area at altitudes at or above 5,000 ft. AGL. Consistent with the Council on Environmental Quality regulations, the agencies disclosed that specific air tour routes, altitudes, and numbers of tours are not available to assess noise and other potential

indirect and cumulative impacts associated with reducing or eliminating air tours within the ATMP planning area. Because specific air tour routes are not available, it is not possible to identify all the other potential noise sources outside the ATMP planning area that might contribute to the acoustic conditions within the ATMP planning area.

The ATMP authorizes air tours by specific aircraft, and provides that any new or replacement aircraft “must not exceed the noise level produced by the aircraft being replaced.” Thus, operators will not be able to use larger, noisier equipment unless the ATMP is amended to allow the use of such equipment.

It is not reasonably foreseeable that operators will fly slower flights that extend the time and noise exposure of the Park. It is unclear how flying slower would benefit the operators. Further, most of the air tours over the Park are conducted by helicopter, and much of the efficiency of a helicopter is used to maintain lift, meaning that slower tours may not result in much fuel savings. Finally, aircraft are also unlikely to fly more slowly over the Park because hovering and loitering are prohibited on two of the three authorized routes, and limited on the Pu‘u‘ō‘ō Route and in the Pu‘u‘ō‘ō Quiet Technology Zone.

Lastly, the commenter also stated that the policies to implement the quiet technology incentives are too weak and ill-defined to mitigate impacts and by not properly analyzing each of these, the assessment of Alternative 3 (Preferred Alternative) understates the actual impacts that will result. Appendix F of the EA, *Noise Technical Analysis*, describes noise impacts that can be expected under the Preferred Alternative for aircraft currently within an operator’s fleet. Further, the *Noise Technical Analysis* also specifically models the Preferred Alternative with the quietest helicopter currently being used. Therefore, the agencies have disclosed and considered how different the impacts could be between quiet technology and non-quiet technology operations. Further, any changes in aircraft from what is analyzed in the EA, including those that qualify for the quiet technology incentives, must be equal to or quieter than what is included in the ATMP. Therefore, the EA properly analyzes the impacts of this alternative.

6. **Concern Statement:** A commenter stated that NEPA has not been correctly applied and the starting point of the noise analysis should be the natural ambient sounds of the Park and that the impact analysis must judge the noise impacts of commercial air tours while they are taking place in the Park—specifically which areas will be impacted by noise from air tours in the Park.

Agencies’ Response: The agencies complied with NEPA and all other applicable environmental laws in the development of the ATMP. See Section 3.1 of the EA, Affected Environment for Noise and Noise-Compatible Land-Use, and Appendix F of the EA, *Noise Technical Analysis* for specific information on how the noise analysis was

conducted. The agencies used the existing conditions of air tours (the three-year average from 2017-2019 of commercial air tours conducted under interim operating authority) as the baseline to compare alternatives, in accordance with NEPA. The alternatives were each compared to the actual current conditions of the Park, which currently includes air tours, in order to accurately assess the impacts of the proposed action (the change from the current conditions to what the conditions would be as a result of the proposed change). However, the agencies acknowledge that no previous NEPA analysis of interim operating authority occurred because the issuance of interim operating authority for commercial air tours over the Park was a nondiscretionary action directed by Congress. One of the metrics calculated in Appendix F of the EA, *Noise Technical Analysis*, was time audible under natural ambient conditions, which is the total time (minutes) that aircraft noise levels are audible to an attentive listener with normal hearing under the median natural ambient conditions. The median natural ambient is the sound level exceeded 50 percent of the time, determined from the natural sound conditions found in a study area, including all sounds of nature (i.e., wind, streams, wildlife, etc.), and excluding all human and mechanical sounds. Time audible does not indicate how loud the event is, only if it might be heard. The agencies also used the time above 35 dBA and time above 52 dBA metrics. These metrics evaluate both the intensity and duration of noise. Further, these metrics are calculated independent of background ambient and were considered in contrast to both the natural and existing ambient. Thus, the agencies did consider the impacts of the air tours themselves on the Parks' resources and visitor experience, in the context of both existing and natural ambient conditions, which is disclosed in the EA. See also Agencies' Response to Concern Statement 8 in this same section.

7. **Concern Statement:** A commenter stated that no cost analysis has been conducted to determine revenue loss to the Park and the reduction in the number of flights would not allow operators to break even. The commenter stated that the Hilo district has been designated as an impaired economic area and the ATMP creates additional hardships within this zone.

Agencies' Response: The fees collected by the NPS from air tour operators are required by the Federal Lands Recreation Enhancement Act (FLREA) and are not related to the ATMP or the Act. The NPS also collects Park entrance fees and user fees which fluctuate by visitation levels. The revenue the Park collects under FLREA is made up of a variety entrance and user fees and fluctuates by visitation levels.

As discussed in Section 3.7.2 of the EA, Environmental Consequences for Environmental Justice and Socioeconomics, the limited number of flights permitted under the Preferred Alternative could limit the potential future economic growth for commercial air tour operators and other ancillary businesses. Because of the capital investment air tour operators have in aircraft, facilities, and equipment, operators could seek to make up

lost revenue from air tours within the ATMP planning area by conducting air tour operations outside of the ATMP planning area to the extent possible. Operators may use their aircraft for other businesses or operations such as search and rescue, fire protection, resource mapping and assessment, and flight for life operations. Therefore, although the ATMP would limit the opportunities for air tour operators and ancillary businesses to generate revenue from air tours conducted within the ATMP planning area, these alternatives would not preclude operators from making up this revenue generation in other ways such as using their aircraft for other business ventures or conducting air tours elsewhere within the region. The commenter does not explain how the ATMP creates additional hardships. The agencies have determined that the socioeconomic and environmental justice analyses in the EA is adequate.

- 8. Concern Statement:** Commenters stated that it was unclear why noise modeling did not include all allowable fixed-wing and helicopter models and were concerned that the maximum noise impacts were not captured since louder aircraft models were not included in noise modeling for the No Action Alternative and Alternative 3. Commenters noted that the No Action Alternative excludes BHT-430-430, MD-369-D, MD-369-E, CE-337-T337H, and CE-421-C, and doesn't differentiate between EC-130-B4 or T2 models, while Alternative 3 excludes BHT-430-430, BHT-407-407, MD-369-D, MD-369-E, CE-337-T337H, and CE-421-C and doesn't differentiate between EC-130-B4 or T2 models. Additionally, commenters stated that the BHT-430-430's flyover volume is considerably higher than the EC-130-B4's flyover volume, and suggested describing why aircraft models mentioned above were not included in noise modeling.

Agencies' Response: The analyses for the No Action Alternative and Alternative 3 represent the current and reasonably foreseeable future conditions and are based on the three-year average of commercial air tour activity from 2017-2019. As required by FAA policy, the FAA typically represents yearly conditions as the Annual Average Day (AAD). For ATMPs, it was determined that a peak month, average day (PMAD) representation of the operations would more adequately allow for disclosure of any potential impacts. Thus, the noise modeling represents the most likely or average condition during a peak month of activity for each alternative.

For the years 2017-2019, reporting data submitted by the operators (as required under the Act) included operations using the AS-350-B2, EC-130-B4, EC-130-T2, BHT-407-407 and MD-369-E helicopters, as well as the Cessna 208B fixed-wing aircraft. PMAD operations included the AS-350-B2, EC-130-B4, EC-130-T2 and BHT-407-407 helicopters, and Cessna 208B fixed-wing aircraft. PMAD does not include the MD-369E operations as these represent less than 0.1% of all operations. The BHT-430-430, MD-369-D helicopters and CE-337-T337H, CE-421-C fixed-wing aircraft are not reported as being flown by the operators during those years and are therefore not represented in PMAD.

Regarding the specific aircraft and airframe configurations, the FAA's noise model database (Aviation Environmental Design Tool, AEDT) does not include information on all possible aircraft, airframe and engine configurations. Rather, AEDT provides the default aircraft mappings required by the FAA for use in NEPA analyses of FAA actions. As such, the EC-130-B4 and EC-130-T2 are modeled using noise data from a default EC-130 aircraft.

For additional information see FAA Part 150 and Guidance on Using the Aviation Environmental Design Tool (AEDT) to Conduct Environmental Modeling for FAA Actions Subject to NEPA.

Process Comments: Alternatives Considered

1. **Concern Statement:** A commenter stated that the Act and other NPS laws (54 U.S.C.) were incorrectly applied because they are intended to protect national parks, not promote commercial air tours.

Agencies' Response: The ATMP is consistent with all applicable laws, including the NPS Organic Act. The Act authorizes the agencies to prohibit commercial air tours over all or part of a national park but does not require them to ban them if their impact on park resources and visitor experience can be mitigated to an acceptable level. The agencies selected Alternative 3 because it continued to provide some opportunity for commercial air tours to be conducted within the ATMP planning area, while appropriately mitigating or avoiding impacts to Park resources and visitor experience.

Process Comments: Other

1. **Concern Statement:** Commenters stated that the EA does not adequately consider the NPS Organic Act or the Redwoods Amendment Act and recommended adding a subsection to Chapter 1 or an appendix that summarizes applicable laws relevant to the proposed action, to include the NPS Organic Act. The commenter notes that the Organic Act is referred to as the NPS conservation mandate and, as such, it, along with other laws and policies, mandates the conservation of Park resources and values.

Agencies' Response: The agencies considered all applicable laws and policies in the development of the ATMP and EA, including the NPS Organic Act, as amended. A list of applicable laws and policies is not required content for EAs. See 40 CFR § 1501.5. The National Park Service- Statement of Compliance, attached to the Record of Decision, details the NPS's compliance with applicable provisions of its Organic Act and Management Policies.

2. **Concern Statement:** Commenters suggested that the decision document should include an impairment determination for the proposed action, consistent with Section 1.4.7 of NPS Management Policies.

Agencies' Response: Consistent with NPS policy and guidance, a non-impairment determination is included in Attachment B to the Record of Decision, National Park Service- Statement of Compliance.

3. **Concern Statement:** Commenters suggested including a specific resource monitoring plan that systematically and periodically assesses the impacts of air tour noise on natural and cultural resources, including wildlife, Wilderness character, cultural resources, and visitor use.

Agencies' Response: The ATMP and other NPS planning documents for the Park include sufficient monitoring to protect Park resources. The NPS may monitor the condition of Park resources at any time. Additionally, Section 8.0 of the ATMP, Adaptive Management, states: "The NPS will conduct monitoring to ensure that the terms and conditions of this ATMP remain consistent with Park management objectives." If new impacts are observed to resources, the NPS can initiate additional monitoring at the Park and adaptive management or plan amendments that may be used to ensure the continued effectiveness of the ATMP over time. As stated in Section 3.7 of the ATMP, Additional Requirements, annual meetings will serve to ensure that air tour operators remain informed regarding the terms and conditions of the ATMP, including any adaptive management measures or amendments, and that operators are made aware of new or reoccurring concerns regarding Park resources. The annual meeting is also an opportunity for Native Hawaiian Organizations or individuals to inform agencies of the dates on which no-fly days, listed in Section 3.5 of the ATMP, Restrictions for Particular Events, will occur.

Process Comments: NEPA

1. **Concern Statement:** A commenter expressed concerns over the agencies' decision to prepare an EA and not an Environmental Impact Statement (EIS). The commenter stated that 40 CFR § 1502.3 relates to major Federal actions significantly affecting the quality of the human environment and requires agencies to complete an EIS.

Agencies' Response: An EIS is only required when there is a potential for significant effects on the human environment. As documented in the EA and Findings of No Significant Impact (FONSI), there is no potential for significant effects for the selected alternative. Thus, the agencies were not required to prepare an EIS for the ATMP.

Correspondence: I read a great deal of the PDFs, proposed alternatives, flight routes, etc.

Having lived in Volcano for most of my life, it'd feel disastrous to have all that helicopter noise in such a quiet, sacred land. Additionally, I see quite a few flight paths coming right up the highway over fern forest / Glenwood. Because this is outside the flight zone requirements in terms of altitude, I can only imagine the impact this will have on tens of thousands of homes, families, and very importantly, recovering nene populations.

The song "O Kalapana" is based on a chant about Holei, within the park and within flight path thresholds. The chant and song speak of the voice of the ocean, which can be heard all the way up on the cliff at Holei, miles from the shore. This is profoundly important to respect and protect as a Hawaiian heritage and cultural right. Additionally, Pele's wind blowing thru the silence at Halema'uma'u is recorded in numerous chants, and is a fundamental aspect of native practices, traditions, and ways of connecting with the land and spirits of the land. Both by day and by night. If at any point a helicopter disturbed this silence, it would be a breach of Hawaiian cultural rights and practices within this sacred land. Not to mention, just plain disrespectful.

I, and many in our community in and around the park, highly DISAGREE with implementing proposed air tours. Especially on the bases of the breach of cultural rights, and the negative impact on endemic and endangered species, migratory patterns, etc.

Expect this to be highly disfavored and unsupported by the vast majority of the community of our island.

Correspondence: Aloha,

Flying tours should stay away from the parks in Hawaii County. We got our past two mayors to get rid of the NOISE of helicopters and now we have to attend to more "noise pollution."

Also the elites can take their tours like the rest of our tourists on the islands.

Why don't we get our roads and highways up to the amount of population we have on the Big Island?

Get our workers home without the congestion of the tourists slowing us down to get home and attend to our crops, lives and welfare.

We need to keep the Hawaiians, locals of years to help keep "ALOHA" in Hawaii too.

I have been here 35 years and we are losing our ALOHA to give to each other and then give to our guests.

Please consider please Transportation Department - fix the congestion and then onto getting this project going. Please again?

Aloha nui loa,

Coreen Nelson

Correspondence: Aloha to whom it may concern,

Flights over the volcano national park have always been an educational purpose for those that travel to Hawaii from all over the world. Not only is it one of the most active volcanos out there, its also got a deep history directly tied to the Hawaiian culture. For years air traffic over the national park has become more and more strict, to the point that it can be challenging to see. As a fellow pilot here in Hawaii, I can honestly say that every operator does an amazing job at flying over the volcanos national park safely and quietly. Everyone one of us wants to enjoy seeing this magnificent volcano, while also allowing our guest to see the same beauty from a birds eye view.

Our operations over the volcano typically take place above 1500 feet above the ground, also as far away from people or buildings to help with noise. Between all the operators out there, we work as a team to fly certain routes to mitigate hazards between one another. When I think about this being an issue I cant help but think about everything else going on in our state, such as our public beaches and coral reefs/wild life being bombarded by hundreds of tourist each day. I think about the cruise ships that come and dock in Kailua bay and all the shuttle boats brining in guest, and the impact that must have on our ocean life. When we fly over the national park, Typically we are there for no more then 10-15 minutes. We are flying above 1500 feet, with little to no carbon foot print being left behind.

To limit the number of fly overs would be eliminated a lot of our jobs as aviators. Also eliminating what is to most people, a once in a lifetime experience. We are not there to make noise or harm anyone or anything. It simply to view one of the great beauties our island has to offer from a birds eye view.

Correspondence: Please do not allow more flights over Hawaii Island.

Aircraft spew solid pollutants (metals) that fall to earth. These pollutants/metals enter our ground water, catchment tanks and oceans. They also fall on vegetation and gardens. But the biggest problems is the fire behavior that has plagued the Mainland. The pollutants become embedded into vegetation. Causing the vegetation to burn hotter. This is causing extreme fire behavior throughout the U.S.

Please don't pollute this beautiful and Sacrad land.

Correspondence:	Like most park-goers, I hope for some semblance of solitude when I go into nature. Helicopters and planes should have to go around and shouldn't be near National Parks and I'd argue State Parks. The noise is incessant, damaging and irritating even with quiet technology. Parks should be about open skies and nature, and not about someone paying x amount of dollars to fly in. Personal drones are banned in National Parks, but why are Helicopters given carte blanche? They shouldn't be allowed.		
Not that Kalalau is a National Park, I could hardly enjoy my 4 night stay there two years back because of an incessant barrage of helicopter tours every single day. I couldn't even hear the birds in Kalalau Valley. Imagine how it must feel to call out for a mate and not be able to hear your own voice as an endangered bird. It's shameful and I'm embarrassed for Hawaii. It's becoming constant on all Islands and we're tired of it. Do the right thing and bar helicopter tours from all Parks. Five people shouldn't be allowed to run roughshod in the presence of endangered wildlife and everyone else seeking beauty and grace of a National Park.

Correspondence: Aloha! I have the privilege of bringing my Volcano School students into Volcanoes National Park all year long, sometimes weekly, for educational programs with Park Rangers. This past Friday, on the Keanakakoi Trail, the voice of our wonderful educator, Jody Anastasio, was repeatedly interrupted by helicopters overhead. It really ruins the beauty and peace of hiking and learning in nature when tourists are hovering in helicopters or flying over in planes. I have also experienced this with my students on the Kipukapuaulu Trail many times, where the birdsong we are listening to as part of our studies is constantly being overpowered by the helicopters and planes overhead. Anthropogenic noise is disruptive to behavior of native birds. We have been taught that as students, our voices should not be any louder than the birdsong. As an educator who uses Volcanoes National Park as a vital resource and outdoor classroom, I would appreciate it if the Park would lessen the allowance for tourists flying overhead during school days and hours. Mahalo nui.

Correspondence: If you issue permits please make sure that the operators are required to record the entirety of the trip.

Many fly very low over Hawaiian Homes Lands in total disrespect of the kânaka maoli that live there. Better would be that routes are defined from ITO and requires using a coastal route for the entirety of the route. Since the operators are required to provide the data. Make it available for the public to examine by waypoint. This would allow us to track the violations more effectively. This is very important during events as the operators tend to circumvent altitude requirements.

Currently they seem to be adhering better but we need an enforcement tool.

Correspondence: Tour helicopters fly directly over my home in Kealahou numerous times a day all day long. They fly extremely low causing loud noises that disturb the entire subdivision consisting of many homes.

Besides the noise, these flight paths could possibly cause crashes that would result in loss of lives and property.

Tour helicopter flight plans should be confined to over unpopulated land and over the ocean.

Thank you.

Correspondence: I am AGAINST air tours flying over Hawaii Volcanoes National Park. As a native Hawaiian and cultural practitioner, there are cultural procedures and protocols being done almost everyday at any given time by natives of the land. Having the noise pollution of aircraft flying by is not only a huge distraction and

interruption of native practices and protocols, it also shows a blatant disregard for the sacredness of this area, the people, and the protocols being performed. There are already so many cultural practices that can not be exercised at this park like foraging, fishing, hunting, and even traditional living, that this noise pollution and interruption of hula, chanting, and cultural practices is vastly crossing the line of being humble, responsible, and respectful guests on this sacred land. Being the home of our fire goddess Pele and many legends, how can the park yet again let another cultural aspect of natives die and be suppressed. The oppression of our culture, traditional lifestyle, and worshipping cannot suffer another low blow for the sake of profit that doesn't help the indigenous in any way, shape, or form. I urge the national parks to treat our people the way you treat out wildlife and plants. As native Hawaiians we are the caretakers of these elementals and wildlife and we do not even get the same level of protection and encouragement as the birds and plants get. It is plain to see our people are in great danger and nearing extinction and no land or habitats have been given to the people. Hundreds upon hundreds of acres are kept pristine and protected but not one traditional village or land parcel has been given to native people to live traditional lifestyles. The parks system needs to adjust your care and protection to encompass all aspects of Hawaiian lifestyle, especially the Hawaiian people, for our bloodlines, stories, heritage, and knowledge is just as endangered as the birds and plant life. If not even this can be done or at least proposed and fought for, how can air tours even be a thing? I humbly ask and urge the parks services to extend their aloha to Hawaiian people and shut down the idea of air tours and start working on land parcels within the park to be given to Hawaiian families and individuals who seek to live a traditional lifestyle. Help us to re create an ahupua'a system, traditional fishing village, or land parcels to build traditional Hawaiian Hale for natives that wish to live the lifestyle of our ancestors. Please consider giving aloha to not only our birds and plants, but also the indigenous people of the land.

Correspondence: Aloha ka kou, thank you for entertaining comments to your draft ATMP, and thank you for making an effort to regulate the noise pollution caused by commercial air tourism at Hawai'i Volcanoes National Park. As a community member living in the serenity of the surrounding native forests and wilderness, the air tourism is offensive. The electronic whine of engines takes over the sound of native birds, wind, the volcano herself, and other natural sounds. One important goal of the Park is to protect the soundscape found here, and air tourism is in direct opposition to that goal. I have never had a visitor fail to comment on how offensive the sound is. This ATMP is a step in the right direction and I thank you, but it does not go far enough. Quiet technology exists and should be a requirement of any and all aircraft permitted to operate under the ATMP. Eliminating Wednesday and Sunday from regularly scheduled flights is also a good start, and I urge you to consider including more no-fly days. Perhaps the ratio could be 2 days of air tours, 5 days without.

I have other concerns about equity and access. As a native hawaiian, I observe that primarily tourists from outside are the individuals utilizing this type of air tourism. Does their ability to pay large sums to tourism operators to gain air access outweigh the rights of people who experience the park on foot? Grant them the right to pollute the soundscape to satisfy some voyeuristic need? Perhaps this is an opportunity to educate visitors on the ethos and values of Hawaiian culture, respect and malama for nature, living in concert rather than to conquer.

I respectfully request less access for air tourism, stricter requirements for quiet technology, and consideration of equity as this process continues. Many thanks for allowing this comment.

Correspondence: Aloha - In order to comply with the Federal Endangered Species Act and the Federal Migratory Bird Treaty Act, ATMP Alternative 2, which prohibits helicopter tours over Hawai'i Volcanoes

National Park, must be adopted. As supported by field studies, any amount of helicopter tours would have a negative impact on endangered species such as the Nene Goose and Honeycreeper, and therefore would be in violation of these Federal laws.
Mahalo for your consideration.

Correspondence: We are surrounded by noise and we need a place to escape, a place of refuge, a place to think and reflect. Hawai'i Volcanoes National Park should be such a place. When I visit Hawai'i Volcanoes National Park, the last thing I want to hear and see are helicopters and the noise they bring with them. Helicopters have no business disturbing the peace and quiet of those visiting the Hawai'i Volcanoes National Park.

Correspondence: The proposed air traffic management plan (ATMP) is wholly inadequate and must be revised to ban all air traffic within the boundaries of the park due to serious concerns about the negative impact that flying aircraft can have for safety of visitors, staff, and wildlife. After all, that was the *exact* reasons cited for banning unmanned aircraft from airspace above NPS land and manned aircraft are faster and heavier posing a greater risk

to those on the ground. In addition manned aircraft disrupt the wildlife as they are louder and have a greater chance to injure or kill the wildlife. For these reasons, the NPS should treat manned and unmanned aircraft the same and ban them both.

Correspondence: No. Please no. You can never undo something like this. Not only would it reduce the quality of the experience, its disrespecting a sacred place and has the potential for disrupting wildlife. Perfect example: the Grand Canyon. Ive been there with and without the air traffic and it cannot be compared. We dont visit National Parks to experience an airport.

At a time when our nation is grappling wuth the massive number of people visiting, and in some cases requiring reservations, why oh why introduce more noise polution.

You have a magical place, keep it that way. Besides, Pele would not be happy one bit.

Correspondence: I can't believe the NPS allows these invasive tours over the Park. I completed an Inventory and Assessment of Anchialine Pools in VNP in 1989 (Technical report 69) and the Park has always been special to me, which is why I purchased a home in the Volcano Golf subdivision.

I have helped remove invasive species within the Park and elsewhere around the island and this noise pollution is extremely invasive. I come to Volcano to be at peace and in its power and serenity is where I feel closest to my Hawaiian roots and culture. The helicopter noise always destroys the experience and pollutes the Volcanoes mana. It should absolutely be a no-fly zone over the Park. Senator Ed Case is correct, that there should not be commercial tour flights over the Park.

Mahalo,
David Chai

Correspondence: Air tours offer a once-in-a-lifetime opportunity for elderly and disabled persons to see landmarks without the impact of road vehicles, toilets, trash, trails, and ground based off trail activities.

They are no less valid than ground tours and provide access to those with limited time or mobility with far less impact on the environment.

As a private pilot I can say that the current proposals will force aircraft into potentially unsafe flight conditions and does not account for the weather patters that impact this area.

I would rather see the HVNP benefit from the hundreds of thousands of dollars in revenue each year from air-tour flights rather than limit the access and therefore income for the park.

Correspondence: You list Park Management objectives related to the development of this ATMP

1) Protect biological resources.

Is the reduction in foot traffic due to helicopter tours not helping to protect biological resources? People are able to enjoy the beauty of the national park without ever having to disturb the national park.

2) Protect natural sound.

Is it the decibel level that is an issue? Do we have a decibel meter at the front gate to prevent people from bringing in certain cars, motorcycles, trucks, and vans? Like a library, do we also have Park Rangers roaming around with decibel meters to ensure people are talking reasonably and not coughing or sneezing (which are both louder than the helicopters flying overhead)?

3) Protect Wilderness Character

Would one not be able to experience solitude more if the number of people that needed to go to the park on foot was reduced? What about the ADA, what if one's only way to experience the park wholly is by air? Would you discriminate against people with disabilities when the park is open to everyone else 7 days a week, 24 hours a day, including holidays, but not them?

4) Protect cultural resources and traditional uses

You basically reference natural sound here again. So the same questions arise. Do you not allow vehicles that have the same decibel levels as a helicopter flying 1,500-5000 feet above the surface of the National Park in the national park?

Also, when you reference "quiet technology" is this a function of decibel level? Will you accomplish test flights to determine the decibel level of each aircraft operating on this island? What if an aircraft that does not possess "quiet technology" has a decibel level at or lower than one that does?

Correspondence: The plan is a good start. I am a resident of mountain view, hi and the tourist copters regularly fly over my home. Normally the first arrives between 830 am and 900 am. We purchased acreage in the country to hear the birds not the helicopters. I have been sitting on my lanai in the peaceful jungle quiet only to be interrupted by the loud whirring of the rotors above. Often they fly directly overhead. Sometimes they are very low and i can read the company name and number on the aircraft. I feel like i live next to an airport. I am excited about the sunday "day off". I am thrilled that the number of flights will be cut down. I would love to know what the three flight paths are. I also hope that the state is providing some way to enforce these new regulations. There are many people that have just given up and decided to live with the annoying and intrusive noise. I hope rhat they will take this opportunity to let everyone know that the tour companies are affecting the wellbeing of many people, animals, and our precious aina.

Correspondence: I have visited Hawaii for vacations numerous times over the last 40 years. Tour aircraft should be prohibited from operating over Hawaii Volcanoes National Park which includes a NO FLY requirement. Unfortunately over 35 years ago I did take a helicopter ride over the national park and this was wrong. Now I know better than to cause harm to residents on the ground. As a regulatory agency, I urge the FAA to implement a NO FLY option and eliminate helicopter noise from impacting those on the ground. This is provided for in the original 2000 Congressional ATMP legislation.

Correspondence: I don't have a financial or personal interest in this industry and don't live near the park, but I'm a local resident and would like to point out that our local tour operators have the same right to make a living using the airspace above the parks as the major airlines do to operate their aircraft over major cities.

Buying a piece of property in rural Hawaii does not entitle residents to perfect quiet, unobstructed views or traffic free roads.

Federal lands are used for oil and gas extraction, livestock grazing, commercial fishing, solar power production and a host of other invasive activities. These activities are essential to our national economy and (aside from the externalized costs of fossil fuel extraction which the Federal Government has refused to impose on the oil companies) they benefit everyone.

By artificially limiting the number of flights, time of flights, type of aircraft and creating other rules and regulations around airspace use, the National Park Service is making the park less accessible to visitors, creating negative economic impact for local businesses and creating a special carve out for Federal lands that does not exist for private land holders.

Citizens don't like it when the Federal Government creates different rules for themselves than they have for everyone else.

The FAA already does a great job regulating our common airspace. No special rules are needed for the National Parks simply because a few local residents complain about the noise.

Correspondence: I support banning all air tours above and around Hawaii Volcanoes National Park. It's inconsistent with Native Hawaiian cultural practices and goes against malama 'aina (caring for the land). The wildlife, flora, fauna, environment, and the peace of the park are disturbed by air noise and flights. Why should Kanaka Maoli and practitioners, hula halau, generously sharing their culture with tourists, be limited to only one day of quiet, as proposed? I was recently on a ranger tour that had to pause to be heard, as the tour group watched the helicopter buzz over us. It's completely unnecessary for any human being to have to tour the volcano or the island by helicopter. I have a disabled family member that can enjoy the park from car and accessible trails, so the argument that helicopter tours are the only accessible way for some disabled people to enjoy the park--is false and insulting.

The park is one of the only places in Hawaii that's accessible and welcoming to all to enjoy the beauty and peace of nature. While there are places in the state that are still peaceful and rural, tourists shouldn't be allowed to trample through locals' backyards to get to that peace and quiet. Volcanoes National Park should keep the park quiet and peaceful--no air noise and no overhead annoyances. That's why millions of tourists visit the park, even when the volcano isn't erupting--to experience the beauty, peace and quiet of old Hawaii.

As an alternative to banning ALL air tours, I support limiting the number of air tours per year or day and support ALL air tours flying quiet technology ONLY during limited, designated hours. But even quiet technology flights are harmful to the environment, the local wildlife, and especially native birds and insects that are quickly being decimated, and therefore even quiet tech flights should be limited to short, designated hours. Rather than proposing that most daylight hours be open for flights, it should be the other way around-- most daylight hours should be for people and animals enjoying the quiet, and flights for only a few hours, a few days a week AT MOST.

The park should care for all areas surrounding the park--the ground and underground, the sea, the air--and limiting (ideally removing) flight tours in and around the park should be a priority to preserve the park for generations to come. Mahalo.

Correspondence: Definitely need to restrict aircraft from the Kilauea Summit Area.

I'm a resident of VGCC Estates residential neighborhood at the summit.

There are several Meditation Retreats in the area.

The constant noise pollution created by aircraft (especially helicopters)

Is destroying the peace and tranquility of our serene environment.

There is also a couple/few hunters with high powered long range hunting rifles living in the area who have been heard threatening to shoot at aircraft flying within ear-shot/line of sight range. I have recently been hearing gunshots in the neighborhood as helicopters fly by. A very serious safety concern.

Please advise aircraft operators to remain vigilant and clear of VCGG Estates.

Mahalo

Correspondence: I am deeply grateful for the policy of quiet-only flights and/or no flights on certain days to protect the sanctity of this sacred space.

I would add that no-flight days on important seasonal shifts would also be deeply appreciated by cultural practitioners (of which I am one). Specifically, equinoxes, solstices, and opening/closing of Makahiki season, as well as some time around Merrie Monarch season, when many visiting Halau are offering their ho'okupu to Ka Wahine Kapu Pelehonuamea.

I also hope that at least some of the revenue earned by these air-tour companies is being funneled back into the community through donation or funding of important community/cultural projects, since they are directly profiting off of a Hawaiian sacred space while not only giving nothing back, but directly damaging it through sound-pollution and lack of proper protocols and respect. I understand that the National Park cannot control what a private company does with their own profits, but perhaps some of the fees they pay to the park could be funneled into a fund to support Native Hawaiians.

Mahalo for this opportunity to share feedback.

Correspondence: Overflights at Volcanoes National Park:

"The Snoqualmie Tribe in Washington state says helicopters flying over a giant waterfall are disrupting traditional ceremonies. It's asking federal aviation authorities to intervene."

An Arches National Park plan proposed authorizing "up to 309 air tours per year on four defined routes."

Bryce Canyon National Park proposed authorizing "up to 515 air tours per year on defined routes."

In 2023 Volcanoes National Park is discussing authorizing up to 1,565 air tours per year on three defined routes. What!?!

No! Enough is enough. The wants and profits of a few in helicopters should not interrupt native practitioners' sacred space and the enjoyment of tens of thousands of park visitors.

To stand in silence and watch hula on Kilauea Volcano is to enter sacred space. One night on Kilauea Volcano we watched in the stillness as clouds over the caldera slowly withdrew to reveal bright stars and a lunar eclipse. Two women began to chant. In the silence, like a ghostly choir, an echo answered from across the caldera. Then from the glowing lava in Halema'uma'u came the voice of Kilauea. No words can describe the awe and wonder of that lived experience. Stillness is the door we leave open for the sacred.

Stillness and natural sounds in Volcanoes National Park and in other US parks are endangered natural resources. Preserving wilderness sounds enhances visitor experience. NPS must garner "converts" to wilderness preservation among the rising generation or national parks will be left to profiteers. If nature is given stillness, she can speak for herself and fill her cathedrals with faithful protectors.

Silence is one of the last great resources the NPS can protect for the people. Protect our 'āina from those who strip mine the whispering winds from the skies. Cap Volcanoes National Park commercial overflights at 300 or less.

No priest must beg for silence to break bread at a church. The 'āina is filled with mana. Kānaka Maoli draw strength from the land. Aloha and stillness for Kilauea and her cathedral.

Mahalo

Correspondence: We have been asked to once again give our final comments regarding this plan. I most recently submitted a cover letter with comments and attachments from kupuna regarding history, culture, and background as requested. Here once again are my comments regarding the current draft plan.

1. Although I appreciate the lessening of air tours with and without noise management, I am request there be no flights over the crater.

Reasons as previously stated and acknowledged in your draft plan are:

a. the entire crater area as well as the land below and the sky above are part of the same sacred space.. Having been at the crater conducting cultural activities during a fly over, I have had to stop until the offending craft has left the area as the noise is very disruptive and invasive. I have had visitors stop and look up to see where the noise is coming from while gazing at the crater.

2. There is a set number of companies and flights in the ATMP as determined by a previous accounting over a period of time. I see that in the plan that to add any new companies to the list, there will be a strict procedure. When is enough enough? a limit should be set now and any new applicant should have to wait until a current company ceases its operations.

My reason for this thinking is that the entire state is suffering from increasing numbers of tourists. This is an opportunity to manage those who choose to visit this incredible place. In my opinion, this would decrease the footprint and improve the visitor experience. Many places have gone to a reservation system to control the numbers.

4. Monitoring. Lastly, I have a real concern about how the ATMP will be enforced. I see that there will be a number to call.

We on Hawaii Island know full well about response times for enforcement. By the time the call is made the offending aircraft will most likely be out of sight and no longer out of compliance..

Mahalo for allowing us to continue to give input in making our wahi pana special for everyone to enjoy.

Correspondence: I'm not familiar with contemporary helicopter models, but I am familiar with my experiences in the military. The birds those tour companies use are the noisiest 'copters on the planet - even at the high altitudes most of them fly. I expect they might even be removing the noise abatement equipment on them to increase passenger weight capacity, but I have nothing to prove that as fact.

That said, the tours out of ITO seem to have direct flight paths over large populated areas of the Puna District. Although every aviator will say that the shortest, most fuel-efficient path to a destination is a straight line, what about the impact on neighborhoods below? During the eruption of 2018, a motion picture foley artist could have used the noise of the tour choppers headed to Leilani Estates over Hawaiian Paradise Park as an overdub mix for Apocalypse Now. It was ridiculous, and I know a few vets who were pretty shaken up with PTSS back then from it.

Flight paths over coastal waters would be ideal, but the tour companies would complain about fuel consumption. I can't suggest an answer, but something DOES need to be done about it.

Correspondence: My compliments to the NPS, FAA and others involved in preparing the EIS. It is a very professionally researched and detailed document.

I believe that Alternative 2 is the Best option. However, Alternative 3 is also a good second alternative in limiting the annual number of flights over ATMP, as well as limiting the flight days to 5 days/week, except for aircraft with quiet technology, as approved by FAA.

As Volcano National Park (VNP) has the highest number of tours under the Act, an ATMP definitely needs to be done and its implementation expedited. The very frequent helicopter tours create a negative impact on the visitors, cultural sites, native Hawaiian events, as well as the unique flora, fauna, and birds. Even if Alternative 3 is chosen, the ATMP would limit the annual air tours to about 1600/year, a great reduction from the current levels.

I believe the proposed required annual NPS training covering the Park's priorities/objectives, as well as enhancing the interpretative narrative and FAA's Introduction Fly Neighborly training are needed components of the ATMP for educating the tour companies and pilots of the importance of Volcano Park and its resources.

To ensure compliance with the Act and ATMP, semiannual reporting should be enforced, as well as attendance at the annual meeting.

Allowing not only the NPS and FAA, as well the public to report apparent noncompliance to the ATMP is needed to ensure compliance to the Plan by pilots and tour operators.

Thanks again for the opportunity to comment on the EIS, as well as the ATMP.

Mark Gordon, Waikoloa HI.

Correspondence: As a single engine, fixed wing pilot, I wish to oppose changes restricting the airspace usage over the Hawaii Volcanoes parks. For the most part the current airspace is either rural or over water, based upon my experience on the tours with local tour operators. This noise generated by the tours has a short-term impact to those who hear it (while overhead), and the tours were operating prior to the vast majority of the impacted Individual's purchasing property in the impacted areas. IE the home / land owners knew about the noise prior to their purchase. These tours represent the best way for a majority of the population to experience the beauty and splendor of these remarkable sites. Much of the area around Volcanoes National Park is privately owned and is inaccessible to tourism. The proposed changes in policy are counterproductive to sharing these incredible natural assets with the public.

Correspondence: As a concerned citizen to express my deep apprehension regarding the proposed restrictions on helicopter flights over volcanoes in Hawaii, particularly in relation to the impact it would have on individuals with physical limitations. I kindly request you to reconsider this policy decision and ensure that everyone, regardless of their physical capabilities, can continue to experience the awe-inspiring beauty of these natural wonders.

Helicopter flights have long been an invaluable avenue for people with physical limitations to appreciate the magnificence of Hawaii's volcanoes. These individuals, who may face challenges in hiking or navigating difficult terrains, rely on the accessibility and comfort of helicopter tours to gain a unique perspective on the volcanic landscape. By restricting these flights, we risk denying them the only means by which they can truly enjoy and connect with the beauty of our state's natural heritage.

It is crucial to emphasize the importance of fairness and inclusivity in policymaking. While it is undoubtedly important to balance the needs of various stakeholders, it is equally essential to avoid disproportionately favoring one party over another. In this case, restricting helicopter flights would disproportionately disadvantage individuals with physical limitations, who already face numerous barriers in their everyday lives.

By allowing helicopter flights over volcanoes, we enable these individuals to partake in an experience that would otherwise be unattainable for them. We must acknowledge that nature's wonders should be accessible to all members of our society, regardless of their physical capabilities. Denying helicopter access solely to accommodate the preferences of a specific group would create an unfair disparity and perpetuate the marginalization of those already facing physical limitations.

Moreover, it is worth considering that helicopter tour operators have invested substantial resources into ensuring the safety and accessibility of their flights. These companies have diligently adhered to strict regulations and implemented robust safety measures to protect both their passengers and the environment. Penalizing these responsible operators by limiting their operations would not only undermine their investments but also hinder the economic growth and job opportunities associated with this thriving sector of our tourism industry.

Instead of limiting helicopter flights, I propose exploring alternative solutions that address the concerns while preserving the rights of individuals with physical limitations. This could include implementing strict flight guidelines to minimize environmental impact, encouraging tour operators to utilize advanced noise reduction technologies, and establishing designated flight paths that ensure both safety and accessibility.

In conclusion, I implore you to reconsider the proposed restrictions on helicopter flights over volcanoes in Hawaii. By preserving the accessibility and inclusivity of these flights, we uphold the principles of fairness and provide individuals with physical limitations the opportunity to experience the natural beauty of our state. I trust that, as a compassionate advocate for all members of our society, you will give this matter the serious consideration it deserves.

Thank you for your attention to this urgent matter. I look forward to seeing your continued commitment to ensuring equal opportunities and access for all individuals in our great state of Hawaii.

Correspondence: Please consider ONLY allowing disabled and kupuna (70+) to use quiet helicopters for sight seeing tourism.

In addition, I favor means testing fees, with a broad sliding scale, so that this service is available to a broad range of individuals. Those with higher wealth and/or income should pay at the high end of the scale to subsidize those without such means.

mahalo,

kaleo kaluhiwa

Correspondence: Our farm animals are burdened by numerous helicopter flights flying well below the required elevation minimums. It terrifies certain animals, elevates other's anxiety and decreases their general overall happiness and sense of safety. We live in the farthest area from people we could find to provide our animals this peace. End of small road, acres next to thousands of acres of cattle pasture. My livestock and animals literally do not see any other vehicles or people aside from the harassment from these aircraft profiting from this intrusion. These helicopters show absolutely no respect for our peace, or privacy, taking a seemingly direct route over our beautiful land every time they pass. Sometimes they illegally fly so low I can see their faces. The faces of others who impose on people for profit in my yard. People who don't show respect for anything living on this land. Where in this world should we go, could we go, to simply find peace if every inch of our sky is available for commercial profit? It is a great responsibility you have to every living creature on this island to regulate this horrible, selfish situation. These offensive flights actually have people filming others, on their own private property, without their consent or permission. Do you think it's OK for someone to fly over and film your child playing nude in your yard, on many acres, hidden from view of all? Sent running for cover in your own yard? It's gone too far when a human doesn't even have the ability to feel sun on their own body in their own yard, despite having 100% privacy for acres around. The ONLY thing stopping the people and the livestock/animals from enjoying this peaceful land are the low flying helicopters. The proposed routes are perfect. We would no longer be bothered by these intrusions. The proposed flight plan is 100% supported here. Please make this a reality. It would provide privacy to so many households that truly desire and deserve peace in this chaotic world.

Correspondence: After reviewing all correspondence regarding the Draft Air Tour Management Plan for Hawai'i Volcanoes National Park, I find it ludicrous that this has continued for twenty-three (23) years.

Bill

4. H.R. 1071- 118TH Congress (2023-2024), Safe Quiet Skies Act, To impose safety requirements on commercial air tour flights, and for other purposes. This bill is sponsored by Hawai'i State U. S. Representative, Ed Case and co-sponsored by U. S. Hawai'i State Representative, Jill Tokuda. They are also supported by Hawai'i State U. S. Senators, Mazie Hirono and Brian Schatz. Archived testimony is included regarding the commercial aircraft accidents and deaths. Representative Case's special interest, includes changes of strong wind patterns that are unpredictable. Therefore, I strongly support the No-Fly Zone designation (commercial aircraft) over HVNP. Realistically, limited exemptions must be allowed for safety measures: natural disasters, fires, air lifts, government operations, heavy equipment, utilities, and maintenance.

While we are aware that the turbine engines of all aircraft are impacted by the salt water environment in which they are flown, it is an additional danger when these engines are exposed to the high levels of acid rain and fine particulate matter emitted by the eruptions of Kilauea and Mauna Loa. They may result in possible engine failure while in flight. Droughts that happen at different times of the year, the lack of water supply, and most importantly, the extreme danger of wild fires due to accidents. Also, the lack of enough firefighters in HVNP, should be taken seriously. Therefore, proactive preventive measures and actions for the safety and well-being of everyone should be the number one priority.

Section 106 prominently demonstrates that the Hawai'i Volcanoes National Park in its entirety is a Wahi Pana. It is deeply enriched in its sacredness, spirituality, culturally, na mo'olelo, and the endangerment of all endemic and indigenous species, mauka to makai.

I strongly oppose the Commercial Air Tour Operations over Hawai'i Volcanoes National Park (HVNP). I will leave you with a quote by OHA Trustee Sylvia M. Hussey, Ed.D., Chief Executive Officer.

"I wish we made decisions out on the land rather than indoors because when we are on land, and we listen to the land, we make very different decisions."

Correspondence: I understand that the Rotary Wing Air Tour Industry is not going to go away. I also realized that this industry does indeed employ our neighbors and friends, gives our visitors a once in a life time experience , and in some instances give our civil defense personnel another set of eyes during an eruption. With that said 0826, Mothers Day Morning, walking my Dog and there they are. shattering the morning calm. This is pretty much an everyday occurrence. My suggestion is to limit the operating hours, and no fly on Sundays. Time over the Park should start at 1100 hrs. In closing it has been none stop now that Pele has awakened.

Correspondence: This is another bogus environmental report. Are we going to stop all travel? There is noise around every airport in the world. Are we limit air travel and back to horse and buggies. People like to see the parks from the air it's a different experience. Our National parks were established for the people to be able to enjoy them not just the rich and famous. Limiting helicopter tours will raise the prices so the common people won't be able to afford it. I'm against this proposal and so are everyone I know. Thank you for reading my comment.

Correspondence: As a Big Island resident, I would favor reducing helicopters on all the islands and complete elimination over Natl Parks. We were lucky enough to head up to Volcanoes National Park to see the latest eruption yesterday. On our walk to a lookout point, there was constant helicopter noise, sometimes more than one, and at one point three. It was sad to be walking through this incredible landscape having to listen to the noise. Helicopters are bad for the environment with their exhaust, they serve very few people and cause noise pollution for the rest of the visitors and residents. Just because we have the technology to fly and some folks can afford it, doesn't mean we should be disrupting other's right to peace and quiet.			
Another instance, a few years ago, we were on Ke'e Beach on Kauai and there was constant helicopter noise and one after another hovered just off the beach. You could hear them coming and going all afternoon. Such a beautiful remote location and we were subject to the noise just so a few folks could view from the air.			
Thank you for your time.

Correspondence: As a person who lives directly underneath the helicopter flight path to and from Volcanos Park I am in support of this plan to curtail the invasive drone of these machines that have been negatively affecting our lives for the last 20 years. The helicopters are very loud and intrusive. We live on agriculture zoned land in Kurtistown. We cherish the solitude but there is none when everyday the flyovers to and from the park destroy our ability to enjoy our days. No sooner does one or two aircraft pass does another and another. When we go for hikes in the park its the same, the constant drone of aircraft. This takes away from the quality of the experience for the hundreds, perhaps thousands, at the park while serving only dozens in the sky, that is just not fair. My family fully supports the reduction in helicopters at the park.

Sincerely,
Terry Harvey

Correspondence: Please don't reduce the number of helicopter tours allowed.

By design, and for good safety reasons, there is no access allowed by the public to large portions of Hawaii Volcanoes National Park. This is especially true during active volcanic eruptions. These tours are the only way for the public to witness one of the greatest spectacles of the world.

The ATMP lists multiple other ways to reduce the noise impact to the park, including establishing routes, restricting hours, and pushing for next generation quieter aircraft.

There are better options available to reduce the impact of noise on the park without curtailing public access like this. Please don't make such a drastic 86% reduction in the allowed tours.

Correspondence: I am opposed to any air tour flights over Hawaii Island and the Hawaii Volcanoes National Park. As a lifelong resident of Puna, I have experienced the daily noise and disruption to our home life and livelihood by helicopter tours. I grew up just 4 miles from Pu'u O'o vent and have experienced for far too long the continuous buzz of helicopters circling overhead to sightsee and gawk at the 35 years of eruption. I am now owner and operator of a land-based tour business. We conduct hiking and sightseeing tours in Hawaii Volcanoes National Park. The helicopter tours overhead are a great nuisance to the visitors' park experience. We often have to wait until they pass by before continuing sharing the mo'olelo and history of the areas that we are visiting. I can only imagine how the noise of these helicopters disrupt the natural environment including the homes and life cycle of our many endangered species. In addition to the noise, the air pollution is unacceptable for our climate friendly park. Please ban all air tour flights over Hawaii Island, including the Hawaii Volcanoes National Park, in order to return to the peace and solitude that should be within our island home and natural ecosystems.

Correspondence: To whom it may concern:

These are my comments and suggestions regarding the Hawai'i Volcanoes Draft ATMP.

Firstly, I want to recite the general history of the problem of the helicopter air tours over the Big Island (BI) of Hawaii. For many long time residents of the BI, the exponentially worsening problem of air tour overflights has become a severe issue of harassment and public nuisance in recent years. When for many, many generations before, we have lived in peace and quiet in our natural rural environment, but over the past decade or so, these private air tour companies have become more and more a bigger nuisance, with larger numbers of noisy, low flying aircraft and more frequent flights.

Not only is there incessant and extreme noise, when these huge helicopters come roaring over the same paths, back and forth, many times each day, but they pose a grave threat to safety of the citizens on the ground! It is an indisputable FACT, that these tour helicopters are much more prone to accidents, compared to commercial flights, many of which have caused, and will continue to cause, severe injury and death.

The tour helicopters have had a history of mechanical failures, pilot errors, and weather issues, causing them to crash with severe injuries and tragic loss of life. Nobody planning to go on a sightseeing tour should risk their life, nor should innocent people living under their flight paths be exposed to injury or death from their crashes.

Therefore, my principal comment regarding this ATMP, is that there should be NO TOUR OVERFLIGHTS OF NATIONAL PARKS, AT ALL!

It should be obvious to anyone, that the primary purpose of our National Parks is to provide a quiet, serene, natural environment for the people to be able to escape the noise, tensions, hassles of urban life, and to retreat to a calm and peaceful state of place and mind. Therefore, allowing ANY noisy tour overflights in National Parks is totally inconsistent and opposite to the very purpose of our parks!

For many years in the past, our family would regularly go hiking in HVNP, for this exact purpose, for the serenity, the quiet, the wildlife, the sounds of nature. Since the past decade, and last 5+ years in particular, the assault from the noise and sight of these monstrous helicopters coming over us, has basically stopped us visiting the HVNP!!! All community efforts to negotiate voluntary changes of routes have failed. These greedy operators just keep on doing their tours regardless of the nuisances they cause.

So, my NUMBER ONE COMMENT ON THIS ATMP = Make major changes, to ELIMINATE *ALL* TOUR OVERFLIGHTS OF HVNP, AND OVER THE RESIDENTIAL NEIGHBORHOODS AS SOON AS POSSIBLE.

If the persons in control of the decision on this ATMP do not have the guts or principles or common sense to rewrite the ATMP to ELIMINATE ALL TOUR OVERFLIGHTS, then I am limited to just submit the following more detailed comments on the existing plans outlined in the ATMP.

1. The "quiet technology" (QT) is a misnomer, a deflection and distraction from reality. From personal experiences over the past decade, of thousands of overflights of every kind of aircraft, QT or non-QT, there is little difference in the sound levels as perceived on the ground from these overflights. To actually eliminate the noise from these powerful sources, the helicopters must fly 2 MILES HORIZONTAL DISTANCE FROM ALL HOMES, SCHOOLS or ANY NOISE SENSITIVE AREAS, to make the sounds truly go away.

Therefore, no special exemptions, nor extended hours of operation should be given to these "fake" QT named helicopters!

2. An equally or more severe problem with the helicopters safety and noise, occurs OUTSIDE of the park boundaries, along all the paths the tour companies take to get to the Park from the airports or their bases. The tour operators have shown utter disregard for the FAA policies such as AC 91-36D, which states "avoidance of noise-sensitive areas is preferable to overflight..." They make no attempt to avoid overflights, rather they constantly fly directly over populated subdivisions, individual homes, schools, using the same paths, causing extreme and constant harassment and nuisance to thousands of residents, who by no fault of their own, live under these paths which the operators deliberately choose to use for some personal convenience.

Despite thousands of online noise complaints submitted to the FAA hotline, by many exasperated residents, the FAA has done NOTHING to make the tour operators follow the guidelines and avoid overflights of homes and schools!

3. Specific comments on the three new flight routes of Figure 2:

a. Coastal route, is the most preferable route in general, but must maintain 2 MILES HORIZONTAL DISTANCE from the shoreline. 2000 feet is unacceptable, too close and still creates substantial noise for residents along the coast. AND, the coastal route MUST be used by ALL tour aircraft as their only path from the airports or bases to get to the viewing areas in the Park. NO OVERFLIGHTS OF RESIDENTIAL, POPULATED AREAS SHOULD BE ALLOWED, to get to and from the Park!

b. Kahuku route must be ELIMINATED. There is population and schools all along Hwy 11 from Ocean View to Naalehu. Flying over the highway will NOT avoid noise pollution to the residents of Kau! ALL flights from Kona side to the Park MUST fly 2 MILES OFFSHORE to get to their destination, and maintain 2 MILES LATERAL distance from ALL homes, ranches, farms, or schools.

c. Pu'u o'o route is the only sensible route to access the Park, from the coastal routes of entry/exit. There are no residential areas along that path, and even though there are some visitors and hikers along that path, it is probably the least intrusive of all the paths to access into the Park.

SUMMARY:

Even though the best ATMP is to BAN ALL TOUR OVERFLIGHTS OF NATIONAL PARKS, the proposed ATMP is a small step in the right direction, but still requires substantial further restrictions on the overflights, as stated in my responses herein. And, without a substantially expanded and comprehensive plan, to AVOID OVERFLIGHTS OF RESIDENTIAL AREAS along the routes to and from the Park, little will be accomplished by the current Draft to mitigate the legitimate complaints and protests coming from Big Island residents!

Most important is to:

1. PROHIBIT OVERFLIGHT OF HOMES and SCHOOLS, on all routes to/from the Park from the aircraft bases or airports.
2. MAINTAIN 2 MILES LATERAL distances from ALL HOMES AND SCHOOLS, and SHORELINES, on all approved routes to fully eliminate the noise.
3. IMPLEMENT A 2 MILE OFFSHORE ROUTE for all tour flights around the BI, as Long Island, NY has made an offshore route like this in effect now for many years, with great success towards noise elimination and creating a sensible solution that allows both operators and residents to co-exist in peace.

Mahalo for your attention to this important and long overdue issue!

Dr. Michael Alapai Linnolt

Correspondence: Being a Volcano resident is not easy. We have next to no municipalities (although we pay the same share of taxes) and we have to work extra hard just to provide for the basics. And why do we bother? The peace and quiet. We don't go through all of this extra work and expense to be bombarded with air traffic. When Kilauea is active, there is NON-STOP air traffic. Literally all day, everyday. As soon as one plane or helicopter departs, there is another just a few moments after.

We do NOT live next to an airport or airstrip so this is unacceptable. The tour companies are reaping all the rewards at our expense. Our rain forests are unique to the world. Our community is unique and it's completely unfair to put this burden on such a small community when we receive no benefit whatsoever.

Please consider the local residents who pay our fair share of taxes with very few resources in return. Enough already.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours “offers the greatest protection of visitor use and experience” in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the “greatest protection” for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: As a child, my parents took us to many national parks and monuments. As an adult, I volunteer with the NPS and my husband and I make a point to visit and enjoy the parks.

Our national parks and monuments are places to appreciate scenery and history, watch wildlife, and enjoy interpretation. I believe that air-tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We visited Iceland several years ago to see the volcano erupting. One of our favorite memories was the sound of the lava flow and wind. Noisy air tours prevent this experience in Hawaii. Air-tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

----------------------	----------

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

----------------------	----------

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We have enough "noise pollution" in our daily lives. National parks should be free of such stress so we can truly unwind and enjoy nature. Air tours ruin the park experience.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: Hawaii is such a peaceful, beautiful place. The National Park should reflect the majesty of the environment where the sounds of nature prevail. I visit National parks to enjoy the unique environment and educational opportunities each park offers. I love to watch wildlife, hike and enjoy nature. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

I live in Gustavus Alaska next to Glacier Bay National Park. Thankfully there are no helicopter tours here and single engine planes must operate high enough to minimize impacts on people and wildlife on the ground and water. However at nearby Juneau, our State Capital, obnoxious helicopter tours to the Mendenhall Icefield are terribly disturbing.

For the Hawaii parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor

use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: The National Park Service (NPS) and Federal Aviation Administration (FAA) have allowed thousands of noisy helicopter tours over the skies at Hawaii Volcanoes and Haleakala. Low-flying commercial air tours interfere with those experiencing the natural sounds, healthy wildlife populations, and Native Hawaiian cultural resources.

National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

Hawaii Volcanoes is a unique national park with volcanic activitywhere one can experience lava flows and eruptions. It has over 50 endangered and threatened species, including birds sensitive to noise. The park and landscape, from land to sky, are sacred to many Native Hawaiians.

Native Hawaiians also consider Haleakala sacred--holding important cultural and spiritual resources and values. Visitors can visit the dormant volcanic crater and abundant rainforest, where rare plants and birds make their home. However, air tour flight paths intersect with the park's hiking trails and visitor centers, disrupting the experience for all.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: I visit national parks to experience beautiful scenery and nature. Experiencing nature includes appreciating its sounds. The noise of air tours disrupts that experience and detracts from the experience of other visitors. For this reason I am writing to urge you to prohibit air tours over Hawaii Volcanoes and Haleakala National Parks.

At both parks commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking, wildlife viewing and the wilderness experience.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. Shouldnt that then be the preferred option?

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy solitude. I feel that air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to more than 50 endangered and threatened speciesmany only live on these islands.

People go to national parks to escape the hustle and bustle of their everyday livesto appreciate nature and learn about their culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We should not pick anything less than the "greatest protection" for our parks.

Thank you for considering my views.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: I'm blessed to have visited Hawaii Volcanoes and Haleakala National Parks. I was further blessed to visit Volcanoes years ago in the relatively slack period after Thanksgiving when the Park was remarkably empty and quiet. In fact, that afternoon for a while no one else was in sight. This was almost a religious moment to reflect and take in the Parks beauty. Suddenly the silence was shattered by the unavoidable and persistent racket of a tourism helicopter overhead. National parks are distant places I travel hundreds and thousands of miles to behold their remarkable scenery and unique natural history, to watch their unique wildlife, and to simply take in with awe what millions of years of weather, geology, and evolution have shaped. Air tours have been regulated and banned in other Parks. Decades after my visit, I'm stunned that they continue should over Hawaii Volcanoes and Haleakala of all places. They must finally be stopped.

I live on an island. Manhattan is a dense urban area. Police helicopters understandably fly overhead. But tourist flights don't. It's not only a safety issue but a noise one. Still, they can be heard and escaping their rumble for a few days is reason to travel to these distant parks and so many others to take in their beauty, solitude, and splendor without enduring my hometown racket. I travel to escape the noise of home. These gems are sanctuaries, havens. For generations Americans have recognized their uniqueness and preserved them for those who follow. A sudden low-flying helicopter carrying a few people destroys that experience for dozens or hundreds or thousands on the ground. That's a selfish imposition that in concession fees can't contribute a fraction compared to the damage they do to visitors' appreciation. Why come to take in Mother Nature when man's rotors intervene? I wouldn't return there based on the racket I heard.

Noise generated by air tours severely affects wildlife, including birds that live only in Hawaii. Both parks are home to over 50 endangered and threatened species, many of whom live only on these islands. Don't send them the way of the dodo.

The National Park Service says Alternative 2, the choice that would eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. Please. We shouldn't pick anything less than we deserve, this "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species many only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National

Park Service says the choice (Alternative 2) to eliminate air tours “offers the greatest protection of visitor use and experience” in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the “greatest protection” for our parks.

Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National

Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: My wife and I visited Volcanoes National Park earlier this year and enjoyed the quiet as well as the unique scenery as we hiked the Kilauea Iki Trail. We enjoyed the overlook trails and found the hike in the crater a special experience. While I would not say the trail was crowded by any means, there was a considerable number of other hikers there, including a school group. The NPS Trail Guide we purchase at the visitor center states:

Because of the at Kilauea. Some years ago, we hiked into the crater atop Haleakala, again enjoying the quietude of that otherworldly place. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks because they interfere, for the benefit of the few, with the special experience of many other visitors to these special places.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

The National Park Service (NPS) and Federal Aviation Administration (FAA) have allowed thousands of noisy helicopter tours over the skies at Hawaii Volcanoes and Haleakala. Low-flying commercial air tours interfere with those experiencing the natural sounds, healthy wildlife populations, and Native Hawaiian cultural resources.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: I have strong feelings about this:

National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. For this reason alone air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

As you know, commercial air tours have been shattering the natural sounds in both parks that visitors come to enjoy; air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Additionally, noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened species, and many only live on these islands.

I believe that almost all visitors go to national parks to escape the hustle and bustle of our everyday lives, to appreciate nature and learn about our culture. But as it is, air tours ruin visitor experiences and harm wildlife.

The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala.

Clearly we shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: My wife and I live on the Big Island and went to the Halemaumau Crater yesterday to enjoy the eruption sights/sounds, quiet punctuated by bird sounds, and wide-open vistas. The continual noise and disruptions caused by the helicopter overflights really disturbed the experience for us, and many other tourists/residents who came to enjoy a natural experience. Instead, the rich tourists and insensitive helicopter pilots imposed their racket on us. Maybe a video experience could be created of the highlights of eruptions that they are seeing by helicopter or drone, so they can see the best of the best, and these repeated and intrusive overflights can be permanently terminated.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday lives to appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours “offers the greatest protection of visitor use and experience” in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the “greatest protection” for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation not be constantly overcome with LOUD NOISE POLLUTION. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks. In fact all of the parks of the Hawaiian Islands.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks and for the locals who are held hostage by wealthy tourist activities.

Thank you from a mainlander who has many Hawaiian family members.

The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

As a recent visitor to the Big Island , I am appalled that low flying helicopters are allowed over Volcano NP. There are better and less offensive ways to enjoy the park and its wildlife and birds. Give the locals and the park some peace by protecting all National Parks affected by this.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

I visited the Haleakala crater before the helicopter tours and regard the tours as an unnecessary, disruptive, and destructive activity. Please chose Alternative 2!

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the
"greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: I have visited Volcanoes National Park and experienced its beauty and totally unique landscape. It and Haleakala can be enjoyed from the ground without the noise or danger to wildlife helicopters cause. I live near a former air base where helicopters still occasionally visit and they are incredibly noisy. Please, protect the uniqueness and environment of these special Hawaiian places, and do not continue to allow the air tours - they are not necessary to appreciate these spectacular parts of the Hawaiian islands.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: Air tours should NOT be part of a National Park experience. I go to them to be a part of nature. I find air tours of any kind very disruptive to my experience, both the noise and the visual intrusion. Please stop them completely in both Hawaiian Parks. While we are at it, air tours should not happen in any National Park.

National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

We go to national parks to escape the hustle and bustle of our everyday livesto appreciate nature and learn about our culture. Noisy air tours should not be allowed to ruin visitor experiences and harm wildlife. The National Park Service says the choice (Alternative 2) to eliminate air tours "offers the greatest protection of visitor use and experience" in Hawaii Volcanoes and Haleakala. We shouldn't pick anything less than the "greatest protection" for our parks.

Correspondence: National parks are places I go to appreciate scenery and history, watch wildlife, and enjoy interpretation. Air tours should be prohibited over Hawaii Volcanoes and Haleakala National Parks.

For both parks, commercial air tours have been shattering the natural sounds that visitors come to enjoy. Air tours are in direct conflict with hiking trails, visitor centers, and the wilderness experience.

Noise generated by air tours severely impacts wildlife, including birds that only live in Hawaii. Both parks are home to over 50 endangered and threatened speciesmany only live on these islands.
